This paper aims at comparing female trajectories in three BRICS – Brazil, China and Russia – since 2000, when a new path of economic growth opened up new opportunities for both sexes in these new mass-consuming market societies. These countries have some features in common, including their being large economies with a strong manufacturing sector, low fertility rates (under 2.0), an urbanization rate over 50%, and convergent female participation rates in the labor market (between 56% and 65%), but one major dissimilarity in terms of educational attainment: only Russia displays high shares of tertiary education (more than 50%) among the adult population[1], as compared to China (less than 5%) and Brazil (around 10%) (OECD Factbook 2013; World Bank GHD 2013: Capital for the Future).

For this reason, however, these three countries differ profoundly in the way they have developed different patterns in terms of institutions and norms with regard to social protection schemes, labor regulations, and gender policies.

This paper will systematize major traits of female trajectories and gender gaps in Brazil, China and Russia in the 2000s, gathering statistics from the ILO, OECD, World Bank and other relevant databases. In parallel, it will map how the welfare state has evolved as of late in these countries and how existing norms and institutions either push for or constrain gender equality. After systematizing data and the major characteristics of national social protection schemes with regard to the promotion of gender equality and wellbeing, a logistic regression model will be elaborated in order to determine the factors that most contribute to explain gender asymmetries in each country.

Financial Inclusion As a Basic Human Right? Reframing Inequalities in > the > South

A new wave of commodification “all the way down” (Fraser 2012) is taking shape as a paradigm to enhance basic protection through market provision in the developing world. A shift from principles of equal citizens to equal consumers and from risk-sharing to individual risk-taking strengthens private insurance schemes and other financial products and services in detriment of public and universal provision of decommodified goods and services. As a result, inequalities between Western countries and the rest of the world may widen. Worse, some (Schiller) argue that “we need to redefine the parameters (...) in more basic terms” (2012:150) to connect all people to finance.

This presentation will compare the extent to which incomplete social protection schemes are being replaced by the provision of minimum income transfers and some basic services for the needy through the social protection floor (ILO 2012) along with a process of "bankcarization" of the poor and the vulnerable. We argue that preventing market failures instead of promoting equality of opportunity and further public redistributive mechanisms to make market societies more homogenously reflects strategies to enhance privatization and capital markets whose deployment has been long constraint by domestic market restrictions in the developing world. This trend is likely to reinforce duality and polarity and undermine strategies to achieve broader equality between developed and developing nations, between the wealthy and the excluded. The North-South divide will deepen and personified as new opportunities for both sexes in these new mass-consuming market societies.
New Ethics of French Employment Advisers and Their Clients Coping with the Unemployment Trap

This research work focuses on the transformation of the French Public Employment Service through a sociological pragmatic study of discourse and practices of professional employment counselors. We consider the reconfiguration of this profession is an indicator of changes in the welfare state to an active welfare state, which is expressed in particular by an institutional incentive project to the adaptability to employment standards and market principles. Based on a long ethnographic investigation in seven agencies with 87 counselors, and 200 observations of appointments between advisers and unemployed, the paper analyzes the effects of these two potentially conflicting targets: the subjectivation (individualized ascription of responsibilities by the beneficiary) and the rationalization. A partir de 200 observations de rendez-vous entre conseillers et chômeurs, notre communication entend analyser les effets de ces deux visées potentiellement contradictoires pour examiner comment émergent de nouvelles éthiques dans les pratiques et justifications professionnelles.

New Ethics of French Employment Advisers and Their Clients Coping with the Unemployment Trap

The category of 'Leisure' as an object of academic pursuit has historically been derivative of Western European epistemologies dominating the literature, providing the reason and intellectual spaces that scholars must somehow shoehorn their ideas into and making a feedback loop into policy circles that make concrete differences to how we live. This paper explores the domain of thinking about leisure and work and offers a call and argument about extension of epistemological breadth to handle the range of cultural truths constituent of professionalism in sociological pursuits and showing an unequal balance of voices from ways of living. The literature extant from Canadian scholarship provides a viable launch point for the main thesis about epistemological diversity and inequality given the nation's commitment to multiculturalism, encompassing Aboriginal, Asian and Caucasian cultures under its umbrella.

LAW, ALAN* (Trent University, alaw@trentu.ca)

Leisure, Justice and Economic Collapse

The paper explores the roles of leisure to both ameliorate and deepen the catastrophic effects of unemployment. The main issue at stake is the extent to which the distributive justice of time and social legitimacy comes to bear in a way that reproduces social relations that, on one hand lead to social inclusion and on the other, radically marginalize victims of economic collapse. The role of the state is critical in setting the terms of social legitimacy, but the state has become agglomerated in clusters of social and economic practices that mutually regulate legitimacies of diverse peoples. State agglomerations are only one plane of action in a complex of social dimensions that find their roots at the intersections of continuously emergent cultural histories including millennia of globalizations. The paper draws on histories of global economic collapse beginning in the 19th century.

Insights for Healthcare Professionals on Patient Experience of Research Participation

There is limited evidence about why patients might be motivated to share their personal stories about their illness experiences through research initiatives and the impact of participation. Ethics committees and healthcare professionals are sometimes reluctant to support research that involves in-depth qualitative interviews given concerns about vulnerability and/or potential harms. Two studies were undertaken, in Germany and in Canada, to explore participant experiences of participating in qualitative research. The research teams are involved in the DIPEx international collaboration – using common methods to collect and share participant narratives and opportunities for ethical research. The data show that people who had been interviewed about either diabetes or chronic pain, were interviewed again about the reasons why they chose to disclose their illness experiences. In Canada, 30 people, who had been interviewed about their family caregiving experiences, completed a survey asking about their experiences of the interview. In both studies, participants were asked about their research participation, perceived benefits, what was difficult and what about the research process could have been better. These studies were conducted independently, using different methods and within different cultural contexts, yet there were strikingly similar narratives. Participants argued to have been helped to present to help others with similar conditions cope with their situation and to help healthcare professionals as well as decision makers understand their situation to improve care. Participants were generally grateful for the opportunity to share their story, and although they acknowledged difficult moments in reliving some of their experiences during their original interviews, no one in either study regretted participating. This paper will contribute to discussions about how healthcare professionals, including members of ethics committees, view participation in qualitative research. It may also contribute to discussions between researchers and clinical therapists about the value and meaning for patients to participate in qualitative research studies.

The Financialisation of Food and Farming in Australia

The ownership of Australian food companies and farm lands by overseas investors has become a national debate in Australia, with some politicians and economists arguing that just as Australia’s past development was assured through foreign capital, so the nation’s future will depend upon continuing (and accelerating) overseas investment. Others are concerned that the present extent – and nature – of the purchases is not in the nation’s best interests. Critics argue that some of Australia’s most iconic and successful agribusinesses will become a vehicle for takeover by hedge funds and private equity firms that can then make decisions that may be deleterious to the national interest. Others consider that when farms are run by external sovereign wealth funds and food is ‘repatriated’, taxes can be avoided: Australia might not derive income from its own productive assets. Finally, it has been observed that the sale of most farmland is going unrecorded: Australians do not know of the extent of overseas ownership and control. Following a discussion of the current debate about overseas purchases of Australian food companies and farms, the paper deals with the phenomenon of ‘financialisation’. In an era of projected food, water and fuel scarcity, financial entities are seeking investment in agribusinesses that can be harnessed for global profit-making, and farms that can be owned and controlled directly by financial firms. Speculation in land along with opportunities for more secure food production for oil-rich but land-and-water-poor countries, are but two of the motivations for investment. Framed within a political economy perspective, the paper outlines the nature of recent overseas investments in food and farming in Australia, exploring the types of firms investing, along with their motives for investment. The paper concludes by theorizing the sociological ‘meaning’ of financialisation as it affects the Australian agrifood sector.

Negotiated Revolutions 2.0? The Arab Uprisings In Comparative Perspective

The 2011-12 uprisings in North Africa and the Middle East have helped to re-invigorate scholarly interest in revolutions. But what kind of revolutions do these uprisings represent? This article situates the Arab uprisings within the context of post-Cold War revolutions, locating them within a cluster of ‘negotiated revolutions’ that have emerged over the past twenty years. ‘Negotiated revolutions’ differ from ‘modern revolutions’ in five main ways: they result from a relatively liberal democratic state crisis; their trajectories are characterized by negotiations rather than armed confrontation; their participants reject the utopian commitments of past revolutions; they are welcomed rather than disavowed by leading international actors; and they lead to the development of weak rather than strong states. The article assesses the Arab uprisings within this schema, arguing that some of those who see the Arab uprisings as offering a new model of revolutionary change, their causes, trajectories, and outcomes are broadly familiar. Extending this point, not only do the 2011-12 uprisings sit within a family of revolutions that can be traced back to 1989, their focus on political justice rather than the ‘social question’ means that the uprisings share a family resemblance to previous instances of ‘self-limiting’ revolutions. This comparison illuminates both the strengths and shortcomings of the 2011-12 uprisings.

Socio - Economic and Health Status Of Elder Population: Some Empirical Reflections From Tamilnadu, India

The rapid spread of modernization, growing urbanization and crumbling of joint family system had conspired to increase insecurity and loneliness among the geriatric population. However, lack of family support, poor financial status, physical, mental disorders and guilt of being dependent on others are some of the problems nagging the elderly population in India, and other developing countries around the world. Very little attention has been focused on the plight of the elderly population in rural areas of the country. Problems of the aged in rural India indicate their exclusion and alienation from the contact of their own family members which in turn has affected them socially, economically, psychologically with implication of their health conditions. Their economic insecurity is the most pressing problem of the elderly population in the villages. The outside employment of the family members has further aggravated their sufferings and caused their loneliness. The care and support supposed to come from the family members are denied resulting in their deprivation and desertsions. Consequently, the welfare intervention form GO's and NGO's are looked forward to fulfill their basic needs. The health care and support systems promoted through GO's and NGO's provide some solace to their requirements. The condition of the elderly population in rural India is not properly addressed. There is also a great deficiency in provision of care and support and status in rural community. This paper is an outcome of the field investigations conducted on socio-economic and health status of elder population in selected block in state of Tamilnadu, India. This paper analyses the status of the elderly population in terms of socio-economic and health conditions especially in rural areas which is fragmented and loses its uniqueness which result in neglect, alienation and deprivation of elder people in the family towards the provision of care and support.

Is There a Medicalization of the Facial Appearance?

A partir d’une recherche au sein d’espaces de la réparation faciale en France et au Royaume-Uni, on se demande : jusqu’où observe-t-on une médicalisation de l’apparence, et par quels dispositifs se traduit-elle ?

On peut avancer qu’il existe des normes d’apparence que les institutions médicales et judiciaires encadrent. La problématique du normal et du pathologique imprègne les jugements des chirurgiens du visage qui nous rappellent le caractère souvent monstrueux de certains de leurs patients auxquels ils ne cherchaient pas à rendre la beauté mais à rapprocher d’une norme d’humanité. Une posture pouvant aller à l’encontre des associations d’aide aux personnes défigurées, qui militent pour un élargissement des normes d’apparence.

Aussi, sans proposer de typification du rapport entre réponse sociale et réponse chirurgicale, en suivant des personnes touchées par une forme de défiguration et les professionnels qui les prennent en charge sur un temps long, on peut distinguer des formes d’expérience de l’anormalité faciale fonction des appuis institutionnels disponibles dans chaque pays.

Virtual Networks As Tools of Social Justice

The popularization of internet has changed deeply the personal and social relationships, the cultural exchanges and the production of subjectivities. The background is a focused word focused by the desire of expansion off the capital, creating inequalities that get stronger by the mechanisms of accumulation of wealth. Social justice and citizenship are also influenced by this context.

We want to demonstrate that social networks are toolls of social justice by ensuring equal access and a parallel public space of social interaction that are essential tools to enable to everybody, indistinctly, the exercise of citizenship, without the limitations of constituted social political normative structures.

To reach the objective were selected examples of usage of virtual networks from institutional profiles, personal profiles, fanpages, social movements and NGO. We analyzed by Qualitative Methods the options like, share and the frequency and content of comments.

The idea of justice is connected with the distribution of natural and social resources among people and the criteria and mechanisms of correction of injustices. Putting together the theories of justice by John Rawls(2003), Amartya Sen(2011), Nancy Fraser(2009) and Martha Nussbaum(2011) that represent the political, economic and cultural aspects of justice, that are related to the justice found in the ways of life and not only in the legal recognition, we can extract resources among people and the criteria and mechanisms of correction of institutional profiles, personal profiles, fanpages, social movements and the limitations of constituted social political normative structures.

The Spaces and Times of Youth Culture in the New Century

It is starkly evident in the new century young people's biographical constructions have come to terms with conditions of: rapid social and cultural change, increasing choice and uncertainty, the loss of institutional reference points as models for action and the widespread perception of intensified risk. These phenomena tend to produce a contingent and situational form of identity, with a markedly individualised imprint that is closely related to the here-and-now. This contingency of identity finds expression in a re-definition of the relationship with time-space in everyday life - the chronotope. In this process, everyday time-space arrangements progressively lose their traditional meanings in the realm of the taken-for-granted, the home of 'natural attitude'. Rather, young people's creative use of urban time-space assumes the form of a fully fledged strategy of action connected to a contingent and situational type of identity. In this framework of understanding, young people's cultural expressions can be understood as organised not so much as answers to 'problems', but rather as expressions of the active negotiation practices that young people themselves carry out in order to deal with contemporary risks and uncertainties.

The Great Transformation Of Japanese Capitalism

Contrary to the dominant vision, according to which Japan is suffering from "arthritis", we argue that Japanese capitalism has experienced a great transformation from the early 1980s. We get this result from an analysis at three levels: corporate level, characterized by an increased heterogeneity in terms of organization and performance; institution level, characterized by a decay of previous forms of coordination and a revival; social compromise level, characterized by a surge of multidimensional inequalities.

We also show that Japan is not converging toward Anglo-saxon or European types of capitalism but follows its own original trajectory.

Understanding Welfare Diversity and Evolution In Japan, Korea, and China. A Regulationist Interpretation

In this paper, which focuses on Japan, Korean and China, we argue that these previous analyses of Asian capitalisms have underestimated or ignored in-depth analyses of Asian capitalisms from the viewpoint of welfare, in adopting, at least implicitly, a perspective, inspired by the over-simplified typology of Esping-Andersen, which can be qualified of "welfare orientalism" (Takegawa, 2005). Moreover, we argue that welfare is at the core of the evolving forms of capitalism in these three countries. Our interpretation is that institutional change in Asian capitalism is currently driven by changes in the social compromise. These three economies are experiencing a series of changes that can be interpreted as the manifestations of internal contradictions, which require the development of new welfare systems to be overcome. Among these changes, this paper focuses on the ones that affected such institutions as family and firms, as well as ageing, and rising inequalities.

The purpose of this article is to show that effective social policies are the necessary condition in these three countries to promote the emergence of new "regulation mode" able to overcome the current contradictions at work. As emphasized by Boyer et al. (2001), these three economies indeed virtually suffer from the adverse consequences of export-led growth regimes. At the level of each country, a new basic compromise should concern the wage-labor nexus, for the sake of both social justice and dynamic efficiency. New forms of welfare are emerging in Asian capitalisms, as political answers to demands from various groups. They may become a distinctive feature of these forms of capitalisms but also the main source of divergence among them.

The Nfa Resistance to the KORUS FTA

This paper focuses on the Korean National Farmers Association (NFA)’s failed attempt of social resistance to the Korea-US Free Trade Agreement. Located at the intersection of the local and the global, traditional methods of farming became threatened in the rural farmlands of Korea because of the Free Trade Agreement that assured US imported foodstuff to dominate the Korean market. Despite borrowing from the “Nyelani Declaration” from the international movement of food sovereignty, resistance was unsuccessful due to the fact that “larger strides” of globalized resources did not interweave with NFAs internal strategy and dynamic efficiency. Thus NFAs leadership and represent a social movement to ensure viable economic food sovereignty in South Korea, as the South Korean government continues to take the path toward a neoliberal and profit-driven agricultural future.
Understanding Stratification in a Global Perspective: The Case of South Koreans

This study distinguishes three perspectives in stratification research based on an unit of analysis. The first is a within-country perspective which has dominated traditional stratification research. It uses nation-states as the unit of analysis with an assumption that stratification takes place exclusively within nations. Modernization school, with this perspective, argues that achieved human capital plays a central role in social selection processes in industrial societies. The second is a globalization school, with this perspective, argues that achieved human capital plays a central role in social selection processes in industrial societies. The third is a global stratification perspective. This perspective synthesizes the both within- and between-country stratification concepts in a sense that it perceives stratification as a global social process, while recognizing that stratification mechanisms vary across different cultural contexts. This approach is more effective as it can be different depending on which perspective or unit of analysis is used. For example, emigration to another country is hardly discussed in the within-country frame, but it draws attention as an important way for social mobility in the global perspective. This study aims 1) to introduce the global stratification perspective, 2) to apply it for understanding stratification among South Koreans (including Korean diasporas), and 3) to see how it looks different from the accounts of the within-nation perspective. To practice the global approach, this paper examines income earnings of South Koreans within a broader pattern of global income inequality, and assesses self-defined subjective and categorical attributes (gender, family background, country of residence, etc.) based on their global income standing. My hypothesis is that, from the global perspective, inequality among South Koreans remains shaped by categorical characteristics (country of residence, particularly) and the role of achievements far more modest than usually assumed.

Relational Skill Assets and Anti-Immigrant Sentiments

This study introduces a new variable in the area of sociology of professions: relational dimensions of occupational skills. Although previous studies have underscored the importance of cognitive skill assets in migration processes and attitudes toward out-group populations, the importance of relational skills has not received much attention. In this paper, we highlight the role of relational skills of native workers in explaining native workers’ attitudes toward immigrants, by using a General Social Survey module (National Identity 2004). We construct two dimensions of relational skills: interpersonal and instrumental skill assets at the occupational level. We conceptualize the former as an entrance skill barrier to immigrant workers, and the latter as a pulling factor that attracts skilled and unskilled immigrant work forces. Then, we create a new independent variable, “relational skill specificity,” which is a relative measure of interpersonal skills over instrumental skills in one’s occupation. Our hypothesis is that workers employed in jobs requiring a higher possession of interpersonal skills over instrumental skills are less likely to support anti-immigrant sentiments. The effects of relational skill specificity are highly significant and robust against different specifications, controlling for individual-level education and citizenship status along with other conventional cognitive skill-variables, demographic, religious and political findings. The paper shows the effectiveness of anti-immigrant initiatives between skilled manual workers (e.g. craftsmen), and skilled non-manual workers (e.g. professionals), originate not only from different levels of cognitive skills but also from varying levels (or compositions) of relational skills. Overall, the findings of this study provide a novel pathway of causal explanation of how native workers develop or resist their anti-immigrant sentiments. It also attempts to advance our understanding of occupation-based social stratification processes, ethnic competition in the labor market, and attitudinal studies of race and minorities.

LEE, CHOONIB* (Stony Brook University, choonib.lee@stonybrook.edu)

This paper will explore how the Black Panther Party (BPP) transformed its chief strategies for the Civil Rights Movement from violent to nonviolent throughout the late 1960s and early 1970s in the United States. The BPP has been infamous for Black Nationalism and armed struggles against racist violence, as opposed to the nonviolent methods for the Movement popularized by Martin Luther King Jr. In contrast to the well-known armed demonstrations of the BPP, there were in fact serious attempts to change the group’s violent tactics, and the leaders of the group promoted more nonviolent actions. After the FBI’s counter-intelligence activities particularly targeted the BPP, incarcerations and murders of most of its leaders forced the group to nearly collapse and split off into the International Section. As a result, the BPP leaders became more divided on the issue of violence. Huey P. Newton strengthened the group’s relatively nonviolent strategies, such as their free breakfast programs. Eldridge Cleaver, however, reinforced revolutionary ideas influenced by Third World guerrillas, and maintained the BPP’s violent rhetoric and tactics during his exile in Algeria. The conflict between Newton and Cleaver was a result of the state’s effort to destroy the BPP, as well as the two men’s personal power struggle.

I intend to argue that the BPP did not have a fixed identity as an exclusively violent organization, but instead created multifarious concepts of black liberation inside and outside U.S. The state agencies, especially the FBI, deeply affected the process of its transformation by repressing the group. The dynamics and dialogues between Newton and Cleaver, which centered around the debate for and against violent strategies for the BPP, will be the key to understanding the interconnected relationship between the social movement’s militancy and the state’s oppression.

Childhood Poverty Across Generations: A Trajectory Approach

Research on social stratification and mobility has established a strong intergenerational link in economic disadvantage, documenting the ways in which socioeconomic status is transmitted from one generation to the next. Childhood education plays a critical role in the stratification process, as it has been identified as a key obstacle to upward mobility. ample evidence from the life course literature suggests that early and persistent childhood poverty has adverse impacts on educational attainment, labor market performance, health, and family formation. Incorporating these two streams of research, this paper provides a multigenerational analysis that turns around the question of socio-economic mobility: How is childhood poverty experienced by parents passed on to their offspring’s poverty experiences during childhood? Using data from the Panel Study of Income Dynamics (PSID), we extend previous research in several important ways. First, drawing upon recent research suggesting the role of family influence across multiple generations, this paper employs a multivariate analysis that includes parents’ socioeconomic standing affects parents’ childhood poverty, which in turn affects children’s childhood poverty. Second, we employ finite mixture modeling to construct trajectories of childhood poverty across generations. Specifically, we investigate how different temporal patterns—timing, duration, stability, and sequencing—of economic deprivation throughout childhood in one generation are associated with those in the next generation. This approach thus allows us to address potential limitations of using cross-sectional measures to estimate intergenerational links in childhood poverty. Finally, our analysis examines the mechanisms by which poverty trajectories during childhood are transmitted from parents to children, using family background characteristics at the time of childbearing as intervening factors. We expect this study to generate new insights into the intergenerational transmission of childhood economic disadvantage.

The Alienated Image of University Professors Under the Corporatizing Culture of Neo-Liberalism: Social Conscience or Academic Labor?

Taiwan universities have been undergoing drastic changes in many respects, since last 25 years, particularly initiated by the neo-liberalism to meet the demands of a globalized advanced industrial labor market, which legitimacy accelerate universities as corporations. The neo-liberalist conception, to be called the ‘corporatizing culture’, by an appeal to market-logic freedom, has signaled a radical shift in the notion of higher education/learning. The aims/academic values of public universities in Taiwan are under siege caused by the entrepreneurial thinking from corporate capitalism. The meaning of university autonomy is replaced gradually by market vocabularies and ideologies. The effect is that professors will be called to public accountability and make their performance accessible to the multiple stakeholders in society. Their freedom for doing research projects and performing academic activities particularly targeted the BPP, incarcerations and murders of most of its leaders forced the group to nearly collapse and split off into the International Section. As a result, the BPP leaders became more divided on the issue of violence. Huey P. Newton strengthened the group’s relatively nonviolent strategies, such as their free breakfast programs. Eldridge Cleaver, however, reinforced revolutionary ideas influenced by Third World guerrillas, and maintained the BPP’s violent rhetoric and tactics during his exile in Algeria. The conflict between Newton and Cleaver was a result of the state’s effort to destroy the BPP, as well as the two men’s personal power struggle.

Gendering the Migration System in East Asia

This paper attempts to do gendering the migration system in East Asia by focusing on the transformation. Intergenerational migration has been one of the key characteristics in recent migration trends (WMR 2012). Jones and Findlay (1998) showed migration system emerged in East Asia by examining the various linkages among origins and destinations including FDI aids, trade and migration. Building upon Jones and Findlay (1998)'s work, I attempt to gender the regional migration system by examining feminized migration streams: labor migration for women and care and marriage migration to the major destinations in East Asia including Korea, Japan, Taiwan and Singapore. In analyzing these migration streams, I explore the changes in socio-demographic and economic conditions of the destinations including the gender division of labor, care provision, (care) labor market, and state policies for migration. By comparing the state responses to the seemingly uniformed issues of care provision, I argue that the recent intensification of migration system in Asia is conditioned by changes in mode of social reproduction.

How To Examine Spatial Housing Inequality and Housing Polarization?

To alleviate housing problems including issues of inequality, disparity, and polarization, we need to determine exactly their present status, characteristics, and influencing factors. Hence, this research developed a spatial housing inequality index that consisted of housing wealth inequality (HWI) and housing affordability inequality (HAI), examined factors of spatial housing inequality through a multiple discriminant analysis model using statistics data from 2008 to 2012; and suggested a housing polarization index that consisted of housing wealth polarization (HWP) and housing affordability polarization (HAP). The first finding is that inequality, disparity, and polarization of housing in Korea are distinctly different aspects. Therefore, examining housing problems requires each index or method in terms of spatial base, wealth, and affordability, such as HWI, HAI, HWP, HAP, etc. The second is that comparing patterns of PIR and the ant subjects in Korea than the level of housing wealth, in view of inequality. The third is that the spatial concentration of HWI and HAI shows opposite result to each other. In HWI, only Seoul and Gyeonggi are below the total level, while in HAI, all regions except Seoul, Incheon, and Gyeonggi are below the total level. The fourth finding is that common key factors of largest gap in spatial housing inequality are inflation rate, housing price, unemployment rate, in descending order, and unlike HWI, HAI is affected relatively by unsold housing of region, the number of houses, per capita GDP. Final finding is that polarization in housing affordability is more serious than that of housing wealth in Korea. The primary cause of the disparity in HWP is MB (middle-bottom) section, and in HAP is TM (top-middle) section.

The Transformation of Family Law and Discourses in South Korea: Possibilities and Limits of State Feminism

Since the Korean familial law including the family head system was enacted in 1958, the status ‘a head of family’ had been given to the male person- the husband or the eldest son in the local family institution in South Korea. Women’s organizations in civil society had constantly demonstrated for the abolition of the family head system for 50 years and they achieved their success in 2005. Many research questions have been focused on “why the abolition of the family head system was possible in 2005” and the dominant explanation has been the state feminism. I try to point out the limitation of the state feminism which has oriented toward the actor centered approach and overlooked the wider social context and to make a supplementary view on the transformation of family structure and discourses in South Korea. Therefore my research question is “what social conditions created a new family discourse and brought about the abolition of family head system?” The IMF economic crisis in the late 1990 triggered the increase of discourses on the Korean family crisis and the demographic change. In this transformation of family structure, the frame of family discourse for abolition of family head system in South Korea had also been changed. Before the 2000s, the cons and pros of the family head system was the confrontation between ‘gender equality vs. tradition.’ However, after the 2000s, the change of the family structure by the economic crisis has involved the risk on the family structure, and patriarchal family model and actual decline in marriage ratio, increase in divorce and remarriage rates and low fertility rate. Therefore, the new discursive frame of focusing on particular family problems has appeared for the recognition of the variety of family in society and social right to make one’s family.

The Cultural Industry and the Scenes of Dalian: Culture As a Driver of Development

The Cultural Industry and the Scenes of Dalian: Culture as a Driver of Development

China has continued to undergo rapid development in the past decade even as individual cities and provinces have pursued different paths to development. Data from the top 90 cities in China for the decade from 2000 to 2010 show that culture has become one path to urban development, particularly through the development of tourism and fixed cultural investments. Dalian is a good example of a city that has combined both of these trends. The city considers culture to be one of the five leading industries and considers integration of cultural resources and capital, science and technology, and even urban layout and planning. Spending on culture has been increasing from year to year, increasing five times over from 2002 to 2011. The cultural industry is centered on contents like animated games, film and drama, media contents, new cultural creation, as well as on tourism and has become a new pole of rapid growth. Much of the city’s growth has been driven by the cultural contents industry as well as by tourism driven by a unique mix of amenities, the non-market features that affect the city.

This study details the Dalian model of development by connecting the developmental trends to the city’s cultural industry and tourism features. This is done by detailing Dalian’s overall urban experience through defining the city’s scenes. The mix of amenities in Dalian provides the lived experience of the city residents who provide the workforce in the cultural contents industry driving development in the city. At the same time, the overall urban scene provides an experience luring tourists both domestically and from abroad to the city.

Globalization, Localization, and International Coproduction As an Emerging Form of Governance in the Global Animation Industry

This paper examines the interaction of globalization and localization and the rise of international coproduction as a noble governance form in global cultural industries. The expansion of Western media and cultural industries to emerging markets has been intensified since the 1990s thanks to worldwide deregulation and liberalization and the introduction of new media, such as satellite TVs and the Internet, which facilitate the integration of national, regional and global markets. At the same time, the growth of cultural and media markets in emerging countries has presented new opportunities and challenges for both global and local firms. Global media giants have found their strategies should be adjusted to better serve local audience who is not solely satisfied with their global content, and local firms have become more ambitious in bringing their content to overseas. Examining the case of the global animation industry, this paper argues that as global firms seek to tap into local markets (“localization”) and local producers try to enter foreign markets with their own production (“internationalization”), international coproduction, a form of cross-national, inter-firm partnership for animation production and distribution, provides both actors with new opportunities to collaborate for
a project amenable in markets across different cultures, languages and regulations. It facilitates global leading firms to better address local markets and access talents in emerging economies, while local firms can benefit from newly acquired skills in creative development, marketing and distribution as well as expanding outlets for their content overseas. The paper concludes with discussion of the challenges facing firms in this new context, and the implications of this new form of inter-firm governance to the future of a global cultural economy.

LEE, JUYOUNG* (Brown University, juyoung.lee@brown.edu)

This study examines public discourse about migrant workers and labor migration policies in South Korea between 1990 and 2003. Using a content analysis, this paper traces how public discourse that appeared in newspaper editorials and opinion columns evolved over time, in tandem with the transformation of migrant labor policy from the International Trainee System (ITS, 1991-2003) to the Employment Permit System (EPS, 2003-present). In particular, I will contrast the period of 1995-1997 during which the efforts to change migrant labor policies were made but ended in failure with the period of 2000-2003 during which the efforts resulted in the successful legislation of the EPS, highlighting two major discourses: (1) the human rights theme and (2) the national economic development theme. The human rights theme was prominent among the advocates of EPS; the national economic development theme was so among the advocates of ITS. The results show that, while the national economic development discourse remained relatively stable over time, the human rights discourse gained its popularity by tapping into Koreans' historical experiences and further developed by reflecting and changing ethnically homogenous Korean culture. In addition, there were differences in how each policy position (i.e., the Pro-EPS and Pro-ITS arguments) had incorporated these two themes. The Pro-ITS argument relied mainly upon the national economic development theme, and did not succeed in incorporating both major themes. In contrast, the Pro-EPS argument, which had built on the human rights theme until 1997, later developed to incorporate not only the human rights theme but also the national economic economic development theme. This study concludes that there were significant changes in public discourse between 1990 and 2003, which may affect the transformation of migrant labor policies in 2003.

The ‘people House’ and a New Move to Organize ‘resident Workers’ in Korea

Recently, a region has become a major area for labor union organizing and its activities in Korean labor movement. The vast majority of workers in small firms located in local regions are both non-union workers and precarious workers. A new move to recognize and organize them as ‘resident workers’ has appeared. The ‘People House’([minjunguji]) in Korea, which provides a space for workers, residents, progressive party members, labor unions, and community organizations to meet and communicate each other and to form networks among them, was established in several wards of Seoul, in Incheon and Kwangju after 2000. The ‘People House’ considers that labor market for non-regular workers is formed based on the locality which they live including neighboring towns. Therefore, it tries to approach labor and livelihood issues of regional workers from a point of view of ‘resident workers’. It provides a space to workers who want to study labor law and to fight for improving their labor conditions. It holds events for residents to meet and talk about labor rights and current social-economic issues such as rail privatization. It also supports small labor unions in the region which have no union office by providing a meeting space, as well as making efforts to organizing ‘resident workers’.

This paper has aims to examine practices of the ‘People House’ to organize ‘resident workers’ and to discuss implications of the practices for revitalization of Korean labor movement. Furthermore, this paper compares the ‘People House’ in Korea and ‘worker center’ in the United States which is community-based organization that engages in grassroots organizing to provide support to low-wage workers and discusses similarities and differences of the two.

Counter Hegemonic Discourse on New Poor in Japan in 2000s – a Case Study of Two Indie-Magazines

Along with the collapse of bubble economy and following extended economic depression since 1990s, people who failed to labor – or people who could be no longer explained by labor as it was – appeared in Japanese society. They were working poor, net-cafe refugees, and others who felt into “new poverty.” The emergence of “new poor” who were undistinguishable but already everywhere alarmed the entire society where poverty had been believed to be eradicated with its dramatic economic growth, and provided a chance to reconsider and discuss “new poverty.” This study aims to investigate two discursive struggles by the young new poor who attempted to produce new discursive counterpublics on “new poverty/poor.” In order to do so, two Japanese indie magazines – Freeter’s Free(2007-2008) and Lost Gene(2008-2010) – are analyzed using textual analysis and interviews with editors and contributors, focusing on their strategies in terms of their contents, narratives, styles-genres, the relationship between contributors, editors and readership and etc. In these two indie magazines, the young new poor attempted to problematize public discourses on themselves and to produce counter-hegemonic discourse by un folding and re-appropriating their own experience. Moreover, these magazines provided (counter-)publics where the young new poor could reach to self-acceptance escaping from self-denial and collectively search for alternative ways of life without being captured by neo-liberal capitalism. In this process, the young new poor – not only readers but also contributors and editors – re-identify their subjectivities as laborers, political subjects, and young generation who are situated in the very middle of the social contradictions produced by late capitalism. In addition, this study explores their alternative ways of publishing as a media movement that created and managed their publishing groups as a collective social enterprise and thus struggled to cross boundaries between discursive and real practices.
income in conjunction with the societal level of inequality in 29 countries, using International Social Survey Program (ISSP 2003 National Identity module) data. I create a new dependent variable “ancestry” which measures how much importance one places on ancestry as a core component of national identity. I examine the relationships between country’s characteristics (economic conditions, income inequality, etc.) and college graduates’ responses to ancestry as a core component of national identity. My findings suggest that, at the individual level, non-college graduates and low-wage earners are more likely to support ancestry-based national membership. However, at the country-level, high school graduates living in highly educated societies and countries with larger foreign-born populations are more likely to support descent-based national membership. In other words, non-college graduates in societies with high percentages of foreign-born and college graduates may feel more vulnerable and seek support for social closure against migrants through restrictive descent-based citizenship. As for income, low-income earners living in countries with greater income inequality are less likely to endorse ancestry as an important criterion of national membership. In line with the relative deprivation theory, this finding indicates that marginalized groups in countries with greater inequality (e.g. income inequality) are less likely to feel discontent and entitled compared to their counterparts in more egalitarian societies.

LEE, ROSA* (The University of Tokyo, rosa.sb.lee@gmail.com) Becoming-Minor through Shinsengumi: A Sociology of Popular Culture As a Culture of the People

This study scrutinises the rise of a people’s culture into a popularly mediated culture to reconsider the state of popular cultures in contemporary societies. For this purpose, it focuses on Shinsengumi, a group of young men in history who are feverously romanticised in contemporary Japan. Initially, Shinsengumi were marginalized from mainstream history as violent insurgents, but they were quickly reincarnated in popular culture to be gradually transformed into a popular cultural symbol through the masses’ relentless fantasising. As a culture borne by the masses, Shinsengumi provides a window onto popular culture in its broader sense as the cultural habits relayed by a particular group of people and thereby, a key to explicating the transitions and dynamics surrounding contemporary cultures and society. With this proposition, this study begins with an overview of previous scholarship on popular culture to demonstrate the need to explore popularly produced culture, followed by an analysis of the Shinsengumi phenomenon. After this, this study explores various intervals of communications undertaken to describe and/or explain the symbol since its debut in culture in early Meiji. The analysis exposes ontological shifts surrounding the concept of orthodoxy and technological advancements in a mature consumer society have diversified popular culture into different streams. Alongside this transition, Shinsengumi evolved into a Deleuzian-Guattarian becoming-minor symbol which can be accessed and appropriated by anyone who seeks to transmit their personal romanticisations about the group. In practice, social interactions at the 2012 Hino Shinsengumi Festival reveal Shinsengumi’s symbolic capacity enables the symbol’s narrators to carve their own terrains by transcending conventional and physical boundaries as they come together and across their differences through the symbol. This finding demonstrates popularly created cultures in post-capitalist societies such as Shinsengumi could operate as a dis-enfranchising medium for non-nondependent individuals to claim their territories, albeit temporary, through creative actions.

RC47-769.8

LEE, ROSA* (The University of Tokyo, rosa.sb.lee@gmail.com) Coming Together and Across through Celebration: How Individuals Change their ‘societies’

Despite its alienating forces, globalisation is noted for providing unprecedented means of mobility and communication to the masses living in post-capitalist societies. Using these instruments, more anonymous individuals are becoming ‘playing selves’ who redefine conventional social and physical boundaries and partake in the remaking of their society by actively recognising and articulating their unique positions in society. Through collective action, they also instigate social changes from the grassroots, propelling studies of social movements to (re) consider how people foster and utilise their ties as social capital to state and advance their objectives. Following this trend, this study scrutinises the emergence of ‘loose’ collective actions based on weak ties and their roles in advanced capitalist societies. It introduces the political boundaries of two social organisations, the Old Tokaido Road Shingawara House Community-building Association and the East Asia Collaborative Workshop, which engage in festivities and performances to respectively revive an urban community and to achieve reconciliation in East Asia. Although it is difficult to assess their achievements in reference to their objectives, these organisations are nonetheless notable for their ability to function as a node for individuals to become playing selves and to connect with other like-minded actors. From an analysis of the social interactions within these movements, this study demonstrates collective identities sustain and renew their selves by offering an open forum for diverse stakeholders where they could mutually confirm each other’s differences and form weak ties. Through this process, participants not only build networks, but also gain empowerment as they reflect on their selves and project their reflections onto their social realities. In this light, weak organisations may not be suited to initiate social changes, but it could stir individual actors and the society encompassing these actors to review and renew their perceptions of social realities.

RC22-400.3

LEE, SANGI* (Sogang University, ls4482@hanmail.net) Religion, Civil Society and Multiculturalism in Korea

In this study, I examine the role of religion as a socially integrating force in the transition of Korean society toward multiculturalism. In this era of globalization, when most nations are becoming multiethnic or multicultural, arguments and conflicts over multiculturalism are topics of heated debate worldwide. Theoretically, I take into consideration the works of Habermas, Casanova’s “public religion” and examine whether these social theories may have validity for explaining the roles of religion in multicultural social context of Korea. My research tries to compare the roles and functions of three major religions (e.g., Catholicism, Protestantism, and Buddhism) in their social works for immigrant workers in Korea. For this task, I analyzed statistical data spanning 2001 to 2010 regarding social welfare centers providing services for foreign migrants in Korea, managed by religious organizations. I also conducted in-depth interviews with religious leaders who are in charge of these centers. As a result, Catholic churches predominantly take the most various activities to solve multicultural problems of migrants in close relationships with Korean civil society. Catholic leaders work with civil NGOs for the social integration. Protestant churches have most number of social welfare centers for the migrant workers in Korea. There is a problem of proselytizing. Lastly, Buddhist temples, lacking the prophetic traditions unlike Christianity, put little effort into these issues. However, every religion, to different degrees, appears to secure its interest in the expansion of religious influence on a society. What is significant in the public roles of religion should be engaged in the civil ethos of a “good society” (Bellah).
migrant domestic workers, homes are private places from which they can find work and, at the same time, seek refuge from the immigration raid. In this process, one is portrayed as irresponsible mothers who abandon their duty of care of their children while the other is portrayed as victims who have been failed by the economic-nationalist immigration paradigm to pick up after other women. In fact, such perspective has been materialized in real laws and policies which have further reproduced or reinforced migrant women's precariousness. I focus on women's presumed normative position as care-giver, and the role that their supposed abandonment/adoption of this position plays in public discourse in shaping the private/public boundaries of homes. Throughout the paper, I present the process in which nationalist reproduction discourse, gender norms and uprootedness (experiences of migration) are essentialized into the duty of care in a particularized private/public place called home.

**Precarious Work and New Class in Post-Industrial South Korea**

This paper aims to examine precarious work in post-industrial Korean labour market. Previous studies on precarious work have focused on employment status, working condition, and income. In this study, we specifically examined how parent-child generational gaps in family values influenced subjective happiness amongst Korean adolescents. Results showed that the smaller generational gaps in family values positively correlated with adolescents' happiness. It is important to understand that high happiness is associated with low income and high subjective wellbeing. Using ordinal regression, we analyzed a subset of the 2010 National Survey of Korean Adolescents data, consisting 91 adolescents with ages ranged from 15 - 18 years old. In addition, we consider how individual workers perceive ‘precariousness’ and how they contribute to the definition of precarious work. Then this paper investigates the relationship between precarious work conceptualized in the paper and the new class structure in post-industrial Korean labour market. Discussion on class structure departs from the traditional division of class and highlights the structural transformation of an industrial to a service economy. Gender and age will be also considered in the analysis. We exploit a mixed method of conventional method and QCA (qualitative comparative analysis) to examine how different configurations of precarious work is associated with new class structure, using Korean Labour & Income Panel Study(1st wave - 13th wave). Results from the analysis suggest how precarious work in Korea is structured within the socioeconomic context of post-industrial Korea.

LEE, SOYOUNG* (Montclair State University, leeso@mail.montclair.edu)
SUNG, MIAI (Korea National Open University)

**The Impacts of Parent-Child Generational Gaps in Family Values on Subjective Happiness Among Korean Adolescents**

Due to South Korea's (Korea hereafter) competitive educational system to enter college, in addition to other developmental stressors, Korean adolescents are more likely to experience a high level of stress. Although the degree of subjective happiness amongst Korean adolescents was higher than the median in the happiness scale, recent studies found that Korean adolescents showed the lowest level of happiness compared to Chinese and Japanese adolescents and those who lived in OECD countries. In addition, due to rapid demographic changes in modern Korea, generational gaps in family values particularly with respect to marriage, parenting, and elderly parent support have become more noticeable. Considering positive family relationships is a strong predictor for adolescents' happiness, it is important to understand how parent-child relationships influence adolescents' happiness within the contexts of modern Korea. As part of efforts to answer this question, in this study, we specifically examined how parent-child generational gaps in family values influenced subjective happiness amongst Korean adolescents. Using ordinal regression, we analyzed a subset of the 2010 National Survey of Korean Families data, consisting 91 adolescents with ages ranged from 15 - 18 years and their parents. Results showed that the smaller generational gaps in family values between fathers and adolescents, regardless of the gender of childrens, was an important factor that predicted adolescents' subjective happiness. For example, when adolescents had similar viewpoints to their fathers regarding values of parenting, they were more likely to be happy. When both adolescents and their fathers similarly assessed their relationship and the amount of communication with each other, adolescent children were more likely to be happy. These results imply the important roles of fathers in parenting adolescents and adolescent children's happiness. In particular, it is worth noting that the consensus in family values between parents and adolescents is important to support adolescents' happiness.

**Mobility of Chinese and Korean Marriage Migrants in Japan Rural Areas**

In this research report, we are going to look at mobility of South Korean and Chinese female marriage migrants in Japan from the following perspectives:

1) suspicion raised among people in the community by marriage migrants' temporarily returning to their hometown,

2) proportional growth of monolingual in their offspring generation.

In rural areas, marriage migrants are still seen as "escaping brides", and are under significant influence of this old paternalistic belief that "Once married into a family, she belongs to it". This idea has taken root in marriage migrants' mobility negatively, and has worked as a mechanism which restricts it. This report will present our perceptions toward female marriage migrants' mobility through cases in Tohoku and Tokai districts.

**Canadian Women's Perspectives On Disability, Underemployment and Health**

Disabled women are underrepresented in the Canadian workforce due to underemployment or underemployment. Some research has focused on underemployment among disabled persons but few researchers have investigated health and underemployment among disabled women. My research addresses this gap by exploring how women with physical impairments understand and address health experiences resulting from underemployment. In this paper, I review the two theoretical frameworks that guided my analytic approach—the social model of disability and feminist disability research—and present a critical interpretive textual analysis of 10 interviews I conducted with underemployed disabled women about their experiences of disability, underemployment, and health in a Canadian context. These narratives illustrate experiences of underemployment including marginalized identities, lost opportunities, limited income, and wasted energy, as well as the negative impact on physical, mental, emotional, and social dimensions of health. They also explain how disabled women can act as change agents to realize their goals for paid employment, fulfilling careers and self-actualization.

LEE, YEWON* (UCLA, post.mezzo@gmail.com)

**The State's Role in Gentrification: Beyond the Co-Optation and Repression Dichotomy**

This paper examines the local state's role in the gentrification process. I compare two cases where gentrification pressure is high and the state has a significant stake in gentrification—Downtown Los Angeles and the old neighborhoods within the city of Seoul. On a superficial level, the state seems inclusive in Los Angeles and willing to incorporate voices that rally against gentrification, and the state in Seoul seems to be exclusive, and at times violently repressive. These two cases seem to align well with the existing social movement theory that projects a trend towards a “Social Movement Society”, exclusively, in the Western world, where social movements are much more prevalent, yet are contained and co-opted (Meyer and Tarrow, eds., 1998).

However, this literature can inhibit scholars from taking seriously the double role that the state that simultaneously co-opts and represses. In so doing, it can create a false dichotomy between the role of the Western and the non-Western state in governing gentrification. Contrary to this view, through participant observation in both cities, I come to unveil the underlying similarities of the two states’ roles in constructing a false dichotomy: I analyze how both states 1) mask their involvement in repres- sion, 2) delegitimize dissenting voices to avoid a legitimacy crisis. Focusing on similarities on the abstract level will help scholars of urban sociology to better articulate the theories of the role of the local state in facilitating gentrification, which has been under-theorized despite the early attempt by Logan and Molotch (1987) to bring the state back in with their ‘growth machine’ thesis. With comparative case study, the point is not to discern the degree of state’s involvement in various cases but to identify types of involvement of the state that will further serve as a stepping-stone for elaborating the theory of gentrification.

**Erasing the Line Between Work and Leisure in Korea**

This paper examines the blurring of the line between work and leisure in Korea, a research which is now in a highly industrialized, hard-working society prompted by rapid globalization. It also has a well-developed ICT infrastructure with a highly educated and skilled labour force, now evolving into an increasingly older society within a creative, service economy. In these contexts, individuals in Korea, both at work and at leisure, are facing diverse inequalities depending on their social structural conditions. This paper mainly regards leisure as un-coerced activity, while

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
looking at work and leisure from the angles of time, place, age, gender and activity. First, it examines why and how the once clear dividing line separating time or place between work and leisure has been erased. Then, it looks at whether the age-segregated life-cycle has been transformed into one that is age-integrated. Next, it considers women's entry into the workforce and whether the conventional values of work and leisure have been changed. Finally, the traditional notions of labour and leisure activities are challenged by both positive and negative views on leisure. As conceptual background the concepts of devotee work, which is part of the Serious Leisure Perspective (SLP), and the labour of leisure are introduced and compared. After investigating the complex relationships between work and leisure, related implications are then taken up.

LEE, YOONKYUNG* (State University of New York at Binghamton, yklee@binghamton.edu)

Resistance Up In The Sky: New Forms Of Labor Protest In Neoliberal Korea

The continued rise of Korean economy in the world stage is widely recognized by the presence of global brand-name products such as Samsung Galaxy phones, Hyundai Sonata, and even by the phenomenal world-hit of Psy's "Gangnam style." However, on the other side of this triumphant story of Asian capitalism, there is Jin-sook Kim, a female labor unionist, who protested on top of an industrial crane at the height of a 15-story building for 309 days. In a vibrant economy where automobile exports contribute a lion's share, the massive logout at Ssangyong Motors pushed 24 auto workers to death either by suicide or by post-traumatic illness. These are unparalleled cases of labor resistance, which merit a serious scholarly examination.

This study focuses on the sky struggle (haneul toojeng in Korean), like the one staged by Jin-sook Kim, which represents a new form of labor resistance in contemporary Korea. In this paper, I first present data on traditional labor disputes and the new sky protest and introduce three major labor struggles - Kim's sky resistance at Hanjin Heavy Industry, the suicidal protest of laid-off workers at Ssangyong Motors, and non-normal workers' struggle at Hyundai Motors. Through these instances of labor contention, I examine how the mode of labor protest has changed in Korea in recent decades. In the second section, I explicate the structural and political conditions that gave rise to this changed form of labor unrest by focusing on Korean economy's neoliberal transformation, the deepening fracture in the labor market, and democratic institutions devoid of labor representation. The paper closes by discussing the theoretical implications of these labor struggles in Korea, especially in enlightening our understanding of contemporary class conflict and collective action in a democratic society.

LEE, YOUNG HEE* (The Catholic University of Korea, leeyoung@catholic.ac.kr)

Technology and Citizens: Case of Citizens’ Jury on National Pandemic Response System in South Korea

Due to their technical complexity, most public policies in today's technological society are dominated by expert-centrism and technocracy (an institutional form of expert-centrism), based on the belief that they should be the exclusive realm of technical experts. But globally, expert-led and technocratic policy-making culture is faced with challenges in many countries. The same is happening in Korea in recent decades.

Based on such awareness, this paper aims to analyze the democratic implications of the Korean experience of the citizens' jury, a form of citizens' participatory technology assessment activity organized by an NGO called the Center for Democracy in Science and Technology in 2008. In particular, the topic of this paper, the citizens' jury on the National Pandemic Response System in 2008, is a noteworthy case for it represents the first time in Korea that citizens were randomly selected to make up a jury, a method considerably different from existing forms of labor protest. From 1970 to 1990, new forms of sport practice appeared that forced the sociologists involved in general population surveys to enlarge the usual definition in order to really get a whole understanding of the sport phenomenon. The goal is now not only to evaluate the hard core formed by the sociohistorical duet "training and competing" but to go further so as to include sober and more ephemeral physical activity forms. In this frame, a scale of the respondent investment in the sport and physical activities is designed, representing a progression from no practice at all to the usual sport participation in its sociohistorical meaning. To this end, the interviewing mode has changed to an emic-and-etnic dual approach.

Sociologists aim to discover the sociological, cultural, demographic characteristics which may influence this sporting scale. A suitable statistical toolkit readily available in an easy-to-use computing environment is thus needed. No doubt that contingency table analysis is the fundamental technique used by sociologists. The distribution-free software proposes some modern approaches for dealing with two-way tables (Yule's Q, confidence intervals, local and global effect sizes, modality profiles) suitable for a sociological quantitative data analysis, and is specifically powerful in producing statistical graphics.

Finally, explanatory methods appropriate to the researcher's goals (Wheaton, 2003) enable to detect and visualize (Ely, 1999) the sociological, cultural, demographic and geographical effects in the 2010 general survey of the sport practices in the French population.

Does Early Schooling Equalize Educational Outcomes Across Social Origins : Evidence from Pre-School Extension in France

Universal preschool is often seen as the mean par excellence of correcting social inequality in educational achievement. However, evidence on the short and long-term effect of preschool is very limited. Over the 1960s and 1970s, France undertook a large-scale expansion of preschool enrollment. As a result, during this period, the enrollment rate of 3 years old children rose from 35% to 90% and that of 4 years old rose from 60% to virtually 100%. This paper evaluates the effect of this expansion on subsequent schooling outcomes (repetitions, test scores, high school graduation) and wages. We examine the average benefit of preschool enrollment and differences across social groups in the benefits of preschool. We find some sizeable and persistent effect of preschool and this points to the fact that preschool can be a tool for reducing inequalities. Indeed, the analysis shows that children from worse-off or intermediate social groups benefit more from preschool than children from better-off socioeconomic backgrounds.

Economic Expansion, Earnings Compression and Changes in Intergenerational Economic Mobility: Evidence from French Cohorts, 1931-1976

Over the last fifteen years, an important body of research has investigated the extent of the intergenerational economic mobility. Two main results have emerged from this literature. First, economic outcomes, in developed societies, are much more strongly affected by family background than was thought two decades ago. Second, the transmission of economic inequality varies considerably across countries and high inequality is generally associated with low mobility. However, beyond the above-mentioned stylized facts, the factors that shape intergenerational economic mobility empirically have not been much explored. Why does the degree of intergenerational mobility vary across countries? To what extent does it change over time? How does the level of economic inequality relate to the persistence of inequality across generations? Have changes in the wage structure affected the degree of mobility? What policy intervention in general, and what educational system in particular, may foster equality of opportunity? Such important questions remain largely unanswered.

This paper analyzes long-term trends in intergenerational earnings mobility in France. I estimate intergenerational earnings elasticities for male cohorts born between 1931 and 1975. This time period has witnessed important changes in the labor market and educational system: large expansion in access to secondary and higher education, important compression of earnings differentials. Over the period, intergenerational earnings mobility exhibits a V-shaped pattern. Mobility falls between cohorts born in the mid 1950s and those born in the mid 1970s, but substantially rise for cohorts born in the first half of the 1970s, age-adjusted intergenerational earnings elasticity amount to around .55. This is significantly higher than the elasticity estimated for the baby boom cohorts. It is also lower than that for cohorts born in the 1930s but the difference is not significant. Changes in mobility mostly reflects the evolution of cross-section earnings inequality, rather than variations in positional mobility.

Embodying the Other As a Self

Based on ethnography of international relief organizations, this contribution explores one aspect of the daily life of aid workers: how emergency contexts bind people together and eventually melt different selves in a temporary, shared body. First, the body is considered as the biological boundaries of human being, with its vulnerabilities. It then becomes the united entity of an emergency team.

What strikes about life in the field is the level of danger commonly accepted by members of the organizational workforce (Roth, 2011). Putting yourself at risk, physically and mentally, is a prior condition to humanitarian care. Incidentally, the fantasy of danger flows into our perception of aid workers as modern heroes living a life of adventures and self-sacrifice (Dauvin, Siméant, 2002). In concrete terms, kidnapping, rape, beating and robbery are often their reality. While being in the field with the teams, one can observe, even experience, that not only may aid workers put themselves at risks but sometimes also others. Life in a mission creates a high dependence between the staff, relying on each other to ensure everyone's safety. This dynamic is reinforced by the lack of intimacy and the control over individual autonomy. Every day routine is submitted to rules and constraints, particularly for international staff sharing house, office and meal. To a certain extent, these mechanisms of embodying the other operate as well with the local communities.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The Self and the Other are linked in the ethical principle of aid itself. But the way it is translated in the field is still to be described and analyzed. It opens the door to a new understanding of humanitarian bio-politics (Fassin, 2006, 2010; Agier, 2012; Redfield, 2013). Indeed, isn’t the choice of risking one’s life for the others the ultimate way to contest the sovereign power of letting die (Foucault, 1976)?

Are Civil Society Organisations Doing Research?

Legitimate governance of science cannot be achieved by the research community alone. Science governance should take into account issues of broad public concern. Engaging CSOs (civil society organisations) in research design and implementation more effectively could help address these issues. Publicly funded research has an obligation to produce outcomes beneficial to the public who fund it. In the European Union this obligation is reinforced by a complementary trend toward participatory governance. Momentum is growing to deepen democratic engagement through the participation of citizens, also in the research environment.

Unfortunately, the knowledge base underpinning CSO involvement in research is extremely thin. This knowledge foundation must be strengthened if Europe is to develop a research governance structure capable of accommodating CSO involvement effectively. We need to deepen our understanding of how CSOs are currently participating in EU-funded research - to what extent, in which roles, for what purposes and to what effect...

In a rigorous investigation of unprecedented scope, our study maps these parameters of engagement and analyse their underlying assumptions. The models being identified should allow us to evaluate research outcomes more efficiently and provide contextualized understanding of CSO participation moving forward.

The findings presented in our paper are based on the results of two surveys carried out by the CONSIDER project in 2012. The surveys, which covered all FP7 projects, were aimed at gathering essential information about participation of CSOs in EU-funded research. Survey one was sent to 14,000 FP7 project coordinators and generated 2,959 completed responses. The role of CSOs in research projects is perceived very differently by academic institutions and the CSOs themselves. CSO participation in the FP7 research projects privileges an institutionalized professional type of civil society organisation over grass roots activists.

Certifying Practitioners and Accrediting Programs: The United States Experience

This presentation is intended to clarify the distinction between the certification of individual practitioners and the accreditation of programs in sociological practice (applied, clinical and public sociology).

In the United States the Association for Applied and Clinical Sociology (AACS) certifies individual practitioners at the Master’s or Doctoral level. Certification is earned by a sociological practitioner to document their qualifications beyond an academic degree. It is a process of evaluation by previously certified peers and includes the submission of a portfolio and the completion of a demonstration in which applicants showcase their action oriented work. Certification is not licensure as granted by a state or commonwealth.
In contrast, The Commission on the Accreditation of Programs in Applied and Clinical Sociology (CAPACS) accredits programs. Sociology programs can voluntarily seek accreditation to document their quality and performance. It involves a program self-study and external peer review of the program. Programs must meet curriculum standards in the areas of sociological theory, methods, and practical experience such as an internship. Accreditation provides impartial advice on improving the education of students. The Commission accredits programs at the Baccalaureate, Master’s, and Doctoral Level.

This presentation is intended to be an informative one in which both the process of certification for an individual and the process of accreditation for a program will be covered. A closing argument will be made that sociological practice - applied, clinical, and public - can be made stronger if it is populated by practitioners who are certified graduates of an accredited program.

Urban Land Encouragement and the Greenbelt in the Greater Toronto Area

In this paper, I look at the implications of the Greenbelt legislation that was introduced in the so-called Greater Golden Horseshoe Area in 2005 and is coming under review. The main rationale for the Greenbelt is to protect green space from further land encroachment by Toronto’s massive urbanization pressures; (2) to secure the hydrological system that is important for the Toronto region; (3) to safeguard several ecological sensitive areas and its biodiversity. This gets tied in with tandem with this legislation, a second provincial legislation came into place with the purpose to direct growth to already built up areas. While it is hoped that the exurban expansion into the countryside will be alleviated with this policy, the provincial pressures on municipalities to support conditions for growth lead to different local perspectives on what the greenbelt constitutes. This paper looks on two municipalities – Markham and Barrie – the “inside” of the greenbelt and Barrie on the “outside” of the belt – and how they negotiate and integrate the physical barrier in their growth agendas, while contributing to further decline in biodiversity. By using these two perspectives, one from the inside, one from the outside, I will investigate how far the greenbelt is seen as a limit to growth, a repository for biodiversity or an important hydrological system. For this, I will look at the few remaining agricultural areas and their relationship to urbanization on the one hand and the protected landscape on the other. This paper draws on elite interviews with representatives in two municipalities (Markham and Barrie), review of reports, and newspapers. It is hoped to draw general lessons from it in regards to questions of biodiversity decline and water regime change in the context of urban development pressures where legislation, discourse and social practices are contradicting each other.

Inclusion and Structural Processes of Young Recipients of “Unemployment II Benefits”

This paper discusses first findings of a research project that tries to reconstruct biographical developments of young adults who are perceived as especially difficult to “include” – due to their precarious status as recipients of "unemployment II benefits”. I am especially interested in turns of events that appear surprising in the eyes of professionals and of creative “metamorphosis” (Schütze 2001). In terms of biographical analysis a special focus is put on “structural processes” (Schütze 2001) of the young adults. There have been approaches to understand the situation of young people receiving unemployment II benefits in recent studies (i.e. Schreyer/Zahradnik/Götz 2012), but the focus on the biographical context and especially the relationship with relevant professionals is missing so far. Autobiographical-narrative interviews with the target group are being conducted according to the concept of "free recall" (Glaser/Starkopf 1996). Insights into the interaction with the professionals are gained on the basis of spontaneous narratives of professionals (in this case: counselors in the job center etc.) about the history of their working relationships with clients (Riemann 2000).

covering narratives’ are at the foreground, and for certain experiences it appears that there is no discursive space, neither in the family nor in the social context. This has consequences: inclusion and exclusion are almost inextricably intertwined and occur simultaneously inside and outside the bi-national family; and violence and fear find their way, uncontrollably, barely discussable.

**Individual and Structural Causes of Neet - a Case Study of Austria**

Compared to other EU member states, Austria has one of the lowest youth unemployment rates, an above-average graduation rate, and a well-developed dual system of vocational education and training. Nonetheless, ongoing structural changes induce labor market conditions that particularly bar less-educated young people from successfully and permanently entering the labor market. Consequently, between 2006 and 2011 the proportion of Austrian youth (aged between 16 and 24 years) Not in Education, Training or Employment (NEET) leveled off at slightly below ten percent.

In order to investigate the phenomenon of NEET in Austria comprehensively, our research is guided by the following questions: (i) How can the social composition of the NEET population be characterized? (ii) What are the relevant key factors that drive young adults on the path to NEET? (iii) How long do young adults remain at NEET-status? (iv) What are the key determinants that help overcoming NEET?

Our analysis are based on the Austrian sample census from 2006 to 2011 and we rely on a descriptive analysis as well as on a regression-based path analysis. First results reveal gender-specific risk factors for becoming NEET including early school leaving, poor health/disabilities, involvement in child care activities, and unemployment experiences at the individual as well as an active labor market policy and a broad supply of suitable jobs at the regional level. The heterogeneity of NEET requires individual measures for young people at risk.

EIFLER, STEFANIE (Catholic University of Eichstätt-Ingolstadt)

**Interaction Effects in Nonlinear Models - Testing and Interpreting Core Assumptions of Situational Action Theory**

In contrast to the linear regression model, interaction effects—defined as the marginal effect of the moderator variable on the marginal effect of the focal variable on the outcome—are allowed to vary across individuals in nonlinear models. Thus, they do not simply equal the coefficient of the product term variable. For this reason, even the nonlinear main effects model includes an interaction effect (labeled as structural or model-inherent interaction and/or compression effect) if both covariates contribute significantly to the explanation of the outcome. The presence of the model-inherent interaction is owed to the restricted range of the outcome variable.

However, several scholars have engaged in a discussion whether the model-inherent interaction has a meaningful interpretation. While some scholars argue that substantive interest is only on the interaction that arises from the product term variable and advocate removing the model-induced interaction from the total interaction effect (e.g. Bowen 2012), others adhere to the interpretation of the total effect (e.g. Ai & Norton 2003). So far, the discussion concerning the idea and interpretation of interaction in nonlinear models didn’t result in a common perspective.

To date, there is a lack of a systematically derived justification for one of the options, based on the combination of theoretical and methodological arguments. In order to overcome this shortcoming, we (1) develop a general perspective on the idea and meaning of interaction in nonlinear models, (2) target at developing an application scheme guiding researchers to the appropriate concept of interaction—either including the model-inherent interaction or separating it from the total interaction effect—and (3) propose statistical tests that allow for an analysis of the interaction effect.

Situational Action Theory, a recently proposed and promising criminological theory (Wikström 2006, Wikström et al. 2012), will serve as theoretical exemplification.

“How People Recount Their Life”: Recording and Analysis of Individual Well-Being over the Life Course

Constructing and structuring life courses through the perceptions of those concerned is a promising approach to the study of life-event histories. Pioneering sociologists have developed the qualitative analysis of turning-points based on subjective quality of life-course narratives (Hareven & Masaoka, 1988); we here present data from a quantitative survey which recorded individual life-event histories together with perceptions of well-being over the life course.

This unique dataset allows to explore the evolution of well-being from birth to age 50 among a representative sample of the French population. Respondents were asked to divide their lives so far into periods, and to explain and interpret these significant phases. They identified the turning points, the general tone of each period and what they saw as the landmark events.

Our initial analyses of this abundant material show how individuals’ life courses are structured around certain factual landmarks, especially landmarks in their conjugal and working lives, and the context of historical events. We also identify how individual characteristics influence the subjective description of well-being: the respondents’ subjective experience proves to be varied, non-stereotypical and not readily predictable.

Having established some of the relevant characteristics of the declared turning points, we then explore the changes in reported well-being from one period to the next within individual life courses. To explore the perceived life courses we apply Optimal Matching Analysis to draw out their main features and establish a typology of well-being trajectory types.

LEMAIRE, XAVIER* (University College London, x.lemaire@ucl.ac.uk)

**Large-Scale Dissemination of Small-Scale Renewable Energy Technologies in Developing Countries**

Access to clean energy services is considered as a requisite for any development in rural places of developing countries. In remote places, decentralised renewable generation of electricity has been considered for a long time as a desirable alternative to rural electrification with the extension of the grid. A number of alternative characteristics for cooking and heating have been designed and promoted by NGOs. But progress in the dissemination of these technologies has been slow. This paper will first examine some of the myths linked to rural access to energy and how they have been impeding the implementation of renewable energy projects.

The dissemination of small decentralised clean energy technologies in developing countries seems often analysed in the international development literature in terms of barriers to be overcome or institutional gaps to be filled. Considerable efforts have been put in subsidising clean energy technologies with most of the efforts having been made in Africa quickly.

This paper will determine how a more dynamic approach could help to analyse the way actors interact and build relations around new technological products, so to understand how their dissemination could be accelerated. Technologies have their own life and need to produce a specific context to thrive (Latour, 1996). Markets are created by policies and institutions; a series of stable rules embedded in organizations or networks have to emerge to make them sustainable. Clean decentralised energy technologies are “new” in the sense they need a new environment to thrive compared to established centralised (and often polluting) technologies.

This paper will finally analyse how innovative business models, but also adapted institutions and regulatory frameworks for public private/partnerships are contributing to accelerate the diffusion at a large scale of technologies that can be now considered as mature.

LEMAIRE, XAVIER* (University College London, x.lemaire@ucl.ac.uk)

**Urban Planning and Sustainable Energy Transition in Sub-Saharan African Countries**

Urbanisation rates in Africa are the highest in the world and in most sub-Saharan countries energy service delivery is inadequate to keep up with the needs. The situation is often dire, with cities scarcely able to provide for their existing population, let alone allocate resources to minimise the longer term environmental risks facing them such as global warming—leading to on-going crisis management and potentially spiralling declines in welfare and economic growth.

Inadequate access to electricity and limited mobility because of deficient public transports are common in major part of African cities, notably within informal settlements. The demographic trend in sub-Saharan Africa and massive migration from rural to urban areas can only aggravate difficulties and deepen the inequalities between the middle class and the poorest relegated in the margins of urban cities.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Strategies to integrate energy issues in urban planning could be built to mitigate these trends, by promoting energy efficient housing, better spatial planning and public transport and also access to energy by alternative electrification approaches. This paper presents a research on organisational dynamics and constraints faced by sub-Saharan cities; it surveys capacity constraints in municipal departments and analyses the gap between policies and implementation of sustainable energy transition measures. This on-going research relies on case studies in Uganda, Ghana and South Africa.

National-Ethnic Identities of Leaders of The German Minority In Northern Poland

The main objective of this report is to present the national and ethnic identities of leaders of the German minority organizations in the context of their activities after 1989. Of the last cohort (an in-depth case study of social construction, including structure and operating principles, considering internal and external interactions and the dynamics of this system was carried out. The empirical analysis of the leaders’ identities are based on the main theoretical concept of ethnic identity that simultaneously constitutes a synonym of ethnicity by John Milton Yinger. The subject of this report includes formal institutions (associations), represented by formal and informal leaders of German minority groups in selected areas of northern Poland. The sample contains associations that operate in Pomerania, a part of Kujawsko-Pomorskie voivodship, the Warmia-Mazury voivodship and the northern part of the Wielkopolska voivodship. The location of the associations coincides largely with former province of West Prussia (1878-1920) and the territory of the former Second Free City of Danzig (1920-1939).

Cross-National Comparative Lifestyle Research: Theoretical and Methodological Considerations and a Two-Country Illustration

In this presentation, we offer a comparison of cultural stratification in France and Israel, with a specific emphasis on the association between the social field and the cultural field. Analysis of cultural stratification is interested in the degree to which individuals from different social groups are able to take part in culture and develop a meaningful relationship with it. In turn, such a relationship affects life chances in the realms of education, occupation, and social status. So, analysis of cultural stratification is a powerful tool for analyzing social stratification systems and to better understand the similarities and the differences between countries in this realm.

Research on this topic has developed significantly, both empirically and theoretically, these last fifteen years, but relatively little attention has been granted to research that adopts a cross-national comparative approach and that asks theoretically, these last fifteen years, but relatively little attention has been grant to research that adopts a cross-national comparative approach and that asks whether patterns of association are similar in different national contexts. Such a comparative perspective will be particularly useful to test theoretical predictions regarding levels of cultural participation and their correlates in societal settings characterized by different social structures, cultural policies, market structures, and historical traditions.

We think this distribution as joining a discussion about lifestyle spaces and cross-national differences to be complemented and continued with similar analysis in other countries. Since research on cultural stratification focuses almost exclusively on European and North American countries, the comparison between France and Israel is potentially very revealing. As all cross-national research entails methodological complexities, we treat the comparison between France and Israel with caution. The general picture shows that cross-national comparison helps us to understand and further theorize the way lifestyle spaces are linked with social positions.

Contested Multiculturalism in Germany? - the Debate on Circumsicion

In the words of Angela Merkel multiculturality has “utterly failed” in Germany (16/10/2010). Although the former German President Christian Wulff had stated “Islam also belongs in Germany” only a few weeks earlier (03/10/2010) the debate seemed to be settled. In contrast to other European countries adopting official policies of multiculturalism, German politics did not strive to incorporate multicultural elements into policy making or the legal system. However, with this attitude the German secular state will face challenges with respect to the religious sphere. The 2012 medial outcry due to ceremonial circumcision recently demonstrated this ongoing societal discussion.

In this case, right-wing politicians as well as a coalition of secularist actors, and children’s rights groups opposed circumcision, an essential ritual practice for the Muslim and Jewish religious communities. As a result of this debate, an exception was introduced to the Civil Code that protects boys for religious reasons legally possible. After this step the medial attention decelerated and left behind what can be seen as an attempt to introduce multicultural elements in an otherwise mostly secular jurisdiction.

My sociological take on the debate goes even beyond this description. I argue from a point of social theory that takes into account the ‘boundaries of the social world’ (Luzzmann 1970). From this perspective it becomes clear that it was necessary for secular politicians, jurists, and participants of the debate to adapt the jurisdiction to the reality of the religious communities living in Germany. This inclusion or re-inclusion of religious minorities as a principle of ‘liberalising back’ children’s rights into a means of their symbolic inclusion into the social sphere of a religious community. In my presentation I will elaborate on this theoretical approach as well as its implementations for the analysis of the debate and the concept of multiculturalism.

Maladies Chroniques, Transitions Professionnelles Et Changement Social

A l’occasion d’une recherche d’une durée de trois ans ayant pour thématique centrale les rapports entre maladie chronique et travail, cette communication s’efforcera de montrer que, à l’occasion d’un dispositif spécifique de recherche action clinique que nous présenterons, la rupture biographique (Bidart 2006, Grossetti 2006) se transmet en une dynamique de transformation sociale. La transformation personnelle débouche, « naturellement », sur une (dynamique de) transformation collective via la présence d’un groupe, qui sur un temps long, conduit chacun à quitter le récit de sa vie pour, soi, pour mettre en commun ce qui dans son parcours individuel fait écho aux autres participants. Le récit de sa vie, de la simple vie, de ce que certains appellent la vie nue (Arendt, 2002 ; Agamben, 1998) ou la vie vivable (Butler, 2010) se transforme peu à peu en une réflexion sur ce qu’il faudrait transformer chez soi, chez les autres et dans la société afin de parvenir à une vie en santé. Ce sont alors les normes sociales du travail entendues comme « la représentation sociale du travail-emploi qui détermine l’accès aux ressources de base requises pour répondre au commandement contemporain de l’individu maître d’oeuvre de sa propre existence » (Castel 2011) qui sont questionnées. Quel que soit l’âge, le sexe ou le niveau social c’est bien la question de la centralité du travail dans une vie qui est mise en débat. Cette recherche montre bien à quel point les transitions sont des occasions de co-construction du changement individuel et social. Si les façons de penser changent, elles conduisent alors à une volonté de changement social qui se manifeste via différentes stratégies que ce soit dans le milieu familial comme dans celui des organisations et des institutions.

From Foosball Table to Beer Crate – Ordering Everyday Worklife in an Internet Agency

Internet advertising agencies are production oriented service companies who mainly develop software applications for their customers, like advertising banner or homepages. They are an instructive example for new forms of organizing working processes in an exceedingly complex working field. By bringing in empirical data from an ethnographic study I will show that in spite of this complexity, employees are able to finish their work successfully. This is possible because of practices of differentiating. The focus of the talk is on the micropolitical aspects of this differentiation. If we apply a qualitative content analysis of the structure of austerity measures in five countries whether and under which premises policy-makers have acted on these opportunities to reinforce social policy models or whether long-standing regime differences persist nonetheless.

Involved Fatherhood: Source of New Gender Conflicts?

This paper, based on interviews with 36 couples, focuses on fathers who take parental leave or reduce their working time in favor of participating in family work. Although looking at the role of the father, our data does not only show that involved fatherhood must be accomplished against the hegemonic pattern, but that, for involved fathers, becoming an unquestioned routine, the father's uncommon attitude to occupational career must be shared and supported by the mother. Otherwise the man's abstinence from career ambitions is a permanent source of conflict.

Another potential source of conflict is who is entitled to define the standards of good domestic work. Fathers who are engaged in family work find themselves often in an ambivalent situation. Our data show that, on the one side, mothers appreciate father's engagement, but, on the other side, tend to defend the household and creative. I will conclude that the ongoing practices of differentiating, e.g. differentiating the software developers from the creatives, "guarantees" the masculinist software developer.

The argumentation will begin with introducing theories of practices as an instructive theoretical "tool" to analyze organization and materiality, secondly basic points of the conducted ethnography will be presented, following by empirical material from the field. I will show how crates of beer and a foosball table are important parts of the practices that carried out software developer and how these practices are interlinked with practices of doing masculinity. The socio-political configuration can be described as a main agent in the field – in addition to account and creative. I will conclude that the ongoing practices of differentiating, e.g. differentiating the software developers from the creatives, “guarantees” the social order in the observed field.

Changing Gender Orders and the Variety of Gender Welfare Regimes

The paper considers the present transformation towards a flexibilised gender order in a comparative perspective informed by the variety of gender regimes. The paper will outline three stages of gender orders in modernity: In the first stage of national modernisation and capitalist consolidation, the neopatriarchal order was developed as the neopatriarchal authority receded. Formal and legal male superiority was reduced with women's votes, legal reforms for women's own rights of property and decision in the family. The worldwide spread of Fordist/Toётist mass production established men as core workers and women as housewives. Emerging welfare states institutionalised this division of labour with the breadwinner-housewife model. The varieties of gender regimes have evolved in the context of the different welfare state trajectories and the various paradigms of mass production as Fordism and Toyotism, but they also were influenced by the diverse liberal, social democratic or conservative political culture.

The difference based gender order has been eroding by women's educational advancements, by women's movements and the resulting legal and social reforms as well as by postfordism and globalisation and flexibilisation of employment. Presently a flexible gender order is emerging which is based on a pluralisation of gender and gendered employment and life forms; as various forms of sexuality have become acceptable and men, the integration of women into the labor market and increasing flexibilisation and global mobility of employment. The impact of the diverse forms of gender regimes on these transitions will be investigated.

soft power, reciprocity and guanxi: temporary business migration, new media and belonging

This paper connects two contemporary bodies of literature surrounding the nation that appear to be unrelated. The first is what might broadly be termed, diasporic connections. Although the notion of long-distance nationalism reifies the participation of diaspora in home nations to interference, work on trans-
nationalism and diaspora advocacy redeem these practices by revealing them to be two rather than one-way flows of socio-political influence and eco-cultural goodwill. Increasing migration from traditionally receiving nations such as Canada and Australia has also hastened the realization of diasporas as assets in the service of national interests. The second body of literature can be loosely grouped under the banner of soft power research. Perhaps spurred on by China’s adoption of Nye’s notion of soft power in recent times, these focus on the management of how one’s own nations is perceived by foreign publics and other nations and include literature on nation branding, national reputations and public diplomacy. Both bodies of work deal with diaspora connections and soft power, understand relationships between nations and diaspora-to-home-nation as dyadic and reciprocal. Hence, though the two bodies of work develop in parallel they remain poorly connected. We submit that as their concern is with how individuals understand and relate to nations these bodies of research might be productively viewed as connected through a more specific triadic relationship between diaspora, home and host nation. As part of a new study on temporary business migration from China to Australia, this paper will use examples from new media to explore how theories of reciprocity and guanxi can shed light on this triad. Doing so will allow for a more holistic understanding of the various forces that shape the temporary migrant’s experience, and a grasp of the mechanisms that engender belonging amidst the uncertainties of provisional residence.

Young Italians Surviving Strategies In The Social and Economic Crisis

The paper intends to present some preliminary results of a research we are carrying out in Italy to investigate the impact of social transformations, spawned by the 2008 financial crisis, on young people and their working conditions. The research’s main goal is to highlight, thanks to the methodological tools of sociology, not only the crisis’ possible outcomes but also how social actors cope with the new situation adopting best practices. Specifically, we concentrate on the changes in the everyday life’s routines, in the consumption practices, in the capability of reduce the negative effects of economic crisis, and to overcome it without weakening the social bonds and, at the same time, promote inclusive, innovative and secure societies. The research aims to provide an accurate description of the everyday practices used to adjust to the current economic crisis, thereby enriching the available qualitative data with in-depth qualitative data.

A frame of ‘wasta’, diaspora connections and soft power, understand relationships between nations and diaspora-to-home-nation as dyadic and reciprocal. Hence, though the two bodies of work develop in parallel they remain poorly connected. We submit that as their concern is with how individuals understand and relate to nations these bodies of research might be productively viewed as connected through a more specific triadic relationship between diaspora, home and host nation. As part of a new study on temporary business migration from China to Australia, this paper will use examples from new media to explore how theories of reciprocity and guanxi can shed light on this triad. Doing so will allow for a more holistic understanding of the various forces that shape the temporary migrant’s experience, and a grasp of the mechanisms that engender belonging amidst the uncertainties of provisional residence.

Author Participation in Welfare Service Management – Possibility of Authentic Argumentation Between the Welfare Service Users and Welfare Professionals

User participation is an age-old piece of good practice advice for human services. In Hong Kong, user participation in service management and planning is mandatory for welfare services that receive public funding. Also encouraged by consumerist impetus, many welfare service organizations in Hong Kong include service users in their governance structures to inform the making of management decisions. However, critics often have doubt on the possibility of authentic argumentation between the welfare service users and welfare profes-
signals in these organizational platforms. Habermas’ model of a discursive space that is free from the domination of power remains an ideal to be realized.

The author has conducted a study on the participation of welfare service users in governing welfare service organizations in Hong Kong. The study sets out to interrogate the interaction dynamics between the welfare service users and the welfare professionals in organizational decision-making platforms. Drawing from Habermas’ theory of communicative action (Habermas, 1986), the presentation will discuss how the welfare service users construct their institutional identity and the institutional power relations, and the ways that their lifeworld and system world come to influence the communicative actions. The presentation will also explore the ways that discourse orientation and communicative competence of the participants shape the discursive space for organizational decision-making. The discussion will help assess the possibility of authentic argumentation in traditional power asymmetry between the welfare service users and the welfare professionals in the Chinese society of Hong Kong.

**Determinants of Effective Cross-Border Cooperation**

The world over local communities broach international boundaries. The borders of the Westphalian system of states have a differentiating effect on policy regimes. This article hypothesizes that the degrees of collaboration, coordination and cooperation are a function of these communities’ capacity to reduce the transaction costs that differ policy regimes on either side of the border impose. Scrutiny of this hypothesis, however, requires us to control for variation in a local community’s interaction. Two phenomena over the past 20 years provide for such variation: the end of the Cold War resulted in new borders that now divided communities that had hitherto functioned as one; the security measures in the aftermath of 9/11 had a similarly deleterious effect on the way cross-border communities functioned. Narval/Vangorad across the Estonian-Russian border is an example of the former; Stanstead/Derby Line across the Canada-United States border an example of the latter. To explain variation across each case study’s outcomes, the paper uses collective-efficacy theory to measure each community’s response as a function of existing networks, supportive institutions, spatial dynamics, leadership, rate of change, economic cost, and organizational capacity. The findings not only disentangle determinants of collective efficacy among cross-border communities but also provide the beginnings of a model to facilitate effective cross-border engagement when local communities are confronted with events beyond their control that give rise to national policies with adverse effects on cross-border communities.

**Implications of Generational Change for the Armed Forces**

This paper investigates how the armed forces might optimize the skillset of the incoming generation of soldiers. Generational cohorts have widely been associated with distinct attitudinal structures and behavioural patterns: Baby Boomers, Gen X, Gen Y, Millennials, and post-Millennials. Each of these generations are said to encompass generalizable proclivities and attributes. This paper surveys the vast body of literature on generational theories which it contextualizes in wider social trends on diversity and technological innovation. With respect to the armed forces, the paper identifies controversies of particular relevance and knowledge gaps that stand to benefit from further research.

**Dispossession through Delivery: Informal Settlement Upgrading and Socio-Spatial Confinement in Post-Apartheid Cape Town**

The South African state has delivered more than 3 million formal houses since the demise of apartheid. Yet the same period is marked by a nearly ten-fold increase in the number of informal settlements, the gradual peripheralization of the demise of apartheid. Yet the same period is marked by a nearly ten-fold increase in the number of informal settlements, the gradual peripheralization of the apartheid geography pal state overseeing delivery and allocations? This paradox is particularly acute in Cape Town, where the persistence and augmentation of apartheid geography is generally accepted in the urban studies literature. In this paper, I examine relocation from informal settlements in Cape Town in the context of emergent forms of socio-spatial confinement. I relate the proliferation of post-apartheid forms – state-provisioned formal housing, rental stock for the working poor, TRAs, and others – to a broader process of dispossession and confinement. Drawing on a year of ethnographic fieldwork in relocation sites across the Cape Flats, I argue that post-apartheid urban relocations can be characterized as dispossession through delivery. Rather than understanding delivery/upgrading and dispossession as antitheses, it is precisely through formal housing allocation that segments of the population are relegated to “alternative accommodation” in TRAs and other novel forms of socio-spatial confinement.

**Natural Disaster Mitigation, Public Opinion and a Propensity To Discount The Future**

Despite the growing urgency of scientists’ warnings, much of public opinion remains wary of major expenditures and life style changes to mitigate future dangers from climate change. The impact is said to threaten mainly poorer countries, off the radar of wealthy polluters. Economists claim there is a universal human desire to discount the future, decreasingly valued the more distant. The worst dangers will strike many decades in the future and, even if they last for centuries or millennia, much of the damage can be discounted to zero. Sociologists point to the greater salience of local and manifest experience over seemingly abstract and uncertain models and long term global scenarios, but also note that a cultural and social shift to short term values is recent and not universal or irreversible. A recent increase in manifest and unpredicted climate disasters, which have at times struck both rich and poor countries, may in time encourage changes in public perception and a greater willingness to act. Scientists are now focussing on the effect of small rises in average global temperatures on the frequency and intensity of extremes in general, and on the measurable probability of them having already contributed to specific droughts, floods, storms and fires.

**The Growing Unpredictability Of Climate Disasters - Implications For Effective Responses In An Unequal World**

Locally unprecedented and unpredicted natural disasters are already becoming manifest, and will increase in frequency and intensity, around the globe, as climate change advances. Poorer countries, with the least resources with which to respond, are often the most exposed to droughts, floods, storms, wild fires or rising seas, but there is no universal correlation between inequality and such vulnerability, which can strike anywhere, as hurricane Sandy and the flooding of the Japanese nuclear plant have demonstrated. Accelerating climate change, shifting weather systems and poorly understood tipping points undermine the predictability needed for preparedness by even the wealthy, and few nations have the resources or experience to respond quickly without help or advice. Transnational assistance can be equally inadequate or inappropriate as illustrated by the introduction of disease into Haiti by UN forces or by the lack of preparedness for radiation effects on US personnel assisting at Fukushima. The mechanisms for rapid trans-national or local to local assistance are as yet undeveloped and Naomi Klein and others have demonstrated the dangers of external aid, when it ignores local knowledge, brings in highly paid expatriates and foreign profit making companies that undermine or displace local activities. On the other hand there has been too little attention to the potential in empowering and channelling aid to local bodies, and facilitating direct communication between localities around the world which have had similar experiences. Monalisa Chatterjee’s study of the Moombai floods, illustrates the potential effectiveness of local networks in contrast with the disastrous and damaging imposed responses to Katrina in New Orleans.

**Blurring the Boundaries: The Declining Significance of Age**

This book examines changes in age-related norms, both in their substance and in their declining rigidity. The analysis of changes in age norms is embedded in a wider thesis that informal social norms in general have diminished in their influence. Jack Levin argues that the social and cultural forces responsible for the blurring of boundaries between public and private conduct, and increasing equality by gender and race, are implicated in the decline of chronological age as a determinant of major life decisions. The book address issues of the cult of youth, the relaxation of age constraints, the erosion of childhood, and the argument for a new life stage of ‘emerging adulthood’. Dr Levin argues that the declining significance of age has depended on the same changes in society as manifest in increases in cheating and in noise pollution, declining basic skills, and growing gender equality. Changes in age norms are examined in the broadest sense, from childhood, to youth to adulthood to ‘boomer changes’. The book thus takes a comprehensive life course approach to aging.

**Urban Resilience and Resistance in the Neoliberal City: The Cases of Comunidade Coliseu (BRASIL – SÃO PAULO) and Es.Co.La Da Fontinha (PORTUGAL – PORTO)**

The world is being urbanized; the urban space is being neoliberalized (Peck and Tickell, 2002) (Leitner; Peck and Sheppard, 2007). The space neoliberalized rise up social fragmentation, polarization and unequally urbanities. At the same time however, the neoliberal spirit and practice, akin a contemporary religion, also arouse renewal urban struggle dynamics, renewal place strikes. The neoliberal practices and discourses produces their own spatiality and that reality is in permanent retroaction with alternative, subversive, counter-hegemonic and resilient space production and space demand. Those are the assumptions and questions criss-crossing the present essay which aims to add some contributes to the discussion that exist in the neoliberal scenario. How the neoliberal direction of space production may be revert by the local people activity and their creative urban production visible on social movements, more or less resilient, more or less resistant? How the neoliberalized space interacts with resilient and resistant space, who movements these processes engage and what are fragilities and lines of flight can they offer? On approaching these questions, we take as case studies the Comunidade Coliseu, a São Paulo’s favela – a Brazilian urban slum habitation type – placed on Vila Olímpia Neighbourhood, and Es.Co.La da Fontinha, a squat-eviction process of an abandoned Porto’s municipal school transformed in an auto-managed collective space. Immersed on dominant urban governance directed to the privatization, to globalized plans, to the flux creation, to the attractively of city, to the urban marketing, those places and those people try to oppose that path, almost heroically. Attempting those cases, the ambition is to underlying local/unprivileged urban population ways of coping with the neoliberal hegemony, understanding how people shapes acts and discourses of their fight, viz. grasping urban resistance potentials in a neoliberal ambience.

**Diversity, Segregation and the Prospects of Multi-Ethnic Education: Narratives of Israeli Educators**

One challenge for societies under protracted conflicts is to develop educational programs and curricula that would both address ethnic and social differences and bridge social differences between various groups. In particular, a society under protracted conflict immerse itself in managing the conflict, thus it fails to attend to other societal issues. In the 1990s, after the signing of the Oslo Accords (1993) and with the absorption of a significant wave of new immigrants from the former Soviet Union and Ethiopia, it was thought in Israel, as elsewhere, that multicultural education would help transcending the national, ethnic and cultural boundaries that separate these various groups.
Notwithstanding the theoretical debates about multicultural education, the challenge of bridging these social boundaries has remained the same. In fact, as it became evidenced during the 2011 social protest (again, in Israel but also elsewhere), for a moment it was as if from 'bottom up' has emerged a new vision of society. In this new vision, the challenge for society was to rebuild its unity and solidarity against the preoccupation. In education, this implied breaking with the "old" divisions and replacing them with a more cohesive educational vision. In this paper, we ask to further explore this vision by interviewing educators (mainly headmasters and teachers) on their conception of multicultural education. Particularly, the research will focus on the Negev area, where we will be tracing the relation between the structural, spatial segregation of education (and habitat) and the possibility and of interest in multicultural education.

Conceptualizing The Bereavement Hierarchy

Abstract submitted to the RC01 Armed Forces and Conflict Resolution. Session: Death in the Military: Towards a New Paradigm?

Scholars of the syndrome of casualty sensitivity exclusively analyze public opinion and its impact on policies. A few studies argued that the mode of recruitment largely depends on collective actors’ position in the bargaining structure of material factors (such as the extent to which the war is portrayed as successfully attaining its original goals) to challenge the dominant discourse and influence the war’s policy. However, missing is an analysis of the bereavement discourse by which various social groups interpret the loss of their children’s lives or the potential risk posed by their military service. The tone of this discourse affects the likelihood of antiwar protest. While manpower policies create a hierarchy of risk by exposing different groups to different levels of risk, this hierarchy is also reflected within the bereavement hierarchy. It is argued that the extent to which a group will develop a subservive discourse of bereavement that can be translated into antiwar protest is highly correlated with several variables: (1) the group’s social status and its reliance on the military as a mobility track; (2) the group’s ideological stance; (3) the legitimacy to protest as derived from the character of manpower policies-market-regulated vs. state-sanctioned death. In general, the lower the position of the group in the social hierarchy, the greater its tolerance for military death, and vice versa. Different levels of discourse can be hierarchically clustered, from subservive to submissive discourse. Thus, mapping the bereavement hierarchy may improve our understanding of how the social composition of the armed forces affects the likelihood of antiwar protest.

Institutional Feedback and Collective Learning in Industrial Waste Management

Heavy industries offer an interesting research subject of complex operational environment of waste management. Due to massive amounts of processed materials, heavy industries also play a crucial role in achievement of challenging recycling targets that many countries have set for the future. Major challenge is to increase material recycling between branches of industries. Production facilities should not be seen as bounded units, but as parts of wider industrial symbioses in which secondary material flow from one plant could serve as raw material for another process or as a component of a novel product. Such symbiosis-like industrial networks, however, are difficult to manage. Management and development of industrial symbioses requires that different stakeholders are constantly able to develop new possibilities for recycling. This, in turn, requires that stakeholders are collectively able to learn from each other to create nuanced picture of the environment of waste management. Based on the above theoretical framework, the paper addresses three issues: (1) the group’s social status and its reliance on the military as a mobility track; (2) the group’s ideological stance; (3) the legitimacy to protest as derived from the character of manpower policies-market-regulated vs. state-sanctioned death.

Conversing with the Executioners: Denial and Expressed Moral Values in Interviews with Perpetrators from Nazi Germany and Operation Condor

In this presentation, we will expose a research on testimonies of former perpetrators of mass violence coming from two contexts (Nazi Germany, Last Dictatorship of Argentina), when the latter are in an extrajudicial interview situation with journalists or co-detainees. The aim of this paper is to show the heuristic dimension of such sources for the understanding of subjectivity within committed State violence and for the study of the question of “moral-concerns” of massmurderers. Conversely, we will bring to light the power relationships characteristic of these interactions, as well as strategies carried out by the interlocutors to lead these “veterans” beyond their face-work (Goffman, 1967) and, through the framework of the encounter, make them speak more consistently about their violent acts. Secondly, we will deal with how documents of this type can give us a privileged access to questions of morality in situations of mass violence. To this end, we will look closely at places in the discussions where the mass-murderer reacts strongly and feels offended, while on the other hand he often asserts the legitimacy of the violence he committed. We will focus here on the thematics of indignation in both contexts and more specifically on the relationships to money and the management of resources that emerge for the perpetrators in the course of their duties.

**LEWANDOWSKI, ROMAN** *(Voivodeship Rehabilitation Hospital for Children, rlewando@wp.pl)*

Internal Conflicts Vs. Integrity within Medical Profession Under Managerial Encroachment

Poland, like other European post-communist countries inherited the inefficient health care system. The first major reform was implemented in 1999, ten years after the fall of communism. The reform changed hospital financing from fixed budget to payment for performance and granted private medical organizations access to public money.

After the Cold War, Poland inherited too many hospitals, as in the days of communism additional hospitals were created for the military purposes, internal security forces, and even for large professional groups, such as railway workers. Thus, after the reform public hospitals have been forced to compete for financial resources and a limited number of medical professionals, not only among themselves but also with rapidly growing private sector.

In the communististic system, costs control were made through a lack of access to expensive medical technologies, which absolved both physicians and managers of moral responsibility for cost containment and thus limited the conflict between managers and doctors. However, nowadays managers bear the primary responsibility for balancing the hospitals budget, and the task can be realized only through exerting pressure on doctors to reduce costs. This situation exacerbated the conflict between these roles.

This paper presents the study on Polish hospitals concerning the identification of methods used by managers to take control over the clinical practice, the response of medical profession to managers actions, internal conflicts within the profession and defense of its autonomy. In western countries the pressure to reduce costs was increasing gradually over many decades, but in the post-communist states these phenomena occurred rapidly. Most doctors currently working in Polish hospitals entered the profession in the communist times and now not only they have to adapt themselves to new reality, but also help to socialize younger colleagues entering the medical profession.

**LEWIN-EPSTEIN, NOAH** *(Tel Aviv University, noah1@post.tau.ac.il)*

Changing Circumstances in Late Life and the Relationship to Household Debt

The study is motivated by the rise of household debt in recent decades in most economically developed societies. Students of consumer society have noted the increasing importance of material comfort and the growing use of credit among people in late life. Yet, for those living on fixed income any change in the economic environment or in one’s health can dramatically disrupt their economic wellbeing. The theoretical framework on household debt in late life builds on two concepts central to social stratification: consumption and risk. With regard to the former we focus on risks associated with changing circumstances such as retirement and illness. As to the latter, we argue that consumer culture and its institutional structures are an important driving force behind growing household debt.

Based on the above theoretical framework, the paper addresses three issues: the relationship between debt and changes in life circumstances (especially as re-
lated to health status and labor market activity); the association between house-
hold debt and the subjective experience of economic hardship; and cross-county
variations in the relationship between household dynamics and indebtedness.
The analysis is carried out using the first and the fourth waves of the Survey of
Health Aging and Retirement in Europe (SHARE). The panel structure makes it
possible to study changes in late life (marital status, labor market, and health)
and their relationship to household debt in 13 European countries and in Israel.
Preliminary findings reveal that household debt is widespread even in advanced
ages; it is not limited to households that are asset poor; but it is systematically
related to changes in health and marital status. Large country differences exist in the magnitude of household debt. We also find com-
plex effects of country context on household level relationships.

Trade Unions and Whistleblowing: Can They Do More Than Protect Their Members?

The role of trade unions in relation to whistleblowing is frequently seen as
reactive and defensive. They often have limited resources and regard their prime func-
tion as being to advise potential whistleblowers and to represent both those
who feel they have been victimised for reporting concerns and members who are
alleged to have engaged in wrongdoing. Research conducted by Public Concern
at Work and the University of Greenwich in the UK suggests that trade unions are
good at performing these tasks but are not particularly effective in ensuring that
allegations are investigated and wrongdoing rectified.

A more proactive and collective role for trade unions would be to negotiate
whistleblowing policies and procedures at the workplace where employers were
willing to do so. Research conducted in several countries consistently shows that
whistleblowers normally report their concerns internally first and that line man-
agers are often the first port of call. However, if this manager is not appropriate
for any reason (for example, is the subject of an allegation or is regarded by the
whistleblower as unsympathetic/antagonistic), the question arises as to whether,
for trade union members, a lay or full-time official should be regarded as a suit-
able alternative to approaching higher management.

This paper will examine the existing data about how trade unions function in
relation to the whistleblowing process and will consider the ways in which they
could use their collective strength to play a more positive role in dealing with
alleged workplace wrongdoing.

Natural Surveillance: Google Trekker and the End of Wilderness

Natural Surveillance: Google Trekker and the End of Wilderness

For individuals seeking refuge from the increasingly monitored spaces of urb-
nanized “control societies,” the idea of untamed wilderness has long held a special
appeal. Figuring prominently in various strains of ecological writing and literary
romanticism, wilderness has also been central to various indigenous belief sys-
tems in the Americas, Australia, and New Zealand. In these contexts, wilderness
has often been valorized as an aesthetic, moral, and national resource of the high-
est order, a sacred place for the regenerative experience of living “off the grid” of
contemporary techno-culture.

However, new surveillance technologies are rapidly taming the wild, bringing it
under the watchful eye of the governments, corporations, and private individuals
who want to minimize risk and uncertainty in any environment—even where an
element of risk has long been considered a virtue. Indeed, the rapid proliferation
of capturing technologies such as UAVs, night-vision, CCTV, GPS and other forms
of remote sensing is challenging long-held conceptions of nature as refuge. As the
surveillance assemblage expands into the wild, finding an unobserved, or unob-
servable, spot will become increasingly difficult.

While Facebook’s Mark Zuckerberg dreams of an “Open Planet” of total trans-
parency, Google is bringing its “Streetview” concept to nature with “Google Trek-
kert,” a backpack mounted data collection apparatus that is designed to illuminate
the hidden values of the natural landscape. With satellite cameras, drones, and now Google Trekker looking over our shoulder even on the highest moun-
tain peak, will we continue to imagine the regenerative power of wilderness in
opposition to the enervating qualities of post-industrial life? Is desert solitude a
bygone fantasy? By putting Google’s Trekker into dialogue with concepts of rur-
ged individualism, wilderness, and frontier autonomy, this paper will explore the
implications of “rural surveillance” phenomenon for national imaginaries and eco-consciousness generally.

The Unequal Structuring of Healthcare Choice: Perceptions of Australian Healthcare Consumers

The notion of choice in healthcare is a cornerstone of many western developed
health policy settings. In the Australian context, choice has been integral to policy
initiatives encouraging Australians to take out private health insurance (PHI). Pro-
moted by policy makers and marketed by the health insurance industry, choice
of specialist medical provider, hospital, and even complementary and alternative
services has become highly valued. This private system coexists with a universal
health insurance scheme for medical care and public hospital provision. Howev-
er, despite the emphasis on healthcare choice, there has been little exploration
about to the factors shaping, and unequal structuring of, healthcare choice.

Drawing on Bourdieu’s theoretical framework of intersecting forms of capital
cultural, social, symbolic, economic, and spatial) we explored the structuring of
choice by Australian consumers using indepth interviews. Purposive sampling
ensured a diversity of perceptions and experiences of healthcare choice, as well as
in capacity to draw on healthcare capital when exercising choice. Interviews
explored use of healthcare; purchase and use (or not) of PHI; social networks and
information sources; drawn upon when making healthcare choices. Interviews
were thematically analysed.

We found that people have an unequal capacity to make choices in health-
care. Complex, interlinked forms of capital contribute to the unequal structuring
of choice. While people’s choices are most clearly enabled or constrained by eco-
nomic resources and tradition, economic capital is strongly shaped by social rela-
tionships and networks, geographic location and interactions with healthcare pro-
viders. Choice represents an individualised rather than communitarian approach
to healthcare service provision. Therefore the prioritising of individual choice
in healthcare policy and markets contributes to the maintenance of unequal health
outcomes across the population.

China in the British Imaginary: Coverage of Beijing Olympics in the
UK National Press

Categorised as ‘mega-events’, the Olympics have long been an incredibly elabo-
rate media spectacle in the guise of a purportedly idyllic and ostensibly shared
global story, which uniquely reveals about host cultures, carrying real implications
for international relations and domestic interests. Such a rich cultural repertoire
shared in the media discourse becomes part of the popular imagination that con-
stitutes the collective memory. It is in this sense that British media coverage of
Beijing Olympics has shaped how a distant culture is discursively constructed and
geopolitically defined. This article will answer the following questions:
-Which themes are focused on in the British press coverage of Beijing Olym-
-How does the character of reporting vary between different titles?
-What is the general image of China that emerges from the coverage to be
analysed?

This paper explores media narratives of Beijing Olympics relate to the wider context
of an evolving repertoire of Orientalism in a discursive power struggle in the global-
ised context?

A New Cycle: Understanding the Current Life Course of Rural Families in Western China

Past research has proposed that with the urbanization process, Chinese agricultu-ure is faced with prospects of industrialization and mechanization. However, rather than such transitions, we see more evidence showing a lack of labor and capital investment in agriculture in western China. This article investigates what the economical meaning of agriculture is to the rural families, and describes a generational division of roles apparently stemming from reciprocity. Using logit models and qualitative findings combined, we show that (1) agricultural income is insignificant to rural families compared to what they may earn elsewhere, so only the less capable part of labor remains home and they will not spend much time and capital in agricultural management; (2) a part men. Sages in Western cultures in which the peasant plays different roles at different ages: he is raised by grandparents in the country home where education is inexpensive, works in the city if possible supporting his children and parents, and returns home where livelihood is inexpensive, raising his grandchildren, hopefully with the support of his children who work in the city. We call this pattern the ‘new cycle’ as opposed to the peasants’ traditional life course which dissolved in the tension between rural-urban duality and globalization.

Gender and Power in the Primary Teaching Workplace: Women's Fight Against Male Power in Taiwan

This paper aims to explore how gendered power manifests in the primary teaching workplace with reference to the context of the teacher surplus issue by analysing the responses of the teachers in the campaign against male power. In addition to official statistical data, the data presented is derived from an ethnographic case study carried out in a primary school in southwest Taiwan. Non-participant observation and semi-structured in-depth interviews are the main sources of data collection. The non-participant observation included shadowing six different class teachers, four females and two males. Semi-structured interviews were conducted individually with eight teachers, including the six teachers shadowed, one male class teacher and one female subject teacher for a gender balance.

The analysis of data from official statistics and state publications identified the seriousness of and impacts from the teacher surpluses in the Taiwanese context and in the case-study school. The research evidence suggests the image of female teachers as a silent majority in their workplace. However, while confronting difficult challenges rooted in the teacher surplus issue, women's image may be changing as empirical illustrations of women displayed their capabilities and ded-

Table of Contents

According to my fieldwork data, in the 2008 academic year, 10 out of 13 males (76.92%) held managerial posts, while only 25% of female teachers were in similar positions. 21 (18 class teachers and three subject teachers) of the teachers having no managerial jobs were female, whereas only three of them were male. That is, it indicates the persistence of gender segregation: male dominance in the higher tiers and a concentration of women in the domain of classroom teaching. Furthermore, there are three important points to suggest the preference for men in the school management. First, men are preferred and advantaged to take on the managerial posts because of men's abilities and availability associated with masculinity. The second is the alliance between men, which were beneficial to their seeking upward mobility. Third, in contrast to women's advantaged position, women's domestic responsibilities and roles are suggested as hindrances for their access to higher echelons. Yet, the quotes give evidence that some male teachers did not agree the preference as an advantage, due to invisible pressure from gender norms. In addition, the findings also demonstrate that some male teachers in the study prioritised their family responsibilities, rather than their own professional advancement. Men's dissociation may imply that men can also enjoy working with children and the solid teaching profession.
This paper provides a comprehensive review of empirical evidence linking parental nonstandard work schedules to four main child developmental outcomes: internalizing and externalizing problems, cognitive development, and body mass index. We evaluated the studies based on theory and methodological rigor (longitudinal data, representative samples, consideration of selection and information biases, confounders, moderators, and mediators). Of 23 studies published between 1980 and 2012 that met the selection criteria, 21 reported significant associations between nonstandard work schedules and an adverse child developmental outcome. The associations were partially mediated through parental depressive symptoms, low quality parenting, reduced child-parent interaction and closeness, and a less supportive home environment. These associations were more pronounced in disadvantaged families and when parents worked such schedules full time. We discuss the nuances, strengths, and limitations of the existing studies, and propose recommendations for future research.

Exploring the Sense of Justice about Grades in Group Projects

The problem of free rider is ubiquitous in governing the commons. It often leads to injustice in allocating the rewards in any group projects. This paper investigates formal methods in which the instructor may adjust individual students’ grades relative to grades earned on a project group that reflect group members’ sense of justice. Data are collected from 77 college students enrolled in a sociology course. We estimate the just grade function for each and every rewardee student in each group, and show how to use these estimates to in their grade adjustments. We also engage a recent debate (Markovsky and Eriksson 2012; Jasso 2012) about how to measure the just reward.

This paper is motivated by two bodies of literature. The first one concerns the free rider problem ubiquitous in the social world when public goods are involved (Hardin 1968; Marwell and Ames 1979). Specifically, every instructor must have encountered the difficulty of how to determine individual students’ grades when they assign assignments to be completed and evaluated in groups. While many instructors may have treated it as a nuisance in their grading duties and proceed in various eclectic ways as long as the students do not complain, it is indeed an important issue to address if one takes seriously the idea of justice and the authoritative duty an instructor/grader performs. The second one concerns the social psychology of distributive justice (Berger et al. 1972; Deutsch 1975; Jasso 1980; Konow 2001). Specifically, we argue that theoretical and methodological developments in this literature (Jasso 2007) may be applied to the free rider problem of allocating rewards to individuals participating in group projects. In this paper, we demonstrate such a particular application in the classroom context.

The Bureaucracy and the Construction of Risk in China

There were three large-loss fires ignited by exterior-wall insulating materials which marked the fire risk of insulating materials a hot topic in the past three years in China. Against the backdrop of policies which limited the combustibility of the insulating materials caused a considerable controversy among Housing and the City and Countryside ministry of construction, Bureau of Fire in the Ministry of Public Security and enterprises specializing in insulating materials. Finally, it was the State Council of China that calmed the things down.

This paper is based on a qualitative research mentioned above, which attempts to elaborate the logics of the bureaucracies of China in the process of constructing and governance of risk. It shows how the fire risk assessment standards vary across government interventions which lead to the risk conflict first and then risk consensus among the three stakeholders mentioned above. From this research, we can get some conclusions. First, the relations of defining risk depend on the power structure in the bureaucracy, especially when the departments of it involved. Second, the risk is divided with the segmentations of bureaucracy which all try to protect, shift responsibility, and this leads to the “organized irresponsibility” which seems to be a classical feature in Chinese politics. Third, although the fire risk of the exterior-wall insulating materials is closely related with the public’s benefit and safety, it’s still a topic existing only in the government and enterprises, not a covered field for the public, which proves that the sub-politics Ulrich Beck expects have not happened in China.

Down to Earth: Environmental Governance and Flexible Bureaucracy in China

The notion of “flexible bureaucracy” is an oxymoron; by definition, bureaucratic institutions are not amenable to change. The sociological literature on the East Asian developmental state has articulated the processes by which authoritarian states relied on rigid bureaucratic mechanisms to implement development policies during the late twentieth century. Despite historical legacies, the authoritarian bureaucracies in East Asia have undergone substantial transformations in the last decade. This paper discusses the relaxation of bureaucratic rigidity, and devolution of political power towards non-state actors in the face of environmental challenges.

This study focuses on the case of China, seeking to understand how environmental issues have brought challenges and opportunities to the regime. How have localities in China devised different strategies to respond to pressures from above and below regarding environmental degradation? As different places experiment with innovative forms of environmental governance, what are the resulting differences in policy outcomes? These questions are not only important for understanding the current state of environmental governance in China, but also critical for contributing sociological knowledge about mechanisms of accountability, institutional isomorphism, and political legitimacy under authoritarianism.

The empirical discussion is informed by ethnographies in four Chinese cities, including Baoding, Duijiangyan, Hangzhou, and Tianjin. It also draws from archival research in Beijing. This paper concludes that, in China, environmental protection is the most politically devolved policy area. Thus, environmental governance exhibits significant diversity across localities in places where the bureaucracy remains tightly controlled by the central state, environmental governance reflects a genuine commitment to ecological sustainability, even at the cost of economic growth. Contrarily, in places where the local state enjoys higher levels of autonomy and flexibility, bureaucracies are more likely to pursue partnerships with private businesses and other non-state actors. These partnerships tend to promote business development and political maneuver under the pretext of environmental protection.

The State on the Street: Visible Hands in Creative City-Making in Shanghai

Historically, cities are strategic sites for the penetration of state authority. They are critical posts for taxation, defense, and trade. It is therefore no surprise that cities bear extensive marks of the state. With the rise of creative economy, however, the city has emerged as one of the most bottom-up, spontaneous, and community-driven forms of urban initiatives. Especially when it comes to urban culture, there is much discussion about the explosion of creativity and entrepreneurialism from below; the state seems to have disappeared from the sociological field of vision.

In this working paper, we bring the state back in. We critically interrogate the role of the state in the creation of the urban creative economy. The discussion is based on a structured comparison of three art districts in Shanghai, including Tianzifang, M50, and Bridge Eight. We develop the comparison along three dimensions: first, the context of each of the arts districts; second, the nature of creative economy; and third, the role of the state. We attend to the contribution of different actors, as well as relations between actors. Third, we bring to light the importance of spatial attributes of each project area in constraining and facilitating the exercise of state power.

Our empirical evidence points to a more nuanced conception of the state than previously reported in the literature. We explain why, on different occasions of creative city-making, the state exhibits different levels of intervention, from tacit agreement to active support. We advance a relational conception of the state to better account for the rise of art districts.

Class Boundaries in Cross-Class Friendships: A Preliminary Study Based on Social Eating Network Data in China

China’s class structure is changing dramatically after market-oriented economic reforms. Economic marketization and privatization of ownership has created a new pattern of social stratification, which differs from the cadre-dominated social hierarchy in the state socialist era. Based on a national survey in China which reported social eating network among 5000 households, this paper documented social networks structure among 12 occupation-based classes, and examined patterns of friendship ties across class boundaries. In particular, analysis of strength and diversity of cross-class ties suggests (1) the pattern of friendship is affected by social class structure, and social resources can be mobilized across class boundary through social network channels. (2) Varying degrees of social-network cohesion is exhibited among different social classes, (3) the manual-unmanual boundary is significantly more permeable than authority, expertise and property-based class boundaries.

Living in the Gray Zone: State’s In/Exclusion of Live-in Migrant Care Workers in Taiwan

Since 1992, in order to accommodate demographic necessities—including the increase in the number of double-salary families and the “graying” of the population in Taiwan as fertility rates decline and people live longer—the Taiwanese government has allowed the immigration of domestic workers and care workers as short-term contract labor force to shoulder the responsibilities of caring for older adults, people with disabilities, the sick, and younger children. In 2013, the number of migrant care workers in Taiwan reached a stunning 200,530 compared to 26,233 in 1997. In contrast to their counterparts working in the factories, live-in migrant care workers are not applied to Labor Standard Law that defines the rights of workers.

Relying upon institutional ethnography, in this essay I demonstrate how the specific lived experiences of live-in migrant care workers are shaped by the social organization of carework in Taiwan within the context of labor migration. This study investigates migrant labor policy in general and migrant care labor policy in particular to illustrate how the Taiwanese government includes migrant workers into private labor market to solve the shortage of care labor on the one hand. On the other, live-in migrant care workers are excluded from full legal protection by the Taiwanese government through its practice of state sovereignty.

Exploring the Meaning of Social Justice in Chinese Context

The globalization process has been greatly affecting the development of many professions as well as the young people who strive to become one recognized member of the professions. Among the many professions, social work, with its long tradition in pursuing social justice is the major concern here. This paper attempts to investigate how social work undergraduates in China understand and interpret the key concept of social justice, the value that they should be devoted to defend, and what factors contribute to their understandings and interpretations. As a qualitative research, in-depth semi-structure interview was adopted to collect opinions from 23 social work students in Guangdong province.

Result indicates that this group of interviewed students perceives social justice as a distant ideal which is too difficult to achieve. From the students’ narratives, a strong sense of powerlessness was detected and they feel constrained a lot by current social and political reality in Chinese society. They mostly construct the idea of justice within a nation-state framework by using a resource-distribution scheme.

Their conception of social justice is largely a mixed product of Western-orientated social work education and their growing-up experience in transitional Chinese society. In addition, it is worth exploring the distinctive and long-lasting effect of their received political education (mainly derived from Marxists’ theories) in high school which offers them vocabulary, standpoint, and theoretical assumptions to develop their interpretations of justice. Based on above empirical findings, this research suggests some future directions for promoting a more inclusive and globalized understanding of social justice among the Chinese youth.
A Text-Mediated Buddhist Conglomerate and Its Practitioners: Using Institutional Ethnography to Explore Lay Followers’ Religious Experience in Tzu-Chi

The purpose of this paper is to use concepts of Institutional Ethnography (Smith, 2005) to explore the way in which texts coordinate lay followers’ religious activities in the Tzu-Chi Organisation (hereafter, Tzu-Chi), one of the largest and the most resourceful Buddhist civil organizations in contemporary Taiwan. Although it started as a small civil foundation with a few Bikkhunis and a dozen of lay female followers in the late 1970s, it has grown into an international religious ‘conglomerate’ within half a century, and owns subsidiaries across charity services, educational institutions, medical centres, media industry, and so on. Offering a wide range of charity services and voluntary programs, Tzu-Chi organization transforms the way in which Taiwanese people think about and practice Buddhism. Scholars are aware of the thriving power and transformative structure of this organization. However, enough not enough debates have been devoted to a) the way in which lay followers, especially female participants, respond to this new form of religious organization, and b) interweaves the discussion with rapid socio-economic changes of 20th century Taiwan. Therefore, the researcher conducted 10 in-depth interviews with female volunteers of Tzu-Chi in order to find out the way in which the followers adapt Buddhist doctrines and practices through the organization’s modern form. The research findings demonstrate that a) in a rapidly changing society, Tzu-Chi transforms Buddhist groups into a new form of religious organization that offers practices where housewives build up horizontal ties outside the private sphere; b) media texts such as the founding nun’s book publications, monthly magazines, TV dramas produced by its own TV network, and so on, as well as lay followers’ participations in the organization’s volunteer activities help to coordinate and coordinate lay followers’ religious identities.

Religious Sisterhood Among Female Audience of Da-Ai Dramas

The purpose of this paper is to examine the way in which the audience responds to prime-time dramas broadcast on a widely watched religious channel (and another commercial TV network), owned by one of the largest Buddhist civil organisations in contemporary Taiwan—Tzu-Chi Organisation. Tzu-Chi started as a humble civil foundation with a dozen of lay female followers and a few Bikkhunis that offers charity-based services in the late 1970s. Within half a century, it has grown into a huge religious ‘conglomerate’ which owns subsidiaries across charity services, education institutions, medical centres, media industry, and so on. Among its various types of multimedia platforms, the success of its TV network (Da-Ai TV) draws attention from one of the largest commercial TV networks – CTI TV and started to broadcast Da-Ai’s prime-time drama (also known as Da-Ai Drama) on both networks from Jan, 2013. As Tzu-Chi has increasing visibility and influence in a competitive TV market in Taiwan, this paper aims to explore the way in which the prime-time dramas are watched and interpreted among followers and non-followers. The researcher has conducted in-depth interviews on 13 female audience who have been watching prime-time dramas on Da-Ai TV for more than six months. The research findings demonstrate that the audience focuses on the edutainment purposes when choosing to watch Da-Ai TV because a) watching these dramas is seen as an easier alternative to acquire sophisticated Buddhist doctrines, and to practice them in everyday life; b) discussing these dramas with female colleagues or friends can be educational and encouraging, and, thus, helps to form horizontal ties among female audience.

Social Desirability Bias and Mode Effect in the Case of Voting Behavior

Response distribution and data quality are influenced by different mode of data collection. Such consequences are seen as mode effect. One significant influence of mode effect on data quality is social desirability bias, which is related to whether an interviewer is involved, pace of cognition process during interviews, and with delayed economic development . This specific distribution led to a particularly non-disruptive path; a path that It will be shown that there are colonial models from Mexico to Argentina that have their origins in scholastic currents found in the peninsular clusters of medi eval Europe. Under this influence, and a century after the conquests carried out in the region of the Rio de la Plata, the first institution of higher education was conceived. The most important philosophical currents in the region could be seen to parallel the political regime introduced there. Furthermore, the economics and the general development of the Argentine territory were considered from their inception focusing on external trade of primary resources whose main aim was the constitution of a handful of precarious port-cities and surrounding areas of the interior with the products being exported to Europe exclusively without balance and with diametrically opposed strategies. These two main aspects –economical and philosophical-political- imbued Argentina with a distinctive profile in the development of its institutions and in the power dynamics that have persisted for almost five centuries. This specific distribution led to a particularly non-disruptive path; a path that is highly inequitable with regard to the development of ideas, of power and its institutions and with delayed economic development. This exploration will give rise to a mapping of the current reality of regional inequality under protection of a biased and caudillista political and economic power.

Democracy and Education: A Strategic Alliance For The Exercise Of Future Freedom. The Case Of Argentina

Argentina today finds itself in the midst of a crisis, with a weakening democracy and an education system in decline. Any solution to the country’s current problems must focus on not only the other of these issues, but on the two together, as inseparable. The discussion presented here will first focus on the school as a highly planned and compulsory training institution for minors.
Second, social networks and new technologies will be considered inviting a rethink of the inclusion of these non-mainstream tools in the fields of intensive training.

In fact, both the democratic transition and the educational system can be studied from the political point of view as an alliance and strategy for the construction of citizenship where students now have extended power coming out of the classroom and are intertwined with the adult world and "control".

From there, decentralization and participation mechanisms were built in that focused on serving and satisfying the diffuse demands of its citizens.

Thus, the expansion of the democratic base with the introduction of students trained in an irreversible process as is the information era and digital culture has led to a dislocation of representation and alliances.

As such, the discussion here will briefly include how new political consensus, access to education and new social networks have strengthened democratic processes around the world.

In particular, it will be asserted that the new school within and with the democratic context in Argentina comprise a strategic alliance that must be ensured in order to discourage the development of undemocratic contexts conducive to coups or destabilizing conflict.

In the first part, the current situation regarding democracy and education in Argentina will be presented.

Next, an analysis of this situation will be given.

Finally, conclusions and some ideas for future changes will be proposed.

In 2010, the U.S. Office of National AIDS Policy (ONAP) promoted a national strategy for HIV testing and linkage to care ("test and treat"), with emphasis on communities at risk. Potential barriers to HIV testing were cited, including HIV laws that criminalized non-disclosure to sexual partners. In order to identify such barriers, this study assessed knowledge and attitudes toward mandatory disclosure and HIV testing among 197 probationers and parolees in a southern state. Over two-thirds of participants had heard about the law (69.2%) and most believed that it was fair (85.5%). Most participants also supported HIV testing for offenders under community supervision (68%). Despite this support, 65.6% of participants believed that the law was a barrier to HIV testing because of fear, stigma, and potential for arrest. Perceptions of HIV/AIDS as a crime and non-disclosure as murder suggested increased stigma and resistance to "test and treat" among convicted offenders. |

<td>Women Foreclosed: A Gender Analysis of Housing Loss in the U.S. Deep South</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Women were a focus of subprime lending during the housing boom, increasing their risk of mortgage foreclosure during the Great Recession of 2007-2011. Following Valentine's (2007) call for a feminist geography on interactions between social categories and spatial processes, this article investigates housing loss among women foreclosures in a southern U.S. county with a history of residential segregation. We collected data manually from legal notices and public access property records between 2008 and 2013, and then combined the information with census tract data for GIS analysis. We found significant differences between women foreclosures in terms of marital status, race/ethnicity, and location. While married women foreclosures typically lived in majority-white areas throughout the county, their unmarried counterparts were clustered in low-income Black neighborhoods close to the county seat. Women's foreclosure activity followed historical patterns of residential segregation, with privilege and disadvantage in juxtaposition with social hierarchies of race and class. We conclude that housing loss in the U.S. South is complicated by racial history and the subordinate status of 'women alone' in the property market. |

<tr>
<td>Public at Risk or Public As Risk? Managing Environmental Concerns through Risk Governance</td>
<td></td>
</tr>
</tbody>
</table>
Public relations, risk communication and participatory approaches to risk management have emerged as means to handle diverging interests in society; not least public perceptions could be a source of risk in the sense that public perceptions and opinions could pose a threat to the legitimacy and stability of existing ways of managing risk. Thus, risk governance focuses on how organizations deal not only with the technical calculation of risks, but also with the actors they perceive as possible threats and potential risks to the stability of the organization.

This paper analyzes risk governance and the implications of it. The empirical material consists of three interview studies and two studies of public records on how Swedish authorities handled citizens’ and stakeholders’ claims for regulating nature. The analysis finds that the public claims were seen as a particular risk, where public outrage and loss of political legitimacy became part of the risk panorama of the responsible agencies. In particular five mechanisms were used: dissemination of knowledge; naturalization of the problem; development of public action; inclusion of stakeholders; and individualization of responsibility. Through these mechanisms, governmental agencies succeeded to influence stakeholders and citizens understandings and modify their claims. Thus, what took place was not only a process for governing nature, but also for governing people. The paper ends by addressing the question whether this conclusion indicates the end of public participation or if it can serve as a trigger for more radical approaches of public participation. |

<tr>
<td>On The Development Of Talcott Parsons’ Conception Of Societal Community</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
On the Development of Talcott Parsons’ Conception of Societal Community During the 1950s and early 1960s, Talcott Parsons tried to write a general interpretive book on American society using the analytic methods he had developed with the function paradigm. Around 1960, he was joined in the task by his recent doctoral student, Winston White. Although the work was interrupted when White suddenly left academia in 1962, well over 1200 pages of draft chapters and preliminary working papers were produced. Among the drafts and working papers are Parsons’ first attempts, using the four function paradigm, to develop a conception of the integrative subsystem of society. The initial attempt built essentially on Chicago School ecological notions of community in the sense of local community. It conceived the integration of society in terms of an aggregate of local communities. A later draft, from 1966, explored a range of social institutions that serve to integrate American society as a whole. In this work, Parsons sought to develop in analytical detail and in application to a complex modern society, the conception of societal community that had emerged in early drafts for his Societies; Evolutionary and Comparative Perspectives and The System of Modern Societies. Our presentation will discuss the differences between the two conceptions of the integrative American society and will attempt to compare Parsons’ conception of societal community to current analyses of civil society and to Jeffrey Alexander’s The Civil Sphere. Parsons emphasized complexes of integrative institutions that have strongly equilibrating effects, but in contrast to Alexander and others, included as well institutions that have stratifying effects. He understood differences in levels of influence among individual actors, collectivities, and associations to be essential to social integration. |

| Misrecognizing the Modern: Japan and the Failure of Social Theory |
Modern social theory rests on a series of misconceptions, the most important of which are ethnocentrism and presentism. That is, classical social theorists equated the modern with the west (and particular parts of the West at that) and with their contemporaneous reality. In so doing, as important as they are, their theorizing systematically misrecognized the nature of the modern. Yet “modernizing” Japan, and especially its social theorists, used the culture-bound and time-bound notions and in so doing not only misunderstood the nature of the West but also of the non-West, including most importantly Japan itself. Furthermore, the Japanese misunderstanding would in turn be absorbed by Western writers who were seeking precisely to overcome the limitations of classical social theory and of modernity. Needless to say, I am aware of disparate and divergent strands in social theories both in the West and in Japan but I wish to focus on the leading writers - most importantly, Marx and Weber - and consider the genealogy of misrecognition that continues to hobble the task of social theory today. |

Using Factorial Surveys and Stated Choice Experiments to Investigate Discriminatory Attitudes and Preferences

Empirical research on discriminatory attitudes and behaviour grapples with the social undesirability of its object. In many studies using regular survey methods, estimates are biased, and the social context of discrimination is not taken into account. Several methods have been developed, especially to deal with the first problem. In this regard, the estimation of the ‘true value’ of discriminatory attitudes is at the centre of interest. However, methodological contributions focusing on the social context of attitude communication and discriminatory behaviour, as well as the correlation between both, are rare. We present two experimental methods which address those issues: factorial surveys and stated choice experiments. In a first study, the usefulness of factorial surveys is demonstrated with data on German anti-Semitism (N=279). We show that the rate of approval with anti-Semitic statements increases if (a) respondents are told that the majority of fellows agree with such statements, (b) the term “Jews” is replaced by the term “Israelis”, and (c) reference to the Holocaust is made. Apart from the main effects of these experimental factors, significant interaction effects regarding the political attitudes and social status of respondents are observed. In a second study, a stated choice experiment on the purchase of olive oil and tomatoes was conducted in Germany (N=440). We find that respondents prefer Italian and Dutch products (control treatment) compared to Israeli and Palestinian ones (discrimination treatments). There are no significant differences between preferences for a so-called ‘Peace product’ (which is produced jointly by Israelis and Palestinians) and products from Italy as well as the Netherlands. Yet, taking discriminatory attitudes into account, a strong correlation between attitudes and stated behaviour (purchase of Israeli, Palestinian and jointly produced products) can be found. This adds support to the hypothesis that discriminatory attitudes hold behavioural consequences.

Reconciliation of Work and Family Life Among Welfare Recipients in Germany. Determinants of Mothers’ Ability to Leave the Benefit System Via Employment

In the first decade of the 21st century there have been reforms in German family and social policy towards an “adult worker model”, aimed at improving reconciliation of work and family, and linking receipt of welfare benefits more strongly on the labour and welfare market. Mothers receiving welfare benefits are subject to both new policies. In this paper it is investigated how these mothers succeed in entering the labour market, to what extent they are able to end their benefit receipt via employment and what the determinants are. Reconciliation of work and family life is a central area of political debate about reducing poverty among families and lone mothers in particular. Therefore the role of mothers’ child care responsibilities in the process of ending welfare benefit receipt is evaluated while controlling for individual labour market resources. Special emphasis is laid on the impact of child care infrastructure and labour market conditions.

In a first step, the probabilities to take up employment are estimated from administrative data for lone mothers and mothers living with a partner. Care responsibilities in the household and mothers’ labour market resources influence the process of labour market integration. Lone mothers are more likely to take up work when they don’t have young children in the household than mothers living with a partner. For both groups of mothers employment is predominantly not full-time.

In a second step, determinants of the probability to end benefit receipt with the new employment are estimated, taking into account that there is a selection against the first step. Care responsibilities only play a minor role in this part of the process, while household size and characteristics of the new job (occupational prestige, working time) are of major importance.

Conflicts and Economic Consequences: Comparative Notes on “Going to WAR”

Wars are beneficial some argue. Wars are costly others argue. Some experiences prove that technological development in warring situations (may) have positive spin off later on. Wars can be simultaneously costly and beneficial others argue. Some suggest that being a victor in one war can create a psychosis or collective social memory that propels the victorious state/nation into long term militarist adventures that eventually leads to its downfall. Against this background we are discussing four case studies.

These paper explores in some detail four economies in terms of preparations and consequences during the Second World War, namely that of Nazi Germany, the UK, the USA and South Africa. A look is taken at the economic state of these countries before the war, preparing for war, economic developments during the waging of the war and the socio-economic and political outcomes. It concludes with some lessons learnt and pointers for the future. In our conclusion the reader may find in his/her own deduction that going to war – even if coming out victorious – may be far costlier on the long term than we tend to think.

LIEM, MARIEKE* (Harvard University, Marieke.Liem@hks.harvard.edu)

Does Age Matter? Experiences of Prison and Release Among Juvenile Lifers

More individuals than ever before are currently serving long-term sentences. Many of them have been incarcerated as juveniles. Little is known, however, how imprisonment influences these individuals, and how they fare upon release. To assess the dynamics of age during incarceration and upon release, life-history and/or interviews with second-degree lifers were conducted. Those who were incarcerated as juveniles were compared to those who were adults at the time of incarceration.

Three hypotheses are discussed in relation to this special group: Long-term imprisonment as a ‘deep-freeze’, prison as a school of crime, and prison as a place of cognitive transformation. The influence of long-term imprisonment is examined with a view to broader understanding of subsequent desistance post-release.

LIEZTMANN, TORSTEN* (Institute for Employment Research, torsten.lietzmann@iab.de)

The Impact of Unemployment on Male Gender Role Attitudes in Germany

Germany has a long-standing tradition as a welfare state with a pronounced male breadwinner orientation in social and family policy. In the last decade there have been some reforms in the direction of a more gender egalitarian “adult worker model”, particularly for women.

In this paper we want to explore the impact of unemployment on men’s gender role attitudes within this new policy framework, assuming that unemployment might lead to a more egalitarian view on gendered work-family attitudes. The new labour market policy in Germany has a general notion that assigns obligations to work to both male and female recipients of unemployment benefits which might lead to less pronounced male breadwinner attitudes among unemployed men living in a couple.

For women it has been shown that unemployment status has an influence on gender role attitudes. In explaining this phenomenon, it has been argued that there are two mechanisms at work: first, there is a selection effect implying that women with more employment oriented attitudes have a higher probability to be employed. Second, there is an adjustment of attitudes, that is, changing one’s own attitudes in response to employment status in order to reduce “cognitive dissonance”.

We conduct an empirical analysis of the relationship between gender role attitudes and unemployment for men and women who live in couple households. For our analysis we use the German panel study “Labour Market and Social Security” which is covering the general population. In a first step we analyse the impact of unemployment on gender role attitudes controlling for other covariates influencing gender role attitudes and unemployment status. We are particularly interested in the effect parenthood has on this relationship. Fatherhood, in particular, might lead to a persistence of male breadwinner attitudes among men as it fosters male responsibility for family income.

BAAZ, MIKAEL (School of Business, Economics and Law)

Theorizing Queer Temporalities

Traditionally, feminist research has focused more on the content and the supposed effects of gender norms and their relations to power, than how the gendered power relations may change. However, there has been a tenet within feminist and—more recently—masculinity studies, which more specifically discusses how to change these power relations. A further research specifically looking at how such gender norms change is warranted. How might the gender stereotypes that seemingly inform the enactment of violence, transform into something new? In queer pedagogy advocates try to find solutions for resisting gendered norms, for example, through queering time. The question is what is mean by ‘temporality’ and ‘queer?’ What norms of temporality are queer supposedly challenging? Taking temporality in queer studies as starting point new strategies of resistance.
against different gendered power relations, prevail. This paper, discusses various resistance strategies in relation to different attempts to reach gender equality.

Change of Basic Human Values in Europe 2002-2012

Values research is gaining an increasing popularity among social scientists and there exists several theories, trying to deal with this complex phenomenon. Given study is based on the Basic Value theory by Shalom Schwartz, which while describing a theory of basic values, has created a robust framework for both cross-time and cross-cultural value comparisons.

During last two decades, Schwartz has developed several value instruments, which has been used in numerous surveys around the world. Given analyses uses data from European Social Survey (ESS), which includes one of mentioned instruments - a short version of portrait value questionnaire (PQV-21). ESS is a comparative social survey with free access and very high quality criteria. It was started in 2002 and is conducted in every second year in most of European countries. Therefor this survey provides a database with nearly 300000 cases from year 2002 through 2012, covering very dramatic period of developments in Europe.

Given study is not analyzing value change only on country level, but distinguishes also major ethnic minorities where applicable, which gives a more adequate picture of real differentiations and enables to describe occurred change in more detail.

The broader aim of this analysis is to fit the change of Europeans' basic values into larger societal-change context, following the transition from economic prosperity to regression, which would also allow a better understanding of the value phenomenon in general.

LILLRANK, PAUL* (Aalto University, paul.lillrank@aalto.fi)

The New Normal As a System Challenge

Since the Lehman shock 2008 there has been a growing sense that the economy is out of joint. The world is not as it used to be during the period of Modern Normal, roughly from 1870 to 1970. The growth potential and progress of advanced economies is lost in systemic changes.

There have been several attempts at grand diagnostics. Francis Fukuyama and Avner Offer have described the Great Disruption in the microsystems of social life as a consequence of mass opulence. For the majority of people in the advanced world biological survival is no longer a daily concern, therefore the traditional foundation of morals have been eroded.

The New Normal argument by Tyler Cowen and Richard Gordon has it that “the low hanging fruit” of modern technology, demographics, the cold war, and educational mobilization have been picked.

The fall of the iron and bamboo curtains have opened the world, and, according to Moises Naim, created the “more, mobility, and mentality revolutions”. Daniel Albert argues that the main disruption is an oversupply of both capital and labor, and a lack of aggregate demand. Edmund Phelps details how massive borrowing is not channeled into productive investments, but absorbed by new corporatism. Tyler Cowen argues that due to Internet, globalization and smart machines “average is over” and the middle classes are shrinking. Ian Morris builds a historical argument about “growth ceilings” that can’t be penetrated without major systemic changes.

In the international debate Japan is seen as an example of things to come. In spite of economic and demographic decline, social order and reasonable labor force participation have been maintained. Therefore the question is, can Japan again be seen as “number one” in adjustment to the New Normal?

LIM, FRANCIS KHEK GEE* (Nanyang Technological University, fkglim@ntu.edu.sg)

Internet Christianity and the Boundary of Civil Society in China

This paper examines whether religion, through a case study of online Christianity, contribute to the development of civil society in China. We discuss how the global interconnectedness of the Internet influences the Christians in China and the diaspora, in terms of communicating their faith, building their communities and furthering their cause. Herbert (2011: 633) has noted that electronic media has enabled a variety of religious groups and discourses across a range of social fields, which tends (even in secularized societies) to move religion out of the differentiated religious sphere to which it is notionally confined in liberal versions of modernity and into various contested public spheres. If this was the case, the Internet and social networking sites may very well challenge many governments’ concern to keep the secular and religious spheres separate in their attempt to maintain social harmony in multi-ethnic and multi-religious societies. Our paper investigates if users of the Internet and social media for religious purposes in China see their activity as contributing to the development of civil society. We proposed two hypotheses: one, while physical spaces can be defined by worshippers and the modern secular state as either sacred or profane spaces, such boundaries are not distinct in online spaces, such as blogs, Internet forums, and social networking sites; and two, to the extent that Internet users engage in social (e.g. religious) and political discourses, boundaries between the social and political domains established by the modern secular state are constantly being blurred and transcended. The answers accrued from this line of enquiry is highly significant in that they can reveal the diverse motivations behind the users’ participation in online religious activities, and hence allow us to analyse the different ways online religious groups relate to the party-state authority as the latter engages in the regulation of religion.

Rediscovery of Asia – from the Value-Based Orientalism to Strategic Universal Asianism

Rediscovery of Asia – from the value-based Orientalism to strategic universal Asianism

The so-called Asian Values debate has long history. In the late 19th and the early 20th century not only in Japan, but also in China as well as other Asian countries (e.g. Korea and India), the Asian intelligentsia had dealt with the modernization. They faced with the essential problem, in which they would want on the one hand to slough off categories of the objectivisation such as a like an orientalism defined by the western, in basic values has to modernize themselves without loss of their own identity, because the process of Asian modernization at that time had lain between Scylla of nationalism and Charybdis of imperialism. For that reason, one of the notorious Japanese historian, Tsuda Shoukichi, and his colleagues had contended with traditional Confucianism and orientalism of linear development embraced by European, and attempted to de-objectivation of Japan and the whole Asia in the name of ‘Great Asia’. On the contrary, Sun, yat-sen, the father-figure of modern China, has attempted with his famous three principles of the people(so-called sam-min doctrine) to find the Asian way of modernization, which consist of democracy, nationalism, and welfareism. Despite of brief contents, he has tried with these principles to pioneer the strategic universal Asianism unless falling into a trap of ‘Great Asia’, which had been identified as the main obstacles in the way of East Asian integration.

Focusing on the past debate inherited in the present to criticize certain version of so-called ‘duality’; one engage in the universal professional norm of journalists as objectivity, the other adopts a viewpoint as a minority in journalism. This study, it can cope with three principles of the people(s) by elaborating the deobjectivation of the journalists from the specific aspect of Asian modernity, this article will examine the dynamics of critical regionalism in Asia from the 1990s to today, and suggest new dimensions of universal Asianism like peace, prosperity of mankind, democratic sovereignty, and socio-cultural integration.

The Profession of Minority Journalists: The Voices of Zainichi (ethnic Korean) Journalists in Mainstream Newsrooms

This study aims to explore how minority journalists follow their profession in mainstream newsrooms. Japanese academic discourses pivoting around journalism and multiculturalism have criticized their mainstream media for preserving a news frame confined to the national boundaries, which assumes the readership is ethnically homogeneous. Although these works offer valuable suggestions, roles of foreigners inside mass media including journalists have not gained much attention as a research interest in Japan. With increasing diversity of residents, however, a demand for minority participation in the media industry slowly emerges; considering effects of minority journalists as members of mainstream media may redeem an absence of approaching minorities as subjects.

Previous studies in America clarify that minority journalists have two natures called ‘duality’, one engages in the universal professional norm of journalists such as objectivity, the other adopts a viewpoint as a minority in journalism. This study defines this ‘duality’ as a structure of conflict between ‘professional identity’ and ‘ethnic identity’, and investigates compatibility of this structure for Japan by interviewing 10 Zainichi (ethnic Koreans) journalists in mainstream media, - one of the biggest minority groups in Japan.

As a result, predominance of ‘professional identity’ over ‘ethnic identity’ is observed in Zainichi case, so there is no conflict such as previous American studies indicate. This absence of conflict reveals that Zainichi journalists do not necessarily pursue ‘ethnic identity’ as their foremost mission, however utilizing this ‘ethnic identity’...
Ciencia, Tecnologia e Industria a Servicio De La Inclusion Digital y Social

En Brasil existe en torno a 3 millones de PCs, o sea, personas en sillas de ruedas con parálisis cerebral. Actualmente nadie puede decir que está inserto en el mundo y que puede interferir en el mundo o sea fuera de las grandes redes sociales en el internet. Para enfrentarla fue desarrollada una pesquisa de sociología con integración de tecnologías digitales y un nuevo desarrollo, enmarcando una red entre agencia de fomento de pesquisas, fábrica de productos de accesibilidad, Universidades, familia de los pacientes, terapeutas, escuela y poder público. El objetivo final de la pesquisa era un producto industrial acoplado en una silla de ruedas postural y de procesos técnicos especialmente configurados para realizar inclusión digital y social de jóvenes en silla de ruedas y que no pueden mover los miembros superiores.

Por fin, desarrollamos una rápida inclusión.

Refocusing Citizenship in Contemporary Brazil: The Effectiveness of Democratic Institutions

After the highly enthusiastic expectations raised by the re-democratization of Brazil in the 1980s, contemporary sociologists and political scientists are more likely to analyze the effectiveness of political institutions that were created by the democratic constitution in 1988. This work compares the democratic effectiveness of two of these institutions: the conselhos (councils) and the ouvidorias (ombudsmen). Each of them sets a particular way of dealing with patrimonialism, a traditional disease in Brazil. The research results indicate that both institutions present considerable limitations to democratic governance inasmuch as they reproduce traditional practices they were supposed to confront. In spite of that, the institutional frame of conselhos is better adapted to absorb social control practices. The work proposes a systematic reflection on the relations between the institutional foundations of these institutions, the role played by them in politics and the individual perceptions of their agents. The experience of conselhos and ouvidorias are also analyzed in the light of the broader debate on the reformulation of conventional patterns of political representation in contemporary Brazil. The main challenge to improve their democratic effectiveness is to encompass political autonomy and accountability mechanisms in their formal dispositions and daily activities.

Social Justice, Philanthropy and Ecology: The Symbolic Legacy of Brazilian NGOs

This work seeks to analyze the longstanding symbolic heritage that frames Non Governmental Organizations’ experience in Brazil. The main objective is to identify the social values which give sense to the very notion of NGO by analyzing its variations of meaning throughout history. Firstly, I present a macro sociological approach in order to deal with the emergence of the NGO field in Brazil. The connections between church, state and society for the promotion of social welfare generated the three major social values that confer meaning to the NGO's experience: social justice, philanthropy and ecology. The first two have a common historical origin, the organizations of lay Catholics which were present in the context of promoting social welfare in Brazil since the colonial period. In turn, the consecration of the value of ecology concerns a different context, dating mainly from the decades of 1990 and 2000. I also build on a micro sociological approach in order to interpret these values in the light of the individual trajectory of Herbert de Souza, known as Betinho, the major actor in the formation of these institutions. Betinho's biography presents individual frames to the macro-historical process of transformation of the value of Christian charity into those of social justice and philanthropy. The research results indicate the social values of social justice, philanthropy and ecology as the main cultural codes that give meaning to the contemporary phenomenon of NGOs in Brazil.

Money Matters for Early Childhood Education: The Effects of Education Subsidy on Preschool Child Readiness in Taiwan

For many children, high quality early learning environment can provide lots of the experiences and skills that help build a foundation for later school success. Among the numerous measures of early childhood education and care quality, some closely linked to later success in school are those which assess school readiness. Many researchers have been claiming that education subsidy is a significant factor related to children's learning and development. In 2010, the Taiwan authority announced "The Free Education Program for Five-Year-Old Children". This program which was expected to benefit a larger ratio of population revealed the importance that Taiwan government has attached to early childhood education. However, little information is available about “the effects of this program's subsidy on preschool children's school readiness" and “can this program's subsidy really minimize the gap between disadvantaged and advantageous children”. This study used two waves survey for 1073 preschool students who are 5 years old from Eastern Taiwan to construct a longitudinal analysis, in order to examine the relationships between subsidy of the program and the development of children's readiness. The results showed that subsidy of the free education program has significant influences on children's school readiness development. Preschool children who are form lower family socioeconomic status are more likely to accept extra subsidy of free education program, and further will reduce the school readiness gap with their counterparts of non-low family socioeconomic status. That is to say, the subsidy of free education program for five-year-old children in Taiwan really diminishes the school readiness developmental gap between disadvantageous and advantageous children. The implementations of the findings for theory, practice, and preschool education policy are also discussed.

That is to say, the subsidy of free education program for five-year-old children in Taiwan really diminishes the school readiness developmental gap between disadvantageous and advantageous children. The implementations of the findings for theory, practice, and preschool education policy are also discussed.
were conducted with 38 academics in the Field of Education from across Taiwan including 17 full professors, 10 associate professors, and 11 assistant professors. P. Bourdieu’s field theories, M. Burawoy’s theory of voluntary servitude, and neo-liberalism that has become globally dominant in higher education policies were referred as the primary theoretical frameworks.

The conclusions are as follows.

1. In terms of Education Faculty members’ perceptions, the SSCI-oriented academic evaluation systems were established top-down and followed in the logic of natural science. The main purpose and underlying logic of the SSCI-oriented academic evaluation systems are against the professional scholarships of Education, and the resistance of faculties thus is inescapable.

2. What Education Faculty members propose to modify the SSCI-oriented academic evaluation systems reflects authentically their calling of re-emphasizing the education core values.

3. The research contributes mainly to unearthing the difference of practical concerns and responsive strategies amongst full, associate, and assistant professors. Theories of field, capital, and social space proposed by Bourdieu present a substantially analytic framework, while neo-liberalism and Burawoy’s voluntary servitude theory offer modest explanations.

4. The research provides delicate analyses of relevant factors in the institutional field, although the difference within gender, university types, and disadvantaged positions are not yet systematically discovered. The relevant factors in the institutional field include the messages embedded in and transferred from the institutional practices, and the hidden rule of the review process. The factors explain why different faculty members share the same response.

Identity Formation and Social Relations on Facebook for Taiwanese College Students

The purpose of my research is to reveal how Taiwanese college students express who they are through Facebook. Based in Taipei, Taiwan, this study applied a multi-sized approach and methods including interviews and textual analysis to explore the identity work and social relations on Facebook among college students in Taiwan, which exists under the surveillance of unseen audiences and the influence of technocapitalism in the context of cultural globalization and consumerism.

Facebook has gradually played a substantial role in students’ college life due to cultural globalization facilitated by information and communication technology, and the international mobility of higher education. Specifically, Taiwanese youth culture embodies a hybrid of American, Japanese, and Korean popular culture because of Taiwan’s historical context and geographic location. This cultural phenomenon thus reflects not only the global influence of American site Facebook but also the cultural interflow within the Pacific Rim area between Taiwan, Japan, and Korea.

32 participants were recruited from the same department of two universities for analytical purposes, as they offer similarities and differences that make for an interesting comparison of dissimilarities not only in urban and rural areas but also in public and private universities. In each university, 8 first-year and 8 fourth-year were recruited to compare changes of identity formation influenced by each university over time. Within each year, there were 4 male and 4 female students for gender consideration.

The conception performance introduced by Goffman, distinction proposed by Bourdieu, and surveillance developed by Foucault are referred as the primary theoretical frameworks in this research. The preliminary findings are as follows.

1. It’s all/not only about having fun?
2. Awareness of image management vs. ordinariness;
3. Intersection of gender and class.

The results will be situated in debates on subculture versus post-subculture within youth cultural studies.

The Global Crisis, International Migration and Social Change: Increased Needs for Employment Flexibility and Its Consequences for Social Inequalities

The recent global economic down-turn, resulting in insecure and precarious labour markets, is likely to intensify the societal transformations. The author utilizes the mobility paradigm or integrates it with other perspectives of inequality, such as global cultural and political economy. The paper examines mobility as the paradigm for understanding social life, and explores these new migration situations as well as the attempts of management of this new migration landscape. The author articulates three analytic approaches of migration: the first one focus on spatial dynamics bound to the international mobilities of populations whether they are transnational or transborder; the second one, from working sites, consists in analyzing the strategies of mobility and migration that structure labor markets; the third one deals with the temporal dimension of migration, in its family and social components. The paper that should address include: (1) the uneven embeddedness of transnational migrants in the societies to which they are connected transnational- al migrants’ adaptation strategies to become embedded in more than one society, (2) constructions of cultural hybridity and/or cosmopolitanism as strategies to attempt to maintain and/or increase social integration in more than one society, (3) the issues that arise for transnational migrants when they have crossed national boundaries to live elsewhere in terms of not being or feeling integrated in either one society. The author concludes with a summary of the main arguments and recommendations. The methods of the study include literature review and survey research.

Youth Education-Work Nexus and New Configuration of Social Risks. Young People, Inequality and Youth Work

This paper examines the education and work nexus in the lives of young people to demonstrate varied forms of potentialities, vulnerabilities, and types of resilience, and explores experiences of youth in terms of how education and work are integrated and/or disintegrated. The author examines the nature of shifts occurring in social policy thinking and practice, examines the analytic details of the labour market reforms, that share the same logic of selective exclusion for younger cohorts, and then considers their social, occupational, economic, and demographic consequences to depict the inequality scenarios can be predicted for the local communities. The paper is structured according to a number of key topics. (a) to seek what social, economic and institutional factors account for the different degrees of social vulnerability present in a young population, (b) to explore the consequences and unintended consequences that globalization has had on labour market outcomes in different phases of the life course, (c) to analyze with youth in austerity and young people’s responses to inequalities, (d) to understand economic insecurity, youth poverty and social protection, (e) to engage youth discourses in potentialities, vulnerabilities and resilience, and to determine how well these themes apply or unsuitably capture the nature of education and work structures impacting contemporary youth, (f) to understand the development of social inequality structures in the course of increasing needs for employment flexibilization, and how the process of globalization has influenced life-course patterns and inequality structures in the local communities. The author would like to debate the results of qualitative and quantitative empirical research, but also focus on the theoretical concepts used in the analysis.

The Unequal Pathways to Adulthood in China: A Holistic Approach of Assessing the Role Transitions

Rapid economic and social changes coupled with instantaneous changing policies have had impacts on the ways in which young adults structure their pathways to adulthood in China. Different from previous studies on demographic markers in young adulthood in China where the focuses are on specific life events, our paper applies a holistic approach to the transition to adulthood based on the 2006 and 2008 waves China’s General Social Survey. This study enhances the literature by exploring the ways in which social class and structural factors influence the occurrence and timing of major life events as a whole. We have distinguished five prototypical pathways to adulthood. Clear differences are found in the trajectory.
rying types between four subgroups defined by gender and household registration status, as well as between father's social status. We also examine the evolution of transition using the typology built to reflect changes in both demographic and occupational spheres.

Governing Natural Disaster: State Capacity, Democracy and Human Vulnerability

The paper discusses how state capacity and democracy interact in affecting human vulnerability of natural disasters. For rule and revenue, political elites have the incentive to build up relevant state capacity preventing disaster impacts on the population and property. The incentive of the elites and the capacity protecting citizens shall be stronger under democratic competitive elections. Thus, strong state capacity effectively reduces human vulnerability especially in democracy. A panel data of 150 countries from 1995 to 2000 are used to illustrate the relationship between state capacity, democracy, and the impact of disaster. The empirical findings from the multilevel models imply that strong state and democracy are associated with the lower disaster death and victim tolls.

Politics Of Production In a World Factory: The Global Fragmented Despotism In Foxconn

In this article we describe some special characteristics of the world’s greatest factory (in terms of the number of employees) belonging to the Taiwanese enterprise, Foxconn group in Shenzhen, China. We argue that the factory regime has been shaped by three key elements: (1) internal globalization: it refers to the global brand names, especially the Apple group’s authority and interventions of the production process in the factory; (2) organizational fragmentation: the fragmented structure of corporate governance, that is, the vertical fraction of business groups (BGs) and the horizontal segmentation of employees belonging to different nationalities. The fragmentation led to the strong autonomy of BGs and incomplete information between BGs; and, (3) workplace despotism: the surplus of Chinese low-skilled rural workers enforced the arbitrary managerial power on the shop floor. According to the three elements, we name the factory regime as the “global fragmented despotism.” The organizational structure of world factory may be helpful for explaining Foxconn’s poor labor conditions and workers’ suicides happened in 2010.

Visualizing Voices of Women

There has been a gendered shift in migration from men to women in the past several decades. This feminization of migration is particularly noticeable with the exodus of Asian women leaving their countries - to serve as nurses in the United States, as domestic workers in Hong Kong or the Middle East, as hostesses or sex workers in Japan. A precious commodity and valuable export for their countries, these women are compelled to migrate throughout the world, duty-bound to abandon their families in search of economic opportunity. Migration patterns have been studied and established regarding this gendered phenomenon. However, the main objective of my research is to explore the global feminine experience using the methods of visual anthropology and portraiture by working directly with individuals. What are the personal stories behind these women, and how can offering the means of self-expression contribute to their empowerment and to their collective experience? The act of creating self-portraits will offer these women a chance to express themselves creatively and visually while gaining technical skills. The long-term objective is to contribute to their sense of empowerment and awareness of their rights as women and as workers through this process of self-reflection. Through an intimate process of gaining trust and access to different communities of migrant workers, I carefully build and cater a specific format for each group that will encourage them to share their stories. Local and migrant sex workers in Hong Kong will visualize their own voices by participating in making media themselves. This paper will examine the results of this study and the effects of these personalized narratives and the role it plays on the awareness of gender and migration at large.

The Effects of Family Support and Friend Support on Adolescent Functioning: A Taiwanese Case

A number of factors affect adolescent functioning. This study investigates the respective contributions of perceived support from family and friends to various adolescent functioning, including deviance, depression, and self-esteem. Although previous studies have examined the relationships between family support, peer support, and adolescent functioning, these studies have some limitations, such as using western samples (e.g., U.S.), and cross-sectional data. Using the Taiwan Youth Project (TYP), we employed latent growth curve model to explore how these two supports influence adolescent functioning. We expect to see that adolescents who experience high level of family support may have better functioning (e.g., high self-esteem and low depression) than adolescents who have low level of family support. We also expect to see similar results when support from friends is in the model. In addition to the individual effect from the two sources of support, we also investigate the moderating effects of these two supports on adolescent functioning. We expect to see significant interaction between these two supports such that high level of family support may have stronger effect on adolescent outcomes when friends' support is at high level. In contrast, low level of family support may have negative impacts on adolescent functioning even when the level of friends' support is at high level.

A Multi-Level Analysis of the Effect of Age on the Female Employment Rate in Japan and Taiwan

Do women overcome the limitation of their life cycle in Japan and Taiwan? Scholars have seen that the relationship between female employment rate and age is an M-shape in these two countries. More women enter the labor market after graduating from high schools or colleges, leave labor force due to marriages and/or childcare, return after their children are somewhat grown, and leave for retirement. Some scholars assert that this M-shape reflects the dilemma between families and jobs for women, while others believe that the curve is mainly due to cohort differences in women’s behaviors. The OLS regression model cannot capture the independent effects of age, period, and cohort because of statistical issues, and thus we need Age-Period-Co-hort (APC) model to do so. Using this method, we attempt in this paper to clarify how age, period, and cohort each affect female employment and whether women’s participation in the labor force correlates with their family obligations or co-hort transitions of women in Japan and Taiwan.

This research indicates that the M-shape is more suitable to describe relationships between female employment and age in Japan. The female employment rate has a dip around the late twenties and early thirties. This indicates that Japanese women choose to leave the job market because of marriages or childbirth and they will later return to work when their children begin to attend schools. Nonetheless, the present research produces more like an inverse U shape in Taiwan. Compared to their Japanese counterparts, Taiwanese women nowadays rarely give up jobs once they enter the job market. Taiwanese women’s re-entry to the labor force around 35 to 44 years old was observed in 1980 through 1995 or so. Since 2000, however, this re-entry has not been readily observed.

Rigidity, Culture-Related Conflict and Depression

Since martial law was abolished in 1987 in Taiwan, the rate of depression has dramatically increased. The reason for this remains uncertain. Some researchers think that this phenomenon might be related to the psychological conflict be-
deeply the new 'Modernity'. Postmodernity is usually defined as a period of cultural and intellectual change that marks a shift away from the values and assumptions of modernity. It is characterized by a deconstruction of established truths, a questioning of the stability of meaning, and a blurring of the boundaries between the high and the low, the sacred and the profane, the art and the everyday. This period of cultural and intellectual change is often associated with the rise of consumer culture and the decline of the industrial system. The term 'Postmodernity' was coined by the sociologist Jean Baudrillard, who argued that the modern era was coming to an end and that a new era of 'Postmodernity' was emerging. This era is characterized by a dissolution of the modernist project and a new emphasis on the fluidity and contingency of reality. 

In the 1980s and 1990s, the concept of Postmodernity was widely discussed and debated, and it has had a profound impact on the way we think about the world and our place in it. It has been influential in the fields of art, literature, music, and film, as well as in the social sciences and humanities. The idea of Postmodernity has been criticized for its relativist and nihilist tendencies, but it has also been praised for its ability to capture the fluidity and complexity of contemporary life. Postmodernity has been described as a time of mass cultural production and consumption, a time of hyperreality and simulacra, a time of the dissolution of truth and the rise of spectacle. The concept of Postmodernity has been hotly debated and remains a topic of ongoing discussion.

*Changing Water Cultures To Achieve Water Sensitive Cities: The Importance Of Communities and Households*

Achieving the vision of water sensitive cities in Australia (and elsewhere) is a complex task involving simultaneous social, institutional and technological change. In this paper I review key concepts and findings from the socio-cultural literature on domestic water cultures and argue that four key domains need to be considered to enable positive change: 1. more flexibility in systems and infrastructures so the public could escape ‘path dependency’ including flexibilisation of large scale supply and demand-side management; 2. decentralization of water governance systems, including water policies and pricing; 2. The development of water sensitive practices in local communities and households. Bringing water sensitive practices to the core of community life in diverse public spaces, enabling community building around local water projects. Developments would take geographic diversity into account at the same time specific groups are defined as being both at risk and being a risk to societal order. With this background there seems to be reason for returning to an old sociological debate on the status of social unrest. During the 1970s, Herbert Blumer (1971; 1978) engaged deeply in the nature and role of social unrest, arguing that social problems are fundamentally products of a process of collective definition rather than phenomena existing independently as objective social facts. In this paper I return to Blumer’s writings aiming to find out what he has to offer in a discussion on the present development. In addition I describe through a Foucauldian lens the process through which social unrest is made manageable using the technology of risk.

*Managing Social Unrest through Risk: Reintroducing the Debate*

Sweden has in no way been spared from riots similar to those that took place in Parisian suburbs in 2005 and in the UK during 2011. Two events well known to the Swedish public were the manifestations of civil unrest in Malmö during the winter 2008 and Stockholm 2013. Recently municipalities in Sweden have begun to include the notion of social unrest in their local risk- and vulnerability analyses. Hence, social unrest is placed at the same ontological level as for example natural and manmade disasters, pandemics and climate change. Put differently, social unrest is managed by being represented as a risk phenomenon which consequently legitimizes specific measures to reduce the potential threat of societal disorder. Within the horizon of Foucauldian theorizing risk is employed here as a technology allowing ‘calculations about probable futures in the present followed by interventions into the present in order to control that potential future’ (Rose 2001:7). In documents pertaining to local risk- and vulnerability analyses social unrest is thus considered a phenomenon with an existence in itself, while at the same time specific groups are defined as being both at risk and being a risk to societal order. With this background there seems to be reason for returning to an old sociological debate on the status of social unrest. During the 1970s, Herbert Blumer (1971; 1978) engaged deeply in the nature and role of social unrest, arguing that social problems are fundamentally products of a process of collective definition rather than phenomena existing independently as objective social facts. In this paper I return to Blumer’s writings aiming to find out what he has to offer in a discussion on the present development. In addition I describe through a Foucauldian lens the process through which social unrest is made manageable using the technology of risk.

*Religious Socialization and Dimensions of Spiritual Violence*

Young adulthood is a critical period of life in religious communities, with regard to whether a person stays in a community or diverges from it. The continuity of many Christian movements is based on not only the recruitment of new people, but rather the fact that a person remains in the community she or he has been raised in. Joining a religious community in adulthood constitutes a rather dramatic change in one’s life. The situation is definitely different when one is born into a religious community: i.e. a child is socialized, or brought up in a religious community from birth. Socialization in religious communities takes place through concrete activities as well as the spiritual teaching undertaken by the community. In addition, the socialization of children and young people takes place with the help of family, relatives, friends, and acquaintances.

The socialization of a young person in a religious movement can occur without problems. In this presentation however, the focus of the examination is in those dimensions of socialization which may show up as being problematic for young persons. Socialization is analyzed as a potential form of spiritual violence, which is defined as violence and the physical or mental violence articulated through one’s belief or existence in the religious community. It is an exercise of power against members of the community, which reduces the ability to determine one’s own future. Birth into a religious movement is not in itself a spiritual violence, but in the socialization process there are many factors that are relevant to the emergence of such violence. Empirically, the presentation focuses on two religious groups: the Jehovah’s Witnesses and also Conservative Laestadianism, the largest revival group in Scandinavia. As dimensions of spiritual violence, the presentation examines themes of human rights, “non-alternativity” and the asymmetric use of power.

**LINKE, VER** (Bielefeld University, vera.linke@uni-bielefeld.de)

Beck describes modern societies as preoccupied with the management of novel risks. Recently, this notion of risk was widened by the idea of risk-based regulation as a rational strategy of governance: risk assessments justify the selective spending of scarce resources on extremely harmful events, as well as withholding investments for less significant events. The focus on risk in decision-making represents a paradigm shift away from the idea that government ought to ensure ‘security’. Even risk assessments can be argued to have been redefined by the once central notion of safety (as a dispositional of risk) is no longer relevant and is substituted by precaution. A second observation concerns the non-essentialist character of risk: Michael Power has spoken of the “risk management of everything”, meaning “that any event can be transformed into a risk, attributed probability and damage values”. The concurrence of both observations requires a new interpretation of risk-based regulation. The focus on efficiency on the one hand and the comprehensive use of risk assessment on the other, raises the issue to what extent probabilities can still be used as a governance tool. Methodologically, there is a tension between the all-inclusiveness of possible harms and the necessity for offsetting all single risks. As a universal tool of description, risk-analysis would need to be able to prioritize between different types of risk. The use of traditional hazard-based assessment strategies in risk-based regulation could be an indication to this unresolved tension.

In explaining and developing this position, the paper draws on empirical evidence from UK regulatory agencies. We review the basic statements of regulatory policy, the Hampton report and key political documents of regulatory agencies like the Food Safety Agency) to investigate whether the spreading of risk analysis actually hampers the use of risk-based management or if it contributes to the expansion of risk management.

*Digital Use As a Mechanism to Accrue Economic and Symbolic Capital: A Bourdieusian Perspective*

The digital divide is a social side effect of the information age. The technological mechanisms enabling people to band together also serve as a wall to separate and stratify populations that have access to it, and the skills required to acquire information through it, and those who do not. This study examines the "second level" digital divide, which characterizes the surfing patterns of those connected to the internet, between the Jewish majority and Arab minority in Israeli society. The goals of this paper were: to examine the digital divide between these two groups; to examine the connection between digital uses and economic and symbolic capital and to characterize the link between the digital divide and social stratification.

The study is based on the Israel Central Bureau of Statistics Annual Social Survey data, collected by means of face-to-face interviews conducted in 2011 among 5,972 interviewees aged 20–65 years old.

Jews were found to have an advantage over Arabs in terms of internet access and capital-enhancing digital uses. Capital-enhancing digital uses were found to be useful for predicting between-group gaps in income level, beyond the impact of classic socio-demographic factors such as education and language proficiency. Moreover, capital-enhancing digital uses were the factor that transformed the gap in social benefits at the workplace between Jews and Arabs from insignificant, after controlling for other socio-demographic and labor market variables. In addition, a positive correlation between capital-enhancing uses and occupational prestige was found. This finding indicates that the investment in digital literacy in the Arab sector in the long run may contribute to narrowing gaps on a national basis in Israeli society. However, digital technology can also serve as a mobility channel for the Arab minority group to attain social and economic equality with the Jewish majority.

*Resisting the Neoliberal Turn in Swedish Housing Provision*
Sweden is commonly regarded as a country with some of the best housing standards in the world. The provision of 'good housing' has been at the core of the Swedish post-war welfare model, but, over the past decades, a systematic process of marketization has led to increasing housing shortage, and the lowering of housing standards, particularly affecting low income groups. A large amount of housing stock is also in urgent need of renovation. Those who do not have the possibility to buy a dwelling are dependent on a shrinking rental market due to the systematic conversion of rental housing stock to tenant-owned housing, and the current reluctance of developers to start up new building projects. As a result, the Swedish housing system has been thoroughly deregulated from the 1990s onwards, to gradually become one of the most liberal market-governed housing markets in the Western world (Hedin et al. 2012, p.444). The lack of national government interventions and the absence of a national urban policy have led to an increased debate within private sector, tenants organizations, as well as the growth of new social movements based on housing issues. The social movements articulated around housing provision are fighting against the fear of 'renovicition', territorial stigmatization and the difficulties for young people to enter the housing market due to the increased housing shortage.

This article will shed light on the organization, arguments and reception (by authorities and police) of these new social movements. We will give examples of the debate and present results from an ethnographic study based on interviews with activists from several marginalized housing areas in Sweden. We argue that this dysfunctional housing market is impliedly a socio-spatial, gendered and racial segregation within the Swedish urban landscape.

Confidence Building and Stakeholder Involvement in Nuclear Waste Management. the "Glocalization" of Social Acceptability

In most of the nuclearized countries, the public agencies in charge of the development of a technical solution for the safe management of the radioactive waste were confronted to a strong opposition coming from anti-nuclear movements and local populations. These movements of contestation paralyzed all the decision-making processes, leading the different agencies to transform their approaches and integrate what they call the "social aspects" (or the "problem of social acceptability") of the waste into their research agenda.

In this context, this paper examines the way in which the nuclear sector has developed different strategies to react to this generalized contestation. It precisely analyses one of these strategies: the setting up of the "Forum for stakeholder confidence (FSC)". The FSC is an international arena that was created in 2000 within the Radioactive Waste Management Committee of the Nuclear Energy Agency (NEA) at the OECD. The FSC gathers representatives from different national nuclear agencies and aims at facilitating the sharing of experience in order to ensure an effective dialogue with the public with a view to strengthening confidence in the decision-making processes.

Drawing from qualitative fieldwork conducted in Belgium, document analysis and non-intrusive participation in meetings of the FSC, I will argue that the setting up of this international arena, in his ability to centralize all the experiments made regarding public participation and stakeholder involvement in different countries, and, therefore, in his ability to develop an diffuse "good practices" of public participation can be seen as a "strategy of glocalization" as defined by Ulrich Beck (2002) as the spreading of multi-level strategy that is almost invisible at the local and national level, seems to be very effective in preventing the apparition of new wave of contestation and will durably alter the social agency of local actors.

The Role of Social Scientists in Dealing with the “Social Aspects” of High-Level Radioactive Waste Management in Belgium. Will Sociologists Tame Resistance?

In most of the European countries that are confronted with the problem of nuclear waste, an important shift in the way decisions are made seems to have recently taken place, labeled by some scholars the ‘participative or deliberative turn’ (Lederer, 1994; Glanville, 2008; Barthes, 2008). While technocratic rationales (based mainly on performance assessment and quantitative risk analysis) prevailed until the early nineties, they have proved to be unsuccessful and reached stalemate, leading to a paralysis of decisions-making procedures. Experts identified the “societal aspects” of nuclear waste management (mainly the emergence of new environmental contestation) as the main cause of this paralysis and set up new tools of decision (e.g. SIA, local partnerships, consensus conferences) to deal with this new issue.

The present paper examines this “participatory turn” in the Belgian case. I identify the emergence of a new consensus among policy makers on how to deal with the “societal aspects” of high level waste management: it is claimed that the problem can only be properly handled if the expertise of social scientists is mobilized. Collaboration between nuclear and social scientists is therefore called upon by the actors of the nuclear sector as a way to unblock the decision-making process on nuclear waste.

Adopting a neo-institutionalist stance, I analyze the genealogy of this new kind of expertise in the field of nuclear waste management, tracking the idea of bringing social scientists in the process back to controversies in the late 1940s in the US. This genealogical account enables me to argue that this use of the social sciences can be seen as a way to maintain the prominence of technocratic rationality in participative decision-making processes.

Disasters inevitably expose social relationships and processes that in more normal times are harder to discern. The 1995 Great Hanshin earthquake inspired attempts to address the multilevel governance failures exposed by that disaster. However, neo-liberal narratives still focus on technical and individual responses at the expense of engagement with any broader social context.

In 1995 older buildings in low rent areas fared worst and poorer residents faced extended periods in temporary housing. In the 2011 Tohoku triple disaster buildings resisted a more severe earthquake but extensive tsunami protection measures failed. The third component of the disaster was exacerbated by institutional complacency in the administration of nuclear power.

The immediate mobilisation of defence force resources reflected lessons learnt in the hiatus following Hanshin. A flexible, combined military command structure developed to coordinate overseas humanitarian intervention was rapidly redirected to the co-ordination of domestic relief operations.

However, the focus remains on physical components of resilience even though technological interventions in the form of tsunami barriers actually eroded traditional aspects of social resilience such as nursery rhymes telling children to ‘go to the hills’.

Effective resilience requires a social dimension which in turn can only be developed in a bottom-up and inclusive fashion. Communities in the area affected by 3/11 created a range of short and medium term fixes for the loss of infrastructure and logistic support, the longer term response of formal governance structures is less clear. As the third component of the triple disaster resolutely fails to respond to request for intervention, a combination of institutional hiatus becomes evident.

This paper draws on recent literature on ‘place branding’ and ‘place leadership’ to identify the creativity in national and international grass roots responses, not least in support of the recovery of identity and location, that offers cause for optimism.

This paper examines attitudes towards education and explores informal educational structures inside the urban community of anarchists and DIY (Do It Yourself) activists. Informal education is one of the parts of lifelong learning that imply the process of gaining knowledge and skills while individuals intercourse with their social environment. Many anarchists tend to criticize prevailing educational practices and maintain the concepts of libertarian pedagogy and postmodernist critique of formal education. They suggest that governmental institutions reproduce social inequality and constrain people from getting knowledge in order to create governable and disciplined subjects. My findings show that anarchists realize their own learning needs and carry out appropriate learning activities that are connected with their values and beliefs. Offering opposition to formal education and suggesting authentic ways of knowledge and skills producing and sharing (distro, workshops, open sources, etc.), anarchists embody them into their daily regime. Their rhetoric, deeds, consumption practices and forms of communication are tightly connected (in dialectical way) with those attainments that are distributed by channels of anarchistic knowledge and skills sharing.

This paper is based on the case study of young people (age 17-30) who identify themselves as anarchists. The empirical data includes 28 in-depth interviews (from one up to five hours), field diaries (app. 100 pages) and video files (more than 20 hours of shooting). The case study was conducted within the framework of international MYPACE (Memory, Youth, Political Legacy and Civic Engagement) project.

The Marriage Squeeze for Aboriginal Men in Taiwan: The Impact of Ethnic Intermarriage Between Aborigines and Han Chinese People

Before 1970, the main stream of ethnic intermarriage in Taiwan was the elder veteran from Mainland China marrying aboriginal women, but the pattern of ethnic intermarriage between aborigines and Han Chinese has been changed due to a new economic transformation. In the past three decades, aborigines moved from their native villages to large metropolitan areas increasing and their spatial segregation from Han Chinese was decreased substantially. Accompanied by the population redistribution, the intermarriage rate of aborigines and Han Chinese increased, and many families with mixed origin were born. The marriage of aboriginal men declined. Although men and women both leave their hometown, the shortage of marriageable partners only appeared in specific local marriage markets, i.e., their hometown areas in the mountain or the peripheral southeastern coast. The spatial distribution of indigenous population become unequal and sex ratio is highly skewed in some areas due to the migration selectivity of sex and education. The propensity of migration of aboriginal women is higher than men and the well-educated tend to stay in urban areas where they are more likely to marry Han Chinese. With the social constraint of the marriage gradient and mating threshold, the less educated aboriginal men who stayed in hometown are compelled to stay single due to the shortage of marriageable women in local marriage market. Using the 2000 Taiwan population census, we try to reveal the complex relation among intermarriage, migration and marriage market. The ultimate goal is to provide some empirical evidences to revalue the impact of ethnic intermarriage in the perspective of marriage squeeze.

Conjectures on Labor-Environment Alliances

This paper examines different historical contexts under which labor and environmental movements have taken their current shapes, and offers some conjectures about possible future trajectories. We put forth a broad schema for explaining the character of labor and environmental movements according to two historical determinants: the historical strength of organized labor, and the overall character of the state (i.e., whether or not it bears an authoritarian legacy). In contexts where organized labor is historically strong and remains dominant, environmental movements are more likely to incorporate livelihood and class politics issues in their agenda, cases such as India and Brazil. However, once the hegemonic labor movements show signs of decline, environmental movements are likely to engage in fierce ideological competition against the dwindling left – cases such as Germany, England and Korea. This competition might take two different paths: the greens attempt to absorb the left (e.g., Germany), or the greens in small no small measure cut themselves off from the leftist tradition and do so intentionally (e.g., Korea). In contexts where organized labor is chronically weak, environmental movements are likely to take the helm of social movement sector (cases such as the US, Japan, and Taiwan), and more likely to emphasize the purely ecological dimension of environmentalism and to jettison the class politics embedded in many traditional environmental controversies. We close the paper with a description of possible future paths of convergence and divergence of labor and environmental movements across the world sectors we have described.

Chinese Elite Higher Education and Reproduction of Educational Inequality

In 2004, China adopted a novel strategy for admission to elite higher education as a reform of the traditional method of enrollment through Gaokao examination only. This new strategy is called Independent Freshman Admission (IFA, or Zi Zhu Zhao Sheng in Chinese). Whereas ample evidence exists for the social disadvantages of people with low SES in the ability to access and complete elite higher education in Westernized countries, research on educational inequality at elite universities in non-Western countries has remained scarce. This research, using administrative data from one Chinese elite university in the years 2007 and 2008, presents behind-the-scenes details of admission processes at Chinese elite universities for the first time and demonstrates the impact of these processes on educational stratification in a radically changing society. Significant associations were found in the IFA selection process between students’ socioeconomic origin and whether they passed the multi-stage selection process to access tertiary education. The new IFA system favors students from higher socio-economic origins at the expense of students from lower socio-economic backgrounds in admission to elite universities. Furthermore, this institutional reform of elite higher education will likely have a long-term impact on the social origins of the intellectual elite and changes in social structure in Chinese society.

Inequality, Government Trust and Election Participation

It is a hot topic that how to promote Social transformation of the trust in government and election participation in China. This paper in China. This paper analyzes the relationship of inequality, government trust and election participation and why people take part in conventional political participations. The author argues that government trust plays an important role in conventional political participation, but contrary to more traditional models, there is regional disparity of the conventional political participation in China. In addition, the authors posit that government trust is strongly affected by perceptions of income inequality and social preferences for income inequality not real economic inequality. Using the data of Chinese General Social Survey 2006 (CGSS2006), the author presents Hierarchical Linear Modeling (HLM) on the effects of inequality and government trust on the conventional political participation, controlling for other related factors. Finding indicates that inequality is the strongest determinant of government trust and that government trust has a great effect on conventional political participations.

Locality and the Moral Inequality of MDMA Users in Taiwan: A Case of a Newly Democratized Country

The ‘normalization thesis’ has been developed to explain the massive increase of drug consumption in recent years, because of the growing popularity of dance/ club culture within the young population. Different from most of the criticism of drug consumption in recent years, because of the growing popularity of dance/ club culture within the young population, this paper takes a passive stand without the intention to do with the moral centre. By way of the figurational approach, this paper concludes that there exists two kinds of individualization developed along with the democratisation, and their capacity to challenge the moral centre is unequal.

LIU, NANN* (Ochanomizu University, rabbit0870411@gmail.com)

Relationship Among Fathers’ Occupation, Fathers’ Parenting Behaviors and Children’s Academic Performance during Early Adolescence in Modern China

The purpose of this study is to clarify two points: (1) whether or not there are differences in parenting behaviors of parents depending on strata and (2) how parenting behaviors of parents influence the accomplishment of children’s education. By incorporating cultural capital in Bourdieu’s theory of reproduction, this research, an empirical study was conducted by putting together a study concept of “economic strata of fathers (occupations) → fathers’ parenting behaviors → accomplishment of children’s education” by considering parenting behaviors of parents as cultural capital. The subjects included 746 groups of second-year high school students and their fathers and mothers, and a questionnaire survey was conducted in the rural part of the Shangri Province in 2009 and the urban area in 2010. The most important aspect as a result of analysis was the strong influence of the “father’s occupation” on academic performance of children. Therefore, it was successfully confirmed that economic strata cannot be ignored and Bourdieu’s theory of reproduction can be applicable to society in China, with a significant influence from fathers’ parenting behaviors on self-esteem and academic performance of children. First of all, parenting behaviors of parents in the blue-collar stratum including farmers and temporary workers have a weak influence on self-esteem and academic performance of children, with a higher reliance on home education than school education. On the contrary, fathers in the white-collar stratum who work for government institutions, corporations and organizations gain a relatively higher income than the blue-collar stratum and emphasize more on parenting; therefore provide more home education to children. Self-employed fathers have higher income than blue-collar and white-collar

Gender, Law and Legal Professions in China

Despite East Asia's efforts towards integration over the past two decades, political and historical antagonisms and sovereign disputes among powers and stakeholders in the region have greatly hindered the process. Besides direct conflicts among powers, this author argues that the difficult state of community building in East Asia is also a result of the securitization of economic integration by respective states in the region, particularly by great powers such as China.

Based on the concept of securitization developed by the Copenhagen School, this paper examines the case of China and how Chinese discourse in the new century has reshaped state relations in East Asia. Specifically, this author seeks to explain how China's discourse on economic security conflict with its parallel discourse on the establishment of a harmonious regional order. The impact of China's mixed discourse is to re-open the dual debates of Beijing's peaceful rise vs. potential challenge and Beijing's maintenance of status quo vs. lean towards revisionism. The debates entail the possibility of China's re-introduction of a tributary-like system in East Asia, which has significant implications for state relations in the region.

The purpose of this paper is to explain how China plays a critical role in the regional community building process and the connection between securitization and the development of integration in East Asia. This paper proceeds in five parts: part one lays out the main argument of how securitization influences community building and integration in East Asia; part two reviews Chinese foreign policy in the new century; part three traces Beijing's discourse and its implications for regional integration; and part four elaborates on the implications for state relations in East Asia and the response of neighboring states towards China's behavior.

Sell the Cow and Drink the Milk: China's Community Building Discourse and Its Implications for East Asia

Sell the Cow and Drink the Milk: China's Community Building Discourse and Its Implications for East Asia

Cultural Stigma and Social Exclusion for Adolescent with Mental Illness: A Case Study in Guangzhou, China

Due to the prevailing stigma towards mental illness, adolescents with mental health problems are facing overwhelming social exclusion in mainland China. In order to respond to the lack of studies on the social exclusion for young adolescent with mental illness in Chinese context, this study tried to explore the process of seeking medical service and daily struggles for teenagers with mental health problems in China. A case study has been conducted to understand the social exclusion for a middle school student in her school life. The data was collected from researcher's one-year placement as a social worker in a junior middle school in Guangzhou, China. The girl, her classmates, her parents, and her teachers were targeted interviewees. According to the research findings, the cultural construction of mentally disabled people as violent and demonic from social media and Chinese traditional belief has profoundly affected the adolescent's mental well-being. The research also identified a dilemma faced by young people with mental health problems. On one hand, they are entitled to the social workers, on the other hand, the labeling effect in social welfare provision and legal responsibility for school to take care of students' safety in Chinese social context result in an unfriendly environment for the young people in school, as being rejected by school and teachers once diagnosed. Chinese cultural value that emphasized family to take care of it member also leaves the family with great anxiety. A new service model as 'medical care- social workers - teachers - families – peers' for social work intervention, which seeks to promote community understanding on adolescents with mental illness, reduce the labeling consequences of 'stigma', and initiate a more positive social support environment for young patients' rehabilitation was advocated.

Social Capital, Resilience and Self-Efficacy in Promoting Psychosocial Development Among Senior Middle School Students in Zhongshan, China

Developing countries have witnessed unprecedentedly rapid urbanization process, whereas we are worried to see that most of the urbanization happened in the form of urban sprawl. It is the situation in most fast growing cities that on the one hand, urban land is expanding into rural areas without control; on the other hand, many distressed inner urban sites are left unused. During the new stage of urbanization, massive urban expansion is no longer encouraged, replaced by more sustainable and intensive utilization of urban land. Nowadays large scales of urban redevelopment have been taking place in China. Among which the redevelopment of urban villages has received substantial attention. Urban village is a unique phenomenon due to China's dual land system and residence registration system. Within urban areas, urban villages have unique social functions by providing low-rent housing for large amounts of low-income rural migrants. Under the risk of losing low-rent houses, the redeveloping activity will affect these migrants significantly. Right now in China, Shenzhen has become a leader among all the cities in the field of urban renewal, of which an important part is the renewal of low-rent housing for large amounts of low-income rural migrants. One of the most economic problems as a result of rapid urbanization on one hand and limited land resources on the other, Shenzhen has encountered unprecedented development bottleneck. Taking Shenzhen as a study area, this article investigates the gentrification process during the redevelopment of urban villages. The mechanism of gentrification, as well as the cause and effect of gentrification are analyzed based on typical case studies.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
the psychosocial development of senior middle school students, and whether and how resilience and self-efficacy could serve as mediators for the relation between various forms of social capital and development outcomes. 231 senior middle school students in Zhongshan participated in the survey. Results show that school quality concerning students’ interaction to school and teachers display significantly positive relation with adolescents’ mental health, behavior adjustment, clear and positive identity, but not with students’ social capacity. Family social capital as parental supervision and community social capital as reciprocated exchange also positively relate to students’ behavioral adjustment. Students with more encouragement and reciprocated exchange in the community are more likely to develop clear and positive identity. Moreover, students who scored higher on teacher encouragement, structural bonding and perceived mutual help with peers, and child-centered informal social control in the community are also more likely to have higher score on social capacity. However, not all sources of social capital have significant relations with students’ development outcomes. In addition, according to the research findings, resilience and self-efficacy also mediate the effect of social capital on mental health, clear and positive identity, and social capacity, while only resilience could have the mediation effect on the relation between social capital and behavior adjustment. Implications for family service and family policy, everyday educational practice at school, and community development programme are discussed.

Educational Expansion of the Upper Secondary Schools in Taiwan

After planning and designing the ‘Twelve-Year Compulsory Education Policy (TYCEP)’ for 30 years, Ministry of Education in Taiwan finally officially announced in 2011 that the policy will be implemented in 2014. However, despite the Taiwanese government has promoted the policy for more than two years, the issue is still continuing to cause intense disputes and to gain numerous opposite views. In particular, the proportion of normal to vocational school students and the ratio of public to private schools, both of these two pre-existing structural issues of the upper secondary education in Taiwan will be the main problems to implement TYCEP.

Therefore, this study suggests that for TYCEP, it is necessary to clarify the importance of these two key issues and review the impacts on the educational opportunities for high school students. Thus, this study aims to explore the history of educational expansion of Taiwan’s upper secondary schools and to analyze backgrounds and major factors of developments of those two structural issues through the literature and field survey. Furthermore, this study scrutinizes ideas, impacts, and challenges of TYCEP’s implementation.

The Development of Inter-Firm Trust: Cases from the Animation Game Industry

Nowadays, technology has played important role in the society and even shaped the way business operates. However, there is also an awareness of the “soft sides” of business, among which is the inter-firm trust. This is particularly observed in the animation game industry where increasingly more internationalization and inter-firm collaboration takes place. Such topics as “how to select a trust-worthy partner”, “how to continuously maintain good relationships with collaborators” are of great value for both academic studies and business practice. This paper explores the inter-firm trust issues in business collaboration. It prioritized values to work more or less subjective, but insurance companies are expected to evaluate it objectively and unambiguously. Disability insurance as well as rehabilitation involves different kinds of expert knowledge. Disability is a construct of medical, legal and insurance industries which are entangled with each other. Experts of these institutions try to prevent disability, define it and construct value differences in distinct ways. The interaction of these professions entails a lot of uncertain elements. Furthermore, as an increasing number of disability insurance applications and benefits are based on mental illnesses, the situation has become even more challenging than before.

This paper studies expert practices in disability insurance and rehabilitation in Finland. The focus is on beneficiary disability insurance system. The main question is: how do different experts and institutions interact as they make decisions on disability insurance benefits and rehabilitation? The empirical material consists of interviews of medical, legal and other insurance experts, observation of institutional practices and technologies in insurance companies, and some key documents. The study shows how decisions on disability benefits and rehabilitation are a result of complex and case-specific negotiations between different professions and organizations, including (occupational) health care. Disability is not only a medical condition but thoroughly a social, political and judicial phenomenon. Hence, the ability to recognize the limits of expert knowledge and the related uncertainties has a crucial effect on the practices of insurance companies and the treatment of the insured.

Conflicts Between Artisanal Miners and the Government in Mongolia

In autumn 2013, Mongolians witnessed gun shootings and an attempt to blast bomb near the Parliament House, motivated by the Civil Environmental Movement of Mongolia. The country’s basic economic revenue comes from mining sector and since the democratic transition; the country started using the mineral resources with the ratification of “Gold Program” in 1994.

As a result, the number of artisanal miners who exploit gold in abandoned areas has increased extensively and they have been one of the main factors to the environmental degradation as they operate out of law. Those 65,000-100,000 people, so-called “micro miners” have been working and living without any legal coordination and official registration for the last decade. The Government made an effort to dissolving those illegal and environmentally hazardous groups in 2005, but it led to extremely acute conflict between the two sides. Remarkably, new comprehensive survey was conducted on this newly generated community in Mongolian society. Accordingly, a research was carried out for determining forms and consequences of conflicts between the artisanal miners and the Government on example of cases in Mongolia. The fundamental conflict theory and approaches were applied in this paper. As a result, the main conflicting parties in artisanal mining were identified as local authorities and the root cause for long term dispute was defined as having no mediation and facilitation in the process. Eventually, the conflicts resulted to unsustainability in artisanal miners’ activities, more risks in safety issues and many people were injured during their rudimentary operation.

The research, carried out deep study on essence of the artisanal miners and process of their institutionalization, has been recognized as significant project which will contribute to effective natural resource management and resolution methods on conflicts over natural resources.

Leisure in an Unequal World: Gender Differences in Australia

This paper traces the development of leisure in Australia along gender lines. Leisure in Australia has been male-dominated. Historical analysis paints a picture of women in supporting roles with regard to leisure. They have been placed in an inferior position. The home care role of women has been contrasted with thebreadwinner role of males. While men dominated recreation resources, women were expected to facilitate men’s leisure. In contemporary times, the gender gap between leisure provision and participation has narrowed with observations of separate pathways in terms of activities and parity in total participation. Development of gender equality in leisure has occurred through research studies; measurement of leisure engagement; and the diversity of recreation offerings and programs. The paper is structured historically with gender activity described in traditional aboriginal life, during colonial times and at post-1945 and contemporary eras.
Temporal Scales of Justice and Sustainability: Aboriginal Peoples and Environmental Governance in the "Wild" Landscapes of Northern Australia

Sustainability evokes concepts of social and environmental justice that are inherently temporal. It assigns rights to future generations and works to apprehend risks to human well-being stemming from as yet indeterminate environmental change. While the future-oriented temporality of sustainability is of manifest importance, research in environmental justice highlights the parallel importance of contemporary social and spatial relations, and the historical roots of those relations, in the determination of social-ecological futures. This presentation explores the temporality of sustainability and environmental justice in context of Aboriginal peoples’ involvement in environmental governance in Far North Queensland, Australia. It argues that while indigenous Australians are ascribed unique legal and moral rights in environmental decision-making, aboriginal involvement in environmental governance is often restricted, in practice, to conservation of natural and cultural heritage. As passage of the Wild Rivers Act 2005 illustrates, aboriginal aspirations for futures that integrate natural and cultural heritage with the development of natural resources, diversification of remote economies and/or political self-determination often meet active state resistance.

Employment and Health Consequences of Care-Giving for Older Workers in Australia

In Australia there is continuing policy pressure on older adults to remain in paid work. For many, especially women, participation in paid work is undertaken in conjunction with providing care for sick, disabled or frail family members and/or grandchildren. Recent policy developments in Australia such as the National Care Strategy Action Plan (2011–2014) articulate a commitment to ‘recognise and respond’ to the needs of carers including supporting their right to participate in social and economic life. To this end, the Fair Work Act Amendment Bill 2013 extends the right to request flexible working arrangements to mature-age workers over 55 and workers with added caring responsibilities. At the same time, The Australian Human Rights Commission Report ‘Investing in care: Recognising and valuing those who care’ (2013) acknowledges the potential disadvantages, particularly for women, associated with unpaid caring responsibilities and the impact on workforce participation, retirement income and health.

This paper explores the relationship between paid work and care-giving, with a particular focus on Australia’s early baby boomer cohort and the gendered nature of care-giving. Analysis of longitudinal data from the Household Income and Labour Dynamics in Australia (HILDA) survey indicates that being female, having a health condition, higher education, being partnered, and being engaged in paid work as a carer and giving in 2002 increase the odds of engagement in concurrent activities in 2010 relative to engagement in paid work only. The finding that prior engagement is consistently related to future engagement in the same activity eight years later highlights the value of examining engagement over a longer time period. These findings will be interpreted within Australia’s policy context and the potential employment and health related consequences of care-giving on those providing the care, their families, employers and the community.

Partners in Change: Using Patient Narratives for Service Co-Design

Objectives: To use a national video archive of patient experience narratives to develop, test and evaluate a rapid patient-centred quality improvement approach (‘Accelerated Experience-based Co-design’ or AEBCD).

The intervention was an adapted form of Experience-based Co-design (EBCD), a participatory action research approach in which patients and staff work togeth-er to redesign care. EBCD draws on transportation theory and narrative persuasion, using locally collected video patient narratives to help staff see through patient eyes. The accelerated intervention used national rather than local patient narratives (in lung cancer and intensive care). This shortened the timeline from 12 to 6 months and halved costs.

Evaluation: An ethnographic process evaluation was conducted, including observations, interviews, questionnaires, and cost and documentary analysis (including comparison with previous EBCD evaluations).

Results: A total of 96 staff members and 63 patients participated in the four AEBCD projects. The accelerated approach proved readily acceptable to staff and patients; using films of national rather than local narratives did not adversely affect staff engagement, and may have made the process less threatening. Local patients felt the national films generally reflected important themes although a minority felt they were more negative than their own experience. However, they served their purpose as a trigger to discussion, and the resulting quality improve-ments were similar to those in traditional EBCD projects. But the element of the intervention that has left both staff and patients feeling energised and empow-ered is the direct encounter with each other; the active partnership in co-design to achieve change; and the sense of tangible results. Staff feedback suggests EBCD can reconnect staff with fundamental values of care and compassion. Patients, too, report a different level of appreciation for staff, a belief that they will be listened to and that change is possible, and a renewed sense of trust in healthcare professionals.

Participatory Guarantee Systems: Alternative Ways of Knowing in Agri-Food Systems?

Over the past twenty years, sustainability standards have been used in agri-food systems as a way to link sustainably produced products with consumers who are looking for these types of products. This system of certification has generally relied upon the third-party certification (TPC) model as a way to ensure that producers are complying with standards. Over the past five to ten years, critiques of this model have emerged in both practitioner and academic circles. These cri-tiques focus on the appropriateness of this model based on the type of knowl-edge that is privileged, the cost of the model and conflicts of interest. This paper examines these critiques by exploring how participatory guarantee systems (PGS) are used to accommodate some of the critiques of the TPC model. We draw upon examples from Japan and Bolivia to illustrate how PGS are rethinking some of these concerns. Through our analysis we explore new institutional arrangements and where there might be spaces for empowering alternative ways of knowing.
Deus Ex Machina? Religious Texts, Spiritual Capital and Inequalities – in Continuation of the Current Debate

This paper is borne from three impulses: broadly, the presently ubiquitous influence of liberation theologies within mainstream Christianities; narrower, the widespread religious assumption that the divine addresses the world through the “Holy Word” of the Bible; most specifically, a current South African debate (in which the author is a participant) on the contextual relevance of scholarly exegesis of these texts. The contention here is that the usual “application” of biblical texts to modern issues of inequality is undertaken in unsophisticated ways. First, the hermeneutical postures are often left unacknowledged. Second, the exegesis is often poor and seldom new, because the prime concern is a pressing modern issue. However, third, with little academic background in socio-political, economic and related fields of study, the pressing issues are often analysed superficially. Thus, good intentions flounder on poor scholarship, based on a critical (by now, clichéd) rejection of "classic" or "old school" exegesis combined with an ideological and political commitment to theologically conservative "Western" biblicalism. The underlying assumption is that Bible texts can be directly brought to bear on modern issues. The concepts of spiritual or religious capital can ameliorate this. The history and implications of these concepts are therefore reviewed. In constituting the religious identity of individuals, the Bible may well be an influence, but one among many. The thus-molded religious identity of persons so inclined may lead them to address social inequalities, pursuing a less unjust and, usually, more egalitarian society. Agency is mediated by such a constructed religious identity. The issues addressed, almost exclusively socio-politico-economic, have involved participants presented with firm conviction, may in this less instrumentalist engagement with the religious heritage be expanded to include the theological, with greater humility, seeking clarity.

Embodying Another Self for Western Shamanic Voyage

New Shamanism is one of the many answers provided by Western countries in order to satisfy the new spiritual urgencies proposed by modernity. Spiritual research and physical well-being care the two basic constituents through which the argumentation about health is built up in contemporary Western world. Both spiritual and therapeutic research share the same objective attainable through activities borrowed from other disciplines like yoga, traditional medicine, Eastern philosophies and neo-shamanic practices.

My analysis is focused on how new-shamanism is being developed and con-jugated in Western world, being it considered a form of therapeutic primitivism populated by small fleeting groups gathering together during meetings and seminars (with fee) in France in order to learn new “exotic” healing techniques.

In this context, the Shaman plays the role of a teacher-therapist in front of the novice-patient; both are involved in a healing and education process where teachings are all about the possibility to raise awareness in exotic cosmologies by learning visualization techniques capable of manifesting participants into the shamanic universe fitting the western world demands.

The purpose of this paper is to lay special stress on the modalities used by western participants (mostly middle class women, aged 40-50) to embody and assimilate the techniques they learn during seminars. The common objective to such techniques is to allow participants to bring to effect the so called “shamanic voyage” without resorting to psychoactive drugs.

It is my opinion that the possibility to reach a different, transitory and unknown cosmology implies the ability to embody another self.

It relates to a self which possesses a specific “ritual face” capable of manifesting itself during the symbolic interaction taking place in the social microcosm of shamanic seminars for western people in France.

Foundations of Global Giving

Social scientists have long been interested in the origins of generosity, altruism, and compassion in society. However, a relative handful of studies have looked at the effects of social context on organized charitable activity, particularly from a cross-national perspective. This talk will introduce an ongoing study examining the effects of global and domestic institutions on charitable activity among individuals and organizations in a large number of countries. I situating philanthropic and charitable activity in what world polity scholars have called a ‘global moral or cosmology implies the ability to embody another self.

The purpose of this paper is to lay special stress on the modalities used by western participants (mostly middle class women, aged 40-50) to embody and assimilate the techniques they learn during seminars. The common objective to such techniques is to allow participants to bring to effect the so called “shamanic voyage” without resorting to psychoactive drugs.

It is my opinion that the possibility to reach a different, transitory and unknown cosmology implies the ability to embody another self.

It relates to a self which possesses a specific “ritual face” capable of manifesting itself during the symbolic interaction taking place in the social microcosm of shamanic seminars for western people in France.

Organization within Organization Studies: From Core Object to Unspecified, Awkward Relic

After the outbreak of the financial crises, scholars and public intellectuals have sought to uncover the roots of the current economic downturn. Prominent in this search has been a renewed discussion of the appropriate balance between state regulation and laissez faire, as well as a critique of the preceding decades accelerated financial deregulation. The current crises, however, should also be seen in conjunction with its organizational dimensions. On the one hand, these dimensions can be traced to the beliefs held and the actions undertaken within a multitude of organizations, including banks, credit institutions, etc. On the other hand, these dimensions should also be regarded in conjunction with a range of historical developments within organization studies (OS) itself, where the core object of ‘the organization’ seems to have been problematized to such an extent that it is rather unclear what remains of this foundational theoretical construct. By attending to these latter historical developments, the paper argues that specific, yet highly diverse, modes of theorizing within OS progressively seem to have undermined organization studies’ core object. This loss, the paper claims, have made OS ill-suited to adequately respond to the organizational dimensions of the economic crisis. Only by reconnecting with and re-appropriating this core object can OS revitalize itself as a practically useful and relevant academic discipline.

Pharmaceuticalisation and Performance Consumption: Differences Between Young Workers and University Students

In the current modernity, the management of personal capabilities gave rise to a broad market and a booming performance industry. Medications play an increasing role in this offering, focusing mainly on cognitive/mental and body performance. The so-called lifestyle drugs and smart drugs are the most visible side of this modern logic of self-management. The production of both pharmaceuticals and natural medicines/supplements participates in this range of purposes, including body performance enhancement, mental skills improvement and overall personal development.
Human Rights As Political Imaginary

The language of human rights has become one of the most important normative and practical dimensions of our time. Along with the struggle for democracy, this quest for human rights resonates with a striking number of societal and political projects; indeed, for some, it is the uncontested emancipatory project of a globally interconnected world. Due to their ineradicable normative nature, however, normative approaches predominate in the human rights field; this remains the case even in the important emerging sociological scholarship.

This paper draws attention to the fact that human rights do not exist as a ready-made object of sociological analysis; hence their sociological “thingness” needs to be elucidated. The paper addresses the type of conceptual and theoretical work that is required to make human rights an object of sociological analysis in order to avoid normative restatements of the origin of human rights in a sociological register.

A model of human rights as political imaginary is proposed and used to constructively review contemporary sociological accounts of human rights. However, rather than a mere review, the concept of human rights generated by the political imaginary model makes possible a cartographical approach to the field. Thus the goal of the paper is not simply to catalogue existing approaches, but to theoretically relate them to one another in order to contribute to the development of a more synthetic sociological framework for analyzing human rights.

Our goal is to obtain a single measure of social inequality. However, the multidimensionality of the concept of social stratification makes difficult to obtain a complete ordering of households according to “inequality” level. The question that arise is how generate a composite indicator, that we call “social distance”, based in a multidimensional measure taking into account the principal factors components. We follow the work of Asselin (2009) who applies this strategy in a multidimensional model where are combined 4 dimensions (work, education, housing and income), 6 variables and 38 categories. With them we obtain a typology with four basic types. The methodology we apply is called “structural and articulated typology”: we use factorial analysis, including multiple correspondence analysis (MCA), in order to reduce the initial attribute space into “m” factors. Then we apply cluster analysis to classify individuals into “key” groups or “types” on these factors.

A partir del principio fundamental de “exclusión de la exclusión” que sustenta la sociética y la antropética que conforman la ética planetaria que propone Edgar Morin, esta ponencia presenta elementos teóricos y metodológicos para una formación ética profesional que contribuya a la construcción de una ética profesional que promueva la igualdad.

La educación superior en México tiene hoy día el desafío de formar jóvenes ante un mundo altamente inequitable. La ética profesional en los procesos de formación universitaria puede contribuir a la comprensión de este fenómeno social y, consecuentemente, a desarrollar la moralidad de la juventud tendiente a la constitución del ethos de los futuros profesionales. La racionalidad técnica combinada con la cultura de la rentabilidad inhumana está predominando en la educación, particularmente en el nivel terciario, cuyos efectos en el desarrollo moral de los educandos son preocupantes, si tomamos en cuenta el desinterés que muestran por contribuir desde sus campos de conocimientos a la mejora de la democracia y la justicia en sus ámbitos de vida. Una de las necesidades prioritarias en la universidad mexicana es concebir a la ética profesional no sólo como códigos de buen comportamiento sino, además, como un dispositivo intelectual y moral para hacer la crítica a la ausencia de equidad en la distribución de los bienes que la sociedad ha producido. Al observar lo que acontece en los escenarios institucionales y escuchar las opiniones de los estudiantes, así mismo, al identificar las limitaciones de los discursos en los profesores en una universidad del noreste del país, la cual seleccionamos para nuestro estudio, nos permitió apreciar los rasgos de esta problemática de la educación superior, analizada desde la perspectiva de la ética profesional. Crear conocimiento en este campo, hace posible imaginar alternativas para la intervención educativa con un sentido transformador y progresista.
unions and levels of government. In this paper we assess the Spanish legislation on migration, particularly of the measures designed to manage the recruitment of circular seasonal foreign workers in the framework of the bilateral agreements signed by successive governments during the first decade of the XXI century. Our analysis suggests that labour market needs were a goal in the design and implementation of these policies which promoted forms of induced circularity. We highlight the idea that the seasonal labour mobility schemes in Spain have been shaped by a constellation of interests and as a result of a consensual policymaking process at local and regional level in seasonal sectors with a high dependency on foreign workers. Economic crisis has change the whole implementation of these policies creating new forms of ‘spontaneous’ circular migration.

LOPEZ-SALA, ANA* (Spanish National Research Council, ana.lisala@cchs.csic.es)

Guestworkers Programs in Uncertain Times. Economic Crisis and Seasonal Labour Mobility Schemes in Spain

Since the 1970's, the global economy has been characterized by liberalization of trade and capital, but also by transnational movements of people. Recruitment of migrant workers has become popular in states facing the ever-changing nature of labour workers. Temporary labour migration has become an attractive resource to several low paid jobs within the agricultural, service and construction sectors. Accordingly, there has been a growth in temporary migrant worker programs in several countries in Asia, Europe, and North America. New immigration countries, such as Spain, implemented also TWP during the economic boom in the 2000's.

In this paper we aim to shed light into the process of policy-making and implementation of these programs in the Spanish agri-food industry during the last decade focusing on three dimensions: a) country selection and recruitment process, b) recognition of rights and transitions to permanent migration and c), actors and political governance.

The final part of the article focuses on the impact of the economic crisis on the implementation of these programs since 2008 and its prospects in these new uncertain circumstances.

Managing Heterogeneous Actors in the Reliable Embedding of Security Technology: Findings from a Comparative Study of Airports in Germany

After 9/11 security measures, especially in the air traffic system, have been increased enormously. Complex technology is employed to protect the global circulation of passengers and goods. Recognizing this venue as a network of heterogeneous actors, it is instructive to see how they can manage to keep this more and more complex security system moving. In our contribution we want to interplay the security as complex technology — in the sense that it transforms an unknown, potentially dangerous person into a safe passenger through a combination of different cause-and-effect chains – that is reliably embedded in the daily activities at the airport. Against the background of growing passenger numbers, ever increasing turnaround times and increasing economic competition on different levels, we want to explore how it is possible to ensure this reliable embedding in spite of different dimensions of heterogeneity. We discuss findings of a comparative study of three airports in Germany which focuses on practices managing those diverse demands arising from 4 different sources of heterogeneity:

(1) Differences in educational background and professional vision on security
(2) Differences in organizational backgrounds (bureaucracies, free-lancers, etc.)
(3) Differences in institutional backgrounds (ministries, security services, airport management)
(4) Differences between passengers and participants, staff

Each of these differences presents special challenges, inhabits various risks and is met by distinct sets of practices that buffer them in a way that the security processes do not collapse. Therefore the aim of our contribution is also to discover how these special forms of managing differences are interconnected and depend on, but also irritate each other.

Self-Fulfilling Teacher Expectations in the Context of Ethnic Educational Inequalities

The role of teacher expectations in pupils’ achievements has been heavily researched during the past 50 years. Experimental research as well as analyses of field data stemming mainly from the US showed that low expectations can undermine academic performance whereas high expectations can have positive effects on learning opportunities and on pupils’ academic future. Another line of research suggests that teachers often have lower expectations for the academic performance of children from low socioeconomic status and/or immigrant or minority background. If such low expectations create self-fulfilling prophecies by leading to behavior that undermines intellectual growth, they could be regarded as a subtle type of discrimination contributing to the widening of the achievement gap between more and less privileged pupils.

However, despite the fact that there is evidence speaking against discrimination in grading or track assignment against pupils with low socioeconomic background and/or immigrant background on pupils’ academic future. We assess the state of Japanese capitalism by taking a fresh analytic look into its labor market. Our findings strongly indicate that the general dictum of “lost decades” stands in stark contrast to economic reality. What is more, we find that the purport view of strong and rigid gender inequalities in the labor market is entirely flawed.

Analyzing employment and wage data for the period from 1988 to 2010 we find that the Japanese economy has seen very stable employment conditions in a long-term perspective. In fact, Japanese businesses have created some 10.1 million more jobs than were to be expected if the 1988 labor force participation rates of both sexes had stayed constant. 1.4 million of these additionally created jobs are more specifically attired to the突出 focus on EEOC and its enforcement of anti-discrimination laws.

regular jobs are occupied by women. Increasing labor market participation by women reportedly largely went into non-standard employment. While this is essentially true, we can evidence a strong tendency toward closing wage gaps both between men and women, and between regular and non-regualr employment. As the latter effect is particularly strong for women, we cannot draw any evidence for any potential gender inequalities for our investigation period. On the contrary, our findings suggest that women have made significant inroads into formerly male-dominated regular employment.

Hypothesizing about potential reasons for this bias, we suggest (a) that this negative perception stems from a general "adaptation problem" referring to the transition from high to low-growth economy, and (b) that the ongoing strong prevalence of the societal ideal of a male breadwinner in Japanese society effectively forecloses a positive appraisal of young women increasingly finding their way into regular employment where this happens at the expense of men.

Civil Liberties or Civil Rights? Muslim American Advocacy Organizations

This paper considers the extent to which two of the most prominent Muslim American advocacy organizations have been able to follow the pattern of advocacy established by the Civil Rights Movement as they have sought to confront Islamophobia in the USA. These two organizations – the Muslim Public Affairs Council (MPAC) and the Council on American-Islamic Relations (CAIR) – have long been at the forefront of Muslim American advocacy. The analysis considers the trajectory of MPAC and CAIR given the cultural and political context of the current "post-Civil Rights era." I begin with an overview of what I call the "civil rights mode" of advocacy, a race-conscious strategy historically used by many civil rights advocacy organizations. This is then contrasted with a "civil liberties mode," a race-neutral or "colorblind" strategy that has recently gained favor in modern times. My findings suggest that the power of the civil liberties mode in contemporary American advocacy politics has played a crucial role in limiting the effectiveness of Muslim American advocacy efforts.

Etched In Stone: Preservation Of Cemeteries and Cultural Identity

Cades Cove was a thriving Appalachian mountain community in the United States prior to the establishment of the Great Smoky Mountains National Park. The creation of the park effectively put an end to this community. It now exists within the park as a tourist destination (approximately 2 million visitors per year) with a few remaining ‘primitive’ homesteads and cemeteries. Everyone knows what cemeteries are, but in that familiarity, there is dismissal, for few know that cemeteries are far more than what they know them to be, and in that regard, cemeteries are far more than sequenced repositories for the deceased. Cemeteries constitute libraries of stone and are proxies or microcosmic expressions of the communities they represent or represent and are an important element of community.

The first task of this research has been to conduct a sociological examination of Cades Cove and the associated cemeteries, archiving the socio-demographic data of the former communities and their residents. The second objective has been to collect precise GPS coordinates of all known stones & markers in the cemeteries of Cades Cove.

A major disaster can strike at any time, endangering precious cultural property. Our cultural preservation efforts of these cemeteries are an important component of disaster preparedness in Cades Cove and to members of the surrounding communities with direct familial ties. These cemeteries have tremendous religious and spiritual importance to present day families with ancestors buried there and are a significant marker of their cultural identity. Without these preservation efforts, a major disaster could destroy these libraries of stone and they would be lost forever. This would potentially threaten the future continuity of the communities and their cultural identity, destroy the artifacts of their ancestors and their family histories, and hinder recovery efforts.

Role of Sociological Theory in Deconstructing Sociological Phenomena In Africa – the Social Exchange Theory and the Small House in Zimbabwe

Sociological theories continue to illuminate various sociological phenomena found in Africa and act as conceptual and analytical tools in deconstructing sociological knowledge. This study uses the lens of the social exchange theory to analyse the small house practice in Zimbabwe. The ‘small house practice’ is the trend among married men in Zimbabwe to maintain a single woman as a quasi-permanent sexual partner of official marriage. This relationship is considered subsidiary (small) compared to the official marriage yet it is important to the welfare of both man practicing it and the unmarried woman being looked after. The study reveals that those engaged in small house interactions are rationally seeking to maximize the profits or benefits, especially in meeting basic individual needs of both the man maintaining a small house and the woman being looked after.

The Spatial Politics of ‘Noise’

This paper attends to sounds and noises as sociocultural phenomena taking place in everyday sonic environments. If noise is considered as sound that is out of place, then how and where does this evaluation transpire in order for noise to qualify as an aural transgression? In defining what constitutes as sound or noise, the process also involves locating how noise is dealt with in different places that we inhabit (public space as shared/private space), at different levels (small/large-scale) and by different social actors (individuals, groups, social institutions etc.). Cases of auditory alterations in urbanity will be analysed in order to demonstrate how sounds and noises acquire socio-cultural valences in the ways that urbanites regard and utilise spaces in city life. By interrogating how places are experienced and contested vis-a-vis auditory encounters, the paper attempts to shed light on the relationship between sound, noise, and sociality in place, and also illuminates how aural information structure social positionings, divisions and hierarchies in everyday life.

LOW, MARTINA* (Technical University of Darmstadt, Martina.loew@tu-berlin.de)

Space as Material Culture

The concept of space continues to represent a challenging category in the field of sociology owing to its implicitly referring to the material dimension of things. Following the "spatial turn" in the social sciences, relational definitions of space have prevailed yet there is still a clear lack of systematic research. However, the concept seems ideally suited to grasp the configurational nexus of complex relations between performativity, iconicity and materiality more accurately. The presentation introduces space as a cultural sociological concept and shows recent examples of how space constitutes social meaning.

Approaching Generational Intelligence: Complexity and Agency in an Intergenerational World

‘Generational intelligence’ (GI) proposes a psychosocial approach to the questions of cultural adaptation to demographic change and a reconceptualization of intergenerational ageism. It places age related generational identities in the domain of intergenerational relations and contexts such as families, workplaces, in policy development and in civil society. GI suggests three dimensions, key to addressing the degree to which it is possible to place oneself in the position of another age group. These include: the degree to which one becomes conscious of self as part of a generation, a relative ability to put oneself in the position of other generations, and a relative ability to negotiate intergenerational connection.

It is argued that dominant forms of adaptation provide limited opportunities for personal development and for age-specific identities to take shape. The value of empathic understanding, negotiated solutions and complementary roles between generational groups are examined as we move toward the discovery of age-specific contributions that may also throw light on the wider human condition. As such the approach works phenomenologically and is not overly concerned with reification based on lineage, cohort and chronological age. It also draws on critical psychodynamic understanding of social relations in so far as a preconceived ‘unthought known’ is seen to play an important role in the maintenance of legitimized social identities and inequalities based on age. Implications for policy and the conduct and training for research are also critically examined.

Dimensions of Exclusion in the Lived Experiences of Adult Survivors of Childhood Liver Transplant: A Micro-Analytic Perspective

The first paediatric liver transplants were performed in the early 1980s and continue today, saving thousands of children’s lives. Underlying syndromes, the transplant surgery, comorbidities and side effects of medication leave young people looking and feeling ‘different’ from their peers, especially in childhood.

Through analysis of in-depth interviews with 27 now-adult survivors of the first cohort of childhood liver transplant recipients in Europe, we take a micro-analytic perspective in reporting how the processes of feared, felt, and enacted exclusion began in early childhood for this group. Exclusion through liver transplant is an additional intersectional dimension to more recognized societal exclusions such as age or gender, and appears to be fluid throughout the lifecourse. Adapting Goffman’s work on stigma and presentation of the self, we see that problems of exclusion are only slowly resolved in a number of social role interactions, where others appear to feel free to comment on the appearance of individuals’ bodies. For example, felt exclusion of schoolchildren often occurred through physical education, where the transplant scar could be observed unless the child learnt to hide their body in communal changing spaces. Learning how to present oneself to others continues throughout the lifecourse. Narrative restarts, such as changing school or employment, appear a common way to ‘pass’ by losing the identity of a liver transplant recipient. However, this strategy is fragile, being contingent on the medical history not being uncovered. Positively revealing oneself as a liver transplant recipient was reported to result in inclusion in groups previously more as an adult rather than a child. For most, a sense of inclusion appears to be reached by this ‘new’ ageing population only through growing older: the understanding that everybody has ‘differences’ and that being ‘normal’ is something not closely defined for self or others.

Growing up with a Childhood Liver Transplant: Medical ‘Pioneers’ and Beck’s Normativity of Diversity

The concept of a stable biographical narrative and its potential undermining by long term health conditions is one that underpins much medical sociology. This is particularly true of chronic illness rather than acute conditions constituting forms of biographical disruption. More recently, the influence of approaches derived from theories of reflexive modernity have started to challenge the salience of the modernizing individual as the reflexive self, introducing notions of indeterminacy and contingency into how individuals construct personalised narratives of the self. Consequently, health conditions can constitute identity rather than be threats to it. Ulrich Beck has also argued that not only is reflexive modernization (or second modernity) constituted by the ‘side effects’ of modernist discourses such as those surrounding the welfare state or modern science but that this has also given rise to a ‘normativity of diversity’ which has replaced the more simple normativity of previous societies. This is not only witnessed in terms of the makeup of household structures, sexuality, marriage and employment but also extends to notions of disability and human embodiment.

This presentation will look at how social theory can help us understand the situation of the cohort of adults who were the first European recipients of liver transplants as children. The first childhood liver transplants took place in the early 1980s and this group has had to act as ‘pioneer’ cohort all through their lives, dealing with the risks of transplant surgery, underlying syndromes, comorbidities and side-effects of medication as previously unencountered phenomena. Through analysis of in-depth interviews with 27 now-adult survivors of this cohort, we report how both biographical narrative is constructed in the face of ever-present risk and how these ‘pioneers’ represent aspects of the normativity of diversity.

Comparing Mobile Phone, PC and Paper-and-Pencil Survey Experience: A Lab Experiment on Mode Effects

This exploratory paper investigates the modality between data collected using an online questionnaire filled in on a mobile phone device and on laptop computer and a paper-and-pencil questionnaire. An experiment was conducted on 5th of July 2013 in thermal comfort conditions of a lab at the University of Ljubljana, excluding external effects. A total of 75 students were randomly assigned to three experimental conditions. A short questionnaire included questions on knowledge, attitudes and behaviour towards organic food products. The two online questionnaire versions were designed in a way that the visual design was most similar to the paper-and-pencil version. In order to explore the participants’ willingness-to-buy and willingness-to-pay for organic certified food, the paper-and-pencil version involved the actual presentation of a glass bottle of organic apple juice of 1 L and a package of organic spaghetti of 500 gr, while the online surveys involved the video projection of both organic foods. For the online versions, para data on time and changes of answers were collected. The results of both questionnaires from the three data collection modes will be explored in order to answer questions on the time differences between the modes, on the data quality, and on respondents’ performance. This experiment is one of the first studies on mode effect for mobile phone online questionnaires as the lab conditions guarantee the exclusion of confounding effects of self-selection and non-response which typically limit the measurement of the pure mode effect.

Evaluating Government’s Environmental Performance: Evidence from China

While China has achieved miraculous economic growth over the past 30 years, this process is accompanied with numerous environmental problems, which result in substantial economic losses, social conflict, and rising health costs in China. How do the Chinese assess their government’s environmental performance? Based on the survey data of the 2003 and 2010 CGSS data, this article provides an empirical analysis of government’s environmental performance in the first decade of 21st century China. The main results of analysis are as follows: (1) Compared to other countries, 39.56% of the respondents argue that their government has done too little; while 6.17% of the respondents think that their central government has done too much. (2) Environmental performance perception in central government or local government become even worse in 2010 than in 2003 CGSS data. (3) As for central government’s environmental performance, rural respondents give more positive evaluation than urban respondents. However, urban respondents give local government a higher environmental performance score than rural respondents. (4) Multivariate analysis of government’s performance in environmental protection indicates that education is the strongest factor in while negative relationship with the central government’s environmental performance. These results suggest that government’s environmental performance in China today are a mixed system, in which objective environmental problems and resident’s subject perception and social characteristics coexist to determine how the Chinese evaluate their government’s environmental performance.

The Reproduction of Intangible Heritage Successors in Heritage Tourism

With the development of heritage tourism, intangible heritage became a kind of tourism attraction, which holds a fascination for the tourists all over the world who try to touch the landscape, human heritage, and customs of other places. In this way, intangible heritage successors became attraction for the tourists. They can tell the legend, the origin, the meaning of the intangible heritage and they can also show some skill about the intangible for the tourists. What’s more, they can get some financial support from the government because they have the duty to pass the skill on. Gradually, the way of selection of the successors, the explanation of the intangible heritage and the inheritance of the intangible heritage are changing. For they will inherit the heritage within the ethnic group, they will deal with all kinds of relations outside the group, and then another kind of reproduction within themselves can be seen. In this article, we will discuss the reproduction of intangible heritage in China, we choose the Hmong as an example. With the development of tourism, the successor of Hmong knife-forging will inherit the intangible heritage of Hmong.
This study examined patterns and predictors of changing young adults’ attitudes toward gender-role during Taiwan’s social transition in the beginning of 21st century. Based on panel data from 2000 to 2011 and latent growth curve modeling methods, the study identifies patterns and predictors of attitudes formation and change from adolescence to adulthood. The young adults showed an attitude of highly significant for gender equality, which was following by the declining egalitarian outlook during their transition to adulthood.

The findings indicate that the parental characteristics and their gender-role attitudes have significant influence on the formation of adolescents’ gender-role attitudes as consistent with socialization perspective. The study also suggests that the parental attitudes have larger effect on adolescents’ attitudes than does parents’ behavioral modeling as indicated by parents’ household labor pattern. On the other hand, the findings disclose the important source of influence from school and community contexts on both the initial adolescents’ attitudes and the changes that occur along the significant effects of school track, academic achievement, class interaction, work experience and participation in community activities.

Furthermore, the results of the latent growth curve analysis evidence the inter-weaving mechanism of socialization and symbolic interaction. Therein the socialization background has far reaching impact, not only shaping the initial adolescents’ attitudes but also affect the trajectory of the attitudinal change through the various social-interaction contexts.

Copreneurship and Gender Dynamics in Small Family Firms in the Transitional Economy of Taiwan

This study explores the relationship between entrepreneurship and gender relationships in family firms during the global recession in Taiwan. Although previous literature conceptualized women’s business trajectories through gender and family businesses, certain studies have indicated women’s substantial contributions and indispensability. The gender dynamics within an entrepreneurial setting remain under-investigated.

In this study, the power dynamics within day-to-day entrepreneurial processes in Taiwanese copreneurial firms during the global economic recession are explored from a family embeddedness perspective.

Qualitative data generated through in-depth interviews of 24 family firms across economic sectors in 1995 and the follow-up interviews in 2010 show the diversity of the gender relationships and the complexity of the power negotiation between copreneurship and patriarchy. The market uncertainty and the firms’ adaptive strategies provide a context in which women are able to negotiate the patriarchal system and reconstruct their position by using their entrepreneurial capability.

The findings show that gender dynamics and wives’ bargaining power in copreneurial firms may vary with copreneurs’ entrepreneurial capability, the nature of their specific industry, and family relationships. Wives’ adaptive entrepreneur based on years of accumulated tacit knowledge and capability, is crucial for firms’ risk management in coping with market uncertainty. Wives’ roles tend to be characterized by greater autonomy in industries that utilize female skills than for wives in other industries. Conversely, wives of copreneurial firms in a strong patriarchal culture, particularly those in an extended-family environment, are more likely to work as unpaid laborers and have no say in firms’ decisions.

The observations further reveal that wives’ entrepreneurial identity is shaped by the perception of their work within the context of daily organizational routines, which can increase their self-employment and improve women’s agency. However, lack of opportunity to cultivate their entrepreneurship asserts their gendered identity and reinforces marginality.

From Information to Interaction: A Collaborative Approach to Health Improvement Programmes

Background: The information driven behavioural approach adopted by health promotion programmes has been criticised for focusing on individual agency while neglecting the impact of structural factors on health. Recent scholarship argues for a relational paradigm in public health which emphasizes collaboration with citizens and other network actors as a key to reduce health inequalities. There is little evidence how this collaborative interactional process is supported and experienced in a health promotion context. Objectives: The study examines a collaborative interaction model of promoting lifestyle changes to improve health with a focus on how networks, relationships between various actors, including members of the public, public service users, service staff and health professionals, and the roles they assume in this context shape the process.

Methods: The paper draws on network and social practices theories, interviews with different actors engaged in a public health programme in England and field-
Rethinking Methods and Ethics in Male Sexual Risk Behaviour Research

Studying sexual behaviour of men is always a challenge to many researchers. This is a qualitative study on the sexual risk taking behaviour of men in the context of HIV/AIDS. The occupational group of seafarers are chosen as the particular study in the port city of Santos, Brazil. Seafaring is a male dominated mobile occupational group at very high risk to HIV with many seafaring countries having reported high prevalence rates of HIV. Ethnographic work in the red light district was conducted consisting of in-depth interviews and nightly observations. Local non-profit organizations working in the field were approached for entry to the site. Results showed that sexual behaviour remains a sensitive topic to discuss. Researchers need extra skills and knowledge to elicit substantial and quality information. Sex of the researcher and the way he deals with the individuals play important roles in data gathering. The study encountered various hurdles in the areas of research (e.g. limited data safety given the nature of the study, which dealt with a semi-legal environment of prostitution and drugs. Language, cultural differences, and other idioms have to be considered in doing the fieldwork. Ethnography is an effective method to understand many phenomena because this form of inquiry digs deeper into the ’relationships’ (with the sex workers). Length of time of researcher’s immersion in the field makes him strongly embedded. A rich reflective account in an ethnographic setting is a major output in a qualitative study. Methodological issues raised in this study provide substantial contribution to the continuing search for appropriate methods in enriching areas of research and working in the field and even provokes risk again. Consequently, the main questions to be answered are: Why do young Malians study nevertheless? And how do young academicians cope with a situation characterized by uncertainty and unpredictability? Achieving individual life goals demands decision-making processes characterized by the evaluation and reevaluation of personal circumstances and risks. The application of a biographical approach will highlight how university graduates work on their situations in order to reduce future risks. Based on six months of field research in Bamako, this predominantly empirical paper will investigate past, present and future aspirations and subsequent strategies of action deployed by university graduates in Mali focusing on how risk is perceived, evaluated and dealt with.

Hukou Intermarriage and Mate Selection Process of Rural Migrants in Urban China

China is a natural case for understanding the relationship between internal migration, rural-urban marriages, and stratification. Past studies show that during Mao’s era when internal migration was banned, rural people married within 25 km from their villages. Social mobility through marriages and migration for work was hindered. After the ban was lifted in 1978, hoards of rural migrants escape rural poverty and flood to the urban areas to improve their life chances. It is logically expected that spatial mobility brings people with rural and urban origins closer culturally, socially and economically, and thus increasing the odds of rural-urban marriages. However, this is not happening. The urban and the rural marriage markets are not overlapping despite migration. Based on 62 in-depth interviews with urban and rural people and participant observations in various parts of South China, I found that opportunities for rural-urban marriages are seriously constrained by the ascribed stratified “hukou system” (household registration) in various ways. First, this system links people’s accessibility to state-provided opportunities and benefits for urban people like housing, education, and health care, which cannot be enjoyed by the rural migrants. They are thus degraded as second class citizens in the urban areas and become the least desirable in the urban marriage market. Second, spatial segregation in education, housing, and workplace has reduced the opportunities for rural migrants to meet urbanites and/or developing urban ties that facilitate rural-urban marriages. Third, day-to-day discrimination against rural migrants has forced some to self-eliminate from “ marrying up.” However, factoring these constraints, some individuals employ strategies to break the social and spatial segregation by using Information Communication Technologies in dating and by upholping and adopting “modern” urban cultures and values so that their status is comparable to the average urbanites.

LUNA, MATILDE* (Universidad Nacional Autonoma de Mexico, matilde.luna@sociales.unam.mx)

VELASCO, JOSE LUIS (Universidad Nacional Autonoma de Mexico)

Power without Representation: The Coherence and Closeness of a Transnational Governance Network

Transnational governance networks usually claim to represent at least an important part of global public opinion. In the absence of institutions that sustain these claims, they must constitute themselves and act in accordance with two opposing principles: coherence and openness. Both the legitimacy and efficacy of these networks depend on their ability to strike an appropriate balance between such principles. To analyze the practical challenges that derive from this need, this paper focuses on the North American Section (NAS) of the Trilateral Commission. A network-like organization bringing together leaders of several influential think tanks and outstanding personalities from business corporations, political organizations, academic institutions and media firms, NAS is a major player in North America’s transnational arena. To analyze it, we approach it in two steps. First, we reveal the membership of NAS at the level of the entire NAS, its executive committee, and its three national groups. This analysis shows that even though NAS is highly coherent, it is excessively endogamous: rather than reflecting the diversity of North America, it only reunites a select group of U.S. or pro-US leaders, members of transnational corporations and partners of NAS, free to decide on the agendas of the NAS’ annual and regional meetings. This makes clear that, judged by the origins of participants and the subjects discussed, these meetings are very exclusive. Thus, our general conclusion is that NAS is a coherent but closed network, very powerful but scarcely representative. Although it is extraordinarily privileged in representing the views and interests of a powerful elite, it fails to articulate the diversity of North America’s public opinion. Ironically, a network that promotes the use of “soft power” in the international arena—a powerful foundation based on political influence, rather than on force and material interests— heavily depends on the hard power of established hierarchies.

LUND, REBECCA* (Aalto University, rebecca.lund@aalto.fi)

Working on Futures, Reducing Risk – University Graduates in Mali and Their Strategies of Action

The research examines the conditions and opportunities of university education in Mali. The West African state counts two state universities, five state grade schools and various private universities. The capital city’s University of Sama- ko with more than 80,000 students is obviously the center of higher education. Facing precarious conditions due to the shortage of means and professors the majority of students simply do not succeed to graduate. Being young and highly qualified, university graduates are still strongly affected by unemployment.

Given the problematic conditions of studies and the major difficulties entering the labor market, a university degree does not create the certainty expected, but provides and even provokes risk again. Consequently, the main questions to be answered are: Why do young Malians study nevertheless? And how do young academicians cope with a situation characterized by uncertainty and unpredictability?
The Work of Producing Quality in Changing Academia from the Standpoint of Junior Female Scholars

This paper is a chapter in my doctoral thesis. It builds on another chapter in which I explore the gendered work of ‘boasting’ in the context of changing academia, and how this work is essential for furthering ruling purposes and interests connected to the marketization and global competitiveness of Finnish academia. I pick up from there to study the evaluation ideology from the standpoint of junior female scholars. This involves explicating: how particular managerial texts, textual technologies and artifacts, including those related to tenure track recruitment, hold people accountable in ways that lead to the production of particular notions of quality; how this is part of furthering particular organizational and managerial purposes; and how the work related to producing this quality involves the (re)production of a particular gendered order in academia. I work from there to suggest a reworking of the concept of homo-sociality in academic recruitment. In the analysis I draw mainly on an in-depth interview with one female scholar; the various versions of an article manuscript she wrote as it developed over a lengthy review process for publication in a top journal within her field; the review documents; as well as the correspondence with editors of the journal in question. Furthermore, I draw on interviews with differently positioned scholars and academic managers, field notes from various events, and text material produced over a period of three years.

LUNDBERG, JANNÁ* (University of Lund, janna.lundberg@uvet.lu.se)
Social Science and Alienation In School

School can in many ways be seen as a place distant from life in general: In classrooms students are kept separate from the familiar parts of life. School and life outside of school follow different schemes so many students seems to put their real life on hold.

Social science class ought to be one occasion where life in school become more real and more similar to life outside of school, since it is supposed to be all about life in society. According to the curriculum for the Swedish upper secondary school it is not enough to learn about society, the students should also become a part of society through active participation – by doing democracy, not only learning about democracy (a legacy from John Dewey). In spite of this we do not appear very well equipped for taking an active part in society even after the twelve years in school that the majority of Swedish citizens complete. The importance of active citizenship is emphasized, but in the room where students and teachers do their daily work something stops the development of active citizenship.

My doctoral study focuses on the intriguing tension between what is told, said and written in theory and what is being done in practice within the field of education and democracy in general and active citizenship in specific. Alienation theory can reveal why the well-intended work within the frames of social science is failing. Alienation in school could be seen as one part of the greater social tendency to postpone life by not living in the present. This paper will examine alienation theory and if in addition to how it can be used to understand the tension mentioned above and thereby search for a path that may have the potential to lead to changes of the situation.

LUNDBY, ERIKA* (Linnéaus University, Erika.Lundby@lnu.se)
Young Consumers In Sweden

In this presentation the question of how economic resources influence children’s peer relations will be addressed, with focus on the Scandinavian setting. This question is of particular importance in times of changing discourses surrounding children’s role in the consumer society. The ways Scandinavian children are portrayed as consumers have gradually changed, from being posi- tioned towards competent actors in their own lives. In total, 48 Swedish children aged 9 were interviewed in focus groups, using a projective vignette technique and pictures. The children were asked if and how children in general could gain new friends through material possessions and money. The findings indicate that children perceive possessions as multi-functional tools in peer relationships. The ability to fit into the peer group, by the use of different possessions, was perceived as especially important. Additionally, the children perceived money as an altruistic tool to demonstrate kindness. As the Scandinavian countries become more liberalized, with higher economic differences between households as a result, we need to address the question of the consequences. We should consider the significant effects of increased consumption on children’s social relationships. If children perceive peer pressure of having “cool” things, and if they believe that they can use material goods to become more popular and accepted, they may be highly vulnerable to the internalization of materialistic values.

LUTZ, HELMA* (Goethe University Frankfurt, lutz@soz.uni-frankfurt.de)
Behind Europe’s Care Curtain. Migrant Care Workers from Europe’s East and Children Left behind

This paper interrogates the features of the Global Care Chain (GCC) from the angle of European East. In the early 1990s, Eastern Europe became the main sending region of migrant care workers to the West und South of Europe resulting in an intimate connection of the care deficit in the ‘old’ EU with care provision from the ‘new’ Europe. Although the emerging picture shares certain characteristics with the GCC, there are many discrepancies in this geo-political setting, and I argue that Eastern Europe cannot easily be subsumed into the Global South. Instead, the legacy of state socialism and the destructive forces of the rampant capitalism that was introduced during the transition period play an important role in the understanding of this migration. In opposition to the West, co-bread-winning in ‘the East’ was a key element of the gender equality politics of state socialisms. The female care migration from this region is therefore a result of women’s specific understanding of their citizenship obligations as ‘earner’ and as ‘care giver’. However, while women, many mothers among them, migrate in large numbers and become bread winners, there are severe counter currents in their identifying mechanism suggests that education and discriminatory attitudes are in sending countries entailing moral outrage about migrant parents who leave their children behind. These children are referred to as ‘Euro-orphans’ and women are eventually accused of bad motherhood performance. I consider the analysis of the orphan debate a litmus test for Europe’s Care Curtain by showing that next to gender, class, and nationality a universalized form of good motherhood behavior or likewise the deviance of it becomes an important component of the ‘othering’ of migrant mothers.

LÜCKING, STEFAN* (Hans Böckler Foundation, stefan-luecking@boeckler.de)
Employee Representation in the German Craft Sector – a Neglected Form of Industrial Democracy

The German Crafts and Trade Code (*Handwerksordnung*,HWo) with its strict rules for market access is often regarded as a pure anachronism and it is regularly put into question by the European Commission who sees it as a barrier to the freedom of trade. However, the German regulation of craft is also an example of industrial democracy as since the enactment of the Crafts and Trade Code in 1953 employee representatives are part of the regulatory bodies, the chambers of craft and in particular the vocational training committees. Since this time employee representation has been further developed and democratized.

The paper will analyse the historical background of these developments and carve out the strengths and shortcomings of employee participation in the autonomous regulation of German craft sectors. We will discuss the impact of employee representation on setting standards for the sector in general and vocational training in particular. On the basis of this analyses the paper will draw conclusions regarding the viability of this form of participation in a context that is increasingly shaped by rules of a liberal market economy. Finally, it will ask if employee representation in the German craft sector can be a model for other sectors and countries.
Surveillance often sparks responses relating to “privacy.” The era of state surveillance, read through warnings like Orwell’s, makes being watched seem negative, undesirable. We want to escape, to hide, or just be “private.” But this approach seems myopic in a world of mass media and now social media. The world of celebrity makes being seen a matter of privilege, of desire. The consequences for surveillance are far-reaching – from the unwanted eye to welcome watching. The desire to be seen may help to naturalize and legitimate surveillance of all kinds, to encourage new modes of cooperation of the surveilled with their surveillors. The desire to discover (large scale surveillance) meets the passion for publicity in social media. Flexibility, mobility and connectivity are sought through social media but users find themselves tracked and recorded using the same media. How do we account for the apparent willingness to be visible to all, or to have a secure or desirable position, when it is known that daily routines and whereabouts are tracked and traced constantly? While social media allows everyone to surveil, it also facilitates in fresh ways classic activities of state agencies. Such forms of surveillance penetrate the time-space paths of everyday life (using constant updates, location tracking). This paper explores these questions sociologically and critically.

LYTKINA, EKATERINA* (National Research University, ekaterina.lytkina@gmail.com)
Transformation – Reality or Simulacrum?

In this report the concept of transformational societies will be revised. The concept was widely applied to address post-communist societies and especially value, institutional, normative change and related phenomena. However it is unclear whether the change is accomplished and what a post-transformational society is or should be like. Besides, a broader context should be considered. Are transformational societies only those with the communist past or can other societies, for example, experiencing economic crisis or different kinds of social instability such as revolutions or wars, or even those who enter the European Union also experience a transformation? Surely, the contemporary context is totally different from the change meant by Durkheim when he wrote about the transition from the traditional society to the industrial one. Contemporary societies are characterized by what Urry calls complexity and certain changes became their permanent characteristic. So is it possible to differentiate between a transition and a societal change? These and other questions will be addressed in the report.

LYTKINA, EKATERINA* (Higher School of Economics, ekaterina.lytkina@gmail.com)
Unique Societies-Common Alienation? Revisiting Alienation in Contemporary Context

The paper is aimed at examination of the difference of nature and characteristics of alienation and and in post-Soviet and Western countries. Recent findings (Lytkina, Welzel 2013) show that in such post-Soviet countries as Russia and Kazakhstan anomie can be measured by powerlessness and normlessness whereas meaninglessness, social isolation and job dissatisfaction form a measurement of alienation. The linkage of powerlessness and normlessness might be explained by the general Mertonne assumption of discordance between the culturally defined goals and the means the social system provides an individual with. Hence, lack of control over desired outcomes (powerlessness) causes anomie behavior (normlessness). Still, powerlessness is commonly used as an indicator of alienation (Seeman 1982, Olsen 1965, Dean 1961) whereas meaninglessness is sometimes used as an indicator of individual anomie, or anomia (Seeman 1982, Legge 2008). These arguments make formulate the following problem: are thus alienation and anomie in post-Soviet and Western countries different? If yes, what are the reasons for its difference and how can the differences be captured theoretically and empirically? Post-Soviet countries can be conceptualized as the ones who underwent the process of social transformation, thus they can be conceptualized in Durkheimian logics. One can assume that in the time of transformation the level of anomie rose significantly. Western European societies, on the contrary, experienced a relative stability. Post-Soviet countries experienced a dramatic change in the value and normative systems which before the collapse of the Soviet Union were characterized by the collectivistic nature, whereas Western societies were characterized by pluralism of normative and value systems together with high level of individualism. Which phenomena and which indicators are thus relevant for the two types of societies? These and other considerations will be taken into account.

LÖFQVIST, LOUISE* (Linnaeus University, louise.lofqvist@lnu.se)
Gender Change and Constants. the Case of Swedish Police and Gender Equality Policy

The aim of this paper is to present the case of gender equality policy and politics within the Swedish Police Service. The main object is to investigate the relation between gender equality change and local gender formations and experiences. The paper provides an outline and a theoretically and empirically informed discussion of specific organizational, historical and socio-demographic factors that are key in an understanding of gender and police work in Sweden, and putting this within a framework of political and policy development. Sweden is often portrayed as world-leading when it comes to issues of gender equality, and state policy has put forward ideals of equal opportunities in all areas of society. In this context the national police service is interesting, as a male-dominated, masculine, state organization where gender change is visible.

Ideals and discourse concerning gender as well as gender equality policy and gender equality projects have been a part of police organization since the 1980’s and the female-male ratio is slowly but constantly evening out. There has been a symbolic change and a statistic demographical change when it comes to women in policing. The issue put forward in this paper is the impact of these ongoing transformations in everyday police work. Rather than evaluating the gender equality regimes, this project investigates into the micro politics of changing gender regimes at the work place. The results show that change is undisputable but unevenly distributed in the organisation with regard to the gendered division of labour and gender symbolism and the grand narrative of gender equality is put under scrutiny. Further the author argues links between processes of professionalisation and academization of policing, as well as altering organizational ideals as pertinent in this process.
The rapid development in Information and Communication Technologies (ICTs) has drawn scholars' attention to a new social problem—the digital divide. However, there has been little work examining the link between national contexts and students' experiences with ICTs. This research combines two groups of literature: micro-level accounts on the inequality of digital usage and macro-level studies of the digital divide. Using data from the Organisation for Economic Co-operation and Development (OECD) Program for International Student Assessment (PISA) 2009 data, I utilize hierarchical linear modeling to examine how institutional variables at the country-level are associated with students' digital usage across 40 countries. I use Cook's distance to diagnose the influence of data points from the cluster level. Three institutional factors are examined: economic development, income inequality, and educational expenditure. Results show that birth cohort size has significant impacts on education achievement. The major and modulatory effects of birth cohort size on education achievement are twofold: (1) The digital divide between socially-advantaged versus socially-disadvantaged students is wider for countries with lower income, higher inequality, and lower educational expenditure. (2) The effects of institutional characteristics on digital usage only matter for low SES students, but not for their high SES counterparts. This research helps scholars identify key national characteristics that influence the inequality of digital usage.

Exploring the Impact of Birth Cohort Size on Education Achievement of Cohort Members

Using the data from China General Social Survey 2005, this research explores the major and modulatory effects of birth cohort size on education achievement of cohort members in China, from longitudinal and cohort perspective. Results show that birth cohort size has significant impacts on education achievement of cohort members, and cohort members in larger size birth cohort have lower education achievement. However, the impacts of birth cohort size on male and female, on urban people and rural people are different, and the reduction of birth cohort size will narrow the gap between these two groups. Besides, this paper decomposes net effect of birth cohort size by simulation and points out that it is the discordant change between population reproduction and education capacity that leads to this result.

Why Should I Know the Reluctance of Absorbing and Sharing ERP Knowledge

In an ERP (Enterprise Resource Planning) system, all necessary business functions, such as financial, manufacturing, human resources, and distribution, are tightly integrated into a single information system with a shared database. Such a system potentially allows firms to manage their integrated business processes and associated knowledge, and to have more control of information and data in the organization. However, ERP systems are very knowledge intensive and require high levels of knowledge absorption and knowledge sharing between organizational members in order to be used successfully.

In the military organization we study, ERP systems are aimed at improving support, competitive, secondary processes. This means that many military employees prioritize efforts related to the primary process of the military over actions connected to the ERP system. Still, top management mandates employees to use the ERP system and perform these secondary tasks, leading to tensions/user resistance including the reluctance to incorporate or share ERP knowledge. In turn, this lack of knowledge exchange can become dysfunctional since it prevents the use of it that could benefit the organization.

We applied qualitative methods including 40 semi-structured interviews with ERP users and their managers in three separate business-units, who have been using the ERP for two years. In the study we assess why and how users of the ERP system become averse to the exchange of knowledge and how military organizations are able to overcome tensions between primary processes and ERP implementation/knowledge sharing as a secondary process. By combining theories about user resistance and informal/formal knowledge structures we grasp the underlying reasons of the reluctance. Moreover we contribute to the literature by studying IT as a supportive technology leading to user resistance, instead of focusing on how organizations incorporate core technologies effectively (e.g. Barney, 1986).
Judgments about Inequality and Economic Elite Among the Middle Classes: Discontents and Sociology of Critique

This paper will present the preliminary results of a research on the Chilean middle-class and its perception of the socioeconomic elite. The global emergence of the middle-class is also visible under conditions of globalization, such as different discourses in middle classes, their feelings, perceptions and give meaning to middle classes, reproducing or challenging inequalities. We will present the preliminary results, especially subjective elements that nourish and give meaning to middle classes and one from non-qualified manual workers. This method allows the study of feelings and perceptions that arise in simulated situations of social interaction, which could not be observed through surveys or interviews.

The study of feelings and perceptions that arise in simulated situations of social interaction, which could not be observed through surveys or interviews. The reason why STS may work well as a research programme may have to do with the fact that the taken as an object of study, socially high-level food security, sustainability and active aging on longevity.

Women Appointments and Political Participation in Brazil

This work aims to study the change identified in the women’s participation in Brazilian politics in what concern the high positions of state bureaucracy. Specifically, it will be necessary to establish what kind of changes patterns followed in what regards women’s political appointments by two different governments in Brazil, such as, Fernando Henrique Cardoso (FHC), Luiz Inácio Lula da Silva. This study uses the social-democracy theory to analyse the social sphere as a main focus of public policies, and as a result of women’s inclusion in politics and a related change of their role. Due to cultural history of women’s inferior role in Brazil, the effective relationship between these factors might signify a relatively change in the participation patterns.

MACPHERSON, ROBERT* (University of California Irvine, rmacpher@uci.edu)
The Right to Democracy and the State in Moments of Crisis: Lessons from the History of Radical Unionism

For the last four years square occupation movements have formed the core of a revolutionary wave calling for radical forms of directly democratic organization. It remains an open question to what degree these rights to democratization can be accommodated by states and the larger structures of global capitalism. Solving this puzzle requires a comparative analysis of the syndicalist unions which are the most long-standing example of a directly democratic mass social movement organization on par with the square occupations. Toward that end, I take a world-historical perspective that allows a comparison of syndicalist attempts at extending democratic rights across two time periods: the early 20th century crisis of British hegemony and the syndicalist resurgence in the current crisis of the Eurozone. The focus is on examining how syndicalist-state interaction differed from the more hierarchical worker organizations putting forward much narrower sets of rights claims. Studying the manner in which crises-torn states of each period deferred, coopted or adopted the democratization claims of the syndicalists reveals the trajectories of state-movement interaction to be conditioned by processes of global capital and the specifics of local structures of dependency and exploitation. Existing social movement theories of democratic movements have been to both enrich and reconfigure the meaning and realization of economic rights; the crucial test of such rights claims in periods of crisis becomes the degree to which workers and other stakeholders have democratic input on policy and thus avoid “cost shifting.”

The Legal Cultures Observed By and Observed Among the Pioneers of Japanese Socio-Legal Studies

Since Professor Takeyoshi Kawashima provoked the debate by his classic work, Legal consciousness of Japanese, in 1967, theories of legal consciousness and legal culture continue to be hotly debated. In my paper, I look at how the emergence of these two disciplines in various fields of socio-legal studies. With an eye to the controversy over democracy and local cultures, theories of legal culture (and legal consciousness of local population) seem to provide suggestive viewpoints to socio-legal studies on globalization and local adaptation. I would argue that both legal consciousness and legal culture serve for studies on globalization and society in two ways. First, they would provide viewpoints for studies on legal reform and adaptations in various countries. We should keep an eye on the cultural consciousness shared by elites leading reforms in our empirical studies on the legal adaptation to globalization and local cultures. We could observe what kind of legal consciousness and legal cultures the leading groups have and what kind of impact they have in molding new legal systems or institutions. Second, they would keep their positions in the socio-legal grand theories on legal culture and local adaptation. I would argue that theories of legal consciousness and legal culture serve as key factors for our contemporary empirical studies.

Instrumental Action and Rhetoric: Framing Rational Action on Language Field

The paper makes a theoretical reconstruction of a model for instrumental ac-
tion in language, using the notion of rhetoric. It takes persuasive language to be constitutive of instrumental reason, and analyses the possibility of bringing to the theory of social action some concepts from linguistic field. The first step estab-
lishes an analogy between instrumental rationality and rhetorical movements like projection of future, or reconstruction of past. In those operations we use rhetoric in order to create the persuasive frames of reality and use them for self-persua-
sion and for persuade other people to go into a specific course of action. Since deliberation is a problem of collective action and rationality we can understand rhetoric in terms of building a new descriptive model of rationality, in other words, we can describe rationality as a rhetoric operation: it consists in giving different degrees of truth to the information available and then create conditions for choosing a specific way. This approach builds a critical view to the notion of information as objective data collected by rational actors, and points to the delib-
eration as a cognitive way to deal with framed discourses about reality. Based on this model we can criticize some analytical problems from the theories of rational choice concerning collective action, here represented by M. Olson's paradox and,

Women's experiences have been the nucleus of domestic violence literature, discourse, and policy, and have shaped the therapeutic and/or punitive measures that are characteristic of domestic violence prevention – measures that research has shown are largely ineffective in curbing violence. Consequently, we still know relatively little about why men batter, and how they make sense of the negative “batterer” credential that corresponds with their offense. The few studies that explore batterer behavior are primarily psychological, reducing their violence to individual pathology that can be “treated” in therapy. Accordingly, non-psycho- logical studies are characterized by evaluations of the utility, effectiveness, and/or therapeutic techniques of Batterer Intervention Programs, thus missing the sociological roots of batterer behavior. Drawing from in-depth interviews with 15 male batters, my research shows that these men make sense of the offenses of which they have been accused in different ways, both with regard to the role they attribute to the state in their felt disempowerment and emancipation, and the role they attribute to their clients. These different meanings are attributable to a number of factors – factors I argue must be addressed to the extent that they are linked to recidivistic risks of battering. The analysis presented in this paper therefore provides a foundation for creating more effective social remedies for battering behavior, and it provides an opportunity to reconsider gender-based theories of interpersonal violence more generally.

MAHI, LARA* (Université Paris Ouest Nanterre, laramahi75@gmail.com)

Sentencing : ‘health Determinants’ of Criminal Sanction

Des travaux en(sentencing) ont mis en avant les inégalités face à la sanction pénale. Que l'on soit une femme ou un homme (Mary-Portas, 1996 ; Cardi, 2007), que l'on ait la peau de couleur ou non (Steffensmeier, Ulmer, Kramer, 1998), que l'on ait un travail ou non (Herpin, 1977), ou encore, que l'on ait un nom à conso- nance étrangère ou non (Jobard, Névannon, 2007), on n'est pas égal face à la sanction pénale.

En matière de santé, la question de l'impact de l'état de santé somatique des justiciables sur les jugements est systématiquement évoquée au profit de travaux sur les déterminants de santé mentale (Thys, Korn, 1992 ; Laberge et al., 1995 ; Cartuyvels et al., 2010). Pourtant, le haut taux de prévalence, dans les prisons françaises, de personnes vivant avec une pathologie lourde (6,2%) par rapport à ceux observés en milieu libre (DREES, 2005) interroge l'existence de formes de sur-penalisation des malades. Y a-t-il un lien entre l'état de santé des justiciables et la peine que l'on prononce ?

Après avoir observé 412 procès correctionnels au tribunal de grande instance de Paris, nous avons analysé statistiquement les liens entre « état de santé du justiciable » et « condamnation ».

Nos résultats font état d'un contrôle particulièrement coercitif, par l'institution judiciaire, des justiciables malades faisant part d'une absence d'engagement dans un processus de soin. Au cours d'un procès pénal, ces derniers sont sur-con- damnés à de la prison ferme et à de plus longues peines.

Au-delà de la chaîne pénale, ces résultats nous invitent à repenser la définition que donne Parsons (1951) des rôles du malade et, plus largement, à interroger les formes du contrôle social qui pèse sur les malades.

The Social Fabric of Solidarity Economy Initiatives: On the Emerging Creative and Collective Action Devices

Solidarity economy initiatives are not obvious. They need specific contexts to emerge and develop themselves. We have to better understand conditions under which individual and collective processes of initiatives can emerge, be designed and implemented.

As Hans Joas formulates it, the sense of action builds itself at the heart of the very action. So, we need to consider solidarity economy initiatives as a social construct. This proposition questions and participates in current researches on social entrepreneurship. My point of view emphasizes on the social contexts and conditions of alternative entrepreneurship.

A second idea, continuing the first one, leads me toward two hypotheses. As a first hypothesis, I consider that solidarity economy initiatives find their dynamics within creativity of action develops by alternative collectives of actors and social entrepreneurial communities. We should better know these collectives in order to differentiate their actors at the same times social activists and entrepreneurs. My second hypothesis concerns their devices which give its sense to collective actions and the processes of their design and implementation. These acting devices should be observed and analyzed in detail as far as they gather, promote, mutually develop and capitalize solidarity economy initiatives. Then these processes and the devices are entities to be female of the social fabric of solidarity economic initiatives.

In order to develop and begin to validate these hypotheses, I shall present and discuss first results of a qualitative research focus on several collective action devices as developed by social actors in France. These alternative collectives and their acting and learning devices are developed at the very heart of co working
spaces and other “third places” described by Oldenburg but also through collaborative web sites and their acting platforms.

OLIVEIRA, SAULO BARBARA DE (Federal Rural University of Rio de Janeiro)

Urban Waste and Our Day-to-Day Chaos

There is litter on most streets of the more privileged neighborhoods of the city where there is cleaning services comparable to the first world; in the underprivileged neighborhoods, urban sanitation is on par with African or Indian quality levels: this is the reality of Rio de Janeiro and the majority of the 16 Brazilian cities with populations of over one million inhabitants. Rio de Janeiro is a city characterized by enormous inequality in income and in geographic distribution of the population, as well as in public services. Erratic urban expansion has made Rio de Janeiro one of the hallmarks of segregation and social degradation, which makes the populace’s standard of living a challenge to manage. Due to this inefficiency, most the city’s periphery has open sewage that runs in ditches, rivers, the sea and on the streets. The system of rainwater drainage does not undergo periodic maintenance where there is a system at all, causing frequent floods and public damage from heavy summer rains. Litter clogs drainage pipes and exacerbates flooding and the contamination of rivers and the sea. It is still possible to see the accumulation of garbage in outlying areas. In favellas, present throughout the entire city, the habitation conditions and urban infrastructure are precarious, and environmental degradation leaks out of control, thereby contaminating the sea and making it impossible to swim and go to the beach in many important parts of the city. Civil society groups were formed in the 1970s. The objective of this article is to present a diagnostic of the impact of urban waste on the city of Rio de Janeiro. The research was conducted using quantitative methods, as well as secondary data from official sources.

MAHMD, HASAN* (University of Sociology, Los Angeles, hm77@ucla.edu)

Migrants Remittances and the Family

Abstract: Contrary to the perception of the relationship between the individual and the family as a structure, this paper offers a conceptualization of this relationship as a process whereby individuals selectively identify with various available forms of family. It builds on 30 in-depth and unstructured interviews, complemented by ethnographic participations, with the Bangladeshi immigrants in Los Angeles. Conceiving migrants’ remitting as a socially motivated economic act whereby the migrants invest both financial and emotional resources to maintain and further develop social relationships, it recognizes migrants’ relationships to their family in Bangladesh as central to their remitting practices. It recognizes multiple forms of family and community organizations to which the immigrants simultaneously identify themselves. However, it finds this identification as a process whereby the immigrants choose to attach to certain forms among a range of culturally defined social aggregates, which causes their remitting to be selective. Emphasizing the immigrants’ emotional involvement and collective orientation, this study recognizes the mingling of the immigrants’ self with the recipients in their origin country as essential in remitting. Thus, this paper makes significant contribution to the study of migrants’ family by adding a relational approach that identifies fluidity in the individuals’ identification to the family through migration and remitting.

Migrants Sending Money and the Family

Abstract: To know why migrants send money to home, this paper introduces a new conceptualization of the relationship between the migrants and their families. It builds on 30 in-depth and unstructured interviews, complemented by ethnographic participations, with the Bangladeshi immigrants in Los Angeles. Conceiving migrants’ remitting as a socially motivated economic act whereby the migrants invest both financial and emotional resources to maintain and further develop social relationships, it recognizes migrants’ relationships to their family and origin community in Bangladesh as central to their remitting practices. Unlike the NELM approach’s assumption of economic rationality, or the cultural approach’s emphasis of cultural factors, this paper finds the immigrants’ relationships to the remittance-recipients as central in determining their remitting. It recognizes multiple forms of family and community organizations to which the immigrants simultaneously identify themselves. However, it finds this identification as a process whereby the immigrants choose to attach to certain forms among a range of culturally defined social aggregates, which causes their remitting to be selective. Emphasizing the immigrants’ emotional involvement and collective orientation, this study recognizes the mingling of the immigrants’ self with the recipients in their origin country as essential in remitting. Thus, this paper makes significant contribution to the study of migrants’ family by adding a relational approach that identifies fluidity in the individuals’ identification to the family through migration and remitting.

Contemporary Grandparenthood in Germany: A Perspective Of Social Inequality

The study provides a multifaceted analysis of contemporary grandparenthood in Germany. Building upon ideas rooted in a sociology of the family and in a sociology of ageing, the study aims to demonstrate the usefulness of a perspective of social inequality for the study of the multigenerational family in later life. Social inequality is on the one hand conceptualised in the form of unequal access to the grandparent role (e.g. the transition to grandparenthood). On the other hand, social inequality is conceptualised in the form of unequal outcomes connected to grandparenthood (e.g. levels of subjective well-being). Based on data from the German Ageing Survey (DEAS) and applying a three-generation perspective, the study demonstrates that access to the grandparent role is in fact unequally distributed: higher educated parents are less likely to experience the transition to grandparenthood and become grandparents later in life than less educated parents. In contrast, the subjective importance of experienced as prospective grandparenthood does not vary by levels of education and other indicators of social class. Given the unequal access to the grandparent role, grandparenthood could evolve into a highly valued but unequally distributed social resource for later life. Furthermore, social inequality also exists as a result of grandparenthood: positive and negative outcomes of relationships with grandchildren for grandparental subjective well-being are unequally distributed across educational groups.

Based on these results, it can be concluded that social inequality in relation to grandparenthood exists in two forms: first, access to the generally highly valued societal position of grandparent is unequal. And secondly, advantages and disadvantages are unequally connected to the grandparent role. The study shows that the perspective of social inequality is essential for an adequate description and analysis of grandparenthood in social and demographic change.

Reconciling Work and Motherhood: Class and Access to Childcare in Dublin

The ‘motherhood penalty’ is invoked to explain the lower labour force participation of Irish women. Mothers with low educational levels have even lower participation rates referred to as an ‘education penalty’. This paper will explore the way these penalties are socially constructed in an Irish childcare policy context. Funded by FP7 FLOWS, separate focus groups composed of mothers with third level education and those with second level education were conducted in order to compare their respective orientations to work and their reconciliation strategies. Mothers in both groups articulated a strong intrinsic, social and instrumental orientation to their work and a distinct worker identity, separate to motherhood. As working mothers they had all overcome the first penalty.

Mothers with third level education earned incomes that enabled them to combine childcare for children aged (0-3) using private nurseries which facilitated their full-time employment, but at considerable financial cost. But low income earning mothers could not afford the 800-1000 euros a month fees. This explains their over lower participation rates.

The exceptional mothers in our focus groups with low educational levels were facilitated by getting a childcare place in a local community crèche with fees of 95 euros a week full time and pro-rata reductions for part time. (Only 30,000 parents nationally have access to these). Mothers without a childcare place (if married) relied on their unemployed partner to provide childcare, or both parents worked part time. Grandparents or siblings also provided care. These constitute a mixture of reconciliation strategies not easily replicated. Childcare policies in a neo-liberal society can considerable reduce equality of access to childcare places and offer an explanation for the education penalty. Overall participation rates are unlikely to rise unless this inequality is addressed.

Constructing a Gender Discourse inside the OECD: The Working Party on the Role of Women in the Economy

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The UN International Decade for Women and the four UN Conferences on women helped to put gender equality on the global agenda. Although feminists are rightly critical of the slow pace of change, gender equality retains an important place on official global (and regional) policy agendas. This paper examines the work of the OECD Working Party on the Role of Women in the Economy (ROWITE). Formed in 1977, in advance of the first UN Conference on Women, ROWITE constituted an important site for the consolidation of a feminist agenda for the Global North and, through its support for the Women in Development group within the OECD’s Development Advisory Committee (DAC) supported the promotion of gender equality through its members’ aid programs.

This presentation aims to present parts of my doctoral work focusing on the ability and desire to be physically active when you live in a residential home for the elderly. The aim for this part of the study was to identify and describe variations in perceptions of the concept for “physical activity”.

Physical activity is described as positive and important for all people. My thesis is to investigate how people are interested in, and able to, maintaining physical activities even though they often have significant disabilities. And also to investigate how older people in residential homes are experiencing opportunities for physical activity and how their physical environment affects these opportunities.

The interviews show that the older people often describes physical activity in on part of the sociology of knowledge in contemporary global perspectives, and three empirical studies dealing with key elements of global knowledge production and three expectations.

- Physical activity is described as positive and important for all people.
- My thesis is to investigate how people are interested in, and able to, maintaining physical activity even though they often have significant disabilities.
- And also to investigate how older people in residential homes are experiencing opportunities for physical activity and how their physical environment affects these opportunities.

To have different perceptions of a central concept can affect both hopes and expectations.

**Perceptions of the Concept of Physical Activity Among Older People and Staff in Residential Homes**

Annsofie Mahrs Tråff, PhD-candidate
National Institute for the Study of Ageing and Later Life, Linköping University, Sweden

This presentation aims to present parts of my doctoral work focusing on the ability and desire to be physically active when you live in a residential home for the elderly. The aim for this part of the study was to identify and describe variations in perceptions of the concept for “physical activity”.

Physical activity is described as positive and important for all people. My thesis is to investigate how people are interested in, and able to, maintaining physical activities even though they often have significant disabilities. And also to investigate how older people in residential homes are experiencing opportunities for physical activity and how their physical environment affects these opportunities.

The interviews show that the older people often describes physical activity in on part of the sociology of knowledge in contemporary global perspectives, and three empirical studies dealing with key elements of global knowledge production and three expectations.

- Physical activity is described as positive and important for all people.
- My thesis is to investigate how people are interested in, and able to, maintaining physical activity even though they often have significant disabilities.
- And also to investigate how older people in residential homes are experiencing opportunities for physical activity and how their physical environment affects these opportunities.

To have different perceptions of a central concept can affect both hopes and expectations.

**Global Arenas of Knowledge: Perspectives from the Brazilian Case**

This paper aims to present the major guidelines of the project ‘Global Arenas of Knowledge’ and its first results. The project involves theoretical work to reformulate the concept of knowledge in the contemporary global perspective, and three empirical studies dealing with key elements of global knowledge production and circulation. The study runs first in three southern-hemisphere countries which are part of the post-colonial periphery or (in world-system terminology) semi-periphery, but which are not part of the impoverished ‘third world’, and where knowledge institutions are well established: South Africa, Brazil and Australia. It will then move to linked institutions in the global metropole, in the USA and UK. The empirical work takes three domains of knowledge as starting-points (HIV/ climate change/ gender studies), and examines them in several ways, combining ethnographic fieldwork, interviews, documentary work and qualitative methods of creation-context analysis to study the patterns of centrality, inclusion and exclusion of researchers across the global arenas. In this paper, I present the results of the first part of the study, which involves interviews conducted in Brazil with senior researchers in three different domains of knowledge and historical analysis of each domain as a whole. From the results of the proposed session: a) how the dynamics center/periphery affects knowledge production in the Brazilian case; b) how Brazilian social scientists in these different domains of knowledge build their careers in a global scale.

**MAICH, KATHERINE** (University of California, Berkeley, kmaich@berkeley.edu)

**Legislation and Its Discontents: Consequences of the Peruvian Households Workers Law**

Peru is currently understood as one of the fastest growing economies in Latin America, one whose wealth is highly concentrated in the capital, fueling a centralized and unregulated flow of labor. Many indigenous internal migrants work as trabajadoras del hogar in Lima, situated within a vulnerable context since their work is highly gendered, private and contained within the intimate space of the home, where discrimination based on race, ethnicity, gender and class looms.

Colonial relations persist in the apartments and homes across wealthy districts of the capital yet meanwhile Lima moves ever so forward by pushing costly modernization projects, developing its booming tourism industry, and promoting its global culinary fame.

Peru passed national labor protections for trabajadoras del hogar ten years ago with negligible improvements in the lives of its household workers. Based on nine months of in-depth interviews and ethnographic fieldwork, I investigate the nature of the outcome of political inclusion and state-granted labor rights in Lima for household workers, private to capital’s growth and yet [arguably] further marginalized through labor regulation, which grants few benefits, offers no minimum wage, and lacks real enforcement in practice.

When the state steps in to regulate the informal sector, what possibilities and potential problems result? How does the implementation and specifics of legislation come to bear on the lives of those it attempts to protect, offer benefits to, or bring into political inclusion? My dissertation grapples with the intersection of gender, law, the state, and the political economy of domestic work in Peru with specific attention to new organizing strategies for household workers in the face of myriad obstacles. When and how can the law matter in the case of informality, and what else is to be done?

**RS32-554.5**

**MAICH, KATHERINE** (University of California, Berkeley, kmaich@berkeley.edu)

**When Does the Dust Finally Settle? Peruvian Household Workers, Reproductive Labor, and Sweeping Changes**

Peru is currently understood as one of the fastest growing economies in Latin America, one whose wealth is highly concentrated in the capital, fueling a centralized and unregulated flow of labor. Many indigenous internal migrants work as trabajadoras del hogar in Lima, situated within a vulnerable context since their work is highly gendered and isolated in the home, where threats of discrimination based on race, ethnicity, gender and class loom.

This practice of domestic labor is broadly accepted in Peruvian culture, demonstrating the profoundly deep, entrenched nature of colonial relations within contemporary Limaño society. I analyze domestic work as both a daily, lived-out practice and a culturally inscribed phenomenon within Peruvian society. Peru passed national labor protections for trabajadoras del hogar a decade ago, though with negligible improvements in the lives of its household workers as the law offers no minimum wage, few benefits, and lacks real enforcement in practice.

Based on nine months of in-depth interviews and ethnographic fieldwork, I investigate outcomes of political inclusion and state-granted labor rights for these women workers, private to capital’s growth and yet [arguably] further marginalized through labor (mis)regulation as they continue to sweep, iron, cook, and care for the future class of Limaños.

My research finds that rather than Lima paving the way for a modern, egalitarian Peruvian state, inequality and colonial relations are alive and well in Limaño homes, with serious consequences for a future, more egalitarian, and ‘modern’ Peru and Latin America.

How does the implementation and specifics of legislation come to bear on the lives of those it attempts to “protect”? My dissertation grapples with the intersection of gender, law, and the political economy of domestic work in Peru with specific attention to challenges facing women workers confronting the burden of colonial history on a daily basis.

**From Political Protest to Sectarian Violence: A Sunni-Shiite Split in Lebanon?**

From Political Protest to Sectarian Violence: A Sunni-Shiite Split in Lebanon?

The year 2005 has been a turning point in the history of Lebanon. The assassination of the former Prime Minister Rafic Hariri in a car bomb on February 14th, 2005 triggered the largest demonstrations in the history of the country. Hundreds of thousands of Lebanese went to the streets to demand a new government. Despite the political stalemate, I argue that the felling of labeling of political, confessional as well as national identities. I have used official records and newspaper archives in order to compile a dataset of all protest movements and events of violence/clashes that have occurred in Beirut between 2000 and 2010. I analysed this dataset in order to depict the shift in protest dynamics and to analyse sectarian alliances. A meso-level analysis of coalition formations is carried out using social network research techniques. The empirical results show that the Hariri
assassination was a “political earthquake” that shifted the attention of the Leba-
nese society from mainly Arab concerns, to internal concerns and anti-Syrian
activism. The analysis of our findings suggests that a change in political relations
leads to sectarian tension when two main conditions are met: (a) the majority of
the sectarian group follows one leader and; (b) when the two opposing communi-
ties are equal in size and in power.

Australian Carers’ Income Support Since 1983 – Changing Frames and Persistent Gender Inequality

Many Australians provide unpaid, informal care for a relative or friend with a
disability, illness or age-related frailty, and women are more likely than men to be
the main ‘carer’ in these circumstances. A dedicated income support payment
for some Australian carers has been available since the 1980s. Unlike many other forms
of income support, which have been progressively restricted as part of a
wide-ranging neoliberal reform process, eligibility for Carer Payment has been
extended to an increasing number and range of carers in recent years.

This paper reviews the history of this policy area, focusing on the manner in
which reforms to the social security legislation have been framed. Drawing on Fio-
nina Williams’ analysis of the framing and framing of European care policies (2010),
we argue that changes to Australian carers’ income support have developed with-
in competing frames of social justice and social investment. The social investment
frame, which prioritises paid work over care, has become particularly prominent
in recent years. This echoes the increasing concern with paid work participation
in other areas of income support, such as unemployment benefits. This is partic-
larly evident for sole parents. However, the changes to carer policy reflect a unique tension be-
tween competing goals of promoting paid work participation for all working-age
people and ensuring a supply of unpaid carers in the community.

Neither of the dominant policy frames addresses Australian women’s ongoing
responsibility for the bulk of unpaid caring, and income support policy potentially
reinforces this inequality. We argue that these issues must be addressed in future
reforms to ensure that the competing pressures on women to care and to engage
in paid work do not lead to greater disadvantage for carers and the people for
whom they care.

MAKI, YOKO* (Hitotsubashi University, maki.yoko@nifty.com)

Middle Class Women’s Work and Childcare in Paris

Today, France draws attention from neighbouring countries because of its high
birth rate. French women are also relatively active in their labour work participa-
ton. In Paris, the number of women in work is especially high, and the number of
nurseries is inadequate. How do women manage to find a place or person to look
after their children while they are at work? How are women and class related to
the issues of childcare? These are the main interests of this paper. In France, the
most widely used form of childcare addresses Australian women’s ongoing
responsibility for the bulk of unpaid caring, and income support policy potentially
reinforces this inequality. We argue that these issues must be addressed in future
reforms to ensure that the competing pressures on women to care and to engage
in paid work do not lead to greater disadvantage for carers and the people for
whom they care.

MAKINO, TOMOKAZU* (Japan Society Promotion of Science, makinotomo815@gmail.com)

The Transformation Of Self-Concept In Japanese Youth: From 1992 To 2012

Japan’s economy entered a long period of stagnation, known as the ‘Lost Two
Decade,’ after reaching its peak in the late 1980s and early 1990s. In this peri-
od, many politicians, business person, and intellectuals criticized Japanese youth:
tending to lose their temper with the darkness of mind, chasing their unplanned
dream without regular jobs, and not leaving their nests. Critics also told fragile
about their self-consciousness of Japanese youth. But we can get another figure of
Japanese youth from the outcome of the research of Japan Youth Study Group,
conducted in 1992, 2002, and 2012. For instance, most Japanese youth love them-
seves, and feel senses of themselves. They are anything but fragile. By the way,
our definition of comparison of three or more time point is that we can distin-
guish between temporary trend and long-term trend. For example, the ratio of re-
pondents of feeling sense of onself has declined by degrees from 1992 to 2012.
The ratio of keeping one’s individuality in any situation has declined too. And the
ratio of changing oneself depending on the situation, and engaging in superfi-
ciality was decreased from 2002 to 2012. These means long-term trend of diversi-
fication of the self. On the other hand, the ratio of loving oneself had increased
from 1992 to 2002, but has decreased from 2002 to 2012 (temporary trend). What
causes for these? We can consider two matters. First, the cultural-social change
underpinning long-term trend, for instance, the diffusion of mobile media and
social network service accelerating the diversification of the self. Also, we need
consider what happened in 2002 (about temporary trend). We try to explain
the structure of self-affirmation by comparing the determinant and related item of
self-affirmation on each year. Finally, we discuss the effect of intertemporal re-
search on public opinion in Japan.

Pathways Of Aging: Old Women’s Gendered Narratives and Cultural-Historical Locations

Pathways of Aging: Old Women's gendered narratives and cultural-his-
torical location

Social gerontology has moved away from a focus on old age per se to the recog-
nition of old age as part of the life-course, and more importantly, as the result of a
lifetimes experiences. In this paper I explore the themes that old Mexican women
themselves identified as important in shaping their pathways towards old age. I
do so by employing a thematic-narrative analysis of multiple in-depth interviews
with 14 women aged 60 to 89. Throughout their life-course the women’s personal biographies, their current
social, cultural and economic locations have been informed by a range of struc-
tural factors, institutions and personal attitudes, choices and opportunities. My
intention is to stress the importance of structural and personal circumstances that
underpin the socio-cultural construction of aging and old age: the relation be-
tween the objective reality and subjective experiences of aging. By making refer-

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
ences to the women's historical and cultural location and their gender socialisation, I contend that not only is there an individual biography, but also a collective story.

There is however diversity amongst these women's life experiences. Through some specific actions such as attaining higher education and continuing to work after marriage, they enacted their individual agency and challenged the prevailing patriarchal narrative. Their actions although offering 'liberating' narratives, become more evident in the experience of their daughters and granddaughters. The women's -formal and informal- participation in the labour market has not brought them real benefits in their old age, as most of them do not have their own occupational pension, thus making the role of the family central to their well-being in old age. This is relevant in relation to family arrangements and commitments that define the contexts of care and the social and economic capital these women have access to.

MALaina, ALoVARO* (University of California Berkeley, alvaromm@pdi.ucm.es)
The Complex Adaptive Systems Approach. a SocioCybernetic Reading

Since the foundation of the Santa Fe Institute in the United States in 1984, and especially during the 90s, was formed a new wave in the science of complexity: the Complex Adaptive Systems (CAS) approach. CAS is based on modeling and simulation of complex systems using advanced computational techniques such as cellular automata or agent-based modeling. With an interdisciplinary and universal character, its mainly methodological approach has dominated the scientific discourse around complexity. Numerous interdisciplinary complex adaptive systems centers have spread throughout the world, from United States to Europe, from Latin America to East Asia.

We need a more reflexive and critical approach to CAS, taking into account its epistemological limits. Sociocybernetics, through authors such as von Foerster, Varela, Maturana, Luhmann or Morin, is very useful here, because of its emphasis on the question of the observer/subject and its construction of the observed/object. Something that CAS models ignore, seeking to determine objectively and algorithmically probabilistic patterns in complex systems, without considering that systems and complexity are primarily attributes of an observer, an operation of “punctuation” in his knowledge of the world. The simulated systems are doubly result of the intervention of the observer: the real system is an “invented reality” (von Foerster) and the system that simulates the real system would be doubly so. CAS-epistemic limits become more evident in its sociological models called “Artificial Societies”. The intervention of the modeler/observer here is even more evident in self-reflexive systems that are able to observe themselves, “self-referential” (Luhmann) systems of meaning in which both the constructed nature of the subjects themselves (Foucault) and the structures or social spaces of objective positions where the subjects are located (Bourdieu) cannot be ignored in favor of a mere behaviorist study of patterns of interaction among agents and their resulting and irreducible emergences.

Not No Place: Fragments of Johannesburg

Not No Place is a collage of visual and written fragments on Johannesburg- historical, archivial, found and self-generated. The book is the result of document- ing and collecting material on the city of Johannesburg over the course of five years. It interweaves selected quotations with personal memories and reflective accounts, as well as fiction in an attempt to explore the city as both lived place and an imagined no-place (the direct translation of U-topia). A montage combin- ing photographs, drawings, archival material and texts, it alternates between the mode of collector, witness, observer and author, taking into account the numer- ous representations of the city in historical writing, urban theory, film, media and fiction. Not No Place presents a collection of moments in the city's complex history, its contemporary spatial realities as well as its future projections.

Bettina Malcomees and Dorothee Kreutzfeldt speak to their visual processes and practices informing their book-length investigation into Johannesburg, Not No Place: Johannesburg: Fragments of Spaces and Times. This intriguing and beautiful book is by no means an official biography of the city – it reads more like a richly illustrated scrapbook of ideas and reflections part made up of quotes from a multitude of sources and part made up of the authors’ personal narratives and ruminations on going Fragments of Spaces and Times captures it well. It is a peripatetic amble through the history and physicality of Johannesburg, stumbling into recurring characters such as the Carlton Hotel and Nongoloza.

Mattering Difference Cervical Cancer, HPV Vaccines and Global Health

Vaccines are a contested technology. On the one hand, they have been pre- sented by health policymakers, researchers and practitioners as the most pow- erful weapon in the war against global disease. On the other hand, vaccines have been an object of criticism and distrust by anti-vaccines social movements. Cervical cancer is a woman's disease in that it is a deeply gendered disease. It has had an important capacity for embodying historical power relations and material conditions of women experience. Cervical Screening programmes and a general improvement in healthcare services in the "developed" world has meant a signif- icant reduction in its incidence and mortality. However, such improvement has not occurred in the "developing" world at the same rate. HPV vaccines dwell be- tween these worlds. HPV vaccines are not only a good case for understanding the convergence of such tensions, but also they make visible new problems such as co-production between gender, technology and disease.

This paper presents the discourses on cervical cancer and vaccines as the framework used in the production of narratives about HPV vaccines. I use the terms politics of disease and politics of prevention in order to describe the ar- rangements of objects, narratives and institutions that involve the contemporary perceptions on cervical cancer and vaccines. I describe the tensions that make vaccines a contested technology and cervical cancer a marginal disease. On the other hand, cervical cancer has a special story as a malady associated with poverty and sexual stigma. I discuss the permanence of these narratives in the contemporary policies and practices on cervical cancer and development. Finally, HPV vaccines establish a connection between the worlds of cervical cancer and vaccines. These technologies not only gather such tensions, but also they make visible new problems such as co-production between gender, technology and dis- ease, the development of “anticipated” cure.

The Impact of Fukushima on Evacuation Preparedness in Case of Nuclear Disaster in Slovenia

Krško Nuclear Power Plant (KNPP) located in Slovenia has met expectations about safety and stability of operation so far. Stress tests conducted by the EU a few months after Fukushima disaster in 132 NPPs in 14 EU member states proved that KNPP was one of the safest installations. However modern technology brings inherent risks therefore failures and accidents are in some way inevitable or even "normal". The nuclear disaster in Fukushima proved that this can happen in one of the most developed countries in the world. There is no reason to assume that such disaster could not occur elsewhere including KNPP.

Drawing on results of the survey among inhabitants and interviews with the highest representatives of institutions and companies conducted in a 3-kilome- tre radius around KNPP, the paper seeks to establish the level of preparedness of population, institutions and companies for the evacuation in case of disaster in KNPP. The analysis reveals that despite communication efforts made by the authorities almost three quarters of the population in the potentially most threat- ened area are not familiar with the locations of reception centres assigned to them in case of disaster, whereas two thirds of them do not know the evacuation routes. The level of preparedness of institutions and companies is also rather low due to fatalistic attitude, and poor nuclear disaster planning, training and coor- dination. These facts suggest that crisis management actors, including Slovenian military, would face extremely demanding situation in case of nuclear disaster similar to one in Fukushima. The role of the military will be especially scrutinized in this context taking into account previous experiences of military's involvement in disaster management.

Uneven Development and Social Equity in American Shrinking Cities: Can the Growing Social and Economic Gap be Narrowed?

The phenomenon of uneven development as a way of differentiating growing and shrinking cities is well-established, but emerging patterns of uneven development within many shrinking cities have been less extensively examined. While there has been long-standing internal variation within U.S. shrinking cities, these variations have become markedly more pronounced in the past decade. A conjunction of market shifts, demographic trends, and economic pressures have resulted in some areas seeing regeneration at levels not seen for many decades in these cities, while decline appears to be accelerating in other areas. The evidence of central core revitalization on the one hand and the accelerating decline of many traditional single-family neighborhoods on the other is particularly striking, with population growth, job growth and housing market strength increasingly spatially concentrated in the core, leading to a growing polarization of these cities by race and income, and raising important questions of economic and social equity. This paper will begin by summarizing the evidence from research into economic, demographic and racial change over the past decade in a cluster of ten large American shrinking cities including Detroit, St. Louis, and Pittsburgh. The paper will explore the challenges and implications for policymaking and governance of this increasing polarization, leading to a proposed conceptual framework for how governmental and NGO actors, particularly community development corporations, can foster more equitable revitalization in American shrinking cities. This framework will address the question of the policy space available for institutional strategies, as well as the environmental and policy constraints, and the extent to which in turn dictates rethinking governance roles and responsibilities in shrinking cities.

Resilient Or Vulnerable? Analyzing Disaster-Triggered Migration Process Of A Tropical Cyclone Prone Coastal Community

The capacity of coping with the effects of a disaster is not only an economic capability; it is also a result of socio-politically constructed vulnerability matter of the survivors. Thus, the migration-decision by the disaster victims is not only influenced by economic contexts but it is a long-term consequence of societal mechanisms that is determined through unequal distribution of resources, opportunities and power. Consequently, the aftermath intervention programs in disaster affected communities succeed to social inequalities – as well as population displacement. Taking this theoretical and conceptual debate into consideration, this paper explores how the aftermath intervention programs influence the community resilience or social vulnerability in coastal Bangladesh? Do such interventions introduce social disparities, and finally, result to a migration-decision of the cyclone victims? Results are derived from a field survey with 1555 respondents. The survey was conducted during 2009 and 2010 in 48 southwest coastal villages; those villages those were affected by cyclone Aila. Applying principle component analysis (PCA) in SPSS, a social vulnerability index (SVI) is constructed and then the respondents are classified according to their socio-demographic characteristics. Findings show that socio-politically vulnerable population is proportionately more displaced than the socio-politically resilient population. Thus, it increases the dependency of powerless on the powerful classes in the society.

MALLICK, SAMBIT* (Indian Institute of Technology Guwahati, sambit@iitg.ernet.in)

Contested Proprietary Technology: In Search Of a Non-Proprietary Technology in Agriculture In India

The paper reviews the strategies by the Government of India over time to improve the state of agriculture. The strategies and the institutional and organizational framework within which these strategies were conceived of and implemented though have contributed to improvement in agricultural productivity have led to larger consequences – exclusion of some regions, communities in the region and crops and marginalization of knowledge of those engaged in the cultivation of such crops and their marginalization from the process of development, exasperation of inter-regional and intra-regional socioeconomic disparities, and environmental problems. Raising questions of equity, sustainability, justice - attributed as well as cognitive. Further, productivity based on green revolution strategy has...
reached a plateau and substantial yield gaps still persist. In this context, modern biotechnology tools having potential to improve crops assume significance. The paper focuses on the potential of non-controversial, genomics-based Marker-Assisted Selection (MAS) technology for addressing biotic and abiotic stresses and yield enhancement in agriculture. As a corollary the institutional, organizational and regulatory issues associated with the development, application and deployment of MAS technology for innovations in agriculture in India are important. In other words, the national innovation system especially with reference to agriculture has to be restructured by establishing productive linkages among public R&D institutions, policy making, regulatory issues and large scale production of products including seed based on MAS. Priority setting with respect to which crops and which traits in a given crop has to be made and adequate resources, physical and human, and institutional and organizational arrangements have to be developed to achieve useful results. Further, MAS is a non-proprietary technology, and hence conflict of interests about ownership and control will be kept to the minimum. The MAS has the potential to promote more inclusive and user-centered innovations in agriculture in all the regions including rain-fed areas.

**Telling the Stories of Disasters Study Juku: A Series of Workshops in 3 Disaster-Affected Areas in Japan**

What are the ways that disasters are memorialized, and how are the lessons of disaster transferred to future generations though preserving objects as well as the actual experiences of people who experienced the disaster? The Telling the Stories of Disasters Study Juku is a series of 3 workshops held in 2013, in 3 areas of Japan that have experienced disaster: Tohoku, Chuuetsu, and Kobe. Each workshop includes a tour of the local area, with a focus on the way that local institutions pass on the stories of the disaster experience, involving local community members.

In recent years, large natural disasters are happening throughout Japan: in 1995 the Great Hanshin-Awaji Earthquake, in 2004 the Chuuetsu Oki Earthquake, and in 2011 the Great East Japan Earthquake. Yet in the disaster area those terrible memories are not being forgotten. Many efforts have begun to preserve and pass down these memories through sharing experiences, items, documents, video, etc., towards the creation of a future society which is stronger against disasters.

The “Telling the Stories of Disasters Study Juku,” visits each disaster area, engages in practical activities related to the collection and preservation of documents in the disaster area, listens to the local people who are involved in passing on the stories of disaster, and learns in the style of a study retreat. Incorporating the discussions of the participants, we consider the ways to pass on the stories of disaster. This paper will review the experience of the Study Juku, along with the different memorialization and disaster storytelling examples from the 3 disaster areas in Japan.

**MAMADA, ROBERT** (University of California, Irvine, himamada@hotmail.com)

**A Mathematical Extension Of The Resource Mobilization Approach Of The Social Movement Theory: An Analysis Of The Emergence Of The Arab Spring**

This paper proposes a mathematical extension of the Resource Mobilization approach of social movement theory to answer the questions: Why does a particular social movement occur at a certain time of history? Does the social movement inevitably occur at that time? Or is it simply a historical coincidence? Current social movement theories are adept at providing us with the analyses of social structure of social movements; however, many of them, with several exceptions, do not seem to be ready to answer these questions. In this paper, I incorporate the Resource Mobilization approach of the social movement theory into a mathematical model of the propagation of information and attempt to ascertain that the shock wave of information and the subsequent information vacuum are the fundamental driving forces of the emergence of a social movement. This paper suggests how the shock wave and the information vacuum have played a crucial role in the emergence of the protests in Tunisia that ultimately triggered the subsequent Arab Spring. Prior to the emergence of the protests, social networks and social movement organizations have to be prepared so that the shock wave and the information vacuum can propagate in society. Thus, the Resource Mobilization approach paves a road to the emergence of a social movement. But for a movement to emerge, a shock wave and the subsequent information vacuum need to propagate in society because, during the information vacuum, people are attracted into the “field” of the protest, and the subsequent activities are coordinated there. Thus, this paper argues that the combination of the Resource Mobilization approach and the analysis of the propagation of information clarifies the detailed steps of the emergence of a social movement.

I would like to submit my paper for the Best Graduate Student Paper competition.

**The Making Of “Homo Financius”: The Emergence Of The Financial Literacy Field In Israel**

In the era of financialized capitalism, states not only supervise and regulate financial markets, but also discipline individuals, requiring them to take responsibility for their financial decisions and their current and future economic situation. Attendant to the privatization of risk, varied actors attempt to instill among individuals the knowledge, skills, predispositions and attitudes considered as necessary to function as responsible and wise consumers in the financial sphere, thereby creating a capable and reliable “homo financius”. In the last years, the constitutive traits of homo financius are being specified and promoted using and diffusing the concept of financial literacy, which refers to a set of capabilities that are seen as underpinning proper and responsible financial conduct. Based on a detailed process-tracing study, this paper examines the emergence of the new institutional field of financial literacy in Israel, analyzing the formation of the array of actors populating it, and the various notions and practices that are being formulated, negotiated and institutionalized. The emergence of the field has been the result of interactions among actors responding to numerous changes initiated by state agencies in the local financial system and to the institutionalization of financial literacy as a compelling global standard. Following these developments, new opportunities were created for many and varied actors – both state and non-state – most of them existing before the emergence of this field. These actors propose varied notions and practices of financial literacy, drawing different fields boundaries and promoting varying rules of interaction between the actors populating it. Patterns of cooperation and conflict among the actors surface mainly around the establishment and institutionalization of boundaries and rules of this emerging field.

**Social Housing in Sustainable City**

The paper investigates how the issue of housing has been treated by urban policy in Brazil to meet the legislation defining the social function of urban property as one of the goals of reaching sustainable city. The object of evaluation is the federal government programs of the past 10 years since the adoption of the Urban Policy City Statute, aimed at reducing the housing deficit of low-income by the use of the instrument of regularization involving, in the Brazilian case, the participation of the community resident in the project area, the implementation of infrastructure and titling of land to families. It is found that urban sustainability in the Statute, has focused on social equity and democratic management, essential aspects for sustainability, but not exhausted. It is noteworthy that much of the land regularization programs occurs in urban areas environmentally fragile, specifically borders of rivers and hillsides. The results of urban land regularization processes of social interest are unimpressive considering the research on the irregularity of urban occupation. Illustrates the fragility of these results, the confrontation between the database Brazilian Institute of Geography and Statistics 2010, and numbers of the federal program of regularization. The 2010 Census showed that 11.4 million people live in informal settlements, which corresponds to 3.2 million residential units. The program's goal was to serve 364,000 homes, but reached in fact 46,000, which means less than 2% of the total residential units located in areas irregular. As the principal results of the analysis: misconceptions of statistical measures, that considers a single house as different types of irregularity, or because there are areas not surveyed in the census; inconsistencies in the definitions of program indicators, whose main focus is on the titration, not considering improvements in the areas of infrastructure and urbanization; low investments in regularization programs.

From Chernobyl to Fukushima: Socio-Ecological Analysis. Russian Outlook

The authors aimed to analyze the typical socio-ecological problems in contemporary Russia, Belarus, Ukraine and Moldova and the main reasons of their appearance in terms of socio-ecological consequences of Chernobyl nuclear disaster. These tragedies - Chernobyl, Russia 1986 and Fukushima, Japan 2011 - have shown that everything people do is not enough to prevent the damage to environment and societies if the country is not nuclear free. The findings of the expert survey presented a definite level of socio-ecological tension in the region of exposure even after 25 years of this event. The data selected in the article is the result of comparative sociological research, conducted in Post-Soviet area since 2006 till the present. Observation, content-analysis of mass-media devoted to ecological problems and expert survey were used during the research. The conception of reflection of ecological environment to social behavior and orientations of different social-demographic groups of population was adapted and developed as well as conception of socio-ecological monitoring and conceptual scheme of origin and development of social-ecological (tension) conflict in Post-Soviet dimension. The conception of reflection of socio-ecological interests in mass behavior of different social communities in transformation was approved. Such important issue as a problem of availability of information on environmental activities is presented. It is characterized by:

- establishment of united federal unified information system on nature Whose mission is protection;
- introduction of up to date information technologies and systems into the process of the decision making in the areas of nature use and environment protection;
- provision of state guarantees of public participation in solving of environmental problems, development of effective social partnership;
- organization and implementation of the environmental education of population.

New Ethics of Russian Ecologists: Myth or Reality?

New professional ethics is becoming important in the conditions of unequal societies, especially during the socio-ecological crisis. The present study is examined the professional ethics of the scientific personnel group in contemporary Russia and other Post-Soviet countries which are societies of anarchy. The ecological ethics and morality are latent and only a part of bigger system of values. It can be seen as a historical phenomenon which evolves and exists as a number of developing and interchanging moral systems. While economics sounds during the globalization process, the ecological morality often keeps silent. Modern ecological ethics and morality are degraded, mostly its regulating influence is evident in emergency situations only. Furthermore, the prominent social orders and levels (including social-professional group of ecologists) have their own specific “ecological moralities”. The findings of the expert survey present the social attitudes and system of values of these professionals and the views of the lay public about their social role. The data selected in the article is the result of comparative sociological research, conducted in Post-Soviet area since 2006 till the present. The competency of ecologists is higher comparing with other professional groups of this field, they have a sufficient influence to other professionals. The main social features of the group are: adequate axiological and emotional relation to society and nature, the availability of specific knowledge, capacities to creative action and thinking, which help them to analyze the real socio-ecological problems and to make the balanced optimal decisions in the sphere of nature protection. The institutionalization of the ecologists is influenced by its special characteristics: the special role of ecological ethics in activity of the professional and the importance of professional activity in conditions of local ecological crisis which leads to development of professional self-identity and appearing of professional pathos.

Strategies for Change: Immigrant Women Confronting Dekilling and De-Professionalization

This paper is based on empirical data from a research study[1] on the experience of highly educated Chinese and Indian immigrant women who were professionals in their home country. In particular, this paper aims to discover how the women utilize their agencies to mobilize a myriad local and transnational strategies to confront and change their situations in the context of neoliberal restructuring and the concomitant deskilling and de-professionalization of immigrant women in the new country.

The study found that despite their education, immigrant women professionals are routinely being deskilled, and are channeled into precarious positions which are low paid, part-time, flexible, with no security nor benefits. In order to survive in a racialized and gendered globalized labour market, some women lowered their employment expectations, and took on menial, precarious employment in the new country in order to gain “Canadian experience” and to make ends meet. Others tried to improve their situation through formal retraining processes by returning to college/university so as to gain formal Canadian education, knowledge and skill. Our research also found that the immigrant women were actively participating in transnational practices. For examples, some immigrant women who were unable to juggle their paid work and looking after young children, sent their children back to their home country to be cared for by extended family members so they could focus on their job search or engage in paid employment to make ends meet.

[1] The data for this paper is derived from the project “Transnational Migration Trajectories of Immigrant Women Professionals in Canada: Strategies of Work and Family” (2009-14), supported by SSHRC through a research grant to Guida Man (PI), Tania Das Gupta (CI), Kiran Mirchandani (CI), and Roxana Ng (CI).

MANALO, MELANE* (Independent Researcher, melenemanalo@gmail.com)
Education-Inequality Trap: State Contributions to the Vicious Cycle

The education-inequality connection is not only apparent but very strong in the Philippines where discussions of inequality, usually in household incomes, almost always never fail to mention the role education plays in maintaining the wide gap among Filipinos. Conversely, this gap accounts for most of the inequalities in education. If the potential of education to increase incomes and allow access to higher-earning sectors of the economy is limited by one’s social standing, the marginalized will remain marginalized, while the dominant and rich fortify their position. Thus, inequalities and education—access to it and its outcomes—form a trap that leads to the reproduction of initial inequalities.

Intervening in this vicious cycle is government. It has a no-tuition policy for basic education levels and operates more than a hundred state universities and colleges. On top of these, it regulates and sets the standards for the whole education sector. Thus, government policies and programs have the potential to define the possible connections between education and initial inequalities. In this paper, state actions or inactions that strengthen the education-inequality trap are identified through the examination of public policies that impact the education sector in the Philippines. To provide context to the state’s role, this paper also presents the education inequality situation and evidence of the education-inequality connection in the country. This investigation of the different paths that the state actually prevents some sectors of the population from fully enjoying their right to quality education can aid in understanding the complexity of the policy, political, economic, social and historical environment facing the millennium challenge of “education for all.” Viewing high inequality negatively as not only impedes growth but also restricts people’s exercise of their freedoms, the paper also attempts to partake in the discourse of inequality and its relation to development.

Paradigms Of The Social: Current Vis à Vis An Alternative

The idea of the “social” is the foundational paradigm of sociology, one which has been stated, understood and restated several times throughout its story. In the realm of Sociocybernetics Niklas Luhmann’s social systems theory defines them as based on communication, with society being the most encompassing form. To this author human beings don’t and can’t communicate, only communication can do so, this means that society has to be described on the basis of events. Social systems areautopoeitic because they produce their own components and their growth can be explained on terms with second order cybernetics; unlike living systems, which are closed, social systems are cognitively open and operationally closed.

This posthuman theory of social systems has been widely discussed and some of its criticisms are that it ignores the law of requisite variety (as it only understand the reduction of complexity).empirical evidence that social systems are indeed open, and the fact that it does not comprehend human behavior in micro scale.

The purpose of my participation is to expound the merits of Luhmann’s theory, to criticize it and to propose a new approach to social systems.
As first order cybernetics deals with observed systems which are teleological and second with observing, which are teleonomical; a third order of cybernetics studies mutually observing systems and have the features of both first and second systems. Third cybernetics has language as a basis, while fourth has cognitive coherence; social cybernetics can be understood as the interplay of third and fourth order cybernetics.

Labor Risk Typologies and Life Course in Latin America

Global labor markets and the internationalization of economies have changed the kind and nature of social risks. Life subject to comprehensive job security systems is questioned in different societies. In this context, the paper considers contrary hypotheses on occupational life course related with work uncertainties:

- Standardization process: progressive concentration of biographical transitions on specific ages related with tripartition of work careers: education-work-retirement.
- Individualization of occupational life course: pluralization and de-standardization of individual labor trajectories.

The main of the paper is to analyze the links between job uncertainty and life course in Argentina and Mexico, in three cohorts. The aim is to develop an empirical approach to life course perspective linking it with a sequential analysis to:

- Model individual trajectories of occupational status related with job uncertainties (identifying different typologies of risks).
- Assess the social conditioning of these trajectories, namely the influence of socio economic status, educational level, family structure and birth cohort.

Optimal Matching Analysis is applied to model time-related processes in order to identify labor trajectories typologies. The premise of this method is to consider empirical sequences of events in labor trajectories and compare them to exist-

The results of the analysis suggest:

- The tripartition model exists but it is gendered and different for each cohort.
- There is no unique model to link individualization of occupational life course and risks typologies. Rather, this link is dependent on: (1) Familial and occupational constraints; (2) Social resources and; (3) Institutional performances in each country.
- These results indicate new kinds of social inequalities, by means of widespread labor uncertainty and individualization of work trajectories, that implies new challenges for how we do research in the fields of social risks.
the “choices” made by the system (Bourdieu). In public schools, where most of the students belong to low middle class families, judgments made in this context are predominantly moral, therefore more social than academic. Learning problems are considered as being originated outside of the school. Students’ personal dramas influence grades, their families are also subject to judgment. Teachers’ work is not part of the debate, teaching strategies that promote learning are not discussed, which ultimately leads to school failure. The institution investigated attends middle to upper class students and has been evaluated as one of the best schools in Brazil after several national assessments. How would be the trial in an institution where the student body is already selected socially? It was observed that the evaluation criterion has an academic origin, but the criterion is not strictly academic. Disposition’s considered fundamental at schools of excellence are: docility and academic aptitude (Bourdieu). The social selectivity in this school is a distinctive selectivity. Cutting class will operate in the kind of attitudes towards school, and the possibility of ascension through school. The student desired profile is the middle class one, whose families adhere more easily to the school values, since they have the cultural goodwill as Bourdieu defined.

MANDIC, DANILÔ* (Harvard University, mandic@fas.harvard.edu)

What role does organized crime play in determining the success of separatist movements? My paper explores the role of organized crime in the separatist movements of Kosovo in Serbia and South Ossetia in Georgia from 1989-2012, two cases that share remarkable similarities but have generated different outcomes in the level of successes of the separatist movement. The crucial difference, I will argue, is that while both Serbia and Georgia were thoroughly criminalized states in the 1990s, the former took negligible and the latter substantive steps towards curbing the extent of organized crime. This crucial difference accounts for Kosovo’s greater success in tearing sovereignty compared to South Ossetia’s more limited success. Exploring the relations between separatist movements and organized crime in these two cases sheds light on different opportunities for resource mobilization afforded by criminal enterprises, and on differing strategies of states, crime networks, and separatist movements toward each other.

MANDICH, GIULIANA* (University of Cagliari, mandich@unicar.it)
Cultures of the Future: Habitus, Reflexivity and Capacity to Aspire

Human action, as Schutz observed, is constructed within an imaginative horizon of multiple plans and possibilities. While we move in the temporal domain “with great agility, pirouetting and swiveling to face both past and future, twisting and turning in the knowledge realms of perception, memory and anticipation” (Adam 2004), the sociological understanding of the same process is far from easy. The analysis of the cultural dimensions of projectivity (Mishe 2009) is a very important task cultural sociology has to achieve to understand action and social change.

The imaginative process of projection requires what Appadurai (2004) calls “capacity to aspire” that is to say the set of cultural resources shaping the ability to project into the future. In this presentation I try to explore the very complex field in which the capacity to aspire emerges as stretched out between the forms of practical anticipation incorporated in the habitus (Bourdieu, 1997) and the cultures of the future inhabiting the public domain (as produced by technologies, media, institutions). Strongly connected with the concepts of reflexivity and creativity the “capacity to aspire” has to be seen mainly as the ability to project present opportunities using socially relevant narratives. These ideas are explored through the analysis of ca. 200 essays on the future, written by young boys and girls of age 17-18.

Reflections on a Rural Community Traversed by the Process of Globalization: The Case of the Tupé Reserve (Amazon, Brazil)

This paper aims to present preliminary results of a PhD research that focuses on the dynamics of social relations of rural population living in a sustainable development reserve, the Tupé Reserve (Manaus-Amazon, Brazil). In this area, agriculture is related to local and regional markets and since 2009, it features a resort – an uprooted space geared towards international luxury tourism. In this context, specific elements of the globalization process are involved, such as financial (global and regional), touristic and political interests. The Tupé Reserve appears as an arena of interaction among several actors, being a bridge of interaction of consumer demands and new lifestyles in which imageries, values and worldviews are shared. Thus, the social relations there are no longer constrained by the local context of interaction, as various forces (local, national and global) are at stake. These, far from being seen as phenomena detached as part of a diachronical process of socialization of a particular culture. In short, we propose a paper that discusses the effects and constraints of the transformations and conflicts in the relations between global
social changes and local reality, its cultural representations, and identities of the people who live there. The question of how, and to what extent rural communities produce, and are made by, globalization is central to our work. Therefore, we are led to discuss, among other things, the vitality and renewal of topics related to rural communities.

MANI, DALHIA* (HEC Paris, mani@hec.fr) Seeing Both the Trees and the Forest: Closure and Social Capital in the Indian Interorganizational Network

The Indian economic context is characterized by the importance of business communities such as the Parsis or Gujarathis. These communities enable trust and norms in interorganizational transactions, and substitute for weak legal institutions. Current research in the interorganizational network context has focused on closure in the local network, and does not do as well in explaining how trust and norms can be maintained within large communities. We go back to the original Colemanian conceptualization of closure and social capital which describes the operation of trust and norms in large communities. In addition, this theory emphasizes the importance of closed structures and also the importance of having "good standing" with closed structures. Hence the theory is two dimensional, and has a positional and structural element. Current interpretations conceptualize closure as a closed triad, but this conceptualization is reductive, and (a) reduces the collective element of closure to a property of actors' local network, and (b) loses the second positional element of Coleman's theory. We rely on the latest advances in network methodology and a complete population network in Indian firms to look at macro closure, and position of the actor within macro closed structures. Using this macro conceptualization of social capital, we find evidence for both the structural and positional dimension of Coleman's theory.

MANKY BONILLA, WALTER OMAR* (Cornell University, wmb264@cornell.edu) Negotiated Neoliberalism?: The Labor Struggles and the Latin American State. Evidence from the Peruvian Mining Industry (1993-2013)

In 1993, Peru experienced one of the most radical neoliberal reforms in Latin America. In its attempt to attract international investors, the government deregulated the labor market, undermined labor rights and created a non-interventionist legal environment for collective bargaining. As a result, the number of unions, strikes and collective agreements fell dramatically, while the labor movement almost disappeared. Nowadays, Peru is the Latin American country with the best economic projections—in spite of its increasing inequalities—; it is the second world producer of copper and gold; and multinational corporations control 85% of the country's mineral resources.

In this context, mineworkers have mobilized to get better salaries and working conditions, and have started organizing to bargaining with global mining companies. Most of the studies about these efforts have focused on the contention between labor and capital—particularly within specific workplaces—, but have overlooked the role that State has in the dynamics and outcomes of the collective bargaining and the labor conflicts.

Using unique quantitative data of all the state's interventions in the mining industry's collective bargaining process in 1993 and 2012, as well as qualitative evidence of two in-depth case studies, this paper analyzes the role of the state in the configuration and outcomes of labor disputes. The study shows that, in spite of the commonplace ideas about the "neoliberal state" and its pro-employer tendencies, Peruvian workers have been able to engage in face-to-face negotiations with public workers and politicians in order to confront global companies. This paper offers a typology of the main negotiation mechanisms between state and labor unions; analyzes their main differences with previous strategies used by workers' organizations; and discuss its implications for a theory of the relationship between the labor movement, the state and the global capitalism in Latin America.

RC44-726.4
MANKY BONILLA, WALTER OMAR* (Cornell University, wmb264@cornell.edu) Negotiating the Margins: The Trajectories of Subcontracting Laws in Peru and Chile. the Case of the Mining Industry

In spite of their different development levels, Peru and Chile have several elements in common. In both cases the basic principles of the neoliberal reforms have persisted—in contrast with the political transformations of other Latin American countries—; mining is the most important economic activity; and more than 70% of this industry's workforce is subcontracted. As in other societies, this labor market segmentation has produced precarious employment, from which global companies have largely benefited in the last thirty years. Additionally, both countries experienced the biggest and longest strikes since their return to democracy in the last decade, and in both cases subcontracted mineworkers organized the main mobilizations. Although miners were not the only group claiming for a reform in the labor legislation, because of the industry's importance, they were the most visible and powerful one. As a result, both countries changed some parts of their subcontracting laws in the last years.

Based on a comparison between Peru and Chile, this study analyzes the relationship between workers' mobilizations and labor law's trajectories. Whereas previous studies have focused on how workers struggle, this one attempts to explain and theorize the results of that contention. Using news clips, legal archives and interviews to union leaders, the study argues that, in spite of the similarities between their contexts, workers' mobilizations produced divergent outcomes. In Chile, subcontracted workers were able to build their own national federation, which helped them to build a strong identity, whereas in Peru the traditional mining federation rapidly absorbed workers' struggles, making them unable to unify their demands in a national scale. I suggest that the networks and structures of the subcontracted workers' organizations affected the reforms they got: restrictive in Peru—they are not for all the workers in the industry—and more inclusive in Chile.

RC49-798.1
MANNING, NICK* (University of Nottingham, nick.manning@nottingham.ac.uk) DSM V, a Sociological View

What does sociology have to say about the DSM? Sociology as a discipline has two approaches to analysing a classification system such as the DSM. Looked at as an object of sociological study, questions and observations are about the way in which this is connected to general patterns of social structure and social action. For example, how do the organizations function that produce the DSM? What are their sources of income and power? How do they change? and how does the DSM function in relation to them? A second sociological approach is to accept the general priorities of a field which is committed to some particular outcome and to try to bring sociological knowledge to bear on its problems. From this point of view, sociology could be used to try to help or improve the process of producing a classification system such as the DSM. Sociological analysis of how the DSM is produced, the way it functions in research and clinical practice and its relation to the nature of knowledge and medical care could all have been incorporated into DSM V, in which the DSM is developed. To my knowledge, this has not happened, and I shall argue that this has resulted in the very substantial failure of the DSM to work. In this paper, I will analyse the nature of the DSM as a classification system and its performance. Secondly I will examine the way in which the DSM became rapidly and widely accepted. Thirdly I will advance some general explanations of the way DSM has been produced and the functions it performs.

RC32-562.3
MANOHAR, NAMITA* (City University of New York, NManohar@brooklyn.cuny.edu) Highly-Skilled Immigrant Women's Labor Market Access: A Comparison of Indians in the United States and North Africans in France

Using the concept of cumulative dis/advantage, this paper examines how early dis/advantage in immigration generates barriers to and/or pathways by which highly-skilled North African and Tamil (an Indian regional group) immigrant women access professional labor markets in France and the U.S. respectively. It draws on ethnographic projects with North Africans in France and with Tamils in Atlanta, Georgia.

It finds that despite their more advantageous position upon immigration—student migrants, single women, and French-styled North African educational qualifications—North African women experience barriers in accessing skilled work—difficulties with French work-authorizations, temporary work contracts, lack of professional networks and of local work experience. They therefore strategize by working in skilled-technical, low-wage capacities or in the ethnic economy. In contrast, Tamil women's immigration is marked by early disadvantages—their legal status as "dependent" wives, the non-transfer of Indian credentials and re-skillability for care work—that contribute to their de-skilling. In response, they strategize through the pathway of gradual ascent—moving from low-wage to high-wage work; (re)education and direct entry; and skilled entrepreneurial work to successfully access highly-skilled work.

Four mechanisms explain these divergent outcomes—education-work experience nexus, interactive effects of local labor markets and immigration policy, social capital in classed social networks, and racialization. For Tamil women, the cumulative effects of these converts their early disadvantages to "contingent advantage" resulting in them becoming highly-paid professionals in America. For North African women, these contribute to the erosion of their early advantages leading to their "categorical disadvantage"—long-term confinement to low-wage work with few ladders into the primary labor market in France. Therefore the
downward mobility associated with skilled immigrant women is not universal, as is often theorized, but relational across national contexts such that some groups are more successful than others in accessing skilled work.

**MANSOURI, VALI*** (George Mason University, vmansour@masonlive.gmu.edu)

**Similar Roots and Diversifying Outcomes: Uprising and Revolution in Iran and Egypt**

Recent uprisings in the Middle East have increasingly been characterized by spontaneous mobilization, decentralization, and the lack of dominating charismatic leadership. This research will demonstrate the salience of Horizontalism in constructing and contrasting the Iranian Green Movement of 2009 with the Egyptian Revolution that started in 2011 through the use of Ideal types. Attention is devoted to assessing the strengths and added resilience of these decentralized movements against their Authoritarian states. Analysis through identification of different processes leading to variations on success, stalemate and repression, this will build on previous studies of revolutions to better understand contemporary social and political change.

The Green Movement, despite months of sustained mass protest and delegitimization of the government, solicited little to no concessions or change from the state, while the Egyptian Revolution within only 18 days was able to topple the head of state, ushering in a struggle for the future polity between shifting alliances and elements of the old regime. Identifying key political institutional arrangements illuminates potential vulnerability or resilience to uprising. Construction of state is key, in the case of Egypt the state is comprised of centers of power in institutions such as the Supreme Leader, the government and Revolutionary Guards, combined with limited but competitive elections allow for flexibility, making for added resilient state. On the other hand Mubarak’s National Democratic Party (NDP) of Egypt was more closely characterized by Patronymic bureaucratic rule, which led to competition and conflicts in interest between NDP members and affiliates who rose since the Infitah and the Supreme Council of the Armed Forces (SCAF). By looking at these social uprisings and the changing states will help to explain the current divergent and potential directions of these two movements and their future.

**Patterns of ICTs Using and Information Flow: A Study of Rural India**

Patterns of ICTs Using and Information Flow: A Study of Rural India

**ABSTRACT**

Information and communication technologies (ICTs) are widely acknowledged as important resources in all the aspects of socioeconomic development and this is especially articulated in national policies. Among developing countries, this perspective incorporates ICTs into the development agenda because of their relevance in transforming human activities and in presenting new opportunities for economic growth. Even if ICTs appear ubiquitous in this day and age, it still exists, the growing presence of digital divide and social exclusion. A considerable number of marginalized groups, such as rural folk, women, and low-income youth remain un-reached by the benefits ICTs are supposed to offer. The vision of a so-called “information society for all” as stated in both developed and developing countries’ ICT policy documents today does not appear to include “all” (Chiumento 2008).

This paper presents the patterns of people’s ICTs using and information flow perceived in India, especially in the rural areas. India is a country of multiple divides as social and economic divides already exist in the country and now with the emergence of new ICTs new divisions are shaped on the basis of many factors involved in its use and access. Today growing ICTs and the telecommunication in country has given opportunities to the excluded sections to be part of this new information society. But the impact of ICTs in rural areas is still very limited, despite its penetration into every corner of modern life. There is need of relatively good flow of information and special skills to make full use of ICTs for socio-economic gains.

**Homeless Diaspora: The Impact of Return Migration on Latin American Japanese Communities**

Currently more than 2.5 million Americans living on the South and North American continents are Nikkei or descendants of Japanese migrants. The history of their forebearers’ emigration is marked by considerable scholarly interest. Their interest in issues of living in the diaspora, the meaning of ethnicity and citizenship has been renewed by the recent wave of sojourner migration by Latin Americans of Japanese origin into Japan. Virtually nothing is known so far about the impact of “return migration” and the “returnees’ remigration” on the diaspora in Latin America. To what degree have the ideas of ethnic or political loyalty, traditional and cultural identity been shifting one way or the other due to the increased proximity to their ancestors’ place of origin and the influx of material and immaterial goods from Japan? And how have narratives on the experience of hostile or discriminatory treatment by the Japanese impacted on the collective image of the Nikkei in Latin America? The Nikkei’s return home migration, to the land of their ancestors, has not fulfilled the postulated ‘negation of a diaspora’ (Clifford 1994), it has squared the sensation of being diasporic in the sense of being displaced twice and having multiple relationships with distinct nations which are neither just homeland nor hostland. Based on multi-sited fieldwork in Japan, Argentina, Bolivia, and Paraguay, I argue that the Nikkei are entangled in a squared diaspora in which the juxtaposition of homeland and hostland itself becomes questionable, instable and fluctuating.

**MANZO, LIDIA K.C.*** (University of Trento, lidia.manzo@gmail.com)

**Community Politics and the Middle-Class Desire for Diversity and Difference. Evidence from 40 Years-Span of (super)Gentrification in Brooklyn’s Park Slope**

The transformation of New York City into a global corporate city and the consequences of economic growth for firms, workers and city planning have been widely studied. However, the impact of mega-efforts to attract foreign investments and especially the role of Foreign Direct Investment (FDI) on harmless social and economic divides already exists in the country and now with the recent deleterious effects on small firms and on dwindling employment opportunities for some and to exacerbate displacement problems for others. By encouraging suburban home ownership, discouraging rental housing construction, and upwardly redistributing income through federal and municipal tax policies, Brooklyn’s Park Slope, at the beginning of the 1970s faced a racial and tenure status division between its neighborhood residents. Reform institutions emerged from neighborhood civic organizations and broad-based interest groups.

Drawing the evolution of its demographic and housing resettlement, I found that different social groups had different class interests and ideologies, and therefore they were differently affected by abandonment and resettlement processes. The involvements and influence in community politics of twenty community organizations were analyzed through archival and bibliographic researches from the late 1960s to the present time; among them four historical institutions – which still exist - and four more recent ones, were followed through the ethnographic activities and other researches and are reported in this work. There is, in fact, a social and ‘moral pluralism’ to understand (Schumaker 2013), especially when a neighborhood has been dealing with racial, ethnic, class, and religious changes.

This longitudinal study on the process of Park Slope super gentrification investigates the middle class’ desire for diversity and difference (Lees et al, 2004), as well as the influences of housing-abandonment and resettlement processes on 1) the types of institutions that emerged to represent different class interests; 2) the types of social groups that came to inhabit the neighborhood; 3) the pattern of that emergence over time; 4) the particular goals, scope, and strategies these organizations evolved; and 5) developmental changes in the relationships between local institutions, government agencies, and private investors.

**Cool Streets: Attitude or Commodification? What - and Who - Is Driving Gentrification Along Two Changing Boulevards in Milan and Brooklyn**

Streets do possess attitude. What usually community preservationists define as ‘spirit’ or the ‘soul of place’, here is re-interpreted both in terms of design attractiveness - human scaled, fine grained, mixed use, or highly walkable - and urban lifestyles (Jacobs 1989, Zukin 1995, 1998, 2010, Parham 2012). Especially during a gentrification process, we can discuss how streets embodied essential elements of ‘coolness’ – showing off trendy styles and great flavors - which seems a reflection of the commodification of cultural production.

In using the concept of ‘cool’ as a framework understanding it as a cultural category in its own right (Pountain and Robins 2000) – this work explores the ways gentrification interconnects with the development of an individual habitus as a
spatial manifestation in which the street coolness is crucial to the construction of
istyle individual personae. This exploratory paper describes the relationship between aesthetics, sym-
bolic meanings, understandings of street character, and patterns of socio-spatial change on local shopping boulevards in two neighborhoods - Milan and Brooklyn - which are discussed as sites of financial speculation and gentrification. These neighborhoods, once considered a symbol of blight in the 1970s, today are one of the most appreciated places for Milan and New York's wealthy and educated peo-
ple. As I have observed, their street practices sometimes overlapped with working class people, hipsters, and sometimes do not. However, with hip bars and cafés, used-books stores, yoga studios, and renovated townhouses, they are 'no longer regarded by the public as blighted, but instead are both celebrated as sites of cultural consumption for a new middle class' (Osman 2011:8).

Drawing on several years of field research (2007-2013), empirical quantitative and ethnographic data on the current, and historical aesthetic characteristics as well as types of stores, and value-creating practices are considered.

South Africa within Brics: Emerging Society and Sociological Discourse

The formation of the BRICS contingent opened up new political and economic debates and discourses. The BRICS members are all developing or newly indu-
stralised countries, and they are distinguished by their large, fast-growing econo-
 mies and significant influence on regional and global affairs.

In 2010, South Africa was the last country joined the BRICS and currently holds the Chair of the Group. Against the afore-mentioned background, as well as South Africa's strategic position in Africa, facets of the social structure as well as critical processes act as key drivers for social change in the country as well as parts of Africa, and simultaneously, provide the platform for rigorous sociological discourse.

Consequently, this paper aims to – in terms of social structure – critically ana-
yse the political, economic, educational and health institutions of South Africa, and the differences and similarities within the broader BRICS contingency. Macro level issues such as for example good governance, democracy and social services, develop-
 mental state, economic growth and policies, development programmes and projects, literacy and access to education, crises in the health sector (HIV/Aids, etc.), as well as other issues related to sustainability will be touched on.

Inter-twined with the above-mentioned, the normative component of culture, namely values, norms and sanctions will also be part of the picture.

Closely linked to social structure, the following critical processes will in an inte-
grative way be put under the magnifying lens, against the BRICS background: ideological reconciliation, nation-building, economic transition, nationalisation, migration, globalisation and post-globalisation.

In the final instance, the paper will sought to – from the South African per-
spective – analyse the contingency (BRICS) as a whole and the role of South Africa within it, specifically in terms of participation (e.g. politically, economically, culturally and militarily), autonomy, inter-dependence, and a designated leader role in certain parts of the world.

Can the Racialised Other 'Belong'? Rethinking Race, Racism and Belonging in Australia – Perceptions of Skilled Black African Migrants

This paper centres the perspectives of a group of black skilled African migrants to interrogate the notion of ‘belonging’ within the Australian context. Specifically, the paper explores how participants’ constructions of belonging are grounded in narratives (and experiences) of racism, racialisation and racial discrimination. There is a significant body of work that explores the migrant’s experiences of mobility and constructions of belonging. However, to date, not much has been done to explicitly link these with experiences of racism and racial discrimination.

Drawing on data from a qualitative study on identity and belonging among skilled ‘black’ African migrants, we argue in this paper that experiences of racism and racial discrimination entwined with ascriptions of ‘otherness’ evoke feelings of the perpetual stranger or outsider who does not belong. We therefore interpret the participants’ perceptions of belonging as exposing an ‘other’ paradox of skilled migration: where feelings of being ‘needed’ (invited) into Australia to fulfil an identified ‘need’ in the labour market co-exist with experiences of discrimination to construct an ‘other’ who simultaneously belongs and does not belong. In the end, while the discussions in this paper are mainly concerned with belonging as sub-
jective, personal and emotional attachment to particular groups and constructs of ‘home’, they also expose the power relations, contestations and complexities inherent in the notion of ‘belonging’ particularly when one has to contend with racism and racial discrimination persistently and consistently.

Social Innovation in the Housing Policy in Spain

The context of this research is the economic and financial crisis that has had the effect of exponentially increasing unemployment and evictions across the country. This research has one general objective, and two more specific objectives. The general objective is to analyze the impact of social management on innova-
tion in housing policy in Spain, since the beginning of the crisis (2008) to the present. The first specific objective is to review the scientific literature in order to find successful actions at the international level in the fight against the loss of housing that have allowed more people, belonging to the most disadvantaged social groups, to have adequate housing. The second and final specific objective is to identify if there is a presence of some of these successful actions in the field of housing in the context of Bar-
celona, where I place this research, and how social movements have influenced the implementation of these initiatives. The results show that there has been a change in housing policy and citizenship, and crucially, it contributed substantially to this change through innovative solutions and social pressure towards the Spanish political system. The innovation introduced by the social movements are both at the individual level (processes of financial literacy, empowerment, deliberation and participation) and at the civil society level (collective action, collaboration with organization promoting new models of housing, such as cooperatives). These in-
novations have open a new path for the future development of the housing policy in Spain and also has turned civil society more powerful and a significant actor in the dialogue with the State institutions.

Female Migration in Greece and Integration Issues: Access to Welfare System and Political Participation

Greece has turned in recent years into an immigration region. While immi-
gration started in the early 1990s, it was only in the early 1990s that significant numbers of economic migrants started arriving and became a new destination country. An additional important feature of the immigration process in Greece is the large proportion of women who migrate alone in search of employment.

With regard to the integration problem of migrant women many studies in-
clude the issue of citizenship. However, access to welfare goods is associated with citizenship, and crucially, it contributed substantially to this change through innovative solutions and social pressure towards the Spanish political system. The innovation introduced by the social movements are both at the individual level (processes of financial literacy, empowerment, deliberation and participation) and at the civil society level (collective action, collaboration with organization promoting new models of housing, such as cooperatives). These in-
novations have open a new path for the future development of the housing policy in Spain and also has turned civil society more powerful and a significant actor in the dialogue with the State institutions.

This research has one general objective, and two more specific objectives. The general objective is to analyze the impact of social management on innova-
tion in housing policy in Spain, since the beginning of the crisis (2008) to the present. * denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The meaning of transparency is seemingly obvious and simple, however, in political terms transparency is more "the condition of being transparent". It arises in opposition to corruption, secrecy and lack of clarity in the management of organizations and institutions. Today, it is more relevant than ever as a consequence of all kinds of recent scandals. Citizens of democratic societies demand a more open and transparent government.

This requisite of transparency is a political goal, which is supported by the possibilities for openness produced by the microelectronics revolution. This has modified the technological, social and political scenarios. It is more than the Internet; it is leading to the global ICT system where available information is increasing daily, as are the possibilities of accessing and processing data.

In this context this paper proposes, first, an analysis of public policies according to the principle of traceability of decisions. This means that it is possible to identify the full cycle of a public policy and its relationship with the different actors of governance in the policymaking process. Second, imitating food processing traceability tools, it is possible to propose a "policies processing software" for recording all the traces of public decisions and an open system to retrieve and access this data. Third, it describes the theoretical conditions and prerequisites for a "barcode" to reveal who proposed an action and how it was designed, implemented and evaluated.

**The Image of the City Between the Local and the Global**

Within the global competition among cities for recognition the ‘image’ plays a significant role. Cities work carefully on their iconic representation to attract tourists, knowledge-workers and investors. Therefore, they have the challenge to create a coherent as well as a distinctive image. One can argue that the field of city marketing is, like in advertising, a battleground in which cities compete for the attention of people or other cities. For this reason, it is crucial to understand how city image is formed and negotiated (i.e., the ‘production’ aspect) and how it is received by the audience (i.e., the ‘negotiation’ aspect). The presentation is focusing on the following aspects of city marketing: the production and negotiation processes, the role of local authorities and media, and the impact of global marketing trends. The presentation is based on two case studies: the city of Frankfurt and the city of Singapore. The presentation concludes with a discussion of the implications for city marketing practice.

**The restrictive Assisted Reproductive Technology (ART) laws and ‘moral safety valves’ in Singapore and their role in creating Singaporean reproductive tourists or exiles**

The paper analyses why some Singaporeans are crossing borders to avail of Assisted Reproductive Technology (ART) treatments like In Vitro Fertilization (IVF), Pre-implantation Genetic Diagnosis (PGD), surrogacy, et cetera. A major factor that hinders or discourages couples from getting ART treatments in Singapore is the Bioethics Advisory Committee’s (BAC) strict regulations on ARTs – one of the most stringent in Asia. Formed as Singapore’s counterpart to the UK’s Human Fertilisation and Embryology Authority (HFEA), the BAC prohibits certain technologies like surrogacy, PGD for sex selection as well as “race or traits shopping” through selection of egg and sperm donors. It also does not permit access to certain people, gay and lesbians, women over 45-46, single, and women who cannot gestate. The BAC’s ban on payments reveals a logic of racial hierarchy that perpetuates a local versus outsider divide at the guise of protecting “weaker classes” and “not importing Singapore’s fertility issues to other nations.”

As a result of the BAC’s ban on donor payments, there is a huge sperm and egg cell deficit in the country. Many Singaporeans do not want to donate or acquire genetic material within the small city-state for fear of incest or custody issues. Instead, like dispossessed groups in developed countries, Singaporean hospitals are lobbying to the government to revise some of the stricter regulations or to “lose out” to neighbouring India, Thailand, and Philippines who are establishing their niche and reputation as fertility tourism destinations. Their lower cost, exotic appeal, and more importantly, loose regulations and “bioavailable” citizens are their major advantage and competitive advantage. Since many technologies and services that Singapore prohbits are allowed in these countries, many of their fertility brokers and clinics report servicing several Singaporean clients annually.

**Rethinking Environmental Movements In Developing Nations: The Case Of Cameroon**

Conventional wisdom holds that citizens of developing nations rarely participate in movements similar to the “mainstream” environmental movements of the developed world. Instead, like dispossessed groups in developed countries, their mobilization generally takes the form of locally based, confrontational responses to direct threats to their livelihoods and health. A large literature examines such movements, but it generally ignores developing nations where such mobilization is infrequent. This paper examines the case of Cameroon, where mobilization of large numbers of citizens for confrontation with government or business interests over environmental issues has been limited and infrequent. Our data come from an extensive literature search and interviews with 52 NGO leaders from five of Cameroon’s ten regions. We conclude that the relative absence of large-scale, clear, and immediate threats to the livelihoods or health of large numbers of citizens, in combination with a resilient, quasi-authoritarian government characterized by patronage, divide and conquer strategies, and mild repression, have mitigated against such movements. Cameroon does, however, possess scores of NGOs and citizens’ groups that address environmental problems through lobbying, public education, and concrete projects to protect the environment. Although they lack a mass support base, they do enjoy significant support. Their accomplishments are real, especially in relation to the obstacles they face; however, they are severely limited by lack of funds, expertise, and equipment. Factors cited above, combined with heavy reliance by the most successful NGOs on funding from international environmental NGOs and international aid agencies, predispose them to avoid confrontation, and only a few engage in it. Our findings suggest that conventional wisdom about environmental movements in developing countries represents a considerable oversimplification and that environmental action can assume diverse forms in developing nations. It also raises important questions about how environmental movements are to be defined, which we explore in the conclusion.

**The Problem of Opportunism in the Changing Conditions (A Case of the Relationships between Retailers and Suppliers in Contemporary Russia)**

The rules of market exchange do not only distribute the value added (Gereffi, 1994) but also reduce uncertainty and control opportunism in business partners’ relationships (Kelly, 1991). In Russia in the 2000s retailer-supplier contracts included different requirements such as pricing and bonus requirements of retailers, unpaid services and penalties to retailers, compensation for suppliers’ services. Those requirements made the behaviour of business partners predictable. But in 2009 the trade law was passed and the most of the requirements must be excluded from the retailer-supplier contracts. Nevertheless, the business partners’ ability to reduce uncertainty and to control opportunism in their relationships even in the new conditions. The objective of this research is to analyze how retailers and suppliers altered their rules of exchange after the political intervention. The empirical data are two quantitative surveys that were carried out in 2007 and 2010. About 500 managers were questioned in Moscow, Saint-Petersburg, Ekaterinburg, Novosibirsk and Tyumen. The half of them are retailers and the others are suppliers. The findings demonstrate that after the enactment of the trade law the most of unallowed requirements were excluded from the retailer-supplier contracts but they are still used as separate contracts. This practice gives the business partners an opportunity to make each other’s behaviour predictable in the new conditions. Retailers and suppliers also continue to discuss the content of the political intervention and the consequences of its application.

**MARKLUND, CARL** (Sodertorn University, carl.marklund@sh.se)

**Organized Hypocrisy – Disorganized Technocracy: The Assumed Retreat of Politics in Contemporary Governance in Historical Comparison**

Today, it is widely assumed that a power shift has taken place over the past few decades – a shift away from politics and in favor of the market. According to this view, neo-liberalism has since the 1970s and onwards reduced the scope of “the political”, limiting the exercise of public power in general and planning in particular. Despite this assumed retreat of politics, politics is still, at least medially and rhetorically, tasked with providing some guidance for the future, based on scientific evidence, and to generate tangible results in a logic of input and output legitimacy (Scharpf 1999). Public power is still held accountable as if it possessed the power which is by now to have been lost. Political control is still to achieve results as if it would be possible to exercise public power without the use of planning, raising the question: Why do we expect more from politics at a time when it is supposedly able to do less? This paper proposes that this conundrum – which could be seen as an organized form of hypocrisy (openness) consisting with an increasingly disorganized form of technocracy (transparency), to paraphrase Nils Brunnsson (2002) – can be analyzed by confronting Karl Popper’s concept of “open society” with Gunnar Myrdal’s notion of “constructive social engineering” and Karl Polanyi’s concept of “double movement”, as generated in the context of pitted conflict between laissez-faire liberalism, totalitarianism, and democratic socialism in the 1930s and 1940s, a conflict which in some ways resemble the contemporary contest be-
tween neoliberalism, progressivism, and traditionalist backlash but also provide some instructive contrast.

**MARKLUND, CARL** (Södertörn University, carl.marklund@sh.se)

**Shaping the Things to Come: Concepts of Planning and European Modernity**

Planning—in the sense of purposive action geared towards the anticipated future—has usually been seen by anthropologists and social psychologists as a characteristic of universal human reason. As a specific socio-political practice and scientific theory, however, historians and social theorists have often identified planning as a specific trait of European (Western) modernity, for better and for worse.

This classic analysis of scientific social and political planning speaks of politicians, revolutionaries, reformers, and scientists infatuated with the success of the natural sciences, dreaming of a brand new world. According to this view, the social sciences would be as closely integrated with politics as the natural sciences had already been adopted by business, medicine, and the military. In more extreme “technocratic” interpretations, planning and science would eventually replace politics altogether.

Either planning has been seen as a largely technologically determined, if not outright “neutral” response to the complexity of the modern world. Or, more commonly, it has been criticized as a misguided attempt at controlling human relations and social circumstances in the same way as humans have sought to control nature. As such, planning is a key concept in European modernity. However, the many applications and diverse orientation of planning belie any simple categorization, making it an appropriate topic for conceptual historical analysis.

Yet, it is a key concept whose conceptual history is yet to be written. This paper maps out points of disjuncture between the historiography of concepts of planning, such as cybernetics, management, planning, rationalization, social engineering, and technocracy on the one hand, and the actual historical usage of these concepts on the other. Thereby, the paper brings previously isolated historiographical and theoretical strands into dialogue with one another with a view of initializing a new take on “critical planning studies”.

**Foundation Political Myths in Divided Societies: The Case of Montenegro**

This paper provides an analysis of the constitutive role of founding myths in the formation of nation-states. In particular, it aims to elucidate the odd cases of identity formation in complex and ethnically divided societies where, it is argued here, the historical and cultural legacies are passed on rather differently than in the case of homogeneous societies mostly analysed in the literature on political mythology. With the intention to submit a phenomenon that belongs to the family of the most basic and yet arcane and essentially contested concepts of political theory and political culture to an impartial political investigation, the founding myth is firstly reconstructed with respect to the general theory of myth and political myth. In the second part, the role of mythological legacy in the genesis of the statehood of Montenegro both in the past and present is analysed. The author argues there are two founding narratives in Montenegro, explaining their ethno-nationalist character and attempts to deduce patterns of their instrumentalization by the rulers of the Petrovic-Njegos dynasty and the current government. The paper ends with concluding remarks about the controversial status of “commemorative foundational mythology” and the need to set forth new and republicanized forms of legitimisation that would disengage the regressive dialectics induced by the myths discussed thus far.

**MARKOVIC, PETAR** (University of Donja Gorica, Montenegro, petar.markovic@udg.edu.me)

**Post-Nationalism in Practice: European Citizens’ Initiative**

The discussion on the practical and heuristic value of cosmopolitanism and post-nationalism has informed and shaped the debate on the future of the European Union from the Maastricht Treaty onwards. The recent literature on belonging, allegiance and political identity suggests that cosmopolitanism is too thin of a concept to account for the gradual emergence of a common European public space visible primarily in the convergence of the EU’s civil society movements. In this context, the notion of “constitutional patriotism” is analyzed due to its centrality in the debate. Before proceeding to the central part of the paper, the author argues that social constructivism portrays a more realistic and substantive picture of the nature of the sense of European belonging. The paper concludes with an examination of the European Citizens’ Initiative and attempts to assess to what extent this institutional novelty of direct democracy in the EU has provided empirical leverage for post-nationalist belonging. Through the comparative and case study analysis of the most paradigmatic initiatives submitted thus far, this investigation aims to provide the reader with a possible dynamics of post-national identification in the EU.

*When Art Worlds Look to Sociology for Inspiration: A Case Study of Contemporary Art Conservation Strategies*

Recent scholarship in cultural sociology has provided new theoretical frameworks and methodological strategies for studying diverse (and sometimes incomparable) value systems (Boltanski and Thevenot 2005, Heinich 2008). This paper examines the relevance of trends in the sociology of values (or pragmatic sociology) in a case study of recent international initiatives involved with the development of new approaches to contemporary artistic heritage conservation. The paper presents research on the activities of four international initiatives devoted to the development of new strategies for the preservation of artistic heritage. The paper examines how contemporary art conservation networks are attempting to grapple with the increasing realization that diverse value systems and multiple meanings of the arts they care for can be taken into account in new visions of the role of conservators in the preservation of artistic heritage. It examines recent trends in conservation research, in particular the efforts of art conservationists to adapt sociological methods and theories for inspiration. Conservators have become increasingly involved with research about the ‘meaning’ of objects and cultural heritage sites when planning interventions. They study records of the creator’s intent, conduct interviews with artists or other authorities, critically analyze the historical contexts of the work’s origins and of subsequent transformations. The paper seeks insights about ways to preserve the integrity of the work that respect its symbolic and cultural significance. These efforts by art conservators to draw on sociological insights provide a compelling example of the relevance and uses of sociological research in contemporary art worlds, however they also raise questions about decision-making, in particular how to use social scientific theory as an affordance for practical action.

*Environmental Trust: A Cross-National Study*

Environmental issues, topics, and concerns are some of the most pressing global challenges of our times. Research demonstrates public opinion on environmental concerns is global, yet simultaneously wide-ranging and varied. Despite its importance, however, our understanding of the within-country dynamics related to the expression of environmental views remains underspecified. This research examines environmental trust using the International Social Survey Program Environment data from 2000 to advance the literature on the globalization of environmental concern by articulating its content and expression in three regional clusters derived from previous research. Important similarities are shown across regional regarding the model overall. Some intriguing differences are revealed in the model when examining results for countries individually within the three regions.

*Pathways to Environmental Activism Across Time and Place*

This paper tests a model of pathways to environmental activism using three waves of data from the International Social Survey Program. Given expectations from the theory of planned behavior and value-belief-norm theory, a path model is specified that examines how individual resources, knowledge, awareness of consequences, attitudes, willingness to contribute, and efficacy affect environmental activism. The mediating effect of willingness to pay or make environmental contributions is investigated in detail given previous research. Results demonstrate support for the model across the countries investigated. The causes of environmental trust include environmental concerns, awareness of consequences, and attitudes combined affect environmental activism. Moreover, mediating tests were conducted that demonstrate a prominent yet not exclusive role of willingness to contribute in promoting activism across nations, uncovering relations that are masked in previous cross-national research. Results reveal that the model is robust over time and across places, with some exceptions, yielding insights for future comparative and cross-national studies.
tained this intense cross-border transit of people, goods and information. Thus, in order to understand the phenomenon of migration as a social product, not only as a result of individual decisions and/or economic and political constraints, it is necessary to consider the key role played by social networks, mostly those related to families and households in the entire process. This paper describes the changes in volume and composition of family arrangements of Brazilian returnees from Paraguay in the five-year periods 1986/1991, 1995/2000 and 2005/2010 and raise some points for reflection and discussion on the participation of transnational families in the migration process and circularity of these migrants. Information from Brazilian Demographic Censuses of 1991, 2000 and 2010 will be used to do so, and to estimate the direct and indirect effects of international migration return to that country.

H1: It is expected that in the period 2005/2010, there is greater diversification of family participation in the migration projected for Brazil, both of returnees, as well as international immigrants from Paraguay.

H2: Although a structural pattern persists, given the nature of family ties, we expect a change in the roles of families in the return to Brazil and in the entry of foreigners from Paraguay, given changes in economic and political contexts of the two countries.

MARQUES, ANA CRISTINA* (CIES, ISCTE-IUL, anacriscina.hmarques@gmail.com)
Families’ Control and Youth Sexuality As Meaningful to Young Peoples’ Transitions into Adulthood

Nowadays, in Western societies, youth transitions into adulthood are, usually, considered even by authors like Gagnon and Simon, Weeks, Thorne, Connell, Richardson, Jackson or Bozon, as well as some other sociological authors like Archer, Mouzelis or Lahire, and using a critical realism perspective. The idea here is not to deny all the problems with living in a hetero-normative world, dominated by ideals of masculine supremacy, but to ask for a sociological analyses of sexuality, and their transitions into adulthood. This happens especially in two main ways. First, the maintenance of some control concerning young women’s leisure time, sociability and sexuality can be associated with a smaller period of sexual experimentation for these young women and with some of them leaving home, entering into conjugality and/or parenthood earlier than the others. Second, the problem of “coming out” and/or assuming a non-heterosexual identity can be related with the need to lie, being (or being afraid of being) kicked out from home. Based on 60 in-depth interviews conducted in Central Portugal, with 60 white young adults, aged between 18 and 29 years old, I intend to look for possible articulations between family control over young people’s leisure times, sociability and sexuality, young people’s representations and experiences of sexuality, and their transitions into adulthood. I will argue that the family context and the domain of sexuality are not meaningless for young people’s trajectories into adulthood. Instead aspects related with family control, as pionniery in the analysis of gender relations and sexuality, where categories, identities, norms and values are not taken for granted, but subjected to scrutiny, taking into consideration the multilevel and interconnected social world where they are constructed and enacted, and where individuals should be thought of as social positioned, action as conditioned and categories critically analysed as relational and contextualized.

RC16-280.5
MARQUES, ANA CRISTINA* (CIES, ISCTE-IUL, anacriscina.hmarques@gmail.com)
"Is Heterosexuality That Bad? Questioning Some Presuppositions and Asking for a Sociological Analyses of Sexuality"

"Is heterosexuality all negative? Why is heterosexuality so dangerous or bad? Are heterosexual women all submissive, victims and passive subjects? Should people be ashamed of being heterosexual? These are some of the questions that came through my mind as I was working on my PhD dissertation and attending conferences about sexuality. Giving credit and importance to the work of feminists, as pioneering in the analysis of gender relations and sexuality, has raised a problem that called attention for problems related with power in gender relations, male dominance and women submission, commodification of sexual female bodies, sexual double standards or sexual violence, and that brought the personal into the political agenda, I still felt that something was missing in those discourses. Notwithstanding, simultaneously I was reading the work of some social scientist that problematized “my concerns”. I felt more reassured. I have to say then that this presentation is also personal. But from a personal unease I wanted to insist in the ways we predict, memorize, accelerate and decelerate time and how we sew the ways groups and individuals, criticize existing modernities, hierarchize the current arrangements modeled by imaginary times (such as SF movies and TV shows) is contextually valid models. Thirdly, analysis of uchronian literature and fictional devices in social theory has conceded an important place to utopias, and utopian thought, either as a device to envisage new and just worlds or to imagine dystopian counter examples. However, and despite some brave attempts by Max Weber, Masaruki, or the so-called Uchronia (the realm of the nowhere in time) never seemed to enjoy the same widespread attention as their spatial imaginary counterparts. In this paper, based on the contributions of Tarde and Renouvier, I’ll try to signal that Sociological Theory has much to gain by paying a closer look to uchronian thought. First of all, uchronian thought paves the way to a better understanding of causality mechanisms at the macro-sociological level, separating the essential traits from the ancillary elements. Secondly, the use of uchronias is particularly helpful in comparative historical analysis, introducing conditional reasoning and “as if” instruments of analysis, offering a clear cut division between universal rules and contextually valid models. Thirdly, analysis of uchronian literature and fictional arrangements modeled by imaginary times (such as SF movies and TV shows) is an important device to assess how societies evaluate current dangers and future risks. Building up dyschronian times (like the ones imagined by Tarde) reflects the way groups and individuals, criticize existing modernities, hierarchize the current sociopolitical arrangements and think about their possible effects. Fourthly, uchronia asserts the levels of temporal continuity and discontinuity that characterize specific societies, making perceptible the creation of fœos, imaginary foundations, communitarian links, and invented traditions. Finally, uchronian thought offers insights on the ways we predict, memorize, accelerate and decelerate time and how we sew the threads that link past, present and future in intelligible ways.

Social and Solidarity Economy As a Real Utopian Design: A Comparative Perspective

Social and solidarity economy (SSE) presents a collective project for another way of organizing the production and the society, in which the economy is subordinated to its social function. Thus, the paper discusses SSE as a real utopian proposal (Wright 2010): its institutional design is desirable in terms of egalitarian emancipatory ideals, such as privileging the collective ownership and control of economic resources and integrating solidarity in the core of economic activities as a means to achieve common goals; it constitutes a viable, and to some extent achievable, alternative to capitalist arrangements, since it has been partially implemented and is active on the political agenda worldwide; it contributes to a pathway of social empowerment, as it involves collective actors taking control of the economy over the capital or the state. However, SSE is also a complex field pervaded by tensions and conflicts. If, on the one hand, it embodies a normative vision for overcoming the hegemony of the dominant system, on the other, some experiences have become complementary or even functional to the capitalist world. The paper results from ongoing PhD research and its purpose is to critically examine SSE, in light of an empirical comparative analysis based on one case from the North (Portugal) and one case from the South (Brazil).

Out of Time: Uchronian and Dyschronian Devices in Social Theory

Social Theory has conceded an important place to utopias, and utopian thought, either as a device to envisage new and just worlds or to imagine dystopian counter examples. However, and despite some brave attempts by Max Weber, Masaruki, or the so-called Uchronia (the realm of the nowhere in time) never seemed to enjoy the same widespread attention as their spatial imaginary counterparts. In this paper, based on the contributions of Tarde and Renouvier, I’ll try to signal that Sociological Theory has much to gain by paying a closer look to uchronian thought. First of all, uchronian thought paves the way to a better understanding of causality mechanisms at the macro-sociological level, separating the essential traits from the ancillary elements. Secondly, the use of uchronias is particularly helpful in comparative historical analysis, introducing conditional reasoning and “as if” instruments of analysis, offering a clear cut division between universal rules and contextually valid models. Thirdly, analysis of uchronian literature and fictional arrangements modeled by imaginary times (such as SF movies and TV shows) is an important device to assess how societies evaluate current dangers and future risks. Tortured Bodies, Ravaged Flesh, Killing Machines: David Cronenberg and the Sociology of Disgust

Over the past two decades, reflections on disgust and repulsion have been piling-up in Social Theory. Moving away from an analysis entirely centred on biological reactions to emotional expression, theorists have turned to finding disgust as an important instrument to understand moral boundaries and civilizational constructions. Disgust seems to fulfil a position akin to incept prohibition – adequately universal to be declared biological, and sufficiently particular to be deemed cultural. If the traditional views on disgust revolved around the issues of purity, pollution, and contamination, having the body at the centre stage, some of the contemporary approaches are linked not to external threats to the human integrity but to the transformative capacity of science and technology, breaking barriers, violating in- terdictions, and destroying moral boundaries. The danger of the body snatchers becomes the menace of the creators of resulsion. Terror and horror movies, tend to epitomize the dilemmas of disgust. For their authors, we have to consider the mutilated, and raped and transformed bodies of the victims of epidemics, and serial killers or on the creative and uncontrolled hubris of the brilliant but mad scientist that aspires to play a demiguric role in a new but demented universe. This double feature of disgust is paramount on the films of Canadian director David Cronen- berg, representing both the civilizing and uncivilizing roles that disgust can play, especially when linked to scientific projects. If science is seen as a cornerstone of modernity, a civilizing process and symbol of progress and enlightenment, reducing human suffering and enabling longer, healthier and happier lives, it is also possible that the idea of the moral boundary of the artificial-natural divide or the human-animal partition. Cronenberg's filmography is a clear example of how the medical, biological and chemical sciences have entered the realm of disgust, side by side with porn or sexploitation.

Developing a Pattern Language For Science-Engineering-Art-Design (SEAD) Collaborations

Acknowledged similarities and prospective synergies underlie the work of artists and scientists in perceiving and describing the natural world; however, there are few formalized or easily recognized methods to utilize those commonalities for enhancing art-science collaborations. The notion that observable or archetypal patterns could represent a form of communication or a language among professionals from different fields was explored by architect Christopher Alexander, who introduced a pattern language consisting of hierarchically arranged patterns that are linked together in countless ways. Whereas the use of patterns and rhythms to communicate art or music is relatively straightforward, the utility of spatial or temporal patterns to portray or explain scientific data is less obvious. Some branches of science focus specifically on nature's patterns and rhythms; however, most scientific data can be expressed in terms of frequencies, cycles, and other common descriptors of temporal patterns, as well as distributions, geometries, and similar descriptors of spatial patterns.

The use of a pattern language for art-science communication would initially identify and collect numerous patterns to be labeled and categorized, but discernable similarities among seemingly different patterns would likely reduce this number over time. Distinguishing among natural, ideal, and abstract patterns could be a first step in categorization and might provide a handy framework for users to perceive relationships among different forms of information (e.g., ideas, data, designs). The precise structure or syntax of the pattern language (i.e., naming, ranking, illustrating, exemplifying, and referencing patterns) should be less important than an unambiguous depiction of the collected patterns and their links. Patterns and rhythms may be more recognizable to people than are words, numbers, or symbols, thus providing a means of communicating across disciplines and cultures.

Social Origins and the Access to Public Higher Education in Brazil

According to the well-known MMI hypothesis (Raftery and Hout, 1993; Shavit and Blossfeld, 1993), the class inequality on the distribution of educational opportunities tends to decline only when attendance rates reach saturation at given educational levels for the upper classes. Lucas (2001) challenged this view introducing the EMI theory which proposes that, even when saturation is achieved for a given educational level, inequalities tend to persist in a qualitative sense, with kids from privileged socio-economic background having more chances of going to the better schools or universities. This means that IEO had to be analyzed not only in reference to attendance to a certain educational level, but also in reference to which segment (or track) in the educational system the individual accesses. Patterns and rhythms may be more recognizable to people than are words, numbers, or symbols, thus providing a means of communicating across disciplines and cultures.

This paper was presented as a SEAD white paper, and supported by the National Science Foundation under Grant No.1142510.
Effectiveness of Keepin' It REAL in Guadalajara, Mexico

Despite high rates of substance use in Mexico, only 43% of young adults report receiving a substance use prevention program. In response, keepin' REAL (Mar-ténête REAL), a substance prevention program developed in the US for Mexican American youth, was implemented in central Mexico by a bi-national team of investigators. Two middle schools in Guadalajara, Mexico, were randomized into a treatment (N=226) and control (N=206) condition. Students completed a pre-test prior to implementation, a short-term post-test after the last lesson, and a long-term post-test 12 months later. Substance use measures were 30-day amount prior to implementation, a short-term post-test after the last lesson, and a long-term post-test 12 months later. Using a path analysis in Mplus on adolescents whose parents also participated (N=462), both direct and indirect effects of participating in FPNG were examined. Findings indicate that participation in FPNG and keepin' REAL had a significant direct effect in lowering adolescents' amount of substance use. For alcohol and cigarettes at wave 3 in comparison receiving only keepin' REAL. These effects, however, were completely mediated by anti-substance use norms - youth whose parent also received FPNG had significantly stronger anti-substance use norms, which in turn resulted in significantly lowered amounts of alcohol and cigarettes used. These results are consistent with the Ecodevelopmental Theory and provide further evidence to the theoretical premise that strengthening parent-child communion of norms can have a positive effect in preventing adolescent substance use. In addition, these results support the assumption that involving parents in prevention efforts has a major effect in strengthening the efficacy of youth-only classroom based intervention. Because FPNG was designed with Latino parents and for Latino parents, FPNG is emerging as a curriculum that can positively impact familial and parent-child influences that characterize Latino youth and families and reduce substance use among Latino adolescents.

Ethics As a Professional Responsibility From a Higher Education Perspective

Se presentan reflexiones provenientes de dos investigaciones doctorales en responsabilidad social universitaria. Por una parte el desarrollado en la Universidad de Valladolid en el cual se indaga sobre la percepción de la sociedad (stakeholders) acerca de lo que esperan de la Universidad. El segundo estudio desarrollado en universidades de 4 países iberoamericanos (Colombia, España, Perú y Chile) realizó una evaluación del aporte de la educación universitaria a la formación de una ciudadanía responsable. El estudio mostró datos que cuestionan el fomento de unos valores prosociales desde que accede a la academia el estudiante hasta que finaliza su grado.

Es de interés para esta ponencia el resaltar la necesidad de confluir en la denominada responsabilidad social de las universidades, aspectos que conllevan a la relación de diálogo con el entorno, y promueve en su mismo seno para ser una institución agente de cambio social en conducir a profesionales con sentido ético de responsabilidad y una ser instituciones que promueven un desarrollo socioeconómico sostenible y que favorecen la progresiva disminución de las desigualdades no tan solo a nivel global si no también en su entorno cercano.

Junto a la presentación de reflexiones sobre los estudios doctorales, se señalan algunas de las directrices internacionales emitidas por organismos como la UNESCO o la OECD en base a las cuales se señala el necesario rol de que la educación superior se alinee con los objetivos del milenio, y capacite en comportamientos sociales y responsables. En este sentido, la educación superior se encuentra en un camino de desarrollo con una serie de características propias que la diferencian de la educación secundaria, y que requieren de un liderazgo comprometido con el desarrollo socioeconómico sostenible.

Managing Organisational Religious Diversity in Finland

The paper will discuss and analyse how the Finnish public administration copes with religious and spiritual diversity in the 2010s. In the post-World War II times, state's involvement with religious affairs was on a low level with the exception of the two national churches: The Evangelical Lutheran Church of Finland and the Orthodox Church of Finland. During the 1990s and 2000s the presence of different religious traditions and organisations has grown considerably. The main contributors to new religious diversity have been (1) Pentecostal and Charismatic Christianity, (2) religions of immigrants and (3) New Age and similar types of spirituality. Simultaneously the historical churches have experienced continuous secularization. There has been both a novel interest in religious affairs by the Finnish public administration and a shift of governing religions from church law to networks (e.g., representative councils, interfaith associations). The new model does not replace historical church-state relations, but it works alongside it. This paper argues that in order to analyse how states' aim to regulate and manage networks (e.g., representative councils, interfaith associations). The new model does not replace historical church-state relations, but it works alongside it. This paper argues that in order to analyse how states' aim to regulate and manage religious and spiritual diversity, we should look at how the historical church-state relations function together with new forms of governance networks.

Impacts of the Financial Crisis on Family Trajectories: The Case of Living Together Apart Couples

Family trajectories and transitions, union formation and dissolution, are strongly linked to or framed by economic and cultural context. In that perspective, family life has to be considered more as a result or the expression of contextual parameters than a universal phenomenon that could be looked at isolated from these parameters (like work conditions, economic assets, etc.). The 2008 financial crisis and its consequences on housings revealed in different countries such a relationship between external macroeconomic factors and family transitions: the case of couples who continue to live together while considering themselves to be separated. We have studied in parallel some of these “living together apart” situations in France and in Argentina (with Andrew Cherlin and Caitlin Cross-Barnet). We have collected in different social classes, the main arguments delivered by people concerned with such situations of forced cohabitation. Among them, we identify situations where residential separation is not possible, either because of the need to keep up appearances, often for the children’s sake, or because total separation is too frightening or living in separate homes is unaffordable.

In this contribution, we want to go beyond a typology of these situations to use them as a mean to compare our respective national family culture concerning marriage, divorce, cohabitation. France and USA are effectively two very different nations regarding family issues. The common economic trauma of the financial crisis that we are still facing in our respective countries is an occasion to reveal these cultural dimensions.

L’appropriation Des Réseaux Sociaux : Des inégalités Sociales Et Culturelles ?

Dans le cadre de la thématique « Technologies de communication et inégalités », nous proposons d’analyser les inégalités sociales et culturelles révélées dans l’appropriation des réseaux sociaux par les usagers.

Pour repérer certaines de ces inégalités, un focus est réalisé sur quelques situations extrêmes de violence et domination sociale dans l’élaboration du processus interactif de construction de l’identité numérique sur Facebook et Spotted/Facebook. Grâce à l’analyse de profils, commentaires et tags, diverses formes de stigmatisation sociale, injure et diffamation (espaces à la fois privé/public) sont classifiées, et interrogées comme autant de traces/marques faisant irruption dans ce processus de construction identitaire.

En quoi l’ordre de l’interaction (Goffman) est-il opérant et réductible dans la négation de cette mise en scène sociale ? Comment articuler le concept de face avec cette représentation de soi socio-techniquement contrainte ? Le profil de ces usagers en termes de capital social et culturel – ses déficits ? – en ferait-il les nouvelles victimes sacrifiées dans l’affirmation du lien social ? La complémentarité online-face à face est-elle importante. Ré-explorer le concept d’empathie (avec son corollaire, le partage des émotions et affects), interroger l’ethique du visage (Levinas) et son devoir de responsabilité permettent de comprendre l’évolution de ces interactions à distance. Et si les TIC participent de la montée de l’urgence généralisée (Jauréguiuberry, Aubert), nous montrerons combien l’injonction (la fatigue ?) à participer à ce flux informationnel génère diverses formes d’instabilité dans le travail sans cesse renouvelé de cette construction identitaire.

Exploitant l’hypothèse selon laquelle la colère est plus influente pour s’exprimer sur Facebook que la joie ou la tristesse, nous avons ouvert un blog pour recueillir des témoignages d’usagers victimes ou témoins. Ces données empiriques sont complétées par des entretiens semi-directifs (n= 20) et des focus group.

God Is Argentinean, and Also the Pope!" Catholicism, Popular Religion and the National Imagination

The arrival of Jorge Bergoglio to the Holy See has introduced a number of changes in the relations between the Catholic Church and the State in Argentina. While traditionally, these relations have been characterized by the preferential status of Catholicism as quasi-official religion and its active presence in the government’s decisions, in the last decade it was noticeable a succession of conflicts between the Church and State. However, few days after the coronation of Pope Francisco, government discourse changed radically, emphasizing the importance of having “a Argentinean Pope.” The media and various forms of popular expression (graffiti, jokes, cartoons, montages on Facebook, etc.) express how unprecedented and unexpected this situation was, from a key that combines various representations of national culture.

In this new picture, the traditional and conservative homologation between Argentinian national identity and Catholicism, acquires new features, especially at the level of popular religion.

In this work, I will observe a specific matrix that allows to relate to the sacred and the idea of nation: soccer. Soccer appears as one of the matrices that model the relationships with the sacred: not as metalanguage, nor as religious meta-

Black Ethnicity and Rethinking Assimilation Theories: A Multilevel Analysis of Housing Values Among and Between Whites and Native- and Foreign-Born Blacks in the U.S

Black-white residential segregation is still a reality in America. Research shows black homeowners are more segregated from white homeowners than black renters are from white renters. The findings have been interpreted to mean blacks do not benefit as much from home ownership because home ownership does not lead to greater access to white space. Implicit in this interpretation is the mistaken belief blacks ultimately desire residency in white neighborhoods and home ownership in said neighborhoods is evidence of the completion of the assimilation process. Focusing almost exclusively on home ownership as an indicator of assimilation is inadequate. To accurately understand whether blacks are assimilating, housing values must be analyzed. If blacks are assimilating, the gap between them and the dominant racial group should decrease over time. Using census-based data for the past few decades, the present study examines the following research questions: 1. Are there racial disparities in housing values for blacks and whites and how have they changed over time? 2. Are the racial disparities larger or smaller between whites and foreign-born blacks or between whites and native-born blacks? 3. What social and demographic variables account for the variations in housing values by race and by ethnicity? 4. What are the theoretical and methodological implications of the study findings?

Gender Inequalities in Health and Socioeconomic Status: Analysis through Healthy Expectancies in the Basque Country (Spain)

In the Basque Country, like in most societies, women survive longer than men but are less healthy. However, several authors have criticized this fact as being too simplistic and not taking into account that men and women are heterogeneous groups. It is necessary to study gender inequalities in health considering other variables such as educational level, social class or age that can explain this gender gap. The aim of the present paper is to examine gender inequalities in health and their change in the Basque Country considering two variables of socioeconomic status, and healthy expectancy as the main result variable, which integrates health and mortality. This measure also allows separating life expectancy into years of life in good and poor health. Educational level and a deprivation index of the residence area were used as socioeconomic status variables. The last one summarizes four characteristics of census tracks (unemployment, manual and eventual workers, insufficient education overall and in young people). Health expectancy and each of the socioeconomic status for different ages was calculated in two periods (1996-2001 and 2001-2006).

Women lived more years than men at all ages, periods and social groups, but the gender gap varied by age and social position. Thus, differences between men and women were greater as the level of education decreased or increased the deprivation index. The difference in the number of years between men and women was lower when considering only the years in good health, so that women lived more years in poor health. The gap between men and women decreased in the second period comparing to the first. A comprehensive vision which integrates gender and socioeconomic inequalities is necessary to adequately understand the health differences between men and women.

Cultural Representations of Widowhood: Social Media and the Declaration of a Status

The lens of widowhood research has moved from a focus on role loss to challenge dominant public narratives of misery and decline, pointing instead to a complexity of experience rooted in personal biography and in gendered life courses. Cultural gerontologists promotes further inquiries into new and untraditional sources of scholarly knowledge in the social sciences, to reveal an even more complex and varied picture. Theatre and film have emerged in some cultural contexts as powerful tools to inform and emancipate widowed women from degrading widowhood rituals and norms. In addition, the rise of social media, with blogs, websites and interactive messaging, has transformed public representations of widowhood. While older widows in particular have traditionally had access to a reference groups of widowed age peers, the defining quality of those interactions is different from the new world of social media. As with structured approaches in traditional society, the interaction happens outside, mainstream culture, brought together in structurared situations through the widowhood status they have in common. Through social media, contact begins more anonymously (visiting websites, reading blogs) or publicly (creating a website, authoring a blog, filing an online video) and then may lead to interactions and connections beyond one’s local community — through widow conferences and meetings, with some becoming sustained interactions. In historical context, one thus sees, over the period of about 75 years, cultural shifts from the public ‘wearing’ of one’s widowed (widow’s weeds and other aspects of dress and appearance) — that ended by the 1930s; to the subsequent ‘visibility’ and denying of widowhood and birth certificate for some decades; to use of social media as a declaration or even reifying of widowhood, especially amongst younger women, those for whom widowhood is off-time, or for those experiencing dis-enfranchised grief.

Indigenous Female Farmworkers in Northern Mexico: Workers’ Rights Violation Under the Veil of Better Jobs

In Mexico the implementation of macroeconomic policies has resulted in the indigenous population experiencing great disadvantage, being deprived of benefits and subject to profound inequalities. Despite the fact that in the northern Mexican states living conditions are generally better than in the rest of the country, development is unequal and inequitable. This situation particularly impacts the female indigenous population that works in the agricultural fields in northern Mexico, as well as reflected in their low educational levels, unemployment or unstable employment, inadequate housing, poor nutrition, lack of social support and great poverty.

This paper discusses the point of view of female indigenous farmworkers in terms of social inequalities and their effect on living conditions. It is based on research conducted over three years in an agricultural valley of the state of Baja California, regarding working conditions, women’s rights and the health of indig-
enous women who work in the agricultural fields. Using qualitative methods, the objective of this research was to recover the voices of the farmworker women regarding the inequalities to which they are subject.

The instability and insecurity of their employment produces and guarantees a permanent precarization of their living conditions. This situation reflects the invisibility of these women in the eyes of the state, which leaves them in a condition of social vulnerability. The asymmetry of social relations explains how the state can offer low-quality services to this population and reduce their working rights and salary opportunities. The socioeconomic vulnerability in which this population is found is reflected in job insecurity and the inability to defend themselves against the state.

MARTÍNEZ, MARÍA* (Universidad del País Vasco, maria_m_g@hotmail.com)

The crisis has had a big impact in Spain and specially on those who were already in increased precarity situations as women. But in order to understand women's situations in a time of crisis, we need a longitudinal analysis that show us the weaknesses and the increasing precarization of their living conditions in the last years. The aim of this paper is to analyse the evolution of women's living conditions and the process of precarization in Spain between 1995 and 2010. We will address the common hypothesis that women constitute a more precarious social group than men, and we will try to complex and research around that hypothesis. In a first moment, we will analyse women as a precarious group as a whole and depending on other social positions (employment, maternity, age, origin...). It is an attempt to show empirically the feminist theoretical proposals around women and different authors about

Protest Cycles and Squatting Practices: Socio-Spatial Structures or Activist Agency?

There are several public myths about squatting houses and social centres. One consists in ignoring the long lasting history of squatting practices and movements over the decades. A second one considers squatting as a simply legal issue which should be either persecuted either legalised. Finally there is a general image that depicts squatters as the unique agents, authors and responsibles of the squatting movements. This paper aims at providing empirical evidence against those three myths. First, I recall on a complete data base of all the squatted social centres publicly visible in the city of Madrid since the decade of 1970. Urban location, duration of the squats and types of ownership of the buildings, shed light over the pattern and socio-spatial conditions. Second, mass media coverage before and after the recent wave of squatting in Madrid (connected to the M15 movement), serve to identify new and external conditions. Additional documents and interviews help to understand the deep political tradition and the experiences that created a favourable scene for squatting. Usually hidden legal tactics and the predominant kind of interaction between squatters and local authorities also shaped the explanatory context of the evolution of the movement. There is a more general consensus about the role of the housing shortage and urban speculation in the legitimation and motivation of squatting, so I won't develop it here. Instead, I will analyse the theoretical framework about socio-spatial structures of opportunity and protest cycles as the best way to overcome the shortcomings of the abovementioned myths and also to provide comprehensive explanations of this and similar urban movements. Finally, the overlaps and distinctions of this approach in relation to previous theoretical references (Castells' The City and the Grassroots and different authors about The Right to the City) will be discussed.

Contemporary Japanese Migration Process in Spain: Cultural Boundaries and Social Networks

The relationship between flow and fixity in globalization literature, leads to questions about how a sense of belonging is achieved, especially when given concepts such as home, family and nation are becoming detached from physical boundaries. In adding to the literature on migration and belonging, this project focuses on how Japanese immigrants in Spain build new social networks and questions how this process changes the way they relate to Japan and their Japanese identities.

In the history of Japanese migration belonging and identity have been managed in different ways. From the business migration system (1970s and 1980s) to the voluntary migrants (1990s, nowadays), migration reasons, interests and lifestyles have changed a lot. However, voluntary migrants are underrepresented in the literature on Japanese migration, and as they do not have the same institutional support structures as the businessman group, it is important to understand the methods through which they create a sense of belonging.

This project employed a grounded theory approach and collected data through semi-structured, in-depth interviews with 44 Japanese living in Spain. The preliminary outcome suggest that Japanese who have created solid support networks with predominantly non-Japanese clusters have a firmer grasp of their Japanese identity. Conversely, immigrants with few Japanese links are more willing to identify their home in the host society. As a result, a Spanish-Japanese identity based on the reminiscence of Japanese traditions and the willingness to become part of the host society is rising.

By focusing on the experiences of Japanese immigrants within the host community the research results provide insights into the construction and consolidation of social networks and how they contribute to a new sense of Japaneseeness. Understanding this process and the relevance of identity within the Japanese community can help prevent inter-group and social conflicts as well as promote a multicultural society.

From Latin America to Spain, Migrants Trajectories of Integration in a Rural Province

Recent migration patterns are characterised by their global nature and the preference for urban destinations. In Spain, immigrants tend to settle in the main cities of the country. Social Social network play an important role in both the decision to emigrate and the choice of home. From one hand, the mobility from migrants and its social network, very little is known about patterns of integration and community participation in rural and low population density contexts in Spain.

This communication explores these issues and is based on a study, in the province of Teruel (Spain), using a sample of 324 Latin American migrants over the age of 18, selected by sex and place of residence. A standardised test – the Musitu
and Gracia AC-90 Community Social Support Questionnaire and open questions were employed. ANOVAs analysis showed significant differences in community integration and participation in accordance with socioeconomic, motivational and social interaction variables.

Results show us that given the changes in lifestyle, customs, language, etc., the peer group, the family and the neighbourhood provide the base from which feelings of self-esteem and self-efficacy are derived, although contact with local people (Spaniards) is one of the main agents of social support; it is therefore important to examine the relationships that are established between the indigenous populations and the immigrants. Prejudices and stereotypes are easily developed in a climate of mutual ignorance and isolated rural enclaves are no exception. In addition to policies of control and regulation, Spain's immigrants require support in the development of the processes of integration and peaceful coexistence.

Being Wives, Mothers and Sisters in the Absence of Men: Bargaining Power of Women Left behind on Oaxacan Rural Areas (Mexico)

This paper analyses how men's international outmigration affects traditionally extended gender family dynamics in some indigenous areas of Oaxaca (Mexico). From the 1920's, not the individual but the family or the household has been considered the most appropriate decision making unit to understand how migration and development are linked. Since then, gender dynamics in rural sending areas have been mainly analyzed in terms of marriage transformations. However, other relevant family relations have not been widely studied. This paper highlights the importance of including mothers and sisters of migrant men to completely understand how traditionally gender norms and discourses, especially those related to inheritance and access to land, reproduce or change in rural Oaxaca.

The main argument of the paper is that son's and brother's migration along with other sending societies has broken down the traditional system of protection based on son's inheritance. It is also argued that mothers try to build new family alliances with their daughters to be cared in old age. In terms of marriage, the paper shows that changes in wives bargaining power must be seen within a cultural context to really understand if women did improved their situation, without establishing direct causality relations as women's paid work greater bargaining power.

Two Oaxaca communities were selected following 5 criterions: rural areas, indigenous communities, high-medium index of poverty, and men’s migration to USA and finally uses y costumbres (ruled by indigenous customary law). The methods used to carry out the investigation were long interviews, to measure shifts on gender discourses and the analysis of quantitative secondary database, to measure functions and capabilities.

On the Relation Between Well-Being and Communication: The Ethical Turn in Conceptualization of Communication with Case Analyses of Negotiation and Decision-Making in PEPFAR

Conceptualization of communication has a crucial effect on communication itself and on communication research. This paper explores how communication affects and is affected by psychological well-being with case examples from an HIV/AIDS international treatment program (PEPFAR) implemented in Southern Africa. It calls for a re-evaluation of Weaver's metaphor on communication as exchange of information and develops Buber's and Peters' ideas on communication as a manifestation of the ethical, where the ethical is described as openness to otherness.

Paulo Henrique Martins

Summary: In this paper I will try to reflect about two points: the difference between economic growth and development, on the one hand, and the existence of different national statements about development, on the other hand. The first point is important to remark that the idea of development in Latin America is connected to the traditional criticism about imperialism and dependence. This understanding is particular to the region and it was born in the World War II when Latin-American economists such as R. Prebisch who noted that international econometric reactions that question the general rights of privatization. Additionally, they suggest a new social justice hierarchy that underline the priority given to collective and natural rights in public policy management. Latin American cases, particularly Bolivia's, are interesting ones to reflect about this change of development paradigms.

Collective Rights to Life and New Social Justice: Lessons from Latin America

For a long time, the basic legitimation of capitalist power was the private power ideology revealed by the rights of the elite to privatize collective and natural resources. This privatization strategy was central to pointing out another dogma, that is, the idea of inexhaustible resources supporting unlimited accumulation. However, the social and political recognition of the exhaustibility of resources is federal government created the Science Without Borders Program with the goal of sending 100,000 undergraduates, graduate and science/technical students to centers and research facilities of renowned international standards located abroad. The program also envisages attracting researchers from foreign locales to settle in Brazil. Through intensifying mobility, the Program wishes to stimulate and refine the research applied in the country, seeking scientific and technological development and to increase the competitiveness of national businesses and the country on the global stage. The study being presented looks to analyze the results of the program as well as the possible difficulties it faces in achieving its goals.

Intergenerational Relations in Rural Tamil Nadu: Grandparent – Grandchild Relations from the Perspective of Grandchildren

The bond between grandparents and grandchildren is of special interest as it involves a relationship cutting across generations. Grandparents are in a unique position to offer love, advice and receptive ear enhancing their ability to provide emotional support. Their financial aid at critical junctures is not uncommon. In the absence of an elderly availability of grandparents, the adult grandchild generally provides care for their grandparents. In the absence of established expectations, obligations and rights permits both in the dyad have enough flexibility to build their relationship tailored to their needs and wishes while allowing freedom to minimize their contact or withdraw from the relationship.

The present paper examines the intergenerational experiences in terms of proximity, contact, time spent with, engagement and exchange from the perspective of 304 grandchildren residing in 9 villages in two districts of Tamil Nadu, India. The districts and the villages were selected using lottery method and the respondents each village were selected by systematic random sampling from interviews method was used to elicit data. Analysis provided percentage, mean, paired analysis of difference and analysis of variance.

The findings reveal lineage and sex of grandparents are significant factors in shaping grandparent-grandchild relationship. In general, proximity, contact, time spent together and degree of exchange are greater with paternal grandparents than with maternal grandparents. Likewise grandparents have greater integration than grandmothers. However, age and sex of the grandchildren play no significant role. The findings also underpin the role of joint family and large family size, which may imply joint living with grandparents, in enhancing the quality of intergenerational relations.

Making home, becoming neighbours: the effects of immigrant home-making practices on living together in the diverse urban areas of a small city

The paper explores home-making practices of immigrants living in the historical centre of Desio, a small city in Brianza, an industrial district up north of the Milanese metropolitan area (Italy). The process of everyday construction of domesticity is explored taking into account the symbolical and material engagement with the house and the home area. Aspects related to housing tenure, processes of self building and care, forms of cohabitation, various uses and forms of private/publicness/publicness of the domestic space, will be analysed in order to account for different forms of belonging and ways of “feeling at home”.

The research explored in the paper is that different forms of investing in the house and the domestic space - varying accordingly to status and socio-economic gaps, habits and cultural traditions (in terms of gender roles, ethnicity and religion), migratory paths (settled vs newcomers), together with the housing market and policies regulations - are crucial elements affecting sociability (neighbors relations and the construction of the neighbourhood as a shared space) social networks (ethnic or non-ethnic forms of incorporation into the local context), social cohesion and the role played by everyday encounters in promouging interethnic relations and knowledge.

The paper will focus on two of the housing complexes explored in the ethnographic fieldwork: hosting only Pakistani immigrants, and a courtyard which instead is marked by ethnic and social “superdiversity”. The ultimate aim of the paper is to show how “hard” elements (material and socio-economic conditions) are more relevant than “soft” elements (ethnicity and culture) in shaping cohabitation in diverse urban settings.

Pakistani Immigrants in Central Brianza’s Small Cities (Italy): The Ambivalence of Ethnic and Non-Ethnic Forms of Incorporation into the Catholic Social Knit of an Industrial District

The paper focuses on Pakistani immigrants’ social displacement in an area of small cities in central Brianza, up north of the Milanese metropolitan area. The difffused territorial model of immigrant incorporation in Italy – with a significant presence of immigrants out of the main metropolitan contexts – and the great variability of local governance schemes, qualify such areas as an especially suitable context to inquire the relation between migrant communities and local regulatory practices. In this paper we focus on a small city – Desio – and its surroundings, belonging to an homogeneous area in terms of immigrant composition, economice structure, political and cultural tradition. International migration has become relevant here since the early ‘90s: in Desio, migratory flows from Pakistan have become more and more significant, producing one of the higher concentration of Pakistani citizens in Italy. Immigrants found employment as both unskilled and skilled workers in the small factories and small offices which stretch all over the Brianza territory. Over a decade, consistently translocal networks have spread over there, most of them originating from a specific area of Pakistan Punjab.

This paper aims to explore the relational everyday life emplacement of Pakistani immigrants in the local context, as it takes place through ethnic and non-ethnic forms of incorporation. In this frame, the everyday practices of local administration and non-state actors, like associations and NGOs of a catholic background. The data collected (through ethnographic fieldwork and qualitative interviews with immigrants and privileged observers) show the ambivalence of such forms of incorporation, in which different features of the immigrant population – such as status and socio-economic gaps, habits, cultural traditions and migratory paths - together with the local government practices and discourse, coalesce in defining different trajectories of immigrants’ emplacement in the local society as well as transnational social spaces and urban fields.

Mobile Precarious Workers? the Case of Post-2008 Latin American Onward Migration from Spain to the UK

Contemporary studies on intra-EU (European Union) migration have paid in- sufficient attention to forms of secondary mobilities, either in the case of mobile - rooted Latin American migrants or, more significantly, in terms of third country migrants who have acquired citizenship in one Member State and subsequently migrated to another. This paper will contribute to this area of research by focusing on the case of Latin American secondary migrants with EU citizenship who have undertaken onward mobility from Spain to the UK post-2008. Existing studies have found that, for Latin American migrants, it is common to enter the EU via Spain, Italy and Portugal, where they expect obtaining citizenship to be easier, e.g. through historical and family connections. However, subsequent onward mobilities seem to have become more common after the onset of the financial crisis and its harsher consequences in southern EU countries. Drawing on a small-scale transnational project involving secondary data analysis and semi-structured interviews with key informants from Latin American migrant voluntary organisations and statutory services working with migrants in Spain and the UK, this paper will explore the emerging picture of the contexts, causes and motivations that underlie these increased onward mobilities and the situations faced by secondary migrants and their families when settling in the UK. Despite these secondary migrants’ hopes of escaping financial difficulties and unemployment in Spain by making use of the right to free mobility which they have acquired with their European citizen- ship status, settlement in the UK becomes fraught with initial arrival problems (i.e. lack of language skills, access to jobs and housing) and the vulnerabilities of joining many fellow Latin American migrants’ socially disadvantaged position as precarious workers in the UK.

The Ice Factor: The Resignification of the Grasshopper

This paper offers a theory of cultural innovation derived from engagement with Saussurian semiotics, Sahlin's analysis of Western industrial food production, and Judith Butler's performativity of gender. Marshall Sahlin's (1978) set out to turn historical materialism on its head by demonstrating that the industrial complex of meat and protein production is organized around the cultural logic(s) of the edible, around understandings of humanness and cultural proscriptions such as the incest and cannibalism taboos. "Edibility is inversely related to humanity," he argued. Particular animals such as horses and dogs, and the internal organs of edible animals, are closely associated with humanness, and the idea of consuming them precipitates feelings of disgust and betrayal. Sahlin's was right that edibility is related to understandings of humanness. However, in addition to symbolic proximity, too much symbolic distance, such as in the case of the grasshopper, may also produce feelings of revulsion and disgust. In this paper I develop a theory of cultural innovation, whereby objects associated with disgust may be transformed into objects connected with enjoyment, pleasure even. Edibility. An insect on an American dinner plate, except in rare and select places, represents "matter out of place" and will produce a ritual cleansing of the plate. Variable across time and culture, the signifier of the grasshopper has been associated with pestilence and filth. Nonetheless, efforts to resignify these creatures are currently taking place. The challenge is overcoming "the ice factor" – the eyes, the wings, the legs... people won't accept it beyond novelty," one proponent, or agent of resignification, states. Building on the above as well as on Douglas and Durkheim, I examine contemporary efforts to place bugs and grubs on American and Western European dinner plates, or to turn these creatures into "mini-live-stocks," ones that are interpreted as not merely edible but as desirable.

Building Local Peace in the Middle of a National War. Community-Based Noncooperation Strategies in Colombia’s Civil War

Despite of the high risks involved and the high levels of uncertainty, unarmed civilians organize themselves to collectively defy armed groups in order to avoid displacement, seek protection from violence, reclaim autonomy over daily affairs, and/or build local zones of peace in the middle of war. This paper presents findings from an empirical analysis of two communities that, in the midst of Colombia’s civil war, chose noncooperation as a strategy to cope with war and live a life free from armed groups’ violence and rule: the Peace Community of San Jose de Apartadó (PCJA) and the Peasant Worker Association of the Cararé River (ATCC). Although both are instances of community-based noncooperation strategies, they form this strategy to different ends: while PCJA explicitly declared itself neutral without any bargaining with armed groups, the ATCC negotiated its noncooperation strategy with armed groups. The aim of the paper is, therefore, twofold: explain what drove these communities to chose noncooperation over other possible responses (e.g. flee, obey, actively collaborate) and explain the determinants of variation in the form of noncooperation. The paper explores rational, moral and emotional considerations behind the choice: attention is paid to both the capacity and the desire to defy armed groups, and both pre-war conditions and processes that are endogenous to war are analyzed. Attention is paid to both the capacity and the desire to defy armed groups, and both pre-war conditions and processes that are endogenous to war are analyzed. The choice. Mechanisms such as pay-offs reassessment, belief (trans)formation, anger and resentment, norms of reciprocity, and moral outrage are spelled-out. MASUTA, AYUMI* (Nagoya Gakuin University, ayumi@ngu.ac.jp)
Japan’s New and Old Concept of Ethnic Policy with a Comparison to a Multicultural Policy

Globalization has changed Japan’s population composition significantly by the 1990s as a result of the arrival of a relatively large number of foreign workers for the manufacturing industry. This prompted the development of the concept of “Co-Living among Many Cultures” to facilitate the settlement of new foreign residents who have come mainly from South America and China. Many of the residents have taken up permanent residence or citizenship, instead of remaining as foreign residents on temporary visas. Japan’s large and long settled Korean community who have been treated unjustly in the past are reacting cautiously to the new concept of “Co-Living Among Many Cultures”.

A new issue affecting the experience of Japan’s growing Chinese population is the rise of China-Japan tensions which also poses a challenge to the new co-living policy. A major aspect of the troubled relation is the emergence of transnational political action, including the Beijing Olympic torch relay incidents. Such incidents, as widely reported in the Japanese media, have triggered concerns among Japanese in general who treasure “Wa”, or harmony and peace, a traditional Japanese value and practice.

In this presentation, I would like to point out what the Japanese new concept “Co-Living Many Cultures”, the traditional philosophy “Wa” and the Australian “Multicultural Policy” concept have the common idea despite significant differences in demographics and ethnic relation policies in the in two countries.

Building the National Identity through the Religious Identity in R. Macedonia

After getting independence, in R. Macedonia the national sense of identity is followed by the religious sense of identity. The religion is classically sacral: “love all other nations as you love your own”. We will emphasize that in fact a nation is an act of faith and believing. Through faith persons better understand characteristics of their own nation. Therefore in R. Macedonia, as a rule, representatives of different ethnic communities follow one faith (almost with no exception each ethnic Macedonian is Orthodox, such as every ethnic Albanian is member of Islam). But, there are a few cases when representatives of different ethnic communities follow the same faith. For example most of the ethnic Macedonians are Orthodox, but still there are ethnic Macedonians who are Muslim. Typical examples for this are the Torbeshi who are ethnic Macedonians who follow the Islam religion. But, there are a few cases when representatives of different ethnic communities follow the same faith. Coping with Risk and Uncertainty in Civil War. Community-Based Noncooperation Strategies in Colombia's Civil War

Although commonly portrayed as either mere victims or resources to be plundered, civilians in warzones face a wide number of possible responses to armed groups’ demands and war strategies. Studies dealing with the micro-dynamics of civil war have informed us extensively on some of these responses, such as displacement, obedience and active collaboration. However, other responses such as resistance and defiance have attracted scant scholarly attention. Despite of the high risks involved and the high levels of uncertainty outcomes are subject to, unarmed civilians have chosen to defy armed groups through different strategies of noncooperation. This paper presents findings from a theory-driven empirical analysis of two communities that, in the midst of Colombia’s civil war, chose noncooperation as a strategy to seek protection from armed groups’ violence and rule: the Peace Community of San Jose de Apartadó (PCJA) and the Peasant Worker Association of the Cararé River (ATCC). The aim is to explain what determines communities to choose noncooperation over other possible responses by examining in detail rational, emotional and moral considerations behind the choice. Mechatms such as pay-offs reassessment, belief (trans)formation, anger and resentment, norms of reciprocity, and moral outrage are spelled-out. Attention is paid to both the capacity and the desire to defy armed groups, and both pre-war conditions and processes that are endogenous to war are analyzed. The aim is to explain what determines communities to choose noncooperation over other possible responses by examining in detail rational, emotional and moral considerations behind the choice. Mechatms such as pay-offs reassessment, belief (trans)formation, anger and resentment, norms of reciprocity, and moral outrage are spelled-out. Corporate Initiatives for Sustainable Development: Some Case Studies and the Task Ahead

Corporate Initiatives for Sustainable Development: Some Case Studies and the Task Ahead

Sustainable development aims at environmental protection, social well-being and economic development. Over the years, corporate houses have realized that it is in the interest of business to operate within a healthy environment and economy and that sustainable development must be factored into the vision, mission and policies of business. This paper highlights the initiatives taken by leading corporate houses for sustainable development. These corporate include Apple, Cipla, McDonald, Philips, HUL, Reliance, Tata Group, Panasonic, ICICI Foundation and Bajaj Group. The study reveals that environmental excellence has become a part of corporate strategic thinking. However, in spite of all the initiatives with respect to sustainable development, the picture is dismal and shocking, not only in India, but world over. The three goals of sustainable remain unachieved to a significant extent. It is reported that 40% deaths globally can be attributed to air, water and soil pollution. 925 million people are under nourished. 30 trillion kg carbon dioxide equivalent greenhouses gases is released into the atmosphere. Further, rural-urban inequality is increasing while 15% of the world’s population goes to bed hungry. The author suggests the need for adopting a holistic approach towards sustainable development and the relevance of Mahatma Gandhi’s Universal Trusteeship.

The interplay between CEDAW, the Brazilian women’s movements, and global feminisms agendas

In this paper we investigate how Brazilian women’s participation in transnational feminist networks and the UN Conferences on Women and Brazil’s ratification of CEDAW have profoundly shaped the two more recent waves of the Brazilian women’s movements: first wave of the 1980’s and the ongoing fourth wave. Our paper presents a case study of the interplay of the national and transnational dimensions in shaping women’s movements. The first wave of the Brazilian feminist movement encompassed the civic participation of Brazilian women in the transition from a military dictatorship to a democratic regime as well as participation in the transnational women’s movement and Brazil’s ratiﬁcation of CEDAW in 1982, during the military dictatorship. The ongoing fourth wave of the Brazilian feminist movements has focused on the institutionalization of feminist demands through public policies for women; the creation of executive or legislative organs for such policies at the national (the National Secretariat for Policies for Women), state and city levels etc. We argue that the reciprocal impact or feedback mechanism between transnational feminism and the Brazilian feminist movements can not be overstated. Brazilian women played a key role in building a broader and inclusive agenda for transnational feminism — currently referred to as the intersectionality of gender, race, class, and sexual orientation. CEDAW also was utilized by Brazilian feminists as a crucial tool to legitimize a very broad international agenda. Based on our case study of the Brazilian feminist movement and CEDAW, we would like to argue that the feedback mechanism operating between local, national and international agendas have proved crucial to the growing intersectionality of gender, race, class and sexuality of the feminist movement worldwide. In sum, we would like to suggest that globalizing the local and localizing the global should be at the center of both feminist activism and scholarship.

Structural Social Support: Insights from Sociograms of Aging Individuals

The objective of the present study was to understand the structural social support and social network of the aging persons using sociograms. The study was based on a sample of 109 Indian respondents on who were identified using snowball sampling technique and following clear inclusive and exclusive criteria of selection. The sample was classified on the basis of working status (pre-retired, retired and post-retired) and gender. Respondents completed the short form of Social Support Questionnaire (Sarason et al. 1987). The items assessing the number of persons remained similar across working groups and gender however the nature of dependence changes dramatically. It is revealed that social network of the pre-retired group is predominantly family centered where spouse is perceived as the most important support system followed by children, friends, relatives and siblings. For the retired persons, social support is critically important. Contrarily, the post-retired depend more on themselves under different situations which require support from others. The importance of supportive neighbors and same sex friendships increase significantly for post retired males whereas family (children, grandchildren and relatives) remains the pivotal support system for the post retired women. Changes in the nature of structural social networks with respect to dependent on others, gender diversity in support networks, frequency of seeking help, availability of support, intergenerational support and emergence of personally satisfying leisure activities emerge as a result of aging process and remain different for both men and women across time.

Subjective Assessment of Happiness and Dimensions of Social Support: Empirical Insights

Subjective Assessment of Happiness and Dimensions of Social Support: Empirical Insights

Subjective assessment of happiness maintains that happiness is a global and subjective measure of whether a person is happy or unhappy (Lyubomirsky and Lepper, 1999). Social support networks and perceived level of satisfaction from support networks contribute to happiness. The present study aimed at exploring relationship between subjective happiness and dimensions of social support (structural: number of persons and functional: level of satisfaction of ageing respondents classified on the basis of working status and gender. The study was based on a sample of 139 respondents drawn from Jaipur City, (India) identified using snowball sampling, following clear inclusive and exclusive criteria. The respondents completed Satisfaction Scale (Lyubomirsky & Lepper, 1999) and short form of Social Support Questionnaire (Sarason et al 1987).

Results indicated that structural social support is positively and significantly related with subjective happiness (r = .291, p<.05) for ageing males whereas functional social support is positively and significantly related with subjective happiness (r = .427, p<.01) for ageing women. Hence, the importance of diverse support networks for ageing males and an enhanced level of perceived satisfaction for ageing women as related with subjective happiness is reflected. Subjective happiness is positively and significantly related with only functional social support (r = .516, p<.01) for retired persons. However subjective happiness is unrelated with both the dimensions of social support in case of pre-retired and post-retired persons. Perceived level of satisfaction becomes critically important when people retire. Conversely, due to changes in family structure, death of spouse and loss of companionships; subjective happiness remains unrelated to social support in post-retired years where as a sense of personal liberation and interest in personally meaningful leisure activities surface for both ageing men and women.

The Interplay Between CEDAW, the Brazilian Women's Movements, and Global Feminisms Agendas

In this paper I focus on informal networks among female workers. Affirming the importance of supportive networks, I explore how they relate to female career continuity in Japan. In order to accomplish this objective, I collected interview data on female informal support networks from persons in charge of personal or gender issues in 22 Japanese companies or associations. My major findings are that these informal support networks have three principal functions: collecting and disseminating useful information on career development, offering...
emotional support in times of trouble, and providing role models for working women.

Given the countermeasures to the dismissal or resignation of female workers in recent years, these findings can be utilized to examine the effect of informal networks on working women, which, in turn, may improve the social status of female workers and gender equality in the workplaces in Japan.

Reconciling Work and Family: Do Japanese Fathers Take Advantage of Policies?

Japanese working parents today are entitled to various work-family-balance support measures such as parental leave, nursing leave for children, and shorter working hours. However, studies reveal that most working fathers in Japan fail to utilize such policies.

The primary purpose of this paper is to further explore the reasoning for Japanese fathers to reject or abstain from using the aforementioned workplace support measures. Furthermore, some critical factors including workplace culture, and the values and beliefs of Japanese fathers must be analyzed, in order to understand their reasoning for justifying their practices.

This study is part of a collaborative research project of work-life-balance led by B. Hobson and others in the European Union. The data was collected from face-to-face interviews, which were conducted in the Kansai area between April and November in 2010. There was a total 104 respondents, which included 51 women and 53 men. All of the respondents were dual-working parents with preschool aged children.

The results of this study showed a number of ways in which the fathers discussed their work-family-balance related practices. Among the 53 Japanese fathers, an estimated 40% of fathers worked more than 50 hours per week and a majority of them worked longer hours by “their own choice”. Moreover, in most cases, fathers were afraid of burdening their workplace by altering their work plans, due to family needs. Some fathers also had fears of damaging their career by actively utilizing paid leave and child care policies. However, there were some fathers who chose to prioritize family over work. Reasons for this include: wives being distressed or child care needs. These fathers appeared to have more bargaining strength or the ability to overcome workplace critics.

Heritage Language Maintenance in Old and New Japanese Communities in Mexico

This paper reports the first sociolinguistic investigation of heritage language maintenance in two distinct types of Japanese migrant communities in Mexico City (old pre-war labour migrants and new recent self-movers). We investigate which social factors most strongly contribute to the preservation of Japanese oral language ability in these two communities among social variables, namely age, gender, generation, sex, identity, education, mass media, language importance, language used at home and work and contact with community members in Mexico as well as relatives and friends in their homeland, Japan.

The results confirm the significant effects of languages used in the home and educational domains upon the maintenance of the heritage language in both old and new migrant communities, while highlighting the community-specific effects of both age and languages used in the workplace among the old community and those of contact with the homeland in the case of the newcomer community. We argue that these differences indicate that in the older community, where a strong solidarity network has been developed but where contact with the homeland has been mostly lost, the use of Japanese in the workplace is most likely to help pre-war migrants maintain it, whilst in the more recent newcomer community with more loose-knit Japanese networks within Mexico, frequent interaction with relatives and friends in Japan serves to strongly support the retention of high language ability.

This paper concludes that heritage language use in both home and school is indeed the fundamental determiner of migrant heritage language survival, whilst different factors, such as the use of the heritage language in the workplace and contact with the homeland, may aid its preservation depending upon the recency of the community’s arrival as well as the strength of the community’s network.

Structural Disaster and Infinite Responsibility behind Institutionalized Forbearance

This paper attempts to elucidate the hidden social mechanisms of “structural disasters” involved in the Fukushima nuclear accident with a particular focus on the aspects of problems that go beyond the widespread dichotomous framework...
of perpetrators versus victims, from the viewpoint of the sociology of science and technology. In particular, the paper brings out the process through which double under-determination has influenced the formulation, implementation, and evaluation of public policies preceding and following the Fukushima accident.

Three points are made based on the analyses of the guidelines for the utilization of HLW (High-level Radioactive Waste) in Japan. Firstly, the paper demonstrates that the guideline for HLW disposal, known as the “MATSUO’s Law,” has produced a kind of gap in pattern structure of trust between religious organizations and voluntary organizations (volunteer and civil activities organizations). These findings are found commonly in each country. It implies measurability and comparability of trust in nonprofit organizations.

Therefore, the study shows that different expression of even the similar words changes the rates of the item nonresponses and questions using abbreviations and non-familiar words may increase item nonresponses. On the other hand, it doesn’t find the strong associations between demographics (sex and age) and trust in nonprofit organizations except religious ones. From the results of multivariate analysis, it proposes the relevance of trust to the religious organizations and voluntary organizations in Japan and South Korea. This implies the possibility of determining the public policies by using religious organizations and voluntary organizations (volunteer and civil activities organizations), which are based on the results of this study.

Postrevisionalist Islam or Traumatic Resecularization? What Does Historicizing the Religio-Political Unity Offer in the Post-Khomeini Iranian Context?

The postrevolutionary Islamic “Islamic revitalists” (who now call themselves “principists”) still evoke an early twentieth-century event that—in their collective reconstruction of the past—crucially crafted politics onto religion. A foreign-backed military coup d’état elevated an anti-Islamic modernizer to the position of power, enabling him to tragically crush the only voice that genuinely represented the anti-dictatorial and anti-colonial popular will. “Our religion is the essence of our politics, and our politics is the essence of our religion,” a saying attributed to “Martyr” Seyyed Hasan Modarres (d. 1937), the prominent Shi’i mujtahid and long-term political opponent of Reza Khan, thus serves as the emotional (and formerly counter-) intuitive basis for the continued necessity of an Islamic theocratic state as a bulwark against secularizing forces inside and outside the country. Against this backdrop, religiously-minded postrevolutionary reformists (known in Iran as “religious intellectuals”) who dare to suggest separation, in one way or another, of religion from politics run the risk of being labeled as “secularists.” It was not a mere coincidence, therefore, that both the December 2012 issue of the most liberal Tehran monthly Mehrnoumeh and a June 2013 principist political documentary featuring them adopted as their title “We are not secular,” a quote from prominent reformist-intellectual Saeed Hajarizade.

After reviewing past-evoking claims made both for and against separating religion from politics and dynamic contentious interaction between the two opposing camps in Iran for the last two decades, this paper will reflect on two important questions. Is resecularization, be it generally conceived or analyzed in one national context, simply the reverse process of desecularization? Does historicizing secularities (and, for that matter, de-secularities) serve as means by which not only fresh reconstructions of collective memories are facilitated but also institutional reforms for accommodating pluralistic understandings of the religio-political unity may become possible?

Use of Paradata in Non-Response Bias Adjustment: Application of Sequential Propensity Weighting on Dutch Reluctant Respondent Sample in the European Social Survey

This paper explores the use of European Social Survey (ESS) Round 5 paradata Z-variables (eg. type of dwelling and neighborhood characteristics, and characteristics of contact procedure variables) to adjust survey estimates for non-response. By taking reluctant respondents - as opposed to cooperative respondents, as proxies for all types of non-respondents - this paper obtains calibrated propensity weights in sequential steps. Two types of propensity scores (i.e. focus is on ‘contactability’ and ‘survey cooperation’) are obtained through logistic regression models and multiplied with each other in order to obtain nonresponse weights for reluctant respondents based on sub-group stratification methods. ESS Round 5 Dutch sample is used as a case study because of high number of reluctant respondents sample (N=460). This paper illustrates sequential steps to transform reluctant respondents sample that are representative of all types of non-respondents through sequential propensity weights. The effectiveness of propensity weights are studied through level of standardized bias, level of correlations between Z-R and Z-Y variables as well as effects of multiple regression models on non-familiar words may increase item nonresponses. These evaluative items are also compared with the effects of post-stratification weights to test the unbiasedness of our approach (eg. age, gender, region). The paper addresses implications of data quality in paradata, fieldwork design on refusal conversion activities and use of reluctant respondent sample for non-response adjustments in cross-national research.

Deciding ‘Quality’ Surrounding Umbilical Cord Blood Treatments in Japan and the UK

Stem cell treatments, such as those derived from umbilical cord blood, are relatively novel in the UK and Japan compared to other countries, such as Spain and America. Hence, the policy and practices surrounding the treatments are still emerging (Brown et al., 2011), and as a result creating uncertainty in the decision-making of haematologists and oncologists in the UK and Japan. In particular, when do they deem an umbilical cord blood treatment suitable for a patient, and how do they choose between umbilical cord blood banks when more than one unit is available for a patient? In essence, how do they 'know' what constitutes a 'quality' cord blood sample?

These are important insights to be gained when the cost of a single cord blood sample can reach between £16,000 to £25,000. Factors such as where the cord blood treatments are carried out and by whom have been considered as influential by policy makers in determining the success of treatments. How such a move to establish 'clinical expertise' around cord blood treatments would impact upon perceptions of 'quality' cord blood in the two countries is significant as it challenges the notion that the success of cord blood treatments is determined by the inherent properties of the cord blood unit. Furthermore, a connection between cord blood collection and banking practices and the perceived 'transplant quality' of a cord blood unit for stem cell treatments is also emerging from recent policy discussions, due to the proposed 'best practice tariff' to reimburse hospitals for these treatments. The perceived 'transplant quality' inherent properties of the cord blood unit. Furthermore, a connection between cord blood collection and banking practices and the perceived 'transplant quality' of a cord blood unit for stem cell treatments is also emerging from recent policy discussions, due to the proposed 'best practice tariff' to reimburse hospitals for these treatments.

Emerging findings from a three year project, funded by the Great Britain Sasaki Foundation, to explore through qualitative interviews how those working in Japanese and UK transplant centres perceive 'quality' in cord blood in a global context, and what factors influence their perceptions, will be presented.

Collapse Of Vacant Japanese Accepting Migrant Care Workers Policy

Why has most Japanese migration policies ended in failure? Since 1990 the Japanese government have argued that we will positively accept highly skilled workers for competing economic globalization. By 2006, the Japanese government had concluded EPA agreements with the Philippines, Indonesia and the other East Asian countries. The Japanese care industry strongly disagreed with this agreement and asked the Japanese government to abolish the 'protectionist' policy which led them to be marginalized in Japanese communities. They speak local language and work with local people under the management of expatriates. Therefore their identification becomes more complicated when compared with expatriates who are strongly embedded in Japanese companies and communities. In addition, their identification influences and is influenced by their choice of staying/moving/circulation. They are contract-based workers and can easily change their jobs and working living place. It means their mobility is connected with their career planning. Considering these situations, they are drawn to the process of Japanese young diaspora. These identities coexist, conflict or are combined in each context.

What forms their diasporic identity, how does it change, and how do they try to control/fail to control it? Based on rich empirical work since 2009, this paper reveals the process of Japanese young diaspora’s identification.

Industrial Heritage and Memory : A Case Of Miike Coal Mine

In recent decades a new gaze has appeared upon architectural remains of modern industry. This gaze makes it possible to turn these remains into cultural heritage, or more precisely, industrial heritage. Architectures such as factory, dockyard and coal mine pit which used to be symbols of modernity has turned, after changes of economic structure, into symbols of degeneration of local towns which had depended on these industries. Industrial heritage is a way of revitalization favored by these towns.

Through the process of revitalization, the past of modern industry is reconstructed from the point of view of new perspective. Reconstructed industrial heritage assume public memory of the place. On the other hand, these remains used to be the places not only of labor, but also of conflicts and tragic accidents whose painful memories last long among local people such as ex-workers and their families. It happens that local people have their own view about the past of their labor different from the gaze of industrial heritage.

In this presentation I will discuss this cultural gap between industrial heritage and lived memory. How are modern industries’ remains inherited through re-construction of the past? How local people remember the past of their labor, especially tragic moments? How the perception of the present heritage is different as a function of the the past experiences? I will address these questions.
through considering a case of Mike coal mine, which exists in Kyushu, western Japan.

A National Park Becomes a Growth Machine: Transnational Environmental Politics In Southwest China

This paper examines the Yunnan Great River Project (YGPR) (1998-2009) in Southwest China, a joint conservation project by the Nature Conservancy (TNC), a U.S. based conservation organization, and the Yunnan Provincial Government. The project was a vehicle for TNC to introduce a standardized model of protected area management to Northwest Yunnan, based on Yellowstone National Park in the U.S.

The study, based on archival research and interviews, has three main contributing areas. First, it sheds light on China's fragmented bureaucracy. Despite TNC's race to save one of the World's ecological hotspots within the project area, it became ensnared, not only in provincial bureaucratic politics, but also in relations between the central and provincial governments in China.

Secondly, the study reveals that global conservation discourses, such as ecological hotspots, may not necessarily create a common conservation goal among key stakeholders (e.g., local governments and people). They attached local meanings to global conservation discourses in order to advance their economic and/or cultural autonomy. In other words, the political, social, and cultural particularities of the ecological spaces in Northwest Yunnan challenged TNC's rationalized way of saving nature under globalization, and they influenced the organization to re-evaluate its conservation methods.

Thirdly, TNC's inability to build alliances with other stakeholders (i.e., provincial governmental agencies, local NGOs, and local intellectuals) weakened its position when an entrepreneurial local government adopted the national park model primarily to create an economic development scheme and turned the idea of a national park into its "Growth Machine" (Molotch 1976). The park ultimately undermined small local businesses and compromised TNC's wish to emphasize community participation.

Comment/like/Retweet: Public Discussions of Economic Crisis News Information through Social Media and the Mobile Internet

The rapid popularisation of social media services, and the even more current popularisation of mobile internet devices raises important questions about the everyday use of new media technologies. In particular, researchers and practitioners in fields such as urban, everyday individuals use these new media technologies to access, discuss, and share, and engage with current topics on the difficult state of our world, such as austerity, economic crisis, and financial policies that impact everyday inequalities. It is important to explore the everyday use of these new media technologies in order to learn more about how the public is engaging with challenging news topics through recent developments in new media.

Do users really engage with these devices and online interactions in a fleet- ing and less engaged manner, or does the ubiquity of the mobile internet afford greater engagement with news information? Does the algorithmic filtering of online information by new media organisations in control of social media services lead to greater agenda setting by the individual users of news, or does it reinforce established news media organisations as the primary or authoritative sources of news? And how may the various affordances of differing and fragmented web and mobile apps impact the discourses of everyday users?

This paper aims to explore such questions through initial findings from research using qualitative observations of online social media discussions on austerity, economic crisis, and financial news, in combination with interviews of participants who regularly engage with such information through social media sites and mobile internet devices. The paper aims to explore how current and recently popularised trends in the use of new media technologies may be affording or constraining behaviours and habits of everyday users when engaging with online news and information on issues that impact social inequalities like austerity and economic crisis.

Knowledge in the Wild - from Mad Cows to Alzheimer's: How Knowledge Mobilization Works

This paper presents analysis of interview data from a study of 'knowledge mobilization' as a social process. In doing so it contrasts concepts of 'knowledge transfer' with those of 'knowledge mobilization' which it sees as a non-linear and iterative process involving social organization, institutional cultures and human interactions. It is based on interviews with researchers from two major science labs who are investigating the way in which misfolded proteins (i.e. prions) produce spongiform illness in animals (e.g. Mad Cow Disease, BSE, Chronic Wasting Disease) and spongiform-like illnesses in humans (e.g. Cruchfeld-Jacob Disease, Alzheimer's Disease, ALS, Parkinson's Disease). The focus of this paper is not on the science per se, but on knowledge development and transition as social processes. On the one hand, it seeks to provide insight into the way that knowledge is developed and transmitted, as these processes are understood by the scientists who are directly involved in the process. On the other hand, it employs sociological perspectives related to networks, social capital, and new institutional analysis to provide a more systemic insight into the knowledge mobilization process.

Academic Writing As a Contesting Territory for Women

In this paper I present a discussion on the forces that come to play when talking about the production of knowledge in universities understood as international identities, particularly through the act of writing. I use women's interviews to explore on the meanings of academic writing today. These interviews have been held with female professors from different disciplines in the Social Sciences and Humanities in one university in Chile. My argument is that contemporary ways to reason universities as corporate institutions have important effects on the configuration of knowledge, subjectivities, and their relations. Discourses of internationalization of higher education that use institutional arrangements to produce specific practices to name themselves as successfully international, such as, international networks and circuits to publish academic work, designing and implementation of international collaborative research, high level indexed publications, etc., produce the idea that all these are the "natural" institutional outcomes and aspirations for professors. These institutional practices create the conditions for a new institutional developmentalism (Sidhu, 2007) where the re-configuration of international practices has taken the status of managerial tools.

Institutional cultures produced through these discourses have privileged the constitution of a disembodied academic subjectivity that requires subjects to narrate themselves with no reference to gendered, racialized, nationalized, and sexualized intensities. I explore on how this disembodiment is narrated and problematized by women through their acts of academic writing, particularly in disciplines related to Humanities and Social Sciences.

L'accès Au Logement Des Jeunes Français : Pour Quelle Indépendance ?

Les jeunes français doivent faire face à des difficultés d'intégration de plus en plus aigus dans tous les domaines de la vie sociale : accès au travail, dans des conditions stables et en rapport avec leur niveau de qualification, accès au loge- ment, accès aux droits sociaux, etc. Ces difficultés en font la population la plus en butte à la vulnérabilité sociale et à la précarité.

De ce fait, les enjeux qui pèsent sur les politiques publiques de jeunesse appa- raissent importants : les nécessités sont grandes de voir se développer des actions et des acteurs permettant de sécuriser les parcours, de garantir un égal trait- ement des différentes générations, notamment en termes de protection sociale.

Pourtant, le paysage des politiques publiques françaises laisse plutôt appa- raître des actions éparse, relevant de tous les niveaux de décision, comportant peu de réflexions sur les façons de dégager des valeurs, des objectifs communs, des modes d'accompagnement en conséquence.

Dans ce contexte, notre communication s'attachera à analyser l'accès des jeunes au logement indépendant. Nous partirons d'une première approche objec- tive présentant les manières actuelles des jeunes de s'installer dans un logement. Les acteurs financiers apparaîtront comme un obstacle majeur à l'acces indépen- dant. L'aide économique de tiers comme la famille et/ou des acteurs publics est souvent requise ; ce qui n'est pas sans créer de profondes inégalités sociales.

Cette première approche objective sera complétée par une entrée com- préhensive qui abordera les liens subjectifs que les jeunes entretiennent avec le logement. Les jeunes apparaissent ancrés en différents logements : le logement indépendant ; lieu d'apprentissage de l'autonomie ; la maison familiale ; vécue comme un lieu d'ancrage. La construction des espaces d'autonomie ne signifie pas absence de liens. L'analyse de la fonction de ces liens permet de questionner la notion d'indépendance et de dépendance juvénile, autrement que sous un angle économique.

The PhD Degree and Weber’s Concepts of Rationality

The decision to pursue a PhD degree is attended by considerable uncertainty over career outcomes. This is becoming increasingly so, as the gap between the demand for full-time academics in the university workforce and the supply of PhD recipients continues to widen in many countries. No longer does a PhD guarantee secure employment. Add to this the large amount of time and student fees invested in a PhD, and it raises the question of why would anyone undertake a PhD? Using Weber’s concept of rationality, the paper will argue that attention must be given to the substantive rationality that is involved in the decision to pursue a PhD. The PhD degree has a dual character: as an institutionally based course in which successfully producing an original contribution to a field can result in the award of a certificate that serves as a gateway into a career; and as a powerful social symbol which is associated with certain myths, values, status and aspirations that can be personally rewarding.

As higher institutions increasingly become subject to neoliberal trends that are transforming the way that PhDs are conceived and structured (such as the growing preference towards theses-by-publication over traditional monographs, alignment of research topics with institutional research priorities and a tightening of candidature time limits), the relationship of substantive rationalities of PhD students to more formal rationalities of higher education institutions is becoming increasingly problematic. As pressures grow on PhD students to align their studies with institutional expectations and also those of a competitive career market, this paper will examine the ways in which students and institutions are negotiating the risks and uncertainties surrounding PhD degrees in light of the push and pull of multiple rationalities.

Digital Technologies and Work-Family Boundaries: A Posthumanist, Performative Approach to Family Research

Our paper draws on a research project funded by the UK’s Engineering and Physical Sciences Research Council that explores how boundaries are being made between work and family in everyday practices, and how technologies are implicated in constituting these boundaries. Our paper will discuss the theoretical and methodological framework that we have developed to study work/family/technology figurations in the home, and that allows us to treat and study social and technological practices as mutually constitutive rather than separate. We draw on varying traditions of scholarship to do so such as: feminist science studies; studies of science and technology; material-semiotics; new materialism; and material culture studies. Our paper discusses how we make sense of family practices around technology use in light of this approach.

Our empirical study uses sensory, visual and participatory ethnographic methods (Pink 2009, Pink and Leder Mackley 2012, Leder Mackley et al 2013). Our overall approach is to invite family members to take part in the project as collaborators of our research by involving them in the selection of methods and production of artefacts. These methods include: a video tour of the home; using spaces, objects, photographs, and other artefacts to talk about work, family and technology; researcher- and respondent-regenerated photographs, films, scrap/smash books and diaries; individual and family interviews and conversations; and walk- or go-alongs as ways of participating in ‘A day in the life of...’ our participants. The study involves in-depth work with 5 households in North-East Scotland, with at least one child under the age of 18.

Technology and the (re)Making of Work and Family: Towards a Performative Approach to Visual Practices

Our paper draws on a project funded by UK’s Engineering and Physical Sciences Research Council that explores technology use in work and family practices in the home. Our study seeks to address a number of theoretical, methodological and substantive aims:

1. To develop a conceptual framework for studying work/family/technology practices and boundaries in the home, drawing on material-semiotic, posthumanist, and performative approaches (Barad 2007; Haraway 1997; Law 2004; Suchman 2007).

2. To explore how work/family/technology are figured – made and remade – through everyday social and technological practices (where social and technological are not treated as separate);

3. To develop and test a portfolio of methods, drawing on visual, sensory, mobile and participatory ethnographic approaches (Pink 2009, Pink and Leder Mackley 2012, Leder Mackley et al 2013; Watts and Urry 2008). An important element of this process is to explore the performative of these methods, that is, how they are constitutive of particular stories, or versions of reality (Law 2004, 2009; Law and Urry 2004).

Families (with at least one child under the age of 18) are invited to take part in the project as collaborators in the research by involving them in the selection of methods and production of artefacts. These methods include: a video tour of the home; using spaces, objects, photograph, and other artefacts; talking about work, family and technology; researcher- and respondent-regenerated photographs, films, scrap/smash books and diaries; individual and family interviews and conversations; and walk- or go-alongs as ways of participating in ‘A day in the life of...’ our participants.

Our paper will address emerging questions and challenges including: Whether and how visual methods can help us grasp sociomaterial practices; how we can use visual methods in participatory, collaborative and cooperative ways with our families.

ICT and Local Development in Globalization

Abstract

In modern times, development is more or less interconnected with globalization. On the other hand, globalization processes are more or less interconnected with the use of ICT. The use of ICT is defined as the access in modern communicative systems, and as a result marks the “presence” or the “absence” of a specific area in the world map, and consequently the ability of this area to attract investments in multiple fields of entrepreneurship.

But what is globalization in analytical terms? Is it a system consisted of state entities which maintain their authority in the regulation of their internal affairs, or it is a system which functions autonomously, transcending states? This paper examines the possible answers to this crucial question up to a final conclusion. Further on, it depicts statistical data from all over the world, in an attempt to document the interconnection of the presence of ICT services in a certain area with the economic growth and the development of this specific area. Finally, it examines the problem of “exclusion” of certain areas from the world map of the economic transactions and the relevant processes of development, under the light of the arguments presented above.

Social Science Knowledge and Welfare Expertise – a Closely Intertwined Development

The development of the social sciences in the 19th and 20th century has produced knowledge about societies that informed other areas of social and political science. In this process, specific knowledge propositions have been chosen, others neglected, mostly depending on the actors and institutions that acted as carriers and recipients of this knowledge. The paper in hand addresses the question of how social science knowledge and its translation have contributed to the construction of welfare states, especially at their outset around 1900, and how it is a system which functions autonomously, transcending states? This paper examines the problem of “exclusion” of certain areas from the world map of the economic transactions and the relevant processes of development, under the light of the arguments presented above.

Career Advancement for Women in the UK Military: Opportunities, Risks and Responses to Gain Acceptance

The number of females holding senior posts in the United Kingdom’s military is around 1% compared to an average of around 30% in the rest of government. This paper reports on a study which sought to examine why the rate was so low using an entrepreneurial lens. As there is a paucity of research on female entrepreneurship in the public sectors and none in the UK military, this study helps to provide some fresh insights into an issue which to date appears to have been intractable.

Using entrepreneurial literature, a model was developed to research the potential barriers faced by female officers in the UK military when seeking promotion to the most senior ranks. The model was designed to examine the relationships between institutional and individual determinants in relation to promotion outcomes. These determinants included structure and agency, social capital, homophily, support and how women deploy a series of other strategies to accommodate institutional and network orientated logics and norms to gain promotion acceptability.

Semi-structured interviews were used to gather data from 48 female officers and a sample of 5 male officers over a four month period in 2013. Candidates were drawn from a stratified sample at the senior ranks. The overall research paradigm was critical realism. All interviews were recorded and transcribed and then analysed using Miles and Huberman qualitative methodology for coding and analysis of data.

The findings from these interviews demonstrated that the interplay between stress, the policy and played a major role in determining promotion. Factors such as emotional support, conflict resolution, reputation and legitimacy also determined the contextual social capital perceived to be necessary for promotion by deeply embedded bespoke male networks.

The originality of this research is in the use of an entrepreneurial framework to examine promotion within a government agency.

Heritage, Culture and Politics of Tourism Along the New Silk Road

After twenty years of the UNWTO’s Silk Road programme, there seems to be a new impetus to revive and re-envision the project to bring the heritage and cultural attractions along this ancient set of trading routes to a new prominence. A recent conference in Dunhuang in August 2013, the addition of a 30th nation into the Silk Road project, together with an action plan for the future that will build a sustainable and competitive tourism product suggests a fresh impetus and a desire for collaboration and tourism development. But to what extent does the Silk Road project offer real potential for sustainable tourism development? And what lies behind the rhetoric of the Silk Road Action plan? This paper seeks to address the politics and discourses of international collaborative tourism marketing projects with a focus on the Silk Road initiative. Whilst the aims of the project are laudable, the paper seeks to understand the power dynamics at play between these nations and the role of the UNWTO. The countries along the Silk Routes that have signed up to the project include some of the most politically unstable in recent history and the paper hopes to shed some light on the tensions between an ideal of peace and intercultural understanding through tourism development and a political, economic and social reality. The papers approaches the issues through the adoption of discursive analytical perspectives on texts: policies and planes, strategies and media items.

Who Negotiates The Relationship Between Leisure and Quality Of Life?

Increasing user’s quality of life has become a central outcome for many leisure services. In the UK, policy expectations encouraging leisure services to improve user’s quality of life have been explicitly pushed since 1999. Drawing on interdisciplinary empirical research in the fields of social policy, leisure and cultural studies, this paper presents an analytical approach to analysing the relationship to accommodate and quality of life. This paper draws on evidence from the cultural sector to highlight the potential impact of leisure workers on user’s outcomes and compares UK policy to the experiences of those delivering services on the ground-level. The negotiation between policy and practice is particularly interesting due to the increasing policy shift taking place towards a more collaborative
style of governance. This raises the question of who is central to the process of increasing individual's quality of life through leisure activities: users, workers or the state. In exploring this question, this paper provides new empirical evidence that leisure workers are key agents in negotiating the relationship between leisure and quality of life. Through utilising their discretion, ground-level workers can deliver activities that impact individual's quality of life on multiple levels. On the other hand, workers are restrained by managerial, structural and hierarchical limitations. The paper concludes that only by exploring the relationships between users and ground-level workers can insight be gained to the relationship between leisure services and quality of life.

Global Unions, Local Power: Evaluating Labor Transnationalism from North America to the Global South

This paper explores recent campaigns led by global union federations and evaluates different strategies these institutions have employed. The central findings reveal a paradox. Though global unionism is typically concerned with creating parity and universal standards across borders, I show that the local context can either undermine or empower the intentions of global actors, creating varied and uneven results. The question posed here is simple: How can global unions build local power?

This research compares three global framework agreements (GFAs) in different national-industrial contexts in an effort to assess the varied ways they are "implemented" locally. I look at private security in South Africa, contract cleaning in India, and telecommunications in Brazil. GFAs have been studied from a variety of perspectives. The insight offered here is to view them as part of a long-term industrial strategy for national unions, or a component of what Marshal Ganz calls "strategic capacity." This paper demonstrates how GFAs are used in different ways depending on local circumstances. In so doing, I focus on the local sphere as a bellwether for evaluating global unionism. The research is based on about 50 in-person interviews in nine countries, but specifically compares outcomes among unions in South Africa, India, Brazil, and the US.

The process of transnational collaboration promotes grassroots mobilization in South Africa, where a new form of unionism that challenges the transnational unionism, still the place it matters most. Focusing on the local arena also offers an insight into the way that specific contexts help determine the varied outcomes. Rather than a universal process, I uncover varied local approaches to transnationalism that simultaneously complement and contradict each other at different times.

Policies Travel Uneasily: The Comparative, Relational and Translative Work Of Making Urban Policy In a Global Context

This paper intervenes in a conversation between two emerging literatures in urban studies: that which questions the generalizability of urban theory and methods developed in, and with reference to, a small number of Global North cities and the literature on ‘urban policy mobilities’ that conceptualizes the circulation of ‘best practice’ policy models. Both literatures focus on forms of the policy-making process that occur in transnational networks and institutions, and thus the question of how “successful” policy models are developed and transferred is central to both. This paper explores the various mechanisms through which urban policy is translated and appropriates new and old ideas, and asks how policies are translated in different contexts. The paper discusses how policies are translated in different contexts and how the process of translation is shaped by the local political and institutional context.

Comparing the Design and Implementation of IT Skill Standards in Britain and Japan: IT Human Resources, Institutional Innovation and Path Dependency

At the beginning of the twenty first century, government administrations in Britain and Japan pinned great hopes on IT for economic development but feared that the rapidity of technological developments frustrated the effective workings of labour markets, education and training to develop and deploy effective IT labour forces. The speed of technological change meant that employers, educators and IT professionals produced piecemeal solutions and lacked a common language to describe IT skills and guide employment, training, education, and careers. In Britain, the government sponsored the development of a matrix of IT functional areas and levels of responsibility, the Skills for the Information Age (SFA), within which tasks and skills could be appropriately described. This ‘one page framework’ stimulated Japanese administrators to sponsor an IT framework for Japan, the Information Technology Skill Standard (ITSS). At first sight, comparing the design of the two skill standards appears to be a case of IT policy transfer and institutional innovation in response to common technological challenges in IT skill formation. However, closer examination of the institutional innovations associated with their implementation in the two countries underlines the importance of path dependency, for the innovations were mediated through distinct institutional histories and cultures. Being locked into different institutional histories and resources does not mean that ‘learning from abroad’ cannot occur, but that policy transfer and institutional innovation will be heavily conditioned by the past and develop different forms and practices. Using official documents and interviews with key participants, the authors demonstrate the continuing importance of different British and Japanese institutional histories on the respective institutional linkages and ownership of the skill standards, the respective provisions for dissemination and updating the skill standards, the respective links of the skill standards to competency, examinations and qualifications, and the international dimensions of the two national skill standards.

Addressing Diversity Trends in Rural America

Background: The new trend in US immigration is an increase in the number of Hispanics, the largest minority population, into rural America. This growing trend in racial and ethnic diversity found in small and rural America is expected to continue. This demographic change is highlighted by rural communities that are defined by migrant labor composed primarily of Hispanics. Most often this definition is one of supposed “decline in community.” This presentation proposes one strategy for integrating migrants into these communities in order to strengthen the community and to save them from putative decline. We focus on the differential HIV risks and access to HIV care and treatment of newcomers and long-timers. Migrants who have been in the community for 5 years or more (long-timers) have greater HIV risk behaviors (more risky sexual behavior and greater alcohol use) and have greater access to primary care. Newcomers (5 years or less) report lower HIV risk behaviors and have less access to primary care. Methods: This is an analysis of adapting an evidence-based health intervention utilizing a sociological theory. This discussion will show how community structures can be strengthened by incorporating the social networks of the growing Hispanic minority into the health care system. Fundamental Cause Theory points to access to health care resources will improve the health of disadvantaged migrant workers through strengthening social support within the networks, thereby reducing HIV sexual risk behaviors and excessive alcohol use. Results: Amigos Hacen Cambios, the proposed intervention, will assess migrant social networks for inclusion of newcomers and long-timers in order to take advantage of their strengths. The heterogeneity of the networks increases the probability of diffusion of the innovation or new ideas.

Institutional Ethnography and the "New Materialism"

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
In the introduction to their 2010 collection, New Materialisms: Ontology, Agency, and Politics, Diana Coole and Samantha Frost write of an increase in “scattered but insistent demands for more materialist analysis” (p. 2). While not seeking to “deny [the] rich materialist heritage” (p. 4) that informs their work and the work of others taking part in this scholarly conversation, Coole and Frost call for the development of “renewed materialisms” up to the job of grasping and analyzing our “materially and discursively fast-changing world” (p. 4). This paper examines these theoretical and analytic trends from the perspective of institutional ethnography. I approach this literature with a friendly curiosity and share my discoveries in terms of what it’s all about and what new materialists and IE materialists might have to say to each other.

Older Bodies, Dancing Together: Gender, Embodiment and Aesthetics in a Canadian Square Dance Club

Square dance in North America is a social activity primarily enjoyed by older women and men. In square dance, eight people (four couples) move with and around each other, forming elaborate moving patterns in response to on-the-spot instructions issued by a caller. In the structure of the dance moves and the names of the calls, as well as the caller’s patter, square dance encodes an idealized version of heteronormative, “old time” gender relations featuring gallant masculinity and girlish femininity, which is further expressed through traditional 1950s-era square dance costumes: western shirts and bolo ties for the men; full, fluffy skirts and puff-sleeved blouses for the women. In the present day, these “invented traditions” coexist amidst a range of self-presenational options, as well as frequent urgings from within the square dance community to “update the image” of square dancing.

Since 2011 we have been researching the organization, practices and experiences of square dancing through an ethnographic study of a square dance club in Calgary, Alberta. Although not designated as a seniors’ club, almost all of the members are over 50, and most are in their 60s and 70s, with some in their 80s. Our research has involved participant observation as club members, interviews, focus groups, photographs, and a survey of 200 dancers from 13 square dance clubs in Calgary. In this paper our focus is on square dance as an embodied, gendered activity of aged and aging men and women who meet every week to dance. We examine the gendered forms of square dance (calls, moves, dress) as resources that actual, individual dancers take up, play with, alter, embody and resist. We also consider the ways dress-up and collaborative dancing offer older bodies the almost transgressive pleasure of countering stereotypes of old people as infirm and unlovely.

Duel of the Dualisms: Production and Reproduction Reconfiguring

The processes and mechanisms by which inequalities are produced and reproduced globally are serpentine and rapidly changing. The standard historical narrative that economic life left the household, leaving nurturance behind in a separate sphere of family and to another stage of life. The two separate spheres of work and family, of paid and unpaid work, a significant blurring is occurring. Work is more often unpaid. Nurturance is more often paid. Economic inequalities leak into and out of care inequalities. Relying on two of the author’s current research programs, on care migration and on life course effects of the Great Recession in Finland and Japan, this paper examines how pipeline design engineers perceive risk vis-à-vis industry concerns that revolve principally around asset protection, public safety, legal obligation, insurance burden and reputational management. We then critically compare this risk burden with a variant borne by a different set of actors, those whose mundane activities pose a constant threat to gas pipeline stability. Although the actual harms of “excavation workers’ confront – i.e. operators of excavating equipment who might be either utility company and local council contractors or landowners - are similar to those visualized by pipeline maintainers (loss of life, loss of supply, loss of contract, loss of material resources) the former group bear a differing set of values, interests and ambitions in terms of how they formulate risk imaginaries. Moreover, they face divergent external pressures and accommodate contrasting internal desires, a situation shedding light on the pluralised, but socially conditioned, nature of risk perception and the multivalent elements influencing disaster prevention procedures. In particular, the paper reveals risk perceptions to be dialectical in essence: orientated to a sense of risk as a particular perception of envisaged harm but shaped by discrete contexts and circumstances.

MCDANIEL, SUSAN* (University of Lethbridge, susan.mcdaniel@uleth.ca)

Global Ageing in Precarious Times

Growing inequalities worldwide and within nation states, global financial crises, massive urban migration, austerity and shrinking public spheres – all contour ageing as a macro, meso and micro process. As the coup d’état of slow motion, as population ageing has been termed, sweeps across all regions of the world, although in different ways, instances of previously hidden terrains are being revealed. Among these are the globalization of care, the effects of growing inequalities on risks to older people but also on youth and those in mid-life, and counterintuitively the greater availability of paid parent caregivers. In this proposed talk, Mcdaniel draws on her extensive research on the policy implication of global ageing, on her comparative research on life course ageing in various countries in times of economic challenge, and her current research on transnational ageing and care supply/demand.

Punishing Coaching: Japanese Educational Sports Clubs and the Normalisation of Coach Violence

At the beginning of 2013 two independent cases made the headlines of Japanese newspapers. The first case involved the suicide of a high school student who was allegedly triggered after he received several beatings from his basketball coach for failing to perform well enough. The second case involved fifteen female judoka, including competitors in the London Olympics, who filed a letter with the
Japanese Olympic Committee complaining of violence by two coaches, including the head coach of the women's team. Both these cases caused a national debate about the practice of corporeal punishment (tai batsu) in sport in Japan. This paper is based on the outcomes of focus groups that were conducted with students at ten universities from across Japan in 2013. In particular we examine the ways in which a masculinized action of violence from coaches, accepting them as necessary forms of discipline and, in many cases interpreting such acts as indicative of caring coaching and kindness. Further, we consider the responses of students, which suggest that these forms of corporeal punishment are necessary in producing a manly form of identity. The contrast between sport and education in Japan suggests that attempts to change the ways in which sports clubs operate, including coach/athlete relationships is problematic and may require major reconsideration of the role of sport in education.

MCDONALD, BRENT* (Victoria University, brent.mcdonald@vu.edu.au)

If It Weren't for Rugby I'd be in Prison Now: Pacific Islanders, Rugby and the Production of (un)Natural Spaces

Drawing on research conducted with Pacific Island men, this paper considers the ways in which rugby becomes a legitimate space, both for the confirmation of Pacific Island identity and the demonstration of successful integration into 21st Century, multicultural Australia. However, in positioning neo-liberalism as the reengineering, rather than the deregulation, of the state, sports such as rugby enact considerable disciplinary capacity over the bodies of minority ethnicity. The disciplinary logic is underpinned by bio-racism and commodification inherent to the discourse of post-colonial Australia. The overrepresentation of the bodies of Pacific Island men in the rugby codes, in prisons, in security, and in manual labour, suggests the structuring effects of such discourse. Such effects shape the legitimacy of access to physical spaces and also to the range of agency that Pacific Islanders' enact. Of specific interest to this paper are the ways in which spaces, and the means to occupy them, become naturalized. This naturalization serves to obscure the actual regulating and exploitative function of such spaces, instead positing them as exemplars of individualism and self-governance.

MCDONALD, KEVIN* (Middlesex University, k.mcdonald@mdx.ac.uk)

Agency and the Vulnerable Body

Sociological approaches to agency have largely been framed in terms of intention and strategy, considering the body to be an instrument of action. However contemporary forms of collective action highlight the increasing importance of embodied experience and the senses, associated with bodies in place, mobility, and embodied publics. Such embodied experiences are not simply acts of claiming place, but experiences of displacement and vulnerability, evident in the embodiment of identity and modes of action where evocative experiences of art are more important than programmes and demands. These transformations are evident in the shift from the incorporating rhythms of the protest march to embodied grammars evident in occupations, from Tahrir Square to Takism Square. This paper explores this transformation of action, as unity and collective, pay to a ethical grammar grounded in displacement, vulnerability and embodying another self. The paper considers the implications for an embodied theory of agency, and the implications for the sociology of social movements as older models of identity-action give way to acting as embodiment.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
This paper 1) introduces the concept of cultural entropy, 2) sketches out the perspective it implies, and 3) discusses the centrality of materiality in such a perspective. Cultural entropy describes the process whereby the intended meanings and uses for a cultural object fracture into a chaos of alternative meanings, new practices, failed interactions and blatant disregard. If entropy broadly describes a tendency for cultural entropy is the tendency toward disorder at the level of meaning. While objects are often thought of as stable, durable, finished things, I argue (by drawing on ideas from anthropology and ANT/STS) that objects are inherently unstable, contingent, and incomplete because of their materiality. As such, in the long run, entropy is inevitable. This is especially true for objects--drawing on Goffman (1959), I argue that disruptions are much more likely during object-to-person than person-to-object interactions because objects can't engage in “impression management.” As such, it takes a great deal of cultural work to successfully communicate through objects and maintain a consistently clear resolution in meaning over time.

Although any cultural object faces entropy, I find that entropy is most visible in objects that people intend to affect belief and behavior. These instrumental uses of objects are commonplace: health pamphlets, commercial advertisements, protest placards, political speeches and more. As the intended meanings and uses for these objects are knowable, so too are the moments when these uses of objects are commonplace: health pamphlets, commercial advertisements, protest placards, political speeches, and more. The key tenet of Roma activism in the transnational political context is that Roma are 'a nation without a territory'. The articulation of Roma nationalism is not built on the conventional ideas of national ownership of territory, but rather on the lived experience of being on the move, living in a state of perpetual transition.

MCINTYRE, JANET* (Flinders University, janet.mcintyre@flinders.edu.au)

The Challenges For Social and Environmental Justice Posed By The Global Panoptican, Penal States and Disappearing States In An Increasingly Vulnerable and Unequal World

Facing up to an Unequal World has praxis implications for sociologists. The most important challenges are understanding the interconnected social, economic and environmental problems pose an ‘existential risk’ to life as we know it. The environment of the problem and the range of inter related ways in which the challenges can be addressed requires not merely transdisciplinary and cross cultural capability when designing policy responses, but the will to grasp the nettle as to why some live at the expense of the majority in this generation and the next. The paper makes a plea for a different form of governance that weighs up the social, ecological, and environmental indicators of wellbeing, in order to enable the equitable distribution of resources and to ensure that some are not living at the expense of others and future generations of life. It moves beyond a critique to suggesting an alternative form of governance and democracy that spans communities of interest at a planetary level.

The study addresses the five areas of priority drawing on the cosmopolitan agenda of Danielle Archibugi as: i) Control over the use of force; ii) Acceptance of cultural diversity by ensuring internal sovereignty based on rules that enable freedom and diversity to the extent that the freedom and diversity of cultural diversity is not determined; iii) Strengthening self-determination of people based on participatory democracy and the ‘absence of domination’ over others; iv) Monitoring based on democracy and governance; v) Participatory management of the global commons as the fabric of life. Currently the role of the state in Western democracies acts as protector of residual welfare rights in terms of the social contract applied to citizens within the boundaries of a state or federation. Those outside these constructed containers do not receive protection in states that are becoming increasingly like fortresses.

When 'the Other' Poses the Questions: Turning the Tables to Produce Data on German National Belonging

After a change was made in Germany's census categories in the year 2005, who is called German? How does one decide who is entitled to describe a much narrower group than German citizens? Germany’s population was divided into ‘Germans’ and ‘persons with a migration background.’ The latter category captures, in one basket, some German citizens—born and bred in Germany—along with immigrants newly arrived to the country. What makes one German? How does one come to belong to the national community? The question of national belonging and national identity is often addressed theoretically. Empirical studies, when conducted, tend to rely on data produced through surveys and apply quantitative methods. Both of these approaches fail to capture the meanings people themselves bring to the idea of nation and national belonging. Research into the social world informed by the epistemological position that there is no reality ‘out there’, independent of the shaping efforts of the mind, demands that one employs methods which access an inside view. In-depth interviewing is one such method. How, though, does the researcher's person (his/her social locations as a raced, gendered, classed, etc. research instrument) affect access to participants or impact the data produced? — a dark-skinned, native English-speaking man in Germany — interviewed Germans (German citizens) in a mid-sized city in Germany. How do participants understandings of what makes one German. Rather than hinder access or curtail discussion, I found that my status as outsider spurred vigorous discussions on the notion of Germanness. My ‘otherness’ seemed not to have hampered free expression but, rather, may have even opened the door for persons who felt themselves marginalized to voice their views. In this paper, I look critically at the process and reflect on the peculiarities of the data produced through the interviews.

Does It Pay to Play? Gender, High School Sport Participation, and Young Adult Attainment

Despite differences in the cultural meaning of sport for girls and boys, popular rhetoric implies that sport participation is always good for kids. Indeed, many youth sport organizations were built on the assumption that sport reinforces shared values—such as hard work, cooperation, leadership, and fair play—that help prepare youth for their future roles as engaged citizens. While there is ample evidence to suggest that sport positively affects educational attainment (Hartmann 2008), it is unclear whether such benefits extend beyond the college years to influence younger Americans' career trajectories or subsequent attainment. Evidence from a small number of empirical studies suggests that sport participants tend to report higher earnings, though the bulk of these studies focus exclusively on men. Those studies that do include women are often outdated, considering the influence of sport participation for U.S. women prior to the passage of Title IX of the Education Amendments in 1972 (which prohibited sex discrimination in education, including school-sponsored sports). Using longitudinal data from the Youth Development Study, this study explores how high school sport participation affects individual earnings and combined household income throughout young adulthood (ages 21 through 34). Multilevel mixed-effects regression models reveal that high school sport participation is positively associated with young adult attainment. This relationship is due, in part, to participants' greater educational attainment: sport participants are more likely to enroll and graduate from college, which translates to greater earnings throughout young adulthood. At the household level, female sport participants do not report larger incomes than their peers. While male sport participants report the highest individual earnings, female participants report the highest annual household income. Taken together, these findings suggest that focusing on individual earnings alone does not fully capture the gendered effect of sport participation on attainment.
older cohorts. One of the objective health markers considered in this study is inflammation, a significant predictor of chronic diseases such as coronary heart disease and type II diabetes. Early results suggest that gender differences in employment histories remain fairly entrenched across cohorts, and that educational attainment has a stronger relationship with inflammation in mid-life than the subsequent life course work and family trajectories it sets people on.

Asian Developmental States: Innovation, Industry, and Investment in China and Japan

- This paper examines the transformation of Asian Capitalism tracking innovation policies in China and Japan. Chalmers Johnson's seminal study of Japan as a "plan-rational" polity initially challenged the neo-liberal assumptions of development in the West. State intervention to discipline companies where necessary to achieve national goals of development proved similarly successful in the Asia's newly industrializing countries (NICs), leading to a mid-range theory of state/ market ties termed the "developmental state."

- China followed a different trajectory, but again with a prominent state role I looked to here to the current status of the developmental state in China and Japan, to assess capitalism, I focus the study on the coordination of beautiful women and men in national innovation systems, where both nations have excelled. Innovation offers perhaps the best indicator of future competition between capitalisms of the East and West.

The paper opens with plan and profile in national innovation systems (NIS) with attention to higher value-added exports. I then look to the role of major firms in both nations since enterprise plays the major role in R&D. In the third section of the paper, I turn to global ties with a contrast of foreign investment in the two nations, and the role of foreign firms in innovation systems.

The research of industrial policy evident in NIS efforts suggests three major differences in the state role. As might be expected, China's party/state plays a far more direct role than that of the Japanese state. Secondly, the Chinese party/state continues to evolve, with curious discrepancies between central and regional governments. We find more continuity in central government policy in Japan, thus with a stronger role for foreign participation. Thirdly, inward FDI plays a major role in China's NIS, in contrast to Japan where outward FDI links them to innovation network in the U.S. and Europe.

MCSCORLEY, KEVIN* (University of Portsmouth, kevin.mcscorley@port.ac.uk)

Visceral Militarism: Embodiment, Intensity and Experience

This paper provides a critical reconstruction of the notion of militarism that is particularly attentive to how militarism is specifically embodied in specific corporeal dispositions, structures of feeling, bodily performances, and sensory practices that are located both within militaries and beyond. As such, it attempts to move beyond a cognitivist understanding of militarism in terms of an explicit system of military discourses and values, and beliefs to trace a more embodied and affective genealogy of militarism that emphasizes the often unconscious, corporeal and sensory practices and discourses through which war-practices may become naturalized in a way that is not normal and desirable, through which militarism becomes naturalized and, unexamined, as an "abstract social norm" that may inhere within the deepest fibres of our bodily being" (Shilling 2007: 13).

Drawing upon empirical analyses of contemporary phenomena ranging from the growth of 'British Military Fitness' as a popular leisure pursuit in the UK, the technologies of affective captivating of immersive military video-gaming, and the intimacies and intensities of helmetcam footage recorded by soldiers in the ongoing conflict in Afghanistan, the paper highlights multiple practices of corporeal and sensory militarization that travel beyond traditional sequestered sites of classical military discipline, reshaping the wider sensorium and bodily pedagogics and projects in numerous domains of everyday social life. As such, the analysis emphasizes how desires for neoliberal self-actualization, thrift and bodily transformation increasingly articulate with wider military imperatives and corporeal practices and discourses to produce specific contemporary forms of embodied, voluntaristic and individuated militarism. The paper concludes by discussing the importance of locating these particular visceral militarisms with reference to shifts in the modes of embodiment, somatic apprehension of the world, and deterritorialized flows of affective experience associated with contemporary transformations in war-lighting.

The Elite Potlatch: Gifts, Girls, and Distinction Among the Global VIP

As income and wealth concentration reach historic highs, sociological research on inequality has begun to focus on the social and cultural lives of the world's "one percent." This article presents rare ethnographic data on spending behaviors among the increasingly global elite and documents how the "nouveau riche" convert their economic capital into symbolic and social capital. Central to such conversations are the gift giving rituals and exchanges of women. Based on two years of observations at high-end nightclubs in the global VIP leisure circuit, as well as 70 interviews with club owners and guests, I document how gift giving is a central condition of conspicuous consumption among nightclub patrons, who distinguish amongst themselves through the display of high-priced bottles of alcohol and the display, wasting, and giving of high-priced gifts of alcohol in ritualized potlatches. I develop the concept of *capital* to describe women as a resource for status-seeking men. Club promoters work to accumulate and mobilize gift*capital* through the circulation of gifts, perks, favors and intimacies to establish reciprocalities that free goods sustain relationships between paid brokers (men) and unpaid women, thus masking the labor behind conspicuous leisure and framing economic relationships as friendships. Additionally, women are themselves circulated as gifts among men, largely through their symbolic presence on display. Thus this article documents two levels through which gifting practices sustain structural gender inequalities and uphold a traffic in women system: gifts to recruit women and women as gifts. This article also demonstrates how gifting practices are fundamental to stratification among elites. Lastly, this article genders elite space by revealing the logics of gendered worth within a contemporary high-society arena, one which recognizes and rewards economic capital for men but bodily capital for women.
The five Central American countries analyzed in this paper (Guatemala, Honduras, El Salvador, Nicaragua and Costa Rica) have a very uneven level of development where it excels Costa Rica, which some have considered the Switzerland of America. This is having a great democratic stability and a good standard of living of the people that attracts the migration of his poorer neighbor Nicaragua. The rest of the countries (Guatemala, Honduras, El Salvador and Nicaragua) have very low levels of human development that join Bolivia and Haiti as the continent’s poorest nations.

This paper provides a brief overview of the emergence of the Central American countries showing different political trends in the twenty-first century governments and offering also a diagnosis of the situation of poverty. The causes are not natural but due primarily to historical internal social groups that have taken for themselves the social wealth of the nation and due also to uneven development scheme where transnational corporations in industrialized countries, especially through the extractive model, have taken over the natural resources of the region. To escape poverty, it is necessary the effective political will of governments, with the awareness that the inequality is not a manifest destiny of nature but a work of men; a best strategy is not only giving a fish to the poor but teaching them how to fish. It is necessary a public policy of redistribution of social wealth but primarily the effort in education with creation of capacities.

Leisure is a complex phenomenon pervading every society. Leisure has meant different things to different people and the concept of leisure has changed with the times. Leisure and lifestyle experiences are culturally determined and each region has its own values and tradition.

The study focuses on a significant social change and transformation of leisure activities and life style of tribals in Rajasthan (India). Modernization, globalization and urbanization lead not only to the growth of commercialism, but also transformed the leisure and lifestyle of tribals, hectic and busy.

Group- oriented activities in the tribal region like Chaupal, circus, puppet shows and village fair in tribal area are about to ruin and are replaced by tea stalls, filmy songs and dances, cinema going, watching TV and satellite cable, use of mobile, etc.

Traditional games like kho-kho, kabbadi, wrestling, gilli-danda, mardadhi; playing cards and chaupad have been replaced by modern games like cricket and football.

Family-oriented activities like folk songs, dances, music, during festivals and marriages are now restricted from week to day activity and more within domestic sphere rather than public sphere.

Artistic, religious (visiting temples and attending religious discourses or sermons) and cultural activities have been declining and are replaced by watching cinema, smoking, chewing tobacco etc.

In the present paper an attempt has been made to see the different forces of changes and their effect on leisure activities and lifestyle of tribals in Rajasthan and suggestions can be given to restore the traditional leisure activities and lifestyle of tribals.

Keywords: leisure and lifestyle, Chaupal, Traditional games, family-oriented activities.

Abstract

Dr Alok Kumar Meena
Leisure is a complex phenomenon pervading every society. Leisure has meant different things to different people and the concept of leisure has changed with the times. Leisure and lifestyle experiences are culturally determined and each region has its own values and tradition.

The study focuses on a significant social change and transformation of leisure activities and life style of tribals in Rajasthan (India). Modernization, globalization and urbanization lead not only to the growth of commercialism, but also transformed the leisure and lifestyle of tribals, hectic and busy.

Group- oriented activities in the tribal region like Chaupal, circus, puppet shows and village fair in tribal area are about to ruin and are replaced by tea stalls, filmy songs and dances, cinema going, watching TV and satellite cable, use of mobile, etc.

Traditional games like kho-kho, kabbadi, wrestling, gilli-danda, mardadhi; playing cards and chaupad have been replaced by modern games like cricket and football.

Family-oriented activities like folk songs, dances, music, during festivals and marriages are now restricted from week to day activity and more within domestic sphere rather than public sphere.

Artistic, religious (visiting temples and attending religious discourses or sermons) and cultural activities have been declining and are replaced by watching cinema, smoking, chewing tobacco etc.

In the present paper an attempt has been made to see the different forces of changes and their effect on leisure activities and lifestyle of tribals in Rajasthan and suggestions can be given to restore the traditional leisure activities and lifestyle of tribals.

Keywords: leisure and lifestyle, Chaupal, Traditional games, family-oriented activities.

The Impact of Social Structures on Adolescents’ Deviant Behaviors: The Study of 402 High-Risk Street Drug Users in Iran

Aims: This study investigates the social underlying factors which impact on substance abuse in Iran’s society.

Method: A comprehensive social approach, a sociological analysis was conducted on the triple dimensions of social structure: institutional, relational and embodied structures which impact on individuals’ behaviors by using the results of a secondary analysis of a survey carried out on 402 high risk abandoned drug users in 2009 and plus evidence from some documentary findings of sociological studies to confirm the arguments about the impact of social structures on adolescents’ deviant behaviors. The paper is drawn up on theories of Durkheim, Giddens, Putnam and also the evidence related to the situations of social anomie and social capital exhaustion that illuminate the role of society institutional and relational structures on forming the embodied structure or the same actors’ behavioural habits and skills in society.

Findings: The most effective factors of substance abuse were individual factors, bonding with unhealthy social networks, exhaustion of bonding social capital, and lack of social support. During the period of social transition, emergence of uprootedness in modern life and disorderiation of social actors in a space of discontinuity of old social bonds creates a ontological insecurity that can lead to the confusion of social actors to organize their social world and to deal effectively with not-so-complicated realities of social life.

Conclusion: Substance abuse is acknowledged as a social deviance which is stemmed from weakness of institutional, relational and embodied social structures during the modern era. The findings indicate the necessity of prioritization of substance abuse prevention by using a comprehensive model which includes interventions, i.e. promoting an established social order by structural policies for improving social capital, emotional and social skills and social support for individuals in society.

Saving Electricity in Private Households: Results of a Field Trial with Smart Meter Based Feedback Systems and Innovative Electricity Tariffs in Germany

In response to the nuclear accident in Fukushima in 2011, the German government decided to withdraw from nuclear power. This turnaround accelerated the transition from the German electricity system from a fossil fuel and nuclear power dominated electricity system to a renewable energy dominated one. The national aim is to reach a share of renewable energy sources of 80% until 2050. However, the major disadvantage of power generation from renewable energy sources like wind or photovoltaic is that they are hard to predict and as control as the availability of these resources is unstable. The challenge is therefore to manage supply and demand of electricity efficiently. In order to meet this challenge, the development of an intelligent energy grid (“smart grid”) has started. In this smart grid private households should play a role as adaptive consumers who shift their electric consumption according to the electricity production (from periods with low production to periods with high production) and who save a significant amount of electricity.

Based on this development my research focuses on the following questions: How to enable private households to play this role as adaptive consumers? Is it possible to make electricity saving behaviours part of the household members everyday routines? To what extend are feedback systems and variable electricity tariff models able to support overall electricity savings?

The results of a field trial on advanced electricity meter (smart meter) with 650 private households from April 2011 to May 2012 in Northern Germany will be presented. Three different types of feedback systems (including an iPod Touch based feedback application) and two different innovative and flexible electricity tariffs were tested. To answer the research questions, multivariate longitudinal analyses with regard to their effect on overall electricity consumption of the participating households were conducted.

Story Telling Debt in Trading: The Topos of Urban Public Space in Financial Crisis Narratives

A major challenge of narratively portraying the 2008 financial crisis consists in representing the debt and the multiple ways in which debt – as the underlying asset of divergent financial derivative instruments – is traded today. In particular, the representation of financial securitization, connecting private and public debt with mechanisms of financial market speculation, requires narrative techniques that make it possible to meaningfully interrelate a multiplicity of private and institutional actors, temporal and geographical coordinates, as well as political and technological influencing factors.

In view of this challenge, this paper explores various filmic and literary narratives that deal with the 2008 financial crisis and its far-reaching socio-economic impacts. In particular, the paper explores how urban public space is portrayed in such narratives. I argue that urban public space in popular cultural representations of this crisis features as a narrative instrument – a topos – that points out how both the individual and organizational risks upon which contemporary speculation draws are obscure due to strategies of financial abstraction and digital trading. However, as a critical gesture, the topos of urban public space often only alludes to the inequalities that are produced due to financial speculation, while largely leaving its concrete practices and instruments unquestioned.

My objects of analysis range from filmic and documentary crisis portrayals such as Inside Job (2010, Charles Ferguson), Wall Street: Money Never Sleeps (2010, Oliver Stone) and Margin Call (2011, J.C. Chandor) to fictional and non-fictional crisis literature such as A Week in December (2009, Sebastian Faulks) and The Big Short (2010, Michael Lewis).

This paper forms part of a research project that applies anthropological and socio-semitic conceptualizations of myth to narratives of the 2008 financial crisis. The project explores how certain narratives act as both social and cognitive strategies of dealing with complex phenomena, and as means of ideological communication.
Aspects of Measuring National Identity: Insights from Online-Probing

Since 1995 the ISSP runs a module on National Identity. With increasing number of participating countries a need to test the data for cross-national comparability has become necessary. Besides data analytical approaches, cognitive interviewing has become a popular tool to uncover differences in item interpretation. Two studies conducting cognitive interviewing could already detect problematic items in the ISSP module for Austria (see Latcheva 2009, Fleiß et al. 2009). However, these studies focused on one country and problems of cross-national comparability may not have been found.

One way to assess the existence of cross-national comparability is the application of online-probing which implements probing techniques of cognitive interviewing within web surveys. The project “Optimizing Probing Procedures for Cross-National Web Surveys” already conducted a cognitive pretest and an online pretest in Germany and will run its international survey in Germany, US, Mexico, Spain and UK in January 2014. A variety of items from the ISSP module on National identity are being analyzed. The data from the project give a unique insight into interpretation differences across respondents in a cross-national perspective.

The presentation will present results of the item battery on specific national pride which has been shown to be particularly problematic in the previous studies. The following questions will be addressed: Which problems appear in a cross-national comparison of the data? Which time horizons, for example, do respondents from different countries apply when they judge their pride on their countries history? What do Mexicans understand under the term “social security system” and is this comparable to the definition given by German respondents? How comparable are the understandings of “fair and equal treatment” across countries? How can these outcomes be combined with current data analytic approaches? What recommendations can be derived from the existing data?

MELLO E SILVA, LEONARDO* (University of São Paulo, leogmsilva@hotmail.com)

Brazilian Unionism and Global Union Networks: A Shortcut to the New Labor Internationalism?

Internationalization of trade unionism is not a new phenomenon. It is currently presented as a “new internationalism” as opposed to an “old” labor internationalism. The new internationalism is meant to be anchored in a break both with the previous internationalism of the early years of the labor movement and with the current “old” internationalism. Between the “old” and “new” labor internationalism unveils an underlying material divide; the “external” front is open to experiences and practices of deliberative participation within corporations. The paper aims to explore this apparent paradox. Evidence brought are: the quantitative dimension of the union networks, their distribution across economic sectors, their guidelines and prospects, all captured throughout available secondary data, as well as interviews with managers and workers. The deepest reach of the union networks is intended to be sociologically measured in a scenario of restructuring, privatization and attacks on social rights. Thus, the paper seeks to raise the point that, in fact, the gap between the “old” and “new” labor internationalism unveils an underlying material and symbolic cleavage which opposes an “old” to a “new” working class.

Festivals and Living History. Tourism in the Age of Edutainment

The festivals of living history are perhaps among the most interesting aspects of the new cultural tourism and the new tourist culture based on festivals. These innovative processes of individual and collective identity construction entail complex interaction between re-enactors, tourists and local community; strategies of tourist and territorial marketing; and new forms of exploitation of heritage. At the same time, however, we can single out some salient features of society and tourism in the late modernity: the consolidation of forms of leisure, tourism and cultural fruition intertwining education and entertainment; the increasing loss of historical knowledge; the growing need of territorial and historical authenticity; and the acceptance of new forms of relative authenticity.

The festivals of living history are effective instruments of governance and tourist development and can meet the needs of different types of tourism. However, in many contexts – as in the case of Italy - local authorities and scholars appear unable to take full advantage from the contribution of these activities and do not support them properly. Furthermore, the “serality” of the festivals devoted to local identity or the new culture of slowness, as well as the inability to properly manage edutainment, are stifling not only the potentiality of living history, but, more generally, of the whole tourist culture related to festivals.
Heritage and Sensory Tourism: The Long Way Beyond Post-Modernity

The increasing attention to the sensory and emotional aspects in tourism undoubtedly reflects the profound cultural transformations of late modernity and, in particular, how societies are most influenced by the Western consumption patterns. This attention involves - and at the same time reflects - a new concept of authenticity, of a hybrid and relative kind, more oriented to emotional and experiential aspects and less tied to contents and material aspects. This change entails effects that appear to be particularly significant in the field of cultural and, even more, archaeological tourism: tactile and sensory museums, light and olfactory installations, practices of living history and experiential archaeology. These and other activities of consumption and leisure, aimed at recovering a supposed historical and territorial authenticity and characterized by forms of historical theming, are profoundly transforming our relationship with heritage and the past.

However, we are in a historical phase of possible cultural change, in which both as a result of the financial crisis and because of the specific traits of the increasingly important Asian tourism, the current sensory, “liquid” and post-modern orientation could be overcome by a return of “solid” and material aspects.

With specific examples, this paper outlines some characteristics of the new cultural and archaeological post-modern tourism of sensory type, focusing on the relationship between edutainment, consumerism and the processes of identity construction, and tries to single out the possible developments of the current trends.

Educación Inconsistentecjercicio Profesional Desigual

Educación inconsistent, ejercicio profesional desigual. José César Mendoza-Cornejo

En la historia del hombre sedentario, la desigualdad es patente. Crea las condiciones económicas y sociales para ésta “diferencia”. Este dominio es desigual, el rico aprovechándose del pobre, el estudiado del illuso etc. términos que provocan divergencia y estancamiento.

Esta desigualdad es parte de nuestro actuar, lo mismo da ignorarla que ejercerla, se presenta en las instituciones educativas al no existir similares posibilidades económicas, términos que provocan divergencia y estancamiento.

Las cátedras sociales no significan minimizar las relacionadas con las técnicas, ambas aportan capacidad crítica, reflexión, análisis, razonamiento lógico para la formación integral del estudiante.

Los egresados despojados de una educación comprometida, pierden interés en retribuir, provocando desigualdad y falta de oportunidades. Esta actitud anulará los logros de las instituciones educativas al no existir similares posibilidades económicas. Se debe inducir una educación con sentido humano, con ideas que converjan en la solidaridad y por consiguiente, hacia una visión de interés colectivo.

MENENDEZ DOMINGO, RAMON* (La Trobe University, ramonmenendez21@gmail.com)

The Culture of Authenticity: An Empirical Study of University Students from Diverse Cultural Backgrounds

This paper is an empirical study of the influence of individuals’ cultural background on their different experiences of authenticity. Due to a lack of consensus in the definition of the concept, sociologists have only recently started to study authenticity in an empirical way. This paper tries to contribute to this new field for sociologists, consisting of a quantitative analysis of open-ended responses to Ralph Turner’s True-Self Method with 138 students from La Trobe University in 2013. It constitutes a partial replication of, and a complement to, another research study conducted by Turner at La Trobe forty years ago, in 1973. Today, La Trobe’s student body is more culturally diverse than it was at the time Turner did his study.

This study confirms that Turner’s analysis is still valid today as the cultural background of the respondents significantly influences their experiences of authenticity. Turner found no relationship between respondents’ cultural background and their experiences of authenticity. However, considering the more culturally diverse conditions of contemporary societies, cultural hypotheses seem to be worth exploring.

MENEZES, PAULO* (University of São Paulo, paulomen@usp.br)

Drifters and Borinage: From the Filmic Subject to the Historical Subject

This communication analyzes two important films in the history of sociological films: Drifters (1929) from John Grierson and Misère au Borinage (1933) from Joris Ivens. The first one shows the herring fishing out of the coast of England, in the North Sea, as a struggle between men and boats against the difficulties of the rough sea on the way to find and catch the herring shoals. The second one shows the very arid and difficult life of the Belgian miners of Borinage, focusing in their hard and hopeless conditions of work that has led to a major strike in 1933, after the worldwide crisis of 1929 in the USA.

Drifters show a very interesting process of overcoming the old artisanal fishing work by the introduction of the new methods from the industrial revolution by changing the animal driving force for the power of steam in a harmonic process but questioning the “natural” approach of a film like Nanook of the North. This new way of labor also makes this process acquire international dimensions showing the British Empire now as a huge commercial and industrial force. Borinage shows that against the power of capitalism, that in the process of reproduction of capital also reproduces the misery in the worst living conditions despite his arduous work, the only solution is the organized working class that struggles against them with their most important weapon: stop using the force of labor and consequently stop making goods and profits.

So, if Drifters is remarkable as the first documentary film in history to put the working class in the central place as a film subject, Borinage is the first one to show the working class in the process to become a historical subject to change the world, like fiction has already made in Eisenstein’s Potemkín (1925).

MENEZES, PAULO* (University of São Paulo, paulomen@usp.br)

Is There a Difference Between a Sociological and an Anthropological Approach to Cinema?

This communication deals with the specific construction of reality made by films which acquire significant epistemological interest when we are dealing with documentary cinema, where the confusion and the merge between the reality of
In the world in the form of feminicides Salvadoran women, who currently experience some of the worst levels of violence show how this exercise of coming out of itself searching the other, when based on poles, constituting them more than making they dialogue. In general terms, this mediation issue, aiming to analyze how intermediary instances, precisely because that can do it, is also the one that creates. In this way, the article lays on the means that are not merely being organized, but formed too. The one who selects, believing curatorship gestures are also active and interested acts of authorship: world cultures are not as a film of his Director. This option force the analyst to catch an epistemological detour where the film is no longer seen as evidence of their stories but inquired in the fundamental concepts of its filmic narrative, dialectic units of form and content. The analysis point out the principles and elements imbricated in the options assumed by the director in order to constitute a filmic narrative discourse that should be seen as a general and natural truth about the “other” (a ritual) and not a discourse that alludes something else (the French colonial heritage).

Finally, I interpret the film Les Maîtres Fous, by Jean Rouch, as a Discourse and not as a film of his Director. This option force the analyst to catch an epistemological detour where the film is no longer seen as evidence of their stories but inquired in the fundamental concepts of its filmic narrative, dialectic units of form and content. The analysis point out the principles and elements imbricated in the options assumed by the director in order to constitute a filmic narrative discourse that should be seen as a general and natural truth about the “other” (a ritual) and not a discourse that alludes something else (the French colonial heritage).

This is a research about Putumayo, a NY based label of World Music collections. On its own words, the label’s work consists in organizing collection that gather music from “exotic places where the music originated” so the rest of the world could know about that culture “as it is”. But what we observed in the research activity is that the curatorship work of the label brings a strong authorship signature: the label isn’t only (passively) exposing the cultures in their own native terms, but (actively) substantially constituting them based in its New Yorker grammar. In light of this, the article aims to show how passive and disinterested curatorship projects are also active and interested acts of authorship: world cultures are not merely being organized, but formed too. The one who selects, believing that can do it, is also the one that creates. In this way, the article lays on the mediation issue, aiming to analyze how intermediary instances, precisely because they see themselves as capable to live in between poles, start escaping to this poles, constituting them more than making they dialogue. In general terms, this is a work about exotization practices of construction of the other that intends to show how this exercise of coming out of itself searching the other, when based in its own believes, it’s always a jump into itself. We want to discuss these issues inside the modernity debate, showing how the problem of “other voices” is a central analytical topic.

This paper examines the root causes of violence in the lives of Guatemalan and Salvadoran women, who currently experience some of the worst levels of violence in the world in the form of feminicides (i.e., killings of women in which the state shares responsibility through omission or tolerance), as well as the state response to such cases. Both countries have recently created governmental offices and they are not merely being organized, but formed too. The one who selects, believing that can do it, is also the one that creates. In this way, the article lays on the mediation issue, aiming to analyze how intermediary instances, precisely because they see themselves as capable to live in between poles, start escaping to this poles, constituting them more than making they dialogue. In general terms, this is a work about exotization practices of construction of the other that intends to show how this exercise of coming out of itself searching the other, when based in its own believes, it’s always a jump into itself. We want to discuss these issues inside the modernity debate, showing how the problem of “other voices” is a central analytical topic.

This paper examines the root causes of violence in the lives of Guatemalan and Salvadoran women, who currently experience some of the worst levels of violence in the world in the form of feminicides (i.e., killings of women in which the state shares responsibility through omission or tolerance), as well as the state response to such cases. Both countries have recently created governmental offices and enacted a battery of laws to combat these crimes and both countries have ratified the 1994 Convention of Belém do Pará, Brazil, yet, levels of crimes against women have continued undiminished. Impunity is rampant and only a small fraction of these crimes are ever prosecuted and an even smaller share result in convictions. And while a UN 2012 report places El Salvador’s feminicide rate as the worst in the world, this country also has enacted a total ban on abortions, under any circumstances, even when the mother’s life is in danger. Based on years of fieldwork in Guatemala and observations from El Salvador, I argue that these various forms of violence are deeply connected and have roots in multi-sided violence composed of structural, symbolic, political and everyday forms of violence. I move away from explanations that focus on individual acts of aggression against women (which for the countries I examine are often are couched in machismo) to focus on extrapersonal structures that create conditions that permit such acts. The persistence of multi-sided violence may not cause the horrific crimes of feminicide to occur but, I reason, the intertwined nature of these various forms of violence paves the way for these more visible forms of violence to take place and also sustains conditions of impunity on the part of the governments.

Spatial planning plays a significant role in disaster risk reduction (DRR); UN Habitat has proposed methods and implementation strategies of spatial planning at local level in this context (UN Habitat 2011). However, DRR has only partially taken this into account in the development and the implementation of numerous spatial plans. Local level socio-political environment (SPE) plays a significant role in effective and functional spatial planning Lack of good governance, incompetence and corruption hinder the policy planning and implementation procedure, mostly in developing countries. This paper addresses particularly the need for a comprehensive understanding of the local socio-political conditions in context of DRR that hinder the planning process and implementation, using the developing countries examples: Mongolia Port City in Bangladesh and Cocoli. Both of these problems surge in Mongolia and flash flooding in Medellin. The obvious differences between them (cultural environment, social structure, level of economic development, intensity of the natural hazards, city size etc.) are considered to define the SPE which may be common to different areas in the developing world. Our findings show that in the studied regions, spatial planning is not given enough importance in local DRR planning. Its implementation is difficult because of lack of coordination and conflicting interests between different stakeholders and also external influence from development partners. The methodology applied in this paper to address the socio-political dimensions of planning procedure is applicable to other similar contexts and that will contribute to global DRR.
the problems of recognition of the materials that aimed at promoting extremism and to implement actions that destabilize the political situation in the country. 2000 respondents were interviewed. They are representatives of different social groups.

The study shows that 67% of people consider that extremist information provides different methods of manufacturing explosives. Using it, one can see people who suggest ideas of how to use it. Thus, the groups of teenagers appear who are able to commit dangerous acts against law enforcement and private citizens. 57% of people believes that extremist information calls for the approval of the advantages of one nation over the other, 53% of respondents believes that extremist information means call for terrorist acts. In this case, 17 % of school students and college students mention the difficulties in discerning which information is really extremist. 65% respondents expresses the need for training, especially young people in order to identify the information in the Internet which encourages extremism.

Indigenous Pathways in Social Research: Addressing Inequities

Part I

Indigenous populations live the issues of human rights violations as part of their legacy of colonialism. The ray of hope that emerges in relation to this experience is that indigenous people from many different countries have successfully negotiated the Northern educational system without losing their indigenous cultural heritage. The indigenous researchers and their allies in this group of papers frame culturally responsive research to confront regimes that have restricted their rights in the past. The voices of indigenous researchers explore their pathways of social research and the use of research to address human rights in their communities. Shawn Wilson, a First Nations member of the Cree tribe, provides insights into how research can be used to address human rights through an indigenous lens in his presentation: Conducting the Ceremony of Research. Exploring the sacredness of relationships in research with consequences for supporting human rights. The second presentation, by Cesar Cisneros from Mexico, takes an example of the global dynamics of capitalism is discussed in relation to a knowledge divide that is associated with epistemic violence. Donna Mertens, a transformative researcher from the United States, will provide the final commentary in a presentation titled: Indigenous Researchers and Social Transformation.

Japanese Artistic Traditions: Mimêsis, Politeia and Re-Interpretation

My paper analyses the representation and perfecting of reality (mimêsê) by visual arts in Japan and how the different traditions of art have been connected to changes in Japanese society and culture. The Japanese state was slow to realize how important visual arts for the Japanese society and culture and that visual arts have a huge influence home and abroad. The idea of state being responsible for promoting the cultural life of people or the idea of cultural rights of people are rather foreign to Japanese society. However, the whole idea of ‘being Japanese’ is very much a cultural reconstruction and the Japanese state has been actively engaged in shaping that reconstruction together with other pillars of establishment in Japan, such as the educational and economic institutions. The invention of tradition does not mean that they are all false or invented from a scratch. The refined tastes of upper classes served as a basis for artistic traditions that are officially associated with the essence of Japanese art and culture. The modern Japanese state presented the Japanese cultural traditions as a proof of Japanese cultural superiority and, therefore, there has always been a tendency also to protect the “Japanese” cultural traditions. For instance, nihonga was seen by the early modern policy makers as more Japanese than yûga, regardless of the theme of painting and without much of critical discussion whether nihonga really is that uniquely Japanese. After all, both Japanese nihonga and yûga were produced by foreign and Japanese artists working side by side. My paper reinterprets the tradition(s) of Japanese visual arts and places it in its social and political context, as well as develops theoretical tools that would better suit analysing Japanese artistic traditions.

TG04-947.6

Merriño, Mikaela (Kibi International University, rmm@tiintti.net)

While the Japanese state has used its power and financial resources without hesitation in some fields such as public construction it has conserved resources by making people face many social risks, such as most family-related risks and unemployment, the best way that they can. If people fall ill or face other individual problems Japanese society often has surprisingly little room for such values as social solidarity and compassion. On the other hand, there have been social policies that have sought to soften the impact of these practices, such as the strong emphasis on lifelong employment and relatively small wage differences among employees, especially among the elite salarymen (sararimān). The characteristics of the Japanese model of risk society are that the weak political leadership muddles along with the rest of the societies with globalisation and the sectors of the society need to adjust to the changed realities the best way they can. On the one hand Japanese society has its cultural values emphasising the merits of social harmony and virtues of inter subjective practices. However, conflicts have always existed openly or been managed under the facade of...
harmony and the new era of even weaker national governance, accelerated by the process of decentralisation (chihō bunken) and deepening fiscal crisis (mak- ing politicians powerless and leaving people on their own) have imposed indi- vidualisation on Japanese people from above. This individualisation has already encompassed every corner of Japanese society and the impact has been drastic for families. While the Abe administration has shown determination to address foreign, defence and economic & trade policies, the issues of social policy have clearly not been given priority and have been left to traditional institutions, espe- cially to families.

Supported Housing for Young Adults: An International Comparative Perspective (Germany/England) on Housing Related Social Welfare and Social Inequality

In youth research the housing transition is considered one important transition to adulthood amongst others. Nevertheless it is not sufficiently taken into account in academia. As long as young adults have the resources to go smoothly through their housing transition because they have enough resources (financial, social, biographical and educational) this transition tends to be invisible. One of the rea- sons for this is that it is not as institutionalized as the transition from school to work for example. However, the complexities and reversibilities of housing transi- tions, as well their ties to other youth-related transitions and social inequalities, become forcefully visible when the homelessness of young people is taken into account. Within social welfare systems, social housing related aid for this age group is rare, and usually given in extreme situations when housing has already become privatized. Therefore it is also often connected to other requirements, such as involvement in employment, training or education.

In this paper I will present the results of a qualitative study comparing two specific supported housing schemes for young adults in Germany and England. Both focus their support on housing as well as on the labour market oriented transitions of young people. My international comparative approach, which is theoretically informed by the model of “youth transition regimes” (Walther 2006), takes into account how the housing transitions of young people are structured by specific housing markets as well as by the housing related supports within specific social welfare systems. On this basis I will highlight differences and commonalities with respect to how social welfare systems can increase or reduce housing related social inequalities.

Hooliganism and the Dark Side of Football Events

Sport events in general and football matches in particular are often clouded by acts of violence. Hooliganism is a problem that is widely feared and thus is communicated throughout the media weeks or months before the actual event. Descriptions of raging masses, flying stones, lighted flares and wounded innocent victims dominate the coverage. At the same time the term “hooliganism” has very little analytical power, as it is used for all kinds of violent acts that occur during football matches including right-wing extremism. The underlying purpose when speaking of “hooliganism” is to make sense of seemingly “senseless” violence, to produce a surplus of order over disorder. From the hooligan’s own perspective speaking of “hooliganism” is to make sense of seemingly “senseless” violence, to produce a surplus of order over disorder. From the hooligan’s own perspective the violence is by no means “senseless” but is restrained by a diffuse moral code. These rules are similar to former ritualized – and thus “fair” – duels, in which the combatants could achieve or restore their honor. In this paper we want to ad- dress the phenomenon of “hooliganism” from a cultural sociological point of view. We contrast the “public” perspective and the media imagery of violent acts of hooliganism with the self-concept of the subculture in question. This comparison shows that hooliganism is a deeply ambivalent phenomenon. It is both playful and serious, sport and “war”. Hooligans are peaceful and “invisible” in everyday life, while they are violence-prone as long as the “moral holiday” (Randall Collins) lasts. We argue that this in-betweeness makes hooliganism so hard to grasp by science, politics and the media.

Transformations Of Cultural Identity; Japanese Mothers Raising Intercultural Families In Australia

Abstract:
Stuart Hall argues that identity is not about ‘who we are’ or ‘where we come from’, but about ‘becoming’ something. This paper explores Japanese women’s changing cultural identity by focussing on those who have chosen to leave their homeland and settled in Australia to raise a family. Selected from a larger study of mixed marriage, this paper focuses on three case studies of Japanese wom- en who settled in Western Australia with their European migrant husbands and raised children in the third culture are the focus of this paper. It examines how these women adjusted their cultural values in relation to their husband’s culture and the new host culture, how they raised their children in a foreign land with a foreign husband, and the manner in which they retained elements of their Japa- nese identity, re-creating themselves through different stages in life. While their experiences demonstrate challenges, at least, of which a ‘culture shock’, and racism, they also offer evidence of resilience and creativity in the ne- gotiation of cultural adaptation. This paper demonstrates the complexity of the transformation of cultural identity, which is intertwined with the multicultural home environment, isolation from familiar cultures of origin, gender roles within the family, and the historical and political background of the society in which these women live.

Social Capital, Organizations, and Disasters: Theoretical Insights from Four Communities

Social capital, especially among community organizations, is central to the US Federal Emergency Management Agency's “Whole Community Approach” for disaster resiliency, in which four of the six resiliency themes focus on so- cial capital. Organizational capital benefits the community and the industrial organizations and produces collective benefits for the whole network, including knowledge creation and sharing, generating financial resources, and creating innovations (Cohen and Prusak 2001; Lesser 2000; Reagans and McEvily 2003). Further, it affects efficiency and effectiveness important to social service and nongovernmental or- ganizations (Kapucu 2006). In disaster settings, social capital among emer- gency management organizations fosters more efficient response (Kapucu 2006; Kapucu et al. 2010; Varda et al. 2009).

Yet, social capital research on organizations in disasters focuses heavily on emergency management agencies. Less research includes non-disaster response organizations. Thus, we are interested in organizations that do not have disaster experience (Boerofel, Lae, and Gowing 2010). In this paper, I describe theoretical insights for organizational theory and disaster theory drawn from case study research on social capital among community organizations in four communities. The case studies were all completed be- tween 2012 and 2013 and include two communities that had recent disasters and two communities that have not. Further, three are rural (populations less than 50,000) and one is a small urban area (population 270,000). Based on interviews with nonprofit, emergency management, religious, and social service organiza- tions, I discuss the benefits and difficulties of using social capital for community disaster response and recovery. Disasters present both obstacles and opportuni- ties for the survival and growth of community organizations. Further, I argue that how organizations interact in networks, including legal and mission-related struggles, is key to understanding social capital for community disaster resilience. My results address how the ‘Whole Community’ is practiced as well as contribute to social capital and organizational theory about social capital's effect on organizational and community outcomes.

JS-60.4

MEYER, MICHELLE* (Texas A&M University, mmeyer@arch.tamu.edu)

The Family Burden of Disaster Assistance

One commonly proposed, but under-theorized, component of community di- saster resilience is social capital. Social capital describes the resources available through a social network that can be activated to affect the outcomes for the in- dividual members and the entire network (Bourdieu 1985; Lin 1999). This concept captures the interactive aspects of a community that imply a capacity to respond, adapt, learn from a disaster, and effectively reorganize community life quickly following an event (Cutter et al. 2008; Norris et al. 2008). Thus, social capital can be both a private and public good that generates resilience for individuals and families along with communities as a whole.

Using surveys and interviews with residents of two Florida counties, one rural and one urban, I discuss disaster social capital and its role in families’ resilience. I apply a common social network measure—the name generator—to measure social capital in two communities that have not . Further, three are rural (populations less than 50,000) and one is a small urban area (population 270,000). Based on interviews with nonprofit, emergency management, religious, and social service organiza- tions, I discuss the benefits and difficulties of using social capital for community disaster response and recovery. Disasters present both obstacles and opportuni- ties for the survival and growth of community organizations. Further, I argue that how organizations interact in networks, including legal and mission-related struggles, is key to understanding social capital for community disaster resilience. My results address how the ‘Whole Community’ is practiced as well as contribute to social capital and organizational theory about social capital's effect on organizational and community outcomes.
use insurance or savings for financial needs. This result shows the increased pressure on low-income families to help each other “get by” during a disaster (Stark 1997). At the community level, my results indicate that privatized social capital may not result in outcomes for the entire community, instead following familial lines that are often racially and economically homogeneous.

Collective Action and Collective Actors in Fields: Some Ontological Clarification of a Recent Debate in Neo-Institutionalism

The concept of “fields” has a lively history. Starting as one of the crucial concepts in Bourdieu’s theory, it became a foundational concept of sociological neo-institutionalism. Today, different attempts exist to transform it into a general concept of collective action (Hoffman 1999, Fligstein/Mcadam 2012). This interesting development is, however, accompanied by some weaknesses: Currently, individuals and collectives, especially organizations, are analyzed symmetrically as actors within fields. Collectives are only described as fields nested within other fields. What is urgently needed is an elaboration on how individual and collective actors are constituted, and how they are related to individual ones.

We take the distinction between agency and actors immanent in theories of practices (especially in the work of Giddens 1984, even Latour 2005), as a point of departure to discuss this problem. Actors – individual as well as collective ones – are special constructions of western modernity (Lukmann 1980, Foucault 1984, Luhmann 1984, Meyer/Jefferson 2000). They are often confronted with the obligation to act consistently in line with different kinds of rationality, often stemming from different field-levels. Agency, in contrast, is the essential possibility to make a difference in the stream of daily activity (Giddens 1984: 9), which is grounded in mental control over bodily activities. Although agency and actors are often actualized in an intertwined form, they sometimes only occur in a loosely coupled way.

Following this conceptualization, we can offer a more complex and clarified picture of individuals and collectives. It allows for a clearer distinction between (a) the properties of individual and collective actors, and between (b) agency and attributed agency. In addition, it allows (c) for a more elaborate description of how fields are nested within fields, for example how agency and actors are constituted by fields at the same time as they constitute them.

Modern Times: How Organizational Time Structures Influence Society

At the latest since Max Weber, we have known that organizations strongly shape modern life – and also time. Modern society has been described as organization society, in which organizations diffuse across every sector. Organizations can, and do operate with different societal macro-logics that contribute towards operationalizing and implementing them: Enterprises strive for economic profit, media organizations disseminate information and schools educate. However, in doing this they use their own specific structures and procedures. Among them are time structures. We focus on such time structures such as projects, deadlines, timeframes, time routines and rhythms, and show that these are not necessarily compatible with the societal logics they address. As a consequence, organizations act as Procrustean bed regarding societal macro-logics. In the same way in which Procrustes “adjusts” people to the size of his bed, organizations impose their time structures on society.

As examples, we use the impacts organizations have on media and science. Media logic dictates that new information is provided continuously. However, editorial departments of television channels or newspapers need stable (temporal) routines. So, editorial departments often privilege the coverage of planned events like international conferences or sport events. As a consequence, organizational temporal structures play an important role by selecting news.

The logic of science implies that the time needed for research and scientific findings can hardly be defined in advance. However, organizations, such as universities, have to plan ahead. So they prioritize research proposals which can convincingly promise deadlines. In the social sciences for example, this gives an advantage to empirical studies which – in comparison to theoretical analyses – can be more easily planned.

Based on organizational institutionalism and systems theory concepts, we develop a model which allows us to analyze the selective effects of organizational time structures on societal macro-logics.

FRIEDMAN, SAMUEL (NDRI)

Understanding Long-Term Risk Behavior: The Importance of Full Picture

On the example of a qualitative study of long-term injection drug users (IDs) who remained HIV and Hepatitis C free despite long history of risk behavior (drug injecting) we argue that analysis of non-risk related aspects of the lives of the risk-takers is very important for understanding their risk-taking behavior and its outcomes. To understand safety—in this case not getting infected—we need to understand more than situations and behaviors that put people at risk. Epidemiological studies that focus on recent injection practices as infection risks cannot help much in explaining how these users “stayed safe” in the long run. In addition, by focusing all attention on drug users’ risk behavior, it distracts researchers’ attention from other important areas of drug users’ lives that are not in themselves risks but may be extremely important in having consequences on various risks people who use drugs face. In short, we need to go beyond epidemiological risk theory to understand risk behavior in the long run. As we shall show, non-drug related practices contribute to peoples’ fates as drug users. More specifically, we intend to show how adjustment of person to drug use, successful mutual integration of drug users’ role with other types of roles are pivotal in defining his life chances, including chances to get infected by blood borne infections. Based on life history interviews with 35 long-term IDs in New York City, we argue that analysis of their biographies as complex, continuous, and integral life-trajectories is indispensable for comprehending their activities, including drug using and risk taking behaviors. Successful management of these combined types of drug users has much to do with socialization, education, and identity processes of the individual and the society they are embedded in.

The Dilemma of Feminist ‘double Activism’ and the Pressure of Separatism

Feminism shares boundaries with other political movements, often acting in sympathy with many of them. The term “double activism,” coined by Italian feminists, describes the position of feminist activists who are simultaneously involved in political organizations of the left (parties, movements, unions) and feminist collectives. The act of moving across boundaries – between the left and feminism – came to light when this double allegiance was presented as conflicting loyalties in the 60s and 70s by feminists advocating a complete separation of their movement. Double activists who lived that experience, were criticized for not devoting their energies entirely to women and feminism; for not thinking and acting freely – a point of departure to discuss this problem. Actors – individual as well as collective ones – are special constructions of western modernity (Lukmann 1980, Foucault 1984, Luhmann 1984, Meyer/Jefferson 2000). They are often confronted with the obligation to act consistently in line with different kinds of rationality, often stemming from different field-levels. Agency, in contrast, is the essential possibility to make a difference in the stream of daily activity (Giddens 1984: 9), which is grounded in mental control over bodily activities. Although agency and actors are often actualized in an intertwined form, they sometimes only occur in a loosely coupled way.

Following this conceptualization, we can offer a more complex and clarified picture of individuals and collectives. It allows for a clearer distinction between (a) the properties of individual and collective actors, and between (b) agency and attributed agency. In addition, it allows (c) for a more elaborate description of how fields are nested within fields, for example how agency and actors are constituted by fields at the same time as they constitute them.

Elements of a Socio-History of the Relation Between Nation and Religion – the Case of Catholicism

The nation has been, simultaneously, a privileged tool of modernization (that is also a potential tool of perpetuation and) and of the political, and also a potential tool of perpetuation of a new type of enchancement (which is a privileged space for the refusal of modernity). Indeed, should the nation become an object of sacralisation, it is ancient ancientity) . Indeed, should the nation become an object of sacralisation, it is ancient traditionalism and not feeling whole in neither of them . This presentation is based on a qualitative comparative research between two types of feminisms which have never been compared before: Québécois (Canada) and Italian feminisms during the 60s and 70s. The paper intends to go beyond the Italian case dominated by the traditional and the New Left and beyond the 60s and 70s period by showing that double activism was – and still is – shedding light on the political evolution of the feminist movement. This is especially the case today, with the renewed sympathy found between feminists and other political actors such as young queer, anti-authoritarian, anti-colonial and anti-racist political groups. The paper will focus on the complex consciousness of double activists; the existential aspect of presenting oneself as a member of a political group while helping to create feminist collectives; and the simultaneous activity of bringing social struggles within the frontiers of feminism while seeking to bring feminist principles and feminist struggles within leftist groups.
imposed in the 19th and 20th centuries while (re)producing indifference, and result- ncluding in violence.

Today, the reality of pluralism makes this fiction of ‘sameness’ globally incred- lible. Should a space which can bring back the current evolutions carried by the acceleration of globalisation exist, the best option would be the one that carries the resistance against this process. In a situation that is characterized by the disqualification of the absolute and the passage of ‘sameness’ to plurality, there should be no surprise to the fact that we are witnessing some actions towards the reaffirmation of the absolute and of ‘sameness’.

To explore this problematic, this paper will draw on the paradoxical relations (and the successive reorganisation of these relations) maintained by the catholic church towards the nation. In an orientation to follow the sign of the times (if not to transform it, at least to inhabit it), religion and the nation are both categories which share with intimacy the avatars of legitimacy, that is the rebuilding (and the partial or complete) of complex dispositions to organise the religious. What at play around religion and the nation can only make sense when dealing with the contemporary redeployment of these devices.

MICHETTI, MIQUELI* (Fundação Getúlio Vargas, miquelimitchetti@yahoo.com.br)

The Isomorphism of Practices and Discourses Between the Corporate Realm and the World of Culture in the Flexible Capitalism

Culture plays a central role in the “flexible accumulation”, but does so as a “resource”, as a way of generating economic value. It is in this context that arise no- tions bringing together seemingly antithetical terms, as “economy of culture” and “creative economy”. The study aims to show how this new isomorphism of spirit, the world of culture seems to incorporate both practices and discourses from the new corporate world, which in its turn seems to feed on the cultural sphere. In this increasingly intricate intertwining between economy and culture, it seems to be an isomorphism between the practices of companies of the flexible capitalism and certain agencies of culture. Under the rhetoric of “organizational innovation”, these agencies replicate business models such as the networking, horizontal, an-ti-hierarchical organization, based on crowdsourcing and / or crowdfunding, etc. In these new models of “cultural business”, content producers find themselves in precarious positions the promise of eventually monitize their creative capital, they experience temporary and outsourced contracts. As Max Weber teaches us, each form of capitalism needs a corresponding “spirit”, so that will be also a discourse isomorphism between the world of flexible economy and the sphere of culture. The discourses about the non-separation between profes-sional and personal life, between work and leisure that flexible capitalism took from counterculture is easily extended to current artistic and cultural activities because such ideas refer to the historical separation between art and work that founded the very category of “artist”. Through the analysis of similar practices and discourses into the corporate world and in the cultural sphere, the study will show how the precariousness has been rhetorically transformed into flexibility and freedom and how, even under the rhetoric of alternativeness, culture in the flexible economy has contributed to the reproduction of an unequal world.

Parenthood, Well-Being Inequalities and Welfare State. Comparative Study of 20 European Countries

1. Income and wealth inequalities have represented a central issue of social policy analysis in the past. Nowadays the nature of inequalities and types of inequality are changing. The paper aims at analysing the inequalities in subjective well-being and its relations to life chances and key life course events determined by welfare state. The main questions asked in the pa-per: Does the welfare state reduce inequalities in people’s overall subjective well-being? Does the welfare state reduce inequalities in people’s satisfac-tion in various domains of life such as health or work-life balance?

2. The goal of the paper is to measure and compare, across European coun-tries, inequalities in overall and domain subjective well-being (SWB) based on subjective indicators of well-being. Doing so allows for the evaluation of changes in economic and demographic changes in societies and to provide information on well-being of different groups in the European societies. So the first question asked is of diagnostic nature: what are the inequalities of well-being of parents and non-parents among European countries? Are there cross-national differences in the level of inequalities in subjective well-being belonging to the vulnerable groups due to specific life course stages (parenthood, marital status)?

3. The paper considers the broadly defined cross national, comparative analy-sis of contemporary family policy as well as gender regimes. The paper will assess if the cross-national differences in the level of inequalities in subj-ective well-being of parents and non-parents can be related to the welfare state regimes or to specific policies.

The Effects of School Racial and SES Composition on K-12 Reading and Language Arts Outcomes: A Metaregression Analysis

Structural vulnerability theory proposes that educational outcomes emerge as organizational features of schools interact with students’ individual characteris-tics. The organizational feature of interest in this paper is school racial, ethnic, and social class (SES) composition. This paper asks the following question: “Does school racial and SES composition affect individuals’ K-12 reading and language arts achievement?” To answer it, the authors conduct a metagression of the US social science literature published in the last 20 years on the relationship between reading and language arts outcomes and the racial, ethnic, and SES composition of the K-12 schools students attend. The authors employ a two-level hierarchical linear model (HLM) to synthesize approximately 75 primary studies with 200 re-gression effects. The tentative answer to this research question is a qualified yes; students attending schools with concentrations of disadvantaged racial minority and/or poor peers achieve less academic progress than their otherwise compara-bly composed counterparts in more racially integrated or low poverty schools. Preliminary results indicate that attending a racially isolated disadvantaged minority school has a statistically significant negative effect on reading and language arts achieve-ment. This relationship is moderated by the size of the sample in the primary study and by the way the independent variable (school racial/ethnic composition) is operationalized. Effects vary for different racial and ethnic minority groups and the effects are stronger in secondary compared to elementary grades. The emergence and widening of the race gaps as students move through the grades suggest that the association of racial and social class isolation with reading and language arts performance compounds over time, illustrating how school compo-sition effects reflect the dynamics of structural vulnerability theory.

MICKELSON, ROSLYN* (University of North Carolina at Charlotte, RoslynMickelson@unc.edu)

The Role of Integrated Schooling in the Development of Social Cohesion in Multiethnic, Just, Democratic Societies

Schools play a crucial role in preparing children for their adult responsibili-ties as workers, parents, friends, neighbors, and citizens. Increasingly, in the US and other multiethnic democratic nations this responsibility is complicated by the growing demographic diversity among students, a diversity fueled by internation-al migration. The central argument of this paper is that integrated schooling is a necessary, albeit insufficient, condition for developing the social cohesion that just, multiethnic democratic societies require to flourish. Using the United States as a strategic case study, the paper synthesizes the US educational, social, and behavioral science literatures on the effects of school and classroom racial, eth-nic, and social class composition on short- and long-term academic and nonaca-demic outcomes across the life course, with special attention paid to immigrant youth. The preponderance of the extant US literature on the topic links integrated schooling to improved academic and non-academic outcomes, and suggests in-tegrated schooling is also a necessary, though, insufficient enabling condition for fostering civic engagement in multiethnic democratic societies. Ironically, despite this growing corpus of evidence, US schools are segregating by race, ethnicity, and/or social class. To be sure, because of international and internal migration trends, the nature of US school segregation has changed so that today it is much more ethnically complex than the Black-White or Brown-White binaries of the past. Nonetheless, studies indicate that today, as in the past, schools with concentra-tions of poor disadvantaged minority students generally fail to educate their students. The paper discusses the implications of its findings for 21st century edu-cation in the US and other multiethnic democratic societies (especially OECD countries) facing the opportunity that growing demographic diversity and international migration pose for delivering educational excellence and equity to all students.

Property, Patrimony and Territory: Autochthony and the Politics of Immigrant Place-Making in Peri-Urban Kisumu, Kenya

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The rapid urbanization currently underway in cities of the global South is unfolding under conditions of limited capacity of the state and conventional market mechanisms to avail buildable land at a pace commensurate with population growth rates. In the Kenyan city of Kisumu, there has been a steady conversion of peri-urban agricultural areas into urban land, as residents seek alternative ways of meeting the rising demand for urban housing. These migratory flows and settlements have over time spawned unique spatial structures and power geometries on the urban fringe, as immigrants from the inner city and beyond buy land and settle among the indigenous population. This paper adopts class and autochthony frameworks to unravel the socio-spatial transformations underway in peri-urban Kisumu. Using in-depth interviews, focus group discussions and ethnographic fieldwork, the paper analyzes the socio-spatial and political ramifications of land-buying and settlement on Kisian, an indigenous peasant community on the western outskirts of Kisumu. The paper reveals that immigrant-host relations have been characterized by uneasy coexistence, the exploitation of and social cleavages. The host community views the ‘immigrant invasion’ as an affront on their indigenous property rights, patrimony and territory—a development they blame for dwindling local fortunes and precarity of livelihoods, as traditional modes of subsistence are disrupted by the new socio-spatial order. Immigrant households have on the other hand devised elaborate socio-spatial strategies aimed at cementing their insertion into the emergent social and built environment. The paper analyzes these adaptive and defensive practices of immigrant households and situates their place-making practices in the broader urban morphogenesis over time. The study addresses vital questions of social inequality and structural power relations embodied in the production of urban space, together with the internal contradictions that typify the urban development process within rapidly transforming cities of the global South.

The Mismatch Between Planning Practice and ‘Actually Existing Urbanisms’: Planning Responses to the Phenomenon of Street Trade in Kisumu, Kenya

Street trade has increasingly become an integral part of urban economies in Kenya following the onset of the structural adjustment programmes (SAPs) in the 1980s, and globalization. However, it has been characterized by informal spatial production and use constitute the predominant mode of urbanism in contemporary Kisumu, official planning practice is still steeped in prescriptive ethos aimed at producing the ‘modern’ city. There is thus a mismatch between official planning policy and the practical realities of what Shatkin calls ‘actually existing urbanisms’. The paper contributes to current debates on inequality, informality, urban citizenship and the challenges of governance, particularly as they relate to contemporary planning practice and scholarship on rapidly urbanizing cities of the global South.

Weber’s Ethic of Responsibility As a Framework for Professional Ethics

Max Weber coined the term ethic of responsibility in his lecture on Politics as a Vocation in 1919. The ethic of responsibility demands to take account of both the means and ends of one’s action, and result, and the principle of responsibility in an ethic of “good attitude”: “there is an abysmal contrast between conduct that follows the maxim of an ethic of ultimate ends—that is, in religious terms, ‘The Christian does rightly and leaves the results with the Lord’—and conduct that follows the maxim of an ethic of responsibility, in which case one has to give an account of the foreseeable results of one’s action.” My paper discusses how Weber’s ethic of responsibility can be turned into a framework for professional ethics. Key bridging concepts are (i) personal/professional autonomy and (ii) the expected degree of performance of professional work (quality, effects, efficiency, invested expertise...). I will explicate how an ethic of responsibility can be turned into a framework for professional ethics clarifies some open conceptual issues both in Weber’s approach (justification, evaluation) and in professional ethics (e.g., personal autonomy vs. professional standards).

Family and Non-Family Support during the Transition to Parenthood

Although today parenting is largely a choice, having children causes stress. Parents, especially of young children, are tired, sleep deprived, and stressed (Evenson and Simon, 2005, Umberson et al., 2010). They experience financial strain (Stanca, 2012) and time pressure. Childcare, an activity slightly more enjoyable than housework (Kahne etc., 2004) is in conflict with parents' leisure, freedom, work demands, and romantic relationships (Angeles, 2010, Lyubomirsky and Boehm, 2010, Nomaguchi and Milkie, 2003, Twenge et al., 2003). Previous studies show that families and other networks provide extensive help to parents of young children (mainly by providing childcare and housework, advice and information, as well as material support, see: Bengtsson, 2001, Chan and Ermisch, 2011, Coall and Hertwig, 2010, Hank and Buber, 2009). However, longitudinal analyses of buffering effect of family and non-family networks, and the interplay of the two types of support remain understudied.

Our analysis fills this gap in several ways. First, we test if the support available from family and non-family networks actually increases after the transition to parenthood. Second, we test the hypothesis that family and non-family support alleviate the negative well-being consequences of early parenting. Third, we assume the family and non-family support affect differently mothers and fathers' wellbeing.

We use the Swiss Household Panel to observe a sufficient number of transitions to parenthood together with detailed information on support available from relatives, neighbours, close friends and colleagues. To control for section effects, we use fixed effects (hypothesis 1) and difference-in-difference (hypothesis 2) models.

This is one of the few analyses explicitly testing with panel data the buffering effect of support from various sources during the transition to parenthood. It is also one of the few analyses testing if social support actually increases during the transition to parenthood, which so far is only a plausible assumption.

The Well-Being Gap Between the Married and the Never Married: Time Trends and Macro Processes

Growing divorce and falling marriage rates in contemporary societies suggest that the institution of marriage is in crisis. Indeed, analyses for United States suggest that the quality of marriages, as well as the well-being premium of married over the never married persons decreased over time (Amato et al., 2003, Corra et al., 2009, Glenn, 1991, Glenn and Weaver, 1988, Rogers and Amato, 2000: Waite, 2000).

This paper examines how the well-being gap between the married and the never married changed over time and it tests the hypothesis that this trend has been shaped by the changing socio-economic conditions. In particular I focus on the hypothesis that the well-being gap narrowed because the level of economic specialization of spouses within marriage decreased. The idea that economic specialization builds the marriage premium has been formalized by Becker (1981) and is currently adopted in analyses of married couples (see, e.g. Stutzer and Frey, 2006).

I use data from the World Values Survey and the European Values Study for 87 countries on various levels of development, for a period of almost 30 years. Multilevel regression allows me to distinguish between the cross-country differences and the within-country differences across time.

Results show that the life satisfaction gap between the married and the never married decreased over time at a rate that could close the well-being gap between them. The changes of economic specialization do not affect the well-being gap among women, and have a weak effect among men. Therefore the study does not support the hypothesis that the narrowing well-being gap between the married and the never married may be explained by lower level of economic specialization within marriage. This result is policy-relevant, as it shows that enhancing traditional gender arrangements may be inefficient way of improving conditions of married couples.

Women and Men As Providers of Informal Social Assistance: The Case of Lithuania

Viewed form configurational perspective, family is a complex set of personal ties and interdependencies that extend far beyond it's boundaries and include not only more distant kinship, but also friends (Widmer, 2010). Basing on this theoretical approach, the roles of women and men in the informal social support networks are explored in the paper. This makes a novelty of research, because most commonly gender differences in provision of informal care and assistance within a family of procreation and a family of orientation are discussed in a literature, leaving aside the commitments to the other persons.

The paper examines the peculiarities of informal mutual social support networks, focusing on the place of women and men - close relatives, distant kinship or friends / neighbours in these networks. Individual experiences in giving and receiving assistance are discussed and personal views regarding the expected potential providers of instrumental and emotional support (i.e., persons who would be addressed and asked for a help in case of urgent need) are analysed from gender perspective, basing on complex Lithuanian data: (1) the results of the questionnaire survey carried out at the end of 2011 - beginning of 2012 (a sample - 2000 respondents, representing national population born respectively in 1950-1955, 1960-1965, 1970-1975 and 1980-1985); (2) the findings of the in-depth interviews with 23 fathers (representing of the same birth cohorts), conducted in summer of 2012 in the six regions of Lithuania.

The investigations were accomplished in a frame of the four years research project “Trajectories of family and non-family social networks: intergenerational dimension”, financed by the European Social Fund (ESF).

Changing The Subject: Occupy Wall Street's Achievements and Prospects In Comparative Perspective

Occupy Wall Street burst onto the scene in New York City in September 2011. It was partly inspired by social movements in the Middle East and Southern Europe, and soon after its critique of inequality gained traction with the slogan “We Are The 99%,” it helped to stimulate many similar occupations worldwide. In the aftermath of the eviction of the New York City protestors from Zuccotti Park and the similar evictions around the country, the U.S. Occupy Wall Street movement has dissipated. But similar movements have continued to spring up around the globe, and the social processes that led to the emergence of Occupy in the U.S. remain in place.

This paper explores the sociological roots of the New York Occupy movement, with particular attention to the changing U.S. labor market. Drawing on the results of a representative survey we conducted of New York City Occupy Wall Street participants in a May 2012 protest march, we analyze the movement's characteristics and discuss its achievements. In addition, we consider various comparisons and contrasts between the New York Occupy movement and other such movements before and since, and on that basis speculate about the prospects for the future of such movements in the USA and elsewhere.

Social Conditions of Happiness. the Case of Mexico

Social conditions of happiness. The case of Mexico

The paper is based on a national survey that will be made in Mexico next November by the seminar Subjective Satisfaction about Life and Society. The paper will present the results of a group of variables associated to happiness according to the following levels. At the individual level, it will explore the consciousness of freedom in decision making, the expectations horizon assumed, and the perception of control over the future life. At the mediational level, it will explore two dimensions: a) social cohesion levels in terms of quality of social relationships (social capital), homogeneity of them, and conflict (family, friends, neighbors, work); c) quality of social relationships and decision practices in organizations (voluntary, club, civic
The final component of the paper views societal interpretations of death tourism and demand management (and promotion), political interpretation and control. Dark tourism focuses on sights, experiences, and actual memorialization, death tourism legal aspects of assisted suicide in conjunction within the tourism industry. By the emerging phenomenon of death tourism, to present briefly the social and central focus on the debates in the right to life arguments. This paper describes treating travel that culminates in assistance to end one’s life is becoming more a confrontation with grief and mortality is met with the expressed purpose of orches-

MILLAR, ROSS* (University of Birmingham, r.miller@bham.ac.uk)
Hospital Board Oversight of Quality and Patient Safety: A Narrative Review and Synthesis of Recent Empirical Research

Context: Recurring problems with patient safety have led to growing interest in helping hospitals’ governing bodies provide more effective oversight of the quality and safety of services. National directives and initiatives emphasise the importance of action by boards, but the empirical basis for informing effective hospital board oversight has yet to receive full and careful review.

Methods: This article presents a narrative review of empirical research to in-form the debate about hospital board oversight of quality and patient safety. A systematic and comprehensive search identified 122 papers for detailed review. Much of the empirical work has appeared in the last ten years, is from the US, and employs cross-sectional survey methods.

Findings: Recent empirical studies linking board composition and processes with patient outcomes find clear differences between high- and low-perform-
ing hospitals, highlighting the importance of strong and committed leadership that prioritizes quality and safety and sets clear and measurable goals for improvement. Effective oversight is also associated with well-informed and skilled board members. External factors (such as regulatory regimes and the publication of performance data) might also have a role in influencing boards, but detailed empirical work here is scant.

Conclusions: Health policy debates recognise the important role of hospital boards in overseeing patient quality and safety, and a growing body of empirical research has sought to elucidate that role. This review finds a number of areas of guidance that have some empirical support, but it also exposes the relatively inchoate nature of the field. Greater theoretical and methodological development is required if we are to secure more evidence-informed governance systems and practices that can contribute to safer care.

New Fatherhood? Post-Separation Parenting Roles and Responsibilities In Australia

This paper addresses parenting roles, responsibilities and outcomes following marital separation in Australia (involving 15% of families with children). Recent research suggests a fathering paradox: although the proportion of lone fathers has increased in Australia over the past decades (now approx. 2.2% of families with children) time use surveys show the level of involvement of fathers in everyday child care has changed very little. Despite fathers' general lack of 'hands on' parenting skills, ideological changes to the Australian Family Law Act in 2006 mandated post-separation 'shared parental responsibility', which has been widely interpreted by lawyers and parents as a basis for equal (50-50) shared custody of children. However, a 2009-11 qualitative study, entailing three, in-depth interviews found that gender inequality in post-separation parenting responsibilities leaves many mothers reliant upon welfare payments. This study included 'tongue' fathers and mothers – ‘primary time’ parents whose children live with them most or all of the time – as well as parents sharing the care of children more equally.

The research underpinning the Family Law changes assumed a degree of interaction and cooperation between separated parents predicated on a new construction of gender in ‘doing family’. However, there is little empirical evidence to support this assumption, as (a) most separated mothers and fathers spectacularly fail to successfully negotiate parenting duties on a daily basis and (b) fathers appear more concerned with their own ‘rights’ while mothers shoulder a disproportionate burden of everyday ‘responsibility’ for children (even in ‘equal shared care’ situations where the children live half the time with each parent) – and this inequity mirrors the continuing greater levels of maternal responsibility within 'intact' families. Such findings reinforce the disparity between stated attitudes of concerned fathers versus their actual behaviour.

Tourism Promotion and Disaster: Ethical Issues Faced in Promoting Tohoku Since March 2011

The series of disasters following the 2011 Tohoku earthquake severely affected Japan's ability to attract tourists. This has led to a government-directed international tourism campaign of unprecedented scale for Japan. While international tourist numbers quickly rebounded nationally in 2012, those to the disaster-hit areas remain low.

The primary cause of deflated tourist numbers in Tohoku seems to be fear of nuclear radiation. This concern was also central in Tokyo's recent successful bid for the 2020 Olympics, and is likely to grow as the Olympics approach. Public and private institutions in Japan involved in tourism, along with guidebook publishers and others, face a serious ethical dilemma: How to promote foreign tourism to the disaster-hit areas and support their economic recovery while being open and informative about potential health and safety dangers.

This paper focuses on this ethically-charged dilemma through examining changes in discourses in international tourism promotion amongst these organizations. The appeal to support both Japan's and the disaster-region's recovery through tourism activities was central to many of these discourses in 2011 and 2012. This included multiple-entry visas for Chinese tourists on the condition that they visit Tohoku, and JNTO encouraging travel agencies to offer tours for foreign volunteers.

In 2013, locally-based internet tourism sites and foreign guidebooks still draw on recovery in disaster-hit regions as a central motif in promotional discourses. However, at the national level there seems to be a shift away from focusing on the disaster-hit regions and of promoting international tourists to these areas to help revive these economies. This paper looks into causes of this divergence in discourses. It considers how these organizations and institutions face differently the ethical dilemma of helping those hit by disaster in guiding the practices of international tourists while keeping tourists aware of potential safety dangers.

Contemporary Greek Myths: Visual Resources for Self-Transformation

This paper focuses on the use of visual media, including music videos, television programmes and films, by young people living in Kinship, foster, residential and secure care in Scotland. It draws on a two-year exploration of practices of belonging that employed visual and audio methods (photo elicitation around spaces and objects; drawings of actual and ideal ‘homes’; recordings of sounds including music tracks then discussed in two interviews). The data produced suggested great importance of such visual media to participants in both blanking out and exploring difficult relational legacies and current circumstances. In particular, like contemporary Greek myths, television shows and music videos often portrayed difficult family situations similar to their own including parental separation, police raids, the absence or loss of a parent. Such representations and their use by participants point to a complex interweaving of absences and presences cross-cutting the private and public spheres, and (often reflected and reproduced by academic disciplines). In spite of living in a somewhat ‘confessional’ culture, prevailing normative family discourses generally discourage these young people from open discussion of such family circumstances. At the same time, the semi-public nature of these young people’s family lives is reflected in often voluminous case files, and the static histories they contain, repeated many times over at case hearings. Further such circumstances are often used as exemplars of dysfunctional/troubled families in stigmatising public, political discourses that divert attention from the structural inequalities that often underlie them. We argue that such visual media help to provide such young people with more fluid, more culturally accepted and semi-public representations of their experience and potentially provide them with resources for self-valorisation and transformation.

Taking Photos? I Don’t Do That Anymore: Critiquing the Photo-Diary As Method in Ageing Research

Over the past 15 years there has been a burgeoning interest amongst researchers, policy makers, and funders in using methods that encourage deeper engagement with communities and offer participants greater involvement in the research process (Mitchell, Milne and de Lange 2012). This desire to use more emancipatory and decolonizing methods (Smith 1999) has led to ‘an explosion of participatory media projects’ (Luttrell and Chalfen 2010: 197). Little has been written, however, about how participants regard or (dis)engage with the visual as a method of choice. Over the past 17 months, a team of researchers from the University of Edinburgh and the Scottish Centre for Social Research have been exploring day to day kindness, help and support and the increasing role it plays as we age. http://www.livelihoods.org.uk. The research, funded by the Joseph Rowntree Foundation, adapted Bartlett and Milne’s diary making method (Bartlett 2011). Following an initial mapping exercise and semi-structured interview, participants were asked to keep a diary for two weeks recording mundane acts of help, support and kindness, offered, received, wished for or rejected. Participants chose the mode of production from a selection of visual (photo or drawing), audial (sound diaries) or textual (written or text). Based upon semi-structured interviews and 45 diaries, this paper presents a critique of the visual as a diary making method and an exploration of its limitations.

MILSTEIN, DENISE* (Columbia University, denicham@gmail.com)
Authoritarianism and Paths of Resistance in Latin America

How does political crisis and, more specifically, repression, transform artistic movements and their evolution? And how do the paths that artists take in contexts of crisis shape the cultural environment in which citizens respond and resist? Authoritarianism in Latin America during the 1960s and 1970s spawned bifurca-
tions and the re-drawing of boundaries in and between artistic movements. This paper explores the separation of political from cultural resistance as one such bifurcation among groups of musicians facing military dictatorship in Uruguay and Brazil during this period. Comparison of four musical movements sheds light on how repression transformed artistic trajectories in each country. Politically engaged reactions to authoritarianism built on social movement participation and ideological commitment to produce music that could be used as a tool for sustaining anti-authoritarian identities and supporting mobilization. Countercultural re-actions attacked authoritarianism from a different angle, challenging established national identities, but also increasing foreign threat thereby also threatening the cultural status quo. The bifurcation of political and cultural responses to authoritarianism produced distinct paths which diverged or converged depending on the institutional conditions in which artists carried out and disseminated their work. In some mediating contexts, competition between the two currents prevailed, producing a political and countercultural polarization. In other environments, the two paths converged as artists collaborated to combine political and cultural responses to repression. These dynamics in turn shaped the cultural and political environment of resistance to authoritarianism, just as much as social movements and, sometimes, in the absence of openly manifest social movements. Building on this comparison, the author draws broader conclusions on the long-term impact of resistant art on the cultural, political and social landscape in which it develops.

The Socio-Spatial Polarization of Large Housing Estates in East German Shrinking Cities: A Governance Perspective

The paper investigates the influence of local government and planning practic-es on the increasing social polarization of neighborhoods in large housing estates in shrinking East German cities.

Despite significant outmigration of middle-class families the housing estates did not experience a collective downgrading as predicted in the early 1990s af-ter the reunification. Instead 20 years after that can be observed a small-scale patchwork pattern of stable and impoverished neighborhoods. The author ar-gues that the uneven development is not only triggered by the demand-driven housing market in the shrinking cities and by segregation patterns caused by the GDR housing policy. Likewise this development is reinforced by specific planning and governance processes: (1) The Federal Government of Germany supports the development of sustainable urban structures in shrinking cities with large-scale funding programs. The approval for funding is based on defining areas of preferred investment and areas of disinvestment and demolition. (2) There are a growing number of real estate investments in low-quality housing stocks. These private market actors often pursue investment and rental strategies that are con-trarian to the municipal development/ demolition plans. (3) Municipal social housing policies and the allocation of low-income renters by housing companies are spatially selective. Hence, the author assumes that the small-scale social polarization in the hous-ing estates is reinforced by conflicting investment strategies of public and private actors, by contrasting rental policies of public and private landlords and by the withdrawal of the municipalities regarding to socially stabilizing measures from areas of disinvestment and demolition. Apparently dealing with urban decline is highly rests on the power of power and resources to the actors, their divergent interests and the lack of incentives to cooperation. To develop these arguments the author analyses the case of the continuously shrinking East German city Cottbus.

Model Minority and Discrimination: Case of the Second Generation of Cambodians Refugees in France

It is said that immigrants and foreigners in France posed a problem of socio-political order in the middle of 1970s. While the Maghrebian immigrants have undergone the experience of discrimination and exclusion in French society, South-East Asians have been considered to be a ‘more assimilable’ or ‘silent’ group in the integration process at the local resettlement and benefited from a warm welcome (Gilles 2000; Simon-Barouh 2003). They have a conscience to take advantage of their positive image based on ethnic category. It is suggested that for French people, receiving Southeast Asian refugees provides an opportunity to justify the status of non-racist citizens (Roquejoffre 2009:118). With this good reputation, they became a ‘model minority’ in France. As Asians have a fairly positive image compared to other immigrants, it is difficult to say that there is a feeling of hostility and racism against them (Gayral-Taming 2000). However, the idea that they can be accepted because they are silent while other ethnic groups without such a personality could be rejected is itself a radicalized stereotype. In the context of French society, the positioning of Southeast Asian refugees as ‘exceptional’ resulted from colonial history and the politics of compassion. But this exception-ality risks generating racialized practices. Regarding Second generation, their edu-cational success in science and their typical choice for the sector of the commu-nication industry has been noticed (Le Huu 1996; Meslin 2006; Masse 1996). Are they really success in their schooling and professional career? Is it doubtful if they...
How is Multiculturalism Americanized and Japanized?

The idea of "multiculturalism" has spread globally and impacted on the ways of being "nation-state" since the 1970s when Canada and Australia enacted the official policies of multiculturalism. The United States is one of the earliest adapters of the idea to redefine its legacies of cultural diversity in the 1980s. Japan, one of the "weak" states in the strength of multiculturalism policies, modified it to a vision of "multicultural coexistence (tabunka kyosei)" for incorporating foreign residents in the 2000s. This paper compares how to accommodate multiculturalism as an image of national society in United States and Japan in entangled three layers: community legacies, national discourses, and global values. Both countries have had historical legacies to incorporate minorities at the level of the local communities, becoming states that naturalize the relation with between multiculturalism and nationalism although the opponents usually attempt to define it as a threat to the nation. The national modifications also depend on what extent people perceive it as a global value. The interconnection of the layers explains how multiculturalism has or has not been a part of the national image. The USA's liberal modifications help to implant a multicultural ethic on its national image while Japan's transnationalist interpretations fail to nationalize it. Based on analysis of governmental reports, public polls, and reactions from local communities and minorities, I will discuss the ways in which USA and Japan establish two versions of multiculturalism to adapt it in the different socio-cultural contexts in the era of global migration of idea.

Routines, Rhythms and the Mobilisation of Musical Practices

Despite the increasing interest in mobilities and cultural practices, the specific mobilities of musical practices have been sparsely addressed in the scholarly literature. This paper advances the notion of mobilisation of musical practices and its relationship with routines, rhythms and bodily gestures as a way to analyse the transportation of ways of making and experiencing music across networks of relationships. The specific case of san jarocho is addressed to explore and discuss this notion. San jarocho is a musical practice originated in southeast Mexico and is believed to be product of the encounter of African, Nahua and Spanish-Andaluz traditions. It is nowadays reproduced, appropriated and recreated in various locations of Mexico and the United States, partly due to the migratory flows between these two countries. Practitioners have used son jarocho to elaborate discourses of authenticity and preservation of a regional musical heritage; however, it is currently also sustained, informed and reshaped by transnational linkages. I suggest that san jarocho is no longer confined to a bounded and coherent community or ethnic group (namely Mexicans, Jarocho, Mexican-Americans or Chicanos), but constitutes a complex form of socially established activity in which repertoires of bodily gestures, rhythms and routines are reproduced, re-appropriated and recreated across transnational social fields.
Inequality in Students’ Citizenship Participation Across Countries

Citizenship participation is a key element to sustain and legitimize the democratic system. Although citizens are assumed to have similar rights, the empirical evidence suggests that participation is characteristic of those with higher socioeconomic background (Brady, et. al., 1995). Furthermore, these inequalities would have an intergenerational transmission (Verba, Burns & Scholzman, 2003): children with well-educated parents have the knowledge, skills and attitudes for participate in a more effective way. The main objective of this study is to analyze the individual and contextual (school and country) elements that can mitigate/strengthen the impact of the social background on student’s citizenship participation, guided by the following questions: To what extent students’ participation levels differ across countries? Are these differences related to contextual factors? Do contextual factors affect the link between students’ background and participation? The central hypothesis in this study is that country contextual economic indicators as well as demographic indicators influence both participation and the impact of background on participation. In particular, we expect that in countries with higher inequality indexes the influence of students’ and school socioeconomic background on participation is stronger, reason why we pay special attention to Latin America, the region of the world with the high income inequality worldwide.

The present paper analyzes data from the International Civic and Citizenship Study 2009 (N=140,000, 38 countries). The main object of study is citizenship participation, composed by two dimensions: present-future and civil-civic. Whereas civil participation refers to activities that involve interaction with the local communities, civic participation is conceived as related to formal institutions. Preliminary multilevel results show that the association between socioeconomic background and participation is strong and varies across countries, however shows different patterns depending on the kind of participation. Some country context dimension has an effect on the levels of participation. Comparison among regions will be discussed.

Migration and Gender Inequality — a Case Study of the Role of MICRO Finance in Mumbai Empowering Women and Transforming Their Lives

Many women in the unorganised sector set up small business, that require very little capital. These are essentially low productivity undertakings. However they are generally relatively more efficient than the small business set up by men because women are able to utilize their capital productively. With the expansion of microfinance facilities credit is also now available to many of these small business, enabling the women entrepreneurs to expand their activities. Providing capital to micro businesses, set up by women has emerged as an important means of women’s empowerment. Empowerment of women is another important indicator of development of a nation and an economy.

The Researcher tries to unfold the following objectives:

Exploring a Model of Inter-Disciplinarity Based on Collective Action Theories

The objective is to develop a theoretical model to analyse and facilitate trans-disciplinary dialog and collaboration between art, science, engineering and humanities (SEAD). The model is inspired in key concepts taken from sociological Theories of Collective Action, which are usually applied to analyse different kinds of collective actions. We propose that these theories can be pertinent to understand the interaction between the main dimensions, agents, resources, contexts and strategies of trans-disciplinary action.

The hypothesis is that interdisciplinary action can be considered as a form of collective action according to the following definition: Collective action is the “result of a social action (or collective challenge) carried out by the set of formal and informal organizations established between (1) a plurality of individuals, collectives and organized groups and (2) other social and political actors with which they come into conflict. This conflict is triggered by the appropriation (of), participation (in), and transformation of relations of power to achieve social goals, and above all, through the mobilization of certain sectors of society” (Tejerina, 2010).

When collective action forms groups it is crucial to understand how these collective entities are shaped by means of discussions, negotiation and re-negotiation processes and not take their existence for granted. There is a need to develop a typology of different kinds of interdisciplinary collaboration in which the environment structure it are reflected. This paper will focus on the key elements to construct a theoretical model for interdisciplinary action and intend to contribute to improve the vision on how interdisciplinary actions change knowledge production and how the aims, motivations, and interactions around interdisciplinary problems synchronize and find resonance (or not) in an environment of limited resources and changing opportunities in which there are collaborators and opponents that need to dialog. Supported by the National Science Foundation under Grant No. 1142510.

Methodological K/Notes: Designing Research on the Enforcement of Labour Standards

This paper traces methodological considerations in designing a research project which aimed to challenge the enforcement of labour standards in Canada. It documents the discussions of a multi-disciplinary team, situated in both universities and community settings, which met over a three year period to develop the project design. Discussion of methodological possibilities often began with “nots”; that is, consensus on methodological approaches the team collectively rejected. Out of these discussions emerged suggestions and approaches through which we navigated dilemmas in research design. Three such “knots” are presented in this paper, specifically: [i] epistemological tensions around mixed methods and the politics of mixing, [ii] the attempt to capture the relationships between policies and their practice/enactment, as well as research and its impact [iii] the need to develop interviews which both establish respondents as knowers, and simultaneously focus on that which is unsaid/normalized in life history accounts.

New Gendered Practices in Auxiliary Services in India’s High Tech Firms

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Transnational corporations have radically altered the urban landscape of many cities in India. They are housed in gleaming, well-maintained buildings with round the clock security. Within these workplaces, primarily middle class virtually mobile workers interact with clients and customers from North America, Europe and Australia.

This paper focuses on the workers who “serve” India’s high-tech workplaces. Based on interviews with workers who provide security and housekeeping services we trace newly emerging patterns of gendered work. Traditionally female-dominated sectors, such as cleaning, have experienced a large influx of men as a result of the rhetoric of professionalism which is used to promote this work within foreign corporations. Men and women in cleaning make sense of the stigma associated with their jobs (in the context of both gender and caste expectations) while simultaneously stressing the technology-based, standards driven nature of their jobs. Similarly, men and women in security jobs highlight the militaristic precision demanded for their jobs while recognizing the low waged, unstable nature of their work in the context of subcontracting. In making these normative claims, workers define and inscribe new gendered rhetorics of masculinization and feminization. We argue that these rhetorics support the gendered segregations of these occupations, which are poorly paid precarious jobs for primarily male workers.

**Rethinking Pharmaceuticalisation from the View of Japanese Context**

Medicalisation is a key concept in medical sociology, and is useful tool to capture social control by medical profession. Recently, however, scholars increasingly are focusing on the pharmaceutical aspects of medicalization. Pharmaceuticalisation is defined as the process by which social, behavioural or bodily conditions are treated and managed in need of treatment, with medical drugs by doctors or patients (Abraham 2010). In recent years, although the concept of pharmaceuticalisation have been pervasive in some journals, the concept is still primarily a topic explored in scholarly terms. Indeed, according to Bell and Figert (2012), as of June 17, 2011, there were only seven thousand hits for “pharmaceuticalisation” in Google, and only seven for the topic of “pharmaceuticalisation” in Web of Science. However, there is a need for the concept of pharmaceuticalisation, because the empirical phenomena, which medicalization theory cannot adequately capture or explain, are increasing. Though discussion of the concept is increasingly developing in sociology, the discussion in Japan is below average. In this report, by considering the reason for lack of discussion in Japan, I aim to reconsider the concept of pharmaceuticalisation critically, and to explore the availability of the concept. One of the factors that pharmaceuticalisation is not general in Japan is universal health insurance system. Japanese people can receive the same medical care at anytime and anywhere by universal health insurance system. Therefore, we cannot imagine the impact of pharmaceuticals is greater for Japanese people. That is, generalising pharmaceuticalisation without awareness of Japan’s economic conditions and social structures however, this heavy workload leads to high rate of absenteeism and drop-out proportion of women.

**Reclaiming the Skin: The Tattooing and Piercing YOUTH Revolution and the Body-Skin-Mind Problem**

All modern countries have recently experienced a “tattoo Renaissance.” This has become an essential part of what is here termed a movement for self-rights, the main driving force of which have been adolescents and young adults. Although tattooing and piercing, even in their more extreme forms, are generally no longer regarded as signs of social deviance, they are still viewed as “self-sabotage” since they not only pose a threat to physical and mental health, but also matter in recruitment for a range of jobs, especially those involving a business brand.

This paper examines the relationships between self, social roles, tattoos as self-brands, and business brands. Only after attention became directed to the recruitment for a range of jobs, especially those involving a business brand.

**Institutionalising Community Participation and Sustainable Irrigation Management: A Case Study from India**

Community participation has become a key method in contemporary development projects. Most of the projects have given emphasis on community participation, learning through experiences for proper operation and maintenance of irrigation systems and supply of irrigation water in adequate quantity according to a farmer’s need on time in a predictable, reliable and equitable manner. Decentralised governance of irrigation infrastructure has recently been emphasised as an essential pre-condition. Centre as well as some States in India has adopted various Acts to encourage farmers’ participation in irrigation management. Using anthropological techniques, the present paper attempts to see the villagers’ participation in traditional system of irrigation management among the tribal communities in kalahandi district of Western Orissa. It also critically examines the intervention of new institutions in irrigation management and their impact on age-old traditional system of community management.

It is observed in our study that the collective action or community participation was quite prevalent in the traditional system of irrigation management of tribal communities. The local knowledge, community cohesion, social capitals, traditional practices, values and beliefs were playing the most important roles in the traditional system of management. The government sponsored Water Users’ Association, which is not devised based on the local culture and needs of the local tribal communities, is not able to evoke their participation in the Water Users’ Association. The culture of ignorance, drinking alcohol, feeling marginal, poverty, illiteracy, the improper co-ordination between irrigation officials and beneficiaries, physical structure of canals, dominance of head reach, higher caste large farmers have influenced the participation of marginal farmers. Moreover, some of the factors like social norms define domestic works and childcare as women’s work and social perceptions discount women’s abilities and opinions restrict women’s participation in WUAs.

**Gender Inequality and Education for Women**

Due to rapid population growth, poverty and politico-economic reasons, the number of illiterates is increasing continuously in the world. In most society’s women have lower status, no access to education, less food and no health care. Economic burden on women, work longer hours, has lowered incomes and little or no access to ownership of property. Normally in developing countries, the proportion of women literates is less than that of literate men.

Girls receive less health care and food than boys thus girls are malnourished. Due to illiteracy they also mostly work in informal sectors where pay levels tend to be lower. Gender specific inequalities are reinforced by unequal access to education. Girls often are simply not sent to school or drop out later, thus increasing the level of illiteracy among women.

Those who live in semi literate families, there is no pressure on women to receive education. Even when the motivation is there, other obstacles are permanently present. Women have to perform so many roles that they do not find enough time for full time or even part time educational activities. Fatigue, frequent or early pregnancies, caring for children and families, agricultural and cultural activities and formal or informal employment, are among the many reasons for lack of time. Gender specific inequalities are reinforced by unequal access to education. Girls often are simply not sent to school or drop out later, thus increasing the level of illiteracy among women.

**Healthy Ageing, Happiness, Quality of Life for Rural Marginalized People and E-Health**

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
“Health for all” is a Millennium Development Goal. Medical Science is developing by leaps and bounds. In India it has brought in more awareness, longevity and a number of other advantages. At the same time availability of health care in India is uneven and unequal. Healthy ageing and living simple but quality life is the right of all. But it is a distant dream.

This paper explores the nature of health care practices in India. While analyzing the issues concerning the health care, it tries to highlight the major concerns affecting health care in India. An attempt is made to provide an alternative to revitalize the provision of public health care infrastructure in the country.

Quality of life through good health is an essential resource that enables individuals, communities and nations to overcome poverty and develop their potential. Healthy ageing is prerequisite for progress and development. This paper will explore the relevance of equitable distribution of health care services to the poor and unreachable. It creates awareness about the new health care concept of telemedicine (E-Health) which can bring the best health care services to people of remote areas. Changing health and morbidity patterns in rural and urban areas are drawing global attention in recent years. Investing in hospitals with good infrastructure may not be much advisable in poor people of rural areas because of the lack of well qualified and experienced medical personnel. Also people find it too costly. The introduction of Information and Communication Technology in healthcare by some hospitals in India in the form of telemedicine is bringing about a revolution in the health care services. Research shows that such activities have tremendously helped the people of rural and remote areas of India who are not able to afford good healthcare facilities.

The Prime Function of Intellectuals and New Conditions of Framing

The paper aims to enrich the existing reflection on the political role of public intellectuals by exploring the impact of the changing nature of the political and intellectual spheres on their potential to connect with an audience. It argues that the significance of public intellectuals’ influence in the political arena is determined by their ability to imprint themselves on a wider social imaginary through ethical and intellectual discourses and practices. The paper also discusses how the process of globalization, access to information, digital technologies, and global networks of interconnected relationships can affect the potential of intellectuals to foster a culture of cooperation in which all participants gain a measure of self-respect, autonomy, and agency.

Trust and Modes of Cooperation

The paper argues that the potential of intellectuals to act as a result of the growing importance of networks of interconnected relationships is determined by the system and the innovative use of knowledge as sources of productivity gains. The paper concludes that the public intellectuals’ role is being recalibrated through the proliferation of imageries that do not identify a dominant conception of the present and underlying structural transformations and are therefore unable to provide defensible political and cultural interpretations of the present and a reliable guide for knowledge of the future.

MITA, AKIKO* (University of Tokyo, hakkiolog@hotmail.com)
Qualitative Analysis for Sociological Study of Various Conditions of Happiness

What I would like to emphasize in this presentation is that now we need to move from analysis of contents (based on open questionnaires) to empirical findings based on qualitative data for the sociological study of “happiness.” To say it objectively, we need to examine the methods and effects of qualitative analysis of research data from interviews or open questionnaires.

In this presentation, I will show the result of my examination. The examination has made use of open questionnaires treating them as short interviews, made on Mexican university students, who as we all know tend to answer “very happy.” As a result, three clusters were found, according to the regions, with different “conditions for happiness.” Feature keywords for happiness are: In the Capital, “above a certain economical level, nation and politics, charity-like service,” in Chiapas, the most southern border state, “economic problems, close people, religious consciousness,” in Puebla, a city in-between those, “autonomy or self-sufficiency, ‘around me’ or ‘social’ situations.” Naturally, many points are shared as well. Almost all the data used by social scientists for analysis about happiness allowing repeated measurement and scaling turns into the multidimensional space with the three axes that problems those but can moderate their problem levels by changing the analysis levels from whole happiness to happiness within each cluster.

This result shows two additional points, valuable to the future of sociology. One is the utility of qualitative analysis and research with a weaker hypothesis; different from the way with a strong hypothesis to prove, test, and certify. Another is that open questionnaires, a system we cannot say we have utilized enough, can be an important source of quantitative data. With quantitative data like this, we can effectively classify and objectively treat the elements of “happiness.” Sociology has the method to do it and it must be an advantage to the other disciplines studying “happiness.”

A Framework for the Sociology of Future: Logistics Curve and the Axial Ages

Until the later decades of the 20th century, almost “self-evident” image of the history was that of the ever-accelerating progress. That image of history had the objective basis; statistics of the energy consumption, etc. However, it is also evident that this kind of ever-accelerating growth cannot be maintained forever. Biologists know well of the S-shaped logistics curve. We carry a species, with the 3 stages; 1. of slow forebody, 2. of rapid or explosive propagation and 3. of the stable equilibrium with the environment. Our species in a finite environment on the planet cannot be free from this curve. Statistics of the increase rate of world population shows the sharp watershed around the year of 1970; turning point from acceleration to deceleration. We are already passing the historical point of junction from the stage II to III. Macroeconomic meaning of the world system crisis in 2008 can be understood as the first crush of the infinite globalized-informatized system with the finity of the reality. “Globe” is a paradoxical geometry; infinite and finite, logical meaning of the “globalization” lies in this paradox. Karl Jaspers talks of the “Axial Age” – simultaneous emergence of major world religions and philosophies. Old basis of Christianity, Buddhism, Confucianism, and Greek philosophers. Sociological background of the “Axial Age” can be understood as the ensemble of the interrelated factors: 1) Emergence of the monetary systems; 2) rise of the cities and liberation from the communities; 3) crisis of lives thrown into the infinity of the world. Monetary system, urbanization, and the infinity of the life world are the very essences of modernity. For that reason, the Axial Age has been the basis of life and world until the final phase of modernity. Modernity can be seen as the stage II. Axial Age was the critical point from 1 to 2.

MITCHELL, ANDREW* (University of Kumamoto, andrew.mitchell.leeds@gmail.com)
Observing Fukushima: A Case Study of Japanese Nuclear Policy through Luhmann’s Social Systems Theory

Since the Fukushima Daiichi nuclear disaster three years ago there has been much debate regarding Japan’s nuclear policy. These debates usually focus solely on the technological, economic or strategic issues at hand, or on the dwindling public support for a nuclear Japan. Whilst all of these arguments have their own strengths, they discuss specific points regarding nuclear policy with little regard to the wider picture. They all also describe what the political system should do to resolve the issues they raise rather than considering how the political system rationalises nuclear policy and the associated risks. By utilising Luhmann’s Social Systems Theory, this paper proposes to frame the different views on the nuclear

structure and every relation-theory as well should have relation to this concept to some degree. As a rule it inevitably has multiple meanings; on the other hand, it should work as a hub by which various relation-theories are consistently connected to each other. In order to extract this unifying power, we introduce the ‘net-base.’ Net-base is a common attribute that provides a basis of social ties. Thus net-base implies a corresponding socio-centric network that consists of all the members who share it; moreover, configuration of various net-bases implies interrelationship between multiple socio-centric networks. We assume that accumulation of social capital is oriented by socio-centric networks embedded in social structure; then, net-base is an indicator in terms of which we can infer how network mechanisms in social structure condition the accumulation process of social capital. In making the inference we often need to access different type relation-theories, which will provide an opportunity of theory integration. Additionally, net-base is easily measurable by questionnaires on personal networks and group participation in ordinal individual-base survey. This makes it possible to locate ‘social capital’ in the storage house of relation-theories and to empirically find valid inference in regard to network mechanisms of capital accumulation. More extendedly, it should have integrity with the rational choice research program of social capital proposed by Flap and Volker (2004).
issue as a problem of observation by different observers within a functionally
differentiated society. The paper shall discuss the technological, economic and
public opinion issues surrounding Japanese nuclear power, demonstrate how
these are first-order observations of different observing social systems, and how
Japan's political system acts as a second-order observer of these observations. By
understanding the political-social system which acts to manage system expecta-
tion by introducing binding resolutions upon society (and thus deals in risky deci-
son-making), the limits of Japanese political action when faced with technological
risks on one hand and the desire to maintain Japan's economic and strategic po-
sition on the other will be illustrated. This paper concludes that despite the risks of
and public hostility towards nuclear power, the rationale of Abenomics and
emerging strategic threats in East Asia leave Japan with little choice but to restart
its reactors, a conclusion which is consistent with current Japanese nuclear policy.

The Role of Demographic and Social Factors in the Use of Licit Drugs Among University Students from One University in Kingston

In Jamaica there is a growing concern related to the excessive use of licit drugs among young people. This is due in part to the rapid social changes that have been driven by larger global and local factors. These factors may predispose young adults to use licit drugs such as alcohol and tobacco. There has been limited research on the role that demographic and social factors play in the use of licit drugs among university students in Jamaica. Socio-demographic factors appear to have little impact on the use of alcohol and tobacco than the attitudes of friends, peers, the quality of family relationships, and entertainment practices. The results of this study cannot be generalized to the population of university students in Jamaica.

Police-Community Relations in the Capital Cities of the North Eastern States of India: A Study of People's Perception in the Perspective of Community Policing

Apposite police-community relationship in India is still in a nascent stage owing to the asserted attribute of the Indian society. Caste, communal and religious discord acts as a barrier in developing a widespread awareness of the common interests of the community. Community policing in India operates at the level of some programmes and not as a philosophy internalized by police officers. The present study seeks to explore the people's perception of police-community rela-
tions in the north eastern states of India. The study seeks to evaluate whether the awareness, sensitization and participation of the people in the community policing initiatives by larger global cities and local cities in north east India have been successful in bridging the gap between the police and the public. The north east of India has not aroused much inquisitiveness in academic research and more specifically in so far as governance is concerned. It has been an area shrouded in mystery due to its geographical locations and unique ethnic culture. The tribal culture has been the main mode of discrimination and has been marginalised because of prejudices. The police too has been suffering from this malaise. To restore the trust of the people, it is necessary to appraise the diverse cultures and involve them in community development programmes of which community policing is surely a must. In this paper concludes that despite the risks of and public hostility towards nuclear power, the rationale of Abenomics and emerging strategic threats in East Asia leave Japan with little choice but to restart its reactors, a conclusion which is consistent with current Japanese nuclear policy.

MITRA, NISHI* (Tata Institute of Social Sciences, nishimitra@gmail.com)
I Was Not Really Imagining Myself in Terms of Becoming a Big Scholar or Academic... Academic Mothers: Power and Powerlessness in Academia and in Homes

Power and powerlessness are two poles of the continuum of life that Academic mothers inhabit by virtue of simply playing these roles in conformance with each other.

There’s is a double edged problem. Traditionally women are denied the thinking and reflecting acumen and are seen as substandard contributors to the ac-
demic discourse. Interestingly, mothering is defined in many cultures as a full
time responsibility and one that is the most treasured attribute of women. One
the one hand, thinking and emotionality are seen as opposed traits that logically
imply academic mothers to be lacking in the basic requisite of mothering, on the
other, women’s intuitive emotionality is seen as coming in the way of a scientific
approach required of women as Academics.

This study seeks to understand women’s experiences, positive and negative in terms of transgressing these straight jacketed boundaries and combining the

role of mothers and academics in India, Brazil and South Africa and seeks to ex-
plore how strong traditions of family values in these cultures influence and impact
women in the Academia. Some of the questions it seeks to address are as follows:

What do women live these roles which are very demanding and chal-
kening, also satisfying and fulfilling? What are women’s obstacles, what are their
strengths? How do academic mothers do a different kind of academics, maybe, or a
different kind of mothering, so as to satisfy their aspirations from these two
roles, two lives? What are their tensions, how do they resolve them, what kind of
adaptations do women make? What kind of a philosophy on life and work do they
thickness and development of any social system. The paper concludes that due to its
geographical locations and unique ethnic culture. The tribal culture has
been the main mode of discrimination and has been marginalised because of prejudices. The police too has been suffering from this malaise. To restore the trust of the people, it is necessary to appraise the diverse cultures and involve them in community development programmes of which community policing is surely a must. In this article concludes that despite the risks of and public hostility towards nuclear power, the rationale of Abenomics and emerging strategic threats in East Asia leave Japan with little choice but to restart its reactors, a conclusion which is consistent with current Japanese nuclear policy.

Inclusion through Communication: Support Activities for the Learning-Disabled and Autistics in Tama, Tokyo

In Japan people are encouraged to include the disabled in such places as regu-
lar workplaces and schools as in some other countries. However, even now, one
third of adults with learning disability and autism are placed in facilities for the
mentally-handicapped, because many persons concerned do not altogether con-
sent to the idea of inclusion as such, particularly when the learning-disabled and
autistics inflict harm on things and people in the community.

This paper is based upon my research conducted in Tama District, the most populated suburban area in Tokyo, to see how those who attend on the learn-
ning-disabled and autistics in the district act in response when they are exposed to
a variety of such harm in the community. The attendants are apt to assume that
harmful doings by the learning-disabled and autistics are connected with what
was done by others, including the attendants themselves. Thereupon, they at-
tempts to illustrate an unexpected harmful doing in terms of the relationship of
the learning-disabled and autistics with other persons, trying to see what caused each individual with learning disability and autism to turn to be harmful. This attempt leads to their attaching importance to painstaking communication with him/her as a measure to include him/her in the community.

I will discuss this way of dealing with the problem in the light of the concept of
double contingency first advocated by Talcott Parsons and later modified by
Niklas Luhmann, believing that it can empirically be applied.

Social Investment Strategy in Japan: A Failed Attempt?

A rapidly aging society with low birth rates, an increasing public distrust to the sustainability of the social security system, a high level of child poverty, and a high rate of suicide among the youth all suggest that Japan should embrace so-
cial investment strategy. A large gain in social benefits seems possible with the
rethinking of an inter-generational redistribution. Yet, social investment strategy
has been weak both in discourse and in practice. Although the Democratic Party
of Japan (DPJ) government (2009-2012) pursued some policy innovation in the
area of childcare and youth programs under the slogan of “children first,” a para-
digm shift has failed to take place.

This paper asks why the adoption of social investment strategy is so limited in
Japan despite the fact that its social and economic conditions should provide a
fertile soil for such a strategy. We shall explore the political conditions which pre-
vent the full-fledged development of the ideas and practices of social investment
strategy. In so doing, we show how the dominant force of neoliberalism consti-
tutes a stumbling block in policy innovation.

This paper will cover major policy changes in the realms of childcare policy (cash allowance and daycare), youth programs for job training and job seeking, and “career education” from the 2000s to the present day. Its main focus will be on the rightward shift of partisan dynamics, legacy of statist, and the persistence of traditional gender roles.

Social and Intellectual Antinomies of Information Technology

Information technology is progressing day by day, at a speed which exceeds our expectations. Therefore, the view about information technology is being torn into two conflicting poles. There are some antinomies of various dimensions in today's highly informative society.

At a socio-economic dimension, Big Data (and data-mining technology) is ex-
pected to rediscover the information marketplace as a rich untouched field, and
that it will produce industrial reorganization and activation, just like fossil fuel
and mining technology accelerated the industrial revolution in the 20th century.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
On the other hand, Big Data has been criticized for collecting all the action histories of people and reusing these as industrial resources, giving rise to the social movement opposed to excessive surveillance and marketing. At an intellectual dimension, especially in the field of human science, the appearance of Big Data is expected to enable statistics technology and behavioral science to explain the public's decision making and mechanism of action selection, and help predict people's behavior objectively. On the other hand, there is a concern that the development of surveillance society or sales promotion may infringe on people's free will and humanness, and may seriously change the relation between an individual and society. These social and intellectual antinomies are homologous to the thought situation of the 1960s in France, the confrontation between objectivism and subjectivism, where Bourdieu elaborated his sociology and the concept of Habitus. Today's antinomies of information technology could be considered by using Bourdieu's sociological methods of overcoming dualism.

Doing Occidentalism through Mangaesque Convergence

This paper addresses contemporary Japan-Italy relations in the field of popular culture. This is achieved by the asymmetrical and mutually constitutive process of Occidentalism, Orientalism and self-Orientalism. In spite of the hegemonic and diversified impact of modern Occidentalism (F. Coronil 1996, K. Iwabuchi 2002), there is still a unified field of systematic academic investigation on the 'West' as a concept, which has become a kind of blind spot in the Humanities and Social Sciences (D. Hirst 2007). Occidentalism still continues to be examined through a body of disconnected works on the one hand, or through methodological civilizationism, nationalism and culturalism on the other (the West without quotation marks). In this regard, modern Italy and Japan offer a heuristic alternative to the center/periphery model conventionally applied to Occidentalism, due to their ambivalent status of sharing a history both as orientalizing imperial powers, but also as orientalized exotic countries. Interestingly, in the last two decades, Italy has become the most loved foreign country in Japan among the whole young and female population (T. Miyake 2010), while Japan has witnessed a similar boom of popularity in Italy, thanks in particular to the Takarazuka Revue Company with the highest number of anime series broadcast on television outside Japan (M. Pellitteri 2008).

The diffusion of Japanese popular cultures in contemporary Italy will be investigated firstly, by situating it within the process of Occidentalism, which will be explained through a theoretical perspective inspired by relational, intersectional and positional sociology (M. Emirbayer 1997, P.H. Collins 2000, P. Bourdieu 1984). Secondly, this study will address more specifically the transmedial constellation of Japanese popular cultures (manga, anime, videogames, character design, etc.) by bringing together an aesthetic theory of the mangouesque (J. Berndt 2012) and a media theory of convergence culture (H. Jenkins 2006).

Differentiating Gender Roles Onstage: An Analysis of the Takarazuka Performance

The Takarazuka Revue Company is a unique musical company in Japan made up of only female performers. The performers are divided into male-role players and female-role players. Many foreign studies have examined the gender dimensions of the company. Adopting a feminist perspective, they have suggested that in the Takarazuka performance—especially with regard to the male-role players—reveals new possibilities for challenging traditional gender roles. My examination, however, will show the opposite side and clarify how gender consciousness is reinforced through Takarazuka's performances. Most studies on Takarazuka have focused on the male-role players and neglected the female-role players. In fact, the latter is more important from a gender perspective because the popularity of the male-role players can only be achieved based on the discrimination or marginalisation of female roles. In this study, I will analyse certain Takarazuka productions and show how the female-role players are treated onstage and offstage. Even on women-only stages, there is an unequal construction of gender.

I will also discuss the audience's approval of gender hierarchy. The male-role players have far more fans; moreover, their fans seem to wield a kind of power over the female-role players. It should be emphasised that most fans are also women. This preference for the male-role players among female fans is reflected in the staging itself for commercial reasons. It might be said that the Takarazuka stage and its fans contribute to the uppinings of Japanese society's gender consciousness.

Musicology in Post-War Japan: German Influence and Social Context

Japan is famous for consuming Western classical music. Since the Meiji era, Japan has eagerly imported Western music and produced many musicians, orchestras, and concert halls. Today, the classical market is large, but it is much smaller than the market for popular music. Nevertheless, extensive studies of classical music have been conducted in Japan.

This research will explore Japanese musicology in the late twentieth century through a case study of the department of musicology at the Tokyo University of the Arts, which has the longest tradition of musicology in Japan.

Japanese musical research was strongly influenced by German musicology, especially after the war. The primary interest has been in examining scores and historical documents related to the great German composers, such as J.S. Bach.
Bach and Beethoven, and analysing their compositions, as opposed to cultural studies or ethnomusicology. One of the most influential German musicians was Carl Dahlhaus. His book The Idea of Absolute Music was widely read in the Japanese music world. This highlights the preference among Japanese researchers for instrumental music. From another point of view, however, it is clear that Dahlhaus's social and ideological background in post-Nazi Germany. As some researchers in the English-speaking world point out, Germany after the war needed to distinguish the 'great German music' from the country's guilt and emphasise the autonomy and purity of music.

This study clarifies how this situation in Germany influenced Japanese research on music and music aesthetics. Further, it analyses the Japanese social context for the reception of Western classical music.

**New Urban Childhoods: Globalisation, Socialisation and Urban Informality on Children in Ghana**

Globalisation has fuelled rapid and unprecedented levels of urban expansion the consequences of which for children’s socialisation have been profound. ‘Urbanisation without industrialisation’ is how Davis (2006) terms this process, as economic dislocation, widening inequalities and rapid social change have undermined the capacity of cities to meet the needs of their rapidly growing populations. Many cities and towns no longer equate with the ‘engines of growth and structural transformation’ (UN-HABITAT 2005, 2010) attributed to them by classical urban theory, but instead appear as a cause and symptom of lasting economic and social ills. It has been noted here that one aspect of this may be productively explored through the notion of ‘urban informal childhood’. Focusing specifically upon Ghana, the paper examines the growth of informal ways of working and living in urban areas and considers the implications of this for children and their socialisation. ‘Urban Informality’ (White 2010) is also pursued through attention to new forms of urban living. As urbanisation becomes increasingly synonymous with the development of ‘slums’ and illegal settlements, this paper considers the rise of informal urban childhood through inadequate housing, overcrowding and a lack of basic services for children.

**The Effects of the Ethnic Business Enterprise on a Local Shopping Mall in the Central Tokyo**

This paper is concerned with the way the development of global migration has made its impact upon Japan’s urban communities. Nowadays, Japanese metropolitan cities are common for individuals from various backgrounds to be found living together and in recent years the rate of such interaction has been growing constantly. The major focus in this paper will be upon the Ikebukuro district, one of the major transportation terminals in the central Tokyo. Previously, the district surrounding the City centre was descending into urban decay as this community confronted a serious shortage of appropriate local labour combined with its ageing population. Since the late-1980s, this district has attracted newcomers, among workers in the 20 to 30 age-group, from foreign countries owing to its business development, offering many jobs especially in service industries. Subsequently, and particularly since the 2004-2005, the district has become the subject of media investigation of plans to establish a new ‘Chinatown’. But this is a new kind of ‘Chinatown’. Here we do not see the traditional Chinatown gates that can be seen elsewhere in Japan’s other major Chinatowns, such as Yokohama. Nor do we see the concentration of Chinese shops and Chinese business development that is evident in selling Chinese cuisine and groceries. Rather, the unique character of this area is ascribed to the numbers of Chinese commuters who travel to and from the precinct, as well as to the various free Chinese papers which inform Chinese residents of applications for visas or accommodations and from which a variety of products are sold. This area is the place for publishing the many Chinese community papers with considerable circulation, and hence this district has become the location of an ethnic town for commuting commuters.

**The Sociology of Fatherhood and Consumption: Empirical Evidence from Soon-to-be Parents in Japan**

Japanese society has been undergoing tremendous transformations in recent years, one of them is the change in family organization and family life and in particular the role and identity of the father. The most well-known example of this is the rise of the so-called ikumen: men who actively engage in child rearing. A government campaign launched in 2010 to encourage Japanese men to take a more active role in parenting is gathering momentum. Seminars aimed at men on how to develop parenting skills are now being held across the country and fathers who take time out of their work to spend time with their kids are currently being applauded in the media.

While Japanese fathers have been studied in the area of family sociology, research on recent changes in fatherhood in Japan and the ikumen in particular is still in its infancy. So far, no study has looked into the issue of consumer behavior of fathers in Japan and how consumption patterns change with fatherhood. Given the state-of-the field, we opted for an exploratory, qualitative research approach. After a pretest with one couple, we interviewed 12 expecting couples about their current situation based services provided, the key risk for terms of their life in general and their consumer life in particular. We first interviewed the soon-to-be parents separately first and then jointly together as well. All interviews were recorded and transcribed verbatim before being subjected to a qualitative content analysis.

Our findings reveal a mix of rational, goal-directed consumer behaviors in combination with the consumption of goods and services in relation to spiritual and superstitious beliefs grounded in Japanese religious traditions or folk culture. We also find gender role and generational differences when probing the social relationships between (expecting) mother and father and between father and his own father.

**Institutionalization Among Older Adults in Japan**

This study is to explore the risk factors affecting the possibility of institutionalization for the elders after the launch of the Long Term Care Insurance (LTCI) in Japan, 2000. Previous research shows that the level of informal caregiving, and caregiver’s capability, rather than the older adult’s declining function, were the key risk factors for institutionalization before the LTCI. The effect of LTCI services have been examined from both the perspective of its impact on risk for institutionalization. Using ordinal logistic regression, we analyze the claims data on LTCI service use in one city in Japan from 2000 to 2006. The preliminary results show that after the launch of LTCI, the caregiver’s preference for services is the significant risk factor for institutionalization, among other predictors related to risk of institutionalization, such as living arrangement, characteristics of both the care recipients and the caregivers. LTCI provides diverse home-based and institutional services for families and individuals, and in our claims data, those who utilized home-based services the most turn out to be the least likely to be institutionalized. And for the elders institutionalized the most, their primary caregivers had expressed their preferences for institutional care services at the time when applying for the LTCI services, and they utilized the least home-based services. Therefore, we gather some evidence that LTCI had provided sufficient home-based services to reduce the possibility of institutionalization due to lack of informal services. De- picting the home-based services provided, the key risk for terms of their life in general and their consumer life in particular. We first interviewed the soon-to-be parents separately first and then jointly together as well. All interviews were recorded and transcribed verbatim before being subjected to a qualitative content analysis.

Our findings reveal a mix of rational, goal-directed consumer behaviors in combination with the consumption of goods and services in relation to spiritual and superstitious beliefs grounded in Japanese religious traditions or folk culture. We also find gender role and generational differences when probing the social relationships between (expecting) mother and father and between father and his own father.

**Implications of Social Capital for Family Life: The Case of « Non Statutory Parent »**

My communication is on the subject of the « non- statutory parent », i.e. the person who, within a couple, fulfills the role of « parent » for a child not legally his or her own, but the offspring of his or her mate. The main results I will present is that the family’s environment of friends, and kin represents a social capital that plays an integrating role through its validation of the NSP’s right to...
be with the child. This role is rooted in 5 structural dimensions that came to light in the course of the qualitative analysis: selectivity of link choices versus their contingency; balanced mobilisation of the parental networks versus skewed emphasis on one or two SPs or NSPs network; presence of facilitating figures within the broader family circle; presence of individual networks within the network of friends of the parents; and the degree of embeddedness of close personal relationships within organised collective practices. The study present an analysis of the social capital of the family environment and its role in shaping, defining and fixing the obligations of the non-statutory parent, stemming from a will to consolidate and increase the parental role despite an unfavourable legal context.

The study is based on a sample of twenty couples living in various family configurations, i.e. hetero and homosexual step-families with whom we carried out three successive rounds of in-depth interviews; first with both members of the couple in order to reconstitute their conjugal and parental history; then with the non-statutory parent, to collect information about his or her experience and strategies deployed to consolidate his or her status within the family and in relation with society in general; finally with the couple once again, with the goal of analysing the conjugal and family dynamics.

MODAK, MARIANNE* (Haute école travail social & la santé, marianne.modak@eesp.ch)

Inequalities Between Man and Women in Social Work

Inequalities between women and men stem from the assignment of the “care” work to women in Switzerland, in certain fields of social work male professionals are quite numerous, but these disparities are not reduced. They take a different form. My demonstration is based on a study by semi-structured interviews as well as direct observation carried out in various public social work services. The type and intensity with which social workers mobilize their emotional and relational skills within the framework of their professional practices denote two different ways of conceiving the place of “care”. “Care” is a stake in the context of the active social state, because social work is now evaluated in terms of its efficiency and productivity. Whilst this management orientation may be viewed positively as a way of heightening the visibility and value afforded to the profession, it may also place an undue emphasis on measurable professional acts versus professional attitudes and relational work– the latter being seen as non-measurable. Professionals are thus faced with the impossible challenge of balancing two alternatives, one being characterized by measurement and focused on efficiency, the other typified by unpredictability and immoderation constitutive of the nature of relational work. Our study shows that when confronted with this dilemma professionals who display typical feminine career patterns take it upon themselves to carry out “bad” care work that takes time and is largely invisible while professionals who exhibit typically male career patterns dispense the “good” care, which can be organized rationally, is measurable, and is thus considered more productive.

Emerging Society and Sociological Discourse in India

The sleepy, slow moving and traditional Indian society which has a historical past of several thousand years is undergoing through a process of rapid social change and unprecedented social transformations. The biggest change has been the emergence and strengthening of democracy. While people in several countries all over world are still struggling and clamouring for a democratic state and institutions, the Indian citizens are exercising their democratic rights strongly whenever occasion arises. The civil society in turn is also becoming stronger and empowerment of the marginalized sections of society such as women, tribals, dalits and the so called backward classes and communities is also taking place. Indian society moved from three percent “Hindu rate of growth” to eight percent in recent years, which was one of the highest in the world. This unprecedented economic growth not only led to the emergence of a massive middle class but also created lot of confidence in the masses about the capability and the strength of the Indian State as well as their own. However, this sudden economic growth and the consequent all round development while on the one hand raised all round prosperity and riches, it also led to the growth of inequality in society and to the marginalization of certain other groups which until recently did not felt marginalized. It is commonly said that while the rich are becoming richer, the poor are becoming poorer. Such a situation has also led to the increase of corruption in all walks of life. As such the Indian sociologists are facing several contradictory situations and are becoming conscious to focus their attention and to study the emerging phenomena and are trying to go beyond to what they have been studying for long and as such moving towards a new sociological discourse.

The Work – Family Interface Among Dutch Navy Personnel and Their Spouses

Perhaps even more than other military personnel, Navy personnel and their families face the challenges of managing frequent and often prolonged family separation. The increased tempo of military operations over the past several decades in combination with trends of downsizing and reconstructing (i.e., fewer human resources performing an increased number of tasks) implies even more frequent separations, sometimes with little time in between. During sailing tours, communication with the home front is difficult and sometimes even impossible. The impact of these military demands on the family and of family factors on the readiness and retention of Navy personnel is scarce and nonexistent among Netherlands military personnel. We collected data among sailing Navy personnel and their spouses at home regarding various work and family experiences. This paper presentation presents the first results of this study.

The Middle Eastern Origins of Dictatorship and Democracy

How do we assess Arab Spring/Occupy almost 3 year later- the hopes for the emergence of popular democracy have now faded or have they? We might note that the traditional dynamics of the rise of democracy or dictatorship in West, contestations/alliances of various groups, esp landlords/peasants did/does not really apply today. Most of the MENA countries were the legacies of anti-colonial struggles and struggles for independence and democratic self-government, but Enlightenment ideals did not emerge. Contemporary conditions differ, 1) neoliberal globalization has enabled the rise of a transnational capitalist class leading to economic growth-concentrated at the top, 2) there are growing classes and cadres of the discontented, educated precariat youth, (today’s lumpenproletariat and the disenfranchised peasants, wretched of the Earth), but 3) Today most people, even in developed countries have access to ICT/social media. To understand the ‘waves of democracy’ and their receding tides, we need note, the movements took place quite rapidly and following the abdications or implosions of dictatorships, the only groups that were well organized were the various militant intellectuals from Moslem Brotherhood to Enahda-which were ill equipped to shepherd a modern economy. But without having experience in actual gov- ernance as opposed to critics w/o power they did quite poorly. However dismissal the short term, and it may get worse, structural factors intersect, with changing subjectivities, embracing openness, equality, empathy and care, portend an optimistic forecast. However undemocratic the post Arab Spring governments may have been/are in practice, they were democratic in form and now there can be no going back to un-elected ‘presidents for life’. Dictatorships now face growing the popular power of numbers of youth that challenge inequality, authoritarianism, corruption and corruption, and struggles for independence and democratization and dignity, empathy community and self-f fulfilled hopes, visions and ICT -social media skills to realize “another world is possible”

Immigrant Access to Training in France

Few studies in France have focused on immigrants’ access to vocational training. This lack of data is surprising in a field which has otherwise been extensively studied. Indeed, one of the stated goals of ‘lifelong learning’ is precisely to compensate for educational inequality, and immigrant access to lifelong learning is therefore essential. The recent study conducted by Gelot and Minni using data from the 2003 FQP survey is a key contribution in this area. They have shown that the rate of immigrant access to continuing education is lower than that of people born in France. One of the main findings of this study is the difference between different immigrant groups. Cross-cultural differences in educational attainment, and in the degree to which migrant groups pursue educational goals, are not enough to account for the educational attainment gap. In order to explain the size of this gap, they have proposed an “accumulation hypothesis”, which posits that differential access to education depends on the accumulation of educational capital at the individual and context levels. This hypothesis is tested here using a combination of survey data and administrative data. The study presents an analysis of the impact of military demands on the family and of family factors on the readiness and retention of Navy personnel is scarce and nonexistent among Netherlands military personnel. We collected data among sailing Navy personnel and their spouses at home regarding various work and family experiences. This paper presentation presents the first results of this study.
Parental Home: Hopes and Constraints of Young People of Immigrant Background in France

Young adults of immigrant background live with their parents longer than do those in the mainstream population (Moguêrou, Santelli, 2010). The great majority of young people from non-European immigrant backgrounds are from working class homes and often the poorest and most economically insecure segments of the working class (Frickey & Primon, 2002). Research in recent years has shown that unemployment rates are very high among young people from immigrant backgrounds, especially in South African backgrounds. Their disadvantage at the start of their adult lives partly explains why they defer moving out to live independently. Another factor is the cultural and subjective attitudes towards independent living that the young people share with their parents (Hamel et al., 2011).

This paper examines the impact of social and family constraints on whether and when young people of immigrant background leave home. It first reviews the factors that encourage young people to defer their departure. It then looks at their projects for leaving home. While it is recognised that more flexible relations between parents and children make it easier to continue living together, the difficulty of finding a job live is a major obstacle for young people's entry into adult life. How do those most centrally concerned experience this prolonged family life? Do they want to leave and what prevents them from doing so?

Dysfunctional Schools: A Mentoring Framework

During transformation (1994 onwards), the South African government instituted different interventions within Education as an attempt to redress learner achievement and throughput. However, various researchers and opinion leaders still view education in South Africa as deficient, as well as characterised by an increasing prevalence of dysfunctional schooling systems. Therefore, this research aimed at designing a generic mentoring framework which transformation within dysfunctional schooling systems can be facilitated. In order to achieve this, a micro-level analysis of schooling systems, using the functionalist perspective, specifically enabled through the contributions of Parsons and Merton was undertaken. In addition, insight gained from a broad range of literature and other secondary resources on mentoring, best practice and quality education was used to develop a number of premises. Based on these premises the generic mentoring framework can be adapted to enable a fit-for-purpose mentoring system within a school to allow facilitation of a process of sustained transformation which gravitates towards whole school development and culture that envisions quality education for all.

Exploring the Socio-Economic Coordinates of Tourism: A Case of Kashmir

The state of Jammu & Kashmir being the abode of Himalayas represents an epitome of natural beauty and, hence, has emerged as one of the top most tourist resorts of the world. The tourism in states tourism sector in the form of nature, cultural, adventure, pilgrimage, leisure tourism etc. has attracted tourist of every nature irrespective of space as a result of which, this sector has been the mainstay of state's economy. Pertinently, all throughout the turbulence when the valley was reeling under the cycle of violence and when life virtually went into sabbatical, this sector especially through the pilgrimage tourism remained the only viable option with the people to relieve themselves from the imposed agonies. Further, in the absence of a well established private sector and given the fact that this sector has been the main agency of employment generation, a complex sociology of tourism has shaped up in the state involving administration, hoteliers, houseboat owners, etc. and the tourist. Unfortunately, the unscientific management and irrational interaction of the public with such tourist places has jeopardized their very delicacy which has, in turn, immensely harmed the states otherwise rich diversity of flora and fauna. This has generated a need towards a proper organizational structure in order to sustainably harness the tourist potential in the state. In the absence of inadequate infrastructure and specific and sound interventionist measures at place, the state couldn't secure properly at many counts be that guest-host relationship, conforming to the environmental norms or drawing the expected dividend. This paper endeavors to explore the sociology of tourism in Kashmir with a due focus on socio-economic dimensions of tourism besides highlighting the need towards the eco-tourism in the state so that the tourist potential can be optimally realized that too, on the sustainable basis.

Informality and the Forging of an Assemblage Urbanism in the Indian City of Patna

Right from the Almrita Patel case of branding slums as public nuisance (Ghertner 2001) to the conceptualisation of slums as sites of ‘deep democracy’ (Appadurai 2001), critical urban scholarship on the Indian city acknowledges the resilience of ‘informality as a way of life’ (Roy 2004) in the Global South. In another vein, the integration of geo-spatial and socio-economic data into the urban planning process has facilitated a proper organizational structure in order to sustainably harness the tourist potential in the state. In the absence of inadequate infrastructure and specific and sound interventionist measures at place, the state couldn’t secure properly at many counts be that guest-host relationship, conforming to the environmental norms or drawing the expected dividend. This paper endeavors to explore the sociology of tourism in Kashmir with a due focus on socio-economic dimensions of tourism besides highlighting the
MICRO Sociological Analysis Of Nationalism: The Fluidity Of Ethnic and Civic Identity In The Workplace, Malaysia

Ethno and civic nationalism are seen as dichotomous and a single track evolution. Studying the essence of nationalism in post colonial society may often show the dichotomous nature of nationalism. However the forces of development, modernisation and globalisation show that ethno nationalism might prevail but embracing civic behaviour might be the emerging nationalism. In global organizations, ethnicity is often regarded as static cultural container, and ethnic conflict as traditional but unusually stubborn impediment to modernization. Our main initial assumption in this research states that experienced acculturation is one of the main forces to shape identity formation at workplace. Being concurrently a cultural marker and an identity catalyst, taste is powerful vessel for identity shaping in our studied workplace. The findings of this study were based on empirical data collected between 2008 and 2010, via qualitative methods, from a specific empirical field: 5 star international-brand hotels in Kuala Lumpur, Malaysia. The data were obtained in these five luxury international hotels where transfer of knowledge and skills take a particularly direct and tangible form: food and beverage and kitchen. Empirical evidence presented here may qualify “the Hotel” as an “advanced social laboratory” for the study of ethnic relations. Focusing on social actors, this micro-sociological study shows that ethnic identity, belief and behaviour are not static but fluid. A specific organisational model such as “the Hotel” can help us redefine how we see ethnic differences, not as divisive, but as inclusive, when contingent forces at work trigger “cross-cutting ties” along group boundaries. Transforming these inter-ethnic differences in “the Hotel” may lead to the discovery of ethno nationalism embracing civic behaviour in the service industry.

Refugee Fathers: Negotiating Fatherhood during Resettlement

The rise of globalization, visible through the increase of international mobility and advances in communication and information technology, has had a significant impact on families. Currently, the analysis of globalization has focused almost exclusively on the macro level impacts, especially on politics and economics. There has been a dearth of research focused on the micro level impacts on globalization via refugee and forcibly displaced families. Much of the research examining refugee and forcibly displaced families has been predominantly focused on mothers and children, failing to incorporate fathers as important within the family system. This gap within the research is concerning due to the changing trends of family structure around the world. Across the globe, traditional gender roles are being challenged as fathers take a more active role within the family and mothers are working more outside of the household. The scant research that does examine fathers within the context of forced migration has found that fathers hold unique values and beliefs about fatherhood in relation to their children. They hold for their children, their interactions with their children, as well as how they negotiate their roles within the family in relation to their partner. Furthermore, many of these values and beliefs are put in flux due to post migration challenges, such as unemployment, lack of social supports, racism, social isolation, and role changes. The purpose of this paper is to critically review the existing literature on fatherhood within the context of forced migration and refugee resettlement, to discuss its limitations, and to bring forth the implications for future research and policy development.

Poverty Reduction Effect of the Taxation and Benefit Systems in Finland 1993-2013: Comparing the 1990s Depression and Post 2008 Recession

The poverty risk rate, measured as 60% of the median income, increased in Finland from 7 to 14 per cent between 1993 and 2008. The poverty risk rate increased especially in the late 1990s, when both benefits and income taxes were cut after the severe depression in early 1990s. The current (post 2008) recession has evoked very different social and fiscal policies compared to the 1990s and the recession has had a little impact on poverty risk rate so far.

We use microsimulation models for evaluating the impact of reforms on the poverty risk rate in the late 1990s, when both benefits and income taxes were cut after the severe depression in early 1990s. The current (post 2008) recession has evoked very different social and fiscal policies compared to the 1990s and the recession has had a little impact on poverty risk rate so far.

medicines. Analysis of the first Monitor Survey yielded a curvilinear relationship between age and high and low levels of scientific knowledge. High scorers were lowest among those aged 65 years and over. The proportion of high scorers for the middle age groups was around three in ten (of those aged 35-49 and 50-64). For low scorers, the reverse pattern holds true, and for young people, 14-16 year olds were high scorers. For young people 17-18 year olds. A possibility is that a given knowledge item has a different probability of generating a correct response from different age groups even if each age group has the same underlying level of knowledge. This study will evaluate the performance of the literacy items and the extent of any age-related bias. The results will feed into the design of the next wave of the survey but also speak more generally to the question of how to evaluate scientific knowledge in heterogeneous populations. I propose a single group IFA-IRT model to evaluate the performance of the items for a pooled sample of respondents, and a multigroup IFA-IRT model to identify the presence of differential item functioning (DIF) by age group. Briefly, the procedure is to fit a series of IFA models to the data, assessing the adequacy of fit for the scales within each subpopulation. The second stage is to look at evidence for DIF/measurement non-invariance on any of the test items with a series of increasingly restrictive nested models. Finally, results from the multigroup analysis suggest that partial measurement invariance across age groups holds.

Examining the “New Normal” and Inequality in the Housing Transitions of Young People in Canada

In Canada, young people’s housing transitions have become increasingly protracted and are marked by lengthier periods of cohabitation with parents and returns to the family home. This has been occurring in a context where access to postsecondary education has widened but at the same been subjected to increasing tuition and housing costs in most large urban centres, and especially in some provinces. Most young adults in Canada today are therefore receiving considerable support from their families over the course of their housing trajectories and, arguably, this trend now constitutes the “new normal” in the transition to adulthood. However, young people from lower class backgrounds, those who leave home earlier, and those who exit child welfare systems at the age of 18 or 19, often cannot count on parental support for housing, and experience much more problematic housing transitions. Our paper will first provide the context in which these housing transitions are occurring, by focusing on available statistical and quantitative data on young housing transitions and the housing policy environment. The second part of the paper will present qualitative data based on retrospective interviews with two sets of young people: street-involved youth and young adults enrolled in high school vocational training programs. Using a life-course approach, the paper will examine how these young people depend upon and interact with support networks, service systems, and policies, and discuss how these types of housing trajectories contribute to the structuring of inequality over the course of the transition to adulthood.

MOLITOR, VERENA* (University of Bielefeld, verena.molitor@uni-bielefeld.de)

Included By Means of a Broadcasting Language? the Case of Language-Based Minority Construction through the German-Speaking Radio Shows in Poland

The language of diaspora communities and minorities can be considered as a boarder-making instrument, as a mechanism of exclusion and inclusion (or rather of both simultaneously). The minority- or diaspora language media can as well function as means, instruments or mechanisms of border creation, boarder maintenance or inclusions.

The paper deals with media offers for language minorities and especially the German-speaking minority in Poland, focusing on the German-Speaking radio shows in the Voivodships Silesia and Opole. In these regions two stations produce radio shows in German; the very availability of non-polish-speaking media is a transformation phenomenon. Due to the novelty of media offers in German language as well as to the fact, that those, who define themselves as “German minority” partly do not speak German because of the minority languages ban during the socialist period in Poland, the central question to be posed in this presentation arises: Which function does the German speaking radio have in the creation of borders, inclusions, exclusions, interties and belongings?

My research concentrates not on the radio listeners but on how the radio stations by means of programme planning foster a regional identity, create a picture of the self and which role German as broadcasting language plays in these processes. I will demonstrate the integration function of the media and simultaneously its function within a diasporic consolidation, focusing on how the radio stations strive to create a collective identity among the German minority. I will demonstrate, how a strong belonging to the minority and tradition of the group is produced by these radios, while asking, how is it possible, if German is positioned as “mother tongue” which is “to be learned first”.

WG01-887.1

MOLITOR, VERENA* (University of Bielefeld, verena.molitor@uni-bielefeld.de)

“Media Diasporas - Diasporic Media” - the Construction of Regional Identities through Radio Programmes

In this paper I will focus on minorities, not often described in the context of media research, namely minorities which result not from movement of people, but from shift of borders, here especially of the German speaking minority in Poland.

The main focus in my research lies on the German-speaking radio shows which are broadcasted in a border region in Poland, near the German and Czech border. The situation of the German media there is very interesting because it is a relatively new phenomenon that there are Radio and TV shows available in German. The minority language media were prohibited in Poland during the socialism period, and could be introduced during the transformation period first. Not being based on a continuous minority media traditions, these radios are free in creating the understanding of their mission and their belonging to a community of listeners or to construct their listeners.

My research demonstrates how radio programmes represent a region in order to foster a regional or local identity and how they create a picture of the self and the others. The presentation demonstrates, how the contents and composition of the programmes describe boarders and a strong belonging to the own local group as well as to the traditions of the minority.

The presentation demonstrates the integrational function of the radio and simultaneously its function within a diasporic consolidation, and hence focuses on the challenges of minority radio stations with regard on both creating minority identities and belongings and representing a region or a local community.

Cross-National Policies and Relative Household Income of Families with Children By Family Structure and Parental Education

Focusing on an array of European and North American welfare states between 1985 and 2005, we consider how welfare state policies are related to households’ relative incomes, taking into account cross-national and temporal differences in income distributions. We consider work-family policies including public childcare and family leave generosity, tax progressivity, family allowance generosity, and levels of wage coordination. We also consider how two of the central factors that may be driving income inequality at the individual or household level – parental educational level and family structure – may be related to a household’s relative income. This research fills a gap in the literature because there are surprisingly few studies that examine inequality by both family structure and education, and even fewer that examine cross-nationally and longitudinally. Our analysis provides a better test of structural vulnerability theory than previous studies because structural vulnerability is operationalized in both the independent (through cross-level interactions) and dependent variables. By creating a dependent variable that standardizes household income relative to societal-level income inequality, we are able to get at the very center of structural vulnerability.

Rethinking the “Exploitation of Self-Realization” Model in Japan

The purpose of this report is to examine the problem of the “exploitation of self-realization.” In recent years, it is said that young people increasingly seek self-realization in their work. Masahiro Abe has analyzed the problem based on his own experience as a provider of motorcycle delivery service, and Yuki Honda has called the same problem the “exploitation of “Yarigai” (the word “Yarigai” refers to the pleasure derived from doing decent work). They point out that certain companies exploit young people who seek self-realization out of work. These days, such companies are called “black companies” and have become a serious social problem in Japan.

However, when we examine national statistics and opinion research about work and employment, we find no evidence that the number of young people who seek self-realization in work has increased in the past ten years. Rather, ac-
cording to surveys by Japan Productivity Center, more and more company recruits claim that they want to work for a single company and do not want to change jobs. It is thus not accurate to say that young people today seek self-realization above all. This leads to the question of why the discourse of the “expansion of self-realization” has become so popular in Japan even though the number of young people who seek self-realization in their work has not actually increased.

In conclusion, this report will bring to light how excessive globalization and the fluidization of employment have made many people feel unstable and unsure about the future. As a result, many people set a high value on stability and relief, rather than self-realization in work. Instead, national opinion surveys tell us that an increasing number of people seek work that allows them to make a “contribution to society.” This viewpoint compels us to rethink the “expansion of self-realization” model.

**Age and Gender Differences in Relationships Among Sociodemographics, Disease, Psychosocial Stresses, and Mental Health in Older Japanese Adults**

This study aimed to identify age and gender differences in the relationships among sociodemographics, disease, psychosocial stressors, and mental health status among older adults, using nationally representative data in Japan.

This study included 8733 adults aged 65 years or older, who were respondents in the Comprehensive Survey of People’s Living Conditions (CSPLC) conducted in 2007 by the Japanese Ministry of Health, Labour and Welfare (MHLW). Participants were stratified by gender and the following age groups: 65-74 years (young-old) and 75 years or older (old-old). Univariate and multiple logistic analyses were used to assess the relationships among sociodemographics (living arrangement, marital status, employment status, and equivalised disposable household income), disease (the five responses chosen by each group), psychosocial stressors (the top five responses chosen by each group), and mental health.

In all groups, the psychosocial stressors of “one’s job/long-term care,” “disease/long-term care of other family members,” “income/family budget/debts,” and “motivation in life” were found to be significantly associated with mental health. In young-old men, equivalised disposable household income, working status, and the psychosocial stressor of “one’s job” were significantly associated with mental health. In young-old women, significant associations with mental health were found for equivalised disposable household income, eye diseases, lower back pain, and the psychosocial stressor of “relationship with family.” In old-old men, the psychosocial stressor of “relationship with family” was independently associated with mental health. In old-old women, lower back pain and the psychosocial stressor of “relationship with family” were related to mental health.

In conclusion, this report will bring to light how excessive globalization and the fluidization of employment have made many people feel unstable and unsure about the future. As a result, many people set a high value on stability and relief, rather than self-realization in work. Instead, national opinion surveys tell us that an increasing number of people seek work that allows them to make a “contribution to society.” This viewpoint compels us to rethink the “expansion of self-realization” model.

**Emotions and Collective Identities in Contexts of Exclusion. The Case of the Protest for the Rights of Asylum-Seekers in Germany**

Emotions and Collective Identities in Contexts of Exclusion. The Case of the Protest for the Rights of Asylum-Seekers in Germany.

Since the 1980s, social movements’ scholars recognize that emotions and collective identities are crucial for the construction of collective actions (Polletta and Jasper, 2001). The extensive literature on emotions and identities shows how these two dimensions interrelate and influence social movements’ strategies, grievances, emergence, evolution, and impact. Few authors have analysed these dimensions in contexts in which activists face processes of exclusion. This focus raises however important perspectives (Einhoven, 2006). In particular, it leads us to discuss the strategic dimension of the emotional and identity work done by activists. Moreover, it permits us to relate the analysis of emotions and collective identities with more general contextual dimensions.

In this paper, I propose to follow this perspective through the focus on a network active for the defence of asylum right in Germany: ‘Caravan for the rights of refugees and migrants’. This network mobilizes against what is defined as a context of exclusion: the ‘residence obligation’ law, which strongly restricts the mobility and social inclusion of asylum-seekers and refugees living in Germany. Through the concept of ‘identity construction for emotional benefits’, I will show how activists strategically shape collective identities in order to trigger feelings of emancipation among asylum-seekers and refugees in the course of protest.

Two methods have been used in order to explore the construction and interrelation of emotions and collective identities in this network: an analysis of the documents that it published between 2000 and 2010, and a series of in-depth interviews undertaken in the German pro-asylum movement.

**MONFORTE, PIERRE** (University of Leicester, pm260@le.ac.uk)

**The Symbolic Representation of Borders in the Protest Against ‘Fortress Europe’: The New Geographies and Strategies of the Movements for the Rights of Migrants**

In the last two decades, the integration of member-states’ immigration and asylum policies at the European Union level has led to a process of transformation and delocalization of borders. In particular, the external dimension of these policies is related with the diffusion of borders across member-states and third countries territories. Consequently, the binary demarcation between the inside and outside of states’ territories is increasingly blurred, and the specific governmental practices and technologies that were once situated at the edges of territories can now be found across countries and territorial borders.

In this paper, I propose to explore the consequences of these evolutions on the social movements for the rights of migrants in Europe. Focusing on the symbolic dimension of protest events, I argue that the changing nature of European borders has influenced their organization and strategies. In particular, I show that, since the end of the 1990s, these movements have represented and used the border as a symbolic space in which new forms of protest are constructed. This analysis is based on the observation of a selection of European networks mobilizing for the rights of migrants. The evolution of the symbolic dimension of their protest since the end of the 1990s has been investigated through three complementary methods: protest-event analysis, frame analysis, and visual analysis.

**The Interplay Between Work and School Outcomes Among Adolescents in Brazil: The Role of Prior Orientations and Aspirations**

In Brazil and other developing countries, empirical evidences usually suggest that the participation of children and adolescents in the labor market tends to hinder educational outcomes (academic performance, high school graduation and dropout, etc.) and, therefore, lead to inequalities in educational and occupational status over the life-course. However, a body of research argues that the interplay between work and school: 1) depends on the intensity (hours) of work;
moderate work (less than 20 hours a week) can actually help the student to acquire professional and soft (sense of responsibility, independence and self-improvement) skills; 2) is the result of spurious relations the negative effect of work on school success is actually result of differences in preexisting individual orientations and aspirations that make some students more inclined to pursue experience in the labor market than invest in school. This paper aims to analyze, first, the extent to which preexisting aspirations and orientations toward school and work can account for the observed negative effect of work on school performance in Brazil. Second, it examines, among workers, how work intensity is related to these outcomes. In order to achieve these goals, we draw upon data from the National High School Exit Exam (ENEM) and from the Minas Gerais State Household Sample Survey (PAD-MG). These data sets combine information on school outcomes, family background, demographics, labor market situation, and orientations toward school and work. Results show that prior orientations and aspirations can predict actual labor market behavior and school outcomes, and account for part of the effect usually credited to work itself. Research on this issue in developing countries would benefit from incorporating fundamentals from social psychology to understand how inequalities are reproduced through orientations and aspirations.

Old and New Models of Federalism in Europe

The contradictory and complex unifying process of European Union does not seem to resemble the classic federal model, such as the United States, but rather refers to the historical legacy from the Holy Roman Empire as argued by Le Rider. The Holy Roman Empire, as it was defined by the Treaty of Peace of Westphalia, was a factor of stability, that while preventing to fall back into bloody wars, created a set of institutions allowed to control the imperial power.

In the same way the tragic experience of the 2nd World War was at the basis of the European Union as an antidote to possible future nationalists conflicts. The European unification process has been an element of law and peace, representing at the same time an old and new imperial model. According to Khanna European Union is the outcome of the three great empires of the world, together with the United States and China, that are distributing among themselves the global resources and influence on the world. In his view the EU is by far the most popular and most successful empire in history because, instead of dominating, educates. Incentives for the European unification process has been an element of law and peace, representing at the same time an old and new imperial model. Post-Repatration Careers of Japanese Knowledge Workers

A key element of the globalization of knowledge work involves the international transfer of executives. Yet despite the importance of this process, the repatriation of business people is still an under-researched area. The majority of existing research into the phenomenon is based on cross-sectional surveys and interviews of North American and European business people. The emphasis is typically on how to make the process more effective for companies, for instance, by improving failure rates, and largely assumes the existence of Anglo-Saxon style labour markets for the management of talent. Consequently, certain empirical and methodological insights remain unexplored. We don’t know for instance how Japanese repatriates post repatriation. This paper addresses this gap by looking two Japanese business people and asking how they make sense of their unfolding careers. To do this, the paper followed their subsequent careers and career perceptions after their return from assignments in North America, interviewing them over an extended time period (seventeen months and twenty four months respectively). The main finding of the research is that (these) Japanese repatriates do not have explicit and pre-planned career paths. Furthermore, this lack of a career path does not concern them. Instead, their careers are subject to a fuzzy career logic that depends on circumstances. Given the extensive literature on protean and boundaryless careers, as well as the ‘need’ for individuals to take charge of their own careers, this is a significant finding. The theoretical contribution of this research is the idea of fuzzy career logic, and the paper will show how it not only provides a useful framework for understanding how Japanese repatriates navigate their careers, but also how it gives an important alternative to, and critique of, the view that careers should be planned in a strategic manner.
Active Ageing Research Trends and Population Policy in Iberoamerica: A Critical Review

The concept of active ageing is being used in recent decades as a line of research in ageing of population studies and as an instrument of public policy, especially since its adoption by the WHO to strengthen health, social participation and security for older people and their quality of life. Despite its increasing use, defining active ageing is a complex task as it is related to various theories, constructed from multiple contents and their interactions, linked to other concepts used synonymously and sometimes interchangeable (healthy, productive, successful ageing,...) and operated following various strategies in both the scientific and public policy design.

The aim of this proposal is to conduct a critical review of the scientific literature on active ageing in relation to other forms of ageing (healthy, productive, successful) in the Iberoamerican settings and in the field of Social Sciences research, to delimit its use, contents, indicators and measurement instruments and the usefulness of its application in order to clarify the confusion to which it is subjected.

Transnational Aging in Mexico. the Experience about Elderly Foreigners, and Return Migrants. Life Style in Old Age, Health Care, Social Networks and Family Support

En esta aportación se discuten ciertas formas de envejecimiento transnacional entre extranjeros en México y migrantes de retorno que regresan a México después de trabajar en Estados Unidos. En el trabajo se examinan cuáles son las formas de envejecimiento de estos dos grupos y las formas de vínculos transnacionales que presentan y los cambios en la vejez, cuidados a la salud y redes sociales. Se presentan resultados relacionados a las redes transnacionales de los migrantes y sus conexiones en la vejez. Se analizan dos grupos de migrantes, uno de jubilados procedentes de Estados Unidos que han emigrado y residen en Baja California (México), y el otro lo constituyen migrantes de origen mexicano que han retornado de ese país a sus lugares de origen (Guayaquilt y Zacatecas), pero que llegan con contactos y experiencias transnacionales valiosas para este análisis. El documento se basa en análisis cualitativo que pone atención sobre las redes transnacionales a partir de la movilidad, las razones de la migración, el periodo de retiro laboral, los cambios en su identidad y el apego al lugar, redes sociales y prácticas culturales. La razón para analizar las prácticas transnacionales de los jubilados estadounidenses residentes en México es doble; por un lado, porque es un grupo de migrantes que han crecido rápidamente en México. Respecto al segundo grupo se justifica porque es muy conocida la intensidad migratoria de mexicanos hacia Estados Unidos, pero no se conoce el papel que juegan los migrantes de avanzada edad o retorno a México; se consideran migrantes de retorno todos aquellos que han regresado de manera permanente o temporal a México.

MOONEY, PATRICK* (University of Kentucky, pmoooney@uky.edu)

Position of Labor in US and Japanese Agrifood Cooperatives: A Class Analytic Perspective

Producer cooperatives emerged, in part, as a means of protecting the appropriation of surplus value from labor and often involved long struggles to institutionalize this economic form. Today, producer cooperatives constitute a significant component of the agricultural economies of most developed capitalist economies. Much work on cooperatives focuses on agent/principal problems or the tensions between producers and management in directing/controlling the cooperative. Given the historical origins of producer cooperatives in the concerns of labor, surprisingly less attention has been paid to the role of labor that ‘adds value’ to agricultural production in cooperative organizations. This paper raises theoretical questions concerning the class position of various actors in cooperative enterprises. We consider this issue in terms of farmer (production and marketing) cooperatives as well as (food) consumer cooperatives. We ask what possible forms of organization might be introduced to cooperatives to make cooperative labor more equal members of cooperative enterprises? We briefly examine these questions with respect to the historical development and current condition of cooperatives in the U.S. and Japan and call for a need to examine this question more systematically and comparatively from a larger international sample.

MOONEY, MINYOUNG* (Vanderbilt University, minyoung.moon@vanderbilt.edu)

Framing Matters: Effective Framing and Movement Success

This article examines variations in framing among four different Korean women’s movement campaigns, only two of which succeeded. This study contributes to a more systematic understanding of the impact of framing on legislative outcomes by comparing successful and failed campaigns paired by the same issue area, as well as by overcoming methodological limitations of previous research built on single-case studies. Two cases deal with a family issue: The Abolition Campaign of the Family Headship System (succeeded) and the Revision Campaign of the Healthy Family Act (failed). The other two cases, the Legislative Campaign of the Anti-Sex Trafficking Act (succeeded) and the Revision Campaign for the Special Act on Sexual Violence (failed), are centered on the feminist idea of women’s rights to sexual autonomy. I analyze organizational documents of the Korean Women’s Association United, who led all of these four campaigns, in order to compare the effectiveness of framing in each campaign. My findings suggest that three qualities of frames were common in the successful campaigns. They are articulate frames, empirically credible frames, and de-radicalized frames. The two campaigns with desired outcomes included all three conditions for effective framing while the other two did not. Since these campaigns took place under the same contexts of political opportunity structure and resource mobilization capacity, I argue that my findings highlight the relative significance of framing in movement outcomes.

MOORE, KEITH M.* (Virginia Polytechnic Institute, keithm@vt.edu)

Agricultural Mindsets Across Social Networks in Four African Countries

Smallholder agriculture is coming under increasing pressure to intensify production practices for food security. Conservation agriculture (CA), involving the three principles of (1) minimum soil disturbance, (2) permanent vegetative cover, and (3) rotations or intercropping, has been identified as a sustainable way to do so. However, indigenous knowledge is not sufficient to support a transition...
to this new production system; nor is simply the introduction of new agricultural production norms and practices by a transforming agent (extension or NGO). Many observers note that conservation agriculture requires a change of mind-set for smallholder innovation to occur (Hobbs, 2007; Wall, 2007). Successful cases of CA development have also demonstrated the active engagement of a network of producers and their partners throughout the agricultural sector (Coughenour, 2003; Swenson and Moore, 2009). The fundamental agricultural development question is how to bridge the gap between these new mindsets and those of the ‘risk averse’ small farmer that has informed indigenous knowledge for generations. The youth are completing in-depth interviews and taking photographs of elements of their everyday life that they define as particularly “Peruvian” or “Japanese.” Preliminary findings indicate that the youth report a range of identities (hāfu, Peruvian, Japanese, Japanese+Peruvian), but they struggle to articulate how being Peruvian is a part of their daily lives. Instead, a Peruvian identity is tied to expression in birthday cakes, Christmas dinners, and occasionally speaking Spanish. The youth plan to remain in Japan, including obtaining Japanese citizenship, with few diasporic ties to Peru. Several factors are encouraging their assimilation, including the declining presence of co-ethnic migrants, the lack of ethnic institutions in the community, the pressure to assimilate in Japanese schools, and the transition to high school and tertiary education, where immigrant youth attend school with few co-ethnics. Nevertheless, this weakening of a diasporic Peruvian identity to symbolic status is surprising, given that Japanese identity is popularly defined as homogeneous and monoethnic, migrant and mixed-race people in Japan are also racialized as gaijin (foreigners, outsiders). This has resulted in identity quandaries for many Nikkeijin migrants, including the immigrant parents of the second generation, weakening their sense of belonging in Japan and strengthen their national (Brazilian, Peruvian) or alter- nate ethnic identities (Nikkei, Okinawan).

MOOREHEAD, ROBERT* (Ritsumeikan University, robertsm@fc.ritsumei.ac.jp)

Am I Japanese, Peruvian, or Both? the Ethnic Identity Formation of Second-Generation Peruvian Youth in Japan

Based on ongoing research, this presentation explores the ethnic identity formation of second-generation Peruvian high-school and college-age youth in Japan. It asks what ties, if any, does the second generation have with the two countries, and what is the nature of those ties? How do the youth interpret what it means to be Japanese and/or Peruvian in Japanese society? What role, if any, do the youth's parents' experiences in Japan play in shaping the youth's ethnic identity? The youth are completing in-depth interviews and taking photographs of elements of their everyday life that they define as particularly “Peruvian” or “Japanese.” Preliminary findings indicate that the youth report a range of identities (hāfu, Nikkei, Peruvian, Japanese, Japanese+Peruvian), but they struggle to articulate how being Peruvian is a part of their daily lives. Instead, a Peruvian identity is tied to expression in birthday cakes, Christmas dinners, and occasionally speaking Spanish. The youth plan to remain in Japan, including obtaining Japanese citizenship, with few diasporic ties to Peru. Several factors are encouraging their assimilation, including the declining presence of co-ethnic migrants, the lack of ethnic institutions in the community, the pressure to assimilate in Japanese schools, and the transition to high school and tertiary education, where immigrant youth attend school with few co-ethnics. Nevertheless, this weakening of a diasporic Peruvian identity to symbolic status is surprising, given that Japanese identity is popularly defined as homogeneous and monoethnic, immigrant and mixed-race people in Japan are also racialized as gaijin (foreigners, outsiders). This has resulted in identity quandaries for many Nikkeijin migrants, including the immigrant parents of the second generation, weakening their sense of belonging in Japan and strengthen their national (Brazilian, Peruvian) or alternate ethnic identities (Nikkei, Okinawan).

MOOUSAHI, LEON* (UNIVERSITY OF LIVERPOOL, LEON.MOOSAVI@LIVERPOOL.AC.UK)

Flourishing Under Pressure: Islamophobia, Resilience and Muslims In Britain

Muslims in Britain encounter Islamophobia in politics, news media and everyday encounters. Since Muslims in Britain are racialised as non-white, the Islamophobia they face often simultaneously merges with racism. In this paper, I consider the effect of the pervasiveness of Islamophobia has on Muslims in Britain. I will argue that Muslims in Britain are often highly sensitive about the presence of Islamophobia which lead them to withdraw from public and social spaces but, perhaps more crucially, from participating in institutions, out of fear of being discriminated against. Thus, it will be apparent that the Islamophobia that some say exists because Muslims refuse to ‘integrate’ is actually a factor in discouraging Muslims from ‘integrating’. The situation is more nuanced than this though as I will also argue that despite Islamophobia, Muslims in Britain are quite determined to assert themselves as British Muslims. Even though they may be labelled as ‘traitors’ by some, British Muslims not only typically declare themselves as loyal citizens, but also show various practical signs of being comfortable reconciling their Muslim identity with life in Britain. Muslims in Britain have shown much resilience towards Islamophobia in the last decade, establishing various groups, campaigns and coalitions which I will argue is proving effective in combating Islamophobic rhetoric. While much still needs to be achieved in tackling Islamophobia, the successes that have been made, and the increasing stigma attached to Islamophobia in Britain as a term, will be argued to be a sign of a Muslim community that is flourishing under pressure. This research is based on ethnographic encounters with Muslims in Britain between 2008-2013.

MORAGA CUBILLOS, MARCELA* (Pontifical Catholic University of Chile, memoraga@uc.cl)

The Use of Tobacco and Marijuana with School Bonding: A Longitudinal Analysis from the Perspective of Social Control

Comparative data from Latin American countries in 2006 locates Chile among the countries with the highest rates of tobacco consumption in the last month throughout various ages. Additionally, Chile has shown the highest rate of marijuana consumption within South America during the last decade, and consumption among Chilean students has grown in the last years related to an important decrease in risk perception on marijuana use. This research analyzes the pattern taken by the relation between school bonding and the involvement with behaviors that usually are considered as risky, like substances use, from a perspective based on social control applied specifically in the Chilean context. The previous descriptive analysis shows: i) an increasing prevalence of truancy as students get older, ii) a reduction of students happiness in school, iii) a decrease in the importance of good grades, and iv) reducing the importance that students connect to the generation of positive opinion on teachers. Besides, truancy more than duplicates the odds of tobacco and marijuana consumption in the upcoming years. While the students happiness in school, the importance of good grades and the relevance assigned by students in the generation of a good impression on teachers reduce the odds. The analysis was based on a panel data from a longitudinal study of tobacco, alcohol and drugs throughout school populations, made by The Pontifical Catholic University. They collected information from variables related to family, school, pairs and substance use of Chilean students in seventh grade during 2008 (N=4,387) from townships with a population over 30,000 across the metropolitan region. The students were annually re-interviewed until 2011.

MORAWSKA, EWA* (University of Essex, emorawsk@essex.ac.uk)

The Effects of Socio-Economic Background and Parental Involvement on Children’s Early Cognitive Development: The Case of Chile

Children’s development has been demonstrated to be an important factor in later life outcomes. Studies have also shown that income and parenting style, as well as the potential contribution to reduce the gap in the cognitive skills achieved by children from the higher quintiles, and finally, parental stimulation has a stronger impact on the wealthier children. From these results, it is possible to assert that parental involvement has the potential to contribute to reduce the gap in the cognitive skills achieved by children according to the level of income of the households they live in, which can be of particular relevance for reducing the inequality-related gap in later life outcomes.

Emerging Multi-Cultural Identities and Practices of Immigrants: Toward the Recognition of Yet Another Integration Trajectory
Steven Vertovec will relate the conditions of super-diversity of present-day urban spaces which affect migrants' positioning in the host society, their social milieus that cross-cut ethnicities, and cross-cultural social relations.

Ewa Morawska will reconsider the premises informing our concepts/theories of immigrant integration challenged by a new phenomenon of the continuous re-direction of migration of travellers seeking self-development and exciting adventure.

Thomas Faist will reflect on the role of class, ethnicity, religion, and sexual orientation in structuring inequalities in present-day multicultural societies characterized by cross-cutting identities and practices of their members, and its implications for integration/assimilation theories.

Peter Kivisto will attempt to interconnect three concepts which have informed theories of immigrant integration/assimilation: that of pluralism which informed the earliest (American) conceptualizations, the notion of ethnic options/optimal ethnicity which emerged in the second half of the past century, and the recent idea of cosmopolitan canopy.

**Explaining Crisis through Infotainment. Effects of the Television Satire in Spain**

Political satire programs on television are experiencing a small boom in democratic societies. One of its themes is the economic crisis, and in ridiculing not only the protagonists but also in their victims, explaining what were the causes and what could be the ways to tackle the crisis. Through humor, these programs reach millions of viewers, presenting serious issues of political community, and at the same time entertaining and educational. The aim of this paper is to analyze the effects of such programs on the public to know whether these programs are fundamentally comical dimension or can have a formative role and public mobilization. Analyzing data from studies that have been made in some countries to measure the impact of such programs, and presenting the results of a survey conducted in Spain, one of the countries hardest hit by the economic crisis in Western Europe, this paper will try to test the possible impact of such programs on public opinion.
The boundaries that groups like the Minutemen construct not only leave a record of how these boundaries were constructed, but also a view of what these boundaries will look like in the future. The literal and symbolic meanings attributed to the U.S.-Mexico border were the motivating factor for Utah citizens to go to the border as Minutemen and to establish the Utah Minuteman Project (UMP). We used fieldnotes and interviews with 20 members of the UMP and found that the importance of the literal border gradually faded as the group expanded to include members who had not gone to the border and shifted to symbolic boundaries within the state of Utah as issues centered on crime and employment. In spite of the unifying identity surrounding the literal and symbolic U.S.-Mexico border, individual members of the UMP constructed symbolic boundaries using the following boundary markers: legal status (illegal vs. legal), nationalism (American vs. un-American), culture (English vs. Spanish), and race (white vs. Latino). The legal status boundary is the most salient boundary among the UMP, and became the key symbolic boundary that all other boundaries are measured against. We found that a wide variety of members conflate legal status with nationality, culture, and race, whereas other members maintain clear distinctions against. We undertook two qualitative studies: 1) 22 community based focus groups with five ethnic/faith groups: Nigerian (Christian), Caribbean (Christian), Indian (Sikh and Hindu), Bangladeshi (Muslim) and Pakistani (Muslim) origin, and 2) semi-structured interviews with 19 hospital chaplains representing Abrahamic and non-Abrahamic religions. The centrality and compatibility of religious beliefs with organ donation varied between ethnic/ faith groups and generations. Although few regarded organ donation as a religious scripture there was considerable uncertainty, particularly among older people and people of Muslim faith who commonly required guidance from religious leaders. Hospital chaplains generally accepted the principle of donation. However few had much experience of deceased organ donation and many felt they could not personally endorse this, although variations existed within religious affiliations. Concerns included possible delays to burial, injunctions to modesty, a need for bodily integrity at the time of death, and a belief that the body and soul remain senesce for some time after death. These findings illuminate the gap between formal statements by national religious leaders, the views of chaplains and the lay population. Greater engagement between health professionals and local communities, possibly via chaplains, might address disparities.

Transformation of Public Housing Policy and Its Impacts on the Residents in Japanese Suburbs

A lot of critical debates relating to Japanese suburb (ageing, juvenile delinquency, absence of local identity, etc.) have not made inroads into the myth of a homogeneous and stable space populated by non-foreign residents from the middle classes. However, with installation of the “precariat”, driven out of the city center by gentrification on one hand, and with transformation of Japanese public housing policy on the other hand, a new face of the suburbs appears: public housing for insecure populations (old people living alone, handicapped people, single-parent households) or semi-public housing hired by companies for their temporary workers including precarious foreigners make it a space of exclusion determined by heterogeneous lifestyles and a whole range of “wasted lives” (Bauman, 2003) is concentrated. It is a very-known fact that territorial fixation is one of the major difficulties for the people of segregated districts, who are not able to “escape” from there (Wacquant, 2007). But that should not make one forget another difficulty: that is the difficulty of not being able to stay in one place, by having to be constantly moving. Because staying in one place also means setting down (establishing a family, sending one’s children to school, having regular dealings with neighbors as a member of the local society, possibility of borrowing money from banks, etc.). On the basis of a survey in the Tokyo suburb area, this paper examines the impact of those changes on (semi) public housing residents, especially where they go and how their lives are changed by their movements.

Religion, Organ Donation and Disparities in Transplantation Among Minority Ethnic Groups in the UK

With a high rate of end stage renal failure and a low rate of deceased organ donation, unmet need for kidney transplantation among Black and South Asian populations in the UK is disproportionately high, with these groups comprising 26% of the active kidney transplantation waiting list. None of the main religious groups in the UK formally prohibits organ donation. Faith-related barriers have however been linked in previous research with a reluctance to donate organs, although there is little detailed knowledge regarding specific ethnic/faith groups. This study explored influences on donation among minority ethnic groups as part of a wider effort to address the inequality of opportunity to receive transplantation services.

We undertook two qualitative studies: 1) 22 community based focus groups with five ethnic/faith groups: Nigerian (Christian), Caribbean (Christian), Indian (Sikh and Hindu), Bangladeshi (Muslim) and Pakistani (Muslim) origin, and 2) semi-structured interviews with 19 hospital chaplains representing Abrahamic and non-Abrahamic religions. The centrality and compatibility of religious beliefs with organ donation varied between ethnic/ faith groups and generations. Although few regarded organ donation as a religious scripture there was considerable uncertainty, particularly among older people and people of Muslim faith who commonly required guidance from religious leaders. Hospital chaplains generally accepted the principle of donation. However few had much experience of deceased organ donation and many felt they could not personally endorse this, although variations existed within religious affiliations. Concerns included possible delays to burial, injunctions to modesty, a need for bodily integrity at the time of death, and a belief that the body and soul remain senesce for some time after death. These findings illuminate the gap between formal statements by national religious leaders, the views of chaplains and the lay population. World Art Cities: Theoretical Considerations

The presentation will deal with the topic of ’world art cities’. The main body of research about global cities has primarily emphasised their function in the global economy (with Frankfurt, London, Zurich, Tokyo and New York as the main examples), thus limiting our understanding of the role of urban spaces as a microcosm and breeding ground for cultural and symbolic activities. This paper highlights the production and creation of a global artistic symbolism through a specific configuration of the artistic milieu, where a high number and a mutual interlinking of artistic activities are crucial for the formation of interactions, networks, exchange and collaboration through which a highly vivid, active and innovative atmosphere can develop. Furthermore, the paper discusses how these activities are embedded into a wider symbolic infrastructure of galleries, music venues, fringe theatres, museums and other spaces of the city. These venues enhance and reinforce certain artistic symbols because through a mutual interlinking of many spaces, they can confirm the innovative character of the work, thereby making them well known outside of their immediate locality. The paper will focus on the development of a theoretical framework that incorporates these different aspects, e.g., art districts, artistic milieu, artistic infrastructure, innovation and global reach.

Toward the Post-Colonial World Connections: Relativizing the Eurocentric Social Movement Theories to Assemble the Citizenship Beyond Nation-States

This presentation examines the Eurocentric social movement theories from contexts of the genealogies of decolonization, democratization and anti-development movements on Okinawa Island. Okinawa has its history of the marginality

* denotes a presenting author.

Abstracts are organized by first presenting author's last name.
as a quasi-colonial part of Empire of Japan from 1879, under the occupation of the US Forces from 1945 to 1972, and the continuous concentration of the military bases until the present. Facing on the situation above, the people in Okinawa have been seeking to relativize their ontology and change themselves through the external connections of social movements over the world.

Capitalism and Militarism after the WW2, lead by the US, had a significant influence not merely to Okinawa, but also East Asian countries, and the subjectification of Asian people. As Sakai Naoki (2008, Kibo to Kenpo, Ibusnsha) clarifies that the regime of the Post-WW2 imaginary space of Japanese people was the inter-archipelago system of the US-Japanese homo social “complicity”. In this perspective, the power formation after the WW2 has shifted from the Hegelian understanding of the nation-state with the anthropomorphism to the homo-social complicity among the nation-states. Therefore the (cultural) naturalization of representation of Okinawa, Japan and the US has to be questioned radically from this perspective.

Considering two still dominant streams of the social movement theories, namely the European tradition of Marxism and American tradition of the resource mobilization theories, I want to seek to interweave the theories of the Postcolonialism with them. Postcolonialism here indicates three streams of critiques, cultural studies, internal colonialism critique, and the Orientalism critiques (Shoh, Kokichi, 2006, Shokigoku no Shairei, Toshindo). By doing so, the effect of the colonialism, imperialism and nation-state can be added to those theoretical models in order to trace the ties and networks of the social movements transcending the time and space, cultural differences, and the nation-state borders.

Transnational Mobilities in Europe: ‘Living Apart Together’ and Gendered Outcomes

Historically women have been associated with immobility and passivity, for a long time invisible or regarded as dependents rather than migrants in their own right, their migration tied to migration of men. Restrictions to autonomous wom- en’s mobility still persist in some countries or they face: spatial stigmatization at some stage of their itinerary by the capacity to be mobile is sometimes easier available to women than to men because of labour demand in specific economic sectors. Being a woman becomes even an advantage so they increasingly become mobile family breadwinners, sometimes pioneering migration even in societies with traditionally male dominated patterns of migration. Women are therefore exposed to contradictory pressures, relating to their double role: as breadwinners, requiring emigration and absence and that of family carers habitually assuming physical presence in the vicinity of those they care for. They are therefore typically the first ones blamed for the social costs of migration and the distortion of a gender order.

While for both men and women crossing of borders can lead to more autono- my and challenging of established gender norms, more opportunities in using the acquired social capital within a broader migratory space, it can also lead to new dependencies and reinforce existing gender boundaries and hierarchies. Gender order seems resistant to change in migration, even in situations of apparent re- versal, when women become main breadwinners. Rather than speaking in terms of gains and losses this presentation looks at the ways contradictory outcomes are negotiated. In several examples of transnational mobility, it will be shown how the gender order is challenged, apparently preserved, but also how “handicaps” are turned into advantages and traditional patterns relied on in pursuit of own objectives.

MORRIS, ALDON* (Northwestern University, amorris@northwestern.edu)

W.E.B. Du Bois was one of a handful of scholars of the 20th century with a sustained global impact on sociological, literary, and political knowledge. In this paper, Morris will draw on evidence from his forthcoming book with the University of California Press to demonstrate that Du Bois was the founding father of scientific sociology in the United States; that is, American scientific sociology was founded in a segregated black university by a black man. This paper disconfirms the accepted wisdom that American scientific sociology was founded solely by white sociologists in elite white universities. This paper will explore the methods Du Bois pioneered and his novel theorizing that laid the foundations for subse- quent sociological analyses. The paper will offer an account of the dynamic forces that generate scientific schools of thought and that undergirded knowledge produc- tion in social sciences during Du Bois’ era.

Understanding Care Giving and Care Taking Experiences throughout the Life Course - a Comparative Study of Older Couples in Denmark and Japan

The systems of providing welfare services interact with older people’s everyday lives in a very complex way. Not only the arrangements of systems as such but also the availability of services influence their possibilities and constraints at an everyday level that roles they play within the social network of their everyday lives. These interactions are long-term changing processes as both the systems and wide-ranging conditions in everyday life are neither static nor im- mutable. In particular, the present paper draws attention to how older people understand the ways that the welfare systems interact with their everyday lives throughout the life course. Older people’s understandings of their interaction with the welfare systems at the everyday level reflect upon both their past and present experiences and practices, and this reflection results in forming a signifi- cant part of their views and expectations for the future.

Guided by life course approach, the analysis focuses on older couples in Den- mark and Japan, and explores the following questions: how have older Danish and Japanese couples experienced care giving and care taking over the life course? How do they perceive these experiences? How have older Danish and Japanese couples experienced mutual support and communication with children, grand- children, and friends and neighbours? How do their relationships with their offspring and friends change? How do their understandings of their roles in the care response. interviews with couples aged 65 and over in Denmark and Japan. The interviews are ongoing and will be concluded by February 2014.

Growing Regional Gaps in Compulsory Education in Japan: A Case Study at an Aging Rural Area

Since the 1990s, mainly in advanced countries, policy makers have been paying increased attention to the terms of school systems that work in partnership with local communities, as the closed nature of the public education system has faced criticism in the context of “neo-liberalism”. Within these global contexts, the Japanese government began prompting a new system of community-based schools named the School Management Council System in 2004. This school council system is extremely different from the existing public school system in that the citi- zens’ participation into school management is definitely institutionalized.

In contrast, in recent Japan, the advent of an aging society combined with a low birthrate has had a serious impact on the whole public education system, making it more important to consider educational policies from the aspect of population problems. Especially, in aging rural areas, the number of abolished schools is rap- idly increasing due to depopulation, and there are heated debates on the regional gap in educational opportunities between urban areas and rural areas. Thus, one of the most urgent problems in rural Japan is to design new forms of communi- ty-based school systems appropriate to the realities of local residents around the schools in the population-declining areas.

Accordingly, this paper examines, from the perspective of sociology, the prob- lems and the possibilities of community-based school systems by focusing on the collaboration between compulsory schools and the local residents in Japanese aging rural areas, in order to search for the new public education forms open to the local residents.

Negotiating Safety in Relationships: Children's Agency in the Context of Family Violence

This paper reports on the findings of qualitative research undertaken in Aus- tralia with children (n = 23) and mothers (n = 18) from a primary care population. The participants had all experienced family violence perpetrated by the father or step-father and were recruited from medical centres and a larger family violence study of women from primary care. The methods included in-depth interviews and focus groups; informed by a theoretical framework of hermeneutic phenom- enology, ethics of care and dialogical ethics.

The aim of the study was to hear children’s voices in primary care research about children’s safety and resilience in the context of family violence. The re- search questions sought to understand children and mothers’ perspectives on children’s safety and resilience; establish how children’s safety is realised in the context of family violence and determine how children’s voices inform a primary care response.
The main findings revealed that children needed to negotiate their safety in the context of family violence and post separation. Key to this was whether the child had agency to negotiate their safety; which was dependent on four interrelated factors. These factors will be presented to explain the ‘Model of Children’s Agency’. Informed by the model, implications for policy, practice and further research will be considered.

MORRIS, BRIGIT* (University of New South Wales, brigitmorris@yahoo.com.au)

Moving Through Space

Spaces in urban geography are rich with symbols and signs related to national as well as personal narratives. Artists who construct public art installations in sites symbolizing hegemonic power and cultural identities are able to rework or reclaim the meanings attached to these spaces.

I am interested in artists who engage in performative, site-specific installations that aim to recreate historical or contemporary political events in a symbolic way. I will argue that by reframing the meaning of significant sites using artistic devices of affect and temporality, installation artists are in a unique position to critically analyse political and social questions which ‘trouble’ our society.

I will examine two case studies. The first is Gregor Schneider’s 2007 work, 21 Beach Cells. This installation involved a series of interactive metal prison cages, symbolizing Guantánamo Bay. The installation was placed on Bondi Beach in Sydney. At the time, the Australian Government supported the US government’s actions of interminably detaining so-called enemy non-combatants. Bondi Beach symbolizes the free and egalitarian spirit of Australian national identity – a jarring vision with the landscape of the Guantánamo prison. The second work is Doris Salcedo’s 2007 work, 6 y 7 Novembre. Salcedo installed a sculpture over the Palais of Justice building in Colombia’s capital city, Bogotá. The work remembered the events of 6 to 7 November 1985 when militia stormed that very building – the High Court of Colombia.

Salcedo and Schneider reclaim these meaningful sites to create affect between artist and viewer, between citizen and nation. The implicit value of these locations facilitates a conversational or reflexive relationship with the viewer where the past is effective to the present. This dialogical relationship makes the viewer complicit in both the artwork and the subject matter it addresses. Therein lies the transformative power of the artwork.

MORRISON, IAN A* (The American University in Cairo, imorrison@aucegypt.edu)

Secularism and the Foundations of Pluralism: The Crisis of Reasonable Accommodation in Québec

In recent decades Québec, like many other Western states, has been a site of debate regarding the limits of pluralism and freedom of religion. In Québec, these debates emerged within the context of a restructuring of the nature of nation and citizenship. Since the early 1990s, the Québec state has undertaken a project of the construction of a citoyenneté québécoise, seen as the culmination of a transformation of the boundaries of the Québec nation that began with the Quiet Revolution of the 1960s, marked by the shift from an ethnic to a civic conception of the nation. The dechristianisation and secularisation of national identity in Québec is presented as an expansion of the boundaries of the nation and an opening towards others.

Yet, contemporary Québec has also been described as the site of a ‘crisis’ related to the measures adopted to promote this conception of such a nation. Of particular focus have been the practices of ‘reasonable accommodation’ for religious practices. Opposition to such measures are made on the basis of two arguments. The first suggests the need to narrow the scope of pluralism in order to protect universal values, and secularism itself. As such, it posits the paradoxical need to limit pluralism in order to protect pluralism. In doing so, it appeals to the need to protect the universal (as host body) from the particular (as contaminant). The second argues the need to protect ‘national values’ from the dilutive and assimilatory forces of relativism and multiculturalism. As such, it demands protection of the particular (as host body) from the universal (as contaminant). The proposed paper examines the manner in which these two seemingly oppositional arguments can be present within a common discourse that problematizes the presence of certain religious subjects and practices within the public sphere in Québec.

MORRIS, VIRGINIA* (University of Oxford, virginia.morrow@geh.ox.ac.uk)

Modern Moralities? Children and Social Change in Vietnam

This paper explores the effects of ‘modernity’ on children’s lives and on their aspirations in Vietnam. It draws on qualitative research undertaken with children and their parents as part of Young Lives, a longitudinal study of children growing up in four developing countries (www.younglives.org.uk). The paper explores how social, political and economic changes are affecting social realities, moralities and norms, especially in relation to intergenerational relationships between grandparents/parents, and children. For example, there is clearly a rapid process of marketization taking place, with consumer durables like mobile phones and the internet becoming widely available. At the same time children describe clearly the centrality of family relationships, and especially reciprocity in the form of caring for parents, siblings, grandparents, and an expectation of filial duty by parents.

Thus, three sets of values are colliding, (a) there is a combination of Confucian notions of filial duty combined with Communist values relating to the importance of reciprocity in relationships, yet (b) there is State-led concern about ‘social evils’ affecting children and youth by parents (while these are nearly universal, they seem particularly marked in Vietnam) and (c) new technologies that are perceived bringing risks to children. Children and young people themselves are aware of shifting moralities. They perceive there to be corruption among adults – some teachers, and employers – and express concern about unfairness and injustice. The paper explores whether there are ‘new’ moralities emerging, and describes how parents and children are managing these processes.

MORROW, VIRGINIA* (University of Oxford, virginia.morrow@geh.ox.ac.uk)

’I Have to Help and Improve Their Life’: Young People’s ‘transitions’ in Ethiopia and Andhра Pradesh, India

This paper explores the lives of young people growing up in Andhra Pradesh, India, and Ethiopia, drawing on data from Young Lives, a longitudinal study of children growing up in four developing countries (www.younglives.org.uk). The paper explores the ways in which boundaries between childhood, youth and adulthood are blurred, by exploring young people’s past and present experiences of school and work, and their anticipated futures. The paper uses descriptive statistics to show trends in leaving school, and then draws on qualitative longitudinal research from a series of case studies to explore children’s experiences of leaving school and why. The paper argues that many of the assumptions underpinning international policy discourse that conceptualise early school leaving as ‘dropping out’ fail to engage with the realities of young people’s lives in rural areas that experience numerous economic and environmental ‘shocks’. Gender, poverty, and other social differences combine with a strong sense of obligation to parents and wider family to constrain young people’s choices and trajectories. The paper questions the utility of the concept of transition and suggest that it must be used critically and not simply imposed on contexts that are in a process of rapid social change and economic development, but that are generating powerful inequalities that mean that some groups of young people are ‘left behind’.

Beyond the Respondent-Interviewer Interaction: Exploring the Performance of a Self-Administered Life-History Calendar

Life-history calendar (LHC) methods have been increasingly used in surveys in the last two decades. There is indeed a general consensus on the fact that the highly structured but flexible approach of the LHC facilitates the memory of past events. Respondent’s past experiences provide a context for retrieval of autobiographical memories and they are used as anchoring points and time landmarks for remembering. While there is a general agreement that the LHC methods improve accuracy of retrospective data even for different populations and cultures with a non-linear representation of time, the reasons for this performance (i.e., retrieval processes) are less clear. The literature suggest that the LHC performance is amplified by the interviewer-respondent interaction via conversational and flexible interviewing, either in CATI or CAPI. However, studies using self-administered LHC on youth sex behavior argued that LHC can be used also in self-administered modes reducing social desirability bias.

In this study we present data from two surveys conducted in Switzerland (the Swiss Household Panel study and the Family timeM study between 2011 and 2013. Results show that self-administered LHC could produce equally valid data in terms of completeness (measured with five indicators: number of residential moves, number of intimate partners, number of children, number of jobs, and number of years of unemployment) than interviewee-respondent interactive interviewing. Moreover, self-administered LHC transmitted by mail data had even...
higher levels of internal coherence than self-administered LHC completed during face-to-face interviews. We argue that improvements in the layout (i.e., graphical visualization) of the LHC, as well as an increasing popularity of life calendar model in social media, may have increased in recent years the accuracy and feasibility of self-administered LHC for data collection.

Five Generational Continuity In Achievement Orientations: New Evidence From The U.S. Youth Development Study

Growing inequality in families has prompted great interest in the intergenerational transmission of advantage. Guided by three complementary theoretical perspectives, we examine the continuity of achievement orientations across three generations. The first posits that contemporaneous parental orientations and attainments influence children. Children of more highly educated parents receive more parental orientations and attainments during adolescence (self-perceptions as intelligent, a good reader, and helpful with schoolwork), and later in life. The second posits that prior parental pathways matter for children. Earlier parental behavior may also provide a model of more or less successful action, and impacts children indirectly through parental attainments. A third “selection model” posits that parents’ stable traits, observed during adolescence, influence parents’ pathways, their attainments, and children’s orientations.

The Youth Development Study followed a cohort of over 1,000 Generation 2 youth from age 14-15 (1988) to age 37-38 (2011), and also surveyed their G1 parents (during G2’s adolescence) and G2’s children aged 11-21 (2009-2011). An SEM model, based on 384 G1, G2, and G3 triads, provides a three-generational assessment of the transmission of achievement orientations. Confirming the first perspective, contemporaneous parental educational expectations were strong predictors of both G2’s and G3’s orientations toward academic achievement during adolescence (self-perceptions as intelligent, a good reader, and having high ability in school). Providing evidence for the second approach, a high agency G2 parental pathway (with high aspirations, career certainty, and active job search, age 18-30) strongly influenced G2’s educational attainment and entirely mediated the effects of G1’s expectations and G2’s academic orientation in adolescence on G2’s achievement. Finally, supporting the third perspective, G2’s academic orientation during adolescence significantly predicted G2’s expectation for the G3 child more than 20 years later. The G2 parent’s orientation, measured during adolescence, thus indirectly influenced G3 orientations. This analysis supports Conger and Dogan’s (2007) integrative model of intergenerational transmission, including both selection and socialization processes.

What's Another Word for “Ruling Relations”?: Translating IE

This presentation highlights the work of using institutional ethnography (IE) in applied health research. I illustrate how my IE study on fetal alcohol spectrum disorder (FASD) both facilitated and complicated the process of knowledge translation (KT). I will discuss this in the context of KT with diverse audiences including community stakeholders, government policy and decision makers, and academics in medicine. It is the work of research to contain and limit the amount of data to collect and analyze in order to keep a study focused. Applied health research also commonly includes KT plans to strategically engage target audiences with meaningful research findings. As an applied health researcher, I considered each primary audience as I decided how and what data to analyze as well as how the findings would be disseminated.

The purpose of this IE study was to examine how institutional supports and services are activated and coordinated around youth with an FASD diagnosis. My study included in two Canadian communities – one remote Aboriginal community and the other an urban provincial capital. In each setting, three distinct community stakeholders were interviewed: 1) caregivers of children with an FASD diagnosis; 2) frontline workers from healthcare, child welfare, education, and social services with direct involvement in the lives of children with an FASD diagnosis; and 3) policy and decision makers who manage the research-mixed front-line staff. In addition to interviews, I collected and analyzed clinical and service-related forms, training manuals, policies and assessments. This large volume of data required focus and prioritization in order to produce results that meet the expectations of my main target audiences: community, government, and academics. I argue that the utility of IE in applied research is only as strong as the ability of the researcher to “speak IE” in a language that can be understood.

The Micro-Politics of Poverty and Inequality: Implications for the Real “Hidden Abode of Production” in South Africa

Almost two decades since South Africa celebrated its political freedom; unemployment, poverty and inequality remain undeniably high. The dominant narrative by most South Africans is “awukho umsebenzi” and “asinalami” – there is no work and we do not have money. South Africa’s transition to democracy in 1994 was thus flawed, as it did not bring about economic emancipation for the majority of its people. More than three in every ten South Africans are unemployed. Neo-liberal policies and the welfare system, aimed at addressing economic failures of the apartheid state, have had limited success.

High levels of unemployment and inequality that followed South Africa’s entry into the global economy have shifted the focus of survival and economic activity from the factory to the household. In the absence of an effective welfare state, the poor have retreated to the household and adopted diverse livelihood activities. Contrary to views held by traditional economics, households are not just places of consumption and leisure but significant places of production and the provision of
services, especially in the context of unemployment and poverty. The household has become the only site of stability for most people as well as their only means of survival—the real “hidden abode of production.” Most households, however, are fragile; they lack resources and are unable, therefore, to effectively alleviate and cushion the effects of unemployment, poverty and inequality.

What emerges, are particular implications for gender relations, gender identities and household dynamics. New patterns of male domination and female subordination intensify, often riddled with conflict. Intergenerational conflict also intensifies in a context where access to income and time use becomes a source of conflict rather than cooperation. Conventional theories of gender relations and households are challenged in this new social and economic context.

Strategic Collaboration As Means and End: Views from Members of Swedish Mental Health Strategic Collaboration Councils

Mental health care professionals are under pressure—both from their own organisations and professions and from external legislation and policy—to collaborate. This article reports the views of collaboration held by influential mental health care professionals who participated in strategic collaboration councils. Semi-structured interviews were conducted with 31 participants in three groups: personal ombudsmen and managers of social care and health care. The participants presented generally homogeneous opinions of collaboration, although they differed in outlook: the personal ombudsmen maintained an operational perspective, whilst the care managers had a more strategic focus. All participants saw collaboration as necessary to a functioning organisation. They joined the collaboration councils expecting to form interprofessional relations that would lead to greater efficiency, better knowledge of other organisations, and professional support. The participants’ adherence to a positive norm, together with further institutional pressures, contributed to homogeneity in the participants’ responses. All guardians of their points of view while collaborating in networks adhering to a social norm. Strategic collaboration was thus both means and end.

Communities in Transition: Security, Policing, Appropriation and the Formation of Community in Inner-City Johannesburg

Johannesburg’s inner-city was once an area notorious for crime, grime and urban decay. It has been described by academics as a ‘vortex of belonging’ (Gott and Simone 2003) and a hyper-ghetto, home to prostitutes, drug dealers, disease and street crime, criminals and their victims (Murray 2011). In recent years, however, there have been considerable efforts to regenerate the urban environment, particularly through the provision of low-income and social housing. These efforts at physical regeneration have coincided with efforts to enhance security in the area as well as foster a sense of community. This presentation examines the relationship between urban social regeneration as well as the practices and methods utilised to achieve these aims. Of particular interest is the relationship between physical and social space and how this structures social relationships and notions of belonging. Furthermore, it explores the ways in which community is formed in a context of urban transition, insecurity and hyper-diversity. Utilising the framework developed by Henri Lefebvre (1991), it examines the perspectives of residents living in the inner-city and the ways in which they are able or prevented from exercising their spatial imaginations and abilities to appropriate spaces in the inner-city and the effects this has on the formation of community and notions of belonging. Particular focus is on residents living in social and low-income housing’s perspectives about what community, security, appropriation and belonging mean in a situation of urban transition, social decay and insecurity, as well as what the limits of community are in these conditions and how these boundaries are drawn and reproduced.

Neoliberal Reconstruction or Urban Regeneration? the Private Sector and the Provision of Low-Income and Social Housing in Inner-City Johannesburg

In academic literature, urban regeneration is more often than not treated as a word-coin for gentrification or dismissed as a term developers use to sugar-coat the commercialisation of space and the destruction of public housing. Reinvestment in urban spaces and public housing is seen as part of a global strategy of capital and both a cause and symptom of the spread of neoliberal politics and practices around the world (Smith 2002). Using the case of inner-city Johannesburg and the provision of low-income and social housing in the area, this presentation argues that more nuanced and contextually sensitive approaches are required. In Johannesburg, the provision of low-income housing has been led by the private sector, who have also taken the lead in the regeneration of the city. However, this has not resulted in a solely revanchist or exclusionary city being created, but has had the contradictory effects of fostering increased social cohesion and meaningful regeneration, whilst simultaneously increasing the cost of land and housing in the area. Utilising Pierre Bourdieu’s notions of field, capital and habitus, this presentation explores the multiple factors which have shaped the reinvestment and regeneration process in Johannesburg and shows how a diversity of outcomes and imperatives are possible and in fact present, even in a context shaped by neoliberal approaches to city-building and housing provision. Cities are part of broader social contexts and milieus and are therefore shaped by competing fields and forms of capital. This presentation highlights the multiple impulses and concerns which have shaped housing provision and reinvestment in Johannesburg’s inner-city and discusses what the effects of these have been on communities living in the area and invites scholars, whilst still remaining critical, to adopt new, more nuanced and context sensitive approaches to questions about urban renewal, particularly in the Global South.

Youth Policy in Ireland and India: A Comparative Study

Youth Policy in Ireland and India: A Comparative Study

Contemporary policy discourse about youth is frequently trapped in the dichotomous paradigm of simplistically portraying them as either ‘a problem’ or a ‘human resource.’ This broadly applies both in Europe and in Asia. However, while significant comparative research on youth, youth work and youth policies has taken place within European contexts, relatively little research has examined the European and Asian contexts, and there is none to date specifically comparing Ireland and India. Based on recently completed PhD research, this paper explores and compares the youth policies of Ireland and India through the analytical lens of Gough’s (2008) ‘five Is’: industrialization, institutions, institutions, ideas and international environment. It examines the major ‘actors and agents’ that have influenced the historical development of youth policies in both countries and situates these in their broader regional contexts.

There are many obvious differences between India and Ireland in terms of location, demography, culture(s) and other economic and social factors. However, there are also significant connections between them, stemming not least from their common colonial experiences, meaning there are important parallels in political culture and public administration. The voluntary sector and its relationship with government agencies hugely influences policy making in both countries (the principle of ‘subsidiarity’ in Ireland can be fruitfully compared with that of ‘Panchayati Raj’ in India). In India, however, there is no forum for NGOs and the government to come together whereas ‘social partnership’ has been central to Irish social policy. In both countries most youth have little or no opportunity to participate in making decisions that affect their lives. Many are not aware of their own rights, or the policies and programmes that affect them. New policy initiatives are underway in both countries, however, which hold out the possibility of redressing this.

Gender Differences in Reactions to Coming out: The Reaction of Mothers of Non-Heterosexual Children and Their Roles

Gender Differences in Reactions to Coming out: The Reaction of Mothers of Non-Heterosexual Children and Their Roles

In a heteronormative society, disclosing one’s non-heterosexuality to others can be very stressful, but it can be heightened considerably when coming out to one’s parents. On the other hand, parents to whose child has disclosed their non-heterosexuality also struggle with feelings of inability to accept their own non-heterosexual child. Coming out thus causes a “family crisis” (Williamson 1998), because family members have to reconstruct a family model which was based on communities living in the area and invites scholars, whilst still remaining critical, to adopt new, more nuanced and context sensitive approaches to questions about urban renewal, particularly in the Global South.

This paper explores how gender influences a parent’s reaction to coming out in non-heterosexual settings. In particular, it discusses how mothers assume gender roles in coping with their children’s disclosure of non-heterosexuality. Data gathered since December 2012 from interviews with family members of non-heterosexuals and observation research at a support group for family members. The
contentions and the potential of contentious politics, in particular subaltern strategies of place based identities from the Global South.

Referring to new challenges in the study of contemporary social movements, Tarrow claims that “To the extent that we have allowed the examples of civil Western movements from 1960s to shape our models, we will not be able to understand them” (2011). The author refers to ethnic wars and terrorist movements, in particular Islamist groups; other movements from the Global South rarely appear as empirical applications of the framework Contentious Politics, but never in the role of challenging it to revisions like Islamists. The thesis of a movement society in two trends, a more contained in the “West”, and a more transgressive in the “Rest”, leaves out many issues around which movements in the Latin America have been contending.

However, attempts to explain the particularities of Latin American social movements have led to the development of specific theories, treating the region as sui generis (Costa 2010). Thus, in the analytical openness and systematic character of the framework on Contentious Politics lie its main virtues: it invites for dialogue and results in a collective process of knowledge construction. It has a serious limitation for that purpose, as Bringel (2011) objects: instead of its claimed epistemological turn, “Contentious Politics” is an ontological movement, a change in what to study (action and structure, relational dynamics by mechanisms and processes). A logical turn is yet to come, by the incorporation of epistemologies from the Global South.

This paper attempts to contribute to this challenge, based on claims raised by Latin American scholars and movements, organized in five elements: the spatiality of contentious politics, in particular subaltern strategies of place based identity building; the commodification and the coloniality of knowledge; the potential of contentious politics, in particular subaltern strategies of place based identities from the Global South.

MOTTA, RENATA* (Free University Berlin, renata.motta@fu-berlin.de)

Contentious Politics and the Global South

When one looks at current figures, in which Brazil and Argentina are, respectively, the second and third world’s biggest producers of genetically modified crops (GM crops of GMOs), the social movement struggles that surrounded and keep revolving around the issue are difficult to visualize. However, the adoption of the technology has been disputed for almost two decades. A major difference was the capacity of Brazilian movements to jeopardize the interests of the pro-GMOs coalition: to have waited for a decade until soybean production had been converted to GM seeds, what took four years in Argentina. This created a widespread recognition of a controversy over GM crops in Brazil, what never happened in Argentina.

There are many other factors differentiating the cases, but also similarities between them. Frames were similar; because movements participate in transnational advocacy networks, where frames circulate. Different from many conflicts in the Global North against GMOs, in these countries there were not only issue-oriented groups, but also identity politics, as peasant movements were important actors. The Campesina frame “food sovereignty” is very prominent.

A major difference lies in the organizational bases and forms for resisting GM crops. The great power of the Brazilian movements lies in the building of a sustained campaign among environmental, consumer rights, agro-ecology, human rights and peasants groups. A coalition was formed with dissident scientists, allies in world agencies and politicians. They engaged in legal mobilization and developed a strong communication front as early as 1999, with a weekly newsletter and a blog. None of these factors are found in the Argentinean case.

The belief that by acting together there was a possibility of affecting social change makes a crucial difference: Argentinean activists perceive more global constraints to their fight, whereas Brazilians perceive more national opportunities to theirs.

MOTTA, RENATA* (Free University Berlin, renata.motta@fu-berlin.de)

Fighting GM Crops in Argentina and Brazil: Global Constraints, National Opportunities?

In Brazil, probably more so than in other countries, sociologists often hold the Comtean opinion that Sociology stands to religion as the positive stands to the supernatural. As secularism so-called, the “holi alliance” of social scientists and cultists, the former often imposing on the latter a kind and subtle theoretical protectorate. Such alliances also exist, in greater or lesser degree, with the Catholic Church (especially with the sectors linked to the theology of liberation) and with the historical Protestant churches. Highly emblematic of this tendency are the graduate programs in “sciences of religion” that have sprouted all over the country and Facebook like sites through which social scientists (who often claim to be believers) and believers (who are at times social scientists) engage in dialogue. Contrariwise, there is in the country a process of open, so far only verbal, warfare between social scientists (again of the highest reputation) and the Pentecostal and other strict community as authoritarian and intolerant of all forms of individual diversity.

MOTTA, ROBERTO* (Universidade Federal de Pernambuco, rrmcmotta@uol.com.br)

The Protestant Ethic Thesis before Weber: Forerunners in France and Brazil

It is well known that the "Protestant Ethic" thesis had existed for quite some time prior to Max Weber's own formulation. Some specific cases of anticipation of the thesis are represented by Émile de Laveleye and Napoléon Roussel, in the French speaking world of the 19th century, and, in the same century, by Brazilian writers Tavares Bastos, E. Carlos Pereira and a certain number of missionaries of English and North-American background who worked in Brazil, like Zachary Taylor and others. Even details of Weber's thesis, concerning, for instance, the emphasis on the consequences of sectarianism ("Sektentum") are present in mid 19th century Tavares Bastos' and E. Carlos Pereira's works (who wrote in Portuguese), or even knew he had existed. While such forerunners do not necessarily reach the same level of theoretical, indeed of theological refinement as does Weber, they view adhesion to Protestantism (albeit, at times, in a rather cultural and secularized sense) as a necessary condition for modernization and economic development. A common source to Weber and, on the other hand, the forerunners, may have been Hegel's Lessons on the Philosophy of History which, indirectly or directly, did not take long to reach Brazil and, of course, France. Weber's own formulation of the thesis seems to represent a largely secularized version of a well known tenet of Protestant apologists. Again in largely secularized terms, this is still, in early 21st century, a fully living, indeed burning issue in both France and Brazil, being but a continuation of the Kulturkampf, the culture war, which has for so long opposed the Protestant and Catholic conceptions of society and modernization.

MOULENE, FREDERIC* (Université de Strasbourg, frederic.moulene@voila.fr)

The Challenge of Sociology of Language: Living in Society, Living with Words

Nowadays, « sociology of language » is explicitly identified in the research groups within the I.S.A. although the sociological associations all over the world don’t seem to have equivalents at their national extent. Alongside, this domain of sociology has an uncertain situation within the university systems: few scholar jobs and chairs, research programmes, articles and books are clearly dedicated to « sociology of language ». The cause is probably that it is difficult for sociologists to work on language even though by definition, linguistics is a specific disciplinary field aimed at investigate language. Moreover, linguists have developed their general framework from the canonic principles of Sausser for whom language has to be studied beyond the social context ; it is significant that a scholar as influential as Thomasy still follows the « saussurean dichotomy » and considers speakers as basically identical and interchangeable. For their part, sociologists usually keep language questions out from their study domain. Thus, they forget that society is spoken by the individuals and with all the words they have learnt by living and doing; moreover, since Austin, we know that it is often as long as certain things are told that they can perform, change the reality. So, knowing that each science tends to consider its object of study as its exclusive preserve, sociology of language is an academic challenge. However, it is worth the effort because social
realism is always something we reach with language (that is socially constructed) – how could we do things to each other without words? Do we need an autonomous sociology of language indeed? Or should we try to persuade the sociologists that all sociology is inevitably a sociology of language (in the same way, for Labov all linguistics is necessarily social)?

Homogenous or Not?

Abstract: This research contributes to the debate on Japanese media homogeneity by demonstrating that anti-nuclear editorials exhibit more diversity than homogeneity overall for the period from 1954-1970. Several observers have noted that Japanese citizens have been divided among those who support nuclear arms and those who oppose them, and that Japanese newspapers have published a wide range of editorial positions along a progressive-conservative and universalist-particularist continua. This study examines the extent to which this diversity is evident in the content of Japanese anti-nuclear editorials.

The Efficiency of Exclusion: Gated Communities, Informality and Social Mobilization in Mexico City

This paper analyzes the double-edged meaning of informality at the intersection of urban inequalities, landed property, and power in urban Latin America. Our study of the Zona Poniente in the fragmented western periphery of Mexico City allows us to identify situations of social interaction in which the narrative use of informality is central to social and cultural distinction. We find that the standard story – and a compelling story of racialization and class identification – is one where the use of informal or marginalized classification units the local elite and community against the perceived informality of the local elite and community. Fieldwork in this peripheral, fragmented and contrasting area provides insights into the link between informality and exclusion on various levels. Firstly, the self-enclosing of the urban elite in “gated communities” is a result of normal moral principles of negotiation between public authorities, neighborhood organizations and real estate developers. Secondly, the spread of such First-World urbanism has negative effects on social and physical mobility of the dis-enfranchised urban population living in deprived islands surrounded by the defensive walls of gated communities. Thirdly, our fieldwork allowed us to identify diverse types of interaction between these two private urban development structures and surround marginalized settlements. These interactions, ranging from conflict to alliances, suggest to question the hypothesis of a generalized confinement.

MUELLER, GEORG* (University of Fribourg, Georg.Mueller@Unifr.ch)

Network Analysis For Discovering Political Conflict In Standardized Interviews

This paper proposes a new usage of standardized interview data: instead of studying contingency tables of individual attributes, the author suggests to analyze the hidden, implicit network structures among the respondents of these interviews. The proposed analysis is based on the idea of virtual encounters between survey-respondents, which allows to identify relations of conflict or consensus between dyads of persons. The relational information gathered this way can easily be complemented with additional survey-data about the social attributes and the group-membership of the persons representing the nodes of the analyzed network. Hence it becomes possible to calculate inter-group conflict of different status-groups and to compare it with their intra-group conflict. Similarly, by looking for isomorphic coincidences of different types of network relations, this kind of analysis may also be used to identify reinforcing social cleavages.

A standard survey has generally about 1 to 2 thousand interviews, which corresponds to a universe of 0.5 to 2 million possible dyads of persons. Hence, the analysis of virtual network structures requires to focus on samples drawn from this universe. Consequently, this paper also describes the construction of such samples by presenting an exemplary analysis of the European Values Study (EVS) 2008. Among others, this survey contains a political self-evaluation on a left-right scale, which is used in the example for the construction of relational arcs of conflict and consensus: dyads of persons with both a leftists or both a rightist political orientation are linked by a relation of political consensus. Other dyads with very different positions on the left-right continuum are similarly linked by relations representing political conflict. Hence, by this exemplary analysis it will be possible to assess, how much different income groups (classes) are politically polarized and how much consensus there is within each of these groups.

Active Citizenship and Rights Awareness Of Roma In The Czech Republic

The goal of this paper is to question the reasons for low participation rates of the Czech Roma in political and civil society organizations considering such participation is theoretically perceived as crucial for excluded minorities’ empowerment. Issues related to active citizenship and rights awareness are somewhat low on the public agenda compared to other themes of social inclusion. Although most Roma face discrimination, there is no mobilization process that would lead to significant empowerment when it comes to political or civic engagement. The Czech government in its annual Report on the State of Roma Community in 2007 defines as one of the 3 priorities of Roma integration the human rights dimension focused on equality and protection from discrimination. However there have been no Roma political parties either in national, regional or local elections therefore there are no Roma representative in the Czech Parliament or any other elected body. Furthermore, the Czech Statistical Office does not desegregate votes by ethnicity, so it’s not possible to say how many Roma vote and for which political parties. However, there have been rumours in media about Roma selling their votes to some parties. Such rumours have not been confirmed before the court but further damage the public image of Roma and possibly discourage their participation. There are 52 civil society organizations concerning in various ways Roma related issues. It is hard to divide them into Roma and other civil society organizations since often bigger civil society organization have special Roma programs and often employ Roma. It’s noteworthy that Roma organization the Association of Roma in Moravia came out of a Roma political party, the Roma Civil Initiative. There are other Roma organizations in the field of media and culture.

Segregation Of Roma Children In The Czech Educational System

One of the most serious forms of discrimination in the CR is the discrimination against Roma children in primary education. Despite conclusions by the ECHR from 2007 in the case of D.H. vs. CR, which stated that there was discrimination and a violation of the right to education of the Roma children by placing them into so-called special (currently called practical) schools, a third, and in some municipalities one half, of Roma children in fact receive education in these type of schools. The Concept of Roma Integration adopted by the Czech government also includes the removal of obstacles in regard to Roma children’s access to education and social inclusion. However, due to the segregation of Roma in education, the CR is continuously criticised by international institutions but, despite this, no efficient regulation has been adopted to remove this type of discrimination. The Czech Ombudsman concluded that the disproportionally high number of Roma children who are placed in such schools based on recommendations of the school counselling institutions, without being diagnosed with mental disorders, is indirectly discriminatory. Due to the segregation of Roma in education, the CR is continuously criticised by international institutions but, despite this, no efficient regulation has been adopted to remove this type of discrimination. By analyzing governmental policies, the psychological tests, which are used in such education and by analyzing the expert’s opinions, the author seek to change the discriminatory practice. I hope to explain in this paper how it is possible in the EU context to carry on with detrimental and costly policy of exclusion of some
of the Czech citizens from the education process and what are the main consequences of such approach.

MUIR, KRISTY* (University of New South Wales, k.muir@unsw.edu.au)

Perceiving, Managing and Negotiating Risky Behaviours from Adolescence to Early Adulthood

Young people's transitions from adolescence to adulthood are individualized, risk taking is normalized, and individual choices, behaviours and actions can have significant implications for future social and economic outcomes (Berk, 1992; Giddens, 1991). Yet young people's choices and behaviours are also set within and influenced by their peers, families and communities (Bronfenbrenner, 1986, 1977).

While previous research has examined risk taking behaviours of young people and the influences and drivers of these, we have a limited current understanding of how, why and under what circumstances young people from different family, community and economic contexts negotiate and make decisions about risky behaviours and who and what they draw on to make these decisions. Based on an Australian Research Council grant, this paper uses Australian Bureau of Statistics data and interviews with 70 young people from different social, economic and community contexts across Australia to understand how young people define, perceive, manage and experience risk taking behaviours and the supports and resources they draw on in making their decisions. Using an ecological framework, this paper aims to identify areas of support at the kitchen, community and policy tables that may assist young people in negotiating risk as they move through adolescence to early adulthood.

MUIRHEAD, BRUCE* (University of Waterloo, muirhead@uwwaterloo.ca)

Losing Control in Western Canada: Private Equity Firms and Land Purchases

My paper will investigate the changing nature of land ownership in Western Canada. This is occurring largely because of the activities of Canadian private equity firms in purchasing vast tracts of farmland as investment properties, and the consequent social and economic transformation that is happening among the rural population as their lives are affected by it. These are striking developments whose effects remain largely unknown and unstudied given that the practice was non-existent in Canada five years ago. However, they have the potential to fundamentally alter the relationship of people with the land. What will be the medium and long-term effect of this development on agriculture in Canada? Is there a transfer of ownership and control of farmland in Canada, with the resultant loss of community, culture and food supply, and a deteriorating environmental and ecological condition? What effects, if any, will this have on land quality, use of resources and food security?

While private property is strongly engrained in the socio-cultural experience of farmers, as well as corporations, their definitions of property collide when those of the former relate to identification of time and place and those of the latter relate to profit and exploitation. Is it the case that the cultural, spiritual and social importance of land to individuals is often ignored when the value of land is determined? Through an analysis of federal and provincial policy, examining the content of interviews with farmers and politicians from both levels of government as well as with farmers and senior management from private equity firms, and an evaluation of industry documentation, my paper will seek to answer the questions posed above.

MUIRHEAD, JACOB* (McMaster University, muirhej@mcmaster.ca)

The Democratic Deficit: The Rise of Private Agri-Food Standards in the Global South

The past few decades have seen a tremendous expansion of private authority in global governance. The agri-food industry has become increasingly privatized in its production and governance. Illustrative of this point has been the declining authority of public international bodies such as the UN's Codex Alimentarius in the governance of agriculture. These developments are the result of a normative shift from government to governance. Such trends have proven particularly hard hitting agriculture in the Global South, where numerous experts have documented, for example, the impacts of cash-crops for export, land grabs and agricultural speculation on the most disadvantaged.

My presentation will examine the development of agricultural standard setting and certification as a case study of private agricultural governance. Using GlobalGAP, a business-to-business standard setting body, the paper has two purposes. The first is to use private certification and standards to highlight the very real and harmful impacts private regulatory developments are having on poor agricultural suppliers in the global South. This will be done predominantly from a governance perspective. The second is to explain the broad-based shift toward a preference for private governance that has occurred within agricultural governance over the last few decades. In particular, I will examine the ideas and logic of neoliberalism and globalization frequently used to justify this shift.

By addressing the impact private regulatory standards have had on suppliers in the global South the presentation will also indirectly focus on a number of theoretical questions revolving around globalization and global governance. These include questions regarding the arrival of new political actors as key regulators of global industries; the role of the state and public regulation in agricultural global governance; and the ability of private actors to govern in the interests of mind in the broader public and the disadvantaged, in particular.
firms, focusing on the role of two professional groups—corporate social responsibility (CSR) and investor relations (IR) managers. CSR managers have made the case that the CSR performance of Japanese firms lags behind that of their global competitors because of their failure to address the historically low level of gender diversity. In cooperation with IR managers, they have theorized its economic benefits, by arguing that improving gender diversity can send a positive signal to foreign investors. This constructed advocacy of gender diversity by foreign investors has substantive changes. Using panel data on more than 800 major Japanese companies from 2001 to 2009, our analyses show that foreign share ownership and the within-firm influence of CSR and IR managers significantly improve gender diversity, especially at the board-director and managerial levels. By emphasizing the role of professionals in translating global standards into local contexts, our study makes a contribution to understanding the role of local actors in generating variation in the outcomes of global diffusion processes.

RC36-624.1

MUNIA, RAFAEL* (Waseda University, ndebud@hotmail.com)  
Resistance or Alternative Alienation?

This paper has the goal of discussing how the political project of Japan, based on its ideology of homogeneity, alienates the Japanese youth, limiting their individualization processes to, instead, focus on a single model of Japaneseness. Through some narratives examined, the Japanese youth showed to be sensing a lack of possibility to fit in society. When analyzing the societal structure in Japan, the rigidity of its job-hunting system, the curriculum of homogeneity and individuality suppression that begin in the school and echoed in society, the rigid gender roles presented in the classrooms and companies; the work culture of permanent availability to the company, all become apparent as the sources of the lack of belonging perception amongst the youth. Since there is a lack of structural change, the youth produce narratives of escaping this hegemonic Japan, adopting strategies of marginality (NEET, Freeker, and some counter-hegemonic sub-cultures); or even strategies of actual escape (prioritizing non-Japanese firms to work, or seeking for opportunities to live abroad.) This paper, thus, argues that these strategies come from a feeling of alienation and purposelessness, linked to the hegemonic Japanese society. However, through the study of the phenomenon of Visual Kei, narratives of individuality and subjectivity can be composed and professed, both by language as well as by behavior and appearance. Through Visual Kei, it is argued, Japanese youth find a way to resist the oppression of their individuality in the name of the group mentality and the ideology of harmony that causes a lack between what the youth is made to achieve, and the impossibility of fitting this commodified life with no appeal to individuality. However, such communities of resistance bring forth new cases of alienation and normativity that operates in addition to the ones from everyday life.

The Effect of the Great Recession on out-Migration Self-Selection of the Foreign-Born

The scientific literature on the permanence of immigrants in host countries has faced the empirical challenge of measurement and characterization. Along this line, research on the impact of self-selection is crucial for a better understanding of international migration and assimilation process in the host countries. In this paper we present a comprehensive empirical analysis on the (re-)migration of foreigners in Spain. Using panel data from the Spanish Labor Force Survey we explore the relationship between out-migration patterns and the labor market situation. We focus our analysis on the self-selection process of out-migration and its change with the economic downturns. To model out-migration patterns we estimate a detailed event history analysis. Our findings confirm results from previous studies. Preliminary analyses reveal that the likelihood of leaving the host country is strongly determined by family configurations and the labor market situation of household members. Those who are unemployed have a higher probability of out-migrating, especially when other incomes are absent in the household. The findings also show differences with respect to national origin, sex, and education levels. Moreover, we show that the less successful foreigners (in terms of labor outcomes) have a higher probability of leaving the country. Surprisingly, its intensity is weaker during the Great Recession than during the expansive economic period.

MUÑOZ COMET, JACOBO* (UNED, jcomet@poli.uned.es)  
The Impact of Unemployment on Temporary Workers. Why Foreigners Are Most Vulnerable during the Great Recession?

The current economic crisis is having a strong impact on the whole society in all developed countries, but especially on vulnerable groups such as immigrants. The case of Spain is unique and at the same time remarkable for three reasons.

First, because of its high unemployment level, well above those of other countries in the OECD. Secondly, because of the strong incidence of the temporal rate, with levels close to 30% since the first Labor Reform in 1984, and third, for the extraordinary inflow of migrants in the first decade of the XXI century, representing a foreign population of 3,6% in 2000 to 14% only ten years later.

This paper aims to examine to what extent nationality influences the risk of job loss among the most precarious workers, in particular those with a temporary contract. This study seeks to test the assimilation thesis in a segmented labor market during a recessionary economic period. To do this, panel data from the Spanish Labor Force Survey (2008-2010) are used. Analyses based on logistic regressions show that some differences in the socio-demographic profile contribute to understand the initial disadvantage of immigrants. However, controlling for education, time of residence in the host country and tenure does not fully explain the gap between groups. Only after taking into account professional status (occupational level and sector), we can understand their disadvantage since the collapse of the economy. The results of this study show that immigrants are harmed twice. First, by their greater propensity to hold fixed-term contracts; and second, and above all, because the nature of their temporary contracts is associated with activities related to low-skilled jobs and seasonal work, typical in sectors like construction, agriculture and tourism. It seems that the precariousness faced by foreigners is chronic rather than a step towards more stable jobs.

The Influence of Linguistic Inequality on the Vitality of Two Otompaname Languages of Mexico: Chichimeco Jonaz and Tlahuica

In this paper we explore the influence of linguistic inequality on the vitality of two related Otomapaname languages spoken in Mexico, Chichimeco Jonaz and Tlahuica, both of which are endangered languages being displaced by Spanish.

First, we compare the similarities and differences in the social, geographical and historical contexts of the two languages. Then we apply international criteria found in the UNESCO Vitality Index which determines degree of linguistic vitality in order to analyze and compare the use of Chichimeco Jonaz and Tlahuica. Finally, the role of language ideology as shaped by Mexican political economies and their institutions is touched upon. How changes in language policy have influenced language maintenance and shift is also discussed.

Japanese Food: An Analysis Of Culture Through The Values Derived From Attributes

The Japanese culture has expanded its horizons in many countries and regions. In special, Brazil, where the Japanese immigrants Represents the second biggest Japanese descendent group out of Japan, its values and habits has an important presence in Brazilian territory. One of the important aspects of this culture is the Japanese food. The research applies the methodology of Theory of Means End Chain - MEC. Within this perspective, product attributes allow the consumer to achieve certain benefits that are linked to a higher level, allowing the ranking of personal values. The latent values cause consumers to recognize products that lead them to achieve their goals and desired end states. Thirty in-depth interviews with consumers of Japanese food were made between the months of November 2012 and April 2013. The ladderizing technique is applied, using personal interviews, with questions that express the goal in a game of links between perceptive elements. This technique is based on the implications glimpsed in the Theory of MEC, with the central concept of 'ladder', exploring three levels: attributes, values and consequences. This technique provided the construction of an implication matrix and the hierarchical value map, to confirm the main elements of such behavior. The survey results showed, among consumers, values such as openness, exciting life, satisfaction, pleasure, happiness, self-esteem and affectionate relationship. These values suggest an alignment with the Japanese culture mainly happiness, affection and friendship relationship.

Local Policing in the Global City: Community Safety Development in Tokyo

In large Global Cities, the ‘command centres’ of the global economy, most aspects of everyday life are subject to surveillance. Forms of Neoliberal urbanism have spread public space video surveillance, homogenized theme-park malls, gated private apartment blocks suburbs and exclusionary policies towards urban others: the homeless, undocumented migrants and so on. I have labeled this as a globalizing form of technocratic surveillance, however in previous work on Tokyo, one of the preeminent global cities, I have argued that in the Japanese capital, particularly in a large traditional outcaste population, and two middle-class suburban areas.

It analyzes the different community-based initiatives that have emerged in each area, their compatibility with and connections to central political initiatives, and considers what combination of local or global forces are the predominant drivers in emerging crime prevention policies and practices.

Meaning and Frame Resonance in the Linkage of Social Movement Groups - Comparing Three Mile Island and Fukushima

This study examines why some social movement groups successfully create linkage while other groups fail to do so. Past studies of the development and growth of social movements have provided an explanation from a view of structural and cultural factors. The former theory explains the linkage from existing organizations or networks; the latter employ such concepts like framing, emotions, collective identity, ideology, symbols, and themes. Comparing the anti-nuclear movement that occurred following the 1979 Three Mile Island nuclear power plant accident and the 2011 Fukushima nuclear power plant accident in Japan, this study explores the preconditions and conditions with which multiple movement groups create linkages. In the 1979 campaign in the USA there was a successful linkage between the national movement organizations and the local movement groups, whereas in the 2011 campaign in Japan, such linkage did not appear to be established. The results of the analysis suggest that a successful result is based on the linkage between movement groups and for such resonance to occur I emphasize the importance of meaning. Frame resonance is necessary to establish the linkage across social movement groups, and to attain the resonance the convergence of meanings each participating group attribute to their activities is necessary in addition to conditions laid out by framing theory. Following the understanding developed in the area of framing theory, I argue that the establishment of such a linkage heavily depends on the extent of frame resonance and that frame resonance is attained through the convergence of meanings attributed to the actions taken by respective movement organizations and groups.

"Table of Contents"
There Are Few Cases Around Here: Structural Problems of the Japanese Nuclear Compensation Scheme

The Fukushima Daiichi Nuclear Power Plant accident resulted in mass evacuations and a large number of people being relocated. As a result, 1.5 million people were employed at the time of the interview and were working in traditional roles. All interviewees were holding high degrees of education and employment. The nuclear ADR was designed to handle the specific precariousness of knowledge workers. How much does educating them about the expected amount depend on their educational attainment but not on their actual benefits? In various sociological theories the effect of education on male fertility is more important, despite the fact that is often the opposite of what it is for women.

Effect Of Men's Educational Attainment On Their Fertility

We are interested whether the effects of men's educational attainment on their fertility diminished over time across welfare regimes and by partnership types. Some research questions will be under study:

- What is the effect of educational attainment on men on their fertility? Is it different for men in consensual unions and in direct marriages? In which national context men's fertility level specific to consensual union may be close to the total fertility rate of married fathers? Our hypothesis is that, in gender egalitarian societies, with more similar gender equality across welfare-state institutions, the total fertility of men (and women) depend less on their educational attainment but more on the type of union patterns. In more traditional societies the effect of education on male fertility is more important, despite the fact that is often the opposite of what it is for women.

Interlocking Directorates and Transnational Corporate Political Unity

The extent of a dominant transnational capitalist class hinges on whether members of the global business community tend to act in a unified manner. Research on corporate political behavior within a national context indicates that formalized ties in the business community, such as those formed by interlocking boards of directors, function to facilitate unified political behavior by the corporate elite. However, due to differing national identities and class interests within the global business community, the effect of transnational interlocks on political unity is unclear.

Combining data on political contributions to U.S. candidates with information on board of director interlocks among the 500 largest corporations in the world between 2000 and 2006, I test the effect of transnational interlocks on business cohesion. I find that the more connected two firms are through the transnational interlock network, the more unified their political donation patterns are. In addition, I find evidence that suggests that a transnational class-wide rationality is becoming more prevalent in the interlock network, to the point that the group G500 firms that are connected to each other through the transnational interlock network exhibit political unity comparable to that of the U.S. capitalist class.

NGO's and New Trajectories of Engagement and Youth Power in the Occupied Palestinian Territory

Youth civic and political engagements are not distinct or separated from each other, and in many cases they overlap and interlink, they result in diversity of youth engagement forms. Youth organizations play an important role in the occupied Palestinian territory (oPt) in terms of being a reource, catalyst, and supporter for youth engagement, whether civic or political. As youth organizations were trying to cope with changes of sociopolitical context in the oPt, they reinforced different trajectories of engagement than the ones that existed within the Palestinian society between the 70s' 80s' and early 90s'. The organization's type (Social movement organization, politically affiliated organization, youth development organization) is a vital factor in deciding how the organization dealt with changes in the context and the frame and trajectory of engagement reinforced.

This paper aims at understanding the change in the trajectory of engagement in the oPt; how does it differ from the trajectory of the engagement that took place between the 70s' and early 90s'? How do different types of organizations provide different strategies, forms, of youth engagement?

Tweets As Democratizing or Reinforcing Existing Inequalities?

Social media platforms including Facebook, Twitter, and Tumblr, etc. have become more ubiquitous. Sociology is well-positioned to explore the power and influence of social media economically, politically, and socially. This paper is particularly interested in gauging the value of the Twitter community and whether tweets can be a democratizing force or usually reproducing current social hierarchies and inequalities. The social media website Twitter has been prominent in the recent past, such as the Arab Spring. This paper begins by presenting a review of the literature regarding Twitter and social inequalities. It uses tweet data from June-July 2013 to classify sentiments which are associated with agency and lack of agency to draw macro-conclusions of whether aggregated tweets can be seen as generally empowering or not as an overall corpus of text. The paper provides an empirical answer to Twitter's role in influencing global inequalities, a claim often made in popular media. The paper ultimately concludes that though there are limitations in automated sentiment analysis, interesting patterns of perceived agency against inequality do emerge.

Position of Women in Sociology or Female Founders in Sociology

Sister's founders in sociology as a coin term are formed by Mary Jo Deegan, in order to explain, demarginalisation of female stream sociological theory. Even though there are more than 52 women considered to be founders of sociology, they are still not recognized in sociology, especially in Bosnia and Herzegovina. Aristotle's distinction between male/female, according to authoress Shipley, represents the key moment to ideological foundation of the women exclusion from academia and public life, because their identification with natural and irrational. Results of Wars, global ecological movements, and movements for the rights of the minorities were joined together in creation of significant subversion and counterpart of male stream patriarchal ordained theories in eco feminist movement. Many The women and nature in male stream theories are considered to be the insignificant Other, formed as counterpart for male principal which is culture, religion and activity. Logic of democratizing versus its objection, imperialism, colonialism, patriarchy and European West racism must be rendered with the logic of nurturing as the prevailing concept of successful bioregional cooperation and interpersonal relationships, pacification and peace agreements. Key terms: logic of dominance, logic of care, malestream / femalestream, independent man vs. independent women, Aristotle's misogyny.
Language Shift and Maintenance of Tamil Language in the Malaysian Multilingual Context

The prevailing multilingual situation of Malaysia reflects the gradual shift in the use of minority languages like Tamil, both in formal and informal domains of language use. This shift is necessary for language shift to take place language maintenance, and one such is the existing power that goes with language(s). How far language attitudes, linguistic views and power based policies will foster the use of concerned languages for the benefit of society at large is indeed a challenge and seems to be a question mark. The Malaysian Tamil society is gradually shifting in languages like English and Bahasa Malaysia as media of instruction to achieve education needs in different disciplines of knowledge, considering the modern economic-scientific and technological – occupational-de mutually on inter-community. This kind of communities are often called homophilically, then they form diverse communities. Actors are often familiar to theoretical model to explain network formation, however they assume homogeneous

Facing the Inequalities in Integration and Reintegration: Indonesian Children of Migrants in Japan

Facing the Inequalities in Integration and Reintegration: Indonesian Children of Migrants in Japan

Successful reintegration into the host country begins in the host country (Kathleen Newland and Aaron Terrazas, 2009). Children are usually not reckoned as vulnerable when migrating with their family. Parents and common people often think that moving temporarily to a developed country will give no distress. However, they have problems in the integration and reintegration. Indonesian children of migrants have to encounter challenges and inequalities when practicing cultural and religious norms in a country where those are different or do not exist. The interview with Indonesian moslem children revealed a fact that they felt a little “different” when their Japanese friends asked about why they were fasting. Meanwhile, in the reintegration, most of them experienced the phase of silence when they did not feel belong to the society while they know they should. One respondent had experienced an unsuccessful reintegration when his school became one terrifying place because he was bullied for his unreadiness to face language and cultural challenges. He remains friendless until now. In the findings, it is revealed that parents usually claimed that there were no significant problems in both phases. They were all worried only about getting a school and financing the children. While, some children showed the opposite behaviors, telling that their parents did not know their feelings. Some even felt traumatic in migrating to Japan. All children deserve to have a safe place wherever they are in the world. This issue should be well-addressed by parents, schools both in Japan and Indonesia, and endorsed by the government policies to properly support these children in undergoing the adaptation phases, especially the underestimated reintegration.
ership with a call for parliamentary democracy. Fourth, the ‘democratic socialist’ vision which sets as its goal a political-economic model which is based on both egalitarianism and constitutionalism.

It is concluded that all of the four visions enjoy sufficient support among different social classes and interest groups to stand a realistic chance of becoming dominant in shaping Chinese capitalism over the next decades: While the two first visions describe a current split within the Party-state elite, the two latter visions represent two different political-ideological shapes for a potential counter-hegemonic social movement from below.

A Transnational Movement In Local Context – The Occupy Movement In Germany

The Occupy movement was a global phenomenon. After the advent of Occupy Wall Street (OWS) occupy camps mushroomed to other, in particular western capitalist states. The starting point of our own empirical research was the question, who participated in the Occupy movement. In our contribution we would like to present findings from an online survey of the Occupy movement in Germany. Carried out in autumn 2012 the study is based on more than 1000 voluntary participants (activist and sympathizers) of Occupy – it was announced through the channels of the occupy movement, Facebook and Twitter.

In our analysis we differentiate between three different groups: (a) Campers, the core activists of Occupy, (b) activists, who have been active in the camps and participated at demonstrations, etc. and (c) sympathizers, who have a predominantly positive attitude towards the movement, shared links, etc. but didn't participate in physical actions. We present empirical results for these subgroups about their class/labour market position, their financial situation, their education degree, their (material and post-material) values, their attitudes towards work and society and their forms of critique of the financial crisis. We present both a narrative analysis of the development of Occupy in Germany and an analysis of the political, social, temporal, and spatial aspects. This includes an overview of the specific frames of actions and a field analysis of other groups involved in the protest, media coverage and the advent of "Blockupy", a broader alliance of left wing groups, trade unions and Occupy activists. Thus we analyze the German Occupy movement in two ways: Firstly, we compare it to the empirical results of the OWS-research by Milkman et al. (2012). Secondly, we compare it to the social and political patterns of other recent social movements in Germany.

Reinterpreting the Relation Between Motherhood and Paid Work: Second Generation Women in Norway

A pertinent question in contemporary Europe is whether the children of migrants will reproduce the so-called traditional gender arrangements and ideals of the migrant generation, which often include strong expectations that women should prioritise family obligations over the pursuit of paid work. This article analyses the cultural and moral understandings at stake in second-generation women’s reflections on and practices of combining motherhood and paid work, and explores the space for negotiating such understandings in the family. The study is based on in-depth interviews with second-generation women born to Pakistani immigrants in Norway, and interviews with some of their husbands. The findings show that the moral understandings and practices of the parent generation are not merely passed on to the second generation; rather they are challenged and reinterpreted in ways that support mothers’ participation in paid work. The article argues that this change is facilitated by the cultural and institutional context that the Norwegian welfare state represents.

Music As Youth Culture: Case Study in Japan

The objective of this report is to discuss how Japanese young people relate to music based on "A Generational Comparison Survey on the Lifestyle of Urban Residents and Their Sense of Awareness," a survey of young people (age 15–29) and middle-aged people (age 30–49) conducted by the Japan Youth Study Group in 2012.

Globally, circumstances surrounding music have drastically changed since the advent of the Internet, continuing to push compact disc sales down. This fact is often interpreted as young people's trend away from enjoying music in Japan, where many people believe that music is something for young people. The survey results indeed show such a trend. However, our data indicate that this trend away from enjoying music is observed not only among young people, but that it is particularly pronounced among middle-aged people. Therefore, I suggest that as people age, they tend to enjoy music less.
Obviously, many young people are interested in music. However, it is not their level of interest in music but the length of time they spend with music that has the largest impact on their musical behavior. This is supported by the fact that Japanese young people are often willing to use music as a communication tool.

Focusing on this fact, this report discusses what music is all about for young people and how young people relate to music—how music affects their everyday lives, self-consciousness, and relationships with friends.

Poverty and Mental Illness in People Excluded from the Labor Market in Japan

The unemployment rate in Japan remains at around 5%, with the proportion of the long-term unemployed higher than in other OECD countries. Our objective is to examine whether and to what extent labor market exclusion is associated with poverty and mental health, using data from the 2004, 2007, and 2010 Comprehensive Survey of Living Conditions. First, we categorized jobless people as "job-seekers" who have a desire for work, do not seek a job, and "jobless people who do not desire work." Then, we compared the economic and health conditions of jobless people to those of working people.

The main findings are: First, the proportion of jobless people who have a desire to work has increased from 2004 to 2010. Compared to job-seekers or working people, these jobless people tended to be single men and married women. Meanwhile, jobless men and women had a desire for work if they were younger and had smaller savings. Second, in 2010, male "jobless people who do not desire work" were the most likely to be from a single man's household. For women, however, "job-seekers" and "jobless people who have a desire to work" were more likely than those in other categories to be poor or suffering from a mental illness.

In conclusion, we found that being jobless may increase the probability of poverty and mental illness, even if employment is not being sought. Furthermore, we speculated that even if men neither search for jobs nor have a desire to work, they are not necessarily satisfied with their lives as jobless, and therefore might be socially excluded. However, this is not true for women as Japanese society is based on a strong male-breadwinner model. Therefore, the meaning of being jobless differs for men and women in Japan.

Political Coverage of Japanese Newspapers in Brazil

Today in Brazil, there are several presses written in foreign languages directed to immigrant communities which appeared in the history of the immigrants. Which characteristics are present in those minority's medias? This work focuses on explaining activity of Japanese newspapers in Brazil, which are written in Japanese for the Japanese immigrant community and published in São Paulo, the most important city of Japanese immigration in Brazil. Generally, these ethnic medias for minority community have tendency to seek and keep traditional values and culture. However, it is interesting that these Japanese newspapers in Brazil report not only culture events or education's subjects, but also frequently political subjects. In the political subject, they report especially activity of Japanese descendant politics from the Japanese immigrant community. This work tries to describe the political coverage of the two Japanese newspapers, Nikkey Shim bun and São Paulo Shim bun, and to analyze that comparing with immigration's history and context of immigrant descendant's advance in the Brazilian politics. Qualitative content analysis was adapted to analyze the articles. We conclude that during the political subjects, these newspapers represented some subjects with a favorable way to Japanese descendant candidates and showed guidance to vote on them by the journalistic persuasion, especially guiding the readers to concentrate their votes on some specific candidates to elect them with enough votes.

What Is Social about the Network?: An Analysis of the Application Program Interfaces of Popular Websites

API (Application Program Interface) is the method of continuous asynchronous sourcing of data between various applications. It facilitates exchange of data between "the networked network" by examining at the nature of the data extracted by the API and its use of the data in defining the utility of the 'application' we can produce a critical appraisal of the nature of the techo-social interaction afforded by the 'networked/networking' society.

The promise of communications technology among other things is the democratisation and the user defined nature of interaction of players constituted by it. But the use of 'bubble' (Pariser, 2011) produced in the human-computer interaction to fashion online activities alerts us to a bias in the nature of such interactions while enforcement of technologies like unique identity based governance systems further complicates the digital divide bringing up the question of equality.

The paper is based on the analysis of API codes and its mechanisms, offered by Google, Facebook, Twitter and YouTube. The analysis looks into the nature of the 'bubble' generated in order to define the character of the network. This is in a bid to argue that the randomness promised by it is being reined in order to create patterns of interaction that are arbitrary and unequal compounding the problems experienced in infrastructural access and the lack of 'cultural' capital.

Technology is best analysed in technological terms in order to arrive at an understanding of its sociological dimensions. Such orientation is politically necessary to make apparent the the hardwiring of inequality in the era of big data.
by analyzing what determines “what amount of income people think that they should earn.” To be more specific we investigate whether actual income gaps between social groups such as gender, those with different educational levels, occupations and employment status, are reflected by Japanese perceptions of ‘just income gap’ between these groups. As a result, we find that gaps of perceived appropriate income between different employment statuses and between different firm sizes are larger than actual income gap between these groups. Furthermore, employment status and firm size play more, or at least equally, important roles than occupation. It shows that Japanese people assume disproportional distribution of income according to firm sizes and employment status is more legitimate than one according to human capital.

Leisure and Mental Health: Sociological Study Of Women Experiencing Leisure During Their Mental Illness

This paper reports the findings from interviews with 194 mentally ill women who are seeking treatment in government hospital, Gurgaon in Haryana State, India. The respondents were questioned about their participation in leisure activities, and also about the overall experience of leisure activities. The results show that the women behave this way in community is not a part of their routine activity and hence they do not get benefits of leisure in their mental and physical health. Further, respondents reported that leisure activities gives feeling of physical and mental health and also provides experience of pleasure and freedom. It is argued that, contrary to the notion that leisure helps in maintaining good physical and mental health, doctor do not insist on participation in leisure activities. It is concluded that leisure and mental health are all embedded in the surrounding social contexts and, indeed, that leisure activities in general are inextricably entwined with their boarder cultural and structural context.

When Poverty Alleviation Perpetuates Inequality. Struggles of the Poor in Johannesburg Post-1994

Although the institutions of apartheid began to be dismantled in 1994, South Africa still bears the scars of inequality and poverty it etched so deeply along the fissures of race, class and gender. Although the African National Congress (ANC) government has committed itself to eradicating poverty and ensuring “a better life for all”, it has also embraced an approach to macro-economic policy largely neoliberal in character that has resulted in the enforcement of the duty to pay for basic utilities (water and electricity) from private renters is generally poor. This is mainly due to their negligible security of tenure and their security of tenure is guaranteed are able to lead a decent life older public housing tenants because their rent is fixed at 25 per cent of their income and their security of tenure is guaranteed are able to lead a decent life and their subjective well-being is high. However, the subjective well-being of older private renters is generally poor. This is mainly due to their negligible security of tenure and the high cost of their accommodation.

NAIR, MANJUSHA* (National University of Singapore, manjusha@nus.edu.sg)
A Labor Time Bomb? Workers’ Unrest in the Automobile Industry in India

In the Suzuki-owned Maruti-Manesar automobile plant in Gurgaon near New Delhi, in 2011, striking workers immolated a human resource manager. These migrant workers, who were employed informally in the formal industrial sector, demanded the right to represent themselves through independent unions. The insurgency has been one among a series of protests in the automobile sector in India, starting with the contract workers strike at the Honda plant in 2009. In Piracic, an auto part plant of the Toyota in Combarobe, and in the Graziano Transmission unit at Greater Noida, the vice-president and CEO were killed by agitated workers. Bloomberg news termed these protests as evidence to a ticking labor time bomb. In this paper, I examine how far these protests signify the resurgence of labor movements in India. The strikes were remarkable for the show of collectivism, use of disruption and violence, and demands that pertained to the workers as a whole. They implied a move from conventional union-based articulation by formally employed workers, to new demands for independent unions by migrant laborers. These protests were organically linked to production and socialization processes in the formal industrial sector and in the informalized agglomerations inspired by transnational imperatives. However, these protests, especially the disruption and violence involved, were indicative of a shrinking of the democratic space for struggle in India, which were equally evident in the rising number of disputes in the industrial environment. They occurred in companies owned by foreign owners, who have less supportive networks to sabotage and suppress them, compared to local owners. Finally, these protests were cellular in nature, rarely extending beyond the factories to become industry wide associations and coalitions.
This presentation aims to examine positive/negative on leisure we partici-
pate in. In the examination, we helpfully apply flow theory described mainly by C. Szentmihalyi. he has found out the significance of intrinsically Reward leading to Enjoyment. as the result he examined the case studies such as rock climbing, everyday work. this study distinguishes the positive from the negative, applying critically flow theory. The main issue is the difference of Enjoyment and Pleasure. According to C. Szentmihalyi, enjoyment is useful for the growth of self. Pleasures useful just for keeping the order of self, it exists just on time.

On the other side, we have examined the former studies which focus on leisure from the perspective of consumption, we can take positive parts in leisure. But we demand Pleasure when we regard leisure as consumption. On the other side, we have examined the former studies which focus on leisure from the perspective of the growth of self, we can take positive parts in leisure. So is the chance which we create Enjoyment.

It is the meaningful that we have found out the difference of two meanings of positive, which differ the case we regard leisure as the growth of self from the case we regard it as consumption. That is to say, on the one side, it is the chance of the working off the energy that we take positive parts in leisure regarded as consumption. On the other side, it is the chance growing self that we take positive parts in leisure creating Enjoyment.

Women On Top: The Temporal Status Of Gender In Elite Professions

The recent growth of women's integration into high-status professions over time has been documented around the world, but stark variation exists across fields of education, government and corporations. However, while there has been much focus on women's labor force participation generally, the literature surrounding hubs of elite workforces is more fragmented. As a result, we lack a holistic view of the experience of gender in high-end professional spaces where women continue to permeate in new and diverging ways from the past. There is of course important research that explores the experience of women in specific industries and organization types, but there remains a need for more studies using comparative frameworks. For instance, across the world, most governments have far less than 50 percent of women members making critical decisions in greater numbers of high-status positions, but top C-suite levels continue to be dominated by men. While industries in each country have unique drivers of inequality, common mechanisms lead to the overwhelming lack of women in high echelons of professional organizations cross-nationally. In this paper, we provide a meta-analysis of existing literature describing the mechanisms that perpetuate gender inequality within and across international professions. Building on exist-
ing sociological research examining gender in the legal profession, consulting and academia, we ask: (a) What kind of changes have we seen over time in these elite professional spaces? (b) How are these changes different from findings in the labor force more generally? (c) What does this emergence say for how we think about inequality and stratification in these professions more generally?
Effects of Wives' Relative Resources on Husbands' Gender Role Attitudes Among Dual-Earner Families

This study examines how in Japan, husbands' gender role attitudes among dual-earner couples with children are associated with their wives' relative resources, namely, income, employment status, and educational levels. Japanese men have more traditional gender ideologies compared with their American counterparts. However, gender ideologies among Japanese men are becoming non-traditional. Previous studies reported the threat hypothesis, in which husbands among dual-earner couples insist traditional gender role attitudes when wives' economic contributions to the family income exceed theirs. This paper reports the result of a questionnaire survey conducted in February 2011 on 342 dual-earner Japanese husbands who had children less than 12 years of age.

Two results are obtained through path analysis. First, when wives' educational levels or managerial posts are higher, wives' incomes will be higher. The wives' higher incomes are associated with the husbands' more egalitarian gender role attitudes. However, the wives' educational levels or managerial posts are not directly associated with the husbands' gender role attitudes. Japanese husbands may tend to hold egalitarian gender ideologies when they hold lower breadwinner roles, and their wives have a higher economic status. In this regard, the threat hypothesis is not supported, whereas the benefit hypothesis is supported. In addition, the husbands may not care about their wives' social positions, in terms of educational levels and managerial posts. Therefore, Japanese husbands' gender role attitudes concern their wives' provider roles within the family, but not with their wives' social roles in public. Second, it is speculated that the smaller the difference between husbands' incomes and their wives' incomes, the lower the level of husbands' tendency to adopt traditional gender role attitudes.

The Self Measuring Radiation Movement for Alternative Food Networks

This report argues that measuring radiation by civic groups plays an important role for Alternative Food Networks (AFNs) in current Japan. Since the 1990s, the localized agro-food movements have spread in several countries: the United States, European countries and East Asian countries including Japan. These movements have mainly dealt with economic issues, social justice, ecology and inheritance of indigenous food culture. Today, the AFNs groups in Japan face the new issue, which is contamination of foods by radiation.

On March 11, 2011, the Great East Japan Earthquake and the tsunami triggered a series of serious accidents at the Fukushima Daiichi nuclear power plants. Since then, Japanese have been concerned about the effect of radiation on domestically grown agricultural products. In the cases of AFNs, members tend to connect with each other directly because someone of farmers, consumers or coordinators between them have to check the food secure by themselves. Since the winter of 2011, many grass-roots groups to measure radiation of foods have emerged. There are 110 groups as of June 2013, and most of them are located in eastern Japan. The total number of samples which those groups already have been measured equals to the number of samples officially measured by the Japanese government.

This report is based on the author's participatory observed research in one of such civic groups in Miyagi Prefecture from January 2013, where is one of the most severely damaged area. I found the major roles of measuring radiation are that the members can judge the level of safety by themselves based on the Japanese Anti-Vietnam War movement, which created alliance with the movements in the First World western societies and the Japanese New Left that were influenced strongly from the Third World revolutionary and aimed for global revolution through international hijacking and terrorism. My socio-historical investigation of the movements in the 1960s, which I consider as the beginning of the contemporary global social movements, therefore will reveal the way in which external political factors, differences in terms of network structure and culture as well as capitals, ideology and taste of the activists influence the making and unmaking of transnational actions and thereby shapes the distinct characteristics of the global movements.

The Impact of Intra-Party Democracy and the Party-Membership in Japan: The Interaction Between Parties and Citizens

In the literature of comparative politics, there is a growing interest on the causes and consequences of the intra-party democracy. This paper first consists of three main sections. The first section briefly presents the theoretical framework, including the definition of key concepts as well as the causal relations between the intra-party democracy and the party membership or public support, drawing upon the theoretical debates and empirical findings in the existing literature.

The second section demonstrates the contextual information about the Japanese party politics, including the electoral system, the party system and the party organizations, as well as the summary of the development of intra-party democracy in the main political parties in Japan.

The third section then investigates the impact of the intra-party democracy on the citizens’ participation and partisanship, using both quantitative and qualitative methods. This section examines how the change in the method of party-leader selection, such as the adoption of primaries, affected the citizens’ party support and party membership, based on the empirical data such as Japanese monthly-based opinion survey. It also presents some compelling case studies on the impact of intra-party democracy on the party support and party membership.

This paper has interesting implications on the changing nature of the party membership in Japan and will be able to contribute to the discussion on the party membership from the Asian and comparative perspective.

Mutual Cooperation Due to TFT Strategy Observing Fixed Number of Cooperative Players

Reputation theories that give a solution to 2-persons Prisoner Dilemma have a common assumption that all players observe what happened in all other players. However, the assumption that a player has to observe all others seems to be unrealistic. To overcome this problem, Nakai and Muto (2008) proposed us-Tit For Tat (TFT) strategy that requires a player to regard another player who did not cooperate with himself/herself and his/her “friends” as a friend, and they showed emergence of a mutually cooperative society. They assume that the us-TFT player doesn't have to observe all other players and observe him/herself and his/her friends. However, when all players become mutual friends, they observe all other players, and hence us-TFT suffers from the same weakness of previous studies. To solve this, we propose a new us-TFT strategy with which a player observes a small fixed number of other players. The players to be observed are selected based on how cooperative they are toward the us-TFT player. We performed evolutionary simulations with ALL_D, ALL_C, the us-TFT etc and found emergence of a mutual cooperative society. Especially, in case that the number to be observed is two, mutual cooperation is the most likely to emerge. Therefore, it is concluded that mutual cooperation can emerge without observing all others and it is a new finding. In addition, we examined what mechanism works. The takeoff begins when a player changes into an ALL_C player by an accident. After that, there appear players between the ALL_C players and us-TFT such as the ALL_C player is positioned at center of the network, and us-TFT players around the ALL_C player. Therefore, the network looks a star-like one and grows into a mutually friendly network.

Solution To Problem Of Free Rider Through Division Of Production and Sanction

The meta norm (Axelrod 1986, Yamagishi 1990) is one of solutions to the problem of free riders. The norm requires all persons to be engaged in a production and a sanction at the same time. However, it seems impossible for a person to play both roles because one is different from the other as a professional job. So we suppose the division of roles meaning that a person can't play both roles, and examined whether the division can solve the problem of free rider. So in a simulation model we introduce two kinds of players. One is a guardian who doesn't engage in a production (that is, he/she doesn't pay a sanction cost), focuses on a sanction against a free rider with a sanction cost, and is presented as a payoff of the other role. We call the player the “guardian.” The other is a player who focuses on a production of collective goods with a production cost, doesn't engage in a sanction against a free rider (that is, he/she doesn't pay a sanction cost), and presents a payoff to a guardian. We call the player the “tributary.” With a guardian and a tributary in addition to a free rider, we executed evolutionary simulations to examine whether a guardian can exclude a free rider and a guardian and a tributary work together for mutual benefit. As a result, we found that the division of roles had established and the coalition could exclude a free rider. Especially, it is found that guardians account for up to the same rate of a society as a presented payoff divided by a total production, which reminds us of a kind of tax rate.

Cosmopolitanism, Nationalism, and Colonialism: The Manchurian Motion Picture Corporation and The Production Of My Nightingale (1943)

This paper contributes to emerging studies on cosmopolitanism by presenting a sociological, historical-institutional analysis of the production (and, to a lesser extent, reception) of an arguably “cosmopolitan” film, My Nightingale (Watashi no uguisu, dir. Shimazu Yasujiro, 1943), produced at the height of Japan’s ethnic-nationalist period during the Second World War. I ask the following three research questions. First, what aspects, if any, of the film text can be considered to entail cosmopolitanism? Secondly, whether, how, and why could the possibly cosmopolitan aspects of the film text emerge under the existence of ethnic-nationalist policies, institutions, attitudes, and behavior existent in the Japanese colonial empire? Thirdly, what implications does this case study have on the ongoing debates on cosmopolitanism, nationalism, and political space? By providing answers to these questions, I argue that an ahistorical, normative call for cosmopolitanism may hinder our grasp of the possibility that some forms of claim to cosmopolitanism entail a rationality of narrow ethnocentric nationalism. As a historical hindsight, it is easy to dismiss Manchuria’s slogan of gozoku kyōwa (heavenly place of virtuous rule) as simple political propaganda. But it may also be the case that this apparently cosmopolitan justification might have strengthened the degree of repression and discrimination of the Japanese colonial rule in Manchuria. In other words, I contend that the case study of the Manchurian Motion Picture Corporation and the production of My Nightingale suggests a possible coexistence of cosmopolitanism, nationalism, and colonialism.

The Challenge of Supporting People Suffering Ambiguous Loss: An MPS Case Study

This presentation examines the challenge of supporting people suffering ambiguous loss. “The theory of ambiguous loss” was introduced by Pauline Boss to define the sort of unclear loss that defies closure, such as having a family member go missing during a natural disaster and caring for a loved one with dementia. Boss provides detailed strategies for professional therapists to treat people suffering ambiguous loss, but does not sufficiently explain how supporters with key information should negotiate these delicate situations. In order to evaluate this aspect of ambiguous loss, I observed and analyzed the activities of the Missing Person Search Support Association of Japan (MPS), a non-profit organization dedicated to helping families search for their relatives who suddenly disappeared. Families in these situations experience ambiguous loss, as they do not know if their loved ones are dead or alive.

My analysis shows that MPS volunteers have to provide mental and emotional support to the families of missing persons while assisting with search efforts. The volunteers listen to families’ anxieties about their relatives’ safety almost every day. They primarily try to be sympathetic and receptive to the families’ narratives of loss, like a strategy Boss recommends. However, sometimes they must impose upon or contradict these narratives when they obtain new information during their search. In these situations, they struggle with the decision to inform the families that their loved ones will likely never return to them, despite their hopes to the contrary. This case study illustrates that clarifying ambiguous situations often conflicts with mental care goals when supporting persons suffering ambiguous loss.

The Meanings of Childhood Mental Health Problems and Children Behaviour: A Comparative Study Between Brazil (Santos) and France (Paris 19ème)

Epidemiological studies developed in the last 10 years, mainly in the Western countries, indicate a global trend of an increasing number of mental health problems in children and adolescents, as confirmed by epidemiological studies conducted also in Brazil and France. To understand the phenomenon in these countries, the study had as objective to understand the meanings of mental problems and children's behavior from a sociocultural perspective, by analyzing children's experiences beyond adults' discourse, namely of health professionals and children's parents.

The research was based on the ethnographic method and took as its starting point the experiences of children with mental health problems who receive care from mental health services. The fieldwork was carried out in two mental health services: the Child Mental Health Service of the Northwestern zone (SCV), in Santos, Brazil; and the Medical and Psychological Centre of Flandre (CMP Flandre), in Paris (19ème), France. To apprehend the different meanings of childhood mental health problems in these contexts, in-depth interviews were made with health professionals of both services and with the children’s parents. The discourses about the problems and complaints concerning the children's behaviour were analysed and grouped by categories to allow the identification of similarities and differences among the adults' discourses, as well a comparison between the two services.

Adults relate childhood mental health problems to children's behaviours that they consider as strange, disruptive or disturbing, as observed at home and mainly in the school. The analysis of the different meanings of childhood mental health problems in these countries point to the interpretation between mental problems and children's behaviour in a common sense, which solutions are sought in mental health services. We observe a displacement of children's life problems towards mental health field, which makes it possible the solution to general children's behaviour.

Logic behind Life Reconstruction in the Mt. Unzen-Fugen Eruption Disaster

Areas that sustain damage in a natural disaster are forced to choose between restoring the original area and relocating to another area in order to reconstruct residents’ lives. At the same time, SABO plan (erosion and sediment control) are undertaken in damaged areas in preparation for another disaster. In the initial stage of minimization of disaster loss, people unite and undertake one direction in order to defend their life. However, in the life reconstruction stage, individual issues emerge such as family structure, livelihood, economic conditions, and disabilities in degree of damage, making it difficult for the whole community to keep in step.

Following the establishment of the Basic Act on Disaster Control Measures, the Mt. Unzen-Fugen eruption disaster was the first disaster to establish a hazard area in a residential area. This report focuses on the villages that fell within the SABO dam site under the plan to prevent expansion of eruption damage to central city. People in these damaged area faces two major issues. One was that the village was divided up into areas included in the SABO dam and areas that were not. The other was that the villages included in the SABO dam had to make the difficult decision to dissolve their community and vacate their homes. People consented to these unacceptable terms at an early stage because people feared prolonging a decision would cause a delay in the construction and result in a man-made disaster.

Furthermore, villages were against moving to reclaimed land on the coast provided to them by the government. Concerned with the reconstruction of their way of life, they found their own land for relocation. This report seeks to clarify requirements for life reconstruction in this area pertaining to the issue of having to relocate due to disaster prevention projects.

The body of the pastoral Samburu of northern Kenya is in the process of re-organization. Under the tourism context their beaded adornments or their “traditional” appearances become commoditized. In this presentation I will introduce examples of heavily beaded neck, long braided hair, and holed earlobes, etc., which have played significant role to indicate the persons’ social and ritual status, are now drastically changing in their meanings. I indicate the process that the interaction with the tourists, for example, makes people redefine their body parts and manipulate their ethnic or personal identity.

Factors for Regional Variation in Japanese Fertility

How do people decide whether to raise children? This research examines the factors inherent in the very existence of the family: what explains family formation decisions? In particular, I seek to explain the considerable regional differences that exist in family formation, within the context of the falling birth rate in Japan. I analyze the influence of various contributory factors such as the differential economic costs, that is, the variance in the actual costs of raising child and also in the economic benefits available. I will also examine the factors which cannot be simply attributed to the economic costs and benefits, such as regional pressure of conventions – the factor of what is taken for granted on family formation -- how such reinforcement systems vary regionally, and how such conventions are reinforced. I mainly analyze data gathered by the cabinet office: Research on Child-rearing Environment in Urban and Rural Areas.

Regional Variation of Gender Stratification Among Japanese Lawyers

This presentation focuses on regional variation of gender stratification among Japanese lawyers. In terms of specializations, Japanese female lawyers seem to be bifurcated in a way. A large number of Japanese female lawyers engage in family law in solo practice or smaller firms than their male equivalent, while an increasing number of female lawyers work for large scale international law firms, engaging in corporate law. Such bifurcation is related to regional differences. For instance, international law firms are only located in major areas and therefore job opportunities for such firms are limited to those who practice in such area. Moreover, traditional gender values are stronger in non-metropolitan areas, and it may affect and limit specialization for female lawyers. On the other hand, the relative shortage of lawyers in non-metropolitan areas could lead to better advantages for female lawyers in finding jobs in those areas. Thus, this presentation sets out to statistically examine regional variation of gender stratification among Japanese lawyers. The index of gender stratification to be used includes specializations, current firm sizes, positions, and income. The data to be used is lawyer’s census (Keizai Kiban Chosa) conducted by Japan Federation of Bar Associations in 2010.

There has been a presupposition in the explanation of ethnicity as sub-groups of a nation-state that there exist persistent, if not fixed, boundaries between these groups. Many scholars have postulated that the modern nation-state imposes homogeneous notions of groups that people eventually accept, resulting in rigid social demarcation within the population. The case of Betawi ethnicity, the “Batavian Indigenous” who emerged as a creole in the colonial setting, illustrates a distinct contradiction to such conventional wisdom. Betawi people basically accepted the state-sponsored definition of ethnicity, yet they emphasized the similarity rather than the difference between cultural features of different groups and those of “Betawi culture” officially defined by the government, so that people of different group-consciousness could tolerate each other within one broader category. The category of Betawi has come so far as to subsume those of foreign origins who were once labeled as non-Indigenous/inlander and excluded from the category of Indonesian Nation/ Bangsa Indonesia. Today this ethnicity exhibits the potential for delegitimizing the persistent and exclusive human classification of “inlander” or “Bangsa Indonesia” which has long been promoted and imposed by colonial authority, as well as by authoritarian rule.

Such notable tolerance to otherness cannot sufficiently be explained by the sole fact that Betawi started off as a creole. The presenter investigates the origin of this tolerance by describing Betawi’s genesis as Creolization, where different groups are intermingled and fused; and the group’s vicissitude under state cultural policy as Amalgamation, where various ideas of group-consciousness are reorganized and reconsolidated under a broader singular category. The transition of Betawi ethnicity instantiates a paradoxical consequence: universalistic rhetoric of difference that the state has constructed along with the flat-faced demarcation of geographical units in turn become the principle for partial deauthorization of supposedly rigid boundaries and incessant inclusion of different senses of belonging.

**Impact of the Long Recession on Japanese Careers**

The aim of this presentation is to examine the effect of the long recession on Japanese careers. After the Lehman Brothers crisis of 2008, many social scientists discussed the changes that took place in the Japanese labor market and the problems of unstable employment. The smooth transition from school to work has been one of the unique characteristics of the Japanese labor market. However, the number of young people who could not follow the typical career path increased, and it has become more difficult to obtain regular jobs. Additionally, opportunities for regular jobs are said to be unevenly distributed on the basis of educational backgrounds. Many social scientists focused on the lifetime employment system, and they presupposed that continuing in the same workplace was a better option rather than frequently changing jobs. However, the present condition of the labor market appears to be anything but simple. Today, if persons with high educational backgrounds change jobs often, they might still be able to get another regular job easily. On the other hand, even if those with lower educational backgrounds continue in their jobs as nonstandard workers, they may not be considered regular workers. Nonstandard workers are excluded from the social security system because welfare services provided by the government are fragile, and companies only provide regular workers with welfare services. Therefore, it is inadequate to focus only on the duration of stay in a workplace. In this presentation, I propose to use the data from the Japanese Life Course Panel Survey that was started in 2007 and is followed up annually. The data includes information on occupation, working conditions, and educational backgrounds, and will help examine the frequency of change of jobs, the duration of stay in a given workplace as well as the abovementioned issues.

**Social Gap in Korea: The Effects of Economic Deprivation on Social Capital and Self-identified Social Stratum**

In Korea, the gap between the poor and the rich has become a serious social problem since economic crisis of 1997. Income distribution has been equalized until 1997, but income disparity has taken sudden turn for a worse after economic crisis. The previous studies on social impact of economic crisis include polarization of social stratum, appearance of the new poor population, expansion of irregular workers, popularization of unemployment and dissolution of family, disengagement of social relations etc. How the economic crisis has deepened the social gap in Korean society? The social crisis has directly linked economic troubles after economic crisis. The economic troubles often make people withdraw from social relations and underestimate one's socioeconomic status, and by extension they affect negatively the hope for the future. The purpose of this paper examines the negative effects of economic deprivation on social capital. Furthermore, we explore the economic deprivation and reduced social capital has negative influence on self-identified social stratum, life satisfaction and optimism for one's future. The economic deprivation such as difficulties of earning daily bread, unstable housing condition, and overdue educational expenses as well as worsening family financial situation are the critical independent factors which negatively affect on the one's social relations and subjective ethos. The economic deprivation has a bad effect on the social aspiration and upwardly mobile expectation. Thus the economic predicaments have been deepening the social gap among the people in Korea. Taking the decline of social capital and lowering self-identified social stratum and social aspiration. We utilize the national survey data which conducted by Institute for Social Development and Policy Research, SNU in October 2012. Interviews were conducted with male and females age 19 and above. The total usable sample size was 1,000. The sample was selected through a process of multi-stage area cluster probability sampling.

Chance and Risk of Qualitative Interview Methods in an International Comparison

The study aims to identify problems in conducting and interpreting qualitative interviews in an international comparison and present some solutions. With the help of new normal communication technology and increasing cross-border mobility, qualitative interviews enjoy favorable basic conditions. Methodological innovations and quality criteria lag behind. Since foreign language and alien culture come into play, qualitative interviewees need native speakers as interviewers or translators and, in the same vein, insiders as cooperation partners and co-interpreters. To study strategies that intervention of natives needs more reflection. Researchers should know in which context an insider is situated with regard to age, gender, classification, and social position in his or her own country. In addition, there are usually interest conflicts, perspective differences, trust or mistrust, power distance, and pre-knowledge between two countries. In the light of that, thorough reflection of the research for cross-border interviews is of great importance. In my study small experiments with interviews about “civil society” with German and Korean interviewees will be conducted. Questions about “global civil society,” “global values,” and “global discourse” will be asked first with insider’s involvement and secondly without. By comparing the two settings, results will show how intervention of an insider works in a qualitative interview and how to reduce one-sidedness, distortion, or misunderstandings.

“Viet Kieu” or Overseas Vietnamese and the Future of Viet Nam: The Case of Viet Kieu Association in Thailand

The Socialist Republic of Viet Nam (SRV) or Viet Nam is one of the countries on the Indochina Peninsula in Southeast Asia which had many times faced severe circumstance caused by colonization. However, Viet Nam finally surmounted all difficulties and has been gradually developed by great help of its own people, particularly overseas Vietnamese, including those who have already returned and who are still abroad. “Viet Kieu” or overseas Vietnamese has a long history closely connected to the protection and construction of Viet Nam. Approximately, there are 3 million “Viet Kieu” or overseas Vietnamese currently living, working and studying around the world. “Viet Kieu” is playing an important role in preserving Vietnamese language, national culture, tradition and knowledge outside the country, contributing to Viet Nam’s economic growth as well as developing the foreign relations of Viet Nam.

This study aims to analyze role of “Viet Kieu” community, particularly in Thailand, in strengthening overseas Vietnamese regime and making great contribution back to the country. The study further highlights view of the Viet Nam State, in strengthening overseas Vietnamese regime and making great contributions of Viet Nam.

The study further highlights view of the Viet Nam State, in strengthening overseas Vietnamese regime and making great contribution back to the country. The study further highlights view of the Viet Nam State, in strengthening overseas Vietnamese regime and making great contributions of Viet Nam.

Governance As an Emergent Compromise: Access to State Service Delivery in an Islamabad Squatter Settlement

Compromise between the formalizing imperatives of modernization and local-ly-grounded informal networks can provide the basis for stable governance in the cities of the global south. This paper examines urban governance in Pakistan as seen through the experiences of an Islamabad squatter settlement accessing electricity supply through the state-run electricity utility. After a crackdown on illegal connections, community leaders negotiated a compromise with the utility leading to the installation of two official electricity meters for 600 households, with billing and individual connections handled by a committee of residents established for this purpose. Some households in the squatter settlement did secure individual connections for service delivery, only to retreat to the communal arrangement when they found that formal contracts could also be used to reinforce patterns of exploitation and inequality rather than simply securing their rights of access and claim-making. The emergent pattern of governance – more stable than its predecessors – is one of compromises between formal contracts and the lived reality of an Islamabad squatter settlement. These local struggles with modernization are echoed at the policy level as well, where the state has retreated from market-ori-

ent institutional reforms in the electricity sector to a more straightforwardly hierarchical set of relationships among state organizations.

Empleo De La Tecnología Para Enseñar Matemáticas En Ciencias Sociales

Nuestra labor diaria consiste en enseñar matemáticas a los alumnos de las licenciaturas que se ofrecen en la División de Ciencias Sociales y Humanidades (DCSH) de la Universidad Autónoma Metropolitana plantel Xochimilco (UAM-X).

La enseñanza de las matemáticas, por sí misma, tropieza con obstáculos que se ven incrementados cuando los estudiantes a los que se les trata de instruir pertenecen a un área, supuestamente, alejada de ellas.

En la DCSH cada grupo es atendido por tres profesores con distinta formación que trabajan coordinadamente, integrando las diferentes disciplinas que intervienen, el módulo alrededor de un tema eje, es el especialista en matemáticas, quien se topa con más dificultades para lograr la integración de su material al resto del material.

Esta compleja situación problematiza el proceso de enseñanza y nos conduce a modificar las estrategias apoyándonos en la tecnología para disminuir esta aversión de los estudiantes y mejorar los resultados, haciendo la clase accesible, divertida e interesante.

Para garantizar un buen logro en el proceso enseñanza aprendizaje se considera importante tomar en cuenta el estilo utilizado por cada estudiante para aprender, muchas veces, ni él mismo es consciente de su existencia, por lo que hacemos énfasis sobre el primer paso hacia éxito, pues el desciente puede empezar a aprender si conoce lo que requiere para lograrlo.

En este trabajo se propone un método de enseñanza acorde con los principios conceptuales de la UAM-X, compatible con las actividades fundamentales del sistema educativo, que incluye entre sus características:

- Apoyo en la intuición
- Apoyo en lo real y actual
- Utilización de herramientas tecnológicas
- Conciencia de la importancia de la motivación
- Adquisición de los procesos típicos del pensamiento matemático a través del aprendizaje activo
- Enseñanza a través de la solución de problemas
- Balance entre el rigor y la aplicación

Hacking the Body: Body Enhancement and the Construction of the Envisioned Future

This paper concerns the movement defined as “Body Hacktivism”, whose goal is to unite hacking, body modification and activism. The body hacking is a current movement whose enthusiasts are found in different places in Europe and America, and are connected through a network, voluntary and experimental approach of the “Body Hacktivism” has as extension the creation of new devices that can be added and interacted with the body. For instance, the implant of F.R.I.D. microchips under human skin, subcutaneous magnetic implants which take the form of metal pieces whose main interest is to react to waves and electromagnetic fields, replacement of skin parts by titanium plates that can be used as a receptacle for various components, and also the explorations of sexuality by the creation of virtual and physical reality convergence in the metaverse. These artists’ experience and their sense of the self in the context of body modification is usually accompanied of a political discourse, that claims the individual’s right to his/her own body. The existence of these discourses has decisive power in forming and unforming conceptions of the future body, excluding and including possibilities. If for the body hackers the future exists first in imagination, their next step is to make real through experiments, opening the possibility to make their futuristic dreams become reality. Our line of thinking reconceptualizes “body” in terms of assemblages, relations, practices and distributes agency and knowledge across heterogeneous materials. The Body Hacktivism is actively challenging long-held normative beliefs about what bodies do, what they should look like and how they should behave. They are not only pushing the boundaries of their own bodies, but are explicitly challenging the very definition of nature, culture, and technology.
**NASWEM, ADOLPHUS***(Nigerian Rural Sociological Association, angolnaswem@gmail.com)

**Nigerian Agricultural Transformation Agenda: Conceptual Plausibility, Infrastructural Vulnerabilities and Disturbing Auguries**

Agriculture in Nigeria has performed below its vast potentials of yielding an acceptable living standard for the ordinary farmer in a globalized world. The sector was the mainstay of the economy before the exploitation of crude oil. The discovery of the latter led to total neglect of the sector which continues to make significant contribution to world production of several commodities. Agriculture in Nigeria is characterized by small holdings, low technology, little value addition and mass poverty. Government efforts to intervene in the past have been hampered by monumental corruption among other factors. Recently, the government introduced a blueprint to develop agriculture in the country christened ‘Agricultural Transformation Agenda’ which seeks to transform agriculture from a traditional habit to modern business. The paper examines the concept behind the model vis-à-vis the infrastructural and institutional foundations required for the programme to deliver sustainable impacts. The paper concludes that the thinking behind the policy is sound but its workability may be compromised by the poor physical and social infrastructure, and dysfunctional institutional framework that would make the implementation environment. The paper concludes by observing some disturbing signals associated with the policy.

**The German Panel Analysis of Intimate Relationships and Family Dynamics (PAIRFAM)**

The German Panel Analysis of Intimate Relationships and Family Dynamics (PAIRFAM) is a multidisciplinary, long-term research program that is yielding rich data for the longitudinal study of family and living arrangements in Germany. Its main focus is on partnership processes and quality, parenthood decision making and fertility, parenting and child development, and intergenerational exchanges. A number of issues from other domains of life such as education, work, income, housing, health, religiosity, leisure activities, and network embeddedness are included as well.

The PAIRFAM survey started in 2008 with a nationwide random sample of more than 12,000 anchor respondents in the three cohorts born between 1991-93, 1981-83, and 1971-73. Respondents (‘anchors’), partners, (step)parents, and children above age 8 are interviewed. The program with the implemented multi-actor design is scheduled to run for a total of 14 waves with annually conducted interviews. Thus, we will be able to cover the most important family formation stages from age 15 up to age 50. The German Family Panel PAIRFAM provides a rich data infrastructure on a wide range of family related topics allowing researchers to analyze private living arrangements as they develop over time and in explicit consideration of the mutual interdependencies of relevant family members. Great efforts are being made by the project team to release fully prepared and documented data from the current survey wave as early as possible to the international and interdisciplinary scientific community. The scientific use file with data from the first five waves is published in spring 2014.

The paper will (a) explain the scope and the design of the German Family Panel PAIRFAM, (b) demonstrate its potential for analysis with examples, and (c) provide information on how to access the data.

**Corporate Interlocks and the Specificities of Indian Capitalism**

This paper aims at studying the interlocking directorates among Indian firms and to locate it within a comparative study of interlocks among the top 250 companies of the NSE in 2000 and 2012. It also compares indices of centralization, compactness, density, etc. with those of similar-size networks in other countries in order to evaluate the specificity of the structure of the Indian corporate network and to locate it within a comparative study of interlocks among the top 250 companies of the NSE in 2000 and 2012. It also compares indices of centralization, compactness, density, etc. with those of similar-size networks in other countries in order to evaluate the specificity of the structure of the Indian corporate network. We thus propose 5 hypotheses to assess the impact of these specificities on Indian corporate networks:

1° The 1991 liberalization policies had an impact on the shape and density of networks.
2° Networks are still very much shaped by the stakes the State has in PSU companies.
3° Companies belonging to a business group are likely to be more connected to other companies than independent companies.
4° Connections between firms are likely to be structured by caste and family networks.
5° The density of corporate networks in India is likely to be both relatively low due to the recent liberalization of the country and to show pockets of strong density on the basis of business group, regional, family and caste ties (overall low density of connections but a high number of multiple connections held by specific actors).

**NAVARRO, PABLO***(University of Valencia, pablo.navarro@uv.es)

**Social Objects As Tokens for Social Eigen-Behaviors**

This paper puts forward the concept of ‘Social Object’. A ‘Social Object’ would be something of imaginary origin (or better, an imaginary hanger shared by a community of social individuals) which works as a referent consistently targeted by a particular family of social actions and interactions. This set is somewhat fuzzy, and it would be made up by the actions and interactions that satisfy—to some acceptable degree—such social object. For instance, the social object we call ‘greeting’ would be the ‘hanger’ or ‘imaginary shared referent’ of the (fuzzy) set of actions and interactions which satisfy that specific object (namely, which accomplish an acceptable greeting) in a given situation. That set of actions and interactions would include those solving (accomplishing) the act of greeting in that situation, and would exclude those failing to do so. In other words, a social object would be the ontological assumption that enables and orient our interactive success (or our interactive failure, in case we misfire and act in a way unacceptable for our interactive partners).

The notion of ‘Social Object’ is cognate to the conception of physical objects as “tokens for (eigen-)behaviors”, put forward by Heinz von Foerster. From this viewpoint, objects are not realities independent from our actions, but assumptions that guide the cognitive and practical processes of the subject – a subject who “constructs” such objects through his actions. Different types of societies are structured by means of different kinds of social objects. And the sort of social objects that are emerging as typical of today’s global society are Social World-Objects (namely, social objects which define their dynamics as unitary systems on a global scale). Many of those Social World-Objects are being generated within and by the Internet.

**Gestion DEL VALOR E Identidad De La Mujer Mexicana**

Los procesos de agency y resistencia de la mujer mexicana se dan dentro de una cultura de la colonialidad que configuran un modelo centro-europeo-nor-teamericano; pero las nuevas condiciones de la globalización planetaria hacen que se generen perfiles que rebasan esta primera clasificación por lo que hablamos de una “cuarta mujer”, después de Lipovetsky (1997), que responde a las categorías de contemporaneidad y en tránsito de construcción.

La cuarta mujer en tanto sujeto sostiene posiciones de liderazgo que van más allá de la división del trabajo y si establece soportes de sus propuestas de vida como un sistema decisional y fuera de la pareja. Aparentemente la cuarta mujer encuentra un campo propicio para sortear las desigualdades.

Las desigualdades de la cuarta mujer están delineadas por tres estructuras que obedecen a la educación, productividad y empoderamiento que configuran un perfil estándar del comportamiento social contemporáneo; el ir sortear las diferentes construcciones de esos tres sistemas las hacen una mujer flexible, educada, ocupada económicamente y con pretensiones de empoderamiento en base al éxito profesional. Es capaz de regresar a valores como la maternidad, pero busca embarazarse sin requerir de la presencia permanente del hombre; es una “mujer emancipada”, “ducha de sí misma y de la situación”; sin embargo, las condiciones de resistencia a los peligros de regresar a la tercera mujer hacen, también, que se transformen en negociaciones con la pareja. En este proceso ¿dónde queda la masculinidad? La masculinidad que funciona con la cuarta mujer es que ha abandonado el disfrute del poder total o del goce de la dominación.

This paper examine violence against women emanates from the social hypoth-
thesis of superiority of men over women. Insubordination of women legitimizes 
gender violence and grants social sanction to the ignoble treatment meted out 
to women. Manifestations of violence encompass physical aggression, such as 
blows of varying intensity, burns, sexual abuse and rape, physiological violence 
through insults, humiliation, coercion, blackmail, economic and emotional threats 
and control over speech, action and behavior. In extreme cases the result of this 
violence is death. The incidence of violence prevalent in man-woman relationship 
takes place in the context of the family, state and society. In most cases the male 
aggression towards women and girls remains tacit, hidden or unrevealed.

Prevent or Cure – the New Philosophy of Health Care

Prevent or cure – the new philosophy of health care

Health care systems evolve at the same time in many different ways: in area 
developing technologies, the development of the medical knowledge, because 
of demographical changes and particularly - aging of the society. This induces 
the choice of criteria, and as a full member of the ever-changing multicultural social reality .

Communicative competence and information, creative movement and toler-
ance come to the forefront in the formation of man , describing him as a specialist 
who can be integrated into the mainstream of the movement of professional knowledge, and as a full member of the ever-changing multicultural social reality. This is an important aspect of the communicative component of education. According to most of the school is the main element in the process of becom-
ing a person , is to teach people to think, to respect labor, to encourage children tolerance, and develop entrepreneurial skills to real life, and not just theoretical knowledge.

Another Look at Sibship Structure and Educational Achievements

Studies have shown negative correlations between both number of siblings 
and educational achievement and between number of siblings and cognitive 
ability. These findings are consistent with the Resource Dilution Hypothesis, the 
Quantity-Quality Trade-off Theory, and the Confluence Model. However, recently 
some scholars have questioned the causal interpretations of the correlations and 
have simulated quasi-experimental studies to test the hypothesis that it is largely 
spurious. The results of these tests are inconsistent so far.

This paper attempts to further the understanding of the sibship size effect and 
itself. We employ a retrospective life history data set on some 2000 Jewish 
Israeli men who were born in 1954 and interviewed while in their mid-twenties. The database includes information on several educational and cognitive out-
comes measured at different ages; socio-economic background variables, and 
detailed sibship and household composition measures. We use fixed-effect mod-
els to evaluate the causality of the sibship-achievement association. The avail-
ability of detailed histories of household composition allows us to estimate the 
effects of sibship present (in the household) at different stages of the life course 
on cognitive and educational outcomes. This is a more precise measure than the 
measures that have been common in the literature so far.

Preliminary results show that the number of sibling present in the house-
hold at ages that precede the measures of outcomes is more detrimental to its 
achievement than the overall sibship size.
similariely across socioeconomic and gender groups. To do this we use data from the English Longitudinal Study of Ageing, which allow us to examine overlapping frailty trajectories for different age cohorts.

NECKEL, SIGHARD* (Goethe-University Frankfurt am Main, neckel@soz.uni-frankfurt.de)

HOFSTAETTER, LUKAS (Goethe University Frankfurt)

Financialization and (Global) Class

The concept of financialization has become a prominent issue in sociology and political economy. As a multi-dimensional phenomenon it affects different levels and social spheres - from the macroeconomic level to states, firms, households and individuals. While most explanations focus on the macroeconomic deregulations since the mid-1970's, its cultural aspects and the actors propagating it remain often under-explored. Our contribution represents an attempt of a cultural approach towards the issue of financialization. We interpret the process of financialization as the assertion of a global “market culture”, emanating from symbolic struggles between social actors over economic valuations. Thereby we aim at highlighting the role of social actors and cultural narratives in economic transformations. We ask whether the global phenomenon of financialization can be attributed to the formation of a “global financial class”.

NEGRI, MICHELE* (University of Tuscia, micheleenegri@unitus.it)

Defence and Security Policies in the EU: From Decision Making to Political Culture

What is the contribution made by the armed forces during and in relation to security operations, both in international contexts and to protect public order and homeland security? Based on the assessment of the contribution and skills currently at the disposal of the armed forces, we have identified possible areas of further use of the military force in security contexts. In the international arena, thanks to the growing use of instruments for civil and military cooperation, the military is in crisis management, conflict prevention and peace-building processes. As concerns internal security, the involvement of the military - and the use of their logistic assets - is increasingly common in response to threats such as terrorism, environmental disasters, protection of critical infrastructure and other emergency situations which the country has to deal with. This trend is also confirmed by the involvement of military forces in European "Security Research" activities, sponsored by the Commission with the objective of developing technological capabilities, tools and methodologies in "civil" security. The research was conducted through: the consultation of political, institutional and regulatory sources (at national, EU and NATO levels), the academic and scientific literature, the media; qualitative interviews with experts in the field.

Les Représentations Sociales De La Dépression Et L'accès Aux Services De Santé Mentale Des Jeunes Dépressifs: Une Question D'identité?

La question de l'accessibilité aux services de santé mentale ne peut se réduire à celle de l'offre. D'une manière générale, la demande des services de santé mentale varie selon différentes variables sociodémographiques dont l'âge. Les études démontrent ainsi que les jeunes et les enfants ont généralement moins tendance que la population adulte à demander de laide. C'est dans cette perspective de tenter de mieux saisir la question de la demande des soins de jeunes en proie à des troubles dépressifs que nous avons analysé des entrevues effectuées auprès de 31 répondants âgés entre 18 et 30 ans qui ont rapporté avoir souffert de dépression au cours de la dernière année. Cette enquête qualitative panafricainenne a été réalisée dans quatre sites : Moncton, Ottawa, Sudbury et Winnipeg par la méthode du réseau d'associations et des entrevues individuelles semi-dirigées. L'analyse des résultats obtenus a été effectuée selon la méthode d'analyse intégrée de contenu des représentations sociales des dépressifs.

Le contenu de la représentation sociale de la dépression ayant émergé du discours analysé est organisé autour de deux éléments principaux : désirer et stéréotype négatif. Ces éléments renvoient à des dimensions descriptives et sociales de la dépression. Le discours activé par ces deux dimensions contraste avec la nouvelle normativité sociale (autonomie, initiative, responsabilité individuelle, etc.), ainsi qu'avec les caractéristiques stéréotypées attribuées aux groupes de jeunes (dynamisme, enthousiasme, joie de vivre, etc.). Cette double tension de nature normative et identitaire mobilise une résistance par rapport à la disposition des personnes à consulter les services spécialisés en santé mentale.

Cynical Vs Empathetic Worldview Schemas and Fairness Perception

This research explores the contrast between cynicism, as a component of Kwok Leung human social axioms construct, and a more empathetic or altruistic view of the social world. As such it looks at the contrast between what game theorists call “zero-sum” perception and “positive-sum” perception. What are some of the attitudinal and behavioural differences between people who believe they live in a you-OR-me world, and those who believe they live in a you-AND-me world? Given its implications for inequality, political conflict, and ideology, this seems to capture a critical dimension in human social worldviews. Preconceptions about whether others can be trusted and whether one can afford to cooperate extensively with others to solve difficult problems have many implications for social capital building and dispute resolution between individuals and groups in society. The research explores ‘cynical’ and ‘empathetic’ orientations to social interaction, and the ways in which these worldview schemas relate to (1) social fairness perceptions and (2) related aspects of personality and self-conception. Data were gathered using a multi-construct written questionnaire instrument administered to undergraduate students in New Zealand, Jamaica and Hong Kong. Results across several cultural contexts show significant differences in both personality attributes and in social fairness attitudes between participants who are predominantly cynical in their worldview (higher scores on 20-item Leung cynicism scale, relative to empathy) and those who are predominantly empathetic in their worldview (higher scores on 14-item empathy scale, relative to cynicism).

NEISCH, PAULINA* (Nagoya University, japoaulnka.n@gmail.com)

Emerging Dimensions of Senior Friendly Built Environment in Aging Societies

The purpose of my paper is to explore the methodology of my empirical research concerning analyses of senior friendly built environment in aging societies. This methodology is based on a framework of nine emerging dimensions, which result from the relationship between design, spatial experiences and quality of life define senior friendly care housing. The nine emerging dimensions are: 1. Building organisation. Through this emerging dimensions summarise buildings in a way that is relevant to the residents’ quality of life. 2. Safety and health and architectural design of senior care housing. 3. Regulations and guidelines as well as their impact to the feeling of well - being in senior care housing. 4. Privacy. According to several researchers, privacy is a most important aspect of the environment for older people (Morgan and Stewart 1998, Duffy et al. 1996). 5. Ability to personalise the surrounding (personalisation as a factor, which allows the transformation of a care housing setting to a home). 6. Orientation – Disorientation – Confusion regarding place, time, personal identity, or social situation – is common among people with dementia (Cohen & Weisman, 1991). 7. Sensory simulation is concerned with the different elements of sight, smell, hearing and touch. 8. Conflicts between different building users (because senior care housing is not only a living setting but also a staff’s working place). 9. Participation and contributions of older people.

The objective of the presented method is to compile a comprehensive review of senior care housing features essential for residents and exposing potential and importance of design to improve senior quality of life.
The social and logistical pressures on organizations to accept non-priority items are discussed, as are the benefits reaped by organizations that employed time-liminations of donations management.

NELLE, ANJA* (Leibniz Inst Regional Development, NelleA@irs-net.de)

Education As a Key to Tackle Inequalities in Shrinking Cities: Examples from East Germany

In East Germany political and economic transformation after 1990 led to demographic change, massive loss of jobs and high levels of out-migration. Just like in many shrinking cities around the world (see Mallick/Brachman 2013 for US or Fol 2012 for France) out-migration was backlog: predominantly talented and skilled people left for better prospects, less qualified and less mobile parts of the population remained. The same migration pattern can be observed on a micro-level. The most fragile parts of the population with lowest educational background are left behind in the least attractive neighbourhoods.

In Germany this poses a problem for the future because statistics show that poorly educated parents tend to have poorly qualified children. Bonte and Mus- terd (2012) have pointed out, that if there is a shortage of well qualified people in a shrinking city, it becomes less attractive for companies and investors, which may cause more people to leave.

Some cities in Germany have realised that a shrinking society cannot afford a poorly qualified younger generation that is unable to keep or attract businesses and pay the pensions of an aging population. Theses shrinking cities regard investment in education as a key to survival and a key to tackle inequalities. The city Bernburg shall be presented to show how the challenge can be met. In 2005 it had 50% less children than in 1990. 20% of them did not complete school. In consequence Bernburg thoroughly reformed the educational landscape and de- veloped new schooling concepts. Approaches from other German cities that focus on identity building and link education strategies to urban regeneration, may be presented to complete the picture.

Could it be a positive effect of shrinkage, that more emphasis is put on a just educational system? This argument shall be put forward for discussion.

NELLE, ANJA* (Leibniz Inst Regional Development, NelleA@irs-net.de)

The Influence of Housing Policies on Urban Fragmentation in Large Brazilian Cities

Urban fragmentation is one of the most important characteristics of the recent urban development in Latin America (Coy 2010, Maricato 2011, Pereira/Hidalgo 2008). Typical causes of the phenomenon are impacts of globalisation on job markets. The emer- gence of residential fragments is related to the building of gated communities for high-income households as well as the provision of housing for the poor by informal markets (Abramo 2009). The housing deficit in the urbanized areas of Brazil amounts to approx. 5.6 million units, of which almost 90 per cent belong to the target group of social housing (households with less than three minimum wages). Do the strategies for intervention developed by the government for re- ducing housing deficit help to dissolve residential fragments? Or do urban de- velopment and housing policies and/or their execution lead to the emergence of low-income fragments?

The research project of which the concept and first findings of a case study in Fortaleza shall be presented, aims to investigate the influence of housing policies and their implementation on urban fragmentation in Brazil. The study includes the analysis of public interventions in the realm of social housing (new housing estates and regeneration of existing squatted areas) and the influence of develop- ment plans and interventions on socio-spatial structures. The objective of the study is to discover which prerequisites assist housing policies’ implementation to counteract urban fragmentation and which parameters (i.e. value of lots, de- cision-making-structures) of and original specifications (planning-procedures, restrictions of guidelines for funding) provoke them to fail. The causes are to be examined to broaden the understanding of urban developments’ and housing policies’ potentials to better the attendance of intense urbanisation-processes observed internationally.

Effects of Work Related Factors to the Schooling, Health and Recreation of Filipino Children

Children in the labor force are a social phenomenon that has become link with the third world countries. The Philippines is one country in the developing regions where there are many children who are productively earning. The survey was conducted nationwide to collect data on the demographic and socio-economic characteristics of working children ages 5 to 17. In 1995 and 2001, Four response variables (present attendance in school, dropping out from school, effect of work on schooling and reasons for dropping that characterize education status of working children were modeled. Results in 1995 and in 2001 show that the nature of employment, working days per week, normal working hours per week and doing heavy physical work affect school attendance. Factors a- ffecting schooling in 2001 are activity during free time, and status of employ- ment. The number of working days and hours per week, increases, the odds of dropping out from school also increases. Factors that help a child to stay in school are engagement in less permanent job, “boss” is a relative, less exhausting work and does not require heavy physical exertion, less activities that the child do during his free time as well as when he is unpaid worker. The health of working children is affected most when they work in the indus- trial sector. The education of the children is affected by the nature of oc- cupations of the Filipino labor migrants has changed from production related work in 2000 to service work in 2010. Due to this change in the nature of oc- cupation, females more than males predominate the Filipino labor migrants in the last decade. This supports the World system theory. The peripheral countries like the Philippines supplies the labor demands of the core regions. The annual remittances of Filipino labor migrants has kept the Philippine economy afloat and are now regarded as “heroes”. Due to the failure of the e Philippine government to provide job opportunities for its growing labor force population and in spite of the social cost to the families left behind, the Filipi- nos search for jobs outside of the country. Thus, labor migration from the Philippines is a global phenomenon for as long as there are market demands for Filipino labor.

Family Policy and Child Poverty in Global Perspective

During the past decades, family policies have often been expanded when other parts of the welfare state have been subject to retrenchment. However, research on affluent countries shows that these developments have been far from unlin- ear. Instead family policy diverged cross-nationally, both in content and scope. Consequences for child well-being have also been varied. Typically, variations in child-poverty among affluent countries are frequently attributed to differences in broad welfare state regimes; leaving unexplored the ‘black box’ of program specific impacts. Almost four-fifths of the world’s population live in low- and middle-income countries – additionally including higher proportions of children than most affluent countries. This paper extends the comparative analysis of links between family policy institutions and child poverty to include both high- and middle-income countries in transition. We thus initiate a debate on the role of social policy in reducing child poverty on a more global stage. A multilevel regression approach is used to investigate the role of different family policy dimensions in re- ducing the incidence of poverty among families with pre-school children. We use household income data on 38 countries from the Cross-National Data Center in Luxembourg (US) and new family policy indicators from the Socio-Policy Indicator Database (SPIN), Results indicate somewhat different associations between policy and poverty in high- and middle-income countries. Policies promoting female la- bour force participation have the greatest poverty reducing effects in high-income countries. In middle-income countries, the general level of support appears to be...

Just Generational Welfare Contracts and Poverty

Citizens in affluent countries face a great number of social and economic risks, from birth until the very end of their lives. Many of these risks are associated with specific phases of the human life cycle when the earnings potential of households decreases. How are these age-related poverty risks linked to the often “implicit” generational welfare contracts that are embedded with social policy making? Such generational welfare contracts may seem just in their institutional design if rights for income protection are equally distributed across age groups. We argue, however, that a generational contract cannot be considered to satisfy important demands of fairness if it fails to substantially reduce poverty among citizens in different phases of life. In this paper we link the idea of generational welfare contracts to poverty outcomes in 18 affluent countries. We combine new comparative data on social rights from the Social Policy Indicator Database (SPIN) and micro-level income data from the Luxembourg Income Study (LIS). For some countries we have income data stretching from the 1960s until 2010, something that provides possibilities to analyze long term trends in policy developments and outcomes. The empirical analyses show that there is considerable degree of correspondence between the design of generational welfare contracts and age related poverty risks, particularly in terms of financial vulnerability. Higher welfare state generosity for a particular age related social risk is generally linked to less poverty in the specific target group.

Conditional Cash Transfers: A Social Investment Instrument in Times of Economic Crisis and Austerity?

Conditional cash transfers receive recognition as a way to address poverty within present and future generations while also promoting economic growth by investing in human capital. Such policies have been used extensively across Latin America and are now being promoted as part of the European Union's Social Investment Package. We assess and compare these policies in Latin America and in Europe. Specifically, we question whether they can be considered social investment policies and, in doing so, illuminate the various factors that condition the success of such policies. We draw particular attention to the need for policy approaches that take a life course perspective and the risk of 'policy crowding out' in the European context. Finally, we elaborate on the implications of a uniform trend in the passage of these policies, the timing of their implementation in the aftermath of economic crisis.

Living with Uncertainty, Struggling with Possibility: A Study on Radiation Effects from the Perspective of Atomic Bomb Survivors

This paper will examine the reality of radiation effects from the point of view of Atomic Bomb survivors. Radiation is a unique material which people cannot see, smell, and feel the touch of. But it can be harmful for human body. Today, especially since the horrific accident of Fukushima nuclear power plants in 2011, radiation and its effects on human have become a focal point in Japan and the world. Historically speaking, the issue of radiation and its effects has been studied predominantly in medical and physical fields. However, a study on narratives and life-stories of people exposed to radiation shows different aspects of this issue. First, in addition to actual health problems which radiation may cause, people frequently suffer from anxiety, fear, and distress about the possible effects of radiation. Moreover, their reality of radiation and its effects are often socially constructed through their interactions with medical and scientific knowledge. In this paper, I will explore the complex relationships between radiation, people, and science, through the narratives and life-stories of Atomic Bomb survivors from Hiroshima. This paper will consist of three parts. First, I will briefly describe medical and scientific knowledge about the physical effects of radiation on human body. Second, by drawing on the survivors’ life-stories and narratives, I will illustrate how they have suffered from and struggled with their anxiety and distress, caused by the uncertainty of radiation. Lastly, I will examine how the survivors’ reality of radiation and scientific knowledge affect with each other.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
However, little is known what the effect of such policies is: Do policies which favour the traditional marriage family increase marriage rates and stability of marriage families? Do policies with a focus on single parents, patch-work families etc accelerate the trend to more instable family relations? Do social policies as an alternative to family security increase cohabitation and divorce rates? The analysis is based on official national statistics for OECD countries and covers the time span from 1980 to 2010. The analysis shows that social policies and family policies such as child care services provide alternatives to the traditional marriage families and family at all. Such measure increase cohabitation rates and divorce rates while fertility rates decrease. A generous and benevolent welfare state seems to provide alternatives to the traditional marriage families. Marriage is no more a precondition to avoid or escape poverty. Social security and family policies have lowered the material necessity to enter marriage, and increased the opportunity to exit unpleasant family constellations.

The Ambiguous Relationship Between Middle-Class, Civil Society and Democracy

Debates on processes of democratization create the impression that the middle-class and/or the civil society are the drivers of democratic change and the backbone of democracies. Seen from this perspective either these groups fight for democratic change or once they have a basic political freedom they will quasi automatically take possession of democracy. This was the expectation in the USA before the Iraq invasion (what we may call the "Rumsfeld Utopia"). However, we have learned that in Iraq, after the Arab spring and in many countries that underwent processes of democratization during the 1980s and 1990s there was no automatic process towards democracy. In these transitions the middle-class played an important role and many of the civil society associations, social movements and especially their political leaders had a middle class background. But the political groups and the leaders that opposed the ideas of a liberal democracy also had a middle class background. At least in Africa and the Middle East the middle-class based civil society represent competing concepts of socio-political order: e.g. liberal democracy, neo-patrimonialism, neo-traditionalism, theocratic rule (or socialism in Latin America). The claim for democratic elections may be used to legitimize any of the socio-political orders.

NEUMANN, ROBERT* (Technische Universität Dresden, robert.neumann@tu-dresden.de)

Trustworthiness As Rational Belief or Unconditional Propensity to cooperate based on trust. While several authors share the definition of trustworthiness as a belief, a probability assessment or an expectancy of Person A about Person B to do X, distinct measurement approaches exist depending on the mode of data collection (survey vs. experimental approach) and strategic outcome of the study (one-shot vs. sequential games). Additionally, different hypotheses can be derived depending on whether one treats trustworthiness as incentive
based or as an unconditional propensity to exhibit trustworthiness. Hypotheses were tested with pooled data from two CATI surveys (n=706) conducted in Germany in June 2012 and January 2013. Using the techniques of both response latency measurement and Cox regression models we are able to conclude that measurement of trustworthiness either lack convergent validity or are subject to theoretical deficiencies. Consequences for future research are discussed.

**Worth a Thousand Words: Conducted Energy Devices, New Media Events, and The Public Eye**

Between April 2003 and November 2008, 26 men died in Canada during events where a conductive energy device (CED) was deployed on them. The death of Robert Dziekanski, a Polish immigrant, in 2007 at the Vancouver International Airport, was recorded on a mobile phone and its footage subsequently uploaded to the popular video site YouTube. The video, which documented Royal Canadian Mounted Police (RCMP) officers deploying a CED on Dziekanski, was viewed by thousands of citizens of the world and expanded its footprint beyond the Internet as traditional media organizations incorporated it into their coverage of the event. Unlike previous CED-related deaths, the recording of the Dziekanski death was an integral piece of the event’s anatomy and granted members of the mass public, as scrutinizers if not legitimate bystanders, entry into how it unfolded. Following Fiske (1996), we treat the recording, its dissemination via the Internet and broader news media, and its mass consumption as a ‘new media event’—one that amplified and articulated competing narratives of risk. We synthesize the work of Beck (1992), Giddens (1991; 1990), Hall et al. (1978), and Lupton (1999) and others in our examination of the YouTube video of Dziekanski’s death and over 400 reports in three major Canadian newspapers, the Globe and Mail, the Toronto Star, and the National Post. Using a broad critical approach, we assess how groups like the RCMP, government officials, and the general public made sense of the recording.

The recording’s electronic nature, we argue, complicated an ‘open-shut’ case narrative commonly articulated by law enforcement officials when describing how they respond to and neutralize threats to the public. The existence of the recording allowed for competing assessments of threat and harm while altering the credibility of the police as sole purveyors of risk assessment.

**Explaining Pathways to Party Activism: Case Studies of Hong Kong Young Adults**

Young people in many advanced industrial countries are unwilling to join political parties. The situation in the Hong Kong Special Administrative Region of China is even worse as it is a semi-democracy where political parties are relatively underdeveloped and legally prohibited from winning governing power through election. Despite these conditions, there are still a small number of young people choosing to join and take active part in political parties. The aim of this paper is to improve our understanding of how some young people come to get involved in political party activism. Qualitative life history interviews with 23 young active members from five major political parties in Hong Kong were carried out to explore this question. Based on a preliminary analysis of the interview data, I single out four distinct paths to party membership, namely 1) the socialization path, 2) the critical experience path, 3) the occupational path, and 4) the social network path. Informants taking the first two paths tended to initially get involved in party activism for political reasons, while those taking the last two tended to get involved for non-political reasons. Theoretical and practical implications of the findings will be discussed.

For Our Children’s Future: Inequalities in Rural Development in Vietnam

The previous literature on Vietnam’s growing urban landscape shows a great deal of rapid change in Vietnam. The 1986 Đổi Mới initiative set up by the central government instigated the rural communities to develop into urban communities. This program had opened up private businesses which incentivized rural communities to urbanize in an effort to modernize Vietnam. These cases of rapid urbanization seem to widen the economic gap of a population over time. Although some people are able to enjoy the benefits which come with urbanization, many are still left in impoverished conditions. These glaring differences in lifestyle and the distribution of wealth which were once reduced by strong government policies are now being superseded by transnational businesses. This structural gap formed by larger movements in globalization, I imagine would create similar differences in personal perception of the world. Differences in experience in this national effort, changes how individuals understand their own identity, their responsibility to the land, and their sense of security for the future. This research is grounded on a 1080 rural households surveyed through an East West Center, National Science Foundation funded research on Avian Influenza and coupled Anthropogenic systems. My findings show that there are key differences in how traditional, transitional and modern farming communities are affected by and understand rural development. Particularly interesting findings include significant perception differences found between the men and the women surveyed. I predict that the cognitive differences of Vietnamese citizens would not simply be due to differences in resources or education; however, a gradual process in which cultural practices becomes embedded in everyday behavior.

Self-Employment in Tourism Business Among Japanese Expatriates in Bali, Indonesia

Ni Nengah Suartini

This study aims to identify the characteristics and motivations of Japanese expatriates establishing their tourism business in Bali, and its impact to local community. Bali as one of the most famous international tourist destination, the number of foreign tourists to Bali is increasing every year. Japan is one of the top five nations visiting to Bali and the number of Japanese settlers in Bali is also increasing. As a result of this, there has been increase in the visible presence of Japanese entrepreneurs, particularly in tourism areas. This study is based on fieldwork with a qualitative research approach. Entrepreneurial activity among Japanese expatriates community is studied in four tourism areas in Bali, such as Jimbaran, Kuta, Sanur, and Ubud. The result of this study showed that: 1) The primary reason for migrating to Bali was amenity factors such as tropical climate, myriad of traditional and uniqueness of Balinese culture, natural landscape, and slow pace of life. This also means for them to escape from drudgery of city living in the country of origin; 2) Tourism experience influenced their decision to migrate and kinds of enterprises established in Bali; 3) High involvement of women in self-employment; 4) They recognize the business chance of their area after setting-tling; 5) To maintain a peaceful lifestyle is a higher priority than to extend their career, many limits related to the professional development can be perceived and kinds of enterprises established in Bali make a significant contribution towards tourism development, supports local effort for job creations, and deepen mutual understanding between Japanese expatriates and local community.

The Shape of Selves to Come: Selfhood without Sexual Difference

Nicholas, Lucy*

The shape of selves to come: Selfhood without sexual difference

What can the historical persistence of gender tell us about possibilities for future selfhood not defined by gender? Is a more purposive way of being possible that is not reliant on the restrictions of binary sex/gender and if so, how? This paper continues work that proposes that a particular dominant mode of thought (or ethos) about the self and other maintains compulsory sex/gender. This is an ethos of oppositional difference and closure. I extend this theoretical work here to the practical consideration of what a post-gender and queer mode of thought and being, not premised on difference and closure, might look like.

Drawing on a combination of Simone de Beauvoir’s existentialist ethics and Judith Butler’s ontological and normative impulses, I propose that a non-opposition- al, non-gendered alternative mode of thought and being is ontologically possible or potential (although not inevitable).

I sketch the ontological justification for this, and then move on to more practical implications for social life. This considers what this ontological picture means practically for attempting to re-form identity or selfhood according to more re- sponsive and open-ended ethos. I argue that it would entail a particular ‘queer’ subjective mindset, an inextrusably reciprocal approach to relationships and the identity of others and sexuality, and enabling social contexts that foster these.

I demonstrate how some of these are already apparent in certain queer social practices. I consider how such social practices may enhance efficacy in their intend-

ed aim of fostering more intentionality in the collective project of selfhood and evade closure or imposition of identity.

China's old-age pension scheme originates from the nation's 1951 labor insurance regulation. It was primarily for people unable to participate in the workforce because of age or disability and provided for old-age, disability and survivor benefits. Prior to China's 1978 reform and door-opening, employees of government and state enterprises were entitled to receive pension without paying into the system. Since 1978, the market economy has undergone rapid growth and at the same time the pension scheme has undergone rapid reform.

We will take a brief look at how the pension scheme was reformed and how the scheme is currently organized as a result of the reform. In this context we'll examine how it is affecting people in reality. Based on surveys supported by Grants-in-Aid for Scientific Research from the Japanese Government conducted in two urban and three rural areas from 2008-2011 we'll look first at the present living conditions of seniors comparing urban and rural settings as well as regional differences. Second, we'll look at a survey of the pension system in four major cities worldwide, still lags relatively behind in terms of investment, human resources, and (endeavor to) achieve accountability and stability within their long-term life planning.

This presentation discusses the complexity of migrant lives with regard to the way they travel and make use of border-crossing activities, the diverse conditions they face on the working sites, and the way they structure their family relations and understand how this is reproducible and must be understood as an element in the broader perspective. In accordance with this the paper seeks to provide an account of the specificities of claims-making on and on behalf of irregular migrants in different context with a focus on this relates to different regimes of citizenship and border control.

Societal Conditions to Produce Effective Knowledge on Sustainable Food Security at Global Level: A System Theoretical Narrative from African Cases

This paper aims at presenting consequences if we conceive the concept of Food Security (FS) as normative. The intention of FS is to create conditions, where no human being is unsecured with food. Such livelihood conditions have to be instituted in social systems. The international community has declared the war against hunger as well as implemented the Universal Human Rights - including the Right to Food- over 60 years ago. Still, around 1 billion people go hungry to bed and 2 to 3 other billion suffer from malnutrition. The various disciplines of sciences dealing with FS-agricultural sciences, economy, sociology and others- are far from providing effective knowledge in order to solve the problem. If these observations are correct, then the main question arises: what can be done better within sciences in general and what can sociological observation contribute in particular? We test four hypotheses based on the Luhmannian systems theory but limited to African cases. (1) The normative character of FS has to be enforced and institutionalized in order to guide both science and practice. (2) The full and equal involvement of peasants, farmers, indigenous communities and social movements has to be enforced in all major scientific and technology development processes, in order to repair environmental damages done and enhancing FS. (3) More resources need to be mobilized by the various collectivities in order to educate a new generation of agricultural scientists and citizen enlightened with social sciences methods and ethics, (4) in order to transform the current faulty food and agriculture into sustainable, just and viable systems, languages have to be used which are understood by people. Recognized indigenous knowledge will result as a new regulative force and strengthen not only the functional system of Food and Agriculture, but contribute to more balanced rural-urban relations and sustainable livelihoods.

Aging and China's Silver Industry: Based on a Sociological Survey of Urban and Rural Beijing in 2012

By 2012, China's population reached 1,354,040,000. The 60+ age group accounted for 14.3% while the 65+ age group alone accounted for 9.4%. Every year, the 60+ age group continues to increase by 8.6 million and will reach one third (32.8%) the population by 2050. At this rate, the 65+ age group will equal 14% of the population by 2026 and by 2040 will reach 316,720,000 making China a super-aged society.

While the population ages at an accelerated rate, traditional care provided by families is declining. In response, the 12th Five Year Plan (2011-2015) encourages China's central and local governments to promote the introduction of private capital into the senior care industry, to cultivate growth of related industries and to educate a new generation of agricultural scientists and citizen enlightened with social sciences methods and ethics, in order to transform the current faulty food and agriculture into sustainable, just and viable systems, languages have to be used which are understood by people. Recognized indigenous knowledge will result as a new regulative force and strengthen not only the functional system of Food and Agriculture, but contribute to more balanced rural-urban relations and sustainable livelihoods.

Neighbourhood Effects on Migrant Youth's Educational Commitments, an Enquiry into Personality Differences

In the neighbourhood effects literature, the socialisation mechanism is usually investigated by looking at the association between neighbourhood characteristics and educational outcomes. The step in between, that adolescents actually internalise educational norms held by residents, is often assumed. We attempt to fill this gap by looking at how educational commitments are influenced by neighbourhood characteristics. We investigate this process for migrant youth, a group that lags behind in educational attainment compared to native youth, and might therefore be particularly vulnerable to neighbourhood effects. To test our hypothesis we used longitudinal panel data with five waves (N=4179), combined with fixed-effects models which control for a large portion of potential selection bias. These models have an advantage over naïve OLS models in that they predict the effect of change in neighbourhood characteristics on change in educational commitment, and therefore offer a more dynamic approach to modelling neighbour-hood effects. Our results show that living in neighbourhoods with higher proportions of immigrants increases the educational commitments of migrant youth compared to living in neighbourhoods with lower proportions. Besides, we find that adolescents with a resilient personality experience less influence of the neighbourhood context on educational commitments than do adolescents with other personalities.

Polish Identity As Entrance Ticked and Barrier On An Altered Labour Market

Taking its point of departure in current research on Polish migrant labourers in Denmark this presentation will discuss ways to understand how and why different intersections comes to have diverse impacts according to the contexts they are taking place within.

Different 'identities' – such as ethnic, national, religious – have had a very limited importance at the Scandinavian labour market through most of the 20th Century. The labour movement and the workers' unions possessed immense influence on the labour supply and were able to prevent uncontrolled influx of workers and maintain union membership as the only prerequisite for employment. Thus the few emigrating workers became internalised in the existing union system and worked on general conditions.

Following the collapse of the Eastern bloc and the success of a neoliberal political and economical regime this order of the day has fundamentally altered. A consequence of this is a major revitalisation of ethnicity as a marker of specific abilities.

The presentation outlines how ethnicity at one point has become a means to get access to the national labour market in the host country, in this case because a certain Polish work ethos is claimed (and, notably, for a lower wage). At the same time however, this opportunity can be a barrier of being regarded an ordinary part on that same market. As a consequence the whole social organization around the migrant workers is impacted of the circumstances, not least the prospective family life.

On the basis of fieldwork among Polish workers on Danish construction sites, representatives from unions and employer organizations in both Denmark and Poland, politicians on national and EU level, the presentation discusses how migrants cope by under these circumstances and how the challenges can be tackled within a national and supranational framework.

No Longer “Believing In Belonging” – Generation Y Challenging Church Membership

Relationship to the national churches in the Nordic countries has often been described as “believing in belonging”. With this term researchers have wanted to highlight the special character and importance of church membership in these countries. For the Nordic people belonging to national churches has been regarded as something special: they want to belong even if they don’t attend or believe in the church and resigned their membership. In this paper I fill focus on the relation between membership and church leaving is explained most often by a certain Polish work ethos is claimed (and, notably, for a lower wage) . At the age of 15 a great majority of all 15 year-olds are confirmed in the Evangelical Lutheran Church of Finland. However, 10 years later as many as ¼ has left the church and resigned their membership. In this paper I focus on the relation of young people to the church, their reasons for staying as members and reasons for leaving based on a longitudinal data which allows us to analyze the question in a life-course perspective.

The research shows that for many young people confirmation period serves as a means of maintaining and activating religious observance. However, in early adulthood young people get more relative and ambivalent about religious tradi- tions and non-believing increases strongly. The search for personally meaningful experiences and relations is strong. Church leaving is explained most often by Church having no personal meaning and tradition itself is not an adequate reason for staying as a member.

Polish in the Hague: The Stories of Long Term Migrants

Different sources estimate the Polish population of The Hague around 5% of the city’s inhabitants. Images portrayed in media and by politicians give the impression that this group is a cause of social unrest and negative stereotyping is common. In this paper the stories of migrants themselves are told. They live, work, and have started their families in The Hague. The respondents have all lived in The Hague for more than five years; most of them migrated before Poland be-
came part of the EU. They have experienced more negative images after Poland joined the EU while their situation should have improved with the change in legal status. They narrate about their position in Dutch society, the changes they have seen, and the stereotypes they have to face. They confirm that ‘tolerance’ is no longer a key component of Dutch society, and tell about the social and economic barriers they face.

Their migration experiences and their encounters with Dutch society reveal a complex image. Coincidence, doubt and hard work are main characteristics of their histories. The in-depth interviews reveal that there was little thought of long-term planning and that choices were made rather haphazardly.

**Space, Time and Symbol in Urban Indonesian Schoolboy Gangs**

This paper uses theories of honour and masculinity to look at the phenomenon of male youth fighting in the urban space of two cities in Central Java, Indonesia. The masculine habitus of lower middle class Javanesse schoolboys is referenced in local collective violence. Acknowledging the long history of heroic warfare and factionalism in Java, the data point to the pleasurable sense of oneself as a kind of warrior fighting with a band of brothers on specified ‘battlefields’ in the city. Four points emerge from the analysis. First, peer fighting is a temporally-bounded activity that ends with the school-to-work transition, thus bearing out Messerschmidt's (1993) argument about the conditional and compensatory nature of collective masculinities. Second, school plays an important role in amplifying peer conflicts and honour disputes. Third, getting a girlfriend demands the expression of a different kind of masculine habitus from that operationalized in peer fighting. Finally, Muslim schoolboy youth squads (geng) are intense formations for the construction of warrior masculinities, employing theologically-informed imagery in battles with boys from secular- and Christian schools. The spaces of battle are identified with names that anchor them to the global Islamist struggle.

NILAN, PAM* (University of Newcastle, pamela.nilan@newcastle.edu.au)

**Using Local Cultural Forms To Talk To Youth In The Global South**

This paper uses material from two research projects, one in Fiji and the other in Java, Indonesia, to discuss the value of using local cultural forms of group talking to engage youth in everyday situations. First, although the convention of talanoa as a decolonising methodology has become popular in the Pacific, talanoa refers to storytelling. In Fiji the kind of talking which is closest to a focus group discussion is veivosaki-yoga, which in Fijian literary parlance means ‘worthwhile discussion or conversation’. The term veivosaki connotes a neutral sense of conversation and dialogue rather than storytelling. Yoga literally means ‘useful or worthwhile’. By engaging in veivosaki, indigenous Fijian participants are tuned in to a form of communal dialogue that demands their serious consideration and response. It is therefore useful for discussing a range of issues with young Fijians concerned about their future. Second, the cultural convention of nongkrognong (sitting around or walking around with friends talking) has started to be recognised by some indonesian youth researchers as a productive method for gathering data from young people for whom nongkrognong is their favoured leisure practice with age peers. Nongkrognong is extraordinarily difficult to translate. It is culturally distinctive, but nothing much really happens. In some ways it is like talanoa research in that the silences may be as meaningful as the comments. None of these cultural forms of group talking matches the rigid definition of focus group discussions (FGDs) typically offered by western books on research methodology, yet they are far more culturally appropriate to the everyday lives of young people in these two countries.

NILSEN, ANN CHRISTIN* (University of Agder, ann.c.nilsen@uia.no)

**Discovering Ideological Codes in the Professional Work of Daycare Personnel**

During the last decades there has been a tremendous growth in the enrolment rate in daycare centers in Norway to the extent that 96% of all children attend daycare centers before they reach school age. Thus, daycare has become an important socialization arena, supplementary to parents, and a place where the demarcation line between ‘the private’ and ‘the public’ is rendered indistinct. The private becomes public when problems associated with the private sphere, for example behavioral disorder, child neglect etc., become a public responsibility. Simultaneously the public is private when normative understandings of what is expected and accepted are transformed into public standards and definitions of ‘the good’ contributing to inform and shape parental socialization goals and practices, and the daycare personnel's appreciation of parental practices and their gaze on the children. Alongside the increase in daycare centers there has been a demand for increased professionalization of the sector, which in general is dominated by personnel lacking formal education. Important in this respect is early intervention: the obligation of daycare personnel to intervene when a child does not develop adequately or has a worrying home environment. The development of standardized tools aimed at mapping children's cognitive and emotional skills are increasingly being introduced to sort out children who are in need of extra concern. However, daycare personnel report to rely on their own embodied sensitivity in regard to concern for children. In this intersection between standardised mapping and personal 'stomach feeling', some distinct ideological codes come into play. What constitutes ‘normality’? Is normality absolute, or are there different definitions for different children? And how is normality and abnormality (not) spoken of? The paper addresses these questions in relation to the concepts of ideological codes and ‘ruling relations’.

**The Practice of Control in Risk Activities**

In this paper I would like to challenge the dominating understanding of voluntary risk-taking as activities with a focus on risk (Lyng). Instead I am arguing for a shift in focus from risk to control, which is the outcome of a successful interaction with risk. Based on ethnographic fieldwork on climbing and scuba diving, I analyse the practice of control as what Foucault calls a “technology of the self”. With this approach to control, participants in risk activities are understood as practicing a dominating ideal in the post welfare era, where the individual is increasingly supposed to be responsible and in control of his/her own life (Simon).

**Legalizing Internet Piracy through State-Invented Religion? A Case Study of the Swedish State's Acknowledgement of the Missionary Church of Kopism As Religion**

In 2011 the Swedish Kammarrkollegiet, the oldest public authority in Sweden, acknowledged The Missionary Church of Kopism (Det missionerande kopimismafundet) as a faith based community (trossamfund). The Church is built on the idea that copying and the spreading of information is an ethical right. As a registered faith based community the Church qualifies as an organized and by the state approved religion, as such it is protected by Swedish constitutional law where it is stated that freedom of religion is absolute. Regardless of the sincerity of its creators, does this mean that the Church has found a way to legalized piracy for its members? If so, what future implications could this case have? The overarching question we would like to ask in this article is how the category religion enables the state apparatus to produce legitimate and illegitimate subject positions and what the consequences of this production are in relation to power and ideology.

The paper presents the analysis of data from a research project for gender equality in Greek armed forces. The legal framework of gender equality in armed forces as well as the operation of the network of support centers under the funding of the European project “Artemis – Equal” will be presented.

The specific goals of these support centers were: the recording of inequality problems which take place in the armed forces, the provision of the information of interested parties about legislation and the official procedures in order to face the problems, the information about similar cases and good practices and finally the most important goal is Psychological, legal and Social support.

**A Discourse on Transnational Crisis of Legitimation**

Historically, instances of transnational interactions between dominant and subordinate societies, through the instrumentality of the political state, had been anchored on particularistic vested interests that may quite often be of asymmetrical advantage, or may not necessarily be of mutual

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
benefits. It is argued that transnational socio-political, economic, cultural, military expressions of hegemony (or pervasive domination) are invariably in tandem with the particularistic vested interests of dominant forces of imperialism. By the same token, parties (i.e., societies/political states) in situations of subordination suffer deficits, as a consequence of their vested interests being determined due to exigencies of unequal exchange. However, imperialist forces of hegemony are quite often challenged, as expressed by counter-hegemony or crisis of legitimation, in reponse to conflictual vested interests. Pursuance and propagation of multi-latral vested interests are quite often conducted militarily by transnational hegemonic blocs, irrespective of potential or actual resistance. Hence, the enduring widespread global instances of legitimation crisis, which may be construed (or be misconstructed) as acts of “terrorism”.

Temporary Transnational Migrants from East Asia to Japan As Unskilled Foreign Workers and Methodological Transnationalism in the Age of Globalization

The objective of our presentation is to show the juncture between the sociological concepts on transnationalism and people's practices while referring to the temporary transnational migrants in Japan. In contemporary Japan since the 1990s, a large number of unskilled foreign workers (=trainees) from East Asian countries have been introduced to the urban and rural areas as temporary laborers under the foreign trainees system. We focus on these trainees, called “Kenshusei/ Jisshusei,” at agricultural villages as well as the fishery manufactories in fishing villages, severely damaged by the Great East Japan Earthquake and Tsunami in 2011.

Based on the field research, we will discuss a sociological concept named ‘methodological transnationalism,’ in parallel to ‘actual transnationalism’ and ‘ideal transnationalism.’ While recalling ‘methodological cosmopolitanism’ as a critique on ‘methodological nationalism’ by U. Beck, we will examine the meso-level perspective between methodological cosmopolitanism and methodological nationalism. In the present situation of North East Asia where nationalism and political tensions are continuously rising, the meso-level perspective in methodology is required. We will explore the participants’ transnationalism. This is also a standpoint that associates with a critical viewpoint against the traditional perspective of sociology.

Another concept we discuss here is the ‘mediators,’ a proximate concept to the G. Simmel’s. However, we took further analysis on the concept and categorized them according to the level: from informal/sympathetic type up to formal/businesslike type. We particularly pay attention to the ‘bridge-type mediators,’ regarding as inactive actors in transnational interactions.

Based on the discussions above, we will examine an implication on conceptions of the nation-state and (civil) society as the most decisive points in sociology. It is the conception of “society beyond a nation-state” along with the perspective of methodological transnationalism, that is also required to contemporary/future sociology.

Concepts of “Bonds” and “Romantic Love” in Japanese Women’s Culture-- the Representation of the Contemporary Japanese Male Idols

The purpose of this paper is to consider the representation of Japanese male idols, one of the largest genres in Japanese popular culture aimed at women, and characteristic of larger recent women’s culture that it is part of. Specifically, through an analysis of articles (text and images) in female oriented magazine media, I will clarify how the image of male idols is constructed by the media. Building on this analysis, I will expand further on the concepts of “bonds” and “romantic love” in recent Japanese women’s culture.

Until recently, Japanese male idols, like those from ‘Johnny’s Entertainment’ were ascribed with the role of the ideal love partner for Japanese women. However, in recent media dealing with male idol groups popular in the 2000s, strong friendship and relationships of mutual trust between the members of the group are represented frequently. ‘The every day’ of idols, including events at school and coming home, are depicted, and many of their physical contact and conversation are made to look like expressions of homosexuality. Situations that consist of silly tomfoolery and play by these idols are usually referred to as “Wachawacha-kan”. What is important here is that the existence of female fans is not represented at all in the discourse of these articles.

In other words, male idols is represented as “ideal love partner” for women, but at the same time as someone who could not possible ever enter into a heterosexual relationship with the reader of these media. In the social background of this peculiar development, links can be made with “yaoi” culture (female made and oriented fiction on romantic and sexual relationships between men) in Japan, as well as changes of heterosexual values. In this way, I consider characteristics of recent Japanese woman culture through magazine media.

Polyvalent Meaning of Community Wind Power Movements: Comparing with Anti-Nuclear Movements in Japan

After the nuclear disaster in Fukushima, the opposite opinion to nuclear power plants and the expectation for renewable energy are growing in Japan. Because the electric supply is monopolized by major electric power companies, people cannot choose the company which sells electric power. Furthermore, the electric power companies are trying to carry out re-operation of nuclear power plants and to keep the exclusive structure of an electric supply. Therefore, the number of citizens who protest against the monopoly has increased, and people who desire to abolish the nuclear power plants, hope for the expansion of renewable energy.

Therefore it’s said that these renewable energy movements are connected with “anti-nuclear” movements. Those who support the anti-nuclear movements construct the dominant discourse –“anti-nuclear”, by relating various points at issue with anti-nuclear movement after Fukushima disaster. However, does the strategy of anti-nuclear movements have the backing of public opinion?

This report aims to clarify this question by answering why the community wind power movements become popular in Japan, using data of investors for the community wind power. The community wind power movement has stated from ten years before, 12 sets of wind power have already worked now.

The results are following: The participants in early community wind power movements were those who had joined in the anti-nuclear movement. As the number of the investors increased, their social attitudes become wide, and they had various motivation for the investigation, not only environmental consciousness, but the commitment to windmill and the expectation for a dividend.

If the administration of community wind power emphasizes the anti-nuclear too much, the number of the participants in a renewable energy enterprise will decrease. This result shows that it’s significant for sustainment of social movement. The participants who keep participants’ various motivations, and the renewable energy movements related with “anti-nuclear” is too simplified.

Re-Entering the Labor Market after Childbirth Among Japanese Women

This study explores the women’s working career after childbirth in Japan. Many Japanese women quit working around the time of their first childbirth, and re-enter the labor market when their children get somewhat older. This study focuses on the process of re-entering the labor market. Some previous research already investigated on the issue. However, most of them only focus on the getting a job for the first time after childbirth. This study further explores what happens in women’s career after they get job for the first time after childbirth, because it seems that many women experience the changes of their employment status even after re-entering the labor market. Data used in this study is Japanese Panel Survey of Consumers (JPS). This study uses data collected from 1993 to 2008. Those women who had their first childbirth during above observation period, and did not working in the year of their first childbirth are selected to describe the working career after childbirth and analyze the determinants of it. Results of the regression model show that when their child is ten years old is 65%. Results of Cox regression model show that university graduates are less likely to get a job compared to those who completed high school, however, it seems that husband’s income is more influential than education on whether a woman get a job or stay out of labor force. Then, focusing on the women who started their first job after childbirth as non-standard employees, their working career afterward is analyzed. The results imply that those who graduated from university are more likely to change their employment status compared to those who have high school diploma. Based on these results, Japanese labor market structure and the difficulties of women’s career development there will be discussed.

Politics of Science Online: Discursive Negotiation of Risk and Uncertainty Regarding Radiation Contamination

As the details of nuclear accident in 2011 unfold, many Japanese were forced into the world of scientific jargons that might determine their life. Some believed the scientific assessment of "no immediate danger," others alerted the danger of both short- and long-term harm of radiation contamination. As Beck (1992) notes that "the sources of danger are no longer ignorance but knowledge" (p183), the knowledge itself confused their understanding of radiation and political stance. While the national discourse was seemingly splitting into two "dangerous" and "safe" camps, there have attempted to assess the risk themselves by negotiating their ideas about safety, health, and lives through various discussions in mass, print, and online media. Especially the open discussions in the social media, whose popularity is tied to the activities in the triple disaster (Saiter, Nishimura and Kindstrand 2012), is an important sites where laypeople's experience, knowledge, and logic come into play and negotiate them.

This paper attempts to illustrate how popular epidemiology (Brown 1987, 1997; Murphy 2006; Novotny 1994) and scientific knowledge about radiation contamination is negotiated in Japanese online discursive space. I compare and contrast two major rhetorics: one that is skeptical of, and another that claims immediate harm of radiation. I center my analysis to those on Twitter, due to its open architecture and ability to identify individual participants. My aim is to explore the different ways in which participants of online discussion are making sense of the situation, from their living space, food, water to their health, family, job, etc. Furthermore, I look at the debates around Kake Motomo Taro, an activist politician who was elected to Upper House in 2013 by centering his campaign around anti-nuclear policy, and how such online discursive space may have ramification to the transformation of political in Japanese society.

"With a Little Help from Outside" – "Outsourcing" of Domestic Work in Germany

Unpaid household labor and the provision of care within families present an important determinant for individual and collective welfare. However, in the past decades, the work and the mobility structure of householders has undergone significant change. In particular, the increase of dual-earner couples and demographic shifts challenge traditional arrangements of paid and unpaid labor within the household. Households are thus increasingly confronted with the decision whether to make use of possibilities by themselves or to buy or rent services in the market. While common explanations emphasize the relevance of time and labor costs for such make-or-buy decisions, empirical results call for further explanations.

From a sociological point of view the relationship between supplier and the household contains many issues which generate trust problems. Moreover, the outsourcing of household work is embedded in a normative framework about family and gender, affecting the choice of what and how to outsource specific tasks. Although time pressures of households are increasingly relevant, the topic has so far been understudied. Especially in Germany there is little empirical evidence about the outsourcing behavior of households. The paper thus analyses the determinants of outsourcing decisions of households in Germany. The analysis is based on the waves 1992-2013 of the German Socio-economic Panel (SOEP) applying panel data methods. Theoretically the analysis draws upon new home economics, family sociology and economic sociology. The article gives insight into the decision of households to engage in make or buy decisions and specifies boundary between household and markets and gives explanations for current empirical developments in this realm.

Mobility Decisions of Dual-Career Couples- New Evidence on the "Co-Location" Problem

Working couples in general face a "co-location problem". Since it is unlikely that both partners will find their individually best job offer at the same geographic location, at least one partner will have to make concessions when joint locational decisions are made. Several research on regional mobility of couples has shown that it is mostly women who make these concessions and who suffer disadvantages with respect to career opportunities. A common framework for explaining such gendered outcomes has been proposed by Mincer who assumes that a joint move will occur if the gains of one partner outweigh the losses of the other partner. Since women are (still) mostly in the role of secondary earners, their losses can be outbalanced more easily. However, with the rise in women's employment participation the potential for couples co-location problem has grown, especially for the higher educated with more specialized careers. One implication of the Mincer model would be, that in particular dual-career couples should be significantly more mobile than other couple types. However, recent research is less consistent on this topic, suggesting that dual-career couples are even more mobile than other couples. This contribution aims to explain these contradicting findings and to shed more light on the mobility decisions of dual-career couples by analyzing more thoroughly the circumstances of such migration. In particular it tries to combine mobility research with regional sociology and economics which emphasize the relevance of regional opportunity structures, especially those of urban labor markets. Theoretically an extension of the Mincer Model is proposed by referring to a bargaining model of household decisions. The empirical analysis is based on panel data analysis of the German Socio Economic Panel, waves 1992-2011. The paper also gives insight into recent developments in urban settlement and the changing social structure of large metropolitan areas.

Ambiguities in Discontinuing Medication: How General Practitioners Make Sense of Discontinuation and Their Strategies for Reducing Ambiguity

This paper will examine how general practitioners (GPs) deal with ambiguity in order to perform medication discontinuation. I examine the case of statins as it is a strongly recommended drug for reducing the risk of cardiovascular disease, however there several possible complications with taking the drug such as side effects, drug-drug interactions and lack of effect because of old age. Discontinuing the drug is therefore not a straightforward task, rather it involves a great deal of ambiguity. Drawing on interviews and observations of Danish GPs and document analysis of two independent drug recommendation bodies in Denmark, I analyzed GPs’ strategies for dealing with three important problems related to discontinuation: 1) assessing the validity of patient reported side effects as a reason to discontinue; 2) discontinuing a hospital specialist’s prescription; 3) assessing the likelihood of a positive outcome after discontinuation. Drawing on sense-making theory, I outline the strategies a GP may use for dealing with ambiguity and selecting alternatives with regards to patients drug prescription. I show how these strategies are shaped by professional qualities, including: terrain of responsibility (whose responsibility is it to discontinue), prioritising ability (how comfortable is the GP prioritizing from a long list of medications), shared communication with patients (how two way is the communication) and discontinuation confidence (are GPs willing to trial discontinuation without the promise of a positive outcome). I conclude with recommendations for how to support appropriate discontinuation in primary care, including updating guidelines to explicitly acknowledge multimorbidity in patients and the importance of medication prioritizing, creating discontinuation alliances for GPs, e.g. with clinical pharmacists and gerontologists, and developing positive metaphors for ‘discontinuing medication’ to enable better communication with patients, e.g. drug holiday or medication pruning.

Re-Building a Conservation Organization: The National Trust for England and Wales in the 1960s

The growth of conservation organisations was one of the more striking features of post-war social change in Britain. With their roots in late Victorian and Edwardian ideas of preservation and conservation, the membership of these organisations expanded markedly from the 1960s. The two biggest national organisations – the NT and RSPB – saw their combined memberships grow from just under 300,000 in the mid-1960s to over 5M by the turn of the century, making them the two largest conservation organisations in Europe. The increasing size of organisations like the NT and RSPB has given them greater influence as lobbyists in their dealings with policy makers at both the national and supra-national level. It has also, however, generated difficult questions about their relationship to their mass memberships and their internal forms of governance. In particular, it has forced these large conservation organisations to confront the nature of their organisational souls and to ask what kind of organisations they are and what kind of organisations they might become. In this paper, I focus on the National Trust and the soul-searching undertaken by the organisation in the late 1960s. As the organisation grew, disputes about the purposes, policy and management of the Trust emerged. These concerns prompted the NT to conduct a review, drawing on evidence from both inside and outside the organisation. Led by Sir Henry Benson, the subsequent Benson Report of 1968 proposed significant reforms to the organisational governance of the Trust, including the relationship between its ruling council, its full time officials, its volunteers and its members. The paper reflects on the source of these organisational reforms within existing management thinking and organisational theory and the model of organisational governance which the Report proposed, considering the family resemblances between the NT’s re-built organisational structure and that of other ‘conservation bureaucracies’.

Montée Des « Risques Psychosociaux » Et Redéploiement De La Critique Du Travail : Opportunité Ou Piège ?

C’est dans une conjoncture d’affaiblissement et de professionnalisation des syndicats que s’élargissent les formes de l’exploitation, qui se traduisent par des atteintes plus fréquentes à la santé mentale des travailleurs. Ces atteintes sont désormais catégorisées comme « Risques Psychosociaux ». Cette notion a emporté sur le territoire français la notion de l’stress, de l’emotion de fuite ou de la souffrance. Les professionnels de la santé au travail et de sa négociation collective ont réussi à l’intégrer dans la problématique pré-existante des « risques professionnels ».

NOACK, CONSTANCE* (Heinrich-Heine-University Dusseldorf, noack@phil.hhu.de)

“Everyday knowledge” is constructed in the mass media by debating or inter-weaving everyday knowledge and common knowledge. It can be assumed that individuals act and identify themselves on the basis of this knowledge, which is nevertheless continuously socially constructed. Drawing from approaches of the sociology of knowledge, I would like to present preliminary findings of my PhD research focusing on the construction of knowledge of masculinity in media products. Since my methodology is based on the ‘discourse analysis as well as sociology of knowledge’, my paper is dealing with the issue of how knowledge is produced in non-fiction publications. By revealing the process of knowledge construction, I am going to analyze the role of the social actors, the subjective positioning and the given social positions as important aspects. Theories of social upheaval and knowledge production, and broadening of the social knowledge pool could be the key to adapt and form alternative ways of living, given of course there is “new everyday knowledge” and not only repetition of long established knowledge. Therefore the question arises how knowledge, whose the potential to form and distribute new “everyday knowledge”, is being produced by the media.

Comparative Research on Contemporary Youth Social Movements: The Case of the Genind Project

The year 2011 has witnessed the emergence of new types of social movements, transnational in scope but especially intense in the Mediterranean area, one of which precipitating factors has been the leading role of the new generations and the urban middle classes. The year began with the so-called ‘Arab spring’, continued with the ‘Spanish revolution’ of 15-M, the Chilean student protests, riots in some English working-class suburbs, the Occupy Movement in the United States and ended – at least till date – with riots in Turkey and Brazil. The antecedents date back to the ‘anti-globalization’ movement emerged in Seattle in 1999 and in Porto Alegre after 2001, the revolt of the French ‘banlieues’ in autumn 2005 and the Greek mobilization in winter 2008, coinciding with the start of the international financial crisis. This paper presents the results of a research project funded: The Indignant Generation. Space, culture and power in the youth movement of 2011 [GENIND]. While it is early to assess the impact of such movements, it seems evident that they respond to a new cycle of social protests, which manifest in public space (both in the squares of cities and in the Net). The project aims to shed light on the nature, causes and recent drift of such movements, taking the Spanish case as a reference point and comparing it with the mobilizations in four Mediterranean countries (Portugal, Italy, Greece, Egypt), and other territories where there was also mobilizations (England, USA, Chile, Brazil). Although it is based on ongoing ethnographic research, their orientation is primarily theoretical. The main
Objective of this communication is to present the GÉNIND project and its main results. It discusses the convergent and divergent elements of such movements, its innovative aspects and its continuities with previous movements and their local and global impact on youth and society.

Geographies of the European Spring: The Case of #Spainishrevolution

Along the week prior to the past local and regional elections in Spain celebrated in May 2015, many Spanish citizens took several places and streets to denounce political corruption and national economic situation that are deteriorating democracy in Spain. Immersed in a strong economic uncertainty mainly marked by a great lack of individual as collective future, the eternal Two Spains have bumped into themselves. This paper will show how the so-called #Spanishrevolucion of the present history of Spain which the urban, modern and young Spain has raised their voice against the rural, traditional, pure, old Spain. Mainly based on a sub-regional scale analysis of the #Spainishrevolution, this paper will show how the young, urban, modern Spain openly expresses that it is not willing to keep on badly surviving in the city while the rural Spain continues to lie in their country houses without showing any sign of entrepreneurship, awaiting the arrival public subsidies mainly funded by the European Commission as well as its Spanish wealthiest sisters regions. The Northern Spain has said enough to the South. Rather than showing a Hegelian spirit of the people, the #SpanishRevolution is a cry for the modernization of Spain.

NOISEUX, YANICK* (Université de Montréal, yanicknoiseux@gmail.com)
Le Travail Migratoire Temporaire Au cœur De La Dynamique De Centrifugation De L’emploi Vers Les Marchés Périphériques Du Travail: Une Perspective Canadienne

The communication (qui se fera en anglais) présentera trois exemples de programmes mis en place par le gouvernement canadien et favorisant l’essor de ce que nous appelons le travail migrant en régime dérogatoire sur les marchés périphériques du travail: 1) les travailleurs agricoles saisonniers immigrants embauchés dans le cadre du Programme des travailleurs agricoles saisonniers (PTAS); 2) les aides domestiques migrantes embauchées dans le cadre du Programme des aides familiaux résidants (PAPR); 3) les travailleurs temporaires dits « non qualifiés » embauchés dans le cadre du Volet des professions peu spécialisées.

Partant d’une analyse de l’évolution de ces programmes, il s’agira donc de bien mettre en relief, au-delà du fait que les travailleurs migrants temporaires jouent le rôle d’une « armée de réserve, que les programmes de travail migrant en régime dérogatoire agissent comme une interface entre le cadre national et international afin de faire jouer la concurrence entre les travailleurs dans des marchés qui ne sont pas – pour toutes sortes de raisons – « externalisables », tout en préservant l’un des plus grand paradoxes du « libéralisme réellement existant » qui fait de la liberté de circulation pleine et entière, l’apanage exclusif des biens et services et non des travailleurs. De manière à établir la cohérence d’une politique du travail visant en premier lieu la mise en concurrence des travailleurs, l’analyse montrera comment les troupes temporaires de ces programmes ont également été instrumentalisés lors de la récente réforme de l’assurance-emploi au Canada. Nous mettrons ainsi en relief l’instrumentalisation non seulement en termes d’exploitation de cette main-d’œuvre au rabais, mais, plus encore, aux fins d’une stratégie d’éclatement d’un régime de travail de type universeliste. Ultimement, nous montrerons qu’au delà de l’appréhension logique de l’efficacité des programmes, le travail migratoire temporaire au cœur d’une dynamique de précarisation par la centrifugation de l’emploi vers les marchés périphériques du travail.

NOISEUX, YANICK* (Université de Montréal, yanicknoiseux@gmail.com)
Organizing Female Workers In The Informal Sector: A Case Study Of Learn-Dharavi

Labour flexibility is a hallmark of a new economic model marked by the rise of informal and precarious work. Given this structural transformation, many scholars have invited unions to organize the unorganized “at the rough ends of the labour markets” (Henry and Adler, 2004) because it is from this engagement that new forms of unionism will emerge (Murray, 2004). India is no exception. The NCEUS have shown that the economic liberalization process of the 1990s have trigger a “jobs centrifugation dynamic” that pushed employment towards peripheral labour markets. Since then, Indian scholars have also stressed the importance of unions to refocus on the “organizing model” and invest these segments (Bhowmik, 2005; Agarwala, 2008).

It is in this spirit that LEARN-Dharavi, an NGO, has successfully launched organizing drives aiming to stir collective action involving women working in the slums of Mumbai. Building on our previous research in the shipbreaking industry (Noiseux, 2013) and empirical data collected through interviews with representatives of LEARN-Dharavi (local leaders and female workers/members involved in different industries i.e. domestic services, canteen workers, embroidery, garment industry, street vending), the paper will present the result of a case study conducted in 2011-13 using the analytical framework developed by Comeau (2005). It will first examine elements of contextualization regarding the State’s role in the development and “regulation” of the informal economic activities, then present the struggle’s chronology and discuss practices, strategies and demands put forwards by the different grassroots unions that emerged from LEARN’s actions. Finally, it will take a look at the “raising issues” in order to highlight the gap between discourses and practices and identify the difficulties facing traditionally organized labour when seeking to transform itself in order to meet the needs of the so-called “informal workers”.

Organized Reaction to Experiences of Stigmatization: The Identity Politics of a Muslim Organization in Switzerland

The success of the Anti-Minaret Referendum of 2009 in Switzerland was due to a long, intensive campaign of the far right political parties. The pro-referendum campaigners highlighted the signal effect of the legislation as a means to contain the “Islamic threat” in Switzerland, many Muslim organizations regarded the campaign as a concerted effort to stigmatize Islam and to discriminate Muslims.

This perception motivated a group of young Muslims to institutionalize their efforts in countering the anti-Islam activities of the far right. Thus, in 2009, the Islamic Central Council Switzerland (ICCS) was founded. The current study investigates the identity politics of ICCS as well as its strategy to cope with what its members regard as a “conspiracy” of the far right political parties to “subjugate” the Muslim community.

The paper draws on in-depth interviews with active members of ICCS as well as on data collected through participatory observation of the public events of the association.

It is argued that ICCS, very much inspired by identity politics of other minority groups, strives for what Jürgen Link (1999) would call “production of normality” – namely the recognition of Islam as a “normal” religion equal to Christian and Jewish communities.

The paper also highlights the following strategy of ICCS: Whereas the far right clearly aimed at eliminating the visibility of Islam in the public spaces, the ICCS activists try not only to publicly observe an orthodox Islam, but also to propagate it. It is finally argued that the dialectics of stigmatization and provocation seems to serve the xenophobic agenda of the far right much more than the ICCS strategy of establishing the normalcy of Islam in Switzerland.

The study is a part of a larger project funded by The Swiss National Science Foundation investigating the narrative identities of Muslims active in voluntary associations.

Post 3.11 Movements in Japan: A Mental Map Approach

In this presentation, we attempt to clarify the nature of antinuclear movements in Japan after March 11, 2011, from the viewpoint of participants’ mentality.

On March 11, 2011, a big earthquake and a gigantic tsunami hit the northern part of Japan. The tsunami also paralyzed the emergency power system of the nuclear power plant in Fukushima, causing power plant explosions. The nuclear accident and subsequent radioactive contamination send a majority of Japanese people to the evacuation centers and evacuate from the contaminated areas.

Whereas the pro-referendum campaigners highlighted the signal effect of the legislation as a means to contain the “Islamic threat” in Switzerland, many Muslim organizations regarded the campaign as a concerted effort to stigmatize Islam and to discriminate Muslims. The study is a part of a larger project funded by The Swiss National Science Foundation investigating the narrative identities of Muslims active in voluntary associations.

explosions and their subsequent act for denuclearization. We try to reconstruct a web of meanings existent in the 2012 campaign, also identifying central meanings and important subsets of meanings. We employ a comparative design, comparing the 2012 campaign against the 1954 campaign, to highlight important features and characteristics of the movement today.

Our major finding is that, while 1954 movement dominantly drew its significa-
tion from collective memory of Hiroshima and Nagasaki and risk on food safety, post 3.11 movement was strongly driven by motherhood mentality to protect a child and a concern over local environmental protection.

Social Movement Transformations in the 20th Century: Japanese Experience

In this presentation we investigate causes and conditions of social movement change in the post-World War II Japan.

Social movements in Japan have experienced tremendous transformations after the World War II. Starting with the movement surge in the 1950s Japan witnessed a sharp rise in popular protest in the early 60s, culminating in the peak in late 60s. After a sharp decline in the early 70s, the entire civil action has stayed relatively calm up to the present. Japan also witnessed huge transformations in repertoires of contention. In the 1950s, Japan saw a rise in labor movements, along with anti-capitalist, student, and environmental movements in 1960s. Why did Japan, as non-western democracy, experience such a huge transforma-
tion in social movements after the World War II? Big shifts in quantity and quality of social movements have been recorded in some other countries. In such cases they often experience huge structural transformations. The Japanese case, with no structural change during the latter half of 20th century, does not allow us to lay out the same explanation. Also the shift is not toward a “social movement society.” Japan seems to have become a society content with what they have.

We employ both qualitative and quantitative methods to investigate into the causes and conditions for social movement change in the post WWII Japan. Quantitatively we use event data analysis to identify changes in volume and categories. Qualitatively we look for cognitive change that involve shift in values and percep-
tions toward social movements.

Our finding is that in international politics along with growing global civil society had to do with the change in social movements in Japan. Also past experience of the 60s may have had a negative effect on the perceptions and motives of the later generations to give rise to social movements.

Routines As Competency. New Medical Routines for Hybrid Health Care Professionalism

Organizing health care services increasingly encompasses hybrid forms of medical professionalism. Relations between managers and medical professionals become less binary and oppositional; organizational forms become less perform-
mance-based and less strictly managerial; medical professionalism itself becomes more organizational. In this paper we focus on the latter trend, as most studies on hybrid professionalism tend to focus on the other two. The rise of “organizing profes-
sionals” (i.e. medical professionalism that includes organizational and man-
agerial capabilities) is usually approached in terms of new competencies. New competency models, such as the CanMEDS model for medical professionalism, circumscribe the new roles and acts that (medical) professionals have to perform, including collaborative and managerial roles. We take another approach: we see competency as an institutional phenomenon, instead of an individual one, and we focus on medical routines in order to analyze institutional competency. Medi-
cal routines represent institutionalized aspects of medical acts and practices and might help of hinder the rise and spread of (innovative) hybrid service delivery that is collaborative and was organized. We especially focus on the many practical and everyday sides of medical routines. We focus on the everyday sides of orga-
nizing health care by medical professionals, including multi-professional collabo-
ration and quality and safety management. We (a) explain what we mean by med-
ical routines as institutional competency, (b) describe current changes in medical routines that enable the rise and spread of collaboration and quality and safety management by medical professionals, and (c) trace effects on medical outcomes. Empirically, we focus on changing routines in a Dutch academic medical center.

Patterns of the Semiperiphery: Using Valued Blockmodeling Techniques to Map and Specify the Relational Characteristics of Semiperipheral Countries

Although the trichotomy of the world-system often is specified in terms of processes of each stratum, particularly the global division of labor, an increasing number of studies specify and define such strata in relational terms. Parallel to this, the core-periphery concept has also been specified by network scholars as a structural template that captures some of the original relational connotations. However, even though the semiperiphery has a distinct role in world-system analysis, with several scholar focusing explicitly on this particular stratum, very little has been said about the relational patterns of the semiperiphery. Rather, in relational (network) analyses, semiperipheral countries are typically those whose relational properties fit neither the core nor the periphery.

Combining a novel approach for blockmodeling of valued networks with a novel algorithm that identifies dependency and dominance in core-periphery struc-
tures, this paper addresses the following questions: does the semiperiphery, similar to the core and the periphery, has its unique patterns of ties? If so, what patterns? What are the characteristic patterns of ties between the semiperiphery and, respectively, the core and the periphery? Using pre-determined core-semi-
periphery-periphery partitions of the contemporary world-system as specified in the qualitative literature, the novel network-analytical methods are applied in the analysis of international commodity trade matrices in search of would-be ideal blocks that characterize semiperipheral relations. Finding such would not only allows for identifying semiperipheral countries based on their relational features, as something distinct from similar blocks for core and periphery, respectively, but it would also allow for mapping patterns of dependency and dominance within the semiperiphery and its patterns to the core and periphery strata. Additionally, it would provide the formal network-analytical toolbox with a specification and possible structural definitions of core, semiperiphery and periphery that actually stems from the actual context from which the trichotomy stems, i.e. world-sys-
tem analysis.

Higher Education of Women Between Heterogeneous Logics: Gender-Equality and Scientific Excellence As Conflicting Requirements in University System

At present the German university system is undergoing a number of reforms to improve its models of teaching and research. Equality politics have a high priority in the discourse. Gender equality in the higher education sector is still unrealized: Despite the fact that now equal numbers of men and women start studying, there is a big drop out of women in higher level of education systems, known as the “glass ceiling effect”. Because of that, equality politics also have taken into regard later stages of university education, namely the doctoral and postdoctoral phase. This contribution is based on a scientific study from 2012, which analyses the benefits of the new measures to promote women within the junior researcher program of a scientific cluster, measures created as part of a new governmental funding policy. The German “Excellence Initiative” is one of the most important initiatives in higher education reform to strengthen international competitiveness and high-quality research. New incentives were created for universities to take into account both scientific and equality policy requirements, in order to reduce the well-known problems of women in this phase. By analysing the situation with the theoretical framework of Neoinstitutionalism, it can be shown that gender equality and scientific excellence are two different logics that came into conflict with each other. These measures partially lead to paradoxical consequences for the careers of women through the constantly changing interplay between hetero-
geneous environmental requirements and organizational structures. Instead of better support for women, new obstructions appeared in their careers. These unfor-
tunate consequences arise out of conflicting institutional logics and were never con-
tended by any of the institutional actors involved.

The “Invisible Hand” of Oppression - Symbolic Violence in the Precarisation of the German Labour Market

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
When we think about oppression and global inequality, we also have to ask why it is that many underprivileged groups suffer from oppression without any real resistance? With the analytical framework of Bourdieu's theory of practice I will argue that any theory that draws on the concept of intersectionality has to take into regard the symbolic dimension of society in which social practice takes place and which causes and reproduces social structures of domination. Symbolic violence, this "gentle violence [...] invisible to victims" (Bourdieu 2001, 1-2), is the key to understand how oppression reproduces and legitimises itself. It contributes both to the recognition of oppression and at the same time to the misconception of its arbitrariness. This contribution deals with the precarisation of labor in contemporary Germany. This field is mainly structured by race, class and gender. Women, immigrants, disabled persons and lower classes are disproportionately affected by adverse working conditions, lack of job security and lower payments, and are furthermore badly integrated into the social security system.

I want to argue that the precarisation of labor and life is a new form of symbolic violence, which affects different groups in different ways for the purpose of labor exploitation. This process cannot be understood solely by looking at economic constraints or pure violence. Deterioration of working conditions is legitimised by the apparent naturalness and inevitability of economic development. To theorize the different axes of oppression in the field of precarious work, I will consider not only different categories of inequality but also the very processes of categorisation through labour. Taking into account this symbolic dimension of oppression in society may lead to a better understanding of its invertebrate persistence.

NORSTEDT, MARIA* (University of Lund, Maria.Norstedt@soc.lu.se)

The main question I will address in my paper is: what does the use of institutional ethnography help me see analytically that I would have risked not seeing with other methodological glasses? In order to discuss this, I will draw on and exemplify with my first analysis of the empirical material from an on-going workplace study about hidden disabilities and working life. In this moment I am in the process of doing this analysis. The study takes its starting in the experiences and work knowledge of individuals with hidden disabilities in order to understand individual, interactional and institutional aspects of importance for people with hidden disabilities when they decide to tell – or not to tell – others in the workplace. While discourse analysis is a relevant methodological approach in a study about people with hidden disabilities I argue that institutional ethnography (IE) through its institution-practitioner praxis can be a relevant method for understanding their material consequences in workplaces and on every day experiences. Discourse analysis could stay at the level of representation, not showing what people actually do with discourses and thereby risking seeing neither agency nor material practices. IE enables an understanding of how marginalization works in individual, interactional and institutional practices in workplaces and of how the everyday life and agency of persons with hidden disabilities are impacted by these practices. Another advantage is that IE does not accept an ontological divide between individual and structure and an analysis based in IE thus can provide an answer to the long intrigued paradox among disability researchers: how to theoretically understand disability as a consequence of inequality/social structures without neglecting individuals’ bodily experiences of living with a disability. This is also something I will discuss in the paper with the help of my empirical data.

“What Do I Do Now?” Post-Retirement Leisure in Japan

Japan's dankasedai, the generation that was the foundation of the country’s “economic miracle,” are retiring. As their careers come to an end, Japan’s “greatest generation” seem at last to be in position to enjoy the fruits of their labors. But can they? Japan has the greatest average longevity, but its post-retirement leisure other Confucian catch-up economies.

Although “retirement divorce” is a danger, couples with sufficient means may find their work and childcare arrangements in the first year of the child's life impacts on paternal involvement as the child grows up.

This paper, based on work by Norman, Elliot and Fagan (Community Work and Family, forthcoming), investigates some of the tensions between employment and a father’s involved caregiver role. We open with a review of the qualitative and quantitative results from previous studies concerning father's contributions to childcare, the facilitating influences which shape paternal leave policies and other reconciliation measures have been played in some countries. Then we focus on employed couples to explore the association that mothers' and fathers' employment hours have with paternal involvement when their child is aged three. Multivariate analysis using the UK's Millennium Cohort Study reveals it is the mothers' employment hours when the child is aged three that has the largest association with paternal involvement in childcare at this stage in the child's life, independent of what hours the father works. Furthermore, both parent's employment hours when the child was nine months old have a longitudinal influence on paternal involvement when the child reaches three, but it is the hours a mother works when the child was aged nine months that has the stronger association with paternal involvement at age three. This suggests mothers' work schedules are more important for fostering paternal involvement in both the immediate and longer term.

Moving up and Down in the Capitalist World System: A Qualitative Comparative Analysis of Patterns in Post-Communist Transformation

The relation of Communist world to capitalist World System (WS) is disputed subject, opinions including the views of USSR as semi-periphery power in the capitalist WS, as residual empire resisting integration into WS, parallel World anti-Sys- tem etc. Its breakdown was fuelled by promises of anti-communist counter-elites and broad populations of joining the core of WS in few years after re-introduction of free market and liberal democracy. After 20 years, analysts describe history of former communist countries in the 20th century as “detour from periphery to semi-periphery and back” (Gill, 2002). After two decades of post-communist transformation, most of them remained in or returned to the positions where they were before Communism, some moved down from the semi-periphery to periphery, and only few managed to upgrade their world-systemic position. According to the tran- sitional wisdom, economic (shock therapy) or political (revolutionary removal of communist counter-elites) factors are decisive for the early success of post-communist transition.

The author argues that neither economic nor politological explanations are sufficient to account for changes in the world-systemic position of former communist states (including China and Vietnam), and highlights the importance of cultural differences described in terms of four orientations (continuational, transformative, rational-legal and innovative) of social imaginary and social action on the eve of post-communist transformation. This argument is tested by qualitative comparative analysis of patterns in post-communist transformation.

What Makes Fathers Involved? Exploring the Relationship Between Paid Work and Childcare

Although fathers’ roles have been adapting over the last three decades financial provisioning remains the essence of ‘good’ fathering and the work schedules associated with fathers’ employment is a key factor that shapes their involvement in childcare and domestic work. However, the relative impact of fathers’ and mothers’ employment on paternal involvement in childcare is unclear, and little is known about the longer term impact, that is, whether the way parents’ organise their work and childcare arrangements in the first year of the child's life impacts on paternal involvement as the child grows up.

This paper, based on work by Norman, Elliot and Fagan (Community Work and Family, forthcoming), investigates some of the tensions between employment and a father’s involved caregiver role. We open with a review of the qualitative and quantitative results from previous studies concerning father's contributions to childcare, the facilitating influences which shape paternal leave policies and other reconciliation measures have been played in some countries. Then we focus on employed couples to explore the association that mothers' and fathers' employment hours have with paternal involvement when their child is aged three. Labeling political enemies as terrorists became the new trend in the new millennium. It has not only become the cornerstone of discourse surrounding US foreign policy, but also a rhetorical tool employed by authoritarian dictators (such as Gaddafi during the Libyan crisis, and Assad during the Syrian civil war) in maintaining their grips on power.

It is argued that the threat of terrorism is successful in garnering public support for military intervention and authoritarian practices precisely because it plays on public fears and anxieties concerning anomie and unpredictable violence. The construction of a terrorist threat reinforces the authority of the State to ensure its territory and public safety, even sanctioning extreme measures (such as torture, intrusive surveillance and the outlawing of public gatherings) that would normally be viewed as antithetical to the humanistic principles of liberty, justice and tolerance. However, these measures are justified on the basis that terrorism is ‘evil’ and therefore requires a ‘means justifies ends’ rationale where humanist ideals are cast aside for the ‘ultimate concern’. Terrorist groups, meanwhile, also cast their activities in terms of humanist and religious responses to oppression and aggressive foreign policy, even as they reject certain humanist principles and modernization as forms of Western imperialism.

By examining speeches and writings from key political figures, it will be shown how humanism and religion merge in the political discourse surrounding terrorism in ways that indicate uncertainty and/or duplicity over the moral foundations of contemporary political action and State power. Do such tendencies reflect differences associated with an emerging post-secularist humanism, or are they a Machiavellian bricolage of ambivalent and contradictory rhetorical elements? The answer is relevant to understanding to what extent the enculturation of humanist ideals can serve to arrest the violence surrounding terrorism.

**Woman Leader, Woman Employee and Ethical Organizational Culture in High and Low Gender Gap Index Contexts**

Considering widely reported differences among countries in terms of innovation development levels, achievements in such fields as gender equality, organizational responsibility and other alike implementations (especially comparing American, African and European, North-South-East-European, Post-soviet/socialist countries), the paper focuses on women’s and men’s status in modern organizations. More specifically, the paper concentrates on perceptions of women leaders and organizational climate in the organizations working in such societies as Finland (Northern country) and Lithuania (East European post-soviet country). Quantitative data were collected by a web-based survey in Finland (2011) and Lithuania (2013, still under process). In this study, indicators of 2 scales are in the focus of empirical analysis: the Corporate Ethical Virtues scale of 58 items comprising eight dimensions of organizational virtues: clarity, congruity of supervisor, congruency of management, feasibility, supportability, transparency, discussability and sanctionability; the leadership practices scale of 7 items, depicting interrelations between a supervisor and a subordinate. Striving to ensure reliable comparability, one public Finnish (N=477) and one public Lithuanian (n=76 at the moment) organizations were selected for comparison.

Results of preliminary statistical analysis demonstrate that the respondents’ average evaluation of male leadership practices is higher than female leadership among Lithuanian respondents, but lower among Finns; also gender differences in the evaluations of corporate ethical virtues and effects of leader’s gender on the evaluations of CEV are almost absent among Lithuanian respondents, but rather obvious among Finnish ones. The findings not only indicate effects of gender equality developments in countries with a high and low gender gap index (respectively, Lithuania and Finland), but also shed some light on interrelations between such phenomena as gender and leadership, gender perceptions of the ethical dimension of organizational culture, etc. In a comparative perspective. The analysis will be repeated at the end of 2013 after data collection process will be finished in Lithuania.

**Post-Disaster Literacy of a Japanese Local Community**

More than two years have passed since the Fukushima Dai’ichi Nuclear Power Plant accident of March 11, 2011. The first phase after the accident, “collective moral confidence” (Petryna, 2013), suggested that the existing system will over-come the disaster, yet evolutioned into feelings of desperation and disorientation about actual risk. An escalated sense of the unknown and unexpected fostered a flow of voluntarism and participation in local decision-making processes. Engaged in the process of information sharing, consensus-building, and mobilizing their resources and connections, local activists have been trying to influence local government decision-making.

This paper examines the process by which the Fukushima accident has been dealt with in radiation-contaminated communities, yielding insights into local government responses to the nuclear accident and probing whether government-citizen relations have been altered in the aftermath of such a disaster. Through

---

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
fieldwork undertaken in 2013 in Abiko City, Chiba Prefecture, this paper traces the nexus of the community-NGO-government relationship, focusing on the after-effects of the Fukushima Daichi Nuclear Plant accident. Utilizing civil society concepts and the expanding role of civil society in governance, we argue that civil society in a post-disaster community is an arena in which new ideas concerning governance are formulated and citizens' civic education is carried out. What is more, this paper provides what Charles Tilly called the "repertoire of collective action," in which people engage in modern post-Fukushima modes of political protest. While observing how people from a radiation-contaminated community have overcome some of the risk-perception problems, this research gives insight on the modern Japanese capacity to deal with unpredictable human-made accidents, extending previously known scenarios of post-disaster management.

NOVIKOVA, SVETLANA* (The Institute of the Social and Political Researches of the Russian Academy of Sciences, s_novikova60@mail.ru) Characteristics of Becoming Sociology in Russia

Russian sociological thought XIX - early XX centuries was closely associated with the ideas of Russian philosophy and literature. The becoming of sociology in Russia was initiated in the framework of social journalism. The first sociological articles were published in the periodical press as a "Notes of the Fatherland", "Business", "Knowledge". One of the founders of Russian sociology N.I. Kareev highly appreciated journalistic contribution to the development of sociology, noting that the "Notes of the Fatherland" was the first in the Russian sub-faculty, which has participated in the creation of generation of sociologists.

In the West the institutionalization of sociology, sociological deployment of higher education took place earlier than in Russia. Recognition of sociology at the state level in Russia was only after the February Revolution of 1917 largely due to P.A. Sorokin. The first sub-faculty of sociology was established in 1919 at the general education faculty of 2-nd Petrograd State University. Only in 1916 it was an attempt to create a "Russian Sociological Society name M.M. Kovalevsky". The Russian government prevented the development of sociology. The desire to prove with the help of positivism, Marxism or another theories led to unreasonable politicization of Russian sociology. On this occasion P.A. Sorokin said: "In Russia the scientific arguments for sociology were: prison, exile and hard labour. Disinterested search for truth and the presentation of the results of this search were impossible". Therefore, the hallmark of Russian sociology was its oppositional political preconception. Probably for this reason Russian sociology was prohibited in 1929-1958 and officially named as pseudoscience.

NOWACZYK, OLGA* (University of Wroclaw, nowolga@gmail.com) Emotional Work During Biographical Research: A Researcher's Personal Reflection: Researcher's Experience (ongoing biographical research projects)

Social research are entangled in experience of researchers, who are emotionally affected by the work that they do. Particularly in qualitative research researchers’ engagement could influencing on the resulting of data. Since during the biographical interview facing many difficult situations. So it is in my case. In my biographical research with veterans I am often in difficult emotional situation. I am going to refer how I manage with this problem and provoke methodological discussion in that field. Biographical interviews required hard emotional work of researchers. Therefore in my paper I take a distinctly approach to provide a personal account of my experiences of doing emotional work while conducting my postdoctoral fieldwork. To add context, my research focuses on the biographical interviews with the polish former soldier of the military operations in Iraq and Afghanistan. In my research I define this social category as veterans because respondents identify themselves as such, too. Thus, through collecting stories, the research seeks to explore experiences and understandings of former soldiers wounded and injured on mission abroad, both in terms of these constructions, and the ways in which people manage and negotiate them. My paper focus on two ways of biographical research reflections. Firstly, on the considerable emotional challenges encountered during the research process and the ways in which these were managed through both successful and unsuccessful coping strategies. Secondly, I detail the ways in which my identity and biography impacted upon this emotional work and my relationships with participants. In order to embody such discussions I use excerpts from my own research diary and quotes from participants. Conclusions in my paper concern to the ways in which we, as the community of researchers, can do more to share our research experiences with each other for the benefit of ourselves and our work.

NOWAK, RAPHAËL* (Griffith Centre for Cultural Research, raph.nowak@gmail.com) Locating the Materiality of Music Artefacts

This paper aims to reassess issues of materiality within the study of music consumption. While music sociologists usually focus on notions of taste, mediation or repertoires of preferences, the materiality of music artefacts are often neglected in the studies on music consumption. From the iconicity of vinyl discs, the hibiness of iPods, to the aesthetic features of posters, artefacts play a major role in how individuals develop and maintain a relationship with their favorite music, artists and genres. The material interactions between audiences and music artefacts are aesthetic and embody their preferences in return.

In the digital age of music consumption, there is an increasing trend towards the fragmentation of modes of music consumption. Music audiences are driven towards the use of different material artefacts to surround themselves with music throughout everyday life. Henceforth, artefacts relate music to different forms of interactions and associate it with everyday activities.

In this paper, I argue that both fields of sociology of music and of material studies need to be intertwined to effectively account within researches of music consumption. By doing so, it becomes possible to uncover the meaning of differentiated types of music consumption and look at forms of aestheticization of everyday life through music and the objects that embody it.

NOZAKI, SHIN* (Waseda University, nozaka-sociol@toki.waseda.jp) Reconstructing Processes of Risk Awareness/Regional Development at Tsunami Disaster: The Case of Otsuchi-Town before and after the Great East Japan Earthquake

In this report, I explain how regional developments changed people’s risk awareness and could add to the damage of disasters. I adopt a case study about Otsuchi-Town (Iwate-Prefecture), which was particularly heavily damaged by the tsunami disaster in The Great East Japan Earthquake, and where regional developments in the waterfront were strongly prompted before disaster. Before disaster, reclamation of the waterfront and the location of houses, factories, and tall coastal levees for protecting them in the reclamation areas were the main ways of the regional development, because this area had less flatland when industrial conversion occurred and population increased. Otsuchi-town had been damaged by tsunami disasters historically and old inhabitants had the awareness that living in this area was risky (eg, “My house is located at altitude but the 1st floor was flooded.”). But in the process of regional development, this risk awareness changed (eg, “My house has been flooded but now tall levees will protect me. At the worst, I should evacuate to the 2nd floor”).

In the emergency evacuation phase, because big factories were located within a confined geographical area, evacuees rushed to a particular refuge and evacuation routes to the refuge were crowded. People with the converted risk awareness previously described failed to evacuate to the refuge. Now, in the reconstructing phase, for less flatland, in the local governmental reconstructing plan, many of the places of work must be relocated in the waterfront and many of the houses must move to around the mountain. Currently, people are concerned about the risk of landslides.

Conclusion: In the process before and after disaster, regional development changed risk awareness and added to the damage. It’s important to note that developments or ideas that generally reduce risks (levees, lessons learned from past disasters, moving to around the mountain) can add to the damage or bring on new risks.

NOZAKI, YOSHIKO* (Japan University Accreditation Ass, ynozaki@buffalo.edu) Shifting and Persisting Forms of Gender Inequality, Higher Education, and Women's Life Trajectory: Views from the United States and Japan

This presentation, first, examines comparable data from the United States and Japan concerning the following questions: How has women’s higher education enrollment changed over time in the context of higher education system devel-
Presentation of the research results concerning mental representation of physical space and territorial behaviours of socially excluded people, carried out with the use of visual methods.

Human territories illustrate the interdependent nature of the exchange between the man and the environment. Territories provide order and stability, as well as enable 'mapping' of such types of behaviour as human and social actions. In this way, they help us plan and organize our daily lives. Territorial behaviours understood as such have been the subject matter of my research, the results of which will be discussed in hereby presentation. The research aimed to identify the relationship between occupation of a certain space and the way of its schematization of space, and, on the other hand, it served the purpose of recognition the relationship between knowledge about the environment and territorial behaviours. It sought to answer the question: how do the people who are experiencing social exclusion – either having a house or homeless – shape their knowledge about the environment? How can physical space be expressed in specific places. In this way, they help us plan and organize our daily lives. Territorial behaviours understood as such have been the subject matter of my research, the results of which will be discussed in hereby presentation. The research aimed to identify the relationship between occupation of a certain space and the way of its schematization of space, and, on the other hand, it served the purpose of recognition the relationship between knowledge about the environment and territorial behaviours.

A Characteristic of Private Sector in Japan about Climate Change Mitigation Measure – Corporate Culture That Puts Strong Emphasis on Harmony and Among the Sector-

Climate change has received growing attention in both political and public areas, and now, has become one of the most pressing environmental issues. This presentation will focus on private sector in Japan, and analyze their perceptions of global warming and measures to reduce greenhouse gas emission. How Japanese companies act against global warming issue, and what kind of characteristic can be found among the private sector?

The analyses are based on data from an international research project, Comparing Climate Change Policy Networks: COMPNET. This project explores characteristics of decision-making process around climate change policies and the Japan team conducted face-to-face questionnaire survey to 125 organizations during February 2012 to June 2013. In this presentation, special attentions are paid to corporate culture and industrial associations. Careful examination will show a roll of industrial associations that adjust a diversity of opinion among the surveyed companies. On the other hand, each company's opinion and measures toward global warming issues. On the other hand, industrial associations have functions to equalize these various opinions. In the process of summarizing claims within the industrial associations, various opinions tend to become conservative to keep strong solidarity as one industrial sector. As a result, it can be observed strong emphasis on harmony among private sector. This tendency can be explained by Japanese word “Wa”, which means “harmony”, is a key concept to understand Japanese culture and in general imply negative aspect.

Although the surveyed companies and industrial associations agree the fact of global warming on the whole, they disagree to implement some regulations to mitigate greenhouse gas emission. However, the important point is that this corporate culture has a function to prevent a company from emerging negative actor about global warming issues. This can be a characteristic under the times of neo-liberalism.

The Extent of Socio-Economic Factors and Its Influence in Mental Health Condition of the Sixth Batch EPA Nurse and Care Worker Candidates

The migration of skilled workers such as health care workers has been inextricably linked with globalization process. Although migration can be a stressful event for migrants (Stillman et.al, 2006), people migrate to improve their well being through an expansion of economic and social opportunities. This research aimed to figure out the extent of socio-economic background and its influence in mental health in the sixth batch of EPA nurse and care worker candidates. A six-pages long questionnaire has been distributed to 42 nurse and 106 care worker candidates, during pre-departure orientation. Questionnaire contains of: socio demographics background (education, age, gender, education degree, socio economic status), degree of preparation to migrate, degree of knowledge about Japan, satisfaction with pre-departure language training program, motivation to go to Japan and number of social sup-
port. The General Health Questionnaire (hereafter ‘GHQ’) was used as a marker of mental health status of the respondents.

The result of this study indicated that the 6th batch EPA candidates indicated healthier mental health in care workers than in nurses (p<0.05), being younger (p<0.05), being economically difficult to survive in Indonesia (p<0.05), being unem-
ployed at the time they applied for i.e: EPA program (p<0.05), having better degree of knowledge about Japan (p<0.001) and having larger number of social support (p<0.001). While language proficiency, satisfaction with pre-departure language training and degree of preparation to go to Japan, had no significant correlation with GHQ scores.

One can assume that the mental health status of the 6th batch EPA candidates mostly influenced by socio-economic status of the candidates prior to the depar-
ture to Japan. It can be noted also that sufficient number of information as well as social support must be provided for maintaining a good mental health status before leaving for Japan.

Politics of Representation of the Workers' Movements in Indonesia

The paper will discuss the politics of representation of union and different cat-
ergories of its constituency in the post authoritarian Indonesia. Amidst the pres-
sure of labour market liberalisation that erodes the union power in the workplace, union starts to develop the strategy of community unionism and tries to play a broader political role through local electoral politics. The purpose of such experi-
ment is aimed for mobilizing broader support to increase union political bargain-
ing position in front of the state and employers. The union includes other local so-
cial groups such as urban poor, informal workers, and peasants as new categories of constituency. Consequently the integration of workers and the non-workers groups into union constituency results in increasing heterogeneity of the con-
stituency. Workers are not a homogeneous category, let alone the non-workers groups. While the union is mobilizing the constituency, groups within constituency are actually still fragmented within their partial identities and interests. The relations between them and the union are vulnerable to contestation. This condi-
tion creates vulnerabilities within the body of constituency. This paper will show the interplay between the strategic homogenization and the heterogeneous real-
ties. It will carefully examine the power relations within the process of mobilization in dealing with the problems of representation gap. On the other hand, it will also look at how the labour process as well as external social context influence the dynamics. The discussion in the paper is based on a case of study on a workers' movement in one industrial city in the province of Central Java, Indonesia.

Becoming ‘Cosmopolitan Japanese”: How Japanese Adolescents Employ Transnational Experiences for Their Empowerment

Reflecting the imperatives of the global economy, both the Japanese govern-
ment and private companies have recently begun stressing the need to raise ‘global talent’, especially placing value on English and various other transnational com-
petences. At the local level, such global forces have led overseas Japanese middle-class families to adopt transnational education strategies, which enable them to accumulate what is called ‘global cultural capital’ (Kim 2011; Waterers 2006; Weenink 2008)–English skills and cosmopolitan sociability particularly, at the same time preserving children's Japanese language and cultural attitudes (Nuk-
aga 2013). However, the question remains as to how these children are incorpo-
rated into the US host society and how they readapt to the Japanese society when they finally return home. Based on interviews with Japanese adolescents who had stayed in the US with their parents since their childhoods and later decided to return or actually returned to Japan for university, this study examines how they perceive and employ their transnational experiences to increase integration both in the US and Japan. Acquiring transnational habitus, a double consciousness that analyses aspects of both life ‘here’ and ‘there’, these adolescents are capable of assessing the value of their global cultural capital and “Japaneseeness” in the US and Japan respectively. Although feeling a sense of marginalization in both soci-
eties, they attempt to maintain transnational connections and learn to use trans-
national assets in appropriate contexts for their empowerment. From their own experience, these adolescents are often critical toward inequalities in both soci-
eties, yet they show a strong preference to become fully bilingual and bicultural by keeping their feet in both countries. Such strategy leads these ‘cosmopolitan Japanese’ adolescents to choose a job that transcends national boundaries and allow them to stay connected to two or more countries.

NUURI, JOHANNA* (University of Turku, johnurm@utu.fi)
Let Go and Remember. Collective Memories and Narratives of Mass Violence in Finland

Due to its inexcusable and inconceivable nature, mass violence causes a con-
siderable sense of insecurity, the impacts of which are felt far from the center of the incidents. They extend out to touch those who are indirectly affected, and even people who are not personally disrupted by the events. Bystanders to these incidents are involved in the complex process of making sense of violence and death through collective memorialization practices and narratives recounting the incidents. These practices provide a sense of community while also being a source of struggle. Should the community remember and memorialize the incident, or try to forget it out of their minds and move on?

In this presentation I explore the bystander experience in two school shooting cases in Finland that occurred in 2007 and 2008. The analysis is based on qual-
itative interviews with residents of the targeted communities – people who vicar-
iously experienced the shootings. The presentation is especially focused on how these bystanders formed memories of the incidents and recounted their personal experiences in the interviews. To understand how the bystander experience is constructed through collective practices, I examine the collective narratives, rec-
collections, and emotions shared in everyday interaction and the media. Public memorialization, such as attending vigils and contributing to spontaneous memo-
rials, is identified as a defining feature in the bystander experience.

NUSS, SHIRLEY* (Nuss & Assosciates, nussphd@yahoo.com)
From International Professional To Caregiver In Rural America

In 2002 my father asked me to care of my mother as he was going blind. This meant I give up professional activities for specialized UN agencies and become a full-time caregiver. Within two weeks, I moved from an Asian city of 13 million to a rural community with 8,000 residents. As I traveled from east to west, I entered a community where I never lived and where I knew no one. A new socio-culture took-over of the country. My new responsibilities would be complicated by this environment. To care for my parents, I would be forced to employ my sociological imagination while also drawing on all skills I learned while working, living and traveling alone in more than fifty countries.

This paper uses participant-observation as its methodology and, thereby, draws on extensive notes documenting this transition from international profes-
sional to caregiver. It discusses methods used to organize support and outreach beginning with the few adult children who also became caregivers for elderly par-
ticipants. I analyze the power relations within the process of mobilization in dealing with the problems of representation gap. On the other hand, it will also look at how the labour process as well as external social context influence the dynamics. The discussion in the paper is based on a case of study on a workers' movement in one industrial city in the province of Central Java, Indonesia.
This discussion is based on more than a decade of participant-observation in a rural community with 8,000 residents and fifty churches. At the beginning of the decade, the author became a resident exclusively engaged in the full-time care of elderly parents. During the decade, a dramatic increase in overt hostility towards the rural elderly was observed and documented as a new culture was emerging to replace respect for the elderly with three main agents: predators, parasites and ambulance chasers.

This paper discusses variations among these agents as they accomplish their objective of financial exploitation of the elderly. The predator waits for an opportunity to exploit the elderly by profiting from their limited ability to defend themselves. Older children form a major predator group, along with those associated with assisted living and nursing homes. For parasites, economic survival flows from exploiting the elderly through provision of services and products that they are no longer able to access or acquire without assistance. Children and grandchildren increasingly operate as parasites. Observation suggests parasites at least double their profit from work for the elderly relative to other age groups. So the parasites operate from local shops and businesses or as attorneys engaged in servicing the elderly, with financial gain being similarly disproportionate as their primary objective. Medicare beneficiaries are often primary targets of parasites. Ambulance chasers may be engaged in provision of health care as well as entrepreneurs who offer people released from the hospital with assistance in selling everything they own, including their home; when met with resistance, phone calls to relatives in social services often facilitates the acquisition of a power of attorney for this final stage of asset appropriation. It concludes with observations suggesting 50 churches serving 8,000 are financially viable with these agents.

Stumbling over Emotions When Researching the Czech Feminist Scene

Since the fall of state socialism in what is today’s Czech Republic (CR), a feminist scene has emerged. It consists of sometimes contradictory activities on the level of (limited) grassroots activism in the form of zines and festivals, NGOs (such as the Gender Studies, o.p.s., Czech Women’s Lobby, Czech Women’s Union) and academia (a BA programme in Brno, an MA programme in Prague and a research centre within the Sociological Institute of the Academy of Sciences of the CR). The theoretical stances of those constituting the scene via their various, sometimes contradictory and conflicting activities has become the focus of my research. It consisted of a discourse analysis of materials produced by the scene as well as of interviews with the scene’s representatives.

Despite having been driven to the research mostly based on my own long-term interest in feminism and familiarity with the omnipresence of emotions in all walks of (not only) social research (e.g., Hesse-Biber 2012), the share of emotions manifested in the research was surprising. In my paper, I try to address the different emotions as they emerged in the research process in order to show how they impacted on the analysis. Besides the emotions informing the focus of the research and its design, three main sites were detected. Firstly, there were emotions showing up in the process of conducting the interviews. Secondly, there were emotions revealed in the coding process. Thirdly, there were my own emotions in response to the former two areas. Positive emotions are related to successful cooperation and achievement. Frustration and vanity stem from tensions and perceived unequal distribution of power and agency across the feminist scene as well as from the resulting limited potential to protest.

NYSTRÖM, ANNE-SOFIE* (Mälardalen University, anne-sofie.nystrom@gender.se)

Facing Potential Failure: Men, Masculinities, and Self-Worth Protecting Strategies in Highly Competitive Learning Contexts

The aim of this qualitative project is to explore how male students’ self-images and self-worth are negotiated in higher education and, particularly, in an elite program and in relation to potential failure. How do masculine and student identities intersect in a context signified by class privilege and high ability and achievement? How is failure/success constructed and what kinds of implications does it have socially and in terms of male students’ identities and engagement? Research on boys and schooling pinpoints how high-status masculinity is associated with ‘effortless’ achievement, and diligent work and anxiety with femininity in Western countries. To explore if such discourses influence students’ identities and practices in HE, or are contested, is thus of interest. While a large proportion of research on education and masculinity has focused on students-at-risk or subordinated groups, there has been a call for more research on privileged groups for a deeper understanding of educational and societal inequalities. Law studies are among the most prestigious and competitive higher education programs, in Sweden and internationally, and are dominated by high achieving students with privileged social backgrounds. Prevalence of test anxiety, antisocial and manipulative behaviour has been reported as a part of avoiding failure and striving for top-positions in such high performance oriented and competitive learning culture.

The study has an interactionist approach; consequently, identities are examined as relational, situated and accomplished in interactions. The design of the study, both theoretically and empirically motivated, is to reside on interviews law student counsellors and Swedish law students. The project is work in process, and expected to contribute to knowledge on how students and staff construct masculinity and student identities in privileged and performance-oriented contexts, particularly how gender and class informs strategies of avoiding potential failure. This small scale study is partly funded by SRHE’s New Research Prize 2013.

Neoliberal Postcolonialism in Skilled Labor Mobility - Filipino Nurses Coping with Deskilling, Discrimination and Ethnic Hierarchies in Finnish Elderly Care

European societies are facing the crucial question of who will provide care for the ageing populations in the future. In many European countries the answer has been migrant worker force, and Finland has recently started to follow suit. Since 2007, private companies have been recruiting registered nurses from the Philippines to work as practical nurses in Finnish elderly care homes. The paper has two parts. First it argues that the recruitment is based on a neoliberal postcolonial logic according to which the Philippines is perceived an endless source of labor force for the needs of ageing Finnish society and international mobility as individualized risk taking based on economic calculation. Secondly, the paper analyses how Filipino nurses cope with the deskilling inherent to the recruitment process and with the everyday discrimination and ethnic hierarchies they encounter in the work places. Moreover, the paper explores how the nurses find dignity in their everyday work (Stacey 2005). A common strategy is to create a moral hierarchy based on ethnic differences according to which Filipino nurses have a better work ethic based on fictive kinship, while the Finnish nurses are claimed to have an instrumental approach to their work. The old discourse of care as labor of love is then given new meanings in the global hierarchies of care work. The paper draws on an ethnographic case study of the Filipino nurse recruitment including qualitative in-depth interviews with Filipino nurses working in Finland (N= 20), representatives of the recruitment company and the private care companies employing the nurses (N=14) and a content analysis of the media coverage of the phenomenon (2007-2012).
Clear energy. These protests were significant since they were some of the largest street protest to occur in Japan since the 1960s and 1970s when hundreds of thousands took to the streets of Tokyo to oppose the revisions of the US-Japan Security Treaty (AMPO). How should scholars, therefore, interpret and explain the recent anti-nuclear street protests within a broader perspective on popular forms of political dissent in Japan? What can these protests tell us about the nature of civil society in Japan? How did such a catastrophic event affect civil society groups already engaged in different social struggles? In an effort to help answer these questions, this paper approaches these questions ethnographically from the perspectives of different Japanese activists that were organizing public protests around irregular employment and growing economic inequalities before the disaster. What role did these groups play in the post-3.11 protests? How did they shape the street politics of the 3.11 crisis? Conversely, how did the crisis shape their politics?

A New Analysis of Claims to Identity and Belonging: The Importance of Knowledge within Australian Native Title Claims

Within Australia success in native title claims for Indigenous peoples has come to be heavily based upon the ability of Indigenous groups to establish ongoing connection to land by presenting proof of the continuity of their identity and cultural practices since colonization. This paper explores the processes through which these claims of identity and belonging are made, and challenged, within Australian Native Title processes. It seeks to extend previous work examining what is creating the difficulties that prevent Australian Indigenous peoples from articulating and presenting their culture and identities in such a way that can be understood within the non-indigenous courtroom. Specifically, this paper will present a sociology of knowledge that enables new insight into these issues by bringing processes that underlie the legitimation of knowledge to the forefront. It will be demonstrated that engagement with the sociology of knowledge can be used to uncover the structural relations that inhibit Indigenous voices within native title claims. In order to do this the Australian Yorta Yorta native title case will be explored in depth using this approach. In particular the paper will deconstruct the arguments that led to the judgment that ‘the tide of history’ had ‘washed away’ the traditional laws, customs and culture of the Yorta Yorta people in direct opposition to their own claims. Through this analysis it will be shown that it was not simply the content itself, but knowledge itself that affected the final judgment, but a disconnect between two different understandings of the basis upon which knowledge may be considered ‘legitimate’. Finally, it will be argued that the sociology of knowledge can be extremely useful in analyzing the ways in which different groups of people present their identity and senses of belonging, as well as the ways in which these claims are received by others.

Towards a Theoretical Model for the Reproduction of and Change in Gender Inequality in Higher Educational Institutions

This paper identifies key elements facilitating/ inhibiting the reproduction of gendered inequality in the professoriate and senior management in higher education. Gender is seen as a social institution (Yancey Martin, 2004) and a multi-level phenomenon (Wharton, 2012; Risman, 2004). It is reflected in the societal allocation of power and resources; in state policies; in gendered organisational cultures, narratives and structures; in interactional stereotypes and perceptions and in gendered selves. Its multi-layered character can potentially exacerbate the difficulty of initiating change. However, in specific contexts, change at any of these levels may consciously or inadvertently affect change at other levels (Walby, 1990).

Cross national structures are a particularly important potential source of change since gender inequality inhibits economic growth (OECD, 2012; EU, 2012). At national level, the salience of gender issues varies. There is an underlying tension in the fact that women are disproportionately represented among knowledge workers, but are under-represented in those disciplines that are seen as most economically important (EU, 2012). Gender inequality is affected by the strengthening/weakening of other structures and the promotion of other societal or organisational priorities (including neo-liberalism; managerialism; definitions of excellence). At an organisational, interactional and individual level, agents of change include men and women who embody resistance as ‘tempered radicals’ (Meyerson and Scully, 2011) on any basis (gender inequality; care; other occupational experiences; collegiality etc). Finally, experiences in particular contexts may not be gendered (Rodgeway and Correll 2004), thus increasing the possibility of the emergence of coalitions.

This framework will be located in a cross national study of senior management, focusing particularly on Irish universities, and including a case study of one university where the proportion of women at professorial level increased from zero to 34 per cent over a 15 year period (O’Connor, 2014a &b)

The Street Politics Of The 3.11 Disaster

In the weeks and months after the Tohoku disaster on March 11, 2011, tens of thousands of people took to the streets in Japan to protest and voice their concerns about the government’s role in exacerbating the crisis. Of particular focus within these protests were the perceived mishandling of the Fukushima Daiichi nuclear accident, and the broader dangers associated with relying on nuclear
The post-3/11 demonstrations against nuclear power have been regarded as a sensational development in Japan, where disruptive protest movements had been conspicuously absent since the 1970s. In contrast, I argue that collective public protests have been part of the repertoire of urban activists since the early 1990s, albeit rarely noticed by the larger public.

One prominent network is the group Shirōto no Ran in Tokyo, which have been at the forefront of a number of protest movements from the early 2000s in Japan, e.g. the Freer-movement or protests against urban regeneration and restrictive legislations. Not a pronounced environmentalist group, they nevertheless emerged as the main organizers of the early 2011 anti-nuclear demonstrations, utilizing their network and long-rehearsed creative protest repertoires. Besides these symbolic demonstrations, they enact prefigurative politics in their daily lives, implementing their alternative visions of urban sociality, entrepreneurship and empowerment. What distinguishes their network from other organizations is their strong and cooperative and creative commitment beyond the restraints of conventional association like NGOs or political parties.

By interpreting their framing of the 3/11 crisis in a larger context of social change, the struggle against precarity and new developments in (proto-)political activism, I will explain how Shirōto no Ran as a non-environmental group did respond so quickly to the disaster - despite their low level of organization and as a non-environmental group did otherwise emerge as the main organizers of the early 2011 anti-nuclear demonstrations.

Reclaiming Their Streets: Prefigurative Politics on Contested Urban Grounds in Tokyo

The social vicissitudes of post-bubble Japan left many young Japanese looking for escape-routes not only from the restrictions of Japan's societal norms but also from its highly privatized metropolitan layout. Addressing both issues, a few dozen activists of a countercultural scene in Tokyo have long experimented with alternative urban lifestyles, staging protests that oscillate between the symbolic and the substantive, challenging the oppression in the use of public space, they introduced a countercultural infrastructure of small "autonomous zones" in some lesser-gentrified pockets of Tokyo, where they carve out free spaces for everyday living and flexible forms of political, social, and cultural participation.

Moreover, long before "Occupy" even became a global catchphrase, they challenged the configuration of their urban surrounding (as well as local police) by staging disruptive and playful events, like carnevalique demonstrations, ad-hoc street picnics or the blockade of contested spaces. They tackle issues ranging from homelessness to insecure employment, from state legislation to nuclear power; resistance to the 2020 Tokyo Olympics just emerged as their most recent urban battling ground.

In terms of movement studies, their relative successes are puzzling, considering their lack of a clear political agenda or single common cause. In addition, they form a radically unstructured and heterogeneous network that is characterized by a low level of professionalization and deliberate externality to the mainstream social and political institutions. Tackling this seeming contradiction, my paper analyzes the unique characteristics of this network, and proposing ways to re-think categories of "social movements" in Japan on the basis of concepts like subpolitics, prefigurative politics, and DIY-politics.

Bridging the Gap Between Overseas Filipino Workers and Their Families through Social Media

The National Statistics Office (NSO) estimates 2.22 million overseas Filipino workers (OFWs) working abroad at anytime during the period of April to September 2012. The increasing number of social media influences in communicating among families with OFW members. The birth of modern technology and its advancements, in this day and age, bridges the proximity between families who are separated in an attempt to improve their quality of life. It is argued that there are inherent tensions in this process of communicating with their families becomes a challenge. A specific purpose of communicating with their families through social media is a factor that needs to be identified.

Using data from the quarterly surveys of Social Weather Stations among Filipino adults, this paper addresses the following questions: (1) What platforms of social media do migrant workers use to communicate with their families in the Philippines? (2) How often do migrant workers communicate with their families in the Philippines? (3) What challenges do families encounter when communicating with their families using social media? (4) How does mediated communication affect the dynamics of family relationships? (5) If a member of the family is non-digitally-literate, how then do they communicate with one another?

Here, utilizing empirical research and Filipino familial theory is analyzed to explain the benefits and disadvantages of communicating among families with migrant workers through social media.
Gender Wage Gap in Japan: Comparison Between Regular and Irregular Employment and within Irregular Employment

In the last 40 years, the gender gap in the labor force participation rate has significantly decreased in many Western capitalist countries; however, the gender wage gap remains relatively large. In Japan, female labor force participation rate and years of continuous employment, which are major factors in the lower wages of females, are still fairly lower than those of males. The gender wage gap in Japan is the second largest among OECD countries.

Sociologists and economists have investigated the relevant factors, including the gender identity and sexism of the labor market. Previous works emphasized employment status. In Japan, regular employment is full-time and permanent, whereas irregular employment is on a fixed-term basis. Women are largely irregular employees, and this has become a major source of gender inequality in wages. Further, the gender wage gap is not only seen in the bias in regular employment, but also within irregular employment types.

This study examined how the gender wage gap in Japan is affected by employment status using data from the Employment Status Survey conducted by the Ministry of Internal Affairs and Communications in 2002. I analyzed micro data using a multiple regression model: the explained variable is personal income; explanatory variables are sex, age, other human capital, employment status, and family situation, including marital status and number of children. I likewise established the interaction between sex and other variables.

Results showed that differences in the gender wage gap mechanisms between regular and irregular employment are not significant. In the wage gap between regular and irregular employment, the female gap is smaller than that of males. In factoring in the families of employees, having children makes males' wages go up and females' wages fall.

ODA, ERNANI* (University of Campinas, ernanioda@yahoo.com.br)

Japanese Brazilian Migrants’ Views on the Status of Ethnic and National Categories in Japan

Recent studies have tried to avoid the pitfalls of essentializing international migrants as homogenous ethnic “groups” or “communities” by focusing on the transnational spaces and the hybrid practices that connect migrants’ sending and receiving countries. However, by restricting its attention to a duality between the country of origin and the country of destination, these efforts frequently neglect other important relations that lie beyond this dualism. Some scholars have responded to this difficulty by adopting a new kind of transnationalism that investigates migrants not based on ethnic or national categories, but on aspects that are more comprehensive and diverse, such as the religious practices of migrants.

In this presentation, however, I examine the specific case of Japanese Brazilian migrants in Japan, and argue that one other possible strategy to deal with essentialist or national categories that are rather essentialist as a starting point, but then, by critically examining the way they are interpreted by migrants themselves, develop a perspective that undermines the very essentialism of these categories. Based on fieldwork and life story interviews, I investigate how Japanese Brazilians in Japan often make use of essentialist and hybrid practices of Brazilian and Japanese identity, but at the same time produce discourses that connect these categories to a much wider and even surprising horizon that includes other ethnic and national categories such as other migrant groups from Asia, North America and Europe. While also treated in an essentialist fashion at first, these unexpected new categories also allow Japanese Brazilians to move beyond this essentialism, for as they unveil new kinds of conflicts and relations, Japanese Brazilians are able to point out and make sense of social spheres that are not restricted to ethnic or national boundaries. These include, for instance, issues related to urban lifestyles and consumption culture.

Child Bearing and Good Mothering: The Case of Turkey

According to most critical social scientists, the body of woman is accepted as a means of social control and the aspirations of politicians. In this presentation, how the capacity of woman to give a birth is politicised by government of Turkey today. Almost one year ago, the Minister of Health Affairs in Turkey started to not give permission to use the method of caesarean. And support this policy by using the good mothering discourse. This presentation is examined the attitude and behavior of pregnant women related to this policy by using qualitative techniques. How the participants express themselves as good mother and is there any relation between this feeling and this discourse are the basic questions of this presentation.

Dealing with Multiple Roles As a Medical Worker, and a Hemophilia Patient with HIV and HCV

Objective: To describe the difficulties of dealing with multiple roles in a work setting experienced by a haemophilia patient with HIV and HCV, who is also a medical care provider, and to identify the ideal behavior of medical providers towards patients with a positive HIV/AIDS status.

Method: A narrative interview that was conducted in 2009 with a male hemophilia in his 30s, who had HIV and HCV and who was working at a hospital was analyzed.

Results: At first he concede his hemophilia, HIV, and HCV status after receiving notification of HIV status, because of prejudiced and discriminatory public perceptions about AIDS at the time and worries about restrictions at work, or dismissal. Then, after two hospitalizations for the side effects of interferon treatment, he quit his job, because he had experienced “a sense of crisis about revealing his HIV status,” which became necessary because he used public health insurance and medications. Also, he had experienced “medical workers’ true feelings” and noticed “the prejudice of other professionals.” However, at the same time, he had begun to reconsider living with HIV, and began to selectively reveal his hemophilia and HIV status. When working in different medical institutes he talked about his illness experience and revealed his HIV status. Here, he was accepted by professionals. “This was a turning point for me. Revealing his status enabled him to work flexible despite his condition.” However, he faced new difficulties caused by “confusion about his multiple roles as a patient and a medical worker.” This case study identified the characteristic difficulties faced by patients working in medical fields. To solve these problems, medical workers should develop a deeper understanding, more profound than the level of understanding seen today.

ODASSO, LAURA* (Université Libre de Bruxelles GERME, laura.odasso@misho.fr)

Intermarriages and Inclusion. Time and Space of Love, Laws and Norms

Based on a number of case studies of women and men involved in intermarriages in Europe, the intervention explores how these marriages and their consequences could challenge the concepts of inclusion and exclusion. "Intermarriages" refers here to couples formed by a European Union citizen and a "Third Country National" (TCN). A TCN is a citizen of a non-EU country who resides in a European Member State, and is thus affected by some specific regulations and administrative practices. Furthermore, the distinctions found in migration laws and administrative practices seem not to be limited to citizenship (e.g. dichotomy EU citizens/TCNs), but extend to features that differentiate certain TCNs from others on the basis of categories such as ethnicity, religion, gender and social class – all of them included in anti-discrimination laws. The requirements included in compulsory integration tests for TCNs who apply for residence or naturalization (Strik & al., 2012; Hajat, 2010) display an overlapping of these categories (Groenendijk, 2006).

Moreover, if laws and family codes (e.g. Personal Status code, civil codes) influence the legal definition of inclusion, other unwritten norms that normalize homogamy may affect the sense of inclusion and modify the concept of "otherness" according to the configurations in which the members of these couples act (Saska & al., 2011).

Bi-national family biographies suggest that what is “normal” for the members of these families vary according to time (e.g. before or after 2000) and to space (e.g. European Union vs. outside).

The method of “biographical policies evaluation” (Delcroix, 2013; Apitzsch & al., 2008) allows understanding the effects of categories as citizenship, denizenship (Bosniak, 2001) and dis-citizenship (Wodak, 2013) on these families and the
The Influence of Population Growth on Land Tenure and Ethnic Conflicts in Benue State of Nigeria

The high growth rate in human population and the increasing scale of human activities on land have resulted in tremendous environmental degradation and climatic change which have grievous consequences on the security and live of people. Benue State today faces with ecological and geographic problems for which they are largely responsible. The most recent are the flood disaster resulting from the over flow of river Benue and incessant conflicts with Fulani herdsmen. Man's activities with the environment have led to problems such as global warming, ozone layer depletion, loss of biodiversity, desertification, desoration and climatic change. What these translate into is decreasing landmass that will be available for farming and grazing Benue State is an agrarian society with rapid population increase. The high poverty profile in the state has aggrivated stress and appetite for natural resources such as plants, animals, water, minerals, air and land and so on. The aftermath of such activities is the disruption of the ecosystem. Benue State today is experiencing recurrent communal and ethnic conflicts as a result of competition over land. There is unequal access to land in the State. These problems have great effect on the health and security of the people. The paper examines how the increasing population growth, utilization of primitive technology, pressure on the natural resources etc. are affecting the land tenure system and social and food security in the state.

Forms of University Elite Sport in South Africa

The paper looks at the phenomenon of elite sport at a university in South Africa, for possible comparisons with other types and institutions, and how this has unfolded at such a university. It seeks to distinguish such sport in the context of three institutional complexes that foreshadows particular institutions. There is the enlightened context of sports practices, and there is the resistant context that sees forms of resistance against such ‘elitism’ of sports, and there are the benign forms of elite sport practices or contexts.

While all three types are not strictly of the mode that they occupy, they do have the main characteristics of such types. Due to the fact that even if S.A. sport is competitive, it’s organizational base is low, universities see a growth spur in sport. Due to the fact that even if S.A. sport is competitive, it’s organizational base is low, universities see a growth spur in sport. The paper examines how the increasing population growth, utilization of primitive technology, pressure on the natural resources etc. are affecting the land tenure system and social and food security in the state.

Improving Quality Education/Learning Using the ESD Learning Performance Framework

The Education for Sustainable Development (ESD) concept, although strongly linked to quality education is still outside of mainstream education and learning. And with the future of education tilted towards more qualitative, bi-directional student-centered learning than uni-directional teaching, the Decade of ESD which was launched to promote and integrate ESD in all areas of learning and hence quality education has made progress although more improvement is needed. This is particularly in the area of continual implementation and strengthening and evaluation of ESD by offering guidance on identifying the important factors and characteristics that lead to effective ESD learning performance and ultimately quality education.

This paper investigates the qualitative achievements of ESD and presents ESD learning performance as a tool for enhancing particularly ESD-based quality education/learning. Through an action-reflection process cycle of relaying the ESD elemental characteristics to the local ESD practice cases of ten regional centres of expertise (RCs) selected from East and Southeast Asia) and the educational/learning theories and methodologies grounded in the literature, both process and content characteristics that underpin quality education were clearly and comprehensively identified and developed into a learning performance framework (LPF).

The framework therefore has the capability of 1) fostering the evaluation of ESD best practices at the local level through better identification and subsequent transference of the ESD agenda into a new global education/learning framework, and 2) enhancing quality education in the formal education sector, particularly a) developing a holistic and relevant school curricula with transformative educational contents and teaching approaches, b) improving teacher competence in relation to the LPF elemental characteristics, and c) providing a safe learning environment for students. Furthermore, recommendations are made for users identified through their links to aspects of the framework where their areas of operation are strongly associated.

The Type to Train? Impacts of Psychological Functioning on Further Training Participation

Evidence is plentiful that especially level of formal schooling and occupational rank determine access to and participation in employment-related training. However, in the case of elderly care workers in Dutch nursing homes, participation in training is not only stratified by classic markers of social inequality, but also by indicators of psychological functioning, namely personality characteristics. Research shows that personality traits drive attitudes and behaviors, and determine socio-economic life outcomes like educational attainment, labor market participation and income. Thus, I conceptualize participation in further training as stratified by intra-individual differences in the Big Five and Locus of Control beyond socio-economic markers; generally I ask what sorts of individual personality traits lead to successful psychological career-related functioning over time.

This research proceeds in two stages using data from the German Socio-Economic Panel from 2000 to 2010. Following the debate on stability or change, I first show that intra-individual personality characteristics are remarkably stable between two measurement points in 97% of the population sampled. In a second step, I apply random-effects logistic panel regression models to 39,833 observations of 4,981 individuals. Findings reveal that those who are more open to new experiences and have high internal control beliefs are more likely to participate in further training, and this holds true under different model specifications. Contrary to the predictions of personality hypotheses, Agreeableness, Extraversion and Neuroticism do not impact further training, whereas the trained effect of Conscientiousness is more complex. I also show, regarding reverse causality, that further training does not lead to significant changes in psychological functioning. I conclude that in addition to the classical determinants of further training such as education and occupational status, there are personality traits which characterize how psychological functioning at work, meaning that personality differences lead to stratified training and career outcomes.

Transitioning through Recession? Labor Market Entry Patterns for Hard and Soft Fields of Studies before and during the Financial Crisis

The Experiment of Workplace Innovation is unique as the innovation is initiated and developed bottom up by the care professionals themselves together with the patients and/or their families. Managers, board and back-office are required to react on the change process started from the work-floor and need to reflect upon their role and adapt it accordingly in order to facilitate the process. The project combines organizational design with change and implementation. The project consists of three pilots at three different nursing homes of BrabantZorg.

Abstracts are organized by first presenting author's last name.
Transitioning from higher education into the labor market is a major life event for graduates and determines and stratifies paths of future career success. However, labor market entry patterns are different by field of study with those from hard study areas (science, technology and engineering) following a smooth transition, whereas graduates from softer fields of study (humanities and social sciences) experience a longer, more winding road into employment where spells of marginal employment and unemployment are frequent.

This research looks at Germany, a country which is highly standardized and stratified, and compares these subject-specific school-to-work transition patterns before and during the financial crisis. It analyses pathways into employment and how these pathways are impacted by the financial crisis and shows even more diverse and fragmented transition patterns. Using data from the German Socio-Economic Panel and employing methods of sequence and cluster analysis, we look at differences and similarities within and across fields of study before and during the financial crisis within the first 24 months after graduation. I demonstrate that there are distinct labor market entry trajectories between hard and soft studies, which differ substantially for later before and during the Financial Crisis. I explain the diversity of career transition patterns as produced by difference in human capital specificities which favors specialized over general skills. Economic fluctuations have a smaller impact on demands of general skills which translates into more fractured transition patterns.

Unequal Distribution of Surveillance: Data Processing of Nuclear Workers in Japan

Inequality has been a central question in surveillance studies because personal data have been sorted to categories and the data-subjects have been treated differently depending on the categories in which they are placed. The word of "social sorting" shed a bright light to those activities of dividing people behind the curtain, although data-collaborative systems are usually established in the claim of everyone’s benefit, either all customers or all citizens. Surveillance does not serve everybody. Furthermore, surveillance society inevitably contains times and places that are intended to be outside of intensive scrutiny. It’s ubiquitous appearance, distribution and surveillance differs with the targets, more precisely, with the relations between watching power and watched population. In turn, the times and places disclose whom the surveillance system serves.

In the Japanese context, such sites, particularly unveiled after the earthquakes on March 11, 2011, are nuclear power plants. Nuclear power plants are operated using numerous electronic monitoring systems. But the workers are not consistently surveilled. Their data of exposure to radiation have been often unrecorded, underestimated, or distorted. The government has tracked their data only for research purposes, never using the data for the workers’ own safety. The lack of reliable records allows electric companies to keep hiring the workers temporarily and contributes to reproducing labor power at the plants.

Based on the research of data processing on nuclear workers in Japan, this paper shows how the unequal distribution of surveillance plays a part of surveillance society. The workers at risk seem to be most in need of monitoring, but are excluded in the middle of highly-wired plant. The mass surveillance and inter-lance system serves.

Employer Evaluation and Transition from School to Work: Reexamining the Impact of Institutional Linkages on the Japanese Labor Market

The purpose of this study is to investigate how employers evaluate high school graduates and the way they make hiring decisions. The process of job-attainment includes two components: one is the entry of job seeker into the labor queue and the other is the assessment made by employers. However, past studies that used a simple regression model typically assumed supply and demand sides were in equilibrium. Such a model may not be appropriate for the analysis of a highly-structured labor market like Japan. This study makes a distinction between job seekers’ preference and employers hiring decisions by using partial observability probit model (Sakamoto and Powers 1995). This model assumes two underlying equations for one observable outcome and can make a behavioral process more explicit. Using a nationally representative data, we analyze how high school graduates’ attain their first jobs. Previous studies have shown the importance of long-term networks among schools and employers (Rosenbaum and Kariya 1989). We examine whether employers in fact highly appreciate such institutional linkages. Dependent variables are the attainment of regular employment, white-collar jobs, and large-firm jobs. The result observes institutional networks are important for employers’ hiring decisions, rather than students’ vocational skills or academic achievement. Moreover, the result doesn’t confirm the impact has weakened after the economic crisis since 1990s. This suggests in Japan, where vocational signals are weak, employers exclusively rely on social relations that are embedded (Granovetter 1985) in the labor market.

Coping with the Ageing Society?: Migration of Care Workers to Japan and Taiwan

Coping with the demographic change of low fertility rate and rapid population ageing, Japan and Taiwan are trying to cope with the crisis of care in a very different way regarding its policy to introduce migrant workers to undertake long term care. Taiwan has started to invite migrant caregivers since early 1990s and approximately 200,000 migrants from Southeast Asia are currently working mainly in private homes. Japan started to introduce the migrants since 2008 under the bilateral agreements with governments in Southeast Asia under the condition that they have to pass the national exam on caregiving in Japanese within a certain period of time.

Unlike migrants in the highly skilled sector or productive sector, care work performed in the intimate space entails not only the political economy of care but a normative value underpinned by cultural notion of what care ought to be in each specific context. The comparison aims to situate the Southeast Asian migrants within the nexus of migration regime and care regime in Japan and Taiwan and discusses the discursive construction of the migrants as well as care work in East Asia. Are the institutional configurations of the care work undertaken by the migrants in relation to the national long term care system and examines the inclusion and exclusion of the migrants in the host societies including career prospects, citizenship and racism.

Searching for the Nexus Between the Care Regime and Migration Regime

The discussions on the nature of welfare states in East Asia tend to focus on the link between the economic development and social policy or emphasize on the historical reliance on the family to provide care. However, what has not been explicitly discussed is the role of migrants in providing long term care. As the population aging accelerates care work has been increasingly undertaken by migrants who constitute an integral part of the care workforce in East Asia. This presentation will compare Japan and Taiwan, which receives migrants from the same sending countries in Southeast Asia namely Indonesia, Philippines and Vietnam and situate the globalization of care in East Asia within the nexus of care regime and migration regime. The paper argues that even though Japan and Taiwan receives migrants from the same countries, the ways in which the migrants are situated within the two regimes reveal different construction of care work as well as different entitlement of migrants. It aims to unpack the otherwise naturalized notion of care work and suggests to perceive migrants as a ‘regional common good’ in order to raise both the status of care work and the migrants at the same time to ensure the safety and security of the elderly and migrants alike.

The Working Mother and the Access to Childcare

In Brazil, the attendance in daycare and preschool are guaranteed by the Federal Constitution, as well as the Statute of Children and Adolescents , as a right of all children from birth to six years.

In a research with interviews of mothers who work in various capitals of Brazil (SOS Corpo , Data Popular , 2012), the main difficulty, reported by 34 % was to get nursery vacations, and this demand does not vary with social class. Objective: To understand the trajectory of teenagers who became mothers during training period for insertion in the labor market at Campinas.

Methods: Eight mothers aged 19-23 years who were part of the 17 teenagers who became pregnant between 1992 and 2009 were interviewed . Qualitative methodology was used for analysis.

Results: Three mothers stopped studying and working. Of the other five, four finished high school and one was studying. Two were unemployed and three....

were working. Of the two unemployed, one had no one with whom to leave her son and for the other, she received help from relatives. Of the three who were working, two have daycare for their children and one received aid from their parents.

Thus, it becomes apparent that the young mothers reported difficulty in getting aid for the care of their children during working periods, is a difficulty common to working women and, unfortunately, it remain current.

Moreover, given the lack of childcare facilities, the mother who does not work and that only studies, situation of many teenage mothers, suffer a disadvantage when trying to place in daycare, further hindering the continuation of studies and future insertion in the labor market.

Postmodern View of Time in Sociology

In modernism, there are two perceptions of time. One is that of modern philosophy, in which history is seen as the process of the liberation of mankind. The second is the postmodern view, which moves away from that kind of past-present-future, straight-line perspective of time. In the postmodern view, the past exists only as memories. The important thing here is that for modernity to exist, it requires not just the modernist historical view, which draws the schematics of human liberation, but also the postmodern perspective, which questions those plans. The postmodern perception of time does not, however, oppose the modern view of time. Modernity, after all, has both modern and postmodern aspects and would not exist without both of them. This theory applies in Japan as well but, as is described in the following section, those two aspects present themselves in different ways than in the West. It is possible to discern that modernism and postmodernism form two sides of the same coin in Japanese modernism, just as they do in the West. The difference, however, is that postmodern thinking remains in the shadow of the modern in the West until people started to question the validity of modern philosophy, whereas in Japan, modernization was spurred by a postmodern spirit. So, while in Japan this postmodern spirit constitutes the driving factor, in the West it plays simply a bit-part and, conversely, the modernism that stole the spotlight in the West remained in the shadows in Japan.

Theoretical framework of Sociology is based on the postmodern view of time. This paper tries to show the possibility of this perception of time in order to make a general theory at the time of globalization.

Women’s Decision-Making Autonomy and Exposure to Maternal Mortality Risks in Nigeria

The statistics on maternal mortality clearly show that Nigeria is lagging in the struggle to significantly improve maternal health. Annually, an estimated 50,000 to 59,000 Nigerian women of reproductive age die because of pregnancy and childbirth. One of the main reasons for this high rate has been the low level of involvement of women in decision-making process. Men generally view some of reproductive health issues as their prerogative, issues in which the compliance of their wives is taken for granted. The study employed the women’s data from the 2008 NDHS to examine the relationship between women's decision-making autonomy and exposure to maternal mortality risks. Given that the study was interested in the risks of maternal mortality in the country, the analysis was restricted to only the women who had at least a birth in the last five years (preceding the survey). A total of 838 women out of the 33,385 women interviewed nationwide in the 2008 NDHS, met the inclusion criteria. The analysis was done at univariate and bivariate levels. Also, using logistic regression models, multivariate analyses were performed to estimate the odds ratios for each of the predictor variables in the models. The study shows that 36% of the women did not make a single antenatal visit to a hospital during the duration of their last pregnancy; as many as 63% did not deliver in a health facility (government or privately owned); and about 60% did not deliver with the assistance of a skilled provider. After controlling for the confounding influence of some other independent variables, the study suggests that the "strong authority" of women in household decision-making gives them a strength to significantly improve maternal health. Annually, an estimated 50,000 to 59,000 Nigerian women of reproductive age die because of pregnancy and childbirth. One of the main reasons for this high rate has been the low level of involvement of women in decision-making process. Social Historical Context Of Health and Illnesses Attributes In West-African Countries: A Comparative Analysis

Undoubtedly, people of diverse cultural backgrounds often make different attributions of illness, health, disease, symptoms and treatment. Cultural differences in health attributions have major implications for medical professionals because of overemphasizing of beliefs concerning health and illness. Different cultural groups have diverse belief systems with regard to health and healing in comparison to the Western biomedical model of medicine. For instance, with regard to health beliefs in the United States, African Americans may likely to attribute illness externally to destiny or the will of God and believe in the healing power of prayer. But West African patients may be more likely to attribute illness to a spiritual or social causes rather than a physiological or scientific cause and thus expect health practitioners to provide an experimental and a spiritual reason why they have been afflicted with illness. With this varying words, in order to effectively treat these illnesses, remedies must be both material and spiritual that is (herbal remedy and amulets). Vaughn, Jacquey & Baker (2009). This paper therefore attempts several aspects of how culture affects the health and well-being of patients in West African countries which are significantly different from those of Western world. Because cultural issues have increasingly become incorporated into medical care as there has been greater recognition of the intimate tie between cultural beliefs and health beliefs.

Students’ Learning and Career Choices in the Vocational Course of a General High School in Japan

The aim of this study is to consider the new concept of vocational education in secondary education in connection with the labor market in Japan, by focusing on the vocational course of a general high school.

Previously, the importance of academic education was emphasized in Japan, and the significance of vocational education was downplayed in comparison with other countries. However, in recent years, a growing body of empirical research has positively reappraised vocational education, and the idea of retrieving the vocational significance of secondary education has gained ground.

It is still a serious problem that must be addressed here. This is the dichotomy between academic education and vocational education. In Japan, academic education in general high schools has been viewed as education for entering college, while vocational education in vocational high schools has been regarded as education to prepare students for the labor market. Recently, an increasing number of students in vocational high schools aspire to enter college, but their academic performance is not sufficient to do so, due to focusing on the acquisition of specialist skills.

In this situation, it is necessary to consider the unification of academic and vocational education, but previous studies have lacked this perspective. This study attempts to fill this gap by focusing on the vocational course of a general high school.

In the vocational course of a general high school, it is difficult for students to acquire sufficient, especially skills, but because that can take more academic classes, compared to students in a vocational high school, more of them are able to enter college or vocational technical schools. By revealing how the actual practice in this kind of school affects students’ learning and career choices, this study aims to consider a new concept of vocational education that bridges the dichotomy described above.

Change of Employment Structure and New Labour Movements in Japan

The aim of this panel session is to share with the audience the outline of changing Japanese employment practice. Japanese employment system has been classified as one of the “organization-oriented,” and it implies that it ensures long-term employment within the same firm. Japanese industrial relations system, the main feature of which is the enterprise union, appears to have reinforced the employment security, Japanese practice of transition from school to work has been regarded as enabling even graduates to immediately begin their occupational lives as regular employees.

As with the employment systems of other countries, Japanese employment practices is confronted with has major implications for medical professionals because of overemphasizing of beliefs concerning health and illness. Different cultural groups have diverse belief systems with regard to health and healing in comparison to the Western biomedical model of medicine. For instance, with regard to health beliefs in the United States, African Americans may likely to attribute illness externally to destiny or the will of God and believe in the healing power of prayer. But West African patients may be more likely to attribute illness to a spiritual or social causes rather than a physiological or scientific cause and thus expect health practitioners to provide an experimental and a spiritual reason why they have been afflicted with illness. XVIII ISA World Congress of SociologyBook of Abstracts

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
This study presents several social problems related to the South Korean government's efforts to decrease bullying at school to be one of the four major forms of violence (sexual abuse, domestic violence, school violence, and harmful foods), and addresses why only the bullies and their parents are faced with legal liabilities and social responsibility. In particular, this study addresses the problem of schools and the government shifting the responsibility for school bullying onto bullies’ families. School counselors and policymakers hope for “deviant” families to transition into a “normal” condition through healing programs. Recently, healing programs are springing up for a wide variety of psychological problems. In this social context, school bullies and their parents are being required to participate in healing programs.

This study employs ethnography and in-depth interviews with participants in art healing programs. The interviews target healers, program staff, bullies and their parents. The bullies are 14- to 16-year-old middle school students. Findings report that staff and participants in the healing programs do not regard bullies as “deviant.” In addition, participating students and parents believe that schools have great social responsibility for the bullying problem.

The importance of this study lies in its exposure of the fact that bullies and their parents receive recognition as “normal” in the healing program, but this is a context outside of school. Therefore, they try to restore their well-being and life satisfaction through healing programs outside the context of school. Such programs help them reconstruct a new identity, and they experience the process of transitioning into their new identity, which implies a state of liminality (i.e., the psychological threshold when transitioning from one stage to another) or social normality.

OH, HELEN* (Sogang University, helenoh1@daum.net)

Is There a Path to Well-Being for School Bullies?

School bullies and their parents are stigmatized as perpetrators, separated and excluded from the school community. They are wounded by this situation and need socio-psychological stability. Therefore, they try to restore their well-being and life satisfaction through healing programs outside the context of school. Such programs help them reconstruct a new identity, and they experience the process of transitioning into their new identity, which implies a state of liminality (i.e., the psychological threshold when transitioning from one stage to another). This study focuses on art healing programs targeting middle school bullies and their parents. By employing ethnography and in-depth interviews with participants in these programs, we find that these adolescents and their parents feel freed from depression and a sense of guilt. In fact, healing programs provide a hospitable atmosphere, and healers approach participants holistically. The problem is that although bullies experience the recovery of their identities through these programs, which act as passing-rituals, their success is not guaranteed within the school system. In healing programs, bullies win trust and show the potential to become good people; outside of the programs, however, they are still treated as bullies and potential perpetrators of school violence. Consequently, they are confused about their social identity. Bullies and their parents are confronting the problem of liminality (i.e., the psychological threshold when transitioning from one stage to another) or social normality.

What Determines the Parent-Child Relationship?: Filial Piety, Economic Dependency, or Intimacy

Family structure and culture have been rapidly changing in Korea. Whether to follow traditional values or individual autonomy seems to be the crucial issue of family problems in the modern world. Previous studies explored the significance of various factors such as filial piety, autonomy, communication, intimacy, etc. in a parent-child relationship. But, what factors can positively effect on the building-up of a harmonious parent-child relationship? Previous studies did not examine the significance of such factors that may contribute to and account for the harmonious parent-child relationship.

This research aims to answer the question what factor influences most positively on harmonious parent-child relationship during the process of child's future decision making of selection of a spouse, which is still the greatest family issue in Korea. Therefore, we (research team) conducted an online survey of 262 college students in Seoul in 2013. The survey questionnaire includes parent economic support, psychological intimacy, communication, social network, filial piety as the traditional Confucian-family value, and other socio-demographics. Findings report that the communication, intimacy, social network are all positively related to harmonious parent-child relationship. However, our results are not significantly related to children on the side of the child, does not appear significantly. This research, thus, implies that the communicative rationality and social intimacy based on reciprocity is far more important for building up a harmonious family than family duties stemming from traditional values or instrumental rationality which may force one to pursue only individual interest in a family culture.

Religion, Trust and Public Society in the United States

Social integration beyond constituents’ diversity becomes a pivotal theme in the public sphere of a democratic society (Charles Taylor); the major conundrum for a post-secular society (Jürgen Habermas). Although religions have played a crucial role for collective consciousness in a traditional society, their roles for social integration in a modern and pluralistic society have been put into questions. Therefore, focus on “trust in immigrants” as a particular socio-psychological phenomenon which could reflect a religious orientation and their public attitude toward social integration.

In a study, utilizing the Baylor Religion Survey (2005), examines empirically how trust in immigrants is related to various dimensions of religiosity and spirituality. Besides socio-demographic control variables, explanatory variables include (1) various forms of religious identities (including theists, spiritualists, and non-affiliation), (2) cognitive types of belief (including images of God, New Age interests), (3) ideologies (religious pluralism, moral liberalism), (4) experiential types (traditional religious experiences and spiritual/mystic experiences), and (5) practices (religious service attendance, prayer, civic group participation).

The findings demonstrate all forms of religious identities other than affiliated theists (i.e., affiliated spiritualists, atheists/agnostics, and the unaffiliated) show significantly higher levels of trust in immigrants. The image of God as judge appears to be related to the lower levels of trust in immigrants whereas New Age interests do not have a significant relationship to trust in immigrants (p<.05). Neither religious pluralism nor moral liberalism appears significantly related to trust in immigrants. Religious experiences in a traditional sense are not significantly related to trust in immigrants whereas spiritual/mystic experiences lead to higher levels of trust in immigrants. In terms of practice, both religious service attendance and civic group participation – not merely prayer alone -- appear to be highly related to trust in immigrants.

Cross-Border Japanese Culture in the Changing Media Environment: Focusing on Japanese Popular Culture in Korea

When the animation Attack on Titan aired on Japanese television, it ranked No.1 on the Internet hit list in Korea, and received much attention through CATV and Internet. Also, a number of parodies have made on television and the Internet. Japanese popular culture is being consumed and reproduced across national borders by various media devices. In the process of media-globalization, Japanese culture was banned over 30-years in Korea owing to the historically particular condition between two countries. This paper purposes to find out characteristics of Japanese popular culture in Korea in this changing media environment and effects of media.

In Korea, Japanese popular culture was officially opened in 1998~2004, meanwhile Internet has rapidly proliferated in 2000s, young users share manga or animation on cyberspace. Namely, media convergence and diversification have enhanced cultural contacts across borders with dynamics of policy, media industry, it effects on the space and patterns of contacting Japanese culture. Particularly, this transition appears in line with pre-existing fandom and extends throughout the new-media as Attack on Titan can indicates. Moreover, this phenomenon has observed on new-media such as translating contents, parodying, using as signifier. Japanese popular culture on the Internet also interacts with existing media, and shows connection among various media, for example, reproducing on television like Hororoi-dango.

Recently, Japanese popular culture can be seen through formal platform IPTV or Internet contents-store besides pirate copies. However, there is limitation on interface because of language, lack of content diversity, and people who cannot use new-media tends to be excluded. Considering impacts of new-media, it is necessary to produce interface with diversified contents based on translation service to share culture and to create interactive cultural space. This paper represents how media environment impacts on Japanese popular culture and suggests possibility of cultural space in new-media.

Searching for the Global Standard Recruitment and Employment of Border-Crossing Nurses and Care Workers: Findings and Recommendations Based on Fieldwork in the Asia-Pacific and Europe

Most developed countries are faced with major demographic problems such as increasing aging populations and rapidly declining birth rates. Parallel to these same phenomena, governments have accelerated the introduction of nursing and care workers from abroad in order to fill the shortages of domestic nurses and elderly-caregiving workers. However, such cross-cultural and transnational care projects are not easy for each host country, and employers have to consider the challenges of hiring overseas-born workers who come from various educational backgrounds and care cultures, and speak other languages as mother tongues.

The author investigated the problems of transnational care especially in the case of the Japanese government’s project to accept Southeast Asian nurses and caregiving workers under Economic Partnership Agreements (EPAs) concluded with the governments of Indonesia, the Philippines, and Vietnam. He explored some structural flaws and faults of the EPA project, and then explains how this led to a broader investigation to research alternative policies and programs adopted by some governments in the Asia-Pacific region and Europe.

This paper presents a critical evaluation of Japan’s EPA project based on the research team’s various surveys in Japanese hospitals and care facilities as well as Filipino/Indonesian nurses and care workers in Japan. Then, it examines the Asian and Western trend of governmental policies on migrant nurses and care workers, and makes some recommendations towards the establishment of a potentially sustainable Japanese model. It finally discusses the possibility for a global standard recruitment and employment system for border-crossing nurses and care workers.

OHBUCHI, YUMI* (Nara Women’s University, yumi-o@dan.wind.ne.jp)
Acquisition of Ballet Technique: Collective Teaching in the Ballet Studio and Social Control

This paper examines the acquisition of body techniques in a ballet studio from the perspective of social control theory (Hogetsu 2004). To achieve this objective, I conducted participant observation at a ballet studio in Takasaki, Gunma Prefecture, Japan, and interviewed 3 teachers and 10 students who belong to this studio. There are three notable characteristics in the institution of the ballet studio. Firstly, students are divided into classes according to their skill level. This division is practiced primarily as the prohibition of students from joining classes intended for higher skill levels. Secondly, since there is only one instructor in each class, the instructor does not always pay attention to every student, but normally addresses particular individuals to correct her posture with words and gestures. Thirdly, even when the instructor is addressing individuals, those who are not addressed responds and reacts as if she were addressed individually each student responds as if, even though, in reality, another student being the focus of attention by the instructor, the instructor is personally addressing her. On the basis of these dimensions, students acquire ballet technique through what we might call “over-understanding” of teacher's coaching.

OINAIS, ELINA* (University of Helsinki, elina.oinas@helsinki.fi)
Femen in Tunisia: Came. Stripped. Conquered. Conquered What?

The paper examines different responses to the activist group Femen’s practices and messages by young activists in different political alliances, including feminist groups, in Tunisia in 2013. The Tunisian Femen context is especially interesting as it captures so many contemporary tensions regarding social change, youth empowerment, political engagements, transnational movements, cultural conservatism, generational clashes, politicized embodiment, public sexualization, and changing fundamentalisms. While Femen has challenged global feminist movements and provoked unusually explicit anger, ridicule and dismissal among women’s movements and conservative religious authorities alike it could potentially evoke other types of responses from activist youth, especially in the aftermath of the initial revolution and later frustration in Tunisia, where a generational conflict on issues of rights and freedoms and bodily integrity is often explicitly politicized. The paper analyses the ways the Tunisian responses frame and implicates different meanings for silences, intimacy, secrecy, and the followed media turmoil. The first interviews were conducted during the first on-line appearances of the Amina Tyler’s internet action in March 2013, and continued in several phases as the event received international media attention and analytical narratives became consolidated. The Western responses provoked counter-reactions that the Femen event can be seen to have become one analytical window to self-understandings of gender politics among youth in the aftermath of the Revolution in contemporary Tunisia.

HIV, Stigma and Agency

Stigmatization is here studied through interviews with HIV treatment activists and voluntary HIV treatment counsellors in an urban township in South Africa. While being also activists, the counsellors’ form a support and advocacy group within the clinics where they volunteer, as well as in the community and society at large. I will examine how they talk about their views on expertise and knowledge, health care, authority, biomedicine and community. These patients describe their lives, care and survival as an entangled net of different relations that sustains them, a net of relations that produces healthier embodiment including both human and non-human actors: for example, help, hope, food, laboratory results, transport to the clinic, and last but not least, the pills. Activists who politicize access to medicine and therefore add the dimension of rights and global injustice to the agonistic/activist responses of medical professionals. The paper also suggests that theorists should consider, tackle stigma by a de-individualization of shame as a side-effect of politicization. The paper asks what destigmatizing strategies the less vocal clinic volunteers use, as they also indicate that a major bulk of their work deals successfully with stigma. Different meanings for silences, intimacy, secrecy, confidentiality and rights are analysed.

Social Exclusion and Health Outcomes of Single-Mother Households in Japan

Single-mothers and their children are one of the most economically-disadvantaged groups of people in industrialized countries. Japan stands out from other OECD countries with regard to its high incidence of poverty and the high employment rate of single-mother households. Previous studies in the Western countries have shown significant differences in physical and mental health between single-mothers and their married counterparts. They also have found that children of single-mother households are more likely to have health and behavioral problems. However, it is still unclear to what extent these differences are attributable to low-income or lack of social support. Employing a unique panel survey on women with children, this study investigates how poverty and lack of social capital affect health outcomes of mothers and children in single-mother households in Japan.

Major contributions of this study are as follows. First, it employs multiple measures of poverty. In particular, it uses not only the poverty line but also the Minimum Cost of Living calculated by the Public Assistance system to define the poor. Second, subjective as well as objective measures of health outcomes are used. Third, the effect of past experiences that may affect health (such as childhood abuse and family dissolution in childhood) is examined to control for unobserved heterogeneity.

Tentative results confirm significant health inequality between single-mothers and their married counterparts. Although poverty has an independent negative effect on health of married mothers, it has no significant effect on health among single-mothers. In addition, even after controlling for age and other socio-economic factors, mental health of single-mothers significantly deteriorates as their children grow up.

Structure of Cultural Rejection

What does it mean to dislike a piece of culture? This study explores the idea that culture is being used as the focus of coordination among individuals. The central topic is cultural rejection. The proposition is advanced that individuals reject cultural practices as the proxies of disfavored groups who are perceived to be associated with them. In turn, this will allow individuals to distance themselves from disfavored groups and maintain the identities separate from disdained groups. This study argues that the pattern of cultural rejection can be seen as a reflection of individuals’ perception of differentiation within society. Using data on musical preferences from 1993 General Social Survey, it applies blockmodeling – the methodology originally developed in social network analysis – in a new way, to analyze the structure of cultural rejection within U.S. society. The results indicate that blockmodeling based on cultural rejection is effective in uncovering sociologically meaningful positions among the respondents, while providing unique insights into the structure of cultural divisions within U.S. society. In addition, the identified blocks correspond with individuals’ perception of the degree of unity (or lack thereof) among Americans, consistent with the theoretical assumption of this study. The results also show the important roles that popular culture occupies in U.S. society.

The Relationship Between Financialization and Accounting Standards: A Japanese Perspective

This study considers global financialization in terms of the dynamics of corporate accounting standards. Accounting standards play a crucial role in financialization by measuring corporate financial performance. Since the definition of “financialization” is ambiguous, this interdisciplinary study can benefit future research. Taking the perspective of Ryuji Takeda, a legendary Japanese accounting researcher with knowledge of sociology, this study focuses on the transition from production-oriented accounting to finance-oriented accounting. This transition is analyzed using Jean Baudrillard’s concepts of “simulacra” and “hyperreality.” This study also analyzes the recent changes in Japan’s accounting standards as a backlash against excessive finance-oriented accounting. Further, the backlash is considered from Takeda’s “spiral development” perspective. Although this study is essentially conceptual, data are presented in support of its argument, and its interdisciplinary perspective can further financialization studies.

This paper is structured as follows. The first section reviews studies on financialization and summarizes their essential points. The second section describes the relationship between the financialization process and accounting regulations (particularly accounting standard-setting) based on Takeda’s framework, which distinguishes between production-oriented and finance-oriented accounting. This framework introduces Baudrillard’s concepts of “simulacra” and “hyperreality” to explain the financialization mechanism by considering the transition from the former to the latter type of accounting. The third section focuses on the new dominance of finance-oriented accounting standards in Japan. Post-financial crisis Japanese accounting regulations such as the development of accounting standards for small and medium-sized enterprises are reexamined using Takeda’s theoretical framework. Finally, this paper argues that new accounting regulations have emerged through a spiral development within the bipolarity between traditional material production-oriented accounting and finance-oriented accounting as a reaction to excessive financialization and finance-oriented accounting standards.

A Comparative Study of Effort and Examinations in Japan and England

This paper compares Japanese and English emphases on effort from two analytical perspectives: cultural and institutional. The cultural perspective examines the Japanese cultural belief that natural gifts are equally distributed in society, while the institutional perspective examines the competitive entrance examination selection system, colloquially known as ‘examination hell.’ It is clear that an emphasis on effort has permeated Japanese society. However, recent rapid economic growth has made Japan more affluent, which in turn has undermined cultural emphasis on effort. On the other hand, English culture emphasizes the concept that natural gifts are unequally distributed, which also undermines cultural focus on effort. In this paper, I will discuss the similarities and differences in these two societies’ approaches to effort and examinations.

Giving Sense to Social Policy Implementation and Its Evaluation
Analyzing the Institutional Work: The Case of a French Social Security Local Organization

Social security and its solidarity policies play a central role on poverty reduction. To analyze how does it work in practice and its limits to reach its aim, it is interesting to wonder how it is elaborated, implemented by organizations and actors, and how it is questioned by policy evaluations. Hence, examine the institutional work (Lawrence, Saddaby, Leca, 2009) is a good way to better understand the complex institutional configuration where different actors interact to conduct and question policy. Studying the case of institutional work in a French social security local organization commissioned on family and solidarity policies, this comparative study is intended to analyze how organizational context, economic crisis and New Public Management affect social intervention and its targeted public. This paper is based on a three years ethnographic immersion in this organization with participant observation as a policy evaluator, a research on a minimum income scheme non-take-up, with some forty interviews and document analysis. Firstly, it explain how does the organization work, its missions, partners and professional cultures. Secondly it examines how in time of crisis, this social organization has not only to deal with an increasing demand to mitigate crisis negative effects on most disadvantaged people, but also with important budgetary restrictions and performance management optimization which impact the service delivery. Then, it analyze how do street level bureaucrats (Lipsky, 1980) react in front of these paradoxical injunctions and elaborate collective and individual performance strategies which are not always focusing on social right accessibility for vulnerable people. Finally, it study how policy evaluation question this situation, giving some perspectives for improvement without really put into question the institutional work influence on actors strategy. More broadly, this paper tries to understand how institutional configuration impacts policy implementation focusing on internal preoccupations more than in policy potential outputs for beneficiaries.

Australia’s Temporary Migrant Work Programs and Its Neighbouring Regions

Temporary Foreign Worker Programs have boomed in Australia over the last two decades, with this group of migrants now comprising the largest category of migrant entrants. Overall, migration from Asia and the Pacific has likewise expanded over this time. TFWs are employed in Australia on a range of visa types; but – with a few exceptions – the visa categories open to migrants from Asia and the Pacific are a skilled worker program (the 457 visa), student visas with work rights, and a ‘migration and development’ styled program with some nations in the Pacific (the Seasonal Workers Program). TFWPs are one aspect of the formation of regional and global divisions around work. The focus in this paper is on the
ways in which these programs of temporary work are an aspect of the shaping of relations between Australia and these neighbouring regions.

In Australia as elsewhere, temporary work carries inherent vulnerabilities. These are likely to be felt more keenly in the lower skilled sectors of the workforce. It is not insignificant that there are concentrations of temporary migrant workers in the lower-income states in Asia and the Pacific working in lower paid work, in casualised sectors of the economy. While not surprising, this is a way global and regional divisions of labor are constituted and that this migration is temporary, is one of the ways regional patterns can become embedded in the workforce. The argument is not that there is a singular economic logic to the formation of these patterns but rather a number of regional factors at play. These issues are explored in this paper drawing on an analysis of the different categories of temporary migration in Australia.

Transnational Engagements: Footscray, Transnational Migration and the Making of Place

Footscray is an ethnically diverse and rapidly transforming suburb in Melbourne’s inner West, formed in part by overlapping waves of migrants. The Vietnamese community and more recently migrants from African countries, influence the contemporary mix of people. Migrants’ engagements with more than one society and in various forms of transnational networks are an evident in the way migrants make place in the suburb. The voting and electioneering of South Sudanese migrants in the referendum establishing their nation indicates involvements in transnational networks. Participation in networks of Asian commerce is demarcated in shops through the suburb. Indian students undertaking a transnational education work in Footscray, including at the Vietnamese market.

Migrants transnational experiences, connections and networks are part of the uneven resources available to different groups and individuals as they become embedded in places. For migrants, such networks can be understood, to degree, as contained but geographically disparate “ethnic worlds” (Webner 1999: 25). But the places in which these networks are located shape the forms of these networks and the resources they offer. Drawing on Smith (2001), these networks “cross-cut” to deal with the challenge and shape one another. To take economic examples, transnational connections provide some migrants with access to capitalisation. But for other migrants their embeddedness in more than one society is a financial constraint, as the payment of remittances can be.

ABSTRACT

This study assesses the perception of security operatives on the challenges they face as security operatives in the fight against corruption in Nigeria. The study adopted both primary and secondary sources of data collection. Primary sources are observations of security operatives at security checkpoints, questionnaires were distributed to 120 security operatives in Kaduna metropolis and 6 in-depth interviews were conducted with key informants. For secondary source, data was obtained from Security Operatives Disciplinary Records on corrupt practices emanating from complaints lodged against them by victims (members of the public) or caught by officers /colleagues while on visiting or visiting rounds to assess performance. Findings show that causes of corruption among security operatives includes over-centrality of authority within operatives structure, recruitment, lack of discipline, poor promotion, lack of value orientations, and lack of good pension scheme. However, some of the challenges facing security operatives as found in the study is that the general public initiate corruption, bringing returns by junior officers, victimization by very important personalities (VIPs), issuing counter orders by superior officers and lack of adequate accomodation. Also, some of the consequences of the above includes lack of good governance, marginalization/frustration of public officers and diversion of public funds. Moreover, it is recommended that in order to win the war against corruption, there is need to reduce government involvement in all economic spheres as well as improving accountability and transparency in financial disclosure. This will eliminate opportunities for corrupt dealings.

What Is Diagnosis?: Medicalization of the Children with Developmental Care Needs in Medical Checkups and Preschools in Japan

Background: A nationwide study reported that 6.3% of normal class students seemingly had developmental disorders. These students or children in Japan called as “kininaru-kodomo” or children with special care needs. However, there is no legitimate definition of children with special care needs. Therefore, its relationship with professionals' viewpoints is ambiguous according to the professionals' viewpoints. This study explores its definition through the hybrid model of concept development.

Methods: The hybrid model is composed of a combination of literature review, fieldwork and analysis. The databases Japan Medical Abstracts Society (1983-2019) and Citation Information by NII (1991-2013) were systematically searched. Participent observation was conducted at multiple parent organizations. Moreover, narrative data was gathered through a key informant interview. These theoretical and fieldwork data were analyzed to hypothesize the relationship between the term's concept and the presence of medical diagnosis.

Results: A literature review revealed that medical professionals used the term of “kininaru-kodomo” as the synonym of children with developmental disorders. On the other hand, teachers of preschools and primary schools regarded them as children with troubles in group actions regardless of the presence of diagnosis. Moreover, the term of medicalization had occurred in schools and a public health nurse stated that preschool teachers asked municipalities to pick up the trouble-some preschoolers as a possible case of developmental disorders at an infant medical checkup. In a medical professional's perception, “kininaru-kodomo” was considered a children who could not be diagnosed because of their normal intellectual ability. Moreover, the distinction between “kininaru-kodomo” and normal children was considered blur.

Conclusion: The hybrid concept analysis demonstrated the arbitrariness of the application of the diagnosis of developmental disorders to children with special care needs. Making a common definition of “kininaru-kodomo” is necessary to reducing the care for children with or without developmental disorders.

Young People with Debt Problems: Uncertain Transition to Adulthood in Finland

Gaining financial independence is a part of becoming an adult in Finnish society and culture. In this paper, we discuss the debt problems faced by young people who struggle to gain agency in their early adulthood of age 18-25. The aim of this paper is to see what the transition to adulthood means in relation to debt problems. Official data on registered debt problems by young people will be analyzed in this paper. The data was gathered by using the official debt enforcement register of the Finnish Legal register center (on debt collection rulings, fines and other sanctions). The analysis of this register-based data concentrated on showing how debt problems start to accumulate and what kind of specific debt problems young are facing. Socio-demographic background is taken into consideration in the analysis. Our results show the debt problems of minors under 18 years of age result mostly from fines or other sanctions imposed upon them by public agencies, or because of their parents. Approximately at the age of 19 these problems increase dramatically and involve most importantly debts from consuming. Registered payment defaults by young people have been increasing in recent years in Finland. Instant loans with high interest are one major source eventual escalation of debt problems, and new concerns have arisen on unpaid fines. Finnish young people show strong gender differences. Women gain economic independence, but at the same time they have to balance the financial risks they are taking. Since most of the young people and young adults study until their mid-twenties, youth in Finland are placed in a waiting period between youth and adulthood. The current economic crisis in Europe has intensified the risky outcomes of this age of transition.

Patriarchal and Medical Discourses Shaping HIV/AIDS-Related Stigma and Its Management in Turkey

The paper explores the discursive formation of HIV/AIDS-related stigma and its management by people living with HIV (PLHIV) in Turkey. Based on biographical narratives of 24 PLHIV, semi-structured interviews with 32 key informants, participant observation in PLHIV networks and documentary analysis, the paper focuses on the role of medical and patriarchal discourses in shaping HIV/AIDS-related stigma at the state and societal levels and highlights the implications of stigma on PLHIV’s agency in managing the physical, emotional and social aspects of living with HIV in Turkey. The findings are overviewed in two sub-sections:

First, I identify the two conflicting discourses around HIV/AIDS in Turkey: ‘cultural immunity’ and ‘right-based’ discourses, at the state and civil society levels, respectively. Here I investigate the role of medical profession and of patriarchy in the formation of these discourses in relation to the socio-political context of Turkey, particular referring to the perceptions about sexuality, ‘modernisation’ and religious discourses.

Secondly, I focus on the ways in which PLHIV understand, reframe and challenge stigma at the individual and collective levels. I focus on family and healthcare as the main institutions where the context-specific ways in which HIV/AIDS-related stigma interferes with the formation and management of HIV-positive identities. Participants’ reconstructions of HIV through narratives of ‘injustice’ and ‘neglect’ are shown, to address the links between the subjective understanding of and resistance to HIV/AIDS-related stigma and the overarching discourses shaping stigma.

The paper aims at contributing to further understandings of HIV-related stigma by focusing on the power relations in the formation of stigma from a discursive and intersectional approach, by exploring the understandings of stigma from the perspective of the stigmatized, with a specific focus on the agency of PLHIV in negotiating and challenging stigma and by offering data from a cultural and geographical setting which remains under-researched.

Pharmaceuticalization and Social Inequalities: An Examination of Problems Relating to Depression in Japan

The growing number of people suffering from depression has become a social problem in Japan. Over the last decade, the number of those consulting medical institutions about depressive symptoms has more than doubled, and the number of those taking sick leave from work due to depression has increased. Accordingly, mental health strategies have become an important issue for both the nation and companies. The problems associated with depression in Japan have been influenced by the pharmaceuticalization of mental health. This trend further promotes the individualisation of social problems and encourages people to seek hospital consultations. Since selective serotonin reuptake inhibitors were introduced to Japan’s pharmaceutical market in 1999, demand for anti-depressant medications has rapidly expanded. It seems likely then that the efforts of pharmaceutical companies, as part of their marketing strategies, to increase people’s awareness of mental illness have led people who are not actually depressed to have medical consultations and drug treatments for it. This phenomenon is known as ‘disease mongering’ and has been reported on. Problems exist from the medical perspective also and include the following: expansion of the diagnostic criteria for depression as formulated in the American Psychiatric Association’s Diagnostic and Statistical Manual of Mental Disorders; treatments that rely heavily on drugs; and biomedicisation. Another reason for the increase in medical consultations is the declining function of communal bodies such as companies and local communities, a move that has left individuals to deal directly with organizational and social problems. This has resulted in individuals struggling psychologically, for example, with anxiety, worry, and depression. In summary, this sociological research has analyzed the problems of depression in Japan and revealed how the pharmaceuticalization of mental health accelerates the individualization of social problems, thereby creating new social problems and social inequality.

A Variation Study of Dialect Contact and Obsolescence in Japanese Community in Mexico City

Ever since the first migration to in 1897, Mexico has hosted the mass influx of Japanese immigrants, resulting in the formation of the largest Japanese community in Mexico City. Although Japanese is often used for communication amongst the community members even today, linguistic aspects of the language used there have not been well investigated in previous research. Since the first generation of immigrants in the community migrated from various places in Japan, there must have been contact between the Japanese regional dialects among them. This study intends to find out what sort of dialectal features are used in the current community as a result of contact between different dialects which were brought by the first generation. The data consist of over 5000 minutes of collected through my field trips in 2011, 2012 and 2013 in Mexico City. The informants consist of more than eighty of Japanese immigrants and their families. The linguistic variable examined in the analysis is negation suffix. The negation form is realized in different forms according to dialect. The major variants are ~nai and ~n, the former is mainly used in

the public in all societies relies on Western scripts when formulating their ideas. Yet, little data exist to show whether and how individuals, and new concerns from consumers, professionals, and scientists about the categorization used. Moreover, focusing on the function of housing land and building dealers in the ethnic community, the actual condition for foreign residents to purchase the housing is clarified.

Focusing on the above mentioned two themes, this paper aims at the structural understanding at the mezzo-level of the society. According to Hughes (1931): Chicago School third term, in his research of “Chicago real estate Board” housing land and building dealers are classified in five groups. In this report, combining both Hughe’s classification and the reporter’s classification of the number of renewal times of license of housing land and building dealers, characteristics of gatekeepers are clarified. There, the phenomenon of circuit-izing between “cooperative channel” and foreign customers is seen.

Then, what promoted foreign residents to acquire residence? In addition to “cooperative channel” centering housing land and building dealers in “edge-wised community,” improvement in the civility in foreign residents is thought to be a factor. In this regard, the actual condition is reported referring to the case studies of Ikebukuro and Okubo.

Edgewise Community: Real Estate and Asian Settlers in Tokyo

Okura, Takehiro* (Azabu university, okura@azabu-u.ac.jp)

Edgewise Community: Real Estate and Asian Settlers in Tokyo

After the latter half of the 1980’s the number of Asian people has increased as “new comer” in the inner area of big cities. As more than 25 years have passed since then, a question appeared if there was an appropriate term which expressed the situation of the community. In this paper, two area in Tokyo: Ikebukuro and Shin Okubo, are examined as case studies, and they are called “edge-wise community.” Edge-wised community is a community which has plural cultural basis, in which there exists a system designed from the bottom, and in which there exists a circuit which makes the system function.

This paper consists of the research regarding the foreign residents’ motives in acquiring the housing and in having relationship with the network and other surroundings. Especially, focusing on the function of housing land and building dealers in the ethnic community, the actual condition for foreign residents to purchase the housing is clarified.

Social Mix in Deprived Areas: A Solution to What?

Ponzo, Irene* (FIERI(Forum of International and European Research on Immigration), ponzo@fieri.it)

Social Mix in deprived areas: a solution to what?

The research study refers to the results of a housing mix policy in Turin (Italy) based on the consideration of the real estate complexes built at the time of the 2006 Winter Olympic Games into public and subsidized housing and aimed at creating a housing mix capable of generating a social mix. Social mix policies put together two main approaches to urban/housing policies: the people based (addressed to empowering and supporting people in their crucial life-housing transitions); area based (addressed to improving physical and social infrastructures of the neighborhood). The policymakers’ expectations about mixed districts can be listed in four points: 1) providing opportunities for housing career in district since it gives residents the possibility to move to better, more expensive and owner-occupied dwelling; 2) improving social contacts and social cohesion, since mixed districts are supposed to foster contacts between different groups of people and through that enhancing social cohesion; 3) increasing social capital since mixed neighborhoods should developed bridging, reciprocity, norms and trust; 4) providing positive role models especially to lower strata, reducing crime, low education achievements, poor health and unemployment, starting from those expected results, hypotheses and outcomes of this specific attempt have been investigated. In the observed neighborhood social mix has not produced all the hoped-for effects. The greatest benefits have been
representations of the social in digitalized (and cyber) domains of the non-dedicated

the paper is a part of the author's project focused on creating new kinds of the natural by the social. the main thesis is that the social creates autonomy of the natural. communication is abounding with symbolizations enough to force out traditional perception of the natural as something external. civilization and culture are abounding with symbolizations enough to construct the autonomous natural. up-to-date culture is dominated by hermeneutics, re-creations, and re-productions of achievements. it is not only a testimony of civilizational crises shaped with up-to-date popular discourses but also it shows that the social is autonomous because it exists as something creating nothing new.

the author argues presages of constructing of the natural as representations of the social. the natural becomes an autonomous domain of the social because it does not create the dedicated. the dedicated has been a kind of exaggeration, exemplification, and preservation of meanings. creating-the-natural individual human beings are not referred to any non-verifiable external. physical, digital, and cyber acts of creation of the natural are representations of the social and they are not participating in something given as unknown. in other words, acts of [self]-lunc fameding are connected with acts of [self]-creation of social subjects.

the author argues that there is a transitory/preparatory stage of the social being dominated/occupied by new digital skills and possibilities. the beginning of the next stage will be characterised by rejection of the dedicated and it will be directed towards creations and constructions of the natural. an individual human beings become autonomous-as-non-dedicated subjects of the social. the up-to-date social accepts huge number of homogenous variants, the future social will expand its cyber heterogeneity as the natural. the consciousness introduces itself as the natural. new kinds of cognitive and non-dedicated absorption will re-define—but without reference to ethics—socrates' cognitive valuation. the subject is the reason.

handling money in close relationships in young family households in poland

the paper discusses the monetary practices in close relationships in young family households in poland and shows mutual influence of life and economic strategies made by young poles who consider the "free market generation." young adults (18-35) who grew up in the socio-economic reality after the transformation of 1989, are now in crucial age for making a wide range of life and economic choices. this generation is interesting as undergoing the transformation of models of family life, the process of individualization, and a shift in family roles. they develop new habits regarding money and consumption, and are subject to new kinds of risks and uncertainties.

in order to show the social context in which young family households' monetary practices are problematized and represented the paper uses the qualitative content analysis of the internet message boards. discourse analysis is focused on reconstruction of underlying assumptions ("common knowledge" and "taken-for-granted" issues) about money in young family households and on identification of language patterns related to the issue.

the research has identified money and "monetary rules" as one of the most discussed problems in the household. young people have serious doubts about money decision making and money in a relationship is a fodder for ongoing moral and economic reasoning. examples of such problems are: should child care provided by a grandmother be rewarded financially by her daughter working full-time? how many bank accounts should a cohabiting couple open: one that is full-time? how many bank accounts should a cohabiting couple open: one that is provided by a grandmother be rewarded financially by her daughter working part-time and economic reasoning. examples of such problems are: should childcare...

the al capone method in the danish police

the challenges and the scope of organised crime and gang violence (including outlaw motorcycle gangs) in denmark have increased during the last years. this critical development has led denmark to toughen the anti-gang laws and caused a more interdisciplinary approach to police work (also called the al capone method). the al capone method combines monitoring and registration of high-risk-profile gang members. according to my research the method in general has an impact as desired by the danish government. however, research has not yet shed light on the unintended consequences associated with the method in a danish context.

the (re)invention of the al capone method combines monitoring and registration of high-risk-profile gang members. according to my research the method in general has an impact as desired by the danish government. however, research has not yet shed light on the unintended consequences associated with the method in a danish context.

taking the viewpoint of the gang members i will highlight and discuss these unintended consequences and examine their impact. my research is based on interviews and follow-up-interviews with 16 gang members, carried out in denmark during a 2.5 year period. additionally, the underlying basis of the research consists of a six months long field study in denmark.

the (re)invention of the al capone method in the danish police force is based on a close interdisciplinary cooperation with the tax authority, prosecuting authority, danish financial supervisory authority, danish bar and law society, public prosecutor for serious economic crime, ministry of justice, ministry of foreign affairs, danish business authority a.o. the interdisciplinary cooperation manifest

using a combination of migration literature analysis and practical experiences of ukrainian migrants in australia this paper examines systemic differences in actual mechanisms for incorporation and integration, depending on the period in which australia accepted immigrants and ukrainians left ukraine. particularly, it explores the role of ukraine/australia structural factors in generating post-independence ukrainian immigration waves. empirical research will change in ukraine and changes in australian immigration policy, the paper suggests there are three distinctive periods of post-independence ukrainian immigration to australia, the first decade: from 1991 until 1999; the second decade: from 2000-2009 and the beginning of the third: from 2010 until 2013. 51 "personal" stories enables to understand determinative structural factors that deeply influences migration, such as state policies, economic situations, and transnational networks, through comparative perspective in effecting the capacity and choices made by each migrant depending on his/her immigration period. it puts forward the idea that these factors strongly influenced and shaped migrants' life strategies and mechanisms of integration in recipient society as well as formed the way this ethnic minority incorporated itself in labour market of australia.

studies of criminal risk factors illustrate that the ex-prisoners, who successfully stay employed or begin an education, are less likely to find their way back on a criminal path. however, the aforementioned preventive factors of criminal relapse become less effective due to the ex-prisoners debt. according to the danish administration of justice act, the state has a right of recourse against criminal offenders to recover legal costs (expenses to defense lawyers, dna-tests, technical and acoustical investigations etc.). denmark is the only scandinavian country, and the only country in the european union, who does not take the income level of the convicted into consideration, when calculating the legal costs. nor do they have a common practice of remitting convicted's considerable legal costs.

thus, we must regard most ex-prisoners in denmark as highly indebted to the state. the ex-prisoners debt is generally understood as causing dynamics of regime problems, but legal regulation, as an unintended consequence of the indebtedness, is still poorly explored. my research is based on interviews and follow-up-interviews with 41 ex-prisoners. the interviews and follow-up-interviews have been carried out in denmark during a 2.5 year period. in-depth insights into the ex-prisoners' indebtedness and living conditions confirm that ex-prisoners share a passive attitude towards the labour market and the education system. the pay-profit of having a job, compared to receiving government transfer income, does not have any (present) effect to the indebted ex-prisoners financial flexibility or everyday life in general. so, the financial boundary between the welfare poor ex-prisoners and the workforce poor ex-prisoners is unclear.

legal regulation based on indebtedness will serve as an argument, to consider debt as an indirect criminal risk factor, which makes the preventive factors less effective, and drives the indebted ex-prisoners' farther from the legitimated socio-economic advantaged affiliations because of their debt to the state.
itself when policemen and staff members of the Tax Authority e.g. execute visita-
tions and confiscations, tries to levy distress and conduct stop-and-search zones in high-risk areas.

Social Movements and Transnationality: A Conceptual Discussion

In June 2009 a short grainy video shocked people all over the world. The video, recorded by a bystander, showed a young Iranian woman, Neda Agha Soltan, dy-
ing from a gunshot inflicted by a regime related shooter during protests against the fraudulent Iranian presidential election. Neda almost instantly became a transnational injustice symbol representing the unjust nature of the Iranian re-
gime. The case of Neda is interesting for social movement scholars for a variety of reasons, including the role of new media and the power of photography and citizen journalism (Olesen, forthcoming).

The present paper, however, employs the case to ask a range of conceptu-
al as well as methodological questions about the transnationality of transnation-
amal movements. Because while Neda's televised death, motivated various activist organizations and interest organizations to act and criticize the Iranian regime, the activities around the Neda injustice symbol was much broader. Apart from activists, three categories of actors in particular were vociferous and active: polit-
cicians/political parties, media, and networked citizens all expressed outrage and demanded responses on the basis of the facts.

This propels us to ask how we can best conceptualize the activities surrounding Neda's death. Was it a transnational social movement – or something else? In the paper I argue that it was in fact a social movement. Accordingly, I contend that the kind of action expressed. I propose that this understanding social move-
ments may be especially pertinent in a transnational context where information circulates rapidly and where actors are increasingly networked, connected, and visible and able to engage in numerous and often different political issues at the same time.

On Policy-Making and Legitimation of the Law in Contemporary Pluralistic Society

The paper's aim is to discuss the substantive dimension, quality and content of current law-policy making and socio-legal legitimation of law in present-day highly mobile, complex, multiethnic society. A special focus will be devoted on the coupling of the epochal crisis of formal-official State-nation law and the rising diver-
fentiation of social and legal sub-systems. Most relevant problematic variables related to this problem are institutional value-oriented identity patterns and interests will be con-
sidered. The quest for new models of citizenship and representativeness related to the search for new participatory rituals and institutional ceremonial events and high-tech interactions will be analysed also in relation to their current reliability and accountability.

Economic Crisis and Health Inequalities in Italy

In recent years Italy has been hit by a severe crisis, not only economically, with worrying consequences on the health of its citizens. In fact, the current economic situation threatens to undermine all dimensions of well-being of a population. The situation is still ongoing, the timing and outcome is impossible to predict, but that poses huge questions for those who deal with health and health planning.

A preliminary analysis of the international literature (Anderson, 2012; Binkin et al., 2010; Cylus et al., 2012; Artz et al., 2004) and data made it possible to substantiate the effects of unemployment and increasing poverty on health inequalities.

In this paper we will try to verify the consequences of the economic crisis on health in Italy, what is the state of health inequalities and what are the risk factors for proximal (material, psychosocial, occupational, environmental and behavior- al), most affected by the economic situation.

Using data by “Health for All Italy” we rebuild the health status of the Italian population in the last 10 years to demonstrate the changes and estimate the conse-
quences of the current crisis, and increase social inequalities.

In time of crisis it is even more necessary to ensure access to health services, especially to the weaker member of society, since the health needs may grow rapidly. Moreover, given the particular situation and conformation of Italy we place the focus on geographical differences between the north and south of the country.

The first results show that, indeed, in recent years are increasing cases of sui-
cide and depression, and all diseases related to the area of mental health (Costa et al., 2012). Health outcomes that are affected by an economic crisis ranging from subjective health, physical health, mental health and may vary in relation to socioeconomic status and place of residence.

Generational Change and Persistence: Gender Equality in the Life Course of Low-Income Brazilian Women

Social, economic and political changes in the Brazilian society since redemoc-
ratization have strongly impacted relational and material conditions of low-class families. Acute transformations took place especially in the realms of mother-
hood, women's participation in the labour market, division of domestic labor and domestic violence throughout the last decades, as reflected in the life course of women. This paper presents results from qualitative research with two or three generations of women in urban, low-class families in Brazil. The interviews were conducted with several families as part of two research projects in recent years.

The reconstruction of women's life stories and biographical self-presentations will highlight the reproduction or transformation of social patterns against the backdrop of new socioeconomic configurations and social policies. This recon-
struction will track, on the one hand, the changes in the perception of women's role and relational dynamic of the family as it relates to gender equality. On the other hand, it will be discussed how women experience their embeddedness in family structures as influencing decisions on migration, access to labor market and to education.

For that, the life paths of two or three generations of women from large cities in Southeast-Brazil will be presented. The analysis of the narrative interviews, fol-
ewing the reflective-reconstructive biographical method, focuses on how the inter-
viewed women define their life course between opportunities and constraints. This is seen in close relation with the social developments taking place around the subjects, as postulated by the biographical policy analysis. The research results can also cast a light on different patterns of generational intercontingency found in the same social milieu.

The Experience of Disrespect and the Genesis of the Recognition Paradigm: Empirical Research and Normative Philosophy in Axel Honneth's Critical Theory

Together with Charles Taylor, Axel Honneth is among the most important pro-
ponents of a theoretical paradigm for the social sciences centered on the idea of “recognition.” This notion has, of course, entirely different meanings in the vari-
ous contexts in which it is called upon. In Honneth's specific case, it is of decisive importance the fact that his theorizations around the centrality of recognition relations for human self-realization are rooted precisely in the negative expe-
diences of denial of recognition: disrespect or misrecognition. Despite the more than twenty years that separate us from the publication of Honneth's Struggle for Recognition, however, it seems that the theoretical genesis of this important book has not yet been grasped in its full potential for understanding today's modern societies and for a revitalization of the social sciences in general, and of Critical Theory in particular. This is due, as I see it, to the misreading of Honneth's works as much as to the author's insistence on making the philosophical work of Hegel the logical point of departure of his theory.

In this presentation, I intend to cast light on other motives that animated the formulation of this recognition-theoretical critical model, aside from the Hege-
lian works from the period of Jena: namely, the sociological and historiographical studies that convinced Honneth of the undeniable moral character of social strug-
gles, that is, the American and especially British Quals, and the Weimar Class-
es that flourished in the 1980's. This influence reveal a closer relation between Honneth's work and empirical social research than is made visible in his books. I argue, finally, that this connection is a most fruitful one and that Honneth, howev-
er, partially abandons it in his recent works – despite its precise meta-theoretical formularization under the name of “normative reconstruction” in his latest book, Das Recht der Freiheit (2011).

Indicators for the Social Impact of Social Sciences and Humanities Research: The FP7 IMPACT-EV Project

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
There is a big concern in the international scientific community to guarantee that Social Sciences and Humanities research (hereafter SSH) has a social impact in relation to the major concerns shared by all its citizens. This is in fact a key goal of all SSH research, on the one hand, because citizens and politicians are interested in research outcomes which serve to improve society, and on the other hand, because their creation of SSH knowledge will be appreciated and maintained if it is relevant for society, and not only for researchers. Nonetheless, these impacts have recently been critically contested. Lack of adequate tools for comprehensively assessing impact, particularly concerning social impact, and indicators of poor quality of research assessment have been the object of concern for the European Commission, and it is being discussed today in academic forums. In that frame the IMPACT-EV project has been selected by the 7th Research Framework Programme of the European Commission to develop a permanent system of selection, monitoring, evaluation (ex-ante, in itinere and ex-post) and comparison of the impacts from SSH research, taking into account the latest qualitative and quantitative evaluation tools, identifying new ways of implementing them and exploring new standards and indicators that complement existing impact assessment processes. As special attention will be paid to the analysis of social impact of SSH research, the IMPACT-EV project will analyse and systematize trends in the four areas of impact assessment:

1. the development of impact assessment methodologies and tools;
2. the integration of the impact and outcomes from SSH research, taking into account the latest quantitative and qualitative evaluation tools, identifying new ways of implementing them and exploring new standards and indicators that complement existing impact assessment processes.

Recent waves of global movements agree, among others, on three demands: to abandon neoliberal policies, media democratization, and advance the public nature of education. Mexican student movement is part of this trend.

In the democratic transition –from a seven decades hegemonic party rule to a right wing government– Mexican citizens believed that the presidential alternation, reached in 2000, would be the alternative to authoritarianism and for an institutional renewal. However, the young democracy was soon eroded with electoral frauds and social unrests. 2012 elections erased any possibility of improvement, when the old party burst with renewed signs of corporatism and complicity. The “#yosoy132” emerged. It claimed the defense of democracy and faced the impunity of the old-regime candidate, due to his intricate web of complicity. The student movement, originated in private universities and extended to the public, could articulate values of social justice and democratic liberties: radical transformation of the political, social and economic circumstances of the poor in rich nations often requires a much higher level of income, and access to many additional goods, amenities and services just to reach similar levels of capability and inclusion as those of many poorer people in developing countries. The paper examines this urgent issue in Canada, the UK and the US where, despite their great prosperity, the rates, severity and consequences of poverty have intensified under neo-liberalism. It also provides cross-national contrasts examining poverty in the Nordic nations which, despite notable increases in inequality and social policy restructuring, still outperform their Anglo-American counterparts. This paper also critically examines dominant and popular theoretical perspectives and explanations that have been advanced to explain how poverty is generated and sustained and assesses the possibility for its eradication.

Recently, this “immaterial” conception has been problematized by conceiving materiality as physical objects –“stuck” matter. Scholars have analyzed how technology affects and is embedded in institutionalization and institutional change. This ontology, however, fails to perceive the human influence on the environment. It belongs to the human exceptionalism paradigm, in which technology is seen to move any probiem that the “progress” might produce. I propose to integrate physical matter required to run social practices (e.g., food, energy, raw materials) and transformed within practices (e.g., to waste, pollution) to institutional theory. Without “loose” matter institutionalism cannot perceive the growing “rifts” that humanity is producing, most prominently embodied as climate change and the depletion of raw materials. The ontology of “loose” matter has direct implications on institutional change and indirect ones on inequality.

Austerity amidst Affluence: Cross-National Contrasts

Austerity amidst Affluence: Cross-National Contrasts

Poverty has long been one of the most pressing social problems across the nations of the wealthy, advanced capitalist world. The poverty in wealthy countries is not on the same order of magnitude as in many less developed parts of the world, where grinding impoverishment is ubiquitous, and its impact and death toll staggering. Yet poverty is not only a “Third World” concern. It is often suggested that many poor people in wealthy lands would be considered relatively well off if they were living in a poorer developing nation. But they are not, and the social and economic circumstances of the poor in rich nations often requires a much higher level of income, and access to many additional goods, amenities and services just to reach similar levels of capability and inclusion as those of many poorer people in developing countries.

This paper examines this issue in Canada, the UK and the US, despite their great prosperity, the rates, severity and consequences of poverty have intensified under neo-liberalism. It also provides cross-national contrasts examining poverty in the Nordic nations which, despite notable increases in inequality and social policy restructuring, still outperform their Anglo-American counterparts. This paper also critically examines dominant and popular theoretical perspectives and explanations that have been advanced to explain how poverty is generated and sustained and assesses the possibility for its eradication.

Distributed Expertise and Professional Collaboration: Recognizing Relational Interdependence in Healthcare

Background

Healthcare work in the context of the hospital is characterized by the need for collaboration. There are several reasons why this is the case; for example that the complex tasks involved in modern diagnostic and therapeutic practices require highly specialized services as well as health professionals with a multitude of expert knowledge. Bringing this knowledge together in every instance of patient care requires, amongst other things, that individual professionals acknowledge the mutual dependencies and collaborative needs that arise from the distributed nature of expertise in clinical settings. However, professional cultures, hierarchical relations and differences in communication practices may give rise to inequalities in the recognition of expertise and hamper the open exchange of knowledge in decision-making processes.

Study and methods

The paper is based on two separate studies of professional work in hospitals. The studies were carried out using a qualitative design. Data were collected by participant observations as well as by individual and focus group interviews with doctors and nurses. The professional groups were interviewed separately, and nurses report that doctors place a higher value on the role of nurses than doctors place on the role of doctors.

Outline of paper presentation

The purpose of the presentation is to describe how different modes of expert knowledge give rise to relational interdependence between doctors and nurses, using the management of oxygen therapy and mechanical ventilation of preterm newborns as illustrative cases. Based on findings from the studies, questions to be discussed are; how is the collaborative relationship experienced and performed by the two professional groups and what determines the exchange of knowledge between nurses and doctors in concrete clinical situations? The discussion is informed by a theoretical framework that captures the relational aspects of professional work performance.

This paper is premised on the nomination of 17 council chairmen (not Chair-women) by Peoples Democratic Party (PDP) for November 2, 2013 local council election in Enugu State. The issue of underrepresentation of certain groups, particularly women, brings to fore the contradiction of the party’s policy of equitable representation of women in party organs by using affirmative action of at least 35% of women. The claim to be a democratic nation cannot be sustained when political parties are not inclusive and the candidates they nominate for all the elections remain male dominated. Most worrisome, is the grave yard silence from the marginalized women group of the local communities. The paper will centre attention on the process of candidate nomination by PDP, highlighting the particular obstacles that women face in the process. The paper examines the likely relationship between the prevalent culture of political ‘godfather’ and women under-representation in municipal politics in Enugu state since 1999.

Patronage in Pre-Colonial and Colonial Ibadan, Nigeria

This paper conducts a comparative analysis of patronage in pre-colonial and colonial Ibadan, Nigeria. Starting up first as a camp of marauders and later a military settlement after the collapse of the Oyo Empire, Ibadan thereafter emerged a military entity that extends over a large spectrum of Yorubaland by the end of the 19th Century. Ibadan developed a unique patronage structure based on the babaogun clientelistic system. The babaogun system entailed a network of military warlords who had clients who provided military and civil services in exchange for protection. Indirect rule introduced by the British integrated the babaogun system into governance, equipping the chiefs with economic and coercive powers, which of course sustained a transformed clientelistic system that was only subverted by the educated elite by the 1950s in preparation for independence. Hence the foundations of contemporary patronage system in Ibadan in particular and Nigeria in general are embedded in the political economy of colonial patronage and succeeding neo-colonial system. Using archival and ethnographic methods, this paper provides the context of patronage in Ibadan in pre-colonial and colonial eras.

Interrogating Social Inclusion: Preliminary Notes on Micro-Credit Institutions and the Quality of Living in South Africa

The notion of social exclusion has featured prominently in poverty and social reproduction discourses. Perhaps there is a sense that its obverse, social inclusion could ameliorate the deprived conditions and improve the quality of living of the excluded. However, the notion of ‘unfavorable inclusion’ suggests that inclusion does not necessarily translate into an improved quality of living. Therefore, there seems to be a skewness of emphases on employment as important for inclusion and improving the quality of living of the included. This thinking has led to the neglect of other institutional structures that may be imperative for the quality of living of individuals and certain categories of people within a society. This paper looks at the implications of the activities of micro-credit institutions as a mechanism of deprivation, even when people are included in the form of being actively employed. In fact, employment has become a conveyor belt that drives people to these institutions, even when people are included in the form of being actively employed. In these social backgrounds, the importance of research on “romantic love” with sovereignty was also started recognizing. However, the study accumulations of “romantic love” are still not enough in the area of family sociology. This study aims to consider how young adults in Japan meaning their “romantic love” by focusing on their rhetoric and gender perspective. The research data are based on 4 group discussions and 4 semi-structured interviews with heterosexual sexual single men and woman, born in 1983 to in 1993. Each group is divided by social positions such as students, company employees and gender. Using these data, I found that Japanese young adults tie the construal relationship by declaration and whether they are dating officially or not is quite important to have sex because it can be the permission, which shows their sexual relationships are right socially. Moreover, the analysis proves that there are not big differences about sexual behavior by gender; however, it shows that there are some differences in awareness of the marriage and “romantic love” by gender. Especially, women group members tend to set the time limit to 30 years old to get marriage and to think that they should date for marriage otherwise they feel they are wasting time. However, from the narratives of survey respondents, it suggests conditions required for marriage and conditions required for romantic love are ambivalence. In Japan where a modern family ideology and a love marriage ideology are left firmly, it could make not only marriage but also “romantic love” difficult.
ceremonies requiring no monetary exchange. While the traditional forms of these customs have almost disappeared from modern life, they can still be clearly identified in all three societies. This paper reports the results of an interview survey and fact-finding fieldwork of South Korean and Chinese contemporary mutual help and shows that systems of mutual help arising from indigenous conditions has continued to contribute to sustainable communities in the evolution toward full modernity. The paper concludes that modern societies might do well to take note of such mutual help networks and incorporate them into official strategies as they search for solutions to both public and private social problems raised by the reconstructing of communities in East Asia.

Life Experiences of the Children of Marmara Earthquake and Adults of Today: An Example from Adapazari

Study will be focusing on the impact of disasters to the life experiences of adults of today but who were the children at the time of Marmara earthquake in 1999.

There are inadequate number of studies basing on merely findings which were derived from children of disaster periods. The coexisted studies reveals that there are differences in the impacts of disasters on children in disaster processes. Survivor rates of children according age, gender and accumulated disaster culture may differ according to different factors (cultural, economic, social, political etc.)

This study aims to find out post earthquake impact of disaster on children up to their adult age.

Methodologically study bases on a field work which will be conducted on a student group of a primary and secondary school teacher’s classes at the time of Marmara earthquakes in 1999. Students will be traced 14 years after through snowball sampling in the Adapazari, Turkey in 2013.

The data will be derived from questionnaires, interviews and video records. Literature reviews and visual data analysis will be used. Qualitative and quantitative approaches will be used together in triangulation. SPSS program will be used for quantitative analyses.

The findings will be presented within comparative perspective, through references to findings from coexisted studies and examples from the world.

The study will be consisted of five main parts: namely introduction, methodology, review of coexisted studies, findings and conclusions.

The Second Group of Keban Dam Studies in Upper Part of Fýrat Basin

The first group of the Keban Dam studies were carried on rural and urban areas in many fields in relation to construction process of the dam, resettlement process and later on similar to many projects in the world. However, there are ongoing high dam projects in many countries on the neck of major rivers and river basins. Kariba, Aswan, James Bay-I, Three Georges, Hoover and Keban are known examples. The lower-upper parts of dams and themselves are still focus of future development projects. Therefore second, third and many more studies can be named in relation to known dams.

Initial studies were focusing on the construction of dams. Their human and environmental issues such as power, equality, aging and right issues, recognition of upper-lower and dam areas; short, medium and long term impacts have become visible in time. However studies are not enough yet to see all or policies not powerful enough to encounter all findings from the fields (human and nature).

This study consisted on four sections. The first section will be revealing introductory knowledge on a necessity of an approach to merge lower, upper and dam areas inclusive of collaboration of all scientific areas without isolating local issues.

The second section introduces methodological foundations of the study. The discussion will be the third section. This will be based on three pillars: Findings from the known high dam projects from the world; general evaluation of the Keban Dam Project and recent developments, rural-urban and environmental policies in the upper part of the Keban dam and upper part of the Firat Basin. The findings will be discussed separately. A special emphasis will be given to the inhabited natural areas (by public-by law) and changes in them. The last section consisted of conclusion and recommendations.

International / Military-Private Cooperation in Disaster Relief: Lessons Learned from Great East Japan Earthquake in 2011

The Great East Japan Earthquake which occurred on March 11, 2011 was a complex disaster including the massive earthquake, enormous tsunami and large-scale radiation leaks from the Fukushima nuclear power plant. It was the one of the most serious natural or man-made disasters in the history of Japan.

On the occasion of this tragic disaster, various military, public and private actors from inside and outside of Japan were engaged in disaster relief. These international/military-public-private actors conducted various activities and made remarkable accomplishments. However, we noted that numerous survivors endured immense suffering, chaos and deprivation in the affected areas. We wondered whether international/military-public-private actors responded to the urgent needs of the survivors as quickly and effectively as possible. This question was the basic motivation for our research.

Our research summarized several issues concerning the state of affairs and lessons learned regarding trilateral cooperation from the view point the MOD and JSDF.

First, it was discovered that there was considerable room for improvement in U.S. bilateral and joint operations in the event of a large natural disaster, even though they have a half-century record of collaboration under the Japan-U.S. alliance. Concerning other foreign military forces, construction of framework for cooperation is also desirable.

Second, cooperation with local governments produced a lot of lessons. Although local government should assume a leading role in disaster response, in some cases damage caused by the disaster keep them from exercising their normal disaster relief functions. This led to a dramatic increase in the volume of aid needed and demands on local organizations following the Great East Japan Earthquake.

A framework for collaboration between JSDF and the private/public aid sectors is also necessary in order to properly prepare for the next large earthquake.

ONODA, SHINJI* (Hosei University, shinji-0219@hotmail.co.jp)

After spending more than two decades for consideration, Japan introduced the carbon tax (officially named “Tax for Climate Change Mitigation”) on October 1st, 2012. Japanese carbon tax adds a tax rate of JPY289 per ton CO2 emissions above tax rates to the petroleum and coal tax. Compared to the carbon taxes in European countries, its features can be seen in its low tax rate, revenue increase and earmarked for energy-oriented CO2 emissions.

Generally, a policy is established through a certain policy making process where not only rationality of policy contents are considered but also the interests of various stakeholders under political, social and economic circumstances are adjusted. In order to introduce appropriate policies for achieving low-carbon society, it is essential to find problems of policy making processes and constantly strives for their improvements. Therefore, this study aims at approaching for elucidation of the characteristics of Japanese policy making process by investigating the carbon tax consideration history.
The analysis will be divided into three stages: (1) from start of consideration (beginning of 1990s) till the establishment of the petroleum and coal tax (2003); (2) from 2003 till the change of government (2009); and (3) from 2009 till the enforcement (2012), so that it makes easier to gras the trends of discussion. For this analysis, the chronological method and a sociological theory called "organization theory" forwarded by Michael Crozier and Erhard Friedberg will be applied. The organization theory is one of analytical methods for organizations/systems, which assumes that individual persons/groups pursue "rational strategies" under "structured conditions" defined by various factors such as political systems, procedures, historical legacies and international trends. Data will be corrected from materials of study commissions for carbon tax, the Diet and related organizations as well as from interviews with politicians, ministerial staff, industries, NGOs and researchers.

Governing Sustainable Seafood

The worldwide consumption of seafood is increasing year over year leading to more pressure on the remaining fishstocks and to expansion of aquaculture. The environmental consequences are substantial and create growing pressures for more adequate environmental governance responses. Recently, market-based approaches to sustainability seafood governance have gained considerable traction in global seafood provision. Born in part out of perceived failures of the state, a range of private-led governance approaches using price signals and market access as incentives for changing production practices have emerged. This paper provides an overview of these approaches in fisheries and aquaculture, including not limited to NGO-led initiatives such as the Marine and Aquaculture Stew-

How We Cope: The Study of the Gendered Dimensions of Conflict on Women in the Niger Delta Region

Recent conflict events in the Niger Delta region have seen the changing faces of the impacts of the conflicts on women. There is an increasing use of violence and rape of women as a tool of warfare by both the militias and the State security forces, thereby exacerbating the rise in new HIV infections in the regions. Also a number of women have become widows with enormous family responsibilities to cater for. Thus there is an increase in the number of female headed households (families) in many parts of the Niger Delta region and Nigeria due to the death of a spouse in the conflict. A key argument advanced in this paper is that the women in the Niger Delta and Nigeria as a whole bear the brunt of the conflict in the region due to their low socio-economic position in the patriarchal society. Their limitations and resulting conflicts affect them disproportionately. Women constitute the most vulnerable group since they have limited access to land and resources, which is a crucial determinant of their access profile. This places women in a vulnerable position in terms of adaptation and resilience to shocks and stresses associated with the conflict. Despite their limitations, the women are not impas-sive recipients of their situation in the conflict, but are active actors in the quest for survival and peace. By studying the gendered dimensions of social conflict, armed violence and peacebuilding we will be able to understand the gendered relationship which goes on from the household level to the general society, and how these relations invariably affect women's vulnerability to conflict and conflict resolution.

Structurally Heightened Structurally Heightened Mobility of Population and Community: Case Studies from the Suburbs in an Indonesian Metropolitan City

Based on both qualitative and quantitative data of Indonesia, this paper is trying to accomplish two goals. First, the author grasps the current condition in the suburbs of Asian metropolitan cities whose mobility of population is structurally heightened. Second, the author examines the community in detail whose members are changing dramatically and whose old community it has replaced.

The rapid development process of Asian metropolitan cities is one of the most important issues in recent urban studies. Industrial products for global markets are produced in these areas. It turns out that the driving force of this development is deeply embedded in suburban areas which have newly developed towns and implications of their situation in the conflict, but are active actors in the quest for survival and peace. By studying the gendered dimensions of social conflict, armed violence and peacebuilding we will be able to understand the gendered relationship which goes on from the household level to the general society, and how these relations invariably affect women's vulnerability to conflict and conflict resolution.

Structurally Heightened Structurally Heightened Mobility of Population and Community: Case Studies from the Suburbs in an Indonesian Metropolitan City

Based on both qualitative and quantitative data of Indonesia, this paper is trying to accomplish two goals. First, the author grasps the current condition in the suburbs of Asian metropolitan cities whose mobility of population is structurally heightened. Second, the author examines the community in detail whose members are changing dramatically and whose old community it has replaced.

The rapid development process of Asian metropolitan cities is one of the most important issues in recent urban studies. Industrial products for global markets are produced in these areas. It turns out that the driving force of this development is deeply embedded in suburban areas which have newly developed towns and implications of their situation in the conflict, but are active actors in the quest for survival and peace. By studying the gendered dimensions of social conflict, armed violence and peacebuilding we will be able to understand the gendered relationship which goes on from the household level to the general society, and how these relations invariably affect women's vulnerability to conflict and conflict resolution.

Taming the Uncontrollable Situation?: Towards a Critical Re-examina-tion of Cosmopolitan Modernization from a Socio-Spatial Perspective

What are the significance and problems in Ulrich Beck's concept of cosmopoli-tan modernization? How do the particular characteristics of a society change in relation to the influx of 'outsiders' across the nation-state? This paper aims to develop a new theoretical approach to the concept of cosmopolitan modernization by integrating a socio-spatial perspective that moves beyond nationalism and the nation-state. Beck's argument has important implications for conceptualizing the future of modern society by drawing attention to the ways that bounded territories are constantly being erased and redrawn, beyond national division of labor.

Taming the Uncontrollable Situation?: Towards a Critical Re-examination of Cosmopolitan Modernization from a Socio-Spatial Perspective

What are the significance and problems in Ulrich Beck's concept of cosmopolitan modernization? How do the particular characteristics of a society change in relation to the influx of 'outsiders' across the nation-state? This paper aims to develop a new theoretical approach to the concept of cosmopolitan modernization by integrating a socio-spatial perspective that moves beyond nationalism and the nation-state. Beck's argument has important implications for conceptualizing the future of modern society by drawing attention to the ways that bounded territories are constantly being erased and redrawn, ultimately his model of cosmopolitan modernization aims to locate alternative formats of 'with-ness' (or being together with fellow citizens) and thus shares basic traits of nationalism. To this end, this presentation firstly examines Beck's concept of reflexive modernization by focusing on the changes in territorial formations, individual conceptions, and the linear growth model. Secondly, this paper critiques Beck's concept through a specific focus on critical discussions of social space developed by GS’ argument and Uma Narwal, Harvey. Building off of these insights, this paper argues that socio-spatial conceptions that represent ‘outsiders’ need to be re-examined in relational terms. Specifically, this paper proposes Harvey’s idea of relational space as a way of taking into account the shifting and emergent boundaries of inside/outside and self/other that characterize the ‘uncontrollable’ of global space. Thus, it further suggests an integrated, socio-spatial perspective for understanding the dynamic tensions within ‘cosmopolitan modernization’. 
ardship Councils (MSC and ASC), and industry-led initiatives such as GlobalG.A.P. and the Global Aquaculture Alliance (GAA). The paper then discusses how these arrangements have led to the inclusion of new categories of private actors in the regulation of sustainable seafood (e.g., auditors), and to a new round of contestation between NGOs and industry actors such as retailers, who are seeking to counter the regulatory risk through a series of benchmarking exercises. The paper concludes with a discussion of whether and how the investment made in these market approaches have supplemented (or even replaced) state governance arrangements in promoting sustainable seafood production and consumption in the context of globalisation.

ORELLANA, GERARDO* (Universidad Nacional Autónoma de México, gorellanaster@gmail.com)
The Role of Social and Cultural Factors in the Involvement of Physical and Sports Activity in Mexico

Mexico is the greatest consumer of carbonated drinks and has the highest percentage of people who are considered overweight. Government actions have not adequately considered sports as a factor that drives social development. Part of this weakness in Mexico is a lack of specialized studies that identify the needs for physical activity, as well as the capacity of large corporations to exert influence on legislators through lobbying, thus limiting the national Government's possibilities to foster social development.

This paper presents results from a study that identifies some of the social factors that influence the possibility of a population's involvement in practising sports and physical activity, such as infrastructure, socialization experiences and different needs by gender, age, regional and cultural conditions. The study was carried out in the central-south region of Mexico, with students of upper high school of a semi-rural community. It is an exploratory study using a mixed methodology that was conducted between September and December 2012. The results show differentiated consumption of physical and sports activities among the student population. The important role that public institutions play in marginal communities with low economic resources regarding health care, and the promotion of physical and sports activities within this population is highlighted.

The results also suggest the vulnerability of the population to diseases that grow with the economic interests of corporations due to the lack of regulatory policies to mitigate health risks.

Canadian Police and Legitimization Of Conducted Energy Devices (CEDs)

This paper focuses on the increasing adoption and deployment of Conducted Energy Devices (CEDs), one of a range of ‘less-than-lethal’ force options, by Canadian police. The paper explicates the legitimization of CEDs as a function of the intrinsic interaction of organizational dynamics, such as growing professionalization and concomitant credentialism of police practice and the agency of CED manufacturers. Four landmarks in the policing field generated by CEDs legitimation are enunciated as gatekeeping and structuring ideational processes. The paper concludes with a trite of resultant effects of the symbolic institutional value of CEDs in the policing field in Canada.

Intermediaries, Facilitators, Agents, Guides: Steering International Medical Travel to Malaysia

Malaysian authorities' desire for foreign patient-consumers from higher-income countries and the spectacular medical tourism infrastructure being developed to cater to them exists in contrast to the actual everyday flows of intra-regional lower-income patient-consumers who, comprising the bulk of medical travellers to Malaysia, have been fundamental in both constituting and sustaining the country's medical travel destinations. This paper draws on interviews with medical travel companies in Malaysia and Indonesia that promote Malaysian private health care to prospective patient-consumers from both higher-income and lower-income countries. It compares and contrasts the functions of these companies, their relationships with patient-consumers and the ways in which they represent and negotiate the differences between health care in patients' countries of origin and in Malaysia.

Moralistic Trust and Rationality: The Individualization of Trust

This study discusses the individualization of trust. In the literatures on trust, there are two conflicting views on the definition of trust. Hardin(1992) argues that trust is based on the prediction about the behavior of other people. In contrast, Uslaner (2002) and Mansbridge (1997) assert that trust is based on moral values or altruism beyond the prediction.

We can apply this argument to generalized trust, or trust in strangers as well. Previous works consider that voluntary associations and voluntary and associative membership are the two main explanatory variables to determine generalized trust.

Institution-centered approach asserts that monitoring and sanctioning the law-breakers by order institutions facilitate trustworthiness of people’s action. Therefore institutional confidence can enhance generalized trust. This approach assumes that generalized trust is based on the prediction about the behavior of strangers.

On the other hand, society-centered approach claims that voluntary association membership creates trust in members in belonging group, and it is generalized to strangers outside the group. This approach implicitly assumes that generalized trust cannot be explained by prediction, but it is based on moral values.

Thus, generalized trust has the predictive and moralistic aspects. We can call the shift from trust based on the prediction to trust based on the moral value as “individualization of trust.” Then, what is the condition of the individualization of trust?

This study focuses the post-materialism argued by Ronald Inglehart. We can expect that trust based on the prediction is rational for materialists who emphasize the existential security. On the other hand, trust based on the internalized moral value is rational for post-materialists who emphasize the more autonomous choices.

To test the hypotheses above, this study will make the quantitative analyses based on the questionnaire survey data in Japan.

The Migration and Development Nexus: Gender Insights

Research on development and migration has mostly stemmed from an economic concern: to measure the volume, cost and contribution of remittances to the local development, largely overlooking women and gender issues. The New Economics of Labour Migration (NELM), the transnational paradigm and the liveability approaches are known to have enlarged the scope of the migration and development nexus (Haas 2010). One aim of our paper is to review how gender studies have also contributed to the shifts in the debate on migration and development and how gender issues have been incorporated.

On the other hand, over the last decade, abundant literature relating to the globalization of social reproduction (the so-called ‘global care chains’) has helped to make women visible, and to highlight women’s crucial contribution to transnational reproductive labor (Hochschild 2000). However, it largely fails to capture the articulation of productive and reproductive strategies. This paper defends the necessity of rethinking the migration and development nexus according to the articulation of transnational households’ productive and reproductive strategies.

We will review the literature on migrations, women/gender and development. Then, on the basis of case studies, we will assess to what extent do migrants’ productive and reproductive strategies (care and remittances, saving and consuming, housing, health and education) determine the gender relations and the social mobility of migrant household members.

Social Networks, Networking, and Ethnic Group Membership in a Talent Pool

Even among highly educated professionals, minority ethnic groups are disadvantaged relative to dominant ethnicities in access to organizational resources, power, and rewards. Social capital is an important factor in reproducing such disadvantages, as minority ethnic groups have less access to and reap fewer benefits from social networks. While the general positive relationship between social capital and career success is well established, limited research has been conducted on how social capital is acquired following organizational entry, and how this process is affected by minority group membership. Focusing on the relationship between social capital and social group membership, we collected longitudinal social network data among a diverse talent pool of ten trainees of one of the large urban municipalities in the Netherlands. Data collection started on the first day and continued throughout the first three months of employment. Survey items addressed occasional or recurring contacts based on work-related advice, non-work-related advice, and friendship, resulting in indicators of network size, centrality, and homophily. We followed the development of social capital within the closed network of trainees and their potential open networks with all municipal employees. Also, we conducted semi-structured interviews with each of the trainees after their first year of employment to explore individual networking behavior (building, maintaining, and using social network contacts), and matching career experiences in terms of their access to opportunities and career support. Preliminary analyses suggest differences between dominant and minority group members in terms of network structure, networking behavior, and career experiences. By combining quantitative data on network structure and qualitative data on networking behavior, we address the common critique that focusing on structure and omitting agency fails to enhance our understanding of how practices and behaviors serve in ultimately (re)producing differences in network structures and their consequences.

The Grimmest Spectre: The Famine Emergency of 1946

“The let them starve,” a Maine farmwoman angrily responded to a Successful Farm politician about the Famine Emergency of 1946 throughout Europe and Asia. A more thoughtful Idaho farmer explained, “Normal people, in a land of plenty, should not stand by and see any group of people starve.” Yet only 51 percent of six million American farmers believed aid should be sent to Europe. Americans and Asians. By mid-1946 agricultural economists narrowed this complex issue of famine relief to a simple economic ultimatum of thirty cents more per bushel of wheat. Would Americans respond in a generous, ethically-minded spirit or a miserly, profit-motivated manner?

When the Second World War finally ended, food mattered most. Rations and calories—mostly bread and potatoes—remained below subsistence level in many warring countries but now started plummeting after WWII to record starvation levels. After war’s end in Eastern Europe, the Soviet Union, China, and India, more people succumbed to starvation than during the violent conflict. As Winston Churchill proclaimed within his infamous “Iron Curtain speech, 1946 had become “this period when famine stalks the earth.” At the same time, President Truman considered this foreign aid as a “solemn obligation.”

To fulfill this obligation, Truman appointed former President Herbert Hoover, who used his expertise to save the lives of European Jews following the Great War, to be chair of the Famine Emergency Relief Committee, and Hoover eagerly embraced the challenge, announcing via radio that half a billion people faced starvation worldwide. Hoover, his name synonymous with relief in Belgium and Poland, knew how to see the children behind the figures years ago, but the death and destruction by 1946 had dramatically escalated. He visited thirty-five countries in less than two months, collecting famine information that would later contribute to the establishment of the Marshall Plan.

Canadian Immigrant Women Engineers’ Work Life: Experiences and Change

The number of women in engineering, in Canada, is growing, yet men and Canadian-educated women engineers continue to outnumber immigrant women engineers, especially those who have been reentering the profession. For the last 10 years, the majority of immigrants to Canada have been mostly comprised of highly educated, internationally trained professionals, many of whom are women. Many of these women hold university degrees in engineering and other academic disciplines and almost all of them have work experience in their professions. Yet few individuals research women engineers in Canada and only a handful of them advance in their career, despite a decade long effort by Canadian educational institutions, the Canadian government, and Ontario’s engineering regulatory body to involve more women into the profession.

In this paper, I introduce the analytic complexities that I will examine in my doctoral research whose theme is an intersectional analysis of the changing experiences of immigrant women engineers in Canada, from various educational, ethnic/race/national origin and social class backgrounds. Based on life history interviews, completed by statistical and other research literature, this paper proposes research which will explore influential social and environmental factors that have
shaped immigrant women's professional and life experiences and contributed to their underrepresentation in the profession in Canada for the last 10 years, in an intersectional analysis of gender, race/ethnicity/birthplace, and class relations which considers changes or their absence over time.

"New Ways of Recruiting – an Engagement of the SAF Efforts of Recruiting Ethnic Minorities"

The transition to an all-volunteer force in Sweden has meant that the Swedish armed forces (SAF) need to try different ways to recruit personnel. For countries that abandoned conscription, there have almost always arisen recruitment problems. The new direction for the SAF, going from an invasion based defense to a more operational defense force with international focus, puts demands on cultural awareness and language skills among soldiers and officers to another extent than before. In November 2012 the SAF, together with the Swedish Public Employment (SPES) Service, started a joint project called preparatory military training. The aim of this project was to attract 500 individuals with a cultural background from outside the European Union, and language skills in other languages than Swedish and English, to start a 10 weeks long preparatory military training. Preparatory military training was giving participants an insight into what the armed forces would look like, as well as get the opportunity to develop academically. Out of these 500 individuals, the SAF aims at recruiting 300 individuals to start the basic military training in the SAF. All participants live at the military barracks and receive free meals and they are allowed paid travel home four times during the course and are paid activity support from the Swedish Public Employment Agency. Men and women live separately with some facilities. The SAF and the SPES share 50% of the education and training at the barracks. Phase two of the project starts in the autumn of 2013 and aims at attracting 300 individuals to start the preparatory military training. The paper assesses the effectiveness of this new and original project.

Comparative Analysis of Regional Governance

This presentation illuminates regional variations of industrialization through comparative analysis of governance for resource management on porcelain industry in Japan. The presenter analyzed how specific arrangements were formulated in three regions, the presentation shows how the relationships of political guidance and support from the political authority to receive funding and other resources to enlarge their activities on their own without little public support. The ways and degrees of involvement by regional political authorities and those who were engaged in porcelain production and distribution. The pre-existing practices and relations shaped the ways of organizing resources for industrialization in each of the regions even after the regime change in the late 19th century. In the region where the regional authority had claimed a strong command over resources for porcelain production and distribution, producers and merchants relied on guidance and support from the political authority to receive funding and other support for a further development. In the region where the political authorities did not interfere the way of using resources, producers and merchants organized resources to enlarge their activities on their own without little public support. The ways and degrees of involvement by the regional political authorities and their relations with those who were engaged in production and distribution shaped the distinctive styles of managing resources for porcelain production in each region. Comparative analysis illuminates different ways of governing resources for porcelain production within Japan at the end of the 19th century. The presentation will invite a further discussion of social changes by bringing other experiences in the world.

Healthcare Information-Seeking Behavior of Evacuees after the Great East Japan Earthquake: A Qualitative Interview Study

Background: The Great East Japan Earthquake devastated the northeast Japan on March 11, 2011. This disaster was characterized by the combined effects of the massive earthquake and tsunami, and the nuclear power plant accident caused by the tsunami. Approximately 300,000 people had to remain evacuees still today (May 2013), having fled to other areas throughout Japan. Subsequently, the evacuees have faced various health problems. Building relationships with healthcare resources is an important task. This study ascertains the process of healthcare information-seeking behavior of evacuees to restore the access to these resources.

Methods: Semi-structured interviews were conducted with 11 participants. They had been staying in City A in Kyoto Prefecture since the disaster and were recruited through an organization that assists evacuees. The interviews were conducted between September and November 2012. Data were analyzed using the constant comparative method of qualitative research.

Results: The participants were nine women and two men aged 30–82 years (median = 49 years). Three categories were emerged from the interview data: (a) seeking healthcare information from people around, (b) barriers to connect with others, and (c) community formation. The evacuees had formed relationships with the people from whom they sought healthcare information. In the early stage, community formation was hampered by overreaction to personal information protection by the local government. Women who had left their families and fled with their children out of concern for radiation damage found it particularly difficult to communicate with others. They were finding various opportunities to connect with others and committed to community formation.

Conclusions: The evacuees developed relationships with people in their new neighborhood, and sought healthcare information to restore their access to these resources. Assistance with community formation among evacuees has arisen as a new issue of public health.

Les Protestations Brésiliennes De Juin 2013

Cette exposition a comme objectif présenté une morphologie critique des protestations brésiliennes de juin 2013 pour mettre en cause les sens politiques qui ont été déboulés à partir de la visibilité du pouvoir des formes d’organisation horizontale et de l’action directe. Un des sujets plus significatifs est la question sur la mobilisation tant des militantes que des gens qui, en général, sont allés à la rue sans aucune unité idéologique claire. C’est-à-dire, il s’agit de situer le problème des émotions et des passions impliquées par l’action dans une perspective non seulement focalisée sur les justifications politiques, mais principalement sur la notion pratique du procès qui les a conduits vers une expérience subjective plus concrète et plus intensive. Dans cette direction interprétative, il faut reprendre l’histoire du Brésil contemporain, surtout les trois dernières décennies, qui correspondent au siècle démocratique. L’héritage de la résistance au régime dictatorial a été potentiellement par la constitution et dissémination pour toute la société civile organisée, aussi dans l’État et le monde du travail, des dispositifs de participation sociale, à la « gauche », et de conséquences de responsabilisation individuelle, « à droite ». Les « journées de juin » ont démontré le carrefour et la massive intensification d’un procès de mobilisation de la subjectivité, qui a été accumulée par les savoirs et technologies créées pendant la consolidation de la démocratie. Cependant, ceci a été produit à côté d’un déclin croissant des mouvements sociaux et des organisations de classe ouvrière. Les « journées de juin » présentent une problématique stratégique pour comprendre mieux la centralité de cette invention généralisée à la participation et responsabilisation, de laquelle la mobilisation subjective est son principal effet politique actuel.

Quality of Lawyers in Civil Litigation in the Era of Drastic Changes in Legal Education and Lawyer Population in Japan

My presentation is based upon our empirical study on the quality of lawyers conducted in Yokohama District Court and Tokyo District Court. The number of lawyers in Japan has been rapidly increasing in the 21st century, e.g., 17126 in 2000 to 32088 in 2012. We have introduced the U.S. style graduate law school system on top of the traditional undergraduate law faculty system in 2004. The legal aid system has been drastically expanded with the completely new system called “Non-fee Legal Aid.” These reforms were intended to enhance the provider’s access to justice and improve the quality of legal services, so that the Japanese legal profession is able to satisfy the increasing demands for quality legal services caused by the globalization. But these judicial reforms have been criticized by the bar associations and many lawyers. The rapid increase of lawyers is most severely criticized. One of the main reasons of criticism is that the increase yielded poorer quality of lawyers. We have been doing several empirical researches to test this and other claims. The study I will report at this session is modeled after Prof. Richard Moorhead’s study on the quality of legal aid lawyers in U.K. One of the
striking results of our research is that the quality of legal services in civil litigation by younger lawyers is better than those of older lawyers.

**The Participation of Women in Farm Management in the Development of Sustainable Food Safety: Case Studies in Switzerland and Austria**

Family-managed farms form the heart of Asian and European agriculture and are essential for the stable supply of safe food. In Japan women are deeply connected with food safety and consumption activities (Nakamichi, 2010). In Switzerland and Austria, women's participation in farm management is also related to food safety. This paper examines specialized education for Swiss and Austrian women that encourages participation in farm management, which is in turn related to food safety. In alpine Switzerland and Austria, Direct Payments support helps to maintain small-scale family farm management, and in particular, organic farming receives higher supports.

Austria has the highest percentage of organic farming (16.5%) among EU Member States, and in a semi-mountainous area of small-scale management, it is especially high. Direct Payments support is higher than the EU average, resulting from the Agricultural Policy (ÖPUL). In addition, women comprise 36% (2012) of farm managers, a high percentage within the EU. Organic farming is carried out especially in mountainous regions of Switzerland, and farm incomes receive a high degree of direct support. In a semi-mountainous area of small-scale management, organic farming holds the highest percentage. Over 11% (2011) of farm households in Switzerland are organic, and among women managers, the figure shows higher. Examples from Switzerland and Austria indicate that women play a large role in the stable supply and safety of food, but both countries traditionally favor sons for farm succession. Women are rarely trained as successors and usually enter farming by marrying farm successors, however both countries have well-established systems of vocational training for female successors. Some women trained in home economics have achieved Meister status as farm managers. Reforms in vocational education are encouraging more women farm successors, and the number of young women receiving specialized agricultural qualifications is increasing.

**Struggling Against Water Environmental Inequality through Dialogue and Cooperation: Micropolitics Under Suppressed Public Sphere**

China has enjoyed rapid economic growth for decades, while not controlled environmental pollution effectively, even brought pollution accidents and conflicts frequently. Especially water environmental pollution has brought sever conflicts in rural area to challenge local governance in which government and industries maintain a disputable balance to convert local natural resources into their own wealth on the one hand washing their wastes to downstream farmers on the other hand. Journalists, NGOs and scholars have been aware of this water environmental inequality in rural China as a "structure" to be changed by any institutional reform. However, more endeavor to find a fundamental approach to deepen the reform should be investigated in both theoretical and practical way. Referring to experiences in Japan where severe pollution hazard like Minamata and Itai-Itai disease caused by untreated industrial wastewater under rapid economic growth in 1950's to 70's, it reminds us a series of lawsuits by victims with their supporters were followed by institutional reform for pro-victims. However, such lawsuits succeeded in Japan not only due to growing of social movements but also due to growing of public sphere to allow broader people to join in. Although political reform has been discussed for many years in China, the public sphere is still suppressed by social control of communist party and the government. In this study, promoting "dialogue and cooperation" as an alternative approach to struggle against such a structure in China will be discussed through a field survey on NGO activities in one basin and participant observation on a pilot project of "community roundtable meetings" in another basin where water pollution has been serious. Toward mitigating an inequality under the suppressed public sphere, we could find a possibility of breakthrough by "micropolitics" among local stakeholders, while revaluing socio-ecological relations which residents/NGOs have woven through their own practices.

**Subsidized Housing and the Concentration of Poverty in the U.S**

For several decades, federal housing policy in the U.S. has been used to address issues of segregation in American cities. Since the 1970s, assisted housing policies aimed to integrate low-income renters into lower-poverty neighborhoods. New programs including housing vouchers, the demolition and redevelopment of public housing, and the use of new project-based developments were adopted with the expectation that they might lead to a decline in poverty concentration in U.S. cities. However, little is known about whether assisted housing policy has successfully reduced poverty concentration. Using national data, I test whether the geographic deconcentration of assisted housing units, which occurred as the new policies were implemented, led to a deconcentration of poverty in metropolitan areas from 1980 to 2005-09. Results show no relationship from 1980 to 2000. After 2000, assisted housing deconcentration is positively associated with poverty deconcentration, suggesting that deconcentrating assisted units allowed low-income families to move to lower-poverty neighborhoods, tempering rises in poverty concentration that occurred since 2000. However, the magnitude of the relationship was quite small, suggesting that the broad shift in housing policy over the past several decades has contributed little to the deconcentration of poverty in U.S. cities, despite substantially reducing the geographic concentration of assisted units. Potential explanations for this weak relationship include the small proportion of poor residents living in subsidized housing and impacts of new subsidized housing on the mobility of non-poor residents.

**SARC (Scientists/Artists Research Collaborations**

This is the story of a pilot project that was aimed to enable creative collaboration between five internationally chosen artists and New Mexico scientists from Los Alamos National Laboratories and Sandia National Laboratories. The SARC (Scientists/Artists Research Collaborations) project was part of the well-established, international electronic festival called ISEA, which occurred throughout the state of New Mexico in Fall of 2012. The project was also given major support on the University of New Mexico campus in Albuquerque by SARC (the Center for Advanced Research Collaboration). The SARC Summer 2012 pilot initiative accomplished some intended objective outcomes, garnered partners that could serve as the impetus for the program's next phase development. There is currently no policy aimed to SARC's current programmatic life and works, though. This White Paper, therefore, lays out SARC resources, structural considerations and intentions. At this point, SARC reality and creative potential is being dedicatedly developed, but uncertain. It is from the grounded reality of SARC development that we will form some action points.
What lessons have been learned from this pilot program? Jack Ox will discuss the problems we encountered and what is necessary to move forward. These issues will be discussed in context with the art-science world as it develops at break neck speed. What are the dangers art-science collaborations will be likely to confront in the cycle of art world attention and what that means. What is the best mix of art and science? Should one domain dominate the other? A most important question is how do we judge the collaboration; are some collaborations between an artist and a scientist not art/science?

Accountability To Environmental Policy: Renewable Technologies and Sustainable Housing Development

Complying with policy requires of practitioners that their actions are held to account; we are increasingly aware in the context of sustainable development of the social housing sector and its use of renewable technologies. The building of 'sustainable housing' is integral to UK government initiatives to reduce energy consumption, fuel poverty, and carbon emissions, and to generate renewable energy. In this article, we examine how 'accountability' is promoted by both the UK government's environmental policy and local councils in their planning criteria. We investigate how accountability is enacted in, and generative of, the practices of sustainable housing development by housing professionals. We identify a key process of accountability – a politics of making environmental sustainability visible through demonstrating the utilisation of renewable technologies. For housing developers, the choice to install such visible renewable technologies is part of their practices to strategically and creatively meet the policy criteria and the local council's target for planning permission. These practices reveal much about the competition and politics that underpin how local planning authorities and housing professionals together shape environmental accountability in a bid to comply, win building contracts, and demonstrate their sustainability credentials. We demonstrate how these practices have implications for potential energy provision and consumption.

Transforming Energy Provision and Reducing Carbon Emissions

Our society is increasingly using more electricity. We have recently seen many changes in consumer and domestic electronics: mobile phones, tablets and internet hubs are, for instance, now part of our everyday scenarios. It is also expected that radical changes in heat and transport services, such as domestic electric heat-pumps and vehicles, will happen in a near future. As a result of this change, it is anticipated that domestic and commercial electricity consumption will rise, which then will increase a level of carbon emissions. The problem is how our society tackles such visible renewable technologies is part of their practices to strategically and creatively meet the policy criteria and the local council's target for planning permission. These practices reveal much about the competition and politics that underpin how local planning authorities and housing professionals together shape environmental accountability in a bid to comply, win building contracts, and demonstrate their sustainability credentials. We demonstrate how these practices have implications for potential energy provision and consumption.

Masculinity, Racist Experiences and Repudiation Of Homosexuality: How To Deal With Research Results In A Racist Public Discourse?

The results of our empirical studies about male youth in Germany show that young immigrants are often confronted with institutional and everyday racism, experienced as a form of stereotype threat. At the same time, they are actively stereotyping and discriminating others. As researchers, we are challenged to not only take seriously racist experiences, but also to deal with the young men’s discriminatory practices, in particular the rejection of homosexuality and homosexuals, closely connected with complex images of masculinity and doing masculinity in peer-groups. Additionally, the experience of homosexual immigrants who with discrimination must be taken into account.

However, the publication of such results is problematic: In some European countries a tolerant and open attitude towards homosexuality has become a cornerstone of judging the potential ability of immigrants’ successful integration. In these discourses often two racialised images are constructed: the native ‘own people’ is contrasted by ‘Muslim immigrants’. While the former constitutes the ‘tolerant’ side, void of any negative attitudes towards gay and lesbian people, the latter is constructed as deeply homophobic. These discourses have polarizing effects and facilitate exclusionary attitudes towards immigrants. In this constellation the publication of research results about the intersectionality of masculinity, racist experiences and negative attitudes towards homosexuality becomes a walk on the ridge. We have noticed that the focus of attention is shifted to ‘their’ homophobia which is constructed as an effect of Muslim culture and its primitive and uncivilized patriarchal values, while the racism experiences of the young men are then usually pushed into the backgrounds.

In our paper we will present key findings of our studies and we will share our experiences with the publication of such results. Our aim is a discussion not only about ethical considerations and responsibilities but also about how to actively engage in altering the racist public discourse.

Sociality and Individuality of Language in Durkheim and Bergson

The purpose of this presentation is to discern the role of language which we use to recognize ourselves and others, and the phase of the sociality and individuality which language has. With this intention, I’ll compare the category theory of Durkheim with Bergson’s language criticism.

Human being differs from animal in that he uses language. The man synthesizes the special, the accidental and the individual by the reason, and he thinks by means of universal forms. He can understand the empiric things in the framework of abstract concept and, by exchanging this concepts, he can communicate with others who have their own experiences.

About this language, Durkheim emphasizes that it is given by society. A concept is given by the society. He thinks that the concept is essentially impersonal representation. The sign is a system preceding the individual’s birthand given by the society. Not until he thought abstractly by the sign did a man became a human being.

Bergson, a contemporary of Durkheim thinks that the self is socialized itself, and the soul of the society is immanent in the language supporting our thinking.

But Bergson opposes two plans of the object recognition method, that is, the analysis that comes from the outside and the intuition that come from the inside. He doesn’t consider that the essence of the object can be perceived from the outside, express itself by symbols, being incommensurable with something else. In opposition to it, he considers that what is gotten by the analysis of the outside

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
is only inert, translatable in words, the common elements given by the whole society, therefore impersonal and abstract state.

In order to recognize the aspect of the concrete and lively human life and society as it is, we have to inquire critically again the sociality which language has.

OZEN, SUKRU (Yildirim Beyazit University)

**Environmental Movements Against the Coalition of the State and Capital: Anti-Gold Mining Struggles in Turkey**

This paper focuses upon the question of how interactions between environmental movements and corporations and the state shape environmental conflicts and influence the intensity of conflicts between the environmental protest movements and the pro-mining coalition. It comparatively examines three cases involving different levels of conflicts on the issue of gold-mining in a range of local settings in Turkey, namely, Artvin, Usak, and, Izmir. The data of the study is collected by conducting field research that includes in-depth interviews with the protestors, local people, company managers, and local governmental authorities, and by doing document analysis on the basis of the news in the daily newspapers, company reports, and web sites. Our findings indicate that state authorities and mining multinationals form a ‘pro-mining’ coalition against environmental protesters, developing common strategies and tactics against the protests. The intensity of conflicts between these movements and the pro-mining coalition is highly related with the effectiveness of the strategies and tactics that each party to the struggle followed. In three cases where one party is highly effective while the other is not, particularly Artvin and Efemcukuru cases, the conflict is at the lowest level. While the protest movement was the dominant actor in the Artvin case, the pro-mining coalition has been the dominant actor in the Efemcukuru case. In Esme case, both protest movements and pro-mining coalition are effective to some extent, making the conflict relatively more intense. Accordingly, environmental movement in Artvin is the most successful one in terms of producing intended outcomes, whereas the movement in Efemcukuru is the least successful one. In Esme, both parties to the struggle have some successes and failures.

OZEN, HAYRIYE* (Attilim University, hozen@atilim.edu.tr)

**Radical Left Wing Groups and Environmental Mobilizations in Turkey**

A number of protest movements emerged in Turkey over the last decade against big investment projects such as hydroelectric power plants, goldmines, thermal power stations, nuclear power stations, and dams. Envisaging these struggles as part of the broader anti-capitalist struggles, left wing groups heavily involved in these mobilizations in order to direct their opposition to neoliberal capitalism and corporate globalization. This study focuses on two environmental protest movements that emerged under the leadership of the radical left wing individuals and organizations: the movement against hydroelectric power plants in the eastern Black Sea region, and the movement against goldmines in the Aegean region. Examining the effects of the leadership of the radical left figures on these two movements, it argues that while the involvement of the left wing individuals and organizations proved decisive in the generation of these grass-roots mobilizations, it also simultaneously undermined the same movements in various ways. The leftist figures played critical roles in the emergence of these mobilizations by raising critical awareness in local people concerning investment projects, by providing them discursive frames to view investments and environment, by providing resources in the form of information and materials, and by connecting local protestors to the leftist networks. Yet, they also influenced the movements in negative ways by preventing the involvement of liberal groups to these movements, and by carrying over the cleavages and clashes between the leftist groups. Moreover, the involvement of the radical left groups is used by the state as a pretext to criminalize and stigmatize the protestors as well as to repress the environmental movements.

**What Does Gezi Park Resistance Mean in Turkish Democracy?**

Justice and Development Party, which has been in power for eleven years in Turkey, has its roots in Islamism. From the beginning, it has been a source of suspicion about secularism for most of the modernists in the society. The party managed to increase its votes in three consecutive elections, and it had the support of half of the Turkish voters in the 2011 elections. The rising popular support for the party also triggered the short falls and threats of majoritarian democracy. The belief that democracy was under threat, and the fear of authoritarianism gained preeminence. Consequently, wide-spread popular dissent erupted in the summer of 2013, after protestors in Gezi Park were brutally suppressed by the police force. Gezi Park protests were an expression of the “pluralist” anxieties and democratic hopes of the people.

Gezi Park Resistance revealed at least two important things. First, they showed that the opposition in Turkey is not weak, but fragmented. Second, and more importantly, they showed that the popular opposition cannot adequately express itself through conventional political channels. The disconnectedness between the protests and the institutional/traditional politics makes the democratic role of the opposition more critical. There is need for discussing (new) methods and instruments to make fragmented popular opposition politically more effective on a pluralist democratic basis. The outcomes of these discussions may be helpful in analyzing the social movements of the 21st century.

In this presentation, a qualitative analysis of the texts which appeared during the Gezi Park events on pro-government and non-pro-government press will be used to discuss the structure and the aims of the popular opposition in Turkey, and to investigate the similarities and the differences of Gezi Park protests with other social movements of the 21st century, such as the Arab Spring, and Occupy Wall Street.

**Interlocking Directorates and Capitalist Class Formations in Turkey: A Study on the Listed Firms in Istanbul Stock Exchange and Istanbul Chamber of Industry (ISO 500)**

In recent years, corporate networks and board interlocks have drawn considerable attention in academic works and are the subject to growing research worldwide. This paper aims to contribute the existing literature with a modest exploration into the structure of the corporate governance network and interlocking directorates in Turkey on which systematic research are extremely limited. Unsurprisingly, a few number of existing studies merely focus on technical/practical issues such as problem of coordination and innovation, building the ways to decrease transaction costs, experience sharing and so on, in dealing with the corporate networks of Turkish companies. In this study we will, at first, develop a critique of those mainstream approaches to the corporate networks in Turkey on the basis of their shortcomings in explaining/discussing the political economic consequences of those ties. On the other hand, through an empirical study investigates the interlocking directorship and the capital relations among Turkish companies listed in Istanbul Stock Exchange and ISO 500 (Istanbul Chamber of Industry) respectively, this paper question whether those corporate-corporate connections have played significant roles in the process of capitalist class formation in Turkey.
Transnational Pentecostal Entrepreneurship: From Africa to Europe, the Challenge of a New Competitive Christianity

African Pentecostalism is not confined to Africa. As Africans move into Europe, many bring their new way to interpret Christianity. The empirical research in Nigeria, Ghana and Italy supports the idea that African Pentecostalism produced a socio-religious innovation in the religious world-wide. Two elements in particular emerge: the high mobility in the individual religious choices and the fluidity of the boundaries of religious affiliation. The migration processes have emphasized even more this second aspect. The most important result of this innovation is, on the one hand, the radical change that affects the church model and, on the other, the emergence of a charismatic religious leadership. The paper deals with the idea of the charisma as transnational company or religious enterprise. In this way, the new African churches (although this argument can also apply to those Latin American and South Korean or Chinese) that are transplanted in Europe contribute to weaken the traditional boundaries of Eurocentric Christianity and to loosen the link between national identity and belonging to a Christian denomination.

The new model of interpretation of Latter-days, introduced by the Global Pentecostalism, tends to destabilize the national-bourgeois European Christian- ity and promote exchanges between the new Pentecostalism coming from the former Third World and Charismatic movements present in many Christian de- nominations and churches in Europe, including the Orthodox Church as is well demonstrated by the huge success of the Pentecostal Church of the Nigerian pas- tor Sunday Adelaja in Ukraine.

Regulation: The Third Party in the Transformation of Patient-Professional Relations

Regulatory arrangements have the capacity to codify elements of the relationship between patients and professionals. They can articulate the expectations that patients can reasonably have of their treating health professional, and also provide a mechanism to notify and address instances where defined standards of professional practice are not met.

This paper reports on a project exploring the institutional design of a new national regulatory system. It draws on an analysis of government drivers for re-form, including instances of regulatory failure that led to patient harm. It also incorporates a thematic analysis of key practical texts including the regulatory impact statement and the consequential legislation to explore how the reforms were designed to affect relations between patients and professionals.

The introduction of the National Registration and Accreditation Scheme for Health Professionals in Australia in 2010 consolidated arrangements across fourteen professional groups who were previously registered separately across each of Australia’s eight jurisdictions. Each state and territory also had separate arrangements to assess the qualifications and experience of health professionals who qualified outside Australia. These new arrangements brought into place consistent requirements across continuing professional development, criminal history records, English language, insurance and recency of practice for over half a million practitioners.

The transformative effect of ongoing consumer advocacy efforts is also reflect- ed through the legislative requirement for community members to sit on all dec- ision-making bodies that administer the Scheme. Another significant outcome of the Scheme has been the provision of single register of practitioners that pro- vides improved transparency with patients now able to directly access informa- tion about the registration status and qualifications of their health professionals.

Bitcoin: Network Based Currency and Its Self-Organizing Emergency

Bitcoin is a form of virtual or digital money, a peer-to-peer, electronic cash system. Bitcoins are created and administered decentralized within a computer based network. They can be transferred through a computer or smartphone without an intermediate financial institution. The currency exists since 2009 and is in the meantime accepted as a legal instrument of payment in various countries but first of all for world wide Internet transactions. In June 2011, Wikileaks and other organizations began to accept bitcoins for donations. That became very important after MasterCard, Visa, PayPal and other tried to cease accepting bitcoins. Since 2011, Wikileaks and other organizations began to accept bitcoins for donations. Since 2009 and is in the meantime accepted as a legal instrument of payment in various countries but first of all for world wide Internet transactions. In June 2011, Wikileaks and other organizations began to accept bitcoins for donations. That became very important after MasterCard, Visa, PayPal and other tried to cease accepting bitcoins.
racy will be the object of my contribution. In my paper I want to unfold the thesis, that the present form of giving people more participation within political processes and providing more insights into documents of governance is an intermediate step to change western style of democracy fundamentally. I want to focus the question how new media, especially so-called ‘social media’, may overcome the traditional dichotomy between parliamentary representative democratic tradition and grassroots oriented plebiscitary democratic elements. Since some years this question has been primarily debated under the term of ‘Liquid Democracy’. It stands for the idea to make democracy more liquid, more transparent and more flexible. People should have the opportunity to participate in political affairs complementarily to delegating the powers of the sovereignty to a body of human elected from time to time for four or five years. “Liquid Democracy” will give people the possibility to campaign effectively and collaboratively for the issues they are concerned about. The paper will show which social, political and technological concepts for such a liquid democracy exist. Which discourses in different areas and scientific disciplines occur, and which experiences and evaluations are available.

Literature:

The paper will end with a discussion on the potential of sustainable platforms of dialogue which necessitates a strong presence and proactive reproduction of social capital. What is the long-term potential of social mobilization in a) sustainably and collectively building-up of social memory for future resilience, and b) identifying and addressing possible weaknesses and challenges faced by the different bottom-up agents in their relations of cooperation, including with the state?

Systemic City Interdependencies In Advanced Producer Services: The European Space In Transition

The paper reports on an analysis of systemic city interdependencies generated by key agents in world economic transformations - global advanced producer services (APS) which use world/global cities as nodes for flows in their worldwide operational networks. The analysis draws on and develops work undertaken in a major study funded by the European Spatial Observation Network (ESONP) which set out to examine Europe’s position in the networked global economy and the implications for policy: TIGER - Territorial Impact of Globalization for Europe and its Regions. Europe provides a unique contemporary territorial frame through which to observe the success of policy transfer and upscaling relevant to sustainable cities in globalization. EU urban and regional cooperation programmes and funding has been a major strand of cohesion strategy for over a decade, moreover European geo-political rescaling in successive waves of enlargement has extended policy collaboration to an ambitious supra-state/regional level. The authors identify two intersecting spatial processes in European APS-generated city interdependencies: A process of intensifying city-network links and functional specialization at a macro-region scale; and a process of extending city links and scale specialization connecting urban Europe to distant economic macro-regions. The interaction between these two processes points to the complex nature of city interdependencies in economic globalization and a need to de-territorialize urban sustainability prescriptions.

Positive Aeging and Leisure: Role of Leisure in Healthy Ageing of the Elderly in India

The ageing of the population is a world wide trend; anticipated to have wide spread and significant social, economic and infrastructural impact. WHO defines health as “a state of complete physical, mental and social well being; and not merely the absence of disease and infirmity’. Healthy ageing depends upon genetic, environmental and behavioral factors, as well as broader environmental and socio economic determinants. It is particularly important for the elderly to remain physcially active as this can decrease the risk of many age related conditions. The study aims to find out the role of Leisure in promoting healthy ageing among the elderly in India urban society. Hypothesis constructed to direct the study are:
1. Involvement in Leisure activity results in healthy ageing.
2. Type of Leisure activities play a role in healthy ageing person.
3. Every Leisure activity does not have a positive role in healthy ageing.

206 respondents aged 60 and above from urban settings of a fast developing town of India were selected through a stratified disproportionate random sampling. Semi structured interview schedule was used to collect the data; there after statistical method was used for the data analyses. Findings reveal that:
- Health has two broad parameters, mental health and the physical health.
- Type of the leisure activity affects the mental and physical health differently.
- Passive leisure activities may have a positive role in the mental health but can negatively affect the physical health.

La Transferencia Tecnológica Como Problema Político En América Latina

La transferencia tecnológica como problema político en América Latina

Una de las cuestiones que viene causando importantes polémicas en la región latinoamericana, es el establecimiento de alianzas estratégicas internaciona-
les, con el objetivo de generar nuevo conocimiento y fortalecer las capacidades científicas y tecnológicas existentes.

La naturaleza de esta cooperación se basa en los principios de las relaciones internacionales y también en el desarrollo de particulares alianzas estratégicas, como es el caso de China.

No obstante, para el caso de los países de la región, la cooperación científica y tecnológica continúa ocurriendo de forma semejante a la década de los ochenta y noventa, una relación entre países dominada por la oferta-demanda de tecnología, que si bien tuvo en su momento un importante apoyo al desarrollo económico de estos países, hoy amenaza con acelerar el deterioro de las capacidades para la producción científica y tecnológica y en consecuencia el desarrollo social y productivo, pero también altera el escenario político.

Al mismo tiempo, el poder gubernamental posee una cultura caracterizada por el analfabetismo tecnológico que impide reconocer los efectos negativos de este tipo de cooperación en consecuencia limita la actividad de formulación e implementación de políticas en ciencia y tecnología que conciban la transferencia tecnológica de un nuevo modo.

El siguiente trabajo, no sólo caracteriza la situación arriba planteada utilizando como referencia la experiencia actual de algunos países de la región, también permite evaluar la pertinencia o no del modelo de transferencia tecnológica hasta ahora desarrollado, lo somete a discusión y proporciona elementos de análisis para describir los aspectos negativos del mismo. Finalmente hace una propuesta hacia dónde debería apuntar la transferencia tecnológica en estos países.

Technological and Political Illiteracy: Its Effect on Social Change in Latin America

Technological and political illiteracy: Its effect on social change in Latin America

The political dilemma between capitalism-socialism or the political power struggle between the right and the left wing, in Latin America, has been accompanied by an anachronism related to problems of social inequality. The increase in these problems has had an effect of generating more conflict between rich and poor, and therefore has become a catalyst in the process of decision-making by the political power.

In some Latin American countries, where trying to experiment with political processes that resemble with the left thinking, social inequality has generated within the political power the need to counteract all areas in which acts the capitalist model, with regarding to the value and the role of science and technology in the transformations and social welfare.

As a result, it has been created a social symbolism within society, which influences negatively and pushes away the true role of science in social and economic transformations of these countries. At the same time, this symbolism influences and suffers an arrangement within the political power.

What happens is a combination of political and technological illiteracy. This combination is also a clash of ideas and political decision (political inequality) for those who in society own and generate scientific knowledge in reference to those who do not. Thus, it has distorted the development of coherent public policies.

This work attempts to make some comparisons of these practices in Latin America, analyzing more deeply the case of Venezuela.

From Self-Management to Representative Democracy – the Case of Two Kibbutz Industrial Plants

Theories of new organizational forms usually assume that in the 21st century the official trend in the majority of small industrial organizations in Western Society is more worker oriented, more democratic, with flatter hierarchical structures and more worker oriented.

In this paper we would like to show when and why an organization abandons its self-management praxis and changes from a neo-organizational structure into a traditional structure by looking at the community and the plant. The main findings show that both kibbutz communities underwent far reaching changes and at the same time so did their industrial plants. But, while the kibbutz communities limited their steps towards privatization the plants went all the way – the one plant has diminished in size as it sold out most of its manufacturing activities and now it concentrates mainly on selling and servicing products it used to manufacture. The other plant has grown and thrived but abandoned most of its democratic characteristics in favor of bureaucratic ones.

What Are the Opportunities for Social Investment in the Continental European Welfare States?

With their passive, employment-based, status-preserving, social insurance and male-breadwinner oriented welfare states, continental European countries are the least likely cases for social investment policy innovation. Nevertheless, some continental welfare states have introduced social investment reforms. While both the Netherlands and France have a similar legacy of a typical continental European passive social insurance-based welfare state, they have changed in various ways and in particular in the early 1990s. The Netherlands has made a strong social activation turn in social security, coupled to a more “flexicure” service-based labour market. In France, there has always been a strong policy legacy of pro-natalist child-care support. Recently, an important policy focus has been paced on the Youth in France. In both these countries, social investment policies have come under pressure after the 2008 financial crisis. Some policy areas (like work-life reconciliation policies) seem to have been hit harder than other areas (active labour market policies).

Moreover, there is also substantial variation across countries. How to account for this? By analyzing the reform trajectories with respect to social investment both before and after the 2008 financial crisis, the paper assesses the (variable) opportunities and related feedback effects for social investment in continental Europe.

Feelings of Ambivalence: Ageing Labour Migrants in Vienna

Feelings of Ambivalence: Ageing Labour Migrants in Vienna

This paper analyzes feelings of ambivalence first generation migrants in Vienna are confronted with, particularly in relation to their sense of belonging and place in society. It focuses on the two biggest migrant groups in Vienna, who came as labour migrants from Turkey and former Yugoslavia. Of those who arrived in Austria as young adults and – despite of the original plan to remain only for a short period of time – they stayed and grew old there. These labour migrants have now reached retirement, a phase of life that is characterized by reflecting on the personal migration history as well as by thinking about plans for late life.

Vienna’s labour migrants have long held the dream of returning to their country of origin, at the latest when they would retire. By the time of retirement, however, feelings of estrangement from the home country prevail and many labour migrants realize that the old home is only preserved in their memories. On the other hand, they do not fully feel at home in Vienna either, even when their children and grandchildren live there. This is complicated by the status loss many experience with retirement. Once welcome as important work force, in the post-retirement phase labour migrants face marginalisation and a lack of state responsibility for ensuring their well-being in old age (e.g. inadequate state pensions and lack of culturally sensitive care). The paper analyzes these feelings of ambivalence among ageing migrants in Vienna and the strategies they assume in dealing with them. Finally, the potential of the notion of ambivalence for the experiences of migrants beyond the particular case study is discussed.

Informalization of Labour: Recent Trends in India’s Urban Economy

Informalization of Labour: Recent trends in India’s Urban Economy

Urban way of life is generally considered to be associated with industrial production. Reality in most third world cities, however, indicates otherwise. Only half and sometimes less of urban population finds employment in factories or similar organizations. Rest all are engaged in ‘informal’ economic activities which are casual, unskilled, with no fixed working hours, low income, with nature of work largely fluctuating and seasonal. Several studies and reports have come...
out in last twenty years, which depict the miserable working conditions of India’s informal sector workers. While workers in the informal sector contribute a considerable amount of output to the country’s GDP, the conditions under which they labour are usually deplorable. Although precise data is not available, we can safely say that nearly all workers in the informal sector lack any form of social security. India has a labour force of nearly 400 million persons, about 13 percent of the entire world’s labour force. More than 70 percent of the nonagricultural labour force is in informal employment. If we include agriculture into this, it will be over 90 percent. Work in the informal sector is so common today that it is almost a norm.

Today, due to policies of globalization, facilitated by advances in technology, labour is losing its formal and organized character. Workers are divided into two groups, who are employed and who are in the reserve army of labour, willing to do anything to obtain employment. Large number of workers in India, who form this reserve army, miserably wander to and fro between cities, town and villages, living in different phases of employability in seasonal cycles. This paper attempts to understand, based on available literature, trends of informalization in the fast changing employment scenario in Indian urban economy.

Examining the Manifest Function and the Latent Function of Japanese Class: Focused on a Example of Public Middle Schools in Osaka

This presentation examines, from the viewpoint of the manifest function and the latent function, extensive adaptive function that Japanese classes could potentially play and understand this issue, the author conducted an investigation at public middle schools in the Kansai area in Japan from 2009 to 2012. The investigation combined participant observation, semi-structured interviewing, and description-type questionnaires. M-GTA technique was used to analyze the field research data.

Results obtained from data collected via participant observation and interviews suggest the follows. Besides functioning as a supplementary lesson for Japanese language and other subjects, the Japanese class also provides a place for “feeling of security” as well as “maintenance of mother tongue and native culture”. We can say this is the manifest function of Japanese class. Apart from such conventional role, Japanese class has demonstrated a crucial role in facilitating intercultural understanding and cultural exchange. Newcomer students, sharing the mutual identity of a minority in class, were observed helping one another to cope with problems and thus create a more comfortable learning environment in school. Then, Japanese class also offers a career role model which could potentially affect newcomers’ career choice in the future. And this is the latent function of Japanese Class that we cleared.

In summary, the Japanese class offers a place for interaction with Japanese students as well as opportunities to re-identify one’s own root; a place to obtain sense of self-realization and recognition; as well as a channel for resource procurement. Hence, it is not only the manifest function but also the latent function of the Japanese class has been observed in this study.

Cyberspace and Cross-Cultural Relationships Online

Previous studies claim that intermarriage dating sites are new digital technologies that have transformed the mail-order bride business. It is generally assumed that, to better understand this issue, the author conducted an investigation at public middle schools in the Kansai area in Japan from 2009 to 2012. The investigation combined participant observation, semi-structured interviewing, and description-type questionnaires. M-GTA technique was used to analyze the field research data.

Results obtained from data collected via participant observation and interviews suggest the follows. Besides functioning as a supplementary lesson for Japanese language and other subjects, the Japanese class also provides a place for “feeling of security” as well as “maintenance of mother tongue and native culture”. We can say this is the manifest function of Japanese class. Apart from such conventional role, Japanese class has demonstrated a crucial role in facilitating intercultural understanding and cultural exchange. Newcomer students, sharing the mutual identity of a minority in class, were observed helping one another to cope with problems and thus create a more comfortable learning environment in school. Then, Japanese class also offers a career role model which could potentially affect newcomers’ career choice in the future. And this is the latent function of Japanese Class that we cleared.

In summary, the Japanese class offers a place for interaction with Japanese students as well as opportunities to re-identify one’s own root; a place to obtain sense of self-realization and recognition; as well as a channel for resource procurement. Hence, it is not only the manifest function but also the latent function of the Japanese class has been observed in this study.

Delivery Of Quality Education In Global Era

However, education and skills have also played key roles. Education has generally supported rapid economic growth through encouraging foreign investment, enabling technology transfer, promoting productivity and progressively upgrading the skills base as required for each successive economic shift to highervalue-added manufacturing and service industry. Education has also played generally positive role in promoting relatively cohesive national identities. Our key tasks in relation to each of our target countries were four-fold. The first was to identify the points in recent world history at which each country made a deliberate choice to forge a stronger integration between respective domestic systems and the global one. The second was to provide an assessment of each country’s progress towards the three goals of ‘successful’ engagement; i.e. export-led economic growth, income equality and peace. The third was to provide an assessment of the contributions made by education and education policies to each of these goals. The fourth was to analyse past policies for their impact on these goals and current and proposed policies for their likely impact in the future. While many of our most important challenges have their roots in our history, there are important new opportunities and challenges emerging in the new century. However, to underestimate the new opportunities and challenges, or to locate ourselves as ‘victims’, would be an historic mistake. While some commentators despair at the complexity of the current global environment, particularly with reference to the welfare of developing nations, we take a slightly different view. While cognizant of supra-national developments, we cannot stand by and watch the erosion of our efforts to build a democratic society.
forms are leading China from one unequal citizenship regime to another unequal citizenship regime.

'Supply Chain Solutions' at All Costs: The Case of Linfox and the Transport Workers Union in Thailand

Linfox is Australia’s largest privately-owned logistics and supply chain company which provides transport and delivery services across the Asia Pacific region for the world’s biggest consumer goods companies and retailers. In Thailand, Linfox provides services for four distribution centers of Tesco Lotus (a joint venture between a Thai conglomerate and Tesco PLC, the world’s second-largest retailer after Wal-Mart). Work conditions have steadily deteriorated over the past ten years (serious injuries including deaths caused by stress, exhaustion and falling asleep at the wheel) and reached a breaking point in January 2013 – the same time as a nationwide minimum wage policy was put into effect on January 1st 2013 – a controversial policy that prompted many companies to increase working hours, re-duce benefits, lay off workers and/or close down their factories. The Linfox truck drivers had no choice but to go on strike but their action only resulted in the dismissal of fifty-six union members and refusal from management to further negotiate with the workers. This paper examines the 2013 dispute between management and 430 members of the Transport Workers Union who work as truck drivers for Linfox – a multinational transport company which first started its operations in Thailand in 1992. Based on interviews conducted in the field, this paper will provide an analysis of the conflicts confronted by workers (whose several attempts at forming a labor union were shut down by management) with the aim of better understanding global corporate strategies and the challenges posed to worker solidarity. Since these are not new challenges, are there really opportunities then for new forms of resistance?

The Future with Powerful Consumers: A Case Study of Kickstarter

In our technologically advanced modern age, the power of production has shifted from the producers to the people. Everyday consumers are taking a more proactive role in the way they buy, use, and mold products to their needs and purposes. New-age consumers are changing the way corporations produce products and are forcing corporations to acknowledge the wisdom, knowledge, and creativity that consumers have to offer. As part of this developing phenomenon, crowdsourcing has become a new practice of corporations and small-time producers. Crowdsourcing is the idea of soliciting contributions (be it money, ideas, or labor) from a large group of people (such as a virtual community). Kickstarter is an American-based, private-for-profit company founded in 2009 dubbed “the world’s largest funding platform for creative projects” (http://www.kickstarter.com). A platform in which producers of any kind (films, games, music, art, technology) can ask for donations for creative projects, Kickstarter puts the power in the consumers’ hands. People have the option to donate as much money as they want to the over 100,000 projects open for funding. The design seems to be winning yet, not without controversy. Kickstarter does not provide any regulation in terms of completing the projects and delivering to the consumers. Unsurprisingly, there have been numerous projects that have been funded but not finished and delivered to the ‘backers’ (i.e. funders). By analyzing the Kickstarter community through Consumer Culture Theory, particularly focusing on the ‘typical activities’ at the expense of the less important – such as daily chores or random housework-related tasks. However, these minor episodes are important in time data analysis, as they can tell much about the differences in time-use patterns or time allocation across the society. This fact has important implications for the time-data validity. If filling in of the time-use diary is postponed by the respondent until, for instance, the day after the activities took place, the record is already subject to substantial distortions. Some episodes are simply being forgotten. It results in diminished sequence variability, and extended episodes of the typical activities - at the expense of the less usual ones. What is more, it has an effect on the differences in time allocation as shown in cross-sectional analysis. The day when the diary was filled in can thus have a significant impact on the results as well as conclusions drawn from time-use research. Using the German Time Use Data 2001/2002 and Polish Time Use Data 2003/2004 (both surveys conducted within the Harmonized European Time Use Survey framework) we show how gender differences in time allocation differ depending on when the diary was filled in by the respondent. By the means of multivariate analysis we also show how sequence specificity (such as number of episodes and their duration) differs depending on whether the diary was filled in on the same day as the recorded one – or the day after.

The Creation of Peaceful Neighbors and Calm Swedes

A discreet aspect of everyday life in Scandinavia is the relative absence of feuds between neighbors and the peaceful atmosphere that prevails in neighborhoods. It is rather difficult to find shouting Swedes and in criminal statistics there are rather few incidents of killings between neighbors. Another aspect of Swedish everyday life is that, when asked, two of three Swedes state that they trust other people.

In this short historical expose the author connects the absence of feuds between neighbors in everyday life and the high degree of trust prevailing in every-day life in Swedish society. It is argued that the regulation of “neighbors war against neighbors”, in essence the regulation of the inter-human space between neighbors, early in Swedish history pacified the relations between neighbors and created a fertile ground for the generalization of trust from few to many people and for the creation of a sense of solidarity. The author argues that it was the spread of topography and cartography through agricultural reforms before industrialization that created objective representations of property and thus eliminated boundary feuds between neighbors. By examining topographic maps before and after the reforms the author discusses how the regulations and objective representations of the physical space regulated the inter-human space.
In 1989, the city of Porto Alegre in southern Brazil implemented the world’s first experiment in participatory budgeting (PB). Twenty years later, an Alderman in Chicago established the United States’ (US) first experiment in PB in the city’s 49th ward in 2009. Over that time, PB has spread to over 1500 municipalities in countries across Latin America, Asia, Europe and North America (Baiocchi and Ganuza, forthcoming). To better understand the driving forces behind the diffusion of PB, it is crucial to consider the contexts within which PB has taken place. For example, events such as the World Social Forum, where Chicago Alderman Joe Moore first learned of PB, may have played a considerable role in spreading PB beyond Latin America. But once PB lands on American shores, what kind of support is needed, who are the organisations that provide such support, and which actors from civil society and the state commit to building its success?

In this paper I consider the diffusion pathways for PB, in terms of both the information networks that spread the idea, and the support environment that makes its implementation possible in a given location. Drawing on social movement diffusion literature, I conceptualise the factors that influence the differential spread and success of PB, particularly in relation to current experiments in the US. I argue that the study of the diffusion mechanisms for PB provide important insights for activists and civil society actors seeking to promote transformative change.

Narratives Of Exclusion In The Discourse Of The Great Terror In The USSR

The Great Terror in the USSR of the mid-1930s was actually an implementation of a social engineering strategy aiming at exclusion of certain social, political, and ethnic groups by means of their extermination or isolation. This strategy was based on and partially produced by a very specific ideological discourse. Its key elements included ideas of a pure social fabric and the necessity of defending it from threats coming from outside. These elements were expressed in various forms, such as the use of the term “kulak”, a pejorative label for rural peasant farmers, and the concept of “enemies of the people”, who were seen as posing a threat to the very existence of the Soviet state.

The implementation of this strategy involved the use of various tools, such as forced labor camps, political repressions, and mass deportations. These tactics were aimed at undermining the power and influence of the groups targeted by the regime. For example, the regime used the term “kulak” to stigmatize and isolate groups of people it deemed to be a threat to the stability of the state. Similarly, the regime used the concept of “enemies of the people” to justify the persecution of individuals and groups it saw as a threat to its power.

In conclusion, the Great Terror in the USSR was a violent and brutal campaign of social engineering aimed at the elimination of certain groups deemed to be a threat to the stability and power of the state. This campaign was based on a specific ideological discourse and involved the use of various tools, such as forced labor camps, political repressions, and mass deportations. The use of these tools was justified through the use of specific labels and concepts, such as “kulak” and “enemies of the people”. These strategies had a profound impact on the lives of millions of people, and their legacy continues to be felt in contemporary Russian society.
The Managerialization of International Collaboration: The Silencing of Social Justice Solidarity

There is an extensive literature on the process of "overmanagerialization of academic work" (Todd, et al 2013). Academics' programs that continue to engage on global issues such as social justice or global solidarity face difficulties in negotiating the disjunction of the entrepreneurial university and solidarity of international collaboration. "Internationalization" of programs has become a buzz idea that most universities in North America are pursuing, but the question remains "What kind of internationalization? And who is benefiting from this process?"

Using Institutional Ethnography, this presentation discusses the negotiation process with which the author has become involved with in the development and implementation of an "international Youth Right project" during the past two years. "The author discusses the steps taken to textually transform the global realities of the everyday experience of youth advocating for the protection of their rights into textual instruments of control -financial, managerial as relations of rulings that reflect the managerial realities of the Northern institutions (the entrepreneurial university and its funders). Through mapping out the different "project managements processes" required to develop and implement international projects within the entrepreneurial university context, this presentation will discuss the disjunction of local realities of those who are supposed to benefit from this kind of project -children and youth and the institutions that are supposed to manage them .

The following questions are discussed: What challenges children and Youth face in achieving their rights? What are the consequences of extremely legalistic discourses of rights on the everyday lives of young people in the Global South? How is the managerialization of international collaboration within university context affecting the everyday practices of solidarity?

SEMSIS Y Procesos De ConstructiiN DE Significado EN La Prensa Digital Colombiana

La adaptación de los medios de comunicación a las dinámicas de la globalización tienen repercusiones sobre los procesos de producción de significado. Las transformaciones han propiciado formas de interacción comunicativa, sustentadas en los valores de la globalización. Esta manera de construir el significado tiene distintos de efectos sociales que repercuten, en la interlocución y las formas como la ciudadanía construye criterios para participar de la vida colectiva democrática. Esto es relevante en países con industrias culturales monopólicas y oligopólicas que centralizan el proceso de producción y difusión de la información, y que fomentan lógicas de consumo en lugar de formas de participación directa en los asuntos públicos.

Se propone explorar las formas como la prensa digital construye interacción a través de la organización de las páginas web. Se reflexiona sobre el formato, el componente multimedia y la multimodalidad en los procesos de producción de significado. Se identifican las formas como gráficamente se construyen marcas de deíxis, orientadoras del proceso cognitivo y mecanismos de construcción y reproducción ideológica.

El corpus de esta investigación son los print de las páginas web de inicio del periódico ELEspectador.com y la revista Semana.com. El corpus se toma el 1-08-2013, tomando como punto de referencia el conjunto de recursos de interactividad que se alojan en estos medios digitales. Se analizarán los patrones identificados con el fin de identificar cómo se propone la interacción comunicativa entre productores y usuarios -lectores.

Palabras clave: medios de comunicación, formas de interacción, multimodalidad, interactividad.

Precarious Politics: Struggles Against Insecurity in the Global North and Global South

My discussion will complement Standings' general analysis by focusing on the collective struggles of two insecurely employed, low-income groups at opposite ends of the globe: low-wage immigrant workers in California, United States, and citizens living in poor communities in Gauteng, South Africa. Both groups compensate for their lack of economic leverage by organizing around demands for recognition, dignity and inclusion. Because these demands are largely directed towards the state, their struggles for economic survival become entangled with struggles around citizenship status. These cases affirm Standing’s emphasis on the importance of citizenship and recognition, but paint a more optimistic vision of the precarious capacity for struggle, and underscore the need for greater attention to differences between the Global North and Global South.

The 1988 Seoul Olympic Games and Habituating Developmentalism in Korean Society

This paper examines social impact of the 1988 Seoul Olympic Games on South Korean society. It attempts to explain the event not as a facilitator to the democratization, but as a means of justifying developmentalism derived from dictatorship government in Korea. The 1988 Seoul Olympics have been regarded as an event that not only displayed the state of the rapid economic growth, but also carried out a positive role in the peaceful process of democratization.

However, the current political situation in Korea raises a question whether the democratization is really successful or not because authoritarian style developmentalism is continuously supported by Koreans, even after the transformation into democracy. Some people claim that a certain level of the authoritarian rule are restored and legitimized. This study argues that the hosting gave the former dictators hegemony, a persuasive power which works in peoples’ everyday life.

First, huge amount of urban regeneration promoted Korean Chaebol(conglomerates) to build skyscrapers in the center of Seoul. Some of the buildings functioned as popular attractions and showed the most citizens the fruits of the economic development by the Chaebol and the dictatorship government.

Second, a huge number of apartment buildings were constructed by Chaebol's construction companies and 'Apari' became a typical dwelling form of middle class in Korea. The middle class people dwelling in the 'Olympic village' invented their own consumer culture and lifestyle. That is, ‘distinction’ in Bourdieu's term began among the citizens.

The middle class's everyday life depends on the products by the Chaebol and the narratives on the growth of their households identify with the narrative of economic growth of Korea. This serves as a principal of supporting successor of the dictatorship in Korea, even beyond the democratization.

A Sequence Analysis of Career Pathway of College(University) Graduates Youth in South Korea - Focus on Variation Across School Locations -

This study intends to analyze career pathway of youth who graduated college(University) in South Korea. The aim of this paper is to show dissimilarity in transition pattern in labour market within youth by the variation across school locations. In order to analyze it, Korean Labor and Income Panel Study data collect in 1998-2009 is used. The dataset is divided by school location (Seoul & Gyenggi, Incheon & Non-Metropolitan areas). I examine sequences of labour market statuses using explorative methods of sequence analysis and optimal matching algorithm. The main results of this study are as follows. Pattern of youth's work careers is different by firm-size and occupation. For example, youth who graduated from provincial college(University) get job in smaller firm than any other groups. And, labour market entry time is also different. For instance, youth who graduated from Gyenggi, Incheon college(university) prefer entering the labour market to applying for a job although it is unstable job. In contrast, youth who graduated from Seoul college(university) prefer applying for a job to entering second labour market. In addition, level of exposure of unemployment instability is different. Youth who graduated from Provincial college(university) have difficulties finding stable job. They face high risks of job termination. Also they expose to repeat of (re-)entry and exit labour market. Especially, it is distinct between Seoul male group and Non-Metropolitan areas'female group. As results of this study show, we need to consider gap of career pathways within youth. And institutional support should be provided by group characteristic.

PARK, JINYOUNG* (Cornell University, jpk989@cornell.edu)

Solidarity and Empowerment of Women Workers in Asia

Solidarity has been stressed as one of the most important tools for powerless and marginalized groups of people let alone labor movements. Pressures from globalization create additional demands for workers and activists to extend their solidarity cross the borders. This is not only because globalization has created problems that connect people’s lives across national boundaries, but also because it has produced many situations and cases in which workers, and activists face similar problems and circumstances, making sharing and learning from each other useful. Based on my experience working at the Working Women Academy
Pokory, present for the first time in the yearbook of 2001 and 2002...
social patterns of low-carbon energy consumption would not be found in developing countries, or be found only in its upper-middle and upper classes. The few sociological studies do not allow to a conclusively answer.

Sustainable development in Latin America is being challenged. Population growth is not driving the increase in GHG emissions, but rather growth in consumption (Satterthwaite, 2009). In this global context, Chile is an example of an emerging economy whose growth affects the environment.

It is possible to hypothesize that the energy consumption in emerging countries (in AL) is associated with the family socioeconimic unequal position. But what happens when we study social patterns of energy consumption of families of similar social positions?

Research on households energy consumption, their views and behavior is complex (Lutzenhiser, 1993). No sociological studies seem to be available for answering this question in AL. This paper aims to shed light on this issue based on qualitative and quantitative empirical sociological research recently conducted in Chile.

‘Must the Subaltern Fight?: Resistance and the Art of Forming Your Masters’

There are many instances from the history of colonialism – not confined to the experience of successful anti-colonial conflict – of the impact of the subject’s on those who purport to be their masters. With this reformulation of Spivak’s classic question (from 1988 set alongside the anthropology alluded to by a version of Scott’s book title from 2008, the paper focuses on the subaltern’s alternatives to open, violent resistance. Thus the paper attempts to map the interplay between top-down power (the paradigm of ‘power over...’) and the bottom-up capacity of the subjects to maintain a degree of autonomy, or even effectively shape the power which is ostensibly exercised ‘over’ them.

How can a ‘power to...’ be shaped into an enabling power which facilitates human activities from the subaltern side? The answer is to be found in the combination of three further dimensions in power relations over and above the top-down will: the resistance of the subject; the practices which actualize activity in a society; and the structuring of conceptions which is traded in discursive exchanges.

Scott (plus Hirst 2005) and the historical sociology of resistance provide an access point for the first of these; Foucault for the second; and Bourdieu an account of ideology that illuminates the third. The paper will draw empirically not only on the history of colonialism and its end, but also on the many histories of popular resistance. The purpose is to read the historical sources with this particular blend of theory, showing the contradictory impulses within which actual power develops.

Predictive Policing: The Case of Burglary

This study is designed to utilize large amounts of data from previous time points in the City of Indio, Ca., to analyze the predictors of burglary rates, commercial and noncommercial, to test the idea that a predictive model of burglary could be developed. Using predictions as to sub areas in the community that are expected to have the highest burglary rates, based in part on an observed relationship, lagged across time, between truancy and burglary, we develop an intervention model and apply it most heavily on the predicted high burglary areas. Evaluation is designed to see if we can reduce these predicted high burglary areas to areas with below city wide means for burglary in the previous year.

Future Energy Landscapes in Canada: Discursive Renderings of Renewable Energy Alternatives through Q Methodology

The transformation of energy landscapes toward more sustainable energy futures is often fraught with challenges, not the least of which is public opposition to the altering of treasured spaces and places. Drawing on Charles Taylor’s social imaginaries, Zebravale’s sociological theory and Nassauer’s notions of culture and landscape, this paper identifies the discursive and visual structures that anchor the socio-ecological world to existing modes of energy production and limit the potential for energy landscape transformation. Within this analysis, culture is understood to be inextricably linked to landscapes and energy development – from wind mills and solar arrays to oil sands and hydroelectric facilities – having a profound effect upon landscape preferences. The landscapes humans create as they meet their needs and desires are not always beautiful or healthy, but they comprise heritage that contributes significantly to an individual’s sense of place or identity. Therefore any meaningful transformation of these landscapes towards sustainable futures will require careful and incisive analysis of these social and cultural anchoring points. These points are examined in this study through Q method analysis of 48 statements on energy production in Canada. Research involves three diverse case study areas (Alberta, Ontario and New Brunswick) aimed at gaining insights into the discursive underpinnings of energy production. Results offer nuanced and regionally specific understanding of citizens’ deeply rooted and often conflicting values surrounding landscape change, aesthetics, governance, ownership, renewable energy alternatives, and identity with the energy sector.

The Link Between Disaster and Violence Against Women

There is compelling evidence that violence against women increases following large-scale disasters. Yet there is a research gap on why this happens, and how increased violence may relate to disaster experiences.

This presentation reports on the first Australian research into this – a phenomenon previously overlooked in emergency planning and reconstruction after disaster. In the absence of reliable quantitative data, interviews with 30 women in Victoria during and after the 2009 Black Saturday bushfires provided evidence of increased domestic violence, even in a context that silenced women. Community members, police, case managers, trauma psychologists and family violence workers empathised with traumatised and suffering men – men who may have been heroes in the fires – and encouraged women to wait it out. These responses compromised the principle that women and children always have the right to live free from violence.

Disaster provides an opportunity to reinforce traditional gender roles, and this presentation considers the concept that social cohesion relies on women’s sacrifice. Further, it identifies that male privilege plays an important role in ensuring men’s interests are prioritised.

The launch of the research findings in 2012 brought this highly sensitive issue to the attention of disaster managers and inspired changes within key emergency organisations to improve the safety of women and children in the aftermath of disaster, beginning with improved data collection and training for disaster personnel. A partnership project was then funded to explore men’s experiences after Black Saturday, with a focus on men’s harmful behaviours to themselves and to those around them. The role of gender and the cost of patriarchy to both women and men are examined through interviews with 32 men.

The Cost of Living Longer: Projections of the Effects of Prospective Mortality Improvement on Economic Support Ratios for Eighteen More Advanced Economies

The aims of this paper are twofold; (1) to forecast mortality for a wide range of more developed countries from 2010-2050 and (2) to simulate the effects of the forecast mortality patterns on economic support ratios under the continuation of current fertility, migration and labour force participation. The mortality forecasts are prepared for eighteen countries using the Poisson Common Factor Model proposed by Li (2013). The effects of mortality on economic support ratios are estimated by comparing the results of projections under the best estimates of the forecast mortality change to the results of projections which assume that mortality remains constant over time. The results of the mortality forecasts show that the projected gains in life expectancy for both sexes are greatest in Japan, Israel, Argentina and in East-Central Europe, and are least in the Ukraine, Netherlands, North America and Sweden. Preliminary results show that the ratios of total hours worked to age-weighted populations are projected to fall most in Japan, East-Central and Southern Europe, and least in Sweden and Australia. In all countries the forecast improvement in mortality accounts for less than half the projected decline in the dependency of the estimated effects of mortality improvement on support ratios is examined levels of fertility, migration and age-specific labour force participation and the age structure of the initial population.

Nature Grabbing or Successful Practices for Nature Conservation? Blurred Boundaries in Chilean Protected Areas

Literature on protected areas (PAs) constantly reanimates an ancient debate that opposes conservationist scholars, considering the world history of PAs, as a testimony of human progress, to critical voices counting this history as a record of failure (Brockington et al. 2008; Stolton, Dudley 2010). For, as several social scientists have emphasized, conservation regulation has in many cases been part of coercive colonial strategies and disempowerment of indigenous groups. More recently, contributions on “nature grabbing” have joined the debate, revealing class processes through which property rights and control over natural resources are transferred from ‘poor’ to powerful hands (Fairhead et al. 2012).

Based on case-study research in two Chilean regions, the Atacama Desert and Green Patagonia, this paper examines the shades of grey between what may be acknowledged either as a success or a failure in the contemporary governance of PAs. This paper argues that there is a need for examining PAs and their governance by using more sophisticated analytical frameworks that help to capture the social complexities in which these areas for nature conservation are embedded and reproduced.

This paper is structured in five parts. Part one combines literature on socio-ecological systems, environmental sociology and political ecology to discuss critical social sustainability issues in the contemporary governance of PAs. Elaborating on these theories, part two offers an analytical framework drawing attention to the social embeddedness of PAs, including politics and power dynamics, economic forces, institutional transformations, as well as culture, discourses, values and justice in local histories. Section three discusses conservation policies and land uses in a neoliberal country that has allowed a wide proliferation of private PAs. Section four zooms into two Chilean regions and the remaking of their PAs histories. The paper concludes with reflections on the blurred boundaries between successful conservation and nature grabbing leading to injustice.

Riots and their supporters: Exploring the roots of collective violence in Italy

This paper focuses on the conceptualization of collective violence in Italy, and on its social and cultural roots. The paper discusses the idea of the "rioters" as a social category, analyzing the relationship between the social and cultural context in which collective violence can occur and the identity and representation of the rioters. The research is based on a qualitative study in three Italian cities, adopting a participatory approach to understand the experiences and perspectives of rioters. The findings show that the concept of collective violence is deeply rooted in Italian society and culture, with a historical and economic background that has shaped the social identity of the rioters. The paper also highlights the role of media and social media in shaping the identity and representation of the rioters, and the impact of political and economic factors on the occurrence of collective violence. The research contributes to a better understanding of the social and cultural dynamics of collective violence in Italy, and to the development of effective strategies for preventing and addressing such phenomena.
“He Is Not Clean:” an Ethnography of Surveillance and Emotions Among Palestinian Arabs in the West Bank and Israel

Drawing on insights from works on the affective dimension of the law and on recent theorization of emotions as transpersonal and collective phenomena, this paper analyses the short term occupational returns of different tertiary degrees provided by the Italian educational system after the implementation of the Bologna process.

The University reform has entailed a great vertical differentiation of higher education and resulted in the transition from a unitary system - based on four to six years courses - to a new sequential system of bachelor/master/doctoral programs. Bachelor/master reforms have been accompanied by the introduction of long courses (Ciclo Unico), which lasted five years and reflected the old unitary structure. In this scenario, the public decision-maker has determined the tertiary qualifications to be considered equivalent. On the one hand, the human sciences, social sciences, and law are legally equivalent and give direct access to doctoral programmes (ISCED 6). On the other hand, masters and long degrees are legally equivalent and give access to doctoral programmes.

In the empirical analysis we use data from the ISTAT 2011 "Survey on the transition to work of University graduates" to examine the early labour market returns of young graduates from bachelor’s, master’s, and long courses in terms of employability, class position and wage. By means of binomial, multinomial and OLS multiple regression, the empirical results show that the labour market rewards of the three types of degree do not reflect precisely the legislative arrangement. According to expectations, four years after the completion of studies, bachelor’s, magisterium and rewarded occupations are less likely to reach the apex of the social hierarchy compared with graduates from master’s programmes.

Colonial Legacies, Law and Discourses of Inequalities. An Analysis of Poverty Alleviation

The paper uses the example of a revolutionary poverty alleviation programme (which is now given legitimacy as a law) to understand and assess the discourses that structure inequalities in India. The focus is on a law called National Rural Employment Guarantee Act which provides as a right, employment to one member of a poor household for 100 days of a year.

On the basis of case studies, this paper argues this discourse does not have a language to comprehend the intersection of political and cultural forms and processes that generate inequalities in India at three levels. First, the attention of this Act is on objective quantifiable attributes of inequalities and wealth disparities such as poverty line, income and food consumption, an understanding which it inherits from 19th century colonial liberal discourses. It thus cannot recognize the fact that the poor work and labour in economies that combine and exchange low value labour goods and services which are rarely quantifiable in terms of the rational economic language created by contemporary capitalist discourse. Second, this colonial legacy has further frozen a range of differentiated cultural practices of domination and subordination that organise inequalities into a few standard Orientalist categories. We argue that not only are these practices varied but they range from stigma, discrimination, intolerance, prejudice and hatred. These may manifest as individual discrimination but are moored in group based representations of domination which are reconstituted from colonial classification systems. The Act has little comprehension of these differentiations and cultural practices as these remain invisible and thus unquantifiable. Third, these representations are unevenly organised across localities and regions defining the nation state creating a complex pattern of exclusionary intersections that manifest differently in varied economic and social contexts of the territory. These cases help to rethink and understand the theory of inequalities.

Returns to Higher Education after the Bologna Process: How Different Are Italian Tertiary Degrees?

The role of Education will be developed automatically follow if leisure is provided. The uneducated can be seen consuming their leisure in useless gossiping, which the educated and the uneducated youth around one spend their leisure. But it is not that the educated have all the means and power to develop a language that is different from the uneducated. The leisure is a time in visits to the cinema. On the other hand, the educated individual puts his leisure to better use.

Evidently, then it is only the educated person who can utilize his leisure properly. I have kept this concepts and select so tribal youths for sampling. In this fifty tribal youths 25 are literate and 25 are illiterate. Those who are literate mostly meet in a public places like bus stand, grocery soaps, near by schools, near by temple, etc. when literate youth meet mostly their parents house. Where parents can watch their activities and some time guide them.

The Global South and Postcolonial Perspectives in International Sociology

A powerful current development in our discipline is the emergence of postcolonial and global-south sociologies. This is not a new specialization, but a change in perspectives that will affect all fields of sociology. New possibilities are currently being explored in sociological theory, sociologies of disability, education, gender, modernization, the history of sociology, and more. This session is planned as an interactive event in which leading colleagues in this movement of thought will be invited to present broad overviews of the areas of research that they are exploring. The session will provide a dialogue with members of the panel. Among the themes for the session are questions of centrality and marginality, changing methodologies, changing agendas for research, new audiences, and changing curricula for teaching sociology.

Literate and literate/tribal Youth and Leisure

Literate and literate/tribal Youth and Leisure

The Education is the one which teaches the edifying many ways of spending his leisure usefully and constructively. The various objects of culture such as literature, music, art, religion and philosophy are the creation of leisure. But it is not yet developed automatically follow if leisure is provided. The role of Education will be seen here. One can perceive the difference if one observes the different ways in which the educated and the uneducated youth around one spend their leisure hours. The uneducated can be seen consuming their leisure in useless gossiping, smoking, quarrelling, sleeping, indulging in alcohol or at the most spending their time in visits to the cinema. On the other hand, the educated individual puts his leisure to better use.

Evidently, then it is only the educated person who can utilize his leisure properly. I have kept this concepts and select so tribal youths for sampling. In this fifty tribal youths 25 are literate and 25 are illiterate. Those who are literate mostly they are gradated and past gradated. I choose some variables to measure difference between them. These variables are following below. Economic Condition, Morning activity, Noon activity, Evening activity, their talking subjects, drug addiction, visits of cinema, gossip places, their desires, etc. I found tribal youth spend their leisure time an average 3 to 4 hours per day. Educated youth append their leisure time in positive activities. Always they are thinking in positive way where illiterate tribal youth mostly do negative activity and thinking negatively. Iliterate youth mostly meet in a public places like bus stand, grocery soaps, near by schools, near by temple, etc. when literate youth meet mostly their parents house. Where parents can watch their activities and some time guide them.

Return to Higher Education after the Bologna Process: How Different Are Italian Tertiary Degrees?

This paper analyses the short term occupational returns of different tertiary degrees provided by the Italian educational system after the implementation of the Bologna process.

The University reform has entailed a great vertical differentiation of higher education and resulted in the transition from a unitary system - based on four to six years courses - to a new sequential system of bachelor/master/doctoral programms. Bachelor/master reforms have been accompanied by the introduction of long courses (Ciclo Unico), which lasted five years and reflect the old unitary structure. In this scenario, the public decision-maker has determined the tertiary qualifications to be considered equivalent. On the one hand, the human sciences, social sciences, and law are legally equivalent and give direct access to doctoral programmes (ISCED 6). On the other hand, masters and long degrees are legally equivalent and give access to doctoral programmes.

In the empirical analysis we use data from the ISTAT 2011 "Survey on the transition to work of University graduates" to examine the early labour market returns of young graduates from bachelor’s, master’s, and long courses in terms of employability, class position and wage. By means of binomial, multinomial and OLS multiple regression, the empirical results show that the labour market rewards of the three types of degree do not reflect precisely the legislative arrangement. According to expectations, four years after the completion of studies, bachelor’s, magisterium and rewarded occupations are less likely to reach the apex of the social hierarchy compared with graduates from master’s programmes.
Gender Inequality and Women's Health: Indian Perspective

Gender Inequality and Women's Health: Indian Perspective

Indian women face most of the health problems due to discrimination. The high risk groups in their lives are early childhood and reproductive years. Inadequate and poor nutrition, non-access to primary health care, poor reproductive health and discrimination against girls are major causes for higher female mortality between ages one and five and high maternal mortality rates.

The practice of sex determination tests and subsequent induced abortion, small family size are added to decrease sex ratio. Sex-selective abortions are indicative of the low value to girls. Gender disparity in nutrition starts from infancy to adulthood. Girls are breastfed less in infancy. Malnutrition is an underlying cause of death among girls below age five. Nutritional deprivation amongst girls leads to improper growth and anaemia. Anaemia is more prevalent amongst girls, pregnant and lactating women. This not only complicate childbearing and result in maternal and infant deaths, maternal depletion and low birth weight infants, but also severely affect women's productivity and quality of life. Infertility poses a serious social and emotional threat to women.

Women also face reproductive tract infections and related infertility. The reasons for maternal deaths include sepsis, abortion, haemorrhage, and anaemia, etc. Sexually transmitted diseases, HIV, have serious implications for women. Women tend to seek medical help only if an illness is advanced, thereby reducing their chances of surviving. Many deliveries take place at homes, with untrained assistance in proportion of moderately skilled workers by automated systems, of task performance, which again could have wage implications for the remaining workforce resulting in greater inequalities. This assumption was tested in eight large capital goods and consumer durables industries in India which had taken up technology upgradation in their plants in the recent past, employing organizational survey schedule. The findings show that technology upgradation leads to greater work force polarization through skill bias and has positive implications for highly skilled sections of the workforce. At the same time the study reveals that bulk of moderately skilled workers could face the threat of being obsolete and lay off. Further, disproportionate increase in wages of highly skilled workers has increased work place inequality with unskilled portion of the workforce looked upon as disposable.

PATIL, DR. N.H* (HKES College, Aland, nhpatil1953@rediffmail.com)

Globalization, Technology Transfer and Growing Inequalities in India

Globalization and transfer of technology in the recent past have brought about significant changes in the process of production of goods and services providing services to the ever growing size and variety of clients which is looked upon as a positive development. But the fact that needs to be looked into is, what implications it has for the workforce in terms of wage inequalities which is an equally important issue. Increasingly advanced technology applied to various sectors in service and manufacturing is assumed to call for new skills and tasks, normally of higher sophistication and complexity which may result in increased real wages for highly skilled sections of workforce. Another outcome of this development is steady decline of the proportion of moderately skilled workers by automated systems, of task performance, which again could have wage implications for the remaining workforce resulting in greater inequalities. This assumption was tested in eight large capital goods and consumer durables industries in India which had taken up technology upgradation in their plants in the recent past, employing organizational survey schedule. The findings show that technology upgradation leads to greater work force polarization through skill bias and has positive implications for highly skilled sections of the workforce. At the same time the study reveals that bulk of moderately skilled workers could face the threat of being obsolete and lay off. Further, disproportionate increase in wages of highly skilled workers has increased work place inequality with unskilled portion of the workforce looked upon as disposable.

Municipal Solid Waste Management In Kolhapur, India: Need For Decentralized Composting

The management of municipal solid waste is emerging as an environmental issue in India. Under Municipal Solid Waste Management and Handling Rules, 2000 and directives of Hon'ble Supreme Court, all the citizens are to segregate the garbage at source.

The waste generated in Kolhapur city per day is 150-165MT. The contract was done by Kolhapur Municipal Corporation (KMC) with Zoom Bio fertilizer Pvt. Ltd. in 2000 and since 2003-04 it used to segregate biodegradable solid waste and for making bio fertilizers. But as the company went into liquidation, this project was closed in July 2011.

KMC had given a contract of collection and transportation of solid waste to Ramkey Group Pvt. Ltd. from 20th Nov. 2007 to 15th August 2013. But the contract was ended by the KMC in June 2011 as the company was not lifting all the waste from the city.

Along with the increasing population more land is required for the disposal of solid waste and today there is no reserved piece of land for the treatment plant in the city. The place at outskirts of the city, Top quarry is under dispute. There is resistance from people of that area and there is a stay order from Hon'ble High Court not to use that place for dumping waste. A land at Halsawade is allotted for sanitary land filling but it is under dispute and stay order has been given by Hon'ble High Court.

The centralized collection and processing has been failure and created environmental issues. There is a need to adopt decentralized composting at homes, apartments, colony, garden, institutes etc.

The paper reviews the Municipal Solid Waste Management in Kolhapur and also shows the attempts made by citizens for decentralized composting.

Causes and Social Implications of Educational Inequities in Indonesia

Educational inequities in Indonesia has been existed for many years. Two major challenges with respect to educational inequities are access to and quality of education. Access to primary education is almost universal, while access to juvenile and senior secondary are still far from the government target. Let alone the tertiary education. The quality of education occurs at all levels of schooling. The twin problem of educational inequities is a major concern of the Government of Indonesia (GoI). Over the past decade GoI has allocated 20 percent of its national budget towards education sector. GoI has made numerous attempts to overcome the inequity issue through, such as regulating the functional assignment between central and subnational governments in providing primary and secondary education, and issuing the minimum service standard for its implementation. Apparently these regulations were not prepared in a systemic and integrated fashion. This
paper analyzes the causes and social implications of educational inequities in Indonesia. In terms of causes, this paper focuses on the socio-economic back- ground, culture, and access to resources. While on social implications, it will cover four issues. The first two deals with the fact that educational inequities will increase inequality in income and competitive ability among individuals in labor markets. Thirdly, educational inequities will widen inequality of vertical social mo- bility chance among social strata. The more educated have higher probability to advance to higher social strata than those with lower level of education. This may give rise to social exclusion, which is the final impact to be discussed in this paper.

Mobilizing from Appropriate Technologies to Sustainable Technologies (based on Grassroots Innovations)

This paper offers an understanding of the concept of Appropriate Technology (AT) and points out its historic relevance from the standpoint of developing countries. The paper focuses on the evolution of AT movement in India and ideological contributions by various thinkers like M. K. Gandhi, E. F. Schumacher, J C Kumarappa, and others to this movement. It stresses that AT movement as a discursive one is not about mobilizing activities and people but is about academic discourses on AT. And the paper presents an empirical case study of a social movement organization named Honey Bee Network, emergent of the said movement that does not represent the original disc- course of the movement any more rather represents the later turning point of the dis- course, i.e., the shift toward sustainable technologies. This drift is perceived on the basis of experience of a developing country like India with regard to misgivings of western industrial technologies and their non-sustainability. Noteworthy, that this case study of the Honey Bee Network at Ahmedabad is in fact a network of three organizations namely, SRISTI, NIF, and GIAN which are to scout, document, register, and incubate the grassroots innovations that are based on traditional and indigenous knowledge systems and are moving into commercialized technologies. The Honey Bee Network as a social movement organization has been analyzed from the vantage of the well known resource mobilization theory of social movements. Lastly the paper brings out the socio-cultural embedded character of the grassroots innovations and their resultant technologies. And it is further argued that, this bottom-up approach of technological development paves the way for sustainable technologies that are socially and culturally embedded and are founded on social participations. Such technologies are perceived to be representative of an alternative paradigm to that of modern western technologies.

Rise of Self-Help Groups As a Social Movement: Experiences from the Indian State of Odisha

Studying and participating in the process of development has been the approach of governments in developing countries and Non-government organiza- tions (NGOs) in which they have taken plethora of initiatives following both top down and bottom up approaches. Some of those (initiatives) succeeded while others failed. But no programme for socioeconomic development was so wide reached and popular than the Self-help group approach. Self-help group (SHG) is a small, economically homogeneous and affinity group of poor people who come together to save some amounts regularly, mutually agree to contribute to a common fund, meet their emergency needs, adhere to collective deci- sion-making, resolve conflict through collective leadership and provide collateral free loans on terms decided by the group. These groups try to empower the least empowered sections (mostly women) socially, economically and politically. Involving millions of women (through SHG), the transmission of development involves community involvement and God’s Thanks Giving Day. The transmission patterns of Chinese festivals and traditions are either direct or indirect. The problems regarding the transmission of the Chinese generation related to social, cultural and economic factors. The factors supporting the success of the transmission of Chineseness are accurate information given by the old to the young generation, a refining process in a family, encouragement of the sense of Chineseness to the young generation.

The Transmission of the Chineseness to Chinese Descendants in Thai Society through the Understanding the Meaning and Religious Symbols

The research entitled “The transmission of the Chineseness to Chinese descend- ants in Thai society through the understanding the meaning and religious sym- bols” aims to investigate the existence of Chineseness in Thai society focusing on the following: first, the patterns and how Chineseness being transferred to the young Chinese generation born in Thailand, which include the transfer of knowledge and understanding of the meaning of important Chinese festivals and traditions, problems related to the transmission of Chineseness, and the factors supporting the success of the transmission of Chineseness. This study is an applied research integrating both quantitative and qualitative data which collected by question- naire and an in-depth interview. The findings are that a majority of the research participants still have their beliefs and faith in gods and sacred or holy items. Most of them still pay their respect to gods on Chinese Sabbath Days as well as to their ancestors. Chinese New Year and Chinese Autumn Festival are two Chinese tra- ditional practices inherited to every Chinese family in Thai society. Chinese New Year, Chinese Autumn Festival, Vegetarian Festival, Moon Festival, God’s Thanks Giving Day, and Fifth Moon Festival are among the most important festivals which the young Chinese generation agreed that these festivals should be inherited to the next generation. Most of participants have knowledge and understanding of the meaning of Chinese New Year, Chinese Autumn Festival, Vegetarian Festival and God’s Thanks Giving Day. The transmission patterns of Chinese festivals and traditions are either direct or indirect. The problems regarding the transmission to the young generation relates to social, cultural and economic factors. The factors supporting the success of the transmission of Chineseness are accurate information given by the old to the young generation, a refining process in a family, encouragement of the sense of Chineseness to the young generation.

A Generalisable Promise of Risk? Risk-Based Self-Regulation and the Inherent Limits of State Intervention in German Occupational Health and Safety Governance

In Anglo-Saxon academic discussions risk-based governance (RBG) has been identified as a method for rationalizing corporate and public governance processes top-down, i.e. offering a central management vision that can then ‘colonise’ other domains and organisations in regulatory processes. As such, risk seems to entail a universally applicable promise for central governments to remedy blame for failure all while managing tight budgets. But does this hold true in distinct institutional settings? Starting from the empirical observation of occupational health & safety policies (OHS) in an international research project (HowSAFE), we find that, in Germany, risk approaches largely emerge in arenas outside the central state, with norma- tive justifications, governance forms and organisational logics that seriously con- tradict Anglo-Saxon state-centric RBG notions. Moreover, regulation of workplace risks in German policies is characterised less by a coherent risk strategy than by pockets of risk-based governance. These have emerged, for instance: - in the funding structure of the public accident insurance (classifying companies into risk groups) - in research priority setting and prevention campaigns of mutual trade associations - in inspection strategies of the Lander (risk-rationalizing the use of limited control resources). These fragmented and scattered risk approaches in German OHS raise the issue of risk-based self-regulation as a so far rather misrecognised form of risk governance. To enlighten this blind spot, this paper examines the role of territo- rial self-regulation by the sixteen Lander in OHS policy enforcement and public self-regulation by nine para-public organisations which govern the accident insur- ance, compensation and prevention in specific economic sectors. We show how self-regulation absorbs blame for failure and cost-bearing and contains RBG rela- tively unencumbered by the state. We argue that self-regulation inherently limits accountability pressures for central government, thus dismisses the promise of risk, and challenges some key conceptual and empirical claims of the Anglo-Saxon risk regulation research.

PAULSEN, FRIEDRICH* (University of Münster, friedrich.paulsen@europa-research-services.eu)

Restorative Justice Approaches in US-American Cities – Smart Responses in Stressful Times?
In 2010, about 750 adults per 10,000 of the US population were incarcerated. Mass incarceration in the United States affects nearly solely poor urban communities of color. US American cities are focal points of racial divide. Since years, the withdrawal of public welfare and intensified criminal prosecution are two sides of one medal. Current processes like urban gentrification and the on-going economi- cism crisis arewidening the gap between upper and lower strata of urban society further. As social cohesion is harmed and cities are bankrupt, the level of stress experienced by the responsible and mostly local authorities increases. Does this stress turn the responses of authorities to the most vulnerable groups towards more innovative approaches to meet minorities needs best? Restorative justice approaches may offer more effective avenues to conflict resolution and enhance social cohesion and the communities’ capacity to build up resilience against crime and victimization. The main objective of the case study based research is if authorities in US cities made experiences of implementing new approaches of demilitarized and non-aggression oriented police practices in urban areas (1) where mi- nority people live. Could new practices guide the way for general improvements of the relation among police and minorities in the US? The cases under qualitative study will be northeastern rust-belt cities, where industrial decline and financial austerity triggers further social divide and structural disadvantage of the urban Afro-American population. As it transpires that the predicted differences in the basic structure of police-citizens relations between Anglo-American Common Law cultures (where Restorative justice philosophy first originated from) and contin- ental European Civil Law societies can be observed very clearly as a common de- nominator, results enable a comparative perspective among policing minorities with regard to Restorative justice in urban settings in Europe and the US.

The Immigrant Childhood As Subject in Social Policy in Chile

This paper presents part of the results of a FONDECYT investigation, conducted by the author who has been financed with public funds, and whose objective is to analyze the integration of the immigrant children and adolescents, addressing the public policy and social interventions carried out by the State and ONG with migrant communities.

The study is based on the Sociology of Childhood that covers the childhood as a three dimension concept. The first one, as a social construction, which is dis- tant from the essential idea of the childish being, and expressed in different ways across the territory in every sociopolitical context.

The second one, as a permanent sociological category of the social structure, although his members are constantly renewed, and the third dimension, which comprises children as “social actors with an agency capacity”, that open genera- tional and gender relations of power with other actors, in their families and other social areas. Nevertheless, that social action is not often recognized in the soci- ety and in the academic field, due to the adultcentrism that discriminates them against because of their age and economic dependence (Jenks 1982; Qvortrup 1994; James and Prout 1997; Mayall 2002; Gaitán 2010; Unda 2010). Across semi-structured interviews to migrant children aged 8 to 15, and by par- ticipatory observation of Offices of Rights Protection, and in an ONG, the social integration of the migrant childhood is analyzed and taken to be the exercise of its rights and the development of transnational practices and how the social inter- vention hinders and/or provides that integration.

Finally, it is considered that migratory trajectories and diverse social factors (such as gender, age, language, place of birth, nationality, social position among others) have an impact on the accommodation and social integration of the new immigrants generations, living in Chile.

Doing Social Sciences on the Military Field: A Special Operation?

The purpose of this paper is to analyze the production process of scientific knowledge on the military and to reveal the complex and diverse relations – and their effects - between:

- the researcher and the military staff he or she is studying (depending on the social background, the age, the gender, the academic level and the military socialization of the former)
- the researcher and the military staff he or she is studying (depending on the social background, the age, the gender, the academic level and the military socialization of the former)

In the investigation, the social integration of migrant children is analyzed through semi-structured interviews with migrant children aged 8 to 15, as well as by participant observation in state Offices of Rights Protection. It is taken to be the exercise of its rights and the development of transnational practices and how social intervention hinders and/or provides that integration.

The concept of “Normative Power Europe” is one of the most actively debated among international relations scholars. It is usually presented as an alternative way to conceptualize the role of the European Union as a new type of interna- tional actor. According to Manners (2002), the distinctive feature of normative power is its “ability to shape the conceptions of ‘normal’”, and thus provide classify certain actions as legitimate or illegitimate. Achieving the status of a normative power is considered by most scholars and politicians as the greatest success of European integration, which has opened new perspectives for the EU as an actor on the global political arena.

The concept of normative power has been developed to account for the EU’s distinctiveness as a foreign policy actor, but this paper is based on the premise that its applicability is much wider, and seeks to explore the conditions for the emergence and functioning of normative power in non-European countries by comparing discourses and political practice in the EU and Latin America. Using qualitative discourse analysis (Hansen 2006, Hofp 2002, Laclau 1991, Torfing 1999, 2005) and taking the EU as the model case, it then looks at the normative as- pects of foreign policy discourse and practice in Latin America. This paper focuses on the pan-regional discourse, later to be complemented by individual country cases. The hypothesis is that a strong and independent counter-hegemonic disc- course, based on the struggle against world neoliberal injustice, exists in Latin America, which contributes to the emergence of normative power.
the researcher and the military institution (understanding of the functioning of the hierarchical organization and its values)

- the researcher's academic environment (university or think-tanks affiliations) and the armed forces

The present paper aims at giving a thorough understanding of the complexity of the researcher social position during his/her social sciences investigations in the army. It is based on a personal experience as a Ph.D Student working on the French Land Forces. Being at the same time a female Ph.D Student in political sciences working on the French Army, a junior academic and a reservist who enrolled as a private and evolves now in a high level headquarters, generates a very particular inquiry context and can be used as an asset if and only if the researcher is fully aware of the consequences of its presence on the military field.

This paper will also debate the importance of a personal and physical commitment from a methodological viewpoint and will discuss the opportunity of developing a comprehensive approach based on the simultaneous use of qualitative (sociological interviews, ethnographic observation), quantitative (questionnaire inquiry) and comparative methodologies. The usual case-selection problematic will be treated by focusing on a specific population: the French reservists. Lastly, the “specificity” of the army as a special social field that requires specific scientific tools (to gain access, to evolve in the institution) will be pondered.

Ecological Modernization as Discourse: A Media Analysis of Irish Newspaper

Ireland has had a very mixed response to the challenges arising from the fact that climate change is perhaps the greatest threat to this planet and to our current way of life. This research investigates how Ireland’s most important newspapers have raised awareness and disseminated information about the issues related to the challenges we face. An analysis of the trend in the coverage of climate change between 1997 and 2011 was undertaken in order to map the peaks and troughs in the media coverage of the issue, and to see if there was a correlation between the peaks in newspaper coverage and significant climate change events. A second stage of the analysis sought to uncover how the issue was framed by the newspaper. An analysis of what types of issues were most commonly discussed. The final level of analysis sampled and coded the statements made by the actors whose views appeared in the Irish newspapers in 2007 and 2008 in order to generate the affiliation network database. This database was used to create four separate discourse clusters, each of which represents a different sub-discourse network within the overall climate change discourse network. Within these clusters actors are tied to each other through their shared positions on related issues. An analysis of the clusters and the complete discourse network found that the climate change debate was dominated by key economic and political actors. The text that discourses of ecological modernization were used to reconstruct the issue of climate change as a technological and economic challenge rather than an environmental one.

PEACOCK, DAVID* (University of Queensland, david.peacock@uqconnect.edu.au)

Institutional Ethnography and The Uses Of Critical Discourse Analysis

For Dorothy Smith, IE is both a social ontology and social scientific procedure that seeks to empirically investigate discourse as social relations that are organized by the activities of people. Such an approach creatively connects ethnographic methods to the local accomplishment of the social with a Marxist insight into people’s active participation in extended social relations that can ‘overpower’ and implicate them in wider ‘ruling’ relations and injustices. Critical discourse analysis has often been used by Institutional Ethnographers as a means to examine certain texts as they are embedded within a field established through sequences of institutional action. Yet the discourse analysis performed in much Institutional Ethnography to date has not paid close linguistic attention to the way the specific local actors utilise texts and discourses in an active appropriation of the ruling relations established by official discourses. Using data from an Institutional Ethnography of students’ equity practices in Australian higher education, this paper illustrates how a Fairclough-inspired Critical Discourse Analysis of the hybridity of a sample of institutional texts and interview transcription is able to provide greater analytical purchase on how texts are actively appropriated within an institutional field of action. Retaining Smith’s focus upon texts and discourses within ongoing and daily interactions, I seek to expand beyond the text within this analysis how genres, discourses and styles (Fairclough) are assembled within a text within a given (higher education equity) social practice. This paper demonstrates how this kind of linguistic focus, when joined with an analysis of the functions that texts play in organising and sequencing a field of institutional action, offers possibilities for more nuanced accounts of individual and collective social agency in the process of semiotic and social change.

Dependency Denied; Health Inequalities in the Neoliberal Era

It is now well established that unequal societies have higher rates of health and social problems than more equal ones. Those adopting a psychosocial perspective see shame and invidious social comparison as one means by which inequality impacts the body, and the social body (Wilkinson & Pickett 2009). Whilst social epidemiology has been influential in theorising the ‘social determinants’ and marginalising of agency. For example, people are not passive recipients of inequality, they resist and endeavour to protect themselves, and there are debates about the place of political discourses such as neoliberalism in this process.

In this paper, findings are presented from a study of women in northern England which used Free Association Narrative Interviews (FANI) to explore the experience of life in an unequal, neoliberal society. Shame and social comparison were present in their accounts, but not in the ways anticipated. Women in the study did not ‘know their place’ in a hierarchy, and detailed knowledge of the extent of inequality was sparse. Women reported various shame avoidance strategies focused on protecting children from the stigmatising impacts of living with a lack of appropriate goods, and shame and shame avoidance were also seen in relation to the women’s bodies and homes. Most striking was a discourse of ‘no legitimate dependency’ - an often painful discourse, where all aspects of dependency were discouraged and self-reliance valorised, leading to considerable strain and distress.

We argue that this discourse represents a partial internalisation of neoliberalism; often expressed colloquially, using the language of therapy. It is manifested in the holding of the self to impossible standards of non-dependence, and through the “othering” of those considered insufficiently responsible. This is an unstable and unhappy discourse, but one which seemed unavoidable for participants, in the absence of available, alternative explanations for inequalities.

Backbreaking Work: Female Food Vendors, Globalization and The Legacies Of Indigenous Systems In Southwestern Nigeria

Backbreaking Work: Female Food Vendors, Globalization and the Legacies of Indigenous Systems in Southwestern Nigeria. My interest in the wellbeing of women in Africa comes from a longstanding concern about how indigenous practices, rights, and responsibilities interacted with imported western structures and policies during the colonial period and after (Pearce 1989, 2000, 2005). Then as now, there have been unintended consequences for the agents of the population. This paper focuses on the impact of neoliberal globalization on the lives of working mothers: low-income female food vendors. The paper uses data collected in 2007/2008 in Ibadan, Nigeria to explore how capabilities developed in an earlier era have been folded into the expanding requirements of economic globalization. The data comes from a larger, multi-sample study begun in 1984 that has investigated many aspects of the vendors’ lives. I take my lead from Sassen’s (2006) use of the term ‘capabilities’ and her suggestion that we pay attention to systems as well as individuals: How do emerging systems depend on capabilities created within the old order? Much of the economic and social welfare of the pre-colonial order rested on household production in which female economic and reproductive roles were central. With colonization, women continued to work, but with less public assistance than men. Independence brought the promise of increased services: health, education, electricity, etc. However, the quality of life declined and development policies have enabled both the holding of the self to impossible standards of non-dependence, and through the “othering” of those considered insufficiently responsible. This is an unstable and unhappy discourse, but one which seemed unavoidable for participants, in the absence of available, alternative explanations for inequalities.
The Emergence of Trust in Clinics of Alternative Medicine

The demand for the services from practitioners of alternative medicine has increased within the last decades in those nations in which western scientific evidence has not been acknowledged by health care authorities. This has led to an impetus for this paper to examine how trust between practitioners and users emerges in clinics of alternative medicine where practitioners are self-regulated and the users pay out of their own pockets for attending non-authorised treatments with very limited scientific evidence of effects. Trust is a key concept for healthcare outcomes and is gradually widespread in research of health. However, most studies focus on formalised institutional settings and only few sociological studies of trust have contributed knowledge into how alternative practitioners win their clients’ trust. Drawing on three qualitative studies (in sum 124 in-depth interviews and 3 focus groups) of different forms of alternative medicine, conducted in Denmark from 2006 to 2009, we explore how uncertainties are managed and trust emerges in the treatment encounter. By informing the empirical findings with a concept of intersubjective trust (i.e. Barbalet 2009), experiences among clients and practitioners are in focus to contributing new empirical insights on how trust is performed since the basis for trust is not evident. The analysis demonstrates that situated trust in the alternative encounter comprises relational, bodily as well as material aspects.

PEDERSEN, INGE KRYGER* (University of Copenhagen, ikp@soc.ku.dk)
The Lifestyle & Health Jurisdiction: A Danish Case about Reducing the Development of Lifestyle Related Chronic Diseases

The objective of this paper is to contribute new insights on the intra- and inter-professional responses to, and dynamics within, an emerging jurisdiction of health problems related to lifestyles. It is examined how health professionals and health users are mobilised to reduce the risk of developing the most common and deadly lifestyle related chronic diseases. How are socially contested issues such as dieting, smoking, alcohol intake and physical activity (in Danish the so-called KRAM factors) defined and managed in terms of medical problems? A Danish case to illustrate the issues of disease prevention as they emerge in clinical practice in Danish publicly owned hospitals is: ‘KRAM screening & intervention’, that is registration and detection of patients’ so-called risk factors to strengthening the efforts on disease prevention. This intervention program followed up by disease prevention counseling is a free service provided by publicly owned hospitals. In the Western part of Denmark, eventually all over the country. One key jurisdictional dynamic to be analysed in this paper is: jurisdictional disputes and professional settlements (Abbott 1998, 2005): What is the division of labour between medical doctors and other professional groups within the interventions programs, and how is this division of labour maintained in professional practice and organization? Empirical materials include documents (standard procedures, registration forms a.o.), qualitative interviews with patients and counselors about goals and practices, and observations of counseling situations. It is discussed how medico ideas feed into the policy process and how governance networks are linked to explain why lifestyle problems are turned into the medical area, nationally as well as in international spheres, i.e. WHO.

PEDERSSON, ANDERS* (University of Gothenburg, anders.pedersson@lir.gu.se)
Old Ways and New Ways: The Relation Between Criminology and Sociology in Post-War Sweden

The trajectory of criminology in 20th century Sweden can be described as that of a discipline under the influence of medicine in the first half of the century, and of sociology in the second. The change from one scientific perspective on crime to another took place in the decades following the Second World War. This shift has been explained by factors such as the influence of medical explanations of society and human behavior following the atrocities committed by Nazism, and the growing influence of American sociology on Swedish academia during the post-war decades. The validity of these explanations is still to be proven. And even if there is truth to them, the question of how the shift came about is still to be answered. In my investigation of the relation between criminology and sociology in post-war Sweden, I will argue that changes can be discerned at three levels in the process by which sociology came to dominate the field of criminology: in the theoretical content of Swedish criminology, in the infrastructure for the production of scientific knowledge, and in the Swedish political discussion on crime. These levels are not separated, neither from each other nor from the society surrounding them, but nevertheless theoretically and empirically distinguishable. An analysis of each of these separate levels will contribute to a better understanding of the relation between them, and of the issue of the relation between criminology and sociology.

On a more general level my investigation will address questions of disciplinary and interdisciplinarity. It problematizes the relation between sociology and other disciplines of social science. Finally, it illustrates the complex character of the interdisciplinary relations needed to produce a fundamental change in the scientific perspective on a social problem.

PEDERSON, THOMAS* (Wayne State University, Pederson@wayne.edu)
Urban Restructuring and the Educational Politics of Race and Place in the Global Niche City

While Detroit is not a center of global finance and has declined as a global production center for the automobile industry the changing relationship among cities, nation-states, and the global economy is manifested in struggles over urban development strategies in Detroit as its leadership attempts to position the metropolitan area as a global niche city. In the process of reimagining the city, the region’s largely neoliberal corporate and political leadership deploys particular urban development strategies in the areas of education, housing, public infrastructure, and governance. While such deployments are framed as both inevitable and in the best interest of everyone, they are also deeply implicated in the restructuring of social and educational exclusion, particularly among the cities overwhelmingly impoverished black and immigrant residents.

My paper analyzes Detroit’s neoliberal policy complex in relation to education, urban development, and governance, drawing on documentary analysis pertaining to the crafting of policy. Recognizing the devastating impact of massive home foreclosures, urban flight, rampant segregation and poverty, and the closing of many public schools, I also reference ethnographic work I am beginning in public schools in the northeast and northwest neighborhoods of Detroit to demonstrate the ways in which nostalgia for the city among suburban whites, rituals of place-making, and their intersection with the racial imaginary and issues of territoriality play out in broader struggles over the city and the metropolitan region’s resources, cultural representations, and power.

LifeCourses, Pensions and Poverty Among Elderly Women in Belgium: Interactions Between Family History, Work History and Pension Regulations

The precarious financial situation of many elderly women in developed countries is well-established. Nevertheless, in-depth insight into the persistent vulnerability of this group remains largely absent. In this article, we demonstrate how a specific focus on the interaction between work history, family history and pension regulations can provide greater insight into the mechanisms that produce poverty among elderly women in Belgium. To that end, we make use of register data on some 9,000 women aged 65 to 71. Data on the poverty risk of these women is linked to career and family data, spanning over 45 years. We find that pension policy can indeed account for the higher poverty risk of some groups of elderly women (e.g. divoresses) as compared to others (e.g. widows). Similarly, pension policy can, to a large extent, directly or indirectly explain how previous life course events, such as marital dissolution or childbirth, affect old age poverty risk. However, our study also reveals some unexpected findings. Most notably, pension regulations fail to account for the beneficial situation of married women. Indeed, our analyses suggest that capital (income) may prove more decisive than pension rights to explain the low poverty risk of married women when compared to other marital groups. Drawing from our findings, we conclude with some suggestions as to where pension policy should go from here.

Conflicts within Finance Capital and Implications for the Climate Crisis

Particularly in the era of financialisation, the logic of financial capital is to focus on (short-term) profits, often at the expense of environmental concerns in general, and climate in particular. Indeed if this were not so then there would likely be no climate crisis. Yet in recent times many groups, including elements of finance capital, have called for greater emphasis on long-term considerations including on climate. What is it that makes some parts of finance capital focus on climate issues while other parts eschew them? What motivates climate-interested investors and what is their potential for addressing the climate crisis? We address these questions through a combination of qualitative analysis of interviews and

*d denotes a presenting author. Abstracts are organized by first presenting author’s last name.

and a sense of belongingness in cultural activities of diaspora. This paper aims to discuss the management of sleep as a focus for performance investments among youth, through the consumption of pharmaceuticals or other therapeutic products, such as natural medicines or supplements. In this context, sleep plays a particular role as a depharmaceuticalized resource to enhance physical, intellectual and social performance, as old identities, articulated on the Internet, are examined. I attempt to understand how relationships between the local and global music culture and new ones, through affective links in processes of social production of music. Issues such as relationships between folk, popular, rural and urban music and a relationship between a local and a global scene is studied.

What transnational experiences may signify for a music culture, which travels between folk, popular, rural and urban music and a relationship between a local and a global scene is studied.

Our analysis is supported by the results of an ongoing research about therapeutic consumptions to enhance physical, intellectual and social performance, among young people in Portugal (aged between 18 and 29). A mixed-method approach was used, including a nation-wide survey (n=1500), followed by semi-structured interviews (about 50 individuals, selected from the questionnaire respondents). On the one hand, the survey originated a set of quantitative indicators about youth sleep patterns, consumptions and predispositions to consume sleep management products, as well as perceptions of risks associated with them and ways of dealing with those risks. It also revealed how these indicators were socially distributed (in terms of gender, education level, occupation and scientific area of study). On the other hand, the interviews enabled the qualitative exploration of the specific purposes that lead to the consumption of products to help one sleep or stay awake, and provided information about the manner in which young people weigh between risk and effectiveness and between the immediate and the deferred benefits regarding these consumptions.

This proposed paper focuses on the relationship between representations of Bolivian urban folk music and Andean diaspora communities on the Internet. This paper challenges the common understandings of how traditional music and identity are presented and consumed online, in particular in relation to the Bolivian folk music genre of Cumbia. The paper examines how this genre contributes to the construction of a relationship between folk, popular, rural and urban music and a relationship between a local and a global scene is studied.

I study virtual rooms as leisure spaces where old and new meanings of identity and social relationships based on a sense of community can be observed. Processes of collective identity construction and identity victim will be described. Aspects about relationships between Andean popular music, Latin American music and Bolivian music, stardom and audiences are addressed.

Questions about defining identities and mixing influences are considered. I also try to show how contemporary social issues and changing identities are juxtaposed in complex collages in the virtual rooms, by musicians and their audiences, through affective links in processes of social production of music. Issues such as relationships between the local and global music culture and new as well as old identities, articulated on the Internet, are examined. I attempt to understand processes of cultural production as ways of creating new meanings, spaces as old identities, articulated on the Internet, are examined. I attempt to understand how relationships between the local and global music culture and new ones, through affective links in processes of social production of music. Issues such as how relationships between the local and global music culture and new as well as old identities, articulated on the Internet, are examined. I attempt to understand processes of cultural production as ways of creating new meanings, spaces as old identities, articulated on the Internet, are examined. Issues such as relationships between folk, popular, rural and urban music and a relationship between a local and a global scene is studied.

This paper focuses on organic rice, the main agriculture crop in Cambodia. Even though the country is self-sufficient at the national level and produces a surplus for export, pressure to reach export targets leads to big farms using more chemical inputs, which can easily get from the market. Hence rice is not always organic as local people have thought. As such, many high-income households carefully source it from local markets or directly from farmers they know, creating a unique network of producers-consumers. Interestingly, some people have started farming rice for their own consumption and have minimize purchasing it from the

break with the long predominance of cultural/discursive constructivism, without reverting to traditional realist cases. Significant examples come, more than from environmental sociology strictly speaking, from post-structuralist orientations in STS, philosophical anthropology and feminist theory, which converge on accounts of the reality of matter in terms of fluidity of organic and inorganic life or of the multiplicity of (human much post-humanist) nature. The second trend is a reworking of the implications of risk and uncertainty. Whereas, for years, awareness of socio-environmental complexities led to a plea for 'technologies of humility', now an emerging tendency is for taking 'braver' standpoints by which, if uncertainty cannot be avoided, then it has not to be feared but rather it has to be 'ridden'. This is signalled by burgeoning narratives and techniques of vision, anticipation and resilience, for example as regards 'nanofutures', human enhancement and climate change. If the 'heuristics of fear' has been for decades the trademark orientation of most environmental social theory, this turn towards ontology-focused affirmations asks for reflection. Are we in front of a much-needed renovation of social theory vis-à-vis rapid sociotechnical and environmental change, or are we rather in front of a ruling imaginary which simultaneously supports and obscures a major socio-political, perhaps even an anthropological, transformation?
market. We have also seen increasing number of ethical organic food suppliers, those managed by non-governmental organizations or private owned businesses.

This paper uses two contrasting cases of organic rice farming from two provinces in Cambodia to illustrate how this organic rice is produced differently and how social status, household incomes, and community development programs influence and shape the decision of producing and consuming organic rice.

PENG, RANY* (University of Sydney, rpen2122@uni.sydney.edu.au)

Securing Food While Caring for the Field: A Case of Rice Farmers in Kampot Speu, Cambodia

Since the adoption of Rice Export Policy, Cambodian rice export market has emerged and the country recently joined the top ten rice exporters. While nationally it produces surplus, many poor rice farmers cannot produce enough for home consumption. Small farmland, unfertilized soil, unsecured land ownership, limited access to irrigated water and unpredictable precipitation are some major causes of their low productivity.

Furthermore, around 43% of rural population depends on purchased foods. The increase of export volume potentially puts more pressure on these consumers, especially the poor, because it is uplifting local prices to as close as the international prices.

Facing food insecurity and having to cope with agricultural production challenges, some smallholders still continue their conventional approach of sustainable land use. Instead of trying to increase productivity through using chemical inputs, these rice farmers choose to preserve and improve their soil quality using organic fertilizers. This is particular for poor smallholders interviewed in Kampot Speu province.

Because rice farming alone is not enough and with limited supports from Government, alternative coping mechanisms that these farmers have adopted include diversified agriculture activities i.e. vegetable home garden, crops farming, livestock raising; seasonal agricultural and non-agricultural works within the village, in nearby villages, or in neighbouring countries; and work related migration to industrial towns.

Using data from a fieldwork conducted in Cambodia early 2013, this presentation will examine these above approaches undertaken by farmers in a district in Kampot Speu province. All interviewees, except two, are part of livelihood programme supported by a local organization, Action for Research and Development, which recruits these beneficiaries based on their economic and social status: families without or with small farmland; families with many children; families that are heavily indebted; poor families with disabled members; or elderly people without support from their children.

Reshaping and Reframing Gender, Care and Migration: With Focus on Asia-Pacific

In the recent decades, changes in economic structures and women's shift into paid labour have strained the family's capacity to perform care, while worldwide population ageing has led to increased demand for paid care workers. The resulting "care deficits" represent a challenge for individuals seeking to reconcile work and family as well as for national policymakers who must balance demands for care with those for equal opportunity for women, and for the full development and utilization of human capital. The need for care has also reinforced "global care chains" that draw women from poorer nations into employment as care workers in wealthier ones, creating not only care deficits but also a "care drain" in sending countries. This highlights the changing global context for care and migration, the new forms of gender and global inequalities, and critical roles that policies can play in reducing inequalities while providing essential care to those in need.

The paper examines political, institutional and cultural factors that have shaped, and are reshaping, ideas and norms of care, focusing on Asia-Pacific context. Definitions of care determine what care is and should be, and who will provide care – family members, communities, and/or paid workers; native-born people or migrants – and the extent to which care may become commodified. How do these definitions shift and adapt as conditions change? How do migration regimes (the laws, regulations and practices surrounding immigration) shift in response to changing demands for care workers?

PENG, JUAN* (The Hong Kong Polytechnic University, linya83113@hotmail.com)

Living in Transition: How Returned Women Migrant Workers Re-Incorporate Themselves into Rural Origins in China

China's internal labor migration has attracted worldwide attention during the last three decades. While studies on rural-urban migration and its implications for China's development proliferated, the reverse flow of these migrant workers and their lives in rural villages or townships upon their return have been largely ignored. In China, many women migrant workers have chosen to return to their rural villages upon their marriage and pregnancy. This paper explores the meaning of city working experience for migrant women and the role of women play both in decision-making of return migration and in establishing their new lives in the changed rural context after staying in cities for an extended period of years. It challenges the stereotypical images of Chinese migrant women who are always depicted as passive recipients of the structural constraints such as the patriarchy system, capitalist market and state rules. Rather than severing their connections with rurality and upholding the modernity they gained from urban experiences, many of them are actively trying in their own ways to reconcile their liminal identity by working on "ruralizing" some "modern" values while others are "modernizing" the "rural" values. Either way they are reconstructing a collective identity for themselves with meanings only they themselves would understand and appreciate. Besides, through critically employing Bourdieu's theory of practice, it puts forward a multi-field perspective in understanding these returned women's identity reconstruction and daily practices and highlights the importance of localization of western theory in Chinese context.
"If You Have a Giving Heart": The Framing of Post-Disaster Need and Donations

The material convergence that occurs in disaster-affected areas is well documented, as are the associated complications that arise. Among these challenges, research has documented the arrival of donations in excess of the need, of material donations instead of monetary contributions, and the donation of items inappropriate in the time, place, or cultural context (Holguín-Veras et al. 2007; Neal 1993; Neal 1994; Rodriguez et al. 2006). Despite the discrepancy between what is needed and what is donated, people continue to make these kinds of contributions. This paper examines the subjective meanings and understandings people who participate in disaster relief give to donations and need. Using Entman's (1993) definition of framing, this research examines how donors frame post-disaster needs, including their problem definitions, causal explanations, moral evaluations, and treatment recommendations, as well as what information and sources inform those frames. Preliminary analysis suggests that participants frequently construct involvement in disaster relief as a moral obligation, though the source of that moral obligation can vary in form, including religious motivation, the mission of the organization to which they are a member, or a personal connection to the area. The donation is not only the treatment recommendation to meet a subjective construction of need developed by internal rationale and information attributed to other sources. Some view the donation of material goods specifically as a treatment for the perceived problem of recipient misuse of monetary donations (be they a disaster relief organization or the individual identifying as a disaster victim). Though not always explicitly stated, participants see the cause of the need as external to those affected by the disaster. Donations are determined accordingly based on these frames. Thus, how these frames are constructed has implications for disaster response.
Emotional Control in the Financial Marketing

In the scope of a major research program about emotional normalization in the contemporary capitalism, I would like to focus on the emotional normalization of the financial investor. By analyzing Behavioral Economics texts about the emotions of the economic man in the financial market, I pretend to show how this bibliography: 1) explains economic crises as consequences of emotional based decision taking, a irrational behavior of the economic subjects responsible for breaking the market equilibrium; 2) normalizes emotions of the investors and offers self control techniques; 3) teaches how to predict and to use the emotional conduct of others investors to obtain economic profits. This bibliography, recognizing the investor as a emotional being, converts emotions in a professional competence that requires previous training to develop human capital. In this way, emotions are regulated and subordinated to a economic logic.

Le Pouvoir émotionnel: Entrepreneurs Et Leaders

En donnant continuité à la recherche présentée dans le World Forum of Sociology de Buenos Aires, où j’ai abordé le thème de la normalisation des émotions des travailleurs et leur responsabilisation concernant leur propre souffrance pensée comme manque d'intelligence émotionnelle, je voudrais maintenant discuter de la normalisation des émotions des entrepreneurs et des leaders d'entreprise par la bibliographie du management. L'objectif est de comprendre comment ces qui sont dans des positions de pouvoir dans l'entreprise font un travail émotionnel sur eux-mêmes en visant manager les émotions des subalternes et conduire leur comportement émotionnel conformément à des finalités économiques.

The Potential of Telecare/Aal Technologies for Enabling ‘Ageing in Place’ in Rural Areas in Poland and Germany

The vast majority of older people wants to continue living independently in their own homes for as long as possible. This preference poses a particular challenge in rural areas where family members are often not available for support since they moved to the economic hubs in the big cities for earning a living and care providers have to travel long distances. Telecare and other ambient assisted living (AAL) technologies can provide an alternative if linked to emergency care services. This paper will explore the potential of these technologies for enabling older people in rural areas to ‘ageing in place’ in two regions in Poland and Germany with a particularly high share of older people – the Malopolska region surrounding the city of Cracow and Upper Lusatia (“Oberlausitz”) to the east of the city of Dresden. Both areas are characterized by outmigration of the younger generations, declining fertility and growing shares of older people. This research analyzes the potential of telecare/AAL technologies for improving older people’s quality of life based on two explorative pilot studies focusing on the provision of telemedical services to senior citizens. Thereby, the analysis considers opportunities as well as risks of telecare/AAL applications in older people’s homes. In the Malopolska region, a group of older people was provided with telecare/telehealth equipment monitoring bodily functions, such as ECG or blood pressure, which are monitored by telemedical/telecare systems enabling remote examination, consultation, and diagnosis. The German study takes a slightly different approach in focusing on matching older people with an interest in AAL/telecare technologies with providers of the latter. The process will be evaluated in a longitudinal user survey measuring their experiences before, during and after using the technology, which in turn will be compared with findings from an independent sample.

The main goal of this paper is to describe the professionalization process of sociology in Argentina during the last five decades. First, it examines both the role of sociologists in Argentina during different historical stages and the situation of the teaching of sociology, trying to identify different traditions and tendencies. Second, the paper additionally describes diverse organisational frameworks in which local sociologists have tried to set their personal and academic issues. Third, it presents some data from a research that focuses on the working conditions of sociology graduates in Argentina from three different cohorts. One, a group graduated from 1961 to 1974. It had an early and successful professional insertion linked with teaching and state planning. Two, another group which received their degrees from 1984 to 1992 had more problems in searching for jobs, but new opportunities in public opinion polls and consultancy were expanding. Third, a young cohort of graduates since 2002 who found an institutional scenario of new social demands and requests for sociological knowledge at academia, state and private sector. The paper looks for an answer to what were their jobs and how they started and followed a professional career in sociology, trying to identify the socialization process of their actions and the political and social networks to which they were affiliated. Methodology combines the use of previous data, the job situation of sociologists in Argentina at different historical stages with a survey, trajectories reconstruction and in-depth interviews. Finally, this paper reflects upon the multiple challenges that sociology in that country faces at the present: institutional expansion, funding opportunities and social recognition combines with institutional fragmentation and lack of consensus on sociologists as workers and professionals.
the latter would have more difficult its action in a more dispersed labor market. In other words, addition might not be limited to new mining boom only, such as Freudenburg suggests, but to merely “large companies”, like nuclear or celluloses. Additionally, evidence suggests that the boom might give way to a very particular culture community that overestimates the importance of the grandiosity for any kind of social change. These are some of the conclusion that will allow to build (upon Freudenburg’s legacy) a more consistent and global sociological theory on the boomtown phenomenon.

Work Social Representation Among Young People and the Ambiguity of the Development Policy in Poland

This paper aims to examine the perception of the meaning of a “good job” among young generations in Poland. The economic policies implemented in recent years have emphasized the importance of entrepreneurship among new generations. The immobility of generations raised during the communist period is usually seen as an inconvenient that stop a major development. This is very clear judging by the number of public advertisement that encourage students to start up their own business, the invitations to take part on competition for the “best business idea” and highlighting of entrepreneurship related subjects in the universities’ curriculum and the emergency of certain entrepreneurship icons within the political spectrum. By mean the conduction of focus groups, in-depth interviews and participant observation, the current research inquiries on the idea of a “good job” among young people, with a special stress on how entrepreneurship is seen. Despite the permanent and dominating discourse about the low wages, working in some of the many foreign corporations that has invested in the country in recent years is seen as the top of the mind job. This accounts for the importance given to the symbolic meaning of belonging to an “international” organization, the social status provided by it and the need of constructing a “modern” identity of themselves. All these things, despite the usual low wages and lack of career opportunities provided. Asked directly about the possibility of becoming entrepreneur, it is seen as a step subjected to first success in a corporation. Entrepreneurship incentive policies might not have the expected results. The fault might be, among other reasons, the contradictory of the public discourse between, on one hand, the importance given to entrepreneurship and, on the other hand, the persistence for attracting globally-driven investment by established corporations and elites via tax break and low salaries policies.

PÉREZ-AGOTE, JOSÉ M.* (Public University of Navarra, jose.perez.agote@unavarra.es)

Mobilization and Performance in the Public Space in 2011: A Comparative Approach

From the Tunisian Revolution onwards the increase in social mobilizations around the world shows not only a significant shift in the political sphere but also some heavy evidences of social change. Young people, who have been at the center of those mobilizations, are especially susceptible to provide evidence of change when cultural, moral or attitudinal issues are involved. Furthermore, such mobilizations possess significant symbolic and cultural dimensions, and constitute fusion experiences in which a great charismatic power, able to trigger off social and cultural change, is generated.

These experiences may or may not have a ritual nature. According to J. Alexander, in the less complex and differentiated societies, social cohesion is generated by rituals, understood as periodical repetition of symbolic interaction in which participants fuse in the whole. However, in more complex and differentiated contemporary societies, the ritual is unable to keep fusion by itself, thus allowing for social performance to achieve the re-fusion of those social elements no longer cohesive.

The main goal of this paper is to approach some of these mobilizations in which youth occupied the streets as social performances, and to explore its consequences for social change. The four 2011 cases to be analysed are: the Egyptian Revolution, the Spanish Revolution (15-m), the London riots and the Youth World Day in Madrid (MY/WD). They are analyzed following the basic elements that shape social performances: actors, audience, collective representations, meanings of symbolic production, mise-en-scène and power.

PÉREZ-CASTRO, JUDITH* (Juarez Autonomous University of Tabasco, pkjudith33@yahoo.com.mx)

The Values Of Scientific Ethics: A Way To Face Inequality

Scientific work is one of the most socially valued activities, as it is a complex task that requires specialized professionals and very specific knowledge and skills. Science characterizes itself because its permanent growth and its self-regulation. It means that any proper or formal research has to be necessarily subjected to scrutiny, refutation and peer approval. Scientific work can be profitable and advantageous. In fact, nowadays, science and technology are usually considered strategic areas to the economic growth, innovation, productivity and competitiveness.

However, impacts of scientific research cannot remain only in the economic field; on the contrary, it must also help the social, communal and personal development. In this paper, we talk about the social responsibility of science and how their results can contribute to improve the living conditions of individuals and to reduce inequality. At first, we analyze the values that support scientific ethics and then we discuss about the ethics of commitment and social responsibility.

We focus mainly on three principles: 1) the observance of the integrity and the respect of the human rights, 2) the social commitment of research and 3) the search to the individuals, communities and countries where the research is carried out. Then, we present the results obtained from a study developed with a group of professors-researches from the Juarez Autonomous University of Tabasco. The objective was to identify the values that distinguish their work as researchers.

The results showed us that, regarding scientific ethics, some values such as objectivity, self-regulation, confidentiality, professional collaboration and the pursuit of knowledge are deeply seated in the researchers’ practices; however, social commitment and responsibility seem to be less important to the researchers’ work, especially when they have to compete for funding or when complying with the deadline and amount of production.

Working Circumspectly: What Are the Implications for Teaching in Multicultural Australia?

Migration, in the era of globalisation has created unique learning environments in Australian schools. While teachers’ chatter and media debates focus on the merits of current education reform agendas a deadly silence reigns over the question of teaching and learning in culturally diverse communities. Government reforms increasing emphasise the importance of national testing regimes as a measure of student achievement, school performance and teacher quality. Such emphases have, according to recent research, impacted negatively on curriculum and pedagogy (Dulfer et al, 2102) and created classroom environments that are neither responsive to the needs of students nor inclusive (Thompson, 2013).
This paper presents a methodology for investigating teachers' everyday practice that draws on Institutional Ethnography, Critical Discourse Analysis and Ontological Inquiry as a means for uncovering, not only the being of social relations in everyday practice but also how that relation can be understood ontologically. It addresses, in particular, how the mediation of teachers' work relates to the influence of various interests by tracing the constitution of social relations disclosed in relations that emerge between teachers' perceptions of practice and their enactments. In doing so, the being of the social comes into view. IE's recognition of being in practice is acknowledged. To better understand the impact of this ontological dimension on practice, analysis of data, extends IE by drawing on Heidegger's (2005) conception of ontological inquiry. This has been chosen for its dual focus in explaining the being of itself, and to reveal explicitly the Being of people and equipment in teachers' work. Analysis of research data offered by practising teachers, confirmed textual mediation in everyday practice, revealed, too, teachers who practised circumspectly. In doing so, the ontological significance of who we are to how and why we enter into social relations was exposed.

Women's Schooling behind Infant Survival. Modeling Demographic Dynamics in Non-Affluent Countries

This paper examines the critical relationship between women's education and infant mortality. This relationship is a key to the demographic transformation of the global South. This quantitative study examines the relationship between female education and infant survival in 80 developing countries. It is found that the relationships between women's schooling and infant survival is shaped by a set of social and health-related variables. These variables have been rarely studied simultaneously. Evidence in the paper is drawn from datasets some of which have only recently become available from agencies including UNICEF, UNDP and UNESCO. The data is controlled by income level, population size, as well as by the extreme epidemic or political instabilities. Missing data is replaced by regional averages. The path-models on infant survival provide new estimates showing the extent to which women's education influences infant survival in the global South. The study indicates that marriage system is the most powerful societal covariates determining the relationship between infant mortality and women's schooling, are income poverty, child health services and breastfeeding. Women's education explains 30-40% of the cross-country variation of infant survival. A key finding is that influences outside the health sphere improve health practices and performance. This global update is in line with what smaller N country-studies and survey based community studies have shown. The results stress that the universal social policies including women's education, poverty alleviation and multiple health policies intersect in fundamental ways for better infant survival. And that universal social policies are fundamental in explaining the pattern of demographic transition in the global south.

The Making Of Obedience To Authority: From Binet To Asch To Milgram

The design of Milgram's Obedience to Authority can be traced back through Asch's classic experiment on conformity to Binet's experiments on memory and suggestion. Binet and Milgram used what is now termed exploratory experimentation which is not guided by theory or hypotheses but consists of carrying out systematic variations to formulate empirical rules. Binet conducted two experiments. Binet conducted two experiments. Binet and Henri (1894) wondered what would happen if school children were given a suggestion so slight that they did not notice its existence? Children were shown a model line on one board and then had to identify the model line on a second board that contained a set of lines including the model line. When the student picked a line on the second board, the experimenter would quietly ask, "Are you really sure? Is it not the next line?" In a second experiment Binet (1900) showed a group of three pupils six objects on a poster board for a few minutes and then asked them a series of questions about what they remembered about the object recently seen. Both experiments performed this task jointly and the students competed with each other to be the first to give an answer. Years later Asch (1951) would combine Binet's two experiments in his classic study of conformity to groups. The group viewed a model line and then the naive subject would find himself disagreeing with the others on matching the model line. Milgram knew of Asch's experiment but wanted to generate sufficient social pressure on an individual in a one-on-one situation. The Binet and Henri experiment with its questioning of the choice of line provided the bridge between Asch's group conformity and Milgram's (1974) researcher/experimenter prodding the teacher/learner "to please continue" and "the experiment requires you to continue."

Members Vs. Experts in Czech Political Parties. Reflections on a New Dimension of the Party Membership

Our main research theme is the Policy-related Expertise in Czech political parties, this theme allows us to focus on such topics as the place of experts in the parties, especially in terms of concurrence between "old" members and experts proposing other resources and legitimation.

The capacity of expertise is now generally considered as a common and obligatory need and good for every party which try to get into the government, based on the idea of a less political and more technical problems to solve on the national or local level.

For this paper we will focus on some aspects but we will discuss mainly the thesis of a practical mix of intra-extra-party legitimacy in the sense of the response to the need of new members seen as specialists or experts. For instance a problem can occur at the time when party came to the power and it gives to members some places or functions (retributions).

Our hypothesis, facing the question of intraparty democracy, are first that there should be a conflict between two diverse legitimacies but over all that such a need for experts contribute highly to undermine the importance of intraparty socialisation and, at the end, weaknesses the party organisation: the members have not to be active for the party as itself, but they have to be experts immediately useable without being "real" members. Secondly this concurrence of intra-extra party legitimacy can be understand practically also as a better and quickest application of experts in the state or local management to the detriment of classical members. Thirdly the other face of this phenomenon is that the less party socialized experts are less disciplined or that they are more prone to defections or change of party affiliation during their mandate.

Socio-Geographic Effects On Higher Educational Choices

The main object, in this presentation, is to explore the relationship between socio-geographic background and higher educational choice. Social space can’t be isolated or ignored when it comes to understand human action. The individual socio-geographic setting permeates the way individuals understand and act in the social world. It contributes to social possibilities and constrains, often understood as habits. This presentation put a socio-geographic focus on a special group of students in a special municipality in the south of Sweden. The municipality is characterized by low progression rate to higher education and a high, but diminishing, rate of drop-out. The educational level is below national average. Despite these traditions a minor group of pupils do attend theoretical education and receive high grades from upper secondary school. Most of these students progress to higher education. An observation made is that in this group most of the students are attending and applying low prestige higher educational programme at local private universities despite the great possibilities. This goes for students with middle-class backgrounds as for students from working class. One suspicion is the existence of a sociogeographic effect on higher educational choices that makes it possible to talk about a sociogeographic habitus, collective in the same way as class-habitus but also unique in relation to other geographies areas. In this paper this is discussed in relation to in-depth interviews with students representative to the above described group.

The Ontology Of The Global City-Regions

The ontology of global city-regions.

The global world is made of hundreds of city-regions interlinked and networked. Yet the ontology of the global city-region is still to be defined.

It includes a different substance than the XX° century metropolis, or the generic and endless city of today. It is a web of contracts much wider and global than in the National epoch. In the past the contract was Principal-Agent: the Principal being the State, the Agent being the City. Whose main role was to provide streets and social housing, schools and welfare. Today the agglomeration substance of global city-region is relational contracting among actors which are global in many cases: enterprises, services, networks. Their places have a variable geometry and geography, functionally defined and no longer territorially bounded.

Relational contracting is a partnership contract where asymmetries arise. The main asymmetry is about information access, which is selective among and within cities in the digital era. A second asymmetry is about mobility which is still more selective: those who can move (financial markets, multinational enterprises, big buyers, world experts), those who simply cannot (sub-contractors, client enterprises, contingent labour). Within global city-region governance mechanisms should include new constitutional orderings by bridging social capital and linking divided actors and fields.

Migratory Experiences of Portuguese People in Macao during and after the Portuguese Administration of the Territory

Migratory experiences of Portuguese people in Macao during and after the Portuguese administration of the territory.

The transference of Macao administrative power from Portugal to China, in December 1999, has represented for Portuguese people who lived there until the 80s and 90s of the XX° century the end of a migratory experience in a very specific context, frequently characterized as being almost colonial.

Following the hand over, while many Portuguese immigrants have returned to Portugal, some choose to stay in that Chinese territory; others have later decided to go back again; and a few others, who have never lived there, elected Macao as their host society. How was the integration process of those Portuguese migrants...
who settled in Macao in the beginning of the XXth century? Did they keep the same benefits - concerning leaving conditions and life styles - that Portuguese people used to have during the Administration period? What kind of relationships have they developed with the local people (mainly Macanese and Chinese) in this ‘new’ political, social and cultural living context? Were they more prone to assimilate local references than their counterparts who lived in Macao in the colonial period?

Basing our study on a qualitative research supported by interviews to two groups of Portuguese migrants - those who lived in Macao during the Portuguese administration and those who moved to the territory after that period - it is purpose to analyse and compare their migration experience (in social-economic, cultural-symbolic and identity terms) highlighting the continuities and changes observed.

PESSOA, INES* (ISCTE - IUL, inespeass@gmail.com)
Portuguese Youngsters on the Move after the Macao's Migratory Experience

Macao has been for the last two decades of the XX century the host society of young Portuguese people, whose parents, mainly high qualified workers, have preformed professional functions in the public or private sectors of the territory. Once this migratory cycle came to an end, and after their return to Portugal, a large number of these young Portuguese has migrated again, some to Southeast Asia, others to different places, this time as protagonists of their own flow. Basing our study in life stories, our purpose is to analyse to what extent the migration experience of these individuals in Macao has contributed to the formation of their cosmopolitan identities, as well as to create a predisposition to re-migrate.

PETERS, VERA* (Institute for Climate Impact Research, vera.peters@pik-potsdam.de)
The Carbon Footprint of German, Scottish and Czech Households and Its Determinants – the Influence of Infrastructure, Lifestyles and Socioeconomic Conditions

Climate change is on its way, and individual consumption decisions contribute substantially to it. About 40% of all GHG emissions come directly from private household energy consumption, and the figure is even larger if indirect effects of private consumption are included.

In order to further explore the conditions that lead to smaller GHG emissions, we present results from a quantitative household survey (n=1,532) in three European countries (Germany, Scotland, Czech Republic), which was conducted within the framework of an EU FP 7 project (GILDEED) in 2011 and 2010.

A COZI behaviour pattern was used to estimate households' carbon emissions in the field of residence, mobility and nutrition. Beside site specific conditions such as infrastructure and socioeconomic factors, major individual and social motives for sustainable behavior are explored by applying psychological and sociological concepts such as the "Schwartz value inventory", people's perception of climate change and a lifestyle segmentation.

We focus especially on the explanatory power of the lifestyle approach for predicting carbon footprints. Lifestyle or "milieu" segmentations represent popular analysis tools especially in German sociology that aim at a modernized concept of social inequality encompassing the 'subjective' dimension (attitudes, values and preferences) as relevant aspects for social differentiation. We applied this concept by connecting values and preferences with the households' income, thus trying to identify different "social milieus", i.e. like-minded social groups that are characterized by distinct mental frames and economic status. Previous lifestyle research suggests significant group differences on factors influencing energy use, e.g. the amount and kind of electronic appliances used or leisure mobility patterns. However, it has yet to be shown if different energy patterns result in different levels of overall consumption and emissions between the groups.

PETERSSON, FRIDARA* (University of Gothenburg, frida.petersson@socwork.gu.se)
The Stigmatizing Semantics of Methadone Maintenance Treatment

People who use heroin are often described as one of western society's most stigmatized and marginalized groups. In public discourse, people associated with heroin use are construed as unruly, lacking self-control and generally bad persons. Negative representations of the heroin addict are also reflected in the regulatory framework surrounding Swedish methadone maintenance treatment (MMT) - the most common treatment practice for heroin addicts – which is based on a basic idea that the treatment not only could, but also should lead to a normalization of the clients’ lives.

In this paper, the everyday semantics of Swedish MMT is put under scrutiny. The analysis based on a local, qualitative study exposes that the professional power is not as objective, neutral and fair as portrayed by national guidelines, policy documents and the professionals' talk. Methods developed in critical discourse analysis and discourse psychology are used in order to analyse a number of key concepts used in everyday clinic practice. For example, at the clinics, “drug-free” and “drug-abuse” are two frequently occurring concepts that are difficult to define because they are not related to the drugs themselves, but to the question of when and how the narcotic substances have been used, as well as who has decided that they should be used. Analysis shows, that according to the professionals' talk, it is possible to live a “drug-free”, “normal” life with methadone, as long as it is distributed by the clinics and ingested according to the staff's recommendations, while taking the same amount of drugs obtained from a source other than the clinic is defined as “drug abuse”, legitimizing sanctions of more disciplinary kinds. However, the effects of the disciplinary exercise of power are counteracted by the clients' modes of resistance, such as subversive interpretations of staffs' arguments or narratives of resistance.

How and When Belongings and Living Conditions Is Made (In) Visible in School

This paper explores how and when principles of categorizing groups related to residential area and living conditions, are present and are of importance in educational and social relationships in school practice. The background to the study is that on the one hand, there is openness and a welcoming of immigrants in Swedish society and in schools, for example, through policy and political objectives. On the other hand, there are clear structural differences and segregation in schools related to the area affiliation and ethnic origin. Interest in gaining an understanding of and explanations for the ambiguity that emerges between policy and what happens in the school’s daily life have contributed to the study's aim. The aim of this study is to investigate and analyze whether, and if so, how and when students in a secondary school in a medium-sized town in southern Sweden, are identified and categorized in relation to the belonging residential area and living conditions within education and social relationships, as well as its relevance for pupils in school practice. The focus is on how the changing demands and social relations are managed, organized and perceived by different actors, when school is becoming a common arena for students from different areas and with different living conditions. The analysis is based on an ethnographic study based on observations, interviews and informal conversations in school practice. The study's result shows that pupils belonging and living conditions is made visible and contributes to categorization in certain contexts in school practice, while it is made invisible to categorization in other contexts, where other factors connects pupils to a group or network. It is also found that the different categorizations overlap each other.

Does Social Economy Really Constitute a Solution Against Poverty and Social Exclusion?

This paper examines the correlation between poverty, social exclusion and social economy at the local level. Particularly, it attempts to discuss the appropriate conceptual and theoretical models of social economy at the local level and to establish multidimensional poverty and social exclusion indices under a relative perspective.

The research question is: “Do social economy initiatives contribute to the fight against poverty and social exclusion at the local level and what is their impact?”. The analysis is based upon the results of both qualitative and quantitative research of selected areas in the broader area of Athens. More precisely, statistical data and the results of the focus group interviews with key informants, stakeholders and vulnerable people will be discussed with a view to focusing on the appropriate design of social policy and social protection at the local level.

Mass Media Representations Of Multifarious Violence During The Greek ‘crisis’ In 2013: A Qualitative Approach

The multifold violence observed during the Greek ‘crisis’ corresponds to the many-faceted character of the recession and to its intensity, as the country continues to reel under the shock of cultural, societal and political rifts. The following
presentation focuses on internal forms of violence and specifically on behaviours of suicidal or quasi-suicidal character. Our primary aim will be to outline the many different ways this type of violence is presented by the Greek media. The study has been conducted with a qualitative methodology utilizing content analysis, through the prism of which we examine the way internalized violence is represented by two of the mainstays of the Greek media, namely the press and internet. Specifically, we will introduce a number of popular blogs and sites with a high traffic volume of traffic and some well-known newspapers with a large reader. Secondly, through the method of qualitative content analysis we will focus on the construction between violence and social inequality and the diverse ways in which these social phenomena have been approached by the news information media. Thirdly, we will classify these representations on the basis of content analysis of representative excerpts from articles and reports on the particular self-destructive form of behaviour that has come to be associated with the ‘crisis’. Finally, we will analyse the ways in which the electronic and print media target the social status and ethnic background of victims.

**High Quality Education: Globalization and Problems of National Educational Systems**

Requirements of the Information Society and Knowledge Society determine the need for significant improvements, structural changes, shifting priorities in the social system. Such a trajectory of development is already represented not only in the education systems in North America, Western Europe, countries of the Confucian and Buddhist cultures but also in the Eastern Europe and Russia. While comparing educational systems of Russia and the United States primarily from the aspect of high quality education development there we can see deep differences between these systems that are connected with different historical traditions (national, regional and local education programs is necessary. Particularly sensitive should be the attitude of the state towards high quality educational institutions: it is necessary to take into account their specificity, to seek additional resources including financial in the form of various additional scholarships for the talented students, and grants to effectively developing educational institutions etc. and at the same time maintaining their maximum autonomy.

**Cross Country and Intergenerational Comparison of Income and Wealth using Luxembourg Income Study (LIS)**

**Abstract**

The aim of this paper is to analyse the income and wealth among the elderly (65-75 years old) and people in their prime age (35-45 years old) in a cross-country comparison. Which group is more likely to be at risk of poverty? The novelty of this paper is that includes not only the disposable income (defined as the sum of total revenues from earnings, capital income, private transfers, public transfer net of taxes, social security contributions and other obligations such as alimony) but also a proxy for the net wealth including the net value of the dwelling in the analysis. Within each age group, we will identify the subgroup most at risk of poverty (based on gender, citizenship status, education level). We selected the countries that have information on wealth from the last wave of LIS, centered around the year 2010: Colombia, Ireland, Israel, Italy, Luxembourg, South Africa and Japan (with available data from 2008). The paper will contribute to the existing literature through a cross-country comparative analysis of income and wealth from an intergenerational perspective.

**Factors Influencing the Careers of Young Scientists during the Period of Their PhD. En Ethnographic Case Study**

The underrepresentation of women in science and the question of reasons for their relatively frequent resignation compared to their male counterparts is a much-studied topic of increasing relevance. In this area there are – nevertheless very few ethnographic studies comparing various disciplines. This paper intends to show the potential of such a discipline-comparative, ethnographic study of doctoral students: With a focus on everyday practices the study researches embedded practices of gender differences and their gender codes, as well as differences in specialized cultures. Thus, a contribution should be made both to explain the proportionally higher exclusion of female scientists from academia compared to their male counterparts as well as for research about the professional culture.

In two ethnographic case studies, the production of gender disparity shall be captured at the level of everyday operation of scientific practices and in habitual actions. The participatory observation is supplemented by interviews. The focus of this investigation are the everyday practices of researchers, since we assume that a number of gendered and gendering practices and their incorporated implicit attributions, are not made consciously by the actors, but happen interactive.

The research examines scientific working groups, whose research is part of an excellence cluster. In particular PhD students in the subjects of physics and chemistry are accompanied through their academic life. Several factors have an impact on daily work and facilitate or hinder coping with the demands during the period of promotion. The studied situations were therefore divided into four categories: time, space, material resources, and social interactions. In all these areas, gender differences can be identified in both disciplines. Furthermore, differences are visible in the methods of scientific working of the two disciplines.

PEUCKER, MARIO* (The University of Melbourne, mpeucker@unimelb.edu.au)

Seeking a Voice: Muslim Organisations in Australia and Germany and Their Struggle for Civic Recognition

Post-war Germany and Australia have, like many other Western societies, seen the emergence of fragmented and heterogeneous Muslim communities. In both countries these ethno-religious minority groups have established a diverse landscape of community organisations, which used to be occupied primarily with the maintenance of their religious identity and internal community ties. This inward-looking nature of Muslim communities in Australia and Germany has begun to change, and more fundamentally, since the early years of the 21st century, triggered by partly similar, partly country-specific developments. An unprecedented number of community groups in both countries have sought to become recognised civil society actors, eager to contribute to the society at large, to engage with non-Muslim groups, media, governments and other opinion leaders and to offer a more accurate public representation of Islam.

This paper explores the motives, strategies and achievements of Muslim community organisations in Australia and Germany, based on extensive desk research and a series of in-depth interviews with Muslim community figures in both countries, conducted between 2011 and 2013. It argues that, while Muslims in Australia and Germany have shared (and continue to do so) similar experiences of social marginalisation, public questioning of their willingness to belong and increasing political scrutiny, their collective struggle for civic recognition has unfolded in different ways. The research findings suggest that Australian Muslim community groups have been much more successful than their German counterparts in utilising and expanding their collaboration and lines of communication with policy-makers and civil society opinion leaders and in establishing themselves as an important voice in the public and political debate. The paper concludes with a discussion of the reasons for these country-specific differences, identifying a combination of historical, political and social factors, including the divergent political opportunity structures and the different socio-economic resources of Muslims.

Tool, Toy or Therapist? the Relevance of Emotion Stimulating Robots in Elderly Health Care

Our main interest is the professional use of "social assistive robots" (Kolling et al. 2013). We call them "emotion simulating & stimulating robots" as they are praised in Japan for their "emotional effect". We use them as interactive robots with "highest therapeutic effect". They are used in Japan as a tool for elderly care. In Germany it slowly finds its way into elderly care institutions. According to research findings similar experiences of social marginalisation, public questioning of their willingness to belong and increasing political scrutiny, the collective struggle for civic recognition has unfolded in different ways. The research findings suggest that Australian Muslim community groups have been much more successful than their German counterparts in utilising and expanding their collaboration and lines of communication with policy-makers and civil society opinion leaders and in establishing themselves as an important voice in the public and political debate. The paper concludes with a discussion of the reasons for these country-specific differences, identifying a combination of historical, political and social factors, including the divergent political opportunity structures and the different socio-economic resources of Muslims.

Erosion of the Boundaries Between Public and Private – New Forms of Care Work in European Welfare States

The paper discusses the ways in which changes in the structures of care work in European welfare states can be analysed and explained. So far, concepts of dual terms predominate with respect to the concept of care, in terms of the comparison between public and private and between paid formal care and unpaid informal care. According to such thinking, care work takes either place in the private sector where it is informal and unpaid, or it takes place in the public sector where it is formal and paid. It is argued here that the clear embedding of care work into one of the two spheres can easily become a conceptual cul-de-sac and tends to hinder the recognition of changes concerning the informal care work itself.

Welfare states have established new, paid forms of semi-formal and formal care work. This analysis demonstrates that family policies alone cannot explain cross-national patterns for organizing child care, and that considering cultural models, family policies and socio-economic differences together leads to a more satisfactory explanation of the societal relationship between women's employment and child care.

PFALLER, LARISSA* (University of Erlangen - FAU, Larissa.Pfaller@fau.de)

From Users to Adherents – Anti-Aging As a Way of Life. Qualitative Interviews and Biographical Perspectives

At least since the founding of the AAM (American Academy of Anti-Aging Medicine) in 1993, anti-aging medicine has formed a discrete discipline, implementing scientific findings for purposes of prevention, early diagnosis, reversal or treatment of age-related changes and loss of body functions. In recent years, anti-aging has also been established in Europe, as the institutionalization of anti-aging medicine in Germany shows in an exemplary way. Despite the growing significance of anti-aging, its impact on the users' everyday life has hitherto been under-explored. This presentation focusses on users of anti-aging products and services in Germany and is based on 15 narrative interviews conducted in the context of the research project "Biomedical Life plans for ageing". The interviews show the profound impact of anti-aging on the individuals' biographies: Although users cannot observe the effectiveness of their practices, they are invested with biographical meaning. Therefore, it is supposed that the persistence and attractiveness of anti-aging practices goes far beyond their scientific persuasiveness. Within the reconstruction of the significance of anti-aging for the interviewees' biographies, the symbolic and emotional potential of the practices are to be examined: Anti-aging turns out to be an ideal staging ground for presenting oneself as a rational actor and a self-caring subject. Anti-aging can thus be described as a form of lifestyle that is committed to an ideal of scientific rationality and the moral values of individuality and responsibility.

The Sociological Discourse on Inequality and Social Class in France

The Sociological Discourse on Inequality and Social Class in France

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Over the past decades social inequality has grown in France, as in many other countries. Paradigmatically, however, during that same period the dominant discourse, both in the social sciences and politics, has tended to conceal this growing social polarization and to eliminate any reference to class. Indeed, since the beginning of the 1980s, sociologists and politicians have vied with one another to invent cleaned-up  and simplified expressions to describe the structure of French society. However, these substitute discourses were soon gaiamed by the growing social disparities prevalent within French society, and which existed in spite of the rhetoric which obstinately denied the reality of class. Indeed, in France, the notion of ‘class’ had, at best, changed and become more complex, but remained as present as ever.

This paper will, first, explain the background to this increasing social polarization of French society. This polarization is not unique to France, and can be found in varying degrees in most capitalist countries in Western Europe. The widening wage gap has had far-reaching consequences for all significant aspects of people’s lives, and a number of indicators converge which allow us to expose this tendency, and demonstrate the existence of a system of inequality characterized by segmentation, hierarchization and conflict. After this presentation, some thoughts will be put forward on the words and categories that are used in certain sociological theoretical frameworks. This alternative sociological discourse was pervasive between 1980 and 2000 and continues to be used today, even though it has long since been largely refuted by the facts. We will focus on the discrepancy between the rhetoric of these theories, which deny the existence of ‘social class’ and the undeniable reality of a growing polarization within French society.

**Women’s Empowerment As a Determinant of Fertility Change in Southeast Asia**

The fertility levels of Southeast Asian countries have been dropping dramatically since the 1950s. The case of Southeast Asia challenges classical theories on demographic transition, which suggest that economic development is the key to demographic changes, whereas, in Southeast Asia, even low- and middle-income countries have experienced rapid fertility declines long before the socio-economic development. This paper suggests a relationship between the empowerment of women and fertility decline. Despite decades of standing in the literature as one of the key indicators of social development, the concept and measurement of women’s empowerment has not reached a consensus. Women’s empowerment is a multi-dimensional concept, which includes measurements at both country and individual levels. At country level, measurements of women’s empowerment includes the percentage of women’s education in relation to men, percentage of female labor force participation, proportion of female in parliaments, and percentage of women’s holding manager’s positions. At individual level, women’s empowerment can be measured by women’s educational attainment, their involvement in household decision-making process (including fertility choices), contraception use, and employment status. Cultural factors such as son preference and preference for high fertility should also be taken into account while measuring women’s empowerment. Most studies have been looking at women’s empowerment in either at country level or individual level but not at a comparative regional level. In this paper, the key debates in the concept and measurement of women’s empowerment and the framework of relationship between women’s empowerment and fertility changes will be reviewed. Furthermore, the current situation of women’s empowerment and the amazing fertility decline in Southeast Asia will be examined. A closer examination of fertility change and women’s empowerment indicators in Cambodia, Indonesia, Philippines and Vietnam suggests that women’s empowerment plays a role in the region’s demographic change.

**Violent and Non-Violent Logics in Contemporary Greek Protests**

The research is focussed on crisis ridden Athens as radicalisation becomes accentuated during economic and political turmoil. I will analyse radical views of political activists based on 19 ethnographic interviews conducted with the creators of alternative urban spaces; migrants, anti-nationalists, anarchists, neighbourhood activists, and radical leftists. From the data discursive strands will be extracted about perceptions of state, society and the extreme right, constructions of oppositions, and refections on violence performed by themselves and others.

**background**

In the case of Athens the consequences of increasing cleavages and precarization by the ‘Euro-Crisis’ are drastic: intensified unemployment, bankruptcy, and impoverishment. At the same time, the metropolis has developed into a hub for migrants and refugees from Eastern European, African, and Asian countries. These two phenomena have turned Athens into a space in-between the Global North and South.

Athens resembles a militarised zone (Kurtovik 2013). The government is perceived as EU-dependent by most citizens, and chooses to demonstrate its strength by demarcating different groups as ‘deviants’ (Dalakoglou 2013: 30). Radical left and anarchists, as well as migrants and refugees, are constructed by the ruling parties as threats (Zenakos 2013): for public security (Philipp 2013), or as dangerous ‘hygromatic bombs’ national health (Parasagouli 2012). New011RPolytechnically and heavily-armed police forces are ordered to fight the ‘undesired’ objects. The increased establishment of far right discourses and neo-nazi-activism support this development (Philipp 2012).

The atmosphere of austerity and oppression has deeply influenced activist logics in this two groups: methods of protest become more extreme, constellations of alliances alter, and clashes between different forces intensify.

**presentation**

My presentation shortly outlines relevant historical circumstances before turning to the activists’ discourses themselves . Parallel activism of this two groups: methods of protest become more extreme, constellations of alliances alter, and clashes between different forces intensify.

Our preliminary results suggest that developed countries with the smallest achievement gaps are likely to have higher performing low-SES students, and high performing high-SES students. Preliminary results also suggest a relationship between income inequality, social safety nets, and gaps in student achievement. Because our work identifies social and economic contexts that contribute to achievement gaps, our study demonstrates both barriers and possibilities that influence academic mobility.

PHILLIPSON, CHRISTOPHER* (The University of Manchester, christopher.phillipson@manchester.ac.uk)

Ageing and Class in a Globalised World

Discussions about the role of social class in the lives of older people have often occupied a marginal position in social research into ageing. Despite the importance of themes linked with inequality and socially exclusive, the tendency has been to examine these only loosely through the lens of social class, with researchers often preferring to emphasise individual characteristics or life histories, other statuses (e.g. gender and ethnicity), or more general features associated with the social organisation of age. In consequence, social class has had limited influence on many of the concepts deployed to understand the lives of older people. This paper highlights the limitations of previous work and considers the ways in which these can be addressed. This paper focuses on the way in which social gerontology has developed. Would a fuller appreciation of social class add anything to our understanding of later life? To develop these points the discussion is divided into three sections in which the role of class has been minimised in studies of ageing; second, evidence for the re-emergence of class analysis; third, the importance of situating class analysis within the context of globalization and economic change; and fourth, the paper concludes with an assessment of possible developments in the application of class analysis to the study of ageing.

The New Political Economy of Generations: Social Class and Social Divisions in Old Age

Increased inequalities within nation states have influenced social structures in a variety of ways. For older people, one consequence has been greater differentiation within generations driven by contrasting experiences of economic recession and life course events. Generations, in western society from the mid-20th Century, were underpinned by near full employment, orderly transitions into and out of work, intergenerational mobility, and declining levels of inequality. These processes ground the idea of generations as a meaningful unit of analysis in studies of ageing; second, evidence for the re-emergence of class analysis; third, the importance of situating class analysis within the context of globalization and economic change; fourth, the paper concludes with an assessment of possible developments in the application of class analysis to the study of ageing.

Beyond Alternative/Conventional: Māori Worlds of Food

Within popular understandings of the food crisis, the global food system is often portrayed as a clear differentiation between ‘alternative’ and ‘conventional’. These two constructs generally distinguish between means of provisioning and consuming food according to narrow and readily measured economic, social and ecological criteria. This categorisation results in a strict dichotomy represented by antipodal views and explicit characterisations of value - what in terms of conventional theory would be organised within orders of worth. In fact, the reframing of popular understandings of the food crisis require a more open engagement with food (its production and consumption) that recognises the diverse sites of action at which change can be enacted and realised. Such an approach sees continuity from mainstream activities to the small individual, independent and value-oriented ones.

This paper uses the theoretical framework of regimes of justification from convention theory (Boltanski and Thevenot 1986, 2006) to elaborate a Māori world of worth in order to demonstrate the potential for marginal economies (Gibson-Graham 1996, 2000) to reframe popular understandings of food and society. Within the New Zealand context, there has been some ferment around Māori groups - a minority whose culture is based on the concept of sustainability as a cornerstone-who recently implemented economic activities around a western-values frame in terms of economic organization. Using two case studies, both expressions of the Māori community but with different approaches in terms of strategies, a reflection is presented on community organisation, food systems innovation and the role of market in food relations.

Who Needs Age-Friendly Cities? Exploring Representations through Participatory and Trans-Disciplinary Research

This presentation builds on the first two years of a six year participatory and trans-disciplinary research programme exploring what an ageing society means for the city (facts), what the latter could become (ideas / scenarios), what can be done (actions / what is feasible) and what should be done (ideals). The programme stems from societal concerns in the province of Québec (Canada) regarding the rapid absolute and relative increase of people aged 65+ and 80+, and the projected impacts this will have on collective services, manpower, and public as well as private financial programmes such as pension funds. It specifically examines how these concerns and trends might transform the city, including housing, mobility patterns, activities, services and the spatial and material form of the urban matrix. The methodology includes, on the one hand, more traditional research methods such as policy and research reviews, survey data analysis, qualitative case studies, fine grain studies of person / environment interactions, and, on the other hand, participatory, trans-disciplinary and trans-sectorial panels for scenario development and assessment. This presentation focuses on the wide variety of and numerous discrepancies in discourses and representations encountered in the process, and how old age is socially constructed through numerous power relationships shaping these representations and the interactions between discourses. The analysis confronts the discourses and representations of individuals, communities, experts and institutions in terms of what may be the core of what constitutes an age-friendly city. It illustrates the wide gap between normative discourse aimed at reforming and shaping the elderly through urbanism and the variety of ageing experiences, to the point that one must ask: “who needs age-friendly cities?” In conclusion, a word will be said on how participatory and trans-disciplinary research can contribute to reducing this gap and innovate in how we approach age-friendly cities.

Austerity and The University In Britain

Austerity and The University In Britain

Over the past decade, young people in the United Kingdom have been facing a variety of factors which have impinged on their opportunities to enter higher education and their chances of finding a job once they have graduated. Whilst the Conservative-Liberal Democrat Coalition Government has not been a sustained governmental policy to increase the participation of 18- to 30-year-olds in higher education (initiated by the Labour Government and continued by the Conservative-Liberal Democrat Coalition Government), the 2008 financial and the ongoing economic crisis resulted in the introduction of austerity measures following the 2010 general election. Notably, the Conservative-Liberal Democrat Coalition Government enacted a sizeable cut to public spending in higher education and it raised substantially the cost of annual university tuition fees starting in 2012-2013. At the same time, the rate of unemployment among graduates has been rising and getting a degree is no longer an automatic boost to one’s life chances. For many it results merely in unpaid internships and/or employment schemes.

This talk will examine British “youth in austerity” regarding prospects for studying in higher education and subsequently entering the labour market over the past decade. It will include young people’s responses to the recent decrease in higher education funding and increase in university tuition fees.

PICKARD, SARAH* (Université Sorbonne Nouvelle - Paris 3, sarah.pickard@univ-paris3.fr)

Divided and Ruined: The Failed Student Protests In Great Britain

The current decade has been marked by both the global economic crisis and a growth in social movements around the world spearheaded by young people. In particular, we have witnessed collective action – demonstrations, direct action and civil disobedience – regarding higher education. In Britain, there was a series of demonstrations and sit-ins in the winter of 2010-2011 about the Conservative-Liberal Democrat Coalition Government’s plan to cut dramatically public spending on higher education and to raise considerably university tuition fees. In fact, both of the policies were enacted and the ceiling on annual fees went up to £9,000 (approximately 1,500,000 JPY) in 2012-2013. Just after their introduction, a demonstration took place organized by the National Union of Students (NUS).
This paper considers the meanings young members of the ‘new far right’ English Defence League (EDL) attach to their activism. Based on an ethnographic study (2012-13) including interviews with over 30 grassroots activists, it argues that the movement’s trademark slogan ‘Not racist, not violent, just no longer silent’ denotes more than a cynical PR strategy. In contrast to a ‘politics’ they reject (understood as ‘debating’, ‘listening’ and ‘reading the Sunday Times’), participants in EDL actions provide young people with a way of ‘getting your point across’, ‘speaking out’ and ‘standing strong’. This, it is argued, is indicative of the experience of the political sphere by some young people as characterised by a ‘politics of silence’. In which ‘political’ becomes synonymous with the social distance between ‘politicians’ and ‘people like us’ and the legal and cultural circumscriptions on ‘acceptable’ issues for discussion. Drawing on Mouffe’s (2005: 6) argument that right wing populism has made inroads in those places where traditional democratic parties have lost their appeal to an electorate no longer able to distinguish between them in the ‘stifling consensus’ that has enveloped the political system, the paper traces the resonance of these tropes in the narratives of ‘the political’ among a broader sample of (non-activist) young people in the UK (based on representative survey and interview data gathered for the FP7 MYPLACE project of which the EDL ethnography is also a part). The paper asks whether the desire to engage in politics in a ‘loud and proud’ way might confirm Mouffe’s argument that a democracy that ‘works’ for ‘the people’ may not be one based on ‘a universal rational consensus’ managed through institutions that ‘recognise all conflicting interests and values’ but rather one in which there is a vibrant public sphere of political contestation (ibid. p.3)?

PILLAY, KATHRYN* (University of KwaZulu-Natal, pillaykot@ukzn.ac.za)

“Nation Under Siege from Foreigners?: Exploring Notions of Belonging and Exclusion in Post-Apartheid South Africa

South Africa finally became a democratic country in April 1994 after the first ‘free and fair’ general elections took place. A commitment was made by the ANC led government to ‘non-racialism’ based on a Constitution which was inclusive of all the ‘races’, accepting shared citizenship. In this paper I contend that even though the democratic state acknowledges South Africans of Indian descent as part of the national discourse, and continually affirms ‘their’ part in the national democratic revolution, it nevertheless still perpetuates the notion of essential ‘differences’ between ‘peoples’ which originated in colonialism, was entrenched further after the formation of the Union, and legitimised through various policies during apartheid. Even though the Population Registration Act (PRA) was repealed, the racial categories that were reproduced and legitimised by the Act still exist. ‘Race’ then continues to be an axis around which South African society revolves. I argue that the continuation of ‘race’ classification through legislated and bureaucratic guises perpetuate racialisation and ‘race thinking’, which is evident in self-perceptions and the perceptions of ‘others’. The argument is demonstrated by empirically examining how South Africans of Indian descent are homogenised and labeled as a separate and distinct group, and in addition how they are perceived as ‘a people’ or ‘community’ with fixed and essentialised identities and ultimately ‘belonging’ to another country, to which they could easily ‘return’, as evidenced by calls to ‘go home’ voiced at various points in time during the post-1994 democratic era. Empirical evidence will be provided to reveal how, as a result of this perpetuation of difference based on ‘race’, similar processes of othering and anti-‘Indian’ sentiment, reminiscent of the political eras prior to democracy, persist in public and popular discourse in contemporary South African society, and is exposed at various junctures.

From Being Excluded to Becoming a Triumpher: Higher Education Massification Policies in Venezuela and Their Biographical Meaning

In 2003 the Venezuelan government started to implement a variety of social programs known as “Bolivarian Missions”. These Missions addressed a variety of social problems that the traditional systems of education, health and social services had failed to overcome. The creation of these programs rapidly became one of the distinctive symbols of the new revolutionary government and the promise of a better life for the poor and excluded groups. In the education sector, different “Bolivarian Missions” offered literacy programs, basic education, high school and higher education for all. Over the years, these educational programs have been strongly linked to the political legitimisation and support of the government by those who have perceived the missions as a benefit. Official reports claim to have solved a historical debt with some marginalized groups of the country, which has shaped the lives of those who have been recently included to both the education system and the Venezuelan society as a whole. This article seeks to explore how this process of inclusion has been experienced by those who have been educated, which represents an important gap in the literature that deals with the Venezu-
environments or backgrounds may exacerbate the educational gaps, as well as, the implementation of a parallel offer to include students from disadvantaged environments. Sociologically, we can use insights from Bourdieu's work. I conclude that the conditions. This paper will reconstruct the creation of Venezuela's Mission Sucre and will analyze the paradox of inclusion in the Venezuelan context from a sociological perspective using insights from Bourdieu's work. I conclude that the implementation of a parallel offer to include students from disadvantaged environments or backgrounds may exacerbate the educational gaps, as well as, the social and political polarization in a system like the one under consideration. This analysis is based on my ongoing doctoral research and presents some reflections coming from the literature review, as well as my empirical work in Venezuela.

Subaltern Tactics and Spaces for Decommodification: Non-Institutionalized Political Practices in a Tokyo Working-Class Neighborhood

This paper draws upon a 2-year ethnography (2012-2014) in a Tokyo working-class neighborhood, with a focus on subaltern political practices. Building upon the distinction between the two meanings of the "political" (Claude Lefort, Études sur le politique: Manuel Castells, La Question urbaine – one related to the institutionalized sphere of the ruling, the other to the social system of power relations and its transformation –, subaltern political practices can be defined as practices that allow their actors, collectively or individually, to free themselves from such-rather-than-subordinate-positions in the net of power relations. Through this theoretical lens, one can observe an array of collective or individual political practices that contest, bypass or elude unfavorable power relations.

With the ever-increasing commodification of society, quite blatant in large cities like Tokyo, domination often make oneself feel as economic domination. In this context, subaltern political practices take notably particular tactics (Michel de Certeau) aiming at getting loose from economic dependencies through the building of small and frequently temporary autonomous spaces.

Since these dependencies are experienced more strongly as we go down the social ladder, this paper will discuss tactics devised by homeless people living in the area I'm engaged in, before showing that practices that are most easily discernible in this radical life-situation can also be noted among working-class neighborhood inhabitants. Urban agricultural practices found among homeless groups and individuals as well as in working-class neighborhoods are an especially interesting case. Growing their own food allows the persons involved to build a small autonomous space, both real – one get a fair amount of "free" food – and symbolic, as they constitute de-commodified spaces in which other types of relations and non-monetary practices can take place (exchange of seedlings between homeless groups, fruits and vegetables' gifts to visitors or neighbors...).

Leisure and Family: A Mutually Supportive Relationship

W. H. Davies in his lovely poem "Leisure" states the wonder of a life worth living where one has no time for leisure, why we are so full of worry that we can hardly steal little time to stand still and watch the world go by. What is this life if, full of care we have no time to stand and stare. No time to stand between the boughs and stare as long as sheep or cows. No time to see, in broad day light streams full of stars like skies at night. A poor life this is if, full of care we have no time to stand and stare.

The loneliness and isolation of an individual has been a persistent theme in twentieth century. We were all born social and need company to live a happy and fruitful life. The institution of family has been with us with a set of cultural patterns. Among these, the oldest pattern of socialization (i.e. campaign to save a park or against privatization of a public space) with radical anti-capitalist ideology.

Essais sur le politique

Leisure time not only builds the self esteem but also self confidence of an individual member of the family. They start sharing a very strong bond with each other which becomes irrevocable. Sensitization towards emotional situation tends to become easier.

Leisure time not only builds the self esteem but also self confidence of an individual member of the family. They start sharing a very strong bond with each other which becomes irrevocable. Sensitization towards emotional situation tends to become easier.

Abstracts are organized by first presenting author's last name.
This paper is based on ethnographic fieldwork conducted mostly in Poland, also in the Czech Republic and Hungary where I collected numerous in-depth interviews with squatting activists, made several participant observations and analyzed media coverage (both mainstream and activist / independent media). In the paper I want to focus on the intersections between the radical squatting movement and moderate movements such as tenants movement to show the transformative power of the squatting movement on other actors. I will be basing primarily on two case studies from Poznań and Warsaw complementing them with examples from other countries from Central and Eastern Europe and the results - in my opinion - can be addressed to other developing societies.

Youth Social Movements and Democratization

In mid-1980s Central and Eastern Europe have witnessed an interesting aggre- gation of anti-communist struggles. Parallel to the pro-democratic dissidents new movements populated by young people and connected to youth subcultures have emerged, in particular the anarchist and environmental protection movement. These new movements were not only inspired by groups from Western Europe and the US but were also an expression of critique of the dissident movement slowly shifting to (neo)liberal positions and loosing the touch with the workers base as well as with the young people whose demands (i.e. regarding compulsory military service) were largely ignored. These newly emerged movements were capable of bridging structures and agency in an unique way.

The popularity of these youth movements partially lays in attractiveness of the subcultures that were the vehicles of the new ideas and not in the topics they were bringing. Moreover, this subcultural-political connection seems to have an impact on todays radical movements making them mostly a young people’s domain and activity. This has far-reaching consequences and recent mobilizations in the region (anti-ACTA protests in winter 2011/2012, many protests in Bulgaria in 2012 or the earlier alterglobalist mobilizations) prove the point that coalition-making possibilities and support from other actors are limited.

The paper is based on long-time research and fieldwork among social activists (alterglobalists, anarchists, environmentalists, squatters) and former dissidents that took an active role in the 1989 transformations for various research projects. Empirical data were collected from in-depth interviews, participant observations and from movements’ publications (printed and online) collected over the years.

Potential, Strength and Weakness of Argentinian Social Sciences to Analyze Contemporary Society

This paper attempts to describe the current state of the Argentinean social sciences in terms of institutionalization, research capabilities and agenda. It is framed within a research program called PISAC, implemented by the National Council of Social Sciences and co-financed by the Ministry of Science and the Secretary of University Policies. PISAC has three main objectives, each one linked to a specific research project: a) a critical assessment of the Argentinean social science system (institutions, agenda, researchers’ profiles, publications, etc.); b) a review of the research findings produced in the last decade with a critical assessment of the Argentinean social science system as they simply address social issues differently. Thus, new social movements (as well as Internet and single-issue activism, etc.) are considered to be new platforms for creating social movements.

This paper is based on case study of ethical-moral values promoting animal rights movement in Estonia. A youth group that consists of politically minded young people who actively participate in and address different issues of the society is the main focus. The paper explores the importance of social movement activism in sphere of political participation. Especially, it first analyzes how young people perceive their participation and role in society. Secondly, how young activists address political issues through social movements. And thirdly, what challenges they face when participating in socio-political sphere through social movements. The empirical data set includes opened-ended interviews and informal conversations as well as participant observations and secondary data sources.

Orthodox Online Communities in Social Russian Nets As an Object of Social Research

Social nets is new social communication environment and the majority of people are involved into them all over the world. The leader among existing social nets in Russia and Russian-speaking area is Vkontakte.

In the social net of Vkontakte there is an orthodox audience which consists of approximately 10% on the part of active audience of this social net. The most active and numerous representatives of the orthodox audience are three age groups which expose relevant portraits of the orthodox audience in Vkontakte: under 18, 18-24, 25-34 years of age.

Communities in the social net is main communicative core around which users’ interests are formed. For our purpose all orthodox communities in Vkontakte can
be divided into four groups: communities of general orthodox theme, communities where the main content is presented by the quotations of revered fathers and modern members of clergy, and also parables and cautionary tales, issue-related communities (question to priests, for youth, family, devoted to beneficence, etc.), and at last territorially united communities (the communities of bishoprics, youth orthodox organizations, etc.).

Each orthodox group in VKontakte and its own unique target audience on the basis of which the group administration chooses content: by format (articles, news, fillers, quotations), by form (text, photo, audio, video), by the functionality of VKontakte social network (discussions, meetings).

In orthodox communities VKontakte the model of social interaction 'online-offline' is actively developed. Within the framework of this model the participants of communities are informed about offline events running (rapidly erected temples buildings, beneficence, meetings with interesting people, etc.) via VKontakte functionalities (messages, meetings). Due to communities participants high degree of loyalty the information about future events is spread by 'virus' method by the means of likes and repost system.

The Fourth Paradigm

The paradigm shifts which featured the systemic thinking from the 1980s to the end of the last century and the very beginning of the 21st lead to some radical epistemological changes at the crossroads between communication sciences and sociology. This paper on one side reconstructs the key paradigm shifts in system theory from the whole/part one (P1) to the system/environment one (P2) and then to the autopoietic paradigm shift (P3). Kuhnian normality was rather unlikely in systems theory and still the key global economical, technological, social challenges of our times required revolutionary shifts. The other side of this paper is essentially focused on theorizing a fourth paradigm shift which selects the key paradigm shifts in system theory at the crossroads between communication sciences and sociology. This paper reconstructs the key paradigm shifts in system theory from the whole/part one (P1) to the system/environment one (P2) and then to the autopoietic paradigm shift (P3). RC09-176.6

PITASI, ANDREA* (Gabriele D'Annunzio University, profpitasi@gmail.com)

“Hypercitizenship” and the Evolution of a Global Identity

The idea of the citizenship moves from the consideration of autonomous agents and global flows eventually converging by means of autopoietic systems. This work reframes the topic of the reconfiguration in the evolving social scene. Within Pitasi’s concept of HYPERCITIZENSHIP, sketched out by designing a multidimensional and multipolar convergence among different kinds of citizenship.

With its four conceptual dimensions, Hypercitizenship, features the strategic attitude of those areas in which capitalism is turning into turbo-capitalist capitalism. Its main features are the following: Cosmopolitan, scientific, societarian and entrepreneurial.

The Hypercitizenship concept is focused on the fact that communication about key challenges of our times is increasingly meaningful communication and public understanding of science and technology for governance and policymaking on a global, global and cosmopolitan scale.

From this point of view, law becomes one of the à la carte products to be bought by browsing a global “catalogue” (Mundus) surfacing on a technological global platform (Globus) of which the internet is the best metaphor and which can be seen as the most important platform for convergence developments and as a driver of several, key, changes. This new media platform is cosmopolitan and global while the mass media often still fall into the methodological nationalism trap. Indeed, the emerging scenarios are more and more shaped by supranational (UN, EU, NAFTA) or multinational (Standard & Poor’s, Moody’s…) entities and by new localisms which cannot survive outside a global network.

Thus, the emerging glocality is witnessing that the “national state” citizenship is too big -bureaucratically speaking-, but too small -in competitive terms-, to be strategic in the merging scenarios.

Hence, the importance of a new conception of citizenship in the glocal age is rising, which we refer to as “Hypercitizenship”.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The global financial sector still has very little regulation over its capacity to manufacture money (or to refrain from doing so), even though the credit crash occurred nearly seven years ago. Many hopes are placed on central banks but surely they have been forced to play an ‘unfair game’, as Hyman Minsky said years ago. This paper investigates ‘independence’, not only as a sociological misnomer, or a form of central bank ‘dependence’ on what financial markets think (as Fed officials are often blunter about), but also the effects of central bank quantitative easing since the crisis. The Fed’s QE has enormous impact on most other economies. The ECB members say) but also the effects of central bank quantitative easing since the crisis. The Fed’s QE has enormous impact on most other economies. The ECB

How Can We Characterise National Sociologies?

This paper presents findings related to the design and use of an evaluation instrument developed for the detection of risks and barriers in a sample of housing provided by the State of Chile, using objective and subjective techniques. (Di-rect observation of performance of Basic Activities of Daily Living, (BADL), focus groups regarding findings and dimensional evaluation both of users and spatial conditions), Findings reflected barriers and risks mainly associated with Mobility, in around 30% of BADL operations, due to inadequate object and or architectural design mostly related with height, presence of uneveness or lack of elements.
National sociologies are often referred to, either directly or implicitly, but the methodological basis for doing this is normally taken for granted rather than discussed, and relevant data are not evaluated critically. The commonest formulation is probably in terms of the thought of those identified in ways not specified as leading national social thinkers, though there are also some cases where the contexts of national journals (identified as such in ways not specified) are treated as sufficiently representative to be used. There are also problems about what to define as the nation. What if the state and its sociology are divided in important ways, for example by having different language communities? What if the sociological work done within state boundaries is closely integrated with sociological work done elsewhere, or significantly influenced by the work of recent immigrants? Such questions raise issues about what could be defined as a national sociology. This paper explores the practical possibilities of empirical work on the characteristics of national sociologies as variously defined, giving special attention to some sources which have not commonly been used in this context.

Public Trust in Health Information Sharing and Health Systems in the United States: A National Survey

Background: The U.S. Institute of Medicine’s Report, Digital Infrastructure for the Learning Health System, calls for “weaving a strong trust fabric” among stakeholders, including the general public, to facilitate broad data linkage and sharing. The texture and quality of this “fabric” is understood, particularly with respect to attitudes and beliefs about information sharing held by non-experts. This presentation adds to a growing body of trust research by measuring trust at the individual, institutional, and system level. It examines four key dimensions of trust—fidelity, competency, integrity, and global trust—and key determinants such as awareness, beliefs, and previous experience. Methods: To understand the dynamics of public trust in broad data sharing as a common practice in the context of the U.S. health system, we are administering a 232-item questionnaire (n=1000) using probability-based web panel designed to be representative of the United States and administered by the GfK Group (formerly Knowledge Networks). Findings: Preliminary results from a pilot survey (n=500) indicate that 60% have a somewhat or generally favorable view of information sharing among healthcare providers, hospitals, public health, and insurance companies. 62% feel that it is fairly or very likely that the quality of health care will be improved with increased data sharing, while 49% see health information sharing as likely to benefit personal health care. Most feel that the health system is inadequately regulated (54%) and that the system would be improved by monitoring by independent oversight (63%). Discussion: The public’s trust of technological change that promotes information sharing in the U.S. health system is not a foregone conclusion. Understanding the nature of the public’s skepticism and uncertainty about the risks and benefits to themselves and their communities of interest can inform future development of information governance and data brokerage.

PLUESS, CAROLINE* (Nanyang Technological University, pluess@ntu.edu.sg)

Cosmopolitan and Essentialized Socialities in Transnational Spaces

This presentation forwards the new analytical concepts of cosmopolitan and culturally hybrid, and culturally essentialized, socialities. This is to account for the access to professional, family, and/or friendships/lifestyles resources of 25 Chinese-Singaporean transnational migrants—who lived in Hong Kong—in their respective transnational spaces, which they formed by subsequently living in several countries. For these two focal groups, I analyse the way of life and changing character of access and non-access to the resources of different contexts-of-interaction in different places and societies because they merge both, the two basic forms of contact culture (adaptation or differentiation), and social relations of reciprocity, trust, collaboration, and exchange. This presentation will show that the Chinese Singaporeans’ explanations of their practices (or lack of practices) of these two forms of accounts for how they perceived of changes in their own characteristics, in the dominant cultural characteristics of their transnational spaces, and of the cultural characteristics of processes of globalization that the Chinese Singaporeans were carriers of. Emphases are on the role of the cosmopolitan cultural characteristics the Chinese Singaporeans acquired through bilingual education in Singapore to establish cosmopolitan socialities in their contexts of work and friendships in Hong Kong with English-speaking people who were form the West, and Asians who had lived in the West; and ‘cosmopolitan’ work socialities with colleagues in mainland China (the PRC). However, the Chinese Singaporeans mostly maintained essentialized socialities in their families, and they were largely excluded from the (differently) essentialized socialities of local Hong Kong people, compelling them—paradoxically, to more highly values cosmopolitan socialities with other non-locals in their contexts of work and friendships.

PODLESNYA, MARIA* (St.Tikhon’s Orthodox University, yamapa@yandex.ru)

The Models of Orthodox Christian Parishes within Post-Soviet Russia: The Influence of Social Environment
Vast reconstruction and building of orthodox churches in Russia is a new architectural landscape of modern Russian cities as well as forming of separate social establishments - parishes and their communities. Such communities are various and have own features demanding on different factors (mainly of territorial and administrative character).

The sociological researches within Kashirskoe and Nikolaevskoe deaneries afforded an opportunity of distinguishing the orthodox parishes models, which develop as a result of religious activity of last several decades.

1. **“The churches with elderly communities unclosed in soviet period”**. The core of such communities is formed by aged people - as a rule, women and old-timers of church who remember the life of parish in soviet and relating to perestroika periods. The characteristic feature of such churches is a presence of several generations of congregants: those who were in the church in soviet times and those who came there in post-soviet period;

2. **“The parishes with constantly varied community”** are typical for churches at hospitals, shelters and prisons where there is a frequent change of congregants looking for mysteries and services of Church;

3. **“The churches in holiday villages with cottagers communities”** and “The guest church”;

4. **“The parishes with the community of “the active”** are formed around an enthusiastic and active priest, who unites people of the most diverse age and social rank;

5. **“The parishes of specific destiny”**. There are parishes which are known for their unparalleled features, as for instance one of Sati-no-Russkoe of Nikolaevsko deanship: here we find both the deposition of respected warrior Evgeny Rodionov (numerous groups come to his resting place), and complicated reconstructed building of the church against the background of luxurious houses raised around and even its own parish tragedy - the murder of a priest.

*’seduction’: A Pattern of Interpretation*

My talk centres on the ways in which experiences of sexualized violence are dealt with biographically; an experience of violence, which, in the context of National Socialism, for the biographer was raised to the fear of being killed. This fear of being killed is an expression of the real – and fantasized - potential of their National Socialist parents to annihilate experienced by children. The biographical case construction I want to present concerns the life story of a woman born in 1928. Her socialization took place in a family with National Socialist values and within Nazi institutions, and she experienced sexualized violence as a child, by her father and a priest. Based on the diary written by the biographer from 1944 to 1954, and on her life story told 60 years later, I want to show in which manner the biographer addresses her suffering from sexualized violence and her past experience as a young National Socialist believer in her diary, and to which discursive patterns of interpretation her discussion of these issues is bound. My particular focus will be the interpretative pattern of ‘seduction’, which is structured along gender relationships. With it, the biographer manages to work through her experiences of sexualized violence as well as to embed her National Socialist convictions into her biography after 1945. It is important to take a closer look at two aspects: in which specific way does this pattern of interpretation unfold over the course of a life? And in which way does it enable her to speak about her experience? The pattern of interpretation of ‘seduction’ allows her to discuss the charged experience of sexualized violence, but also to obscure and to deny her own participation in Nazi society as a teenager, as well as her fear of being killed.

*Asian Prosperity and Inequality: Gains and Injuries of Success*

During the past decade or so, the Asian region has experienced rapid growth and expansion. While rising prosperity has led to poverty reduction, social inequality has also widened within and across societies. This paper will interrogate and differentiate the drivers of growth and inequality and its varying consequencen to different income groups in the region. In particular, a sizeable lower middle class is fueling the growth of urban economies. By examining the differential gains of economic success within and across income classes, particularly among the emerging middle class, the paper characterizes the intersecting/interwining social injuries of prosperity, poverty and inequality. In doing so, the paper extends the understanding of injuries of income inequality from the physical to the social and political.

*Shifting Spaces of Hope and Power: Facing Increasing Inequality and Crisis in Asia*

For the past two decades, the Asian region has experienced rapid economic growth. While countries like China, India and Thailand have reported double digit growth rates in their economies, the region has experienced increasing poverty and inequality. Complicating this contradiction is the region’s high score in the Global Risk of Hotspots for Disasters (2013 Global Risk Index). This paper will discuss the region’s challenges and responses to this multi-dimensional crisis, highlighting the varying contexts of inequality among countries in the region and their social innovations.

POKROVSKY, NIKITA* (Higher School of Economics, nikita1951@yahoo.com)

*Cellular Globalization and the Environmental Awareness in Rural Communities*

A multidisciplinary team of social scientists (sociologists, economists, social geographers and demographers from main Moscow universities under the auspices of the Society of Professional Sociologists) works in the Russian region of Kostroma in the background of large in size West Virginia and has a population of 800,000. 70 percent of its territory is virgin forest. The Soviet era industrial plants in Kostroma have gone out of business, leaving Kostroma’s environment as the region’s main asset. Despite the region’s seeming isolation from the flow of globalization, a process of “cellular globalization” (Pokrovsky, 2008) is subtly but inexorably changing the character of the region. This process is changing traditional rural ‘solidarity in despair and poverty’ towards recognizing wealth as a value. Against this social background one can indicate the growth of rural communities made up of the migrant residents from big cities who decided to move out from megalopolises in order establish a new environmental Utopia based on the value of ecological balance and downshifting. In the countryside ‘new re-colonizers’ continue their basic professional work through Internet and telecommunications, they make use of all modern commodities of life, they travel much on business—they are on the move or in the condition of ‘liquid mobility’. Those new ‘infocommunication settlers’ (ICS) exemplify a much higher degree of social solidarity and vitality as contrasted to the deteriorating solidarity of the traditional population of the region. Is this an early evidence of the forthcoming general turn to ‘infocommunication ruralism’ in the spiral trajectory of social change?

POKROVSKY, NIKITA* (Higher School of Economics, nikita1951@yahoo.com)

*The Tale of Two Projects: The New Trends of Post/Counter Consumption in Russia – Visual Case Study of Yuri Voiceysky-Katchalov Estate Project in the Vologda Region and the Ugory Environmental Project in the Kostroma Region*

The modern Russian history provides examples and trends in the evolution of consumption among the upper and middle class. Trend, tentatively called the “Abramovich’s case” is still showing examples of Byzantine luxury. A new trend is characterized by the removal of (a) the demonstrative signs of wealth, (b) the desire to transform it into humanitarian programs. The paper analyzes the visual indicators of the “Manor Khvalsevskoe” - restored by the famous financier Yuri Voiceysky-Katchalov (“Standard bank”), the family estate of the 19th century in the Vologda Region in northern Russia. The visual analysis demonstrates social implications of the concept laid in the foundation of this project and its manifest/ latent consequences including those of architectural design preferences of the 19th century and today. The second case, the Ugory Project in the Kostroma Region, which has wealth than in the past. But the most advanced villagers already realize the significance and value of the ‘old style’ living. A new migration force is about to radically change the profile of local community life but tends to preserve diverse ‘indicators’ of old times. The dramatic crisis of urban life enables sizeable groups of middle-class professionals and IT-experts to consider moving to environmentally balanced areas in the North of Russia.
Informality and Policy Making: Evidence from Post-Socialist Spaces

Informed by participant observation in public places, informal interviews and a large-scale survey this paper explores the way informal practices may impact policy making in the post-socialist region with case studies drawn from Lithuania, Poland, Russia, Ukraine and Uzbekistan. It offers a new perspective on what we have termed as a "culture of corruption" to introduce the concept of (non-)state socialism, defined as a system for redistribution of welfare based on human interaction. Such an agency, replacing state agency where and when this latter is ineffective or absent. Non (state) socialism refers to the fact that informal practices of redistribution are so complex, and comprehensive, that they may be seen as an alternative, and more equitable, system functioning parallelly to state-driven welfare distribution. When a substantial number of actors engages systematically with informal economic practices, the alternative system generated may be seen as persistent and unofficially reshaping national policies, especially when not tailored for a given context, place, or category of citizens.

By doing this, this paper proposes a differentiation of corrupt practices: those harming the state (like fraud or bribery) and those harming the fellow citizen directly (trafficking, narco-trafficking). Although both "illegal" the first one might allow redistribution of welfare in areas where the state is absent or ineffective. Survival of such practices lies in lack of strict control by the state, that lets the citizens relatively free to act. When this happen, even if the state is not effective, the society re-regulates itself and there is no need to put forward political or economic claims. However, when an ineffective state tries to control too much, the main effect could be to boost deprivation without proposing any viable alternative.

The study explores trajectories of migrant inclusion and exclusion in Belfast, Edinburgh and Wroclaw – the three economic centres in the two post-2004 migrant destination countries. Northern Ireland (NI) and Scotland became net in-migration countries in the early 2000s. A significant share of their immigrant population is composed of workers from Poland – a country that itself is becoming a destination for a growing number of migrants.

Previous literature has developed different conceptual understandings of migrant integration into host societies. However, there has been less research about critical biographical junctures at which individuals stop being migrants and become settled in their various communities, migrant and host. By taking a leap into migrant workers' subjectivity, this study investigates, through the analysis of in-depth interviews, how migrants develop and negotiate their belonging and sense of place, and how their understanding of what home is evolves over time. It builds on previous studies on migrant settlement but adds to it by exploring qualitative differences in settlement thus arguing for a more nuanced understanding of the concept that sees it not as a state but a changing process with variant shapes. The study also tries to explain how different settlement trajectories are affected by the nature of employment and the import of political economy.

The aim of the paper will be to present our proposal of analysis that links the emotional intensity these experiences have and the importance of incorporating this dimension to the analysis, our objective will be to show how emotions motivate, discourage, radicalize and generate new outcomes out of the experience of struggle, giving a new meaning to the experience of protest. In order to do this, we will analyse the role of emotions in crucial moments of the protest in which people decide to take part in the struggle and define themselves to it, changing their way to see the world and their relationship and bond with other people in a process that leads to transformations of consciousness and behaviour and, finally, to their empowerment.

Based on previous empirical research where we have studied different experiences of movements, protest and resistance in Spain and Mexico (indignados, #yosoy132, two Oaxaca's women collective, Mexican anarcho-punk movement and a few resistances against dams and environmental conflicts in both countries) we propose an analysis that inverts the look to ordinary people who participate in these experiences in order to understand their deepest and least visible dynamics which macro-structural literature cannot perceive. The methodology that we have

The 1978 World Cup in Argentina, from within Its Political Prisons and Clandestine Detention Centres

Situated at the crossroads between the study of political repression and the media coverage of a sports event, this paper focuses on the reception of Argentina's 1978 World Cup among those who were imprisoned in clandestine detention centres, in a political context that some have described as state terrorism.
developed throughout our research is based on depth interviews, life story telling, focus groups and narrative analysis of the biographical material.

All in all, we want to prove that the emotional dimension is vital to understand and analyse the change of worldview that ordinary people experience when participating in protest and resistance; as well, it leads to a change in the perspective where protests are seen.

POMA, ALICE* (UPO and EEHA-CSIC, alice@upopoma.com)
Local Resistances and Social Change. How Local Environmental Protests Lead To Citizens’ Empowerment and Democratization

Currently, thousands of communities and collective groups all over the world are struggling to defend their territories from devastation which leads to the construction of railway, energy and hydraulic infrastructures, only to mention a few. Both in Europe and Latin America, the complicity of the institutional left wing, engaged in the construction of infrastructures and in the limits of the transnational social movements focused on following the agenda of power rather than the problems of the local communities, has led to the emergence of thousands of autonomous experiences of struggle that arise from below.

In our article we will show that these experiences are social and political laboratories where self-organized citizens are experimenting new political practices and are also proposing new discourses, turning these resistances to defend their territory into experiences of democratization, political participation and empowerment.

Focusing on the subjective dimension of protest, we will show the role of emotions, such as place attachment, motivation to action, participation and radicalization of discourses and practices, in order to describe how the experience of resistance produces a transformation of consciousness and behavior.

We will base our analysis on an item of empirical research carried out during experiences of resistance in Spain (the struggle to defend the Riohalo valley and the Grande river) and Mexico (the struggle against the reservoir of San Nicolas) all of them analyzed with techniques of qualitative research. The approach selected has been from below, in other words, centered on the experience of participants and activists of local communities.

Finally, what we intend to highlight is that these resistances are struggles for a significant democratization of territory and resource management, and eventually, of society.

Gender Roles In Television Commercials In Asia

Television advertisements are a rich source of data for social scientists to investigate because they can be seen as a reflection of prevailing cultural values. Gender value is also one of the critical factors in developing marketing strategies via advertising messages.

Advertising gender role stereotyping has been a prominent topic in literatures since the 1970s. Over the past decade gender stereotyping in television commercial...
An “Area Studies” Program in France: Scientific, Institutional and Geopolitical Rationales

Institutionalizing and developing “area studies” programs are commonly associated with the Cold War context, while the strengthening of knowledge about foreign areas became a goal of public research and educational policy. These developments came within scientific, academic and geopolitical rationales. Their importance could vary according to the strength of the national intellectual traditions in studying specific foreign areas, the connexions between disciplines, and the need for expertise due to the position of a particular State in the international relations. In the case of the US, these evolutions have less explored for the Western European countries, and that would allow probing their particularities. The paper focuses on the set up from the mid-1950’s of the Area Studies, and particularly of the Russian and Eastern Europe Studies, by a specific actor of the French academic field: the 6th Division of the College des Hautes Etudes. Outlining the national and international conditions determining such a process, it also points out the particularities of the local (academic, scientific, political) context and of its main initiators’ background. Thus, it questions the specific path taken by the implementation in France of this new scholarly infrastructure. Furthermore, the paper takes into account the social, professional, political characteristics of the team initially recruited for working on a “sensitive” geopolitical area and their productions, while it explicates the scientific content of research, documentation and teaching programs. They are meant to implement interdisciplinary approaches relying all the same on various disciplines, which were differently connected to the State and political power. Finally, the paper questions how the knowledge elaborated in this framework was placed in relation to approaches implemented by pro-communist committed social scientists and to what extent it could be itself of use not only in the academic milieu but also in political and economic circles.

Generation and Reproductive Health in Newfoundland

This paper presents a linking piece between a comparative study of the Reproduction in some Latin American (Porto Alegre, Brazil) and Indonesia (the proposed study on how gender is negotiated between generations in transnational families. In this paper I look at the particular experience of negotiating ideas about sex and reproductive health between three generations of families in the province of Newfoundland in Canada. The eldest grandmother participant was born in 1910 and the youngest granddaughter in the mid 1980s, which provides a broad historical perspective to their experiences. More interesting is how the grandmothers, mothers, daughters and granddaughters negotiated their changing needs and opportunities and how they balanced tradition, duty, affection and innovation.

Sustainable Consumption Among Brazilian Young: Daily Practices and Political Participation

Several evidences point to changes in Brazilian consumption practices that might be interpreted as a growing greening and politicization of consumption, similar to what has been occurring in other countries. In this process, consumption practices are perceived and used as a way of political pressure to improve social and environmental conditions. In this article we present the results of a research aiming to map political consumerism phenomena in Brazil, focusing on young people. The research was divided into two different methodological phases, a quantitative and a qualitative one: (1) a survey conducted in 2010 among 457 young people aged between 16 and 25, belonging to upper, middle and lower middle socio-economic segments, all living in the two biggest cities of Brazil, Rio de Janeiro and São Paulo; and (2) a focus group with a total of 51 young with the same socio demographic characteristics, conducted in 2012. The research shows that involvement in sustainable consumption among young people in Brazil is low. It can be explained, partially, by the way that young people in Brazil remain under the influence of the family much longer than in Europe and North America, and therefore do not have to perform household tasks or face the dilemma of making consumption choices at their daily lives. It also can be explained by the importance and activism of Brazilian social movements that are responsible for many social changes, thereby rendering individual action in daily lives secondary. We finally point to another relevant cultural aspect of Brazilian society, namely the way that individuality and a sense of responsibility are formed. We conclude, therefore, that while global tendencies may be identified in many countries, the way these developments depend on the institutional configuration of each society.

An Epistemological Look at the Concept of Transnational Families

The study of transnational families is a recent one, and although many contributions have been produced in the last decade, it is still necessary to look at the theoretical and epistemological characteristics of the concept. Transnational families are not only an outcome of family member's strategies, but they are also part of broader transnational dynamics particular to global capitalism where a hierarchy of mobility rights exist, depending on skills and talents. As stated in recent literature, the constitution of transnational families is part of contemporary mobility trends. But the use of the concept presents some difficulties that in my point of view need to be addressed. First, it's hard to find a unique definition general enough to take into account the diversity of families (different migratory conditions have to determine its boundaries; for instance, to determine who are involved in the transnational family practices. Second, the predominance of the network's approach (informal connections, remittances, individual strategies)
 overlooks other important structural elements, such as the role played by public policies. Third, the evident prevalence of a posteriori perspective in the study of transnational family ties makes it difficult to deeply understand their sociological production; in particular the institutional framework that produces, or at least encourages, the separation of family members. Hence, I strongly consider that we must enrich the knowledge about transnational families by adding a solid background from the field of sociology of the family, instead of only the background from migration studies. Despite their local and culturally determined roots, some contributions related to kinship, parenthood, maternity and patriarchy are essential. Also, we must include the contribution of gender studies in order to better understand individual and collective experiences of participants, men and women. This epistemological view will thus increase the heuristic value of the concept of transnational families.

PORTILLA, HILDA JOYCE* (University of Ottawa, hiportilla@hotmail.com)

"Transnational Families" Analysed through the Intersectional Prism

This communication stands at the crossroads of the sociology of migration, the sociology of family, and the sociology of gender relationships. It focuses on Latin American women and men who migrate unaccompanied to Canada for a given period of time, as part of specific government-sponsored temporary work programs for "unskilled" workers. The participants work in Canada, usually for many years, as either live-in caregivers (mostly women) or as agricultural seasonal workers (mostly men). As a result of a significant increase of temporary immigration in Canada and a more restrictive and selective law for permanent immigration, we have observed the creation of a permanent-temporary labor migration dichotomy. Thus, the migrant experience and the relevant life-challenges that both groups face are not the same. Literature review, forums and other related migrants' activities show that one of the most important challenges faced by temporary workers is the configuration of transnational families, particularly because they are not allowed to bring their families to Canada, as permanent immigrants do. In fact, in addition to a global hierarchy of mobility rights related to their professional skills, many other factors determine the transnational families' lives: differences in legal status; their access to resources, mobility and lifestyles; their origin or ethnicity; their age; their gender, etc. The intersectional approach will allow us to include the diversity, complexity and analytical challenges of this particular contemporary phenomenon.

Incivility and Disorder in Urban Public Space of the Czech Republic: Normativities and Instrumental Interests

The paper focuses on the changing definitions of incivility and disorder in urban public spaces of the Czech Republic. After the fall of the totalitarian regime in 1989, the notion of urban public space as a site of social interaction, negotiation and conflict appeared, first legally defined in 1990. The following years saw a process of negotiation of the limits of acceptability in urban public spaces. The terms disorder and incivility were employed by various actors, including courts of justice, local municipalities, activist groups, NGOs and the media, to define acceptable conduct and exclude undesirable elements from the newly emerging public spaces of Czech cities. This paper focuses on how the meanings of disorder and incivility were defined in the process. Two perspectives are identified in the discourse: (a) normative perspective, identifying the notions of disorder and incivility with respect to values of public order, safety, health and others and (b) instrumental perspective, where: (a) the notions of disorder and civility are manipulated by various actors to promote their particular interests in the conflicts over the use of public space. The conflation of these two perspectives and their mutual relationships are discussed, using the empirical material of local and municipal ordinances and regulatory plans of city administrations. The data shows that the conflicts over the definitions of disorder and incivility point to a larger dispute about the nature of public space and about the notions of citizenship and social inclusion.

POSSAMAI, ADAM* (University of Western Sydney, A.Possamai@uws.edu.au)

The i-sation of society and post-secularism: towards new inequalities?

In Jameson’s classic work, the end of the 20th century was claimed to face the third phase of capitalism, that of late capitalism, the world space of multinational capital. Around the same time, Ritzer wrote about the McDonaldisation of Soci ety which refers to the permeability of (what Weber made reference to) rational bureaucracy into our everyday life. This paper will argue that we are now in a fourth stage of capitalism, the cyber space of “denationalised” capitalism, and that with the help of new i-technologies, this penetration of rational bureaucracy has filtered further from everyday life to our personal biographies. Linking these two theories, this paper will present the argument that we are going through a process of i-sation of society (1) in which capitalism is not only dominating our outer life (e.g. global capitalism) but our inner life as well through its expansion into the internet facilitated by various i-technological applications and (2) in which the McDonaldisation process has now been normalised and religion has been standardised. This paper will address the new inequalities at hand in this i-society, its impact on Habermas’ project of post-secularism, and will project the role that various religions will have in supporting and/or countering this process.

Public Religions and Same Sex Marriage

It is widely recognized that marriage, and more generally family life, has changed profoundly in the last half century. The causes of change are very diverse

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
but one important issue has been legal change. The introduction of no-fault di-
vorce in the post-war years contributed to the rapid increase in divorce, and more
currently the idea that same-sex marriage will be sanctioned by law has stirred up
significant public controversy.

Debates around the legal recognition of same-sex marriage and other related
matters such as gay rights in the public domain – over creationist teaching in schools, veiling in public, cir-
cumcision, gay marriage, and Sharia law – illustrates the ideas of ‘public religions’ (Casanova, 1994) and appears to confirm recent commentaries on post-secular-
ism. The argument presented by Habermas (2008) of post-secularity will be
used as a framework to examine the impact of religion as a cultural resource in debate and
decision making in the public sphere. The proposed paper seeks to examine
whether the inclusion of religious and spiritual arguments in the public debate
on same sex marriage positively influences, as Habermas claims, the democrac-
tic quality of deliberative outcomes and contribute to the enhancement of social cohesion or whether on the contrary public religions play a divisive role in dem-
ocratic debate.

Our paper draws on an Australian research grant to study the same-sex mar-
riage debate in Australia and New Zealand, and on a second grant proposal to
undertake a comparative study of legal change in relation to marriage in Australia,
France and the United States.

Political Decisions in the Area of Public Security and the Action
of Death Squads: The Case of the Violence Crisis in 2012 in São Paulo, Brazil

The purpose of this communication is to present our findings of an original
research that is being conducted at the Center for the Study of Violence of the
University of São Paulo, regarding the cycle of violence that took place in the Met-
ropolitan Area of São Paulo, which among other incidents, led to a crisis in the
public security sector in the State, in the year of 2012.

Since there is no official data on the matter, our data were mainly collected
from the media. According to it, during the second semester of that year 30 state
agents, (specially Military Police officers) and 274 civilians were killed and 200 in-
jured in similar situations – hooded men, shooting their victims from a motorcycle or
a car in movement. This suggests that death squads or equivalent group strat-
egies of execution were used. The novelty here seems to be, amongst others, the
organization of groups oriented to killing out of duty police officers.

The research aims at identifying the trigger(s) of these sequences of actions,
around which a dynamics of action-reaction seemed to be installed. For now, our
main hypothesis is that previous political decisions, taken in the realm of public
security policies, worked as the main trigger to initiate a process of mutual killings
between members of the State of São Paulo Military Police and members of the
PCC (First Capital's Command) organized crime group.

Truth and Politics: The Case of the Truth Commissions in Brazil

This presentation will seek to clarify the underlying phenomena as well as the
routines and different sources of tensions surrounding the politics of truth com-
misions that are currently convened in Brazil by systematically cataloguing them
and presenting reports from their public sessions and interviews with commis-
sion members and deponents. Unlike similar initiatives convened in other coun-
tries that have transitioned from authoritarian regimes, the truth commissions
in Brazil did not occur at the onset of the emerging democratic regime. Instead,
they are part of the broader phenomenon, appearing in the context of an already mature
democracy, and acquiring a multiplicity of forms, as they are established at dif-
ferent levels of governments, legislatures, universities and many other forms of
organization of civil society. Established by Brazilian president Dilma Rousseff in
May of 2012, the National Truth Commission (NTC) forms the main axis of a large
net of independent commissions. Through the NTC, the Brazilian State takes upon
itself the responsibility of investigating the human rights violations that were per-
petrated by its own agents during past military governments (1946 to 1988), but
does so without revoking the Amnesty Law of 1979, which explicitly prevents any
criminal investigation or punishment of any transgressions of human rights that
may have occurred during this period. Therefore, the NTC holds the clarification
of the historical human rights record as a value in itself, and not as a means of
informing judicial action. However, this paradigm is not uncritically accepted by all
the auxiliary commissions, which, despite operating under the same legal frame-
work as the NTC, often question the general amnesty principle. The value of his-
torical truth as either a goal in itself or as a potential instrument to legal reform
and judicial action remains the topic of much controversy, and forms the main
analytical thread of this presentation.

Ranking Regimes, “World Class” Universities, and the
Improvancement of Intellectual Life

This paper considers the pressure felt by scholars publish in journals that are
highly ranked according to their “impact factor.” A world-wide movement has
pushed scholars to publish in English-language journals, to the detriment, we ar-
gue, for intellectual life at the national level. We first document evidence for this
pressure, then discuss the consequences of funding mechanisms and research
assessment for higher education. Then we review several factors in this move-
ment: 1) the rationalization of expertise as a feature of Weberian bureaucratic
authority; 2) the politics of higher education regulation and control, as manifest
in the new managerialism and standardized teaching and research exercises; 3) the
principles and finance of commercial scholarly publishing, which takes advantage of
the preceding developments by charging high prices to maximize profits; 4) de-
cisions by editors and their journals to play by the new rules even when they are
personally opposed to them and when they value journals for a different purpose.
We draw on national case studies from Japan, Taiwan, Argentina, Singapore, the
UK, and South Africa.

The Residential Segregation of Homosexual Households from
Heterosexual Households in Metropolitan Areas of the United
States, 2010

Residential segregation is a major area of research in demography and sociol-
ogy. Most of the research has focused on the segregation of racial/ethnic minori-
ties from the majority race/ethnic group in cities of the United States and several
other countries. Few if any analyses have dealt with the spatial segregation of
sexual minorities from the majority. In our paper we analyze homosexual-to-het-
erosexual household segregation. There is a void in the literature about the ex-
tent to which gay men and lesbians are residentially segregated from heterosex-
ual households. There are some studies of “gay spaces” and enclaves, but most are
are case studies of single cities (e.g., San Francisco) or analyses of gay enclaves and
political force and activism. There are no systematic empirical studies of met-
ropolitan areas in the U.S. (or elsewhere) of the degree to which gay male and
lesbian households are residentially segregated from heterosexual households.

Persistent School Segregation or Change Toward Inclusive Education? The Convention on the Rights of People with Disabilities and Reform Mechanisms in Germany

The United Nations Convention on the Rights of People with Disabilities (UNCRPD) was ratified in Germany in 2009. Article 24 requires that nation-states implement an inclusive education system. This ambitious goal poses great challenges for the transformation of institutional and special education systems that can facilitate—or hinder—inclusive education. Germany is one of the countries worldwide that, to achieve the UNCRPD’s goals, must transform its highly segregated education system. In fact, for decades Germany has maintained one of the most differentiated and segregated education systems in Europe. Inclusive education contradicts not only contemporary special education structures, but the entire highly-stratified general education system, addressing a core conflict in German education policy. The consequences of segregation, such as social assistance receipts over the life course, are dramatic even if they have not often been calculated.

Thus, this neo-institutional analysis examines both the barriers and the reform mechanisms that impact the implementation of the UNCRPD in a decentralized national context. German federalism guarantees the sixteen Bundesländer authority over educational matters; however, ratified human rights conventions demand fundamental reforms regardless of regional policymaking preferences and priorities. Based on historical process-tracing and expert interviews (with policymakers, administrators, scholars, and advocacy groups), we contrast “leader” Schleswig Holstein with “laggard” Bavaria. In the northern state, inclusive education has diffused broadly since the 1970s. In the southern state of Bavaria, implementation is just beginning; indeed, the law’s intents are being subverted by government actors, exhibiting considerable backlash.

Comparing these cases enables an investigation of specific mechanisms of institutional persistence and change: power-based, legitimacy-based, utilitarian, and functional. This analysis contributes to the theoretical literature on institutional change and path dependence, to studies on the human rights revolution in education (UNCRPD in particular), and to research on inclusive and special education, long marginalized in the sociology of education.
Crisis and (re-)Informalisation Processes: The Cases of Barcelona and Berlin

With the economic crisis and the retreat of welfare services, European cities are witnessing the reemergence of informal practices creating reciprocity mechanisms and informal markets as well as non-formal, reciprocity-based forms of provision of housing, healthcare and other services. Nevertheless, the strength and the emergence of these practices takes place unevenly across these cities, depending on the impact of the crisis, the nature of the state and its multi-level governance and the institutional culture on the provision of policies.

This paper analyses through historical and qualitative analysis, the role of informal practices in the provision of resources in two European cities in crisis: Barcelona and Berlin. As in many other southern European cities, the emergence of informal practices in Barcelona is key to understand the capacity of its inhabitants to overcome the adverse effects of the crisis. Historical analysis will show how the scenario of informal practices until the eighties and that part of these practices are reappearing now. In Berlin, which fell into a deep economic and financial crisis with the reunification of the city in 1990, informal practices have been an element explaining the redevelopment of the city. Local administrations have tried to formalise informal activities negotiating and tolerating certain practices.

Both case studies show that processes of informalisation taking place in the current crisis are rooted in previous practices and the historical development of cities, that never saw a complete disappearance of these practices. Besides, the analysis show those practices have been selectively allowed by local administrations to ensure certain form of social cohesion.

Socially Innovative Forms of Renewable Energy Provision: Towards a ‘Commons’ Approach to Sustainability in Barcelona and Catalonia

With the financial crisis, responses to environmental problems in European cities are increasingly based on privatization of water and energy companies, and the promotion of technological approaches to increase efficiency and reduce pollution and energy consumption under the policy concept of ‘smart city’. This paradigm promises energy efficiency without discussing the systems of production and supply. Nevertheless, there also exist alternative approaches from civil society fostering new models of energy production, distribution and consumption.

This paper focuses on these proposals and their institutionalisation possibilities through the analysis of a cooperative initiative (Som Energia) spreading in Barcelona and other Catalan cities. Following the experience of initiatives in northern Europe, this cooperative proposes new relations with green energy through the redistribution of both decision-making and energy power. This brings an increase and diversity of actors in the field of renewable energy, moving from traditional large private corporations and public companies to common citizens, who act both individually in the private-domestic sphere and collectively through socially innovative experiences.

The paper analyses a) how the cooperative emerged in its institutional and governance context, strongly dominated by an oligopoly of large private electricity companies and a complex and inefficient regulation that entails economic, social and environmental deficits, and b) the potential of this approach to create a greener and more democratic model of production and supply of energy. Results show that the co-op must tackle barriers and obstacles adapting itself continuously to changing frameworks. Despite this apparent unfavourable scenario, it develops different strategies for ensure its activity paving the way for the strengthening of alternative forms of organization led by civil society that go beyond state and market-oriented logics. These experiences demonstrate the limits of technological innovation in moving towards a post-social carbon. Urgent changes in how socioeconomic activity is organized are also claimed.

Individuals and communities live in a globalized world, defined by supranational institutions, companies and civil societies, while global travel and information streams expand. Yet they are part of specific nations that have experienced very specific events, which became part of very specific cultural figurations that are shaping narratives of those specific events.

Those narrative structures are figured and refrigured to continue to be included in the on-going struggles and challenges – e.g. economic or political crisis and developments – that are experienced in the context of a nation state. And the national media – in all their forms and distribution channels – are a primary channel where those processes can be observed. Yet when discussed in the media those figures are often used as tools to discuss contemporary issues and anticipate further societal developments. But how are those ideas included when further events happen that may or may not match those expectations?

The proposed presentation will discuss how the Austrian quality press (“Die Presse” and “Der Standard”) did discuss potential futures in relation to international terror from 2001 to 2011 and how those futures were consistently included into national narratives of a country which never took an active role in the international war on terror. How do those predictions brought forward from strictly national media differ from the forecasts found in the New York Times, an internationally recognized information leader? How do the Austrian journalists build those international futures and how do they think about them later on? Do the reference those figures built within the national context again?

Those questions will be discussed, using 25 narrative interviews with Austrian journalists and a qualitative comparison of 1377 Austrian newspaper articles with 1983 from the NYT, published in 5 two week sampling windows from 2001 to 2011.

Residents' Responses to the May 1-4 2010 Boston Water Contamination Incident

This study used the Protective Action Decision Model to examine local residents’ warning sources, warning receipt times, message content, warning confirmation, risk perception, and consumption of untreated tap water, bottled water, bottled water, and bottled water increased. First warning source was significantly related to protective response but message content was not. Unexpectedly, risk perception was more strongly related to water consumption before the incident than after the incident. This finding calls attention to the need to recognize that, although increased risk perception can increase protective action, successful implementation of protective actions can decrease risk perception.

Families Apart: Long-term Implications of Canada's Live-in Caregiver Program for Filipino Migrant Workers and their Families

Canada's Live-in Caregiver Program (LCP) is one of Canada's largest and oldest temporary foreign worker programs. Throughout the first decade of the new millennium, the program grew four-fold, in line with a more general national and global expansion in temporary foreign worker programs. The majority of those coming through the LCP are Filipino women, part of a vast labour diaspora of over nine million Filipinos working in roughly 200 countries. An unusual feature of the LCP is the opportunity it affords to migrate permanently to Canada if the worker completes 24 months of live-in care-work within a 48-month period. In 2010 the Philippines displaced China and India to become Canada's top immigration source country; by 2009 40 percent of Filipinos migrating to Canada came from the Philippines.

Testimonial Theatre, Transnational Debate and Filipina Labour Migration to Canada

I have for many years worked with the Philippine Women Centre of BC to document the experiences of Filipina migrant domestic workers and their families in Canada. Our latest project, a collaboration with Caleb Johnston and theatre artist, Alex Ferguson, involved creating a testimonial play based almost entirely on verbatim transcripts of interviews conducted with migrant Filipino domestic workers, their children, Canadian employers of domestic workers and nanny agents. In the first instance, we turned to theatre to put disparate experiences of care and need into dialogue and to stimulate wider public debate within Canada. But for domestic workers involved, the theatre project also solidified their desire to narrate their stories of life in Canada differently to their families in the Philippines. In November 2013 we presented the play at PETA Theatre in Manila in an effort to contribute to a complex transnational debate about Canada’s Live-in Caregiver Program. I discuss some of the challenges of transnational translation, given that the same migration experience can look and be thought about differently from different locations, and the potential of theatre as a platform for dialogue and organizing and promoting cultures of solidarity and resistance.

Workplace Innovation and Consequences for Employees and Organisational Performance in the Netherlands

Based on ‘Netherlands Employer Work Survey’ (NEWS) data this paper investigates the consequences of workplace innovation for employee and organisational performance in The Netherlands. The NEWS is a unique, two-yearly held survey among 5,000 establishments of public and private organisations in the fields of work organisation, HRM and supportive technologies. Workplace innovation is considered to be complementary to technological innovation. Taking this definition, which is rooted in the ‘theory of modern sociotechnology’ (De Sitter) and ‘the job demands - control model’ (Karasek), as a point of departure, we constructed a Workplace Innovation Index that consists of the following characteristics: ‘active jobs’ (flexible but tailor-made employment relations), ‘employee voice’ (dialogue and autonomy), ‘flat organisation’ (limited hierarchical levels and teamwork) and ‘innovation orientation’ (openness to renewal and seeking new knowledge externally).

The relationship between this WI-index and several performance output measures, such as labour productivity, performance (turnover, profit), sickness absence, work stress, and perceived employee commitment will be examined. Control variables are sector (industrial branches) and organisational size (number of employees). To date, research investigating the relationship between workplace innovation and organisational performance has been scarce. Our analyses will be executed in the end of 2013 and will be fully reported in the paper. Implications for theory and practice will be discussed.

Emotions and Values: From the Greek Riots of 2008 to the Movements of 2011

It is not uncommon for theories of collective action to differentiate between ‘conventional’ and ‘unconventional’ protests. This paper argues, however, that although riots are ‘unconventional’ protests, they are an important element in the process of collective identity construction. They signal a crisis in representation and the need for improved or renewed cooperative politics, as practiced in social movements. ‘Riots’, although lacking the clear demands, degree of organisation and duration of social movements, offer an insight into the network of emotions and values that subsequently crystallize into more coherent forms of collective action. In this respect they should be thought of within the theoretical framework of social movements. The intense and exceptional nature of the events thatmake riots as such have not been scarce. Our analyses will be executed in the end of 2013 and will be fully reported in the paper. Implications for theory and practice will be discussed.

PRENTOULIS, MARINA* (University of East Anglia, M.Prentoulis@uea.ac.uk)
Responding to the Greek Crisis: Social Media, Horizontal Organization and Networks, then and Now

The use of social media during the first wave of protests responding to the crisis and the leading agreements in Greece, enabled the emergence of a new political discourse. The main website of the Greek ‘Aganaktismeno’ (Indignants) was anchored around the concepts of horizontality, autonomy and leaderless (www.real-democracy.gr). The analysis of the website reveals an attempt to divide the political field in pro and anti memorandum forces and expresses the widely felt hostility and suspicion towards the existing forms of democratic representation (Prentoulis and Thomassen, 2013). Although the lack of coherence and permanency of this movement points towards processes of identification (as failed attempts) rather than new forms of collective identity, this paper is concerned with the influence of the ideological and organizational elements emerging from the use of social media during the protests and their displacement on a variety of socio-political sites: First, the ideological and organizational influence of social media for the creation of Solidarity Networks. Second, the use of social media by the radical left coalition Syriza, which is currently the opposition party in Greece.
Geopolitical and Personal Influences on Willingness to Participate in Political Action in the Middle EAST

This paper examines individuals' willingness to engage in political action in five Middle Eastern countries (Egypt, Iraq, Jordan, Morocco, and Turkey) using the 5th (2005-2008) wave of the World Values Survey. We will also analyze the sixth wave (2010-2014) once it becomes available in spring 2014 in order to draw comparisons with the 5th wave. Analysis with the 5th wave demonstrated that individuals' willingness to sign a petition, join a boycott, and participate in peaceful demonstrations was lower in the Middle East than in any other region of the world. Nearly 70% of respondents would never sign a petition; 75% would never join a boycott; and 72% would never participate in a peaceful demonstration. Counter to this finding, the Middle East, especially Egypt and Turkey, has seen high levels of political action over the last 4 years. We aim to understand political action in the Middle East by examining change in the percentage of individuals willing to participate in the 5th and 6th waves of the WVS. In addition to description, we will examine the role of individual personal characteristics and geo-political attitudes in willingness to participate. Analysis with the 5th wave demonstrated that geopolitical beliefs have the most predictive power. Individuals' views regarding government and its institutions, particularly their beliefs about governance in their own nations, mattered. Personal characteristics (demographic and human capital) did not have the same effect as would be expected from earlier studies on different (mostly Western) populations. However, men and those with less education were the most willing to engage in political action.

The Politics of Intergenerational Conflict: A Comparative Study of the UK and Japan
Internationally we are witnessing renewed conflict over political settlements and attempts to forge a new moral economy of welfare in economically straight-lined times. In some (but not all) advanced economies these disputes are crystallising around the concept of intergenerational equity with a noticeable re-positioning of older people as the selfish welfare generation. In this paper we consider the recent resurgence/emergence of discourses of intergenerational conflict in the politics of financing later life, especially pensions and social care, in the UK and Japan. In both countries there are calls in government and public life for a re-balancing of public expenditure in favour of youth, while age-divisive policies set up the intellectual and political debate as a matter of intergenerational tension. Both are wealthy, advanced democracies, with old and ageing populations, facing prolonged austerity. Yet in many cultural, political and institutional respects they are quite different and have historically combined different modes of governing in the interests of social welfare. The UK emphasises free will, individualism and market solutions, whilst in Japan, the emphasis is on balancing free-market thinking with some sense of social responsibility and community, along with calls for reforms of existing collectivist policies, all in the context of strong traditions of intergenerational solidarity and filial piety. We consider how and why this policy prescriptive language has emerged in both countries, what purposes it is serving, and what the consequences might be for the distribution of resources in later life. We then assess analysis of each country in comparative perspective, highlighting factors that contribute to differences or features that transcend national boundaries. We conclude that publicly framing the allocation of financial resources as a matter of intergenerational conflict masks inequalities in the social distribution of resources within all age groups that arise with the increased marketisation of late life welfare.

What Drives National Differences in Intensive Grandparental Childcare in Europe?

Grandparents play an important role in looking after grandchildren. The provision of intensive grandparental childcare varies considerably across Europe, with figures ranging from less than 4% in Sweden and Denmark, to almost one quarter in Greece. This paper investigates whether contextual-structural factors (such as formal childcare and labour market structures) and family cultures influence the level of informal childcare support from older parents to their adult children, using data from the Survey of Health, Ageing and Retirement in Europe. Multilevel analyses suggest that grandparental childcare variations are mostly driven by macro-level factors. Both parent and grandparent socio-demographic and economic characteristics were associated with intensive childcare and were consistent with existing literature. However, even accounting for socio-economic and demographic differences between national populations, country-level variations in the level of provision of intensive grandparental childcare remain. Most of such variation can be explained by structural and cultural factors. In particular, in those countries where both parents and grandparents are expected to work, formal childcare is generally well provided and appears to be the norm; thus, there is a lower level of grandparental childcare. In contrast, in countries where there is a high percentage of women who are not in paid employment, maternal care for pre-school children appears to be the preferred norm. In such countries, provision of formal childcare is limited as care is expected to be provided by family members, and mothers in particular rather than grandmothers. If, however, a mother is in paid work in a country where mothers are expected not to work (but to look after children), she tends to rely on grand-maternal support on an almost daily basis. Recent European policies which encourage older women to remain in the labour market are likely to impact on mothers’ employment, particularly in Southern European countries where there is little formal childcare.

You Are a Dark Person after All
In the 1960s I visited one of the first racially mixed primary schools in the Netherlands. Half of the 200 pupils were second generation Moluccan children, whose parents felt forced to leave their home country in 1951 in the aftermath of the decolonization of the Dutch East Indies. Some forty years later I recorded the lifecourses of 35 of my former classmates. This paper will focus on the extent in which the native Dutch, as members of the ethnic majority, and the Moluccan-Dutch, who perceive themselves as second generation political exiles, identify with Dutch society. More specifically, it will analyze how their accounts tap into but also resist dominant discourses of race, ethnicity and culture. While the stories of the native Dutch contain a range of images of the 'other', from special or pitiful to unsettling or inferior, and often express concern about the ability or willingness of 'foreigners' to adapt to Dutch culture, the Moluccan accounts appear to be devoid of any imagery of immigrants as 'other', as well as any concern about cultural integration. On the other hand, while most native Dutch emphatically emphasized that they consider Moluccans to be part of 'us', the Moluccan accounts testified that, due to their different culture or outward appearance, they cannot but identify as ‘other.’

Being Active As a Route to Health and Happiness:
A key feature of what has been called the epidemiological transition is that a fundamental shift occurs in mortality and disease patterns whereby pandemics of infection are gradually displaced by degenerative and avoidable diseases as the chief form of morbidity and primary cause of death. One of the consequences of recognizing such a transition is that the health policies of rich nations have incorporated a concern to promote ‘healthy lifestyles’ and a personal sense of ‘wellbeing’ with the ultimate aim of reducing mortality and morbidity rates across the life-course. One component of a healthy lifestyle is said to consist of sustained physical activity for at least 150 minutes every week, but according to the WHO only around 1/3 of people in Europe achieve this; the reasons why are numerous and complex. In this paper we explore lay thinking about what ‘activity’ is and what might promote or hinder the uptake of physical activity. We gather qualitative data from 10 people in 14 focus group discussions. The data were collected in the course of researching the use and potential use of a linear park designed for an inner city area stretching across
Wellbeing of Return Migrants in Rural the Northeast Thailand: Acquiring Material Wealth to Maintain Subjective Wellbeing

**Wellbeing of Return Migrants in Rural the Northeast Thailand: Acquiring Material Wealth to Maintain Subjective Wellbeing**

**Abstract**

There has been a popular view concerned with negative impacts of migration of rural people to seek jobs in modern economic sector. This type of arguments emulated family breakdown, loss of land, environmental degradation, increase indebtedness, etc. This notion therefore suggests that migration will result in ill-being of rural dwellers. This paper explores the implication of migration on wellbeing of return migrants in the Northeast of Thailand. This paper argues that while migrant leave their village in seeking material wealth, they continue to maintain a high value on bonds and relationships to their natal village. The bonds they have to their rural village limited their objective wellbeing, because of low returns of agricultural and low wage works in rural. But the limited seeking material wealth through migration on the one hand also enhances or fulfils their subjective wellbeing. This study also found that the rich seems to be experienced higher happiness after returning to the village, while the poor do not experience subjective wellbeing in the same manner.

**Key words:** wellbeing, migration, the Northeast of Thailand, Development

The relationship between Locus of Control (LoC) and occupational outputs has already been shown in several cross-sectional studies. The belief to have control over the achievement of the own goals, as do people with internal LoC, seems to be an important property for the career opportunities. Thus, people with an internal LoC get more pay, and take higher vocational positions in the average. This paper, however, has a longitudinal perspective and investigates the mutual influence between labor market experience and the development of LoC. More specifically it is assumed that there is an accumulation of (dis-)advantages for people with an external locus of control. In this case the external locus of control leads to worse employment opportunities and the worse employment opportunities leads then to a strengthening of the external LoC over time. On the other hand, an accumulation of advantages could be assumed for people with a stronger internal LoC.

The analysis is based on household panel data from the German Socio Economic Panel (SOEP) for the years 1999-2010. The SOEP includes a multi-item scale which measures the LoC in the years 1999, 2005 and 2010. In addition, the SOEP contains much information about the employment history, so that the employment situation can be modeled in detail.

On the basis of “Fixed-Effects-Models” I estimate the effects of labor market outcomes, like unemployment or the decrease of income, on a possible change in the locus of control over time. First results show that a deterioration in the individual labor market situation leads to an increase of an external LoC. The assumption of the accumulation of (dis-)advantages can so be confirmed on the basis of the previous analysis.

The occupational aspirations and work-values of adolescents strongly influence their career choice and therefore are formative for their status attainment. The importance of the family for adolescents’ development of work-values has been mostly studied in terms of direct intergenerational transmission of work-values from parents to their children. In contrast with this approach the present investigation investigates to what extent the sibling constellations and inequalities within the family affect the formation of work-values. It is assumed that differences in supportive parenting between siblings reduce the social work-values of the child that is less supported. Based on the assumptions of the theories and research on social parisons it is further assumed that these effects are stronger for more similar sibling pairs, because the individual social comparison orientation is stronger and a “de-identification” is harder within these pairs.

The analysis is based on household panel data from the German Socio Economic Panel (SOEP) for the years 2000-2011. In the SOEP adolescents are interviewed at the age of 17, including questions on their vocational goals or their perceived parenting behavior. The great advantage of the data is that the siblings are also surveyed at the age of 17.

On the basis of “Sibling-Fixed-Effects-Models” I estimate the effect of the differences in perceived parenting behavior. First results show that a supportive parenting style increases the social work values, but that higher support of the other sibling leads to a lower formation of social work-values. The results also reveal a stronger effect for same-sex siblings in comparison to opposite-sex siblings. In particular, the effect is stronger for sisters than for brothers.

The recreation of the successful social and educational actions is achieving the transformation of social contexts with strong indicators of exclusion. These actions have been identified through the INCLUD-ED project, the only Integrated project about schooling from the Framework Programmes of research until its ending in December 2011. There have been 15 universities from 14 countries participating in the project and case studies have been conducted in Spain, Italy, Malta or Cyprus, among other countries, where the successful educational actions (SEAs), universal and transferable, have been identified. The case that we are pre-
senting here is the one in the La Milagrosa neighbourhood, at the outskirts of the city of Albacete (Spain). The educational centre in the neighbourhood presented low academic performance, high levels of absenteeism, serious problems of co-existence among students and high levels of conflict between teachers and the families. Through the implementation of the SEAs advocated by the international scientific community, a transformation started which was extended far beyond. The academic results experimented a rapid improvement and the diverse social agents (university, administration, professionals-officers and neighbours) carried out a Dialogic Inclusion Contract to re-create the SEAs and to carry out the transformation process. This process has become a model at a European level to exit the ghetto. The key resides in the design of policies based on scientific evidence; and on the inclusion of the voices in all the decision-making processes.

New Alternative Masculinities Against Gender Violence

This paper presents a South’s contribution to overcoming gender violence. Recent scientific evidence about the perpetuation of the traditional heterosexual model of masculinity upon gender violence shows that 1) there are in the history many examples of men that have fight together with feminist women for the eradication of gender violence; and 2) often and according to an existing socialization to be egalitarian do not promotes a desirable image (in terms of sexual attraction). It stands out the differentiation between three types of masculinities: Dominant Traditional Masculinities (DTM), Oppressed Traditional Masculinities (OTM), and New Alternative Masculinities (NAM). DTM and OTM contribute to perpetuate violence against women, while NAM allows preventing it and, thus, overcoming it (Flecha, Puigvert, Rios, 2013).

This theoretical contribution was presented for the first time in Barcelona (Spain) in a conference organized by Homes en Diáleg (Men in Dialogue), a men’s organization, based under the context of Dialogic Feminism and which main objective is to promote and strengthen other models of masculinity based on equality and dialogue, as an alternative to the hegemonic masculinity. From the theoretical perspective of Dialogic Feminism, defined by Puigvert (Beck-Gersheim, Butler & Puigvert, 2011), and the new conceptualization of DTM, OTM and NAM, it is possible to contribute to the eradication of gender violence in different countries. Thus, this paper proposes how this conceptualization could be transferred to all cultures and contexts and fight gender violence in a global way.

From Reform Socialism To Transnational Capitalism: The Political Economy Of Foreign Direct Investment In Postsocialist Central and Eastern Europe

The existing literature on postsocialist transformations in the former communist ruled states of Central and Eastern Europe (CEE) argue that paths of market reform in the region were largely determined by policies implemented at the moment of transition. This paper, by contrast, argues that reform paths were heavily constrained by each state’s inherited industrial structure and ties to the world economy prior to 1989. Examining flows of foreign direct investment (FDI) in the region during the initial liberalization period, the paper shows that the density of East-West inter-firm ties in the 1970s, and rates of international state indebtedness during the same decade, are better predictors of how rapidly postsocialist states amassed FDI stocks in the early 1990s, than their economic, institutional or policy characteristics during the transition period. However, the paper also finds that while the state and inherited ties to the world economy form a powerful structural basis attracting FDI, post-Communist political coalitions were key in enabling or hindering the advancement of foreign investment. The combination of industrial structure and political coalitions at the time of liberalization explain divergent pathways in transitions from state socialism in CEE.

Social Implication of Inequity in Higher Education; A Comparative Study of Formal and Non-Formal Mode of Education in Andhra Pradesh of South India

A B S T R A C T

SOCIAL IMPLICATION OF INEQUITY IN HIGHER EDUCATION

A comparative study of formal and non-formal Mode of Educatio in Andhra Pradesh of South India
*Dr. P. Koteshwar

Social implications of different modes higher education has been gaining lot of importance in contemporary times. This is because of growing important for higher education and its consequent skill and talent required for management of complex issues and problems emerging in the era of post liberalization. As such Higher Education has been considered as necessary tool for social transformation by using increasing knowledge in science and technology. As a result many post globalized era developed and developing countries initiated establishment of institutions of higher learning across the world. In this consequence Government of various Nations have been liberalizing the higher education and imparting education through formal and non formal means, India is one of such countries which have been liberalizing higher education and expanding its institutional activities through formal university education and non formal system of open university education and distance mode of higher education to reach all the sections of the society. However, there is a lot of disparity in the content, quality, curriculum and mode of teaching etc. Further the socio-economic profile of the students are also varies. Hence there are number of consequences on the students due to various systems of education for the same degree.

This study aims at to understand comparatively the system of formal and non formal higher education and its implications and the students of various backgrounds. For this study Kakatiya University and its formal and non formal system of education has been chosen to understand the implications of the system inequity in higher education.

A New Age of World Factory: Monopoly Capital and the Struggle of the New Generation of Chinese Workers

A startling 18 young workers attempted suicide at Foxconn production facilities in China in the year of 2010, attracting worldwide attention. This article looks at the historical development of Foxconn Technology Group as a case to demonstrate the advent of rapid capital expansion in China and its impacts on the lives of Chinese workers. It also provides an account of the role of the state that facilitates to Foxconn’s production expansion as a form of monopoly capital. Foxconn is important and typical of this phenomenon due to its speed and scale of capital accumulation in all regions of China which is incomparable to extant enterprises. We argue that this new form of capital generates a global factory regime and a distinctive managerial mode that further leads to workers’ suffering from work pressure, anxieties and desperation at an unprecedented level.

Communism Revisited: A Third World Perspective

As an idea or philosophy, Communism died in the West when the mature form of capitalism didn’t succumb to a communist revolution. As the result of the transfer of capital, with the support of militarism and class conflicts in the Third World, socialist revolutions arrived there in the 20th century. This is the history of communism, the first wave, if you would like to name it.

Since the movements of the 1960s, the state or party-politics has usually been represented as the enemy to be attacked. But from a Third World perspective, as Lenin highlighted, the highest stage of capitalism was imperialism. The first half of the 20th century focused on national liberation that required a state machine. This proved to be the foundation of communist struggle in the context of the Third World. After the revolution, the state didn’t vanish but this didn’t put an end to the struggle – as many in the West thought – since we see communism as a rival to the Third World. However, there are number of consequences on the students due to various systems of education for the same degree. This study aims at to understand comparatively the system of formal and non formal higher education and its implications and the students of various backgrounds. For this study Kakatiya University and its formal and non formal system of education has been chosen to understand the implications of the system inequity in higher education.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The present contribution stands as a deeper and wider sociological reflection of some empirical evidence resulting from a national research project entitled “Federalism, Local Autonomy and Quality of Democracy”. In an attempt of understanding the reasons for the substantial halt of the federal reform process in Italy, the content analysis of the interviews addressed to privileged witnesses of the administrative and local political system emphasized two central aspects: the increasing role played by technical knowledge and the persistence of a ruling-classes political culture geared towards a parochial/individual dimension of interest, more than according to general and collective aims. On the one hand the increasing complexity and technical nature of the regulatory framework “imposed” by a higher level of governance (European Union), on the other a network of relationships between politics, society and economy – both at national and local level – that is oriented to the defense of the achieved benefits through what we can describe as familialistic (or neo-feudalist) mechanisms of interaction.

In this paper however, I raise another issue. To what extent are our theories using Southern theories, in my own work and those of others as a way to demonstrate that many Southern theories are better positioned to explain and mark the increasing role played by technical knowledge and the persistence of a ruling-classes political culture geared toward a parochial/individual dimension of interest, more than according to general and collective aims. On the one hand the increasing complexity and technical nature of the regulatory framework “imposed” by a higher level of governance (European Union), on the other a network of relationships between politics, society and economy – both at national and local level – that is oriented to the defense of the achieved benefits through what we can describe as familialistic (or neo-feudalist) mechanisms of interaction.
essay *The Gift*, sociologists and anthropologists have considered the gift largely on the basis of exchange. However, there are also forms of giving that are not reducible to the reciprocity of exchange. While in ceremonial gift exchange (e.g., Christmas and birthday presents, reciprocal dinner invitations, etc.) gifts are perhaps best conceptualised in terms of reciprocal recognition (Hénaff, 2010), the practices of giving presented by self-sacrifice and humanitarian aid, for instance, escape or at least suspend the strict economy of exchange. What is more, the paper suggests that modelling the gift solely according to exchange significantly undermines the giving (up) involved in the gift. Whenever what is given is given only ‘in exchange’, so to speak, the giving with abandon is annulled already by definition. Nevertheless, it is not that giving would be completely separate from reciprocity. The paper argues that gratuitousness and reciprocity comprise two dimensions of the gift that at once presuppose and exclude each other. The gift of ceremonial gift exchange needs to involve some generosity and thus at least be guided by the ideal of the pure, absolute gift, if it is to avoid being turned into sheer market exchange. And, from the other way around, even the gratuitous giving in pure loss seems to presuppose at least a minimum of reciprocity – insofar as the gift is accepted by the givee – if it is not to remain illusory, utopian, and abstract.

*Two Social Movements in China: Foreign Foes, Critiques of Tradition and Collective Commitments*

The paper reports on a theoretical and historical research project comparing two contrasting social movements that shaped China’s immediate and long-term futures, the post-World War I May Fourth Movement and the Cultural Revolution of 1966-76. The May Fourth Movement grew out of the betrayal of China by western powers at the Versailles Conference, and was the culmination of a renegotiation of Chinese indigenous traditions. It led to political reform and intellectual strengthening. The Cultural Revolution can similarly be situated in China’s international isolation during the Vietnam War but rather than a popular expression of future-orientated optimism it was a party-led mobilization of inexperienced young people directed to internal factionalism. It led to chaos, lost opportunities and isolationist cultural closure. The paper explores the characters of these very different movements and also considers some similarities which they share. One common element that will be developed in the analysis in addition to international context and qualified rejection of indigenous traditions is the possibility of characterizing each movement in terms of representative collective commitments. By focusing on the macro-level commitments internal to each movement the paper will relate the movement-level engagements of participants and their psychic investment in socio-cultural and political development in these two quite different but crucial phases of Chinese history.

*A case study of Wuhan City about research on improvement strategies of the state-owned mining shantytowns under the guidance of ecological civilization construction*

With the rapid development of China’s urbanization, industrialization, expansion of urban population, housing becomes a growing problem, especially the growing problem of settlements decline. At present, our old settlements regeneration are mainly used in large-scale reconstruction of the tear down, and it has brought up housing prices, the differentiation of urban living space, the loss of urban form and urban culture and other issues. Under the inferences of the living environment development of the 21st century, the harmony of “Man and Nature” became the theme of urban development, which requires the city old settlements to provide a sustainable development of rehabilitation programs, the sustainable development concept of “Reconstruction – renewable urban settlements came into being, it is designed to improve the living environment, optimize the layout, and enhance the quality of the living, and inject new vitality to the healthy development of the city, while also promoting China’s housing market in the context of rapid healthy urbanization and stable development, to build “eco-society”. Through the study of the planning of Wuhan City and the state-owned mining shantytowns settlements regeneration from the planning and material transformation level, proposed to construct an ecological society proposed to try new ideas to improve the living space for vulnerable groups such as the shantytowns, and other cities.

*New Religious and Nonreligious Organisations: Competition, Contest & Communalities*

What are the communalities and differences between religious and nonreligious organisations? With ‘nonreligion’ I am referring to groups that are generally considered to be not religious but are nevertheless related to ‘religion’ in important ways. Obvious examples are atheist, rationalist, and secular humanist organisations. Despite their roots in the 19th century, their apparent growth in many parts of the world and their realignment in the contemporary world make them in many ways new forms of (nonreligious) organisations. My engagement with such groups will primarily draw on a long-term study of rationalist and atheist organisations in India (Quack 2012) as well as data from atheist groups in the Philippines and humanist associations in Sweden and Germany. These organisations try to spread an explicitly secular worldview, provide secular alternatives to religious life-cycle rituals, and stand in direct and indirect competition and contest with religious organisations in various ways. To analyse these relationships, I will critically engage with the ‘theory of religious and secular competition’ devel-
oped by the sociologist Jörg Stolz (2009) to complement the ‘religious economies approach’ within secularization theory. Based on a relational approach to study ‘nonreligious’ groups and organisations (Quack 2014), I will further engage with the organisations’ struggles for various kinds of capital within institutional and field-related ‘logics’. On this basis, I discuss the ways in which nonreligious organisations can be situated within the ‘surroundings’ of a religious field, thereby complementing Bourdieusian studies of specific religious fields.

Reconfiguring Personal Communities in A ‘Divorce Biography’

Scholarly discussion on divorce has largely focused on the detrimental consequences of divorce. This scholarship inadvertently constructs divorce as a tragic life event that destroys individuals and a social problem that threatens the very fabric of society, reinforcing and reflecting common attitudes towards divorce. However, there has been an emerging field of research challenging such academic and policy discourses about divorce. My study is situated within this new sociology of divorce. It departs from the perspective that divorce signifies moral decay and focuses instead on the way individuals organise their family life and practices. My research argues that divorce creates spaces, however fraught, for individuals to construct what I call a ‘divorce biography’. These spaces include the ways in which they construe their marriage, decide on the terms of divorce, cope with the crisis, organise one’s personal relationships and make plans for the future. In this paper, I focus on how Singaporean divorcees, as part of constructing their divorce biography, negotiate their post-divorce relationships with family, friends and other significant others. My paper explores how they exercise choice, navigate around cultural norms and take into account practical considerations as they reconfigure their personal communities for survival, intimacy and belonging. This study shows how divorced individuals might continue to build and enjoy strong and close relationships even after the rupture of their marriage and disruption of their nuclear family unit.

Estimating Societal Trends from Heterogeneous Cross-Sectional Time Series Surveys – Some Challenges Demonstrated on the Example of Church Attendance Trends in Europe

Sample-based social science surveys have initially been a tool to collect data for analyses with a limited time horizon. With the advent of long-standing survey programmes such as Eurobarometer, EVS/WVS, ESS, or ISSP, the option of deriving society level trend information from cross-sectional data collected over different time points has come into the world. It has often been demonstrated that larger trends can be observed from repeated cross-sectional surveys within the same survey program, when some methodological homogeneity can often be taken for granted. It is however much less clear whether data from different survey programs, with different methodological details, are sufficiently homogeneous to be cumulated into a common source database for building even longer, denser, and geographically more complete trends. The present study uses a database of responses to church attendance questions in European surveys, compiled from the survey programmes named above. This database is analysed with respect to possible problems arising from the requirements of harmonisation across time and countries, given the variety of languages, question and questionnaire formats, and other design properties of the individual surveys. The database presently comprises more than 800 time/country samples from 32 European countries or regions and covers almost all years from 1986 to 2010. Analyses aim to establish the presence or absence of particular national and supra-national trends, identify aberrations of samples from trend patterns and investigate possible methodological factors behind such aberrations. Further, the analysis may eventually contribute to answering such questions as what the effects of different response formats, sampling design, administration modes etc. on reported average attendance levels are.

QUANDT, MARKUS* (Leibniz Institute Social Sciences, markus.quandt@zgesis.org)

Understanding Patterns of Political Participation – Are National Borders Natural Borders?

Different modes of political participation are often seen as expressions of the loyalty to or discontent with the society that people live in. Institutionalized, formal participatory behaviors such as voting or petitioning are understood to signal compliance, support and trust for the political system, non-institutional behaviors such as boycotts or participation in demonstrations are understood to signal conflict and risks for social cohesion. Obviously, the likelihood that respondents report certain behaviors depends – besides respondent attributes – on the incentives and opportunities for such behaviors found in their home society. For comparative studies this means that we have to expect cross-national variation in the measurement properties of scales for political participation, even for substantive reasons alone.

This study investigates how such substantively driven heterogeneity in the measurement of protest behaviour can be dealt with, in particular in relation to methodologically driven heterogeneity of the participation measures, which may be also present and which we routinely attempt to exclude. A latent-class item response theory model for a participation scale from the European Values Study 2008 will be estimated and the outcomes analysed in terms of substantive and method-induced variation across countries.

Genre Et Vieillissement : L’expérience De Femmes Aînées Immigrantes

Cette communication présente certains résultats d’une recherche qualitative menée auprès de 90 femmes aînées ayant immigré à Montréal au Canada, dont on ne sait peu de choses. En effet, les données sur les aînées immigrantes sont rares et entremêlées presque toujours avec les données sur les aînées canadiennes (poids des enfants, impact de l’éloignement géographique) (Attas-Donfut, 2008; Phillipson, 2002; Treas et Shampa Mazumdar, 2004; Aldous, 1995). Notre recherche visait à comprendre l’expérience – au sens à la fois des perceptions et des émotions ressenties et des actions déployées par les femmes pour organiser leur quotidien (Dubet 1994). Le vieillissement quant à lui doit être compris dans ses dimensions à la fois personnelles (rapport au corps, à la santé, etc.), familiales (place de la grand-maternité, rôles comme aînées dans les relations et la transmission intergénérationnelles) et sociales (rapport à la société québécoise- canadienne, discorde, solidarité, etc.) et des émotions ressenties et des actions déployées par les femmes pour organiser leur quotidien (Dubet 1994). Le vieillissement quant à lui doit être compris dans ses dimensions à la fois personnelles (rapport au corps, à la santé, etc.), familiales (place de la grand-maternité, rôles comme aînées dans les relations et la transmission intergénérationnelles) et sociales (rapport à la société québécoise- canadienne, discorde, solidarité, etc.).**

Regulation of Private Expenditures in Cross-National Perspective

Over the past decade, health spending in many developed countries has grown far beyond the growth of government health expenditures, given the increase in alternative financing structures, notably through increases in the share of private expenditures. However, as these increases are generally not randomly distributed in the population, these transformations have raised concerns about their impact on the population health and social inequalities in health. Finally, as the extent of private expenditures on health varies between developed countries, it appears that certain countries are better able to limit barriers to health insurance coverage, notably through more generous public coverage as well as greater governmental regulation of the private insurance industry.

This paper will examine this hypothesis with the Health Insurance Access Database (HIAD), by demonstrating the variation over time, by health service and
across countries in the nature of those policies. The HIAD is a repository of policy indicators offering harmonized policy data on public coverage and the regulation of private expenditures. The standardization process used for collecting these indicators allows for comparisons over time (from 1990 to 2010), across health services (data are collected on 8 health services, for instance prescription drugs), and across 10 countries of the OECD (Australia, Canada, Denmark, Finland, France, Germany, Italy, the Netherlands, United Kingdom, and United States). These countries were selected to provide a range of variation (and thus to allow for contrasts) with regards to Esping-Andersen’s Welfare Regime classification (Liberal, Social Democratic, Conservative). Communal noteworthy type of health system (comprehensive welfare oriented, entrepreneurial) and the OECD’s typology of the role of PHI within that system (primary, primary substitutive, supplementary, duplicative or complementary).
This research will inform and feed the current debate on the future of health care in developed countries and on the interplay between the public and private sectors in these changes.

Quality of Data Collected from a Vulnerable Population: Using the Calendar Method and Third-Party Help
In the field of social sciences, collecting extensive retrospective data such as life histories has been fraught with recall errors compromising the quality of the data. Collection of life histories gets even more challenging when it has to be done among vulnerable groups, such as poor households who are victims of involuntary displacement and resettlement due to disasters or infrastructure projects.
Recognizing this, a tailor-made life history calendar was designed to gather data from households in Indonesia who were involuntarily resettled in a newly-built community. The substantive focus of this study is to obtain ‘social capital’ histories on the level of neighbourhood, households, and heads of households. In addition to the usual aided recall features the calendar procedure included the option to allow, in certain parts of the interview, the help of “third parties” in the recollection of the requested information. These “third parties” are either household members or friends of the respondent who also reside in the same community. Collaborative recall generally increases accuracy of information that is shared socially between community members, since different people may remember different aspects of the memories. A natural field experiment was designed in which data quality was compared between the conditions ‘with help of third parties’ and ‘without help of third parties’. Data quality was assessed regarding ‘numbers’ of household related transitions), ‘names’ of community leaders and ‘dates’ of public services (of the study). The study examines whether integration of “third-party help” in the calendar method can enhance the recollection process among respondents and may lead to better data quality. In addition, it was also discussed how “third-party help” may interact with calendar procedures and what consequences are to be derived from related data collection procedures.

Los Egresados De Los Posgrados En Educación
Los egresados de los posgrados en educación
En esta investigación participaron cuatro instituciones pertenecientes a la Secretaría de Educación Jalisco que ofrecen estudios de posgrado en el ámbito de la educación, se aplicó un cuestionario en línea y de manera personal a 28 participantes de las generaciones 2003-2008 que contestaron de manera voluntaria. El cuestionario contó con 14 secciones que abarcaron las posibles actividades que desarrollan en su ámbito profesional. Tales como experiencia laboral, valores, reconocimiento, relaciones interpersonales, experiencia en la práctica educativa, desempeño profesional, evaluación, experiencia en la formación continua, en el entorno educativo, en la producción académica, en el ámbito administrativo, en la satisfacción del programa, en la formación de docentes y en el ámbito social. Los resultados del análisis estadístico manifiestan que el perfil de egresos de los egresados es congruente con lo esperado por las instituciones, la información generada será útil para la toma de decisiones de las autoridades estatales de educación. El proyecto fue financiado por el Consejo Nacional de Ciencia y Tecnología.

Transformaciones y Retos De La Función Social Del Académico En El Marco De Las Reconfiguraciones Del Conocimiento, La Universidad Y Las Políticas Educativas
El trabajo se desprende de un proyecto de la Red de Estudios Sobre Instituciones Educativas (RESIEDU) todavía en proceso denominado: “Modos colectivos de producción de conocimiento de los académicos en Universidades Públicas Estandares”. Parte de 3 ejes problematizados enmarcados en la sociología del capital, la sociología de la universidad y la sociología del académico, éste último abordado tanto en su vertiente individual, como en su vertiente colectiva. En este marco analizamos el papel evaluador que la política educativa confiere al estado, bajo el discurso de calidad y profesionalización de la planta académica mexicana, y la manera que impacta en los procesos de gestión institucionales y las dinámicas de los propios académicos y grupos de investigación. El abordaje empírico se llevó a cabo a partir de acercamientos cuantitativos y cualitativos mediante un cuestionario aplicado a 630 académicos de 49 Universidades Públicas Estandares en México, y acercamientos cualitativos a partir de grupos focales y entrevistas en cuatro universidades mexicanas de los estados de Hidalgo, Chiapas, Tamaulipas y Jalisco. A partir de los hallazgos, se discute el papel de los académicos en las nuevas reconfiguraciones del orden mundial, en el que el mercado va teniendo un papel cada vez más protagónico. Se analiza la manera en que la función social de la ciencia y la función social de la universidad, presentan nuevas configuraciones que impactan en una redefinición de la función de los académicos. Se concluye con algunas interpretaciones de las tensiones que enfrenta el académico entre lo individual y lo colectivo; tensiones entre las demandas sociales, empresariales y del estado que ponen en entredicho su función social; tensiones entre sus formas de organización al interior de la institución (departamentos, academias, cuerpos académicos) y al exterior (redes, colegios), entre otras, y se enfatiza el papel y los retos de la política educativa en estos procesos.

The Problematic of Gestión in the Soft Industry
The ponencia se orienta a dar respuesta, en base a un estudio de caso en la industria del software, a la pregunta ¿de qué manera las organizaciones, los gerentes y los trabajadores lidian con las tensiones relacionadas con la innovación? La hipótesis es que dadas las características del trabajo en esta industria, ordinarias: la innovación en los conocimientos y con una fuerte autonomización de los trabajadores, su gestión no puede apoyarse solo en las estrategias de los empleadores o gerencias de RRHH, teniendo éstas que articularse con el componente “humano”. Estas nuevas modalidades de gestión por ende deben tener como eje central la construcción de relaciones sociales en la organización. Esto, conlleva, una fuerte diferenciación de las estrategias de gestión de RRHH de este sector respecto a otros más tradicionales pero también una fuerte diferenciación al interior de la actividad.
Esta dinámica la pensamos en función de cómo las organizaciones del software resuelven y artican tres dimensiones problemáticas:

Guidelines for the Creation of Laws and Intuitions in Order to Eradicat Poverty in Mexico

Mexico has principles that are set forth in the text of its Constitution. Said legal principles encompass: the concept of the power of the state regarding education, human rights principles, the dignity of the agricultural workers, the right to work, the right to a decent salary, the right to housing, and social welfare in general. Accordingly, all the citizens have the same constitutional rights and obligations. So, the existence of poverty is inadmissible, as it actually establishes an inequality between the citizens. We are talking about an inequality that does exist and that is not contemplated in the Constitution.

In the present lecture, we propose a review that (even though superficial) is fundamental, as it reviews the English Poor Laws that were in force in England from the XVIIIth to the XIXth Century. Its results allow us to recover the relevant aspects that said Laws played as an institution against poverty.

The situation is different in Mexico where we try to reuse some transcendental aspects of the old English Poor Laws by adapting them to the present context; or what kind of laws may be adopted to solve the growing and searing problem of poverty. As implied by the previous information, in Mexico there are neither laws nor institutions to eradicate poverty, but only a Program related to conditional cash transfers. It is obvious that a mere program does not guarantee the power of the state regarding education, human rights principles, the dignity of the agricultural workers, the right to work, the right to a decent salary, the right to housing, and social welfare in general. Accordingly, all the citizens have the same constitutional rights and obligations. So, the existence of poverty is inadmissible, as it actually establishes an inequality between the citizens. We are talking about an inequality that does exist and that is not contemplated in the Constitution.

Accordingly, all the citizens have the same constitutional rights and obligations. We are talking about an inequality that does exist and that is not contemplated in the Constitution. The what we would like to posit is that actions, both legal and institutional, are required in order resolving this problem: actions that take into account the economic/social context and that contribute to transform it.

Contested Claims over Space: Discourse and Politics Among Fishers and the Oil Industry in Mexico

This paper examines hybrid forms of resource governance and the involved struggles over space and subjectivity among coastal fishers, the Mexican government and the state-owned oil industry in Tabasco, Mexico. The analysis builds on the study of contested claims over rights to off-shore space in an area established as a security measure exclusively for the use of the oil industry by the Mexican government in 2003. The study is based on research material collected during intensive ethnographic fieldwork among coastal fishers, government actors and oil industry representatives in Tabasco in 2011 and 2012.

The study focuses on the "how" of hybrid mechanisms of resource governance, with particular interest in the strategic use of legal measure, corporate social responsibility programmes and political discourse in the claims over resource space. The research takes part in post-Foucauldian theorizations of space as social arena, constructed in political frictions between private capital, state, society and nature.

We argue that fish-oil governance in Mexico operates as a combination of different logics and technologies that work towards the displacement of fishers as legal subjects from politics and their subjection to ideologies of entrepreneurship. Simultaneously, the multiplication of transnational actors in the oil industry's CSR programmes provides a new political venue for the continuance of the fishers' resistance to clientelist arts of governance while it makes the identification of accountability and responsibility diffuse. In this context, the fishers' resistance is constructed through individual networks and opposition to mechanisms of self-responsibilisation and through fragmented political resistance which keep the extractive politics volatile. Our study of these less visible struggles over resource redistribution and political representation seeks to provide new perspectives to the prevailing forms of environmental governance and the contestations regarding them.

QUIROGA TERREROS, DEBORA* (Universidad Complutense de Madrid, grobed0@gmail.com)
ROSS, ALINE* (LEXIA Insights solutions, aline@lexia.com.mx)

Posibilidades EN La Base De La Pirámide

Los estudios sobre la base de la pirámide se han centrado, de forma tradicional, en comprender las causas estructurales de la pobreza, así como sus aspectos psicosociales. México lleva a cabo numerosas campañas para apallar los niveles de pobreza en el país, desde los programas OPORTUNIDADES hasta la “Cruzada contra el hambre”. Ambas auspiciadas desde las instituciones y el gobierno e interesadas en los aspectos estructurales de la pobreza y en el impacto comunitario.

Este papel propone una visión alternativa a la percepción dominante en México de la situación de la pobreza basado en los estudios realizados por C.K. Prahallad. El concebir a los integrantes de la base de la pirámide como consumidores genera una estrategia de doble dirección. Por una parte permite a las Marcas ampliar sus nichos de mercado. Por la otra ofrece a los más desfavorecidos la oportunidad de acceder a bienes y servicios a precios asequibles, proporcionando dignidad y empoderamiento a las familias de bajos recursos.

Este papel propone una metodología en tres fases:

Por un lado una investigación sobre los distintos programas gubernamentales y sus efectos reales sobre los individuos y las comunidades.

Por el otro una inversión en los datos estadísticos como los índices de pobreza del INEGI o el reciente estudio sobre “Pobreza y bienestar subjetivo” realizado por el INEGI y FLACSO México.

Finalmente una serie de estudios cualitativos de carácter etnográfico en diversos estados de México realizados en los años 2007, 2008, 2009 y 2013. El uso de las herramientas antropológicas permite comprender los hábitos y motivaciones de los grupos sociales situados en los umbrales de la pobreza, al mismo tiempo que da cuenta de sus mecanismos de supervivencia y proyecciones.
Participatory environmental governance is framed as contributing to the equity ambitions of sustainable development. The trend of formal delegation of power to decentralized institutions of various kinds has been extensive. It can be questioned, however, if these more pluralistic approaches can adequately deal with and balance uneven power relationships between stakeholders or if existing power relations are reproduced through these processes. As a result of pre-existing inequalities weaker actors may risk getting ignored, neglected, manipulated or even abused. Marine governance has also adopted these democratic ambitions, but empirical examination of practice has been severely neglected by the social sciences and has not been exposed to sufficient reflection regarding its social purpose, process and implications. The focus of this paper, democratic aspects of governance of the Baltic Sea, is especially understudied.

In this paper, I draw on the concept of procedural justice linked to power to examine and compare the establishment of St Anna archipelago and Gråsö archipelago nature reserves in Sweden. The former case has been characterised by authorities as consensus oriented while the latter has been seen to be conflictual. By employing the procedural justice concept over time in this under studied and novel empirical setting the present paper aims to develop new understandings and formulations of justice and thereby contribute to the literature on participatory environmental governance, marine governance, nature protection, and environmental justice. The paper will show that issues related to legitimacy, identity and representation are substantial in both cases, as well as conflicts between public and private interests and that a long-term struggle for ‘independence’ is being played out in the setting up of nature reserves.
What are the gender and age related risks? Who does what, to whom? What are the risks to children and young people at different ages from different perpetrators? How much abuse and violence is committed by children and young people? Is the world a more dangerous place where children experience more violence and commit more violent crime than ever before? Are adults fearful of and responses to child abuse and children's violence part of the problem? What are the challenges and opportunities we face in putting children's experiences of abuse, neglect and violence and their rights and agency at the centre of thinking and practice?

Sugar BABY - the System of Medicalization(s) Around Childhood Obesity
Obesity is considered a pandemic and childhood obesity is considered one of the most serious public health challenges of the 21st century by WHO. The medicalization of childhood obesity is a clear example of the medicalization of risk. It is believed that the obese child is more likely to have high blood pressure, elevated cholesterol or of becoming diabetic already in childhood but also in adulthood. The risk is based on the basis of any program of prevention, real vehicle of the system of medicalizations about childhood obesity: the entire life cycle of the child is kept under control and medicalized, from pregnancy to breastfeeding, from food choices for physical activity. In this context, the engine towards medicalization of excess weight in children come mainly from health professionals and major Food Companies. The present paper shows the first evidences about the comparison of health promotion programs on childhood obesity in Europe from the European Charter on countering obesity (2006) to the most recent Vienna Declaration on Nutrition and Noncommunicable Diseases in the Context of Health 2020 (2013) made by Institutions, health professionals and European Food Companies.
Using pooled data from TIMSS 2003, 2007 and 2011 – an international survey project of competences among 8th grade students – we estimate a set of (multi-level) random constant linear regression models on the expected level of educational attainment. The study covers 24 affluent countries. The recent economic downturn has affected advanced economies to a different extent, producing substantial variation in the context conditions in which educational expectations are formulated. This longitudinal and comparative setup thus provides the opportunity to improve our understanding of the driving forces of unequal educational trajectories of children at the end of compulsory education. Moreover, by examining perceptions of parents, we take a look into the future of educational inequalities.

Our results confirm the existence of systematic cross-country regularities and suggest that economic downturns lead to an overall reduction in expectations among students. Recessions also boost educational inequalities by meaningful indicators of student background. Furthermore, our findings indicate that the influence of expectations on educational expectations is less sensitive to economic growth than the influence of parental education. At the same time, cognitive skills emerge as a crucial mediating variable of the relation between economic context and family background effects on educational careers.

**Building the Case for CSR: Four Decades of Philippine Corporate Discourse on the Role of Business in Social Development**

Corporate social responsibility (CSR) is a fluid and malleable concept. The dynamic, at times even say ambiguous, conceptualization of CSR stems from its socially constructed nature which opens it to the influence of discursive practices and contestations of several actors including business, social development practitioners, civil society, government, and the academe. This paper traces the spotlight on the business side of the discourse on CSR. The paper shows how Filipino companies, through their public communications, contribute to the construction of the CSR concept and the role of business in social development. The paper achieves this through a discourse analysis of corporate communications in the annual reports and some select public documents of Philippine Business for Social Progress, the largest corporate-led social development foundation in the Philippines. The paper looked at thematic changes in Philippine business CSR discourse from the 1970s to the present and found an increasingly explicit presentation of a business case for CSR over the past four decades.

**Reported Premarital Sex: Explaining India’s Gender Divide**

The popular media tell us that the Indian premarital sex rates have risen sharply in recent decades. On closer examination, these reports appear to misrepresent the data. Local surveys have been portrayed as national. Research on one age cohort has been reported as if it covered multiple decades. The only multi-decade national survey to ask detailed sexual history questions is National Family Health Survey (NFHS, 2006/7). Confining the analysis to sexual and marital history of men and women at the age of 24, it is possible to draw appropriately comparable samples of respondents from this survey representing different age cohorts based on year of birth. This shows no clear increase in the level of reported female premarital sex over time. For male respondents the rate rose from a low of 2.45% for those born in the period 1962-66 to a high of 6.98% for those born in 1977-81. The discussion below suggests some social forces that may have reduced the level of female premarital sex, but these do not explain why the reported rates are not symmetrical between men and women.

**Challenges of a Global Sociology: Centers and Peripheries in the Geo-politics of Sociological Theory**

Debate about the possibility of building a global sociology has gained increasing importance in recent years. In dialogue with works that argue in favor of post-national sociologies as well as literature that critiques the hegemony of the theoretical centers, I rearticulate the so-called center-periphery debate and re-reflecting the idea of global sociology. The main sustained theoretical hypothesis is that the national experiences must be understood as bearing the potential of making important contributions to stimulate the theoretical discussion about sociological theories and concepts formulated in the centers. By mobilizing some sociological concepts such as public sphere and right to the city, originally formulated in centers, we suggest that peripheral sociologies could contribute to broaden theoretical formulations. In this sense, the theoretical construction of sociological theory must involve an equal dialogue between sociologists from the center and the periphery in order to construct a global sociology.

**Deviance and Camouflage City: Sexual Deviance and The Construction Of Invisible Urban Spaces In Post-Revolutionary Tehran**

This study is an attempt to expand on the relationship between sexual deviance and urban space in the context of post-revolutionary Iranian society. It focuses on Tehran, a major metropolis where gender segregation and heterosexual norms in the form of family institution appear to dominate societal norms. But this study instead offers an ethnographic account on various “sexual deviant” practices including homosexuality, transvestic fetishism, sadism, and necrophilia in diverse city spaces to shed light on a hidden world in post-revolutionary Iranian urban life. The notion of “camouflage city” underscores the complex relationship between embodiment and city space and argues how behaviors deemed “sexually deviant” in Tehran continue to undergo illumination for concealment through heterosexual normative practices sanctioned by the Islamist normative discourses and practices. The study specifically looks at transsexual practices both in terms of everyday and institutional life in the context of changing state official and public perceptions of sexual deviancy. It also looks at how such practices tend to “resonate” with a peculiar culture of a distinct urban space, where everyday sensibilities become fused with ways sexual deviance is practiced and made (invisible) in shifting daily/nightly life situations. In the final section, the study theoretically examines deviancy as performative act which is always spatial practice and that it involves a de-labeling process to destabilize the societal norms whose infractions institute sexual deviance.

**Mobile Media, Digital Divide and Social Movements: The Case Of Iran**

This study attempts to offer a theoretical interpretation of the political and social dynamics of mobile technology practices in the context of digital inequalities in the 2009 post-election uprisings in Iran. It shows how the interactions and communications Iranian protesters created with the practices of texting, photographing and live video recording served to characterize not only distinct kind of contentious performances, but also a new sense of everyday life as embodied action in the public sphere. Unlike the Habermasian public sphere of rational consensus, the mobile recording practice is described here as interactive performances that reimagine the public in affectively contentious ways. Yet the emotive is not “resonant” with a popular culture of a distinct urban space, where everyday sensibilities make the practice possible, but also a new sense of everyday life as embodied action in the public sphere. Unlike the Habermasian public sphere of rational consensus, the mobile recording practice is described here as interactive performances that reimagine the public in affectively contentious ways. Yet the emotive is not “resonant” with a popular culture of a distinct urban space, where everyday sensibilities make the practice possible, but also a new sense of everyday life as embodied action in the public sphere.

Gender and The Migration Process: Bangladeshi Migration To The United Arab Emirates

Drawing on the experiences of Bangladeshi female and male migrant workers in the UAE and the members of their families left behind in Bangladesh, this study examines the gender differentiated migration outcomes among Bangladeshi migrants. In particular, the study seeks to address patterns of recruitment, experiences on foreign soil, and remittances for Bangladeshi migrants in the Bangladesh-UAE migration corridor. The study argues that we need to broaden the study of temporary migration and gender issues to include major spheres in the temporary labour migration and see migration as a process. This research identifies three major spheres where gender matters: recruitment, experiences on foreign soil, and remittances.

Total sample size of the study is 250. Fifty female migrant workers and 100 male migrant workers in the UAE were surveyed through face-to-face interviews. Fieldwork in Bangladesh involves interviewing 50 selected UAE male migrant households and 50 selected female migrant households. These two-way surveys are complemented by participant observations and focus group discussions.

Institutional Change Of Indigenous Peoples In Response To The Forest Policy In Indonesia

This study is about the institutional changes of the indigenous people as a response to resource tenure conflicts, to take a place in Kasepuhan Community in Halimun Salak Mountain National Park and the Dayak Iban community in Sungai Utik forest. Legally, forest are controlled by the State. Through existing authority, the State can provide some of its authority to private (Company/ concession holder) to commercialize forest. But in fact there are local community (indigenous people) who have been living for generations in and around the forest. Community has knowledge and institutional governance of forests. The existence of state institutions has clearly hegemony to local institutional, which had an impact on the local institutional change. In Kasepuhan Community institutional change is a response of hegemony of the state, while in Dayak Iban Community, institutional change has strengthened local communities in the face of the State resulting in counter hegemony.

Cluster Dependency, Social Capital and Social Innovation: Insights From the Engineering and Plastic Clusters in Chennai, South India

In most developing countries a focus on the development of MSME or Micro, Small and Medium enterprises is evident. Operationalising this goal in the Indian context requires a conscious planning has been adopted not only to strengthen existing enterprises, but also to create ‘clusters’ of such enterprises. The formation of individual clusters is not new and it has been imitated successfully in the creation of the service clusters - the IT and Biotech industry. However, the traditional manufacturing clusters are still very significant in their contribution to the economy both in terms of labour absorption and capital investment.

In this paper we discuss the nature of functioning of two such clusters - engineering and plastic and in and around the city of Chennai, South India. The city however is well-known for its automobile clusters. Significantly different in size, technology used and labour utilised, these ‘clusters’ have innovative practices to mobilise labour, access technology and capital and sustain productivity. Sharply different in terms of their sensitivity to regulations by the state, they nevertheless manifest some similarities in terms of operation. Significant differences are also observed. The plastic clusters face regulations and sanctions to a greater extent in the context of the environment where they are located. As most of their labour is unskilled ‘social capital’ in mobilising continued labour supply seems essential and predominant in hiring practices.

The paper discusses some of these aspects based on insights obtained from a sample survey of these clusters. Questions raised include How do they ensure continuity of labour? How do they access capital and technology? How do they sustain production and marketing? Essentially the paper highlights the strong inter-dependency of units among the cluster in a domain of high competition. The insights drawn highlight the innovative practices at the workplace in a developing country like India in the context of MSME.
non-governmental organizations with varying interests and objectives interact in new and unplanned constellations. These actors face different challenges in the different phases of disaster management, ranging from organizing relief and rescue to help in recovery and disaster risk reduction. While coordination features in all phases, its characteristics differ significantly in terms of stakes, urgency, complexity and transparency for those involved.

With increasing numbers of natural disasters handling economic stress post-disasters becomes extremely challenging. One of the reasons for such losses is the failure to establish a clear nexus between development programs, disaster risk reduction and post-disaster recovery programs. Given the process of repeated learning after disasters, it calls for mainstreaming disaster risk reduction with sustainable development. This helps in reducing economic losses and various impacts during disasters. It also reveals the importance that states play on issues of vulnerability. It is therefore important to address issues of development during disaster reconstruction. If recovery helps communities to build back better, resilience helps to face future hazards and minimize loss. When disasters are seen as isolated events, disaster response becomes more prominent than building a culture of preparedness and addressing developmental concerns. The paper explores the challenges in mainstreaming risk reduction with sustainable development and thereby the factors affecting participation of stakeholders in the process.

**Economic Globalization and Feminization of Labour: The Case of Domestic Servants in India**

This paper discusses the consequences of economic globalization for women in India. It analyzes the neoliberal policy frame from a gender perspective to bring out the impact of economic globalization on the women's workforce. Economic globalization has generated sources of livelihood and opened up new vistas of opportunities for women in the unorganized and casual job sectors. Besides the huge number of those educated women who are working at low level IT jobs. Most of these women such as domestic maids are living in abject poverty and therefore they seek the job of domestic maids in urban areas. As a result of globalization, women in urban middle class families have shifted their burden of home management on to these poor women and they themselves engage in leisure activity or low paid white collar jobs. Poverty makes the maids and the female labour of their likes vulnerable to gender-based violence and HIV/AIDS due to greater susceptibility to infection during unprotected sex. The lack of education, employment and economical opportunities and inequitable inheritance laws are among the causal factors of women's sexual and reproductive health and unwillingness of government to publicly discuss the empowerment of women in gender relations and sexual practices. The neoliberal ideology has negative impacts on women such as feminization of labour as well as poverty, low-income, exploitation and health hazards. In India, the number of women has increased more in labour-intensive, informal and unorganized and casual job sectors, besides the huge number of those educated women who are working at low level IT jobs. Most of these women such as domestic maids are living in abject poverty and therefore they seek the job of domestic maids in urban areas. As a result of globalization, women in urban middle class families have shifted their burden of home management on to these poor women and they themselves engage in leisure activity or low paid white collar jobs. Poverty makes the maids and the female labour of their likes vulnerable to gender-based violence and HIV/AIDS due to greater susceptibility to infection during unprotected sex, the lack of education, employment and economical opportunities and inequitable inheritance laws are among the causal factors.

**Examining Child Mobility and Transport: Challenges for Theory and Practice**

The paper provides an outline of the ways in which general theoretical concerns in the Sociology of Childhood relate to child mobility and transport. This paper raises new kinds of knowledge and insights on the transport problems that can offer transport experts and decision makers. The argument proposed here is that the study of children and childhood is incomplete unless mobility and transport issues are located in an understanding of the complexities and varying realities of children’s everyday life. The paper (1) examines children's social representation, including positioning within South Africa’s transport policies and interventions, and (2) the extent to which these frameworks incorporate national data on children’s daily transport and mobility activity patterns. This paper also contributes to the growing scholarship on the social perspectives on child mobility. This emergent field has occurred alongside the child rights movement and shifts towards evidence-based policy developments and practice interventions. Consequently, contemporary mobility and transport discourses promote the idea of transport as a public good and human right and this implies that all citizens' interests and needs are of equal importance. Yet, within the sector there is still a bias towards excluding the impact of child mobility on adults’ mobility, their daily lives and schedules with children’s voices, experiences and needs remains obscured. This empirical marginality and invisibility fuels knowledge gaps and generates a passive, univil and constrained view of children. It certainly impedes the development of child-centred and participatory transport policies and interventions.

**International Migration: A Study of Gender Equality Among Tibetan Women in Mysore India**

Tibet, a peaceful country situated in the Himalayas faced changes with the occupation by China in 1951, since then exodus of the Tibetans began to take place to India, Nepal and Bhutan. The largest number of refugees came to India in 1959 along with his Holiness, the Dalai Lama. There are about 94000 Tibetans living in different settlements all over India today. In South India, all the five settlements of the Tibetans are located in the state of Karnataka out of which four settlements are very closely located to the city of Mysore. After the completion of their schooling in the settlements, most young Tibetan youth move to Mysore for their Union city education. During their stay away from the settlements, the students are exposed to several new socio-cultural forces.

The are always told that they will return to their land and therefore Tibetan Buddhism is strictly practiced. Contact with the outside world has led to tensions in maintaining their identity since they are a drop in the ocean outside. Tibetans are a highly religious group but their religion is facing a competition from western influences. There have been changes in the lifestyle of the Tibetans along with generational differences. Attempts have been made to preserve and modify Tibetan culture.

This study is based on the sample of Tibetan women studying in the colleges of Mysore University. The study attempts to examine the impact of migration on gender equality, fertility, family size, treatment of women in the community and the efforts made by Tibetan women to adjust to new social spaces. The paper tries to examine the gendered changes.

**Gender Segregation in Hospitality Sector – Extent and Consequences**

Hospitality is one industry in which women are preferred and are found in large numbers. However according to the research, there is a high-based segregation in hospitality industry, specifically focusing on hotels and restaurants. Data are collected from a sample of 56 ITDC recognized hotels and 48 restaurants in cities of Bangalore, Hyderabad and Chennai in South India employing a survey and interview schedule. The analysis indicates to definite patterns with regard to gender segregation of roles, responsibilities and wages at the intermediate levels where women staff tend to be concentrated. Their salaries do not commensurate with duties they perform. Such segregation follows no predictable pattern at lower levels where women staff is in minority. Further, positions at higher levels involving responsibilities and decision making tend to be monopolized by their male counterparts. It is the women staffs who are made responsible for the maintenance of the hygiene and order in establishments, which are not aligned with their education and skills acquired during their professional training. Women equally qualified as men in hospitality organisations appear to be not in consonance with their indispensability to this industry, as evidenced by high rate of turnover and lower participation in decision making process. And disadvantages they could be facing at work due to segregation. Present study investigates into the extent and implications of such gender-based segregation in hospitality industry, specifically focusing on hotels and restaurants. Data are collected from a sample of 56 ITDC recognized hotels and 48 restaurants in cities of Bangalore, Hyderabad and Chennai in South India employing a survey and interview schedule. The analysis indicates to definite patterns with regard to gender segregation of roles, responsibilities and wages at the intermediate levels where women staff tend to be concentrated. Their salaries do not commensurate with duties they perform. Such segregation follows no predictable pattern at lower levels where women staff is in minority. Further, positions at higher levels involving responsibilities and decision making tend to be monopolized by their male counterparts. **Women in Indian Immigrant Communities in Canada: A Case Study Among Families of Karnataka Origin**

There has been an unprecedented increase in opportunities for migration form India to other parts of the world, especially after the economic liberalization regime set in. Canada is among the countries that are seeing a growing number of Indian immigrants. Even by 2004, Indo-Canadians were the most rapidly growing ethnic-cultural population. Though there have been a number of studies on Indian diaspora in Canada, they have concentrated on themes such as issues of conflict culture, adjustment dilemmas and institutional networks. The gendered impact of migration has not formed the main subject of most studies. However, it is important to take up studies on questions of changing gender relations within the family and community, participation of women in public sphere, creation of women’s support networks to address issues of gender based violence.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The paper focuses attention on the shifts that have taken place in the lives of women in families of Karnataka origin in Canada. Such issues as changing nature of role allocation and power sharing in families, inter-generational changes as measured by women's performance in such areas as education, employment and freedom from violence (physical, cultural and mental) and control over familial resources in Canada and India also need to be addressed. This study is primarily based in Edmonton city in the Alberta Province. Both primary and secondary sources of information would be used in generating the study data.

The «Italian Paradox» in the High-Tech Industries

There is an "Italian Paradox" in the development of the high-tech industries. As it is well known, Italy is under-specialised in the high tech industries and, during the last decade, has recorded disappointing performances in these sectors. In particular, the innovative capacity of Italian firms is quite low. 1) Patenting is below the European average: 7.4 patents per million of inhabitants in Italy vs 19.6 per million of inhabitants in the EU. 2) Furthermore, despite being the fourth largest economy in the EU in terms of GDP, Italy is only sixth for high-tech applications to the European Patent Office. However, Italy has a potential in these industries, which has not been fully exploited yet. In fact, it ranks third amongst European countries for the number of high tech firms and for added value. Moreover, the percentage of employment in high-tech and medium-high-tech sectors on the total of workforce (8.1%) is similar to the European Union average.

On the basis of this data, how can the Italian Paradox be explained? I will try to answer this question focusing on two aspect of the "Italian case": 1) the weakness of its National system of innovation and 2) the territorial unbalances of its economic development. In fact, according to the 2013 European Innovation Scoreboard – which gives a comparative assessment of the strength of EU27 Member States' innovation systems – Italy ranks only fifteenth in Europe in terms of innovative capacity. Furthermore, Italy is characterized by a high degree of internal diversity. So national averages do not render the internal complexity and diversification of the economic development of a "regionalized form of capitalism" as that of the Italian case. To corroborate this thesis, I will present the results of an analysis carried out on the Italian geography of innovation.

RAMIOUL, MONIQUE* (University of Leuven, monique.ramioul@kuleuven.be)
Greening in Construction: What Changes for Workplace Innovation?

This paper investigates how construction companies innovate their organisations in response to the shift to energy-efficient construction. The changes in product and process induced by green construction confront companies with detailed technical instructions, severe accuracy requirements for all operations and no room for improvisation. As a result, construction involves more specialisation, a growing length and complexity of the value chain (with more contractors involved), more standardisation, the modularisation of construction components, a shortening of lead-times, etc. Overall the process becomes highly sensitive for disturbances and requires rigid coordination and logistics. To investigate the impact of these changes, case studies were carried out in two Belgian construction companies. Each included interviews with 6-7 management representatives, 5-6 workers and on-site visits. Two contrasting work organisations were observed. The first can be characterised as an ‘enlightened’ employee-centred organisation model based on participation. The work organisation combines the centralised design and off-site prefabrication of some components with on-site empowered teamwork and investments in skills of the workers. These aim at reinforcing decentralised process coordination and regulation capacities. Subcontractors are included as partners in the on-site construction teams. The need for contextualised knowledge, decentralised problem-solving and high involvement of all dominates in this corporate strategy. The second company, in contrast, opts for high levels of division of labour, standardised and short-cycled off-site preparation of prefabricated components, centralised and bureaucratised process coordination, risk-transfer based subcontracting and a strategy of constant productivity intensification.

RAMIREZ FARFAN, DARIO* (sociólogo, dramirez@unal.edu.co)
Capitalism World System, Clash of Civilizations or Violence Civilizing in Contemporary World

Luego de la caída del muro de berlin y la profetización del fin de la ideología y el último hombre el mundo contemporáneo ha estado lejos del unanismo propuesto por Francis Fukuyama, la explosión de manifestaciones sociales en casi todos los aspectos de la experiencia humana no ha dado esperanza, movimientos sociales que van desde las clásicas reivindicaciones de clase y soberanía nacio-nal, hasta manifestaciones por la diferencia, el género y la identidad, pasando por movimientos ambientalistas y animalistas, son parte de un abanico de manifestaciones que no han obedecido el advenimiento de la sociedad liberal mundial. Esta explosión de manifestaciones no ha estado ausente de grandes procesos de violencia a nivel mundial e intervención militar en distintos países del planeta, Irak, afganistan, Libia, Siria son algunos de los ejemplos más significativos de los conmociones procesos surgidos con el “fin de las ideologías”. Las perspectivas teóricas en la comprensión de estos fenómenos son sugerentes especialmente las surgidas desde perspectivas económicas como la marxista, con el análisis de sistemas marcado de I. Wallerstein el cual tiene como hipótesis de Samuel Huntington y las propuestas de-coloniales de múltiples intelectuales del sur global. Esta ponencia busca plantear el debate sobre la “naturaleza” civilizatoria de estos conflictos, pero a diferencia de Samuel Huntington, y en coherencia crítica con Wallerstein y el Giro decolonial desea plantear que de lo que se trata es de un proceso de expansión civilizatorio, que a diferencia de Huntington y su choque contemporáneo de civilizaciones, este inició hace cinco siglos en América y se ha expandido por el resto del mundo, India, China, Japón, medio oriente hasta nuestros días.

Palabras claves:
Sistema mundo capitalista, civilizaciones mundo, expansionismo civilizatorio.

Microcredit and Poverty Alleviation In The Mexico Contemporary

Microcredit as strategy for poverty alleviation grows stronger in the last decades of the twentieth century, from successful experiences in different parts of the world, both in developing countries and the developed; numerous studies beginning to emerge about microcredit; however these studies are mostly empirical. Muhammad Yunus, founder of Grameen Bank, believes that the persistence of poverty is not because the poor have low or no schooling, but because many people lose business opportunities by not having access to a loan. For Yunus poverty can be alleviated if you pay money to the poor.

Yunus raises to credit as a human right and the prospect that the key in overcoming poverty through this financial instrument, are the economy and private initiative. Microcredit provides to people poor self-esteem and empowerment, addition, of creates new jobs. This is consistent with the idea that the state should move away from social welfare issues and concentrate on the proper functioning of the economy.

Microcredit has been incorporated into the social programs of the governments of various countries. Thus, in Mexico, the Ministry of Social Development (SEDESOL) has the social program called “Opciones Productivas”, which supports productive projects of the population poor.

This paper presents a historical review of the development of microcredit and analyzes to the loans granted for the government in contemporary System.

Social Changes and Social Responsibility

Responsabilidad social y su impacto en la sociedad.

Como bien se conoce la responsabilidad social es un modelo de gestión que está siendo aplicado por las empresas y organizaciones a nivel mundial. En este proceso de incorporación de políticas, acciones y estrategias de responsabilidad social en organizaciones de tipo público, privado y del tercer sector es preciso entender el cambio que estas acciones ocasionan no sólo en la propia empresa, sino también en la sociedad y en particular en sus grupos de interés o stakeholders.

Para poder explicar las variables de impacto, presentaremos el caso de estudio realizado en el contexto peruano. Para esto presentaremos resultados de la investigación desarrollada para el IDIC de la Universidad de Lima, sobre los casos de tres organizaciones que tienen presencia en el Perú, como son: BBVA- Continental, Petroperu y Caritas del Perú.

Towards the Construction of an Ecological Model of Healt from Social Science
HACIA LA CONSTRUCCIÓN DE UN MODELO ECOLÓGICO DE SALUD DESDE LAS CIENCIAS SOCIALES.

Resumen.

Vivimos en un mundo en donde las relaciones causa y efecto han dejado de ser insignificantes, la capacidad de reciencia del planeta ha venido disminuyendo con el paso del tiempo. En el período de las fuerzas productivas a lo largo de estos últimos treinta años que a diferencia de décadas anteriores las consecuencias son cada vez más importantes que la calidad de vida y diversidad ecológica del planeta; en la re- unión del club de Roma, se advirtió a los líderes mundiales la necesidad de poner límites al crecimiento debido a las posibles consecuencias irreversibles que su acción traería sobre la vida en el planeta, especialmente sobre los más jóvenes. Fenómenos como el calentamiento global, la escasez de agua, la perdida acelerada de biodiversidad, el aumento de la violencia e ilegalidad serían realidades pre-sentes de no asumir límites y formas de distribución justas frente al crecimiento. Frente a estas interrelaciones sociales y ambientales, la teoría del paradigma mecanicista, newtoniano y el dualismo mente/cuerpo no ha sido suficiente para comprender de manera adecuada estas realidades. Ellos no permiten comprender la complejidad de la “trama de la vida” las complejas interrelaciones existentes entre ecosistemas, especies y sociedad. Ante esta situación valió la pena preguntarse ¿qué nuevos paradigmas, qué nuevos conceptos y maneras de estudiar la realidad se necesitan para solucionar la situación por la que atravesamos en el mundo actual?

Palabras clave.
Salud/enfermedad, crisis ecológica, mecanicismo, modelo ecológico.

Does Violence Begets Violence? Evidence from Mexico

One familiar argument to explain violence rates is the common sense affirmation that violence begets violence. Imported from the biological sciences, this organic metaphor is well rooted in the discursive explanation of crime. However, the empirical evidence around this supposition is quite scarce. A typical combination of the “violence begets violence” argument with the lack of proper empirical evidence is easy to find in countries dealing with recent outbreaks of criminal violence. This is the case of Mexico where the recent trend of criminal violence has been explained with a wide array of arguments including the spread-contagion argument. This one in particular has gained presence among the media and policy makers. Moreover, this assumption is being increasingly used to justify the design of prevention programs where significant amounts of public resources are being invested. In view of this, this paper presents the results of a study on the empirical validity of the hypothesis behind the “violence begets violence” assumption. For my research purposes I have selected a set of relevant hypotheses on the contagion of violence to verify its empirical validity for the case of México. With a combination of different quantitative techniques I have analyzed homicide rates at the local level for the city of México from 1990 to 2010. The results of this work will throw light on the empirical pertinence of the contagion of violence hypotheses, and it will help to inform public debate and public policy about the characteristics of criminal violence in México.

Placing Food and Nutrition Security: The Co-Production Of Land, Dietary and Livelihood Relations In Four Sites Of Northern India

Patterns of land distribution in association with local agro-ecological conditions play crucial roles in shaping the dynamics of food and nutrition security in the global South. The relevance of the local is highlighted in this paper, which examines the differences existing between four rural communities in northern India. Using evidence from 389 in-depth household interviews, the paper identifies the connections which exist between household assets, nutritional outcomes, and livelihood strategies. The paper argues that the considerable differences found by the study and elsewhere suggest case studies should inform the understanding of the importance of processes of local embeddedness in determining food and nutrition security outcomes.

Trust Under Conditions of Extreme Risk: Exploring Trust Networks of Clandestine Activities

Trust is important in all types of social relations, but its role is crucial in secret activities of clandestine organizations operating under conditions of extreme risk. The paper explores the sources of trust in secret activities of underground publications (so called samizdat) of Soviet Lithuania. Samizdat was one of the most persecuted means of oppositional activity in post-Stalinist Soviet Union. Therefore, building a network of samizdat publication and distribution required extremely high level of trust and cooperation among members of clandestine networks. What are the sources of trust in a situation when a correct judgement on trustworthiness of a person is a question of life-and-death? Using social network analysis, the paper explores the trust networks of several samizdat publications in Soviet Lithuania, including the most successful underground publication in the Soviet Union, ‘The Chronicle of the Catholic Church of Lithuania’ which was continuously published from 1972 until the breakdown of the regime in 1989. The data is drawn from face-to-face interviews with the main publishers of the selected publications. The results of the research refute the claim of the theory of secret societies that to solve the problem of trust clandestine networks are built in pre-existing strong ties among collaborators.

The Impact Of Cultural Capital On Students’ Performances In Brazil

The main goal of this study is to verify the effect of cultural capital on students’ performances through an official test applied by the Brazilian government (Prova Brasil), the students are part of the Brazilian Elementary to High School Evaluation System (SAEB). The data set used is from the year of 2003 and involves 52,434 students. The standard test was applied in the SAEB year for the case of the students’ demographic characteristics and relations with other students and their teachers? The theoretical background is based on James Coleman (1997), Pierre Bourdieu (1982, 1998) and Basil Bernstein (1997). Among Brazilian scholars the study includes the ideas of Nelson Silva and Carlos Hasenbalg (2000) and Maria Ligia Barbosa (2009). The study model has as the dependent variable the students’ grades applied in the SAEB test and the cultural capital as the main independent variable along with the control variables. Descriptive analyses are used as well as regression models to obtain the effect of the independent variables on the dependent variable. The preliminary and main results show that there is significant association between levels of cultural capital and students’ performances in the SAEB test. Specifically, there is a significant and positive correlation between parents’ education, ownership of computer, access to the internet and newspaper reading with the performances in the SAEB test.

RAMOS ZINCKE, CLAUDIO* (Universidad Alberto Hurtado, cramos@uc.cl)

The most significant sociologists in Chile, in the academic field and the public sphere, have been makers of narrative accounts or stories about the reality of the country and its process of transformation which have served as guidance for social actors. Such sociological stories have helped to constitute the socio-political world and the processes occurring in it: structural transformations under Popular Unity Government (1970-1973), resistance and criticism under the military dictatorship (1973-1989), transition to democracy (late 1980s, early 1990s), etc. They have played a performative role, actively becoming part of the reality they describe. This is not merely the result of the force of ideas, but is rather a product of complex networks producing such narrative accounts, in which the authors are prominent nodes that manage to become obligatory passage point. The research examines three remarkable sociologists who have contrasting trajectories, orientation, and institutional links applied with marxist critical orientation, connected to left political parties; Pedro Morandé, in the Catholic intellectual tradition, connected with the Catholic Church; and Eugenio Tironi, in a Durkheimian tradition, with participation in the State. With regard to them and in reference to the period 1970-2013 three main matters are analyzed: (1) key axes of their
A Study on Competency Utilization of Women Entrepreneur in Small and Medium Scale Enterprises (SMEs) in Kanpur Region

Abstract
As god is a creator of flora and fauna, a woman is a creator of family which leads to society and Nation. The Indian society considered women as weaker sex. Such sociological and cultural traditions have kept women dormant for quite a long time. Despite of all hurdles Indian women stand tall from the rest of the crowd and are applauded for their achievements in their respective field. The aim of this study is to discuss the issues regarding women entrepreneurship in Kanpur. Different stakeholders are playing pivotal role in women's economic development. This paper is mostly based on Primary secondary data and some observations as and when required. The paper talks about the status of women entrepreneurs and their competitive skills in world of business environment. Skill, knowledge and adaptability (SKAs) in business are the main reasons for women to emerge into business ventures. The paper also focuses on the problems in front of women during setting up a business enterprise and running in the competitive world. Some issues related to lack of financial support, availability of resources as well as support of stake holder etc. are major barrier in development of women entrepreneurs in India. It will also suggest the way of eliminating and reducing hurdles of the women entrepreneurship development in Context of Kanpur.

Keywords- Women Entrepreneur, Socio-economic, Small and Medium Scale Enterprises, Competency.
The consequences of beef production for the environment have been a hot topic in recent years. The myriad of issues raised include: the copious amounts of methane released into the atmosphere by cattle, the large quantities of water and feed used to sustain cattle, and the amount of oil that is used throughout the commodity chain in order to produce such large quantities of beef. However, environmental discourses are often confined to industrial processing systems in industrialized countries. This paper shines a light on the unique environmental context of beef production in Southern Africa and the impact of conservation policies on producers in Southern Africa. Specifically, the paper will explore the unique interplay of cattle rearing within an arid and semi-arid environment, the environmental issues relevant to smallholder and pastoral systems of production, and the issues that emerge from the interaction of livestock and wild animals.

Open Your Own Data - Creating Individual High Value for Little People from Big Data

The Open Data movement signifies availability and access to data as a prerequisite for the exercise of individual democratic rights. Data are now Big Data with large numbers of attributes, transactions, relationships, complexities, and individuals. Government data are typically viewed as aggregate data. However, plenty of examples show that your individual data is required for the administration and planning of your tax, your pension, your health etc.

Individuals using electronic devices and applications leave electronic traces. When using the World Wide Web, your phone, or applications you leave traces. Data in the form of electronic traces are also fruitful for commercial companies because profiling based upon the detailed registration of individual behaviour can be used to target the right product or service to the right customer. Profiling can remarkably improve the success of invitations from a company to individuals. Seemingly, the individual also benefits by only being disturbed by offers containing more relevant information. The issue of privacy and confidentiality is discussed and high-level precautions are implemented in order not to disclose individual data to a third party. However, the individual data should be available to the individual. To open and own your own data should be the general rule in all areas.

Big Data implies an information asymmetry that disfavours the individual. When individual data are not available to the individual, the individual's decision making is based on insufficient data. As an example your phone company knows precisely your behaviour regarding phone conversations, text messages, and data traffic. If you had your individual data - “know yourself” - you could generate more individual value when approaching the company. With full availability of individual data and development of capable software applications and agents the individual can gain the rightful ownership and effectively act in the individual's own interest.

Children’s and Preschool Teacher’s Photographs of New Preschool Architecture: Issues of Participation and Interpretation

Children's and preschool teacher’s photographs and experiences of new preschool architecture

Kim Rasmussen

In an ongoing project (2013-2014) about children’s and preschool teacher’s interactions with and experiences of new architecture/physical environment, young children between 2-5 years and their preschool teachers has photographed the physical and social environment. A numbers of photo-elicitated interviews with the preschool teachers had been held over the summer too. These actions have created increased awareness of the relationship between the physical and social environment and generated a lot of communication and interpretations among all involved. The project continues during the wintertime.

The aim of the project, (inspired from action research, new childhood sociolo-

gical perspective) is to create knowledge (on basis of experiences, narratives, observa-tions/field notes, photos/visual knowledge) about the preschool environment, which might qualify the discourse of kindergartens and the new architecture.

The architecture in new childcare-institutions breaks on several points with the former idea of “kindergarten” (small environments with an emphasis on domesticity, development and play). The new preschools in Denmark are bulky, contains many children (some more than 200 children), and are highly transparent (wide use of glass in both interior and exterior walls). The new architecture is based on (neoliberal) ideas of flexibility and puts the emphasis on early childhood learning. But one thing is the ideas of politicians, architects and builders, another

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
is how the buildings are "lived" and coded/decoded (Bernstein) and experienced by the participants.

The paper and presentation will focus on issues of interpretation visual data and dilemmas experienced during the process of cooperation with the preschool teachers and children. A key issue is the asymmetry between children and adults: preschool teachers play a key role in the interpretation of children's photos, while it is difficult to invite and involve children (2-5 years) to interpret their own photos and words.

RATCLIFFE, PETER* (University of Warwick, Peter.Ratcliffe@warwick.ac.uk)

Public Sociology and the Impact Agenda: A Case Study

This paper explores the interface between two areas of debate high on the agenda of contemporary sociology. On the one hand, there are concerns as to the relevance and significance of the discipline in the 21st century; on the other, the imperative of displaying 'impact' (in accord with the current neoliberal agenda demanding accountability and value for money). The concepts 'public sociology' and 'impact' are interrogated briefly but the core concern of the paper is to illustrate the complexity of operationalizing impact in a research project that demands the deep, and unswerving, involvement and commitment of a sociologist and researcher driven by the imperative of progressive social change. Deploying as a case study the attempt to use public procurement as a vehicle for promoting the employment prospects of racialised minorities (and other marginalised groups), the paper explores the dialectical relationship between various forms of social agency and disparate structural factors at macro, meso and micro-levels. It concludes that the 'messiness' of the demonstrable 'impact' mirrors that of the research process itself, and the pursuit of a 'public sociology' in this context conflicts with dominant characterisations in the literature.

La Strada Network As an Example of Transnational Mobilization Against Trafficking in Women

My presentation will explore mobilization around trafficking in women for the purpose of sexual exploitation in the Central and Eastern Europe (CEE). I will focus especially on the La Strada Network (LS) that is a network of non-governmental organizations from CEE and Netherlands. La Strada was developed in the mid 1990s as a result of cooperation between Dutch, Polish and Czech activists and since then developed in a European network and is a recognized actor in anti-trafficking mobilization at the national level as well as international level.

This network because of its roots as a cooperation between activists from the Western Europe and from post-socialist countries is a fruitful example to explore the processes of transnational mobilization. Firstly, I will use the concept of transnational activism networks in order to examine the role of the exchange of information and knowledge as well as the patterns of cooperation between activists form Netherlands and CEE.

Secondly I will give a closer look to the framing of trafficking by the network as a whole and by particular members of LS. Trafficking is linked to migration policy, national and international security, politics of prostitution etc. Framing of trafficking by a NGO depends on the location to the actor, the views on prostitution, the source of funding etc. Using the example of La Strada I will investigate of the way local and international organizations from CEE and Netherlands assess the causes and consequences of trafficking in women both in the unequal living conditions of workers and the unequal power relations between unions in the global south and the global north. Based on two research projects investigating trade unions' environmental strategies in Brazil, South Africa, India, Sweden, and the UK, we discuss the different ways in which unions of the global north and south assess the causes and consequences of climate change and the relationship between labour and nature. While in both hemispheres the protection of jobs and the protection of nature need to go hand in hand, it is mainly in unions of the global south that Capital is seen as exploiting both the earth and the worker. This creates conflicts between northern and southern unions concerning the development of climate change strategies.

Mapping the Consumption of Distance Across the Life-Course: Connecting Individuals' Mobility Milestones to the Histories of Mobility Practices

Life events and life-course transitions can dramatically impact on people's consumption practices. There is ample evidence that key life events (e.g. arrival of first child, relocation, transition from education to work, retirement) coincide with more or less radical changes in consumption patterns (cf. Schaefer, Jaeger-Erben and Bamberg 2012). Understanding the role and significance of such 'tipping points' in people's consumption biography has the potential to significantly advance our knowledge of current patterns of (un)sustainable consumption and how to either encourage or transform them.

At the same time, individual consumption biographies reflect wider structural conditions in society, including prevailing 'systems of provisit' (Evans 2011) that organise the delivery of goods and services and their subsequent consumption. Linking individual consumption biographies to the histories of particular practices can thus cast new light on the causes and consequences of (un)sustainable consumption and pave the way for more promising policies that work with rather than against people's established socio-environmental practices.

This paper argues for the development of longitudinal theoretical and empirical approaches to the study of everyday physical mobility and the associated 'consumption of distance'. The ability to adequately capture important mobility milestones across the life-course, that is, moments of radical change in how (much) people travel, must be central to these efforts. These milestones must in turn be linked to the history of key mobility practices such as walking, cycling and car use. Drawing on documentary evidence, policy papers and qualitative interview data from the Republic of Ireland, the paper identifies key mobility milestones in individuals' lives and connects them to the development of the modern Irish transport system and its implications for different mobility practices.

Pre-Marital Rituals in Contemporary France. Inventing a New "Tradition?"

In 1960s France, marriage was an obligatory stage of couple and family formation and the marriage process followed a clear-cut pathway that remained rela-
tively uniform from one individual to the next. Newly formed couples went out together - without living together – for two years on average. During this period, the future spouses presented their partner to their families, often through an official celebration of their engagement. While more than half of all marriages at the time were preceded by an engagement, the practice then declined. In this paper, we examine engagement since the 1970s. Has the practice disappeared, or do couples still choose to become engaged? If so, who are the fiancés of the 21st century? The actual content of the engagement process will then be analysed. Are family networks becoming increasingly autonomous, in the sense that engagement is no longer a direct concern of the parents of the future spouses? If so, are they replaced by friends, or is the engagement a more private affair?

Last, our attention will turn to a new form of pre-marital ritualization, namely "bachelor" or "bachelorette" parties, often seen as a "tradition" by the persons involved. We will examine the emergence and spread of these rituals among the social groups that practice them in order to test the idea that parties have now replaced formal engagement.

We will use the initial findings of the "Study of Individual and Conjugal Trajectories" survey conducted by INED and INSEE in 2013 on a representative sample of 8000 persons aged 25-64. Focusing specifically on the couple formation process, the survey will be used to study couples formed from the early 1970s up to today. It includes a specific set of questions on rituals for detailed studies of engagement and bachelor/bachelorette parties.

RAULT, WILFRIED* (INED, wilfried.rault@ined.fr)
REGNIER-LOILIER, ARNAUD (Inded)
VIVIER, GÉRALDINE (Ined)
COURTEL, FRANÇOISE (Ined)

This paper presents the new survey on couple formation in France. It was conducted by the National Institute for Demographic Studies and the National Institute of Statistics and Economic Studies in 2013 on a representative sample of 8000 persons aged 25-64. Focusing specifically on the couple formation process, the survey will be used to study couples formed from the early 1970s up to today. It follows on from two previous studies on couple formation. The first took place in the late 1950s and concerned persons who married in or after 1914. The second, in the 1980s, focused on persons who were married or in a consensual union. The economic, legal and social context has changed dramatically since these first surveys were conducted: fewer people are in couple relationships, time spent in education has increased, more women are in employment, divorce is more common, and new forms of union – including the PACS civil partnership – have emerged, along with new ways of finding a partner, such as online dating for example.

The new study aims to update our knowledge about the lives of people with a partner, divided by age and by cohort. We will use the initial findings of the "Study of Individuals and Conjugal Trajectories" to show how this new survey will shed light on continuity and change in couple formation and living arrangements, and also reveal how attitudes to couple relationships have evolved by age and by cohort. In this way, we would like to promote future collaboration and develop new opportunities for comparative research.

Gender Socialization of Youth in the Family

India is the second most populous country in the world, with over 1.2 billion people (2011 census). According to the provisional figures of the 2011 census, the youth population in the country including adolescents is around 550 million. This phenomenal rise in the youth population has made India the youngest nation with a demographic dividend appearing to be a reality. Socialization of young in the family is very important. The main objective of this paper is to know the different dimensions of gender socialization of the youth in the family i.e. their gender role, gender stereotypes, gender relations etc.

The sample of 600 students is selected from undergraduate and postgraduate students. The questionnaire is designed as a tool of data collection. This paper is divided into four parts. The first part introduces the Sociological concepts of youth, family, gender socialization, approaches of gender roles and socialization. The second part is on methodology. The third part consist the detailed analysis of the survey and final part is on findings and suggestions.

The study reveals that socio-cultural factors are important in gender socialization. The study indicated that there is a significant effect of gender socialization in the family on the young. The study also shows that there is quite a good relation between patriarchal system and inequality of socialization. The study makes a number of recommendations for action.

Voluntary Risk-Taking As Habilitated Action: How Can a Practice-Theoretical Approach Contribute to Risk Research?

Abstract

Within the sociology of risk, the last 25 years have witnessed a development from viewing risk as something to be avoided towards viewing risk-taking as part of one's self-development. Researchers have argued that routinised everyday life compels us to make 'escape attempts' (Cohen & Taylor, 1992) in which we deliberately put ourselves at risk. Central in this line of theorizing is Stephen Lyng's notion of 'edgework' (Lyng, 1990; 2005); i.e. voluntary risk-taking which negotiates the 'edge' between control and loss-of-control (Lyng, 2005). The concept of 'edge-work' sheds light on important aspects of risk-taking – but it also leaves some aspects of risk-taking in the dark.

The empirical case under study in this paper is youth recreational drug use, a form of voluntary risk-taking that has often been viewed in terms of edgework. However, viewing recreational drug use as edgework also entails some limitations: First, not all practices defined as risk-taking are actually experienced as such by the people involved. Experienced recreational drug users do not necessarily view their own drug use as 'risky'. And second, the experience of edgework builds on an underlying assumption about reflexivity; that risk-taking is a deliberate and carefully considered act. However, risk-taking is perhaps not always as well-considered; it may be more spontaneous or it may be non-reflexive.

To try to take these limitations into account, the present paper will allow for other views on risk-taking by drawing on insights from practice-theory, in particular notions of habituated action and embodied knowledge originating from the work of Bourdieu and Wacquant. In the paper I demonstrate how a practice-theoretical approach can contribute to our understanding of youth drug use by focusing on the subjective perceptions of risk, and on the bodily and embodied practice of risk-taking.

RAY, MANASHI* (West Virginia State University, Manashi.Ray@gmail.com)

Navigating the Myanmar–Thailand–Malaysia Border: The Escape Strategies of Burmese Refugees from Chin State, Myanmar, to Battle Creek, Michigan

Forced migrants who flee their home countries as part of a mass movement face significantly different realities than ‘refugees’, as conventionally understood and legally defined in the West. Forced migrants typically lack secure legal status and access to any form of welfare system. Additionally, because they lack social structures that support international migration, they often engage in ‘step-migration’. Before arriving at their final destination, they move to nearby countries where they can obtain assistance from other migrants, employers and smugglers who are absent in their native communities. Scholars who study forced migration and/or illegal migration focus especially on how migrants use resources at their points of origin or destination or both, but they always overlook the actual border-crossing experience of these vulnerable migrants.

Based on twenty-one biographical narrative interviews with Burmese refugees in Battle Creek, Michigan, in 2012–2013, this paper examines how illegal border crossing from Myanmar’s Chin State to Thailand and then to Malaysia (and later to the United States after migrants are accepted as refugees by the UNHCR in Malaysia) is a migration strategy rather than an ‘end state’ and, among other factors, is related to the enormous difficulties of migrating legally to Malaysia. The paper examines hazardous border crossing (which requires clandestine agents and smugglers for crossing and documentation) and ‘irregular migrant’ status – defined as the lack of legal residence in a nation-state – as essential components of forced migration, which is no longer related only to labor migration and is an expensive, much longer process. Thus, drawing on the concepts of increased border control, stricter immigration policy and definition of citizenship by nation-state, this paper considers the agency of Burmese migrants and raises the question of whether their ability to migrate ‘irregularly’ can be regarded as a resource in the particular context of forced migration.

Negotiating Risk in Intimate Labor: Domestic Workers and Night Nurses in Urban India

A recent spate of violent sexual assaults in Indian metropolises shocked the conscience of the nation and sparked a conversation about women's safety on the streets of urban India, further reinforcing the view above that women were safest at home. Indeed, one reason domestic labor remains a major occupational category for poor women is because it is done within the confines of a home. Yet, most types of intimate labor in the private sphere are unregulated and potentially unsafe, especially when women are young. This paper looks at how two types of workers who perform intimate labor -- domestic workers and night nurses -- seek to navigate physical and "moral" risks as they move between their homes and their place of work.

To Violate with Impunity: Legal Constructions of Marital Rape

Law is one of the important tools through which the state claims to ensure that women are treated as equal citizens. However, literature shows that though, women across India face myriad forms of gender based violence everyday, law has not proved to be an efficient mechanism to control such violence. Further, it is also well documented that not all violence is condemned by the law. One such violence is that of marital sexual assault. ‘The Protection of Women from Domestic Violence Act 2005’, does include sexual abuse within the definition of domestic violence, yet it does not clearly criminalize marital sexual assault. On the other hand legislations on ‘rape’ including the new Criminal Law Amendment Act 2013 continues to uphold legal exemption of “marital rape”. This paper attempts to understand such exemption of “marital rape” from Indian legal lexicon.

Legal constructions of “marital rape” is traced through analysis of legislations on “rape”, observation of cases at two Mahila Police Stations (All Women’s Police Station) at Odisha and through in-depth interviews of legal personnel from Odis- ha. This paper brings forth how despite campaigns and sensitization by women’s groups patriarchal notions continue to influence legal understanding of “marital rape”. Patriarchal and parochial notions such as “wifely duties”, “marriage as inherent consent to sex” “wife as property”, “divine ordinance” and others are invoked to justify the exemption of “marital rape”. It is argued that, while certain legislation may provide scope for pro-women interpretations to include marital rape, yet given the history of legal interpretations of law in India, such attempts would be far arnless. There is therefore, a need to amend the existing laws on sexual assault and bring in a comprehensive legislation against “marital rape”.

Bulgaria Case Study: The Challenges of the 2013 Social Protests in Bulgaria

The contemporary technologically determined information and communica- tion environment is not only facilitating users’ participation in the process of generation and dissemination of content, but is also creating new opportunities for democratic citizenship. A variety of texts on new communication characteristics (Carpentier, Castells, Deuze, Filier, Friedman, Jakubowicz, Jensen, Lash, Patri- arche, Todorov, etc.) offer multiplex approaches to this phenomenon, elucidating the interrelations between the audiences, the traditional and the social media.

The proposed text will discuss some major political and social implications of the new media. The audiences viewed through the prism of the media activism in Bulgaria. It is based on comparison of two case-studies, focused on recent social events in the country that had significant political effects. The first one, triggered by the high electricity bills, is connected with disapproval of the living standards. Although it resulted in resignation of the acting government in February 2013, the cost of electricity has not changed. The second one has moral purpose -- for sus- taining the democratic standards. On June 14, about 10,000 people summoned spontaneously via the social networks to protest against the Parliament for the non-transparent appointment of a controversial media mogul as a head of the State Agency of National Security. Although the Parliament withdrew the appoint- ment immediately, since then (nearly three months) hundreds of activists are every day out in the streets protesting against other controversial measures of the new government. Both events enjoyed extensive mainstream media coverage.

The aim of the proposed research is to answer the question in what ways the ongoing audience transformations challenge the contemporary media mix in Bul- garia.

Cross-National Differences in Early Family Instability By Socioeconomic Status

Extensive research has shown that family instability has negative consequences for children’s well-being. At the same time, there is growing evidence that differ- ences in children’s experience of family instability by parental socioeconomic status are growing—at least in the U.S. Less well understood is the extent to which the same may also be occurring across industrialized countries more broadly.

In this paper, we add to the literature by evaluating the extent to which the gap by education in family instability during childhood appears to be growing in cross-national context, using data for 17 industrialized countries with multi-state life tables and country-specific hazard models. To the extent that our preliminary results hold true, this research suggests that inequality in children’s family experi- ences may be an important feature of life across the Western industrialized world, and that protecting child wellbeing for those born to less advantaged parents may be a growing concern.

Democracy, Social Movements and Rights: The Challenge Of Pluralism

In recent years social movements around the world have been more and more explicitly related to the issue of democracy. Since the 90s and the triumph of neoliberalism, transnational movements have struggled for an idea of democracy fo- cused on human rights and inclusive citizenship, and not simply on the freedom of association, political participation and consuming. With the alter-global movement, and more recently with 15-M and Occupy, the focus of collective action has shifted from the search of individual freedom – as in many post-1968 mobilizations – to collec- tive rights as main goal of a democratic project compatible with an idea of global justice in a pluralist world. On the one hand, digital technologies have enhanced transnational communications and cross-fertilization of mobilizations situated in contexts still deeply differentiated in terms of culture, history and politics. On the other hand, social rights and human rights have become a general frame- work of reference hiding different internal positions and interpretations about rights themselves. In this presentation I will focus on the theoretical issues raise by pluralism in the recent history of social movements fighting for democracy and rights.

Subjectivity and Human Rights: A Theoretical Investigation

In spite of an enduring attention for ethics and morality, the interest of sociologists for human rights is recent, although lively and prolific. Power, violence, domination, the idea that “Whoever says ‘humanity’ wants to betray” (Carl Schmitt), have been at the core of critical sociology much more than the analysis of subject’s capability to struggle for human rights through social movements and everyday personal choices. Hence, not only positivistic tendencies have brought to mistrust towards the issue of rights, but critical and emancipative sociology as well – from Frankfurt School, to Foucault, Bourdieu and others – has been sceptical towards the topic of human rights. Indeed, a sociology of human rights is related not only to ethics, social justice and social inclusion, citizenship rights and critique of discriminations, but also to a sociology of the acting subject. A full sociological understanding of the issue of human rights needs as well a reflection on subjectivity in a pluralist, multicultural and globalized society. After a philosophical phase during which the concepts of subject and subjectivity have been criticized, deconstructed, reduced to the immanence of situated practices, the rise of the issue of human rights in the international sociological debate and in social movement studies highlights again the centrality of the problem of subjectivity (and humanity) in social theory. The aim of this presentation is to analyse the connections between contemporary sociology of human rights’ movements and sociology of subjectivity.

Post-, Trans-, or De-Nationalization? Fine-Tuning Political Identifications Above and Beyond Nation-State Allegiances

The literature on emerging global identifications tends to use ‘post-national’, trans-national and ‘de-national’ as convenient synonyms. However, these terms are better employed to single out distinct forms of disalignment of political identification from historically solid national identities. The paper describes these forms one by one and illustrates ideal-typical contents and conditions of such diverse configurations of detachment from nationhood in practices and attitudes. The empirical part of the paper draws on a 8,500 cases survey and 160 in-depth interviews with EU citizens living in six different countries (Denmark, Germany, Italy, Romania, Spain and the UK) as part of the EUCROSS project (www.eucross.eu).

REED, HOLLY* (City University of New York, holly.reed@qc.cuny.edu)

Race and Patriarchy: Gender and Migration in South Africa during and after Apartheid

Apartheid was not only a racial project, but also a patriarchal project that encouraged family separation. By design, black men and women in South Africa had different experiences under the apartheid regime, although many times they did not follow the strict patriarchal and racial laws. There is not much good historical data about gender differences in migration in South Africa, so I use a unique data set (2000 South African Migration and Health Survey) that includes life histories for a nationally representative sample of the black population to investigate the impact of apartheid policies on both men’s and women’s past and present migration patterns. Overall, I find that both women and men became increasingly likely to move over time, both during after the apartheid years and that women were more likely to move with their families, contrary to conventional wisdom and unlike migration patterns in other contexts. Women may not have moved at the same rates as men, but this paper gives evidence that despite apartheid’s intended effects of family separation, both women and were moving as families. Gender and migration patterns are relatively understudied, especially for historical populations, so this paper has the potential to add to our understanding that both historical and current gendered migration patterns, particularly in South Africa.

Modernity Reconfigured, or, Empire and the End of Habermas
Versus Foucault

Central to debates in social theory about the relationship between modernity and criticism has been the opposition, variously construed, between Foucauldian and Habermasian perspectives. Particularly in the 1980s and 1990s, and into the 2000s, these iconic figures stood for differing positions on the nature and purpose of human rationality, the workings of power in modern (and perhaps post-modern) capitalist societies, and the meaning and purpose of “critical theory.” As many papers and advanced course syllabi show, the opposition itself became a tool for thinking about democracy, capitalism, violence, and so on. However, this opposition was undermined by a surprisingly similar theoretical narrative of modernity informed by a comparative-historical sociology of national states and economies, and this narrative is in important ways incorrect and incomplete, for it excludes empire and colonization from its causal stories and cultural interpretations. A reading of the explicit and implicit historical sociologies of Foucault and of Habermas is presented, highlighting these absences. The paper then explores the recurrence of this absence in other theories of modernity or modernities, including Wittrock and Eisenstadt.

What, then, is the alternative? Too often, alternatives are themselves presented in terms informed by “Habermas versus Foucault,” modern versus postmodern, etc. In an effort to resist this tendency, instead of proposing a new all-encompassing position, this paper examines how three concepts are that are simultaneously analytic and normative would shift in their meaning and use, if we were to incorporate the sociology of empire into our understanding of modernity and critique.

First, the relationship of the concept of power to the concept of instrumentality or instrumental reason is reconsidered. Second, the concept of fantasy, and the possibility of a hermeneutics of modern fantasies, is explored. This leads to a final reflection on the concept of modernity itself.

Overcoming Institutional Barriers: The Relationship Between Basic Human Motivations and Immigrant Integration Across European Societies

Research on the incorporation of immigrants into host societies has paid particular attention to the question of who is most likely to integrate, by distinguishing between individual, country of destination, and country of origin effects. Most of these debates have largely overlooked the question of why some people are more likely to integrate. In this study, we analyze integration at the micro-level by identifying what basic human motivations lead to greater socioeconomic success, cultural adaption and political participation. Social psychological research has identified four higher-order universal human values that are consistent with specific types of motivations: self-transcendence (motivation = social justice), conservation (motivation = social order), self-enhancement (motivation = self-esteem enhancement), and openness-to-change (motivation = creativity and independence of thought). Although each exists in every culture, there is much variation in relations to the distribution of these values within and between countries (Schwartz & Bardi, 2001). In this study, we posit that immigrant integration should depend on whether immigrants have the same values and motivations that are dominant among native residents. Moreover, we expect self-enhancement values in particular to be strongly correlated with integration. Yet, because immigrants are more likely than native-born citizens to experience discrimination, we expect this motivation to be more important for immigrant outcomes than for natives. Further, we hypothesize that the relationship between these values and integration will be strongest in societies that have additional institutional features that make immigrant integration more challenging (i.e. weaker welfare states, societies without multicultural policies, and societies without inclusive immigrant integration policies).

To test these hypotheses, we analyze the 2002/2012 cumulative file of the European Social Survey, which includes the Schwartz’ Portrait Values Questionnaire in addition to a number of social and political and attitudes and behavior.

Welfare Magnetism within Public Opinion. Evaluating Welfare Opinions Among First and Second Generation Immigrants

Invoking the metaphor of the magnet, an oft-heard concern about the sustainability of the welfare state is that generous social welfare provisions serve as an important pull-factor in immigrants’ consideration of their preferred country of destination. With their accumulated social risks, immigrants are on average more likely to claim welfare benefits, fueling the idea that such generous provisions reverse migration flows. If this concern would be justified, then the analysis of attitudes towards social welfare programs among immigrants would reflect such magnetism effect, namely that immigrants would exhibit stronger pro-welfare attitudes compared to the non-immigrant population, particularly in countries with higher per capita spending. To evaluate the extent to which immigrants reflect the idea of welfare magnetism, we analyze the 2008 ‘Welfare Attitudes’ module of the European Social Survey, fielded in more than 20 countries. This survey allows us to untangle the extent to which self-interest motivations determine welfare attitudes among immigrants equally as they do among non-immigrants. Further, we evaluate whether pro-welfare attitudes are a function of the size of the welfare state immigrants reside in. While our analysis indicates that immigrants are indeed slightly more pro-welfare than the autochthonous population, it also shows that their welfare attitudes are an imprint of the welfare opinions of the majority population of the country they are living in. We conclude our contribution with the implications for the future of the welfare state, the theory of welfare magnetism, and the consequences for public policy.

Subjectivity and Social Change In Social Struggles In Mexico

Mexico is a key country to look at and analyze the forms of struggle and the projects of other sorts of life that are being put into practice in the Global South. The experience of Zapata autonomous communities (since 1994), and the re sistances of Atenco and Oaxaca in 2006, the processes of self-defense of villages in Guerrero and Michoacan, and other numerous indigenous struggles, whether rural or urban that are taking place in Mexican territory have been configured as a point of reference for the development of a new social imaginary in both the Latin American continent and other places around the world. In addition, these experiences have contributed to a path to new forms of mobilizations in Mexico and also in Latin America, mainly led by social subjects that have outweighed the North-centered analyses of collective action and also the traditional conception of social movements.

In this paper, we will present a proposal of analysis regarding social struggles taking place in current Mexico, from below and from the point of view of the leaders. Our starting point is the Latin American literature on social movements and the ethnographic work carried out by the authors in various social protests in the country in the past decade. Among our purposes, we aim to analyze how these struggles people reinvent and re-configure non-institutional forms of doing politics in relation to collective needs and desires.

With this paper we attempt to contribute to the construction of a dialogue between the experiences of struggle in the Global South and the Global North, where the starting point are not the theories far from social subjects nor their geographical location, but instead the everyday political practices of people.

Obesity and Social Inequalities : Public Health Campaigns and Their Implementation

In the context of a French “epidemic” of obesity, the question of social inequalities regarding the development of obesity and the implementation of nutritional recommendations coming from public health campaigns constitutes an important concern. Based on a statistical analysis of obesity prevalence (1), on a corpus of 85 semi-directive interviews (2), and on a large corpus of texts related to the French media (3), this contribution will analyze the inequalities regarding obesity in France related to social classes, gender and generations, and it will examine the several factors explaining this social gap, in particular the integration of recommendation related to diet and body along the social scale and the way obesity is taken in account in public health campaigns. First, it will be placed on the ongoing existence of a strong social hierarchy in which well-to-do and low-income categories are at opposite ends of the scale, and the factors that determine the integration of dietary dictates are presented (economical factors; mental representations of diet and body; the symbolic of sickness and its relation to diet; the collective mental representations and identities of each social class). The analysis also shows the social inequalities that exist in the development of norms and the complexity of the intermediate social groups, divided between submission to normative pressure regarding diet and corpulence, and a form of working class rejection.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
We will thus highlight that the French public health campaigns, claiming to be universal, seem destined to fail: in order to raise a strong mobilization when it comes to obesity, public health campaign have neglected social disparities. In consequence, they may have deepened social inequality further because they have ignored – at least until recently - the social dimension of dietary consumption.

La Crise Racontée Par La Télévision Française

Cette communication se présente en forme de décryptage et d’analyse, sur une période d’une année, des programmes de la télévision française (grandes chaînes historiques, TF1 et France Télévisions) concernant la représentation de la crise selon deux catégories d’émissions: fictions télévisées d’une part, et émissions de débats politiques, d’autre part, illustrant et légitimant conjointement un discours de l’inégalité.

S’agissant des fictions télévisées (séries et téléfilms), sous réserve de quelques notables exceptions qui donneront lieu à un éclairage spécifique, le modèle régulièrement dupliqué ignore la crise, en ne représentant que des milieux sociaux qui y échappent. Les exclus, lorsqu’ils apparaissent font figure d’accidents individuels. La télévision publique n’apparaît pas, à cet égard, fondamentalement différente de la télévision privée. L’exemple emblématique, de la série quotidienne Plus belle la vie (France 3), alors même qu’elle a la vertu d’illustrer les grandes questions sociétales du temps présent (racisme, homophobie, sex-isme, problèmes familiaux…), ne le comporte parmi ses personnages ni chômeur, ni ouvrier, en claire opposition avec les séries britanniques comparables. Les inégalités de représentation y apparaissent bien comme des inégalités de classe.

Des tendances comparables caractérisent, selon d’autres voies, les émissions de débats politiques, nombreuses sur les chaînes publiques : la première traduction d’inégalités concerne les experts et « intellectuels » invités, quasiment toujours les mêmes, fondant la distinction entre une minorité « visible » et la majorité des « invisibles ». Et ces mêmes experts partagent le même discours néo-libéral d’appréhension de la crise, imputée à l’inadaptation des salariés aux nouveaux principes du marché du travail.

Public Transport in Times of Individualization

Public transport is recognized by policy makers as a main tool in the combat against greenhouse gas emissions, and a key factor in sustainable urban development. Yet in Stockholm, the European Green Capital of 2010, systems for private transport are given a significant portion of space and funding in policy making and regional development plans. A recent prognosis shows that by 2050 Swedens will be far from reaching its zero-emission climate target for road traffic, given hitherto decided measures. This implies a gap between the rhetoric and set targets, and the physical plans made to reach these targets.

This paper is focused upon transport policy strategies for facing and responding to climate change in second modernity, and how modernization pressures are reconciled with sustainable development in policy for urban transport. As a major driver for policy changes, the second modernity has resulted in a step further towards individualization and a step back for the collective planning of the first modernity. How do the second modernity and sustainable development relate to each other and how do they affect urban transport policy? An assumption is that the mechanisms of the second modernity encourage “light” private, flexibility-enhancing solutions over those heavier collective solutions laden with distributive justice that the 1987 Brunntdal Report promotes, making weak sustainability or ecological modernization more attractive as a policy direction.

I will relate Stockholm’s urban transport policy to the regional development plan, to consider how policy relates to modernization and how well the theory of second modernity can explain the gaps between targets and prognosis for emissions. My hypothesis is that ecological modernization is a way to reconcile modernization and sustainable development, and that a bias towards modernization provides a way to reconcile second modernity with sustainable development in policy for urban transport. As a major driver for policy changes, the second modernity has resulted in a step further towards individualization and a step back for the collective planning of the first modernity. How do the second modernity and sustainable development relate to each other and how do they affect urban transport policy? An assumption is that the mechanisms of the second modernity encourage “light” private, flexibility-enhancing solutions over those heavier collective solutions laden with distributive justice that the 1987 Brunntdal Report promotes, making weak sustainability or ecological modernization more attractive as a policy direction.

Labour Market Re-Entry of People with Disabilities after Vocational Rehabilitation in Germany

Employment is one important aspect for societal participation as well as social well-being. Besides providing a living, employment gives access to benefit entitlements in case of unemployment or retirement, but it also provides social prestige and social recognition.

Vocational rehabilitation, as an instrument of the German social welfare state designed to support societal participation, aims at (re)gaining employment for people with disabilities. Due to a lack of data, there is little empirical evidence on the degree and quality of labour market integration of vocational rehabilitation in Germany.

Based on a three-wave panel survey of the Institute for Employment Research on vocational rehabilitation and the life course, our research focuses on rehabilitation in the financial responsibility of the German Federal Employment Agency (FAD), who require reintegration into the labour market. These people already have several years of working experience, but cannot continue their prior occupation due to health problems and thus, mainly participate in further training, retraining and/or integrational measures. We analyse employment transitions and respective determinants for the re-entry into the labour market and the sustainability of employment using event history analyses.

Results show that two third of the population obtains (mostly unsubsidised) employment only a few months after vocational rehabilitation and on average stays employed for almost three years. The transition in employment is highly determined by structural factors, but also by the type of measure attended during vocational rehabilitation. Integrational measures, like e.g. employment subsidies, are more successful for the placement in employment. Surprisingly, the type of disability does not play an important role in labour market integration, but the subjective well-being appears to be of high significance for both the transition in and the sustainability of employment. Those who report a (very) bad health condition have significantly worse employment chances and thus, reduced chances of social well-being.

The Transformations of the Nation State As Challenges to Sociological Theory

The great changes the world experiences in recent decades have had profound consequences for nation states. Yet, the impact of such changes has been under theorized. This theoretical deficit makes it difficult for us to contemplate the prospects of the historical fusion between national solidarity and state authority. Relevant as the criticisms directed to methodological nationalism were, their further implications remain poorly explored, giving marginal if misplaced assessments of the future of the nation caught between the global and the local. In the paper I discuss two issues that bear a direct impact on the changes we conceive of the nation-state today: (a) the emergence of the idea of civil society and (b) the politics of place, that together with market integration and state authority constitutes a third ideal type of societal resource organization; and (b) the idea that the presumed equality of the citizens of a nation-state can be compatible with the recognition of social differences. I argue that sociological theory must take into account the two aforementioned cultural-ideological changes to be able to provide sound guidance to empirical research on the future of the nation. I conclude with the argument that contributing to account for the cultural ideological changes in the way society sees the interactions between authority, interest and solidarity today, sociological theory will also contribute to a better understanding of the prospects nation-states confront.

Billiomedia: Journalism Ethics and Ideology in the Age of Open Participation

Throughout the world, news is becoming a more open, collaborative project. In “We The Media” (2004), David Gillmor re-imagined journalism’s role in society as a joint conversational process achieved by citizens and professionals. Later, the term “Participatory Journalism” was conceptualized by journalism scholars in order to transcend the citizen vs. professional journalism dichotomy.

“Participatory journalism” has been discussed in recent years in various contexts. First, there’s the cultural change defined as “convergence culture”: the gathering, filtering and editing of news produced by professionals transformed into a participatory culture of news in which the audience became “users” or “producers” ,and arguably achieved more control over news content, production and distribution. Second, is the social erosion of journalism as a profession: its boundaries, its gatekeeping function or the ideology and ethics which accounted for journalists authority, legitimacy and autonomy. And lastly is the Marxist view of the ramifications of these developments: digital serfdom or exploitation (manifested in user generated content), precarous labor patterns (freelance contributors and news aggregation sites) and cultural work.

Despite overwhelming print circulation numbers, subscription base and advertisement revenues, Japanese newspapers experience a steady decline in profits.
Recently, major newspapers began developing participatory platforms such as Asahi Shimbin’s “BilliMedia”. Newspaper reporters from the Asahi were also encouraged to open official Twitter accounts, converse with the audience and debate with their peers and competitors on-line.

Albeit limited, these actions are transforming the culture of news production, gathering and gatekeeping functions. Based on Japanese reporters interviews, my research focuses on these newly emerging participatory practices and the challenge they present to professional ethics and ideology. Employing concepts as user generated content, social curation or big data manipulation, Japanese reporters attempt to redefine professionalism in order to reclaim their credibility and jurisdiction at a time of crisis and uncertainty.

Muslims Social Exclusion in Canada and France: Does National Context Matter?

This paper compares the experiences of Muslim minorities in three contexts: France, Quebec, and English Canada, and in so doing helps illuminate a number of issues of significance to current debates on immigration and multiculturalism, including the role of public attitudes, national integration 'models' and advantages of transnationalism from a 'nations of immigration' over recent European experience, and language and culture. The rise of an anti-Muslim sentiment in most of Western European societies, and especially in France, has not reached the same level in Canada, however Quebec's is clearly distinctive in this regard and more like France. How these differences among public opinions and in political discourses affect social integration prospects of Muslim minorities in the three settings? Both quantitative and qualitative data are used. On the quantitative side, for France the new government-mandated “Trajectories and Origins” (Teo) survey conducted in 2009 (over 21000 interviews) overcomes many limitations in existing statistics for identification of ethnic minorities. The comparable Canadian source is the “Ethnic Diversity Survey” conducted in 2002 by Statistics Canada (over 42000 interviews). The paper also draws from structured encounters between Muslims and non-Muslims conducted in Paris, Montreal and Toronto.

Transborder Disaster In The Progressive Era

What can disaster teach us about diaspora? What can diaspora teach us about disaster? This paper explores two early 20th-century disasters in the U.S.-Canada borderlands. One, the Halifax Explosion of 1917, took place in a region that sent migrants south to the United States; the other, the Salem Fire of 1914, mostly affected French-Canadian immigrants to the U.S. and their descendants.

Each disaster illuminates experiences of migration and diaspora. The Salem Fire—which started at a richly patent-leather factory and spread through the tenement district, eventually rendering 18,000 homeless or jobless—shows the relative unimportance of the Franco-American diaspora to the lives of its members. Contrary to what the historiographical literature would have us expect, Franco-American survivors mostly stayed near Salem, going neither to other New England centers of the diaspora nor back to Quebec. Local and regional communal organizations did little fund-raising or relief work. In contrast, the Halifax Explosion—which began as a fire on a munitions ship, killed 2,000, and left about 25,000 homeless or jobless—shows the importance of the Nova Scotia diaspora. Nova Scotian migrants to the “Boston States” donated money for relief and through their donations built a transnational political community that sought to influence relief and recovery efforts.

Likewise, attention to diaspora and migration can help us better explain the experience of disaster. As Erikson (1976) and others have recognized, displacement is a key to many disaster stories. Prior “displacement”—that is, migration—means that disaster refugees have more access to aid from outside the affected community and have a greater willingness and ability to relocate. These two historical disasters help shed light on the uses of diaspora and migration in disasters’ aftermaths.

Intergenerational Coresidence and Electricity Consumption: Age Effect, Retirement Effect and Scale Economies Effect

Many studies have found that, even in the most modernized urban areas in China, intergenerational coresidence still account for a large proportion. Intergenerational coresidence, low retirement age, high female labor participation rate can make the household activity and the related energy consumption patterns different from western countries. In this paper, we analysis the impact of inter-generation coresidence on energy consumption. Taking electricity as an example, we find that there are significant differences between intergenerational coresidence household and single generation household. electricity usage of single generation household is much higher than other intergenerational coresidence household. Step down in variance in single generation is much larger than others. We pooled data from the Chinese Family Panel Studies (CFPS) and used OLS regression model to decompose “Age effect”, “Retirement effect” and “Scale economies effect”. The decomposition model shows that (1) the presence of “Scale economies effect”, which means that the household per person electricity usage declines not only when household members increase, but also when intergenerational household members live together; (2) “age effect” and “retirement effect” can be found that female over 50 years old live in a household can increase household per person electricity consumption, and all the other age-gender-specific group live in a household can reduce household per person electricity consumption, especially for male at the age of 30-40; male consume less electricity in household than female at all age group, except for age 10-20. Energy policy makers can benefit from better understanding of these effects.

RENAUD, LEÅ* (University of Potsdam, lea.renard@etuu-iepg.fr)

The Statistical Construction of Alterity: Governing National Population By Numbers in France and Germany (1860-1900)

This paper is aimed to contribute to the history of statistics as science but also as a key instrument (Foucault 2004). This abstract explores the role of official statistics in the nation building process in the second part of the 19th century in France and Germany. Following the analyses of Desrosières and Foucault the study asks how science produced “imagined communities” (Anderson 1983) by using and constructing statistical categories on migration. By doing that official statistics contributed to produce differentiation between national and foreign populations, which both aim to be governed differently.

In the first step I will argue that the historical development of official statistics in the 19th century in France and Germany led to its use in both countries as a governing tool to administrate population, but in different national ways. In the second step, I will present the processes and the outcomes of these different practices to show how official statistics took part in the historical process of nation building.

Scientific journals (Journal de la Société de Statistique de Paris, Zeitschrift des königlichen statistischen Archivs) between 1860 and 1900 formed the empirical basis of the study. About 160 articles on migration statistics have been qualitatively analysed in order to sketch the statistical discourse about migration as well as the discursive construction of German and French nations by statisticians. The author gratefully acknowledges the financial support of the Scientific Commission of the IEP Grenoble, the Doctoral School SHPT of the University of Grenoble and the Potsdam Graduate School.

RENAUD, MARIE-CHRISTINE* (Université Autónoma Chapingo, mcrennard@gmail.com)

Behind the Label: Always Fairly Traded?

Since Fair Trade entered the mainstream market, a label symbolizing the quality of being "fairly traded" has mediated between the producers and the consumers instead of the more direct relationship existing when fair trade was an alternative trade organizations business. With the lengthening and a larger opacity of the commodity chain, the label is supposed to give information and a guarantee to consumers about the conditions of trade offered to the producers. A system of standards and certification has been developed to deliver the label.

On the other side, as the literature on Fair Trade demonstrates, the corporations have developed multiple strategies to occupy the promising market niche that fair trade represents, through favoring competing labels that induce consumers’ confusion or being themselves certificated by the fair trade institutions for a small part of their purchases.

Based on a case study in the Sierra Madre de Chiapas, South of México, the paper pretends to demonstrate how a single label, the Fair Trade International label (or FLO), covers (or hides) very different and opposite realities on the side of production and supply: on one side, autonomous cooperatives of coffee peasants, that have sold under Fair Trade conditions to Alternative Trade and Fair Trade organizations in the North for long time; on the other side, producers organized and financed by one of the largest coffee trade corporations, engaged in a multi-label strategy in order to occupy all market niches, that buy up their coffee to be sold under the FLO label.

REPEZZA, MARINA* (École Hautes Études Sciences Sociales, marina.repezza@gmail.com)
L’identité Entre Construction Et Renonciation. Réflexions De Ernesto De Martino Et Georges Devereux Sur La Sexualité Dans Une Dimension Transculturelle

L’anthropologue italien Ernesto de Martino (1908-1965), dans sa vision historico-critique du rapport entre psychisme et société, considère le sujet humain comme un produit historique dont les origines plongent dans ce qu’il appelle le ‘‘monde magique’’. L’existence d’une frontière stable entre l’individu et le reste du monde est, pour de Martino, loin d’être un fait établi mais caractérisé le monde occidental, qui a dépassé le phénomène de la ‘‘labilité de la présence’’ et dont l’angoisse face à la dissolution (l’appelle cannibale) ces états psychiques d’‘‘identité indifférenciée et perdu de monde magique’’ est désormais consacrée à des situations bien précises (l’acte sexuel, la mort).

Georges Devereux (1908-1985), élève de Marcel Mauss et fondateur de l’ethnopsychanalyse, étudie de son coté la constitution d’une ‘‘identité intégrée’’ et théorise la possibilité d’une ‘‘renonciation à l’identité’’, comme un stratagème volontaire d’autodéfense psychique.

Je proposerai une analyse comparative de la notion de construction de l’identité chez de Martino et Devereux, et son corollaire, la perte de l’identité pour le premier, versus la renonciation à l’identité pour le second. J’essaierai d’élucider en particulier le lien entre l’acte sexuel et la sexualité, qui est traitée dans une perspective transculturelle par ces deux contemporains, mais qui est abordée selon des angles différents. En reconstruisant entre autres la réflexion sur la pudeur et le plaisir sexuel développée par de Martino, celle sur la déviance sexuelle chez Devereux, je voudrais souligner l’originalité et la complémentarité de la contribution de ces deux théoriciens.

Elites of São Paulo and Their Varied Relationships with Public Space

The paper examines specific areas in São Paulo where elites cohabit with poorer populations and investigates the different ways they mediate this physical proximity. Our findings indicate that the relationships emerging from these dynamics vary from complete appropriation of public space by the elites to negotiation with other cohabiting social groups.

Until the 1970s, São Paulo’s elites lived in the center of the city. Although they were one of the actors in the metropolis’ macro-segregation configuration, the local literature traditionally emphasized the formation of urban peripheries inhabited homogeneously by poor populations. Recently, however, both quantitative and qualitative research have eloquently pointed to heterogeneous living spaces in São Paulo, indicating that portions of the elite have scattered throughout the metropolis, while others have stayed in the center.

The elite’s varied choices of housing location since the 1980s led to different impacts on public space. Some of the groups have closed streets with gates and walls; others have banned sidewalks, and so forth. At the same time, some of the groups that stayed in the center have not materially sealed off contact with other social groups. Therefore, our aim is to understand how elites view contact with other populations and which role public space plays in the establishment or avoidance of such contacts.

We take three methodological steps: (a) using Geographic Information System, we select areas that are inhabited by the 10% richer extract of the population according to the 2010 Census data, provided that these areas also contain poorer populations; (b) conduct and analyze in-depth interviews with members of the elites and label them into groups according to shared lifestyles, as well as social, political and economic insertion; and (c) proceed to describe the relationship each elite group establishes with neighboring populations, focusing on the role of public space.

Mobility Policies in São Paulo: Distributive Strategies Towards the Public Transport

The paper focuses on a redistributive strategy that attacks poverty on one of its aspects – the impaired access to urban resources, specifically to mobility. It investigates two locally-designed São Paulo policies aimed at redistributing road space towards the public transport to make bus users travel faster and at lower costs.

While Brazil has been redistributing income towards the poor through a federal Conditional Cash Transfer policy, its poorer metropolitan inhabitants are still submitted to lower-quality urban services, mobility being one of the most critical. Analyses of the 1987, 1997 and 2007 Origin/Destination survey conducted in the São Paulo Metropolitan Region show a positive and significant correlation between higher incomes and automobile use.

Data indicate that the two policies investigated here have redistributed road space and travel speed towards buses. The Sistema Integrado (2001-2004 adaption) focused on the implementation of a BRT (bus rapid transit) network while introducing an integration system that allowed fixed-fare multiple-bus riding. The Da Licença para o Obus (current administration) has implemented more than 200 kilometers of exclusive bus lanes and claims to have reduced travel time on these lanes by half. Both policies suffered from political and institutional setbacks, as the paper will detail.

The role of transportation in accessing other urban-life goods has been eloquently described as crucial by European literature. Research on the subject has been scarce in the Global South, however. With empirical data on mobility in São Paulo, this paper aims to make a contribution to the research agenda on strategies that go beyond the redistribution of income.
The Image of Male Immigrant in Radical Right Parties’ Discourses: A Case Study on the French National Front

Based on a qualitative study (semi-structured interviews with party executives, analysis of public speeches, parties’ programmes) and using iconographical analysis of party posters, this paper describes the construction of the threatening male immigrant in the discourse of the main French radical right party “Front National” in the recent years. Analyzing how the otherwise is constructed offers ways of understanding the symbolic boundaries of the national community drawn.

Immigrants are related to insecurity and “gang leader”, systematically associated to poor suburbs subjugated by delinquency. Legacy of colonialism and animalization can also be observed since male immigrants are described as primitives, brutal, uncivilized people living in “ghettos” dominated by the “law of the jungle”. Since the leadership of the new president, this image has been reinforced by a criticism of their authoritarianism and violence against women in order to reach new women voters.

Unemployed, benefiting from social and health assistance, ready to welcome their families and many children, male immigrants are taking advantage of the French welfare state. Based on an opposition to cosmopolitanism and multiculturalism, the risks of being dominated by an overwhelming number of illegal immigrants and asylum seekers are constantly dramatized in FN discourse.

On Weather Disasters and International Migration: Empirical Model and Worldwide Forecast to 2060 Under Business As Usual

Weather Disasters (WDs) have played a role in promoting internal and international migrations in a number of episodes, but it is unclear if they play a systematic or idiosyncratic role. Part of the problem is that the statistical literature for national migrations in a number of episodes, but it is unclear if they play a systematic or idiosyncratic role. Part of the problem is that the statistical literature

Transnational Mining Projects in Wirikuta, Mexico

Wirikuta is a vast desert located in Northern Mexico. It is the place in which Wixaritari (Huichol) ethnic group have been depositing votive offerings for centuries in order to reproduce their worldview, named one of the purest amongst American natives since colonization. Wirikuta also hosts relevant desert flora and fauna. The region is protected as a Sacred Natural Site Protected Natural Area by state laws; however its conservation is currently being threatened by the plans of two Foreign Direct Investment projects concerning gold and silver mining. Different kinds of resistance movements have appeared. Some of them have focused in creating global counter-development strategies to preserve Wirikuta from environmental impacts related to large scale mining. A notorious resource used in struggle is get Wirikuta inserted in the list of World Natural and Cultural Heritage Sites before Unesco. Local actors believe this action can stop the extractive projects. Due to global pressures Mexican government has initiated and supported a counter-proposal, which would lead Wirikuta to be enlisted under intangible Heritage scheme, putting aside the relevance of matter (nature) in conflict. This would give way to mining companies to drag the metals with any method, obviating particularities of territory and culture. By analyzing this case we aim to elaborate on the role of institutional heritage in conflictive contexts, Unesco’s role and limitations of heritage schemes, state trends in solving –or not- local conflicts and social innovations that actors perform in policy-culture realms in order to preserve the environments they live in.

Comparative Sociology As an Inquiry and As a Teaching Discipline: An Attempt of Comparative Analysis

Andrey V. Rezaev, Chair, Comparative Sociology Department, St. Petersburg State University, anrezaev@yandex.ru

Comparative sociology as an inquiry and as a teaching discipline is a part of a current policy activity, a part of a theoretical debate but is increasingly part of the intellectual life has not yet occurred in academia, despite many valiant searches developed by the research teams and teaching instructors during last research could be a good benchmark for improving the quality of teachers that the country produces.

There were four important migration phenomena about Filipino Teachers that were explored in this paper. First, it surveyed the migration and employment profile of teachers who usually worked in abroad as teachers. Demographic and socioeconomic profiles were also dealt with in this paper. Second, it analyzed the experiences of teachers as regards their motivations in working abroad, finding and applying for teaching jobs, teaching experiences, and adaptation and adjustments in a foreign country. This part was highlighted by competitiveness level of teachers and their perceived loses and gains while teaching abroad. Teachers’ competitiveness was indicated by their salaries, promotions, incentives and other benefits received due to their services to the host institutions. Third, the standards and required competencies among teachers from home country and receiving country were analyzed. Lastly, this paper examined as well the competitiveness of Filipino teachers using gender lens.

Competitive Edge of Migrant Filipino Teachers in Selected Countries

Recent history tells us that a number of Filipino teachers have extended their territorial milieu in teaching from the Philippines to various countries of Asia, the Middle East, and North America. This paper examined the global movement and experiences of Filipino migrant teachers vis-a-vis the qualifications of the Filipino teachers as a result of institutional competencies of Teacher education Institutions (TEIs) in the Philippines. Most importantly, it explored as well the phenomena of gendered migration. As the Philippines looks forward to be more competitive, it is important to analyze the nuances of what makes a Filipino teacher globally competitive. Results of this
seven years (2006 - 2013) at the International Center for Comparative and Institutional Research (InterComCenter) and Comparative Sociology Department of St. Petersburg State University, Russia.

Macro Conditions of Class and Micro Patterns of Social Interaction: The Problem of Studying Labor Migrants’ Discontent in the Time of Economic Instability

Paper to be presented at the XVIII ISA World Congress, Research Committee on Sociology of Migration, RC 31

The paper aims to focus not only on the limited control over migrants’ external situation in host societies, cultural discrimination or accessibility to legal protection, but to examine the problem of migrants’ everyday life practices in their uncertain condition, specifically in the time of economic instability. We try to conceptualize this emergent experience within the framework of the sociology of emotions and everyday life practices, which are understood as a domain between action, (a) determined by the structural conditions, (b) created by and transmitted through the everyday social interaction, and (c) capable to result into collective action. This analytical move allows us to study ‘discontent’ at both macro- and micro-levels without losing its specific content.

In terms of theoretical and methodological foundations the research is orientated toward ethnographic institutionalism. We try to provide theoretical groundings and empirical evidence to justify an approach that link the micro experiences with the macro institutional arrangements through the detailed studies of migrants’ everyday life practices.

The data come from the three longitudinal field research Projects jointly supported by Vietnamese state foundation (2008-2010), CARI - Greece (2010-2012), and Russian state foundation - RNGF (2013-2016). The field researches dealt with everyday life practices (including “alternate practices”) of transnational labor migrants in Athens, Greece and St. Petersburg, Russia.

REZVANI NARAGHI, ASHKAN* (University of Wisconsin Milwaukee, rezvani2@uwm.edu)

Constructing the Virtual and Material Public Spaces: The Cases of “We Are All Khaled Said” Facebook Page and Tahrir Square during Egypt 2011 Revolution

Social movements use urban spaces for their representation. They demand a spatial setting for their full effectiveness. However, spatiality of social movements has entered into a new phase since the mid-1990s. The prevalence of the Internet as part of the daily lives of people has challenged traditional theories of social movement and political public space. Recent revolutions and social movements in the Middle East and North African countries, the Arab Spring, as well as reactions to the economic crisis and austerity programs of governments in different parts of the globe have created a new phase of research on the relationship between online activism and social movements. Scholars focus more on the role of social networking sites (SNS) and try to articulate their contribution to social movements. This essay has argued that Hannah Arendt’s concept of public space can contribute to the definition of material and virtual public spaces in contemporary social movements. By investigating Tahrir Square as a material public space and ‘We Are All Khaled Said’ Facebook page as a virtual public space during the Egypt 2011 revolution, this essay has studied the relationship between these spaces and the events of the revolution. It has shown that Arendt’s concepts of action and speech can theorize the virtual and public spaces of the Egyptian revolution.

The Social Clinical Approach and Social Change. /La Clinique Du Social Et Le Changement Social

Analysing différentes formes de recherche et d’intervention en sociologie clinique, le récit de vie de collectivité, la psychodynamique du travail, les pratiques autobiographiques, nous explorons les possibilités et les limites de ces pratiques en regard d’une problématique du changement social. Sont présentées brièvement des recherches en psychodynamique du travail auprès du personnel dans un centre de santé pour personnes âgées dépendantes, auprès du personnel d’une prison; des recherches sur des récits de vie dans des collectifs communautaires; des expériences de formation sur le roman familial et les trajectoires sociales. Le thème central de cette analyse est l’importance de la conscientisation personnelle et collective que permettent ces expériences et la nécessité de prendre en compte des facteurs institutionnels favorisant le changement. Cela conduit à une réflexion du type épistémologique sur l’échange des savoirs entre chercheurs et partenaires et la place du savoir critique dans ces expériences.

Halal Katsu Wraps and Jerk Chicken Bagels - the Guts of a Postcolonial City

In recent years there has been a growing recognition and celebration of culturally hybridised dishes as part of a Northern European and American street food revival. As this paper might do, this hybrid characteristic is nothing new for a post-colonial city such as London, which, for the majority of its history, has cooked up an assortment of transcultural dishes. Through a consideration of everyday lunches such as the halal chicken katsu wrap, jerk chicken bagels and the mince sandwich pakora, this paper explores the relationship between life in the city’s margins, taste, transculturation, adaptation and entrepreneurship. Attracting some of the longest queues of the inner-city’s urban food courts, the popularity of such dishes will be considered in terms of both economic necessity (offering the most calories for the least money) but also as important cultural meeting points, a role that is derived through histories of global exchange. Taking the increasingly ubiquitous chicken katsu curry wrap as its main focus, the paper reveals the origins of the ‘authentic Japanese’ dish amongst early twentieth century dialogue with Euro-American tattes. The more recent proliferation of the dish through the lunchtimes of working Londoners is related to the affordances delivered by this early moment of intercultural exchange. The paper also considers the importance of this earlier moment of cultural exchange in the light of the recent rise of Asian economic and cultural influence in the city. Through tracing the evolution of this dish and a taste for it the paper demonstrates the transformations local and global culinary cultures undergo as entrepreneurs strive to accommodate the super-diversity of globally embedded cities. Alongside the jerk bagel and deep fried chicken sandwich, the importance of chicken katsu curry wraps will be emphasized for what they lend to an understanding of the complex genealogies of contemporary urban culture.

Spend It As I Tell You, NOT AS I Do: Children, Families and Money in Different Socio-Economic Contexts

This article aims at contributing to a body of work about children and inequality, exploring the importance of socioeconomic context and social capital for understanding the ways in which money is perceived, obtained and used by children. Socioeconomic context seems to influence not only the level and structure of household expenditures but also how money and consumption are valued and understood. Social capital conditions the access to economic capital and embeds the practices of consumers and their social networks, concurring to various forms of inequality. Alleged contrasts, especially between middle and working classes, in terms of money management, consumption priorities and postponement of gratification have been debated. It seems thus relevant to investigate if this presumable relation applies to children and why. Do children from different socio-economic contexts reveal the traits that have been attributed to the socio-economic categories, namely class and income levels, to which their parents and households belong? Authors have considered the importance of socialization for developing notions of money and consumption and their subsequent use in adulthood and theories of consumption have mentioned the importance of social capital, social reproduction and habits in this process. The material and symbolic world of

Music as a factor of social cohesion: at what conditions?

This paper reports results from a two-wave survey which has been conducted as part of the Third Age Online-Project (TAO) in the Netherlands, in Germany and in Switzerland. The research aimed at analyzing the psychosocial consequences of going on-line and of joining social media. In the first wave of the survey, more than 3,000 participants could be recruited, and were then categorized as either ‘onliners’ or as ‘offliners’. The questionnaire contained sociodemographic variables, real life social inclusion variables and Internet usage variables. Mental well-being was assessed using the Mental Health Index -5 (MHI-5). Logistic regression models were used to analyze associations with Internet usage and with social media usage. After one year, the same participants were again approached to provide data for the second wave of the data collection. 670 onliners provided sufficient data that could be matched with the wave one survey. Logistic regression models were again utilized to find out which variables from wave one would open up other possibilities and deepen appreciation of the uncertainty and ambiguity that is the basis of life.
The results of the wave one data revealed that senior on-liners were very well socially included and had a high level of mental well-being. However, in the longitudinal analyses, Internet and social media related variables did not predict mental well-being and social networks. It was concluded that going on-line and joining on-line communities may, at best, help to maintain quality of life and social networks rather than enhancing seniors’ psychosocial conditions.

Verbal Aggression Against Health Care Staff - Mixed Methods Study

Clinical staff in various settings has to cope with aggressive behavior from patients and visitors. In recent years, physical aggression has received a lot of attention and many prevention programs are available throughout Western societies. However, verbal aggression against health care staff is much more prevalent than physical aggression.

This paper reports on a mixed methods study which was conducted in the following settings in Germany: mental hospitals, forensic hospitals, acute care hospitals, nursing homes and residential homes for mentally ill residents. Eight focus group interviews were conducted with a total of 74 staff members (nurses, physicians, psychologists and nursing assistants). The interview protocol contained questions about any kind of verbal aggression which had been experienced, about the differences between physical and verbal aggression and about the coping strategies of health care staff. Subsequently, 1,053 staff members from the various participating settings in a survey which focused on the frequency of verbal aggression and on the severity of aggressive acts.

The results revealed that verbal aggression is a very common phenomenon among health care staff. The following types of verbal aggression were identified: threats, verbal abuse, use of rude/sexual language, continual loud vocalizations (e.g., shouting, questioning), remarks which questioned the competency of the staff, refusal of cooperation and the ridiculing of staff. 16 percent of staff reported having experienced verbal aggression on a daily basis during the six months prior to the survey data collection date. Threats were experienced as being the most severe form of verbal aggression, followed by refusal of cooperation. On average, verbal aggression is rated to be more severe than physical aggression.

Currently, prevention programs in healthcare institutions are focusing mainly on physical aggression. This focus needs to be altered by teaching staff how to cope better with verbal aggression.

Cecilia Ridgeway: Framed by Gender: How Gender Persists in the Modern World

In an advanced industrial society like the United States, where an array of processes work against gender equality, how does this inequality persist? Integrating research from sociology, social cognition and psychology, and organizational behavior, Framed by Gender identifies the general processes through which gender as a principle of inequality rewrites itself into new forms of social and economic organization. The book argues that people confront uncertain circumstancs with gender beliefs that are more traditional than those circumstances. They implicitly draw on the too-convenient cultural frame of gender to help organize new ways of doing things, thereby re-inscribing trailing gender stereotypes into the new activities, procedures, and forms of organization. This dynamic does not make equality unattainable, but suggests a constant struggle with uneven results. Demonstrating how personal interactions translate into larger structures of inequality, the book offers a distinctive analysis of the troubling endurance of gender inequality. Framed by Gender: How Gender Persists in the Modern World, Oxford, 2011

Structural Coupling of Financial Markets and Media Coverage - the Case of the State Debt Crisis

In our project we focus on interdependent processes between financial markets and media coverage during times of financial turmoil. The main goal is to identify explanations for price movements on financial markets that are beyond the comprehension of crisis as a problem between the state and the market. Thus, it is not the question whether there is too much or too little market regulation, instead we emphasize the importance of information processing on financial markets and the subsequent entanglement of financial markets with mass media. From a systems perspective, these processes are part of the structural coupling of two social systems, which perceive and implement new information, but only through their own systemic logic.

By examining the structural coupling we reveal patterns and causalities that are crucial for the understanding of financial market coordination through mass media products and vice versa. Especially the so-called “state debt crisis” and its media coverage can be empirically viewed as the cause for major changes in the configuration of the financial markets. During that process state bonds get more and more volatile, deviating from the century old long-term investment cycles. No longer are interest payments the only way to gain profits with bonds, instead, short-term speculation becomes possible due to the heavily pending bond prices of crisis states like Greece, Portugal or Spain. The starting point for those fluctuations strongly correlates with the international media coverage about the possibility that states can actually fail financially. As a consequence, traditional evidence of financial stability like macroeconomic indicators or debt ratings have no measurable impact after the crisis on the increasing bond volatility. The process underlying this development is that media publications are much faster and already incorporated in the market prices when the reactions of states or rating agencies get published.

RIEDE, FELIX* (Aarhus University, f.riede@cas.au.dk)

Towards a Science of Past Disasters

Extreme climatic events are forecast to become more frequent in the future. This contribution argues that the past may hold clues to efficient, cost-effective, and culturally sensitive adaptations to and relief measures following such events. It is widely recognised that disasters emerge in the interplay between extreme events and the human communities affected by them. Whilst detailed knowledge of a given event is critical in understanding its impacts, an equally thorough understanding of the affected communities, their economies, ecologies, religious structures, and how all of these have developed over time is arguably as important. Many extreme events leave methodologically convenient traces in the historical and archaeological records. This contribution focuses on two volcanic eruptions that have significantly affected Europe – the eruption of the Laacher See volcano (Germany) in the 13th millennium BCE, the eruption of Thera (Greece) volcano in the early 17th century BCE and the eruption of Vulcán Ilopango (El Salvador) in the 6th century CE – to illustrate the power of a quasi-case-control comparative method for examining vulnerability and impacts in the near- and far-fields of these eruptions. Although issues of data resolution often plague the study of past disasters, these limitations are counterbalanced by the access to unique long-term information on societies and their material expressions of livelihood, as well as a similarly long-term perspective on the critical magnitude/frequency relation.
ship of the geophysical trigger(s) in question. By drawing together aspects of di-
sasters science, archaeology, volacnoology and historical sociology, this contribu-
tion offers a programmatic statement and methodological roadmap for a science of
past disasters that can make historically informed, evidence-based statements on
general processes of cultural adaptations to climatic processes and events, and on contempo-
raneous vulnerability and impact from a deep time (historical and prehistorical) perspective.

RIEDERER, BERNHARD* (University of Cologne, rieder@wiso.uni-koeln.de)

Drawing a Line Between Immigrants and Transmigrants

The changes of international mobility are apparently visible in all immigration
countries of the world. Today’s migratory movements challenge classical concepts of labour- or forced migration theories. The pattern of permanent immigration
lost its long lasting predominance in describing individual changes of location be-
 tween countries. One of the most influential competing concepts in migration
literature constitutes the idea of transnationalism. In this approach, individuals
engage in lives, cultures, and activities in more than one country to the same extent.
Although Germany is one of the main immigration countries of Europe, quantitative studies seizing the relevance of this conceptually new phenomenon are scarce. This is mostly due to the lack of data as the appropriate identification of transnationals requires multi-sited, mixed methods approaches with specific, often non-randomized, sampling procedures. But what can be done if there is no such data at hand? This study tries to answer this question by presenting and discussing strategies of quantitatively operationalizing transnationalism with existing, secondary survey data.

In this respect, the primary objective of this paper is to discuss the strengths and limitations of a strict distinction between transmigrants and immigrants in contrast to a more continuous definition of transnational lifestyles. To this end, the research is arranged in three stages:

In a first step a multi-item measurement is developed in order to distinguish between immigrants and transmigrants in the most unambiguous manner possi-
ble. In contrast, the second step aims at accounting for gradual differences in the individuals’ ways of living. To this end, a transnationalism index is constructed.

Finally, results of bi- and multivariate analyses on the adaption of immigrants and transmigrants in Germany are presented. The paper closes with prospects for the future research of transnationalism.

Children: Pleasure or Pain? Effects of Parenthood on Subjective Well-Being

Against the background of numerous public and academic debates on de-
crining birth-rates and problems of reconciling professional work and family life, the present research addresses the association between children and subjective well-being. Most people believe that parenthood should make us happy. Notwith-
standing, happiness research suggests that children are not important for the
well-being of people living in contemporary western societies: Children might at
most have a slightly positive effect on parental well-being. However, a closer look
at existing research reveals that some studies report positive effects of paren-
thood on subjective well-being while other studies report negative effects.

The present research aims at contributing to the explanation of this variation in children’s effects. Therefore, in line with social ecological theory, we identify sev-
eral factors on individual level, couple or family level, and societal level that might
affect the association between children and subjective well-being. The respective
hypotheses are proved by means of multilevel modeling and structural equation
modeling using individual data from 30 countries participating in the European
Value Study 2008/2009 and couple data from a project covering three countries
(Austria, Germany, Switzerland).

Results illustrate that both, factors on individual level as well as factors on soci-
tal level moderate the association between children and subjective well-being. On
individual level, among other factors, the stage in one’s life (age) proved to be
relevant. On societal level, the welfare state based childcare system and dominant
family values seem to be most important. In addition, individual level factors and
processes on couple level mediate the association between children and subjec-
tive well-being. For example, the strain resulting from childcare that women feel
indirectly affects men’s subjective well-being via relationship conflict perceived by
men. Findings are relevant to future parents (timing of first birth, division of work) and welfare states (childcare policy, existing norms).

RC42-712.6
RIEDERER, BERNHARD* (University of Vienna, bernhard.riederer@univie.ac.at)

Parenthood and Subjective Well-Being within Couples: The Division of Work, the Relevance of Mutual Appreciation, and the Role of Partner Effects

Sociological and psychological theories point to parenthood as means to per-
sonal development and social embeddedness, discuss its function for societal
integration and highlight its meaning in structuring people’s lives and providing purposes in life. But the widespread belief that parenthood promotes happiness and satisfaction with life seems to be contradicted by a bulk of research discussing problems of reconciling professional work and family life. Quantitative studies primarily report negative effects of children upon parental well-being and qual-
itative research often highlights that especially women are confronted with an
additional burden and the second shift at home.

Current research argues that children have both, positive and negative effects
on parental well-being. Analyses conducted by the author with data from the Euro-
pean Value Study 2008/2009 reveal that individual factors (e.g., the stage in one’s life) and societal conditions (welfare state policy, dominant norms and val-
ues) contribute to variation in children’s effects. But consequences from paren-
thood directly affect the couple and the relationship between spouses. Therefore,
effects of children on well-being and life satisfaction should also be dependent on
the spouses’ capability of mutual perspective taking, and their support for each other.

The present research uses data from dual earner couples with young children
to analyze the mediating role of (a) the division of household work, child-
care tasks, and professional work, (b) positive and negative spillover from work
to life and vice versa, (c) the appreciation spouses give each other, and (d) relationship conflict. In addition to actor effects, partner effects are also
considered. Results are in line with the qualitative research that points to the
importance of giving and receiving gratitude. Furthermore, the quantitative findings
support what A.R. Hochschild wrote: “If men share the second shift it affects them
directly. If they don’t share, it affects them through their wives.”

Life Strategies of Families in Marginalised Urban Neighbourhoods: Dealing with Social and Educational Inequalities

Migration families often face challenges in Europe: unemployment issues, low
income and the threat of poverty as well as an unequal education system, where
children and young people are disadvantaged and consequently, their access to
higher education and job perspectives is limited, hindering their chances and op-
portunities with regard to participation in society. These families frequently live in urban areas strongly influenced by migration movements and faced with pro-
cesses of marginalization.

In our research project (within the framework of a larger, European research
project), we focus on life strategies of families in marginalized urban neighbour-
hoods in Germany. Migration families frequently form a family project, and family an impor-
tant resource in dealing with educational, job-related and social challenges. In our
theoretical approach, family members are seen as actively dealing and negotiat-
ing with societal circumstances and social meanings (Wacquant 2006). Their strat-
egies are analyzed, taking relevant explanation contexts into consideration, which
shape each person’s scope of possibilities (Holzkamp 1983). Our research project
aims to transcend beyond the deficit-oriented perspective without neglecting the
social and societal challenges families have to deal with (Riegel/Yildiz 2011).

In this paper we will present analyses from biographical interviews, group dis-
cussions, and ethnographic data, on how family members describe and interpret
educational pathways and which life strategies can be observed. We analyze bi-
ographical meanings and dynamics within a family and with regard to experienc-
es centered on education, an area accentuated by the intersections of migration, class, gender and generation. First findings show that family members develop
strategies and creative pathways to deal with challenges posed by everyday rac-
ism and the education system, using unconventional ways to negotiate solutions
for structural challenges, demanding participation and inclusion. The ambivalenc-
es of these strategies - dealing with processes of inclusion and exclusion – within
circumstances of social inequality will be discussed.

RIEGEL, VIVIANE* (Goldsmiths University of London, viviane.riegel@terra.com.br)

A Reflection on the Main Challenges of Comparative Research on Global Consumption Studies

We face several methodological challenges once we are involved with compar-
ative research. The scope of study to its phenomena demands a dialogue with
writers from different nationalities, theoretical and methodological affiliations,
whose interests converge to collaborate in the comparison of different contexts.
Specifically, the main discussion when comparing different contexts is whether to
discover an underlying grammar to social life which is applicable globally, or to
pay attention to the detail of local differences.
The complexity of social research on global consumption studies can be under-
stood as the idea of a complex system that combines both issues related to
the idea of a global culture, as well as specific characteristics concerning local
contexts. Following Law and Mol (2002) ideas over complexities in social studies, it
is necessary to face multiple domains and the complexity related to consumption
practices that are research objects for sociologists today.
Comparative research on global consumption studies faces a changing signifi-
cance of empirical research, as it happens with contemporary social studies. This
means that traditional methods, and the most conventional ones are increasingly
dated research methods, which are unlikely to provide a robust base for empirical
sociological and cultural studies. It is why it is so important for sociologists to get
involved with a ‘politics of method’, renewing their interests in methodological innovation,
mixing methods and renewing critical reflection (Savage and Burrows, 2007).
Following this methodological discussion, the goal of this study is to discuss the
main challenges of comparative research on global consumption studies, consid-
ering both the hypothesis of a global consumer culture (Ritzer, 2004) and of local-
ization/heterogeneity of consumption practices (Featherstone, 1991). In order to
present these challenges, I am going to analyze three different research projects
focused on global consumption practices that aim to compare the reality of these
practices in different countries.

RIEGEL, VIVIANE* (Goldsmiths University of London, viviane.riegel@terra.com.br)
Global Consumer Culture: A Theoretical Discussion Between The
Centrality Of Consumption In The Contemporary Society and Its
Possible Localizations As A Result Of Cultural Differences
How can we understand the theoretical discussion concerning global consum-
uer culture? Is it possible to affirm that such culture exists as global representation,
central to contemporary society? Or should we consider possible localizations of
consumption practices as a result of cultural differences from individual?
In early modern social theory, consumption has been object of discussion and,
with the advent of post-modernist theory, its centrality has become a tonic
in social analysis. Further, contemporary studies presented mainly two different
perspectives: the centrality of consumption in society or localizations of this prac-
tice according to cultural differences. In order to understand global consumer cul-
ture, this paper proposes a synthesis of theoretical discussions on these two perspectives.
In the first perspective, there is a rationale that begins with modern social theo-
rists, and their focus on production systems (Marx, Weber, Smith), and that moves
to the study of consumption (Simmel, Veblen, De Certeau), whether celebrating or
demonizing this practice. Post-modernists have detailed this critique in order to understand
the structure of the consumer society (Baudrillard, Bauman, Lipovets-
ky), with consumption as the central practice of contemporary life. This centrality
would also explain earlier studies that demonstrate the capillarity of consump-
tion, not disjointed from the production system, but as a continuum that can be
translated as prosumption (Ritzer).
The second perspective, present in most contemporary studies of consump-
tion (Bourdieu, Campbell, Featherstone, Miller) has tried to steer a middle course
that reconciles pessimistic classical theories with a recognition of the fact that
consumption is not only indispensable, but also a domain in which people can ex-
press themselves positively in our society. They develop the notion of a consumer
culture that refers to norms, values, and meanings associated with a society dom-
inated by consumption. In this culture, there is possibility to localizations and the
development of individuals with their respective differences.

RIESS, JOHANNA* (BIGSAS, johanna.riess@gmail.com)
Internet Usage and Socio-Cultural Change in Nairobi/Kenya
Through technical improvements and cheaper access the Internet in Kenya is
becoming more and more important. For many years mainly Internet cafés have
been the most important source for Internet access. Nowadays there are more
and more people who own a private Computer/Laptop or use their working place
to access the Internet in Kenya. The most important change is the rapid spread of mo-
bile use of the Internet in Kenya.
The Kenyan Internet- and Mobile phone market is growing fast and it cannot be
ignored that this phenomenon is changing. On the streets of Nairobi you
can find Internet cafés nearly everywhere and you can pay nearly everywhere with
M-Pesa. Mobile phone shops, repair services for computer and mobile phones
and private computer colleges are an integral part of the road infrastructure.
Nearly everyone in Nairobi has a mobile phone; for younger people it is very import-
ant to have a Facebook account.
In my research I wanted to find out what people do with on the Internet and
how this is changing the life of the users. I visited three different cybercafés in
different areas in Nairobi. One cybercafé was in a big shopping mall, the second
in the city centre and the third in the so-called slum area Mathare. The inequalities
were obvious but it was also very surprising how widespread the Internet already
was and how different the people used it.
Another aspect of the presentation will be the function of Facebook before, during
and after the presidential election in March 2013. During the post election vi-
olence in 2007/2008 over 1100 people were killed. Everybody was watching the
election 2013 with worries and tension. After the results were announced every-
thing remained more or less peaceful on the streets but on Facebook there start-
ed an ethnic war with words.

Social Inequalities in Preventive Care and Healthcare System
Organization: The Case of Gynecological Cancers Screening In
France
Socioeconomic inequalities in health are high in France compared to other de-
veloped countries. This is unexpected considering that the National Health Insur-
ance offers universal access and free care for disadvantaged people. Considering
the case of gynecological cancers screening, we intend to analyze the genesis of
these health inequalities in relation to the features of the healthcare system.
Screening status was analyzed according to socioeconomic status among a
random sample of 1819 women with logistic mixed models. We observed marked
social gradients for cervical cancer, but lower ones for breast cancer for which
an organized screening program alongside the individual one exists. However,
the last prescriber was socially differentiated: gynecologists for the upper class,
organized screening for the lower and GPs for the middle.
The modeling role of the healthcare system in producing inequalities through
social norms it contributes to establish can be specified. Organized screening con-
tributes to catch up patients with low social status. Gynecologists often ask for
unregulated fees and receive patients with good socioeconomic level, whom they
tend to overscreen. GPs are supposed to have a gatekeeper function toward spe-
cialists, but direct access to gynecologists is possible without referral. Although
GPs involvement would be necessary to improve participation and lower inequal-
ities, they lack legitimacy and tend to divert of these screenings. In addition to
this suboptimal task division, information sharing and coordination between pro-
fessionals are limited. This confusing situation has been settled by socio-histori-
cal processes, without any global vision of the interactions and perverse effects
it would induce. Few people (patients, physicians or policymakers) are aware of
the contribution of such an organization to inequalities. Despite the pressure on
health funding and the bad demographic perspectives, it seems difficult to re-
model professionals’ routines or to re-regulate the screening of women on a more
equal basis.

Abstract
The social hegemonization of the biomedical perspective in the beginning of the
21st century has been heavily critized. But as pointed out by Kuhn (1962),
criticism alone has never brought about major paradigm shifts (Kuhn 1962). Para-
adigm changes require a realistic, viable, research able alternative - a paradigm
candidate, as Brante phrases it (2005). Therefore, one obvious question is, what
the most feasible alternative to the existing neuropsychiatric modes of explana-
tion is, and what challenges must be faced in trying to establish a viable and qual-
ified alternative.
The dominance of certain forms of knowledge does not exist within an insti-
tutional and societal vacuum. It is produced and reproduced through political,
managerial and economic discourses, institutional solutions and organizations,
which should be taken into account to gain a complex understanding of the cur-
adigm changes require a realistic, viable, research able alternative - a paradigm

the most feasible alternative to the existing neuropsychiatric modes of explana-
tion is, and what challenges must be faced in trying to establish a viable and qual-
ified alternative.
The year of 2011 marks both the Fukushima disaster in Japan, and a one-generation time distance from the nuclear disaster in Chernobyl in 1986. Does it also mark any new emergent – perhaps more reflexive, inclusive and participatory modes of nuclear power in CEE countries? Have these expectations of participatory governance materialized in new structures and modes of more inclusive decision making? This paper examines these questions by addressing the public controversies around new and old nuclear power facilities in divergent post-Soviet societies, particularly Lithuania, Belarus and the Ukraine. What are the lessons (if any) reflected in the public attitudes and public policies in terms of participatory governance of nuclear power in the EU and the EEU new comers, whereas the others are still characterized by rudiments of totalitarianism? Have they triggered environmental, climate and energy policy change towards more inclusive, participatory mode stemming from possible social trauma? By contrast, this paper concludes on the basis of empirical evidence from Lithuania and neighboring countries and the processes point to the opposite direction. This direction is geared towards privatization of the public domain, towards new forms of state-private oligarchy in the nuclear power sector, epitomized by the establishment of LEO LT nuclear power conglomerate in Lithuania. Instead of any new off-springs of participatory governance, as paper indicates, there are tendencies of the opposite. Inter-twined with the recent nuclear power “initiatives” by Russia and Belarus, these tendencies could be described as leading towards emergence of a nuclear “renaissance” as some observers have termed it. This “renaissance” a reflection of public attitudes towards energy security in the period of economic crisis? Or is a more general tendency of societal neglect of the Fukushima and Chernobyl lessons vis-à-vis globalizing uncertainties in the fields of economy, ethno-centric politics and climate change?

**Rethinking Localism in the Global Risk Society: The Ethics of Care and Coalitions of Anxiety Confronting Gas Fracking in Lithuania**

Focusing on the global dimension of risk society, Ulrich Beck has made a case that earlier social and economic formations are increasingly replaced by the world risk society where risks and uncertainties are no longer bound by particular locales, but are distributed globally. To conceptualize this new political organization, Beck and others have developed the notion of cosmopolitization that refers to the emergence of new alliances and social movements that challenge and transform the nation state and its institutions. At the same time, scholars have also underscored the growing significance of localist movements that are actively promoting regional and national sovereignty agendas, while working to unplug from global economies and political infrastructures. The purpose of this paper is to articulate the connection between these two contradictory processes by employing conceptual tools developed in the scholarship focusing on local politics and ethics. Building on the work by N. Noddings, E. Kittay, and J. Tronto, we argue that care as a justification for political action links particular constellations of actors to coalitions organized through anxiety concerning particular issues or emergencies.

Based on the European project “Shrink Smart”, different shrinking cities in Northern, Central and Eastern Europe will be dealt with related to different housing markets. The paper draws on research undertaken within the EU 7 FP project SHRINK SMART (04/09-04/12; grant agreement no. 225193; www.shrinksmart.eu).

tries. Fingers were pointed at formula companies, policy makers, grandparents, fathers, and health care providers for posing barriers to breastfeeding. The report focused on the heroic efforts NGOs and other actors can make to "empower" poor women to make the "right" feeding decisions; however little recognition was given to women as possible heroes. Rather, women were portrayed as either victims of their environments or ignorant villains doing the wrong thing.

In this talk, I will explore the implications of legislating women's bodies as a solution to structural problems, as well as the problematic structural barriers posed to women being able to do what they are told to do. By exploring the Indonesian case and the framing of breastfeeding campaigns, I aim to demonstrate how breastfeeding promotion can be both empowering and detrimental for women. I will conclude with a possible way forward drawing on an ethic of care and a praxis of humility.

Labour Precarity and Other Structural Forces Affecting Migrant Workers’ Health: The Case of the Undocumented Workers in Ontario, Canada

This paper will discuss the ways in which the labour dynamics that have emerged in the agricultural production in Ontario during the last decade have been organized. We look at particular forms of precarity that affect the physical and mental health of the undocumented migrant workers and other migrant workers of precarious status (UMW and MWPS) that are employed in such industry. Likewise, it will analyze how this phenomenon of labour precarity, along with legal and linguistic barriers; fears of deportation; and perceived forms of racial subordination in the local health institutions, have prevented the workers from seeking and receiving medical services. Finally, the paper will discuss some of the ways by which the workers have contested the social forces affecting their health, and will offer some reflections on why such forms of collective action haven't been entirely successful.

This paper draws upon the analysis of twenty in-depth interviews with UMW and MWPS, as well as upon field notes generated as part of a sociological, ethnographic research carried out in Ontario, Canada.

RIVERA, ROSELLE LEAH* (University of the Philippines Dilliman, rkrivera@upd.edu.ph)

Capabilities and Missing Users: Progress In Gender Analysis In Transport

The paper uses a normative framework of transport justice to recognize the link between mobility and “capability enhancement” as articulated in Sen’s writing and also in the context of the gender of transport (Bezyar, 2011) (Carr, 2004) (Martens, 2012). Transport justice reveals the mode of thinking and institutional mechanisms behind a nation’s transportation planning and delivery systems (Vasconcellos, 2001) (Litman, 2012) to elucidate how and why particular social groups (e.g. low-income women and minority communities) often face the brunt of negative impacts of decision-making and where investment in terms of access and transport-related burdens of poor safety and environmental standards.

“Gender” is a key analytical concept used alongside transport justice to address a set of policy concerns to show how particular understandings and values of “gender” influence the construction of categories of analysis in transport and spatial planning (Levy, 2013). Empirically, the study documents the needs and perspectives of urban transport users in Davao City, Philippines as related to their access, or lack thereof, to transport and their access to employment, education and services. These findings are contrasted with the realities of power and political processes in decision-making to show how concerns of users from low-income groups and how gender differentials in preferences, choice and agency are yet to be taken seriously by planners.

Recognizing methodological pluralism as important in interdisciplinary research, the paper uses a combination of methods which have distinctive roles. The survey captured similarities and differences among 360 transport users, mostly of women traders and workers. Focus-group discussions with various sectors, field observations and in-depth interviews with a subsample of 8 brought deeper insights on meanings of “safety” and “security” from the perspectives of women. Textual analyses looked into issues of misrepresentation and invisibility.

Ouvrir La Boîte Noire Des Peurs Féminines : Encadrement Parental Des Pratiques Urbaines Des Enfants Et Dimension De Genre

Interrogeant la socialisation urbaine dans le cadre familial, l’approche comparative préconisée par l’encadrement parental des pratiques urbaines des enfants permet de mieux saisir la genèse de cette différenciation genrée de l’expérience des espaces publics. Menée auprès de parents de 123 enfants âgés de 8 à 14 ans à Paris et Milan, une enquête par entretiens (n=78) montre ainsi que les filles font dans les éspaces publics l’expérience d’un rejet sexué et sexuel intentionnel. La forte prédilection de la représentation d’espaces publics à dominant masculine et hétéronormée conduit les parents à mettre en œuvre des précautions spécifiques pour les filles, qui recoupent largement celles prises par les femmes dans les espaces publics : éviter de se promener, recherche d’une escorte, contrôle de l’habillement et de manière plus générale de la présentation de soi.

Pour reprendre la typologie d’Albert Hirschman, les filles sont socialisées à l’évitement (exit) et à la discrétion (loyalty), mais pas à la remise en cause des normes de genre (voice). La transmission de normes générée semble ainsi pouvoir être considérée comme la clé de voûte de la vulnérabilité ressentie et perçue des femmes dans les espaces publics urbains, l’encadrement parental contribuant dans cette perspective à la (re)production d’inégalités d’accès à la ville mais aussi à l’incorporation du genre par les enfants.

Geopolitical and Personal Influences on Willingness to Participate in Political Action in the Middle EAST

This paper examines individuals’ willingness to engage in political action in five Middle Eastern countries (Egypt, Iraq, Jordan, Morocco, and Turkey) using the 5th (2005-2008) wave of the World Values Survey. We will also analyze the sixth wave (2010-2014) once it becomes available in spring 2014 in order to draw comparisons with the 5th wave. Analysis with the 5th wave demonstrated that individuals’ willingness to sign a petition, join a boycott, and participate in peaceful demonstrations was lower in the Middle East than in any other region of the world. Nearly 70% of respondents would never sign a petition; 75% would never join a boycott; and 72% would never participate in a peaceful demonstration. Counter to this finding, the Middle East, especially Egypt and Turkey, has seen high levels of political action over the last 4 years. We aim to understand political action in the Middle East by examining change in the percentage of individuals willing to participate between the 5th and 6th waves of the WVS. In addition to description, we will examine the role of individual personal characteristics and geo-political attitudes in willingness to participate. Analysis with the 5th wave demonstrated that geopolitical beliefs have the most predictive power. Individuals’ views regarding government and its institutions, particularly their beliefs about governance in their own nations, mattered. Personal characteristics (demographic and human capital) did not have so much effect as would be expected from earlier studies on different (mostly Western) populations. However, men and those with less education were the most willing to engage in political action.

The Road To Revolution and Egyptian Youth: Findings From The Value Surveys

The Arab Spring that began in late 2010 captivated the world’s attention, particularly in Egypt with the uprising that began on January 25, 2011 in Tahrir Square and ended Hosni Mubarak’s reign as president 18 days later. Before December 2010, protesting against repression and injustice was risky and often seen as futile. El-Ghobashy (2011) argued that it was when the main protest sectors of the first decade of the 2000s finally came together, united in their demand for “bread, freedom, and social justice”. That is when Mubarak was forced to resign. Both the media and scholars alike have noted that youth were some of the key players in the uprisings in the first decade of the 2000s. Before December 2010, protesting against repression and injustice was risky and often seen as futile. GOEMANS, ADELINE* (HEC-Management school-University of Liege, adapog@hotmail.com)

Multinational Companies, Social Responsibility and Human Resources Manager

This communication analyzes the situation of six multinational companies' policy of "social responsibility" and of "sustainable development". The purpose of this communication is to define how these companies, especially the subsidiaries, are socially responsible and take into account environmental issues. This exploratory and qualitative study is based on the analysis of official discourse of six firms and those of human resources managers. We highlight different types of "social responsibility", the "stakeholders" that are taken into account by companies and the strategies to achieve the policies of "sustainable development" and of "social responsibility". Our purpose is to show, beyond the official discourse, which role the subsidiaries play and which autonomy they have in their policies' implementation. We wonder in conclusion about the hypothesis that a new way of human resource management of organizations is likely to appear through this new "social responsibility" and, conversely, if the new management involves the emergence of a new social responsibility. We will show that the types of responsibility, shown through the web site and in the HR discourses, are "ethical" (stands for the respect of the values, the standards and the requirements that stakeholders find fair) and "economic" (focuses on the production of goods and services). Those classifications depend on the firm's sector.

The Human Resources can be more regardful for the legal aspects or for the political aspects, especially in crisis situation. The human resources play different roles and highlight different priorities: respect of fundamental values, actions of the subsidiary that are presented as models, transparent communication, gather the employees around values and projects.

ROBERTS, ANTHONY* (University of California-Riverside, robe003@ucr.edu)

The Embedded Economy and National Income Inequality

The ubiquitous growth of national income inequality in developed and less-developed countries has raised major concerns amongst academics, policy-makers, and the general public. In response to this trend, researchers have offered a multitude of explanations for the persistence and growth in national income inequality. I will focus on the role of the IAEA (International Atomic Energy Agency) to achieve the policies of "sustainable development" and of "social responsibility". Our purpose is to show, beyond the official discourse, which role the subsidiaries play and which autonomy they have in their policies' implementation. We wonder in conclusion about the hypothesis that a new way of human resource management of organizations is likely to appear through this new "social responsibility" and, conversely, if the new management involves the emergence of a new social responsibility. Youth and Leisure in Europe in an Age of Austerity

Despite young people's above-average risks of unemployment in most countries, the evidence to date suggests that young people's leisure has remained largely austerity-free. This is explained not in terms of historically novel features of the recession itself, but in terms of changes in youth's leisure that occurred in preceding decades with the lengthening of the youth life stage, the advent of new leisure industries based on the latest information and communication technologies, and changes in the pattern of class inequalities. The evidence indicates that it is child-rearing households whose leisure has proven most vulnerable during the recession, which has implications for leisure socialisation during childhood, which will have lifelong consequences.

Focus On Fukushima: The Iaea's Response To Fukushima As a Focusing Event

What does it mean for the Fukushima disasters to be a "focusing event"? A focusing event provides a "little push" to bring a problem onto the policy agenda. It acquires its power by aggregating harms in a short timespan and large number (Kingdon 2003; Birklad 1997; Downs 1972). Some scholars use the term to describe the event itself, while others locate causal power in the symbol surrounding the event. For example, the IAEA and its Director General, recently appointed, are seen as suddenly, relatively rare, and bring aggregated harms to public view through the media, and yet not all such events lead to policy change. How the IAEA responded to Fukushima promises to shed light on why some focusing events lead to only very limited change. Birklad and others (Walgrave and Verhulst 2009) find that nuclear power is a domain where advocacy coalitions (roughly pro-industry versus pro-environment) are in competition and therefore policy change after a focusing event is not likely. Yet the IAEA had similarly divided advocacy coalitions in safeguards and security, and these policy areas still underwrote dramatic policy change after a focusing event. My paper investigates to what degree policy change occurred in IAEA's safety responsibilities in response to Fukushima. Preliminary research shows that some change did occur, especially relative the IAEA's limited power compared to states. My paper will also examine how and why change occurred, paying attention to the advocacy coalitions in competition hypothesis, theories of framing, as well as to internal bureaucratic competition and the technical constraints on what the IAEA can accomplish. The IAEA's response to Fukushima may show that managers are able to shape the effects of some focusing events as much the literature suggests the media and policy entrepreneurs can do in other contexts.

ROBERTSON, HAMISH* (UNIVERSITY OF NSW, robertsonhl@optusnet.com.au)

The World Has More Leisure! so What?

The sociology of leisure (and leisure studies more generally) were born amid confidence that leisure would continue to grow and become a larger component of people's lives. This confidence has proved justified. Leisure has grown in time, spending on leisure goods and services, and hence participation rates in many leisure activities. Meanwhile, researchers have identified and distinguished the various ways in which leisure plays a role in people's lives. Apart from re-creation — restoring body and mind to states fit to return to other social roles — leisure can enhance well-being (or ill-being), it can be a source of social bonds and belonging, identity, and capabilities that enhance performance in other social roles. However, this paper argues that the sole sense in which its growth has made leisure functionally more important is economic — as an object of investment and consumer spending, and as a source of employment. The paper explores the implications for leisure's additional functions, and its future in the twenty-first century.

Labor relations have undergone significant changes over the last decades. Job precariousness and work precariousness weaken assured and stable occupational integrations. These changes challenge rigid, continuous and foreseeable conception of occupational career (the choice of a profession, training, labor market integration, promotion and retirement), and question both material and symbolic recognition that are linked to professional activities. Facing this rise of uncertainties, we first analyze how unemployment periods impact job recovery in terms of 1) level of individual and household income 2) job quality (job and work precariousness) 3) social mobility (using social stratification schemas: CMSIS and CSP-CH) in order to determine if people know stability, improvement or deterioration of their situation. We then identify how particular groups of people are unequally exposed to these three potential forms of changes, and particularly in terms of nationality, sex, education, age and presence of children in the household. The relation between these variables and the observed effects are analyzed with a logistic regression that includes interactions between the dependent variables.

We use longitudinal data from the Swiss Household Panel (SHP) between 1999 and 2012. The SHP is a yearly conducted centralized CATI panel survey which started in 1999 with slightly more than 5,000 households, representative for the Swiss resident population.

TEIXEIRA ASSIS, WENDELL* (Universidade Federal de Alagoas, wwficher@yahoo.com.br)

Participatory Budgeting: Considerations about the Global Spread of a Local Practice

This article discusses the diffusion of the Participatory Budgeting (PB) as exemplary practice of governance and urban planning. In a context of democratic openness and strong needs of urban infrastructure, the PB was implemented for the first time in 1990 in Porto Alegre, as a local policy to meet demands for a more equitable distribution of public resources. In the following decades, the PB has spread among other major Brazilian cities like Belo Horizonte, Recife and São Paulo. The local democratic innovations linked to such experiences has crossed national borders and reached different social, economic and political contexts such as Montevideo, Buenos Aires, Lisbon and Berlin. Currently it is estimated that there are about 1000 PB’s around the world. Several factors explain this global spread of the PB such as the synergies within the World Social Forum and its legitimacy as a good practice by international organizations. However, after more than twenty years of its setting up, in what extent this practice conceived in the context of the global South has contributed to the establishment of a counter-hegemonic model of urban governance? Focusing on a paradigmatic experience, the BP of Belo Horizonte (Brazil) – one of the most enduring and on two occasions honored as Best Practice by UN-Habitat –, we intend to answer to this question and critically discuss the recognition, promotion and dissemination of the BP as model for urban governance under a general context of neoliberal politics.

Contextualising Sport Spectacles: Exploring Non-Spectacular Aspects of Spectacular Mega-Events

‘Contextualising Sport Spectacles: Exploring Non-Spectacular Aspects of Spectacular Mega-Events’

Mega-events, including sport mega-events like the Olympics and FIFA World Cup, have been increasingly studied over the past decade or more (e.g. Girginov ed. 2012, Tomlinson and Sugden 1998). This growth of mega-event studies as an interdisciplinary field has included an area of social scientific and sociological work (Roche 2000, Horne and Manzenreiter eds. 2006, Hayes and Karamchais eds. 2010, Foley et al. 2012, Hiller 2012). This paper argues that the further development of the sociology of global mega-events and their implications for social inequalities requires the further development of a ‘contextual’ approach to event analysis. This approach is concerned with what will be referred to as, on the one hand, ‘event-immanent’ or ‘backstage’ contexts, and on the other of ‘trans-event’ contexts – the legacies’ (Moragas et al. eds. 2013, Kassen-Koelsch et al. 2012). The paper is concerned with the heuristic utility of a ‘spectacle-based’ perspective on mega-events (Kellner 2010). This perspective is useful as far as it goes. However, the paper will argue that a ‘spectacle’ perspective is, nonetheless, essentially limited and ultimately unhelpful in relation to the sociological exploration of aspects of sport mega-events which are centrally important in understanding their general social nature, their long-term significance, and their implications for social inequality. Rather, drawing on work including my book ‘Mega-Events and Modernity’ (Roche 2000) this paper argues that these aspects require an expanded perspective in which not only sport mega-events, but also non-spectacular (e.g. backstage and long-term) features rather than spectacular features of sport mega-events. The paper will illustrate this argument in respect of the case of the London 2012 Olympic mega-event.

Local Responses to Globalising Processes: The Use(s) of Pharmaceuticals in Maputo, Mozambique

After the explosion of the pharmaceutical industry and the beginning of pharmaceutical mass production in the mid-twentieth century, these technologies quickly started to be disseminated all over the world, making them also available in poor countries. As widely discussed, globalisation involves both processes of standardization and hybridization. If it is true that medicines are nowadays part of the materia medica of all societies through the development of multinational companies, there resources assume a large variety of meanings and particularities within different contexts, and the way these instruments are engaged in local practices vary significantly. This paper is based on an ongoing research about medicines’ consumption patterns in Mozambique, which aims to understand what dynamics of pharmaceuticalisation are emerging in local consumption cultures. The project focus on local responses to these globalizing processes, directing the main attention at lay practices and conceptions towards pharmaceuticals, and their relation with other options, such as traditional herbs or other substances. Medicines constitute a privileged object to analyze lay conceptions and practices towards biomedical technology, due to their intrinsic characteristics that not only enable a private and individual consumption, without the presence or vigilance of a health professional, but also increase the perception of certain care options as being ‘health related or not’ – as something that can be managed. In a context where traditional medical systems co-exist with biomedicine, the main questions that arise are: How is knowledge about pharmaceuticals constructed and how does it shape social practices? To what extent are pharmaceutical’s consumption patterns in local contexts in Mozambique changing towards the modern trends of therapeutic, preventive and enhance consumption? The findings presented in this paper result from the conduction of individual and group interviews to community members and health professionals, as well as from a household survey applied in Maputo.

Glorified Taboo: Teacher-Student Sexual Relations In The 21st Century

Teacher-student sexual relations, whether consensual or abusive, is a taboo topic of discussion in our culture and one that has seen much media attention in the 21st century. In particular, there has been a surge in reported incidents with a female teacher involved. It leaves one to wonder if sexual relations portrayed in various digital media via news, music, and film, have had a major influence on how normalcy of such relations are perceived. To what extent do society glorify this taboo via digital media while punishing through legal means?

After analyzing written works, forty-three popular songs, fifty films, and various tate laws that contain an element of teacher-student misconduct, statutory rape, or a very large gap in age difference, I sent out a questionnaire via SurveyMonkey, com and Facebook that asked volunteers if they were familiar with any of the aforementioned. The results showed a sincere lack of awareness to laws as such as the age-of-consent, statutory rape, or child seduction, but much exposure to popular media condoning taboo actions with a possible correlation between the age of offenders and the amount of digital entertainment produced by decade.

After completing the aforementioned preliminary research, I sent an electronic message to each of the “Best Education Schools” as identified by U.S. News in 2012. This was to inquire whether they had courses for teacher candidates that reflect the various viewpoints of sexual misconduct for educators, coaches, and other professionals. In essence, there was much research but if if they were familiar with any of the aforementioned. I propose to establish a national requirement for teachers to take one course that introduces them to a well-rounded perspective on this serious social issue with the intent to reduce such professional misconduct.

The DNA of Happiness and Satisfaction: Comparison of Logistic Models in 44 Countries

The focus of this article is the causation and possible models of Happiness. Thinking on Happiness takes us above the individuals towards genuinely social processes generated by social interaction. In that way we are able to move beyond the classical points of view of material satisfaction from economy or the psychologist grounded well-being. We specify the social dimension of Happiness with indicators of social interaction and social action. We propose a basic general model based on three dimensions: Love, Money and Health. We contrast this general model in those 44 countries looking for explanatory patterns. To test these conclusions, we use binary logistic regression with its standardized coefficients. We discuss the statistical analysis of logistic regressions and their standardized coefficients are the raw material for the conceptual and material construction of a complex relational system between countries, between models and between countries and models. This approach leads us to a sort of DNA definer of social models of Happiness and Satisfaction. We use the Social Network Analysis as a way to explore the existence of different explanatory structures and their features. We conclude that, despite the close conceptual relationship between Happiness and Satisfaction, the explanation of Happiness is more complex and accurate. Love is a necessary condition for Happiness while to explain Satisfaction material and volatile aspects as Health and Money are more relevant. That points to a differ-
enabling dimensionality in which to be satisfied depends on components of Happiness much more than Happiness needs Satisfaction. They clearly are different social phenomena.

Constructing Transnational Polynesian Identities: Soldiers, Sportsmen and Illegitimate Masculinities

For the small Polynesian island states of Tonga and Independent Samoa, their biggest export is labour – their people. Six out of ten Tongans and Samoans are born outside their home countries. In a climate of transmigration and globalization Polynesian men are sought out as sportsmen, heavy manual workers and standover men. They also have the highest over-representation of any racial group in the US military. This paper argues that contemporary Polynesian masculinity has been externally constructed through the physicality of Warrior in a colonial and post-colonial context and questions whether internalization of this representation as a “regime of truth” leads to an embodiment of race, class and cultural identity that is inherently informed by the physical. Through this lens of heightened and exaggerated physicality, acceptable expressions of Polynesian masculinity are readily acknowledged through work and sport. However, its illegitimate expression – as gang member - is less understood. Polynesian gangs have an extremely high profile in New Zealand and are now the fastest growing ethnically-identified gang population in the United States. Proportionally, this population group is progressively over-represented in the penal systems of many countries. This paper will explore how this narrow range of acceptable masculinities, combined with increasing socio-economic marginality, contributes to low civic engagement and greater interface with agencies of law and order. As conventional employment opportunities are reduced for unskilled labour, more young Polynesian men are at risk of being drawn into gangs and are likely to engage in other forms of criminal behaviour. This paper will therefore discuss how popular perceptions of Polynesian strength and aggression, so valuable as sporting commodities, are regarded as threatening and violent outside of sporting domains. Interviews were conducted with 48 Polynesian men aged 18-60 in two studies.

RODRIGUEZ MORATO, ARTURO* (University of Barcelona, rodriguez.morato@ub.edu)

Assessing the Value of Art in the Culture Society

Nowadays it is widely recognized that due to the great expansion of the arts sphere during the XIXth century and the concomitant increase of the influence that the art paradigm exerts into other fields of practice culture and the arts have taken on a central strategic role in contemporary society. This is particularly visible in big cities today, to the extent that there we can speak of a culture society in the making, a new social configuration structurally dominated by culture (Rodríguez Morato 2012). As a result of these changes, since the late nineties and during the first decade of the new century the idea of creativity, which is closely linked to the arts from its origin, has gained a lot of prominence in the urban discourse, as a means to organize and represent and, at the same time, to renew the interest in assessing the value(s) of art for society. In this paper we will consider the ways in which this assessment is currently being carried out, through the aforementioned concepts and others, as well as through specific analytical strategies used in the grey and academic literatures, and the data, statistical or otherwise, produced for that matter.

Fasting Centers in Contemporary Japan As an Expression of Alternative Medical Care

Along with the modernization process in the Meiji era, Japan adopted the Western modern medical system. Although this remains the dominant paradigm in contemporary Japanese medical science, traditional health methods like (japanized) Chinese medicine and martial arts physical therapies that existed prior to the introduction and prevalence of Western medicine have continued to be practiced to different degrees. In addition, new alternative healing practices from other cultures have also been introduced in the country, and the The Japanese Society for Complementary and Alternative Medicine is functioning since the late 1990s. From this diversity, new forms have developed which combine traditional notions of health, Western modern medicine and imported CAM methods. This presentation will introduce the case of fasting centers, providing a description of their notions and practices. Next, the discussion will situate the development of these alternative facilities in social context. It will also point to changes in the representation of their therapeutic proposals, reflecting the dynamics of globalization (such as the spread of CAM and new spiritualities), as well as the impact of local factors (like the Aum Shinrikyo affair).

Desafios De La Adaptacion Para La Prevencion De Desastres En Mexico

La vulnerabilidad social se incrementa en condiciones de variabilidad climática asociada con el cambio climático antropogénico; los desastres asociados a fenómenos hidrometeorológicos ocurridos durante el siglo XXI en México nos dan la oportunidad de cuestionar teóricamente conceptos tales como “eventos extremos”, “lluvias atípicas”, pero principalmente “desastres naturales”, que deforman la realidad desde las ideologías tecnocrática y naturalistas. El fracaso del desarrollo sustentable, dio lugar a la irrupción del cambio climático como uno de los ecos más perjudiciales para la humanidad, sobre todo para los sectores excluidos, sobrevivientes de la pobreza, en los territorios donde la vulnerabilidad social y ambiental; en estas condiciones la configuración de vulnerabilidad aumenta.

Con base en los postulados internacionales de adaptación y reducción de riesgos de desastres el gobierno mexicano ha asumido formalmente compromisos para diseñar y ejecutar políticas y programas orientados a fortalecer la resiliencia colectiva, ciudadana, sin embargo las decisiones privilegian la resiliencia institucional, con énfasis en la política de protección civil, orientada a la atención cuyontural de emergencias, desatendiendo la prevención de desastres como eje de política pública. Recientemente el Plan Nacional de Desarrollo 2013-2018 define los lineamientos programáticos en materia de cambio climático, sin incluir la adaptación y la crisis de vulnerabilidad nacional.

Los desastres plantean el desafío de reducir la desigualdad social como premisa para también reducir la vulnerabilidad y los riesgos a la población. Se propone trabajar investigaciones futuras con las experiencias populares de autogestión social y comunitaria, mismas que requieren apoyos institucionales y académicos para consolidar procesos de planificación popular del territorio, fortaleciendo las capacidades locales para mejorar la calidad de vida y la preparación colectiva frente a los riesgos asociados a cambio climático, con experiencias en comunidades de los estados de Tabasco, Chiapas, Veracruz y Guerrero.

The Insecure Attachment of the Organization Theorist: Present Day and Past Responses to Health Care Scandals in the NHS

In this paper I present a dramatic health care system collapse and scandal in the UK, as I analyse the story about appalling suffering of a large amount of patients at Mid Staffordshire NHS foundation trust between 2005 and 2008, and the subsequent public inquiry in 2013 of the Stafford hospital and the trust’s professional staff and directors. On this background, I discuss present day response to the scandal and show how this response departs from a preoccupation with operational truths, such as world-class management, regulatory transparency and openness, and culture of compassion. I argue that organization studies and work that critically reflect upon the context in which clinical malpractice occurs have been largely absent from this discussion. This is peculiar since the scandal seems to be an open invitation to organization theory and organization concepts to take on a life and role in the discussion. In addition to this, I argue, the scandal invites organization theorists to contribute to a discussion of how we choose to organize treatment and care of vulnerable citizens in our society. To follow this line of thought, I revisit the work of Isabel Menzies Lyth (1959, 1988) and central analyses of The Tavistock Institute of Human Relations (Jaques, 1951; Trist and Bamforth, 1951; Rice, 1958; Winnicott, 1958). I scrutinize whether, in light of the hospital scandal and the numerous failures of care, these classical endeavours add something to present day theorizing on organizations and how we think about and approach the activities and relations of organisations. To conclude, I argue that classic organization theory in the early Tavistock tradition provides us with old-new ways of thinking about and acting upon contemporary scandals in the NHS.

ROGERS, PETER* (Macquarie University, peter.rogers@mq.edu.au)

Transparency & Visible (Dis)Order: Surveillance and the Riots

This paper links the UK riots of August 2011 to citizenship and the subject through the lens of risk and resilience. It suggests that the rhetoric of respon-
sibilisation and observational techniques/tactics in response to the riots reveal a moral ordering of the ‘legitimate’ citizen/subject at odds with the rhetoric of inclusive resilience. The visibility of the disorderly citizen was used to objectify the ‘irrational subject’, turning the riots from a societal reaction to (the negative impacts of neoliberalization) into wanton criminality inherent to the ‘worst 100,000 families’ in Britain. This paper situates the disorderly and ‘irrational’ citizen/subject within a critical reflection on risk, order and surveillance. It is argued that a complex interplay of thinking, doing and acting out citizenship forms tendential links between risk and surveillance that scholars need to investigate further.

**Protest, Conflict, and Class Struggle in South Korea: Two Cases of Urban Redevelopment In Incheon**

South Korea has suffered from major economic dislocations under the pressures of globalization, marketization, and economic restructuring particularly since the Asian Financial Crisis of 1997-98. Labor responded in the last decade with a wave of labor militancy that receded with the decline of the labor movement and a period of labor peace during the recent economic crisis. At the meantime the public has asked for more welfare spending. Throughout the period, though, there has been sustained resistance to capital in the form of protests against urban redevelopment. In recent years, urban protests have even taken a similar form to labor protests, with both involving sustained occupations and a common protest culture. This study reviews the recent trends in resistance against domestic (and foreign) capital and then looks at the specific cases of housing protests in the Kayasa and Dohwa neighborhoods of Incheon. In both cases, a lower-income community was displaced by landlords seeking profit by building more expensive housing in a pattern common throughout Korea despite plenty of housing stock that could be rehabilitated at lower cost. The capital drive to redevelop housing in spite of a collapse in the luxury housing market, and a lack of affordable housing. The course of the occupations and protests are reviewed and linked to broader issues of class conflict in Incheon and South Korea.

**Being a Housewife – Is It a Traditional or Progressive Female Gender Role? Understanding Gender Role Constructions in a Transcultural Russian-German Research Setting**

This paper is based on a PhD project investigating the au pair migration from young Russian women to Germany. Two aspects of this project will be discussed: 1) What kind of biographical research design may be employed in a transcultural research setting and 2) how does this design help to reconstruct the socio-cultural constructiveness of social categories such as gender. The methodological design of the research project consisted of data collection with biographical narrative interviews mainly done in German language (to lesser extent in English or Russian with interpretation). Data were analysed by the method of sequential analysis with a group of researchers, who belong to German and Russian backgrounds, enabling the reconstruction of cultural specific social categories. Concerning the question of gender this project depicts how this category not only in everyday knowledge but also in research is formed by socio-cultural and historically shaped contexts.

**ROHDE, CATERINA*** (University of Bielefeld, caterina.rohde@arcor.de)

**The Male Au Pair: Migrant Men Providing Domestic and Care Services In Au Pair Jobs**

Research on migrants working in low income jobs show a gender logic according to which female migrants typically work in domestic and care work, while male migrants hold jobs in the industrial sector. The increasing popularity of male au pairs offers a unique opportunity to research a specific case of migrants’ labor market position contradictory to this logic. Since there do not exist any studies and stations on male au pairs yet, I propose an explorative research project on male au pairs in Germany. It is based on 3 in-depth interviews with male au pairs, data from online forums, journalistic articles, advertising materials of au pair agencies as well as interviews with agency staff.

Au pair work is a specific type of reproductive labor because the working relation between au pair and the employing family is only very poorly regulated. Thus, every case shows which specific tasks are delegated to the au pair and which according competencies are expected of the au pair. At the intersection of ethnicity/nationality and masculinity the male au pair is constructed as a suitable worker for families with sons. Alike the broad discussion about the importance of men for socializing male children, male au pairs are hired when the male parent is absent and is expected to fulfill the position of a male role model. The foreignness of the au pair is portrayed as a value of intercultural education. At the same time offering low waged work within the own household is legitimized as providing life chances to a young person from a less developed country. Biographical interviews show that male au pairs often feel overburdened by the expectation to be a male role model and report to feel pressured into adjusting to the families’ cultural/individual routines instead of pursuing their own lifestyle.

**Social Psychology of Relationships of Domination in Hegel, Nietzsche and Fanon**

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
This paper explores the writings of G.W.F. Hegel, Friedrich Nietzsche and Frantz Fanon on the dynamics within relationships of domination and subordination. Although the three authors held quite different political perspectives, there are commonalities, as well as differences, in their discussions of this dynamic. All explore the subordinate as an object, the importance of the Other, and the effects on the meaning of such relationships. Nietzsche and Fanon also discuss the role of resentment and the importance of physical coercion and repression in maintaining and then undermining domination. Hegel considers the labor of the subordinate significant. Despite their differing views of the processes by which an outcome is reached and the desirability of that outcome, the three writers all underscore that the destruction of the inequality is an inevitability.

The Financialization of Housing and Spatial Segregation: New Frontiers in Brazilian Cities

Urban space plays a crucial role in the contemporary processes of capital accumulation, which is essential to analyse transformations on social housing policies and their impacts on patterns of socio-spatial segregation in the cities. More than mere effects of the financialization of the world economy, changes in the production and consumption of urban space have figured as driving forces of a new economic order, characterized by deep connections between financial markets and real estate.

Cities in general and the housing sector in particular have not only become fertile fields for commoditization of social needs and expansion of market relations, but also mobilized as guarantees for financial assets. Social housing was not the sub-sector to be affected firstly by such phenomena, which has gone further where the expected rates of return are higher such as corporate buildings or luxury residences. However, it stands as a terrain of strategic relevance for business due to its large scale.

In this context, rather than ways of providing social rights, housing policies have been progressively conceived as means of opening new frontiers of financialization in low income residential markets. Like in many other countries, this is the case of “Minha Casa Minha Vida” program, the main housing policy implemented in Brazil, which subsidize homeownership to low income households.

With the protagonist role of private developers in the formulation of social housing projects, their spatial dimension are conditioned by cost calculations made by economic agents seeking to maximize profits. Without taking into account urban policy goals, the definition of the projects’ location is mainly guided by the criteria of the cheapest land available - generally also the most precarious.
