Fligstein and McAdam’s (2012) claim that an “emerging action field” (EAF) is a space where “rules do not yet exist”, but are progressively constructed as a result of the discursive construction of collective interests. This communicative process, in its turn, results from the interaction between participating actors. This perspective does not take into account the possibility that such process may in itself be regulated by pre-existing norms and repertoires of action and repertoires that were circulating within the public sphere. As a result, it is not able to account for the way in which “challenger groups” within EAFs challenge those pre-existing norms and promote new rules and action frames, therefore contributing to their emergence and consolidation as autonomous “Strategic Action Fields” (SAF). This paper aims to fill that gap in SAF theory by connecting it with Habermas’ theory of “communicative action”, as well as with the research on “counterpublics”.

It uses the process of emergence of the Brazilian Solidarity Economy movement as an illustration of: 1) how pre-existing norms and repertoires of action within a “counterpublic” regulate the emergence of an EAF; 2) how “challenger groups” within an EAF promote normative and strategic innovation, therefore promoting the emergence of an autonomous field; 3) how the pre-existing norms and repertoires act as a common “matrix” that prevents secession, by ensuring that the norms and action frames developed by “challenger groups” will not diverge too much from those of other groups within the EAF.

Contested Land, the Implicate Relation of Memories and Traumas of Israelis and Palestinians

Israel and Palestine, over the course of their historical conflict, have created a complex patchwork of memory narratives dealing with different representations of the same landscape. The paper examines how the two peoples have elaborat-
ed their narratives of national identity by practicing a pre-modern repertoire to shape a modern identity, and by knitting together their collective, multiple visions of the land. Israelis and Palestinians have used space as a temporal-spatial tool to practice the remembering of lost land and to elaborate an imaginative geography.

In an intractable conflict like the Israeli-Palestinian one, a culture of conflict and a psychological repertoire of conflict have developed. This repertoire includes ethos, emotional orientation and collective memory, which all sustain and reinforce the conflict. My purpose is to focus attention on both narratives adopting Bar-Tal’s view: “Israeli society represents a mirror image of the Arab societies, particularly of the Palestinian society (...) both societies share beliefs and mutually held social representations.” (Bar-Tal 1998). The case of the Israeli and Palestinian memories raises many questions; however, I wish to limit the discussion to the relationship between dreamt/imagined space in the Diasporas memories, and the entanglements related to loss and claims of return. The time line does not follow a unified, particular historical trajectory. A temporal dialogue keeps memory alive, but the past is not simply “preserved. The results of the 1948 war dramatically changed the relationship to the land. Political Zionism fulfills for “people without land the dreamed-of homeland. The uprooting from the homeland is the focal point of Palestinian national identity, the trauma and the loss feeds their memory and nourish their narratives.

Is Mobilization for a Better Life a Challenge to Change Society?

Cases in Germany

Contemporary social movements are in large extent linked by networked communication technologies, quickly developing a borderless public sphere in a mix of new cosmopolitan citizenship deep-rooted to local issues. The social movements of previous stage create online and offline communities to share views, practices, and strategies, creating a third space defined by Castells a space of autonomy to challenge the disciplinary power. In the paper, first we pay attention how the communication flows across the offline and the online communities are set up, how the local level is intertwined to borderless frame to enhance collective strategy. We analyse how they capitalized past social movements backgrounds, like campaigns, and networking platforms, how they appraised the repertoire of action and communication forms of past social movements. Secondly, we pay attention to Middle East social movements in the call to question the Western ethos, emotional orientation and collective memory, which all sustain and reinforce the conflict. This repertoire includes ethos, emotional orientation and collective memory, which all sustain and reinforce the conflict.

Bridging the Silos: Curriculum Development As a Tool for Crossing Disciplines in the Arts, Sciences and Humanities

Investigators in the 21st century are finding that there are tools, information and points of view from other disciplines than their own that can answer the problem they are studying. However, higher education becomes more restrictive as a student moves from general education courses into graduate school, where a single department awards degree based on a usually narrow set of course requirements and a thesis or dissertation. Little is known about the kinds of cross-disciplinary courses that are currently being offered, the mechanisms that employed to offer these courses, and their educational effectiveness. A necessary step in is to research current cross-disciplinary offerings in higher education on an international basis in order to understand the modes of development of such curricula. We present an analysis of a compendium of arts-science-humanities cross-disciplinary courses created through several Calls for Contributions (2009 to 2013). A web site was created and submissions were posted at http://www.utdallas.edu/atec/cdash. Permissions and updates were received for over 100 courses, along with additional material. The data (from courses) was analyzed as to the nature of the cross-disciplines, level of offering (graduate vs. undergraduate), geographical location, level of collaboration (number of instructors) and department(s) offering the course. A comprehensive re-visioning of curricular structure to encourage collaborative and cooperative teaching of integrative courses and programs is needed. Suggested actions include specific ideas to enhance networking and visibility, asset mapping, sharing of syllabi and course materials, and a research effort to demonstrate the efficiency of cross-curricular courses in international humanities courses. This preliminary study points the way towards further efforts in curricular design and research that will be required for cross-disciplinary courses to be integrated into college curriculum.

Alternative Visions Of Work In a Neoliberal World: An Impossible Dream Or a Project Under Construction?

“We give people jobs” is the capitalists’ prime legitimation for monopolizing political and economic power. The reality behind this ideology is that the role of capitalists is to make sure that the supply of jobs is inadequate and to degrade those jobs that remain. Yet, the idea that supporting the dominance of capital is the only route will enable people to exercise their productive capabilities and receive livelihoods in return remains one of the most powerful elements of neoliberal “commonsense.” Replacing this “commonsense” with an alternative vision for organizing social production that is credible and compelling in the context of the world’s current global political economy is a central challenge in the production of counter-hegemonic knowledge. The centuries old history of frustrated efforts to escape the imposition of inhumane and counterproductive modes of organizing work notwithstanding, it remains a project that must be resurrected anew in every era. This paper will combine an effort to systematize an analytical countermovement to the current commonsense together with an exploration of existing efforts to formulate alternative strategies for expanding productive livelihoods and implementing alternative organizational forms for securing those livelihoods in practice, within the hostile environment of global neoliberal capitalism.
The neoliberal era has undermined worker's rights and labor's power at the national level, but there have been some positive developments in the transnational articulation of national labor movements. The growth of global corporate empires has expanded opportunities to use connections among national labor movements for “reverse whipsawing” – applying labor's strength in one national terrain to increase the power of labor in another national context where it is weaker. Extreme adversity at the national level has pushed U.S. unions toward a new transnationalism. Brazil shows how the more important global economic role of major countries in the South, when combined with a strong national labor movement, can create fruitful opportunities for transnational alliances. The growth of Global Union Federations, which has outpaced the growth national unions, and the development of new governance instruments like Global Framework Agreements, have also created opportunities for articulating the efforts of national labor movements and strengthening labor's ability to mobilize globally. These diverse channels can also be balanced against global labor's inability to find effective ways of supporting the ability of insurgent workers to become a political force in the home of world’s largest national working class and the likely future hegemon -- China. Assessing both recent advances in the architecture of the global labor movement and its future prospects as positions in international hierarchy of nations shift is an essential task for global labor studies.

ERYS, INGRID* (University of Surrey, ingrid.eyers@surrey.ac.uk)

Knowledge Transfer: From Identify Determinants of Poor Sleep in Nursing Homes to Developing and Implementing Solutions Supported By Technology

This paper presents the process of knowledge transfer from within a research project into the development of best practice recommendations. It will show how research findings inform practice development involving the use of technology and how this can improve night time care provision in nursing homes. Building on research conducted in England, best practice recommendations have been developed to improve sleep in nursing homes.

An extensive study of 10 nursing homes in England aimed to identify the determinants of poor sleep incorporated a collection of quantitative and qualitative data from 183 residents aged 65-100 and 40 members of staff. One of the key findings from the study was related to sleep disruption caused by regular, physical checking of the bedclothes to establish if they needed changing. A recommendation from the study was to enhance person-centred care at night by the use of sleep monitoring sensors in the mattress. In this instance the use of sensors in a mattress can for example indicate whether the bed is wet or dry and when the resident is more restless, implying that they are not in a deep sleep phase. Care supported by technology can be provided when it is needed and suits the individual sleep pattern of residents. Consequently restorative sleep can be achieved and dignity maintained. Thus the evidence based knowledge and understanding related to a determinant of poor sleep is transferred to the development of care giving procedures involving the use of technology. This process can be seen to improve care delivery and result in an outcome which acknowledges the individuality of night time sleep and maintains personal dignity of older people.

The research was supported by the New Dynamics of Ageing initiative, a multi-disciplinary research programme funded by AHRC, BBSRC, EPSRC, ESRC and MRC (RES-339-25-0009).

MALAURENT, JULIEN (ESSEC)

What Impact Do Various Sociomaterial Assemblages Have on Collective Thinking Activities?

The association “Pole Bio” has created a multi-tenant project called “Melbio” to support organic agriculture in the Massif Central region, France. Pole bio is intending to manage this project for a three years period (2011-2014) to improve knowledge sharing in the organic farming field. And this focus group is specifically interested in meadows composed of a variety of flora or forage crops. It brings together a group of heterogeneous actors: researchers in biology, computer scientists, a Chamber of Agriculture officials, farmers, agricultural experts, farmers’ associations. The project is funded by the region and aims to find new techniques to tackle the climate change.

The project has two main objectives: the first one consists in producing a decision-making model to assist seeding. This decision-making model will be embedded within an on-line platform to assist farmers to calculate the ideal mix for seeding flora in meadows. The ideal-type process is the following: farmers will have to enter local data into the software (such as location, soil type, weather conditions), and will get back advices for seeding recipes. The second objective is related to the creation of a wiki-based knowledge platform to articulate both expert and lay knowledge to improve the collective expertise of the organic farming community in that region.

Given the complexity of the relationships between group members due to a number of factors such as personal interests, institutional interests, and geographic distance we wish to focus our interest in the role played by sociomaterial assemblage for collective thinking activities. To do so, we suggest the adoption of a slightly different research paradigm compared to the classic sociomaterial apparatus (Leonardi and Barley, 2010; Orlikowski, 2007) based on a Cultural Historical Activity Theory (CHAT) framework, suggesting an original perspective to look at the role of material artefacts during thinking activities.

Dutch-Japanese Encounters: Gendered Experiences Of The Japanese Occupation Of The Netherlands East Indies

This paper examines the stories of women who transgressed national and racial boundaries by entering a relationship with the ‘enemy’ during the Pacific War: Indo-European women (with Dutch citizenship) who conceived a child with a Japanese man during the Japanese occupation of the Netherlands East Indies (1942-45). To date, their actions remain highly controversial in the Netherlands, as they apparently willingly engaged with an enemy that even now evokes strong emotions for subjecting large parts of the Dutch civilian population to three years of internment. Unlike Comfort Women, they have not received recognition for their wartime experience in form of pensions for war victims, as they were considered as collaborators, opportunists and prostitutes. The treatment they suffered by their own families and communities left deep scars in the lives of women and their children, and evokes memories that are often too painful to articulate even in private. The persisting silence surrounding the origins of their children constitutes an important starting point to investigate the political and social processes that have defined the ‘truth’ and memory of the war and women’s experiences of the occupation. Their stories reveal that their actions not only contradicted the wartime enemy image, but also the prevailing ideologies of women’s expected relationship to the nation and its men. Based on Japanese and Dutch archival documents, including interrogation reports and accounts of mothers themselves, and 21 life history interviews with children born of these unions, I reconstruct the wartime experiences of these mothers from the perspective of their children. Their stories not only shed light on women’s agency and their gendered experience of life and survival during the Japanese occupation, but also a family and community discourse, that continues to marginalize and silence women and children within the history and memory of the Japanese occupation.

Sex and Witchcraft: Performing and Transforming the Gendered Body

Eighty people dance naked around a large bonfire during an all night ritual at Faunalia, a Pagan festival in Australia. This paper examines how these rituals transform embodied forms of gender inequality for women and men. Women with poor body image find self confidence and pleasure in their somatic performance. Men discover new ways of relating to the feminine sides of themselves. Both men and women explore same-sex interactions, such as kissing someone of the same gender, and as a consequence become more comfortable with homoerotic desire. The paper argues that many forms of gender inequality are located in emotional and somatic self-understandings and that ritual performances allow these to be countered and transformed.

FABIANSON, CHARLOTTE* (Victoria University, Charlotte.Fabiansson@vu.edu.au)

Edgework: A Modern Phenomenon Or a Discourse Symbolising An Innate Human Quest?

The paper explores if edgework is rooted in a human quest for excitement and challenge and if contemporary edgework can be compared with historical explorative expeditions, where humans and equipment endured extreme challenges. Hunter Thompson (1971, 1979) defined edgework as a voluntary risk activity requiring extraordinary knowledge, mental and physical skills, which is different from voluntary risk taking actions where no skills above everyday knowledge are required. More recently, Lyng (1990) explores the edgework discourse in analysing skydiving and Fletcher’s (2008) risky behaviour and practices within elite and professional sport. Activates based on a perception of having control of a situation, such as gambling, might also relate to edgework (Fabiansson 2010). The paper argues from Bourdieu’s (1978, 1984) habitus discourse the influence of the social and cultural environment on human action and perception of societal place, that contemporary edgework activities and historical expeditions have common grounds in symbolising an innate human quest to challenge the everyday, but differ in presentation of the achievements in the private and public spheres. Where historical expeditions are placed in the public sphere for the explorer to gain public acknowledgement, while modern edgework is practiced in the private sphere or within a close knit group of likeminded edgework followers.

Young People Feeling Valued and Safe In Mono- and Multi-Ethnic Australian Communities

The paper explores if young people growing up in mono-ethnic regional or in multi-ethnic urban communities present different experiences in feeling valued and safe in the community. The paper argues from Bourdieu’s (1978, 1984) habitus discourse that the social and cultural environment influence the community setting and young people’s feelings of being supported by friends, their social networks, and trust in people. The mono-ethnic young people live in regional communities dominated by generations of Anglo-Australian heritage and traditions. While the young people in multi-ethnic communities live in ethnically diverse urban communities in Western and South Western Sydney with its intermix of young people from Arabic and Middle Eastern, Pacific Island and Asian heritage. The young people in the mono-and multi-ethnic communities are all aged between 13 and 21 years and live with their families. The research shows that the urban young people living in multi-ethnic communities live in community settings. The results, however, revealed a division along different lines: the first factor proved to be non-existent, while the second was reproduced with almost the same structure as at the individual level.

Transformation of gender roles is regarded as one of the key dimensions of modernization. Notions of gender, as hardly any other set of beliefs, possess universal relevance and pervade everyday life. Not surprisingly, the gender issue has become one of the key themes in rhetoric and sources of mass mobilization for neo-traditionalism. As a result of the polarization of positions in global public debate, most gender role expectations are easily recognized as belonging to either a liberal or a neo-traditionalist value set. What remains less clear, however, is the variability of modernization patterns for different gender norms. Do all role expectations form a one-dimensional factor, or are there several autonomous dimensions of notions about gender, each with its own liberal versus neo-traditionalist core? Can these dimensions be used to compare gender role expectations at individual and country levels? To answer these questions, we analyzed the integrated database of the European Values Survey and World Values Survey by means of multilevel structural equations modeling. The formulations of relevant items, as well as the current theoretical agenda, suggested their possible division of gender roles into those describing behavior in work and family settings. The results, however, revealed a division along different lines: the first factor comprises duties, both in public and private spheres, while the second factor includes hedonist gender role expectations, related to self-fulfillment and enjoyment. At the country level, the first factor proved to be non-existent, while the second was reproduced with almost the same structure as at the individual level.

Thus, gender roles are both horizontally and vertically differentiated, and form different dimensions of neo-traditionalism. To account for these differences, we compare sets of predictors for the two factors, with special regard to cross-level interactions.

Post-Nationalism, Cosmopolitanism, and Modernization of Values: Empirical Evidence from 85 Countries

At the start of the current phase of globalization, nationalism was supposed to become obsolete, with new means of communication opening new degrees of freedom for individuals worldwide and thus giving way to cosmopolitanism. Later it became apparent that the established significance of national identities and nation-state sovereignty has not been declining over time, if so, rising incomes cannot have had any impact. Second, there is as much reason to think religiosity is a cause as a consequence of development and inequality. Third, the mechanisms linking inequality to religiosity remain unknown. Addressing each of these limitations, this paper tests more robustly whether and in what way people’s preferences about inequality shape religiosity. I find, first, that religiosity, though not development, correlates with religiosity over time. Second, using an instrument to rule out reverse-causality, historically rooted differences in both inequality and development have powerfully shaped countries’ current levels of religiosity. Third, deference to authority correlates with both inequality and religiosity, suggesting it is a key mechanism linking the two. In recent decades, the increasing inequality experienced by many countries appears to be one reason for the relatively modest decline in religiosity.
Does inequality discourage political engagement? Previous studies have noted that people are less politically engaged in societies with higher income inequality. This cross-sectional association has been taken as evidence of a causal relationship, with inequality discouraging engagement by leading all but the wealthiest people to conclude that politics is not about them or their concerns. If correct, this interaction suggests that the increase in inequality seen in many countries in recent decades has been driving down engagement, with potentially serious implications for the quality of democracy. Yet the association could be spurious, or due to reverse-causality. The very reason scholars care about political engagement is that they believe it has consequences for democracy and distribution; rather than inequality discouraging engagement, disengagement could foster inequality. Using multilevel models fitted to two measures of engagement from all five waves of the World/ European Values Surveys, this paper re-assesses the thesis of a causal relationship running from inequality to disengagement, in two ways. First, I investigate whether the relationship holds not just cross-sectionally but also longitudinally. Second, I use an instrument for inequality to test whether the correlation between inequality and engagement holds even when ruling out reverse-causality. I find mixed evidence for a relationship over time, but a clear correlation when instrumenting for inequality. At least over the long run, then, it seems that unequal societies tend to develop less participatory politics.

LINN, JAMES G. (Optimal Solutions in Healthcare)
Providing AIDS Nursing Care In Botswana:what Explains The Level Of Job Satisfaction

Despite the many strengths of its health services and economy, Botswana has experienced one of the world's worst HIV/AIDS epidemics. HIV prevalence for most age groups doubled over the 1990s resulting in an adult infection rate of 38.6%, which was reported in the National Survey for 2001. HIV/AIDS infection became the main cause of hospital admissions as health services in all units of the healthcare system became strained and shortages of clinical personnel, especially nurses, appeared nationwide. As a result of many new & expanded government health services, the HIV infection rate and number of new cases has declined significantly. Recent data shows that 31.8% of women attending antenatal care clinics & 17.1% of male adults are infected with HIV-1. Yet, as with other countries of Southern Africa, Botswana continues to have a generalized epidemic that for the foreseeable future will present a challenge to its healthcare system. Nurses and other clinical service providers must constantly treat HIV symptoms and AIDS related illnesses while also giving other required care. The purpose of this analysis is to determine the level of job satisfaction and its predictors among a sample of 202 nurses involved in HIV/AIDS care in Botswana. A model is derived for explaining job satisfaction among these nurses which can be tested in other healthcare systems in Africa.

FALCON, JULIE* (Life course and Inequality Center (LINES, julie.falcon@unl.ch)
Returns to Vocational Education and Training (VET) in Times of Crises: A Stepping Stone or a Trap for Career Advancement?

VET is often acknowledged as being a very efficient stepping stone to integrate the labor market: it prevents unemployment risks and insures good returns to first employment. However, while benefits of VET are undeniable from a short-term perspective, they remain more questionable from a longer-term stance: it would seem that, from a longer-term perspective, graduates of VET face higher unemployment risk and lower career advancement opportunities than their counterparts with general education. Yet, this under-studied aspect is crucial as the political response to the recent economic crisis has been to promote vocationally oriented education rather than general education (see Europe 2020 strategy). Therefore, I will investigate the following research questions: Does VET offers better – short or long-term – returns to education than other academically oriented educational tracks? How these returns vary according to institutional arrangements and according to economic context? I will focus on four countries who depict different educational systems, namely France, Germany, Switzerland and the United-Kingdom to investigate these questions. In order to gain insights as regards to the to the prospects of each cohort of VET graduates using labour force survey data on the longest-time frame as possible. In other words, the analysis will consist in analysing returns to VET in each countries at an aggregated level to see whether we can observe cohort and/or period effects.

I expect important cross-national differences in returns to VET, with higher returns to VET in countries with vocationally oriented educational systems (Germany and Switzerland) and lower returns in more academically oriented ones (France and UK). I furthermore expect overall long-term returns to VET to have decreased since the emergence of repeated economic crises.

Media Literacy As an Educative Tool Against Inequality: The Results of the Programme “Preventing in Madrid”

Most analysis on the effects of Media and new Technologies on children and teenagers focused risks or the social risks (concerning inequality, social stereotypes, violence or substance abuse behaviours that may be increased by the patterns shown by Media) either on the positive opportunities that Media may bring (regarding new chances of learning and development). Based on the integration of both sort of studies, this research underlines the use of Media Literacy as a tool to be used in prevention programmes with children and teenagers, in order both to reduce social risks and to increase opportunities of freedom and equality. As an example, we propose the results of Preventing in Madrid (Universidad Complutense of Madrid), a prevention programme against violence and social discrimination that has been developed in schools of Madrid since 2002.

FAN, GANG-HUA* (Shih-Hsin University, ganghua.fan@gmail.com)
Gender Differences in Religious Influence on Subjective Well-Being:
Evidence from Japan, South Korea and Taiwan

Research has consistently shown that women tend to be more religious than men. The structural location theory proposes that, due to disadvantageous social positions, women are more likely than men to regard religion as an alternative source of social support. The relative importance of religiosity versus socio-economic status on subjective well-being is thus expected to be more salient among women. Nevertheless, empirical verifications of this thesis, especially under East Asian contexts, are relatively few. To address this gap, this article use data drawn from AsiaBarometer 2006 survey to examines gender differences in religious influence on subjective well-being (measured with happiness and life satisfaction) in three East Asian societies: Japan, South Korea, and Taiwan. The three hypotheses for this research are: 1) the association between religiosity and subjective well-being is stronger among women; 2) the relative importance of religiosity compared to socioeconomic status on subjective well-being is greater among women; 3) gender differences in religious influence on subjective well-being are more salient in societies with greater gender stratification. Results of analyses provide certain support for the above three hypotheses. In these three East Asian societies, the influences of religiosity on subjective well-being are more significant among women in both absolute and relative measure. Also, gender differences in the association between religiosity and subjective well-being appear to be more salient in South Korea, where gender stratification in terms of education and occupational status is greater than that in Japan and Taiwan.

Education Delayed but Not Denied: Returning to School of the Chinese Cultural Revolution Cohort

This paper examines a unique Chinese cohort whose educational opportunities were lost due to an unexpected exogenous shock. The Cultural Revolution (CR) cohort came of age during China's Cultural Revolution decade (1966-76), when the educational system came to a halt (especially colleges whose normal recruitment stopped for 11 years). Based on life history data collected in the 1994 State and Life Changes in Urban China Survey (Zhou and Moen 2002) and Cox proportional hazards models, I find that, compared with the pre-CR cohort just before them, the CR cohort members are considerably more likely to return to school after they graduate to compensate for their initial educational disadvantages, thus narrowing (but not closing) their educational gap with the pre-CR cohort as they age. Marriage and having young children discourage women - but not men - from returning to school. In addition, children whose fathers held a senior-high degree and/or whose fathers were cadres or middle-class/intellectuals have significantly higher school reentry rates, which lead to a widening educational stratification with respect to social origins, nullifying the state's success in attenuating inter-generational transmission of educational (dis)advantage by launching the Cultural Revolution, as reported previously using data collected from the CR cohort in their early adulthood (Deng and Treiman 1997; Zhou, Moen, and Tuma 1998).

Choice and Inequality: Transition from Secondary to Tertiary Education in Chile

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Higher education is increasingly desired by families because it is seen as an important mechanism of social mobility that allows students to achieve better living standards. However, access to higher education appears consistently correlated with student socioeconomic status. The lack of prior opportunity to study a curriculum that provides both the quality and content required to proceed to higher education is suggested as the most important barrier. It is worth noting, then, that some low-income, high-performing students who expect to continue to higher education choose programs with lower-level content or quality.

This study utilizes the case of Chile to explore whether choice between vocational and academic education at secondary level (VESL and AESL respectively) could help to the reproduction of inequality throughout the diversion of high-performing low-income students from the academic to the vocational track. This study approaches a causal analysis combining propensity score matching and robustness check strategies. It also uses an ad hoc survey and a rich panel of censal study approaches a causal analysis combining propensity score matching and robustness check strategies. It also uses an ad hoc survey and a rich panel of censal study approaches a causal analysis combining propensity score matching and robustness check strategies. It also uses an ad hoc survey and a rich panel of censal study approaches a causal analysis combining propensity score matching and robustness check strategies.

The findings show that socioeconomic status, culture, the environment, and self-perception are correlated with enrollment in VESL. In addition, there is an important gap in the national entrance test to higher education between comparable VESL and AESL students (0.2 – 0.5 SD). Results also show that high-performing, low-income VESL students are less likely to go to a bachelor degree program and more likely to enter a vocational program at tertiary level than a comparable AELS student. Finally, VESL students tend to have a lower persistence at vocational tertiary education than AESL students. Hence, VESL could be distracting and preventing some low-income, high-performing students from obtaining better income, employability, and social status, ultimately reducing their social mobility. In this way, choice could be contributing to the reproduction of inequality.

FARIAS, RAISA NAIADE PAEL* (Universidade de Brasília, raiasapael@gmail.com)
MULLER, FERNANDA (Universidade de Brasília)

Childhood in the City: The Children in Focus

Research indicates that children have spent more time in institutionalised places than in public spaces (WARD, 1978; RASMUSSEN, SMIDT, 2003; TONUCCI, 1996). However, the same studies show the ability of these children in breaking the charge. The present work aims to study specifically how four five-year-old children, two girls and two boys, who live in Brasilia/Distrito Federal/ Brazil, perceive the city. Thus, from the recognition of children as social agents, producing meaning and that regardless of their size interact with the physical environment (CHRISTENSEN; O’BRIEN, 2003), we propose this research. The methodology of the study considers the child as a primary informant and seeks to involve the children in the planning of the city. The study was conducted over a year, the child was invited to build a city map with blocks of wood and artifacts in miniature, like cars and trees. Later, presenting the picture of the city map construction, it was possible to conduct a photoelicitation exercise (CLARK-IBÁÑEZ, 2004; BANKS, 2009). The methodology helped to increase the involvement of children in discussing aspects related to their urban experiences.

Women’s Local Social Movements

This study aims to understand whether the phenomenon of rural women’s collective action in Dasun, Kediri can be interpreted as a social movements, and related to the issues, actors and the setting, how’s that social movements can be categorized and have an implication to social justice, and can improve the inequality of women’s life. Based on this, this study aims (1) to explore and interpret the phenomenon of collective action undertaken by women in Dasun, if indeed a social movement and (2) the implications of social movements to improve inequality of women’s life and to develop a social justice.

This study is a qualitative research with an ethnographic approach, which a plural method include observation, participation, analysis of records, and interviews. The subjects of this study included some Dasun’s women activist and outsiders who were involved in the growth of the local social movements. Based on the results of field research and theoretical analysis led to some conclusion, an important finding of this study, show that a women leader is the conclusion, an important finding of this study, show that a women leader is the important factor for the development of the social movement in the Dasun area. The subject of the study included some Dasun’s women activist and outsiders who were involved in the growth of the local social movements.
ethnographic study with over three hundred in-depth interviews, this approach provides an account of the changing position of the foreign skilled migrant in the corporate labor force in Shanghai from the 1980s to the 2010s, a period in which expatriates transition from a dominant field position as incumbents who defined the “rules of the game” for employment, to challengers who must defend a marginal position within a much expanded field.

Narrowing The Pipeline? Assessing Female Participation in STEM Fields

The underrepresentation of female Science, Technology, Engineering, and Mathematics (STEM) faculty members at teaching institutions leaves few role models for young female students, particularly racial/ethnic minorities, interested in pursuing careers in STEM academic fields. A shortage in the number of professional women in STEM narrows the pipeline for future progress in every STEM discipline. The underrepresentation of women STEM faculty members everywhere, but most notably at small, primarily teaching institutions parallels the national statistics, which indicate numbers disproportionate to student and community demographics at institutions of higher education.

We intend to: examine and evaluate the specific needs and practices regarding advancement of women in STEM fields at a small, southern, rural, primarily teaching university and similar regional teaching institutions, and formulate specific sustainable strategies and goals toward increasing representation of women for the success of female scientists, our institution, and the future of scientific innovation.

A variety of measurable quantitative data and qualitative information will be systematically gathered from female STEM faculty and from a comparison group of male STEM faculty to determine causal factors influencing the underrepresentation of women in STEM. All baseline data gathered on female STEM faculty will be compared to results obtained from male STEM faculty. The data will be analyzed in order to assess needs and methods for implementing policies and conditions favorable for achieving positive change in the number of and professional advancement of STEM female faculty at this institution and to contribute to the existing body of knowledge regarding the underrepresentation of women STEM faculty.

FARRO, ANTIMO LUIGI* (Università di Roma La Sapienza, antimolugi.farro@uniroma1.it)

Subjective Struggles and Collective Movements

Movements are constitutive parts of contemporary global realities, buttressed forward through on-line communicational flows. They present a counterpoint to broad systemic powers which aim to condition and control individuality, thereby deconstructing social life. Financial forces are increasingly constituted through informational platforms, which take place outside the real economy. Moreover these movements increasingly underscore the differentiation between themselves and systemic actors. Movements underscore for us the separation between systemic forces and real life as expressions of the fragmentation of social life. Individual subjects become participants in the construction of collective movements to affirm themselves in the face of systemic domination as well as to engage in experiments around new living constructs as an alternative sociability to fragmentation. Communication by physical and online networks enables individuals to establish a common cultural framework. The result of this is a new political re-democratization and sociability confronting the contemporary context of global reality.

RC47-767.3

FARRO, ANTIMO LUIGI* (University Sapienza Roma, antimolugi.farro@uniroma1.it)

Urban and Environmental Development Issues

Collective movements operating at local, national, regional levels are contesting the increasing global trend of urbanization as a threat to environmental sustainability. These movements have become central to the economic, social, cultural and political contexts of environmental management. They confront the problematic activities of dominant financial actors whose activities mold urban spaces. They highlight the importance of subjective engagements with actual physical space that increasingly takes the form of individual actions. The individualization of collective action brings forward new experimental spaces that suggest the building of a new sociability as they contest urban development and the risk it poses for environmental sustainability.

**Everyday Boundaries and “Queer” Experiences in the Transit Migratory Space of Turkey**

Looking at the everyday as a crucial site for being and becoming as well as for (re)shaping belonging(s) of marginalized social groups (Manalansan, 2003), this paper seeks to examine everyday worlds of Iranian queer refugees in Turkey. The paper draws on findings from a doctoral dissertation project, which is based on 11-months of fieldwork consisting of key-informant interviews as well as on ethnographic data and narratives collected through in-depth interviews with 43 Iranian sexual refugee living in different “refugee” cities in Turkey. Turkey is a transit locality for non-European refugee communities due to its “geographical” limitation to the 1951 Geneva Convention. Among other irregular migrants and transit refugees, Turkey hosts many Iranian queer subjects, who are seeking asylum based on sexual orientation and gender identity persecution and waiting for resettlement to a third country in the global North. Time they spend between their “home” and “destination” affects and reflects their everyday life struggles and experiences as they shift across multiple boundaries and hierarchical axes of difference within the conditions of cross-border mobility as well as of asylum seeking while living in the transit migratory space of Turkey. In that sense, the main aim of the paper is to go beyond a panoramic snapshot of what the mundane activities of Iranian sexual refugee population in transit in Turkey looks like, toward a sociological analysis of how race/ethnicity, class, gender, and sexuality intersect and create borderlands in the daily life struggles and experiences of migrating Iranian sexual dissidents.

**Identities, Migrations, and Asylum: Thinking through the Experiences of Queer Refugees**

Since the early 2000’s Turkey has become a prominent transit destination for Iranian queer subjects who are seeking asylum based on sexual orientation and gender identity persecution. However, to date, there has been little research focusing on this growing component of queer/asylum mobilities. In line with the larger literature on international forced migration, much of the existing literature has avoided asking questions about these queer subjects’ understanding of self in relation to their sexual and as well as concerning their choices and motivations for departure. Often, this lack of academic coverage is due to so-called protection-related ethical dilemmas which many researchers are facing. Paradoxically, however, to avoid asking such questions in our researches strengthens the victim perspective on human rights responses towards queer and refugees. This might even further diminish possibilities of inclusion for (queer) subjects who seek justice, safety, and belonging beyond the borders of their countries. Moreover, this lack of academic coverage elides the real complexity of (queer) asylum mobilities.

Drawing upon in-depth interviews with 43 Iranian sexual dissidents seeking asylum and waiting for resettlement to a third-country in transit in Turkey, this paper offers insights into Iranian queer refugee’s understanding of self in relation to their movement as well as concerning their choices and motivations for departure. More specifically, the paper draws on the migratory trajectories and identity aspects of Iranian queer refugees to formulate an understanding of how they create, sustain, and/or negotiate a sense of self and belonging while shifting across multiple boundaries and hierarchical axes of difference within the international refugee regime. The main argument of the paper is that experiences at the intersection of queerness and refugeehood, influenced by the norms, politics, and processes of the refugee apparatus in the migratory space of Turkey constrain Iranian queer refugees’ possibilities for being, becoming, and belonging.

**Poplife. a Strategy to Mitigate the Social Risk**

The research is centered on the hypothesis that the propensity of a significant number of young people to participate to a reality show is related to social risk and uncertainty in planning their own life. Such an hypothesis is captured under the concept of realism. From a theoretical point of view, realism may be defined as a social logic characterizing the relationship between reality and imagination as strategy to cope with fundamental social risk. Such a logic has been very pervasive in the past fifteen years in Italy as well as in many other countries. From an empirical standpoint, the research is supported by 750 video interviews, and pictures of individuals wishing to participate to the reality show “Big Brother” (Italian edition). The results show that realism is, in many cases, the response of individuals to the fragmentation and the precariousness of social experience from both neo-liberalism and failure of societal institutions in keeping alive the emancipatory promise. Particularly, the logics of the action of the young people surveyed are specified in two directions. In the first, they show a sort of camouflage through which they intend to mitigate the discovery of a social insecurity that becomes existential and that seeks to transform the feeling of com

**Experiences on Improving Quality in Home Care Services for Seniors in Argentina**

In this paper we present research progress on the National Home Care Program in Argentina that has been carried out continuously since 1997 and with greater intensity in the period 2003-2013. The objective of the research is to investigate the impact of public policy aimed at the older population with some degree of dependence with respect to the learning incorporated by public and non-governmental organizations involved in the decentralized structure from which perform these services.

The proposed research is a comparative case study of implementing organizations of National Home Care Program in order to detect changes and learning that occurred in these organizations from the perspective of the actors (members of these organizations and users of its services, including home caregivers service cooperatives originated in the program) to build indicators and make proposals for continuous improvement of the quality of this public policy.

**Caregiving and Employment in the Canadian Context**

According to Statistics Canada, in 2012 more than 8M Canadians had provided care to a family member or friend with a long-term health condition, disability or aging-related needs during the previous year. The largest proportion (44%) were age 45-64—that is, baby boomers in peak earning years. Moreover, the number of boomer caregivers increased by 20% between 2007 and 2012. As in most developed countries, most Canadian caregivers are employed and many report care-related employment consequences. Many also report psychological, emotional and physical health consequences, many of which are serious enough to result in a visit to the doctor. Gender differences are narrowing; a slim majority (54%) of caregivers were women in 2012, but women still spend more time on care tasks, do more high demand tasks (personal and medical care), and experience more health and economic consequences. Demand for care will continue to grow in Canada, as in most parts of the world. But Canada’s public caregiver support infrastructure is under-developed compared to other countries. And despite growing awareness of negative impacts, caregiving can have on labour force attachment, commitment and productivity, Canadian caregivers remain largely uncommitted to supportive workplace practices for caregivers.

In this paper we report results from further analysis of Statistics Canada’s 2012 General Social Survey on Caregiving and Care Receiving examining incidence and predictors of care-related health and employment consequences for caregivers, as well as estimates of monetary costs that accrue to caregivers’ employers as a result. These findings will be interpreted against the backdrop of the Canadian public and private policy context and implications for future policy and practice in the health and continuing care and labour domains discussed.

**Children’s Health and Well-Being: Making Sense of the Health Conundrum**

Lifestyle related morbidities affecting children have attracted attention from national and international policy makers. One response to these public health concerns is to inform children and their parents of health promoting behaviours so as to establish life long habits for good health. However, epidemiological trends suggest that the prevalence of childhood morbidities is increasing. This suggests that health promotion programs appear to be struggling in effecting change in response to a complex set of factors driving this trend.

This paper attempts to make a small contribution to understanding this problem by presenting some research on children’s understandings of health and health promotion. The study surveyed 290 children in a participating, medium sized, representative, longitudinal, qualitative research study with 123 children aged 8-15 years, focussed on children’s understandings of ‘well-being’. While a significant amount of research draws upon the sociology
of health to understand children's perspectives of their illness, less common is research that obtains children's perspectives of what health or well-being means.

Our findings show that when children discuss their health they invoke themes from health promotion campaigns, which share many of the features of 'healthism' (Crawford 1980). However, children also call upon different and more broad-ranging meanings of well-being which problematise these healthism discourses. These include locating health as one dimension of well-being that prioritises agency, security and a positive sense of self; as promoting the body as a functional entity; and of health as generated intersubjectively which reproduce patterns of moral anxiety among carers. The findings suggest that children's understandings of well-being provide important clues as to the limits of health promotion campaigns and a set of considerations policy-makers need to take into account to effectively respond to the health conundrum.

FATTORE, TOBIA* (Macquarie University, tobia.fattore@mq.edu.au)
Enterprise and Network As the Basis of Solidarity – Strong and Weak Ties in Children's Work on the Informal Economy

Fundamental transformations in the world of work have created different opportunities for social integration depending on group membership. Furthermore these transformations have helped define the different economies emerging in this work in. This presentation critically evaluates children's work in the informal economy. Based on a study of 11000 children 12 to 16 years of age in New South Wales, Australia, the presentation examines, for the work children perform on the informal economy, how this particularity of relationship between workers and employer prescribes rules of conduct given the absence of other forms of social integration, such as formal regulations. It examines the extent network solidarity, and particularly reciprocity, provides a normative structure that underpins operation of the informal economy for children.

Three principal work performed by young people on the informal economy are identified: enterprise workers, informal employees and associative workers. Each category of work is embedded in different social relations between 'worker' and 'employer' that represent different relationships of appropriation. These relationships of appropriation reflect latent class structures with young people from poorer backgrounds more likely to undertake work as informal employees and wealthier young people more likely to be involved in enterprise work.

The nature of appropriation also influences intrinsic and extrinsic orientations towards work. Informal employee-relations, predicated upon strong particularistic ties, do not evidence greater levels of intrinsic attitudes, but are least commo

FAYOMI, OLUYEMI* (Covenant University, nike.fayomi@covenantuniversity.edu.ng)
Russian Universities in the Neo-Liberal Reforms

In Russia, for two decades, neo-liberal reforms have been carried out in all spheres of social life: economy, politics, culture, and education. The higher education reforms (universities in particular) dismantle the previous Soviet national education system trying to substitute it by a new pattern based on the Western model “for the purpose of being fully integrated into the global community”. The process of transplanting Western education patterns on Russian ground resulted in the fact that education no longer performs its most important social functions of integration and differentiation.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The integration function implies the system of education that is supposed to reproduce a set of core values reflecting the spiritual priorities of society and uniting people in a common social, historical and cultural community. It is known far and wide that every society does its best to preserve national identity, socio-cultural and mental characteristics of the population. Therefore, in order not to lose national identity communities try to transmit (and reinforce) their most important values through education systems.

The differentiation function implies preparing people of the younger generation for "embedding" them into cells of the social structure, bringing social and occupational structure of society into the right track; preparing the right number of specialists of different skill levels and different specialties for the country, according to the strategy of its development. But the paradox of contemporary Russian situation is that neither twenty years ago, when the construction of the neo-liberal capitalism was just at the beginning, nor now – nobody elaborated or formulated the development strategy. There was too much that was obscure: there wasn't ordered a priority system in the development of certain sectors in the economy, science, and social services. People were unaware of the economic model and the model of society they would create through liberal reforms.

**Pathways For Prevention: Disentangling Causal Relationships Of Preventable Mortality and Forced Migration In Post-Colonial Africa**

If humanity consensually agrees that innocent children should be spared the ravages of violence, political murder is not a reasonable means of debate, and that no person should be led to starvation at gunpoint, then we must also agree that humanity has failed modern Africa. This research summary points to a volume of historical evidence linking a host of independent factors that consistently predict higher rates of preventable mortality from violence, starvation, and disease across sub-Saharan nations. A wide-angle view of dictatorship and resource exploitation in the independence era (1957-1980) set in motion the foundation for many of the structural factors that continue to brutalize millions of Africans. Sadly, violence, starvation, disease and other preventable mortality causes are easily predictable, yet continuously occur across many parts of Africa. A second function of this research summary is to highlight causal pathways between extant social, geographical, economic, and agricultural indicators and the increased likelihood of forced migrations and preventable fatalities. If scholars can disentangle the cause and effect relationships that have resulted in millions of lost African lives decade after decade, local and global society will be best prepared to prevent similar catastrophes in the future.

**Science of Selection: Developing Social Technology in Educational and Vocational Field 1920–1940, Norway**

This paper explores how creating the applied science psychotechnics refitted societies' views on abilities and disabilities during the early twentieth century. The main empirical sources are textbooks, articles and political documents. It studies the making of applied psychology as two interrelated processes: first, the early experimental laboratory developments of scientific knowledge and the new understanding of the relationship between body and mind, and second, the introduction of new occupational roles in the French entertainment industry (intermittents) in order to understand the anonymous history of the technicians who craft the cinema and the inequalities process in this field.

**FEIXA, CARLES** (University of Lleida, feixa@geosoc.udl.es)

**Chronotypes of Youth in the Global City**

This session is based on the contributions to a book with the same title, to be published by Brill in 2014. It follows some similar themes represented in a previous edited collection published following the International Sociology Association World Congress in Brisbane, Australia in 2002 (Feixa & Nilan, Global Youth? Hybrid cultures, plural worlds, London and New York, Routledge, 2006). The new book builds on the themes of the previous volume but extends the analytical and theoretical approach to focus on the concept of chronotope, that is, the time/space dimension of social practices. Urban space and time are paradigms of analysis that can be productively applied to the study of contemporary youth phenomena, especially the study of youth cultural practices. Place is a defining element in the social relationships between youth, and between young people and the rest of the community. In the city, not only physical places are important though, social and symbolic spaces are equally significant. The virtual spaces available through new information technologies enable communication, sharing and networking. In both public and virtual spaces young people can collectively connect with the cultures and political agendas of a world brought closer by the pressures of globalisation (Nayak, 2004), even while they give priority to the local. The local now transacts directly with the global (Sassen, 2001), altering the life trajectories of everyday life and producing new kinds of spatial and temporal relationships in urban settings. The spatial temporality of the contemporary city therefore offers a "strategic lens" (Sassen, 2000) for the study of a major social formation - the period we know as youth - in terms of practices and representations.

**When Men Kill Women and When Women Kill Men: The Aspects of Gender and Social Class in Legal Discourse at Homicide Trials**

This work investigates how aspects of gender relations permeate the system of justice, giving rise to practices that corroborate relations of dominance and reproduction of inequalities in the trial by Jury. It analyzed the discourses of the prosecutors and public defenders who acted in the trial by Jury in the city of Porto Alegre, in the State of Rio Grande do Sul, in Brazil, from October 2008 until November 2010 only in cases involving men who killed women and women who...
killed men. A total of 26 sessions where observed and systematically registered in field diaries. The study identified aspects related to gender and social classes being mobilized in the discourse of those agents in the legal field to connotate their thesis for both accusation and defense. It is possible to perceive that these aspects are summoned in representations elaborated in the discourse as an strategy undertaken by the agents for a differentiation of the cases submitted to the trial as being either “crimes of passion” or “drug trafficking crimes”. According to the findings of this research, the resort to this strategy makes evident a discursive violence in relation to aspects of gender and social class yielding the idea of defendants (female or male), victims (female or male) or crime committed being “more accepted” or “more tolerated” than others.

FENG, QIUSHI* (National University of Singapore, socf@nus.edu.sg)

Globalization, Market Transition, and Variety of Developmental Models: The Case of the Chinese Car Industry

The Chinese automobile industry has been experiencing some profound changes during the recent market transition and globalization of the Chinese economy. Regarding to the ownership structure and technological upgrading strategies, there have been emerging four major developmental models among the domestic assemblers. Three major theoretical perspectives are then employed including the Schumpeter’s hypothesis, the approach of global value chain, and the developmental state argument; however all have major limitations to provide a good explanation.

This paper proposed to apply an institutionalist approach to understand such a variety of developmental models in the Chinese automobile industry. Four representative cases including FAW, SAIC Group, Chery and Geely were sampled for a systematic comparison in the empirical analysis. The major argument is that the divergent paths among these Chinese car makers were historically rooted in the pre-reform ear of the planned economy, from where the local political structure, developmental ideas and related agencies took on different looks in the market transition and together contributed to a local social construction over the local automobile sector.

Seniority Wage and Wage Inequality in the Segmented Labor Market: The Case of Korea

Since Brazil’s former President Lula Ignacio da Silva launched his successful national conditional cash transfer program (CCT) known as Bolsa Familia (BF) in 2003, academics and development practitioners have been fixated on—who gets it, how are the beneficiaries identified, where does the money come from and how is it delivered, and what are the program’s impacts—usually, does it reduce poverty. Judged upon these variables, BF has been quite successful and has been widely diffused throughout Latin America. It has however, been criticized for being a rather narrow form of social protection. This paper argues that BF and like-CCTs should not be considered as ends in themselves, but rather as a means towards consolidating a broader poverty alleviation strategy that includes complementarity to social investment initiatives such as labour activation policies and vocational training. Within Sem Miséria, new supply-side initiatives are being grafted onto the otherwise stable framework of BF. By tracing the timing and sequencing of Brazil’s poverty alleviation initiatives over three presidents, this paper will demonstrate that Dilma’s Sem Miséria is an institutionally feasible next step in expanding Brazil’s social investment strategy beyond CCTs, a strategy that is dependent both here and elsewhere on cross-sectorial and intergovernmental collaboration.

FEOFANOV, KONSTANTIN* (Moscow State Technological University, konstantin.feofanov@gmail.com)

Civilizational Basis of Russian Modernization

Every country participating in the global modern age contest, has its own unique modernization profile, which is based on the country’s civilizational features. Speed and specifics of every country’s traditional societies evolution into the modern ones and further, are still subject to close analysis with a view to discover efficient methods, reasons, mechanisms, recipes and secrets of “progressive” and “accelerated” modernization development.

Russian modernization determinants are of a special interest because they hold back progressive, sustainable and effective growth. For over three centuries they have been recurring repeatedly, with great persistency and literality, and the modernization processes have been of inorganic, catching-up, tardy, mobilization, relapsing and recurrent nature. Their implementation procedure includes initiation not by society but by government using force. These processes are deeply rooted in Russian civilizational history and culture, as well as character and psychology. They are enormously powerful and no matter how much the government or population want it, they cannot easily “adjust” them.

These features of Russian modernization obstruct the transfer from tradition to modernity, and disable long-term and productive Russian modernization on a national level, which would result in actual democracy, corruption level decrease, rule of law, and thereupon, in economic, environmental, cultural and technological achievements. Individual reforms and “modernization leaps” initiated “from the top-down”, can only lead to temporary and relative results. Specific version of traditional society based on recurrent waves and de-modernization elements of the largest modernization projects, keeps prevailing. There is “balancing” between the imminence of “catching-up” copying of certain elements from Western modernity, and “national peculiarity” as inability to implement this assimilation, as well as floating influenced by increase of one factor after another without a resulting vector.

The Multi-Culinary City: Transforming Traditions

Multi-cultural/multi-ethnic/multi-culinary : these dimensions of gastronomic spaces complement even as they counter each other. The proliferation of restaurants of all sorts and the consequent profusion of culinary choices endow the city with a cornucopia of gastronomic spaces. Yet, all gastronomic spaces are not equal. Horizontal differentiation conflicts with vertical distinctions: The premium placed on creativity relegates the reproduction of tradition to a lesser status than production of the new, the untoward, the heretofore unknown. In the exceptionally competitive dining world of New York City, culinarian identity builds, not on products or people or places, but from the infusion and transformation of a broad range of traditions.

Perception of Discriminatory Practices Among Bri’s Countries: Brazil and South Africa

This paper addresses the question of whether individual perception of discrimination is affected by occupational segregation by race and job status. We use data from Brazilian 2000 Census, Belo Horizonte Area Survey (2005) and Cape Area Survey (2005) conducted by the Federal University of Minas Gerais and Cape Town University. These surveys were designed to have comparable sociodemographic measures of many kinds of both cities. Processes of opening and closing of the labor market due to racial discriminatory practices are well-established topics among social stratification literature. Perceptions of discrimination in South Africa and in Brazil are unique phenomena. In South Africa, up to 1994 discriminatory practices based on race were straightforward and safeguarded by national constitution. African, Coloured and Indian inhabitants were denied the right to vote and forced to reside in peripheral townships. Interracial sex or marriage was formally prohibited. In Brazil, in another hand, there is no clearly distinct cultural boundary that separates blacks from whites. Both groups have the same mother tongue and most identify themselves with the same icons of Brazilian nationality. The commonalities among Brazilian ethnic groups led to the establishment of a myth of racial democracy, that despite being contested with evidences, still seems to prevail in some sectors of society, whereas discriminatory practices linger as a tacit social agreement. We found evidence in both countries that point to a higher perception of social discriminatory practices when the socioeconomic and cultural status of the under-privileged group is higher. We can imply that more access to material and symbolic goods of the dominant group (e.g., information, earnings and culture) can increase, instead of diminish, the perception of the minority groups of their conditions of prejudice and discrimination in the society.

Changes in the Health System of the B’laan Indigenous Community– Its Factors and Effects

The influences on the changes of the health system within a B’laan indigenous community in Southern Philippines deserve a deeper sociological analysis to partially explain the disparities in the epidemiological trend presently observable in indigenous health. The understanding how understanding health system adaptation is logically focused on the various aspects of belief system on health and illness, the health providers, preventive and curative treatments, utilization of medicines, and food source and dietary patterns. External factors in the form of exposure to outsiders, government intervention, acculturation to western-based medicine, and industrialization are considered to be strong influences to the changes in the health system. On the other hand, internal influences to change include the demise and decline of traditional healers in the community as well as the non-utilization of the different agendas. Of particular interest is their effort to avoid stereotypes, create a community on the move and engage with other communities avoiding academic tourism and the touristic gaze.

A Comparison Between Time-Use Data Collected By Smartphones and a Paper Diary

Smartphones and “apps” allows time-use research to be set up in a completely different way, such as for example a time-use app. Smartphone users have (almost) permanently access to this device, so respondents can report (more easily) their activities at multiple times per day, instead of using a paper diary in traditional time-use research. Additionally, smartphones enable to collect complementary information such as exact location, such as GPS, how people feel at random moments during the day (i.e. experience sampling), what short-term activities they do throughout the day (by pop-up questions such as about social media use), etc. The Netherlands Institute for Social Research (SCP) and CentERdata jointly conducted experiments to collect time-use data by smartphones. An app was specifically designed for this purpose (following HETUS-guidelines) and tested (n=150). The pilot study was evaluated positively regarding the technical software development and tests, as well as the willingness of respondents to participate, their response quality and the ease with which even inexperienced persons were able to use the smartphone app. Therefore the smartphone app is implemented in a larger survey. Data are collected from a random selection of the LIS-panel, which is representative for the Dutch public aged 16 years and older. People without a smartphone can borrow one, in this way everyone is able to participate. In order to be as similar as possible to the data collected by the traditional time use surveys in the Netherlands (2011/12), data are collected for an entire year (2012/13). This paper will compare the smartphone data collection with the traditional Dutch time use surveys using a paper diary, both based on the HETUS guidelines.
Economic and Labour Market Outsiderhood Among Young People in the EU

This paper analyses economic and labour market outsiderhood for young people across different European countries and welfare regime models. We define ‘outsiders’ as those people who are either unemployed, in temporary contracts or have an income below 60% of the median. By using cross-sectional data from the European Union Statistics on Income and Living Conditions (EU-SILC, 2006) we find: (1) a considerable variation in rates of youth outsiderhood across EU member states. The youth outsiderhood – measured observing the duration of the spell of outsiderhood – is higher in Mediterranean countries than in Liberal, Continental and Scandinavian countries; (2) that the depth of youth outsiderhood is influenced by the different types of skills possessed by young people. However, the strength of the effect varies across different welfare regimes.

Climate and People in a Region of Tension Between High Urbanization and High Biodiversity: Social and Ecological Dimensions of Climate Change

Single policies adopted at a global scale are unlikely to cope with risks, impacts and uncertainties associated to climate change (Ostrom, 2009). Stakeholders of science, police and civil society recognize that dealing with environmental global change requires a multilevel and interdisciplinary approach to identify gaps and promote collective action. While climate change will expose regions to similar impacts, the extent of those impacts and effective response at the local level will be determined not only by the location's sensitivity and vulnerability but also by local groups and individuals' capacity, including their institutional links, social networks and motivation to actions. Considering this perspective, a research project is undertaken on São Paulo Coast, Brazil, a region of tension between high urbanization and high biodiversity. The São Paulo Coast exhibits the socio-ecological dilemmas of contemporary economic development. The combined pressures of tourism, industry, oil extraction transport, and sustainable development are increasingly difficult to resolve. The prospect of climate change exacerbates this problem. Drawing on an empirical research on this area, our study aimed to set groundwork research on the environmental consequences of climate change along the coast of São Paulo, including the investigation of how solutions may require better understanding of local and regional government stakeholders’ knowledge, concerns and actions related to climate change. Our results points out that are different arenas and conflicts around the local environmental issues. The identified arenas are characterized by different interests and aims, and asymmetric capacities to mobilize resources. The results highlight how local stakeholders and residents perceive climate change risks, indicating that the social and economic context and government support are determinants in the way people responded to risk threats. Our results also indicate how climate change issues are being framed by local governments in terms of policy strategies and instruments.

The Dynamic Equation Between Social Conflicts, Natural Resources and Environmental Disasters: The State of the Art and a Theoretical Proposal

In the recent years, environment, risk, biodiversity and climate have been among the main intellectual dilemmas presented by the social reality and constituted the greatest challenge to the sociological investigation. The social sciences field has not only sought to theorize these dilemmas, but also to analyze empirically recent objects of the contemporary societies, in order to deal with the super complexification of social dynamics in a polycentric and polyphonic world. Considering this perspective, recent studies on conflicts demands a robust intellectual substratum which involves a review of classic and contemporary approaches from authors affiliated with Sociology and Anthropology areas as well as efforts from social scientists to be opened to the power of the investigated social reality. It means that social scientists are called to better understand social groups who live or work on affected areas by different restrictions or arbitreries, such as: (i) legal issues, related to the use or appropriation of natural resources; (ii) scarcity related to quantity or quality of resources; (iii) natural disasters or disasters caused by human activities; (iv) issues related to the exclusion of territory or resources provoked by disputes among different social groups and among social groups and species. This paper seeks to review and analyze the state of the art on social conflicts focused on natural resources and catastrophic events that have been debated in the international literature. We also seek to present and debate our theoretical affiliation which has been hold our studies on these issues.

AFRICA

ABSTRACT
Africa has always been affected by external influences such as Western colonial
rule and processes of independence of most states since the 1960s. The changing
nature of African post-colonial politics led to increasing conflicts in most states be-
cause of power devolution and violent regime changes by military coups. Histor-
ical causes of intrastate small wars are mostly due to belligerents and non-state
actors having congruent and grievance issues, power struggles, resource wars, ethnic
and religious differences, a lack of western norms and values which are not part of
theoretical ideas of development and also a lack of democratic principles, as these
are not yet instituted in most countries. The default action is always to fall back on
violence when belligerents are dissatisfied with current governments and break-
ing of peace accords by either of them. Changing sides in Africa is a normal occur-
ence, because alliances can change overnight. Enduring conflicts such as those in
the Democratic Republic of Congo (DRC) and Sudan lead to economic hardships
and social problems through the internal displacement of thousands of people in
their own home countries, as well as those of political refugees. Consequently, two-
thirds of global conflict is currently in Africa and the majority of United Nations
(UN) peace missions are hosted in these conflict-ridden African states. Reference
to South African peacekeeping contributions in these states will be made briefly.

 impacts of the Economic Crisis on Gender and Class Inequalities in Europe
The presentation aims to understand to what extent the present crisis increas-
gender and class inequalities and subjective well being in Europe. In periods of rising
and reduced disposable incomes it is clearly relevant to assess their differential impact on gender and class relations.
Evidence will mainly be collected from the different rounds of the European So-
Social Survey (ESS - 2002; 2004; 2006; 2008; 2010 and 2012). Other sources will also be used such as official information of GDP, Unemployment rates, Gini Indexes
per country, Human Development Index (HDI), Gender Development Index (GDI)
and Gender Empowerment Measurement (GEM), in order to “quantify” the effects of
the crisis, comparing rescued and non-rescued European countries, the last
ones being submitted for long to severe austerity policies.

Reflections about Work, Time and Subjectivity in the Contemporary Culture
The obsession for innovation, planned obsolescence and the consequent dis-
cardability have become conditions of the contemporary culture. A culture of con-
sumption and the commodity form have impregnated our way of life, even people
and their relationships. In this article, methodologically inserted in the dialogue
between psychoanalysis and social theory, we will start from the premise that
in this new version of capitalism, people can be considered as commodities in
the labor market. And if we are commodities, in this endless shelf of products,
we need to remain salable because we are also disposable (or, to use common
expression in business: we must invest, continuously, in our employability). It is
precisely this point that interests us. The rules are unfair but clear: we must uninter-
ruptedly upgrade to keep up with the frenetic speed of technological change.
As well as the products, we have to innovate ourselves to keep our chances of
work and in levels of life and work satisfaction.

The rise of sociology during the Nineteenth century represented not only the strengthening of new ways of understanding the reality of social problems. In this historical process, it is also possible to see the rise of new ways of comprehending the scientific knowledge, specially the problem of objectivity in social science fields in connection with the objectivity foundations of natural sciences. The sociological "discourses" were observed and understood throughout the classic period as a proto-reflexive critical concern about the logical development of the scientific reasoning, both in natural and human sciences (Geisteswissenschaften). As a result of the classical sociological analysis of the scientific method as a way of constructing the epistemic roots of social sciences reasoning, the sociology developed during the XIX century an important and unique capacity of comprehending "science through the scientific method". Thus, in this paper we aim to develop a historical analysis of the rise of the critic and "reflexive vocation" of classic sociology as an important epistemic condition to the strengthening of the modern sociological conception of science in different fields of sociology like sociology of knowledge, sociology of science and sociology of scientific knowledge. In a first moment, the classics of sociology pointed out the "problem of knowledge" as an internal challenge to the development of a sociology as a scientific way of thinking; in a second moment, the contemporary sociology pointed out the "problem of knowledge" as a general difficulty to the whole scientific conception of reality, promoting a crisis in the logical demarcation of science in face of a real "social demarcation of knowledge".

Russian In Israel: Group Competition and Language Status

A linguistic situation in Israel has been charged with conflicts since the formation of the state. The primacy of Hebrew was the ideological cornerstone of Zionism. As a result of the political and economic interests of working people, Russian speakers brought up in a multiethnic country where Russian dominated. Members of this group had higher education status than average Israelis and rejection of their mother tongue was perceived as the first step in downward mobility. This paper will analyze how the use of Russian-language media, schools, theaters, associations of compatriots and various informal networks went hand in hand with the promotion of the Russian language in the host society. We will look into the role of immigrant politicians, scientists and artists in bringing Russian culture to native Israelis thus preventing ghettoization of the immigrant community. We will also discuss linguistic implications of the rising status of Russian-speaking Israelis for one-and-a-half and second generation immigrants. Material for the paper was drawn from in-depth interviews, conventional and electronic media and participatory observation.

A New Tsunami: The South African Anti-Nuclear Movement in the Wake of Fukushima

South Africa's government has made clear its plans to order a fleet of six nuclear reactors, providing an additional output of 9 600 megawatts. It also aims to reassert other elements of the nuclear fuel chain such as the construction of an enrichment plant, a fuel fabrication plant, and a nuclear waste smelter. President Zuma has taken over from his deputy the chairing of the National Nuclear Energy Executive Co-ordination Committee, the intra-governmental body that is charged with overseeing procurement. The overnight costs of the reactors alone are likely to amount to between US$60 – 100 billion, by far the biggest infrastructural purchase made by democratic South Africa in its 20-year history.

Seemingly the impact of Fukushima has not had repercussions among the responsible decision makers. Instead they have sought and gained approval from the International Atomic Energy Agency for the expanded nuclear programme. However, civil society continues to challenge the plans as a fait accompli. Whilst there has been a shift in the anti-nuclear movement away from opposition to nuclear power for its environmental NGO sector, new formations and new sectoral opposition is notable. Significant disquiet has been voiced by the trade union movement (in political alliance with government, but not on this issue), faith-based communities, academic energy researchers and civil society energy lobbyists, the consortium of large-scale electricity using companies, communities situated close to the construction of nuclear facilities, and even the government's National Planning Commission. The paper seeks to understand the dynamics of government indifference to Fukushima, and the stress on Fukushima by opposing social movements, who have adopted TSUNAMI as the name of their coalition (The SouthAfrican United National AntiNuclear Mobilising Initiative).

Shale Gas in South Africa: Regulating a Resource Grab

A number of transnational oil companies have recently been given the go ahead by the South African government to initiate hydraulic fracturing for the exploration of shale gas in a semi-arid part of the country, the Karoo region, despite a lack of robust regulatory procedures being in place. When she lifted an earlier ban in September 2012, the minister of mineral resources provided no indications of the source from which the substantial quantity of fresh water necessary for fracking would be derived. Existing economic sectors fear the contamination by the oil companies of local groundwater, on which all farming and tourism depend, and a substantial environmental heritage. In the race to exploit the resource, encouraged by the National Planning Commission, a grab will be made for up to 20 per cent of South Africa's land surface.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The country’s mineral rights are not vested in landowners but in the state, which has allocated them to the oil transnationals. Taken together with scarce water resources, the cost of the industry’s activities will be far higher than the temporary energy dividend. Yet government uses the language of energy security, lower carbon emissions, and local economic development, all of which concepts have been questioned by civil society, pointing to shale gas as typifying the ‘resource curse’.

The presentation looks at potential socio-economic and environmental impacts of shale gas exploration and mining, raises questions about the functioning of the new South African democracy in deciding on controversial new technologies, and proposes legal and regulatory instruments steps that need to be put in place.

Inscribing Dance: From Embodiment to Digital Media

Inscribing dance: from embodiment to digital media

The ephemeral aesthetic of dance, in comparison to other art forms, contains no tangible corpus. It’s matter - body and motion in live performance - are transient and defy any attempts to record the practice in order to create an accurate transcription and permanency.

Since the beginning of the 21st century the accessibility and proliferation of digital media has influenced the way we document and archive the practice. On one hand, it has contributed to recording unique traditional dance forms that are considered to be in danger of disappearance due, mainly, to socio-political and ecological disturbances. However, though video recordings attempt to preserve intangible cultural heritage through the documentation of the interpretation of dance works, it cannot be taken for the work itself (as is the text of a play in theatre or the score for music). Further, this accessibility of information through technology, this “visibility in excess”, is questioned both by practitioners and scholars; it can create a cultural bias, contributing to the contamination by technology, this “visibility in excess”, is questioned both by practitioners and scholars of the ephemeral aesthetic of dance, in comparison to other art forms.

In Brazil, mostly from the social sciences and physical education, using the terms ‘body technique’, ‘Mauss’, and ‘body’. In addition, we found that there is an important theoretical-methodological effort for establishing a sociology of the body similar to that proposed by Marcel Mauss. We aimed to identify: object of study; theoretical and methodological analysis, we selected 53 articles that referenced the term ‘body technique’, of which 272 articles were found in sociology journals, of which two referred to body techniques, 36 to Mauss, and 690 to body. Of the total, 220 articles were selected (36%). With respect to physical education journals, a total of 1,791 articles were found. Of this body technique, 450 to Mauss, and 1,700 to body. Of the total, 199 were selected (11%). Considering the range of works for the interpretative analysis, we selected 53 articles that referenced the term ‘body technique’ coined by Marcel Mauss. We aimed to identify: object of study; theoretical framework used; methodological approach; researcher’s academic field; and the body concerned with the journal. We found that there are scientific publications in Brazil, mostly from the social sciences and physical education, using the terms ‘body technique’, ‘Mauss’, and ‘body’. In addition, we found that there is an important theoretical-methodological effort for establishing a sociology of the body itself.

FILgueira DE ALMEIDA, DULCE (University of Brasilia - Brazil - g.thais@gmail.com)

Is There a Sociology of the Body Itself in Brazil?

The sociology of the body can be understood as a fruitful research field, whose goal is to understand human embodiment (Csordas, 2008). By defining three research fields, Le Breton (1992) aimed to instigate reflections on how the phenomenon of embodiment is understood in the context of the social sciences and to build some sort of disciplinary matrix by mentioning many authors who are devoted to the study of the topic within the sociological field. Our work aims to answer whether there is a sociology of the body itself in Brazil by performing a bibliographical study of the period between 2000 and 2012. We used the journals A1, A2, and B1, classified by Qualis/Capes, from the fields of sociology and physical education. The keywords were: body technique; Mauss; and body. A total of 728 articles were found in sociology journals, of which two referred to body techniques, 36 to Mauss, and 690 to body. Of the total, 220 articles were selected (36%). With respect to physical education journals, a total of 1,791 articles were found. Of this body technique, 450 to Mauss, and 1,700 to body. Of the total, 199 were selected (11%). Considering the range of works for the interpretative analysis, we selected 53 articles that referenced the term ‘body technique’ coined by Marcel Mauss. The Dances and Their Meanings in the Kalunga Quilombola Community in Goiás/Brazil

Paraphrasing Almeida and Suassuna (2010, p. 59), the stories and social relations that constitute the group are revived during the dances and, while dancing, people can place the identity, revealing the identities of their kin and mechanisms of resistance or acceptance regarding new cultural patterns. Based on this understanding, this work intends to comprehend the meaning of dances for young people belonging to the Kalunga community of Teresina de Goiás (located in the State of Goiás, Brazil). We sought to analyze the transitional processes that have been taking place in the daily life of the Kalunga community in relation to the reception of the dances (values and practices) between the generations of older adults and young people. An ethnographic research using interviews and direct observation as techniques was carried out in the community. The interpretation of the information took place on the grounds of authors who discuss the topic in the field of social science in dialogue with physical education. As a conclusion, we can affirm that the bodies intertwine in the feasts and dances and promote dialogues established between generations. The ritual system, constituted by means of feasts and dances, reveals the senses and meanings of the dances as a cultural resistance strategy, while allowing for the reconstruction of the past and the re-signification of the present of this social group analyzed. This way, we observed the establishment of hybridization processes between traditionalism (older adults’ dance – sussa) and modernity (youth’s dance – forró), revealing multiple influences between traditional culture and the cultural industry, resulting in other cultural patterns.

“Movements Wrestling: Union Engagement with Migrant Worker Policy and Organizing in Comparative Perspective

Migrants crossing borders in search of better economic opportunities are often able to utilize their social networks to gain employment but they face the deprivation of the labour market alone unless unions and other non-governmental organizations become involved in supporting voice, not only in the workplace but in the policy as well. An institutionalized labour movement can provide protection, support and the possibility of ongoing representation for migrant workers. Indeed, migrant workers are taking advantage of increased opportunities to partner with unions, but this is happening at a time of great peril for the labour movement. Historically, unions have engaged in vigorous debates regarding labour migration; even when they have adopted “pro-migration” policy positions, approaches to organizing and representation have varied depending upon the individual culture, structure and ideology of specific national and local unions. Of course policies do not act to influence policy or organise migrant workers in a vacuum, rather they do so within specific state contexts. This paper will focus on some of the key debates concerning migrant issues that unions have engaged, as well as the strategies and specific types of organising efforts that have been launched in recent times and the underlying impetus for these efforts including the role played by national union federations, national unions, global union federations and NGOs. It will draw upon research conducted on US, UK, Jordan, Dominican Republic, Sri Lanka and South African cases.

A State/Society Approach to Labor Standards Enforcement

Given the tremendous gap between passing laws and outcomes for workers, how can labor organizations improve enforcement? We contrast two sets of strategies for labor organizations which align with distinct conceptions of the state and enforcement. On the one hand, labor organizations can advocate for laws to be passed and then push the state to enforce them using its own capacities. This strategy accepts a view of enforcement as primarily a technical problem to be solved by regulators. Once there is political will for implementation, it is up to the state to provide the resources and choose the best strategy to ensure compliance. On the other hand, after getting legislation passed, labor organizations can work to create conditions for partnering with agencies in enforcement and can become directly involved in the operational aspects of enforcement. This approach is based on a fundamentally different view of state capacity, which is constituted by a combination of the regulators and organized groups in society that complement the state. Such a view challenges the notion that setting enforcement right is a technical problem that can be solved with the right strategy or correct internal organization of the bureaucracy. By contrast, it treats enforcement as a political problem of constructing institutions that can facilitate collaboration across the state and society divide, thus ensuring greater enforcement capacity. Using cases from highly different political contexts (US and Argentina), we contend that the latter approach has the potential to help
labor organizations further enforcement and argue that these findings suggest a need to develop more expansive theories of the enforcement process.

**Intergenerational Dependencies: Challenges for Theory, Research and Policy**

This paper examines recent developments in the theory of intergenerational solidarity and dependency, drawing on a review of key sociological studies and policy documents. Despite the rejection of the generational conflict hypothesis in the sociology of ageing, prominent public authors such as Fishman (2010) continue to give popular support to the perspective of demographic determinism and apocalyptic demography. As well as helping to refute such views, attention to the theory of intergenerational dependencies is argued, has the capacity to reinvestigate research on the sociology of ageing and to provide new research perspectives on policy in the epoch of longevity.

**BRIATA, PAOLA (University College London)**

**Comparing Two “Banglatowns” – Reflections on the Use and Transformation of the Streets in Rome and London**

The paper aims at comparing how two different “Banglatowns” were built-up in London and Rome. In both cases the “street” played a core role in urban transformation.

In London, the Spitalfields’ case will be analysed. Here, a typical inner city has become in the last 40 years one of the biggest Bangladeshi enclaves in Europe. Since the end of the 1990s, its marketing as London’s Banglatown was a product of an alliance between Bangladeshi political and commercial elites that represent the majority in the local Council. A number of area-based initiatives played a core role in this process.

In Rome, the Torpignattara case will be considered. This is an Italian “periphery” that started to receive foreign immigrants, in particular from Bangladesh, since the 1990s. Here it was the absence of this place in the policy agenda, and some consequent intensive uses of the streets by the immigrants’ population that led to its labelling as a Banglatown.

Based on an idea of “diversity” that considers multiple axes of differentiation (e.g. national origin, class, gender), the paper will explore how these places’ transformation led to a reconfiguration of the streets’ uses that included new groups, excluding others.

The comparison between the two cases will focus on some core issues:

- With reference to the debate between formal vs. informal, policy vs. practice, citizenship right vs. urbanity right, was the presence/absence of a public policy where the immigrants played a core role a minus or a plus in these places?
- Is the street a privileged space for the cohabitation of differences?
- What kind of diversity is produced in the space of the street?
- With reference to the Bangla-towns image, what kind of “authenticity” was produced? Is authenticity a meaningful issue for the social construction of spaces?

**Distrust and Law-Evasion In Iran (Case study: Tehran city)**

Distrust and law-evasion in Iran. Case study: Tehran city

Social capital is basis of development and stability in every society. Trust is one of the most important social capital indicators. Distrust is sign of erosion of social capital in every society. Erosion of social capital is named as Weak Intergroup objective and subjective relations in society, can issue disorder or law evasion in society. Therefore distrust to other (people and the authorities) about law-obligation can increase law evasion in society. So this article explains distrust effect on law-evasion. In this research is used Putnam and fukuyama theory to analyze social capital erosion. This method is survey research the study population of this study of women and men over 24 years in Tehran. And the data collected by questionnaire from a sample of size 384 people in Tehran. Method of sampling is Multi-stage sampling. After data collecting, research hypotheses examined in two inferential and descriptive levels by Amos and Spss package. Law evasion is divided in two dimensions: objective law-evasion (behavior) and subjective law-evasion (orientation). In contextual variables, it is seen meaningful relation among gender, marriage position, type of job, age, education, economic position with two dimensions of law-evasion. Basic variables in this research with their total effect on dependent variable consist of, civil distrust (0.44), generalized distrust (0.21), disbelieve to law (0.26).Generally, these independent variables with subjective law-evasion explain 43% of the dependent variable variance (objective law-evasion). Whereas these variables explain 14% of subjective law-evasion variance. So social capital erosion has more effect on subjective law-evasion (orientation) into objective law-evasion (behavior). Hence to support inter group social capital in society can issue revival of law orientations and hence obey the law in society.

Keywords:
- Distrust, subjective law-evasion, objective law-evasion, disbelieve to law,

**Race and Class Differences In Urban Environmental Participation: Investigating How School Gardens Connect Students and Families To Communities**

How are race and class related to environmental forms of civic participation? This project disentangles the differences in participation in environmental activities by race and class in one urban setting by studying the ways that students, families, and communities are/are not getting involved in their local school gardens. Building on the fact that there are few studies that specifically focus on non-White civic engagement, and even fewer that hold constant social class, compare across race, and look at environmental activities, this project is designed to fill these gaps by studying race and class differences in environmental engagement. Moreover, this study examines how student participation through a state-supported school garden program is related to environmental engagement, science aptitude, and nutritional knowledge of the students and parents of the children who are enrolled in the program. The project integrates pre-existing data on academic achievement, with survey and interview data collected through the three components of the project to understand the impacts the school gardens have on students, their families and their communities. We find that there are significant differences in environmental engagement by race and class and we discuss how to understand them in detail.

**Comparative Ethnic Exclusion Of Immigrants In The Western Hemisphere, 1790-2010**

This paper calls into question the widely held view that in the long run democracy and racism cannot coexist. It shows that democracies were the first countries in the Americas to admit immigrants according to racial criteria, and undemocratic states the first to outlaw discrimination. Through analysis of legal records from twenty-two countries between 1790 and 2010, it explains a critical history of the rise and fall of racial selection in the Western Hemisphere.

The United States led the way in using legal means to exclude “inferior” ethnic groups. Starting in 1790, Congress began passing nationality and immigration laws that prevented Africans and Asians from becoming citizens, on the grounds that they were inherently incapable of self-government. Similar policies were soon adopted by the self-governing colonies and dominions of the British Empire, eventually spreading across Latin America as well. Undemocratic regimes in Chile, Uruguay, Paraguay, and Cuba reversed their discriminatory laws in the 1930s and 40s, decades ahead of the United States and Canada. The conventional claim that racism and democracy are antithetical is wrong because democracy depends on ideals of equality and fairness, which are incompatible with the notion of racial inferiority — cannot explain why liberal democracies were leaders in promoting racist policies and laggards in eliminating them. Ultimately, the changed racial geopolitics of World War II and the Cold War was necessary to convince North American countries to reform their immigration and citizenship laws.

Who Builds Our Homes? The Power of Homebuilders in the Urban Landscapes in Brazil and the United States

This paper analyses the transformations in the ownership structure of homebuilders in Brazil, and their relation to the financialization of the housing policy. The analyses of the ownership structure of homebuilders, as well as their year-to-year transformations over the last ten years, allowed the identification of the investment flows that entered that sector: public funds, private equity funds, and

Emotions and the Self's Past and Future

A Canadian philosopher, Charles Taylor, spoke of emotions, such as love and loyalty, as revealing to oneself and others what one strongly cares about. He argued that they play a role of a moral compass and in this capacity are constitutive of one's identity and morality. Many of his examples make it difficult to distinguish them from particularly strongly felt preferences. A British sociologist, Margaret Archer, proposed that in our inner conversations about our future commitments, our memory of our past experiences and of the emotions that accompanied them contribute to the very process of decision-making about the future. Also in this case emotions seem to help in the process of teasing out one's preferences and, once these are chosen, of buttressing them. Discussing one form of reflexivity, however, Margaret Archer puts her finger on how the propensity to value strong emotional attachments can standardize personal reponses to a great variety of situations, often with disastrous effects to the self. In my talk in contrast I want to show how specific emotions or, better yet, personal emotional geographies, are constitutive of unique individual identities in a sense of fixing or freezing the way an individual relates to her or his self, others and to the past, present and/or future.

Explaining Women's Employment Patterns in the Local Context: The Role of Education and Local Care Policies in Terrassa (Spain)

Empirical research into the factors determining female employment has given rise to a lot of interpretations regarding the cultural, institutional and individual effects on women's employment patterns over the family life course in different local contexts and among different groups of women. What can be the long term consequences of these new developments for gender balance and for the relationships between fathers and children? Are these new arrangements here to stay as emerging new opportunities for fathers or will they fade away as soon as there is an economic recovery?

Explaining Women's Employment Patterns in the Local Context: The Role of Education and Local Care Policies in Terrassa (Spain)

International Mobility of German Diplomats and Their Families: Direct and Cross-over Effects on Quality of Life, Family and Partnership Outcomes

International work assignments are often found to be stressful and to affect employees' and their accompanying partners' well-being. However, whether this applies also to diplomatic personnel who are relocated regularly is unclear. The study surveyed the health-related quality of life, work and family life, and the partnership satisfaction of German diplomats. Potential risk factors are the duration of international mobility (years spent in the diplomatic rotation scheme; number of postings abroad), perceived stress, and employee's attitudes towards working in diplomatic rotation. Potential protective factors include cognitive coping, internal control beliefs, self-efficacy, preoccupation with the host country's culture, and social support. As a key aspect, crossover effects between employees and accompanying partners are analyzed. N=2,433 active diplomats in the German Foreign Service were assessed using self-rated outcome measures, questions, and corresponding assessments were obtained from N=362 accompanying partners. While perceived stress had negative effects on all three outcomes, the number of years passed in diplomatic service and the number of postings had no effect. Diplomats who saw more advantages over disadvantages than disadvantages had positive outcomes. Cultural coping moderated the effects of stress on health. Crossover effects revealed that accompanying partners' stress levels and their attitudes towards living in diplomatic rotation are among the determinants of expatriates' quality of life, family, and partnership outcomes. Implications are drawn for personnel management, development and health promotion. The importance of considering families within employee's prevention strategies is emphasized. Examining the highly mobile group of diplomats and their families is an important aspect in the understanding of the major issues and challenges for spatially mobile societies.

'cultures of Sick Leave': Institutional Categorization, Legitimacy, and Moral Order at the Intersection of Research and Politics in Sweden

In line with what has been described as a 'cultural turn' in the social sciences over the last decade, 'cultures of sick leave' has become an important concept in Swedish social insurance studies as well as in political debates. 'Culture' has been used for understanding variations in sickness benefit usage between groups and between different geographical areas in Sweden. Examining how the concept of culture works to negotiate the institutional category 'sick absentee' in the intersection of research and politics, positioning the individual in relation to the welfare state and bringing notions of accountability, legitimacy and morality into play: whose fault is a 'culture' anyway, and what can be done about it? As a methodological approach, the paper suggests ethnography's way of studying culture as it is being 'done'. Seeing culture as constituted in discourse, and placing culture in action rather than action in culture, opens up for a bottom-up analysis in which members' situated practices are in focus. Furthermore, conversation analysis provides an ethnomethodological framework for analyzing institutional categorization processes by closely attending to linguistic detail in interaction. Drawing on a Swedish study of meetings between people on sick leave, their doctor, and the state office administering their sickness benefit, the paper illustrates the use of such an approach, showing just how the legitimate boundaries of the sick leave category are co-constructed and negotiated: how 'cultures of sick leave' are done in the fine details of interaction.

Building Back a Better Nation: Disaster Rehabilitation and Recovery in the Philippines

The paper explores the operationalization of Disaster Rehabilitation and Recovery in the Philippines context. It is divided into four sections. The first section discusses the origins and development of Disaster Rehabilitation and Recovery as a thematic area. It highlights the paradigm shift in the Philippine Disaster Risk Reduction and Management System which was brought about by the enactment of a national law. The second section reviews the legal and institutional framework that has been put in place to operationalize disaster rehabilitation and recovery. The third section considers the implementation of the law and the achievements in rehabilitation and recovery so far, including the lessons learned. The fourth section finally reflects on the future directions for reforming the system to respond better to the needs of post-disaster communities.
of Republic Act 10121 as its legal framework. The second section discusses the design principles of Disaster Rehabilitation and Recovery. It explains how Disaster Rehabilitation and Recovery is carried out through the National Disaster Risk Reduction and Management Plan. It explains the involvement of the communities in rehabilitation and recovery programs. It also discusses the Post-Disaster Needs Assessment (PDNA) as a specific Disaster Rehabilitation and Recovery tool. For further illustration, the use of PDNA, the third section presents the case of Davao Oriental, a province in the Mindanao region, which was heavily devastated by Typhoon “Pablo” (International Name: “Boophi”) last December 2012. It also explains how civil property rights serve as among the major considerations in the aftermath of a disaster and how the PDNA takes into account the civil property rights of the victims.

Buddhism and Critical Social Science on the Causes of Suffering: Towards a Dialogue

In order to demonstrate the possibilities of building a philosophically and empirically informed framework for the study and alleviation of suffering, this paper compares the Buddhist tradition and critical social science from the perspective of their understanding of suffering. Both traditions are driven by the wish to combat suffering, their understanding of the causes of suffering differs. There may be, however, a productive complementarity in this difference; and yet frictions between the two traditions are real enough. Furthermore, neither tradition exists in a social or ideological vacuum. Thus, establishing a dialogue between these and other traditions calls also for reflexivity, critique and self-critique.

Globalización y Construcción Identitaria. El Caso De Los Jóvenes Universitarios En México

La globalización ha generado diversos procesos que permiten la movilidad de productos, mercancías, personas, información e ideas sin que las fronteras de los países sean un obstáculo, salvo en algunos casos. En el proceso identitario, las costumbres, valores y significados de una determinada región eran los que conformaban la identidad de una persona o colectivo. Con los procesos de movilidad resultado de la globalización, la permanencia física en un lugar no son necesariamente determinantes en la conformación de la identidad, ya que al estar en contacto con los productos, valores e ideas de otros lugares, éstos van formando par- te de los significados que se construyen. La globalización crea una nueva manera de construcción identitaria. Lo anterior puede observarse con mayor facilidad en las ciudades, donde existen los recursos que permiten este intercambio de ideas. Dentro de los centros urbanos, los jóvenes por sus características, resultan consumidores ideales de las propuestas surgidas en el entorno global. En este sector, quienes eligen un grado universitario pueden contar con mayores elementos de asimilación y mayor movilidad para integrarse en un sistema global. Por esto, resulta pertinente estudiar cómo es que la identidad de los jóvenes universitar- ios se construye. La ponecia que se propone es parte de la investigación que se realiza para integrar la tesis de grado dentro del programa del Doctorado en Ciencias Sociales. Se busca explicar cómo se da la construcción identitaria a través de los agentes socializadores presentes en la vida de los jóvenes. Los medios de comunicación y las tecnologías de información resultan de gran importancia en este proceso, ya que es gracias a ellos que se facilita el intercambio de ideas. Para entender cómo una persona ha construido su identidad con base en la interna- lización de los significados externos, se estudia cómo verbaliza su historia.

On the Maturation of Immigration Detention: Theoretical Approaches and Evidence

The detention of irregular migrants and asylum seekers has become a prominent feature of both national and international efforts to “manage” global migra- tion. An important aspect of this phenomenon is the emergence of new institu- tions devoted to migrant detention, which can be observed for example in the gradual shift in countries across the globe from using prisons or other “off-the-shelf” facilities to dedicated immigration detention centers. This maturation of immigration detention regimes has important implications, not least of which is the fact that it appears to have occurred at the same time that the number of mi- grant detainees has increased. Is there a correlation between the institutionaliza- tion of detention regimes and the increasing reliance of this method of migration control? Using data on detention regimes from the member states of the Council of Europe, where human rights norms appear to have had an important impact on how detention practices have evolved in recent years, this paper seeks to ad- dress this question through differing theoretical approaches to state behavior. For example, has pressure from human rights actors been a key driving force for the institutionalization of detention? If so, what implications might this have for how rights actors view the long-term consequences of certain liberalisms? On the other hand, does a Weberian model of institution-building provide a better explanatory framework for how detention regimes have evolved? Do theories of policy diffusion shed light on the spreading of these practices across the Europe- an region and beyond? Or, is growth in detention institutions more the result of increasing private-sector involvement in state functions, including incarceration? Ultimately, the paper seeks to provide some initial guideposts for investigating immigration detention institutions while making clear the broader implications of this phenomenon.

Frontier Societies: Culture and Social Institutions

The paper presents a cross-cultural study of contemporary frontier societies, based on an analysis of World Values Survey data from the USA, the Russian Feder- ation, Canada, Australia, Argentina, and Brazil. Consistent with Turner’s “frontier thesis”, we find that frontier societies carry a common syndrome of socio-cultural attributes, ranging from higher levels of membership in voluntary associations and civic activism, to greater libertarianism and skepticism of government. The “frontier thesis” therefore explains not only the historical experience of America, but constitutes a common frontier phenomenon in other world regions and contin- ents, with different settling patterns of new lands. The experience of living on the border areas leads to the formation of a stable set of values, distinctive features of frontier life, such as individualism, egalitarianism, libertarian commitment to the principles of economics, social activism, higher levels of social trust and toler- ance of outgroups, civic protest, social conservatism, traditionalism, less support for the federal government rule and others.

Re-Thinking Cautious Urban Renewal. the Iba (Berlin, 1984/87) As an Early Attempt for a Politicized Strategy for a Sustainable City

Apart from the fact that the strategies for a sustainable city today form the basis of a neo-liberal urban, mainly environmental policy, the main question re- mained on the significance and initial potential of some of the key concepts. The International Building Exhibition (IBA) in Berlin in 1984/87 with its two areas IBA Alt and IBA Neu, and the two strategies of a critical reconstruction and a cautious urban renewal, seen as a paradigmatic case study in light of the specific situation in Germany in the 1980s, especially the conditions in West Berlin, by linking urban rehabilitation with social and ecological objectives produced alternative, but ultimately normative models of urban regeneration, not only with regard to Euro- pean urban planning, but of global interest. This paper analyzes, to what extent primarily the IBA Alt – as a paradigmatic concept of development in response to the policy of redevelopment by demolition and reconstruction of the 1960s and the common squatting practice, with its procedures of advocacy, participation, and self-building for the socially engaged and responsible restoration and maintenance of old tenements, new forms of respon- sibility and ownership, the provision of green spaces and social infrastructure – at first promised a politicization and democratization of urban renewal and every- day life. Since the IBA, funded by federal and state agencies, is called back to mind for its projects and protagonists with various research, exhibition and publication projects to mark its 25th anniversary, I will discuss the function of cautious urban renewal, both its positive achievements and uttered criticisms. In revisiting the IBA, I intend to provide a historically argued contribution to the current debate on sustainability and the city, by not only by highlighting planning processes, but by challenging the dimensions of the ecological and the social.

The Cosmopolitan Future: A Feminist Approach

Our study questions the approach according to which world society is shaped by “the clash of civilizations”. For that purpose, referring to Beck and Sznider (2010), we analyze what we call the cosmopolitanization of feminism, i.e. this pro-
Social Cohesion in Multi-Ethnic Community

From the beginning of the sociological study, social cohesion in community, usually measured by community ties, have been a key topic of discussion. Community ties provide social support, foster social relations, and facilitate social capital among residents in a community. They also facilitate a sense of attachment to the larger co-ethnic proportion in a community promotes community ties, while the larger co-ethnic proportion in a community promotes community ties, while the integration hypothesis suggests that length of residency in the community facilitates community ties. Though there are many publications on these two hypotheses, they are rarely measured by community ties. Few of them have considered the significant changes in society. First, we know little about how the hypotheses are relevant to the current population of immigrants who come from diverse social and demographic backgrounds. It has been well documented that the representation of immigrants varies widely in major North American cities. So, the cities become more multi-ethnic, little is known of how the two hypotheses relate to different ethnic and racial groups. In this study, we merged the 2008 General Social Survey with the 2006 Canadian census to explore how ethnic composition and duration of residence in a community are related to community ties. The findings suggest that, in a multi-ethnic context, co-ethnic proportion in the community is no longer associated with overall community ties for minority members and immigrants. However, our findings show that the association between residing for a longer time in a community and overall community ties is still applicable today.

The Role of Intellectuals in the Construction of Public Policies: The Example of the Educational Reform of Vichy

This paper aims to show how intellectuals can contribute to the imposition and the justification of a particular social order through their participation in the construction of a public policy. From the example of the educational reform of Vichy, we show the role played by some intellectuals in the definition of a "school problem" and in the prescription and the implementation of solutions to solve it. Some competitive intellectuals (academics, writers, journalists) assembled in networks (circles, leagues, associations) struggle, in the interwar period, against the republican school and its ideals. A relatively unified discourse about the problem of the school appears, transmitted by significant resources (specialized and mainstream publications, public meetings, etc.): the established educational institution would promote the moral degradation of society (I). In 1940, the emphasis of this "school problem" by Petain and other high-ranking military officers, members of the same groups which were marginalized under the Third Republic, give them a window of opportunity to contribute directly to the reforms (II). The seven ministers of Education under Vichy, and their collaborators come from these networks and will do public policies inspired by the solutions suggested before the war (make the school a nationalist, elitist and religious institution), even if internal contradictions in the conservative group will appear (III).

FONTAINE, JULIETTE* (Univ Paris I, Sorbonne, CESSP CRPS, Juliette.Fontaine@univ-paris1.fr)

When Symbolic Violence Changes: The Example of the Educational Reform of Vichy

This paper aims to understand the mechanisms of symbolic violence through the capacity of the State to impose a specific social order by means of public policies. Public policies are, according to Pierre Bourdieu, one of practical modes for the exercise of symbolic violence: as much as the government justifies and legitimizes its intervention, it legitimizes the dominant representations of the social world. From the example of the educational reform of the Vichy regime - on which focus our thesis - we will concretely evaluate what resources the new government had at its disposal to impose a new vision of the educational institution and the limits to which it is confronted.

In 1940, the establishment of the Vichy regime allows activists of a conservative school, marginalized under the Third Republic, to occupy key positions in the Ministry of National Education. Against the republican school (free, secular, positivist) established in the late nineteenth century, it is an elitist, religious and nationalist school that is proposed as necessary to recover France (I). Beyond the speeches, some tools are actually implemented by the new government to produce this new vision of educational institution: change the structure of the Ministry, transform the organization of teaching, change teachers' formation, impose new men at all levels of the hierarchy, etc. (II). This symbolic violence, which really translates into some institutional structures of the society - very quickly because of the authoritarian nature of the regime - is however limited by some actors. Teachers, street troubles, some institutional structures of the society - very quickly because of the authoritarian nature of the regime - is however limited by some actors. Teachers, street troubles, the Seven Ministers of Education under Vichy, and their collaborators come from these networks and will do public policies inspired by the solutions suggested before the war (make the school a nationalist, elitist and religious institution), even if internal contradictions in the conservative group will appear (III).
al), with community organizations (working to provide social housing in the fight against poverty and social exclusion) as well as with the social economy and solidarity-based economy (through Quebec government support for the new social economy).

With this historical backdrop, we present a summary of our reflections on the capacity of such initiatives to impact social change. When evaluating initiatives, we proceed in three steps. To begin, we examine the extent to which an initiative is able to respond to social or socio-economic emergencies, thereby testing its reformist capacity. We then look at its institutional impact on the production of societal frameworks, namely through its ability to contribute to the determination of new path dependencies. In a third step, we identify the conditions that would allow it to increase its reformist or restorative capacity as well as its potential to act as an agent of change within the societal framework.

FONTPAR, BARBARA* (Université Rennes 2, CREAD, Marsouin, barbara.fonter@uhb.fr)

LE MENTE, MICKAEL* (Université Rennes 2, CREAD, ESO, mickael.mente@uhb.fr)

Entre Dispositif Institutionnel, Représentations Et Usages : Le Numérique Comme Pouvoir De Renforcement Des inégalités Sociales

Si les inégalités numériques s'intègrent plus largement dans la définition des inégalités, la réalité de la vie sociale des individus et leurs pratiques numériques sont dans un rapport dialectique. Une continuité existe entre les pratiques off et on line (Granjon, 2009 ; Cassili, 2010 ; Fontan, 2010). Ainsi, interroger les inégalités numériques nécessite de questionner les rapports entre institutions, représentations et usages.

Le Mente (2010 et ANR INEDUC) interrogera l'articulation institutions/usages en montrant en quoi les institutions d'aide à l'insertion renforcent les phénomènes d'exclusion à travers la mise en place de dispositifs techniques présupposant des savoir-faire chez les usagers. Plus largement, la relation d'aide proposée s'établit sur un rapport dominant-dominé créant une forme d'inégalité qui touche les capacités d'actions des personnes.

Fontar (2010 et ANR INEDUC) questionnera le rapport représentations/usages en montrant que la tyrannie de la majorité (Pasquier, 2005) crée une norme sociale pouvant générer des difficultés d'appropriation chez les adolescents. La pression sociale à « devoir y être » ne sous-entend pas nécessairement des compétences développées ni des usages variés. Elle s'attacherà à déconstruire le mythe du « Digital Natives » (Presnky, 2001) qui présume implicitement une inertie des pratiques et voile le rôle des apprentissages.

Ainsi, cette proposition de communication contribue à relativiser les visions enchantées du numérique (notamment ces bienfaits émancipatores) en en montrant son pouvoir de renforcement des inégalités sociales.

FONTENELLE, ISLEIDE* (Fundação Getulio Vargas-São Paulo, idef@ufop.com.br)

Consumption and the Social Organization of the Illusion

CONSUMPTION AND THE SOCIAL ORGANIZATION OF THE ILLUSION
Isleide A. Fontenelle
Associate Professor - Fundação Getulio Vargas - Brazil
idef@ufop.com.br

In order to reflect on the reach and limits of the social organization of the illusion that constitutes the very nature of capitalism, and based on the transformations that are occurring in contemporary capitalism, this article analyses how consumption lies at the very heart of the operation of this illusion. The analysis adopts the Marxist approach with regard to consumption's place in expanding value within the context of industrial capitalism. It also looks at the history of marketing strategies that aim to produce a new form of subjectivity who is moved by a desire to consume. Resorting to the dialectical method as developed by Marx, i.e. based on the idea of movement and contradiction, the article tries to reveal the contradictions that surround the consumption sphere in the predominant financial and immaterial operating methods assumed by current capitalism, which may result in the possibility of over-consumption, which in turn leads to the non-realization of value. While this points, on the one hand, to the possibility of capitalism coming up against something that is in itself impossible, like the infinite self-expansion of capital, on the other, the solutions sought, also in the field of consumption, point to a hyper-commercialization of the spheres of life and knowledge, which sets in motion new merchandise expansion mechanisms through the privatization of culture, creativity and human life itself, leading to an equivalent of the “enclosure of the commons”.

FONTES, FERNANDO* (University of Coimbra, fernando@ces.uc.pt)

SANTOS, ANA CRISTINA (Centre for Social Studies - University of Coimbra - Portugal)

Disabled Women and Sexual Violence in Portugal

When compared to the general population, disabled people present a higher risk and incidence of violence (UN, 2006; EU, 2011). National reports have highlighted the higher vulnerability of disabled women and people with learning difficulties either living in institutions or with their families (OPM, 2002; INR, 2010). Despite the great investment by Portuguese public authorities in programs designed to prevent violence there are no intersectional studies of violence in Portugal, emphasizing discrimination factors and highlighting the situation of disabled people in Portugal. Therefore the lives of disabled people are still marked by exclusion, poverty and prejudice. In a context that is particularly disabling, masculinized and male-oriented, such as Portugal, disabled women are in a particularly vulnerable position, accumulating the inequalities based on disability and sexism.

Based on the Social Model of Disability and drawing on the research project “Disabled Intimacies: sexual and reproductive citizenship of disabled women in Portugal” (funded by the Portuguese Foundation for Science and Technology - reference PIR/M/50005/2008) and on my post-doctoral research on disability and violence in Portugal (funded by FCT – Reference SFRH/BPD/8059/2011) developed at the Centre for Social Studies, University of Coimbra, this paper considers the issue of sexual violence targeting disabled women in Portugal. In this paper we begin by introducing the Portuguese context in relation to citizenship rights and outlining the phenomenon of sexual violence targeting disabled women in Portugal. The data was gathered from public reports, media coverage and original empirical data collected in biographical interviews and evidences that family and close neighborhood members constitute most of the perpetrators. We continue examining the legal dispositions already in place in Portugal in order to protect disabled women. And we conclude, assessing the effectiveness of the existing laws and exploring the potentialities of the legal recognition of disability hate crime in Portugal.

FONTES, FERNANDO* (University of Coimbra, fernando@ces.uc.pt)

What's New about New Social Movement in a Time of Economic Crisis? Reflections about the Portuguese Disabled People's Movement

Until the 1960s, social movements were comprised mainly of workers' movements, focused on class and economic issues, highly organised in trade unions and political parties and using strikes and demonstrations as their main action tactic. The 1960s and 1970s witnessed, however, an increased variety of social conflicts beyond the workforce, particularly in Europe and North America, and the subsequent emergence of numerous new social movements around new 'post-material' issues. The emergence of these new social movements (NSMs) did not only push for a multitude of issues based on identity, but also the investment on civil society as its key location, organised in non-hierarchical structures and networks and embracing direct action and protest.

As with other social groups, the failing of disabled persons by the welfare-state made them especially active since the 1960s. This was especially true of the UK and USA, where disabled people struggled “for equality and participation on an equal footing with other citizens” (Driedger, 1989-1). This action was made possible by the creation of the Disabled People's Movement composed of diverse organizations of disabled people. Most current debates on the Disabled People's Movement included the discussion of whether this is a new or an old social movement.

Drawing on my PhD about social citizenship and the Disabled People's Movement in Portugal (completed at the University of Leeds – UK), this paper investigates the ways in which this case study may contribute to the theoretical dispute between old and new social movements. I will begin by examining significant characteristics of the Portuguese Disabled People's Movement. Then, I summarize the theoretical dispute within disability studies on whether the disabled people's movement is an old or a new social movement. In the last part, I explore the ways in which the Portuguese case study may contribute to this theoretical dispute.

FORBES-MEWETT, HELEN* (Monash University, helen.forbesmewett@monash.edu)
Violence Against Female International Students and the Need for ‘Gender Security’

Violence against women has become a pressing global concern that represents significant social and economic cost. According to the World Health Organization, more than one-third of women worldwide are victims of physical or sexual violence. While some progress has been made there remains much to be done to increase the understanding and amelioration of this vast social problem. Within this context, females make up approximately half of the estimated 3.6 million international students undertaking tertiary education in a host country. Previous research has addressed issues of safety and security for international students generally with only passing mention of gender-related concerns. This paper explores the problem of gender-based violence against female international students in their host country and the pressing need for ‘gender security’. Focusing on the United States, the United Kingdom and Australia, the paper draws on empirical research in each country and on international students and other key informers who work closely with international students. The paper presents knowledge about stalking, rape, assault and domestic violence against female international students. The study also presents ideas about education and response programs that address the issue of gender security. The study uses an intersectional analysis and a claim for human rights to argue for an expansion of preventative and response programs relating to violence against female international students. Findings indicate that female international students are far more likely to be victims of violence than male international students. It is also suggested that low reporting of gender-based violence is exacerbated within the international student cohort. The findings of this paper will be of value to female international students and their families, wider communities including in particular women from diverse backgrounds, practitioners and scholars concerned with the issue of violence against women, the international education sector, and host education institutions and nations.

FORNO, FRANCESCA* (University of Bergamo, francesca.forno@unibg.it)

Personalized Engagement in the Current ‘New’ Wave of Anti-Mafia Grassroots Mobilization

This paper discusses the social mechanisms set in motion by a new anti-Mafia organization called Addiopizzo (Goodbye, Pizzo) which has been able to successfully encourage a growing number of entrepreneurs and shopkeepers to refuse to pay racket fees to local mobs in the city of Palermo, Italy. By using communication technologies that enable personalized public engagement as part of a new interpretative frame which has brought political consumerism into the repertoire of the anti-Mafia movement, Addiopizzo activists – a group of post-grad students and others – have succeeded in creating a range of collective and selective incentives that have made it possible for local businesspeople to overcome the problems of collective action and build new social bonds of solidarity. Referring to social movements and diffusion theories, the paper discusses how a relatively small and locally based SMO succeeded in bringing about important changes by organizing itself locally as well as globally, and via Internet. Data for the analysis came from several sources of information, such as interviews with the activists themselves, participant observation, media analysis and a unique dataset reporting the answers given to a structured questionnaire with more than 70 closed questions, distributed in 2011 to 277 entrepreneurs who had joined the mobilization campaign entitled “Change your shopping habits to fight the pizzo” at various points in time.

FORNO, FRANCESCA* (University of Bergamo, francesca.forno@unibg.it)

United We Buy: Re-Embedding the Economy into Society for a Sustainable World

It is increasingly argued that the environmental and social problems that afflict industrialized societies cannot be resolved without a change in citizens’ lifestyles and consumption practices. In recent years, the inability (or unwillingness) of institutions in addressing these problems whilst ignoring evidence of different, more inclusive patterns of consumption has stimulated the development of new social movements that, while increasing general awareness on the social effects of consumption practices, have favored the emergence and spread of forms of procurement based on the direct relations of solidarity and mutual participation between consumers and producers. The paper focuses on some new grassroots initiatives promoting alternative forms of consumption as a way to protect the environment and the right of workers, which have been very successful in Italy in the last decade. Born in 1994 “Solidarity-based Purchase Groups” (or “Gruppi di Acquisto Solidale”) count today more than 900 groups. The success of these initiatives has been to social movements and diffusion theories, the paper discusses how a relatively small and locally based SMO succeeded in creating a range of collective and selective incentives that have made it possible for local businesspeople to overcome the problems of collective action and build new social bonds of solidarity, both amongst group members and with the producers. Nevertheless, such criteria are interpreted and appropriated on a strictly local basis. From many points of view, GAS are an important case study for understanding the mechanisms and decisional processes through which citizens can enter into a cooperative relationship amongst themselves and with individual producers or networks of producers, aiming for reciprocal benefit on a concrete basis, namely modifying the production processes towards a higher sustainability. The paper presents the results of two online questionnaires, filled out by 204 members of GAS in Lombardy and by 158 families belonging to the same groups and reflects on the mechanisms that have fostered the spread of these forms of collective action, exploring both the reasons that have encouraged individuals to take part in these experiences as well as the internal organization and strategies of GAS.

Housing and Social Re-Stratification

This article looks at transformations in the role of housing in social stratification. During the ‘golden age’ with high-speed economic growth and generous government subsidies, the social inequalities were mitigated by the expansion of middle class home ownership and redistributive schemes of providing social rented

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
dwellings to lower classes. However, with the ascendance of neoliberal prescriptions in the 'global age', new housing systems oriented towards accentuating the role of market economies in providing and financing housing have increasingly exacerbated, rather than alleviated, social disparities. There have been widening gaps between the market-included and the market-excluded in terms of housing conditions. Moreover, within market spheres, various variables such as the timing of housing purchase, the appreciation and depreciation of housing assets, the nature of housing investment, the condition of mortgage borrowing, family support in acquiring housing, intergenerational transfers of residential properties, architectural profile and location of dwellings and the number of houses owned have been becoming more definitive in creating social cleavages. In varied fields of social science, position pertaining to labor markets has been regarded as most important in explaining the formation of social classes. However, housing and property ownership have increasingly been becoming, and will be, more definitive in reshaping social inequalities. This paper will identify housing related key drivers for social re-stratification and explores housing situations in some exemplar countries such as Britain, USA and Japan in arguing the importance of housing in creating new contours of social inequalities.

Coalition Patterns in Labour Market Policy – How Activation Policies Restructure the Political Contest in Western Europe

Activation policies became the means of choice to address typically post-industrial unemployment rates in a context of “permanent austerity” (Pierson 1996). However, comparatively little is known about how these “novel” policy instruments influence the political contest and the coalition formation mechanisms in this policy domain.

First, in line with the debate on multidimensional modernising reforms (Bonoli and Natale 2012; Häusermann 2010; Clason and Cleg 2011) this paper investigates the nature of the political conflict in the domain of labour market policy and addresses the question whether the political elite’s preferences pertain to more than one dimension.

Second, the analyses address the political elite’s coalition patterns by focusing in particular on the political left testing the hypothesis whether social democratic parties address rather insider or outsiders’ interests (Rueda 2007, Schwander 2012).

The empirical analyses are based on a novel elite survey which captures labour market policy preferences of all actors involved in the political decision-making process, i.e. parties, state bodies, unions, employers’ and social movement organisations in three dualising (France, Germany, Italy) and in two flexicurity-oriented countries (Denmark, Switzerland). The analytical strategy relies on factor and cluster analyses of preference measures weighted by the respective issue salience (cf. Kriesz et al. 2008).

The empirical findings suggest that politics is essentially shaped by policy. In other words, the political elite’s preference and coalition patterns are determined foremost by the regime specific institutional legacies and are structured on a redistributive and on an activation dimension. Interestingly, the most salient and controversial issues related to policies which are the core of the political confrontation continuum come to the forefront. The political conflict and the political elite’s interests are determined by the regime’s specific institutional legacies and are structured on a redistributive and on an activation dimension.

‘Belonging’ in The Land Down-Under: Insights from Three Methodologies

This paper considers differences in articulations of belonging in Australia generated using three different more or less innovative methodologies among different populations. Results from face to face interviews plus a photovoice exercise among refugee settlers are compared and contrasted with data generated in 20 focus groups with migrants and non-migrants across Australia using a set of images designed to elicit discussion around national, transnational and postcolonial identities. Membership Categorisation Analysis is used to interrogate the presumptions included in the prompts used to generate the data (interview questions, themes for photographs, and images for focus group discussion). The range of parameters of belonging from the political (civic and ethnic belonging) to the interpersonal (family, friends, place) are noted, as well as the limits to belonging, particularly the category work done discursively to identify insiders and outsiders. The paper concludes that each method is useful in different ways to gain access to different experiences of belonging and un-belonging.

The Discussion to Implement Charging for the Use of Water Resources: Challenges in Participatory Management

The participatory discussion appears as one of the greatest innovations occurred in Brazilian democracy since the 1980’s and have as a principle the joint action between state and civil society and the sharing of responsibilities in the design and management of public policies. São Paulo State’s Water Resources Policy has the premise that water management should be decentralized, integrated and participatory, through the Watershed Committees. One of the tasks of the Watershed Committees is to establish the charging for the use of water, the economic instrument of water resources policy, which aims to encourage the rational and sustainable use of water. This study aims to analyze the discussion for the implementation of charging for the use of water in the Basin Committee of the Upper Tietê, located at the Metropolitan Region of São Paulo, in the period 2006-2010, in order to understand what was and how the participation of the state, municipalities and civil society occurred. This article aims to identify the specificity of the participatory process through the analysis of Watershed Committee meetings’ minutes and to compare it with a theoretical reference. The hypothesis is that the state failed to provide an egalitarian conditions for the representation of participants in the Watershed Committee of the Upper Tietê in the drafting and implementation of water use charging. Furthermore, the inaction of state institutions may have contributed to the slowness of the process. The evaluation of the discussing process for water charging in the Upper Tietê Basin corroborates to the debate about the actual influence of participatory institutions in public policies and the prospects for improving the existing relationship between government and civil society and the conditions for the exercise of democracy in environmental issues.

El Concepto De Comunidad: Teoría Sociológica, Historia Conceptual e Historia Intelectual

Desde hace al menos tres décadas la noción de comunidad se ha vuelto central para una variedad de disciplinas asociadas al campo de las humanidades. El llamado “renacimiento de la comunidad” supuso la tarea de retomar la historia de esta noción desde sus orígenes griegos hasta el presente. Como es sabido, el surgimiento de la teoría sociológica a mediados del siglo XIX impactó de manera decisiva en la formación y el desarrollo del concepto de comunidad. La distinción acerca de las transformaciones en los usos y significados de dicho concepto a lo largo y a lo ancho de la tradición sociológica parece requerir de una exploración, discusión y evaluación de las potenciales de diversas herramientas y propuestas teórico-metodológicas provenientes de perspectivas no específicamente sociológicas. En este trabajo nos proponemos, entonces, analizar de forma crítica y metagrámatica las posibles confluencias de investigación teórica o metateórica en torno al concepto sociológico de comunidad con dos enfoques de uso generalizado y cada vez más extendido en las ciencias sociales y humanas contemporáneas: la “historia conceptual” y la “historia intelectual”.

Youth in the Age of Austerity

This paper will draw upon international evidence of how ‘youth’ and the ‘youth question’ within social and public policy has been (and is) changing as a result of the global disruption to international capital. It will examine by way of ‘financial re-structuring’ in different countries is impacting on public and social policies aimed at the young and how the concepts such as ‘youth’ ‘age’, ‘transition’ ‘diversity’ ‘risk’ and ‘inclusion’ and ‘citizenship’ are being reconstructed and reconfigured in policy discourses. Since the early 80s ‘neoliberalism’ has been seen as the major driver to national and international policy frameworks in western type states. This paper will argue that the recent ‘crisis’ does not create new responses but has accelerated neoliberal strategies that see public and social policies and practices help western states implement a range of new ways of managing young people and the ‘youth question’. The focus of the paper will therefore be on how youth
'policy' is using the 'crisis' in responding to the youth question, how it is creating new narratives of youth and the life course and what new types of 'societal pathways' into adulthood for the young are emerging as a result of recent austerity measures in policy. The analysis will examine these developments by the use of a number of international case studies, across Austria, North America and Europe highlighting the political ecological framework of policy that integrates an understanding of how 'finance', 'markets' and various neoliberal policy responses to them are re-shaping the life course for the young through the implementation of austerity measures.

A Tale of Two Sorrows: Hurricane Katrina, Parenting Trouble, and the Politics of Suffering

This paper examines a set of intellectual and ethical dilemmas that stem from efforts to define and analyze suffering. Drawing from two separate studies, one on the survivors of Hurricane Katrina and the other on middle-class parents whose children have a wide array of problems, we highlight the gap between sociological and self-referential claims to suffering. How do we conceptualize the experiences of people who appear to suffer but are reluctant to identify themselves as suffering? Should studies of suffering include the experiences of privileged people whose hardships seem comparatively trivial? By addressing these questions, we call attention to the politics of suffering and scholars' participation in the construction of what constitutes "legitimate" distress. We also consider what scholars might gain from comparing the lived experiences of seemingly disparate groups of "sufferers." We argue that when scholars do not pay attention to how people make sense of their own situations, they risk depersonalizing their participants. Sociologists' adoption of psychological and psychiatric vocabularies of suffering is particularly problematic in this regard. In the end, we suggest that it is possible to conceive of suffering as part of the human condition and to embrace all forms of human distress, while at the same time making moral assertions about whose situations warrant political action. However, doing so requires scholars to be explicitly reflexive about the political assumptions that underpin their research.

Contested Landscapes: Film Narratives and the Meaning of Land Rights

In rural areas of southeastern USA, African-Americans have fought to maintain land ownership in order to protect independent farmers and maintain economic and political freedom. Struggles over property rights carry a heavy history from enslavement to contemporary racial discrimination. Landownership among African-Americans peaked around 1910, after which there has been a steady decline of ownership. This trend has many causes, including intimidation, force, access to capital and information, and the legal nature of many African-American landholdings.

Alongside the legal battles and political movements that have come to define land ownership, however, are lived experiences and personal relationships that are intimately tied to landscapes. Using ethnographic film to document and present images of land and stories from rural African-Americans who claim land rights, my research examines the complex and overlapping interactions between humans and land. Land is more than an economic and political asset; for many rural African-Americans land holds meaning and memories and creates a sense of place and identity. These stories reveal that the best legal option for retaining land is not always congruent with the inherent meaning of ownership. In this paper, I use interdisciplinary modes of inquiry to examine the structure of historic and contemporary African-American land ownership and land loss and to demonstrate how personal stories and oral histories often reveal symbolic and temporal layers of understanding that question the very meaning of land rights.

(Im)Mobile Youth?: Globalisation, Leisure and Social Change in Scotland and Hong Kong

In recent years, the 'global' question has become central to debate in the social sciences. For some, processes of globalisation have increased mobility of people, culture and technology; for others, access to 'global' culture remains sharply stratified by access to resources, with those at the margins rendered increasingly immobile, both spatially and socially. At the same time, however, the globalisation of 'mobile' technology has opened up corridors of dialogue and interaction between disparate cultures and communities in ways that are both emergent and inchoate. These new 'geographies of mobility' strike at the heart of debates surrounding the lived experiences of globalisation: the tension between 'spaces of place' and 'spaces of flows'. These debates have a particular resonance for young people, whose lives are lived at the precarious frontier of the global economy, and the leading-edge of global consumer culture.

This paper will engage with these debates through reflection on emergent findings from an ongoing comparative study of youth leisure, funded by the ESRC, in two geographically and culturally diverse research sites: Scotland and Hong Kong. The study adopts a historical and cross-cultural comparative design, building on landmark research carried out in both study locations by the pioneering sociologist Pearl Jephcott, involving concurrent fieldwork and data-collection in communities in both locales - including ethnographic observations, stakeholder interviews, focus group discussions, oral history interviews, and on-line data-collection. While methodologically rooted in these 'spaces of place', the paper will engage with the new configuration of identities thrown up by the emergent 'spaces of flows' that compose the lived experience of youthful global modernities.

FREDERIKSEN, MORTEN* (Aalborg University, mfr@dps.aau.dk)
Multileveled Uncertainty: Meso-micro Linkages between Trust and Confidence

The paper seeks to conceptualise the relationship between trusting institutions and trusting people. While these two types of trust are clearly linked and share important dimensions, they are also distinctly different at a phenomenological level. This paper elucidates these similarities and differences and the ways in which the two levels interact. First, it draws on Niklas Luhmann's analysis of uncertainty and contingency along with his phenomenological distinction between trust in people and confidence in systems and institutions. Secondly, it draws on K. E. Loesgstrup's phenomenology of trusting as the default attitude within familiar social worlds.

Two fundamentally different ways of dealing with uncertainty are conceptualised. Trust, it is argued, is related only to alterity but depends on confidence in systems/institutions in order to bracket the contingency associated with any intersubjective encounter. Trust is possible only when preceded by a trusting orientation, a sense that whatever future is in store will not be a bad one. This orientation is it is an expectation of a more or less wide array of possible futures all within what is familiarly relevant to at specific situation, delineated by confidence. However, trust also provides the foundations for building confidence. Confidence can only be established once the issue of human agency invariable linked to institutions and systems has been settled the in form of trust. Consequently, confidence is learned from trusting. The contribution of this paper is two-fold. First, it brings together otherwise disparate writing on the relationship between trust in institutions and trust in people, helping to clarify this point in trust research. Secondly, it provides conceptual tools to describe and analyse the relationships between trust in intersubjective relations and the ways that familiar institutional and organizational backdrops provide the confidence to trust the other.

FREDERIKSEN, MORTEN* (Aalborg University, mfr@dps.aau.dk)
Nordic Moral Repertoires: A Contribution To a Comparative Cultural Sociology Of Social Justice

The great values similarity between the Nordic states seems to be a fact beyond dispute (Kildal and Kuhnle 2005; Svalfors 2003; Svalfors 2006). However, since contemporary research primarily focuses on the historical and socio-econometric causes of these attitudes, the Nordic inhabitants reasons for having these perceptions are all but unknown. This paper seeks to contribute to an understanding of these reasons.

Identifying macro level drivers is crucial to explaining the development and continued existence of welfare state and institutions. Nonetheless, these are inadequate for understanding why people hold values and perceptions supportive of specific institutional structures: people express egalitarian ideas because this is important and meaningful to them, not because they have a working class upbringing. The analytical framework applied in this paper is drawn from the Sociology of Valuation and Evaluation (Hall and Lamont 2013; Lamont 2012) emerging in the intersection between political sociology (Boltanski and Thévenot 2006; Wagner 1999) and comparative cultural sociology (DiMaggio 1987; Lamont and Molnar 2002). This approach suggests that perceptions of what is good and just differs between groups and nations because of differences in preferred cultural standards of valuation and evaluation.

This paper seeks addresses these research questions:
- What are the dominant standards of valuation employed in justifying the level of redistribution in the Nordic welfare states?
- Which group identities (nation, class, generation) are most salient to differences in standards of valuation?

The research project is a comparative cultural study of Sweden and Denmark focusing on issues of social justice. 60 semi-structured interviews are carried out in each country with people between 25 and 70 currently employed. The sample

* denotes a presenting author.  Abstracts are organized by first presenting author's last name.
is balanced in terms of age, gender and class. The interviews explore the four subject areas: social justice, redistribution, work, and institutional legitimacy and trust.

Sustainable Credit Guarantee Associations

Purpose of the paper
This research analyses credit guarantee associations and their contribution to financial solutions for local societies. Credit cooperatives aim to guarantee bank loans for micro, and small and medium-sized enterprises.

Research method
Qualitative data were gathered through semi-structured interviews and direct observation with organisations, public authorities, businesses and bank institutions to conduct a case study of Upper Norrlands Credit Guarantee Association (OKGF), in Sweden.

Research Findings
Cooperative enterprises have been democratically owned and controlled by their members and have taken economic and social responsibility for the development of local societies and businesses for the benefits of the members and the society. The research shows that OKGF creates relations with the members by communicating their value base as a cooperative organisation. They develop cooperation with local banks to support commercial business and entrepreneurs who want to start and finance their own businesses. They get advantage to attract new members by emphasising democratic management and members’ sovereignty, educate members, network with authorities and bank officials in charge of handling loans and with local and global organisations using mouth to mouth marketing. For the cooperative credit guarantee association we can see an enlargement of the market and members’ participation and also need for innovations to sustain its business. New entrepreneurial activities face difficulties because of lack of stable financial resources.

Main Contribution
The study contributes to the literature of credit cooperative financial sector, by presenting a model of successful operation of OKGF. We recommend managers to develop networks with members and other stakeholders to promote cooperative collateral financial activities in the local economy to legitimate and sustain their business in the local society.

Social Memories In South America: Generational Narratives In Times Of Political Youth Activism

Social memories in South America: generational narratives in times of political youth activism
Raimundo Frei (PhD Candidate)
Humboldt Universität zu Berlin

Given the recent, extensive political youth activism in Argentina and Chile, these two post-authoritarian countries provide fertile grounds in order to explore identity boundaries and those born after the dictatorships in the Southern Cone. Against this background, the main research questions are whether and how generational narratives have emerged in the context of political democratization. Generational narratives link life course sequences with experiences of collective events. This connection must not be regarded in terms of Mannheim’s idea of ‘participation in the same destiny’. Rather, by sharing stories of a common past, people narrate a generational identity. Put briefly, generational narratives are attempts to bestow coherence and connect biography and history.

My analysis draws on sixty narrative interviews with people born in two different age-cohorts (1965-1974 and 1985-1994) in Buenos Aires and Santiago de Chile. It will show that whereas long-standing politics of memory in Argentina have created a discursive homogeneity and continuity between generations, the cycle of youth mobilization in Chile during 2006-2011 opened up the opportunity to create new narratives through collective remembering.

My analysis will thus illustrate how ordinary members of the respective society create (or not) generational identities by narrating past and present. That is, I will show that Argentina is an extraordinary social space to observe continuity between generations which risks perpetuating historical divisions, while the Chilean youth movement has contributed to shed light on the country’s undemocratic past.

Consumidores Críticos, Pacientes Informados y Pacientes Tradicionales: Visiones y Prácticas De Cuidado De La Salud Entre Usuarios y No Usuarios De Medicinas Alternativas En Buenos Aires

Unos de los rasgos de las sociedades occidentales es el énfasis en la responsabilidad individual en el cuidado integral de la salud. Conservar y mejorar la salud se ha convertido en medida del logro personal en un contexto epistemológico en el que se han incrementado la mortalidad y morbilidad debido a un aumento de transgresiones a la salud, por un fenómeno de morbilidad y la incidencia de pandemias y crisis sanitarias como la de la pandemia de COVID-19, o la pandemia del VIH, la de la lepra o la de la malaria.

La evolución de los modelos de cuidado de salud y la especialización en el tratamiento de las enfermedades crónicas ha supuesto una evolución en la relación paciente-terapeuta, que ha pasado de un modelo centrado en la autoridad del médico a un modelo centrado en la participación del paciente, que es el que decide qué tratamiento recibir y a quién debe dirigirse.

En este sentido, la revisión de la literatura permite resaltar la importancia de la información que los pacientes reciben de su médico, tanto oral como escrito, en el momento de tomar una decisión sobre su tratamiento.

La información que se brinda al paciente debe ser clara, precisa y comprensible, así como ser accesible para el paciente. La información debe ser presentada de forma clara y con ejemplos clínicos para que el paciente pueda comprenderla y tomar una decisión sobre su tratamiento.

En el caso de los medicamentos, es importante que el paciente entienda los posibles efectos secundarios y las posibilidades de interacciones medicamentosas.

En este sentido, la implementación de herramientas de información y educación para el paciente (IIIP) ha sido un objetivo importante en el campo de la salud.

En la actualidad, el uso de herramientas de información y educación para el paciente (IIIP) es cada vez más común, tanto en el ámbito de la atención primaria como en el ámbito de la atención especializada.

La implementación de herramientas de información y educación para el paciente (IIIP) ha sido un objetivo importante en el campo de la salud.

La implementación de herramientas de información y educación para el paciente (IIIP) ha sido un objetivo importante en el campo de la salud.

La implementación de herramientas de información y educación para el paciente (IIIP) ha sido un objetivo importante en el campo de la salud.

La implementación de herramientas de información y educación para el paciente (IIIP) ha sido un objetivo importante en el campo de la salud.
surveillance, comparative effectiveness research, etc.), thereby improving quality while also lowering care costs. Yet, while HIEs stand to transform systems care in some significant ways, they also generate new risks associated with the ubiquitous flows of personal health information. Using documentary evidence (and informed by debates in content- and discourse-analysis), this paper considers how HIEs are conceptualizing, addressing, and attempting to manage emergent risks. With particular attention to the ways that patients are rendered transparent—and focusing on how they are made responsible for managing the risks associated with flows of their personal health information—this paper critically examines potential the unintended consequences of HIEs in the US.

Solidarity (and alternative) Economy and Its Anarchist Grammar

This paper demonstrates the value of French pragmatist sociology, and particularly the methodological device of a ‘grammar’ to articulate the normative macror-elements that underpin the organizational principles of the solidarity economy movement in France. Our grammatical analysis demonstrates that the loosely coupled movement is held together by a shared libertarian imaginary. We identify as its core four principles about an alternative organization of economic activity: creativity, conviviality, self-management and political activism; and we trace their historical roots in 19th century libertarian socialism and their renaissance in radical social movements in the 1970s. Analyzing the theorization of the libertarian imaginary provided by Proudhon in the 19th and movement protagonists in the 20th century, we argue that the values of the libertarian imaginary have become recombined into a composite construct of complementary, yet potentially conflicting grammatical elements. Presenting a case of a solidarity economy organization, we illustrate how organizational practices are evaluated through a grammatical lens but how the movement can lose its critical edge when the grammar is ‘extrapolated’. ‘Extrapolation’ offers an alternative explanation for movement instrumentalization, a frequently observed and deplored phenomenon in social movements, and suggests that it takes place not by co-optation of an external and conflicting value logic, but by over-emphasizing a value that is constitutive of the grammar itself.

FRERICHS, PATRICIA* (University of Hamburg, patricia.freericks@uni-hamburg.de)

Solidarity Regimes and Individualization: Institutional Change In Social Security Schemes

Since the 1990s so-called mature and upcoming welfare states have undergone fundamental reforms. These reforms are related to social, demographic and cultural changes, and they are at the same time highly influenced by a currently leading political concept: i.e. that of the self-responsible social citizen. Concurrently, it is widely assumed that welfare institutions will align and finally lead to institutional convergence, in our case to institutions based on the concept of self-responsibility. Concepts, however, find entrance into institutions in very different ways. Actors, for instance, interpret self-responsibility in terms of individualization on the one hand, or subsidiarity how the movement can loose its critical edge when the grammar is ‘extrapolated’. ‘Extrapolation’ offers an alternative explanation for movement instrumentalization, a frequently observed and deplored phenomenon in social movements, and suggests that it takes place not by co-optation of an external and conflicting value logic, but by over-emphasizing a value that is constitutive of the grammar itself.

The Emerging Church Movement in the USA As a Critical Response to the Neoliberalization of Religious Organizations

The unprecedented decline in formal religious adherence and sharp increase of religiously unaffiliated Americans at the turn of the 21st century have led to critical assessments of the ways in which neoliberal religious organizations respond to the spiritual needs of society. The emerging church movement (ECM) is a religious phenomenon that shows not only which elements of neoliberalism-inspired religion the followers oppose, but also the kinds of alternatives they envision. This paper presents empirical examples of emerging church practices from the American Midwest and implement. It addresses the question of whether the ECM is able to leave neoliberal religious organizations in the United States in the 21st century. It presents the ECM as a reaction to mega-churches and seeker sensitive approaches in the late 20th century. Its followers question and critique existing religious organizations and the influence of neoliberalism on their practices and theologies. Interestingly, the ECM’s flat hierarchies and localized organization are themselves characteristic of neoliberalism, which raises the question to what extent the theologies and variations of orthopraxy represented in this group are also influenced by the spillover effects of free market ideology into the religious sphere.

This paper discusses the ECM as a manifestation of the rejection of neoliberalized religious organizations in the United States in the 21st century. It presents empirical examples of emerging church practices and theologies and variations of orthopraxy represented in this group are also influenced by the spillover effects of free market ideology into the religious sphere.

The Emerging Church Movement: A New Form of Religious Organization?

The last 30 years have seen an unprecedented decline in formal religious adherence in the United States and has affected a range of religious organizations. As a result, institutionalized religion has undergone heavy scrutiny regarding its abilities to respond to the spiritual needs of society in postmodernity. With the deterioration of grand narratives and absolute truths, institutionalized religion is rapidly losing its monopoly on interpreting the faith and prescribing the ways in which it is to be practiced. Instead, local religious communities are questioning the right to redefine what it means to lead a faithfully Christian life in their individual contexts.

Understanding Mobile Childhoods: Children of Migrations from the Philippines to Europe

Contemporary parental migrations have resulted in the rise of many transnational families characterized by solidarity despite family separation across geographical distance. Children of these families have attracted scientific attention for the last twenty-five years, which reflects the existing social concern about their well-being as they grow up separated from one or both of their parents. When family reunification takes place in the receiving country of the migrant parents, children themselves become migrants. Such mobile childhood is considered atypical in both the children’s society of origin and of destination. How to capture the diversity of childhood experiences of these children migrants? In what way do their experiences present scientific challenges to the study of migrant children and their mobile childhoods? In this presentation, we explore these questions by focusing on the childhood experiences of Filipino migrants’ children who are growing up in the Philippines partly and in Europe, France and in Italy. Here, we examine their experiences in terms of mobility to unlock their subjectivities and agency. The results of our ethnographic fieldwork among children of Filipino immigrants in France and in Italy demonstrate the different forms of mobility of migrating children throughout the migration process. Using mobility as an analytical lens, we attempt to move beyond nation-state borders by considering carefully the context and temporalities of mobile children’s childhoods.
At The Leading Edge – Does Gender Still Matter? A Qualitative Study On Successful Coping Strategies and Prevailing Obstacles In Academia. Analysing Female Careers In Austria

At the leading edge – Does gender still matter? A qualitative study on successful coping strategies and prevailing obstacles in academia. Analysing female careers in Austria

Although academic science in Austria is still male-dominated to a great extent, recent development evidences changes especially in higher positions. Statistics on the Austrian setting show that the share of female scientists at upper levels of the career ladder is shifting slightly but steadily. This article deals with explanations for this development phase and analyses crucial biographical phases of female academic careers in leading positions. For this reason, the paper focuses on three key research questions: Which obstacles hinder successful female careers? How do successful female scientists overcome these obstacles and which long-term strategies are used to acquire or hold leading positions? The findings are based on eleven qualitative interviews with the most successful female scholars in Austria (i.e. rectors and vice-rectors). The findings are arranged in three sections: (1) The results emphasise obstacles impeding female scientific careers. The analysis reveals that informal encounters, (male-dominated) social networks and the requirement both to be geographical mobile and to handle family issues at the same time are important obstacles. (2) The analysis concentrates on the underlying mechanisms in terms of how successfully female scientists manage to overcome these obstacles. With regard to informal encounters, it appears to be important to keep the distance from one’s environment, while pursuit of change can be seen as a crucial mechanism in terms of coping with the negative effects of (male-dominated) networks. Planning and organisational skills are decisive in conciliating geographic mobility and family obligations. (3) Finally, this paper elaborates on different long-term strategies applied by women in order to achieve leading positions.

Increasing Low-Paid Employment in Germany, Austria and Switzerland Between 1995 and 2011. Who Are the Losers of Recent Labour Market Flexibilization?

Since the 1980s, Western societies have been experiencing an increasing flexibilization of their labour markets, which led to a massive expansion of non-standard jobs. Interestingly, and this is the starting point for the present paper, there has been relatively little research done on this topic in German-speaking countries such as Austria, Switzerland and Germany over the 15 years. Taking up this research desideratum, we discuss the growth of low-paid employment in these countries.

For the empirical analysis, we use GSOEP, EU-SILC and SHP data from 1995 to 2011. Besides descriptive time series analysis, we present results from logistic regression models and decomposition analysis. Our results confirm a growing trend towards low-paid work in all three countries. Compared to Austria and Switzerland, the German rates of low-paid workers are quite low (25% of all jobs in the labor market in 2012), indicating a substantial change in the historically dominant form of labour market regulations towards a liberal labour market regime. By contrary, Switzerland and Austria only show a moderate enlargement of the low-paid sector and therefore pursue the traditional path of strong regulation. Against this background we highlight the most significant differences and similarities at a national level and display historical trajectories of regulatory processes leading to the emergence of particular regimes of precarious employment.

Moreover, our analysis shows that risks of low-wage employment are not evenly spread across the workforce. In fact, we can observe strong and increasing inequalities between and within special groups. Especially temporary work, part-time employees and workers with fixed-term contracts belong to the losers of the prevailing dynamics on the labour market in those countries. We conclude that the already disadvantaged workforce has to bear special risks produced by recent labour market changes.

Voluntary Work in Denmark 2004-2012 - in General and within the Field of Social Policy

In recent years political interest has bee intensive concerning the possibilities for civil society and voluntary work to relieve the strained governmennt services in social care and help for dealing with social problems. Many initiatives have been established to stimulate voluntary work and expectations are high around developments in civil organisations of the civil society. The paper is part of the work in a network of researchers from a number of Danish universities around developments in civil society and voluntary work.
Profiles from the US History of Clinical Sociology: Addams, Du Bois, and Gomillion

Using Canonical Correlation for Index Construction with Aggregated Data

Indices constructed by aggregated data are frequently used for macro data or multilevel studies. There are several statistical approaches to construct such macro indices (as has been done by World Bank econometricians or psychometricians who deal with cross-country research questions).

For measuring multi-facet phenomena on the macro level (such as happiness, corruption or freedom), one would consider indices based on sub components which refer to the same phenomenon. Specifically, for convergent validity it seems important that the sub components measure different aspects of the same phenomenon but ideally nothing else (convergent validity). Statistical methods applied for index construction usually regard for convergent validity. This implies that most indices are constructed with high reliability. For preserving validity completely, one should also consider differences in measurement to other constructs or phenomena (discriminant validity). This is typically not under consideration in econometricians’ way of procedures when indices are constructed. It is also not seldom regarded by psychometric attempts of index construction.

As a method that allows for both reliability and validity, e.g. for warranting discriminant validity, we suggest canonical correlation as a procedure of macro index construction.

We show the advantages of canonical correlation for macro indices construction by referring to the seldom scrutinized social phenomenon of personal freedom. One of canonical correlation analysis mostly used application is the reduction of dimensionality (Anderson 1984) which is a crucial matter in index construction when sub components are also concerned.

The construction process is compared to factor analysis results (e.g. the role of eigenvalues in both procedures, Burt 1948). It is shown that both methods do not necessarily end up with the same results. In sum, canonical correlation is a more flexible tool that comes with stricter assumptions but with a clearer concept of what should be excluded from the index.

Housing Market and the Activities of Land Banks in Socioeconomically Distressed Neighborhoods in Cleveland, Ohio, the United States

Abandoned and vacant properties are a serious urban issue as blight induces further blight. Real estate prices are nominal in some parcels in blighted neighborhoods. Also, subprime lending sometimes results in subprime foreclosures and low-income neighborhoods the hardest. Moreover, foreclosure sales sometimes malfunction due to speculators.

Cleveland, Ohio has lost more than 50% of its population from the peak. In case of Cleveland, distressed neighborhoods are found in the east of Cuyahoga River, especially areas bisected by Cleveland’s primary corridor that connects Downtown and University Circle. Draft Cleveland Sustainable Development Pattern guides development and housing to high-priority zones. The map shows development horizon of short term, medium term and long term. Ordinary as well as distressed neighborhoods tend to be left “blank” or at best categorized as long term.

Land bank is an effective tool to repurpose blighted properties to productive use. Cleveland has a unique two-strata land bank system. The City of Cleveland Land Bank, a city government program, has existed since 1976 and owns over 11,000 lots on conditions that such lots have no structure. Cuyahoga County Land Reutilization Corporation, an innovative land bank established in 2009, acquires properties including with structures from various sources: tax foreclosure, national mortgagors, REOs and deed-in-lieu. The two land banks work in partnership.

This paper quantitatively clarifies the situations of Cleveland’s highly distressed neighborhoods and discusses how to tackle the issue of distress. Analyzed are private real estate transaction, foreclosure flings, Sheriff’s sales and acquisition/sales by land banks as well as socioeconomic indicators including income, poverty and vacancy. The historical perspective, year 2000, 2006 (pre-housing crisis) and 2012 is an emphasis. Stabilization of neighborhood and (re)creation of social capital are discussed through a case study of Reimaging Cleveland, a pilot program till 2015 to utilize City Land Bank-owned vacant lots by indigenousness of a community.

Environmental Destruction and the Social Impacts of the Fukushima Nuclear Disaster

The Fukushima nuclear disaster is sometimes called as the worst environmental pollution in Japan. However, the social impact of the Fukushima nuclear disaster has particular features different from other previous environmental pollution cases such as Minamata disease. In this paper I’d like to point out the problems of the refugees from the highly radiation-contaminated area in Fukushima from the perspective on the social structure of pollution victims based on the sociological study of the cases of the ‘kogai’ or the industrial pollution in Japan.

In most cases of kogai, although it took many years for a human damage to be identified as a pollution related disease, the seriousness of the human damage was perceived. Whereas in case of the low dose exposure in the Fukushima disaster, it’s impacts to human health have not been clarified yet and still controversial. At this point, in Fukushima prefecture, more than 150 thousand of people were forced to evacuate from their community soon after the accidents. Recently the national government is trying to shift a focusing point to return and rebuild the communities.

In comparison with the evacuation, even family members have to be forced in the separation. For example some mothers have taken refuge far away from Fukushima with her children, left their husbands for their jobs in Fukushima. Since there is no credible health standard for the radioactive contaminations, each of them has to make very difficult decision independently. These difficulties might bring the deep cleavages in human relationships within communities as well as within families.

Social stresses of refugees and residents are related with their previous attitudes and sentiments to nuclear facilities in the area. In comparison with the study of the victims of the past ‘kogai’, I will discuss this connection and their anxiety of being neglected their damages.

Social Movements in Solution Process of Environmental Problems: From Case Studies of the Anti- Pollution Movements in Japan

In Japan, many environmental social movements arose against industrial pollution called ‘kogai’ in 1960s. However, most of them are dissolved in solution process of the current issues in 1970s. The decrease of social interests in pollution problems have been a cause of recurrences of similar problems. We can see same situations in Asian countries where the residents around the construction site for chemical factory do not know about the previous pollution problems such as Bhopal case.

In this paper I will start with two case studies of environmental movements which are related with ‘kogai’ and have continued.

Itai-itai disease (or ‘ouch-ouch’ disease, cadmium poisoning) is the first pollution related disease certified by national government in 1968. The grass-root movements Itai-itai disease have continued to work for more than forty years. They have also affected the cadmium regulation policy in Japan and have support the residential movements occurred in other cadmium contamination area.

And they have enforced the environmental measures of the mining company which was a defendant of the trial filed by the victims of Itai-itai disease in 1968. Recently they have succeeded to reduce the cadmium emission to nearly zero level.

The long-term corporative measures between the residents and the company have attracted considerable attention from some East Asian Countries.

There are some movements to inform Asian people of the experiences of pollution problems in Japan. Asia Arsenic Network (AAN) organized after the settlement of Toroku Arsenic Poisoning low suit in 1991 is one of the most important groups in this respect. AAN supports the people who are suffering from arsenic pollution caused by natural water flow, mainly in Bangladesh.

At the final section of this paper I’ll consider the meaning of these movements, referring to the grass-roots movements following Love Canal case in the USA.

Do Increasing Attorneys Mean Increasing Poor Attorneys?

In this paper, I will analyze the income distribution of active attorneys in Japan using the decennial income survey data from 1980 to 2010 collected by the Japan Federation of Bar Associations and the Surveys of Income and Wealth of the 62nd Legal Apprenticeship Cohort (registered in 2009) conducted in 2010 and early 2014 by myself and other legal sociologists as well as the yearly tax statistics compiled by the National Tax Agency Japan. The number of Japanese attorneys is rapidly increasing, especially since Japanese style of law school was inaugurated in 2004. Not only this time, but also whenever an agenda to increase the number of attorney
neys was at stake, critics argued that the larger number of attorneys would have too much competition and yield many poor attorneys, and in turn debase the quality of legal services provided. Indeed media have repeatedly reported some new attorneys are so poor. I found that the income distribution of attorneys has not changed so much as critics argued even in the latest data available, controlling for the age and gender compositions of attorneys. However, the percentage of lower middle income attorneys are slightly larger in the 2010 survey compared to previous data. Based on these analyses, I will argue that current sentiment shared by many attorneys, like “the more lawyers are, the poorer they are,” is not strongly supported by the fact but it would be a necessary sentiment of the transitional period from the age of the litigation lawyer to that of socially permeated lawyer.

Work Motivation and Social Networking Development in Professional's Job Change Behavior: A Comparison Between the U.S. and Japan

As professionals’ work-related knowledge is not dependent on the organization to which they are employed, professionals are thought to be able to move between organizations more easily than non-professionals. However a great number of professionals in Japan enjoy a lifetime employment system and never change organizations as many large companies in highly professional fields such as science and technology, etc. adopt internal labor market-type employment systems. Therefore, Japanese professionals tend to hope their growth in the same company, and not to change jobs even if the work is not interesting enough.

In the U.S. on the other hand, professionals in Silicon Valley, California found ventures one after another and frequently change jobs. They dislike to continue the same job for three years, because they always are anxious to the opportunity which makes them grow. They have a lot of interesting to the new projects which satisfy their curiosity. For this purpose, they are extending their network not only in the same professional area, but also with other professionals or even non-professionals to meet new idea. They are also looking for colleagues with whom to collaborate to realize such idea.

As a result, professional social networking development in Japan tends to be confined to professional groups such as affiliated companies and academic conferences, etc. Meanwhile, as professionals in Silicon Valley are in a high-risk situation with the fear of bankruptcy and dismissal lurking behind success, a wide variety of social networks consisting of former colleagues, persons in the community, PTA members, and members of the same ethnic group, etc. have developed. These differences in the social environment surrounding professionals have impacted the development of social networks; while employment in Japan divides networks into public organizational networks and private networks, Silicon Valley professionals acquire job opportunities through mixed public and private networks.

Coalition-Building Process Between Socially Heterogeneous Organizations in Japanese Biodiversity Movements

This paper explores how and why social movement organizations build coalitions from the perspective of multi-organizational fields, with a particular focus on coalitions between socially heterogeneous organizations. While researching the interaction between social movements and their opponents, most scholars tend to pay less attention to coalitions/alliances between other movement groups or organizations in different sectors, despite suggesting their importance in social movement dynamics. In this paper, existing analytical approaches toward inter-organizational coalition—alliance—namely “coalition work” (Staggenborg 1986), “mesomobilization” (Gerhards & Rucht 1992), and “resource dependence perspective” (from the sociology of the organization)—are comparatively examined and tested in a case study. This paper attempts to reorder the determinants of coalition building proposed by these analyses.

The case study examines the environmental movements in Japan, particularly organizations involved in advocacy activities for conservation of biodiversity since the 2000s. These biodiversity issues involve many different sub-issues—for example, preservation of wildlife, sustainable development, access to genetic resources, and benefit sharing, and biosafety of living modified organisms—whereby coalitions among many different actors have been critically important. The following specific movements are reported in this paper: (1) movements for alien fish problems in the early 2000s, in which environmental citizen groups, and fisheries associations and academic committees built some coalitions; against sports fishing groups (2) nongovernmental organizations’ (NGOs) alliance for the tenth meeting of the Conference of the Parties to the Convention on Biological Diversity (CBD/COP 10) in Nagoya city during 2010, in which there was coalition building between environmental NGOs, grassroots groups, consumer organizations, and business companies. In discussing these cases, I focus on the interaction between framings and counter-framings, and on resources distribution among these actors.

Network Effects and Activities of University Students in a Seminar

University seminars require students to be involved in intensive activities that require cooperation with each other and also develop their own skills and abilities. In such activities, their friends are also an important factor for their activities—we call these network effects. This is similar to activities pursued within modern organizations such as companies and non-profit organizations. Using Bonacich centrality, we can take account of these direct and indirect network effects. The aim of this paper is to empirically examine the determinants of activities in a university seminar. In addition to network effects, we included other factors such as the ‘Fundamental Competencies for Working Persons’ that is promoted by the Ministry of Economic Trade and Industry, ‘generalized trust’ and students’ GPA. Results indicate that Bonacich centrality has a positive and significant effect on students’ activities and its magnitude is as the same as that of GPA. In the Fundamental Competencies for Working Persons the competency of “discipline” is both positive and significant. For generalized trust results are negative and significant and this effect is interpreted by Uslaner’s (2008) generalized trust as pessimism. These three significant factors are consistent with Putnam’s (1993) definition of social capital.

The Structure of the Bangladesh’s Economy

This presentation aims to discuss “inward tendency” of Japanese youth based on the analysis of social survey of 2012, and a secondary analysis of social surveys of 1992 and 2002, all of which were conducted by Japan Youth Study Group. The term “inward tendency” refers to Japanese youth attitudes that is more “domestic-oriented,” rather than “internationally-oriented” in character. However, up-to-date, its usage is not clear: it refers to both the decrease of youth travelling overseas, and the decrease of students studying overseas. Since the “inward tendency” of Japanese youth started to be considered a social issue in the beginning of 2000s, there is no previous studies, as well as statistical analysis, dealing with it. Therefore, I will review studies on youth in Japan in terms of methodology, examine some government surveys, and discuss which social factors contribute to “inward tendency.” This presentation will attempt to address the following issues in dealing with the study of youth. Though in terms of methodology, it is important to make comparison with other age cohorts in order to understand the characteristics of youth (16-29 years of age), there was no such arrangements in previous surveys. Also in order to known for change in youths, it is necessary to carry out repeated cross-sectional surveys. Though its necessity was pointed out, the age, period and cohort were not distinguished (Fujimura 1995). Furthermore, it is assumed that “inward tendency” correlates with other attitudes, such as intimacy, conservatism, and moral issues. The analysis of data makes it possible to clarify which factors correlates to “inward tendency.” And, consequently, it will be discussed that it is not sufficient to analyze the issue of “inward tendency” just as youth attitude, but it is also necessary to consider other macro factors and policies that have an impact on society.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Bangladesh is described as the “Next 11” or “Frontier 5” and it is expected that it will grow to be a key player in the world economy. Macro-economic dates, such as GDP growth rate which keeps as high as 6% since 2000’s, are indicators for the potential of Bangladesh's economy. The Ready-Made Garment (RMG) sector is the country's most dominant industry as well as its leading industry to earn foreign currency. It plays an important role not only in domestic economy, but also international market. The thriving RMG sector accounts for approximately 80% of total exports. As a major apparel products exporter, Bangladesh is ranked in 4th place behind China, Hong Kong, and Italy in the supply of apparel goods to the world market.

Even though RMG sector in Bangladesh is making remarkable progress, the industry stands on a fragile base. The following aspects should be taken into account when evaluating the real circumstance surrounding RMG sector: (1) RMG sector is highly dependent on imported raw materials specifically from China and India; (2) RMG which is divided into two categories, woven and knit, can only self sustain in knit sector. While knit sector supply meets most demands, woven sector that make higher value add-on products is far behind at about 20%; (3) Bangladesh's competitive advantage is found largely in lower wages among than other competing countries such as China, India, Cambodia, Vietnam and so forth. This fact is strongly linked to working condition of RMG workers, which represent current tragedies in RMG factories; (4) Sourcing countries has been changing and it depends on international market trends. The possibility of Bangladesh remaining in its current stage is uncertain due to changing conditions in the external environment.

**PR or Social Movement? : Against Climate Change Campaignes in Japan**

This presentation examines the national campaign against climate change in Japan through the “frame alignment process” with from the state to the public based on the frame analysis in the social movement research.

State sponsored global environmental campaigns have been blamed for its policies that hide the economic disparity and political-social inequality underlying global environmental problems and trivializing it matters of personal effort. However, specific analysis of these campaign activities had yet to be conducted.

Thus, I investigated one of the national campaigns against climate change, Team Minus 6%(2005-2010) and Challenge 25 (2010-2013), in order to clarify problems that had been focused on and values and strategies that had been adopted. The results showed an overall preference for "frame bridging" and "frame amplification" in the frame alignment process in order to hide conflicts among stakeholders. They repeatedly represented and stressed unity in the fight against climate change through "All Japan."

In particular,

1. They focused on non-eco-friendly lifestyles as the major cause of increasing carbon dioxide emissions while lobbying efforts, against politics delaying the solution of climate change, receded into the background.
2. They presented the value of "individual environmentalism" in which the efforts of every individual adds up to a major force against climate change. As proof, they would quantify carbon dioxide reductions in accordance to numbers mobilized in a campaign or of individual actions.
3. They adopted a "personal interest strategy," whereas individual interests and climate change issues are connected.

**The Changing Gender Relations in Marriage and Fertility in Japan**

The trend toward later marriage and growth in the proportion of men and women who never marry is a major cause of the Japan's low fertility rate. Similar to some countries in East Asia, Japan is a country where traditional gender role expectations, i.e. a husband works outside home and a wife stays at home for household tasks and childrearing, have been firmly rooted in the society, despite of the high level of women's enrollment to tertiary education. Previous studies often pointed out that the gap between women's increasing demand or potentials for market labor and the norms of the traditional gender role attitudes leads to women's retreat from marriage, thus causing the expansion of the non-marriage population in Japan. However, more recent studies began to show a reversed relationship between women's socio-economic standings and marriage and fertility behaviors. For example, studies using the latest and largest panel survey which covers the first decade of the 2000s show that women with more income or higher education are more likely to marry than their less or lower counterparts in the era of 2000’s. Other study also shows that married women who have a full-time standard job or who are entitled to childcare leave are as likely as women without a job to have the first and second births. How can we interpret these changes? This study first introduces some of the old and new findings regarding to the relationship between women's socio-economic characteristics and family and fertility transitions. Thereafter, the study seeks for the socio-demographic explanations behind the change and discusses the possible implications for the future trends of family and fertility in Japan.

**Uses of the Future: The Problem of Theodicy in Nagasaki**

How is it possible to construct a meaning for the collective trauma among various social groups? This paper explores how people in Nagasaki respond to the collective suffering of the atomic bomb attack through a different approach to the problem of theodicy. The paper focuses on the religious mode of theodicy which can be seen among the catholic community on one hand, and “tragic mode of theodicy” (Simko 2012) observed at the Nagasaki City Atomic Bomb Memorial Park, on the other, to investigate a way to deal with collective suffering in contemporary public arena. Urakami, ground zero of the bombing, was one of the residential areas for catholic communities that historically have suffered discrimination in Nagasaki. Immediately after the bombing, religious theodicy could be seen among the community that attempts teleologically to interpret the collective suffering as a “bunt offering” by providence. Although the catholic community found solace in this theodicy at that point, it was later criticized in public not only because it acquits the responsible of the bombing but it also creates semantic conflicts among a variety of social groups that were affected. In contrast with the theodicy of the catholic community, narratives of suffering of the Nagasaki atomic bomb attack, it is implied that the secular mode of theodicy oriented toward the future is more prevalent in contemporary Japanese society than the religious mode of theodicy that justifies the past.

**Social Inequality of Immigrants in Old Age: Exploring Multiple Dimensions of Social Network and Resource Flow during the Great Recession**

This is a qualitative research project whose data comes from 10-month ethnographic field work at two senior centers in Phoenix, Arizona that respectively cater to one of the predominant ethnic minorities that the majority Asian or Latinx and that the majority of foreign-born older minority seniors are of foreign born. The project examines the access to social support and flow of resources among the older foreign-born population relative to their ties to the community as well as to their family. The primary goal of this study is to understand how the current sociopolitical context in Arizona affects the lives of old immigrants and might channel different ways of involvement in their social networks which are shaped by their living arrangements, relationships with younger generations in family/household, participation in community activities and in the labor market, and access to social welfare and services. The project tries to capture various ways in which immigrants in old age navigate their everyday lives when faced with economic and physiological obstacles as well as opportunities, and by doing so, it seeks to understand how they not only access and utilize but also contribute to the pool of resources. The secondary goal is to understand the life course impacts of quality and quantity of social and economic resources that are available to immigrants—individually as well as within the ethnic community. The project examines the factors that encourage the expansion of social networks and reciprocity throughout a life course as they impact well-being in old age. It also explores how individual experiences may cumulatively contribute to well-being of the members who share the social networks. With these goals in mind, the project seeks to investigate probable factors that are associated with persistence of social inequality in old age at community level which may be further impacted by the sociopolitical context of Arizona.

**On the Potential of the Classic Japanese Theories of Sociology of Law**

After the end of the Cold War, since early 1990's, the structure of the world society has been greatly changing under the pressure of globalization. The world society is becoming politically multi-polarized, economically covered with the global market and the law becomes complex and hybrid on the global level. Every national society becomes multi-lingual and multi-cultural. Worldwide information...
networks make the global transaction much easier than in former times. Legal scholars are as if on an uncertain voyage.

However, against all expectations, I insist that we can find a helpful compass for the voyage in the discussion by classic Japanese sociocultural theorists. The modern Japanese law had been constituted under the pressure of the global colonialization in the second half of 19th century, since opening the country in the late Edo era. Still in the first half of 20th century, Japanese legal scholars had to be strongly conscious of the global pressure to harmonize between traditional Japanese/Asian laws and modernized Western laws. Even Japan’s defeat in World War II was regarded as a result of less attainment of the legal modernization in Japan. The pioneer theorists of sociology of law acted in that age.

History repeats itself. Global legal issues similar to that of in the age of colonialization have been revived since 1990s. Current hot issues relating to the interface between the global economic laws and domestic civil laws are quite similar to that of the transplantation of western law into Japanese/Asian society. The discussion on the support for the development of laws in underdeveloped countries is also a revived issue in the colonialization age. Of course, the discussions on the polarization between traditional Japanese/Asian and modernized Western law are outdated. Nevertheless, it seems that we can extract valuable indications from the classic Japanese theories of sociology of law.

**Representation on the Experience of Suffering in Urban Space: Wall Murals in Belfast**

The purpose of this presentation is to show how hostility and empathy have been expressed in post conflict Northern Ireland society by using an analytical framework of visual data in sociology.

Visual culture has been widely argued in various disciplines. Although many disciplines have had successful analyzed visual representations, my focus here is to apply a sociological method of urban studies on the analysis of the visual representation.

My research interest is to examine the collective consciousness and memories of two communities where their identities have been in part shaped by the images and icons shared in their communities. To do so, I will deal with and discuss wall paintings in Belfast. Mural can be seen as a community medium (Rolston 1998), since the approval of the community is needed in order for a mural to exist in the community for a long time.

My focus is on production, circulation and reception of murals in the urban space. In particular, I will look at the emplacement of murals in order to assess the positioning of each image in community.

The points that have been revealed in this study are 1) Making use of images from famous pictures, murals on national histories usually express confrontation and tend to be located along main roads in the communities, 2) Remembering the dark side of the history of their communities is considered to be expressed (not covered up) in both communities, although some of them are usually seen in residential areas, 3) “Empathy” between the two communities can be seen when they deal with the experience of sufferings under the authority.

**Emerging Child Care Services in France and Japan: Public, Private or Associative?**

Early childhood education and care (ECEC) system comes to the front in three contexts today. First, quality child care services are indispensable for parents to continue working after their child birth. Second, quality child care services are important for young children to develop their sociability. Third, the quality of the child care services depends on the working conditions of child care staff. In many cases, various child care services are emerging: municipal day care center, on-site day care center, family day care, small day care, parental day care and so on. There are also some facilities such as information center for families, open space for parents, toy museum for kids and so on. Looking at the child care providers, the private sector and the associative sector are growing instead of the public sector. What are the factors of this change? How shall this change influence on the quality of ECEC system? This paper deals with the experience of sufferings under the authority.

From Field To Theory and Back – The Biographical (re-) Construction Of An Unconventional Family Through A Multi-Variant Range Of Data

By use of the case-related reconstructive method, I will show how various types of data can be integrated in the research process. The topic of interest is an unconventional family, whereby unconventional means the absence of the biological parents. Instead of the conventional family structure, the parental role is fulfilled by a homosexual female couple, who realised their wish for children with the help of a sperm donation. The central method of data collection is the family-historical interview as a core component of the ethnographical access to the family. From that, other methods of data collection have been used to ensure that every case is incorporated in the analysis from various angles. This approach is based on the following principle: case reconstructions are not fulfilled in their entirety if only the transcribed interviews of the family history are considered. The set of data also consists of observational data (e.g., the constitution of interactions within the context of welcoming gestures, the seating arrangements, door bell nameplates), but also family indicative documents such as family photographs. Furthermore, data is obtained concerning the family of origin and the life course. This data is collected in a genogram, which is sort of a genealogical tree displaying the family or a generational context. This approach is the investigation of the “biography as a life context of the milieu” (Richard Grathoff). The aim is to explain biographical constructs, which are limitedly accessible to the own reflection, as an act of negotiation with the family of origin. However, case-reconstructions serve as a basis for theory development. The aim is to overcome the description of the related case, I will also discuss in my lecture the interpretation of the results in the context of theory development.

**Network Diversity and Educational Inequality: A Case Study Of China**

Following the line of James Coleman, this paper focuses on how network diversity influences educational inequality. Social capital is positively related to one’s academic performance. One way to gain more social capital is having a diverse social network as we can access to various kinds of social capital from network within the community. Disadvantaged groups tend to have a less diverse social network. However, if students from a disadvantaged group have a less diverse educational support network, then why would some of them still be able to achieve academic success, such as attending an elite university? This study examines the case of students from both disadvantaged and advantaged groups in China as an example to answer the above question.

In the summer of 2008, we conducted in-depth interviews with 30 undergraduate students from two of the most prestigious universities in China – Peking University and Tsinghua University. Twenty were rural students, and the other 10 urban. By comparing the educational support networks of these two groups we discovered that the educational support network of rural students is generally larger than that of urban students. This is because rural students face more barriers than urban students and their network members are less able to provide them with resources, so they need more supporters than urban students in their journey to elite colleges. This indicates that rural students cannot get enough help from the state and therefore have to rely on their own resources to achieve academic mobility.

**Nervous System: Media, Communications and the Fight for the City**

As community confronts the specter of austerity budgets, growing inequality and a diminishing public sector, the question that organizers encounter is how to shift from multiple autonomous movements in a city to one movement for the city. This paper details and analyzes the role of media and communications in the process of developing a united front of people and organizations fighting for urban social change. Specifically, we look at the practices of the Media Communications in the process of developing a united front of people and organizations fighting for urban social change. This data is collected in a genogram, which is sort of a genealogical tree displaying the family or a generational context. This approach is the investigation of the “biography as a life context of the milieu” (Richard Grathoff). The aim is to explain biographical constructs, which are limitedly accessible to the own reflection, as an act of negotiation with the family of origin. However, case-reconstructions serve as a basis for theory development. The aim is to overcome the description of the related case, I will also discuss in my lecture the interpretation of the results in the context of theory development.
In this paper we use the concept of the nervous system to analyze the manner through which media conjures people across the fragmented political topography of the region. In this sense at the core we argue MMP utilizes an independent media and communications infrastructure to collapse isolation between groups throughout the city. The concept of a communications nervous system that serves to build a unified front politics, challenges the long held assumption that media is the arm of an already pre-existing movement, instead showing how through specific media and communication practices (social media, radio, video) new organizational forms and collective identity processes can emerge. In this sense, the paper provides a conceptual framework of how to study and understand the relationship between social movements and media in a contemporary urban setting.

**Return of Religion in the Public Sphere? Comparing the Nordic Countries**

This paper analyses the role of religion in the public sphere in the Nordic countries during the past twenty years. While some scholars have claimed that there is a return of public religion in Western countries, this paper asks if this is a reasonable claim for the five Nordic countries. These countries harbor a combination of common and different features that make for an interesting comparative study. The public sphere is here identified as the state, politics, the media and civil society. The study is based on a wide range of quantitative and qualitative data. The data show a trend towards disestablishment, with the exception of Denmark and Iceland. Although religion is not a major issue among the political parties, it is more debated in the parliaments, except in Sweden. The media do not seem to center more on religion than before. Finally, religious communities seem to deal with the growing diversity by engaging with current political issues and dialogue initiatives. This study indicate that religion has had more of a continued role in the public sphere with a higher probability of a subsequent birth and a shorter birth interval if they associate with other media such as television or radio. In this sense at the core we argue MMP utilizes an independent media and communications infrastructure to collapse isolation between groups throughout the city. The concept of a communications nervous system that serves to build a unified front politics, challenges the long held assumption that media is the arm of an already pre-existing movement, instead showing how through specific media and communication practices (social media, radio, video) new organizational forms and collective identity processes can emerge. In this sense, the paper provides a conceptual framework of how to study and understand the relationship between social movements and media in a contemporary urban setting.

**A Socially Value to Support and Rehabilitate the Elderly**

What meaning of punishment the elderly offenders, it is the only to pay for crime of them? I think that there is the socially value of support, them in the criminal policy on aged societies. From social work practice I have presented to the crime of them? I think that there is the socially value of support of them, in the public sphere in the Nordic countries, although it is changing, most notably in Sweden, followed by Denmark, and Norway, and the least in Finland and Iceland.

This study explores how market order emerges in Japanese closed auction markets for antiques and secondhand goods. Most auction markets for antiques and secondhand goods are exclusive to dealers in Japan. The Antique Business Act (Kobutsu Eigo Ho) states that participants in auction markets must have a secondhand goods dealer license. Participants also need to obtain a reference from an existing member to enter the markets. Dealers belong to auction markets and associate with other members. In contrast, top buyers who have significant influence in the markets. They make great efforts to attract dealers and goods to the markets. Participants accept their authority because they know that the markets do not function without their contributions. Although their influence will distort market competition, the hierarchical structure ensures orderly function in markets.

**Youth Justice Programs in New York City**

Youth justice programs have been part of the fabric of urban landscapes since Civil Rights. During the 1960s and 70s such programs were explicit in helping young people, particularly young people of color, fight oppression and participate in democratic processes. Today, some argue that the sociopolitical aims of such programs are falling by the wayside due to the focus on “youth development” which emphasizes the growth of individual young people, rather than the growth and health of urban communities (Ginwright & Cammarota, 2002). Not only can we not expect young people to lead healthy, productive lives when growing up under abhorrent conditions, we believe young people can be a part of the solution for transforming their environments. Youth justice programs engage young people as active agents of change in their own lives. While the outcomes of youth justice programs have been examined (e.g., Austria, 2006; Ginwright and Cammarota, 2002; Hill, 2004), there has been a lack of analyses of the processes critical to determining how they work, how they are implemented, or why such processes are effective. The purpose of this research was to examine such processes by examining how youth workers conceptualize the inequities facing urban youth today and how those perceptions translate into practice (e.g., into methods for engaging young people in social justice). We wanted to understand the key inequities youth identify as critical in the lives of urban youth and how young people are engaged in understanding and responding to such inequities (what processes are used). We interviewed key staff from youth justice programs in the Northeast of the United States in order to obtain rich qualitative data for addressing the research questions.

**Probability and Timing of Having a Second Child in Japan: Does Gender and Characteristics of the First-Born Matter?**

This study examines whether gender and characteristics of the first-born child predict the probability and timing of a second birth among Japanese parents. I examine two explanations. Daughter preference has become common among Japanese couples since the mid-1980s (National Institute of Population and Social Security Research, 2011). In Japan 69% of couples have first linkages and 10% of them were to have only one child. Past research reveals that having a child of the unwanted gender is associated with a higher probability of a subsequent birth and a shorter birth interval if they choose to have an additional child (e.g., Larson et al., 1998). Therefore, given wide-
spread daughter preference, I investigate whether Japanese parents with a first-born son tend to not only have a second child but also have one sooner. Previous research shows that having a first child with socioemotional and behavioral traits that make parenting easier is associated with a second birth (e.g. Jokela, 2010). It is commonly known that young male children are more difficult to raise than females because they are more prone to illness and injury. Also, boys are considered more physically active and require parental attention. Then, parents with a first-born son may rather hesitate to transition to a second birth or postpone having another child.

Using the Longitudinal Survey of Newborns in the 21st Century, a nationally representative survey of children born in 2001 in Japan, I explore the above explanations. I use Cox regression to model the hazard of progression to a second birth among parents of first-born children surveyed. I especially focus on how gender of the first-born child and measures of parenting difficulty (i.e. occurrence of illness/injuries/accidents, perceived parenting burden/anxiety) as well as other characteristics affect parity progression. Interactions between gender and parenting difficulty on parity progression will also be considered.

Child Trafficking in the EU

The paper presents findings from an empirical study of the trafficking of Roma children into the UK, involving the establishment of the first EU wide police joint investigative team (JIT) to investigate the illegal movement of humans in Europe. The paper draws on 12 months of UK-based research and four research visits to Romania and Bulgaria yielding more that 100 hours of interview data collected from interviews with senior actors within policing and justice agencies, Roma advocacy NGOs, and child protection organisations in the UK, Romania and Bulgaria. This dispute paper interrogates the problems of policing and protecting marginalised populations across different jurisdictions and how vulnerabilities are exacerbated by the diverse and often conflicting remits of the various agencies involved. The paper discusses how the impact of structural issues such as poverty and exclusion, and the resulting conflation of the criminalisation and victimisation of the Roma, has not only limited the effectiveness of available responses to child trafficking, but also served to aggravate the increasingly adverse conditions faced by ‘Europe’s favourite scapegoat’. The paper additionally seeks to progress a theoretical space by linking such analysis to sociologies of mobility, marginalisation and the pluralised rendering of criminalised and victimised ‘others’. Key here are the myriad ways in which (national and organisational) borders are imagined, governed and responded to by diverse groups of criminals, victims, criminal justice and social services agencies.

Security, Surveillance and Space: Contested Topologies of Anticipatory Urban Counter-Terrorist Surveillance

Drawing on data generated from ethnographic research and two years of interviews with counter-terrorism practitioners this paper analyses practices and arrangements of domestic security surveillance operations in two empirical case studies: the London Olympic security programme and, also, urban counter-terrorist surveillance measures in a British city. Particular emphasis is placed on the anticipatory turn in security practice and how collapsing distinctions between internal and external security draw multiple new actors and agencies into the dispute of counter-terrorism and attendant surveillance practices. With them come diverse practices, orthodoxy, values, techniques, weightings of risk and ambitions for security and surveillance. The paper argues that topological approaches informed by Foucauldian notions of ‘security’ (2007) and biopolitics (2008) provide particular utility for understanding of these heterogeneous configurations, techniques and practice of surveillance. Such approaches not only provide conceptual tools to articulate the diversity, plurality, conflict and cohesion within CT practice but, also, capture how power simultaneously operates at different scales and for varying (sometimes competing) purposes. Moreover, the paper argues that such conceptualisations of security represent a move beyond territorial control to the management of circulations, where subjects are left in situ, but their mobilities are monitored, delineated and assessed and, ultimately, reclaim elements of Foucauldian surveillance-focused debate from the shadow of panoptic analyses.

Parental Leave Policies in the French Work Family Regime: Innovative Formulation, Disappearing Implementation

Theoretically, this proposal hinges its analysis around the concept of Work Family Regime - which at the same time draws from the knowledge acquired from large European comparative studies and from those which come from the feministic critique of these works. It then makes a study of the French Work Family Regime through family policies and, in particular, the formulation and implementation of parental leave.

Francoise has formulated parental leave that is neutral and very innovative in its formulation but which does not fundamentally question, in its implementation, the unequal position of men and women in employment and within the family. Consequently, despite the fact it is very innovative and well founded from the point of view of a better hinge point between Family and Work, the use of the device remains almost exclusively female, puts the employment of women at a disadvantage and reinforces gender inequalities. The world economic crisis, by making available employment and the means of the social investment more scarce, has only reinforced such a dynamic.

In fact, the real sociological question is less to understand how the crisis is putting the brakes on (or even destroying) acquired experience in terms of reconciling working life/family life than to measure the growing discrepancies between social practices and normative frameworks that cause dysfunction and inconsistency phenomena within most contemporary societies. The discrepancy between standards and practices are reinforced against three contradictory phenomena: one that refers to the process of homogenising employment ratios between men and women; a second that refers to the permanence of a sexual allocation of productive and reproductive activities (sexual division of social activities); and a third which expresses the desire of women and men to be able to be reconciled without wearing down their working life and their family life.

Further Development in Study of Dispute Patterns in Central Eastern Europe

As the research on dispute patterns in popular legal culture in Poland is developing the further research results are presented. The 2013 results of field interviews in bi-ethnic area will be presented checking the hypothesized similarity of disputing patterns amongst Polish and Ukrainian population in Poland as well as the initial 2014 data on large urban population in Eastern Ukraine as compared with Polish population in Poland. The reasoning behind is that though different in their identity the two societies had enough similar past that they should display the same basic features as to the willingness to dispute, use courts or to settle disputes informally. The methodology of further study concerning the use of courts within such comparison will be presented. Variety of types of disputes is under study ranging from traffic disputes through business disputes to family disputes.

Gender Inequality: Work and Family Conflict in Contemporary Japan

The number of dual-earner households has increased during the last several decades in Japan. Nevertheless, women still perform most of the housework, despite being employed full time. The issue of work and family conflict—particularly for female workers—has drawn the attention of policy makers, because it has often been associated with the issues of low marriage and fertility rates. Thus, in order to create family-friendly work environment, many Japanese companies have recently begun implementing policies such as overtime work restriction for employees with young children, enhancement of employees’ discretion over the pace and schedule of work, and introduction of various work-life balance measures. On one hand, these policies are expected to facilitate the continuous employment of women. On the other hand, their effects on household management—how spouses divide housework and communication with each other—are uncertain, because these policies are often created taking into account women’s responsibilities at home and aim to reduce women’s work and family conflict. Gender biases may affect the way spouses divide the housework and communicate with each other. This paper examines the impact of family-friendly work environment on (1) the division of housework between spouses and (2) the frequency of communication (conversation and having meals together) between spouses. The Japanese Life Course Panel Survey (LPS), a national longitudinal survey of the youth and middle-aged in Japan (i.e., individuals from 20 to 40 years old), was used in this research.

'De-Pharmaceuticalizing' Sleep? Patient and Professional Perspective on Prescription Hypnotics in UK Primary Care

In this paper we look at UK General Practitioners' (GPs) views of prescribing hypnotics in primary care and compare and contrast these with patient perspectives and experiences, in the context of debates about the (de)pharmaceuticalisation of sleep. Data are qualitative in nature, drawn from focus groups with chronic users of sleeping pills and semi-structured interviews with GPs.

We examine the degree to which views of patients with respect to both aetiology of their sleep problem and prescription of pharmaceuticals converge or diverge with medical discourses on these matters. We discuss the role of so-called 'lay expertise' in the therapeutic management of sleep problems, the perceived value of pharmaceuticals, and the importance of building mutual trust between doctors and patients in the medical encounter.

We argue that in practice, medical views on the value of hypnotics, beliefs about 'deserving' and 'undeserving' patients and corresponding prescribing practices have permeable borders which regularly break down the partitions between these categories, turning GPs into reluctant prescribers of sleeping pills. In the doctor's view, the recognition of lay expertise is thought to enrich medical encounters, give patients a voice of their own and increased responsibility for their healthcare practices. From the patients' perspective, enacting the identity of 'informed patient' is not straightforward or easily accomplished. In this study the boundary between medical expert and patient was still fairly robust. The patient perspective emphasizes a split between lay and expert views on the value of pharmaceuticals and, the importance of building mutual trust between doctors and patients in the medical encounter.

As religious institutions and practices continue to decline in Japan, a number of young men and women have begun traveling long distances to gather at shrines, temples, and other holy sites. In groups or alone, these pilgrims pay respects at holy altars and purchase votive tablets, protective charms, and other religious paraphernalia that have long marked religious consumption practices in Japan. At first, it seems this trend is to be a reversal of the processes of secularization that have intensified around the world under the forces of modernization and late capitalism. However, what draws these individuals is not the charisma of the gods enshrined at these sites, but rather the charisma of fictional characters who inhabit the fantasy worlds of particular manga and anime stories which take these actual holy sites as their settings. These subcultural pilgrims are part of a community of fans who pursue a multi-dimensional connection with two-dimensional, fictional storyworlds. While some scholars view this as the further commercialization and secularization of 'traditional' religio-cultural practices, these practices reveal how broader cultural forms – i.e., religion and the popular culture forms of anime/manga – in fact share overlapping cultural idioms of individual effort, charismatic devotion, practical reciprocity, and contingent sociality. In this paper, I analyze the kinds of personal attraction and interpersonal relations formed through participation in subcultural pilgrimages. I suggest that 'anime pilgrimage' reveals how religious and secular practices in Japan are neither mutually distinct in a Kantian sense nor dialectically progressive in a Hegelian sense, but rather reciprocally shaped through cultural modes of both ethical sociability and self-advancement. This further calls into question conventional views of distinctions between 'traditional' and 'popular' cultural forms by revealing how new technologies and pop culture media can be reshaped into augmenting and intensifying previous cultural practices of pilgrimage, self-advancement, and sociology.

High, Lonesome, and Sociotechnical: The Corporealization of American Bluegrass Music in Japan

In August 2013, the Takarazuka Bluegrass Festival in Japan marked its 42nd year, making it the world's second-longest running bluegrass festival. That bluegrass – a quintessentially American popular folk music from the poverty-stricken, rural backwoods of the Southeastern United States – has found such solid purchase in Japan is noteworthy. The continuities and reconfigurations that have marked bluegrass's transplantation into Japan speak to larger questions of how and why explicitly rural, volkisch traditions are not only invented but also translated into foreign contexts within the larger process of modern nation/state formations.

But while bluegrass and American folk music more generally have been studied to varying degrees as markers of (transnational) sociohistorical transformation, the embodied, sociotechnical quality of bluegrass music – and indeed of music – has garnered less attention. A key but understudied component in the performance and consumption of bluegrass, in both America and Japan, is its corporeality – the ways in which human bodies instantiate the ideas, identities, relationships and values assigned through bluegrass music to the actors, human and material, who comprise its sociohistorical cosmos. Central to this analysis is the examination not only of the work of human bodies, but also of the agentive work of non-human actors – specifically, the acoustic instruments whose material qualities work recursively with human agents to produce specific physical attitudes, interactions, and limitations.

In this paper, I show how the embodiment of bluegrass music in Japan offers insights into the sociotechnical transformation of national music-making, and, in particular, the micro-analysis of bodily practice with transnational and transregional movements of goods and ideas. Using ethnographic and historical data and the sociotechnical insights of Bruno Latour and others, I argue that Japanese bluegrass allows performers and consumers to engage explicitly with questions of cultural identity through intimately embodied and networked practices.

Israel Case Study: Israeli “Social Justice” Protests

This paper focuses on complex interactions involving offline and online activists, new and mainstream media audiences, during the Israeli “Social Justice” peaceful protests (“July 14th” – October 2011); based, amongst others, on theoretical frameworks as social agency (Bourdieu, 1998), media political economy (Couldry, 2010; Mosco, 2009), new media and social change (Downing, 2001; Castells, 2000). By following numerous workers‘ union strikes in 2011, Israeli citizens desperate of welfare state deterioration, began comprehending the harsh neo-liberal economy mechanisms, and became very angry. On June 14th 2011, Ynet (a popular online news-media) continuously covered a Facebook call by young orthodox Israelis, to boycott cottage cheese, a popular basic food, and Facebook quickly gained 100,000 followers (Levin, 2012), who also monitored supermarket prices. A month later, the young film editor, Daphni Leef, opened a Facebook call for

* denotes a presenting author. Abstracts are organized by first presenting author's last name.

297
her friends to join a tent protest in Tel-Aviv on “14July”, an initiative that spread throughout Israel with even families and elderly people joining demonstrations, marches and gatherings. Some 800,000 protesters -10% of the Israeli population (nearly 8 million) - comparatively the highest number, even internationally, participated in civilian demonstrations (Schechter, 2012). Public support was 91% (July 2011 Pew Ind., Israel mainstream media - printed, online and electronic - supported the protests, opening live studios on main TV channels (participant observation; Schechter, 2012).

Research questions seek the modes and reciprocal relationships between activists, journalists, new and mainstream media audiences; through a combined methodology; offline and online ethnography and netnography; in-depth interviews with activists and journalists; and quantitative and qualitative text analyses.

The Great Recession Washes Across the Desert: A Study of Neighborhood Organizational Resources and Social Disorganization in the Phoenix-Mesa Urbanized Area

The Great Recession (2008-09) impacted urban communities in the U.S. in many different ways. This paper focuses on the role of organizational resources in mitigating the impact of the recession on one metropolitan community, the Phoenix-Mesa urbanized area. Our research questions are: did areas' organizational resources mediate the effect of the Great Recession on neighborhood outcomes? From Wilson (1987), Small and McDermott (2006), and our own research we know that some neighborhoods in the metropolitan area have considerably more organizational resources than others. Logan (2012) labels this spatial inequality. Our hypothesis is that areas that had more organizational resources prior to the recession were better able to cope with the crisis than areas with fewer resources (Sampson, 2012). These intermediate structures enabled communities to absorb the shock and stay intact. People could turn to neighborhood establishments for social services, amenities, health care, religious support, and social support. The counter-argument is that this recession was so severe that it destroyed organizational resources that gave some areas advantages over others. The economic crisis not only undermined the capabilities of the household sector, it also destroyed establishments. It was truly an economic tsunami.

The units of analysis are 943 census tracts in the Phoenix-Mesa urbanized area and we use spatial econometric models. We examine data for 2003, 2007, 2008, and 2009 from the U.S. Census, Dun and Bradstreet, the Urban Institute, and phone directories. These data are collected and geocoded. The dependent variable is a composite measure of social disorganization: crime (homicides), poverty rates, school dropout rates, and overweight births. The mediating variables are the number of youth serving organizations, schools, congregations, membership clubs, parks, and health care facilities in the census tracts. The independent variables are housing values, unemployment rates, and population change. Finally, we control for racial/ethnic composition and socioeconomic characteristics.

The Spatial Capital of Urban and Suburban Families: The Effects of Place on Children’s Activities and Parental Satisfaction

Families' life chances are affected by where they live as well as by their financial, social, and cultural capital. That’s because their residence affects the likelihood of accessing organizational resources (Wilson, 1987). The latter include employment, education, health care, and food as well as entertainment, religion, and culture. Logan (2012) characterized this “unequal access or exposure by different population groups” spatial inequality.

The concept of spatial capital reconceptualizes spatial inequality in network terms and sheds light on how an area’s transportation network can reduce/enhance spatial inequality. This concept focuses attention on the different abilities of households to access diverse elements in the context of the urban design (Mason, 2010). Families’ access to organizational resources is measured using network analytic techniques, i.e., how many supermarkets, doctors’ offices, parks, schools, sports clubs, etc. can families reach through the transportation grid in a reasonable amount of time. This will depend on how transportation networks are designed, where establishments are located in the network, the family’s location, and the family’s transportation and communication technologies, e.g., cars, bikes, smart phones, GPS devices, etc.

We use data from surveys of families in 2003 and 2013 in the Phoenix-Mesa urbanized area and spatial data that we collected on a variety of establishments that provide services and activities for children for these same years. We hypothesize that availability of families using and evaluating establishments that their children patronize will be function of how many establishments are accessible to them through the transportation network. The more choices a family has, the more likely they will take advantage of them and the happier they will be. We test the data using various analytical models where we model the likelihood of families’ use of different establishments and their satisfaction using areal data to define the set of establishments accessible to them.

GALBRAITH, PATRICK W.* (Duke University, pwg2@duke.edu)

The Politics of Research on ‘popular’ Culture in Japan

At the beginning of the new millennium, Japan, then still the second largest economy in the world, was suffering from a decade of recession and watching as geopolitical interests shifted to east Asian neighbors. At the same time, Japanese games, cartoons and comics were circulating around the world, and business and government leaders rushed to support the creative industries. The subsequent strategy to win the hearts and minds of the youth of the world through mega-popular franchises such as Pokemon was dubbed “Cool Japan.” While the success of this strategy has been widely debated, and drawn its share of criticism, in June 2013, Japan’s Upper House sent out a statement that they were redoubling their Cool Japan efforts, giving the go ahead to the Ministry of Economy, Trade and Industry to earmark ¥50 billion for promoting the cause over the next 20 years. With Tokyo gearing up to host the Olympics in 2020, many expect the charm offensive to continue.

However, with increasing interest and investment in branded popular culture, local geek subculture has become an issue of national concern. What is “cool” about Japan, and who decides? How do gamers, comic-book nerds and animation aficionados fit into that image? Is it cool to include such people in projects focused on “Japan”? What sort of research is acceptable, popular and cool within this paradigm? What research is “uncool”? What is the role of the Japan researcher in negotiating all of this during a “crisis” in the field, which is to say declining opportunities for funding and employment? This paper seeks to unpack the politics of popular culture in Japan through the case study of Akihabara, an area in Tokyo that some think is geeky and gross, and others position at the center of Cool Japan.

Missing Bodies? the Visual Landscape of Home and Its Meanings to Solo-Living People

Not only presence of other bodies, but also the absence of bodies of others has a significant effect on the contemporary experience of domesticity and belonging. In her classical study on home as a tyranny, anthropologist Mary Douglas (1991) addresses solo-living only once, mentioning that conflict between persons is just transformed into conflict of wants within one person. In that sense, the normativity of home in terms of routines created via the relations of its various members is produced by the single member who has to discipline him- or herself. Goffmann-esque “backstage” of home becomes a highly important “onstage” via internalized social norms or aesthetics. In our research we focused on home-centred and home-generating practices performed by the occupants themselves, or between the occupants and the materiality of their dwellings and other non-human players (e.g. things, animals). In this paper, we will present the photo essay based on both 1) visual diaries, where photographs and texts were taken and written by participating dwellers focusing on mundane routines and everyday situations (of “doing nothing”) as well as on the moments of significant ruptures and changes, and 2) on visual material collected by participating researchers during the research events using go-along ethnography in the dwellings. Both are then interpreted in relation to other written or oral narratives produced within different phases of the research project aiming at understanding how the meaning of home is constructed by solo-living men and women, which practices they use to create, maintain, experience and imagine their homes in space and time, and how they position themselves within wider social networks, family and society. We are seeking for more fluid, open and empirically grounded concept of home based not on essentialist and normativity, but rather on performativity and it’s becoming-into-being through active bodies, dynamic meanings and mundane aesthetics.

The Perception of Leisure By Grandparents in the Era of Active Ageing: Conflicting or Complementary Roles?

Family, education and work in later life, care for grandchildren as well as the imperative of “active” and “healthy” ageing are framing and structuring the everyday life and decisions of the Czech ageing population. The paper aims to bring new insights into the problem of the role overload, i.e., “the stress generated within a person who cannot comply or has difficulty complying with the expectations of a role or a set of roles” (Burr 1973 in Lee 1988: 776). Based on triangulation of quantitative (representative survey) and qualitative (open-ended in-depth interviews) data generated within the research project “Role overload: grandparents in the era of active ageing”, the perception of various and dynamic roles performed will be examined, focusing, for the purpose of this paper, mainly on the perception of leisure time and leisure activities in the context of the interpretation and experience of other role expectations and role performances. We perceive leisure as a specific integrating field in which the particular roles may be perceived both as complementary as well as conflicting, depending on the self-positioning, available resources and the interpretation of the grandparent’s role itself by the grandparents as well as by other relatives and members of relevant social networks. The attention, then, will be paid to the ways how the possible challenging intersection of these different levels are coped with and actively shaped and lived.

Knowing the Body and Embodying Knowledge - the Practice of Complementary and Alternative Medicine

Bringing together findings from several empirical studies I have conducted over ten years with students, practitioners and teachers of complementary and alternative medicine (CAM), I will define and illustrate the concept of ‘embodied knowledge’. I will argue that the concept has significant implications for practice and scholarship in the field of health care research, and give specific consideration to issues of spatial/bodily boundaries and timescales in practice.

While health professionals of all types have been traditionally been viewed as (more or less) credible brokers of knowledge about the human body in health and illness, the embodiment of the practitioner him/herself is an important counter-balance to the focus on the knowledge of the bodies of ‘others’. The philosophies of different CAM approaches are enacted in day-to-day practice within their social context, with an impact not only on the recipients of CAM treatments but also on those delivering them. The bodies on both sides of the CAM therapeutic encounter are often not primarily constructed as medical bodies; they may be ‘energetic’, ‘emotional’, or ‘spiritual’ bodies. The ‘disease’ of biomedical becomes instead framed as ‘dis-ease’, an imbalance or disturbance of energy. In these models, biomedical timescales and spatial/bodily boundaries are not necessarily relevant. Touch can be ‘energetic’ rather than physical, and the focus of the subjective temporal illness, what that experience can be crafted during the clinical encounter into body-stories (Gale 2011) that actively integrate personal, lay, medical and CAM concepts of aetiology and healing.

I will present an overview of the embodied pedagogies in practitioner training, the challenges of making the transition from training to professional practice and the embodied experiences and practices of being an established and expert practitioner. I will argue that the concept of ‘embodied knowledge’ is vital to our understanding of the knowledge base of healing practices internationally.

Post-Nationalism or Transformative Transnationalism: Beyond Cosmopolitanism and Narratives of Change Across Borders Among Australian Students and Volunteers in India

This paper is a case study on the possibilities of personal transformation through transnational experiences based on the narratives of Australian students and volunteers working in India. It examines the possibilities of change through transnational experiences with a focus on Australia young people and their experiences of India and challenges to commonly held ideas and understandings of the Other. The research is based on a methodology of participants telling personal stories of experiences across national borders. The paper contrasts the many different narratives exploring what contributes to a transformative experience and the circumstances that contribute to what can be identified as post-nationalist, or an ethic of transnationalism. The paper is part of a project supported by the Australia India Council that focuses on the relationship between Australia and India through Australians involved in aid and development projects in India. The project particularly focuses non-Government aid organizations and Australian students and volunteers who have been visiting and working as volunteers in India over the past 25 years.

National Educational Systems and Academic Profession: Portuguese and Spanish Cases

The transformation by which the universities are faced now is a global phenomenon that is affecting all regions on the globe. This has led some states to unite in regional blocs to seek strategic responses to position themselves favourably in the global context increasingly competitive. In Europe there is an ongoing process of construction of the European Higher Education Space. In this regard, national political agendas are heavily influenced by what Dale’s calls globally structured agenda for education. Despite identifying processes of convergence in national policies at the time of legislating there is a hybridization of the education agendas in higher education.

Assuming that the impact of political reform are felt and asked differently by social actors in two countries (Portugal and Spain) with consequences in demands on professional competences of professoriate and with the guidance methodological perspective of comparative education, this proposal aims to examine how the European guidelines for the Construction of a European Area of Education, firstly legislated by national governments, produce changes in the what is a professor in the context of economic knowledge societies and thereby assess the importance of the national state in the process of recontextualization of these policies.

The Invisible Spring*: Internet and Political Practices in Colombian and Brazilian Mobilization

When it comes to social movements like the ‘Arab Spring’. Occupy Wall Street and the Indignados in Spain, there is widespread uncertainty about the extent of their international dimensions. But we do know that these movements penetrated borders to gain support from other contexts, where the use of internet and social networks (especially Facebook) involved the configuration of a particular mode of protest and mobilization. What is the relationship between these events and the mobilizations in other contexts?

Two cases concern us: the MANE (Mesa Amplia Nacional Estudiantil) in Colombia, which deployed an unprecedented student movement in the last 40 years of national history, whose founding charter explicitly refers to the events in Tunisia, Egypt, Spain and ACAMPA SAMPA OCUPA SAMPA from the Occupy movement in Sao Paulo, born of the global call to install camps in different cities in October 2011.

This paper shows, in a transnational perspective, how the emergence of new forms of communication in the Latin American context involves a reconfiguration of political action and denotes a new politicity process. The « Invisible Spring » is the metaphor of the origin and deployment of the new movements, their actions against invisibility, and the new online collective actions and protest mobilizations.

This paper will expose the invisibility notion concerning three dimensions: the international mass media, the political character of these mobilizations, and the connections between these movements and the three international movements (Arab Spring, Indignados, and Occupy). The analysis concerning the Latin American cases presents two focis: the motivations and discourses and the actions and organisational forms.

Overall, the Framework is a PhD research project oriented to analyse the transformations of political practices of the young people in Latin America through the use of Internet (Colombia and Brazil cases). This paper can be presented in spanish.

Post-Nationalism or Transformative Transnationalism: Beyond Cosmopolitanism and Narratives of Change Across Borders Among Australian Students and Volunteers in India

Human Well-Being in a Media Multitasking Environment

The paper discusses the relationship between media multitasking (MM) and human well-being.

Media multitasking (MM) is changing the way people think, talk, learn, socialize and view the world. MM has both cognitive and behavioral consequences on human beings. On the one hand, it drains the brain altering memory, linguistic ability, and learning process and, also, overwhelming humans with a huge amount of potential information, it can lead them to a feeling of being paralyzed and unable to make decisions. On the other hand, being pervasive in people’s lives, MM shapes their social interactions creating new “social aliens”, and let them experience a weaker capability of being connected with their own self.

Generation gap makes a big difference in the perception of how profoundly MM is affecting human well-being. And in this respect, in an evolutionary framework, does the “digital immigrant” (M. Prensky) original mould affect human well-being. And in this respect, in an evolutionary framework, does the “digital immigrant” (M. Prensky) original mould affect human well-being.

The paper reviews the literature on the topic, examines the above issues and, based on some empirical results, proposes some perspectives for the future.

Technology and Immortality: The Digital Narration of the Anthropologic Myth of Amorality

Death had always a traditional role on recording differences and inequalities of member of society. The raise of the modern version of the anthropologic myth of Amorality on the hand, and the new digital devices of immortality on the other hand, both realize a contemporary narration of immortality: it points of change, of inequality, but in the same time, the new idea of immortality as well as a narration that holds together the dead and the alive and that stirs by the personal intent (purpose) of the subjects.

The highlights of presentation stressed these points:
- The digital development of amorality on the net: Facebook and other sites.
  - Immortality for everyone:
    - The latest boundaries: the self made immortality and the QR code
  - Short bibliography

The dead and the alive and that to st held by the personal intent (purpose) of the subjects.

Inequality in Intergenerational Closure As a Barrier to Social Capital Formation

Intergenerational closure – a term coined by Coleman (1988) to represent a closed social network of parents and children – is a key marker of social participation, as it serves as a basis for social capital formation. There are no financial barriers to intergenerational closure, so one may have expected to see similar levels across economic and ethnic groups. Yet there may be social barriers, especially in the communities where young children’s friendships formed in school do not necessarily cross over to relationships among their parents. This paper examines economic and ethnic differences in intergenerational closure during the course of first-grade. Data come from a large-scale randomized trial in which SZ schools were randomly assigned to a family engagement program intended to boost social capital of a control group. The schools this research in rev.U.S. is that there seems to be a weak functioning on the part of the communities of care in terms of carrying out their specific functions. It recommends that further studies on ex-offenders, on recidivists and on the communities of care (Gamo, 2007) should be conducted as an addition to the growing literature existing on Prison Sociology.

The Rise of Privatization in Tertiary Education, and Its Implications for Teaching and Research in Universities

Increasing privatization in tertiary education is a world-wide phenomenon. In many countries around the world, developed and developing, this takes the form of an expanding private university sector. In the U.S., expanded privatization occurs in the form of sub-baccalaureate for-profit institutions, on-line degree-granting institutions, and the privatization of many functions in public institutions. What do these changes mean for the future of teaching and research in universities? This paper identifies distinctive forms of privatization and discusses the implications of each. An expanded private sector is likely to increase inequality of access to prestigious universities but does not threaten their standing. Moreover, the net effect of privatization on access depends not only on whether families are able to meet tuition demands, but also on whether privatization leads to a general expansion of the tertiary sector, which could increase access overall. Privatization in the form of on-line institutions and for-profit sub-baccalaureate institutions may challenge the ability of universities to maintain their place, but quality distinctions are likely to override the challenges. Privatization within public institutions

Elections and Territorial Inequalities in Post-Revolutionary Tunisia

Elections and territorial inequalities in post-revolutionary Tunisia By giving a comfortable advance to the Islamist party of Ennahda (around 37% of the votes), the first free elections of independent Tunisia on the October 23, 2011 have taken by surprise most observers. In this paper, we identify the social and socio-territorial bases of major Tunisian parties through combining quantitative analyses at different scales and field surveys in specific localities. While most interpretations have focused on the cultural modernist vs. conservative argument, hence obscuring the class cleavage, our analyses highlight very differentiated socio-territorial electoral bases for the main parties and indicate deep social differences in voting behavior between peripheral and core areas, as well as within cities. While allowing for a better interpretation of electoral results, our analyses also provide tools to understand possible evolutions within the Tunisian political space.

Key Words: election, democracy, Tunisia, socioeconomic inequalities

The Reputation Economy: Knowledge Workers and Freelance Networks

A decade after Richard Florida's 'creative class' manifesto we are now confronted to labour markets in the knowledge economy where professionals are increasingly independent and networked. The project-based and freelance nature of contemporary knowledge work enhances the necessity of constructing a solid reputation within a professional network, which appears to be a determinant element to build successful careers. This combines with the use of social media for professional purposes and the increasing importance of digital marketplaces where reputations become visible and, under certain conditions, potentially measurable.

Based on a doctoral research combining mixed methods within an ethnographic approach, this contribution dwells upon the networked dynamics of creative labour across both offline and online environments, to discuss the existence of a Reputation Economy whereby reputation management becomes the determining element for the professional success of networked knowledge workers. This has implications at the level of subjectivity and hybridization of skills within highly fragmented labour markets.

Placemaking: Inequality By Accident or By Design

Placemaking: Inequality By Accident or By Design

This paper seeks to extend the literature on the neighborhood effect by examining the myriad ways through which surveillance of the past, present and future in the service of urban planning works to reproduce different types of inequality through cumulative disadvantage. We understand the "neighborhood effect" in terms of the association between poverty and disadvantage and spatially located and colloquially named places within cities. The tensions between socio-structural, cultural and individualistic explanations for the scope and stability of these correlations are described before an analytical approach that combines all three is presented.

A key focus in this analytical strategy is the role being played by geographic information systems (GIS) in the development of plans for the transformation of urban spaces. It begins by reviewing patterns of growth in the spread of GIS information systems (GIS) in the development of plans for the transformation of urban spaces.
The mother India notion of downtrodden women of India, helpless, exploited by men, worn to and early death; and the exotic sensuous women of the orient, who make maharajahs happy with their beauty and talent, are somehow in the picture too.

Indian women of dignity, charm, simple beauty in all classes-form women in the village, middle class women in the cities, government women in New Delhi-who were neither helpless and downtrodden nor absorbed in erotic gratification. Of pampered husbands. Some of these intelligent and still graceful, feminine women were in legislatures, some were running others sector.

Mother India, a mother culture, goddess worship, and in a general cultural veneration of the feminine. The study of the Morden societies the Hindu women problem indentified. The major source of data for the study is descriptive material from ten Indian informants, women graduate student in university coming from educated, urban and middle and upper-class backgrounds, representing various geographical areas.

Literary sources include translations of original Indian literature. The research paper focus if discussion of the Hindu women problem connected with the single women, older women, widow, divorce, mixed marriages, and friendship live-in-relation and NRI friendships etc. Most of these problems are related to the Morden age and its impact of traditional patterns.

Some of the problems involved in modern Indian womanhood. Except for widowedhood, they are related to changing times and the impact of the globalisation.

The Role of NGOs in (de-)Constructing ‘Flight’ Migration at the Mediterranean Borders
Since its inception of the 1985 Schengen Agreement, internal borders within the Schengen space have been abolished. No doubt that this has bolstered the freedom of human mobility within the Schengen borers, which went hand in hand with the southbound, and more recently eastbound, EU enlargement. Observers speak of transnational mobility, commuter/shuttle migration, moving away from the presumed linear nature of migration in the study of immigration. But this is just one part of the European migration landscape: the mobility to the southeastern and southern external borders seems no less vibrant yet the entry into these has become severely hardened owing to the ever tightening border control, as widely reported by the media.

However, we still know very little about what the Mediterranean member states’ migration regimes have in common. Even lesser analyzed is the role of NGOs in supporting these migrants as well as responding to the media coverage about forced flight from Africa and the Middle East. The aim of this paper is threefold: firstly, we shed light on the practices of NGOs in Southern Europe, which went hand in hand with the southbound, and more recently eastbound, EU enlargement. Observers speak of transnational mobility, commuter/shuttle migration, moving away from the presumed linear nature of migration in the study of immigration. But this is just one part of the European migration landscape: the mobility to the southeastern and southern external borders seems no less vibrant yet the entry into these has become severely hardened owing to the ever tightening border control, as widely reported by the media.

Secondly, we explore the role of meso-level social networks among NGOs in not only supporting migrants but also (un-) making flight migration, by contemplating on the question whether the difference between the “forced” and “voluntary” migration is only a theoretical one. Third, we envisage visualizing our findings through Google Earth. This paper draws on interviews with key informants in NGOs and organizations in Southern Europe. The present paper focuses on NGOs in Southern Europe, from a notional and geographical perspective.

Info-Communication Culture, Cultural Crisis, Social Media and New Technologies: The Model “Info-Communication Cultural Management (ICCM)”
New technologies exert strong pressure on traditional cultural organizations and institutions to digitalize their cultural management and administration structures. In economic crisis, some of the most important and widely debated issues in the areas of digitization of cultural policy are administration of cultural organizations and rights of cultural communication (ICL). In order to cope with the recent crisis and to protect cultural policy and cultural management, all countries should collaborate to create and offer a dynamic regulatory mechanism in info-communication globalization. This paper examines and analyses cultural management, social media, new technologies and info-communication culture. It focuses on cultural management, public interest and regulations of digitized cultural products and services. It proposes a new dynamic model for cultural management “Info-Communication Cultural Management (ICCM)” in cultural and economic crisis.

Ongoing Disaster: Fukushima, Complex Technological Systems and Uncertainties

Catastrophes such as that which struck Japan early 2011, as a result of the accident in the Fukushima nuclear power plant, the most serious accident ever in the history of nuclear power plants after Chernobyl, demolish claims to extremely small risk probabilities for complex systems and upend the delicate balance between costs and benefits argued by safety experts. The Fukushima disaster demonstrated that in contemporary societies, vulnerabilities and threats are difficult to locate or predict, being both incalculable and impossible to offset. The natural tsunami that ravaged Japan was also a technological tsunami with ecological, social, economic, and political consequences. The Fukushima disaster may be thought of not just as a disaster for Japan, but for the technological order. Our analysis of the March 11th disaster begins with a simple narrative showing how a natural disaster in a country at the forefront of technological development precipitated an accident in a nuclear power plant that in turn led to a chain of calamities at multiple levels. How did we become constructors of a world with such catastrophic potential? Section two responds by considering how the nuclear threat is played down as a result of the euphoric notion that human vulnerability can gradually be overcome by the increasing ability of science, technology and probability analysis to control and predict events. The final section retrieves the idea of “forsightlessness” as the basis of a political and social approach that can take on not only the uncertainties of the world, but also those generated by technical systems, in order to illuminate our choices and decisions. When faced with calamities and dangers that appear to arise out of the blue but are the outcomes of our technological systems, their interactions, and our dependencies, foresightlessness emerges as a response both rational and virtuous, however difficult.

Fighting Social Injustice in Spanish Cities: Social Innovation Practices Against Housing Evictions As a Response to the Current Housing Crisis

This paper analyses the aftermath of the bursting of the housing bubble in Spain, which has left thousands of families without homes and indebted for life. In the first of two parts we look at contextually specific interactions between state regulation and market-oriented projects in Spain. This country is a salient case in which deregulation and liberalization and a debt crisis follow upon a long period of growth characterized by a housing bubble and a particular urban growth model. In this part we argue that central government has played a key role in framing fiscal incentives for housing ownership, and local and regional administrations have engaged in short-term forms of inter-spatial competition for public and private resources, place marketing and regulatory under-cutting in order to attract investment. In the second part, the paper examines the urban social movement “Platform in support of the evicted” (Plataforma Afectados por la Hipoteca – PAH) that, after starting in Barcelona, has spread to many other cities. The movement has created innovative strategies for housing accessibility and public and private governance in the housing market. These strategies include innovations at the local level and at national and European institutional levels. In this part we argue that social movements like the one we study are socially innovative when they aim at responding to social needs not met by the market and the state institutions. At the same time with their activism they transform the debate in the public sphere while prompting institutions to introduce new governance mechanisms and policies. The paper is the result of a research conducted under the umbrella of the COST Action IS 1102 (European Union RTD Framework Programme) during 2012 and 2013.

The Construction of “US”: The Experience of Love in the Sensible Proximity

According to Norbert Elias, the loving relationship between two people is, at the same time, subjective and objective. It is so because the relationship is related to three different yet overlapped dimensions, namely: the experience of love from the ‘Y’ in relation to another person; the experience generated in the ‘US’ which implies observation and bonding of the loving relation; and the ‘THEM’ experience regarding the observation, experience and bonding of ‘others’ with those who are in the loving relationship.

In the first part of the paper, we will develop the “US” dimension of love relationships in heterosexual couples. The aforementioned dimension implies not only a discursive story, but also a story of experiences. Experience here relates to a mutually created process that involves the existence of two or more embodied psycic systems which “grow old together” (Schutz, 1932) and persistently irritate each other (Luhmann, 1984).

The observation of a particular “US” story is thus made possible through the examination of those conditions that precipitated the “US” in a continuous present which includes social discourse (power, gender, class), relational moulding or what Goffman studied as ‘interaction’, and synarchy between what the mind/bodies create whilst together.

In the second part of the paper, we will observe the “US” dimension through the interaction process (Goffmann, 1983) using a finer level of analysis: sensible proximity (Simmel, 1908). Our starting point is that in interaction with others and specifically in the ‘sensible proximity’, bodies produce Sinn which is mutually interpreted (Sabido, 2012). We will develop this through the example of the loving interactions in a heterosexual couple. The presentation will finish with some examples that illustrate this sensible process.

GARCIA CASTRO, JORGE FRANCISCO* (Universidad de Guadalajara, boll@garcia@hotmail.com)

A Different Path for Public Demands and Their Effects on the Processes of Democratization

En clave de la Teoría de Sistemas de Niklas Luhmann, ésta investigación planta una explicación acerca del proceso mediante el cual la demanda histórica sobre la democratización de medios en México, retomada en mayo de 2012 por el movimiento #YoSoy132, logró instaurarse en la agenda legislativa para su posterior leyificación y aprobar como Reforma de ley en materia de telecomunicaciones en junio de 2013. Esto es: identificar la articulación y evolución de una demanda pública propagada principalmente por Twitter, su consolidación en el ámbito mediático y la evocación a nuevos actores, la formulación de múltiples variantes y su consecuente aprobar e implementación como política pública. Así, la relación e irritación intersistémica que se pone en análisis permite explicar y asociar la operabilidad de diversos sistemas (político, jurídico, mediático, científico, y los movimientos de protesta), en su participación sobre dicha demanda y como fuentes de influencia y de tensión social a lo largo del proceso de decisión del Estado.

Para ello se realiza un estudio longitudinal de corte cualitativo que incorpora principalmente recursos audiovisuales de YouTube, documentos oficiales alojados en internet, y notas de periódicos digitales. De esta manera mediante un análisis documental fundamentado en la Teoría de Sistemas, el estudio permite la observación de la interacción sistémica y sus efectos en el aparato estatal al momento de tomar una decisión de vinculación colectiva.

En este sentido, la hipótesis que rige ésta investigación parte del supuesto de que gracias a la viralización y mediatización de las demandas a través de las redes sociales y de los medios masivos de comunicación, a la participación de actores especializados y a la respuesta de un grueso de la población, se aumentó la presión sobre el Estado lo cual dio paso a un acoplamiento estructural orientado por el cúmulo de irritaciones provenientes de su entorno.

Secularization in Mexico City: a Wrong Paradigm?

The political situation of the world and the complicated relation of the West with Islamic countries have provided evidence that the most significant mistake in the theories of secularization is the conviction that modernization inevitably leads to the loss of the importance of religion. Thus the proposition of Berger (2001) replacing this paradigm with an analysis of the interaction between the forces of the secularization and a counter secularization is pertinent.

In a similar way, it can be said that globalization reminds us that the relationship between religion and politics as established in the Western world, that is to say the passage of the religious to the sphere of the private life, is rather an exception.

Religion in the history of Mexico is a key element in understanding the cultural reality of the country and there exists a collective memory linked to the Catholic Church. However, the first years of this century were an undeniable setback for Catholicism. We can talk about changes in the nature of the religious that opened...
new perspectives for study. In that way studying the study of the process of secularization, its modalities and its particularities, become a pertinent subject.

Likewise, it is suitable to indicate that during the first two decades of this century the paradigm of secularization began to be questioned and the idea of a return of religion or a re-enchantment of the world began to emerge. It is possible to speculate that in large Mexican cities, especially in Mexico City, the process of secularization remains constant only in members of a middle class who can be considered carriers of an international subculture; these are people who have received a Western-style higher education, particularly in the humanities and social sciences.

GARCIA DOS SANTOS, YUMI* (Federal University of Minas Gerais, yumigds@uol.com.br)
Brazilian Long-Term Migrant Women in Japan. Work, Family and Subjectivities

This paper aims to present the first results of research initiated in January 2013 about Brazilian women migrant in Japan. Japan has accepted Brazilians of Japanese filiation and their spouses as labor force for over twenty years. The Brazilian community in Japan remains the third largest foreign community (population of just over 210,000 in 2012) in that country. If studies of the Brazilian community in Japan has concentrated both causation and competitive analysis of gender relations in migration context is still incipient. Women's role in the migration process is often naturalized as complementary to male migration. However, studies of social and historical approach indicate that decisions to emigrate depart often from women, married or single, breaking with the classical view of the history of migrations that has been male centered (Rogerat, 1996; Morokvasic, 2005). Thus, we would like to show women's agency in migration process in Brazilian women's case. What is the objective and the subjective reasons to leave the country? Secondly, once in the country, what are the specific issues that those women face daily as immigrants, in the public and private spheres? How gender arrangement is done in terms of domestic work and child education? How they organize their everyday life as well as their emotional aspects as (foreign) workers, wives and mothers, specially when their residence in the foreign country became durable (contrary to their initial project)? Our analysis will be based mainly on qualitative research conducted with six Brazilian women, of Japanese origin or not, who live in Japan in a long-term period (about twenty years).

GARCIA LANDA, LAURA* (Universidad Nacional Autónoma de México, garlanster@gmail.com)
Academic Language Barriers: Professional Stigma or Recognition and Success?

In the last decades, university language policies have strengthened the use of English for publishing papers, books and articles, even in non-English speaking countries such as Spain and Mexico, for example. This fact has led to a series of academic problems that may place both academics and students at stakes with linguistic and extra-linguistic uses of codes unknown to them and their English teachers. This practice surpasses their real conditions of coping with those matters in a short term period, which triggers ill practices that place them in face threatening situations that later may become a barrier for achieving this institutional goal.

Within this context, English holds the status of the language of academic and professional communication. In this sense, it has become a privileged language in the academic and professional realm, where academic production and activities in other languages are stigmatized. We analyze implicit and explicit language policies in macro and micro school practices where language status places individuals in asymmetric relationships, and see how these agents have become critical or success in the medium term, the analysis of these layoffs and resistances within the context of the world economic and political crisis, from 1968-72/73 to the present, and 3) the long term, the analysis of the 2009 massive layoffs and resistance struggles within the historical crisis of capitalism.

In the short term, I described how union workers and other groups resisted the massive layoffs of 30,000 workers, a policy implemented by the Government in 2009. Typical governmental resistance strategies to eradicate the fiscal deficit, led to an unemployment rate of 16.9% in 2010. Employment rate decreased to 33% in 2011. In the medium term, the massive layoffs and resistance struggles held in 2009 were analyzed in the conjuncture context of the economic, political and social crisis from 1968/1972 to the present (Wallerstein, 2004). Considering the experiences of the people and groups who participated in these resistance struggles, six challenges are discussed for unions and other groups. The potency of these and other groups to become anti-systemic movements is discussed. These movements can contribute to create new principles and politics for work and life. These principles and politics will be discussed supporting a new world system beyond capitalism, the long term temporality presented across the research.
Double Estrangement, Embodying a Reflexive Habitus: The Experience of Minority Group Boys in Three Inner City Primary Schools in Dublin, Ireland

This paper introduces the concept of 'double estrangement' which is based within a somatic Bourdieuian framework and draws from DuBois concept of 'double consciousness' and the work of Abdelmalek Sayad. Drawing on a large qualitative dataset I will argue that migrant group boys in Dublin's north inner city tend to experience their body image with unease, as somewhat problematic 'shameful bodies', through which they suffer from a break with their embodied selves and a disruption of their internal time as they are pushed between habitual reflexive action. The dual elements of 'double estrangement' will be outlined, firstly, it will be contended that visible difference and dispositions of the body mark migrant boys out as not belonging and this provokes a tendency for them to feel constantly on display and judged through their bodies. Secondly, I will argue this has the effect of heightening a boy's self-consciousness of their body as an object of value within peer interactions and this reflection estranges them from their habitual embodied being. This paper will conclude by illustrating how double estrangement acts as a form of symbolic violence within the 'child world' of the school, spaces in which the attention of children is on their peers instead of authority figures (Hill 1997). I will argue the development of a 'reflective habitus' or habitual disposition to reflect on one's body, estranges migrant origin boys from the embodied orthodoxy of the child world field and this is used to justify inequalities between boys and disguise racism within encounters.

Embodying The Least Adult Role: Reflections On Youth Research

The aim of this paper is to emphasize the embodied root of reflexivity, fieldwork and intellectual activity within the youth studies field. This paper will begin by arguing that academic research is not a separate form of action, placing the researcher in a position of epistemological privilege, but is an embodied capacity developed through practical activity. The particular importance of this for youth research will be explained through an exploration of qualitative 'least-adult' (Mandel 1988) research with children, which this author engaged in for a longitudinal ethnography, which explored the inter-ethnic relations between primary school children in the academic years of 2007/2008 and 2008/2009. Through a description of the interweave process and challenges, conventional notions of reflexivity within youth research will be highlighted and the desirability of reflection in its intellectualist definition will be questioned. Taking Allison James (2000) contention that any account of children or childhood must be rooted in an embodied perspective, as the process of growing up places the body at the heart of a child's identity, this paper will argue that ethical research with children must acknowledge the somatic process of research or fall into a Cartesian trap that reflexive research exists as something other than an embodied manner of being. This paper will conclude by arguing that intellectual activity is ultimately engaged and that reflexivity within the youth studies field is better understood as a 'reflective habitus' developed through practical activity within the fields of research, academic literature and the embodied linguistic schema of the habitus.

New Dynamics in Collective Bargaining in the Informal Sector: Impressions from India

Globalisation has led to a numerous critical changes in the lives of the world's working poor. The effects are particularly intense on those engaged in the informal sector in developing countries. Female workers in India's informal sector have been experiencing a dramatic impact of these processes on their work and lives. Some of these changes have also led to new coping mechanisms and survival strategies.
What does Europe mean for Europeans, of many parts of Europe or of places outside Europe where are social groups of European origin? The paper looks for to reply to these questions through a research carried out on fourteen samples of ethnic minorities and majorities of Europeans (about 2700 interviews of people), living in the Italian region of Friuli Venezia Giulia (Italians and Slovenes, Friulians), in the Serbo-Croatian region of Vojvodina (Serbs and Hungarians, Slovaks), in the Ukrainian region of Kharkiv (Ukrainians and Russians, Belarussians, Jews), and in the Siberian region of Tjumen (Russians and Ukrainians, Caucauscians, Tatars). To each sample the attitudes towards Europe and its meanings were requested. The main meanings (through attitudes) of Europe were: an area included between Atlantic Ocean and Urals, a Christian civilization, the European Union (EU), a family, the West, the overwhelming some peoples, a common culture, a vague idea. The paper considers the intensity and the relations of all these meanings between the macro-regions, between ethnic groups, and between majorities and minorities. The paper among these focus on the macro-regions, first of all, and inside each region between minorities and majorities. Besides at the same level of macro-region also the structure of the meaning is very different. For example, the most important factor (Factor Analysis) in the Friuli Venezia Giulia is very simple (West, EU, common culture); on the contrary in Vojvodina the first factor is more complex. In the Kharkiv region the structure of the first factor is simpler, but different than the Italian content (that is: Europe is overwhelming some peoples and vague idea); so as the most important factor (first) is simple for the groups of the Tjumen region, but the structure of the meanings of Europe is composed of West and vague idea.

**Comparing Latin American Migration in Different Urban Settings: Theoretical and Epistemological Issues**

This paper offers a epistemological reflection on comparing Latin American migration in different urban settings. We provide a framework of analysis that is at the same time theoretical and epistemological. Migrants are simultaneously emigrants (thus coming from a certain “society of origin”) and immigrants (that are bound by a new set of structures). Therefore we examine the characteristics that have to be taken into account when researching Latin American migration in different cities. Among the circumstances that configure the emigrant experience we should take into account the historical evolution of the country of origin, which generates different social spaces (in the sense of Bourdieu) and fields (ibidem) where the migrant occupies certain positions. We also address what it means to become and immigrant, that is, a person bound by certain constraints related to migration law of the host society (requirements of stability and work permits, rules of access to citizenship of the host country) and the features of the urban contexts where the migrant settles. Examples of different Latin American migrations in different countries (Spain, Italy, Belgium) will be provided. We conclude the paper with a reflection on the strengths and weaknesses of current research on Latin American migration in cities.

** Comparing Latin American Migration in Different Urban Settings: A Comparison Between Barcelona and Brussels**

This paper analyzes comparatively the language use of Latin American migrants in two bilingual cities: Barcelona (Spain) and Brussels (Belgium). Both cities share some similarities but also have some differences. Bilingualism in Barcelona is based on two cooficial languages Spanish and Catalan. While Spanish is the official language for all Spain, Catalan it is only the official language in Catalonia (the region). Latin American migrants from most countries (with the notable exception of Brazil) are already Spanish speakers and therefore have little incentives to learn Catalan. However, nationalistic policies in Catalonia and Barcelona encourage use of Catalan and give preference to those who can speak Catalan in the labour market. On the other hand, Brussels is the capital city of a country strongly divided amongst linguistic lines. In Belgium only Brussels is bilingual while the regions of Wallonia (French) and Flanders (Dutch) are monolingual. Migration policies depend on municipality, meaning that in Flemish speaking municipalities Dutch prevails while French is dominant in the French speaking. Latin American migrants in Brussels, native speakers of Spanish or Portuguese (brazilians) do not speak any of the two as mother tongue and have to learn. Choice of language learnt is related to the context of settlement and social networks. The paper concludes with a reflection on the features of Latin Americans and the likely outcome of the migrant integration in the two cities.

**Theory of Engaged Collaboration Across Borders: Alternative Perspective on Transnational Advocacy Networks**

This paper proposes a theory of engaged collaboration across borders to explain the process by which local environmental campaign initiated in a Third World setting transforms into a transnational advocacy network. I use grounded theory as tool for analysis in examining archival documents and interviews (n=31) on the case of the LSAC (Local Solidarity Action Committee) for the environmental cleanup campaign on the toxic contamination in the former US military bases in the Philippines. To invoke international support, the LSAC mobilized a transnational advocacy network for the environmental cleanup campaign on the toxic contamination in the former US military bases in the Philippines. To invoke international support, this campaign develops a tactical repertoire which includes networking, information-sharing, participatory and direct action, legal engagement, and engaged collaboration. What I define as theory of engaged collaboration emphasizes an alternative route to Keck and Sikkink’s (1998) Boomerang pattern and a corollary to Wu’s (2005) Double mobilization model. I theorize that the nature of relationships among partner-organizations within transnational advocacy networks can evolve from formal information sharing into more engaged collaboration and eventually into various dimensions salient to the ongoing processes in the network. The emphasis lies on how domestic NGO organizes a TAN so that external advocates become in-
volved in the lives of the community being advocated on. In the case study, three prominent dimensions of engaged collaboration are present. The technical/legal dimension comprises the strategic decisions on information sharing, policy advocacy, research, and litigation aspects of activism. The ethical dimension covers the moral and affective aspects of the campaign using victimization frame. Finally, the artistic dimension caters to the collective identity of the campaign anchored on Filipino nationalist identity and the underlying colonial past that created it. Thus, this theory on engaged collaboration enriches the literature because it takes into account how the external advocates deepen their involvement in domestic affairs not only with their partner-organizations and the targeted states, but more importantly with the community of victims.

Emerging Agrarian Crisis and Farmers Suicides; A Study of Telangana Region of Andhra Pradesh in South India

Changing agrarian structure and labor relations, Consequent crisis and farmer suicides is an important area for the study of social scientists in contemporary times all over India. It is a well known fact that India is mostly an Agrarian country and even today 70% its population inhabits in rural India by depending on agriculture and its related occupations despite rapid progress in science and technology. It is a paradoxical situation which prevails only in India where large chunk of population lives even today in rural India with or without land by pursuing agriculture and its related subsidiary occupations resulting rigid social and cultural bond. This complex social structure which constitutes deferent layers which creates consequent inequality hierarchal structured in terms of caste, class, ethnicity and gender etc.

Further, increasing modernization in agriculture and consequent growing capitalistic mode of production coupled with an unstable returns due to change in climatic conditions resulting the farmers entering into debt traps which leads to help less condition and hopeless life unlike in the past. Lack of timely help from Kith and Kin and indigenous institutional support and constant pressure of ruthless market financiers resulting in large number of farmers to attempt suicides this phenomenon is increasing day by day particularly in the state of Andhra Pradesh in the era of post globalization. This study aims to understand the changing agrarian structure and emerging labor relations since post liberalization era and the reasons for increasing farmer suicides and its causes and consequences. For this study Telangana region of Andhra Pradesh in South India has been chosen where large number of farmers are attempting suicides.

Telangana Movement: A Study of Problems and Prospects

Telangana movement for separate statehood is historically well known all over the world. One of the reasons for its popularity is that its peasantry revolt with arms during (1946-48) under the Leadership of Communists against the Nizams autocratic rule. However the Telangana region of Hyderabad state was merged in Andhra Pradesh on 1st November 1956. But Telangana people wanted to have their own state in view distinct geographical, socio-economic, political and cultural identity. Telangana people were discriminated in every sphere by the See-andhra regions. This process has created lot of inequalities and uneven development among the three regions of the state. Telangana natural resources like land, water, forest, mines were extracted unabatedly since the formation of Andhra Pradesh. Against this discrimination and exploitation separate Telangana movement under the leadership of Dr.M.Chenna Reddy was organized in the year 1969. About 400 students and youth were killed during the movement. Due to political betrayal of the parties in the power the moment was subsided. However, in the year 2001 separate Telangana Movement again started under the leadership of K. Chandra Shaker Rao who is a shrewd politician. During the last 12 years of the Movement, about 1000 students and youth sacrificed their lives. In view of the above background this paper mainly aims at to understand the unethical political stands and manipulations of various political parties in the state and at the center in decision making process of the formation of Telangana state. The other objective of the study is to present how people's cause and political aspirations of Telangana region manipulated and marginalized for the selfish ends of Seemandhra.

Political Parties and Community Organising in an Era of Membership Decline

At a time when formal party memberships are declining across advanced industrial democracies, political parties are experimenting with new ways to re-engage members and reach out to party supporters. Adapted from the experience of American party organisations and campaigns, political parties in the United Kingdom have adopted community organising techniques as a means to address the resource and linkage implications of declining party memberships and to engage supporters (and not just party members) in the community. This paper analyses the character of and motivation for these techniques, how they have been implemented by the Labour Party, the Liberal Democrats and the Conserva-

Cultural Capital of Young Russian Intellectuals

The research of young intellectuals takes on special significance in the conditions of Russia’s transition to the information-oriented society. Attention concentrates on the cultural characteristics of theobservable social group because of the "cultural lag" which takes place in the most part of Russian province cities. The main role in their subjectivity is played by the young university tutors as the most active and mobile group. They were considering as either main subjects of the cultural work in the social space of region. It is necessary to find out their cultural needs and general condition of incorporated cultural capital because of their influence on young people’s values and aims.

The empirical base of research is presented by the mass poll and the focus group interviews with the young tutors of the institutes of higher education located in the Ural federal district. The investigations were conducting within the bounds of grant project "Professional potential of young tutors in Russian province". The analysis contains information about basic components of young academics incorporated capital: leisure structure and the place of cultural practices within, the art forms and styles which prefers the researched group, the perception of province cities’ cultural infrastructure, opinions about necessity of higher art education preservation.

The results of research let us talk about hyperrealitarian in the behavior of young academics, which concentrates on their professional responsibilities and forget about cultural self-development. They constrict their functions to the information translation and don’t feel themselves as the active subjects of social changes. The main reason for such attitudes doesn’t think of themselves as “cultural class” and don’t regard their lifestyle as different from life of the majority. Unstable identity of young scientists and tutors, consumer attitude to the cultural space, passivity and lack of self-organization reduce their creative potential.

The Idea of Age-Friendly Cities and Communities As the Answer for Global Trends of Aging Societies

The aging process is great and unheard of in the past, challenge for governments, economies and societies. This means the need to meet the needs of the growing group of people with specific requirements, with full rights and legitimate aspirations for decent quality of life and mobility.

Effective management in this area is primarily a matter of the reform of health insurance, tax and retirement system, or other distribution of funds. Of course, these changes are important, but we should take various measures to create friendly environment for the elderly: social solutions conducive to maintaining an active lifestyle and innovative projects allowing for broad independent.

The answer to this can be the concept of Age-friendly Cities and Communities (AFC) which was conceived in 2005 at the XVIII IAGG World Congress of Gerontology and Geriatrics in Rio de Janeiro. It immediately attracted enthusiastic interest, and erupted into the implementation of the concept across 20 countries with a total of 115 cities and communities. The network must implement a variety of activities in this area. Currently member-organisations operate in 42 countries and 136 cities and communities. The Network has identified eight key priorities for the development of Age-friendly Cities and Communities: respect and social inclusion; civic participation and employment; communication and information; and community support and health services. The network of the City of Torku (Turkey) has been a part of the network since 2006.

The Appearance of a Sub-Field of Medicine of Poverty in France

This paper aims to tell and analyze the processes and historical background which gave rise to a sub-field (in a Bourdieusian understanding) of medicine of poverty in France from the early 1980’s to the 2010’s. The analysis is based on an ongoing Ph.D. empirical study in sociology about the social question in and by public hospitals in France through the analysis of the PASS.

Inclusion in Society through Religious Orientation? Biographies of Male Students Participating in the ‘İlhami Moven Deyf’ in Germany

The so-called ‘İlhami Movement’ (Ebaugh 2009), a global network revolving around a Turkish-Islamist preacher, has become increasingly visible inside Germany. Founding private elementary and secondary schools, as well as centers for private coaching, supporting intercultural and interreligious dialogues, and self-publishing pamphlets such as “Our Jihad is education”, the movement acts to render possible the educational success of children of Turkish immigrants. By referring to themselves and their practices as hizmet (service), network participants also aim to alter the common view of ‘backward Islam’, a view perpetuated by popular discourse, and to contribute to a perception of a ‘moderate’ Islam, which can be synthesized with the natural sciences and with globalization. According to this understanding, the ‘İlhamian’ can be understood as a promise to become successful, educated members of society.

In our lecture, we wish to present some reconstructive results of an analysis of biographies of male students who attend a weekly religious sobriet (discussion circle) in hizmet. By this we wish to discuss how inclusion and exclusion can operate as productive concepts for underestimating the students’ narratives about becoming members of hizmet. Our claim is that participation in the hizmet functions not only as a religious orientation, but also plays an important role in resolving crises among young Turkish adults. These crises result from discriminatory discourse in the public sphere in Germany against Turkish migrants and Islam, and from the construction of cultural, religious and ethnic difference in schools and...
The need for assessing women's unpaid work and reproductive activity has long been discussed by economists within the context of estimation of a country's economic growth rates, as well as by sociologists within the inequality studies. The world statistical practice has acknowledged that working time budget surveys remain to be the most relevant tool to obtain reliable information on unaccounted work because such surveys allow estimating the ratio of time spent by women and men on labour market employment and on unpaid work in households.

The proposed paper is devoted to presentation of the results of a special sociological survey on assessment of women's unaccounted work realized in Ukraine. The main issues under investigation include: gender inequalities in time spent on domestic work, distribution of home duties and features of decision-making in households.

A particular emphasis is given to gender assessment of involvement to informal work, which makes a rather important problem in the region of transition economies. The role of prevailing gender stereotypes in reproduction of gender inequality is also analyzed based on data of the national sociological survey, as well as on the results of European Sociological Survey. The latter survey reveals a striking contrast between Ukraine and other countries of Europe in terms of public opinion on social gender roles and norms, in particular those related to women's priorities in harmonizing their work and family obligations.

The paper provides also some analysis of gender policies realized in the country, and subsequent conclusions and recommendations on harmonization of gender disparities in paid/unpaid work balance and general empowerment of women in the country.

GERBAUDO, PAOLO® (*King's College London, paolo.gerbaudo@kcl.ac.uk*)

**Liquid Organising and Soft Leadership in the Popular Protest Wave**

In activist and academic discourse it is often claimed that contemporary protest movements, including the Arab Spring, the indignados and Occupy Wall Street are 'leaderless' or 'horizontal' movements (see for example Castells, 2012). However, looking at their internal doings and at their communications it becomes soon evident that far from being leaderless, these movements are characterised by new forms of both personal and collective leadership, in which activist clusters often numbering no more than a dozen people come to acquire much influence in the direction of social movements. What we are witnessing to is thus not the end of leadership, but the emergence of a new form of leadership which attempts to harness the communication ecology of contemporary social movements.

Drawing on my ongoing research about the popular protest wave of 2011-13 in Egypt, Spain, the US, Brazil and Turkey, and developing the argument presented in my book Tweets and the Streets (2012) I describe contemporary leadership as 'soft leadership'. This form of leadership makes use of the interactive capabilities of social media, tapping into the imaginary of participatory culture (Jenkins, 2006). Leadership comes to revolve around community management and facilitation, rather than outright 'direction' of collective action.

This paper will look at the specificity of emerging forms of leadership and their connection with the informal and 'liquid' practices of organising performed by contemporary movements. Specifically I point to the limits of this format of organising, arguing that while soft leadership is powerful in nurturing social movements at their inception, it also runs the risk of exacerbating contemporary movements’ well known tendency towards evanescence. Furthermore, the new forms of leadership emerging in contemporary movements raise serious risks of opacity and unaccountability because of their very ‘liquidity’.

**JS-24.1**

GERASYMENKO, GANNA® (*National Academy of Sciences of Ukraine, geranna@ukr.net*)

**Women's Unaccounted Work and Contribution: A Case of Ukraine**

This paper argues that the squares' movements of 2011-12, a protest cycle comprising the indignados in Spain and Greece to Occupy Wall Street in the US and the UK marks a turn in collective action with a renewed majoritarian ambition and the aim to refound democratic institutions. I attempt to capture the nature of these movements by centering my inquiry on the two main traits of the squares that dominated the anti-globalisation movement. Analysing materials originating from a long term ethnographic research, I identify two fundamental traits of the squares movements, a) majoritarianism and b) emphasis on unity, opposing them to the minoritarianism and emphasis on autonomy of the anti-globalisation movement. These two traits are shared to the majority of the populations, rather than to an ideologically cohesive, calling citizens to embrace a new 'democracy 2.0'. Furthermore, they put much emphasis on unity, in contrast with the emphasis on internal autonomy and diversity of anti-globalisation activists. The article proceeds to gauge the significance of this popular turn and its reflection of the democratic crisis of contemporary societies. I assert that the adoption of a popular identity bespeaks the spread of social grievances amidst the global financial crisis, and the capacity of appeals to resistance to resonate with different sectors of the population.
Globalisation, Market Value and Cultural Diversity and the Predictability of Football Leagues

Processes of globalisation have changed the nature of professional football in two different ways. Firstly, football clubs revenues’ from different sources have multiplied over the past decades. Today’s football clubs need to be regarded as commercialized globally operating companies. Secondly, football clubs have been attracting foreign players to sign for their teams, leaving only little room for recruiting exclusively from own national ranks. Hence, teams have become more multinational.

This paper examines the extent to which such processes impact on a team’s success. 1) Due to commercialisation processes, the market value of a football club has become the decisive factor in determining their chances of success. The market value of a club is defined and measured as the sum of the market value of each individual player on the team. The higher a club’s overall market value, the higher their chances of success. 2) The increasing multinational composition of football teams influences their chances of success negatively, because coordination within the team might become more difficult to realise. At the same time, however, multinationality can also have positive effects on their performance because players from different countries bring new techniques and qualities that can complement the already existing ones.

We have collected and statistically analysed data from the 12 most successful European football leagues, yielding the following results: 1) A team’s market value has a very strong (positive) influence on their success rate – indeed, ‘money scores goals’. 2) Only to some degree does the multinational composition of a team determine their success. Teams that are composed of some players from different national backgrounds perform better, on average, than nationally more homogeneous teams. However, the direction of association is reversed when there are players from many different nationalities – multinationality, then, influences a team’s chances of success negatively.

GERBIE-AUBLANC, MARJORIE* (Cepad, Paris Descartes University, France, g.marjorie@hotmail.com)

In social sciences, it is now trite to say that HIV/AIDS reveals relations of power. But what could it mean to argue that the epidemic is the incubator of new social interplays in a post-colonial context? The way Sub-Saharan African women living in France have become key players in HIV, within communal associations (prevention and support groups), is an illustrative example of such a question. A socio-ethnographic fieldwork led by direct observations and interviews, from October 2011 to July 2013, invites me to explore this issue through the prism of Intersectionality and Care Theories. Care is understood here as an ethics of Subalterns and a singular political process, following the reflections of J.Tronto (1993).

The subaltern position of those women - as women, migrants, from a post-colonial minority and sometimes HIV-positive - led them to develop an expertise of complexity and a model of intervention drawn on an ethics of Care. Their participation to fight HIV in France represents an unprecedented way to position themselves and reverse the multifaceted relations of power they are the object. Thus, this paper will explore how they socially and politically use the traditional categories assigned by the dominant society to transform their subaltern position in this post-colonial context. A special focus will be given to the way they review their subaltern status toward white French women, within a racialized gendered labour market and an excluding access to citizenship. As an example of grounded theory approach, this field research proposes a theoretical opening that let us thinking about the transition of subaltern identities in light of the intertwining of multifaceted inequalities in a post-colonial epidemic context.

GERBIE-AUBLANC, MARJORIE* (Cepad, Paris Descartes University, France, g.marjorie@hotmail.com)

Tensions Between Identities and Roles: When Sub-Saharan African Women Living with HIV Become Health Mediators in France

Between 2000 and 2005, an experimental training program for « new health actors » was lead in France, to improve access to HIV prevention and healthcare for populations in condition of vulnerability. This program trained more than 150 health mediators from the targeted social groups and it included many Sub-Saharan African women living with HIV in France, recruited from communal associations (prevention and support groups). Though their interventions in the Infectious Disease Wards of the Hospitals, the peer health mediators have turned key players in the relationship between patients and professionals.

This paper proposes to explore the specific interactions between HIV-positive health mediators and institutional healthcare professionals, in particular physicians and social workers. This reflection is based on a socio-ethnographic field research led from October 2011 to July 2013, by conducting 18 months of direct observations in HIV communal associations and 85 interviews with HIV-positive patients, health mediators, physicians and social workers. The roles that health mediators are asked to play to improve patients’ quality of care will be examined. It will highlight the tensions that they experiment between the double identity of being an HIV-positive patient and a healthcare professional. A special attention will be given to their specific position within a set of unbalanced relationships with physicians and social workers. Thus, this paper aims at showing that the professional participation of those patient-expert has inexorably improve patients and professionals interactions, by helping reconfigure the hierarchical position of physicians and the states of patienthood. Nevertheless, their intermediary status (between being a patient and an healthcare professional) reveals serious social issues, especially because they are included in an intertwining of unequal power relationships.
collective aspirations leads to social transformation at various levels. First, better educational assets and new job opportunities lead to an erosion of revolutionary ideals. Second, globalization processes have reinforced diverse mobilities: migration to metropolitan centres and new forms of knowledge giving way to alternative visions of a future society, have become more prevalent than before. These are particularly voiced by activists who are increasingly acquiring a new social status within their immediate social context as well as nationally – a process which is highly dynamic and conflictive. This paper inquires into these dimensions from an empirical perspective and discusses the social transformations in relation to the options for expressing demands within the national framework, as members of the minority population see for themselves. Finally, this leads to an examination of broader visions of society and of the scope for fostering social inclusion and an eradication of political inequality through political participation at different levels of society.

Towards a New Security Culture 2030

This paper presents results from a Real-Time Delphi Study which focuses on the following research questions: What are the important trends with high impact on public security in Germany until year 2030? What will be the most relevant risks within the next 15 years? How do security or risk research and research policies deal with these challenges? The aim of the survey is to initiate a broader discussion about the future of public security. Therefore we need to discuss the perspectives of five main expert groups: politics, science, economy, media and end-users (e.g. emergency assistants).

Theoretical and conceptual framework

Theoretically we have two perspectives on security and risk that will form the conceptual framework. Firstly, we know from risk research, that risk is often understood as the probability that something occurs combined with comprising negative outcome (e.g. Bechmann 1993, Renn et al. 2007). Even if this is criticized (because risks aren’t objectively determinable), it is relevant for security research due to the fact that arguments for political decisions are justified by these calculations. Therefore the paper secondly discusses the empirical findings in the theoretical framework of “security culture” (Daase 2012), which understands security and risk as social constructions based on norms and beliefs.

Methodology

The survey will be conducted as a Real Time Delphi Study, a foresight method that collects data from experts in iterative rounds (cf. Gordon & Pease 2005). After the first round the aggregated results are communicated to the experts immediately so that they can change their first rating. Within the presented Delphi Study 1200 experts will be invited to take part in the survey which takes place in November 2013.

Results

The results address the above stated questions and will be displayed as statistical numbers and figures.

Sustainable Agriculture and Regional Development in Western Mexico: Lessons Learned, Challenges Ahead

Globalization is an advanced process in Mexico, profoundly transforming the endogenous properties of the countryside, including its sustainability. As a consequence, many farmers can be identified who have been developing alternative development models, based on agro-ecological farming practices and the revalorization of the local territory, organization and knowledge systems.

In western Mexico, many farmers have been transiting towards agroecological farming practices. Following international trends these transition processes are based upon two main strategies. On the one hand, farmers perceive agroecology as a way for substituting external inputs for locally elaborated ones, while, on the other hand, agroecology is seen as a means for developing an ideologically-based farming style.

This presentation describes the different transition processes towards sustainable agriculture, including motivations of farmers and their perceptions of its possibilities. Furthermore, it describes the regional context of sustainable agriculture. Based on both strategies encountered in our region, recommendations are made for promoting sustainable regional development.

MEYER, KIM-CLAUDE (Konstanz University)

The “Incest-Beast” of Amstetten

Durkheim has shown that the atonement of crime creates solidarity among those who condemn it. Therefore, crime contributes to sustain the social and moral order, although and because the deed questions them. Nevertheless, there are violent acts that transcend this order in a way that makes it impossible to classify them as acts of “normal violence”. Cannibalism, incest and senseless cruelty not only evoke refusal but strong emotions such as disgust and hatred. We want to argue that crime becomes non-polluting and unclassifiable when it “amalgamates” different kinds of violence – for example imprisonment, incest and cruelty (Jan Philipp Reemtsma termed them “locative”, “raptive” and “autoetolic” violence). If there is “only” one transgression the crime is more likely to be integrated into society. In this paper we want to address the case of incest committed in Austria in 2009 by Joseph Fritzl. He held his daughter captive for 24 years in a self-made cellar in the house he lived in with his wife, telling her, the daughter had run off to join a religious sect. He abused and raped his daughter thousands of times fathering seven children. Some lived with their mother in the cellar, the others lived with their “grandparents” as Fritzl told his wife, his daughter had left them at their doorstep. The case of the “incest monster” was of international interest. At the end of the conviction in March 2009 Fritzl was found guilty and was sentenced to life imprisonment. He was thought to be both sane and mentally abnormal. In this paper we want to analyze the case of the “Incest-Beast Fritzl” as a deeply polluting act of violence that was scandalized throughout the media. Transcending the notion of “normal violence” by combining various transgressions the crime had to be framed as an extraordinary, monstrous act.

GETZ, SHLOMO* (Academic College of Emeq Jezreel, shlomog@yvc.ac.il)

Place of Residence and Higher Education Choice

It is generally assumed that the lower class faces restricted access to higher education and that opportunities of college choice and choice of field of study are restricted for lower class students. Differences of students’ choice by place of residence are usually explained by the socioeconomic status of the place of residence.

Studies conducted in Israel examined the effect of living in four types of locations (city, small town, Jewish village and Arab village) on higher education choices. Those locations may be ranked from high SES in the city through small town, Jewish village and finally the lowest SES in the Arab village. Those studies do not treat place of residence as a monolithic entity. They examine students’ patterns of college and field of studies choices controlling for individual SES and academic achievements. The hypothesis is that place of residence is not only a geographical attribute but also a social place that influences self-identity and plays a role in students’ choice regardless of academic abilities. Findings show that the place of residence has a net effect on students’ choices, and it interacts with SES and with academic abilities. This effect is differential. “Successful” students from cities tend to enroll in more prestigious universities and in prestigious fields of study, like medicine and law. Students from Arab villages tend to enroll in less prestigious universities and choose lower status fields of study, like paramedical studies. Students from towns and Jewish villages are similar in their choices. Less “successful” students are less influenced by their residential place.

It is argued that those differences show an influence of residential place as a way of life, and create a ‘habitus’ based on locality. This ‘habitus’ lead to differential college and fields of study choice, interacting with academic achievement and SES.

Open Source Professionalism: Changing Forms of Professional Expertise

Public professionals often complain about their lack of autonomy and the pressures put on their work by ‘outsiders’, such as managers, politicians, inspectors, clients and the press. They experience red tape, bureaucratic burdens and accountability pressures that curtail them and their service provision. But when professionals are set free and when bureaucratic and managerial standards are dismantled, public professionals might become insecure.

In this paper we show that the problem public professionals face is not standards per se but inappropriate standards - standards that are not meaningful for doing their job, and not legitimate.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
We argue that public professionals might take the lead in developing appropriate standards. These can no longer be based on professionals’ expert knowledge, including ‘evidence based’ standards, technical guidelines or strict protocols. Classical professionals used to develop. Times are changing; the problems professionals are confronted with have become more volatile, uncertain, messy and ambiguous. Professionals less possible to handle these problems in a technical manner; problems call for more adaptive approaches. Professionals’ expertise as such is no longer sufficient; it needs to be complemented by other types of knowledge from so-called relevant outsiders, i.e. stakeholders.

Public professionals might tap into several sources of stakeholders knowledge, scientific as well as experiential, and deliberately create effective and legitimate professional action. We label this ‘open source professionalism’. In this way, public professionals open up their professionalism; with stakeholders (networks) they co-produce meaningful and legitimate standards that help them to deliver valuable and valued public services.

Incomparable Pay-Offs and Rationality - the Parallel Games Approach

The reason why sometimes people make suboptimal decisions from the point of view of not maximizing wealth has been an interesting question for researchers for a long time now. This question is apparently embedded only in a rational choice theory, but throughout time researchers have given it different answers. From the suggestion that people make suboptimal decisions because they are bounded to their cognitive abilities (Simon,1965), researchers went on to suggest that suboptimal decisions happen because people are committed to a task with long-term implications (Sen, 1977) and because they tend to be biased by the use of uncertain judgement heuristics which lead them to make systematic judgement errors (Kahneman and Tversky, 1979; 1981; Kahneman et al., 1982). Later on, scholars noticed that the actor’s choice is only suboptimal to the observer, while being perfectly optimal for the actor (Tsebelis, 1988; 1990; Frisch, 2001) because of certain judgement heuristics which lead them to make systematic judgement errors. These categories of pay-offs generally appear in games that is games played at the same time. An ultimate game experiment was conducted to reveal two parallel games and two nested games was undertaken. Results showed that the presence of a relationship external to the experimental game determined a suboptimal behaviour in the experimental games was undertaken.

Biographies and The Doubleness Of Inclusion and Exclusion

Most research on diversity is often showing either exclusion or inclusion practices at work in the integration process. Yet biographical research provides the possibility to see the layerdness that is often involved in the process of societal participation which is rather paradoxical than straightforward. With the term of doubleness we hope to grasp these paradoxical processes in which inclusion and exclusion overlap. In this paper, we explore two paradoxes that show this doubleness: namely the language paradox and the economic integration paradox. Through biographical narratives of women with a migration background we show how the language (language exclusion) could lead to a decrease of sense of belonging (emotional exclusion) when they get access to the national discourse which is negative about migrants. The second, the economic integration paradox, demonstrates that women who were successful to integrate economically (via study and work), felt excluded through everyday negative experiences with others. Our conclusion of the majority group in those environments was less social and emotional inclusion. This study shows the limitations of a linear conceptualization of the integration process by policy makers (and scholars), assuming that language and economic inclusion would be the crucial step towards social and emotional inclusion.

This presentation summarizes an ongoing research regarding scientific community in Chile, including more than 50 in-depth interviews conducted with leading Chilean scientists and one digital survey results, answered by nearly 350 academic and researchers from three disciplines. The presentation also describes several structures and mechanisms that are related to the market, the government and the university which, in principle, transform a non-scientific to a scientific community. The presentation attempts to uncover the economic, social and cultural reasons for why these function as they do, especially in terms of their different intellectual and social environments.

The findings indicate that these structures and mechanisms are different than before, suggesting that there are new structures and emerging mechanisms - local and global - whose impact is still unknown. The framework of analysis and discussion centers around the idea that there is a utilitarian historical and current relationship between the University and companies, conditioned by the neoliberal economics revolution, which prevents universities from creating a genuine scientific culture of their own. Finally, the principal sociological vari-
ables that come into play in the changes that are occurring in these communities’ current processes are described. These changes include gender, age range, income, values, workplace, and use of financial opportunities to develop scientific research.

Social Relationships in Later Life: The Role of Childhood Circumstances

There is an established body of research in social epidemiology which links both health and emotional wellbeing to social relationships across the life course and in later life. However, there is surprisingly little evidence on how differences in the nature and quality of these social relationships arise. It is not known, for example, whether existing social gradients in the prevalence of social engagement, social network size or quality mirror gradients in childhood socio-economic status (SES) and/or health.

This paper investigates the long-term impact of childhood conditions on social relationships. We use data from SHARE (the Survey of Health, Aging and Retirement in Europe), a collection of nationally representative surveys of the over 50s in 13 European countries. Combining novel objective and subjective measures of current social networks with retrospective life history data on childhood health, cognition, SES and household environment we examine the long-term impact of childhood conditions on social network size, social network satisfaction and emotional closeness in older age.

Using regression techniques, we show that there is a strong but differential association between each aspect of childhood circumstance on social relationships in later life. Therefore we critique the index approach to measuring childhood conditions which gives equal weight to SES, health and social environment over time. We find that emotional closeness mediates the relationship between childhood circumstance and social network satisfaction.

The French, presidential elections, the rise of nationalism, embodied by the rise of French Nationalist Groups and Parties

Since 2002, when the Front National (FN) suddenly entered the final stage of the French, presidential elections, the rise of nationalism, embodied by the rise of the Front National label, and they are, in a paradoxical way, not necessarily compatible altogether, and can even be totally opposed: radical Christians, »identitarian«, anti-sionists, sovereignists, anti-muslims, conspirationists, a few neo-nazis...people voting for the FN don’t necessarily abide by the same doctrine.

Who are the voters of the Front National and why do they unite, in spite of the large differences that exist between their beliefs and socio-professional categories, is the question to which this communication will try to answer. First, by describing the sociological history of the different groups or categories of voters, and how they came to ally themselves with the FN. Secondly, by analyzing in detail the communication strategy of the Front National and the external elements that supports it, especially the large internet nationalist network: websites supporting one ideology or the other, linked between them by affinity, some even violently criticizing each others (for example, identitarians and the anti-sionist groups), but every single of them pointing to the Front National website, creating a galaxy of beliefs where a great number of voters can recognize themselves.

This work will be based on interviews with members of the Front National, but also activists of different groups voting for the FN without subscribing to the current main political line of the party (conspirationists, anti-muslims, anti-sionists, neo-nazis), on periods of observations in events organized by these groups, and on the study of the nationalist internet network, as well as on a large bibliography on social movements, populism and nationalism.

Does Deregulation Help? the Impact of Employment Protection Reforms on Youth’s Non-Employment and Temporary Employment Risks in Europe

Previous comparative research argued that, across Europe, youths face increasing unemployment risks and insecure labour market positions in the course of globalization and related macro-structural changes. Besides macroeconomic conditions, empirical evidence points to the need for more detailed analysis of protection legislation (EPL) in each country as the root of youths’ employment problems in Europe. Against this background, many European labour markets have reacted with the deregulation of employment protection laws, often targeted at the group of youths. However, doubts on the effectiveness of EPL reforms occurred. Against this background we investigate whether EPL reforms succeeded in integrating youths into labour markets or whether they were ineffective and just promoted temporary employment as a crucial new social inequality in Europe.

The empirical analyses are based on a pooled cross-sectional design by using yearly micro-data from the European Labour Force Survey for 14 Western and 8 Eastern European countries for the period from 1992 to 2011. This database provides unique large-scaled, standardised micro data. We apply multilevel models with three levels (individual-, country- and time-level) implemented in a two-step estimation procedure to investigate contextual influences on individual age-related temporary employment and non-employment risks. At the macro level we use cross-national and cross-temporal variation to quantify the impact of EPL reforms under control of other macro-institutional and macro-structural factors. Further, we control for country and time fixed-effects to account for unobserved heterogeneity.

Our analyses reveal heterogeneous inequality trends in youths’ temporary employment and non-employment risks in Europe. Moreover, our results cast doubt on the effectiveness of EPL reforms.

GIESECKE, JOHANNES* (Humboldt University Berlin, johannes.giesecke@hu-berlin.de)
HEISIG, JAN* (WZB Berlin Social Science Center, jan.heisig@wzb.eu)
SCHAEFFER, MERLIN* (WZB Berlin Social Science Center, merlin.schaeffer@wzb.eu)

Social scientists generally rely on three broad modelling strategies to test hypotheses about contextual effects: random intercept and slope (often simply referred to as “multilevel”) models, pooled OLS with cluster-robust standard errors, and two-step approaches. Econometric textbooks tell us that while random intercept and slope models are the most efficient estimator, two-step approaches offer robustness in exchange for inefficiency, and cluster-robust standard errors are situated somewhere in between. But how do these trade-offs play out in actual research settings? To address this question, we go beyond previous Monte-Carlo studies by focusing on more realistic set ups with complex data-generating processes. The leading scenario that we investigate is cross-national comparisons, which are characterized by small numbers of contexts, many observations per context and high complexity in terms of marked differences over the contexts.

In particular, we focus on four types of complexity. First, we investigate whether the different approaches are robust to the violation of equality assumptions. In particular, we examine the case where the correlations between level one variables vary across contexts. Second, we show the impact of specifying “similarity models” that ignore context specific heterogeneity. How well do the different approaches handle unspecified (random) slopes that vary over level two units? Third, we explore the consequences of Normal and Gamma distributed errors

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
at both levels one and two. Finally, we alter the number of level two units, as any simulation study on hierarchical data should.

We focus on linear models with continuous outcomes and on standard set ups as they are typically implemented in applied research papers. However, we also plan to investigate whether and when more refined versions of the three modeling approaches such as GLL with bootstrapping or multilevel SEM improve their performance.

Talk the Talk and Walk the Walk: Analysing Changing Urban Governance Practices in response to Climate Change

As nation-states are further lowering their climate ambitions in response to the economic crises, a neo-liberal ideology of a small state, and an ecological modernisation rationale, the challenge seems to have been picked up by lower tier governments such as cities. The C40 Cities Climate Leadership group of mega cities addressing climate change is an example of this new reality. They group indicates that the cities combined have about 4700 actions directed at mitigation and adaptation. However, the question remains whether these actions have resulted in different practices within the cities’ institutional setting. This research uses a survey of the C40 cities in order to investigate the lasting impact of participation in a global network aimed at combating climate change. We use practice theory to analyse how well embedded these new practices are in the urban governance regime. We also analyse what dimensions are particularly relevant to these changing practices of the preliminary results seem to indicate cities more at the centre of the C40 network are also impacted the most in their daily governance practice. Yet the changing practices are primarily associated with spatial departments such as transport and spatial development.

Connected Audiences of Politics: Analyzing Twitter Conversation on Beppe Grillo and Five Star Movement Generated during Political TV Talk-Shows

In the last two decades, characterized by an increasing crisis of traditional forms of politics, talk-shows have placed interesting challenges to the research on contemporary political communication and participation forms. Scholars of the “third age of political communication” have studied the cognitive, evaluative, affective effects of this mix of entertainment and information on the citizens/spectators. Recent analysis considered the increasing symbiotic relationship between political talk-shows and Twitter, by studying the “second-screen” practices in terms of audience double exposure to the content of the public debate. Referring to this approach, our study analyzed Twitter connected audiences of all the Italian political talk-shows (1,077 episodes) on air from September 2012 to April 2013. This period covers significant political events related to the 2013 Italian General Election (24th and 25th February), from the electoral campaign to the Five Star Movement’s electoral achievement, and its institutional consequences. We aimed to understand: how much do “connected audience” of political talk-shows discuss on Twitter around MSS, in the different phases of the “permanent” electoral campaign (RCQ1)? Is the presence of MSS, Grillo and other representatives as a topic of conversation on Twitter correlated with specific characteristics of the aired episodes (talk-show, audience, phases of the campaign, issues)? (RCQ2). While significantly less frequent than conversations mentioning the right and left coalition, Tweets around MSS were present during the three phases of the campaign. Furthermore, the analysis identified significant amounts of Twitter discussions around MSS presented during the episodes dedicated to specific issues (political backlash, polemics, strategies of the MSS, scandals, anti-politics).

GILAD, NOGA* (University of Haifa, giladnoga@gmail.com)

Biographic Self Positioning As Narrated Argumentation

One of the most inspiring struggles of biographic research regards the issue of ‘identity’: “how I have become to be who I am today!” (Fischer-Rosenthal, 1995). Scholars have struggled with biographer’s putting into words of self experiences that have accumulated along the life history as it has been generated (Rosenthal, 2004). Indeed, Biography is constituted by the interaction between the articulation of the experiencing of “the world out there” (Schutz, 1964), each being so rich in meaning and value that their simultaneous unfolding creates a new reality. Our study addresses this phenomenon by considering the communicative act of ‘oral narration’ to be a specific type of argumentation about highly controversial settings as gendered biographies in transcultural settings.

Based upon my model analysis shows how biographers, while conducting an external dialogue with their listener; re-positioning themselves over and over again in a hegemonic position in the interaction, are simultaneously preoccupied with an internal dialogue in which they try making sense their own experiencing of themselves in the world. In this way the question: “how have I become to be who I am today?” gains new and dual meanings.

The transcultural context of the analysis not only extends between the interview interlocutors (secular vs. fundamentalist) but as the narrator is implicitly involved in a project with transcultural construction aspirations, aiming at ‘restoring tradition’ in a way that would appear as absolutely contemporary to the inter- viewer. And as the analysis shows, gender plays a crucial role in such a framework not only through the identity of the participants but within the subsersive cultural project as a whole.

RC39-672.3

GILBERT, CLAUDE* (CNRS, claude.gilbert@msh-alpes.fr)

Consequences of the Ambiguous Relationship Between State and Societal Actors in the Management of Risks and Crises

In France, public policy risk prevention and crisis management still rely on the state. A role is assigned to local authorities and civil society. But only the state appears to have the ability to prevent risks and cope with exceptional situations. More disasters are considered, more state intervention is legitimate. The representatives of the state attach importance to these powers (corresponding to the “state of emergency”).

The predominance of the state in the field of risk and crisis is however being challenged. First for economic reasons: central governments no longer have resources to support alone public policy in this area. A divorce occurred between formal capacity and actual capacity of the state (in particular during disasters). Second, for political reasons: local authorities (in particular in the major cities) and a part of civil society (in particular firms) want to play a role in defining policies they help to finance. Third for “societal reasons”: disasters can no longer justify the interruption of democracy.

We begin to accept the idea that the state can not be the only or the main actor to manage risks and crises. Reactions on resilience are intended, including by officials, to promote the involvement of other actors in society. But politicians and administratifs want both transfer a part of their responsibilities while keeping control of risk and crisis management. There is an ambiguity that local authorities and other actors of civil society help to maintain: if they want to play a more important role, they do not want to assume state responsibilities.

The question central of this paper is to know what are the effects of this ambiguous situation in the effective management of risks and crises (especially from the example of pandemic influenza threats).

GILBERT, EMILY* (University of Toronto, emily.gilbert@utoronto.ca)

How Much Is a Dead Soldier Worth?

How much is a dead soldier worth? This paper will interrogate the monetary value ascribed to the death of soldiers in the 21st century, and the narratives of sacrifice and heroism that confuse military fatalities. Rather than focus on public funerals and burial, I explore the more intimate (yet no less social) acts of valuation and compensation that are navigated by surviving relatives. Questions regarding the price of death are particularly interesting to consider as civilian compensation has become a regularized component of counterinsurgency strategy. Monetary payments have been made in the event of the ‘ inadvertent’ death, injury or property damage of civilians in Iraq and Afghanistan, as a way to win the ‘hearts and minds’ of the population, and demonstrate the compassion of the international forces. How are the lives (and deaths) of civilians and soldiers of different countries valued differently, and for how much? What logics of compensation are articulated? And does compensation in contemporary warfare reconfigure the distinctions between soldier and civilian? These questions will be considered alongside the increasing pressure to reduce deaths, of both soldiers and civilians, as a result of the targeted and remote-controlled strikes of the revolution in military affairs. As tensions regarding death in war increase, how does this impact on how lives are valued, and on our understanding of military service in contemporary warfare?

GILBERT, LEAH* (University of the Witwatersrand, leah.gilbert@wits.ac.za)

The Mercurial Piece of the HIV/AIDS Puzzle: ‘Stigma’ and HIV/AIDS in South Africa As a Social Scientist’s Challenge

‘Stigma’ and its relationship to health and disease is not a new phenomenon. However, it has not been a major feature in the public discourse until the emer-
gence of HIV/AIDS. The range of negative responses associated with the epidemic placed ‘stigma’ on the public agenda and drew attention to its complexity as a phenomenon and concept worthy of further investigation. Despite the consensus that stigma is one of the major contributors to the rapid spread of HIV and the frequent use of the term in the media and among people in the street, the exact meaning of the word is ambiguous. Therefore, its conceptual complexity and its embodiment in the reality of HIV/AIDS in South Africa present a formidable challenge for social scientists who continue to grapple with the questions it raises.

The main aim of this presentation is to briefly re-visit some of the scholarly deliberations and further interrogate their relevance in the HIV/AIDS-related stigma evidenced in South Africa. Although it provides more nuanced understandings of the concept, most of the literature reviewed adds a level of complexity that requires further investigation and renders measuring stigma more problematic. The presentation argues that the fact that there is such an abundance of scholarly articles on the concept and its definitions is testament to the fact that they do not provide adequate explanations for the various manifestations of stigma. In addition, the explosion of studies looking at ‘measuring’ stigma and reducing its impact is evidence that ‘stigma’ exists out there and continues to be a threat to the successful implementation of public health programmes.

GILINSKY, YAKOV* (Herzen University, yakov.gilinsky@gmail.com)

Social and Economic Inequality As Deviantogenic Factor

There is no only "reason" of deviance and crime. There are many factors - economic, political, cultural, demographic and others, influencing upon state and dynamics of different forms of deviance. It is important theoretically and practically to define the specific "weight", "power", value of each factor in genesis of deviance and its separate types.

K. Marx, R. Merton and many others wrote about a role of an economic inequality as "reasons" of crime and others of negative (deviant) acts.

The ever-growing economic polarization of the population in Russia – is a main source of continuing social conflict. The differentiation between the incomes of the 10% least prosperous and the 10% most prosperous increased from 1:4.5 in 1991 up to 1:15 in 1999 and later up to 1:18.

Empirical researches of multiple-factor model of the reasons of deviance and crime are conducted in Russia by criminologists S. Ol’kov, I. Skifsky, E. Yuzikhano-va. From many factors influencing crimes and suicide - extent of alcoholization, demographic structure of the population, consumption of drugs, economic inequality, the last factor it appeared the most considerable. The Gini index (i.e., index of economic inequality) in Russia increased from 0.289 in 1992 to 0.422 in 2007. According to S. Ol’kov, during 1990-1999 the index was at its maximum in 1994 (0.409) and the number of homicides was at a maximum (32,300) and suicide too (61,900); the index was at its lowest in 1990 (0.218) and the number of homicides was at a minimum (10,409) and the number of suicides was at a minimum (2,300). The correlation coefficient between homicides and Gini index was the highest 0.9253, between suicides too (61,900); the index was at its lowest in 1990 (0.218) and the number of homicides was at a maximum (32,300) and suicide too (61,900).

The catastrophic increase of economic inequality serves in Russia as the main factor of deviant manifestations.

GILLEARD, CHRIS* (University City London, Brain Sciences, c.gilleard@aol.com)

Distinction and Identity in Later Life

The cultural turn in the social sciences during the 1980s brought new prominence to sources of distinction based on the body, such as disability, gender, race and sexuality. We argue that many of the embodied practices associated with these newly privileged bodily distinctions were further developed, sustained and...
extended by consumption and consumerism. Drawing attention to aspects of social identity that had been previously overlooked, the new social movements brought into central focus and ‘liberated’ what might be deemed marginalised identities. The identity politics and associated new social movements of the 1960s and 1970s however were situated in the counter-cultures of youth. In this paper we explore how the ‘ageing’ of those youth cultures have affected the contemporary experiences, narratives and performances of age and in the process brought new ways of thinking differently about ageing and the body. This ‘cultural turn’ is exemplified in contemporary research into ageing lifestyles, ageing and exercise, ageing and fashion, ageing and sex and more generally the performativeities of ageing. Rather than developing a transgressive ‘age liberation’ movement however, much of this embodying performativity seeks to resist the purchase of ‘agedness’ on fashioning lifestyles oriented as much to not becoming old as to still being gendered, racialised, able-bodied/disabled, straight or gay throughout one’s adult life.

How Are Social Relations and Locality Connected? New Ambivalences in the Research on Migrant Families

Research on transnationalism is an attempt to avoid methodological nationalism by focusing on families and its members, which do settle at different places or move between these places. In this perspective not only national belonging becomes relativized, blurred and diminished, but local, regional and national attachments of individuals and social groups as well. Here questions of belonging arise anew for we are considered not only as belonging to each other, but also as belonging to others and what relevance can be given to the location where people live? Migrants and their families do often experience social interweaving relations, which are not bounded to one single national territory, but interact in a multi-local situated context. At the same time the existing boundaries of the nation-states do still influence a lot the mobility and opportunities of individuals.

The proposed paper discusses the ambivalence of social belonging and local/regional attachments under modern conditions of social fluidity and multi-local attachment in social relations. First, the paper starts with the elaboration of the theoretical context as sketched and explores methodological questions related to that. Second, referring to empirical research on migrant families, the paper analyses family practices in which social and cultural boundaries are negotiated with reference to the places to which family attachments exist. Empirical findings show that there is no social belonging to a community or society without local/regional attachment(s) and it is precisely the new constellation between the social belonging(s) and the local/regional attachment(s) which can be seen at the basis of the ‘migrant condition’ of human beings. Situating the self and the family in a context of fluidity and constant change entails developing family practices in which belonging(s) and local/regional attachment(s) are negotiated as ambivalences of social and cultural affiliations, as well as establishing individual and collective attachments to certain places and regions of (biographical) relevance.

Limits of Complexity? - the Need of a Multilevel Approach in Migration Research

In the age of migration, cities have become heterogenic places, which strongly influence the life courses of their inhabitants. They define their framework of opportunities in the economic, educational and social fields. As heterogenic places, cities are a zone of interference and inequality challenged to accommodate and negotiate diversity of their inhabitants. In an international complementary research project on life strategies of migrant families in different local, regional and national urban contexts, the question of heterogeneity and its possibility for comparison arises. The multilevel approach is applied to different urban and political contexts in Basel (Switzerland), Heidelberg (Germany) and Klagenfurt (Austria). The multilevel approach of this research is challenging, because there are not only life strategies of migrant families, which will be researched and internationally compared, but also the relevance of local, regional and national influence on life strategies will be analysed. What is particularly interesting is the question concerning the sort of orientations migrant families develops towards the location they are living in and how they are influenced by local and national factors.

By identifying and discussing the relevant contexts for multilevel analysis in our international research project, the paper will present methodological challenges of multilevel analysis in the international comparation research. While the multilevel framework guarantees intersubjectivity and contributes to avoiding methodological nationalism, it raises the question about the limits of complexity in the international comparative research. Based on the analysis of group discussions in all three localities, we will show how multilevel research works in practice and discuss difficulties regarding research practice and methodology.
labouration between universities and social movements. Popular Extension is a valuable tool for pursuing the construction of a contextualized university capable of opening its walls to the social reality that surrounds it. However, little has been researched regarding the outcomes of this practice on building a real alternative to the hegemonic models of university and rationality. Recognizing the centrality of Popular Extension for universities and community development practice in Latin America, the paper looks upon the experience of the Popular Extension Project "Popular Legal Promoters" on coping with gender based violence in the outskirts of Brasilia, Brazil. Established jointly by feminist movements, the University of Brasilia and the Brazilian Public Minister, the project is based on a freirean approach to popular education on human rights focused on the formation of community leaders able to engage themselves on tackling gender based violence within their communities. By resorting to collected data regarding the project implementation and outcomes, we argue that Popular Extension Projects can be an important tool not only for coping with social issues, such as gender violence, but can also be the founding point for the emergence of an emancipatory and democratic University, marked by a production and circulation of knowledge where the surrounding community becomes an active agent of this process and a constitutive element of University itself, which assumes a more contextualized role as an important stakeholder on participatory development practices.

GIORGINO, VINCENZO* (University of Torino, vincenzo.giorgino@unito.it)

The Contemplative Turn in Sociological Imagination

In my presentation I will address some epistemological and theoretical aspects related to the integration between sociological and contemplative methods. The latter are social practices originating from the wisdom traditions of human culture, mainstream and spiritual backgrounds. Their recent secularization (going back to the 70s) enables non-experts to achieve specific knowledge. The most successful attempt in this translation is currently found in the so called mindfulness programs, oriented to integrate the biomedical approach and nurturing the subject of the so called integrative or behavioural medicine; it has also been an important tool not only for coping with social issues, such as gender violence, but can also be the founding point for the emergence of an emancipatory and democratic University, marked by a production and circulation of knowledge where the surrounding community becomes an active agent of this process and a constitutive element of University itself, which assumes a more contextualized role as an important stakeholder on participatory development practices.

Comparing Employment Policies in a Globalising World: New Challenges and New Methods

Globalisation is an overwhelming phenomenon that transforms individual identities and social affiliations as well as it destabilizes the three basic policy-making functions traditionally associated with the nation and the nation-state: public problem formulation, public problem resolution and the definition of citizenship status. It is a form of social inclusion and political participation as well as a key symbolic resource (Giraud, 2005). As such, globalisation undermines the validity of the basic assumptions of the comparative method as we have known it so far.

In the paper, we will elaborate on three complementary methodological solutions to address the formulated dilemmas, and will test and discuss them in the case of self-entrepreneurship as an unemployment policy in two countries: France and Brazil. In the first place, we will consider the comparative method in terms of most different cases (for example: Gerring, 2007, Tarrow, 2010). By confronting the basic characteristics of the object to be compared in very contrasted national contexts, this methodology sheds new light on the functions of the object of comparison as well as it reveals its boundaries and its significance. Second, we will focus on the scalar dimension of the policy under scrutiny, i.e. on the logics of power relations at the various relevant policy levels and on the vertical bounds linking the various policy scales (Scarpa 2009, Anderson, Ostrom 2008; Mahon, 2006). Finally, the focus on the transnational character of comparison shows a third dimension of the objects to be considered (Walby 2005, Dobbin, Simmons, Garrett, 2007, Hassenteufel 2005, Kettunen, Petersen, 2011, Gilardi, 2010, 2011). It demonstrates the exchanges and mutual influences between cases as well as the way specific cases integrate supranational or global recommendations, such as the ones formulated by the OECD or the ILO in the case of self-entrepreneurship as an unemployment policy.

Ignou- Paradigm Shift for Higher Education in India

India’s higher education system is largest in terms of number of institutions and third largest in terms of enrollment next to China and United States. Total approximate number of institutions imparting higher education in India is 26,000 whereas it stands at 6,706 in USA and 4,000 in China. Despite massive expansion, there is mismatch between the demand and supply of higher educational institution in India. Gross Enrollment Ratio (GER) for higher education in the country is very low at 16.23 per cent as compared to the world average at 27.06 per cent. Open distance learning is one of such strategy which aims at universalization of higher education, to address the barriers of higher education.

IGNOU- Indira Gandhi National Open

The Indira Gandhi National Open University (IGNOU) established by an Act of Parliament in 1985, has continuously striven to build an inclusive knowledge society through inclusive education. The mandate of the University is:

- Provide access to higher education
- Offer high-quality, innovative and need-based programmes
- Reap the benefits of technology
- Promote, coordinate and regulate the standards of education
- Adopting a variety of media and latest technology

IGNOU, the National Resource Centre for Open and Distance Learning, with international recognition and presence, provides access to sustainable and learner-centric quality education, skill up-gradation and training by using innovative technologies and methodologies and ensuring convergence of existing systems for large-scale human resource development.

IGNOU has been conferred with awards of excellence by Commonwealth of Learning (COL), Canada, several times. Recently, it was listed 12th in the webometric ranking of Indian Universities, based on the caliber of its presence on the Internet.

The University is committed to quality in teaching, research and extension activities through ODL system.

GIUDICI, FRANCESCO* (Columbia University, francisco.giudici2@gmail.com)
An Inter-Cohort Comparison of Intra-Cohort Social Stratification: How Do Cumulative Dis/Advantages Evolve Across Cohorts?

The aim of our paper is to analyze trajectories in hourly wages between the ages of 30 and 50 for five different birth cohorts, using the PSID data. More precisely, we focus on processes of intra-cohort stratification by tracing patterns of income as individuals age. Our analysis is informed by the cumulative dis/advantage hypothesis as a process of intra-cohort stratification. Using growth curve models, we seek to describe and explain the patterns of income stratification within and between cohorts. We hypothesize two key patterns: Simple interindividual divergence and path-dependent interindividual divergences. Simple interindividual divergence is indicated when the relation between initial hourly wage and its slope over time is positive (in contrast to convergence, where this relation is negative, and stability, where there is no relation between initial hourly wage and its slope over time). Path-dependent interindividual divergence is indicated when hourly wage differences between men and women, or between whites and non-whites, increase as individuals age. Our analyses will reveal if the patterns of wage divergence over the life course are constant across cohorts, or whether the extent and form of wage divergence is shifting over time.

The Impacts of Brazil and India's Development Dialog on Poverty Alleviation Policies: Knowledge Sharing and South-South Cooperation

Since the beginning of the 1990ies a South American approach to Conditional Cash Transfers policies for poverty alleviation has been in development. Although widespread throughout the continent two main experiences can be singled out as most significant for their characteristics, range and influence: the Mexican Opportunidades and the Brazilian Bolsa Familia. Poverty rates have declined in Latin America during the last decade and in the Brazilian case the most intense fall is concurrent with implementation of the national CCT program. Due to the results of these policies the model has spread beyond the continent and is currently encouraged and financed by the World Bank to alleviate poverty and brake its generational cycle. The spread of this model of poverty is currently encouraged and financed by the World Bank to alleviate poverty and to increase its generational cycle. The spread of this model of poverty is currently encouraged and financed by the World Bank to alleviate poverty and brake its generational cycle.

Questioning Development: Global Integration and the Ecological Efficiency of Well-Being

The author investigates the extent to which sociological theories of global integration, including political economic, military, and world polity theoretical orientations, help explain different countries' carbon intensity of well-being. The carbon intensity of well-being approach provides a way to measure a country's progress toward simultaneous environmental and social sustainability by asking how energy (or ecologically) intensely or efficiently a nation-state is producing well-being for its citizens. This research utilizes statistically rigorous longitudinal modeling techniques, addresses core sociological issues of inequality, human well-being, and development, and explores questions of sustainability and energy use key to environmental sociology. This is a burgeoning area of research and yet looking at the effects of political economic, military, and world society integration is relatively unexplored in the sociological literature. Results indicate that varying forms of integration have an impact on states' abilities to provide environmental protections and well-being for citizens, and therefore unequal levels and various types of global integration are important to consider in environmental and development planning.
Vous proposez d'analyser en quoi la figure du client de ces organisations de service permet à la fois d'occultuer les relations de pouvoir et d'intérioriser les contraintes organisationnelles à travers l'utilisation d'un certain imaginaire leurrant (Enriquez, 2007).

**Value Identity of Russian Younger's**

The study on value orientations in Russia has been conducted from the middle of the 1960s. When the theoretical works by a psychologist B. G. Anar'ev, sociologist A. G. Zdravomyslov, V. A. Ladov and others appeared, as well as empirical studies. The biggest one was the sociological and social-psychological study on workers’ value orientations (including young people), carried out by Leningrad scientists under the direction of V. A. Ladov [1] in the beginning of the 1970s. During the Soviet time the study on youth value orientations to a considerable degree was directed toward the revelation of their accordance with the communist ideal, to the socialist lifestyle [2]. At the period of the Perestroika (1985–1991) the problem field was noticeably extended due to the studies on the informal youth associations (actually it was the way to the switch to study on the youth subcultures). Finally, during the last 15 years value orientations of the Russian youth have been investigated by considerable number of individual scholars and scientific groups. The situation of social order change and “re-comprehension of values” on the national scale has encouraged the scientists to interpret the transformation of value orientations of the Russians. The extensive study on dynamics of the value orientations of the Russians that was conducted under the direction of N. I. Lapin [3] is of a great scientific significance. There have been dozens of empirical studies carried out in Russia for the last 15 years, several hundreds thesees defended on the problem of the youth value orientation [4]. Although quite often the scopes of such studies, their methodological correctness and opportunities for the data comparison remain to be a subject of criticism.

**Can ‘Religion’ Provide a Response to Today’s Climate Challenges? The Valuability of Environment in the Islamic Republic of Iran**

The very recent report published by the United Nations confirms unsurprisingly that around ninety five per cent of the current climate issues are man-made. This illustrates more than ever the significance of various dimensions of people’s everyday life, such as policy, religion and education that influence their practice of environment.

Environmental concerns are growing in Iran. Some of them are related to increasing dryness of rivers (such as Zayandeh-rood) and lakes (such as Urmieh and Hamoun) and expansion of sandstorms even to the mountainous area of north-west Iran. Having said this, intense air pollution in Tehran and other large cities is probably the most urgent concern. The main reasons for the pollution are: population growth, rural-urban migration, the poor quality fuels used by mostly old cars on the road, and industry – mainly due to the economic sanctions and the geographical location of cities – and, more importantly, a lack of awareness of the environment and of a positive attitude towards it.

Islamic government policies that have been used to deal with at least some of these concerns have not always been systematic. The Islamic government’s disregard for the environment is also reflected in the state education system. Education in general, and in particular religious education, do very little to deal with these concerns.

It is expected that ‘Islam’ informs policy, state-provided education, people’s attitudes and practices towards sustainability in Iran. This paper concludes that this is not the case and aims to provide an explanation for this. Is ‘Islam’ really incapable of tackling climate challenges in the context of Iran? A social constructionist approach of ‘Islam’ will be presented.

**“The Question I Would Never Have Asked Federer Or Nadal”: The Sexualisation Of Sportswomen In British Contemporary Print Media**

The sexualisation of sportswomen was well documented by sport sociologists and feminist media scholars alike in the 1980s and 1990s (Creedon 1994; Lenskyj 1998). However, in the 2000s research claimed that a shift was taking place in sports media. Amidst cries of increasing gender equality in sports coverage, this paper explores whether claims of significant inequality in the form of the sexualisation of sportswomen continues to exist at the end of the first decade of the new millennium. Using five British Sunday newspapers over 24 months (Jan 2008-Dec 2009) this paper attempts to construct a comprehensive categorisation of how sportswomen are sexualised by British contemporary print media. The sexualisation of sportswomen is classified into five categories which consider: 1) sexualised bodies in text and images, 2) a specific and singular type of sexuality, 3) stripping and nudity, 4) sexed bodies and sexual partners, and 5) flirting as sexism.
items have begun to threaten residential environment there. The increase in housing vacancies, which is closely connected to a lack of security, sustainability, and human bonds among residents in a community, is one example.

This study aims to examine local responses to the increasing number of vacant houses in suburbs. We pay attention to the influence of local regulations on housing policy; several local governments, including that of Ushiku City, have enacted regulations to promote appropriate maintenance of vacant houses since the late 2000s. Then, we discuss institutional structures that have caused the problem. We also identify the generative process of housing vacancies in the Tokyo suburbs, and we examine the results of field surveys of several old housing estates in Ushiku City, Ibaraki Prefecture. Based on interview surveys of residents, we clarify the mechanism that produces housing vacancies there. We conclude by examining the attitudes of local communities toward vacancy problems.

Sequestering Public Housing Policy and Research

Sequestering the Poor: Budget reductions and housing policy change in the US and UK

Public housing in the United States has had a long history of both being pressured for financial solvency as well as for redressing the racial and poverty concentration of its residents. In 2013, a fiscal cut-back of substantial size occurred as the budget “sequester” took effect. In New York, for example, the loss of funding amounted to over $200million for the year (Chaban; Dawsey). Politically analogous budget cuts have also occurred in Britain as the Conservative government has pursued fiscal restraints over the social rental sector.

This paper will examine the intersection of the various formats of the US-UK fiscal crisis and its impacts on housing policy and related national housing research. A series of major housing research experiments have been recently launched in the US to learn how to better manage with less, while the ground rules of fiscal support for most forms of welfare policies are being eroded. My presentation would be upon the choices and tensions as these policy experiments are developed, in the context of on-going reductions in support for the poor.

Intergenerational Reciprocity – the Idealization of the Intercancelability of Phases of Life

Among the prominent concepts used for the sociological description of intergenerational relations is the one of reciprocity. Adopted from predecessors in cultural anthropology, the term was coined by thinkers like Goffmann in the perspective of exchange theory, thereby ignoring other traditions of thought. In the course of time, analyzing intergenerational relationships in terms of exchange theory got confronted with growing problems. It became clear that the “goods” exchanged between generations are not equivalent, that this exchange extends beyond the immediate self and its_totems. It reflects the fundamental difference between “long” and “short” waiting as well as various framing conditions of waiting. Specific attention is given to the aspect of interculturality, thereby criticizing the conception of the so-called “short cuts” which plays a big role in studies on waiting lines.

Waiting – an Often Neglected Social Phenomenon

Synchronicity or rather asynchronicity are among the most important research topics of the sociology of time, since the successful synchronization of the diverging time spheres of individuals and systems is a precondition for the effective functioning of society. And yet, as we all know at first hand, failed processes of synchronization are a daily occurrence. One of their most prominent results is waiting, once defined by Thomas Luckmann as the correlate of “the incongruence of the various temporal dimensions”. In the same breath he deplored the vast ignorance displayed by scientific research concerning “this significant phenomenon”.

Pretty exactly 40 years after Luckmann’s statement, the scientific literature on the topic has expanded, but nevertheless waiting still presents a challenge for sociological theory. Is it to be described as action or rather as inaction? Are processes of waiting to be conceived exclusively as the outcome of unsuccessful synchronization or are they a constitutive part of the procedure of synchronization itself? Is waiting socially dysfunctional or functional?

Considering the existing literature on the phenomenon the presentation does not intend to give answers to these questions, but rather aims at unfolding the spectrum of aspects that have to be taken into account when answering is attempted. It reflects the fundamental difference between “long” and “short” waiting as well as various framing conditions of waiting. Specific attention is given to the aspect of interculturality, thereby criticizing the conception of the so-called “short cuts” which plays a big role in studies on waiting lines.
through the visibility of the clothed body - relying on connections between the local and the global – ultimately comes to shape the local landscape.

Consideration and Meaningfulness of the Educational Scientific Research: The Explicit or Implicit Concealment of Social Class

The present paper is concerned both with the limits and dynamics of research tools in the specification of theory, in data categorization and in the final representation of the educational incidents or situations schematization and meaningfulness. In particular, the issue of investigation is how meaningfulness is rendered, through the single-focus on the variable of gender or nationality, to a uniform society which is typically or atypically conceptualized as a homogeneous collectivity, partially differentiated in terms either of gender or nationality. Social inequality, differentiations in economic, educational and cultural capital elevated through the categorization of individuals in the various social classes was concealed by the argumentation about the in-depth study with focus on one of these variables. There is a thorough analysis of the system which, as the dominant scientific paradigm, was gradually promoted in the capitalist, liberal structures as a model of blunting social inequalities by the projection of new collectivity scheme such as social stratification. The latter actually substituted social class by eliminating the concept of social inequality, different educational opportunities and the individuals’ different present and future based on their social class.

The exemplary implementations depict how non-reference to social class was conducive to an enfeebled theoretical approach, because social consideration, the actual social situation and the social class replication model were not elevated, in which the variables of gender and nationality should be co-examined by co-formulating the issue of study within the expanded schema of social class. Within a mature phase of post consideration, the restoration of social class in the educational research and in education is suggested, being conducive to the promotion of the policy of rights, especially during an economic crisis period.

Social Movements and Protests in Brazil in 2013-What’s New?

Social movements and protests in Brazil in 2013-what’s new?

The paper analyzes the new cycle of demonstrations that have taken place in Brazil from June 2013, which took about one and a half million people to the streets and earned international media headlines. The text examines three relevant moments: June 2013-July 2013 and September 2013. It examines three questions: First: who are the actors who make up the demonstrations, which the movements, organizations and social collectives in action; what are your proposals and differences, what is the role of young people and the use of media and social technologies. In the second block: what are the main practices, which like feature global trends of cooperation and political confrontation; what are the social impacts and innovations produced in society and political institutions. Third block: what the character and sense of the demonstrations, what’s the point of the ongoing democratic process, what are the main ideologies present, which social theories that have been used to explain them, as these are dovetailed with similar demonstrations at the international level.

Different Cultures - One Mandate: Integration of Military and Civilian Personnel within Defence Organizations

Most defence organizations are comprised of both military and civilian personnel working in partnership with each other towards the realization of defence goals. Civilian personnel (i.e., civil servants) in defence organizations often work closely with their military counterparts (e.g., in headquarters, on bases, in missions, in academic settings). Although the issue of civilian-military personnel collaboration within defence organizations has not historically been explicitly considered in the context of ‘collaborative work arrangements,’ it is indeed an important issue that affects both operational and organizational effectiveness. This presentation will review several related international initiatives to examine collaboration between military and civilian personnel across defence organizations, including a NATO Human Factors and Medicine Research Task Group (HFMT RTG-226) and a cross-national survey initiative. Further, results from the Canadian Defence Team Survey will be presented. Civilian personnel in the Department of National Defence (DND) and military personnel in the Canadian Armed Forces (CAF), referred to as the Defence Team, work in partnership to meet the mandate of the CAF/DND. Together, personnel in this integrated represent a unique group dynamic allowing the DND/CAF to draw upon the expertise of military personnel who have specialized skills and knowledge that support military and operational functioning, as well as upon civilian personnel trained in a variety of occupations and possessing a range of knowledge and expertise. The Defence Team Survey, presenting the results of 644 Regular Force military members and 1,149 DND personnel, was designed to examine unique issues central to the partnership between civilian and military personnel. Recommendations will be provided for developing strategies and practices for enhancing the quality of collaboration between military and civilian personnel working within defence organizations.

Oh, Didn’t Anyone Tell You? the Importance of Intra-Organizational Information Sharing in Defence Organizations

Organizational justice, or the extent to which people perceive organizational procedures as being fair and equitable, is a fundamental organizational value. However, the literature has been shown to impact on personnel outcomes, such as job satisfaction and commitment, and ultimately to impact organizational outcomes such as performance and retention. In the study to be reported here, based on survey data from 6,503 Canadian Armed Forces (CAF) personnel, analyses were conducted to determine members’ perceptions of informational justice within the CAF, and the role of informational justice on key outcomes of interest. Results indicated that informational justice was indeed highly related to a range of important factors, including overall perceptions of organizational justice, organizational and unit leadership, career management in the CAF, trust in the CAF, and employee physical and emotional withdrawal. Moreover, mediation analyses indicated that military personnel’s perceptions of informational justice were related to outcomes such as commitment and leave intentions even after controlling for other key variables such as perceptions of overall justice and satisfaction with leadership, further emphasizing the importance of informational justice. Implications for information sharing within military organizations are discussed.

Fertility Stall and Social-Demographic Risks Of Humanitarian Disasters In Tropical Africa, and Means Of Their Prevention

The recent decade has witnessed remarkable success in various aspects of socioeconomic development in Tropical Africa. However, contrary to the “development is the best contraceptive” expectations, fertility in many countries remains stalled, frequently at very high levels of 5 and more children per woman. We investigate the values and behavior pattern underlying African persistent “pro-natalism” to reveal that some of the best-recognized fertility-inhibiting aspects of development, such as female primary education and female labor participation, are far less efficient for accelerating the fertility transition in Africa than they were in the rest of the developing world. This sharpens the necessity of urgent introduction of effective measures of accelerating the fertility decline, as otherwise the rocketing population numbers will result in burgeoning youth cohorts, tremendous pressure in rural areas, hyper-urbanization, and greater risks of political violence and humanitarian catastrophes. Our analysis shows the most effective ways of accelerating the fertility transition in Tropical Africa to be the introduction of universal primary education (with particular attention to enrollment of women in their 20s and early 30s) accompanied by re-introducing family planning campaigns as a development priority.

Why the Arab Revolutions of 2011 Are True Revolutions: Implications and Prognosis

When they began, there was hope that the Arab Revolutions of 2011 would be like the peaceful "velvet" or "color" revolutions in the USSR and Eastern Europe in 1989, or the Orange Revolution in Ukraine in 2004. Instead, with the possible exception of Tunisia, they have turned out to be more like true, classic revolutions with civil wars, counter-revolutions, high levels of violence, and extended periods of turmoil and sudden shifts in government. There are a number of reasons for this difference, including (1) the greater youth of populations in the Arab revolutions; (2) the role of ideological contenders for power – Islamists – alongside the secular liberal revolutionaries; (3) the major interventions of outside powers; and (4) greater internal regional, ethnic and tribal divisions.

Native Languages of the Bering Strait: The Changing Conditions of Interaction and Endangerment

A characteristic quality of the area under consideration is the variety of distinct groups inhabiting it. If one only counts broad ethnic and linguistic categories, Chukchi, Siberian Yupik (including St. Lawrence Island Yupik), Naukan Yupik, Inupiaq, and, to a lesser degree, Central Alaskan Yupik have to be considered. The is not a surprise that such factors can be multidirectional. We think that a careful involvement of the research sector of the university. Political factors cover the state policies, social events, and sociolinguistic and political boundaries make a projection on a personal language map. In conclusion, at attempt has been made to link socio-political changes to the degree of language endangerment.

The Entrepreneurial University: Institutional, Political and Social Factors

The mission of the public research university is to advance excellence in research, scholarship and creative activities. Within the increasing cutbacks in government spending on science, the university should achieve a greater degree of flexibility to be more prepared to respond to the needs of a knowledge-based society. It means the greater significance to the ways in which the production of scientific knowledge and the technology transfer are organized. We think that the political sociology of science approach can be adequately applied to study the mutual benefits of intercultural exchanges opened by the circulation of cosmopolitan elites.

Brain Drain and Academic Mobility

Emigration of high-skilled professionals from less developed countries to developed countries leaves the sending countries economies with a reduced supply of skilled people. The resulting brain drain would limit the use of educational investment in the sending countries, creating conditions for their re-use by the more developed countries. Skilled emigration has been analyzed according to two contrasting models: the model of the exodus that stresses the idea that more skilled individuals are forced to the exile, allowing them to get a job and a remuneration corresponding to their training; the model of the Diaspora that stresses the mutual benefits of intercultural exchanges opened by the circulation of cosmopolitan elites.

This research aims to test the comprehensive power of each of these theses referencing to the mobility of highly qualified Portuguese professionals to Europe in the last decade. Portugal is one of the European countries where the brain drain has been accentuated in the last 15 years. Emigration has been analyzed according to two contrasting models: the model of the exodus that stresses the idea that more skilled individuals are forced to the exile, allowing them to get a job and a remuneration corresponding to their training; the model of the Diaspora that stresses the mutual benefits of intercultural exchanges opened by the circulation of cosmopolitan elites.

Since at least the 1990s, representatives from several Ecuadorian indigenous communities have sought to obtain redress for an environmental disaster attributed to a consortium of oil concessions that operated in the Lago Agrio oil field of the Ecuadorian Amazon between 1964 and 1990. The alleged harm includes an unprecedented environmental degradation, and all sorts of health-related injuries to the inhabitants of those communities. The legal battle comprises a complex web of court, arbitration -both investment and commercial- and administrative proceedings in Ecuador, the US -where more than twenty courts and several administrative agencies are involved. Legal remedies have also been pursued in other countries. The centerpiece of this gargantuan battle, however, is an $18.2 billion judgment issued by an Ecuadorian court in early 2011 against Chevron. This judgment is the largest and most complex award rendered against a multinational oil company in Ecuador, and perhaps in the entire region. The Chevron saga has rekindled an interesting debate on the development of mechanisms for the protection of diffuse rights involving the environment, indigenous peoples, and human rights in general; the role of the courts in supervising compliance with judicial remedies, and their engagement in activities that go beyond their traditional role as simple adjudicators; and the role of privately-formed entities in the administration and supervision of monetary awards. My presentation will address these issues insofar as they contribute to help understanding the current landscape of environmental and indigenous rights litigation in Latin America, and the interplay between the social, economic, and political factors in the development of large-scale litigation.

GON, Eli* (Chiba University of Commerce, eli@ccuc.ac.jp)
‘the Reinvention of the Traditional’ in the Post-Traditional Societies — an Essay on Encouragement of Dependence

The theory of reflexive modernization led by A.Giddens and U.Beck characterized modern societies as the post-traditional societies where traditions have been taken down thoroughly. They assume that the human relationships defined according to the traditions should be replaced by individuals and the expert systems, both of which are indispensable for the most important theses of the post-traditional societies; choices and decisions. In fact, since 1990s the norms for family, communities and jobs have been disappearing in Japan.

The expert systems as the alternative to the tradition, however, don’t fully func. People there are to make ‘free’ decisions any time, and they are forced to be ‘free and independent decision-makers’ ambivalently. Individuals can’t build the social relationships that used to be mediated by the traditions, especially interdependent relationships. The author argued before that in the present societies individuals refuse ‘dependence’ which should be inevitable social relationship especially in the old age, and with that refusal they necessarily fail to be independent.

People burdened heavily are now starting to seek for the norm to support their daily lives and the groups to belong; nostalgia for the traditions, rise of exclusion nationalism, sympathy for the cults or any fundamentalistic ideas. We can’t dismiss these as reactionary and out of date. These requirements simply show that ‘free and independent lives based exclusively on choices and decisions’ are impossible. They ask for the ‘traditional’ as a reference frame of decision-making. I would let this movement slide into nostalgia. How can we respond to this requirement for ‘the reinvention of the traditional’? In this study, we take the argument over ‘care’ in Japan and discuss the logic that positively encourages ‘dependence’ on others. Rebuilding new social relationship including ‘dependence’ might be the first step to ‘the reinvention of the traditional’ in the post-traditional societies.

Transnational Articulations of Law and Inequality in Latin America: A Legal Genealogy of Inequality

Until quite recently, Latin American countries widely assumed that legal discrimination against ethno-racial groups was a practice that took place elsewhere but not in the region. Somehow, the articulations between law and racial inequality remained successfully covered for almost two centuries. By tracing how such an illegible space could be hidden for so long to these communities. The legal battles on domestic legislation and offers a legal transnational approach for the analysis of the multi-scale intercursing of racial discourses through law. It aims to elucidate the chronological and epistemic concurrence between different legal projects of racial stratification operating in different world areas and to expose the crucial role that law played in the racialization of society under globalization and the continuities of such role in contemporary Latin America. For this purpose, I introduce Sérgio Costa’s definition of inequality regime. This concept serves to depict transnational interconnectedness between legal texts and to place norms in the center of the analysis of racial inequalities. The concept is also useful for the study of long periods of time, because it allows a focus on regime change (i.e. major shifts in the racial conceptions and legal standards and their effects in terms of ethno-racial inequalities). The first part of the paper introduces the legal trans-
national approach applied to conceptualize ‘race’ as transregional inequality and the central role of law in this regard. The second part presents some articulations between law and ‘race’ in Latin America as conditioning ethno-racial discourses, social hierarchies and inequalities during European rule and the most significant continuities of such articulations after independence and in subsequent regime transitions.

Double Troubled-Young People Struggling to Cope with the Conjoined Status of Neet-Youth Homelessness in Times of Austerity

Despite the established body of work in sociology illustrating the diversity of youth experiences, there are gaps in understanding the challenges faced by young people whose lives are framed by the duality of NEET-Youth homelessness, particularly in times of economic austerity. As such, the NEET youth homelessness conceptual framework developed in the mixed method study conducted in Essex, Kent and London and reported here, allows for a particular and more nuanced understanding of the nature of this onerous status, including the coping strategies and or tactics of those affected. This encompasses associated aspects such as their attitudes to work, the welfare state, family and training.

One of the central tenets of the NEET-youth homelessness conceptual framework presented herein is that irrespective of the importance of micro-level factors and personal preferences in shaping young people’s lives, individual situations can only be fully understood by drawing on perspectives which also recognise the impact of broader social change and its role in structuring opportunities and choices available to young people (Russell, et al., 2011).

Importantly, the NEET-Youth homelessness conceptual framework introduced in this paper, marks a shift from the hitherto, dominant ‘silo approach’ to understanding both NEETism and youth homelessness separately, despite their acknowledged links (Smith, J. and Ravenhill, M. (2006);Quilgars et al, 2008; Jones, 2009).

This paper posits that those afflicted by the conjoined status are doubly troubled as they not only struggle to cope with the challenges of living in austere times whilst yoked by external influences such as welfare state access conditionality, but also experience debilitating social exclusion linked to their severely compromised personal capacities and turbulent, liminal adulthoods.

GONTHER, FRÉDÉRIC* (Université de Grenoble, frederic.gonthier@iepg.fr)

GONTHER, FRÉDÉRIC* (Institut d’Etudes Politiques - Université de Grenoble, France, frederic.gonthier@iepg.grenoble.fr)

Public support for welfare state has been shown to be sensitive to economic conjuncture; e.g., to lower with increasing unemployment or inflation rates, and to raise with gross domestic product (Erikson, MacKuen & Stimson, 2002).

Contrasting with the comparative welfare state literature, that usually focuses on social indicators’ annual figures or covers only short time spans, we will adopt a long period perspective and explore how social indicators’ overtime evolutions influence support for state since the 80s. We will use multilevel modeling with pooled data from the ISSP Role of Government, a survey module that has been repeated four times in an increasing number of countries since 1985.

This presentation will deal mainly with global inequalities and public policies indicators. Mixed findings stem from the exploratory analysis. Strong income inequalities are found to fuel support for government, thereby expressing a growing demand for state protection. But more subtle variations appear when we consider the Gini evolution. Support for state appears to be less important in countries where the Gini has increased, suggesting a threshold effect (increasing inequalities usually lower public trust in institutions, and hence dwarf support for state intervention).

The impact of social expenses is only partly as expected. Europeans are all the more in favor of state since they live in countries with low social expenses. However, when social expenses increase, support for state also increases. It indicates that the general public tends to react when political elites answer to social demand, but does not necessarily react according to a “thermostatic” pattern (Wilezen, 1995).

Thus, our findings will also raise substantial issues regarding welfare sustainability and democracy responsiveness; e.g., to help understand how public opinion is shaped by previous levels of policy outputs and how government policies answer to prior changes in mass opinion.

Comparing the Evolution of Attitudes Toward Government: Cross-Cutting Substantial and Methodological Issues

While many scholars have used cross-national data to investigate attitudes toward welfare state in a comparative perspective, this topic has seldom been explored with pooled waves of surveys. A long lasting survey module such as the ISSP Role of Government, repeated four times since 1985, permits to gauge whether cross-state attitudes have moved since the 80s. But it is also particularly useful to question aggregate data analysis and its limitations. The goal of this presentation is to address the overtime evolution of support for State from both substantial and methodological perspectives.

First we disentangle the different dimensions of attitudes toward state, so as to compare the global trends across countries and assess the “values convergence” hypothesis (e.g., people are supposed to be less supportive of State due to globalization, individualization and postmaterialism). Hence we raise the issue of aggregate measurements of public opinion and their reliability through time and space.

Then we use multilevel modeling to look at the evolutions among subpublics, especially among middle classes and “transfer classes”, which have been found to be widely in favor of public policies. Complying with the literature showing that statist attitudes are linked to narrow personal interests, we find that demand for welfare is more important among the disadvantaged social groups. Thus we also cope with the problem of harmonized data and comparability of national contexts.

Our results finally provide evidence that support for State tends to move slowly and uniformly among subgroups and countries, thereby confirming the “parallel publics” thesis but strongly contrasting with the idea that welfare retrenchment has a direct impact on values and public opinion. Here we are faced with our last challenge: how global inequalities and public policies indicators can help to understand attitudes toward government?

Comparing the Evolution of Attitudes Toward Government: Cross-Cutting Substantial and Methodological Issues

While many scholars have used cross-national data to investigate attitudes toward welfare state in a comparative perspective, this topic has seldom been explored with pooled waves of surveys. A long lasting survey module such as the ISSP Role of Government, repeated four times since 1985, permits to gauge whether and how attitudinal attitudes have moved since the 80s. But it is also particularly useful to question aggregate data analysis and its limitations. The goal of this presentation is to address the overtime evolution of support for State from both substantial and methodological perspectives.

First we disentangle the different dimensions of attitudes toward state, so as to compare across countries and across the values and public opinion. Here we are faced with our last gate measurements of public opinion and their reliability through time and space.

Then we are modeling to look at the evolutions among subgroups, especially among middle classes and “transfer classes”, which have been found to be widely in favor of public policies. Complying with the literature showing that statist attitudes are linked to narrow personal interests, we find that demand for welfare is more important among the disadvantaged social groups. Thus we also cope with the problem of harmonized data and comparability of national contexts.

Our results finally provide evidence that support for State tends to move slowly and uniformly among subgroups and countries, thereby confirming the “parallel publics” thesis but strongly contrasting with the idea that welfare retrenchment has a direct impact on values and public opinion. Hence we raise the issue of aggregate measurements of public opinion and their reliability through time and space.

The study provides insights on the capabilities hidden in the informal relationships of primary care professionals. In addition, it enhances our understanding of the determinants of GPs’ organizational performance, which is both an important issue for policy makers and an intriguing facet of the shift between clinical professionals and management.

What Happened with Our Plans? Plans and Behaviour of First Time Dual-Earner Couples in Spain

Most studies show that the arrival of the first child produces a new gender balance within the couple, and frequently initiates long-lasting gender inequalities. This paper investigates how first time parents deal with the reconciliation problem (combining paid and unpaid work), which are the consequences of adopting different reconciliation strategies (use of family policies, informal networks and couples’ time) on gender inequalities, and to what extent different strategies are based on individual attitudes and societal constraints in Spain. This study has two peculiarities. The first one is the sample selection. We interview couples which had a fairly egalitarian division of labour when they were expecting the first child, and we interview them again one and a half year later; when most couples have already made the decision to return to paid work. The second one is the historical moment in which the interviews were conducted, marked by a deep economic crisis and a sharp increase in the number of women’s working conditions. The study is based on a sample of 33 egalitarian dual-earner couples interviewed two times firstly in 2011 and secondly in 2013. Results indicate that mothers elaborate more realistic expectations during pregnancy about their chances to combine work and care. Mothers more often express dissatisfaction with work-life balance and a greater gap between ideals and reality, without really feeling much remorse as they feel that their arrangements are fully justified by their job constrictions and the economic crisis. This study highlights the importance of a good policy design in order to favour gender balance over the life course, even in the worst socio-economic circumstances.

Male Homicide and Life Expectancy in Mexico

Objective. To determine the impact of homicide on male life expectancy in Mexico and its 32 states during the three-year periods 1998–2000 and 2008–2010 and the weight of the different age groups in years of life expectancy lost (YLEL) due to this cause. Methods. Based on official death and population data, abridged tables for male mortality in Mexico as a whole and its states were created for the three-year periods studied. Health-adjusted life expectancy and YLEL for men aged 15 to 75 were calculated by selected causes (homicide, diabetes mellitus, and traffic accidents) and age groups in each three-year period. Results. In the years between the 1998–2000 and 2008–2010 periods, YLEL due to homicide increased. Furthermore, the numbers of homicide cases during the three two-year periods, the YLEL due to homicide increased. From 2008 to 2010, homicides were the leading cause of YLEL among men aged 20–44. YLEL due to homicide among those aged 15–44 increased between the two three-year
periods. **Conclusions.** The increase in the rate of homicidal violence, especially among young people, is impeding an increase in male life expectancy in Mexico. In several states, such as Chihuahua and Durango, this violence appears to be the main reason for the decline in life expectancy among men aged 15 to 75.

**Sociedad, Violencia y Demografía En América Latina**

Los cambios sociales y económicos vividos en tiempos recientes por América Latina (democratización política, crecimiento económico, reducción de la pobreza) no han evitado que sigan existiendo notables desigualdades sociales, y que la violencia alcance niveles insospechados décadas atrás. Obviamente esta situación ha influido en la demografía latinoamericana: si bien el aumento de la esperanza de vida y la disminución de los niveles de fecundidad han propiciado un acelerado proceso de envejecimiento poblacional, lo que ha llevado a que la proporción de personas con 60 años y más se haya incrementado sustancialmente, simultáneamente en la mayoría de los países latinoamericanos hay todavía un numeroso grupo de población en las edades más jóvenes, lo que en la práctica genera una coexistencia de demandas sociales que difícilmente han sido satisfechas en las sociedades del continente. Faltan aún de un modo significativo unos sistemas de seguridad social y de pensiones adecuado -y por ende, la existencia de un amplio número de adultos mayores pobres-, así como la alta mortalidad entre los jóvenes debida a hechos violentos –y su impacto en la esperanza de vida– son prueba de ello. Este trabajo pretende analizar la relación entre cambios sociales y características demográficas en América Latina en las últimas décadas.

**Language Diversity at Work: Guidelines to an Interdisciplinary Approach**

Communication at work is a complex process in which there is much more at stake than information exchange. How can such an element be analyzed in order to understand both its nature and relevance inside organizational culture (Velázquez Valadéz & Gonzalez Trejo, 2013)? How can we introduce a sociolinguistic perspective to approach it? The answer might conduct us to consider firstly a renewed concept regarding language diversity. Namely, it could be conceived as a performance landscape or development arena emerging as a result of dynamic forces affecting the linguistic repertoire. Inside companies, language diversity would enable individuals to perform exchange and balance functions (particular registers or languages) at the workplace to fulfill a place of social identity in a particular context. The latter would imply, secondly, a new perspective to be introduced into a typical analysis of communication at work in order to analyze speaking events considering the following elements (Hymes, 1974): setting and scene, participants, ends, act sequence, keys, instrumentalities, norms and genre, among others. Such an approach would also result from the integration of concepts from the so called Economic Linguistics Exchanges (Bourdieu, 1985) into what is called “Economics of Language” (Grin, 1996). Investigation in the latter field pay special emphasis on: reasons why some languages must be taught and learned rather than others, level of professional proficiency in different languages that companies require in their employees, evaluation of benefits for individual learners or for society of learning and teaching second languages, language policies in education promoted in organizations and their relationship with macro policies (Grin, 2002). Finally, it is the purpose of this contribution to present results from interviews analyzed during the qualitative stage of an investigation conducted in Mexican companies using the concepts and approaches described in order to inquire about the relationship between diverse sociolinguistic functions and positions individuals hold in a company.

**Human Rights and Political Governance. Using the Sociological Theory Tools to Address the Monitoring and Compliance Problem of the Human Rights NORM at the National LEVEL**

The monitoring and compliance with human rights norm in domestic political contexts still is a core research problem in the human rights arena. I intend to present results from a recent research that suggests that political governance structures could be a major improvement with regard to this problem. Political governance is defined in institutional terms as a negotiation structure between state and non-state agents that works as an interface between the domestic political system and regulation processes of the human rights problematic outside this system, mainly at the international level.

I present a case study of a negotiation process between the Colombian government and non-state agents from the system of international cooperation for development, the international human rights system, international NGOs and domestic civil society aimed at the regulation of human rights problematic in Colombia. The outcomes of this negotiation show how a political governance structure can emerge as a change in the political regulation model of this problematic at the national level.

This kind of negotiations entails the participation of plural social agents that act at different scales (national and international), with different interests and power capacity and that must solve a problem of inter-sectorial coordination (state agents and non-state agents) in order to overcome political conflicts and get at some point of agreement with regard to how regulate the problem under consideration. In this research, I used a combination of the structuration theory and the Coleman’s macro-micro-macro loop in order to explain how this governance structure can emerge as a new model for addressing the monitoring and compliance problem of the human rights norm by the Colombian government.

A New Crisologie after 2008? Crises and Cognitive Autonomy

This paper is an attempt to address Morin’s (1968) plea for a sociology of crisis, focusing particularly on the issues of the sociology of time and intellectual change from the vantage point of intellectual responses to a crisis.

Most current sociology characterizes our epoch as one of incessant acceleration, which precludes social agents from being able to weave a lasting narration where to situate their life-worlds in the context of an ever-changing society. This insight brings together thinkers as diverse as Rosa, Sennett, Bauman and Castells. Nonetheless, when moments of heightened uncertainty occur and faced with a context of pressing time – the classical definition of crisis as a turning point, from the Greek krino (to cut, to select, to judge) – narrations do frequently appear, for without a minimum of foreseeability, action is impossible and the future unbearably cowering insights.

If, precisely at the moment in which narrations are the most unstable we need them ever more urgently, we face a tension where the role of intellectuals becomes fundamental. Already Gramsci had acknowledged this. Furthermore, as Morin had already argued, intellectual reactions to a crisis are in no way readily predictable, for they raise forcefully the issue of the justification of normality. This might even mean the ascent of ‘regressive’ responses to a crisis – plagued with dualisms – or a newfound sense of complexity.

From this starting is that I attempt to weave together the tension between cognitive autonomy and narration after critical events. I argue that in order to fathom intellectual change and crisis, sociology must meet at least two characteristics: First, it must understand cognitive autonomy as a relational (not absolute) characteristic of intellectual actors and second, it must be particularly attentive to the issue of time in a self-reflecting way. I.e. it must become a ‘temporalised’ sociology.

Think Tanks As Public Intellectuals? Recent Developments in the Sociology of Think Tanks

This paper's aim is to contribute to the sociological literature on think tanks by drawing from insights from the sociology of intellectuals. I first proceed by describing and establishing links between some of the latest contributions stemming from sociology and political science: Tom Medvetz’s Bourdieuian framework and Hartwig Pautz’s neogramscian approach. From there, a discussion ensues on the potentialities and limits of those perspectives to study intellectual change, independence and stability within think tanks. Herein positioning theory, previously used to study public intellectuals (Baert) becomes relevant, as it highlights the relationship between a public intervention, its context and other actors. In the case of think tanks, it highlights how these organisations must “juggle with” diverse forms of power in a field of power within and outside, criss-crossed by institutional and economic constraints. Since within think tanks individuals and institutions are enmeshed in various public debates and connect to a range of people and organisations, alliances are crystallised in the public sphere through the think tank’s intellectual reputation (and the form we understand a think tank’s intellectual function: based on technocratic expertise, on being a critical voice, etc.). These resources can in turn be mobilised in the form of allegiances and distances, economic constraints and intellectual resources. This reputation thus becomes a think tank’s greatest asset, its depository of symbolic capital. A public intervention is then the exercise of weaving together the intellectual image of a think tank, “talking”, as it were, through its experts in every public intervention and across platforms and publics. This stretches the concept of cognitive autonomy in interesting ways, as organisations themselves generate an image vis-à-vis the image of those who talk on its behalf. In order to exemplify this I expose the case of the British think tank ‘New Economics Foundation’.

Researching the Ordinary: The Extraordinary Sociological Research of Pearl Jephcott (1900-1980)

The lives and works of many sociologists have now been well documented and explored yet even when these biographical accounts are combined with boarder authoritative accounts of the discipline this ‘standard history’ is by no means a fully complete nor an uncontentious one. There are numerous others who have made, or continue to make, an outstanding contribution to the understanding of social life but who have become lost within the minutiae of academic historiographies. As such considerably more needs to be done to examine the history of our discipline and reassess the significant contributions made by ‘other’ researchers so that we may also re-appraise what can be learnt from these ordinary sociologists. In this paper we argue that Pearl Jephcott (1900-1980) is one such researcher whose contribution to sociology, and the sociologies of youth and community in particular, is suitable for reassessment. Her books - Girls Growing Up (1942), Rising Twenty (1948) Some Young People (1954) Married Women Working (1962), A Troubled Area: Notes on Notting Hill (1964), Time of One’s Own (1967) and Homes in High Flats (1971) – were both formative for many themes within sociology of the 1940s, 1950s and 1960s, as well as having contemporary relevance despite being largely forgotten. Focusing on two books in particular - Time of One’s Own (1967) and Homes in High Flats (1971) and data collected over a ten-year period from various archives and Universities, we discuss (i) Jephcott’s sociological practice based on ‘reality congruent’ theory developed in order that she may cast a lens on the realities of working class life. She wrote richly detailed studies that offered an unsentimentalreflection of ‘lived realities’, of the ordinary, of the mundane, of the quotidian; and (ii) Jephcott’s methodological innovation and pluralism in the use of text, image and non-standard data sources that mark her out as being socio- logically ‘ahead of her time’. An ordinary researcher researching the ordinary but her legacy is anything but ordinary.

Obesity and Gender As Status Characteristics

For over 30 years, researchers have examined social influence and persuasion using Status Characteristics Theory (Berger and Conner 1974). While research has investigated beauty and attractiveness as status characteristics (e.g., Webster and Driskell 1983), no research to date has investigated obesity as a status characteristic. The current paper reviews the literature on influence and persuasion, demonstrating how they are related to status characteristics. Next, this paper...
democratizes how the effects of both gender and obesity can be explained by considering them as status characteristics which have the potential to create subsequent status beliefs. Finally, the current study reports empirical findings that support obesity as a status characteristic. This study finds an effect for obesity on ratings of diffuse status, and effects for both obesity and gender on ratings of influence and persuasion.

TIRADO, RICARDO (UNAM)

Social Productivity. Advancing a Concept to Think about Contributions of Social Organizations

The paper deals with social productivity as a useful criteria for assessing the contributions of social organizations to civility, solidarity and quality of life. Commonly social organizations are evaluated with these criteria: a) results, b) the impact of their actions on the world, and c) organizational capabilities. These criteria focuses on examining contributions in a field rather intangible: values and the quality of social relations. The concept points to a poor explored field, although some notable authors wrote about it.

The social productivity concept points to consequences that are not always deliberately sought, since they are often unintended byproducts of organizations behavior. One important aspect is that the image and action of organizations is broadcasted into the civil sphere and it constitutes a role model, that is, it has an effect of social pedagogy. Another important aspect is that organizations' social performance can sometimes be negative, deteriorating social life. Social performance can be seen in these dimensions:
1) From the point of view of the objective or performance materiality and concerns to the contributions of the material and social welfare of the stakeholders. This includes the production of benefits, training of participants in joint decision making, the implementation of the decisions and setting and enforcing rules.
2) From the point of view of the factors affecting the formation of sociality, it focus on the relationship with the environment in which the organizations operate and interact, and covers the image projected by the organization, its actions and how all this stuff interacts with other institutions and actors. These are issues which impact on social connectivity, civility, the public sphere, and the construction of the meanings which are shaping society.

The Two First Paradigms of Empirical Social Research in Germany

Irmela Gorges
Abstract: The two first paradigms of empirical social research in Germany Empirical social research in Germany evolved from the necessity to get information about the impact of the industrialization on the social conditions in Germany during the 19th century. At the example of the Association for Social Policy, founded in 1872 in Germany, it will be exemplified how the founders of the Association developed a strategy to conduct empirical social research with which they could collect data which they could use to realize their political views of a functioning society. In front of the peak of the industrial revolution, the second generation of members of the Association, among them Max and Alfred Weber, developed a different political view of a future society. As a consequence, they fought for a different strategy to gather empirical data. Because both strategies of empirical social research differed from one another not only with regard to the methods to collect data but also in view of the political goals, i.e., with regard to their epistemology and methodology as well as methods to collect data, it seems to be justified to identify the two approaches to empirical social research as two different paradigms.

Civil Society and Civic Culture in Modern Russia: Experience of Sociological Diagnostics

It is hard today to speak of a common and well formed civil society in Russia. Civil society exists, but it is fragmentary and divided across both horizontal and vertical sections of the population. The paper contains the results of sociological researches, including a description of the strengths and weaknesses of Russian civil society and the environment in which it develops, as well as recommendations on strengthening civil society in Russia. The author draws a complex, and in many respects inconsistent, picture. The condition of civil society in Russia is not subject to unequivocal judgments in terms of good or bad. The breadth and variety of the information allows the author to depart from simple, sometimes speculative perceptions about Russian civil society. A sincere interest in civil society can tempt to make too many a priori assumptions, but when the empirical base is rich enough, it is impossible to draw black and white conclusions. The results obtained during analytical work with the literature and empirical data will become the basis for general conclusions and recommendations regarding the development of future research in the area of youth and youth policy.

The results obtained during analytical work with the literature and empirical data will become the basis for general conclusions and recommendations regarding the development of future research in the area of youth and youth policy. In particular, they determine the main trends in research regarding Russian youth, especially in relation to the so-called «new Russian reality» of the market economy. Uncertainty As an Asset in Education Policy

Education policies around the world are responding to increased perceptions of risk by attempting to reduce uncertainty. They are attempting to gain clear information and identify 'guaranteed' solutions by finding out 'what works' to develop policy accordingly. They are setting up clear measures of accountability and transparency. In order to understand states of affairs and identify policy issues,
huge machineries of calculation have been mobilised. Regular surveys are used
to track progress and to respond to the first sign of ‘decline’. In this sense, we
could say that the complexity and uncertainties of the world are transferred to the
processes of calculation, which in turn render clear and less uncertain accounts of
the world in the form of numbers.

In this paper, I take the notion of ‘uncertainty’ to the statistical translations of
the education world and the attempts made through these translations to erase
uncertainty and ambiguity and provide clear, certain accounts. I explore
how complex such operations are, and how the uncertainty and complexity of the
world constantly challenge and stymie the attempts to tame it. I support my
thesis with several empirical examples from my research on the Programme for
International Student Assessment (PISA) and on Australia’s Education Revolution.
I explore the dilemmas involved in these attempts to contain uncertainty (including
through mathematical devices such as calculating ‘confidence intervals’), and the
ways in which the world exceeds these attempts to contain its uncertainty.

Using Callon et all’s (2001) notion of ‘acting in an uncertain world’, in particular
their argument with regard to ‘hybrid forums’, I argue in this paper that keeping
uncertainties alive can have the beneficial effect of bringing more resources and
expertise forward and adding new voices into the discussion. Uncertainty can thus
be an asset rather than a problem to be solved.

**Towards a Synergy Society: Beyond Reflexive Modernization**

The purpose of this paper is to consider the reality of synergy society criticizing
the theory of reflexive modernization and third way. Though positive welfare
oriented third way politics has acquired greater importance in creating active civ-
il society and wealth, it is too Western because reflexive modernization implies
the project of political bargains concerning the ideal attainments. Synergy is not
a collaboration beyond boarders. It lies in seeking the social well-being accompa-
nied with rethinking process of modern values. The rise of communication sector
where consultant, adviser, planner and religion play an important role in empow-
erment is a characteristic of synergy society. Instead of public sphere, we focus on
communication media as the standard of fair trade and eco-label circulate and create the networks of social resonance. This has political, economical and cultural meaning simultaneously. Synergetic modernization is not a progressive project which has political and historical end. It just exploits the explosion of well-being continually and exhibit the huge influence of utilitarianism and excessive individualism. Then we reevaluate the Japanese semantics of happiness(shiawase) and research the activities of Japa-
nese Buddhism after 311. Arguing the everyday life with suffering and joy, we
realize that a contextual succession of accidental meetings build necessarily social
relationships which have potential to form the networks of social resonance relat-
ergating aspects of another modernity beyond the risk society. Synergy society promotes social diversity and well-being against the increasing liquidity. But fragility is unavoidable as resonance contains contingent process. Therefore
we conclude that stable social commitment and sustainability are possible when institutional embedding of synergy develops to construct interactive partnerships
with synergy networks of well-being.

**Re-Regulating Reproductive Bargains**

This paper proposes a framework integrating various capitalism and trans-
national approaches with feminist theories of gender regimes. A road map of the
varieties of capitalism literature charts conceptual building blocks for the compar-
active study of economic governance models and related labor regulations. Vari-
cies of capitalism theories implicitly refer to work and social regulations designed
for standard industrial work and a corresponding form of standard family life. As
such, these theories neglect how gender relations are embedded in the way
major institutions are organized, creating blind spots in their political-economic
models. Without an account of the gender dimensions of employment practices,
institutions, and regulations, the varieties of capitalism approach cannot
decipher the gendered patterns of nonstandard employment and its variation
across countries. National variation in generating of nonstandard employment
becomes more intelligible with reference to what I call the varieties of reproduc-
tive bargain. A reproductive bargain constitutes embedded structures of social
relations that contribute to the differential integration of women and men in
the labor market. Discussing empirical trends across four advanced capitalist
countries, including the United States, the United Kingdom, Germany and Japan,
typically polycentric and multi-level reproductive bargains have the same
characteristics. Examining specific developed markets reveals a complex picture of the gendered character of nonstandard work
in each country. I argue that the type, the density, and the interaction of labor
and gender regulations over working time, both directly and indirectly, shape the
conditions affecting the supply and demand for particular types of labor and
the quality of these arrangements. An examination of the European Union and the
International Labor Organization also suggests that supra-national institutions
influence the transfer of regulatory norms. Yet, employment outcomes and work-
place practices still largely depend on a country’s type of welfare state, coordina-
tion mechanisms of employment relations, and varieties of reproductive bargain.

**Climate Change Policy: The Role of the World’s Cities**

The community of nations has struggled in vain to shape a coherent and effec-
tive mechanism to reduce the global emissions of greenhouse gases. Rather
than advancing toward the modest emissions reduction target set by the 1997 Kyo-
to Protocol, we have witnessed a dramatic increase in global emissions.

Concurrently, climate change policies have devolved to non-governmental ac-
tors and to sub-national levels, often with far greater effectiveness. Particularly
noteworthy is the role of cities around the world in adapting to rapid climate change.
Already home to over 50% of the world population and routinely
major players in the global economy, the world’s cities are primary consumers of energy
and other natural resources and account for an estimated 70% of global greenhouse gas emissions – a ratio likely to increase dramatically in the future.

Moreover, many of the world’s cities are acutely vulnerable to the effects of cli-
mate change, such as rising sea levels.

In light of these profound challenges, it is hardly surprising that many cities are
vanguards in reducing GHG emissions, increasing energy efficiency, and adapting
to the social, economic, and social risks of climate change. Hundreds of cities
around the world have successfully established and implemented climate
action plans with ambitious emission reduction and energy efficiency targets, and
many are taking preventive measures to cope with climate change-related risks.

In light of the unparalleled challenges to urban planning and economic, social,
and environmental policy posed by climate change, the articulation of a theoreti-
cal model that defines the key elements that contribute to the success of climate
change policies is of utmost importance. The current study elaborates such a
model and tests it empirically by examining several case studies in cities around
the world.

**Towards Better Education and Less Inequality? Trends in Geographical, Generational and Gender Inequality in Education**

In our paper we provide an overview of past, current and possible future
trends in disparities in education following the traditional patterns of inequality
along gender, generation and geography. Magnitude and recent trends in in-
equality vary across regions and countries. Educational differences by genera-
tion indicate the speed of change in human capital formation over time and we
identify different patterns of educational transitions that are closely connected to
societal, economic and institutional contexts. We focus on pathways from female
deficit to disadvantage and gender equality and new forms of inequality. The closing of gen-
der gaps is typical mostly of developing countries, where recent gains in educa-
tion are often more pronounced for women compared to men, but are not always
sufficient to remove the limitation in access to education; whereas the issue of
male disadvantage especially in higher (i.e. post-secondary) education emerges in
developed countries of the North, as well as countries in Latin America, East and
South-East Asia. It must be emphasised that gender inequalities are an important
aspect of ‘over-education’. For the future of potentially ‘over-educated’ societies,
even on gender differences as a coherent element of education policies.

We base our analyses on a unique global dataset on educational attainment --
encapsulating the reconstruction and projection of educational attainment from
1970 to 2060 for 171 countries by age and sex -- developed at the Wittgenstein Centre for
Demography and Global Human Capital.

**Natural Law, Human Rights and Sociological Theory**

Barnett has argued that the requirements of organized social life are the prin-
ciples of natural law. These laws are “as fixed and unchangeable as the laws which
operate in the natural world.” For Barnett, the (normative) force of natural law
is found in “if-then” propositions. “If you want to achieve Y, then you ought to do Z.”

There are three dimensions of sociological theory integral to a natural law
argument, which is essential in the formulation of a human rights agenda. Barnett’s
characterization of the normative force of natural law requires that sociological

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
theory have a functional dimension, specifying propositions that are held to be valid for all social systems. Second, analyses of social relations must focus on patterns of interrelationship and these patterns will differ depending on the nature of the social structure under analysis. Social theory formulates universal-class propositions about more particular types of social structure. Third, if, for example, a functional theory enables us to say we must do X if we are to avoid social disorder, it does not suggest that we ought to do X. If we are to have hope of providing guidance about how we ought to act, we need to introduce a developmental dimension into our argument. A developmental model characterizes immanent possibilities for social and individual development, where later stages are hierarchically-ordered progressions capable of generating earlier ones, but where the reverse is not the case. The last stage in this progression may then serve as the critical standard judging earlier stages.

A characterization of the stages of social development culminates in a stage that constitutes the equilibrium. These interdependencies can be symbolic and/or material, ranging from expressive support—such as daily contact or giving advices and comfort—to instrumental support, such as helping in household tasks, lending money or giving supplies. These webs of exchanges are likely to vary according to the composition of personal configurations in which individuals are surrounded. Traditionally, friends are known to be confidents and providers of emotional help, whereas relatives are more likely to exchange practical support. Our point of departure is not to consider friendship and kinship relations in a separate manner, but to look at the personal networks as a whole. A configuration can fulfill both types of support, by including persons who provide different or overlapping types of support. Moreover, these exchanges can be reciprocal or not, in a long or short term, as well as people can give one type of support and receive in another. In this sense, we hypothesize that the pluralization of personal configurations, mixing primary kin with distant relatives, ex-kin and non-kin has an impact on networks’ multiplexity. Multiplexity is understood as the existence of overlapping exchanges and affiliations within a network of relationships. The pattern of interdependencies are construct within the frame of macro structures (gender, social class), but also by the diversification of life course and family patterns of interdependencies are construct within the frame of macro structures of overlapping exchanges and affiliations within a network of relationships. The impact on networks’ multiplexity. Multiplexity is understood as the existence of overlapping exchanges and affiliations within a network of relationships. The pattern of interdependencies are construct within the frame of macro structures (gender, social class), but also by the diversification of life course and family statuses. Do different configurations provide different types of interdependencies?

Data is drawn from a Portuguese national survey applied to cross-sectional samples at different periods, but also by the diversification of life course and family statuses of interdependencies are construct within the frame of macro structures of overlapping exchanges and affiliations within a network of relationships.

Personal networks are paramount for the wellbeing and social integration of individuals, by providing a sense of belonging though the multidimensional interpersonal interdependencies that occur within configurations. These interdependencies can be symbolic and/or material, ranging from expressive support—such as daily contact or giving advices and comfort—to instrumental support, such as helping in household tasks, lending money or giving supplies. These webs of exchanges are likely to vary according to the composition of personal configurations in which individuals are surrounded. Traditionally, friends are known to be confidents and providers of emotional help, whereas relatives are more likely to exchange practical support. Our point of departure is not to consider friendship and kinship relations in a separate manner, but to look at the personal networks as a whole. A configuration can fulfill both types of support, by including persons who provide different or overlapping types of support. Moreover, these exchanges can be reciprocal or not, in a long or short term, as well as people can give one type of support and receive in another. In this sense, we hypothesize that the pluralization of personal configurations, mixing primary kin with distant relatives, ex-kin and non-kin has an impact on networks’ multiplexity. Multiplexity is understood as the existence of overlapping exchanges and affiliations within a network of relationships. The pattern of interdependencies are construct within the frame of macro structures (gender, social class), but also by the diversification of life course and family statuses. Do different configurations provide different types of interdependencies?

Data is drawn from a Portuguese national survey applied to cross-sectional samples at different periods, but also by the diversification of life course and family statuses of interdependencies are construct within the frame of macro structures of overlapping exchanges and affiliations within a network of relationships.

The mother India notion of downtrodden women of India, helpless, exploited by men, worn to and early death; and the exotic sensual women of the orient, who make maharajahs happy with their beauty and talent, are somehow in the picture too.

Indian women of dignity, charm, simple beauty in all classes—form women in the modern middle class. Women in the cities, government women in New Delhi—women who were neither helpless and downtrodden nor absorbed in erotic gratification. Of pampered husbands. Some of these intelligent and still graceful, feminine women were in legislatures, some were running others sector.

Mother India a mother culture, goddess worship, and in a general cultural veneration of the feminine. The study of the Morden societies the Hindu women problem indentified. The major source of data for the study is descriptive material from ten Indian informants, women graduate student in university coming from educated, urban and middle and upper-class backgrounds, representing various geographical and social strata.

Literary sources include translations of original Indian literature. The research paper focus if discussion of the Hindu women problem connected with the single women, older women, widow, divorce, mixed marriages, and friendship live-in-relationship and NRI friendships etc. Most of these problems are related to the Morden age and its impact of traditional patterns. Some of the problems involved in modern Indian womanhood. Except for widowed, they are related to changing times and the impact of the globalisation.

The paper views contemporary China as one characterized as much by consensus as coercion; identifies the overarching vision to which consensus is sought, and defines those actors with whom consensus is sought and also the process through which such consensus can be negotiated.

The process of globalization in India has brought many changes not only in the sphere of Indian economy but also brought ample scope for the mass media communication to expand its network at global level. The advent of satellite television in the early nineties and new communication technology in the later part of nineties have shape the process of globalization of mass media in Indian societies. The growth of private and government organization has not only improved the performance of these organizations but also helped in the growth of service sector in India. The number of internet users and mobile phones has increased tremendously in the recent past. It has enabled fast and uninterrupted communication between the masses located even in remote areas. These new communication technologies are giving rise to new patterns of communication and culture and have great impact of the style of life of their users. The present paper is aimed to understand the social background of the users of new communication technologies and the patterns of mass media exposure as well as patterns of using communication technolo-

gency-internet and mobile phone in Ghaziabad town of Uttar Pradesh on purposive sampling (N=240) using and a highly structured interview schedule. It was found that there was a sharp difference in the patterns of using internet and mobile
phone. The use of mobile phone was relatively wider than the accessibility of the internet. The connectivity of mobile phone is spreading cutting across all caste, class and gender categories but internet connectivity is still confined to some selected sections of the mobile users.

SZWIEL, TADEUSZ* (University of Warsaw, szwiel@uw.edu.pl)

Religion and Church in Times of Social Change

In post-communist countries, during the last quarter century two processes have overlapped: the shaping – after communism – of church-state relations and the global trend to strengthen the presence of religion in the public sphere. This is why they are important and difficult to study.

1. The communist system – for ideological and political reasons – repressed churches and believers who remained in open or covert opposition to the system.

2. However, the countries on which a relatively uniform communist system was imposed differed in many aspects. There were different religions, denominational compositions, relationships between religious and national identities, and the power of the churches (including an assessment of their policies during WW II). That's why communist authorities had to take into account the "local conditions": the policy towards the church(es) and the faithful had to be different in the relatively secularized Czech part of Czechoslovakia, the religiously divided Hungary and the uniform, religious, Poland.

3. With the collapse of the communist system the situation changed. Churches and believers regained autonomy, able and willing to stand up for their rights, and the democratic government accepted them or even sought their support.

4. So, institutional and legal measures in selected Central and Eastern European countries will be analyzed.

5. These problems should be analyzed in the triangle: state – church – society. For this reason the position of the Church in society will be included in the analysis, as will society's attitudes – its religiosity, opinions about state-church relations and the sensitive issues in these relations.

6. The analysis will concentrate on Central and Eastern European countries, with comparisons to selected western countries. The main data sources are the WVS and EVS data sets. (These data sets contain many indicators of religiosity, but attitudes on state-church relations and sensitive issues are not represented equally well.)

GRABOWSKA, MIROSŁAWA* (University of Warsaw, grabomir@is.uw.edu.pl)

DURLIK, JANUSZ* (Public Opinion Research Center, j.durlik@cbos.pl)

Social Conditions of Survey Research

The analysis will include two aspects: (1) social conditions of conducting surveys, and (2) social conditions of obtaining meaningful, accurate and reliable answers. These first are very difficult to influence, but researchers have to analyze it to know what the situation is. When it comes to getting reliable answers to sensitive questions, a number of indirect measurement strategies have been developed. In both cases we will present the results of analyses of Public Opinion Research Centre (CBOS) data – treating them as an illustration of the broader processes rather than as a basis for more far-reaching generalizations.

Ad 1. The CBOS (along with the Institute of Sociology of the University of Warsaw) has analyzed participation in survey research and the "escape from the field of the question" as significant answer orientation. It is difficult to say or refuse to answer. We attempted to determine whether these responses depend on how and they depend on the questions' issues (closer and easier, or more distant and more difficult for respondents), the characteristics of the respondent (gender and age, education and interest in politics, the place of residence), the attitude of the respondent to the interview, and finally, dependence on historical time – the analysis included a quarter century – the period 1985-2011 – including the transformation of the system.

Ad 2. Because asking questions about sensitive issues carries risks, and even a high probability of distortion of answers to comply with social norms (social desirability bias), and in Poland the abortion issue is very sensitive, so the randomized response technique was used to get to the actual experiences of abortion of women. Field work lasted six months (November 2012 – April 2013), and the research procedures included a total of 3576 Polish women. The results of this technique will be presented.

The Life Course and Individual Time Styles of Elderly People in Cross-Cultural Perspective

The life course and individual time styles of elderly people in cross-cultural perspective

Our contribution presents the conceptual framework as well as preliminary findings from a cross-cultural qualitative study, focusing on life course-related time perceptions and time-related agency of older persons in Germany and the United States. Both countries are similarly affected by demographic change, yet reveal significant differences regarding life course structures and the institutionalization of old age. Our epistemological interest centers on the interaction between the wealth of everyday time and biographical time poverty in old age. A special focus is set on the relationships between experienced time sovereignty during the life course and the perception of one's own finitude in old age, i.e. the potential tension between a more autonomous disposition of time in daily routines on the one hand and the necessity of handling the limitations and unavailability of one's own time on the other. How do both forms of time management interact with each other – and to what extent does the specific individual time style in old age relate to the internal temporal ordering of the life courses elderly people experience in younger age? Based on problem-centered interviews including large biographical-narrative parts with retirees from various social milieus and different cohorts, we investigate individual experiences with managing ageing, lifetime and everyday time. A special focus is set on the effects of culture (e.g. regarding the relevance of autonomy values or the societal handling of death and finitude). In doing so, the common self-restriction in ageing research with its still-dominant focus on the cultural "own" is overcome. Simultaneously, we aim at gaining a deeper understanding of the peculiarities of different cultural contexts and their specific impacts on the structure of life courses and individual experiences with time and aging.

Unhappy Souls at Work: Subjective Narrations about Psychosocial Working Stress

Since the end of the last century new types of work, employment and management have caused substantial changes in contemporary subjectivity. In the meantime, an increasing social consciousness about psychosocial problems caused by working stress can be observed. In public and media discourses, the „diseases of the soul“ are increasingly linked to flexibilized working and living conditions in late capitalism. On the other hand the reality of „the exhausted self“ (Ehrenberg) is questioned – at least in Germany – on the part of psychiatrists and employers' associations. At the same time, the „psychomedicalization of the social“ is gaining significance in almost every area of social reality.

In my research I aim to contrast these complex socio-discursive interpretation schemes with the subjective knowledge about psychosocial working stress people develop under flexibilized working conditions. I want to know how affected individuals experience and interpret the experience of emotional stress caused by work. By conducting narrative interviews with persons from different working areas (education, health, industrial production, financial services) who have been suffering from incapacity to work due to psychological strain, the interpretive patterns in which this experience is subjectively framed are investigated. The analysis shows how and to what extent psychological vocabulary and interpretation schemes frame subjective interpretations of stressful working experiences – and that they are used in multifaceted and often creative ways, oscillating for example between criticism of working conditions on the one hand and an psychologically "informed" self-ascrption of causes on the other. In my contribution I will explore the types of narration and implicit knowledge individuals concerned by working
stress use in order to re-establish and/or maintain their personal and biographical agency.

Age and Knowledge As Challenging Factors for the Energy Transition in Germany

The German federal policy for phasing out nuclear power and supporting a shift to renewable energies exerts a strong influence on energy supplying companies. They are forced to readapt their business strategies fundamentally. This is a challenging task as German energy suppliers are traditionally very stable and only step by step changing. This stability is reflected in an outstandingly long duration of employment contracts, leading to a high average age. Thus, companies need to rearrange their business by mainly relying on personnel that embodies traditional knowledge and orientations. Furthermore, the recruitment of new, well trained personnel is limited and it is particularly difficult as it is not quite clear what fields of knowledge and which qualifications will be required in the future. The paper explores how energy supplying companies try to find their way into a more sustainable and ecofriendly future of energy supply and use under the given conditions of an aging workforce and predominant conventional orientation. It argues that the transformation is only possible to a certain extent within the old organizational structures.

Eco-Innovation – a New Paradigm for Latin America?

Global phenomena of climate change on the one hand and not predictable technological risks of energy supply on the other hand are challenging not only Germany and the European Union but society, politics, science and industry worldwide. The answers to these challenges are very different. Some countries are screening their existing energy concepts and are searching ways of alternative energy, such as legislation on clean technologies, so-called eco-innovation. It is especially this shift to eco-innovation that catches our attention. It is not reserved for energy technologies, sustainable production can also be meant in this context. The fact that countries are considering transforming their energy systems within the process of the ongoing shift to renewable energies is strong evidence for the “digital generation”. While the overall role of communication technology has already been emphasized in McLuhan’s seminal publication on “Understanding Media” (1962) the more recent technical and technological changes of information technology (IT) have brought these developments to the doorsteps of countries, and their citizens, across the world. At the same time, these technological revolutions went hand in hand with massive internal social divisions of those who have the access, and the purchasing capacities, to access and utilise these technologies. This debate, captured as the “digital divide” has given rise to more comprehensive studies about social inclusion and exclusion. The quintessence of these studies is to elaborate on the vast disparities of access to any form of digital media, particularly in (so-called) developing countries.

At the same time, these global developments pose quite a challenge for any government. In terms of national policies, the current Bangladesh government and their “Digital Bangladesh” policy places a strong emphasis on modern Information Technology services. In their Election Manifesto, they point out their past achievements, and argue that these “made it possible for Bangladesh to enter the digital age” (ibid. 2009). In their “Vision 2021” they have epitomised this policy as “Digital Bangladesh”. Yet, the Bangladesh Youth Survey “Giving Youth A Voice” provides data that strongly question the success of this policy.

Democracy and Inequality in the Philippines and Latin America: Historical Patterns and Political Values

This paper explores the case of the Philippines in light of the Latin American democratization experience. Being a catholic country, with Spanish heritage and a recent authoritarian past, the Philippines may provide a ‘hoop test’ (i.e. a test of necessary conditions) for theories on Latin American politics. Latin America’s fragility is a result of the combination of the inextinguishable optimism to the reminiscences of an Iberian political culture and through the effects of a statist ideology among elites. These theorized causes are present in the Filipino case as well. Located in Southeast Asia, the Philippines share several cultural and political features with many Latin American countries, such as social and political inequality, patronage and state inefficiency. Despite such problems, the Philippines and most Latin American countries have managed to sustain a democratic routine since the mid-80s. The Philippines and Latin America also face similar challenges, for instance popular dissatisfaction with political elites, high levels of unemployment and also concentrated inequality and democracy is often explained through the argument of case similarity, first we compare historical patterns of development in the Philippines and Latin America. Then we compare available survey data on Latin America and the Philippines in order to test whether political values are in fact compatible among them. Our main goal is to evaluate how theories on Latin American politics effectively apply to an external case. If the similarity remains present, we may say that the Philippines in fact provides a ‘hoop test’ for Latin America. If not, the challenge becomes to incorporate findings in our understanding of Latin America and the Philippines.

The Matthew Effects of the Canada Research Chairs Program: Do Women Enjoy the Same Benefits As Men?

In a classic 1968 paper Merton described the “Matthew Effect” as the tendency by elite scientists to accumulate advantage. More recent analyses, Zuckerman and Cole (1975) documented the experiences of women scientists and found women’s productivity was routinely eclipsed by men’s. This, they argued, accounted for the propensity for men to reap disproportionate rewards over their careers. In the years since, the gendered nature of academic work has been the focus of significant research. Recently, the Council of the Canadian Academies’ Expert Panel on Women in University Research (2012) found that women continue to face obstacles in their appointment to faculty positions and their progress through the ranks. Structural and individual discrimination continue to have adverse effects on women academics.

In 2000, the Canada Research Chairs program was established to attract and retain research leaders across all disciplines. Initially, most chairs were awarded to men. More than a decade after the program was established, only 26.2% of CRCs are held by women. In this paper, we are interested in the way in which the Matthew Effect plays out for women and men CRCs. We have previously argued that on many dimensions of professional achievement, status, and rewards, women and men CRCs enjoy similar experiences (Grant and Drakich, 2011). Yet, critical differences do exist and these centre around the gendered nature of academic work and workplaces. In this paper, we focus on measures of research productivity (specifically, research output) and awards. We examine how the dynamics of accumulated advantage vary by discipline. Findings based on 60 qualitative interviews show...
that men are more likely to enjoy greater benefits. We explore the reasons for the enduring pattern of inequitable distribution of rewards amongst women and men.

Investigating Teachers’ Decision-Making about the Use of Digital Technology in Kindergarten

To secure its place in the global economy, the Australian government (2009) recognises that its citizens require highly advanced Information Communication Technology (ICT) skill sets to meet the demands of global ‘knowledge’ economies. Political imperatives to introduce digital technology in educational settings have seen the emergence of digital technology educational outcomes within the national early childhood curriculum, The Early Years Learning Framework for Australia (2009) and in Building Waterfalls (2nd edition, 2011) the curriculum framework used by Queensland Crèche and Kindergarten teachers. Although emerging in early childhood curricula in the prior-to-school sector, digital technology is not yet visible as a policy priority with a plan for funding of digital technologies and infrastructure for support, or for teacher professional development about the integration of digital technology into classroom practice. Against this backdrop of government political imperatives to become a digitally literate nation, new digital technology curriculum accountabilities and an absence of early childhood educational technology policy the question arises, “How do teachers make decisions about the use of digital technology in kindergarten classroom practice?”

To address my research interest in teacher decision-making about the use of digital technology in kindergarten classrooms, this paper draws on interview data gathered from nine teachers working with 3-5 year old children in Crèche and Kindergarten classrooms throughout South East Queensland, Australia. The interviews form a subset of PhD research data collected as part of the larger Australian Research Council Discovery Project “Interacting with knowledge, interacting with people: Web searching in early childhood” (Danby, Thorpe, & Davidson # 1100004180). Institutional ethnography provides a means of scrutinising how teachers use of digital technology is organised and shaped by the discourses embedded in current early childhood curricula and technology policies.

GRASSI, MARZIA* (University of Lisbon, marzia.grassi@ics.ul.pt)

Places and Belongings: “Circular” Conjugality Between Angola and Portugal

In the context of contemporary studies of families and transnational lives, we study the emergence of new forms of conjugality among heterosexual couples living apart (one in Portugal, the other in Angola). Considering the importance of gender stratification when the domestic space is transnational rather than shared, we seek to understand how the construction of masculinity is reformulated in the couple when the man migrates to the other country to find work. The data gathered in my coordination in the ongoing project Places and belongings: “circular” conjugality between Angola and Portugal (PTDC/AFR/119149/2010) capture the repercussions of mobility on conjugality as well as the self-perception and representations of those involved of the domestic space – here understood in its physical, affective, and social dimensions. When a conjugal pair separates as a result of the migration of one person, fluid forms of conjugality arise, demanding realignment of gender roles. The “circular” forms of conjugality that are emerging today can also be studied from the point of view of Post-colonialism Theory – seen in the continuities and ruptures in Portugal’s colonial imagination, the gender-role building, and the migrations between the two countries. The paper contains a first lecture and analysis of the data already collected in the before mentioned project.

Clouds over Spain: Work and Family in the Age of Austerity

Purpose – This paper aims to contribute to the academic literature in two ways. Firstly, the paper will analyse the impact of the financial crisis on the level of flexibility, autonomy and stress of Spanish employees. Secondly, this study aims to identify if the impact of the economic crisis on the work-family balance differs by sex, educational level, economic sector and regions across Spain.

Design/methodology/approach – The article reviews relevant literature in work-family balance. Two databases (2005 Ad-hoc Module on work life balance; 2010 Ad-hoc module on conciliation between working life and family life) were analysed in order to characterise work-family balance before and during the economic recession.

Findings – The findings revealed that (a) economic crisis had a negative impact on the control and autonomy that Spaniards had of their jobs, (b) economic crisis diminishes the level of flexibility at work (c) economic crisis had a negative impact on the level of stress among Spanish employees.

Originality/value – Despite the explosive growth in the work-family literature, it is not easy to find empirical evidence showing the relationship between financial crisis and work-family balance. Moreover, the case of Spain is very interesting given the very specific circumstances of austerity there.
This paper employs a feminist analysis to explore civilian military wives’ experiences of domestic abuse in the British military context. Although military families do not live their lives in complete isolation from the civilian sphere, their lives and communities are shaped to a significant extent by the gendered structures and discourses which construct military culture. Following Stark (2007), I conceptualise domestic abuse not just as a crime of assault, but as a gendered pattern of power and control in which a perpetrator attempts to entrap his/her partner in a state of “unfreedom” through the micro-regulation of his/her everyday life. I suggest that the particularities of life in the British military community reshape the tools and opportunities for, as well as the barriers to, both the perpetration of and the resistance to such a pattern of control. This has implications for help-seeking and the provision of support services.

This paper draws on interviews carried out with civilian women who have experienced abuse in marriages to British servicemen, servicemen who have perpetuated domestic abuse, and military and civilian support workers with experience of supporting either/both of these client groups. I tease out the ways in which a range of factors including the material structures of military life, militarised constructions of the public and private spheres, wives’ disempowered position on the borders of the military community, and discourses around heroism, duty, protection, and precarity produce particular vulnerabilities to abuse and particular help-seeking needs. In concluding, I explore the contributions of this work for the provision of services to this particular group of women as well as its wider implications for understanding the challenges faced by military families in the 21st century.

GRAY, KEVIN* (American University of Sharjah, kegray@aus.edu) Systems Theory and the Constitutionlization of International Law

In this paper, I propose a critique of the Habermasian model of the legitimacy of global institutions, drawing on Luhmann theory to explain how legal systems multiply, recreate and maintain themselves in worldwide social system. Recently, legal theorists have drawn on Habermas work to suggest that it is possible to imagine a constitutionlization of international law and legitimation of international nation along broadly Habermasian lines (Von Bogdandy 2012; Von Bogdandy, Dann and Goldmann 2008; Von Bogdandy and Dellavalle 2009; Von Bogdandy and Zacher 2015). The broad trend has been to theorize the development of legitimate international law in terms of processes of will formation outside the state that mirrors the distinction drawn by Habermas and Fraser between strong and weak publics – where strong publics are parliaments and other deliberative institutions, and weak publics are those public spheres which influence parliaments and international organizations such as the EU, international courts, NGOs, etc. Similarly, the tendency is to treat the role of law in terms of the hinge theory of law as outlined in Between Facts and Norms – law is a ‘transformer’ which transforms commands from the public sphere and the lifeworld into a specific language of commands for the economic and bureaucratic fields (Habermas 1994).

I will argue, against the Habermasian, in my paper that the model of international law proposed here is empirically incompatible with law making in the international arena. Luhmann and Teubner’s model of law formation does a better job of explaining the innovation and development of legitimate international law.

Religiosity, Spirituality and Happiness In Buddhist Thailand

Thailand, a Buddhist country in Southeast Asia, has experienced deep social division and political conflict since 2006. The predominance of Theravada Buddhism is considered an important aspect of the Thai setting since it influences Thai people’s attitudes, thoughts, and ways of life. The purposes of this study are to explore whether the level of happiness is changed over the period and whether religiosity and spirituality has a significant relationship with happiness among Thai people. The pooled data of population age 15 years and over from the National Statistical Office Surveys in 2008 and 2011 were utilized. They are the national representative sample surveys. The sample consisted of 25,950 population in 2008 and 23,670 population in 2011. Based on binary logistic regressions, the results reveal that Thai people were happier. Religiosity and spirituality were associated with happiness statistically significantly after controlling for study year, demographic factors (age, sex and marital status) and socioeconomic factors (education and occupation). Those who always undertook all five precepts and meditated in Buddhist holy days and other important days were more likely to be happier. Those who expressed their gratitude, gave an opportunity to others before self and donated regularly were more likely to be happier than those who rarely or never did them. The findings suggest that religiosity and spirituality played a vital role in increasing happiness among Thai people during the difficult time.

GRAZIOSI, MARIOLINA* (University of Milan, graziosi@unimi.it) The Self and Identity in Technological Times

The Self and identity in technological times

I intend to explore the impact of technology on the formation of the self and identity. The Italian philosopher Umberto Galimberti, in his book Psyche and Teche (1999), maintains that it is no longer accurate to speak of alienation. When Marx advanced his concept of alienation in capitalist society man was still a subject who could imagine new horizons. Today, the domination of technology has reached a point where the relationship between man and technology has been reversed: technology is the subject and man is the predicate. In this new situation, it is not correct to speak of alienation but rather of identification with technology. In a world totally generated by technical equipment, according to Galimberti, man is an official of this apparatus and his identity coincides with that of his function. Thus, man is himself only if he is functional to the other, technology (1999). In the light of Galimberti’s thesis, can we still speak of a reflexive identity developed in contemporary society, as the sociologist Antony Giddens does? Furthermore, can we still believe, as the existential philosophers Sartre and De Beauvoir did in the seventies, that identity is a project and coincides with subjectivity? Moreover, what becomes of the self? If identity coincides with function, the self is totally withdrawn, and the difference between interior and external life is suppressed. Naturally, this creates a psychological and sociological pathology which Marcuse denounced when he spoke of the one-dimensional man. Graziosi speaks of the death of the psyche because what is enhanced are the intellectual abilities while emotions are disregarded (1999).

GREBE, EDUARD* (University of Cape Town, eduard.grebe@uct.ac.za) LOW, MARCUS (Treatment Action Campaign)

New Forms Of Transnational Organisation On Access To Medicines: The Global Activist Response To The Imatinib (Glivec) Case

In the late 1990s and early 2000s, global AIDS treatment activism had been characterised by innovative forms of organisation, including the construction of transnational ‘networks of influence’ (Grebe 2011, 2012) incorporating activist networks and broader coalitions comprising national and intergovernmental bureaucrats, scientists, the media, etc. These networks were built and deployed in order to expand access to patented antiretroviral drugs priced beyond the means of developing country governments, with significant success. Following its successes, however, the movement largely demobilised. The recent patent dispute between Novartis and the Indian patent office over the rejected patent application for the cancer drug imatinib (sold as Glivec)—the rejection eventually confirmed by the Indian Supreme Court in 2013—spurred existing activist networks into action for a globally-coordinated campaign in support of the rejection (especially after the United States placed India on a trade “watchlist” in response). The mobilisation described in this paper illustrates the innovative characteristics of activism on access to medicines in the context of globalised corporate power, as well as global trade and intellectual property rights regimes. These forms of organisation include North-South and South-South collaboration and horizontal forms of organisation that span geographic and sectoral boundaries—representing what Ferguson (2004) might have termed ‘horizontal topologies of power’—in order to deploy influence and social power at the global level. The paper further develops the ‘networks of influence’ theorisation of transnational civil society mobilisation previously described.

**Immigration and Public Opinion in Japan: Keys to Fostering Integration**

It is often hoped that efforts at integrating foreign immigrant populations on the part of both local communities and government will bring about a more favorable perception by the public at large. Yet as immigrant populations increase, public opinion is in a state of transformation—whether this is for better or worse. In the case of Japan, research examining public opinion on immigration in Japan is surprisingly rare. Public opposition to immigration is often unquestioningly taken as a given with little subsequent analysis, either due to language barriers or a lack of interest on the part of Western scholars. Utilizing data from nationally representative public opinion polls, this paper aims to bridge this gap. We propose to dig deeper into public opinion on immigration in Japan, arguing that while the public perception may remain negative overall, there are a number of important mitigating factors that can elicit more positive associations with immigration in the country. If communities and local policymakers hope to foster integration and improve relations with immigrant communities, this research can provide important clues as to what sort of actions can be taken.

**Criminal Careers: Discrete or Continuous**

Numerous empirical studies of criminal careers have made use of finite mixture modeling to analyze sequences of events such as crimes or arrests. This approach represents a set of individual event sequences with a small number of mutually exclusive discrete classes, using data for 332 males released from the California Youth Authority in 1981 and 1986, and followed for several decades after release. In this data set we find little evidence of sharply discrete arrest trajectories.

"What Is to be Sustained?: Towards a Critical Theory of Urban Sustainability"

We live in a time when the need for urban sustainability has become a new common sense. We daily witness confirmation of the famous prediction made by Henri Lefebvre that our planet is becoming progressively urbanized, as well as more crisis-prone (Lefebvre, 1970). Urban sustainability appears to many of the logical, if not inevitable response. Yet for all its ubiquity and broad acceptance, the concept remains largely uninterrogated. My paper will discuss a theoretical framework for analyzing and advancing a more critical use of the term. I argue that there are multiple urban sustainability in circulation and competition today, and that to distinguish amongst them, we must identify the particular urban environments which seem worthy of sustainability, and/or the competitive environment for capital. Second, using archival, textual, and institutional analysis, I demonstrate how these discourses are rooted in distinct epistemologies, whether "vernacular," "ecological," "justice-oriented," or "market-oriented." I argue that through market-oriented, post-crisis urban redevelopment and green city brand- marketing, market-oriented sustainability discourse is becoming dominant. (Greenberg, 2014) Finally, drawing on case-study research from a multi-campus University of California research project I direct, I analyze how such discourse develops and is contested in particular urban ecological spaces, with a focus on iconic city-regions of Northern California like San Francisco, Berkeley, and Silicon Valley. The birthplace of "ecotopia," "eco-city," "whole earth," and "Google Green," Northern Cali- fornia has played an outsized role in the proliferation of sustainability discourse since the 1960s, and with this a global "sustainable urban imaginary." Yet through urban redevelopment, this local discourse becomes increasingly market-oriented. Thus now is an opportune time, and Northern California an opportune place, to critically examining longstanding struggles over the question of what and who is to be sustained.

**Changing Disadvantage: Creating Space for Chicago's Third Ghetto?**

Chicago has long served as a national policy lab, particularly in regards to urban housing policy. The city's public housing policy over the past 20 years has been particularly intertwined with arguments for national program reforms and devolution. As public housing policy in the United States continues to devolve amidst fiscal austerity and market-driven public private partnerships, the spaces of housing need and assistance have also shifted. Parallel to national linkages with public housing policy, Chicago has long served as an important driver of scholarly work regarding the geography and structure of metropolitan opportunity. As the Chicago Housing Authority's "Plan for Transformation" approaches 14 years of implementation, what impact has its policies of transformation had on shifting structural dimensions of disadvantage in Chicago neighborhoods? This paper links existing theories of metropolitan opportunity structure with an analysis of the historical shift in spaces of advantage and disadvantage for public housing residents. Using the Chicago Housing Authority's Plan for Transformation as an important inflection point in local housing policy, this paper examines shifts in spaces of advantage and disadvantage for public housing residents in relation to broader shifts in these spaces for unassisted households. This paper contends that while the Plan for Transformation espoused values of racial and economic integration, and the revalorization and stabilization of historical sites of housing assistance via income mixing, that its end effect has largely been one of further disintegration, displacement, and a reenactment of structural disadvantage for broader swaths of Chicago neighborhoods. By examining the impacts of public housing transformation on the spatial dimensions of structural disadvantage, this paper contributes to a broader understanding of the intersection of policies of housing assistance and the structure of metropolitan opportunity.

**GREGG, BENJAMIN** (University of Texas at Austin, bgregg@ austinvetexas.edu)

**The Local Construction Of a Human Right To Democracy**

Is the idea of a human right to democracy coherent? Sociologically oriented human rights studies can usefully identify civil society processes that show why and how particular societies have come to embrace, to some extent, various kinds of human rights standards. These are empirical studies in vernacularization, i.e., the translation of human rights norms into local practice. Did any part of the Arab Spring, which took place in non-democratic communities, vernacularize democracy in any sense? Did any part make the idea of a human right to democracy plausible? A right is plausible only given some connection to specific duty-holders and their obligation to ensure the practice and defense of that right. If, as it appears, in the Arab Spring there were no domestic institutions or powers obliged to ensure a human right to democracy, could any conceivable foreign institutions or forces be so obliged – and obliged, perhaps, to intervene? Intervention ranges from “soft” forms, such as scholarships for dissidents, to “harder” forms, such as financial support of domestic opposition groups, to conditions on aid packages, to the “hardest form”: unilateral military intervention. From a social constructionist standpoint (in distinction from, say, a theological or metaphysical one), while human rights might be thought to involve obligations toward humanity as a whole, for a given individual in a particular political community, a human right to democracy imposes obligations only on fellow members of that community. The idea of a universal human right to democracy makes no sense, and outside intervention toward encouraging local democracy would not be warranted on human rights grounds. Still, the local vernacularization of human rights could possibly infuse the vernacularization of democracy. Then a human right to democracy would be a local, domestic construction by the participants themselves rather than a foreign import or imposition.

**What Cognitive Sociology Can Contribute To Human Rights Diffusion**

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Because many a social construction appears parochial from standpoints outside and beyond the community of origin, one wonders: On what basis might one parochialism ever justifiably trump another? Specifically, how might particular human rights be made widely plausible from within communities in which they currently appear implausible for local cultural reasons? The words “from within” already signal an essential aspect of my thesis: a parochial idea is legitimate for the community that embraces it. Human rights can be legitimate for any community that comes to embrace them. But how can particular human rights become persuasive within cultural communities tomorrow that today regard them as alien or misguided? The concept of “cognitive reframing” has a role of these intermediaries in disseminating the rules of the marketplace from other port cities with direct access to the Atlantic and Indian Ocean. And it takes a closer look into how these rules have structured particular “spaces of hospitality” in the city of Copenhagen.

GREVE, ANNI* (Roskilde University, anni@ruc.dk)
On Spaces of Hospitality

Although specialists in hospitality have worked extensively on hospitality with respect to relations between different nations or between nations and individuals of a different nationality, for instance when they seek asylum, Jacques Derrida preferred to focus instead upon the relationship between the guest and the host. This has provided a much-needed rethinking of how to understand hospitality as a way of relating, as an ethics and as a politics. Within this work, there have often appeared discussions of ‘spaces of hospitality’, but these spaces have remained largely abstract. This is where this paper comes in: It will re open discussions of spaces of hospitality with an introduction into an on-going research project that studies the performative, structural and social dynamics of cultural encounters focusing on forms of hospitality that are related to particular sites in the city, namely the market place, the religious sanctuary and places for the performing arts and cultural heritage. For the modern city they are the tightly woven fabric of social reality, and their configuration can make certain cities more hospitable than others, is the leading idea.
GRIGORIEVA, LUDMILA* (Krasnoyarsk State Pedagogical Univ, adonai@bk.ru)

Sociologist of Religion: Insider As a Professional Outsider, on Professional Competence and Potential Engagement

This type of research is about understanding concealed internal meanings of a religious belief and religious action from the viewpoint of Max Weber's interpretative understanding of social action. This method helps to reveal subjective presumptions, incentives and personal foundations for religious belonging and religious service. This research requires specific conditions and specific methods: "ethnographic," "anthropological" and phenomenological methods. Typical sociologists of religion face numerous problems when they study unknown communities as outsiders. The difficulties are about generating stories, duration and continuity of staying in a group, the difficulty of understanding the internal worlds of believers, etc.

Contemporary religious communities involve people of every social class, educational level and intellectual abilities. Sociological education per se does not always result in high quality research.

It can be argued that an 'original insider' cannot avoid religious engagement or that they cannot be completely objective, an important rule to observe in any research. The author explains that every society member has a greater or lesser degree of religious engagement caused by their initial attitude to any religion (Max Weber, 'Intellectual Honesty as a Principle of Religious Cognition'). Speaking generally, each of us is 'engaged' by our temperament, nature, experience, beliefs, prejudices, etc. Being objective might be a theoretical objective for any researcher with a bit of self-discipline and an honest attempt to distract from their personality. A 'professional outsider' is not especially different from an 'original insider' in this respect.

The problems might be mitigated if original insiders could become professional outsiders. They could be members of a studied community by birth, education or, conversion and, essentially, they would have the necessary level of intelligence, culture and training. The paper discusses some methods of finding, attracting and training such researchers.

GRIMMER, SASCHA* (University of Basel, sascha.grimmer@unibas.ch)

Sociology of Corruption

Corruption under the perspective of its effect on the stability of macro-social democratic societies shall be discussed. It appears as deviation from normed functionalities in spheres of society with the aim of taking advantage for all parties involved in the corruption relationship. In the theory of differentiation this is an effect of dedifferentiation, a throwback of modernity, because their superior, to functional differentiation and specialization based operation has been abandoned. Corruption appears to herein as functional equivalent of subsystem-specific function logics. It appears from the normative point of view of democratic theory and a corresponding democratic political culture as a system in jeopardy context. The reference to the political culture may be enough to highlight that corruption in everyday life and its many small, non-significant standard violations begins with each individual. The studies of Morlok and Tänzler refer to social changes (De-structuralizations), which promote structural level corruption. In the sociology of domination and social theory, where corruption with respect to the functioning of organizations or subsystems have no relevant role. They operate as criminalized forms of deviant behavior and not as a functional equivalent to

higher educational aspirations - many studies reveal increased transitions of migrant youths to the more demanding educational tracks available to them (Jackson et al. 2012).

In spite of these studies, the question of a possible interaction between gender and migrant background has been rarely investigated so far (e.g. Fleischmann und Kristen 2011). Given this lack of research, the paper focuses on such educational inequalities at the intersection of gender and migrant background at the transition to higher education.

In order to formulate the theoretical expectations, we refer to decision theory. As can be seen from the analysis of the transition 35 a comparison of Switzerland (data source: TRES) in Germany, France and TRES France (Panel d'élèves of the second degree) 1995. Multivariate regression models were run in order to investigate the research questions.

Preliminary results indicate increased transition rates to Higher Education for second-generation males from some socially disadvantaged migrant groups for Switzerland and Germany, if controlled for social origin. A deeper analysis for Switzerland thereby also reveals that such advantages are largely driven by the high occupational aspirations these males pursue.

However, the assumption that second-generation females originating from countries characterized by a rather patriarchal culture would encounter disadvantages at the transition to higher education was not backed by the data for none of the countries under consideration.

out in public institutions (hospitals and prisons), where religion meets the secular and the old religious monopoly meets religious diversification. The research has been conducted in the framework of the project: The accommodation of religious diversity in hospitals and prisons in Spain funded by the National Research Programme of the Spanish Ministry of Economy and Competitiveness.

GRIGA, DORIT* (University of Bern, dorit.griga@edu.unibe.ch)

Educational Inequalities in the Access to Higher Education at the Intersection of Gender and Migrant Background: Results from Switzerland, Germany and France

Gender inequalities as well as migrant-related inequalities in education have been profoundly analysed in sociology during the last decades. While gender inequalities were shown to have been reversed during the last decades (Buchmann et al. 2008), youths with a migrant background appeared to generally perform lower in most European educational systems (Heath et al. 2008). However if it is controlled for social origin and school performance – and in line with migrants'
Caregivers and the Biopolitics of Aging

The aim of the paper is to discuss the way in which the global aging crisis gives special configurations to elderly care. To this end, an analysis of the Brazilian recent debate on transforming caregiver into a professional career that took place in the legislative arena is juxtaposed to the practical solution given to elderly in home care in Brazil and in Italy. The absence of public policies directed to old age and the new needs of care reconfigure and give new meaning to women migration and to domestic paid work.

Comparing Occupy Movements: Global Mobilizing Power, Local Political Context and Dynamic

A new wave of mass mobilization and popular struggle has spread all over the world since 2011, traveling from Tunisia and Egypt to Spain, Chile and Israel and the USA. When the wave arrived to the US the New Yorkers gave to name to the global new repertoire of resistance - Occupy movement. Although the events in one place encouraged activists in other places, the content and impact of the new movements was determined by the local political conditions.

It is my argument that despite all the differences and peculiarities of political context and dynamics, there is a common pattern to all movements: the need to occupy the public space in order to be recognized and to talk in the name of the people, the masses or 99%. All mobilizations are resisting the economic damage caused to middle and lower classes by the neo-liberal economic policies. Two main effects of neo-liberal policies gave rise to the occupy movement’s new repertoire: the individualism that destroys social solidarity, and the weakening of political parties as the focus of negotiations between civil society and the state.

Occupying the public sphere is an innovative repertoire designed to reconstitute social solidarity and “peoplehood” that have been destroyed by the neo-liberal policies, and to make claims in its name. The paper will compare various the most salient cases of popular mobilization, and the specific political contexts that facilitate the movement, and the different political dynamics they provoke.

Orthodox Christianity and Mixed Religiosity Among Russian University Students

In the early 90s of XX century Russia adopted the law on freedom of conscience and Russian people were enabled to express their religious views. Religion became an opportunity to gain inner stability in the midst of a social chaos. All that in a very short time contributed to a higher percentage of formal Orthodox Christian believers but a lower proportion of practicing believers. In this paper we analyze the social phenomenon of university students’ mixed religiosity in post-Soviet Russia. Results for our research are based on interviews conducted with 323 Russian university students, between 18 and 25 years old. Nearly 68% of the respondents stated that they believe in God, however religious faith comes second to last out of 14 most important life values. 11% of those respondents can be attributed to a ‘practicing Orthodox believers’ group. In the course of our research, we have identified three religiosity types of the university students: formally religious, actively practicing and spiritual. We argue that a significant gap between formally religious and actively practicing Orthodox students has occurred mainly because of a prevalent mixed religiosity among the students and might be explained in terms of uninstitutionalized forms of religion. Mixed religiosity is defined as a combination of different elements of traditional religious concepts and spiritual ideas and practices. The processes of secularization at macro- and meso-levels are analyzed in the article and viewed as preconditions for a mixed religiosity at the micro-level.

To sum it up, we argue that a broken religious socialization between generations is an important factor for emerging mixed religiosity among Russian university students. The attitude toward religion in the Soviet society, that affected the behavior of our respondents’ parents, continues to indirectly influence the religiosity of students in the 2010s.

GROSHEVA, LYUBOV* (Tyumen Military Institute, Marduktoten@gmail.com)

Obstacles and Opportunities of Self-Employment of Young People in a Modern Society

In the modern society the elimination of the problem of youth employment becomes one of the main tasks for every country despite of its level of development and income. It is absolutely clear that developing countries and countries with transition economic policies have more difficult situation and have less institutionalized conditions for providing enough possibilities for young people. One of the most perspective trend that is considered as a reliable solution to this problem in the world is the self-employment youth.

Though international experience is of great help for some young current and potential entrepreneurs, the extent of its efficiency in countries like Russia is still questionable.

The author suggests a hypothesis that these difficulties can be solved by elimination unnecessary institutional formations and correction of youth policy as a whole. The author had conducted a survey that was aimed at identifying the main obstacles to the creation of youth business. There were surveyed 800 university full-time students aged 18 to 25 years. The results of the study showed the most significant barriers to the startup. For example “unofficial payments at the opening of business” were checked by 46.8% of respondents, while 59.2% were concerned about “additional fees to inspection bodies” though there are some ways that make possible to avoid such fees if you consider them as something inevitable. This imbalance shows that there are some problems with information support of youth startups while students themselves are not too bothered by this problem (19,2%). Further analysis of the results showed that some of the essential elements of the current policy of the country are neglected. Author believes that such situation is represented in many regions and countries and offers some recommendations in order to reduce the dysfunctions of current programs for business-active youth.

GROSJEAN, SYLVIE* (University of Ottawa, sylvie.grosjean@uottawa.ca)
Following the Constitution of an Organizational "Way of Seeing": Intertwining Talk, Body and Materiality in Context

Many practices within organizations are centered on the visual capacities of the agents. For example, in the field of architecture (Ewenstein & White, 2007; Styhre, 2011), construction (Nicolini, 2007), medicine (Mondada, 2003; Alač, 2008), scientific work (Daston, 2008; Vitereri, 2012; Vertesi, 2012), researchers have shown how the members share a "professional vision" (Goodwin, 1994). These studies investigated visual practices in professional communities and demonstrated their role in the production, creation of knowledge, expertise and so on. Following the work initiated by these studies, my objective is to analyze and understand how an organizational "way of seeing" is interactionally constituted and shared as a means to sustain the production of expertise. To do so, I conducted an organizational ethnography (Ybema et al., 2009) in 2012 in a firm of land surveyors. The video recording of the daily activities was privileged (Heath et al., 2010) in order to grasp the multi-modal dimension of the interactions (Mondada, 2008). I studied the survey work as a situated activity and an interactive activity based on a variety of multimodal resources such as speech, gestures and manipulation of objects or technologies. In this study, I analyzed how organizational members progressively and jointly build expertise about a property and, in particular, how specific "practices of seeing" (Styhre, 2010) are constituted through the daily work activities. My goal is to reveal how materiality, corporeality and language play a key role in the constitution of a collective "way of seeing" in organization. In this presentation, I would like to contribute to the discussion of the role of "socio-technical arrangements/agencements" (Callon, 2004; Latour, 2005) in processes of constituting an organizational "way of seeing".

Representations of Desirability and Accessibility of Jobs in the Transition to Vocational Training in Switzerland

Transition to vocational training in Switzerland is still characterized by social inequalities, in particular in terms of gender, social origin and nationality. In this paper I wish to explore how the theory of social representations can help us understand the way in which young people make their choice of future job. How do their representations influence their professional aspirations and choices? In particular I wish to explore how two different characteristics of an imagined job, its desirability and its accessibility, can be differently emphasized among different social groups. I will explore the factors that contribute to this different emphasis, in particular the consequences of belief/disbelief in the possibility of social mobility, of degree of self-confidence, of school results and of the representation of how difficult the studies to access a particular profession are, on evaluations of accessibility and the consequences of representations as to social prestige of jobs, as to school and acquiring new competencies, as to parental expectations and as to gender roles, on evaluations of desirability. This research is based on a dataset that was gathered from over 3000 13-15 year-olds in five Swiss cantons in 2011.

GROSS, TOOMAS* (University of Helsinki, toomas.gross@helsinki.fi)
Marathon Running, "Bodies for Others," and Social Class in Post-Communist Estonia

Like many other countries, Estonia has in recent years experienced a veritable boom of recreational long-distance running. Since the turn of the millennium, the number of people running at least one marathon a year has grown nearly twenty-fold, and year-on-year growth rate of marathon runners in Estonia has been constantly over twenty percent. This paper, based on an ethnographic study, seeks to understand the corollaries of this process and links the marathon boom to wider socioeconomic and value changes in the post-communist setting. The paper pays special attention to the phenomena of the body in the context of novel ideals of health, welfare, and success in post-communist Estonia. Bourdieu’s notion of “bodies for others” is particularly helpful when trying to make sense of the runners’ perception of their bodies in the new social and economic environment. As will be argued, long-distance running as a bodily experience is related to class identity. Moreover, a sport is more and more adopted by a social class if it does not contradict that class’s relation to the body at its deepest and most unconscious level. The paper demonstrates that subjecting one’s body to regular physical strain when training for and running marathons corresponds to various class-specific ideals of self-discipline, motivation, success, and perseverance. Also, runners now increasingly subject their bodies to constant self-monitoring and measurement by means of modern technology. Such technologically enhanced and informed “optimisation of the self” constitutes a new form of biopolitics that fits with the neoliberal values of efficiency and productivity.

GROSSI PORTO, MARIA STELA* (Brasilia University, msgrossi@unb.br)
Police Organization; Professional Identity and Social Representations in Brazil

In contemporary Brazilian society, police violence and his involvement in violent forces of conflict resolution are topics relevant to those who are interested in understanding the public security dilemmas. In this sense, this paper aims to analyze how are police forces organized, which relationships are there between this organization, the professional identity and police violence: how police organization and practices are represented by police officers and the effects of these representations for the way they understand their role as responsible to assure the law and order. We believe that these representations have developments not only in maintaining law and order but also in ensuring all human rights. We still believe that such practices result from the symbolic universe through which police officers conceive themselves in terms of marks, belong and identity records.

The paper is based on a survey that was structured using the Theory of Social Representations- TSR. The empirical goal was to obtain, and to compare, the social representations that military and civil Brazilian polices make about their organizations, practices, professional performance and relationships with society. We also compare social representations that police officers create about themselves and the ones they believe society creates about them.

The design of the survey was a sample structured by spatial divisions, hierarchies, roles and sex, comparing both policies: the sample is compounded by 399 questionnaires for the civil police and more 1,181 answered by military police officers. We did one for the way the hombres and female. Also, we have done interviews and focus groups.

The analysis focuses on motivations for the choice of the profession; the pride of the profession; representations of fear, stress, uncertainty and risk arising from police work; and how all these symbols affects police organization and daily performance.

Exploring Residential Mobility As a Spatial Practice Via Qualitative Interviews, Quantitative Survey and Agent Based Modeling

The paper reports on a collaboration of sociologists and landscape ecologists in understanding future residential patterns in a medium sized shrinking city in Germany. Shrinking cities are an especially interesting case here, because numbers of inner city relocations are in general higher than in other cities (Sturm et al. 2013 for Germany). This is due to housing over-supply with more and cheaper offers being available. Like this, patterns of socio-spatial segregation can alter faster.

In a step-wise design, we included inductive and deductive steps, qualitative and quantitative approaches and finally the construction of an agent-based model to simulate future households residential mobility patterns. Firstly, we explored mobility practices by means of in-depth interviews from which we derived context-appropriate information on the orientations and decision criteria of residents. Here, space is included as the life worlds of interviewees.

Secondly, from these results, we constructed a classic questionnaire survey to achieve representative data on the decision criteria among different social and demographic groups. In this step, administrative spatial boundaries were introduced in order to standardize questionnaire responses. From the survey results, thirdly, we develop rules of behavior of households and simulate their decisions in an agent-based model (ABM) as a method to understand patterns emerging from individual behavior. Thus, ABMs use abstract spatial categories and typologies of spatial practices of agents (households in our case). In ABMs, space can be both an independent variable (thus influencing behaviour) and a dependent variable (if the space is influenced by human actions). In our case, space is an independent variable in that location choice depends on the socio-spatial structures and the images attached to certain places and neighbourhoods, on distances to work-places, social networks, infrastructure access etc. Space is a dependent variable when analyzing collective household migration patterns and the changed patterns of socio-spatial segregation.

Socio-Spatial Inequalities and Socio-Spatial Policies in Shrinking Cities

Socio-spatial segregation – the question of the uneven distribution of social groups in urban space – is a classic of urban research literature. The extensive body of literature was elaborated set against the background of growing cities all pointing to the growing spatial separation of social groups in todays cities. Less is known about the dynamics and patterns of socio-spatial segregation in shrinking cities that is cities which loose population over a longer period of time due to a bundle of causes, ranging worldwide from de-industrialization or other econom ic restrictions, urban transformations if urbanized, the political change or conflict, natural hazards or demographic change. In our paper, in a first step we analyze how urban shrinkage impacts on the process and patterns of socio-spatial segregation. These are based on empirical work in three of the case studies of the EU 7th Framework research project "Shrink Smart": Leipzig/ Germany, Ostrava/ Czech Republic, and Turin/ Italy. The loss of inhabitants due to far reaching de-industrialization experiences, job migration, urbanization and steep drops in fertility rates impacted on urban structures in a variety of policy fields, socio-spatial segregation being one of them. With the support of selected data, we shed some light on how urban shrinkage influences the social makeup of cities. We will show that in all case studies, population decline acts as a catalyst to socio-spatial segregation leading to pockets of rapid change and decline. Set against this background, in a second step, we examine which policies are promoted to solve problems such as ethnic segregation, ageing, and socio-spatial inequalities. The results show that even though the linkage to socio-economic changes for social cohesion, the attempts of policies to tackle them still appear to be secondary priorities, sectoral rather than comprehensive, and involve a certain delay.

The Risk of Becoming NEET in Poland

The emerging phenomenon of young NEETs in recent decades has been linked to transformation processes of societies like the global processes of individualization and de-institutionalisation of a life course and individualization of social risks (i.e, Beck, 1996). The effect of de-institutionalisation seems to be much stronger in Central and Eastern European EU member states, also in Poland, where the collapse of the strictly regulated old system has considerably increased flexibility and vulnerability of youth transitions if compared to the old EU members. The economic recession starting from the late 2000s has further worsened the process of young people's transitions towards independent living. Becoming NEET is the risk for a young people and for society.

The main question of the paper is on the scale and dynamic of the Polish NEET population and its heterogeneity in perspective of ways and barriers of transition to independent living of the young. I also discuss the consequences of being NEET for young people and for societies. The analysis are based on quantitative data of Polish Central Statistical Office and the Eurostat, the disclosure of the scale, rates impacted on urban structures in a variety of policy fields, socio-spatial segregation being one of them. With the support of selected data, we shed some light on how urban shrinkage influences the social makeup of cities. We will show that in all case studies, population decline acts as a catalyst to socio-spatial segregation leading to pockets of rapid change and decline. Set against this background, in a second step, we examine which policies are promoted to solve problems such as ethnic segregation, ageing, and socio-spatial inequalities. The results show that even though the linkage to socio-economic changes for social cohesion, the attempts of policies to tackle them still appear to be secondary priorities, sectoral rather than comprehensive, and involve a certain delay.
Financial Independence of Mothers upon Returning to Work

Mothers face challenges when returning to employment after childcare interruptions. The re-attainment of financial independence is crucial for women's economic independence. This study investigates how long it takes for German mothers who entered motherhood between 1992 and 2009 to re-attain financial independence after returning to work. We operationalize financial independence in two ways: meeting the minimum wage threshold and reaching a pre-birth earnings level. Our findings show a deep East-West divide in the speed of re-attainment, with West German mothers reaching financial independence faster than their East German counterparts. The duration until re-attainment is influenced by individual characteristics and policy factors. This research highlights the importance of policy interventions to support mothers in achieving financial independence upon returning to work.

GRYSOLE, AMÉLIE* (CMH (EHESS, ENS), amelie.gryssole@ineed.fr)
Raising Children Born Aboard in the Country of Origin: A Specific Case of Fostering?

Based on a six-month ethnographic study in Senegal, this paper explores the child fostering strategies of Senegalese migrants. Building on data collected in the town district of Yoff (Dakar), I study a specific and relatively understood form (Gryssole, Beauchemin, 2013) of transnational fostering (Kamga, Tillard, 2013) involving children, born in their parents' countries of destination (specifically United States and Italy) and currently living in their parents' country of origin, Senegal. I show how the national institutional contexts, such as the educational and health systems, the immigration policies, in both the parents' countries of origin (Senegal) and the parents' countries of destination (United States, Italy), shape the organisation of transnational families (Bryceson, Vuorela, 2002, Mazzucatto, Schans, 2008, Razy, Baby-Collin, 2011). Migrant parents examine the advantages and drawbacks of origin and destination countries, when deciding where their children should be raised. However, these children are also frequently affected by internal mobility (Vandermeersch, 2002) within Senegal in response, amongst other reasons, to parents' work constraints, health issues, family solidarity, and educational choices. I then discuss the differences between various care-giving arrangements (internal and transnational fostering) within the extended families which have been studied.

Access to and Perceived Quality of Childcare (and elder care) in Europe

The reconciliation of work, family, and private life has become one of the main challenges for younger and older families in Europe today. Access to affordable and good quality childcare is essential in removing barriers to parents' labour market participation. In order to investigate the determinants of perceived quality of childcare and elder care services, we use multi-level analysis with grand mean centred data and consider country-related factors, thus investigating the impact of age, gender, number of children, household's financial situation, overall life satisfaction, female employment rate, being employed, rural or urban living area, satisfaction with economic situation of one's country, level of corruption, etc.

Our paper's research was funded and done for the European Foundation of Living and Working Conditions in Dublin (Eurofound) and is based on Eurofound's EQLS3 data set, a European quality of life survey which was run in 2011/12. It investigates perceived access to and perceived quality of childcare and elder care( also known as long-term) care services in Europe as a whole and in different EU member states and how the availability of such services is related to (female) labour market participation. In order to investigate the determinants of perceived quality of childcare and elder care services, we use multi-level analysis with grand mean centred (Hox, 2010). The model takes into account the individual but also country-related factors, thus investigating the impact of age, gender, number of children, household's financial situation, overall life satisfaction, female employment rate, being employed, rural or urban living area, satisfaction with economic situation of one's country, level of corruption, etc.

Precariousness in Mexico: Labor Trajectories and Meanings of Work

In the context of the processes of globalization, productive restructuring and labor flexibility, data from international and national studies on the topic shows that contemporary work features a spread precariousness condition. In order to contribute to the discussion, in this paper we present the main findings of a study about work precariousness in Mexico which is based on the heterogeneity of women's labor market participation. In giving account of the diversity and development of work precariousness, we compared the labor situation of workers from three contrasting occupations in different regions of the country: garment workers, call center workers and orchestra musicians. Empirical research was based on a mixed methodology which allowed us reconstructing workers’ labor
Adapting To Climate and Biodiversity Change: The Case Of Large Canadian Cities

Adaptation is generally thought of as a successful response to a changing situation. For the social sciences, adaptation is the outcome of a long series of deliberations, decisions and negotiations. One cannot take for granted that adaptation will normally follow changing conditions. Adaptation must be seen as a social process whose outcome is not known before hand by the actors and institutions. The paper starts with a critical examination of what adaptation is for sociology.

A multidimensional model is proposed wherein adaptation is conceptualized as a process which is both controversial and cooperative and is the result of interacting actors and institutions which come to a common understanding of a problematic situation and of its solutions. To understand this process a combination of different theoretical approaches are necessary. The overlapping elements are the following: 1) governance process where ecological uncertainty is pervasive, and where structural and social diversity has deep implications for decision-making; 2) controversy analysis, which focuses on debate on common understanding and on the choice of courses of action; 3) cultural theory to explain how people perceive and organize the changing world (natural as well as social) they live in; 4) since some, if not all, adaptation measures are likely to be innovative solutions, an understanding of how innovations are produced, diffused and adopted, even co-produced is important; 5) finally, one may ask to what extent models and instruments of environmental governance are sensitive to social and ecological justice. This approach will be applied to problem-definition and policy-making in instrumentation of environmental governance are sensitive to social and ecological justice. The approach will be applied to problem-definition and policy-making in adaptation to climate and biodiversity change in a selection of large Canadian cities.

On the Concept of 'Human' and the Aporia of Social Sciences

It is to be ascertained by way of a simple juxtaposition that the set of concepts ‘human / human being / humanity / humanism’, which forms the very core of modern scientific production in its entirety, belongs to a category that qualitatively differs from all those morphologically, lexically, pragmatically comparable concepts. The concept of “human” does not assign any manageable features, or assessable parameters, to those phenomena subsumed by it.

It belongs to a class of concepts that I provisionally call “hoax”. A concept of this category pretends to indicate a set or subset of conspecific phenomena in that one or more shared accidents are applied as differential features of the construction. The concept “human” is the best and truest of this kind. It is the Epitome of the ‘hoax’. Withal, it doubles its uniqueness by appointing itself to both the source and the guarantor of its own legitimacy and virtuosity. To top it all, one of the most significant features of “humanness” and human existence consists in the circumstance that the humaneness of the concrete units of human society is determined heteronomously. The simple, but nonetheless devastating, consequence of this briefly described construction and operating principle of the concept “human” is that the whole edifice of modern social science, no matter the path taken, no matter how sublime the respective motive and objective may be, is doomed to always end up in a cul-de-sac of some type of biology.

Parallel to a radical critique of the central conceptual edifice of the modern social sciences, and, within the framework of a theory of ‘modified and extended semiotics’, and a qualitatively different mode of knowledge production developed on the basis of this, my paper offers a radically new line of approach to the texture and the mode of operation of human society.

Postcolonial Sociology: An Oxymoron or a Border Crossing?

Since its inception, the division established in the course of securing the disciplinary borders of the sociology field between the populations to be studied by sociologists and those who fell in the “other” group to be studied by anthropologists has been taken for granted and remained beholden to the political conditions of possibility of the institutional recognition of their profession that included the labor division between sociology and anthropology. Now that the
residents of those other populations have become the new citizens of former empires such as France and UK, or Japan, the question of the repatriation in the sociological repertoire of notions such as de/colonization, indigeneity, autochthony, and the coloniality of power and social relations, in terms of gender, race and ethnicity is to be investigated anew. If such endeavor is upheld in various corners of the globe, the sociologist has become, in places like France, where a main sociological contribution was made, it remains a contentious topic. From this situated sociological universalism, post-colonial studies remain the outside of the sociological field. Whether one thinks of courses taught in an inter-disciplinary perspective or of research funding moving beyond the pale of deliverables, coloniality and its contemporary expressions are unthinkable in a still ethnocentric sociology climate. Acknowledging that the colonial is indeed the past and the outside of sociologized societies and sociological routines, but also their present, may be a first step towards a postcolonial sociology in search of its academic locations and professional habitation. Mapping such an ongoing history may help include, or not, France in a global dialogical field aiming at understanding enduring inequality processes.

GUÉNIF-SOUILAMAS, NACIRO* (University Paris 8, ngs39@hotmail.fr)

Reflecting/Reflexive Surface: An Ethno-Gender Othering Experience

Practicing sociology as an art of resistance offers an unusual vantage point on what may seem to be the hidden agenda of the sociological duty: locating the sociologist from within. Beyond empirical and routinized practices, this paper aims at giving an account of oneself as a sociologist at the margin or as a minority sociologist. Recording and narrating various encounters of the othering processes, it will explain and discuss the kind of knowledge built under such guise and the way in which it can add some value to the sociological experience. Undoing the disciplinary process still considered central to the existence of sociology is an intellectual itinerary and a collective platform for change in times of enduring inequalities. Reconciling the individual and intimate, here considered as a reflexive/reflexive surface, with sociology as a discipline will be one of the challenges of this paper, as it is one for sociologists in a common world of uncertain paths to equality.

Party Members in Bulgaria, Slovakia and Czech Republic

Political parties in ECE countries are assessed as unstable, weakly entrenched into the civil society, very much attached to the state (Hafner: 2001) and with low levels of members (Brezen and all. ). Political parties in ECE countries are even described as “party with no members” (Cabaña: 2013). This is problematic for the parties, the levels of representativeness and the legitimation and the expression of different civic groups and interests. In general, parties in ECE countries are not implementing formal rules for equal representation of young people, women and minorities. According to some researches the boundaries between statutes of formal party membership and other forms of activism like sympathizers or citizen’s involvement are blurred because the members don’t matter. Parties in ECE countries are also pointed as based on clientelistic networks and patronage. The paper proposed aims to analyze party members and party policies and practices to sustain and extend the membership in comparison with other party-orientated researches of the ECE countries. The main research question is how do political parties in studied countries deal with low membership issues?

Control of the Bodies and Self Expression during Mealtimes in the French Nursing Homes. a Ethnographic Study

This presentation falls within the framework of my PhD research, which aim to get to a sociological understanding of mealtimes uses in the French nursing homes. I’m studying the social conditions of the daily lunch – when the residents have to eat together – in spite of physical and cognitive disabilities, eating and moving challenges, and frequent deaths. I question this social practice considering that residents often declare they do not want to live in institution, and do not want to share mealtimes with others. Eating together is a daily rule in all types of nursing homes – public, commercial, or associative. Eating alone is always an exception or medically justified, or in cases of “irresponsible eating behaviour”.

From the institutional point-of-view, the shared meal practice is built around the values of the French conviviality, and the institutional appropriation of the French public health discourse on the undernourishment of elderly people. The paper aims at discussing the potential of observing mealtimes during four months in two nursing homes, I intend to describe how the social practice of eating together produces forms of social control of the body according to different health restrictions. Depending on the health condition of the elderly people, they face various body management (ex: table placing, type of food service), and various forms of food incorporations (manners). I aim to show how the daily practice of eating together often produces typologies of eater’s, far away from gender, social and generational conditions of the residents.

In the context of control of the embodied dimension of the selves during mealtimes, I propose to focus attention on forms of deviant behavior of residents as forms of self expression in different social conditions. By way of example, attempted negotiations with the nurses, continuous criticism or refusal to eat will be analyzed with gender and social categories references.

GUERRA, JOÃO* (University of Lisbon, joao.guerra@ics.ul.pt)

Sustainability and Social Equity in Rough Economic Times

The interest for sustainability issues and the redefinition of social priorities in an economic recession (Schumacher’s concept) (Schumacher, 1980) have covered, for better or for worse, their own way in today's societies, and the urgency of change is gaining more and more advocates. Despite this, the holistic view of sustainability – promoting human welfare and preservation of the natural environment – is becoming a programmatic and cross dominant ideology that has shaped the general framework of environmental policies, but its effective implementation has basically been done in an evasive (Adger and Jordan, 2009), superficial (Redclift, 2005), and inconsequential (Lélé, 1991 [2005]; Carter, 2001) manner.

In those rough economic times that we are experiencing in Europe – and desperately trying to get to the end of the “age of irresponsibility” that other scholars (Jackson, 2009) – those features tend to worsening and, nevertheless, do not release an engaged, empowered and collective movement able to request and support just, equitable and pro-sustaining measures. Hence, based on the testimony of representatives of Portuguese civil society organizations (focus groups, ofline survey, and document analysis) we will try to define i) motivations, ii) interests, and ii) profiles of civil society organizations, taking into account that, despite the rhetoric of holistic sustainability, environmental groups tend to ignore social problems and overestimate ecological ones, while the remaining groups tend to take a reverse position.

Sustainable Adaptation Projects and Initiatives in Portuguese Municipalities

Governance for sustainability has gained greater public awareness and social significance since the late 1980’s (Adger and Jordan, 2009), and it shares basic purposes and characteristics with sustainable adaptation. Consequently, both governance for sustainability and adaptation to climate change often overlap in policy design and implementation (Kemp, Parto and Gibson, 2005). In the Portuguese case, despite the persistent lack of a concerted national framework and/or reliable funding policies, incontrovertible advance has taken place in recent years. However, these dynamics are still irregular, in reality some misconceptions and unsustainable practices are persistent (Schmidt & Guerra, 2011).

Bearing this in mind and in the context of climate change, the overall objective of BASE – Bottom-up Climate Adaptation Strategies for Sustainable Europe, (a FP7 funded project) is to produce knowledge to support decision making on adaptation strategies and pathways, as well as related action programmes across Europe. Based on results from an online survey applied to a representative sample of Portuguese municipalities by the BASE Portuguese team, and framing our analysis within a multi-area governance framework (Jorgensen, 2012), this paper will discuss the conditions and features of local sustainability initiatives promoted by Portuguese municipalities. We will attempt to diagnose the situation, analysing the features and context of initiatives and projects currently being implemented by municipalities, under the framework of European and national policies for climate change mitigation and adaptation. Moreover, we will try to highlight some relevant features of local communities
study derives from three different sources. Firstly, the European Values Studies (EVS) conducted in 2008 offers a unique value for this research because fieldwork for the survey in Estonia coincided with the military confrontation between the Russia and Georgia on 8-14 August. EVS, among other domestic and international institutions, inquired about the level of confidence in the United Nations (UN), the European Union (EU), and the North Atlantic Treaty Organization (NATO), which serve as the dependent variables of the current study. Using propensity-score matching technique, respondents who were interviewed in a time interval before the war are designated as the control group, whereas those respondents who were interviewed after the war started, can be designated as the treatment group. Secondly, the information from this dataset is further supplemented by observations and in-depth interviews conducted in Estonia both in the period around the Russo-Georgian conflict, and after it. This will enable us to go deeper into the embedded meanings of trust that Estonians exhibit towards international organisations, and the West more generally. Thirdly, we will offer a brief review of how the 2008 conflict was framed in Estonian media at the time, and how this may have shaped the perception of the Estonian public.

When the so-called 5 Day War between Russia and Georgia occurred in the summer of 2008, the Estonian public reaction was especially passionate. Two major explanations stem from the strong identification of Estonians with the situation of Georgia (post-Soviet state, small country, Russian citizens/speakers on Georgian territory) and the question of existential insecurity (will the EU and NATO guarantee our security in case of necessity?). Using a mixed methods research design, in this study we investigate how the 2008 war between Russia and Georgia affected public confidence in international organisations in Estonia. Data for this study derives from three different sources. Firstly, the European Values Studies (EVS) conducted in 2008 offers a unique value for this research because fieldwork for the survey in Estonia coincided with the military confrontation between the Russia and Georgia on 8-14 August. EVS, among other domestic and international institutions, inquired about the level of confidence in the United Nations (UN), the European Union (EU), and the North Atlantic Treaty Organization (NATO), which serve as the dependent variables of the current study. Using propensity-score matching technique, respondents who were interviewed in a time interval before the war are designated as the control group, whereas those respondents who were interviewed after the war started, can be designated as the treatment group. Secondly, the information from this dataset is further supplemented by observations and in-depth interviews conducted in Estonia both in the period around the Russo-Georgian conflict, and after it. This will enable us to go deeper into the embedded meanings of trust that Estonians exhibit towards international organisations, and the West more generally. Thirdly, we will offer a brief review of how the 2008 conflict was framed in Estonian media at the time, and how this may have shaped the perception of the Estonian public.
the economic and social regeneration of the area, and the groups of artists, who propose to empower residents and their identities in the public space and attain the rehabilitation of the actual community.

Trade Unions As “Contested” Legal Intermediaries ? Reflection on British Unions’ Legal Mobilisation for Equal Pay Since 1970

Since 1970, British trade unions have been involved in the obtaining of a national equal pay legislation, in the pursuing of significant claims and in the implementation of the law through collective bargaining and job evaluation schemes. This legal mobilization did not developed in a consistent manner over time and across unions though. In the 2000’s, unions have been heavily criticized for hav- ing consistently colluded with the employers to minimize the effects of equal pay legislation, while being forced to support massive litigation on behalf of their low-paid female members. To understand this contrasted story, I will use a conceptual framework that defines trade unions as “contested organisations” which highlights the disputes both between and within unions as to what constitutes the central trade unions “project”. To understand why union legal mobilization for equal pay has been very controversial within the trade union movement and challenged by lawyers, I will argue that trade unions can be characterized as “con- tested legal intermediaries”. Drawing on a multi-methods approach combining 34 interviews with trade unionists, legal practitioners and experts, union archives analysis and legal case study data, I will argue that union legal mobilization needs to be understood in the context of the contentious (and gendered) relations exist- ing between members with different interests, the competing relations between union officials and their base, and the often adverse relationships between trade unions and employers. I will also claim that litigation strategies need to be ap- prehended in their complex and sometimes constrained relationships with other types of legal and political practices such as collective bargaining. Finally I will reflect on the effects and limits of massive litigation on union agenda and practices, pointing out the potential risk of marginalization and de-politicization of pay inequalities issues.

GUILLAUME, OLIVIER* (EDF R&D, olivier.guillaume@edf.fr)

Fishing in River, Confrontations at Risks and Ambiguous Situations

The contributions dealing with industrial risks bring to light the organizational and sociological causes which provoked accidents (Perrow, 1984; Vaughan, 1996) or those who prevent them (Laporte, on 1996). They also reveal the controversies which denote the presence of the works modifying the living environment of the local residents (Loihe, 1997), or externalities are denounced as being risks (Chataureynaud and Torny, 1999; Borraz, 2008). But what about cases where the local residents do not denounced the industrial risks and confront themselves with the risks? And what can be their incidence on the risk management?

Not feeding controversies towards the industrial works and their risks, the local residents can even develop practices of leisure near the industrial works, mini- mize the incurred risks and go against rules. If the theory of the perception of risks (Slovic, 1992) and practices are facilitated by multiple rules which create ambiguous situations (Lot, 2008). They clarify the situations by establishing “cognitive compromises” (Amalberti, on 1996) or by mobilizing “techniques of neutralization” (Sykes and Matza, on 1957) to justify their practices (IV). The ambiguous situations are maintained by the associations of fishermen in order to develop their practice.

Children’s Participation in the Promotion of Their Right to Health: The Specialists’ View

More than 20 years after the Convention on the Rights of the Child, the right to participation is yet to become common practice. This article has analyzed the concept that scholars and NGOs specialized in child health have about the role of the children’s scholars in promoting their right to health. The General Comment on Article 24 by the Committee on the Rights of the Child was organized through a requested contribution from experts, who submitted 36 comments. Among these, 19 addressed the issue of child participation with a view to have their right to health realized. Results indicate: a) a consultative participation, limited to the institutional and political reorientation of health services; b) the access to infor- mation as a prerequisite to participation in the promotion of the right to health; c) the importance of health education as an instrument of information dissemination; and d) the domains of social interaction and intergenerational relationships in the family, school and community are not appreciated as health promotion areas. In summary, experts believe that the right to information is the sine qua non to the right to participation. Because valid opinions are conscious, participation is manifested when they are formulated. This perception does not include ‘learning by doing’, which is centered on the development of personal and social tools. One text alone mentions the importance of the children’s awareness and knowledge about their own rights, as well as that of exercising their citizenship.

Household Carers and Gender Inequalities: A Comparative Perspective on Care

Domestic services are now on the global policy agenda. In Europe, there has also been a development of varied forms of domestic work that recall periods such as the eighteenth and nineteenth centuries where domestic help spread beyond the nobility to merchants and farmers’ households. In fact, then as now, the recruitment of domestic labor is an important expression of social relations, including social class and status, as well as a means of reproducing them. House- holders and domestics have been understood as a solution to the “Great Transformation” of recent decades that involves ageing of the population, changes in family structure and gender roles, with the masculinisation of women’s employment patterns, in a context of shortage of public care services, in-migration and de-in- dustrialization which in turn calls for the development of the service sector. This paper examines policies that aim to manage through fiscal policies mainly the hiring of domestic workers thus has a political economy aspect since labor market regu- lations and welfare state policy legacies will influence responses to socio-demo- graphic changes. It focuses on gender inequality: Domestic workers relieve wom- en from doing this work themselves and avoid gender conflicts over the division of domestic work but can reinforce inequalities amongst women and reproduce gender roles. Finally, domestic work is often performed by migrants or minority women from previous migration waves although some activation policies have emphasized the retraining of women native workers. Notwithstanding what is the current mobilization of domestic services, the question of global inequality? This pa- per focuses on political debates relating to domestic work during the last quarter of century and the policy measures adopted, their stated goals and their actual consequences in France, Belgium and at the EU level.

Bullying As Social Control: Prejudice and Discrimination Among Children

This study examines bullying as a form of control, surveillance and punishment of socially deviant behavior among children. This violent practice mobilizes regu- lation-powered rules that outline the limits and possibilities of what it means to be a boy or a girl. It is based on data from an exploratory ethnographic research in primary and secondary education schools in Brazil. It is argued that bullying is centered on complex power (gender, social class, race and sex) relations embed- ded in the broader sociocultural context, and particularly in children’s cultures. The bully, along with a group of followers, enforces a prescriptive ideal. His or her performance classifies and naturalizes normality through symbolic aspects that act to produce and socially legitimize the socially established, ideal types. The ‘popular’ and ‘successful’ infuse desired attributes, and guide the actions of those who must live in constant fear of isolation and rejection. Noteworthy is the continu- ous effort by boys and girls towards the visually ‘perfect’, which is intensified by a celebrity-driven culture and their own exposure on social networks. The process- es of identity formation and competition are marked by a differentiation from the abject. The Other is the self’s regulating and identity referential. It directly affects subjectivities drifting from guilt to resignation, failure or hope of a future meta- morphosis. As an example, there is the figure of the ‘Who’, who manages sexual regulation, and prompts a demand for prescriptive performances of femininity by the ‘good girls’. Thus, the bullying-engendered game of violence segregates children territorially, and affirms and protects dominant identities, affiliations, representations and social roles.

Price Boom: The Case of Norway

Intergenerational Transfers and Solidarity in the Wake of a House-SANDLIE, HANS CHRISTIAN (Norwegian social research)

Although the growth of GM crops has been dramatic, its uptake has not been the smooth transition predicted by its advocates. Unless we examine why GM crops have not been universally accepted as a public good, we will fail to understand the conditions under which „GM crops can help to feed the world.” To answer this question we develop a research programme of fieldwork within and across India, Mexico and Brazil. Our research looks to contribute: (1) to enrich the debate at the level of culture and ontology; (2) to attend to the meanings of GM crops and foods and how they are embedded in practice; and (3) to develop deliberative methodologies to engender a broader set of options for GM policy and agenda setting. The main objective is to highlight the distinctive political, anthropological and cultural dynamics to the debate on GM crops across the 3 countries.

Through this research, founded by The John Templeton Foundation, we identify some gaps in the literature: (1) little in-depth research examining the impacts of GM crops on farmers’ communities and their culturally-specific farming and related practices; how GM crops have been embedded into everyday life contexts, how benefits and risks have been assessed from diverse cultural perspectives, how they have affected if at all farmers’ social situations, practical knowledge, and their engagements with the land and food. (2) little in-depth examination of public perceptions of GM foods, and (3) little attempt to encourage farmers (particularly female), citizens, regulators and scientists in deliberation, to assess how and under what conditions GM crops can be developed fully cognizant of social, cultural and spiritual values.

In the research we developed a) stakeholder structured interviews; b) stakeholder qualitative questionnaires; 3) Ethnographic fieldwork with farmers and researchers and 4) focus groups with urban consumers.

Understanding the Social, Cultural and Economic Factors That Shape the Acceptance, Use and Resistance to GM Crops: A Comparative Approach

The enormous increase of housing wealth is a newer phenomenon than the increased housing prices amount to substantial housing wealth for older people, and “poor” housing. In Norway most households has become home owners early on, and retired people plan to dispose their growing housing wealth. Do they spend their wealth, do they continue to save or do they help younger family members? Another question is whether new generations of elderly behave in other ways than generations before them. Our main question is whether an explanation based on different attitudes in different generations or an explanation based on life course changes fit our data on how middle aged and elderly people plan to dispose their housing wealth.

The enormous increase of housing wealth is a newer phenomenon than the Scandinavian Welfare State where good housing originally was one of the pillars but not the vehicle of capital collection as we see today. We will ask how this development in the housing sector and in the system of family wealth affects other aspect of the Scandinavian Model as for instance pensions and policies towards income and wealth distribution. We will also make a short comparison with Sweden, another representative of The Scandinavian Model, with a system of housing tenure where the rate of individual home ownership is much lower than in Norway.

The Territorial Separated Marriage As a New Reality

Aim of this research is a one new form of marriage – the territorial separated marriage. Now some part of migrants have two (or more) families: the first is in the motherland and the alternative – on the migration territory. What are the reasons of this situation? How many kinds and species it has? What are the profit and problems men and women have? What about children?

Background of this research is the theory of demographic transition, theory of social stratification and social mobility, analysis of the international labor market and labor migration and the model of balance outlays/income of the generation offered by author, published in the paper of RC33 Eighth International Conference on Social Science Methodology in Sydney, July 2012 (N. P. Guliaeva. Socio-demographic problem of modern society: age structure, migration and labour force). The research method is the analysis of the open (official) statistic data, media data (including internet source) and the results of investigating activity published by another authors and researching centers.

Results: the territorial separated marriage is a new form of marriage generated by long-time migration. Appearance a new marriage on recipient territory often does not destroyed a first marriage on the motherland. Frequently it is because the recipient has not possibility or necessity removing the first family to the job land. At the same time the job of the working migrant is the main source of income to both families.

It is concluded that the territorial separated marriage is reality. As international migration is growing it is opportunity of the dissemination of this form of the marriage.
Leisure and Indian Joint Family System - a Some Case Studies of Hyderabad Karnataka Region

The study of Indian joint family system and Leisure is assuming importance especially developing countries of the world in general - India is in particular. The study of Indian family system deserves specially attention, not only because they are born in Indian families but also here the family system differs in material and also social trends constantly reinterpreted and modified in the face of interactional events and crises of action, when conflicting norms are negotiated. In this sense 'discourse' is seen as an entirety of correlated speech acts, which are analyzed for institutionally stabilized patterns of structure and rules of action. By combining discourse analysis and grounded theory, we examine speech acts (e.g. minutes of plenary proceedings; patterns of structure and rules of action . By combining discourse analysis and grounded theory, we examine speech acts (e.g. minutes of plenary proceedings; patterns of structure and rules of action). Leisure-Disabled Children & Their Welfare Measures: A Study Of Hyderabad Karnataka Region

The study of leisure disabled children and their well-are measures assuming importance especially developing countries of the world in general - India is in particular. The children are the most precious asset of any nation & deserve the best of man kind has to offer. They have not only a right to full health, phigically development but also the right to grow to full their potential intellectually, socially, morally, & culturally all efforts and resources mobilized towards the end by any society or country are a necessary and crucial investment.

At present 80 % of disabled live in the developing countries where less than 1% received any trained help. Of the 146 million disabled children under the age of 15 years, as many as 106 million are in asia & Africa. According to figures of 2011, 5.7 million children in INDIA are disabled in which means 1 out of every 4 children suffering from one or the other kind disability. Hence it is extremely important focus their urgent needs, allowing such children to lead a reputable & life quality in the society recognizing their leisure rights. The present study is aimed to know about the socioeconomic status and the effective utilization of leisure services and social security measures of the disabled children in Hyderabad Karnataka region of India.

This study data has collected on the basis of imperial survey & detailed interview with the respondent interactive method of interpretation is adopted to interpret qualitative as well as quantitative data.

students from diverse academic programmes and disciplines of the University of Hyderabad in India. The survey method, selected individual and focused group interviews have been conducted in order to map out the rationale behind supporting and opposing reservation based on ascribed and achieved identities. The opponents of reservations felt that reservation is nothing but the exclusion of the meritorious talented students from the higher education, employment. On the other, the reservation policy gets support as a compensatory justice mechanism for the historical exclusion and multiple forms of deprivations and discriminations against the marginal groups of the Indian Society. The study also brings the personal narratives which demonstrate how reservations enables the social mobility for the marginal caste/groups and works as disabling mechanism in the case of students from upper castes, male and normal students. Therefore, the paper brings debates and (dis) contents associated with preservation and suspension of reservation policy within the framework of public policy and development discourse.

Understanding Swedishness and Conceptualizing the Self: The Perspective of Young Women of Middle Eastern Backgrounds Living in Sweden

Searching for a sense of belonging and defining one's sense of self has become a complex task in this globalized world. The way we define ourselves, for instance along ethnic lines, has consequences for our understandings of others in our everyday lives. This presentation will depart from a project that uses semi-structured qualitative interviews – with 24 young women of Middle Eastern backgrounds aged 15-22 – to explore the ways in which identity can be constructed. The reason why these women's identity is in focus is that they have been the subject of heated debates on honor related violence in the Swedish news media and in contemporary research. This backdrop, questions about the implications of being regarded as ethnic 'Others' can be explored. In this presentation, the focus will be on social identity processes and the interplay between self and public image, with specific regards to ethnic identity. The presentation will draw attention to the way in which understandings of Swedishness play a role in these women's conceptualization of self. These understandings include, among others, assumptions regarding Swedish peers' liberal approach to norms on sexuality and the informants' conceptualizations of Swedishness in their personal narratives which demonstrate how reservations enable the social mobility for the marginal caste/groups and works as disabling mechanism in the case of students from upper castes, male and normal students. Therefore, the paper brings debates and (dis) contents associated with preservation and suspension of reservation policy within the framework of public policy and development discourse.

An Emerging Social Movement in China: Frames and Activists in Dog-Rescue Actions

A series of dog-rescue actions intending to save dogs from being slaughtered and destined for restaurants have been occurring quite regularly in China since 2005. Seen as activities taking action on high-ways to demand dogs to be released from the trucks, interrupting traditional festival in Yulin, Guangxi Province celebrating eating dog meat, and exposing illegal slaughterhouses for dogs, in China where dog meat has been a common source of meat and where dogs have been socially and culturally regarded as lowly creatures, these activities should deserve closer examination. For one thing, do these activities indicate an emerging movement advocating animal welfare rights? Or do they reflect some broader changes in the values and practices of a new generation of Chinese growing up in post-reform affluence and materialism? And how has such a movement been able to expand, especially in a social milieu that is generally conservative and authoritarian? Adopting the lens of frame theory, this research endeavors to answer these questions by inquiring into the participants and organizers of these activities and the frames they share and develop in spearheading their organization and movement. In turn, a critical analysis of the broader social, cultural and economic changes in post-reform China will be carried out. A case study of an Animal Rescue Organization, which has organized two dog-rescue campaigns has been conducted in Kunming, while 20 depth-interviews with activists in Kunming, Beijing and Chongqing have been delivered as well.

The Social Role of Legal Theory: Kawashima’s Theory in Japan, the United States and China

Since the late 1970s, Kawashima’s approaches to Japanese law that attribute significant explanatory value to culture have been in Retreat. Recent sociological scholarship share a skepticism about efforts to explore Japanese law through the lens of culture, which they see as conceptually weak, undefined.

With cultural translation theory, this paper argues that the vagueness of Kawashima’s theory has consequence for the salience and scope of legal problem, by focusing on the link between legal professional, media literacy and local culture.

A case study of Communicational Impact in Kawashima’s Legal consciousness theory is analyzed in two parts: the first, to compare the form of Kawashima’s communicational work and discourse on public, with a paperback book called Hi-nohon no ho ishiki (The Legal consciousness of the Japanese), shows that legal profession and layman culture has different types of legal information. The second is to confirm the possibility of comparative understanding of legal theory, by following Kawashima’s Legal consciousness debate in Japanese, American, Chinese legal review from 1967 to present.

Financing Higher Studies - the Relation Between Economic Resources and Choices in Swedish Higher Education

How do students in higher education finance their studies and how is this related to their choice of place and field of study? This is the portal question for the presentation.

At the same time as the number of students in higher studies has increased vastly in Sweden during the last twenty years, the economic gaps in the society have large have grown. We know from surveys and examinations that the public student loans – introduced in 1965 – are not sufficient for covering all students expenses, but the knowledge of where in the educational landscape and for which groups of students the loans are particularly meagre (or superfluous) is lacking.

In this presentation, we explore the ‘economic landscape’ of Swedish higher education by first mapping landmark areas, defined by students with different economic situations. We locate both the students with the largest amounts of economic resources (loans, wealth and incomes) and the position of the students with the smallest amounts. How is the public student loan system utilized at these two ends and what function does it seem to serve in the students’ total economy? Second, we relate these economic differences to educational differences. Do the largest concentrations of educational resources (grades, results from aptitude tests, and backgrounds in prestigious educational programs) coincide with where we find large economic resources? Theoretically, we relate economic resources to educational resources – both central forms of capital in Bourdieu’s sociology – and discuss their relative importance for choices and strategies within higher education.

The presentation utilize a dataset from Statistics Sweden on all students in higher education during the last 20 years, including previous educational investments, present educational choices and their own and their parents’ economic and social situation, as well as how they make use of the public study loan system.
Brotherhood, Masculinity, and Social Capital: Fraternities At The University Of The Philippines Diliman

The paper is based on the study of college fraternities rooted in traditions of bonding and loyalty at the University of the Philippines Diliman (UPD), the country’s premier state university campus. Tracing their roots in the early 1900s, UPD fraternities have built a vast network of brotherhood ties connecting various generations of men, from college students to professionals who now occupy leadership positions and status in government, private and corporate sectors in the Philippines. The study looks into the identity formation of young men, including the quest to be part of a trust-based social network to affirm masculinity, survive the competitive challenges or enjoy the adventures presented by college life, and assure paths to social capital and professional status.

The paper discusses how young men gravitate to fraternities for constructive aims such as academic excellence and socio-civic service, on the one hand, and become emboiled in antisocial violent behaviors within their group or in conflict with rival fraternities on the other. Such violence in gang fights and hazing rites has claimed the lives of at least eleven, and injured hundreds of young college men in the history of the university. The concepts social capital, identity and masculinity are utilized to understand the meaning of “brotherhood”, the origin and shifts in orientation and behavior of the group and individual members over generations. The study analyzed documents supplied by fraternities, and examined the narratives of fraternity “bros” or members from various generations or cohorts since the 1950s to the present.

Abstracts are organized by first presenting author’s last name.
Muslim Informal Organizations of Tatar Youth in the Republic of Tatarstan (Russia)

The report deals with the revival of Islamic identity in the Republic of Tatarstan which is an ethnic republic within Russia and the Muslim informal organizations of Tatar youth. Sociological research shows that religion is more important for Tatars than for other ethnic groups who traditionally do not profess Islam. There are more religious Tatars than other groups. Tatars who observe religious customs and ceremonies; there are less non-believers and non-believers. As far as religion is concerned, sociologists used to argue that women were more religious than men, older people more than youth, the uneducated more than people with higher education and people from rural areas were more religious than citizens from urban areas. However due to processes of post-modernity the situation has changed and another tendency has become apparent, which is sometimes the reverse. One of these trends is Tatar youth. The research data reveals that secularization has increasingly affected young people, and their degree of religiosity does not depend on the level of education or place of residence (there is even more rapid Islamization among the educated youth of big cities). A group of strictly observing young Muslims has been pointed out. They are about 5% of all Tatar youth. They are very religious and they confirm it by their behavior. The report focuses on some initiative groups and informal organizations of Muslim young people in Tatarstan citing two cases. First, for a specific but large group (Consciousness, ‘Altyn Urta’, ‘Ikhlas’, ‘SAMI’). They were formed in 2004-11 and gained their activity uniting Muslim students of Tatarstan cities. The report is based on the results of sociological research, 2008-2013 in Tatarstan, Russia. The methods comprise of two surveys by 1500 respondents each and about 80 in-depth interviews.

Effects of Interview Mode on Self-Reported Well-Being

This study explores the differential effects of face-to-face interviewing and web-survey self-interviewing on subjective well-being questions. The analysis employs individual data from traditional surveys (e.g. the World Values Survey, the European Social Survey, and other representative national surveys) and data obtained from a web survey posted at WageIndicator websites in more than 30 countries. In this case the respondents were accessed to web respondents at a lower cost and large numbers relative to traditional surveys that are conducted via phone, mail, or on a face-to-face basis. The WageIndicator is a labor market oriented survey that also includes several subjective well-being indicators. In the first step we contrast the characteristics of samples resulting from different modes. Second, controlling for demographic characteristics, we test the hypothesis that online surveys decrease measurement error in sensitive questions created by the presence of an interviewer (e.g. the underreporting of socially undesirable behavior). We show that mostly in advanced economies respondents tend to report higher subjective well-being levels in the presence of an interviewer, while in developing and former communist countries the presence of an interviewer generates a downward bias in the reported well-being levels. The paper also contributes to the ongoing debate on web survey data quality, reliability, and validity for scientific use. It demonstrates how social sciences can benefit from the use of web survey data in order to overcome the limits of traditional information sources.

Changing Identity: Istanbul Clubs during Gezi Protests

Galatasaray, Fenerbahçe and Beşiktaş are the biggest sport clubs in Turkey. Even they are sport clubs their main focus located in football and football has an obsession level love and hate relation within Turkish public. But even %90 percent of Turkey’s population see themselves as fan of these 3 big clubs which are also the oldest clubs, these Istanbul clubs have zero class affiliation throughout history. Very crudely Galatasaray represent aristocracy, Fenerbahçe bourgeoisie and Beşiktaş worker class but like we said these assumptions are very crude and can not apply to fans and general public.

At June 2013 Turkey was the headline of all press worldwide. A small peaceful protest started with environment concerns turned into a nationwide protest and rebellion against ruling party AKP (Justice and Development Party) and especially its leader Reccep Tayyip Erdoğan. While police brutality against peaceful demonstrations triggered the situation it must be realized that there is a building frustration in non-conservative society for the last couple of years. At Gezi Park protest we can see mostly all political, ideological views developed in Turkey. From communists to nationalist, from Muslims to Atheists, from LGBT to football fans of these 3 biggest clubs. Of course politicization of these fan groups can be described as political awakening of youth after 1980 military coup and turning it into a struggle within their passionate interest.

This paper aims to understand these fans, their change and their demands from authority.

The Socio-Economic Implications of Kidnapping in Port Harcourt, Nigeria

Kidnapping seems to be growing as an industry involving every level of the society. However, studies on it have been relatively a recent phenomenon, with much of the literature coming from Asian, American and European continents. There is very little empirical research carried out on kidnapping in Nigeria and yet there are series of media reports of daily incidence of kidnapping in the country. In Port Harcourt, the commercial and oil Hub of Nigeria’s Niger Delta, kidnapping was/is generally said to be a fearful and threatening crime. While in other places, the problem is more or less an occasional thing, that of Port Harcourt is generally observed to be habitual, sporadic and spontaneous that happens almost every day. It is against this backdrop, this study examines the nature of kidnapping and the socio-economic implications of kidnapping in Port Harcourt, Nigeria. Using the multistage cluster sampling method, a sample survey of 350 households with color inclusion probability was administered questionnaire. In addition, official crime statistics on kidnapping from the police was collected and 15 in-depth interviews (IDI) including victims, police officers, traditional rulers among others were conducted. The findings show that one, kidnapping takes a violent dimension and it has been established, operated and executed in form of business empire; two, there is the development of independent negotiator between the victims and perpetrators of kidnapping; three, there exist paucity of official reported cases; fourth, there is general behavioural modification of residents on socio-economic activities and relationships. In conclusion, the study confirms that kidnapping has negatively influenced people’s behaviors and that cases are grossly underreported to the police as government does little or nothing to stamp out the menace.

Voluntary Commitment in Church-Based Environments As a Chance of Generating Meaning for Adolescents

In analyzing the religiousness of youth, positions vary between the hypothesis that religiousness has decreased and the hypothesis that there is a specific youth religion. In my paper I will assume that the development of religious identities and convictions depends on social contexts and family environments. My paper elucidates that adolescents generate different religious interpretive patterns in order to position themselves in relation to concepts of life and meaning in societies that are marked by the pluralization of values, the secularization of social relations and the individualization of life styles.

In western Germany, church-related status passages are still part of the norm. We unpack how knowing the ‘new’ and ‘old’ is being translated and reinterpreted among the two generations. Drawing on ethnographic fieldwork I am going to...
show specifically how the implicit dimensions of knowing how to use ‘new’ and ‘old’ media becomes visible and obtains agency in each of the context of the other generation.

The paper is divided in three steps. First, I will discuss the moments when members remember how to use either ‘new’ or ‘old’ media and discuss the implications for memory on media studies. Second, I will show what happens when the implicit knowledge of using these objects is being translated to the other generation. I will follow how the rhythms of bodies in interaction with their environment change, and how the use is being remembered and reinterpretated. Third, I will discuss the implications of such an intergenerational view on the enactment of social time in each of the generations’ body rhythm.

GÖBEL, HANNA* (University of Hamburg, hanna.goebel@uni-hamburg.de)

Unpacking Sensual Ruptures and Rhythms in the City: Methodological Devices for a Sociology of Sensual Translations

Studying urban sensual experiences through film and photo cameras is one of the most intense settings through which an argument about the performativity of methods and their epistemological and ontological consequences can be developed. Drawing on the recent developments in the realms of a ‘sociology of translation’ and the methodological devices offered by the ontologies of ‘urban assemblages’, this paper wishes to unpack the specific case of visual, acoustic, haptic, taste and smell related ruptures and reconfigurations of body rhythms in the city.

The case will be unfolded in three steps. First, I will focus on specific moments when sensual ruptures occur and reorder the body rhythm of movements through the city. I will draw on ethnographic field work in the cities of Hamburg and London introducing different moving crowds in political settings of protest, shopping related activities and transport practices in which the five sensual activities are challenged in various ways, overlap, interact and compete. The rhythmanalysis as offered by Henri Lefebvre is going to be applied in a fresh way showing how sensual translations become social makings and unmakings. In the second step, I will stress the epistemological consequences when extending the agency of observation through film and photo cameras and show how to follow the new ontologies that occur through these lenses. In the third step, I am going to argue for a sociology of sensual translations offered when taking into account the methodological agencies of film and photography in settings of urban experiences.

In the Name of the Rule of Law and Democracy: Institutional Restructuring of the State and Women’s Rights in Iraq

The nature of international involvement in improving the status of women in Iraq has been ironic, inconsistent and controversial. Since the initial years of the war, women’s oppression has been rhetorically used by Anglo-American coalition forces as an excuse for the military operation. Ironically, the US has been accused to be moving from Sweden as a European periphery to the big financial and industrial circles of Anglo-American coalition forces as an excuse for the military operation. Substantial changes inspired by western (neo)liberal (political, economic and legal) models have been introduced to the institutional system of the country, ultimately to establish democratic institutions, encourage political participation of youth, reconstruct the economy, achieve ethic reconciliation and implement the rule of law (e.g. Legislative Strengthening Program sponsored by USAID and UNAMI -United Nations Assistance Mission for Iraq). This international endeavor entails a rather controversial role for humanitarian actors like the UN, as their role has been to mitigate the discrepancies between the priorities of foreign agents (e.g. fiscal and security reforms, modernization, economic growth and so on) and daily injustices suffered by Iraqis. By analyzing the three significant lines of action by the international community, i.e. “ethnic reconciliation”, “youth empowerment” and “social justice” in which the UN and foreign governments are actively involved, the paper investigates the scope of international interference in Iraq, more specifically the nature of negotiations among international actors, governmental authorities and local politics in the course of state-rebuilding since 2003. It argues that the discrepancy between the priorities of international state-building efforts (based on international norms, humanitarian causes and self-interest) and the complexities of national and local politics in a highly militarized multi-ethnic context like Iraq has contributed to the institutionalization of social injustices, marginalization and frustration of youth and consolidation of ethnic fragmentation between Arabs and Kurds. The paper aims to provide insights about the international involvement in domestic politics in the Middle East and contributes to the theoretical discussions on the complex repercussions of state-building and institutional design through military and humanitarian interventions.

Interrogating the Role of International Actors in State-(Re)Building in Iraq: Implications for Ethnic Politics, Youth Discontent and Social Justice

A significant consequence of the military intervention in Iraq has been the active involvement of international actors and agencies (e.g. foreign governments led by the US, the UN, EU and INGOs) in the institutional restructuring of the country. Substantial changes inspired by western (neo)liberal (political, economic and legal) models have been introduced to the institutional system of the country, ultimately to establish democratic institutions, encourage political participation of youth, reconstruct the economy, achieve ethic reconciliation and implement the rule of law (e.g. Legislative Strengthening Program sponsored by USAID and UNAMI -United Nations Assistance Mission for Iraq). This international endeavor entails a rather controversial role for humanitarian actors like the UN, as their role has been to mitigate the discrepancies between the priorities of foreign agents (e.g. fiscal and security reforms, modernization, economic growth and so on) and daily injustices suffered by Iraqis. By analyzing the three significant lines of action by the international community, i.e. “ethnic reconciliation”, “youth empowerment” and “social justice” in which the UN and foreign governments are actively involved, the paper investigates the scope of international interference in Iraq, more specifically the nature of negotiations among international actors, governmental authorities and local politics in the course of state-rebuilding since 2003. It argues that the discrepancy between the priorities of international state-building efforts (based on international norms, humanitarian causes and self-interest) and the complexities of national and local politics in a highly militarized multi-ethnic context like Iraq has contributed to the institutionalization of social injustices, marginalization and frustration of youth and consolidation of ethnic fragmentation between Arabs and Kurds. The paper aims to provide insights about the international involvement in domestic politics in the Middle East and contributes to the theoretical discussions on the complex repercussions of state-building and institutional design through military and humanitarian interventions.

Power Shifts and Transnationalization. a Comparative Study of Long-Term Changes in the Swedish Power Elite, 1990 - 2013

Based on three surveys with a few thousand decision-makers each in top positions in all areas of Swedish society (in 1990, 2001 and 2013), we analyze changes over a period of more than 20 years in the composition and internal power relations of the power elite. It is to our knowledge the first time that a historically oriented study has been made, where three points in time are studied using the identical research design. Also, it is possible to analyze the entire elite stratum (not just a sample) as it is small enough, while at the same time it is big enough to allow statistical analyses.

Comparisons are made both over time and in social space, that is, between different parts of the field of power, characterized and ruled by different logics and relations. The previous studies have shown systematic differences between fields and also between the genders in various respects. Our paper has three parts: the first part gives an overall perspective of the long-term development and changes, and the second part discusses some important results. The third part discusses methodological problems, emerging especially in connection with the growing transnationalization of fields and of elite groups. With the increase of international ties, migration and the merging of big business as well as of cultural arenas (e.g. NGOs, and economic and political cooperation, important power seems to be moving from Sweden as a European periphery to the big financial and industrial centers and cultural arenas. What is a national elite group these days? Also, several sites of power are gender-balanced (or de-gendered) in Sweden. How will the scope, force and hierarchy of the gender-order be affected in the meeting with other gender-orders as part of a transnationalization process?

Competition over Expert Authority in the New Field of Human IVF

Is human IVF (in vitro fertilization) the extended version of animal IVF or is it human fertility? Such a question may seem odd today. Nevertheless, the question ignited controversy in the 1980s when the term “human IVF” first appeared, creating competition between experts.

This paper analyzes the competition over expert authority between obstetricians and gynecology clinicians (OG clinicians) and embryology (E) scientists in the 1980s when human IVF began to take root as a new field in Korea. Here I refer to human IVF not as a discipline but as a field because IVF is “an amalgam of thought, a mixture of habits, an assemblage of techniques” (Mol & Berg 1998), not a coherent prime face. The process of mixing and assembling that which is originally different is neither simple nor peaceful. The new establishment of a field inevitably requires a process of determining the “dominant professional” (Oudshoorn 1994) through competing with rivals and making the field appealing to outsiders. The human IVF field in Korea was settled down by OG clinicians who had the capabilities to motivate a wide range of resources; E scientists entered the field with the help of these first players.

This paper aims to provide insight into the human IVF field of the 1980s in light of its developmental history through analyses of academic journals, in-depth interviews with experts, and analyses of discourses over the issue, all of which reveal how the experts regarded this new field as an extended version of their own expertise.

Expert authority is not self-evident but results from social politics. This insight is gained when we consider human IVF as a social reality and when we pay attention to the construction of that reality, not regarding it as a natural object. To that end, a sociological analysis is required.

Urban Shrinkage As a Travelling Concept

Urban shrinkage as a phenomenon has globalized during the last years: worldwide, including also the global South, cities have faced population decline and its manifold consequences for urban space, fabric and society. In terms of urban theory, shrinkage as a phenomenon or way of urbanization was disregarded for a long time, or shrinkage was looked at through the lens of urban growth as the basic trend of urbanization: as deviation from the norm, a bad or false development or a temporary appearance to be overcome.

Shrinkage as a concept was used first in the German discourse and got onto the national scientific and public agenda with the extreme population losses of East German cities during the 1990s and early 2000s. Shrinkage got accepted as an international term with the growing number of comparative studies and projects from the mid-2000s onwards.

The concept of shrinkage today faces a twofold challenge: On the one hand, it still struggles for recognition as describing a common pathway of global urbanization. On the other hand, research shows an overwhelming diversity of contexts and explanations from shrinking cities might be helpful for the understanding of recent crises in the US and Europe, however, represent a context where expertise is gained when we consider human IVF as a social reality and when we pay attention to the construction of that reality, not regarding it as a natural object. To that end, a sociological analysis is required.

The pertinent role of technology in societal development expands the demands on future engineers to "soft" skills such as intercultural communication and consideration for economic, social and environmental aspects. Therefore, the engineering profession is in a process of re-examining and re-legitimising their knowledge-base.

In spite of a general agreement on the need for future engineers to be broad thinking and hybrid, the engineering education system has been reluctant to part with traditional knowledge regimes focusing primarily on "hard core" scientific and technical competencies.

An empirical investigation of a year group of engineering students in Denmark finds that a great deal of the professional status and legitimacy of the engineer is based on the symbolic value attributed to the engineering knowledge base. The experience of hardship and endurance in relation to the demanding workload of the science and technology disciplines and a high degree of difficulty of these subjects are seen as "tests of manhood", ritualising the professional initiation.

This anachronistic way of legitimising the profession may bolster the self-confidence of the engineering students making it through to graduation, but it is also likely to be an obstacle to the stated objectives of engineering education systems of attracting more women to the engineering profession and of providing engineering professionals able to address challenges of a dynamic, global society.

Self-Selection and Economic Assimilation Of Immigrants: The Case Of Iranian Immigrants Arriving To Three Countries During 1979-1985

Self-selection and economic assimilation of immigrants: The case of Iranian immigrants arriving to three countries during 1979-1985

The study is designed to evaluate the impact of the interaction between patterns of immigrants’ self-selection and the context of reception at destinations on the economic assimilation of Iranian immigrants who came to the three countries during 1979-85. For that purpose we studied immigrants at the age of 22 or higher upon arrival by utilizing the 5 percent 1990 and 2000 Public Use Microdata files (PUMS) of the US census, the 20 percent demographic samples of the 1983 and 1995 Israeli censuses of population, and the 1990 and 2000 Swedish registers. The results indicate that the “most qualified” immigrants – both on observed and unobserved variables, who left Iran right after the Islamic revolution, arrived in the US. Their positive self-selection led them to reach complete earnings assimilation with natives there. Iranian immigrants who arrived in Israel and Sweden did not achieve full earnings assimilation with natives. Of these two groups, a smaller immigrant-to-native gap in average earnings was found in Sweden, but in the US Iranian immigrants in Israel were more positively self-selected and showed better assimilation than their counterparts in Sweden. Market structure played a certain role in immigrants’ earnings assimilation mainly in Sweden.

Repositioning the Racial Gaze: Aboriginal Perspectives on Race, Race Relations and Governance

In Australia, public debate about recognition of the nation’s First Australians through constitutional change has highlighted the need to improve public understanding between Aboriginal peoples and the Euro-Australian mainstream. But the unevenness of race relations has meant Aboriginal perspectives on race relations are not well known. This is an obstacle for reconciliation which, by definition, must be a reciprocal process. It is especially problematic in regions with substantial Aboriginal populations, where their visibility make race relations a matter of everyday experience and discourse.

There has been considerable research on how mainstream Australia views Aboriginal people but little is known about how Aboriginal people view non-Aboriginal people or mainstream institutions. This paper is based on an Australian Research Council project undertaken in partnership with Larrakia Nation Aboriginal Corporation. It aims to reposition the racial gaze by investigating how Aboriginal
people's in Darwin recognize and understand who is Euro-Australian, who is Ab-
original, and Aboriginal views on Euro-Australian values, priorities and lifestyles.
We argue that a necessary ingredient for improving race relations in Australia is for
dominant cultures to understand the relative nature of their own cultural
attachments. Through interviews, social media and survey with Aboriginal peo-
ple this research provides a basis for Euro-Australians to discover how they are
viewed from the outside. It repositions the normativity of Euro-Australian culture
which is a prerequisite for a truly multicultural society. Aboriginal disengagement from mainstream political and civil law processes
and institutions contributes to their social exclusion but the reasons for this
distance are not well understood. Through ideas of agency, recognition and
resistance we also explore how Aboriginal people view and understand the gap
between Western-style governance and traditional Aboriginal approaches to deci-
sion-making and the impact this has on patterns of compliance and participation.

Attitudes Towards Patriotic Education and Armed Forces among
Slovenian Youth

Contemporary democratic societies are encountering many demanding challenges
such as decreasing political participation in the democratic societal sphere. In most
European countries one can detect an almost annual drop in citizens' political partic-
ipation. Due to the dramatic changes in political, security and societal conditions in
Europe in the last decade, today's youth is being brought up in a fundamentally differ-
et spirit. Extending the purview to more participative citizens for the future, there is
debate in Slovenia regarding civic and patriotic education, as well as active citizenship
among the youth. Differing opinions may be found on how to realise this education,
and what forms and methods should be involved. In general, two different concepts
are at odds: a discipline of patriotic education, introduced in rather limited way into
the Slovenian elementary schools in 2009; b) second concept attempts to cultivate a
sense of taking responsibility and of the acceptance of democratic culture while si-
multaneously maintaining a critical stance on the very political system; this concept is
traditionally not sync with military tradition, but was introduced into school curricu-
ulo in 1990s. The proposed paper will analyse attitudes of youth towards patriotic ed-
cuation, and try to ascertain, wheather the concept of patriotic education is has been
able to deliver its goals. When analysing trust of youth towards different institutions of
democratic state in the last decade, one finding is relatively high trust of youth in the
armed forces and school as an institution on the one side and relatively firm distrust
into various political institutions of democratic state. Research question will ask how
patriotic education has been accepted by the pupils and teachers and how patriotic
education is affecting pupils trust in the armed forced and school as an institution on
the one side and distrust various political institutions on the other.

A War without Images?

A “war without images”: Secrecy, information and communication during the war in Mali

As the international operation is still under way in Mali since January 11th 2013, the French armed forces played a huge role in the defeat of the jihad's fighters.

From the first days of the French commitment (i.e Operation Serval) to the Mali presidential polls (August 11th 2013), this paper will deal first with the information and
communication policy conducted by the French forces during this new “war on terror” both on the political and organizational sides (political discourses and structures), is the war in Mali a “war without images and without facts” as French
and foreign reporters described it? How the French authorities dealt with this traditional dilemma: the (French) people's right to be informed and the need of secrecy, especially on the front line? Based on the analysis of the political an institu-
tional discourses and on interviews, this paper will explore all these questions.

liberal to controversial art than collectors abound. This makes me wonder; is it a coherence between art liberalism and features of anxiety in a society caused by sudden wealth? May this be reflected in the content of art in the current society?

When Art Becomes an Emotional Burden

Art infuences our emotions, usually positively. However, art may also appear as offending and become a burden. Here I discuss so-called “offending art”, defined as art with improper sexual, violent or blasphemous content. I use empirical examples from my PhD-thesis (2011) and new observations. My thesis reveals different practices for corporations collecting art in four countries, including the USA and Norway. Although related cultures, the policy for collecting art diverges regarding offending art. While most of the American corporations express that they avoid art that can be experienced offending by employees and visitors, the Norwegian corporations are more liberal. Although most art in the Norwegian collections are not offending, they also contain offending artworks that creates emotional reactions among employees, who experience this art as a burden. Due to the emotional impact on employees and visitors corporations have had to remove artworks from public areas, for example a painting regarded blasphemous. An artwork still hanging contains a digital text about sexual abuse and is described by employees as depressing. The employees have got used to it and suppress their emotional reactions. Corporate collectors can easily avoid offending art, as they can influence the choice in their own private collections. However, some corporate collectors that they like to show their art interest and support art. They also like to appear as democratic organizations and will probably not risk being accused for censoring art. Sometimes art seems prioritized on the cost of people. This applies also to commissioned art. Some new paintings in a governmental building in Oslo show falling paper and skeletons between flying buildings. Employees experience the artworks as an emotional burden, because they give associations to the terrorist attack on the government buildings in 2011. Seemingly there is a gap between fear of art censorship and consideration to employee emotions worth examining.

Renewal of Organizing Strategies for Child Care Workers?: Union Responses to Neoliberal Child Care Reform and Downgraded Care Work in Japan

Child care work, mostly performed by women, is almost always poorly paid. Unionizing child care workers is an important strategy for securing fair compensation and better working conditions for child care workers. This entails social movement that re-evaluates care work and women’s work.

In Japan, certified child care teachers have been relatively well organized under the All Japan Prefectural and Municipal Workers Union (Jichiro). This is because local governments acted as major care providers at least until the 1970s, and they employed certified child care teachers as local government employees for publicly run child care centers. With their collective bargaining power as an occupational group and a women’s group, organized teachers have also played a critical role in improving working conditions for child care teachers as a whole.

However, their influence has been on the decline both in the policy-making process and in the union with the arrival of neoliberal reform policies such as the privatization of accredited child care centers, and the deregulation of the workforce such as lifting of the limit on the number of part-time teachers per center. Certified child care teachers employed by local governments, once regarded as secure and decent jobs for women, are disappearing, and child care providers, including certified teachers, are now becoming members of the working poor.

How will teachers respond to lost occupational homogeneity? Furthermore, will the union’s survival be compatible with sustainable care provision? The paper describes some of the history of the organization of the child care teachers and their activism, and focuses on and compares the current struggles and functions of two unions: Jichiro and the Union of Workers of Welfare and Child Care. The craft union for teachers and non-certified teachers affiliated on an individual basis.

The Whole of Society and Society as a Whole

The tradition emerging from Weber conceives of a modern society consisting only of parts. This view is epitomized in Niklas Luhmann’s theory of a modern society characterized by functional differentiation. In the tradition emerging from Durkheim, mutual interdependencies among the subsystems create a social bond of organic solidarity particular to modern society. Society is a community or even collective, because of legitimate institutions, shared social norms and a common culture. In the Marxian tradition the other subsystems are regulated by capital and power, with the market and the bourgeoisie state as the real centers of society. All three perspectives have their merits and can claim empirical confirmation either in a world society of global financial markets, art and science, or nation states as embodiments of solidarity and power.

However, all three perspectives share a common weakness: They are unable to explain how mutual interdependencies among subsystems lead to problems of performance or function that are also problems of collective action, and thus collective action as a collective regarding its own cohesion or societal integration. The reason for this shortcoming is an ontology of the social based in spatial metaphors which refrains collective phenomena. When this epistemic obstacle is identified, we might create an alternative ontology that enables a new understanding of modern societies as communities or social wholes with varying capacity for collective action on local, regional and global levels.
of Mexican migrant workers in Canada’s largest cherry orchard conducted by Elise Hahn on behalf of the Lake Country Heritage and Cultural Society. In conjunction with our paper, ten original photographs of migrant workers in the Okanagan Valley, products of the aforementioned case study, will be presented. Together, these experiences have challenged our pre-conceived notions of who migrant workers are, the lives they lead, and their cognizance of the racialized processes to which they are subject in Canada.

HAID, CHRISTIAN* (Technical University Berlin, christian.haid@metropolitanstudies.de)
“Planning the Unplanned” - Trajectories of Managing the Informal in the Urban North

This paper will present research on how informal activities and practices in Berlin’s public spaces are tackled. The global trend of proliferating informalization in urban centers as a result of ongoing neoliberalization is not solely a contemporary reality in cities of the Global South but encroaches as well on North-Western cities. Especially in multicultural societies of receding welfare states, many people’s possibilities have become confined to informal economic opportunities as they have been denied access to more formal spheres. As such, the street vendors and bottle collectors that are working in many of Berlin’s parks are faced with various regularization strategies in a city that otherwise is known for its “anything goes” attitude. While on the one hand tightening the possibilities for diverse informal practices to develop and proliferate, the city government on the other hand also promotes its “urban pioneers” that have informally appropriated various spaces in the city. Right after the fall of the Wall, the abundance of vacant lots and buildings in Berlin has received as weakness in the new urban development processes. However, today they are endorsed and proclaimed as strengths and idiosyncratic features of the urban landscape. Hence in current governmental strategies “planned informalization” is an important pillar to develop urban space that is otherwise lacking financial investment.

Overcoming the in/formality dualism and stimulated by this debate which emanates from the Global South, the paper will show how informality and formality are intricately intertwined in the researched cases in Berlin. Furthermore, it will talk about the ambiguous role of the city government that on the one hand, embedded in the neoliberal agenda, is promoting certain kinds of activities, while on the other hand, evoked by the image of the modern and orderly city, is regularizing undesirable informal practices.

Circular Labor Mobility in the Central European Region: Job Finding and Labor Market Outcomes of Cross-Border Commuters from Hungary, Slovakia and Czech Republic in Austria

Circular labor mobility within the EU has been strongly promoted through several institutional programs since the 1990s. However, so far the given circumstances for participants in these emerging transnational labor markets have not been investigated in detail. This is especially the case for Euro zone cross-border commuters. Our paper aims to close this gap by taking the Central European Region (CENTROPE) as an exemplary instance. Therefore we investigate job-search strategies and related labor market outcomes of cross-border commuters in the regions of the Czech Republic, Slovakia and Hungary, the so-called “Oder-Area”. Theoretically, we build upon a model developed by Aiguleira and Massey on the nexus of social networks, job search methods and related labor market outcomes. Methodologically, we use a brand new longitudinal survey on employment careers of cross-border commuters conducted in 2013 (N=2550). Empirically, the focus of our paper lies on three research questions concerning job search methods do cross-border commuters from Hungary, Slovakia and the Czech Republic use in order to find employment in Austria (1)? What are the labor market outcomes of these job search methods in terms of wages (2)? Our results strengthen the hypothesis that human and social capital resources serve as key factors for finding job strategies and successful labor market integration. For example, we can show that far family and friendship ties are more intensely related to job finding than near-family contacts. However, near or far social ties do not influence wages of cross-border commuters. Furthermore, there are substantial gender differences and differences related to previous occupa-tional status and migration experience in regard to the job searching methods and commuters’ wages in Austria. Overall, our results reflect cross-border commuting as a new form of social practice in Europe, and demonstrate the fundamentally unequal opportunity-structure of CENTROPE as a transnational labor market.

The Brazilian Second Generation in Japan and Ethnic Community – the Role of Bridge

This talk aims to examine how the Brazilian second generation residing in Japan wants to contribute to Brazilian community with their bilingual language capital. In Japan there are more than 60 Brazilian schools where Brazilian children can learn Portuguese and in Portuguese. For the Brazilian children who study in Japanese schools, especially in the towns where a lot of Brazilians live there are some Portuguese classes administrated by local governments or non-profit organizations. Some of the informants of this research had studied Portuguese after their entry to Japan at around 10 years old in a supplementary Portuguese language course offered by a Brazilian school and maintain their mother language proficiency. They graduated from Japanese universities and also have high level Japanese proficiency. They have supported their family to survive in Japan as guide and interpreter, chosen jobs, for example, language education, legal work to renew visas and passports, etc., to contribute to Brazilian community, and taught Japanese language to Brazilian children as volunteers. They try to bridge between local community and Brazilian ethnic community in various dimensions and they are aware and proud of the role. We can find the importance and necessity of this role in several original characters of Brazilian community in Japan. The first one is their limited contact with Japanese people in working space and locality. The second is the wide spread Brazilian ethnic business. These two points have related to low level of Japanese language proficiency of Brazilians in Japan. The third is the passage of time. More than 20 years of Brazilian immigration history in Japan made bilingual second generation grown up. In these days the role of bridge or pipe line between local end ethnic communities constructed by bilingual Brazilians of first generation is being maintained, succeeded and renewed by second generation little by little.

Do Egalitarian Couples Have More Sex?

The German Family Panel (pairfam) is a multidisciplinary survey focusing on partnership and family dynamics. The survey implements a complex study design. In addition to the panel approach, it follows a multi-cohort and multi-actor approach. This means that so-called anchor persons from birth cohorts 1991-93, 1971-73 and 1971-73 are surveyed annually. Furthermore, the anchors’ partners, parents and children are also included in the survey. By next year the panel will comprise of five waves. Because pairfam collects yearly information from both partners it is perfectly suited to address partnership topics. Studies show that partnership characteristics are influenced by distribution of household work, e.g., if the man’s share of the housework increases, the woman’s partnership satisfaction rises and the risk of divorce diminishes. However, relatively few studies have addressed how housework distribution influences the frequency of sex in domestic partnerships. Kornrich et al. (2012) is a recent exception. They suggest that traditional gender behavior fuels sexual scripts and therefore results in higher sexual frequency. However, the data for their study, collected in the United States, is 20 years old and only focuses on married couples. Further, other studies assume that women exchange sex for household work, resulting in a negative association between women’s share of housework and sexual frequency. So far there is no known study from Germany that deals with this topic. Using pairfam data I can demonstrate that couples with an egalitarian housework distribution have the highest sexual frequency. This correlation exists for traditionally female, as well as for traditionally male households. Neither sexual scripts, nor exchange seem suitable to explain this correlation. Moreover, I am going to use fixed effects panel regression methods to examine if this correlation also holds true in a longitudinal analysis and to explore the underlying causes of this correlation.

HALAFFOFF, ANNA* (Deakin University, anna.halaffoff@deakin.edu.au)
Gender, Ordination and Socially Engaged Buddhism in Australia

While women have played a prominent role in Buddhism in Australia, at least since the 1880s, they have received relatively little scholarly or public attention. These women include prominent nuns, teachers, community leaders, scholars
and activists engaged in environmental and human rights issues, such as Marie Byles, Natasha Jackson, Venerable Robina Courtn and Judith Snodgrass. Courtin, has frequently featured in the Australian press and been referred to as ‘unconventional’, giving her forthrightness and dynamism. On October 22, 2009, four women received Theravada Bhikkhuni Ordination in Perth, in the Thai-Forest Tradition, which also generated a considerable amount of controversy. Members of the Australian Sangha Association, including prominent nuns and monks such as Rev. Chi Kwang Sunim, Ajahn Braham and Bhante Sujato have, and continue to be, at the forefront of promoting gender equity in Buddhism in Australia. This paper examines the contribution of Buddhist women and men, and also Buddhist organisations, in addressing gender disparities in Australia. It argues that stereotyping Buddhists, and Buddhism more generally, as passive and pensive, negates Buddhists’ commitment to the Bodhisattva ideal, social justice and social engagement, evident in both traditional and contemporary Buddhism.

Mortgage Households As Carry Traders: The Social Life Of The Swiss Franc In Poland

The recent innovation of mortgage credit in Poland has been rearranging property relations, stimulating construction and enabling new middle class aspirations. There are more than 1.5 million active contracts; there exists no significant population who paid off. Half of those contracts are adjustable rate mortgages denominated in Swiss francs. They draw housevholders into the currency market, making for a new fact of life in Poland. By 2008, the franc-frone exchange rate was 1.5, a favorable exchange rate between the Polish zloty and the franc. “Franc people,” as they have come to be known, enjoy the benefits of this speculation, but are also subjected to unprecedented risks. As the recent crisis attracted investors worldwide to the “safe haven” of the Swiss franc causing its strong appreciation, the mortgage sector witnessed a sharp plunge of equity on their houses and an increase in monthly payments. Based on ethnographic fieldwork this paper traces the dual productivity of the Swiss franc in Poland through the lens of the groupmaking effect of currency: “Franc people, or “currency spread generation.” Economically, the franc is capable of producing independent effects that contradict the conventional wisdom that money is “just a veil” to economy. Symbolically, as a discursive site, or locus communis, the franc and its people become a vehicle of debates about postcolonialist transformation, capitalist generation, instabilities of contemporary capitalism, and the legitimacy of speculation. What are the practices of domestic living with such a sharp plunge of equity on their houses and an increase in monthly payments? How do charts, exchange rates, and the LIBOR index become objects of attachment both in intimate household economies and in the public discourse at large? While based on the Polish case, this paper also uses data on the social life of the Swiss franc in Croatia, Hungary, and Spain for a more comparative and theoretical perspective.

HALD, LENE* (KEA Research and Innovation Centre, lhal@kadk.dk)

Design Experiments As Intervention: How May This be Rendered Visible?

Building on empirically based visual experiments in the form of design interventions and co-designerly processes this paper seeks expand the field of visual sociology. This is done through an exemplification and discussion of how we might visualize interactive, multi sensory and process based aspects within fashion and identity studies. Furthermore, the paper address how visual, expressive and design based ways of constructing and representing sociological insights affect our understanding.

Visual sociology is based on the notion that valid scientific understandings of our world can be attained by observing, representing, analysing and theorizing its visual components. People and material artefacts of culture (Pauwels 2010). Equally, fashion, like the arts, is often considered a visual phenomenon and the creation of aesthetically appealing artefacts is frequently described as one of fashion design’s main goals.

Design disciplines (including fashion design) have, throughout their history, actively engaged visual methods in the form of photography, moodboards, sketching etc. (Boradkar 2010). Furthermore, fashion design and the study of fashion & identity have been moving towards a broader definition than mere object making by being concerned with activism, critical and social design (von Busch 2008) - elements that historically have been the core of sociology. This points out some clear and recognized parallels between visual sociology and the study of fashion, which make it prima facie plausible that visual sociology has a potential for social and cultural fashion studies.

Through visual design experiments conducted within a specific case-study concerned with troubled youths, fashion and identity, this paper seeks to investigate whether it is possible to grasp meanings of fashion beneath the visual surface and re-frame these meanings in a visual and designerly manner.

Vulnerable Workers: The Significance of Trust and Uncertainty in Coping with Workplace Hazards

Based on a qualitative study of 120 Canadian born and immigrant workers in unorganized and non-unionized workplaces this paper explores the different ways in which workers manage and cope with workplace safety hazards in contexts of varying forms of employment vulnerability and insecurity (Vosko, 2006). I examine the rationalizations, beliefs and identities that workers employ to dismiss or make sense of their risk-taking, while also considering the ways in which they seek to construct levels of control over hazards and security in their employment, in part through the building of knowledge and trust with other workers and supervisors. I also consider the contradictory nature of workers’ actions which are frequently in tension with each other, including taking safety risks to build employment security, as well as taking employment risks to establish limits to their acceptance of safety risks. In this latter part of the analysis, I explore the conditions and actions which limit worker compliance to certain levels and kinds of hazardous conditions, arguing that some workers are relatively successful in working either individually or with other workers to build what they see as a balanced level of safety and security.

Where Is Japan in the Global Land Grab Debate?

Some of the main explanations of the “global land grab” implicitly suggest that Japan should be close to the center of the phenomenon. Japan, after all, has the world’s third-largest national economy, is extremely dependent on imported food and fuel, is a massive capital exporter, and has multinational corporations with vast international experience. In fact, however, the main land grab stories from Japan show a distinct slant originating in Japan’s role as a “safe haven,” and the land grab literature has little to say about the country. This paper seeks to explain both why direct Japanese investment in overseas land might be limited and why whatever land grab-related activity Japanese actors are engaged in might go relatively unremarked. I argue that 1) the international experience of Japanese multinationals has predisposed them to avoid large-scale overseas land acquisitions; 2) the Japanese government is prioritizing and supporting forms of international agricultural investment other than direct land acquisition by Japanese actors; 3) the avoidance of sub-Saharan Africa by private and public Japanese actors (with the major exception of the ProSAVANA project in Mozambique) lowers the visibility of Japan’s actions; and 4) more generally, that little attention is paid to Japan in broader discussions of world politics. I also suggest that Japan’s experience shows that there is much more to “land grabbing” than land, and that the literature needs to pay more attention to areas like investments in agriculture-related infrastructure, control over shipping, and technology transfer where the Japanese role has been quite prominent.

Internet Media and Radical Conservative Activism in Japan: The Battle Against “Anti-Japanese” Enemies

Focusing on right-wing groups in Japan, this paper addresses how radical conservative activists use internet media to build collective identity and mobilize support for their campaigns. In particular, this paper will examine the online activities of two closely affiliated “grassroots” organizations: Nihon Bunka Channel Sakura, an internet broadcaster, and Ganbare Nippon, a conservative activist group. Both organizations are involved in a wide range of activist programs, such as opposition to “masochistic” history teaching, opposition to voting rights for foreigners, promotion of awareness about “fascist” Chinese foreign policy, protests against perceived bias in Japanese newspapers and television programs. Through content analysis of the organizations’ websites, videos, blogs, posts, and social media usage, I argue that they have embraced the latest forms of internet communications technology, and are skillfully employing the internet to spread their message. Their online activities have helped create a virtual community of supporters, many of whom also engage in offline forms of activism. In addition, this paper will explore how both organizations encourage the formation of a collective identity that sees Japan as a victim of powerful foreign and domestic “anti-Japanese” entities, and depicts their campaigns a moral struggle for truth and justice.
This paper examines place-based belonging as a construction of thrown-together experiences within the public spaces of two gentrifying neighbourhoods. It draws on Massey's (2005) concept of thrown-togetherness and Amin’s related work on situated multiplicity and collective culture (2008), to examine the manner in which such belonging can be generated through our everyday negotiations of the multiple trajectories of people, objects and symbols, that make up the contemporary city. Massey argues that because of the multiplicity of these trajectories, places should be thought of as unfixed, their meaning instead constructed within these moments of encounter. In this paper I apply this perspective to place-based belonging, to consider how the experience of belonging may be constructed within these negotiations. In doing so the paper also seeks to shift the focus from dichotomies of public and private, or inclusion and exclusion, that often characterise discussion of public space in gentrifying areas, to instead consider ways different practices of coming together are encouraged by these intersections.

In this paper I particularly focus on quasi-public spaces - cafes, bars, and shopping centres where publicness is always ambiguous, and where much potential for both inclusive and exclusionary experiences resides. Drawing on qualitative research conducted within two gentrifying Australian suburbs, this paper describes the throwing together of interactions, representations, and interpretations to construct personal and collective identifications. These can work to enable belonging and create opportunities for diversifying exchange; both of which have the potential to communicate the presence of the community across time and space. In doing this work seeks to demonstrate the ways that geographic and temporal boundaries of public space are blurred, breached and yet also reinforced as we throw together place-based experiences of belonging.

HALL, TOM* (Cardiff University, halla@cf.ac.uk)

City Streets, Dirty People and the Politics of Cleaning

This paper reports from empirical research on the work of urban patrol, in particular the physical work of street cleaning and the social (although similarly physical, messy and material) work of ‘outruth’ and street care. We consider a team of council employees based in the city of Cardiff in the UK whose job it is to make repeated tours through the centre of the city, day and night, looking to establish contact with and minister to ‘vulnerable’ adults who may otherwise struggle on their own to access mainstream (social and healthcare) services; the street homeless make up a significant proportion of this target group, but take their place alongside assorted others, including sex workers, all of whom outreach workers aim to assist and enrol as clients. We also consider the daily patrols of teams of street cleaners, again employed by the local council to patrol the city streets – picking up litter, emptying the bins and sweeping surfaces clean.

The paper develops two themes of analysis. The first examines the ways in which street cleaners and outreach workers – the latter ‘moral’ street sweepers, of a sort – employ and engage the senses in pursuit of their tasks and are drawn, alike, to the same dirty, grimy, cluttered, smelly and unsightly places as they do. The paper’s second contribution, building on the first, considers the ways in which the expected outcomes required of street cleaners and street carers (outreach workers) are often equated with the appearance and look, and ‘feel’, of the places and people in, on and with whom they work. This linking of care and upkeep to appearance – as the desired outcome of work that tends to and mends place and people – signals a politics of repair, enacted with ‘deviant’ groups in frequently dirty city places.

HALDÉN, KARIN* (Stockholm University, karin.halden@sofi.su.se)

Gender Differences in Academic Careers in Sweden

Gender differences to women’s disadvantage are evident in most branches of the labour market, so also within academia (Danell & Hjerm, 2012, 2013). Research on Swedish data shows that women have difficulties reaching the highest academic positions. Among other things, women’s likelihood of becoming professors are significantly lower compared to men (given PhD obtained in the same year). Women’s greater family responsibilities are often assumed to account for much of the observed labour market gender inequality. Nevertheless, to our knowledge no Swedish study has analyzed the impact of parental leave on academic careers in a systematic way. Hence, the current study uses Swedish register data for all teachers and researchers at Swedish universities and university colleges and matched information on individual and family related characteristics for the time period 1995 to 2011. Event history analysis is employed to analyze the effects of parental leave and temporary parental leave on gender differences in academic careers. The results show that men have a higher likelihood of becoming professors - which is in line with previous research. However, the gender gap in academic careers gets smaller over time since obtained PhD. Parental leave and temporary parental leave have negative effects on academic careers for both men and women. When studying separately individuals with small children in the household we find that the gender gap in academic careers is significantly larger for this group compared to the gender gap in academic careers for others academics.

Ethnic Stratification and Income Inequality Around the World

The paper starts from the assumption that inequality within countries is a very important topic for research also in the area of globalization. Data show that there exist huge differences between countries and world regions (continents) in this regard, with Latin America and Sub-Saharan Africa exhibiting extremely high, most European countries and Japan rather low income inequalities. Neither sociological nor economic research have theorized and investigated this issue systematically. The general hypothesis of the paper is: Economic inequality can only be explained if we see the close interaction between class stratification and ethnic differentiation. For a test of these hypotheses, a new aggregate data file has been produced, including characteristics about the ethnic structure and history, the socio-demographic and economic structure (population, level of development etc.), and the political system (democracy, federalism, welfare spending) of 130 countries around the globe. A regression analysis shows that both ethnic diversity and a history of slavery are significant determinants of income inequality; the same is true for land distribution, democracy and welfare spending. Some implications of these findings for policy and further research are discussed.

Social Inequality and Income, a Comparative, International Analysis

Social inequality in sport is an important topic in Sociology. Ever since modern sports were established there have been differences in the type and frequency of sports practiced by different socio-economic classes. Do these socio-economic differences in sport participation still exist today? Or are horizontal dimensions more important in determining who is participating in which type of sport and how often? In this presentation these questions will be examined using the 2007 International Social Survey Programme (ISSP) on “sport and leisure time”. The relevance of three dimensions of vertical stratification (education, occupational position, and income) is investigated as well as of two horizontal dimensions (gender and age) for 34 countries around the world by using descriptive and causal (regression) methods of analysis. The results are surprising and even spectacular. Contrary to the widespread thesis that the vertical dimensions of stratification are losing in importance in favor of new, horizontal dimensions, we find that if anything it is the horizontal dimensions that have lost in importance. Participation in sports is much higher in rich countries than in poorer countries, also, the more affluent the country the lower the relevance of the horizontal dimensions. Indeed, in the most affluent countries the effects of horizontal dimension are even reversed.

Searching for European Values

Since 1981, the European Values Study group is searching for the values of the Europeans by means of surveys in an expanding number of countries. The latest wave took place in 2008 and included all 45 countries (with more than 100.000 respondents) on the European continent. We aim at a repeat survey in 2017.

It was attempted to identify value systems, but in general values appeared not to be clustered coherent patterns, but the patterns found and values that could be identified were domain specific. It means that values could be identified with regard to various life domains and it is hard if not impossible to find overarching value systems. What also was revealed in and repeatedly found since the first wave in 1981 is that Europe is far from homogeneous when it comes to basic values. Despite its common Christian history, the values of the people in the European countries appear rather diverse and the European unification has not (yet) resulted in a converging of the values of the Europeans. Ideas of multiple or varieties of modernities (e.g., Eisenstadt; Schmidt) and path dependency (e.g., Inglehart) seem to be confirmed by such results.

In this paper I focus on European values in 2008 and elaborate on our efforts to find patterns in values distinguished in various value domains (religion and morality; politics and society; primary relations; work and leisure time). The data allow to identify one or two more fundamental orientations which appear to be underlying the orientations in the distinctive value domains. Perhaps such results are disappointing but they illustrate the wide variety in values that exist in contemporary Europe despite its ongoing process of unification.

“Why Independent Elderly Prefer to Continue Living in Their Home Even When They Become Frail?”

Frail old people have three options for care (informal, formal, mixed): move in with one of their family members (usually one of their children); live in a nursing home or in assisted living setting; continue to live in their home and receive private care or care services (based on the Long-Term Care (LTC) Insurance Law). As a multicultural society, Israel serves as a natural laboratory for identifying similarities and differences between various groups. The present research compared independent Jews and Arabs aged 65+ who live in the community, on various aspects of their preferences for care.

The study included two stages, a quantitative one, in which closed-ended questions were administered to 200 old Jews and Arabs, followed by a qualitative one, in-depth interviewing 20 respondents. The study found that Jews mostly preferred nursing or sheltered homes, whereas Arabs preferred mostly to remain in their homes. However, approximately 40% of both populations preferred “mixed care,” staying in their home with a live-in worker or with one of their children.

Three main aspects were identified: a macro-level aspect of social and cultural contexts (collectivism vs. individualism); a mezzo-level aspect of family patterns and norms (reciprocity and exchange in intergenerational relations); and a micro-level aspect of personal attributes and values (psychological meaning of family/home; dignity vs. honor). Although main aspects were in general similar between Jewish and Arab respondents, the initial meanings of these aspects were different, reflecting social contexts, past experiences, family norms and the importance of home in late life.

Results revealed the need for developing culturally sensitive and tailored programs and services that take into account these aspects. Providing such services would allow old people to continue living in their homes, even when they become frail and need care and support.

The Disconnexion Between Attitudes to Transport and Policy Choices

This proposed article explores the following paradox: whilst research on attitudes to transport and travel behaviour in European States often suggests that the negative externalities of the transport system are a significant everyday concern, decision-makers at various levels of government are reluctant to support “anti-car” measures that may do so. Framing sustainable transport policies and policy tools such as speed limits, urban tolls or other carbon taxes. This article seeks to further explore this paradox by revisiting the public policy assumption. Political attitudes research, especially that which seeks to identify influences on voting intention, shows that transport is often relegated to a much lower level of priority. Based on our previous research and Eurobarometer surveys, our analysis suggests that attitudes to transport and travel are increasingly shaped by the politics of choice and combination of policy tools. Following the claim made by the so-called policy feedback model, we expect transport policies to shape citizen attitudes towards institutions, including policies, measured in terms of trust, causal narratives, the punishment of free-ride.

HALSA, ASTRID* (Lillehammer University College, astrid.halsa@hil.no) 

At Home and Elsewhere: How to Handle Daily Life Growing up with a “Mad Mother” or “Drunk Father”? 

There is a large body of research on children living in families with parental mental illness/substance abuse focusing on parental failure, adverse outcomes and risks imposed on the child. The risk and harm perspective is however less suitable to study children as participating agents. There is a gap of knowledge about how these children deal with the different realities of home and away, and at what costs and benefits they adapt to these different contexts. They often have to negotiate between the often secret and shame-laden family context and arenas and situations outside the family. This paper focuses on children and young people's first persons accounts on growing up with parental mental illness or substance abuse by analysing children's own experience. The paper concludes with the suggestion that to grasp these children and young peoples lived experiences the research has to look outside the families front door and include children's activities in school, leisure and community, and focus on the active and challenging identity work these young people go through in trying to keep their homes together while developing a sense of selves.

HAMADA, KUNISUKE* (Tokyo Jogakkan College, hamada@kcn.ne.jp) 

Causal Relationship Between the Feeling of Alienation and Anti-foreignism in Contemporary Japan

In the last decade, anti-foreignism has emerged gradually in Japan. Grassroots right-wing organizations such as “Zaitokukai” have held anti-Korean demonstrations repeatedly. Furthermore, we can easily find many postings and articles on the internet which have hostilities toward foreign nationals and left-wings. They claim that people who have a liberal view on migration and advocate for immigrants are “traitor” to Japan and have intended to damage Japanese national interest. Although only a few people participate in these movements, quite a number of people may share the feeling of intolerance toward vulnerable and minority groups. For example, a national diet member Satsuki Katayama waged a campaign to investigate the recipient of welfare public assistance and expressed...
the opinion via twitter that welfare public assistance for foreign residents should be cut off. Why has this trend emerged during recent years in Japan? Who support these speeches of anti-foreignism?

Yasuda (2011) pointed out that the people who support “Zaitokukai” have a feeling of alienation from societies and participate in activities to gain the esteem from others. On the other hand, Higuchi (2012) claimed that “Zaitokukai” have recruited “ordinary” people who have a patriotic feeling through the internet, because there are only a few organizations which fulfill the demand of conservative people. However, these discussions are based only on the qualitative research of “Zaitokukai” members and it is difficult to generalize about characteristics beyond this particular group.

The aim of this presentation is to clarify the relationship between a feeling of alienation and anti-foreignism in Japanese ordinary people. For this purpose, I analyze the data from nationwide surveys conducted in 2009 and 2013 using the method of causal analysis and structural equation modeling.

Late-Alain Touraine's Theory of Modernity, New Subjects and Cultural Movements: Toward Theorizing Social Transformations in Contemporary Asia

The purpose of this presentation is to theorize social transformations in contemporary Asia from the perspective of late-Touraine’s theory. The “compressed modernity” theory (Chang) is often used, which is based on the theory of “radicalization of modernity” (Giddens, Beck) that focuses on the institutional level of modernity. However, the latter is partly criticized by the theories of “multiple modernities” (Annam) and Touraine, because the cultural orientations characteristic of modernity are embodied in institutions, but not reducible to them. Its founding gesture is a break with the widespread assumptions that there is one main pattern of modernization and modernity.

This presentation explores the insights that emerge from the exploration of Touraine’s major works after 1990s that are highly appreciated by the theorists of multiple modernities. Touraine does not justify modernity institutionally and does not anchor it in the market economy, the government administration, or democratic organs. Instead it brings other regions of the world into the debate over modernity.

Touraine maintains that modernity was characterized from the beginning by the two poles of reason and the resisting subject. In a world best defined by multiple process of change, there exist no other means of combining economic strategies and entities than through the individual. It is not the individual as consumer or member of various organizations, and even less as citizen, but the individual as subject, in the desire for individuation, which constitutes the only principle able to mediate between the instrumental world and the world of identity; the collective situations that protect the uniqueness and individuality of individuals called cultural movements.

These conceptualizations can be applied to Asian societies, however to that end it should be developed into institutional analysis based on a new theoretical model from the theories of welfare regime, new social risks, social/cultural movements, and social governance.

Contested Rights of the Cross-National Family: Recent Cases of International Parental Child Abduction Between Japan and the United States

This paper aims to explore conflicting rights claims of cross-national family members. Based on multinational case studies of recent international parental child abductions involving Japan and the US, it discusses the ways in which the realization of the basic human rights of each party of a cross-national family (father, migrant mother and child) involves fundamental challenges to the achievement of social justice in the absence of a universal legal system. In May 2013, the Japanese Diet passed a bill approving Japan’s accession to the Hague Convention on the Civil Aspects of International Child Abduction. Signatories to the Convention such as the US had for many years criticized Japan for showing little interest in the increasing number of family disputes of international parental child abduction by Japanese nationals. Frequently the cases involve Japanese women who are international marriage migrants abducting their children to Japan after the breakdown of a marriage. In the US context, not only do these migrant mothers offend the right of joint custody of the American partner, but they also breach the child’s right of access to both parents and violate the Convention rule against unilateral removal of the child from their habitual residence. Japan’s accession to the Hague Convention is likely a progressive step indicating that Japan has begun to see the issue as a matter of basic human rights, rather than a purely private and individual matter. However, in this paper I argue that in order to improve global social justice in relation to family disputes, accounting for the particular situation of migrant woman in both public and intimate spheres is crucial. Taking this new rights talk into account, I attempt to sketch a more nuanced concept of social justice in relation to the cross-national family, pointing out possibilities for further international legal refinements.

HAMARAT, NATASIA* (Université libre de Bruxelles, nhamarat@ulb.ac.be)

Taking Action for the Recognition of a Lay Expertise over the Body: A Narrative Based Activism? the Case of Breast Cancer Patients’ Organisations

For thirty years, biomedicine is characterized by the development of clinical, organizational and legal structures that promote the “narrative based medicine”. These structures are expected to strengthen the “humanization of care” and the “patient participation in decision-making”, but they also inherently contain a risk of strengthening the social control of the patient, especially in cases where these narratives are used to assess the legitimacy of the patient’s demand for a medical intervention. According to Memmi (2003), a consequence of the development of the “narrative based medicine” for the therapeutic activism is the focus on issues related to the body, evidenced by the emergence of feminist and LGBTQ movements in the early 1970s and, more recently, the mobilization against the AIDS epidemic and the increase of patients’ organisations. Therefore, how to think, in the same analytical framework, the incentives to produce subjective narratives of the body in the privacy of the medical practice and the public claims for recognition of a lay expertise over the body from the patient’s organisations? My PhD thesis focuses on the shaping of an experiential expertise in and by the French-Belgian breast cancer patient’s organisations, a pathology strongly subject to the incentive to produce narratives because of the impairment to the performative femininity. In this paper, I propose on the one hand, a reflection on the theoretical and methodological challenges that seem to be facing the researcher when (s)he studies the political resistance in this medical context and, on the other hand, based on examples from my fieldwork, an illustration of how these activists frame their critique of the system through their personal awareness of the illness experience, transforming this awareness into a “politicized collective illness identity” (Brown et al. 2004) holding legitimacy from the discursive operation of generalization - from the singularity to the collective experience.

Linking Middle Class to Political Stability in Ghana

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The concept "Middle Class "conventionally invoked to refer to a social class that are drivers of social change both in economic and in Political terms in the west and in developing world.

The concept of "Middle Class "conventionally invoked to refer to a social class that are drivers of social change both in economic and in Political terms in the west and in developing world. Ghana, like many African countries has had its share bit of political instabilities particularly in the aftermath of independence, in the 1960, 1970s and 1980s. But since the return to democratic rule in 1992, it has been steadily established itself as the beacon of democracy with multi party elections every four years and serves as an example for other African countries to emulate.

This paper will explore if the current political stability in Ghana since the return to constitutional rule in 1992 had been a result of its middle class. It traces the Ghanaian middle class from independence, post-independence era of military rule to date and the role the middle class played especially in the 1990s and 2000s to ensure the political stability prevails. Drawing on a field work carried out in Ghana in 2012 with a varied sample from different social backgrounds to gage out who these middle class are? What classify them as middle class? To borrow Bourdieus social classification typology: is it their economic, political, education and cultural capitals that make them middle class? And what economic or political role do they play within the Ghanaian political sphere?

La Socialización En La Emergencia Del Científico De Bioquímica y Ciencias Sociales. Consideraciones Para El Futuro

Los procesos formativos de los doctorandos son heterogéneos, la socialización se deriva de las comunidades a las que pertenecen. La variación en los mecanismos de modalidadse relacionan con los procesos de formación, cognición y roles de identidad en distintos momentos para insertarse en la comunidad científica. La trayectoria del investigador es de un cierto shock con la realidad, dificultad que se va superando según se logre un proceso de enculturación, mediante el cual se adquieren habilidades tácitas de competencia científica a través de ensayo y error hasta lograr la independencia para la publicación (Delamont y Atkinson:2001). El propósito es abordar conocimiento sobre el vínculo de la cadera entre el último año del doctorado y su inserción en la comunidad científica (Laudel y Gläser, 2007) en bioquímica y ciencias sociales porque varían las tareas y las formas en las que publican resultados, aunque tengan en común transitar por procesos cognitivos, formativos y jugar roles en la construcción de sus rutinas para convertirse en investigadores. Se parte de que en estos programas de doctorado se tiene, en distintos grados, reconocimiento del campo de conocimiento, consolidación de la disciplina de formación, prestigio institucional y liderazgo del grupo de referencia; factores que aumentan la probabilidad de que sus doctores devengan en científicos. Se presentan resultados parciales sobre las entrevistas de los egresados de estas disciplinas sobre su participación e integración en las actividades propias de la comunidad científica; se analiza la reconstrucción de sus experiencias en la formación doctoral y las posiciones que ocupan en los ámbitos de inserción laboral que reflejan su formación como científicos; finalmente, se reflexiona sobre el futuro de la socialización para la emergencia del científico.

Risk Perception and Risk Governance in East Asia

The aim of this paper is to examine salient characteristics of the public perception of risks in Beijing, Seoul, and Tokyo as capital cities of three major countries of East Asia and to explore multiple pathways to reflexive risk governance in East Asia as an important condition for second modern transformation. Based on the 2012 survey data from China, Japan, and Korea over the issues of risk society, risk governance, the future of East Asia, and second modernity, the authors will show 1) the overall consensus among East Asian citizens about the consequences of modernization and the future development; 2) the commonalities and differences in the public perception of risks in three capital cities; 3) the major factors which may shape a concrete paradigm of risk governance in each country. Reflexive risk governance at issue is second-modern in that state alone can no longer be able to adequately perceive and manage complex risks citizens face today, requiring a partnership though its forms are various. The authors will thus examine the interactive patterns among government, experts, NGOs, and citizens in forming risk governance, drawing a particular attention to the evolving procedures in which the bottom-up inputs from citizens and the extent of institutional responsiveness are linked together to produce efficient policy outcomes. The authors will argue that it is necessary for East Asia to delineate and combine two dimensions of risk governance, that is, local and cosmopolitan, depending on the types of risks to be regulated. In so doing, the authors want to demonstrate the overall commonalities of risk governance in East Asia, on the one hand, and specific characteristics involved in each country, on the other.

Transitional Justice and East Asian Community: Two Patterns of Civil Engagement

This paper deals with two salient patterns of civil engagement in South Korea and China as a collective response, first, to the lack of transitional justice on the part of Japan concerning war crimes committed by its imperial army and its colonial rule and to the difficulties in forming East Asian community in its genuine sense as we can see in European Union. Confronted with, and challenged by, this unfortunate legacy of the past which is still wielding enormous influence on the domestic politics and international relations in East Asia, the authors want to delve into contrasting patterns of civil approaches to this problem via discursive analysis: one is driven by a nationalist ideology and emotional mode of confrontation in various forms of popular movement, another is characterized by civil discourses and NGO activities aiming at mutual understanding and solidarity among citizens of East Asian countries rejecting a state-centered and politically motivated nationalistic drivers. The authors argue that the advance in transitional justice in Japan is an important condition for East Asian community. At the same time, the authors also argue that retributive justice is not enough for creating a new future but a genuine care by Chinese and Korean citizens over the pains of the Japanese authors also argue that retributive justice is not enough for creating a new future but a genuine care by Chinese and Korean citizens over the pains of the Japanese unfortunate legacy of the past which is still wielding enormous influence on the domestic politics and international relations in East Asia, the authors want to delve into contrasting patterns of civil approaches to this problem via discursive analysis: one is driven by a nationalist ideology and emotional mode of confrontation in various forms of popular movement, another is characterized by civil discourses and NGO activities aiming at mutual understanding and solidarity among citizens of East Asian countries rejecting a state-centered and politically motivated nationalistic drivers. have produced a neighborhood with socio-spatial qualities contrasting those of the dominant centralities near by. An incorporation of these differences has been initiated by local magazines, tourism agencies, and ministries: differences produced in a incremental and bottom-up process have been turned into an attraction for people beyond Shimokitazawa and a mainstream compatible youth culture, whereby the space is being deprived of its experienced dimension. Kimambo in the north of the city is struggling with an aging population, economic issues as well as questions of identity, similarly to other peripheral areas. Due to this change, its dependency on the central area of Tôkyô is transforming and demanding a new consciousness for place. This is leading to the emergence of an active production of differentiating elements in the city, driven by the local authorities and inhabitants: an intended commodification of local assents, such as the natural environment, seasonal changes or local goods is aiming at creating local, socio-cultural value and identity. By looking at the production of differences as part of a dialectical process of production of differences this paper aims at capturing the complexity of everyday life as a backbone of urban society. To achieve this, my research encompasses an open methodological approach and methods from different disciplines.

HANCOCK, ROSEMARY* (University of Sydney, rosemay.hancock@sydney.edu.au)

Islamic Environmental Activism in the United States and United Kingdom

Social Movement theorists have, until recently, accepted after Marx that religion is the opium of the masses and inherently opposed to social or political change. The small but growing involvement Muslims in the environmental movement in the US and UK is a challenge to this belief. The emergence of specifically ‘Islamic’ environmental organizations (IEOs) in both the UK and US shows the engagement of certain Muslims in the Diaspora with grassroots activism, and with the contentious politics associated with environmentalism. This paper is based on the study of four IEOs and their participants, two from the United States and two from the United Kingdom. The IEOs participate in actions and projects that are remarkably similar to their secular counterparts, and show a similar critique of the effects of capitalist economics and industry upon both the environment and a visible alienation from social justice. However, their underlying ideology is grounded in a unique interpretation of Islamic scriptures emphasizing the role of humankind as God’s representative on earth; the environment as a ‘sign’ from God in perfect, divinely ordained balance; and the necessity of following Islamic teachings in everyday life. The secular environmental movement and its organizations have heavily influenced IEOs, both in the framing of environmental crises, and in terms of their organizational structure and forms of action. Utilizing Social Movement Theory and comparative analysis, this paper argues that Muslim environmentalists bring an Islamic voice into the environmental movement, calling for significant social and political change based upon Islamic principles, while sharing with secular environmental organizations methods of mobilization, organizational structure, and aspects of ideological framing.

Growing up in a One-Parent Family: Families and Child Wellbeing

Background
A large body of international literature has documented that children who grow up living with both biological parents fare better on a range of outcomes when compared to children not living with both biological parents. Researchers continue to disagree as to whether the association represents a true causal effect. The majority of Irish mothers who give birth outside a traditional marriage are single, and a substantial number are not living with their children. This paper examines the experiences of children living with single parents in Ireland, focusing on the impact of living with a single mother. The study is based on a survey of 1,000 children aged 5-15 years, conducted in 2012. The results indicate that children living with a single mother are at greater risk of poverty, poor health, and educational difficulties, compared to children living with two biological parents. The paper concludes with policy recommendations to improve the well-being of children living with single parents in Ireland.

Conclusions
The results of this study have implications for policy makers and practitioners working with children living with single parents. The findings highlight the need for targeted interventions to support these children, particularly in terms of education, health, and social services. The paper concludes with policy recommendations to improve the well-being of children living with single parents in Ireland.
ly half of the total residential floor area in Shenzhen, although they only cover 13% of the total built-up land. Over time, these multifaceted spaces of informality have shaped a landscape that is clearly different from the formal city; however, their transformation follows a logical trajectory which continuously contests social and market-driven demands. As the city further develops and infrastructure improves, the expected economic rents of urban village land will keep on rising. For those villages, market-led redevelopments are almost inevitable. Large-scale land acquisition and redevelopment are beginning to transform urban villages into upscale private apartments, luxury hotels and malls—citadels of the rich. This process diminishes a great deal of affordable housing stock in the central city, further marginalizing the low-income groups. Moreover, this works as a domino effect where the redevelopment of one urban village drives the process for other urban villages in the proximity to follow on the same redevelopment path.

Similarly, the practice of producing scientific knowledge is no longer solely in the hands of experts, and the boundary work (Geyr, 1983) between experts and non-experts has been recently challenged. This tendency is more visible in “scientific” knowledge that is contentious, such as climate change, alternative medicine, hybrid cars, child vaccinations, and alternative and renewable energy sources. There is no “correct” knowledge, but rather what exists is contentious knowledge through its co-production among experts and laypeople. With these situations in mind, this paper examines how contentious knowledge is constructed in a social media environment, namely Wikipedia. More specifically, this study empirically investigates how online discussions take place on Wikipedia articles on the Fukushima Nuclear Power Plant Disaster that occurred in March 2011 in Japan as well as child vaccinations (i.e., MMR and Thimerosal). Wikipedia is an online encyclopedia with over 280 different language versions and over 4 million articles just in English. In addition to the articles that are more visible to the general public, Wikipedia provides an online discussion space for each article. This offers a rich space for examining how scientific knowledge is negotiated in an open online environment. This study aims to examine who is included and who is excluded in the co-production of knowledge in a social media environment and to discuss the mechanisms in which co-production of knowledge occurs. The implications of the findings are relevant to studies of scientific knowledge as well as consumers of scientific knowledge.

**Understanding Boundaries For Knowledge Sharing In Online Communities**

Online knowledge sharing activities are flourishing with the advent of social media. Websites such as Facebook, Twitter, and Wikipedia facilitate knowledge sharing in online communities that extend beyond the constraints of existing organizational boundaries (Qualman 2011). Since the focus of prior research has generally been limited to knowledge sharing within organizations (e.g., Wang & Nee, 2010), it is imperative to better understand its practice on Web 2.0 platforms and in these online communities (Allen 2010). As Vakkayil (2012) contends, the concept of boundaries is informative for understanding knowledge sharing and collaboration among heterogeneous users with diverse cultural, organizational, socio-economic and spatial backgrounds. In organizational settings, boundaries, such as physical, cognitive, social, and political (e.g., Carline, 2004), may privilege certain participants, motivations, and modes of participation. However, these boundaries may function quite differently in Web 2.0 environments outside these organizational settings. Although it becomes easier and faster to share knowledge and collaborate online, few studies have investigated how boundaries and boundary-crossing in Web 2.0 environments affect online collaboration, knowledge sharing, and participation. This paper aims to explore the usefulness of employing existing boundary frameworks to facilitate knowledge sharing and collaboration. To test and modify existing theoretical frameworks of boundaries we analyzed Wikipedia entries about the Japanese nuclear power plant accident triggered by the Tōhoku earthquake in March 2011. This event attracted attention from around the world and is useful for our research because the case involves multiple boundaries and various processes of boundary-crossing. Based on the data and the literature we propose a refined framework for boundaries and boundary-crossing, and by doing so this paper advances our understanding of boundaries for knowledge sharing in online communities and identifies how these boundaries facilitate or hinder equal participation.

**Japan As a Shrinking Society: What Is the Condition for Recovering the Replacement Level of Fertility?**

This paper focuses on the phenomenon of shrinking society emerging in Japan and its sociological meanings, such as the possible historical consequence of demographic transition from high birth and death rates to low ones. First, we used the Historical Statistics of Japan (Statistics Bureau and the Director General for Policy Planning of Japan, 2006) and Population Projections for Japan (National Institute of Population and Social Security Research, 2012) to show the past and future development of the dependency ratio from 1891 to 2100. Second, utilizing the life table population and Net Reproduction Rate (NRR), we observed separately the effects of the increasing life expectancy and declining fertility on the dependency ratio. Finally, we analyzed the historical relations among women’s survival rates at reproductive age, the theoretical fertility rate for maintaining the reproductive level (NRR = 1), and the recorded Total Fertility Rate (TFR). Important findings are as follows. (1) The effects of the rising longevity on the dependency ratios were stable until the average life expectancy reached around 70 years. Women’s survival rates at reproductive age reached the maximum level near 100%, the dependency ratio began to grow swiftly according to the extension of life expectancy. (2) Historical observation showed TFR as adapting to the theoretical level of fertility (NRR = 1) at a certain time lag and corresponding
what extent the Fukushima nuclear disaster impacted communities. In this article, these areas are defined as Low-Recognized Disaster Affected Areas (LRDAA).

The Center for Social Capital Studies of Senshu University, Japan, chaired by Professor Hiroo Harada, have made the questionnaire research about ‘social capital’ both in rural and urban areas of seven countries/areas; Vietnam, Cambodia, Laos, South Korea, China, Taiwan, and Thailand, and at Shinjuku Ward and Kawasaki City in Japan, from 2010 to 2013. In this report we will focus on the research of seven countries/areas.

The hypothesis is that ‘social capital’ might differ from the degree of economic development and urbanization. We define ‘social capital’ as the index of four components; social trust, maintaining and improving livelihood, risk and social safety-net, and social rituals, consisting of 56 questions and 18 items of face sheet. We are quantitatively examining the outputs so that we have not reached the final result and conclusion, but ‘social capital’ differs in urban and rural areas, families, communities, and so on. This may also suggest that ‘social capital’ differs with the economic development, market capitalism and globalization in prevailing at the present age. We also focus the examinations on the history of the families, communities and countries/areas. These would be the qualitative analysis.

We have to carefully treat the outcome of the questionnaire, because the degree of ‘social capital’ does not imply the superiority or inferiority, nor the positive or negative of social capital, just declares the type of social relationship and evaluation in the society of community conditioned by the history and geography. Therefore the policy implications would be differently induced.

Civil Movements in Low-Recognized Disaster Affected Areas

We discuss how civil movements have developed to protect children from radiation pollution in local communities after the March 2011 Great East Japan Earthquake and Fukushima nuclear disaster. We focus on those areas that have not been classified as ‘Affected Areas’ by the government, although local residents have sought to gain institutional recognition of the damage due to nuclear accidents. In this article, these areas are defined as Low-Recognized Disaster Affected Areas (LRDAA).

It is important to pay attention to LRDAA in mega disasters. Existing research suggests that local communities with low-level impacts were peripheralized and neglected by both the government and society in the face of tremendous negative impacts as a result of the earthquake and nuclear accidents. In seeking institutional recognition, residents in LRDAA have difficulty showing the causal relationship between the level of pollution and its impact on health. This makes it difficult for residents to justify damage claims. The level of success of social construction around radiation pollution in low-level impacted areas determines how far and to what extent the Fukushima nuclear disaster impacted communities.

As a case study, we examine a civil movement in Ibaraki, a city near Fukushima. A series of petitions were filed by dozens of newly established citizen groups against local governments and legislators, and the government of Japan. We analyze how Ibaraki local citizen groups have established their network, to which extent they have achieved their claims to gain legitimacy in social and political process, and the roles the professional experts played in those processes. We point out that the establishment of the Law to Support Child Survivors of Nuclear Accidents of June 2011 in the National Diet changed the character of the local political situation by transforming the local government’s attitude toward citizen groups from oppositional to cooperative.

**Conspiracists’ Longings for a Pure Science**

Conspiracists’ Longings for a Pure Science

Conspiracy theories have in recent decades become a popular and widespread cultural phenomenon in the Western world. Although conspiracy theories come in all shapes and sizes, a communality can be found in the challenge they pose to the epistemic authority of science. The social sciences have, however, simply conceived of conspiracy theories as bad science, making a parody out of the respectable scientific tradition, but in their moral condemnations these scholars leave unexplained how we can actually understand these critiques. In this article I draw on the ethnographic research conducted in the Dutch “conspiracy milieu” to explore what conspiracy theorists claim about science, scientists and the knowledge they produce. On the most abstract level is modern science critiqued for its dogmatism that excludes deviant forms of knowledge and leaves many terrains of inquiry unexplored. A second line of critique is directed to the knowledge scientists produce, which in practice is not living up to its a-social ideal of objectivity and disinterestedness. The last strand of critiques then centers around the powerful social position scientific experts have established in relation to outsiders that subordinate laymen and protect their in-group. In sum, what these critiques articulate is a (particular) public understanding of science. Despite a strong critique of science, conspiracy theorists are not against science, but hold a rather ambivalent position: science is at once sacralized for its intentions but profaned for its effects. I conclude by showing how these critiques resonate with both pre- and post-modern scientific understandings of science, and argue how the frailty of modern scientific ideals of the universality and disinterestedness of science paradoxically instigates those critical longings for a pure science that characterize contemporary western conspiracy theories.

**Strategy and Identity in the “Conspiracy Milieu”**

Strategic Identity in the “Conspiracy Milieu”

Conspiracy theories have in recent decades become a popular cultural phenomenon, and its discourse is now an increasingly normalized idiom for many people to account for the occurrence of (seemingly ungraspable) phenomena in contemporary societies. The social sciences have nevertheless conceived of “conspiracists” in rather absolute terms: they have paraded conspiracy theories as an outdated worldview and endanger the body politic. Although the moralism in these studies is already problematic for the sociological understanding of who people are, what I challenge in this paper is the uniform identity these scholars construct of conspiracy theorists. I draw here on ethnographic research in the Dutch ‘conspiracy milieu’ to explore what differences in beliefs and practices can be found and how they are related to dynamics of identity formation. While a communality can be found in the societal change all conspiracy theorists want to bring about, I dissect three different strategies with which people think these
changes should be accomplished: withdrawal, activism and mediation. Strongly influenced by New Age beliefs, adherents of the first strategy assume change is to come from within: by changing oneself, the world will change accordingly. The activist strategy is informed by the notion that a different world can only be established by overthrowing the old order, practices therefore take place on the barricades. The adherents of last argue that societal change can only be achieved in cooperation, adherents therefore want to bring people together by making visible societal and political problems. I conclude by showing how the identity of conspiracy theorists is much more complex and dynamic than social scientists generally assume: it is multiple and formed in relation to the general public and other conspiracy theorists alike.

HARDERING, FRIEDERICKE* (Goethe-University, f.hardering@soz.uni-frankfurt.de)  

Alienation and Meaningful Work – Subjective Strategies of Ascribing Meaning to Work

This paper speaks to current debates about new expectations of meaningfulness at work and new forms of alienation pathologies (Rosa 2012). Current scholarship generally agrees that defining work as meaningful is an important strategy against the feeling of alienation. But still little is known about the mechanisms and processes that individuals themselves use to create meaningful relations to work (Rosso, Dekas & Wrzesniewski 2010). This paper investigates the mechanisms and processes of how employees ascribe meaning to their work.

The sample consists of 21 employees who had changed occupations. I conducted in-depth narrative interviews about their work biography and their work orientations. Four distinct types of ascription of meaning emerged from the data: (1) reference to basic identification with work, (2) reference to meaningful aspects of work, (3) reference to the purpose of work for a greater good, (4) reference to values beyond work. The results show that current understandings of work or job orientations need to be extended and elaborated. Furthermore, the empirical findings invite more detailed questions on alienation, for example, in how far alienation can be interpreted as a gradual phenomenon.

Mindful Living, Mindful Working? New Understandings of the Role of Work in Post-Growth Society

In discourses about post-industrial, post-growth societies (Paech 2012), emerging questions of the “good life” and appropriate, sustainable consumption have invited a general inquiry about new lifestyles. Two archetypes of the new lifestyles include “Lifestyles of Health and Sustainability” (LOHAS) and “Lifestyles of Voluntary Simplicity” (LOVOS). The research about these lifestyles focuses particularly on the consumption behaviors of these lifestyle groups, but questions of how these lifestyles and philosophies affect the understanding of work remain understudied. Because work and consumption are closely linked, we expect that those involved with these new lifestyle models may also have a notably different orientation to work.

We investigate the understanding of work held and articulated by members of these new lifestyle groups. We reconstruct the understanding of work using the responses from four narrative interviews, two from representatives of the LOHAS lifestyle and two from the LOVOS, collected in Germany in 2012 and 2013. These four cases are a selection from a larger sample of 21 job-changers who described their new lifestyles. The central analytical themes of the research are health, sustainability, work-life balance and, simplicity. Our results show that the understanding of work as expressed by these new lifestyle representatives deviate strongly from common understandings of “normal work” or “occupational careers.” The respondents report that it’s very important that their work mirrors their broader values on the dimensions of self-sufficiency, deciding for themselves rather than being driven by outside forces and demands, health-consciousness, and meaningfulness.

HARDY, JANE* (University of Hertfordshire, j.a.hardy@herts.ac.uk)

China in the Global Division of Labour: Contradictions and Class Relations

By examining the contradictions in China’s model of growth and the shifting dynamics of its place in the global division of labour, the aim of this paper is to understand the tensions in the class relations that underpin the Chinese ‘success story’. It will provide the contextual underpinnings necessary for understanding the environment in which increasingly restive Chinese labour is located. The paper will argue that China’s integration with global capitalism and global circuits of capital—particularly from the early 1990s onwards—has been a major cause of its meteoric growth, but has also sharply increased its economic vulnerability as manifested in its exposure during the 2008 crisis. High rates of growth, driven by unprecedented accumulation that outstrips private consumption, has increased China’s reliance on exports, particularly to the core capitalist economies of the United States and the European Union. Reflecting fears that this scale of accumulation is not sustainable, the government’s 12th Five Year Plan (2011 to 2015) called for slower growth and rebalancing from investment to consumption, in part at least through higher wages. Such an approach, however, presents a threat to China’s comparative advantage based on low wages and super-exploitation. Some regions and sectors are already under strain and production has moved within China or to other cheaper economies. In addition, the combined and uneven nature of China’s development, sectorally and regionally, underpins the fractured interests of the ruling class. Finally, the presentation will point to the massive infusion of finance used to ‘soften’ the brunt of the global crisis that has produced property bubbles, which are further fuelling inequality and discontent.

HARGREAVES, STUART* (The Chinese University of Hong Kong, stuart.hargreaves@cuhk.edu.hk)

Geo-Immersive Technologies & the Male Gaze

Geo-immersive technologies are a set of nascent services that digitally record public spaces and then make the imagery accessible to anyone with an Internet connection. The best known is perhaps Google’s StreetView service. This paper argues that by transmitting images of public spaces to anonymous groups of billions, far removed both spatially and temporally from the site of the initial public behaviour, these technologies form a new kind of public street surveillance.

This paper shows that certain images captured by such technologies are increasingly harvested by anonymous users, who seek out photographs they find notable and re-share them. Such ‘notable’ images frequently include images of topless women, or women sunbathing, or women merely dressed in a fashion the anonymous crowd feels is worthy of comment. This paper argues that geo-immersive surveillance thereby replicates the male gaze in a manner that has adverse impacts for the claims of a range of equity-seeking groups, particularly but not exclusively women.

In most jurisdictions, such photography is nonetheless largely unregulated. Individuals are typically treated as having no reasonable expectation of privacy while in public and thus are granted no legal recourse to prevent such “street photography” or seek ex post facto remedy. At the same time, Google and other service providers make no efforts to enforce copyright over the imagery they publish, and thus certain photographs tend to rapidly go ‘viral’, increasing their potential to create harm.

This paper suggests that this situation demands regulatory change. The balance between privacy claims in public and legitimate claims for freedom of expression through ‘street photography’ must be better struck in a way that acknowledges the differing ways in which surveillance is experienced by different groups, who may be more susceptible to surveillance-related harms.

Academic Discourse Meets Praxis Discourse in Group Tutoring

The aim of this study is to explore the meeting of academic and praxis discourses in group tutoring of undergraduate’s thesis. The point of departure is that the quality of the thesis, undergraduate and master level, at the teacher education programs has been questioned by The Swedish National Agency for Higher Education (2006). The main critic concerns lack of academic qualities, such as failing theoretical awareness, weak analysis, normativity and lack of critical writing and thinking. The teacher education program is, however, primarily defined as a professional training program meaning that students to a large extent are focusing on the practical aspects of the profession. Two differing discourses can thus be identified, and this contradiction is explored by investigating the difference between student’s and the supervisor’s perceptions of the purpose of the thesis writing. The results from the analysis, of the transcribed extracts of
Children's Reproduction of Power Relations in the City

This study investigates power relations in a small city in southern Sweden. It is a city where there have been radical social changes in the population structure due to a major inflow of immigrants. The social situation can best be described as filled with tension between different groups. In relation to the tension there is a strong and dominant narrative about "us" and "them", relating to the categories "Swedes" and "immigrants". The study has two aims in relation to this narrative. One is to explore how it is used to reproduce power relations in the city. The second aim is to investigate how children actively use and reformat the narrative and the power relations within it.

The point of departure is the assumption that human beings are embedded in figurations (families, social class, ethnic groups, nations etc.) containing different power ratios that are transferred from one generation to another (Elias 2009). Socialization is thus central in the transmission of power ratios, as children acquire adult standards of behavior and social norms. However, children are from, childhood sociology's point of view, also active agents involved in creating and influencing their own and others' lives, which implies that socialization is not equal to adaptation and internalization, but also to children's negotiation, sharing and creation of culture (Allison, Jenkins and Prout 1998, Corsaro 2005). In the study the children's contribution to reproduction and reformation, in relation to the narrative of "us" and "them", is in line with William Corsaro's (2005) concept of interpretative reproduction. The term interpretative captures children's participation in their own unique peer cultures by creatively taking information from the adult world to address their own peer concerns, while the term reproduction captures the idea that children not only internalize society and culture, but actively contribute to cultural production and change.

Educational Institutions As Mating Markets

Educational institutions are important settings in which future partners meet and where inequalities in the current and next generation are reproduced. Yet there is little research on educational institutions as mating markets, partly due to limitations with existing data. In this study, we use population register data to follow the educational histories of an entire birth cohort of Swedes, born in 1970. We are able to identify the educational institutions the members of this cohort attended, and analyse how these partners overlapped in these institutions. We focus on high schools (Gymnasium) and universities. As the outcome, we focus on first births and analyze assortative mating through the characteristics of the parents. We estimate which share of our cohort members overlapped with (“met”) their partners in high school or university and use contextual level information on the structure and social compositions of the high schools and universities attended to analyze the probability of meeting one's partner in these institutions, and on the probability of assortative mating according to age, ethnicity, and class background. Our preliminary results suggest that up to 40 % of tertiary educationally homogamous couples have met in university, and that the social and demographic compositions of both high schools and universities shape meeting chances and mating along demographic and social lines.

Newspaper Messages about Public and Private Health-Care Services in Australia: The Entrenchment of Unequal Choice

Media representations of health care can perpetuate stereotypes about public and private systems that unequally shape consumers' perceptions and enactment of health-care choice. For instance, recent research about Australians’ (dis)trust of public and private health care suggests that participants’ concerns about long public hospital waiting lists echo prominent media messages, which might in turn contribute to the fact that one in two Australians supplement Medicare (the universal public health insurance scheme) with private insurance. As part of a larger study about health-care choice, we seek to understand ways in which the media represent both public and private health services, and their role in structuring different ‘choice’ pathways through Australia’s health-care maze.

This paper presents results from an analysis of newspaper reporting of public and private health care. The sample consists of newspaper articles and letters dealing with public and private health services, private insurance and Medicare from ‘broadsheet’ and ‘tabloid’ newspapers in three Australian states (2011-13). These texts were coded for positive, negative and neutral messages about public and private care and examined for representations of choice, trust and responsibility. In line with the theoretical framework for our study, we also focused on articles that presented different aspects of ‘health-care capital’ – economic, social, cultural, symbolic or geographic – as influencing consumers’ capacity for health-care choice. The analysis reveals variation by state, newspaper, and over time.

We found that articles in the populist tabloid papers are dominated by negative, frightening messages about the “crisis” in public health systems and, to a lesser extent, the threat of rising costs of private health insurance. The ‘quality’ broadsheets present more balanced accounts, with articles typically combining positive, negative and neutral messages. Media representations thus contribute to the differential structuring of health-care choice, potentially compromising quality of care and exacerbating inequality.
Understanding Society (UK) survey, which records people’s responses to specific questions about their own and others’ experiences of racism.

What emerged is that in the qualitative project, participants found it difficult to name racism and denied that quite explicit forms of racism they had experienced was ‘really’ racism. In the survey, respondents recorded widespread racism which they and/or people they knew had experienced. This paper considers some of the implications of these apparently divergent findings. The use of ready-structured questions is helpful in alerting us to the persisting prevalence of racism. This is facilitated when survey respondents are not actively encouraged to reflect on the personal and societal impacts of being a victim of racism.

The study documents how the described phenomenon often occurs in response to class and upper class shoppers, who find these foods in health food stores, niche organic farming, and artisanal food production. This segment attracts both middle class and upper class shoppers, who find these foods in health food stores, niche organic farming, and artisanal food production. The third segment is framed both as an attempt to re-invigorate local culinary traditions and as an effort to separate one’s consumption from the transnational agro-food system. This emphasis is then articulated in distinctive local restaurants as well as shops and markets.

The presentation is based on the article published in Youth Justice in April 2013.

HARRINGTON, BROOKE* (Copenhagen Business School, bh.dbp@cbs.dk)

**Governing Global Capital: Professions and Regional Competition In Offshore Finance**

How do professions affect the configuration of political economies worldwide? This study addresses the question through interviews with members of a new trans-national profession—wealth management—whose innovations are reshaping the balance of power in global finance. Wealth managers specialize in helping elites avoid taxes and other forms of regulation. The study documents how the means through which they achieve this objective—shifting billions in private capital wealth between Asia, Africa, India and Europe—and how this affects the balance of regional economic power. Drawing from an institutionalist perspective, the paper examines three ways in which wealth managers, both individually and through their professional influence, influence regional competition for power and wealth: 1) by finding loopholes in existing policies that limit the global flow of capital; 2) by lobbying and international policy-making bodies to advance the interests of the profession and its wealthy clients; and 3) by writing the fiscal legislation of some jurisdictions. Through these mechanisms, the profession has reconfigured political and economic power trans-nationally, shifting the world’s legislation of some jurisdictions. Through these mechanisms, the profession has reconfigured political and economic power trans-nationally, shifting the world’s legislation of some jurisdictions.

The study documents how the described phenomenon often occurs in response to class and upper class shoppers, who find these foods in health food stores, niche organic farming, and artisanal food production. This segment attracts both middle class and upper class shoppers, who find these foods in health food stores, niche organic farming, and artisanal food production. The third segment is framed both as an attempt to re-invigorate local culinary traditions and as an effort to separate one’s consumption from the transnational agro-food system. This emphasis is then articulated in distinctive local restaurants as well as shops and markets.

**Practices of Conviviality and Belonging Among Young People in Urban Multicultural Australia**

While there is considerable anxiety about social cohesion in increasingly diverse societies, and especially young people’s role in multicultural civic life, little is known about their everyday practices of conviviality and belonging. Through an analysis of research with youth in some of the most multicultural and disadvantaged neighbourhoods of 5 Australian cities, this paper explores the local spatial practices through which belonging and productive intercultural relations are negotiated. It provides an insight into the ordinary processes by which youth get along in multicultural neighbourhoods, and suggests that practices of conflict and distanciation must be part of the discussion about conviviality in order to properly capture the complexity of productive relationality in the lives of young people.

**Alternative Food Networks in Monterey Mexico**

The agri-food system in Monterey, Mexico is structured by three segments. One segment consists of the “traditional” Mexican diet of corn, beans, rice, chicken and pork. For residents of Monterrey, these foodstuffs are usually purchased at local mercaditos from local vendors who have acquired the foods from long supply chains. The second segment consists of the rapidly growing middle class and upper class. They purchase their foods at national and transnational supermarkets, and they tend to consume a more international middle class diet. The third segment is an emerging alternative food network that emphasizes locally produced foods, distinctive traditional foods, heirloom varieties of vegetables, organic farming, and artisanal food production. This segment attracts both middle class and upper class shoppers, who find these foods in health food stores, niche specialty stores, and periodic alternative food markets. The third segment is framed both as an attempt to re-invigorate local culinary traditions and as an effort to separate one’s consumption from the transnational agro-food system. This emphasis is then articulated in distinctive local restaurants as well as shops and markets.
life. In fact, during the height of what is widely accepted as the period of neoliberal triumph in many countries across the global South, the relationship between work, land, and welfare has begun to transform in ways that look quite different from what the dominant paradigm leads us to expect.

The most salient examples today are state-led social protection programs which have been implemented across the former Third World. For those who lament that the post-2008 crisis has produced no Polanyian double movement, we argue that these state-driven social assistance policies are precisely such a mechanism. These emerged not out of technocratic fixes from above but often out of political and social struggles from below. The rise and spread of these programs are not only in stark contrast to popular conceptions of a neoliberal reinforcement, but are specifically targeted at social strata whose precarity has been largely generated by developmental policies which predated the neoliberal era.

Our paper presents a macro-level quantitative survey of the rise and spread of social protection while exploring the past two decades in the global South, and qualitative comparisons of these programs in the BICS - Brazil, India, China and South Africa - as evidence of our argument.

Comparison of the “Examination Hell” (JP) and “Testing Wars” (US)

Comparison of the Examination Hell and the Testing Wars is the comparison of Japanese school examination and American school testing, mainly in the 19th century. Specifically, for Japanese examination, I will explain how Japanese elementary school examination had been composed during the very short years of the beginning of Meiji Era from 1868 to about 1879. It seems to inherit the ethos of being official from the feudal ages when only some portions of the Samurai Class (ruling class) executed examinations for the sake of encouraging prudent students of the Samurai. However, it got the new “shape” or “form” from Western school examination information. Judging from the remaining foreign books of those ages, it is likely to say they came mainly from America. After Western information, Japanese examination got many rule books as well as guide books.

For American testing, William Reese’s Testing Wars in the Public Schools: A Forgotten History, (2013), tells us many about how testing in 19th century American public schools had flourished under the influence of Europe. The years, from 1868 to about 1879, when the information about the testing of this country came to Japan and utilized much, were such era that standardized testing was almost conquering all States, regardless of the good will to improve teaching by using statistics and testing; days of testing’s side effects. My comparison would be made on both examinations’ (tests)’ implementation of procedure, process of execution, standards for scoring, logic and ways of its utilization and some others.

By finding out the difference of Japanese examination and American testing, we may be able to see the difference of how it could work as a social organ, and then get to the reason of how people’s understanding of assessment and evaluation of both culture differ.

Generations and Globalization: Shifting Family Relations in a Postindustrial Society

This presentation provides a cultural sociology of changing intergenerational relations in the face of globalization, focusing on a historized account of shifting family relations that have dramatically altered the landscape for elderly people in Japan today. The demographic and economic transformations that have impacted expectations of social welfare and the ground rules of social obligations will also be examined as part of a broader trend in postindustrial societies. Drawing on her work on comparative aging, Hashimoto will discuss how these shifts have influenced the cultural ideals of aging in the global era.

Multi-Sensory Experiences at Aso Farmland, Kumamoto, Japan

Aso Farmland is a multi-sensory experience for tourists. The farm stay resort allows tourists to consume local food produced in the region at 11 restaurants, exercise in a activity zone, and enjoy a variety of onsen baths including mud baths, as well as 13 heated saunas (earth power spas) lined with different herbs and minerals as well as a cold dome. Visitors can place their feet in a pool of fish for foot care and they can visit a petting zoo. There is an agricultural production facility on site as well as a farmers’ market. Tourists experience a range of aromas from sulphur baths, to perfumed and herb baths to the aroma of a variety of cuisines and the busy market place and deli. An arts and crafts centre allows tourist to make a variety of crafts including music boxes, paper crafts, candles and snow globes. Accommodation is in dome shaped rooms infused with an antioxidant (anti-aging) solution. The paper will look at attempts by the attraction to provide a stimulating environment taking visitors beyond their reliance on just sight to engage in a more holistic experience.

The Non-Nationalized Narrative of Two Korean School Graduates

In April 2010, the Japanese government began a tuition-waiver program for high school education. In February 2013, after many twists and turns, Korean school students (chosongakko) were excluded because of their connection to North Korea. In the media and through popular hearsay, Korean schools have often been identified with North Korea, and Korean school students are exposed to the outside prejudice that they are “brainwashed, anti-Japanese children.”

In this paper, based on an interview about whether it was appropriate to exclude Korean students from the waiver program, I present the complicated realities of an insider’s life story. The interviewees are a couple living in a local Japanese city with their 6-month-old baby. Each member of the couple is a third-generation zainichi Korean, born in the 1970s, and attended Korean school for approximately ten years. While the interviewer is a Japanese who is an outsider to the Korean school system, I have known one of the interviewees for a long period of time. Thus, when this interviewee characterized our interview as “the occasion to put my life in order,” I could hear these insider’s life stories about Korean school without the interference of a mindset gap between insider and outsider.

Though the two interviewee’s reasons and experiences are different from each other, the opinions they arrive at in this interview are similar: 1) Because of their own difficult experiences, neither interviewee wishes to have their son attend Korean school.

2) Neither interviewee entirely denies the value of Korean school itself.

3) Both are against the exclusion of Korean schools from the tuition-waiver program.

Do these opinions run in contradiction to one another? Although it may seem so to outsiders, it is possible to understand these opinions as consistent if they are not viewed as part of a national (i.e. North Korean) framework.

The Discursive Construction and Performance of Gendered Identity on Social Media

This article looks at the construction and performance of gendered identity through the medium of social media. Data was collected from a sub-section of Facebook webpages belonging to the Slut Walk movement. Our analysis suggests that gender is constructed through the subjects’ participation in the ‘post-feminist masquerade’ – through which their gendered identity is defined in relation to a hegemonic masculine ideal. This situates the network of sites within a post-feminist context, characterised by the ambivalent and appropriative treatment of feminism. Acts of resistance are framed as individual, momentary ruptures of Judith Butler’s heteronormative matrix of ‘cultural intelligibility’. The online context of these ruptures is found to vest a creative potential, by removing the constraints of time and location, indicating that the impact of these ruptures may extend beyond its immediate environment.

What Explains the Rise of Ethnic Minority Tensions in China?

In the past few years there has been a rise of flash ethnic violence in the relatively developed areas of China such as Beijing and Shanghai, to the far-reaching Western provinces of Xinjiang and Tibet. While the state’s response to ethnic unrest oscillates between ‘soft’ (e.g. funding ethno-cultural activities) and ‘hard’ (e.g. increasing security mechanisms) policies, this paper suggests that this strategy will do little to address the underlying causes behind ethnic minority tensions in the long-term. Instead, it will argue that the most culpable factor behind current ethnic tensions are socio-economically rooted: Minorities are increasingly experiencing ‘ethnic penalties’ in the labour market, whereby their comparable educational attainment and training, akin to the majority ethnic group, Hans, do not match similar labour market outcomes. While intuitively, overt discrimination insofar as one’s physical appearance or linguistic abilities, and first generation migrant status, are often cited as prevailing reasons to explain this penalty, the findings presented in this paper will suggest that explanatory factors such as an individual’s social network, a firm’s working culture, and social trust in a community are equally important considerations. Moreover, the interactive role of non-cognitive skills in minority labour acquisition will be discussed. Finally, the
Over-fishing and eutrophication caused by agricultural nutrient run-off comprise two of the most severe environmental threats to the ecological integrity of the Baltic Sea, located in Northern Europe. This article takes its theoretical point of departure in Bent Oliver's work on design principles, arguing that a selection of these principles fruitfully can be scaled to serve as analytical tools at the international level. The principles of conflict resolution mechanisms, nested enterprises and monitoring are adapted to a multi-level governance situation where international conventions, EU directives, national strategies and stakeholder involvement all contribute to setting the stage for collaborative initiatives. Because of the tensions between environmental protection and natural resource use in fishery and agricultural sectors mutually acceptable agreements are especially difficult to reach and thus constitute hard cases in relation to the broader spectrum of marine environmental disturbances. Moreover, collective action problems often emerge among the Baltic Sea States where free-riding is an ever present threat. It is shown that although formal conflict resolutions largely are missing at the regional level, forums for deliberation where broad spectra of stakeholders are invited are slowly emerging as mechanisms to facilitate conflict resolution among countries as well as sector interests and other stakeholders. Furthermore, it is shown that even though different layers of institutions for regulating fisheries and agricultural runoff typically exist at local, national, regional and global scales, nesteddness is often incomplete, that is, the intuitional fit between the layers are frequently not fully adequate. Finally, while monitoring is part and parcel of modern environmental management, broader models of integrated monitoring of biophysical as well as social parameters and processes in collaboration with relevant stakeholders are still in their infancy.

**The Co-Construction of Identity As 'Japanese Women Living Abroad' in Interview Narratives**

This paper aims to illustrate how Japanese women living in London as permanent residents co-construct and represent their identities. As a recent trend of the social science of language, narrative has been analysed as talk-in-interaction. Following this perspective, narrative should not be analysed as a mere representation of past events, but should be understood as a process of co-construction influenced by the social norms of their new/previous communities. In this presentation, the presenter will focus on aspects of co-construction in the narratives of Japanese women who were indirectly affected by the Great East Japan Earthquake in 2011. The interview narrative data collected in London in 2012 have been analysed from the perspective of positioning theory (Bamberg 1997, De Fina 2003, De Fina, Shiffrin and Bamberg 2006 and others), analytical methods of small stories (Bamberg 2004, Georgakopoulou 2007) and multimodality (Goodwin 1981, Bamberg 1997, McNeill 1992, 2005, Kataoka 2011).

Analysis of the data shows how co-construction is manifested in linguistic and other semiotic resources - final particles, supportive giving/ receiving verbs, nodding, laughter, dysfluency, overlapping, gesture, eye gaze, and so on - appearing in interview narratives. This presentation will reveal that 1) how the narrative message can be conveyed by not only language, but also other semiotic resources, 2) the participants of the conversation put much value on collaboratively constructing their mutual identities in the "here and now" situation, rather than the contents of their storytelling, 3) they inevitably encounter aspects of internal conflict derived from the way they represent their feelings in view of the social norms of their original and current community and the pragmatic constraints on expression in their mother tongue.

**Reading Comics with Ears**

Comics is an art form of visual storytelling, which means a page of comics cannot be reduced to texts in speech balloons and narration boxes. Facial expressions of characters, onomatopoeia, emonata, and even gutters convey meanings non-verbal. Reading comics is mostly an experience of looking at and interpreting visual images drawn on a page. Based on this understanding of comics, this paper investigates comics for people with visual impairment. Recently some volunteer groups in Japan have made speaking translation of comics catering for visually challenged people. Although translating images to voice information has been already practiced on speech translation of films, in comics-to-speech translation it is necessary to bring not only characters' behaviours and their situations but also signs used in panels, as mentioned above, to speech. Also, because comics literacy of the readers (listeners) differs, what they want in reading experience is not the same; some know comics as an art form from their former reading experiences and thus want to read comics as comics, whereas others have never seen pages and read comics as entertainment-oriented stories, in other words they are not so interested in the visual aspects such as the layout in a page. Translators try to grant these requests as far as they can, and at the same time, give sufficient consideration to authors too, not to spoil what authors place importance in their art works. The focal points of this paper are both on translators' experiences of reproducing comics with oral language and on readers' experiences of reading comics with ears. This paper describes how comics communicate with readers without using images, via translators' modest intervention, and examines what for people read comics.

**Reflections on the New Patterns of Exclusion within the Working Class: Exclusion As “Omission” and the Struggle of Homebased Workers Union in Turkey**

Homebased work, one of the most expanding work forms in the context of globalisation, has been one of the most invisible forms of work in the working class. This invisibility can be related to its women concentration in the male dominant world of existing organisations and systematic negligence of the second. This is why homebased workers, like other informal workers, have found ways of organizing themselves to become new agents with different aims and scope, and consequently organizing strategies, have entered to the fields of social movements and formal social policy. This development has not only an important effect on the field of social movements and public social policy, also marks a significant transformation in the patterns of exclusion: a shift from mere exclusion to an 'inclusive' one, at least in Turkey. In the past, exclusion was mainly in the form of almost complete denial of the existence of homebased work and these workers, now their acceptance as full workers do not make a sense in the decision making processes of social policy on the context of social movements. Almost every concrete instances, they are forgotten to be invited to involve in. This negligence can also have several forms: to forget they are workers, union is not a charity association, they are not experts working for... In some instances, when they make corrections, they are oftenly treated as ‘hysterical’, over-enermotive women expressing anger improperly.

This paper describes these new patterns and takes the “omission”, as the most common form of exclusion in the case of homebased workers’ organizing in Turkey. By exploring the perspective of the representatives of social movements/ organisations who omit systematically, and then, by discussion of these data with union members, aims to contribute the exploration of grounds of solidarity and action.

"We Want to Report about Everything!" How the Technologies of Results-Based Management Protect the Comfort Zone of Donors in International Development Cooperation

Donor agencies legitimize their existence by producing activity reports which show that they are making a difference. Evidence needs to be produced that links the donor to the results achieved by its partner organizations. Such evidence usually comes in the form of reports which the partners are obliged to deliver before they receive the next slice of funding.

The present paper examines this practice of exchanging funds for reports, asking how it affects the relationship between the development partners. The focus of the analysis is on how reporting requirements of Results-Based Management (RBM) structure the communication between donors and recipients and thereby organize global social relationships in asymmetrical ways, allowing donors to appropriate the credits for the work done by the recipients of their funds.

Based on a case study from donor funded HIV/AIDS work in South Africa, the analysis finds two conflicting languages: the language of results and the language of norms. The paper shows that a significant source of donor power lies in their ability to structure the communication between the partners in a results-oriented way and thereby frustrate attempts of grievances-related storytelling. However, the study also documents the urge of some community based organizations to “report about everything”, meaning: not only what the donor wants to hear. Awareness of “telling the whole story”, including grievances outside the scope of the donor’s program, is interpreted as expressions of dissent aimed towards the construction of a dialogic relationship between donors and recipients. It is discussed whether this is possible within or alongside with RBM, or whether dialogue based on local experiences implies a rejection of the RBM framework.
HAUG, CHRISTOPH* (University of Gothenburg, haug@gu.se)

Consensus Decision-Making in Meetings As an Interactive Accomplishment: Silence without Silencing?

This paper starts from the observation that most of the literature on decision-making is focused on methodological individualism: at least in the western world, it seems that a decision can only be understood as the outcome of an individual act or an aggregate thereof (voting). Nevertheless, genuinely collective practices of decision-making (consensus) are widespread across institutional and cultural settings, but the collective dimension of these is inadequately understood, leading to confusion between unanimity (everyone agrees) and consensus (no one disagrees). Both researchers and practitioners of decision-making have largely avoided this issue, so that empirical studies often remain unclear about how exactly a decision was made, and decision-making groups sometimes find themselves in the paradoxical situation of disagreeing whether they have reached consensus or not.

Based on participant observation of numerous meetings among global justice activists using the consensus principle, this study seeks to untangle some of the conceptual confusion through a detailed interactional analysis of meetings as communicative events. Focusing on the final stage of the decision-making process, the paper identifies four types of consensus: imposed, acclaimed, hasty, and considerate. Drawing on previous findings from conversation analysis, it is argued that although they all observe the absence of voiced disagreement, they differ significantly in how this absence is constructed interactionally. Therefore, what appears to be the same mode of decision-making – consensus – should be treated as different modes, both by researchers and practitioners.

The paper concludes by discussing the consequences of this analysis for radical democracy and anti-hegemonic practice, wondering whether it is possible to produce silence without silencing.

Towards a Post-Hermeneutic Phenomenology

The kinds of attention that have less to do with intellectual analysis than with our senses, emotions and bodily responses to our immediate experiences are generally recognized as important among field-researchers. Still when it comes to reporting there is an urge to turn the indistinctness of sensory and emotive experiences into identified and accountable registrations. Bodily and affective reactions to the surroundings are most often perceived as something to be interpreted in order to lay bare an underlaying and ultimate meaning. Thus we tend to subject the multidimensional of lived experiences to different kinds of selection and reduction implied by that production of knowledge aiming to render the world in clarity.

Nevertheless, the blurriness of emotive and physical reactions to the world can be said to be due not to their imprecisioness but rather to their richness in nuance and complexity. Hence, they may be much precise vehicles of meaning not in spite of but on account of their indistinctness.

In this paper we ask what epistemological potentials might be revealed if we explore our lived experiences in their own right rather than try to explicate them and make them conclusive. Based on empirical research of our own, we turn our interest towards the possibilities of understanding bodily reactions during the process of research as being informative in themselves and discuss possibilities for transforming them into scientific writings that likewise invites a reading not only with the intellect but also with the senses. We propose an approach to both the making and communication of knowledge, which could be called post-herme-neutic – a phenomenology not aiming at fixation of identified significance, but at a knowing that includes and even takes advantage of the fluctuating and manifold ways we experience the world when we move in it instead of stopping to make analysis.

Hormone Decline and Aging: Sociology of a Medical Promise

The promise of slowing down, stopping or even reversing the aging process is, in a sense, medicine’s hyper-promise and the ultimate victory of science over human nature. And indeed this desire has been expressed, in particular through the media, for thousands of years and in a great many civilisations. This idea emerges regularly in the public and scientific space, from the early 20th Century attempts to transplant animal glands in order to restore the vitality of people’s youthful state to the forecasts made about “regenerative medicine in the wake of the isolation of embryonic stem cells and the cloning of Dolly the sheep.

Since the mid 1990s, research and practices aiming to fight the aging process have even intensified and become more structured, with the development of so-called “anti-aging” medicine. One hypothesis played a key role in this dynamic: that of hormone replacement therapy. The underlying idea is that during life, the production of certain hormones, which are essential for many of the body’s functions, tends to decrease and that by compensating for this decrease, it is possible to tackle the very process of aging. Different hormones were targeted: melatonin, the growth hormone and DHEA (dehydroepiandrosterone). In France, it was above all the latter that was promoted as a possible “youth pill”.

It this presentation we will first examine the construction of DHEA’s anti-aging promise, its underlying roots, the conditions under which it emerged, and the changes it has undergone. We will then analyse the reception of this promise in France, its impact on the representation of the body and on anti-aging practices. A last section will show how this promise was called into question from the mid-2000s onwards but managed to survive.

Voting As Symbolic Practice: Comparing Electoral Rituals in France and Britain

Voting is a symbolic practice. Yet as political scientists focus increasingly either on the outcomes of elections or on citizens’ motivations to vote in the first place – typically by building models of the former on assumptions made about the latter – we tend to forget the symbolic significance of the actual vote and the meaning and impact it has on the participants. In this paper we seek to restore a focus on this symbolic dimension, exploring some of the differences between the ritualisation of democracy through an analysis of voting rituals in France and Britain. We explore what citizens do when they vote and the extent to which these actions reflect and contribute to construct particular visions of the polity and the place of citizens within it. In particular we pay attention to how the voter’s choice is constructed as either something that can be performed and hence displayed publicly or as irredeemably secret and private. We consider how such typically taken-for-granted practices help us to understand how politics have been constituted and reproduced on the basis of divergent assumptions about the boundaries of the public and the private.

Company Brand Vs. Professionalism: The Marginalization of Women in TV Newsrooms in Japan

This paper analyzes Japanese media elites from a gender perspective in order to identify why male domination stubbornly persists even in a working environment where institutional arrangements all seem to support women, such as paid maternity leave and an equal payment agreement. We argue that the pervasive source of the persistent marginalization of women in the media sector.

A growing number of women have entered the world of corporate journalism in Japan since the late 80s after the implementation of the Equal Employment Opportunity Law in 1986, but the ratio of women in senior management positions still remains at the lowest level among advanced industrial countries, according to a survey by the International Women’s Media Foundation in 2010.

Having conducted in-depth interviews on the social/educational background, professional career and life course of 21 senior news editors ranging from their late 40s to late 50s at leading TV stations in Japan, we identified clear differences between the genders in their understandings of the role of professionalism and the brands of the companies to which they belong. Female journalists tend to rely more on meritocratic professionalism based upon individual skills and achievements in moving up the corporate ladder, whereas their male counterparts feel their success largely owes to informal networks and prestigious corporate brands to which they belong.

Although gender studies has emphasized the masculine nature of the conception of professionalism, and the sociology of work has revealed the self-centered ideology underlying professionalism in many occupations, we contend that playing down the role of professionals and professionalism imposes a substantial brake on change in terms of gender equality within an occupation.

The 'Gap-Filling' Role of Civil Society Organisations for an Ageing Population in a Global Context: A Comparative Study of Three Welfare States - Japan, Britain and Sweden

Across the globe, societies face pressing challenges to address the needs of their rapidly ageing populations against a background of austerity. This is particularly true of Japan, Britain and Sweden, all aged and established welfare states, where each government has attempted to expand and diversify public care services. This paper takes a comparative approach to the respective new and reformed public care systems. This paper, drawing on empirical research involving detailed interviews and participant observation, will examine and compare successful and innovative models of civil society organisations that have developed 'gap-filling' services for older people in Japan, Britain and Sweden. Key findings concerning each model will be contextualized within their respective cultural context, highlighting specific features. Analysis of models at a national level will then be placed in a transnational and comparative perspective, underscoring best practice benchmarks together with the challenges encountered by organisations. For instance, while the standardised and universalist Japanese model relies on traditional quasi-governmental community resources, the British model emphasises partnership working and recognises innovation and professionalism, and Sweden’s model is characterised by localism and sensitivity towards the employment of ‘conventional’ labour, with volunteers being discouraged. In conclusion, this paper will discuss suggestions for future care policy-making and possible refinement of the care market, potentially transcending national boundaries. It will also consider how experiences and best practice from the models examined here could be utilised in other countries to pursue evidence-based sustainable care policies and promote civil society.

Integrity Management and Fantasy Planning: The San Bruno Pipeline Rupture

On 9th September, 2010, a high pressure natural gas transmission pipeline ruptured under the suburb of San Bruno near San Francisco, California. The resultant fire burned for two days. Eight people died, and thirty eight homes were destroyed because a weld in the buried pipeline failed. The weld had been poorly made in 1956 when the pipeline was first constructed.

Using document analysis (investigation reports, transcripts of evidence and other primary source materials), in this paper we focus on the experts in this organisation who were responsible for pipeline integrity management. Clarke’s work regarding fantasy planning in the face of uncertainty explains both how and why the integrity management system had taken on a symbolic, rather than functional, role in this organization. ‘Knowing’ about the system was grounded in elaborating narratives about the system’s history, and how risk was ‘managed’. Yet, this analysis was only tenuously linked to the actual level of danger. In an environment of cost cutting, expensive inspection work was tailored simply to meet available budgets. Small failures were repaired and then dismissed from the collective memory so that valuable opportunities for learning in this uncertain environment were ignored.

This professional disposition on the part of the expert engineers was embedded in a broader organisational context. The paper further argues that senior management decisions about cost cutting were divorced from the real world impact as a result of the historical restructuring of the domestic gas industry overall and the low status of relevant industry expertise at senior management levels. We conclude that this ‘organisational accident’ provides important lessons for all organisations relying on technical expertise to prevent low frequency, but high consequence events.

Knowing Stories That Matter: Learning for Effective Safety Decision Making

Ongoing safe operation of complex, tightly coupled technologies such as hydrocarbon production and transportation, air traffic control and nuclear power generation depends on effective decision making by those in key positions. Safety studies often focus on the extent to which actions of operational personnel in particular are dictated by procedures or rules and hence reinforce the need for compliance to ensure the best outcomes. This paper directs attention to a different area – the judgements made by experts in the cases that are not covered by rules and, in particular, the key role of stories and storytelling.

This ethnographic research draws on literature related to high reliability theory, organisational learning and naturalistic decision making to examine how experts working in diverse critical contexts use stories to share and make sense of their own experiences. It argues that these stories are vital to effective decision making as a result of both the general and specific lessons that they embody. Our analysis shows that experts use stories as parables to nurture the sense of safety imagination. Stories are also embedded in work practices to support decision making in the moment. Finally, stories are strongly linked to organisational learning for experts and their less experienced colleagues.

We argue that the increased focus on incident reporting systems in hazardous industries has, in part, been driven by a belief that by constructing organisational learning, could be improved to better facilitate story-based learning. Finally, we report early findings of our current research regarding how best to integrate story-based learning with other formal systems for professional development and reporting.

Racial Gringuidad and the Ethnic Identities of North American Lifestyle Migrants in Ecuador

This paper explores the position of the “Gringo” in the racial order of Ecuador. The paper is based on 69 qualitative interviews conducted in 2011, 2012 and 2013 with lifestyle migrants from North America now residing permanently in Ecuador. They are supplemented with ethnographic field notes. North Americans in Ecuador are particularly concerned about their ethnic identity there, and describe the “Gringo” as both a fantasy community in racialized terms, as Gringo. I posit that the “Gringo” is a racial category, and while it does not carry the same negative connotations in Ecuador that it does elsewhere in Latin America, it refers to a particular phenotype, often also marked by cultural symbols, such as clothing. The paper discusses what racial gringuidad supposedly means for North American lifestyle migrants in the Ecuadorian context. These narratives tell us more about the lifestyle migrant themselves than about the real meaning attached to their apparent physical differences. The paper then identifies strategies or practices that lifestyle migrants in Ecuador have adopted in the face of their Gringo identity, or ‘Gringuidad.’ First, some North Americans have begun to police the behaviour of the North American community in a bid to optimize Ecuadorian perceptions of “Gringos,” reinforcing their racialized self-identity rather than deconstructing it. The second strategy consists of individual attempts to further integrate into Ecuadorian society, particularly by learning Spanish. These practices illustrate a fantasy of ethnic mobility. Yet, even as integration promises to diminish “Gringoness,” the Ecuadorian “Other” with whom lifestyle migrants desire to integrate is raced and classed in the Ecuadorian social order, thus potentially reproducing existing inequalities. The paper explores the intersection of North American racialization in the context of Ecuador, where the meaning of race is often quite different.

Violent Natures: From Coercive Conservation to Climate Change in Africa

Since the colonial era, African natures—both external landscapes and internal human dispositions—have been constructed as violent via the parallel ideologies of wildlife conservation and climate change. Both address the human impact on, responsibility for, and stewardship of the environment through the lens of violent natures. During the colonial era in East Africa, ‘natives’ were relegated to specific areas, their lands usurped for white settlement and the conservation of dangerous wildlife. Today, conservationists continue to violently evict residents of East and Southern Africa from apparently precarious landscapes. In colonial and contemporary conservation, both ‘native’ and nature appear unruly and potentially violent. Under the ideology of climate change, as well, poor, non-white populations usually bear the brunt of catastrophic natural (or unnatural) disasters, at the same time that they are blamed for contributing to the underlying environmental causes of such events. African environments and peoples are therefore constructed as inherently violent and in need of external intervention via the rhetoric of both conservation and climate change.

Each system of thought employs science and technology to cast the power-striken, racialized ‘other’ in the role of the enlightened noble conservationist; evil instigator of anti-conservationist or climate change-inducing practices; or victim of the violent environments engendered by conservation and climate change. These roles depend, at a basic theoretical level, on the characterization of ‘native,’ nature, or both ‘native’ and nature, as violent. ‘Violent Natures’ thus explores the racialization of nature by connecting the parallel stories of conservation and climate change in Africa.

The Peace-Seeking Body in East African Pastoral Society

When approaching anthropologically to emergence of the new disease in the way that goes beyond a dichotomy between nature and culture, the phenomenological body, which enables to attach significance to experience, is often assumed. While its silent power of representation can be explicated, the social and political power is removed from consideration. To illuminate the bodily power in toto, the paper describes the process of embodiment of political violence with reference to local medicine and the subsistence activity for healing patients. The Karimong, Dodoth and jie in northeastern Uganda and the Turkana in northwestern Kenya live in the dry savanna, keeping cattle, goats and sheep. Their living setting, the Uganda-Kenya international boundary, is trans-local-national multi-layered space, where armed violent conflict has occurred endlessly in the wake of the spread of automatic rifles and forcible pacification. Political violence separates herders’ bodies as grounds of cultural existence from particular place and time and creates new classification, and then each body becomes the antagonistic referent. Since 2000s’ disarmament policy in the area, the epidemic chronic disease (called as ngkerep) has been generalized. It has variety of symptoms that represent headache, nausea, nightmare, insensitivity to pain, confusional state and creates new classification, and then each body becomes the antagonistic referent. Since 2000s’ disarmament policy in the area, the epidemic chronic disease (called as ngkerep) has been generalized. It has variety of symptoms that represent headache, nausea, nightmare, insensitivity to pain, confusional state and migration to midlife in old age by drawing on longitudinal, nationally representative data from Sweden from 1974 (when respondents were aged 40-59) and 2011 (age 77-96). Preliminary results go in two directions. On the one hand, results indicate that people with multiple disadvantage in midlife were likely to experience multiple disadvantage also in old age. On the other hand, around one-third of those who experienced multiple disadvantage in old age reported no disadvantage in midlife. Thus, for a considerable proportion of those reporting multiple disadvantage in old age it may be a relatively recent experience, suggesting that there are different pathways into deprivation in old age. Further analyses will aim at describing the plausible pathways and target the issue whether certain pathways are associated with certain kinds of disadvantages.

HEAP, JOSEPHINE* (Stockholm University, josephine.heap@ki.se)

Multiple Disadvantage in Midlife and Old Age - Exploring the Associations

To experience multiple disadvantage – the simultaneous occurrence of disadvantage such as health problems, lack of economic resources or social isolation – implies reduced possibilities for people to manage daily life. The prevalence of multiple disadvantage has been found to be much higher among older adults (especially those older than 80) than among younger age groups. In this study, we investigate whether multiple disadvantage in old age was preceded by multiple disadvantage in midlife, or if the accumulation of disadvantages may have happened later in life. Previous research has established that individuals’ health and resources in old age are strongly correlated with their health and resources in midlife, making midlife a crucial starting point for the study of old age. However, old age is often associated with a decline in resources such as health and social resources, making it plausible that this is a period of life is a time when disadvantages accumulate.

In this study, we test the association between multiple disadvantage in midlife and multiple disadvantage in old age by drawing on longitudinal, nationally representative data from Sweden from 1974 (when respondents were aged 40-59) and 2011 (age 77-96). Preliminary results go in two directions. On the one hand, results indicate that people with multiple disadvantage in midlife were likely to experience multiple disadvantage also in old age. On the other hand, around one-third of those who experienced multiple disadvantage in old age reported no disadvantage in midlife. Thus, for a considerable proportion of those reporting multiple disadvantage in old age it may be a relatively recent experience, suggesting that there are different pathways into deprivation in old age. Further analyses will aim at describing the plausible pathways and target the issue whether certain pathways are associated with certain kinds of disadvantages.

Autoethnography, Theorizing and Transnational Movements and Moments

This paper is in three parts: a brief overview of the relevance of autoethnography for transnational sociological theorizing; critical interrogation of my previous work on autoethnography; re-evaluation of their implications for transnational sociological theorizing.

The second part investigates four different interpretations of my own personal, work/employment, political, and theoretical change over time. In this, I build on previous autoethnographic work to examine how theorizing develops and changes with transnational movements and moments. The first is based on different relations to nation and nations: England, Ireland, Finland (Autobiography, nation, postcolonialism and gender*, Irish Journal of Sociology, 2005). The second focuses on changing relations to children, family and household (‘The personal is social work is political is theoretical: continuities and discontinuities in (pro) feminism, Women’s Studies, men and myself*, NDRA, 2008). The third concerns changing relations to transnationalisations, transdisciplinary and transinstitutional developments (‘Opening up material-discursive (trans)-forms of life … politically, theoretically, institutionally, personally*, in M. Wojtaszek and E. Just (eds.) Quilting Stories: Essays in Honor of Elizbetta H. Oleksy, 2012). And the fourth highlights the relations of men, intersectionality, organizations and (pro)feminism in research and fieldwork in the diversity and equalities field, with a focus on gender and intersectional dynamics and research processes (Equality, Diversity and Inclusion, 2014). In the third part I discuss more general implications of these four perspectives for the analysis of intersectionality and intellectual biographies, in terms of: the politics of location; reflexivity and its limitationss; critical positionality of members of superordinate groups; the problematisation of the male ‘I’ (‘Contra soxandsox and soxmen’s ‘I’: the writing of men, and the concept of gex*, Revista Canaria de Estudios Ingleses, 2013); and the relation of body and writing (Writing as intimate friends … how does writing (pro)feminist research become methodologically challenging?, in M. Lihnlots (ed.) Emergent Writing Methodologies in Feminist Studies, Routledge, 2011).

Interrogating Violence Against Women and State Violence Policy through Gendered Intersectionalities and Intersectional Gender: Local, National and Transnational Contexts

This paper arises from collective work within the 5-year Swedish Research Council project, “Feminist Theorizings of Intersectionality, Transversal Dialogues
Global Atomic Inequalities: Marginal Work in the Nuclear Sector

This paper takes the aftermath of the Fukushima accidents as the starting point for an exploration of work and workers commonly considered marginal to nuclear systems. The paper seeks to make visible that – by virtue of its unexciting nature or (apparently) peripheral location – often remains hidden in our accounts of technoscientific work: ordinary maintenance, African mining.

It begins with the contract workers hired to “clean up” the Fukushima meltdowns, then move back in time and across oceans, to consider the subcontractors hired to conduct ordinary reactor maintenance and refueling in Japan, France, and elsewhere. Maintenance is the unseen, decidedly unglamorous work essential to keep any technological assemblage working—work so invisible and unglamorous that most scholars avoid studying it, preferring instead to focus on acts of creation and construction. Yet without these workers, sociotechnical systems could not function: they may be socially marginal, but they are technopolitically central to the production of nuclear power (and all other industries).

In nuclear and other systems, subcontracting has consequences for occupational health, as well as for transnational knowledge production (about the effects of low-level radiation exposure in the nuclear case). Contemplating these consequences, in turn, takes us to another apparently peripheral part of the global nuclear industry: uranium production. After a quick comparative consideration of knowledge production about the dangers of radon exposure in mines, the paper discusses uranium mining in Gabon. It examines labor and occupational hazards there, including the efforts of Gabonese miners to make themselves and their illnesses visible on the global technoscientific stage.

Precarious Wives: Social Exclusion, ‘Décohabitation,’ and the Mobility/Immobility of African Polygamous Women in France

HECHT, GABRIELLE* (University of Michigan, hechtg@umich.edu)

Women living in polygamy in France are particularly vulnerable. They may choose to bear numerous children to increase their monthly family allowances and to avoid deportation as guaranteed under the post-1993 legal framework. Yet, many are forced to live in undesirable situations where children and secondary wives inhabit small apartments because a husband can only support the first wife and children in social housing. Drawing from in-depth interviews with women living in polygamy in France, this paper examines the ways that the legal and policy framework shapes the mobility of African polygamous wives. It uncovers the strategies these women employ to manage their precarious immigration status in France.
governance become more national or have transnational networks been robust? Here we take a first step in answering this question. We see the financial crisis as a test case for the cohesion of the transnational capitalist class (TNC). If business interests are coordinated and the TNC is resilient, we expect that the business community remains stable in times of economic downturn. A decline of the transnational business community however may indicate a fragmented elite that cannot uphold its cohesion when the financial sector is in trouble.

We investigate this issue by comparing the networks of interlocking directorates among the 176 largest corporations in the world economy in 2006 and 2013: just before the crisis unfolded and present day. We place this in the empirical context of the corporate networks in 1970, 1975 and 1996 as collected by Carroll and Fennema (2002)

RC02-61.1

HEEMSKERK, EELKE* (University of Amsterdam, e.m.heemskerk@uva.nl)
The Global Corporate Elite Uncovered

The transnational orientation and organization of corporate elites has for long attracted the attention of those who expect that ongoing globalization goes hand in hand with transnational elite cohesion. The laborious nature of compiling reliable network datasets has hitherto forced scholars to focus on those arena’s where we expect transnational corporate elites to emerge, notably the largest (often stock listed) firms in the western industrialized world. This systemic bias disregards the role of non-western elites in the global regime and neglects a possible multi polar architecture of the global corporate elite. Applying state-of-the-art techniques and tools, we are able to overcome this barrier by analyzing the entire network of interlocking directors between a set of 100,000 corporations across the globe in 2012. This allows us to uncover the extent to which western and non-western corporate elites occupy similar social circles; which firms, countries, sectors and cities serve as linchpins within the global corporate elite, and as such reveal the sites and spaces where transnational corporate elites organize themselves, both in the west and beyond.

SHAMMAS, VICTOR LUND (NOVA Norwegian Social Research)
Processes of Success Among Students in Gender Segregated VET Qualification and Social Inclusion

The aim of this project is to explore educationally successful processes in gender segregated VET based on qualitative life story interviews. Informants will be recruited from a school based longitudinal dataset (LUNO) of young people in Oslo, and I will focus on the importance of gender segregation for changes in aspirations during VET.

High rates of drop out in vocational upper secondary education is a problem in every European country. On the one hand, about one third of students drop out of or fail to complete upper secondary school in Norway – and the drop-out rate is highest among students in VET programs. On the other hand, the Norwegian VET system, which in general provides two years in school and two years in apprenticeship, ‘leaks’ a substantial number of high achieving VET students after the second year to general education supplementary studies which qualify them for higher education. This suggests that a ‘success’ according to the individual and national higher education attainment goals, may be seen as ‘failure’ according to policy aims regarding high quality vocational skill formation at the upper secondary level.

Theoretically, gender has been shown to be of importance for the development of identity among a learner, for failure and success in school, particularly for boys but also for girls. The key objective of this project will be to understand processes related to educational processes and changes in aspirations among students in gender-segregated VET study programmes and give a deeper understanding of the characteristics of gendered school contexts which supports or hinders the completion of VET and transition to apprenticeships. The study will be based on educational life story interviews with selected LUNO-respondents, and strategic short-term fieldwork in gender-segregated study programmes.

HEIBERGER, RAPHAEL* (Otto-Friedrich University Bamberg, raphael-heiko.heiberg@uni-bamberg.de)
The Social Construction Of Prices – The Impact Of Culture, Networks and Institutional Rules On Stock Quotations

Prices in market economies are based on supply and demand processes. I challenge this common economic sense by comparing stock price movements and their causes in the US and Germany, arguing that stock valuations also depend on the cultural contexts of trading and the networks and rules. Briefly summarized, stock valuations depend on the cultural understanding of households invest money (market vs. bank based investments), on the network topology of stock listed companies using social network analysis. I am particularly interested in the shifts occurring in the network ecology after the financial crisis and the subsequent changes in each systems’ stability. Finally, the change of stock repurchase laws in Germany in 1998 delivers an ‘experimental’ setting for different types of rule based information trading before and after the legislation reform. Applying Event Study methods the short- and longterm influence of repurchase plans in the US and Germany is compared.

Different patterns of stock price volatility are revealed, depending on culture, networks and rules. By investigating the network topology of stock listed companies using social network analysis, I test the field theory of financial markets by comparing the setting of the US and Germany trading in culturally constrained frames of meaning, corporate networks and institutionalized rules. Economic sociology is well aware of such social forces. Still, sociological investigation of price formation lacks both theoretical integration and empirical evidence for how different types of market conditions interact and influence prices.

Taking a sociological field theoretical perspective as a starting point I combine three independent strings of price formation explanations, considering the simultaneous influence and interaction of institutional regulatations, network positions and cultural frames. Empirically, I test this field theory of financial markets by comparing the setting of the US and Germany trading in culturally constrained frames of meaning and the longitudinal development of macroeconomic structures are discussed. Secondly, I investigate correlation networks of stock listed companies using social network analysis. I am particularly interested in the shifts occurring in the network ecology after the financial crisis and the subsequent changes in each systems’ stability. Finally, the change of stock repurchase laws in Germany in 1998 delivers an ‘experimental’ setting for different types of rule based information trading before and after the legislation reform. Applying Event Study methods the short- and longterm influence of repurchase plans in the US and Germany is compared.

Dimensions, Practices and Dynamics in Cultural Adaptation Work: An Example from Norway

My paper concerns the movement of an idea and a legal system. The idea is that a product’s quality can be determined by where it comes from. The legal system is known as Geographical Indications and may enable protection under law of product designations for foodstuffs with a special geographical origin, tradition or characteristics. In 2002 a system for GIs (Protected designations) was set up in Norway modelled on corresponding systems in the EU.

I develop a grounded conceptual framework to understand the implementation, administration and the use of protected designations in Norway. I emphasize that the movement of ideas and legal systems is dependent on actor’s adaptation practices. More specifically I describe this as Cultural Adaptation Work (CAW). My analysis shows that the actors’ work with adaptations of meaning, social organization and materiality, during implementation, administration and use of the Norwegian scheme is important. They occur because opinions, forms of cooperation and production of foodstuffs in food culture do not always coincide with the food-cultural conditions which the EU scheme was founded.

To identify, describe, and understand how the implementation, administration and the use of Protected designations is worked out I elaborate on the concepts of translation, reorganization and transformation, giving them a special meaning. In this regard translation refers to adaptations of meaning, reorganization refers to adaptations of social relations and transformation refers to material adaptations. These adaptation practices may furthermore be understood as elements of CAW.

I conclude that CAW takes place in the interplay between people’s translations of meaning, reorganization of social relationships and transformation of things. The interplay takes place in the tension between the global and the local, the old and the new.

surprisingly weak in Swedish legislation, with negative implication for the welfare of vulnerable children. Signing of the UN Convention has in this respect not left any clear imprint on Swedish legislation. The findings show the need to formulate new policy strategies: We may resolve the tension between children as ‘beings’ and ‘becomings’ by recognizing that it may be necessary to invest in children’s education and child care but that this is not sufficient as long as we do not consider children’s rights to voice.

Hunting the Northern Lights

This work in process explores gendered landscapes imbuing the increased use of ‘hunt’, ‘hunters’ and ‘hunting’ in the language of northern lights tourism in Northern Norway, aimed at English speaking markets. The development of this tourism product, as winter tourism as such, started in earnest with Finnmark Reiselv’s (county DMO) winter project in 2002. The evolvement of the last decade’s hunting metaphors has become very important in the marketing of northern lights tourism in the region and is has been adapted by tourists in their blogs (trip advisor). Hunting the northern lights tours, at least in their commercialised forms are highly planned by tour operators and aimed at soft adventure tourists (Beedle and Hudson, 2003). These hunters thus do not need any skills, experiences and knowledge to take part in the hunt. Therefore the link to hunting as a symbol of masculinity (Bye, 2003) and masculine social values such as hierarchy, physical toughness, rationality, emotional distance and risk taking (Haenfler, 2004) is lacking. This paper thus discusses how commoditisation of hunting metaphors in relationship to northern lights tours contributes to demasculinisation of hunting and hard adventure tourism discourses. It also explores partly overlapping discourses between big game hunt and the hunt for the northern lights. Whereas the former energy today is mainly a masculine pursuit which requires preparation and good physical strengths the latter is available to masses of tourists regardless of gender, skills and knowledge (Houston, 2008), References

Winter People: Constraining and Motivating Factors for Attracting Winter Tourists to Northern Norway

Based on 116 qualitative interviews with domestic and international tourists visiting Oslo, Norway in the summer of 2013, this paper explores constraints and motivators regarding winter holidays in Northern Norway. Preliminary findings suggest that not all tourists are winter people. Perceptions of coldness and darkness, however, are positive and negative. Some tourists are excited about experiencing an arctic winter climate; in particular those interested in winter activities such as skiing and northern lights hunts. These tourists emphasise the pureness and fresheness of the winter climate as well as a fascination for winter lights during the day and night. Other tourists dislike being cold on holiday and would only travel to warmer climates. Some of these tourists live in winter destinations and know how to deal with a cold climate. Others do not. In particular disinterest in winter activities, lack of appropriate clothing and old age are constraining factors. This suggests that winter tourism is for special interest tourists.

HEIN, PATRICK* (Meiji University, p.hein@meiji.ac.jp)
The Role of Victim Witness Testimonies for Collective Memory Formation, Recovery from Trauma and Future Reconciliation

Title: The role of victim witness testimonies for collective memory formation, recovery from trauma and future reconciliation.

In this paper the author argues that witness testimonies in war crimes and genocide trials play a crucial role even though they may not be related to the in-dictment of the prosecution or help to establish justice. In her book Eichmann in Jerusalem Hannah Arendt mentioned that the survivor accounts were not helpful in collecting legal evidence against Eichmann. This author thinks however that witness accounts are crucial not for legal purposes but for purposes of collective memory formation and victim trauma recovery by using the example of the witness account of the Auschwitz survivor Alfred Oppenheimer who gave a testimo-ny at the Eichmann trial.

The paper refers to other reconciliation attempts such as the truth commission in South Africa or the Comfort Women issue in Korea and Japan and seeks to iden-tify conditions that make future reconciliation possible.

The example of the comfort women in Japan shows that witness testimonies alone cannot lead to positive change and reconciliation as long as there is no recognition of wrongdoing and guilty behavior in the first place. In other words witness accounts can only be effective and fulfill their purpose if there is an oppo-sition not only to the individual or a political body but to all forms of wrongdoing. In the case of the Eichmann trial and the South African truth commission the perpetrators were physically present whereas in the case of the comfort women nobody has assumed responsibility.

HEINRICH, PATRICK* (Dokkyo University, pah1@dokkyo.ac.jp)
Shimakutuba - Adapting the Ryukyuan Languages for the 21st Century

Language endangerment is often not the result of repressing language use but of repressing language adaptation. The way endangered languages are character-ized is not neutral but include ideologies constructing these languages as static, marginal and obsolete. Due to such repression, endangered languages indeed become classified as marginal languages and often become static, marginal and obsolete. According to research, young people in the Western and Eastern Europe today are increasingly similar in important aspects. The different understanding of the youth in the West and the East is economic resources which is causing obligato-ry cohabitation in the family of origin which is influencing more widely the attitudes of young people. The qualitative and quantitative data that has been collected among the university students in 1999 and 2010/2011 in the city of Riga will an-swer to the question what is the role of religion for emerging adults in a post-soviet society. The paper examines youth and different dimensions of religion (e.g. belief, practice, affiliation) and what are the differences among the attitudes of young people with ethnically different backgrounds in the country where approxi-mately 55% of inhabitants belong to the so called “Russian speaking minority”. How do young people, born in the end of 1970s and 1980s, themselves see the role of family and other traditional authorities in religious socialization? The study belongs to the field of sociology of religion and to the youth study because it explores the changing attitudes and religiosity of young people in one of the post-soviet societies.

Initial Teacher Education – Who Gets in and What Are the Implications for Students, Schools and Society?

Teachers Matter (OECD, 2005). Through their influence on the young (academic, personal, emotional, social) they contribute to diminishing educational disadvantage as well as broader inequities of society (Gay, 1993; Sleeter, 1996; Villegas & Lucas, 2001; Zeichner, 1993). Attracting and selecting individuals to the teaching profession who have the potential to ‘teach for social justice’, equipping them with the necessary skills during their training, and retaining them in schools is important tasks for policy makers and teacher educators.

This paper offers a critical analysis and discussion of currently administered selection criteria and procedures for initial teacher education (ITE) programmes in Ireland and internationally. It presents first findings from the Diversity Profiling: Initial Teacher Education (DITE) study which explores (i) the impact of selection criteria and procedures on the composition of student teacher cohorts as regards their socio-demographic, motivational and educational profiles and (ii) ITE applicants’ perceptions of teaching, learning and second-level education in Ireland.

Researching teacher candidates’ diversity profiles is important and timely since contemporary school contexts have ignited concerns about the mis-match between the ethnic, cultural and language backgrounds of pupil and teacher populations. Furthermore, a small number of studies (King, 1993, Su, 1997) found that minority ITE candidates have clear and strong visions for social justice and for their own roles as change agents in the school and society (which differ from the motivations and conceptualisations held by mainstream students).

Issues related to equity in and equity through teacher education admission (Child et al., 2011), access and widening participation policies will be explored with the aim of identifying important debates about what types of teachers are needed in today’s schools and how policy makers and teacher educators can assure that the most committed and suitable individuals are attracted to and can enter ITE programmes.

Distinction Practices and Socialization Of “Native” and “Foreign” Elites In Mexico

The paper summarizes the results of an empirical research project on “native” and “foreign” elites in Mexico in a comparative perspective. The focus is set on the elites’ different attitudes, socialization and distinction practices (in particular “completeness” versus “syndecodomism”). Furthermore, the relations and interactions between „native“ Mexican elites and „foreign“ expatriate elites in Mexico are taken into account.

Similar to other ‘emerging market’ countries, Mexico has gone through profound changes in the last 30 years. Some Mexican enterprises have become large multinational enterprises operating on several continents and some Mexican business men are now among the wealthiest in the world with Carlos Slim Helú being the richest business man in the world.

Simultaneously, during the economic liberalization process which culminated in the North American Free Trade Agreement in 1994, many foreign multinational enterprises have set up major operations in Mexico, resulting in ca. half of the 500 largest enterprises active in Mexico being foreign – bringing to Mexico their own foreign top managers (expatriates), cultures and distinction practices. The question how the different attitudes and distinction practices of foreign and native elites in Mexico co-exist, interact and whether they mix, will be addressed.

It will be argued that it depends to a significant degree on the home culture, socialization and nationalities of the foreign expatriate elites whether they blend into the Mexican elite milieu. Concerning the distinction practices, it will be argued that the Mexican upper class leans heavily towards syndecodomism.

The Effect of Non-Monetary Incentives on Unit and Item Non-Response in Surveys on Intimate Topics

The Effect of Non-Monetary Incentives on Unit and Item Non-Response in Surveys on Intimate Topics

The use of noncontingent incentives constitutes a well-established technique in order to reduce both item- and unit-nonresponse in self-administered surveys. While the use of monetary incentives has been investigated in the initial mailing, the use of nonmonetary incentives might be more appropriate in at least two situations: Depending on the study area, various regulations on data protection or budget restrictions might prohibit researchers from sending multiple follow-up reminders as suggested in Dillmans’ Total Design Method (TDM). Current research indicates that low-value nonmonetary incentives can serve as a substitute for the absence of follow-up mailings to a certain degree. Secondly, the use of monetary incentives might be disadvantageous in interaction with certain survey-topics (e.g. topics that correspond to reciprocity, morality or other social desirable norms as well as intimate questions) and might even turn out to provoke reactance on the respondents’ side.

The contribution renders the adequacy of nonmonetary incentives under these two conditions and presents the results of an experimental designed study. Within a target sample of 450 potential respondents, who received a survey on “Morality and Conscience in modern life”, the initial mailing of a ball shown significant effects on the following criteria:

- Response rate (unit-and item-non response) and response-speed
- Sample-composition
- Data Quality (Elaborateness of answers to open-ended questions and Reduction of Acquiescence Response Patterns)

The findings suggest that the use of low-value nonmonetary incentives is a cost efficient strategy to improve data quality, especially in the context of intimate or personal topics. Because of their more subtle character, small gifts may even be more appropriate than cash- or money-related incentives in certain contexts.

Intra-State Conflicts In Activation Reforms: Authority Delegation and Bureaucratic Centralization In The "Privatized" Implementation Of Welfare-To-Work In Israel

Based on the Israeli case, this article highlights the role of intra-state conflicts between bureaucratic actors in the politics that surround the reform of the government of public employment services and the ways in which these conflicts have shaped not only the reform process, but also the institutional makeup of the reform itself. We analyze the politics that surrounded proposals to change the governance of long-term unemployment in Israel (1997-2004) and shaped the institutional makeup of the reform (2004-2010). We highlight how intractable conflicts between state agencies — the Ministry of Finance (MoF) and the Israeli Employment Service (IES) — brought about the delegation of administrative authority to private agents with the MoF and its bureaucratic control over the management and implementation of a workforce program that targets the long-term unemployed who are entitled to social assistance benefits. We suggest that the delegation of administrative authority to private agents in no way represented a rolling back of the power of state agents, or a transition to a “regulatory” or “steering” state. On the contrary, we argue that this delegation of authority actually enabled state agents to strengthen their intervention in the routine management of the program, bringing about a process of bureaucratic re-centralization. We conclude that the initiation of “partnerships” with private agents does not necessarily signal a transition to a steering state or towards a collaborative mode of governance, but may also function as a strategy through which certain state agents seek to impose their projects, thereby marginalizing alternative or competing conceptions of the role of the state in society.

HELMRICH, ROBERT* (Inst Vocational Education & Training, helmrich@bibb.de)

TIEMANN, MICHAEL (Inst Vocational Education and Training)

The Renewable Energy Expansion and Its Effects on Vocational Education and Training and the Labour Market in Germany

In Germany, the sector of renewable energies (RE) is currently experiencing enormous growth. Besides first estimations about the type of the expansion, energy mix, resulting demand for workers and new requirements for firms, the effect of the RE sector’s growth on the job structure and on skill requirements has not been sufficiently examined.

Our proposal exemplifies results from an ongoing research project. Theoretically and empirically the study is based on a combination of three frameworks. We refer to the demands and requirements on the level of the working place: Firms will have to structure their working places according to new requirements. Being able to describe occupational content and its links to new qualification demands will put us in a position to examine a) what the new requirements for firms and employment are and b) what their effect on the occupational structure will be.

The first reference framework draws on work by Prediger and others (c.f. Prediger/Swaney 2004) who developed dimensions – namely „people vs. things“ and „data vs. ideas“ - which are used to describe certain aspects of occupational contents and for graphing occupations. The second is the requirements on knowledge work by Volkhof and Kochling (2001), where the working population is partitioned according to the type of knowledge work of their employment,...
ranging from qualified workers to task flexible and innovative workers. The third reference framework is the task-approach by Autor and others (2003) about the share of routineness of occupations, which is an enhancement of the "Skill-Biased Technological Change" approach.

Questions we address empirically (analyzing primary data of surveys of employees and firms) include:

- What is the extent of RE on the labour market?
- What characterizes jobs in RE?
- Are there unequal chances for working in RE as opposed to other occupations?

**UNCERTAIN TRANSITIONS: CHANGING ATTITUDES, VALUES AND LIFESTYLES OF YOUNG FINNS**

This paper is based on empirical comparative and longitudinal studies of young people in times of economic crises and uncertainty in the Finnish context (Helve 2013; 2002 and 1993). It will present results of the research project “The changing lifestyles and values of temporary employed young people in the different labour markets of Finland” analyzing data from 2009 to 2011 including in-depth narrative interviews (N=20) and ethnographic observations among young people working temporarily, and the survey data gathered on-line from Finnish students in higher education (N=689). The attitude scales measured attitudes towards education, working life and society, and the future orientation and meaning of life. The paper places its focus on the research question: How uncertain employment affects attitudes, values and lifestyles of young adults? The study shows that young people working with short-term employment contracts, or who are temporarily unemployed are not doing much long-term future planning. The short-term and temporary employment is changing work attitudes and values of young people. Drawing on theories of values with the bioecological model of human development through life-course (Bronfenbrenner, 1995) the paper discusses about the impact of uncertain transitions on coping with shifts between dependency and independence as a result of prolonged transitions (c.f. Du Bois & Staub 2005, "yo-yo transition").

**Leaders’ Enhancement of Leader–Member Exchange (LMX) Relationships: An Examination of Leaders’ Cognitive Support and Knowledge Resources in Research Group**

The quality of leader-follower relationships has repeatedly been associated with positive individual and organizational outcomes. But how can leaders improve on the quality of the relationships they have with their followers? We examined the effects of the Cognitive Support and Knowledge Resources that leaders provide their followers in a sample of 166 academic and commercial researchers in Sweden. Our goal was to investigate whether these two task-related variables were antecedents of followers' perceptions of leader-member exchange (LMX) in research settings. Specifically, we investigated the effect of leader-provided Cognitive Support and Knowledge Resources in relation to the four sub-dimensions of LMX (LMX-MDM); Affect, Loyalty, Contribution, and Professional Respect. As we hypothesized, we found that both Cognitive Support and Knowledge Resources, with one exception, related to the four sub-dimensions. The exception was the failed association between Cognitive Support and Loyalty. We conclude that in creative knowledge environments, Cognitive Support and Knowledge Resources are possible means for leaders to influence the quality of their leader-member relationships.

**LEAVING THE PARENTAL HOME AND THE MATERIAL CONDITIONS OF ENTERING ADULT LIFE**

Youth sociologists usually note different stages of transition to adulthood, which are often understood as access to autonomy and financial independence (Galland, 2009; Harnett, 2000). However, synchronization and irreversibility of these stages in the course of contemporary life have been questioned and some scholars insisted on distinguishing autonomy from financial independence (Hamel 1999; Singly, 2000). We focus on a particular stage of the passage to adulthood – leaving parental home, which is often described as a way to gain autonomy – and we examine the impact of this emancipation process on living conditions of youths.

We use the waves 1 to 13 from the Swiss Household Panel, a representative longitudinal annual survey of the general Swiss population, to study the economic impact of leaving the parental home for several hundred young people aged 18 to 29. Several objective and subjective indicators of financial situation, as well as debt and material conditions, are used as dependent variables. Analyses are performed controlling for a series of socio-demographic (age, sex, nationality, region) and economic characteristics (job income, occupation, education level), as well as life-events (end of training, first job, entering into a couple) of both the interviewee and his/her parents.

Much more than a portrait at a given point in time, the use of the SHP longitudinal data with appropriate analytical methods can significantly enrich the analytical perspective on young people leaving their parental home, especially by taking into consideration other life-events and information about their family background. Our preliminary analysis suggests that for a number of young people access to autonomy through leaving their parents' household is correlated with a decrease in material well-being. In other words, for some young people in Switzerland, access to autonomy is paid for by precarious living conditions and a loss of economic independence.

**MEDIATING MENTAL DISTRESS IN YOUNG PEOPLE: THE ROLE OF POPULAR UK MEDIA IN CHALLENGING STIGMA**

Most mental-health needs in young people are unmet, even in high income countries and ‘stigma associated with mental disorder is a key challenge’ (Patel et al, 2007). Media representations are considered to play a key role in fuelling stigma though this is not a new problem. Mental illness and prejudice has a trajectory which predates modern media and is deeply ingrained culturally (Signorrelli, 1993). This paper draws on semi structured interviews with programme makers and source organisations as well as thematic content analysis to explore messages concerning young people in mental distress. What role might popular media play in helping to challenge or perpetuate stigma? Are there unique opportunities created by popular television that challenge prevailing representations of young people in distress? How do source organisations work with programme makers to create positive collaborations? What are the associated opportunities and pitfalls? Is there evidence that such representations can change attitudes and beliefs?

This paper builds on studies that have identified connections between media coverage and public beliefs about mental health (Philo 1993). The negative coverage of mental health is considered to bear significant responsibility for fueling public prejudice and misconceptions (Wahl, 2003). Acute conditions such as schizophrenia are associated with particular stigma and the media stereotyping of those affected is considered to have significant repercussions for their social network. Charities and other organisations have explicitly targeted popular prime time drama in a range of successful health campaigns and there is evidence that young people are receptive to ‘public’ issue messages within popular media formats (see Henderson, 2007). This paper examines the role of popular UK entertainment in shaping public understanding of the risk and suggests that populist depictions of young people in mental distress can challenge prevailing perceptions of those affected and represent their experience in unique ways.

**HENDRICKX, JEF** (KU Leuven, jef.hendrickx@kuleuven.be)

**WHAT’S IN A GAUGE? AN ASSESSMENT OF SELF-REPORTED MEASURES OF INFORMAL ACTIVITIES**

The relationship between different measures of informal activities is at best uncorrelated. In theory, if one estimated the same reality, the outcome of different measures should point in the same direction. That remains unclear in the case of informal activities. This paper assesses self-reported survey measures of informal activities. If surveys measure informal activities in a reliable way, the possible applications are extensive. In comparison to national level macro-economic estimates, their potential is much bigger.

One source of bias in surveys is the respondents’ propensity to answer sensitive questions in a socially desirable way. This problem would be limited to the impact of the error terms on the condition that the bias were randomly and evenly distributed throughout the population. One possible consequential issue in questionnaire based measures of informal activities, however, is that the social desirability bias may be associated with certain group characteristics. In this contribution we will investigate the indication that the prevalence of the social desirability bias in a given population is positively associated with experiences of government interventions. The lack of rule of law or of basic individual rights should influence the willingness to honestly disclose past illegitimate actions such as tax evasion off-the-books work by respondents.
Indeed, the disturbing fact is that the gap between macro-economic and survey based estimates of informal activities seems to be bigger in former communist regimes in Central Europe or repressive right wing governments. This paper tests the prediction that the social desirability bias in self-reported survey measures of informal economic activities depends on this institutional history. Based on the second round of the ESS, this thesis is tested with the help of comparison with other forms of (economic) deviance, the impact of generations to the social desirability bias and direct measures of negative attitudes toward informal activities.

Reification, Money, and Wage Labour: A Defense of the Classical Theory

Reification is not a new topic, neither in Sociology nor in Social Philosophy: Authors such as Georg Wilhelm Friedrich Hegel have described it already. Astonishingly, however, when Axel Honneth ‘reconstructed’ this concept from the angle of his normative theory of recognition in 2005, he did not include the ‘classic’ factors of reification: money and wage labour, in his new version of the theory. This lead, or so I will argue, to a re-idealisation of the concept which had more in common with Hegel than it had with the classical Critical theory that used this term in a Marxist understanding.

Against this moralization and de-economisation of the term, this paper argues for a re-economised theory of reification. The starting point for an alternative reconstruction, however, is not History and Class Consciousness, but the political economy of Karl Marx himself, who already used the term in an interesting way (e.g. in VI. III of Capital). The paper will first develop and defend a sociological interpretation of Marx’s Parsie Manuscripts (1844) and Capital (1867), where Marx identifies the mechanisms of a monetarized economy and a production based on wage labour as the main drivers of a capitalist ‘reification’ of social relations. In a second step I will apply this reformulated classical theory of reification to today’s globalized and flexibilized economy. I would like to suggest that conceptually the ‘classic’ tradition of Critical theory still has a lot to offer for an analysis of contemporary capitalism.

HENRICKS, KASEY* (Loyola University Chicago, khenricks@aboefn.org)

No Taxation without Discrimination: The Racial Interconnectedness of the Third-Fifths Clause, Taxation, and Alienation

No Taxation without Representation! These ironic words of tax rebels like the “Sons of Liberty” marked the birth of a new nation. Yet when they became formally codified under law, neither can be fully understood without reference to race. In terms of congressional representation, Northern representatives wanted to regard slaves as much less than three-fifths a person to ensure their own political control, but when it came to taxation, these same delegates argued that slaves should be counted as more than 60 percent for a tax system based on population size. Of course Southern delegates objected to higher tax burdens and lower representation, and they assumed positions in direct opposition to their Northern brethren. On both sides of the debate, racial oppression was rationalized by elite white men to promote their own interests through discourses of alienation and estrangement—discourses ranging on a continuum from entitlement and disenfranchisement on one end to victimhood and disenfranchisement on the other. The debates spanned nearly 10 years, until finally, a compromise was achieved. Yet this compromise is not merely an artifact of the American past. It culminated into the prohibition of direct taxes by federal government, a legal clause that still stands as a major Constitutional roadblock to federal taxation on most forms of wealth in the United States. For these reasons, among others, I argue for a re-articulation of those revolutionary words as not “no taxation without representation” but “no taxation without discrimination.”

Youth Protests in Baghdad: Acting in intertwined realities

Youth protests in Baghdad: Acting in intertwined realities

Analysis of young women and men protesting during the so-called Arab Spring have mostly overlooked recent developments in Iraq. Yet - inspired through other countries in the region - Youth in Baghdad do engage and position themselves in urban spaces as well as in digital social networks and challenge sectarianism, political developments and frictions within Iraqi society. The paper argues that these symbolic and physical spaces are not to be regarded as dichotomous but rather as two aspects of relational space. The evolving digital platforms (e.g. Facebook, Twitter, Blogs) have created new spaces and ways of acting and networking that would have hardly been possible otherwise due to the ongoing violence and worsening security situation. Drawing on interviews and chats with involved actors the paper explores which new possibilities arise from technological opportunities of networking and organizing and how the self-representation and performances of actors in digital and urban spaces are linked from a theoretical view as well as from the actors’ own perspective. Furthermore it aims to discuss how these processes of positioning shape public spaces and can be seen as new instruments of power.

From Promise to Reality: Equal Opportunities and Real Capabilities of Women in the Era of Globalization. an Approach Based on the Study of Female Seasonal Agricultural Workers in Chile

From Promise to Reality: Equal Opportunities and Real Capabilities of Women in the Era of Globalization. an Approach Based on the Study of Female Seasonal Agricultural Workers in Chile

After years of numerous worldwide strategies and policies, implemented by different public, private, national, and transnational actors, who want to install a gender and equal opportunities approach for women, what is the final assessment of these practices? What true empowerment and what real capabilities have been achieved by these different actions? Are there any significant transformations that we can identify in these attempts?

Some interesting answers to these questions can be found in the case of female seasonal agricultural workers. After going through a process of proletarianization and insertion into, by definition, precarious and unstable work, numerous changes have affected their social, economic, cultural and domestic environment. These include access to a consumer society, participation in new networking and the sharing of responsibilities in the family area. But in a context of great inequality and precariousness, how can we talk about empowerment and capability?

HENRIZI, ANNIKA* (University of Marburg, annika.henrizi@gmail.com)
Purposes and Rationalities in a Globalized and Multicultural World. A Study of the Agricultural Sector in Chile

Hermanowicz, Joseph*
(The University of Georgia, jch1@uga.edu)

Colleagues and Quests For Immortality

The achievement in the professions is situated relationally. Work comes to constitute contribution only by the judgments of colleagues. This is paradigmatically the case in science and scholarship, a realm understood to be imbued by characteristics such as uncertainty, productivity, and profitability is a company’s goals; and income maximization, individual benefit, and increasing economic power seem to be a manager’s goals, what are a worker’s goals beyond the solution of his/her basic needs? In a culturally diverse context where globalization appears to guide the different actors, what are the different purposes they pursue? What kinds of contributions and what cultural peculiarities do we identify in a world where interconnection and the imposition of transnational patterns are becoming more important?

This proposal discusses the multiple rationalities that mobilize social actors, in a context of major inequalities, using an ethnographic approach carried out in Lima, the capital of Peru, for three agricultural workers. Numerous development strategies designed to increase productivity and economic growth have been introduced, meaning that the local society has had to deal with big transformations, in the economic, social, environmental and cultural spheres. The arrival of national and transnational companies to give value to the agricultural sector, with foreign managers who do not know the local culture, has put the agricultural sector in conflict. Productivity, competitiveness, efficiency and economic development are not concepts shared by all the actors.

The research based on this case study, combines with the study of social, cultural and economic transformations, such as the confrontation and diversity of the different actors’ representations, purposes and rationalities, triggered by development strategies.

Dissatisfied But Not Enough – Israeli Protest Of Summer 2011

In the summer of 2011, between the first major eruption of protests in Tahrir Square and the emergence of the American Occupy Wall Street movement, Israel experienced a massive protest wave. However, unlike Egypt and the US, at that time Israel did not have unusual political, social or economic difficulties. In fact, by most objective parameters, this was a relatively calm period. Yet the protest gained unprecedented attention and participation. Based on social movements political process theories and public opinion data collected in the framework of the monthly Peace Index and the annual Israeli Democracy Index run by the author, the paper will examine the reasons for the unexpected momentum of this protest campaign; and analyze the public assessment of the 2011 protest ex post facto.

The main argument here is that the 2011 protest popularity on the one hand and its negligible results on the other are two sides of the same coin. Dissatisfied with the government performance and motivated by their perceived political inefficacy and simultaneously fascinated by the political and social transformative ideas, rhetoric and activities of the Arab and Western protest campaigns of the time, the Israeli masses filled the streets of Tel Aviv from July to September 2011. However, the data suggests that the protestors were not “hungry” for substantial social, economic and political changes. In fact, they had national (Jewish) and (middle) class vested interests in the maintenance of the socio-political status-quo, as was manifested later in the 2013 parliamentary elections. Because of this duality, significant social dissatisfaction together with strong motivation to maintain the socio-political superstructure, despite certain similarities, unlike the Tahrir and Occupy struggles, the Israeli 2011 protest did not and could not have produced a clear transformative agenda or action plan.

(The University of Georgia, jch1@uga.edu)

Colleagues and Quests For Immortality

Achievement in the professions is situated relationally. Work comes to constitute contribution only by the judgments of colleagues. This is paradigmatically the case in science and scholarship, a realm understood to be imbued by characteristic authority, where colleagues not only sanction behavior but also serve as a conduit by which others are immortalized for their contributions. Normative- ly, it would stand to reason that colleagues would be held in high regard; the work of scholars, the lives of scientists and scholars, depend on them. The present work, however, examines empirically how incumbents value colleagues in actuality. Taking academia as a site for analysis, the present work investigates one aspect of the social significance of colleagues by asking how scientists might desire being remembered by them. The study is thus centered on two social-psychological questions: the importance, if any, that incumbents assign to colleagues and the specific attribution to colleagues of how incumbents would like to be remembered. The paper is fully written and complete. The presentation will discuss its major points.

Internationalization of Knowledge Work in Argentina: The Case of ‘Global Professors’

Globalization has changed the world in many aspects relevant for professionals and ‘knowledge workers’, such as professors and teachers. One of these aspects is linked with higher education and its internationalization process. The configuration of the educational sector and the increasing necessity of ‘symbolic analysts’ and other ‘knowledge workers’, who can manipulate and manage the proper codes required for production today, are part of a development that calls for permanent and higher education to foster production and social reproduction. These global processes significantly increase the need for ‘knowledge workers’ and for cross-border higher education, and subsequently they may cause conflicting interests between local education institutions and transnational providers. In addition, lifelong training is increasingly required, such as postgraduate and professional courses in a wide range of areas. Taken together, these are major reasons for a new emergent type of a ‘global professors’ in 21st century. A growing number of professors are working in different countries but without moving; moreover, as virtual tutors or professors they are teleworkers in the information society. This paper will discuss this new reality in Latin America, specifically focusing Argentina.

Sociología DEL Trabajo Y Desigualdad: Nuevos Desafíos Globales - Labor Sociology and Inequality: New Global Challenges

En 1995 reflexionamos sobre la Sociología del Trabajo y sus paradigmas disciplinarios, afirmando que había que superar el reduccionismo economicista. Tan- to por la necesidad de incluir otras perspectivas, como por las dificultades que suponía dar cuenta de las nuevas realidades de las transformaciones post-fordistas en el capitalismo globalizado.

En 2012 actualizamos la descripción y análisis histórico de los procesos sociales de trabajo, ampliándolos a escala global y relacionándolos con el desarrollo del moderno sistema mundial.

Es el propósito de este trabajo continuar el esfuerzo para superar el main- stream de la Sociología del Trabajo, con miradas eurocentricas que consideraban como modelo de trabajador al obrero industrial asiaronado, lo que ya era insufi- ciente para dar cuenta del mundo laboral de los “Años Dorados”, fuera de los países centrales.

Eso implica la necesidad de abarcar en el análisis un espectro más amplio y diverso de categorías del trabajo, y la elasticidad permanente que supone la existencia de población ’supernumeraria’ en diferentes momentos y locaciones como, por ejemplo, ahora en la Unión Europea.

La crisis a la que hoy se enfrenta la Humanidad, ya no sólo es económica sino sistémica: involucrando los recursos planetarios disponibles, alterados y extingui- gibles. En este sentido, para la sociología laboral, la necesidad de renovación para comprender el sistema dominante capitalista (procesos financieros y tecnológicos, poderes globales); la racionalidad y metabolismo del sistema; la baja respuesta global e identitaria de los colectivos simbólicos tradicionales; el avance de las fuerzas productivas, su concentración y sus contradicciones; los nuevos movimientos y sus formas heterogéneas de los trabajadores y, por último, la necesidad de contar con metodologías colaborativas.

Para ello, se abordarán elementos de las nuevas corrientes del pensamiento crítico y de las realidades del trabajo hoy para dar cuenta de cómo afectan a la división del trabajo global y a los trabajadores.
Globalizing the Classroom: Innovative Approach to National and International Learning

This essay examines an innovative approach to teaching globalization and assesses a course on Globalization, Social Justice and Human Rights co-taught collaboratively by faculty from different campuses and countries since 2009. This course was created to address unmet needs in the traditional higher educational systems; the lack of cross-cultural and interdisciplinary collaboration among students, faculty, and institutions to examine recent forms of globalization. Whereas economies, policies, environments, and human societies are experiencing great connections across the globe, the educational system continues to be modeled on Nineteenth century assumptions and structures. Faculty teach at their respective universities but use an on-line platform to allow for cross-campus communication. In addition to the classroom rooted in a physical place, a major component of student learning involves the use of technology, including undertaking collaborative group work across borders. A shared core syllabus can be modified by institution to satisfy local needs. We examine the following: the logistics of this course; the obstacles and possibilities in its implementation, including the use of technology; the role of language and communication, and mechanisms for adapting faculty participants' needs to local curricular guidelines. We also address the benefits of the course for students, such as exposure to a greater diversity of worldviews and pedagogical approaches; the development of teamwork skills, including developing a flexible mind frame; accepting and accommodating diverse educational needs/approaches, and; promoting interdisciplinary communication and collaboration. We also assess the challenges for faculty in designing and managing a course on different time zones and academic calendars, facilitating transnational group service learning projects, and the great time demands required to coordinate and monitor students' online interactions. Our objective is to contribute to improving and innovating approaches to teaching globalization.

Aesthetic Proximity and Performance Among “Hatsune Miku” Cosplayers in Japan

“Cosplay” is an activity popular among Japanese youth where somebody dresses-up, in the most of the cases, as a fictional character. I focus on those cosplay fans born in the character named “Hatsune Miku”, a voice synthesizer presented as a female fictional character developed by “Crypton Future Media”, under the concept of a “virtual idol”. This synthesizer uses the “vocaloid” technology developed by Yamaha Corporation and is used to “sing” the songs produced by her users. However, unlike many other popular characters, Hatsune Miku is characterized by her offer-a-negative. Nevertheless, instead of lose “reality” because of this “lack”, is precisely thanks to this characteristic that she has the versatility of appear in many media (mainly User Generated Media) and be used freely in many different ways, becoming a perfect icon of the “Participatory Culture”, as imagined by H. Jenkins (2006). The particular kind of reality that supports her success as a “virtual idol” is described following a “character-migrant” theory proposed by G. Ito (2005). In my study I analyze the role of this kind of reality among Miku’s fans in Japan, departing from Ito’s theory of “Kyaro”. However, while Ito’s theory is centered on iconic futures of Japanese comic books (manga), I will adapt his theory into a wider use of the “Kyaro”, and particularly its performative use in the cosplay. For this aim, I will move from the textual iconicity focused by Ito, towards the idea of “aesthetic proximity” as proposed by Sandvoss (2005a, 2005b) in the study of fan affectivity, and therefore, focusing not on the “visual” but on the “aesthetic” dimension of popular culture. As a result, my aim is to present an example of how “reality” is created in the social practice in the particular case of contemporary Japanese cosplay culture.

The Industry of Migrant Mobility: Bastard Institutions and Temporales Legales De México a Estados Unidos

La producción de la migración internacional, ya sea como movimiento colectivo o acto individual, no solo es resultado de las grandes desigualdades económicas entre países. La migración también requiere de intermediarios que ponen en juego saberes e infraestructuras que vinculan efectiva y eficientemente a empleadores, por un lado, y trabajadores, por el otro. Definimos a este conjunto de intermediarios como la industria de la migración. Aunque es comúnmente asociada con las migraciones indocumentadas, la industria de la migración también está presente en los flujos autorizados por el estado, sean éstos permanentes o temporales. En este trabajo analizamos el papel que la industria de la migración juega en la organización del flujo de trabajadores mexicanos a los Estados Unidos, bajo el programa de visas temporales H2. Si bien el programa de visas H2 es un programa del gobierno norteamericano creado para suministrar trabajadores de baja calificación a la agricultura y otras industrias intensivas de mano de obra, el manejo prático de dicho programa está en manos privadas. La administración práctica de este programa inicia con un conjunto de agencias estadounidenses que certifican, a nombre de los empleadores, la “escasez” de mano de obra en determinada industria y región de la Unión Americana. Estas mismas agencias colaboran con contratistas mexicanos y norteamericanos para anunciar, seleccionar, y coordinar a los trabajadores que habrán de tramitar sus visas H2. Las visas temporales H2 son el resultado de un proceso de negociación entre el gobierno de México y el gobierno de los Estados Unidos, que se inicia con la formulación de una solicitud de visa por parte de una empresa norteamericana que busca contratar a trabajadores de México. Las visas H2 son otorgadas por la Oficina de Vehículos de Estar Temporario en los Estados Unidos, ubicada en Monterrey, México. Esta ciudad es el epicentro de la industria de la migración que maneja programa H2. En este trabajo analizamos a los actores que la conforman, sus saberes y articulaciones: reclutadores, transporristas, hoteleros y tramitadores de documentos.

The Industry of Migrant Mobility: Bastard Institutions and Infrastructures in the Eastern and Western Migratory Corridors of the U.S.-Mexico Border

The international migration scholarship has paid little attention to the actors, institutions and infrastructures that facilitate migrant mobility. In this paper, we use the concept of migration industry as “bastard institution” and “infrastructure” to analyze migrant mobility in two corridors of the United States-Mexico border: the Monterrey-Texas or eastern corridor and the Tijuana-California or western corridor. Based on sociologist Everett Hughes, bastard institutions are “chronic deviations from established institutions, which provide alternative distribution channels of goods and services. The migration industry can be conceptualized as a bastard institution in that such industry and its actors provide alternatives to state sanctioned mobility across international borders. We also conceptualize the migration industry as infrastructure, that is, as institutionalized means which facilitate migrant mobility. How did a migration industry of migrant mobility emerge
in the eastern and western corridors of the U.S.-Mexico border? Who are the migration entrepreneurs that facilitate and develop the infrastructures of migrant mobility? How do segments of the migration industry of migrant mobility go from being a bastard institution to become a legitimate institution? What differences and similarities exist between the industry and infrastructures of migrant mobility of the Monterrey-Texas and Tijuana-California migratory corridors and what accounts for them? We answer these research questions using data from a multi-year ethnographic and qualitative study of transportation networks on both sides of the U.S.-Mexico border.

By introducing a typology of actors that traces their careers (Becker, 1956) previous their entry to the Secretariat, this case study underlines the criteria employed for the appointments at the levels of Secretary, under-secretary and director. From this typology, an initial assumption can be made: the logics of bureaucratic appointments in the Secretariat depend not only on the appointees’ affiliation to Correa’s party, Alianza País, but also on their involvement in the social movement organizations mobilized for the migrants’ cause.

Relying on this tableau of actors, a detailed analysis will be presented shedding light on how the appointees dispose of a specific set of capitals (Bourdieu, 1972, 2004), practices and representations of the migration issue that allow them to shape the design of the nascent institution and the implementation of the Ecuadorian migration policy. It is finally through the lens of bureaucratic appointments that we will have a powerful entry point to further understand the interactions between the political and social movements spheres and their effects on the restructuring of the bureaucratic field during the Correa administration.

This paper is empirically based on a six-month field research at the Secretariat carried out from June to November 2011 and a series of 30 interviews with high officials of this institution.

In order to understand the future of economy as a social system, my research reviews a theory of media from the general perspective of communication and retraces the first accounts of generalized symbolic media in the form of money, payments and today’s nexus of exchange, as initially described by Marx and later by Adorno. Second, the piece studies how monetary economy includes risk within its internal operations in front of an increasingly complex environment. The third part of the paper describes the epistemological transformations that are required. In effect, the current development of autonomous systems asks for different methodologies and epistemological perspectives in order to observe and decrypt the new landscape arising from the way in which society has evolved.

Increased reflexivity within system’s production (Luhmann, 1995) has important consequences in respect to the communication flow in society. What are those consequences? Wilcke (Willke,2007:14) envisages the market within a variety of mechanisms to ensure coordination and cooperation. Nevertheless, disembodied media of communication may have erosive effects upon previous modalities of coordination and cooperation. In what extent the recent developments of derivatives and newer media of communication within economy renew Marxist perspectives of reification?

Concluding, a comparative analysis of the communicative power of distinct media of communication must be part of economics. This supposes an enlargement of communication as a field in order to comprehend the distinct systemic varieties of communication at stake, the diverse semantic and praxical purposes that they serve, and the possibility of overlapping communications that create further risk.

The concept of nexus of exchange is found in Marx, Karl. (1858).Second Draft of Critique of Political Economy. MECW Volume 29, pp. 430-507.

This research deals with the necessity of a transformation of the dominant paradigms of observing society. It builds from N. Luhmann theory of social systems. The problem is dealt with using cybernetic theories of social communication that are used to advance selected case analyses.

I first deal with the fragmented state of scientific production, which I explain as a side-result of functional differentiation. I describe this as a case of incomplete rationality that has consequences for the level of human agents and for the level of systems’ communications.

I then postulate that structural changes force any serious social epistemology to include the notion of functional differentiation, in order to account for newer epistemic forms of agency such as organizations that exist at a level of praxeological inequality with human beings.

The situation of newer epistemic forms has profound consequences for all the concerned levels. On the one hand, in respect to the level of direct human agency, the fact of emergent modalities of agents forces a reconsideration of the more specialized perspectives of agency (Collins, 1992). Anthropic perspectives are refuted by those newer epistemic forms, jeopardizing the former centrality of the human subject in the making of society. On the other hand, in respect to the side of techno-systems and their increasing reflective features, a reconsideration of...
Cosmopolitanism in a Changing Political Landscape: Making Sense of Cultural Difference and Belonging in an Australian School

With the recent change in federal government, Australia is currently experiencing a conservative nationalist turn. Xenophobic, anti-immigration debates abound about how cultural diversity and difference will lead to the demise of ‘Australian’ national identity, values, social cohesion and security. Whilst this political discourse has marginalised post-national sentiments in dominant media, does this align with how culturally diverse communities orient toward cultural difference and belonging in the everyday? The City of Greater Dandenong in the outer suburbs of Melbourne is one of the fastest growing, most culturally diverse regions in Australia. Dandenong government schools, micropolitics of the wider community, are key sites where issues of race, cultural diversity and belonging are experienced. Normative cosmopolitanism offers an alternative discourse and a competing resource for the imagination through targeted educational and cultural interventions in school communities. Whilst cosmopolitanism has currency as a valuable ethico-political ideal for contemporary transnational and global ways of life, it has faced criticism as unrealistic, elitist, consumerist and western-centric. Based on fieldwork in a Dandenong high school, this paper considers how students and teachers interpret and interact with nationalist, cosmopolitan and other post-nationalist discourses in making sense of how they live, belong and get along in a complex, culturally diverse school community and their wider worlds. In light of debates over whether grassroots, vernacular forms of cosmopolitanism manifest in commonplace encounters with difference and diversity, this paper provides insight into whether students and teachers in this school create an everyday cosmopolitanism on their own terms – independent of the ever-shifting ‘flavour of the month’ political and institutional discourses.

Le Paternalisme Recyclé. Le Cas D'un Projet Minier Au Pérou

Le paternalisme comme système total régissant la relation entre employeur et salarié a été essentiel à l'ombre de l'industrialisation et du travail salarié en Europe. A travers ses différentes caractéristiques et ses différents usages, (encadrement de la population marginale, outil de féodalisation et de discipline, univers clos, outil de contrôle politique et social permettant de faire écran à l'Etat et aux luttes sociales), ce système demeure au travers de relations plus complexes et d'acteurs nouveaux.

Nous observons ce système de domination au Pérou, où certaines entreprises minières ont un contrôle non seulement sur leurs salariés, mais sur l'ensemble de la population avoisinant le projet minière. Nous voulons étudier la relation entre l'entreprise minière Suisse Xstrata, et la communauté paysanne de San Ureabamba au Pérou, installée depuis 2005 sur le territoire communal, l'entreprise développe des stratégies d'adhésion à son modèle, notamment à travers le système de Responsabilité Sociale. 

Le paternalisme n'est pas, ici, uniquement la prise en charge des employés par l'entreprise. En système intégré, les habitants de la communauté (féodalisation, dépendance, distraction, suivi « social », sponsoring, etc.) pour le bon déroulement de son projet.

Ainsi, l'entreprise remplace l'État, crée son propre marché du travail, emploie les habitants de Fuerabamba, offre des bourses aux jeunes, propose des formations et d'ateliers, (ré)invente des traditions et des concours de danses traditionnelles, promeut le développement dans la communauté et s'impose comme l'entité légitime pour prêcher la bonne parole aux paysans.

L'entreprise minière semble ainsi recycler des systèmes anciens de subordination, rappelant les relations entre Indiens et métis dans les haciendas durant plusieurs siècles, où les relations de subordination des travailleurs minières à l'œuvre du XIXe siècle.

Nous tâcherons donc de disséquer ce complexe rapport de domination où, a priori, chacun semble y trouver plus ou moins son compte.

Present Absentees: Internal Refugeeism As Location and Identity in the Second and Third Generations of Palestinian Women Citizens of Israel

I explore the emergence and significance of the identity of "internal refugees:" the identity of Palestinian citizens of Israel who were expelled from their localities in 1948 and, though remaining within the state of Israel's borders, were denied the right to return there, and were forced to reside in other places. The analysis is based on 15 biographical narratives of women who are second and third generations of internal refugees who were born in the host localities.

The theoretical and empirical claim is that refugeeism as location and ethnicity is a liminal arena that both enables an examination of women's experience and offers a new viewpoint for understanding Jewish and Palestinian societies as well as women's experiences. My argument is twofold: first, women's multi-faceted marginal location within both Jewish society and their own society enables them to challenge both societies.

Second, internal refugee status for the second and third generations of Palestinian women in Israel, has become a category of identity alongside national, ethnic, religious and gendered categories. It is an identity category through which existential experiences are interpreted, and a collective, familial and personal history is constituted. Like national, ethnic, and gender identity, this category is also subject to constant negotiations and contestation over its boundaries and meaning, but is unique in its location. From the woman refugee's position somewhere/nowhere, women are able to develop a strong political critique towards their own society (Palestinian within Israel, in the Occupied Territories, in the Diaspora) and toward Jewish society.

Re-Membering the Past: Biblical Archaeology Between Secularization and Religionization

Secularization and religionization are concepts that continue to arouse much debate. This paper focuses on the societal level mainly in terms of institutions and norms. Our theoretical presumption is that both "religion" and "the secular" are not universal nor essentialist entities, but rather contingent dimensions of social life that are embedded in time, place, and changing historical circumstances. Moreover, they are based on continuing social processes of separation and hybridity between these social categories. This mandates examination of religious and secular institutions (such as state, science, nationality) as relative dispositions and strategies for action in historical perspective. Our case study is that the changing attitudes toward the Old Testament that reveal the pendulum between secularization and religionization and, at the same time, unveil the hybrid nature of the categories of religion, secularity and nationalism.

Traditional religious appreciation of the Old Testament by the three monotheistic religions was disrupted by the secular school of biblical criticism that flourished in Germany from the mid-19th century and challenged the historicity of the biblical narrative. 

A counter movement of biblical archaeology rose at American Divinity Schools in the early 1920s aimed at refuting the secular biblical criticism claims by excavating sites mentioned in the Old Testament and thereby testifying to the historicity of the biblical events. This approach was enthusiastically adopted by secular Israeli archaeologists in the newly established State of Israel. The collective memory of the religious biblical stories strengthened national cohesion.

Since the 1990s, the pendulum has swung toward a critical view of the archaeological data. Secular scientific archaeology rejected the shackles of religion and national concerns.

Tourism in Vulnerable Coastal Areas: Towards a More Resilient Wadden Area

Coastal areas are extremely interesting regions to examine, since a large share of the world population lives in these areas, despite threats caused by climate change and sea level rise and their consequent state of vulnerability. This research area is particularly important, as will be shown in the following question: how can vulnerable coastal areas make a transition towards areas that are more resilient and better prepared to cope with unexpected ecological, social and economic changes in the future? In this paper, the concepts of tourism, complex social-ecological systems, resilience and planning will be illustrated by the case of the Dutch Wadden area, which is one of the largest tidal wetlands in the world and was enlisted as UNESCO World Heritage in 2009.

This paper will be organized in three parts. First, we will examine the concept of tourism and indicate where the academic gaps and shortcomings regarding tourism in vulnerable coastal areas can be found. Second, we will look into why, and in what ways, a complex adaptive systems approach - like a social-ecological systems approach - can be useful in analyzing tourism in vulnerable coastal areas in order to overcome the traditional separation between ecological and social sciences (Liu et al., 2007), to examine tourism in a more systematic way (Ruiz-Balles-tros, 2011) and to find ways to develop and protect at the same time.

Third, the paper will describe governance perspectives that contribute to understanding and managing complex issues like tourism in vulnerable areas through different scales. Planning is important and has to be done carefully, since tourism in a coastal area is often developmental, but at the same time an agent of disruption or destruction (Getz, 1986). By means of this paper, we will eventually provide theoretical lenses for looking at the Dutch Wadden area and other vulnerable coastal areas in the world.

Participatory budgeting (PB) is a practice that gives urban residents control over local budget decisions, has spread to hundreds of cities in Latin America and around the world since the 1990s. PB was originally closely tied to a Left political agenda; the most radical proponents of PB envisioned it as a tool that could be used to form a socialist revolution. But while PB has been championed by social movements, it has also been utilized by political elites to engage the electorate in local decision making. This paper explores the possibility of extending participatory control from the political to the economic sphere. I argue that a radical left party with four characteristics can facilitate the construction of what I term emergent socialist hegemony. These characteristics are: internal democracy; links to popular movements; a prefigurative commitment to democratic socialism; and links to autonomy from the national state. This argument is illustrated by examining participatory control over political and economic decision-making in Torres, which has been called “Venezuela's first socialist city.”

Military Children: The Effects of Deployment during Operations Iraqi and Enduring Freedom on Children's Psychosocial Well-Being

Nonetheless, since the 2000s, national religious perspectives that dominate Israeli politics have again been filtering into the archaeological discourse by attempting to revive traditional biblical interpretation.

Juilio Caro Baroja (1914-1995) was a Spanish-Basque social anthropologist and one of the founding fathers of modern Spanish and Basque Anthropology. Despite his lifetime achievements and his recognition as being one of the leading figures in the field - Caro Baroja is the author of two dozen books and numerous articles - internationally speaking, Caro Baroja and his work remain barely known. The lack of international acknowledgement is partly due to non-translation; just a few selected books have made it into other languages. In our presentation we will look at Caro Baroja and his work as that of a forerunner to modern cultural sociology.

Military Children: The Effects of Deployment during Operations Iraqi and Enduring Freedom on Children’s Psychosocial Well-Being

More than half of military personnel have children and nearly 2 million children are affected by the war in Afghanistan and recently terminated war in Iraq (Quigley, 2009). Not only are members faced with the demanding obligations of the military, children are also challenged by the disruptions and stress of military life. Family disruptions are never an easy transition for any child. For those children whose parents served in Iraq and/or currently serving in Afghanistan, family disruptions may have a significant impact in their lives. This study is investigating the psychosocial well-being of children with a parent deployed in Iraq/Afghanistan, location categorized as hostile zones, with the psychosocial well-being of children with a parent deployed elsewhere.

Reclaiming Democracy: Popular Participation of the Left and Right in Venezuela and Bolivia

Participatory budgeting (PB), a practice that gives urban residents control over local budget decisions, has spread to hundreds of cities in Latin America and around the world since the 1990s. PB was originally closely tied to a Left political agenda; the most radical proponents of PB envisioned it as a tool that could be used to form a socialist revolution. But while PB has been championed by social movements, it has also been utilized by political elites to engage the electorate in local decision making. This paper explores the possibility of extending participatory control from the political to the economic sphere. I argue that a radical left party with four characteristics can facilitate the construction of what I term emergent socialist hegemony. These characteristics are: internal democracy; links to popular movements; a prefigurative commitment to democratic socialism; and links to autonomy from the national state. This argument is illustrated by examining participatory control over political and economic decision-making in Torres, which has been called “Venezuela's first socialist city.”

From Social Democracy to New Nationalist Populism

Sri Lanka emerged as an incipient social democracy following independence. Progressive labor legislation, social protection for public and private sector workers, free health and education, etc. led to a steady improvement in social conditions in the country. Though some of these gains remain largely intact, economic liberalization over the last three decades has changed the socio-economic landscape in an unprecedented manner. Increasing public debts, both domestic and foreign, a widening trade gap, continuing devaluation of the local currency and the stagnant state revenue leave little room for significant state interventions in the area of social policy. Whatever measures that have been attempted have already been abandoned due to financial unsustainability. While a minority of employed people continue to enjoy some form of social protection, the vast majority engaged in informal economic activities remain exposed to the vagaries of the market in terms of both earning an income as well as meeting their basic needs, let alone the prospect for a future devoid of poverty and neglect.

It is against the above background that the dominant public discourse spearheaded by the state itself has shifted from social democracy to nationalist populism. While the former emphasized the role of the state as one guaranteeing the
social rights of citizens, the latter highlights the protective role. Even though the war ended in 2009, public discourse continues to be dominated by security issues. Persisting ethnic tensions in the country feed into the dominant discourse, relegating social policy issues to the background.

**Issues in School to Work Transition in Sri Lanka**

The transition from school to work has become more complex in recent years due to both changes in the education system as well as the dynamics within the labor market. This paper, first, provides an overview of the above changes based on secondary data drawn from various institutions and then examines how young people in Sri Lanka fit into both the education system and the labor market in the light of data drawn from the national youth survey of Sri Lanka conducted in 2009 under the direction of the authors. As is evident from the survey data, the desire on the part of the youth in general for securing educational credentials remains strong, though the opting out of education at secondary level is also increasing, particularly among male children. This tendency appears to be related to labor market dynamics as well as poor prospects for employment among youth with higher levels of education. Domestic labor shortages and increasing overseas employment opportunities for people with low levels of educational attainment persuade young people to leave school early. The paper discusses the implications of the above for skill formation in a country that strives to achieve a higher level of economic development in the years to come.

**Statistical Methods and Network Simulation: The Role of Limited Information in Edge Formation**

Snijders et al. (2009, 2013) have contributed to an approach integrating agent based models and empirical network data in which instead of empirical data “validating” the simulation, the simulation estimates the empirical parameters. One assumption is that agents have information about the other actors in the network, i.e. that any two agents could potentially form a tie. This assumption means that the model is limited to modeling relatively small empirical networks. Another potential solution is to consider how information about potential matches might be limited. In a loosely related area, Bearmann et al. (2004) looked at the potential generating mechanisms of a specific type of social network: sexual histories. They found that linking potential matches (excluding those close ones’ network) generated social networks that closely matched empirical data.

We use agent based simulations to consider the effects of assuming full versus limited information in evolving social networks. First, we limit information in a network’s evolution based on the existing network, partitioning the list of potential new friends between those within one’s local network (e.g. 3-step acquaintances) and a small sample of strangers. We test whether limiting information about potential matches generates more realistic graphs in terms of the average path length, clustering, edge distribution, and connectivity, as community size increases. The question of limited information is then extended to sexual history networks, again, partitioning potential matches into those in one’s local network and a small sample of the general population. The evolution of social networks is based on an exponential graph models while the sexual histories including including including including including including including including including including Civil-Military Gap in Japan: Comparing the 2004 and 2013 Surveys -- CANCELLED

This paper compares two surveys conducted by the authors in 2004 and 2013 which look at the possible “civil-military gap” in Japan. These surveys, modeled after the TISS survey, were the first academic attempt to examine the attitudes of Japan Self Defense Force (SDF) officers as well as civilian elites in Japan. In the 2004 survey, we found that (1) SDF officers were more conservative than the civilian elite, (2) on US-Japan alliance issues, there were no evident gap between the officers and civilian elite, while there were signs of gap with the general public; (3) SDF officers long for a greater role in the policy making process. Events that took place between 2004 and 2013, including the SDF dispatch to Iraq, the end of the conservative party rule in Japan, and the 2011 earthquake and the disaster relief efforts by the SDF, suggest that there may be a change of attitudes among both the SDF officers and the civilian elite. A second survey is to be conducted in October 2013, and this paper will compare the 2004 and 2013 survey results to examine whether and why there may be changes in the “civil-military gap.”

Contested Spaces. Informality, Dwelling and Spatial Governance in Berlin

This paper examines the intersections between informality and the governance of place in Berlin, Germany. In particular, it examines practices of dwelling, in which permanent residency does not fit neatly into the logics of formal planning processes in order to discuss the possibilities and delimitations that people experience when living beyond the law.

In Berlin, research on urban development has frequently been framed through debates on neoliberalism and a series of interdependent developments such as gentrification, urban entrepreneurialism or increasing socio-spatial inequality (Mayer 2009; Holm 2010; Bernt 2012). While these debates focus mainly on the enclosure of space, a series of postcolonial approaches have developed an analytical toolbox that helps to consider the ways in which cities are shaped through the everyday actions of their inhabitants. Here, the city is seen as “a site that is not just inhabited but produced through that inhabiting” (McFarlane 2011: 651), a site that is neither ossified nor stable, but open to political transformation. Drawing particularly on Bayat’s (1997, 2000) notion of ‘quiet encroachment’, which describes the quotidian and longsome advancement of the poor, these frameworks will be used to compare processes of regulatory enforcement in three urban typologies, in which people informally inhabit space: ‘Schrebergärten’ (best translated as allotment gardens), camp sites and ‘Wagenburgen’ (best translated as trailer encampments). Even though the retreat of their inhabitants into sheds, vans or camps could simply be interpreted as an indication of socio-spatial marginalization, I set out to explore if the infiltration of planning law through their informal dwelling practices could similarly be understood as a sign of encroachment. In sum, I highlight both enabling and destabilizing aspects of these processes: While residents find opportunities to claim urban spaces and sovereignly influence their uses, their practices similarly weaken their positions within the city.

The Rules That Govern Peoplexs Lives: Informality in Tallinn, Bafatá and Berlin

Urban research has long related informality to a lack of state capacity or a failure of institutions. This assumption not only lacks attention to the heterogeneous logics and relations through which informality is produced by multiple actors in- and outside of the state, it has also created a dividing line between states. Whereas some states are understood to manage urban development through a coherently functioning state apparatus, others presumably fail to regulate.

To unpack and reframe such understandings this paper offers a theoretical exploration into the ways in which informality is infused in contemporary urban development in both the north and the south. Based on a comparison of three case studies in Tallinn (Estonia), Berlin (Germany) and Bafatá (Guinea-Bissau), our line of argumentation focuses on the ways in which local state agencies are entan-

Species out of Place – Investigating the Visual Framing of an Ecological Problem

Invasive species designate a recently emerged category of ecological risks: alien plants and animals, introduced by human agency, causing extinctions of native species and also diverse economic, aesthetic and human health problems. This phenomenon gained much scientific and political attention. It motivated people worldwide to participate in a vast array of organized attempts to preserve and restore local environments.

My paper investigates the frames (Goffman, Gamson) that constitute this ecological crisis (Harrigan). Basically it reveals a construction of nature as differentiated in well-ordered, stable, and homogenous units (ecosystems, ecological communities). I argue that specific visual frames are crucial in establishing the problem formula in question by integrating the realms of science, media and political action. Exhibitions, flyers, documentary films, websites and databanks use maps, photographs, graphics, icons and numbers to display environments as relatively homogenous spaces, which enable clear-cut distinctions of inside and outside (native/alien). Thus specific species become perceivable as invaders and understandable as phenomena of disorder (biological pollution). Furthermore visual references of horror and science-fiction stories (aliens, zombies, monsters, etc.) relate factual and technical information metaphorically to more emotional realms of experience and popular imagination. By means of these visual elements of ecological communication (Luhmann) encourage state actors and civil society to fight against certain species.

The imagery of dangerous aliens strongly resembles notions of political conservatism, romanticism and xenophobia. Hence it aligns with certain cultural critiques of the disintegrative forces of globalization. As national, ethnic and other perceived primordial identities are feared to dissolve, so is nature. But if undoing globalization is inconceivable, and society and nature have to be understood as inseparably entangled (Latour), don’t we have to confront this nostalgic eco-political illusion of small-scale orders with a need to originate positive representations of our globalizing environments, as recent postulates of cosmopolitanism (Beck, Heise) suggest?

Language and the Geo-Politics of (dis)Location: A Study of Zimbabwean Shona and Ndebele Speakers in Johannesburg

This paper explores the language repertoires and survival strategies of Zimbabwean migrants in Johannesburg. In the aftermath of the May 2008 attacks – now widely referred to as xenophobic attacks – the status of African migrants in South Africa has been the subject of much critical discussion. By virtue of a multifaceted crisis in their country, Zimbabwean Shona and Ndebele speakers have a particularly marked presence in South Africa. In this paper we explore the geo-politics of othering within the metropolitan boundaries of the “City of Johannesburg.” We begin with a GIS-based study of speakers designated “other” in the 2011 census, focusing particular attention on the distribution of foreign others at neighbourhood (sub-place) level. This section provides the background to a more focused study of Zimbabwean migrants, drawing on ethnographic research conducted in five neighbourhoods. Using Bourdieu’s “economy of social practice” as an analytical framework, we show how each neighbourhood is a social universe of struggle that is inscribed with its own internal logic and relational matrix of recognition, and how language repertoires are adapted to fit these matrices. We discuss these patterns critically, and relate them to the wider “field of power”, a complex socio-ecological economy that belies the post-1994 Constitutional enfrainment of eleven official languages.

A Tale of Three Villages: Boom and Bust Experienced at the Local Level in Rural England

The paper compares and contrasts three English, rural villages, each with different lifestyles and social histories: one geographic proximity to Southern UK cities (for commuting purposes); another offering a heritage site (several buildings and ruins of historical note) and, finally one with geographic characteristics that brought a large-scale industry temporarily to the village, but only to depart with similar rapidity.

Through a comparative approach, the paper considers the impact of these individual circumstances for each village before and after (in the modern-day context). It draws upon a portfolio of evidence including macro contextualizing background information and also ethnographic research datasets. This seeks to capture an insider perspective, whilst recognizing villages contain different social class groups and are not immune to global influences.

It then questions the sustainability of each of these periods of boom and bust. What implications does each model hold for their respective village? Who benefits from each of these three differing circumstances – local, regional or national (or even global) interest groups? What lessons can be learned from local adaptability and resilience? The paper finally seeks to comment on the theoretical model best suited to capturing the complexity of rural villages. Are you defined by where you live, as some sociologists have recently argued? Or does there remain something sociologically significant about the social situation as grounded by the local level? This article places economic trends and changing circumstances as experienced and also informed by local, community-level social actors.

What Facilitates Moving from Urban Cities to Rural Depopulated Villages?: “I-Turn” Phenomenon in Ayabe City, Kyoto Prefecture, Japan

The Japanese countryside is suffering from severe aging. Due to the lack of job opportunities, many young people migrate from their home villages, leaving the elderly to struggle to live in difficult living environments. Moreover, according to government reports, 423 villages will be depopulated by the year 2050, with the majority already carrying a population less than 1,500 residents. However, while the general trend is a decrease in population, some people living in urban cities are willing to move to the countryside, often seeking better quality of life or a slower pace of living.

This movement is often referred to as “I-turn” or “I-turned” phenomenon. This movement is often cited as an example of how individuals are choosing to retreat to the countryside, often seeking better quality of life or a slower pace of living. However, it is not a uniform trend, as some individuals choose to move to rural areas in search of better quality of life or a slower pace of living.

It Takes Two to Tango: Dutch Majority Group Evaluations of Muslim Political Acculturation

Explanations of the degree to which ethnic minorities are included in a national political system typically concern either the institutional build-up of a nation (e.g. electoral systems, seats in parliament reserved for ethnic minorities), or characteristics of individual minority members (e.g. gender, education, social capital, political orientation). While these explanations are very valuable, they ignore the pivotal role played by the ethnic majority group. After all, minority groups and their individual members become politically active in the face of constraints presented by the political system – a system that is shaped by the rule of the dominant majority group. In other words: it takes two to tango. Drawing from Berry’s seminal work on “cultural acculturation” (Berry, 1997), we formulated different ways in which minority members can acculturate politically (e.g. integrate, assimilate, or separate). Employing representative samples of Dutch majority members (N=802 and N=928) we then conducted two vignette studies in which Muslims, the most prominent minority group in the Netherlands, were the target group. In addition, we considered the roles of perceived threat and perceived political unrelatability. The results showed that minority groups’ acculturation strategy indeed affects majority group’s attitudes. Furthermore, evaluations of Muslim political participative hitherto contingent on the level of perceived threat and political unrelatability. The results are, however, not in line with expectations one would derive from cultural acculturation, indicating that the strategy towards majority representation in the political domain might differ in important ways from everyday ethnic relations.

Labor Market Exit of Older Low-Skilled Workers: German Firms’ Practices

Recent pension reforms in EU countries display two main trends: 1) early retirement pathways are closed and standard retirement age is increased; 2) the contribution-benefit link is strengthened, mainly by calculating pensions on the basis of lifetime earnings. Both developments endanger the adequacy of old-age pensions of low-skilled workers in particular because they regularly attain low lifetime earnings, leave the labor market (much) earlier than (highly) qualified workers, and often have to claim pension benefits before reaching standard retirement age. In the paper, Germany is taken as an example of a country that, for long, practiced premature exit of older workers and had developed an “early retirement culture”. The first part describes and analyzes the pension reform trends and early retirement situation of elderly low-skilled workers. The second part explores in more detail how firms part company with these workers, at what age, and whether firms’ strategies and workers’ preferences have (already) adapted to shifting institutional frameworks. This part is based on semi-structured (qualitative) interviews with human resource managers of firms (manufacturing/service sector) employing at least 50 workers of whom a disproportionate share are low-skilled. It is found that there are significant differences between the industries (mainly across the manufacturing-service axis) with regard to “normal” exit age, adopting measures that promote employability of low-skilled workers and the interest in retaining workers until standard retirement age (or even beyond). Furthermore, it is found that firms do not just follow the models of their counterparts in other countries, but also consider their own special circumstances.

How Does Participation in Resistance Interact with the Construction of Family Relations? West Bank Palestinians Between the First Intifada and the 'Post-Oslo' Period

A large share of the Palestinian population in Gaza and the West Bank was involved in the First Intifada (1987-1993). As a mass movement against the Israeli occupation it was both, shaped by and shaping the construction of family relations and gender roles. Academic literature on Palestine, on the other hand, has been widely discussed whether the involvement in civil and militant political activities against the Israeli occupation has reduced the patriarchal influence of senior males in favor of a growing influence of juveniles and women within the (extended) family.resp. clan (Hamullah). In large parts research focused on the effects of female integration into ‘committee work’ and the increased familial authority of young Palestinian males (Peteet 1994). The period after the so-called Oslo peace process (roughly after 1995) and the various transformations it entailed for Palestinian society, however, have caught much less attention in research on the Palestinian family. Based on biographical case reconstructions and participant observation, we want to discuss if the societal conditions in ‘post-Oslo’ Palestine have altered the interplay between participation in resistance against the Israeli occupation and the construction of manhood and family relations. Therefore we show the effects that the interplay of involvement in ‘resistance activities’ and family relations yields for the biographical trajectories (Schütze 2006) of young Palestinian males. Looking at the relations of family members from a biographical perspective allows us to reconstruct the changing relevance of family relations in the course of a lifetime as well as the intertwining of family relations with other biographical spheres of action. Our paper is based on fieldwork in the West Bank which is part of our PhD-projects as well as a larger Israeli-Palestinian-German research project funded by the German Research Foundation (DFG) and supervised by Prof. Gabriela Rosenthal, University of Göttingen.

Women’s Experience of Maternal Morbidity - a Global Meta-Ethnography

While the conditions and healthcare women experience during pregnancy and childbirth vary greatly, this meta-ethnography will explore whether there are shared human experiences, regardless of differences in settings, healthcare resources and the social capital of women in different settings. Maternal mortality rates vary greatly around the world, 99% of all maternal deaths occurring in developing countries. Improving maternal health by reducing maternal deaths is at the heart of global health policy.

Studies of near miss maternal morbidity, where a woman needs urgent life saving treatment during childbirth to save her life, have been undertaken in various settings. They are used to understand factors that lead to maternal death and improve care and outcomes for women.

Methods:
Qualitative interviews of women experiencing near miss maternal morbidity from around the globe (including the UK, Australia, Brazil and Burkina Faso) will be reviewed and synthesized using the meta-ethnographic method.

Findings:
There are considerable organizational differences in the delivery of care and social context in which women experience these emergencies; women in Australia and the United Kingdom are giving birth in more individualistic and isolated communities than their counterparts in Burkina Faso and Brazil. Does experiencing an acute health crisis in a first world country where mortality rates are very low vary greatly from experiencing it in a developing country where maternal death is still a common occurrence? How does the ‘social capital’ of women in different contexts impact on the long-term emotional and physical impact of these experiences?

Conclusion:
This presentation will explore what can we learn from shared experiences and whether a synthesis of qualitative research can contribute to improving maternal health outcomes in diverse settings.

Restructuring Vegetable Oil Supply and Demand in Asia: The Impact of Trade Liberalization Facilitating Increase of Fat Supply Among Asian Nations While Jeopardizing Their Domestic Production

This research examines strategy shift in vegetable oil sector among global transnational corporations, focusing on Asian TNCs like Japanese sogo-shosha and food industry, together with related trade liberalization and deregulation policies of Asian countries in the Corporate Food Regime (McMichael, 2005). These shifts are based on the increasing Asian countries’ dependency on global vegetable oil, which can jeopardize their food security as the global oil supply increasingly depend on only two crops, oil palm and soybean, produced in the limited number of countries. The shifts also can jeopardize public health of the Asian population.
Does the Great East Japan Earthquake Influence the Migration Patterns of Filipino Nurses to Japan? – Study on the Mental Health of Filipino Nurses to Japan

The disaster caused by the Great East Japan Earthquake influence foreign residents in Japan. A mass exodus of foreigners was observed especially in the first few months after the earthquake for fear of being exposed to long-lasting radiation after the 1986 Chernobyl accident at the nuclear power plant.

Nevertheless, there were Filipino nurses, who entered Japan to work at hospitals across the country, only two months after the earthquake.

This study aim to find the predictors of the mental health status of the 3rd batch Filipino nurses coming to Japan, under the Japan-Philippines Economic Partnership Agreements. A four-page questionnaire, including GHQ (General Health Questionnaire), socio-demographic status, motivation to go to Japan, degree of knowledge about Japan, language skill, satisfaction for pre-departure training and impact of The Great East Japan Earthquake, was developed and distributed to all candidates who attended the pre-departure orientation organized by Philippine Overseas Employment Administration in May, 2011.

The multi-linear-regression model (R² = .535, p<0.001) indicated that the strongest factor to indicate GHQ score was satisfaction for pre-departure training (beta = .370, p<0.01), followed by motivation to go to Japan (beta = .351, p<0.01), and the impact of the earthquake did not show a significant correlation to GHQ score.

One can assume that Filipino nurses' migration was derived by their motivation based on their economic needs. On the other hand, the degree of impact of the earthquake did not influence their migration patterns.

Migration of Foreign Nurses to Japan Under the Economic Partnership Agreement: Trends and Challenges through Sociological Perspective

Over 400 Indonesian nurses and 300 Filipino nurses entered Japan under the Japan-Indonesia Economic Partnership Agreement (hereafter "JI-EPA") and Japan-Philippine Economic Partnership Agreement (hereafter "JP-EPA") in past six years. This is the first case for Japanese government to officially receive foreign nurses to Japanese hospitals. Under these agreements, Indonesian and Filipino nurses can work as a registered nurse in Japan, after they pass the national examination for registered nurses in Japanese language, within three years after their entry to Japan.

However, the recent phenomenon indicates that many implementations on this program should be made. The number of applicants as nurses and as hospitals for this program has been shallowed, and many criticisms on the programs have been discussed in both sending and receiving countries. One of the criticisms is based on the absence of the governance of the nurses, including Japanese and foreign nurses, of the programs. In this presentation, the JI-EPA and JP-EPA programs are analyzed through quantitative and qualitative analysis which author and her co-researchers have been working for since 2007.

Throughout the study, some suggestions will be made to contribute the cross national movement of health professionals in Asian countries.

Legitimacy or Legitimation?

After years of Great East Japan Earthquake, day by day, disparities in restoration among similar regions are seen as social problem. In this study, we explore the limitation of this schematic way of making problem, through the process-oriented research of local governments' decision-making concerning their restorations.

Certainly, restoration disparities among regions are verified statistically, for instance, numerical difference of population recovery rate. Furthermore, the popularly supported national policies have been made to target restoration disparities among regions. However, each of region or its local government has been permitted to decide distinctive plan or style of restoration. After the Second World War, Japanese local government is not just bound by national law but also become to be allowed to pursue its autonomy. Additionally, this degree of allowance of local autonomy has increased with successive fiscal crisis of national government.

In fact, through our follow-up survey of the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive determination of local government. As we attempt to identify the "distinctiveness" of determination of local government, in this research we pay attention to the different ways of restoration financing between condition similar local governments. The results show differentiation of financing: from dependence just on local tax revenue and national subsidy to but also on donation from residents, corporations and foundations and financial assistance of international NGOs and so on. In accordance with pluralization of sources of fund for restoration, local governments have been required the plural logics of persuasion or conviction of several stakeholders with varying interests.

Based on this research, we could call the restoration difference among regions not as disparities subject to given singleness, "legitimacy" but divergence arisen from "legitimations" of distinctive local governments.

Theoretical Considerations of Recent Studies of Japanese Immigration to Brazil

The paper considers that the migrant, even prior to becoming an emigrant, was transforming within his own country and within his own community/society of origin, due to his dreams, desires, and utopias, into an atopot, that is, an atopic being, without place. Among the various ethnic groups that migrated, including Japanese, those who belonged to so-called "complex genetic stock", due to their cultural singularities that differentiated them from the supposed community/society standard accepted as nationally prevalent, faced prejudice, acts of intolerance and "racism", in which "myths" and "historic facts" were mobilized to justify the violent actions of people, of social group, and of the receiving State itself. However, how does one remain Japanese when living outside Japan for many years? When, with the passage of time, is a new place (topus) constructed in Brazil?

Housing Policy and Gentrification: Conflicts and Contradictions in the Inner City of São Paulo

During the last decades, Neil Smith is developing a conceptual framework linking neoliberal urbanism and gentrification. In his works, the increasing role of the state as an agent of the market is underlined. Also, according to Smith, in a context of globalization and financial capital, the gentrification is thoroughly generalized as an urban strategy (Smith, 2002). This paper aims to discussing the concept and the elements of gentrification in cities of emerging economies, using as an empirical case the inner city of São Paulo, Brazil. Since the nineties, the central area of São Paulo is being subject of several urban interventions, varying from the promotion of new cultural facilities to the redevelopment of several blocks as a key to increase population in the historical neighborhoods. The most recent intervention presented is using the housing policy as an instrument to promote gentrification, by removing several buildings, today occupied by poor families that were once attracted by low rent prices, in order to make room to new developments to address the housing needs of the emerging medium class. The conflicts and contradictions that are arising from these projects are meaningful and give us strong elements to deepen the political terms of the Smith's concept of gentrification, coloring it with the characteristics of the Brazilian uneven urban development.

HIRATA, YUKIE* (Dokkyo University, kirara0616@hotmail.com)

For a Happy Encounter Between a Researcher and a Participant Living in the Different Contexts of Social Organization of Gender

In this paper I discuss how to interpret and represent individual gender biographies in transcultural research settings when a researcher meets with informants who belong to different social and historical contexts. In my experiences regarding gender biographies in transcultural research almost all informants talked about ‘their’ social norms of gender before telling their life histories, although it is very important to understand the conflicts between their biographies and social contexts. Here it is also implied that the nation-state has still a powerful meaning for informants and a researcher, even if a researcher argue ‘transnationality’ or ‘transculturality’ of the filed to be examined. In this paper I explore whether a methodological effort can help make an adequate co-production for both a researcher and an informant in case that they have different cultural and national backgrounds.

HIRAYAMA, YOSUKE (Kobe University)

Housing and Social Re-Stratification

This article looks at transformations in the role of housing in social stratification. During the ‘golden age’ with high-speed economic growth and generous government subsidies, social inequalities were mitigated by the expansion of middle class home ownership and redistributive schemes of providing social rented dwellings to lower classes. However, with the ascendance of neoliberal prescriptions in the ‘global age’, new housing systems oriented towards accentuating the role of market economies in providing and financing housing have increasingly exacerbated, rather than alleviated, social disparities. There have been widening gaps between the market-included and the market-excluded in terms of housing conditions. Moreover, within market spheres, various variables such as the timing of housing purchase, the appreciation and depreciation of housing assets, the nature of housing investment, the condition of mortgage borrowing, family support in acquiring housing, intergenerational transfers of residential properties, architectural profile and location of dwellings and the number of houses owned have become more definitive in creating social cleavages. In varied fields of social science, position pertaining to labor markets has been regarded as most important in explaining the formation of social classes. However, housing and property ownership have increasingly becoming, and will be, more definitive in reshaping social inequalities. This paper will identify housing related key drivers for social re-stratification and explores housing situations in some exemplar countries such as Britain, USA and Japan in arguing the importance of housing in creating new contours of social inequalities.
Reshaping the Housing System in the Context of Japan’s Post-Growth Society

Many mature economies are now entering the ‘post-growth’ era characterized by low growth in GDP, ageing of the population and increasing social stratification. Japan stands at the forefront of such transformations towards ‘post-growth societies’, where the government is increasingly being prompted to reorganize the housing system within the context of the shrinking and super-aging population, lowering marriage rates and lowest-low fertility, extremely prolonged recession, increased social inequalities, house-price volatility and housing asset deflation, and growing pressure to cut back on social spending and public subsidies. Housing studies have been debated during the postwar ‘golden age’ of social and economic development accompanied by increasing population, high-speed economic growth, expanding housing construction, and increasing rates of home ownership. Such housing debates were linked to the development of wider social theories on social stratification, welfare state and urban transformations. With the entering the ‘global age’, however, the ‘post-growth’ social context now requires a re-examination of housing debates and related theories. This presentation looks at Japan as a vivid exemplar in terms of exploring how housing is implicated in shaping ‘post-growth societies’.

Teachers Concerns and Proposals in Educational and Ethical Practices to Face Uncertainty

In Mexico, teachers that instruct in primary and secondary levels of education are increasingly being evaluated by international and national policies and organizations and are being harshly judged by different social agents, such as mass communication media, public opinion, parents and entrepreneurs. In international tests, our country has been evaluated and compared with many other countries, and has been rated with low levels of educational achievement. To attend this problem the government has proposed continual educational reforms that include diverse types of evaluation of schools, students, teachers and the institutions that are in charge for the preparation of the future teachers. Processes of actualization have not been developed simultaneously and furthermore there have been important changes in the labor conditions that have created uncertainty. In our research project: Professional Ethics for Professors and especially from the open question: which are the five necessary actions to prepare teachers about professional values? we found that teachers are interested in a better cognitive knowledge and actualization, an approach to norms, rules and codes in reference to values and ethical themes, the consequences of their professional decisions, the importance of teamwork and personal relations and communication. Two key aspects are the reference to be a behavioral model to their students and to teach and research not only as a professional but as a life project. These last two answers are more articulated to subjective and individual concerns that search for diverse ways to face uncertainty.

Politics of Food (In)Security in East Asia: Insatiable Appetite for World Food and Agricultural Resources

This paper will be focused on backgrounds of and perspectives for the food (in)security politics in Japan and East Asia, and could therefore be an introduction to the session. With its rapid economic growth, East Asia is widely recognized as one of the most important regions in the world economy. Despite its significance in the globalized agrifood system, very little has been discussed in international academic communities about the realities and transformations of the agricultural sector, food systems, and rural societies in the region. Because of its consumer affluence and limited agricultural resources, the extent of the region’s heavy dependence on food imports has become too significant to be disregarded. According to FAOSTAT, the region accounts for 28.9% and 64.5% of the total volume of world maize and soybeans imports, and 15.6% of the total value of world agricultural imports in 2010. This situation is unsustainable not only for regional economies but also for the world food economy in the era of “the end of cheap food”. A heightened sense of “food crisis”, especially since the 2007/2008 world food price crisis, can be observed at every corner of political, economic and civil society in the region. Unfortunately, in the mainstream discourse, our “food security concerns” are appropriated and manipulated to justify the business-as-usual agricultural and food policy for further agricultural trade liberalisation (e.g. KORUS and TPP) and large-scale overseas farmland investment (i.e. land grabbing) in order to make food accessible in the globalised market at the expense of food sovereignty within and beyond the region.

This paper addresses Chinese women's self conceptions through developing the concept of erotic justice to focus on access to life chances and opportunities for sexual expression, erotic exploration and realisation.

The erotic is conceptualized as more ambiguous, fluid and diffused than sex-oriented sexuality in that as a process it does not focus on one part of the body or one object. It is about connection between currents inside and the world spinning outside, but not limited to the interpersonal (Ho & Tsang, 2013).

Erotic justice, in turn, articulates the demands and anticipations, however, eros and eroticism or ‘erotic economy of life chances’ which are not equal. Indeed, people in their movements, emotions and desires are themselves made in terms of the discourses and unequal differences, of the past, present and future political economy (Foucault 1980; Bourdieu 2001). In short, erotic explorations in everyday life occur within the field of power where they play a game with others who strategize with equal self-interest, but often with more legitimacy (Bourdieu 2001).

In-depth case studies of online narratives of Chinese women have suggested ways in which these women create new identities for themselves through a political of iconogenesis using new social media (Ho, 2006, 2011, 2013). We examined how they articulate the kinds of injustices they face in love, marriages, family and society due to their gender, age, social class, ethnicity, sexual preferences and other social variables. We also identified the strategies that they used to rectify these injustices including becoming everyday icons through their practices of self online and offline.

In creating these new identities, they envisage and locate themselves within new futures in which gender and sexual justice become possible. Their self narration includes a reflexive construction of self where the past is reshaped to fit the present and the imagined future.

The Determinants of Intrinsic and Extrinsic Work Motivation Among US and Norwegian High School Students

This paper investigates the work motivations of American and Norwegian high school students. It centers on types of motivation that are widely defined as either intrinsic or extrinsic to the work itself. The distinction, which has a long history in the empirical study of work values, aims to separate the motivational force of self-development through work from that of obtaining external rewards as a result of work. The paper draws on prior studies of young Americans' work motivations, and attempts to build bridges to cross-national research, which has primarily been preoccupied with the work values of adults. The paper thus aims to paved the way for more comprehensive cross-national research on young people's work motivations. While scholars have disagreed as to whether intrinsic and extrinsic values should be treated separately or as opposite poles on a common continuum, the paper underlines the benefits of not committing exclusively to one understanding, and giving both their due in empirical examination. A key benefit of this approach is that it tackles acquiescence bias, a surmountable challenge when conducting cross-national comparison of rating-based survey data. Regression analyses reveal that national context, gender and ethnicity greatly impact intrinsic and extrinsic work motivations. In the Norwegian context, intermediate variables (grades, part-time work, and particularly high school program) are also strongly linked with work motivations. Conversely, no significant effects of parental education are found in either context, signaling a break with earlier studies.

A Globalizing University Centered in Asia: State and Society Interactions in University Restructuring

A Globalizing University Centered in Asia: State and Society Interactions in University Restructuring

K.C. Ho (Sociology, NUS)

East Asia countries are late comers in international education, league tables and world class university formation. This entry was marked by a fundamental restructuring of the university system, particularly top national universities whose traditional role has been the training of the nation's elite.

My paper discusses Singapore's restructuring experience and its consequencess in terms of its search for international talent for professors and students, its focus on basic research rather than applied or policy research, and its increasingly ambiguous relationship with society and community. Drawing from a large cross-sectional survey of the country's two largest comprehensive universities, the paper discusses the impact of the internationalization drive and its connections to Singapore's global city-state status, its implications of being unhinged from its traditional societal roots from a variety of disciplines: science and engineering, medicine, and business and management, and the reactions of different societal and community groups to this shift.

The Place of Community Practices in City Heritage Projects

The fast transforming city is faced with a systematic tension, the necessity of city building and redevelopment and yet the need for this to be respectful of the different ways of life in the city.

My paper examines two heritage projects, Pomahakan in Bangkok, Thailand and Kampong Glam in Singapore. Both sites represent contrasting ways in which local communities have been alienated from wider city-based efforts branding heritage. Set in a planned Rattanakosin historical park of old Bangkok, Pomahakan represents a case of how local heritage and ways of life are fighting for recognition and preservation alongside the royalist and religious heritage being considered in the "politics of economy of life chances" which are not equal. Indeed, people in their movements, emotions and desires are themselves made in terms of the discourses and unequal differences, of the past, present and future political economy (Foucault 1980; Bourdieu 2001). In short, erotic explorations in everyday life occur within the field of power where they play a game with others who strategize with equal self-interest, but often with more legitimacy (Bourdieu 2001).

In-depth case studies of online narratives of Chinese women have suggested ways in which these women create new identities for themselves through a political of iconogenesis using new social media (Ho, 2006, 2011, 2013). We examined how they articulate the kinds of injustices they face in love, marriages, family and society due to their gender, age, social class, ethnicity, sexual preferences and other social variables. We also identified the strategies that they used to rectify these injustices including becoming everyday icons through their practices of self online and offline.

In creating these new identities, they envisage and locate themselves within new futures in which gender and sexual justice become possible. Their self narration includes a reflexive construction of self where the past is reshaped to fit the present and the imagined future.

HO, SANA* (Seoul National University, sanaho@gmail.com)
Nationality of Food: Food Safety As National Crisis and Nationalistic Ideology in South Korea

This paper examines food safety issues as national crisis and nationalistic ideology in South Korea. Food safety issues are one of the major issues at stake in South Korea recently. The import of US beef and potential threat from mad cow diseases had caused one of the biggest protests in Korean modern history in 2000. The risk of agricultural products imported from China is almost the daily topic on mass media. The uncertainty of possible radiated fish from Japan after 311 Fukushima incidents arouse panic among family tables. Food safety is a topic that touches people's nerves in everyday life.

In this paper, I will analyze the discourses and regulations regarding original places of food productions. My argument is that although food safety is a reason- able issue to worry about, yet in South Korea it is rather a political/nationalistic issue. An agricultural movement calledshintobuli in late 1980s had successfully
built up an ideology that only domestic food is reliable and good for Korean people's body and health, no matter how those foods are produced. Regulations to enforce labeling the origins of food production enhance Korean national identity and sentiment towards their domestic products as well as nation. Fear penetrates when evolving foreign food products. Crisis of food safety thus is not only an issue about health and well beings but rather an issue in political arena. It shows the anxiety and senses of threats when South Koreans have to face other powerful countries around them such as US, China and Japan. Safety only exists inside the door. Nationality is thus not only essential for people, but also for food.

Queer Reproduction in Global Context: How Taiwan Lesbian Building an Alternative Sociotechnical Network of Assisted Reproductive Technologies

While Taiwan is the most LGBT friendly country in East Asia, it is still one of the twenty regions only "married" (heterosexual) couples can legally use assisted reproductive technologies (ARTs). Globally, East Asian countries are the second restrict region (next to Muslim countries) where assisted reproductive technologies eligibility criteria are severely based on marital status. At the same time, the first lesbian parenting social group in East Asia emerges Taiwan, the interesting contradiction between legal restriction and vigorous lesbian parenting desire and association bespeak a theoretically abundant case. In this paper, through more than six years field work, participation and observation in Taiwan LGBT parenting group, the author explores 15 lesbains in Taiwan how did they negotiate to get access to ARTs in spite of the legal restriction. First, the author find self-insertion is not well diffused and used in Taiwan like the United States and some other western countries, and it's due to different feminism movement context and the predominant feminist antinatalism discourse in Taiwan. Second, lesbians in Taiwan disguise as single (with heterosexual assumption) women to fulfill legalARTs treatment, while some physician's consider single women are more legitimate than lesbians to have children despite of both groups are illegal users. Besides, some lesbians have pseudo-marrage with gay people to get legal access to ARTs. Finally, reproductive exile also happen in Taiwan—some lesbians go to Canada and Thailand to pursue ARTs treatments. In this paper, the authors found how lesbains in Taiwan negotiate and navigate their way to procreative desire in existing medical system, their reproduction practices challenges the original ARTs intend. Furthermore, queer actors, knowledge, and ARTs travel beyond borders, not only weaken the state-bound health regulation, but also embody a new transnational biomedical mobilities.

Infiliation Into The Country, Infiltration Into The Mind? Framing Of Asylum Seekers In Israel and Its Consequences For Attitudes Towards Them

In January 2012, the Israeli parliament passed an amendment to the infiltration prevention law, originally passed in 1950 as part of Israel's defense policy against security threats. The new amendment expanded the infiltration prevention law to treat any person who did not enter the country through border terminals as an 'infiltrator' entering Israel illegally. The context for the amended law was the large incoming flow of asylum seekers entering Israel between 2006 and 2012; the new law was intended to systematically deprive them of their basic rights for asylum. While the official 'infiltrator' terminology is relatively new, the term 'infiltrators' has been used by policy makers to describe asylum seekers already before 2008. Thus, the association of African asylum seekers with national threats is, by now, embedded in the Israeli public discourse. This study investigates whether framing asylum seekers as infiltrators is merely not only exclusionary policy measures, but also public support of such measures.

This study is the first to investigate the consequences of Israel's policy towards asylum seekers more extensively. It results in a spatial mismatch between the demands of young households with wealthy parents and following university education entering the Amsterdam housing market is growing, whereas disadvantaged starter groups are increasingly excluded. We will analyze how socioeconomic and parental backgrounds influence young households' decision making on the Amsterdam housing market. Included elements are the age of nest-leaving, tenure type they move into, the type of household they form, and the chance of moving back to their parental home after a brief period of independent living ('boomerang kids').

Processes of gentrification have made most of Amsterdam's inner-city neighborhoods more expensive, the study asks enter... It results in a spatial mismatch between the demands of young households for inner-city living and the supply of relatively affordable and accessible dwellings located more peripherally. This paper looks at the spatial production and reproduction of inequalities, which have been transferred between generations. Increasingly, we see that starters who have wealthy parents move to the most expensive neighbourhoods, whereas disadvantaged residents increasingly concentrate within peripheral parts of the city.

interroger conjointement la nature des mutations du travail en magasin et les registres d'action et de contestation dans une multinationale des services dont la main d'œuvre est essentiellement peu rémunérée, féminine, immigrée et pas ou peu diplômée. S'appuyant sur une série d'entretiens réalisés auprès des salariés des magasins, activistes et syndicalistes du secteur ainsi que sur des observations in situ de réunion et manifestations menées par ces derniers, cette communication souligne les dimensions organisationnelles et institutionnelles de la difficile émergence des formes de contestation dans une firme qui en un demi siècle est parvenue à tenir en échec les tentatives de syndicalisation de sa main d'œuvre.

This presentation is based on the analysis of “discrete” mutations of work, employment and trade unionism in and around the US Walmart stores. While the corporation is experiencing significant technical and organizational transformations, the rise of criticism invites us to question both the nature of mutations of work in stores and the protest records in a global service firm whose workforce is mainly made up of low paid immigrant women, holding jobs that do not require a particular degree. This communication is based on a series of interviews with employees and union activists as well as on in situ observations of meetings and walkouts organized by unions and associations. Through a diachronic approach, it emphasizes the organizational and institutional dimensions of the difficult but ongoing emergence of protests in a firm that, in half a century, has come to thwart all attempts at unionization of its workforce.

Managing the Difference Engine: A Cybernetic Analysis of Discrimination

This paper will propose, as a model, a cybernetic device, deeply embedded in human language and social processes, which produces both separation – of groups and meanings – and unity and convergence. Drawing on evidence from linguistics and sociology it will argue that both movements, of separation and convergence, must be managed by the same device. This has important implications for efforts to manage discrimination of all kinds (e.g. racism, sexism, class divisions), if these opposite outcomes are produced by altering the settings on a single system, rather than by the clash between opposing systems, one of which might exist without the other.

From cybernetics, Bateson’s models for schismogenesis and for schizophrenia will provide a starting point. From linguistics especially relevant will be the work of Chomsky, Labov and the Comparative Philology tradition stemming from Sir William Jones and Saussure, and empirical studies of language change and multi-culturalism will provide concepts and materials. Theories and studies of evolution and development, as in the work of Edelman. From theories of chaos and complexity, the basic framework will come from Prigogine’s account of catalytic and auto-catalytic loops in biological and social life. Mandelbrot’s theory of fractals will be drawn on, as will theories of artificial life.

Social Networks and Strengthening the Participation in Brazil: “Projeto Vidas Paralelas” Experience

“Projeto Vidas Paralelas” – PVP aims to reveal and give visibility to daily life, culture and work from different social groups, from the perspective of the subjects involved, by means of training processes in digital culture and articulation of social networks to strengthen social participation in the construction of public policies, health promotion and culture. It is a proposal for strengthening the social movements and struggle processes through audiovisual training and use of new media as tools of expression, critical thinking and social organization. The project arises from a demand of workers for expanding the visibility of conditions and work processes experienced in the contemporary context and strengthening social participation. Thematic work has been raised by social movements and delegates of the Third Brazilian Conference on Occupational Health held in 2005. Thus, “Projeto Vidas Paralelas” – PVP is articulated and built with all the Brazilian Union Centers and social movements related to occupational health. Between 2008 and 2010 the project was implemented in twenty-one (21) Brazilian states, in a partnership between “Rede Escola Continental em Saúde do Trabalhador”, University of Brasilia, Brazilian Ministry of Culture and Ministry of Health. In 2010 indigenous students demanded the formation of “Projeto Vidas Paralelas Indígena” – PVPI, and in 2012, the process for the construction of “Projeto Vidas Paralelas Campo”. Currently, “Projeto Vidas Paralelas” – PVP is a social network that articulates the major social movements in Brazil, related to urban and rural workers, indigenous and “quimobola” communities. This study aims to share the experience on their theoretical and methodological proposal, as well as socialize the progress and challenges regarding the implementation of the strengthening of social participation through social networks.

Do RRT and the Crosswise Model Produce Valid Measurements of Sensitive Items? An Online Validation Study

Social desirability and the fear of negative consequences often deter a considerable share of survey respondents from truthfully responding to sensitive items such as own norm violations (e.g., nonvoting, tax evasion, cheating). As a consequence, the prevalence of norm violations is underestimated and results are inaccurate. Indirect techniques for surveying sensitive questions such as the Randomized Response Technique (RRT, Warner 1965) or the Crosswise Model (Tian et al. 2007), a new variation of the RRT, are intended to mitigate this problem by providing complete concealment of respondents' answers.

However, it is far from clear whether these indirect techniques generally produce more valid measurements than standard direct questioning (DQ). Furthermore, most systematic evaluations so far compare a particular method's resulting prevalence estimates of sensitive behavior with DQ estimates under the "more-is-better"-assumption and lack a known true value for validation. Under the "more-is-better"-assumption higher prevalence estimates are interpreted as more valid estimates. So, it cannot be ruled out that higher prevalence estimates are a methodological artifact and not the result of a technique's superior validity. Whether or not a particular sensitive question technique truly produces more valid measurements can only be answered for certain with validation studies. But the possibilities to carry out validation studies are rare and the topics' range very restricted. Therefore, we designed an online experiment which allows for the in-depth validation of any sensitive question technique. Inspired by Fischbacher and Heussi's (2008) widely used cheating dice game we developed two dice games where respondents had an incentive to violate a norm, i.e., they could illegitimately claim a bonus payment. After the game, respondents were surveyed about their personal norm adherence, i.e., whether they cheated or not. We used different sensitive question techniques to survey this sensitive item. Resulting prevalence estimates were then validated with the true observed behavior.

HOGSBRO, KJELD* (Aalborg University, kjeldh@socsci.aau.dk)

Institutional Ethnography for Oppressed People

The especially oppressed people in modern society are the people with communicative, mental or social disabilities stemming from brain injuries, developmental disorders and mental illness such as schizophrenia. These people are in many ways marginalized in modern society where social and communicative skills are highly valued and sometimes requisite for achieving a position on the labor market as well as getting into social networks of modern urban subcultures. Being in such a position often makes them ultimately dependent on welfare institutions where they have difficulties in expressing their needs and demands for social relations, daily activities and means for personal development.

Since 1997 the author has been involved in several investigations into the institutional landscapes for these people following the ambitions of an applied institutional ethnography. That means that our point of departure was the life-world of these people and their efforts to get a coherent everyday life and a basis for personal development. With this reference we judged the total structure of insti-
Experiencing It like a “Gogo”: Intergenerational Relationships in South Africa

“Gogo” is the Zulu word (from “ugogo”) for grandmother and this paper will focus on the pivotal role of older women in the context of entrenched inequality and Japanese poverty. An estimated 1.2 million so-called HIV/AIDS orphaned children, of whom around sixty percent reside in grandparent-headed households, exacerbate this and obviously place on the research and policy agenda the continuous asymmetrical dependency and needs of younger generations on older generations. Although these grandmothers’ contributions are increasingly recognised, current explanations of the dynamics within these multi-generational networks lack a nuanced understanding of their complex and ambiguous nature. Drawing on 58 narratives from different generations (a generational sequential approach) in 20 multi-generational networks, this contribution qualitatively explores grandmotherhood in Mpumalanga, South Africa towards a deeper understanding of such intergenerational relationships. The main findings relate to the intrinsic and extrinsic vulnerability of the sacrificing older carer in resource-constrained and uncertain contexts. This has implications for them at the nexus of their individual rights and their future care outcomes.

The Emergence of the European Research Council As Supranational Funding Institution

Structural transformations in the European Union’s funding policy of the last decades have led to the historical emergence of a genuinely supranational funding institution, the European Research Council (ERC). Conceptually orientated towards an institutional approach of the sociology of science, and methodically led by extensive documentary analyses, we empirically analyze historical evidence for the opportunity structure, social mechanisms and effects of European research funding as part of the history of the ERC as an institution. Analytically, we draw a distinction between the following levels of investigation: Firstly, the structural relationship of national and supranational dimensions of the European research policy is located at the heart of a historical interest in Europeanization processes in science. While the ERC as supranational organization can be seen as intermediate in relation to the European Commission and the international scientific community, the transnational organization structurally builds on and reflects historical predecessors at level of national science systems as well. Secondly, we try to clarify in which way we deal with integration or rather disintegrative stratification of European research, reflected in cultural objectives of funding programs such as “transnational cooperation” and “scientific excellence”, and researchers’ socially structured opportunities, ambiguities, and potential conflicts to realize these objectives. Thirdly, seen from a dynamic perspective, we investigate how and to what extent European funding policy’s goals have historically changed and been subject to self-perpetuating processes with unintended effects feeding back to the social structure of European, and global, science as well.

Flexible Work Practices, Workplace-Related Policies and Individual Strategies for Reconciling Eldercare and Paid Employment. Findings from the European Carers@Work Project

Faced with a historically unprecedented process of demographic ageing many European societies extended the working lives of older workers, with the side-effect that working carers have to juggle the conflicting demands of employment and care-giving even longer. This does not only impinge on working carers’ well-being and ability to continue providing care, it also affects European enterprises’ capacity to generate growth which increasingly rely on ageing workforces.

The focus of this paper will be a cross-national comparison of flexible work practices and other workplace-related company policies aimed at enabling working carers to reconcile both conflicting roles in four different European welfare states – Germany, Italy, Poland, and the UK – based on expert interviews with human resource managers and 240 semi-structured interviews with working carers in the four countries. It is analyzed to what extent these company-based measures are path-dependent according to the respective welfare state / care regimes, which resulted in diverging degrees of state intervention and support and, subsequently, varying levels of company-based policies. However, a key finding of the research was a trend towards converging individual reconciliation strategies in the four countries. Finally, varying degrees of gender inequality in the provision of care will be examined.

High Aims, Low Outcome: Implementing Gender Equality in Japan

Japan has ratified the Convention for the Elimination of All Forms of Discrimination Against Women (CEDAW) in 1985. Next to other measures, the Convention led to enacting the Basic Law for a Gender-equal Society in Japan (1999). This law is the most outstanding and far-reaching policy regarding gender-related issues in Japan to date. However, when it comes to gender equality in international comparison, Japan still lags far behind other countries, ranking 101 among 135 countries in the Global Gender Gap Report 2012.

This paper asks for the reasons of the discrepancy between the far-reaching aims of policies for gender equality and the low outcome. By taking the Basic Law for a Gender-equal Society as a case study, this presentation reassesses, how and to what extent the ideas of CEDAW have been implemented throughout Japan and what barriers prevent successful outcome. This question is being taken into account from different perspectives. Next to deciphering the mechanisms and strategies of implementing gender equality on the regional level of the 47 Japanese prefectorates, an outlook of policy change during the DPJ government (2009-2012) and the new LDP government that took over in December 2012 will be given.

The paper draws back on results of the authors Ph.D. thesis on the implementation of governmental gender equality in Japan as well as on a paper on the impact of the DPJ government on the institutionalization of gender equality policies (both published 2013).
Alcohol, the Body and Gender in Later Life

Alcohol consumption in later life has emerged as a public health concern in many advanced economies in recent years associated with an observed increase in alcohol consumption among the elderly. The dominant public health message has centred on the need to moderate drinking in later life due to the direct and indirect impact that alcohol has on frailty in later life. This paper challenges the assumption that increased alcohol is associated with functional as well as social decline, but in doing so recognises how assumptions about the inter-relationship between alcohol consumption are both gendered and class-specific. Drawing on both quantitative and qualitative data on alcohol consumption in later life we explore how drinking is a cultural practice that both resists and conforms to expectations about ageing and frailty. In particular we consider how drinking patterns are both gendered and classed and how drinking is a practice through which idealized norms of femininity and masculinity are performed in old age, but also how these can be resisted. The paper is based on qualitative analysis of the English Longitudinal Study of Ageing and qualitative analysis of focus groups with older people on drinking in later life.

JS-76.1

Youth Leisure As Job Training and the Pursuit of Distinctiveness

In 2009 a group of students at the University of California, Santa Cruz who self-styled themselves as the ‘Research and Destroy Collective’ issued a *Communiqué from an absent future* denouncing how demands on young to perform and be active rather than liberating, were stifling their futures, and that ‘even leisure is a form of job training’. This paper responds to this rally cry to map out how young people are increasingly engaging in leisure pursuits in advanced economies in order to enhance their CVs. I will consider how leisure activities, which may include travel, sport, hobbies, volunteering and membership of organisations, are increasingly seen as ways of standing out from the crowd and demarcating oneself as distinctive. While these quest for uniqueness is not a particularly new quality, the forms of consumption associated with it are. The hypothesis following from Presdee’s argumentation is that the consumption of crime and consumption affects the creation of identities. Furthermore, these body practices into their everyday life. Models’ share several clearly defined professional duties with regard to their bodies, but go about achieving them in various ways. However, virtually all models are engaged in physical exercise and surveillance of food and drink intake. These practices are, for them, a restrictive effect on models’ everyday life routines. On the other hand, these practices are constitutive to a models’ self. Models are not just corporally involved in their profession: their entire daily lives are profoundly affected and directed by the professional mandates of becoming and staying beautiful. Models’ ultimate bodily involvement in the professional production of beauty makes for the negotiation of self to become a necessity for most models: they frame their own body practices as in need for legitimating, as these practices are constitutive not only to their professional, but to their ‘entire embodied selves’. Clearly, in fashion modeling, labor, body and self are intertwined in an exceptionally radical way. Modeling as a profession should therefore not be categorized as simply a form of aesthetic labor (Entwistle & Wissinger 2006). Models’ entire day-to-day life routines, their social surroundings and everything they drink and eat, are geared towards the aesthetic pursuit of becoming and staying beautiful. I therefore go as far as to argue that fashion models are the ultimate embodied selves.

JS-55.6

EMBODIMENT OF BEAUTY, ENACTMENT OF SELF

The paper presents a sociological study of how beauty is defined within the current national field of fashion modeling. Based on ethnographic and interview data collected in the modeling industries of Amsterdam, Paris and Warsaw — this presentation aims to illustrate what male and female models do with their bodies in order to attain professional beauty standards and how they integrate these body practices into their everyday lives. Models’ share several clearly defined professional duties with regard to their bodies, but go about achieving them in various ways. However, virtually all models are engaged in physical exercise and surveillance of food and drink intake. These practices are, for them, a restrictive effect on models’ everyday life routines. On the other hand, these practices are constitutive of a models’ self. Models are not just corporeally involved in their profession: their entire daily lives are profoundly affected and directed by the professional mandates of becoming and staying beautiful. Models’ ultimate bodily involvement in the professional production of beauty makes for the negotiation of self to become a necessity for most models: they frame their own body practices as in need for legitimating, as these practices are constitutive not only to their professional, but to their ‘entire embodied selves’. Clearly, in fashion modeling, labor, body and self are intertwined in an exceptionally radical way. Modeling as a profession should therefore not be categorized as simply a form of aesthetic labor (Entwistle & Wissinger 2006). Models’ entire day-to-day life routines, their social surroundings and everything they drink and eat, are geared towards the aesthetic pursuit of becoming and staying beautiful. I therefore go as far as to argue that fashion models are the ultimate embodied selves.

RC54-864.2

EMBODIMENT OF BEAUTY, ENACTMENT OF SELF

The paper presents a sociological study of how beauty is defined within the current national field of fashion modeling. Based on ethnographic and interview data collected in the modeling industries of Amsterdam, Paris and Warsaw — this presentation aims to illustrate what male and female models do with their bodies in order to attain professional beauty standards and how they integrate these body practices into their everyday lives. Models’ share several clearly defined professional duties with regard to their bodies, but go about achieving them in various ways. However, virtually all models are engaged in physical exercise and surveillance of food and drink intake. These practices are, for them, a restrictive effect on models’ everyday life routines. On the other hand, these practices are constitutive of a models’ self. Models are not just corporeally involved in their profession: their entire daily lives are profoundly affected and directed by the professional mandates of becoming and staying beautiful. Models’ ultimate bodily involvement in the professional production of beauty makes for the negotiation of self to become a necessity for most models: they frame their own body practices as in need for legitimating, as these practices are constitutive not only to their professional, but to their ‘entire embodied selves’. Clearly, in fashion modeling, labor, body and self are intertwined in an exceptionally radical way. Modeling as a profession should therefore not be categorized as simply a form of aesthetic labor (Entwistle & Wissinger 2006). Models’ entire day-to-day life routines, their social surroundings and everything they drink and eat, are geared towards the aesthetic pursuit of becoming and staying beautiful. I therefore go as far as to argue that fashion models are the ultimate embodied selves.
authority of the industry over colonised places / spaces and over histories / contemporaneities. The presentation therefore will principally question:

-1 = Which priority areas of concern in international tourism should be decolonised, if any?

-2 = What would / should / could the decolonisation of Tourism Studies principally entail, or mainly consist of?

-3 = Who should be involved in the so-called decolonised ‘cleansing’ of Tourism Studies?

-4 = How would the decolonisation of tourism be substantiated educationally (in the schooling of practitioners and researchers who currently drive international tourism)?

The main supposition undergirding this paper is that the decolonisation of the so-called bleached realm of tourism (after Pfaelzer’s term “bleached” field / “bleached” contexts) would involve considerable conceptual unsettlement for many of those who work in Tourism Studies / Tourism Management. Much of the required re-oriented understanding would indeed be corrective (as the industry’s internal and collaborative sinsews of oppression are identified). Hence a more fluid acumen is demanded vis-a-vis the fields’ “improved conversation with the world” (after Bauman), where the productive / compossible genius latent with more fluid acumen is demanded vis-a-vis the field’s “improved conversation with the world” (after Bauman), much about the productive / compossible genius latent with more fluid acumen is demanded vis-a-vis the field’s “improved conversation with the world”. Hence, the focus in this paper is on analysis and interpretation of photographs taken by 15-year old students in the comprehensive school in Finland. The importance of the researcher’s language minority habitus in interpretation is explored in relation to the habits of the language minority students.

The teenagers all belong to the Swedish speaking minority group in Finland. The purpose of this study is to explore how the Swedish language minority students position themselves with regard to belonging to the Finland-Swedish group by using photography as well as interviews as the data collection methods. In particular we were interested in exploring how photographs and interviews complement each other. Of particular interest are the teenagers’ identifications with and their views of the Finland-Swedish language minority group.

The study is part of a larger multi-sited ethnography and in this paper we focus on the group of 15-year old students engaged in the analysis and interpretation of photographs taken by students in four schools and 62 interviews and 22 photo elicitation interviews. We found that the photographs and the interviews complemented each other by bringing up different issues. The interviews focused mostly on the language itself and the daily life in school can be unfair for certain groups of students. This unfairness and marginalization can have long-term consequences for welfare and achievement.

In Finland the Roma children have not done very well in school. The national curriculum is very supportive of Roma children but the reality is different. The indigenous Sami population is also doing less well that the majority Finnish students. Students with immigrant background are a risk group with regard to bullying and discrimination.

The group most vulnerable in school is the students with disabilities or long-term illnesses. Of this group about two-thirds have found themselves treated in hostile ways or excluded from the group.

Hence, even in a system that at the policy level officially strive for equality and equity, the daily life in school can be unfair for certain groups of students. This unfairness and marginalization can have long-term consequences for welfare and achievement.

Photography As a Research Method in Exploring Bilingual Teenagers’ Language Minority Group Identifications

Using participatory photography as a research method is underutilized in sociological youth studies. Young people today are comfortable using photographs for communication. Visual research methods are increasing in overall importance, but especially the analysis and interpretation of visual data have not changed much in the last decades. Hence, the focus in this paper is on analysis and interpretation of photographs taken by 15-year old students in the comprehensive school in Finland. The importance of the researcher’s language minority habitus in interpretation is explored in relation to the habits of the language minority students.

The teenagers all belong to the Swedish speaking minority group in Finland. The purpose of this study is to explore how the Swedish language minority students position themselves with regard to belonging to the Finland-Swedish group by using photography as well as interviews as the data collection methods. In particular we were interested in exploring how photographs and interviews complement each other. Of particular interest are the teenagers’ identifications with and their views of the Finland-Swedish language minority group.

The study is part of a larger multi-sited ethnography and in this paper we focus on the group of 15-year old students engaged in the analysis and interpretation of photographs taken by students in four schools and 62 interviews and 22 photo elicitation interviews. Producing Inequality: How Welfare Institutions Influence and Shape Cancer Experiences – Comparisons Between German and Japanese Patient Narratives

This paper aims to understand the influence of welfare institutions on illness experiences, particularly health insurances and income compensation policies, by comparing narrative interviews with breast- and prostate cancer patients in Germany (n=90 for both cancers) and Japan (n=97 for both cancers). Both countries have a comprehensive social security system. Using the data collected for the project Database of Individual Patient Experiences (DIPEx), two levels of comparison will be sought: 1) country and 2) disease type, resulting in 90 analytic groups. Due to language constraints, cross-national comparisons will be based on the analysis within each country is complete with regards to the study question: How do health insurance systems and income compensation policies such as sick leave and disability benefits affect the experience of having cancer?

Preliminary findings show that in both countries breast cancer patients who are generally younger and thus still in the workforce tend to express financial concerns more than prostate cancer patients. However, the impact of financial pressure is more apparent in Japan where out-of-pocket copayments are higher and the terms for sick leave are less favorable to employees, affecting patients’ treatment decisions and the timing of return to work. For German patients who
are eligible for early retirement and disability benefits, the diagnosis in many cases does not present financial disaster. However, receiving disability benefits led to stigmatization through the bureaucratic mechanism in place. Subsequently women discussed feelings of shame and worthlessness induced by bureaucratic mechanisms.

The present study will be one of the first studies in which international comparisons on qualitative interview materials that have been collected in different languages and by different interviewers are analyzed within the same research framework. Thus the paper presents important findings on production of inequality in high-income countries, and provides a new methodology for cross-cultural secondary analysis.

HOLMWOOD, JOHN* (University of Nottingham, john.holmwood@nottingham.ac.uk)

The Neo-Liberal Knowledge Regime and the Displacement of Critique

This paper will address neo-liberalism not as a theory of public policy, but as a theory of knowledge. I will argue that neo-liberalism favours the market as a mechanism for the generation of knowledge. In favouring knowledge under contract, neo-liberalism is explicitly hostile to those forms of social science that provide expertise precisely because that expertise might sanction political intervention. In this context, the forms of social science that are favoured are those that can be commercialized in the form of re-packaging ‘big data’ and ‘behavioural’ interventions. Sociology’s traditional concern with social structures is displaced by anti-social (structural).

Parents Against Radiation: Strategies Towards Advocacy

To what extent do organizations within the larger anti-nuclear power movement monitor, interact with, and possibly influence (local) authorities in the policy making process? Thus in which ways, if any, do these organizations provide advocacy to their members? And how do these compare cross-culturally?

After the triple catastrophe of March 11, 2011 in Japan, as part of the upsurge of the larger anti-nuclear power movement, more than 300 citizen groups were formed throughout the country that joined forces within the “National Network of Parents to Protect Children from Radiation”. Groups within this network use different strategies: Whereas some participate in highly visible protest activities such as mass demonstrations, others belong to the “invisible” part of civil society using less aggressive tactics to influence protective measures against nuclear power, contaminated food and playgrounds.

Our study has a multi-method approach: we combine field research through participant observation with semi-structured interviews and the analysis of our survey questionnaire, conducted among members of all 23 local chapters of the “Tokyo Union to Protect Children from Radiation”, a post-3/11 network of parent social movement organizations. Using this network as case study, we analyze strategies and tactics of political participation which post-3/11 parental organizations use. In a second step, we compare these to the strategies and tactics employed by social movement organizations founded in response to the Three Mile Island nuclear incident in the US more than 30 years earlier.

For the Japanese case, our preliminary findings suggest that whereas strong social capital emerges out of the activities within the group, the impact of advocacy understood as influencing policy outcomes is much weaker. Whereas this result stands in line with existing research, we argue however that the parental groups shape their style of activities to build up sustainable relations with local authorities in the long run.

HOLTHUS, BARBARA* (German Institute for Japanese Studies, barbaraholthus@gmail.com)

Time, Money, Infrastructure: Young Parents’ Needs and (dis) Satisfaction with Family Policies in Japan

Generally, family policies can be categorized into the three pillars time, money, and infrastructure. This is equally the case in Japan. Differences between countries lie in the way a country balances these three pillars. In the case of Japan, the longest running policies can be found in the arena of infrastructure (of day care centers), whereas policies like child-care allowance are newer, and time policies, such as childcare leave and work-life balance policies, have been the most recent addition.

In this paper we ask if parents of young children (up to age 6) are aware of the different policy measures, if and to what degree they use them and if and to what degree they are satisfied or dissatisfied with them. It is furthermore the question if there are significant correlations to be found with such demographic indicators as gender of the parent, their income level, employment status, regional stratification, marital status, and/or the age of their children.

Data comes from a nation-wide survey, conducted by the German Institute of Japanese Studies Tokyo (DIJ) and Benesse Corporation. 2000 mothers and fathers throughout Japan were surveyed in early 2012. The survey data brings new insights into the well-being of parents. We model parental well-being to consist of seven dimensions, one of which is the well-being or satisfaction with family policies, a so far highly understudied dimension of well-being and the focus of this presentation.
Who needs society anyway? Since Weber, many sociologists have shunned the notion of society as a reified collective concept; and in the wake of the globalization debate, the critique of ‘container theories’ of society has further decreased the number of those who regard society as an essential sociological concept. But ‘society without society’ not only runs the danger of discarding an important element of social theory without a proper alternative but also fails to account for the process of the term outside academic discourse. This paper addresses the sociological and everyday usages of the concept of society from a functional perspective. Although the function of society, as the most encompassing social system, must be conceived quite broadly, it nonetheless remains distinctive if compared with other social systems such as organizations and face-to-face interactions. Only loosely related to this functional reconstruction of the concept, ‘society’ also continues to play a role in everyday discourse. Yet what kind of society is thereby discursively constructed? The usages of the term ‘society’ in mass media and other discourses are difficult to pin down; yet a common denominator lies in the fact that society usually refers to an anonymously constituted and therefore not directly addressable social horizon.

Since ancient times, Japan has had an unusual self-care culture. Following Japan’s nineteenth-century modernization, Western medicine has prevailed in the country, and the high health awareness of lay people forms the basis for pro-social interaction. Only loosely related to this functional reconstruction of the concept, ‘society’ also continues to play a role in everyday discourse. Yet what kind of society is thereby discursively constructed? The usages of the term ‘society’ in mass media and other discourses are difficult to pin down; yet a common denominator lies in the fact that society usually refers to an anonymously constituted and therefore not directly addressable social horizon.

Reflecting on Work Practices: Possibilities for Dialogue and Collaborative Knowledge Production in Institutional Ethnography

The presentation explores ontological and epistemological issues of institutional ethnography (IE) in relation to bringing together different knowledges and epistemic commitments. More specifically, the presentation addresses the possibilities for dialogue and collaborative knowledge production between research participants’ practice-oriented, experience-based ideas about their work and researchers’ academically informed concepts. The issues are explored through analysis of how participants in an IE project, namely researchers and maternity nurses, engage in reflection collaboratively on the care activities. The material analyzed are fieldnotes produced at workshops arranged for joint reflection on the nurses’ own work practices as documented on video.

The analysis shows that the possibilities for, and the difficulties of, achieving dialogue emerge from three sources. First, conflicting knowledge interests between researchers and research participants may lead to complementary projects in situations where all parties align themselves with the others’ interests. In such situations, experience-based knowledge may be co-produced through storytelling motives. Second, doing IE is about the researcher moving from one setting to another and taking up different positions accordingly. These fluid positions create constraints and possibilities for dialogue. An outsider expert/administrator’s position and circumstances that reinforce it are not conducive to the articulation of multiple voices. However, it is possible to shift the overall positioning so that the participants may co-produce knowledge. In my case this was done through working with videos and researchers’ provocative commentary that bore on the nurses’4 quick appearances and reflected on. Third, presenting theory-based interpretation that addressed an organizing element of care provoked accounts that addressed the organizing element from a different angle and specified how such organization is actually realized. Reframing the ongoing analysis through such dialogically produced experience-based knowledge means that theoretical concepts are used not to make generalizing statements on commonalities in the material but to put them to test.

After the Dream of Medicine As a Versatile Solution, What Comes Next?

Since ancient times, Japan has had an unusual self-care culture. Following Japan’s nineteenth-century modernization, Western medicine has prevailed in the country, and the high health awareness of lay people forms the basis for promoting medicalization. Modern Western medicine is currently the national standard in Japan’s universal health insurance coverage. Unlike self-care movements closely connected with individual rights, such as in the United States, Japanese lay people’s high level of interest in health does not exert an influence at the institutional level. Thus, medical discourse still has primary influential power. We have studied illnesses that lack objective abnormalities, especially the awareness of fibromyalgia, with respect to both patients and physicians. Although

The Advent of Vulnerability: Socioeconomic Insecurities and Feelings of Social Isolation in Contemporary Japan

Over the past two decades, topics related to social inequality have come to dominate public discourse in Japan. Over the same time span, the number of Japanese who experience socioeconomic anxiety in their everyday life has increased. Analysis of data of a nationwide survey carried out by the author for the German Institute for Japanese Studies (DIJ) in 2009 shows, that an increase of social risks is not only perceived as something affecting others, but that socioeconomic anxieties and fears of social isolation spread throughout all strata of Japanese society. The data indicate that such negative emotions have a strong negative impact on subjective well-being in the Japanese context.

An analysis of who is most likely to be affected reveals objective differences in social status to be only weakly associated with a variation in insecurities. Instead, resources of different forms of trust and individual coping competences – in particular the sense of coherence – are decisive for an experience of status anxiety or social isolation.

However, trust levels, especially in governmental welfare, prove to be low in Japan, and, thus, cannot fully develop their protective function. Japan has not yet managed the transition from a society based on assurance to a society based on trust. Most of all, the young generation is vulnerable and ill-equipped to cope with the new social risks it faces in present-day Japan.

Blocking the Road to the Future: Biases and Misperceptions of Chinese Youth

The future of Asia will be highly influenced by the current opinions of its youth and bilateral relations between China and Japan. The current perceptions of the Chinese youth show that, despite their full knowledge of China, there is a gap in perceived and actual perceptions on issues which are acting as roadblocks in bilateral relations. Previous research suggests that there are highly emotional responses to numerous controversial issues from both sides (Yong, 1997; Choi, 2010; Fan 2012), but little fieldwork has been done to identify the feelings involved in these emotional responses and how individuals perceive their peers’ opinions. Recent surveys conducted by Genron-NPO in 2012 have been able to capture the opinions on a number of topics and the reason for negative opinion, but failed to ask to identify respondents’ feelings as well as how they believed themselves to be perceived by the other nation. Therefore, to improve the relations between the two countries, we need to understand the Chinese youth’s views and build a better future.

Who Feels Powerless?: An Examination on Self-Attitudes of Japanese Youth

Youth labor market in Japan has changed drastically since the beginnings of 1990s. It is often pointed out that both precarity and severity of work, the risk of poverty and social isolation have increased remarkably among Japanese youth. In order to forecast the future of Japanese society and to search for clues to break its deadlock, we need to grasp the precise trajectories and attitudes of young people.

Youth Cohort Study of Japan (YCS), a five-year longitudinal quantitative survey of young people in Japan, provides us abundant information which is beneficial to the purpose mentioned above. Using the YCS data, this analysis focuses on factors which affect self-attitudes, especially the sense of powerlessness and self-esteem of Japanese youth. The reason is that these attitudes are deeply related to agency and resiliency of young people, who is expected to rebuild the staledated social structure.

Among numbers of axes which divide young people, most influential ones are gender, family SES, trajectories of transition from school to work, educational experience, regional mobility, workplace environment and social network. Through multivariate analysis, it is found out that there are remarkable differences both of levels and of factors concerning self-attitudes between men and women. The results imply that Japanese young men, including regular workers who have been thought to be advantageous compared to non-regular workers, feels more depressed than young women. The deterioration of labor condition since the early 1990s had much graver negative impact on Japanese men than women as the change of male-breadwinner norm has been far slower than that of the actualities.

Immigrant Homeland Re-Creation and Healing in Urban Community Gardens of Los Angeles

This presentation will extend the definition of the domestic sphere to include urban community gardens, which I argue serve as critical spaces that allow undocumented Latino immigrants to sustain themselves and to re-create homeland in urban Los Angeles. I focus on undocumented immigrants, some of them indigenous and some mestizos, from southern Mexico and Guatemala. Illegality and legal violence, racism, and marginality characterize urban life in these neighborhoods. Home-making and healing practices occur in these urban community gardens, which become shared domestic space. Mexican and Central American immigrants and their families gather at these gardens to grow familiar foods that nourish them. In the process, they connect their children, some of whom are U.S.-born, with ancestral traditions, attaching them to homeland culture, and to an experience with la tierra (the earth). They are not simply feeding their families, as they are spatially re-appropriating urban Los Angeles and re-coding it with material plant life such as sugar cane, mango trees and corn stalks. The urban community gardens are also healing spaces. The gardeners cultivate and share a range of medicinal herbs, creating informal homeland pharmacies that remedy tooth aches, nervous anxiety and indigestion. The gardens also provide palliative remedies for intimately experienced social problems, including loneliness, social isolation, and the depression and anxiety that accompanies poverty and illegality.

The domestic sphere has always been a loaded place, a site of comfort, sustenance, and belonging, but also, as feminist scholarship reminds us, a site of patriarchal control. In this paper, I present the process of SEE from both aspects: “bottom-up” and “top-down”. Finally, I will present the process of SEE with integrated with the Social Network Theory, in order to present a dynamic description of these processes.

A Special Way of Modernization (“Sonderweg”) or Methodological Cosmopolitanism?

Since the IMF crisis of 1997, Beck and Beck-Gernsheim’s “Individualization thesis” has attracted much academic attention in Korea, for it was seen to explain the importation of modernity and the processes that have already manifested on the peninsula in the early 90s. An important feature of the discourse on individualization in Korea is its intensive focus on the transformation of family forms. Unlike the original German approach of “individualization thesis” as a critique on researches of social inequalities, Korean academic analyses, when employing the same model, are limited to areas of gender and family.

Another important feature of the discourse is Beck’s “methodological cosmopolitanism”. Beck and his Asian colleagues seem to consider the values and institutions of strong Confucian family as unique characteristics of the Asian path to modernization. While the above introduction is based on the assumption that Korean discussions on individualization are exclusively concentrated in areas of gender and family.

Industralization developed in Germany significantly later than in other Western European countries, and for many decades thereafter, the country’s path to modernization was considered as a special way (“Sonderweg”). Beck’s individualization theory, however, aims to explain Germany’s modernization as a typical process of Western development. With the above introduction in mind, I propose to investigate the historical context between “Sonderweg” and the methodological cosmopolitanism of Beck as an initial step necessary for the analysis of the special ways of Asian modernization. I will proceed to make a further comparison between Germany’s Sonderweg and Korea’s path of modernization as a mean to evaluate Beck’s methodological cosmopolitanism, and the implication this has for Korean sociology.

The Power of Expectation: Apply Wisconsin Model in China’s Educational Stratification

Besides Blau-Doncan’s Status Attainment Model, Wisconsin Model is another important model in US to explain educational and occupational stratification and mobility. However, the Wisconsin Model is relatively ignored in Chinese stratification studies. Drawing upon data from a national survey conducted by Tsing-presents the evaluation methods of social emotional stability under educational expectations of Chinese parents: idealistic educational aspiration and realistic educational expectation, and then examines the effects of parental educational aspiration and expectation on children’s educational achievements.

In this paper, first, I describe the distribution of educational expectation levels across different classes both in urban and rural China. Second, I analyze the formation mechanisms of the gap between idealistic aspiration and realistic expectation, examining feasible influencing factors. Third, I adopt a family capital framework, mainly including social and cultural capitals, to explain how educational expectations work in household level. In sum, this paper attempts to reveal the cognitive and behavioral processes of how educational stratification occurred in current Chinese society.

Social Emotional Stability Facing Disaster Warning

Social emotion is a complex system, with a dissipative structure. When the carriers of social emotion percept threaten from a disaster warning, the initiative dissipative structure of social emotional system will be broken down. This study applies the dissipative structure theory of social emotional system to evaluate the disaster warning from the aspect of a complex system. Firstly, we analyzed the dissipative structure features of social emotion and used Social Emotional Entropy (SEE) to measure the changes of social emotional stability, which was explained by the example of the Bird Flu H7N9 events in 2013. Secondly, we considered that social emotion is not simply the totaling of individuals’ emotions, but results from both the combination of individual-level affective factors as well as from the group or contextual level. In that way, we used the Cellular Automaton modeling method integrated with the Social Network Theory, in order to present a dynamic dissipative process of SEE from both aspects: “bottom-up” and “top-down”. Finally, we used a case study to verify the effectiveness of the integrated method. Our results indicated that the social network properties and population characteristics are key determining variables of social emotional stability.

Golden Age - Ageing, Well-Being and Tourism

Population ageing is likely to affect the tourism movements especially in Western countries. The importation of seniors for local tourism economy is growing. Nowadays seniors are expected to be more active in domestic tourism and traveling more often abroad than previous generations. However, there are several reasons why ageing people are not traveling as health problems and lack of resources.

The paper clarifies how active travelers ageing people are and it identifies reasons why seniors are not participated in tourism. The main research question is how well self-estimated health predicts the propensity to travel and travel activity is compared with other leisure activities.

The survey questionnaire was distributed to inhabitants of North Savo region (Finland) in whom turned 60 and over in the year 2012. The response rate was 31 %. In total 1827 inhabitants participated in the survey. The survey was named as Aging and well-being in North-Savo as part of the Age Innovation 2012-2014 Project.

According to preliminary results, only 4 percent of respondents answered they did not participate in domestic tourism but 20 percent were not traveling abroad.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The older age cohort was traveling less than the younger one as expected. The socio-economic differences are wide in domestic tourism and especially traveling abroad. People traveling often were also more active in other leisure activities. Respondents’ self-estimation of their health predicted the propensity of traveling. Health problems were one main reason why ageing people are not traveling (anymore) but also other factors like lack of money.

[HOPMAN, MARIT* (Utrecht University, The Netherlands, m.hopman@uu.nl)]

**Defining Children in Youth Care Interventions**

Within welfare states, attention for the development and upbringing of children is increasing. On the one hand, scientific disciplines such as developmental psychology have professionalized child development and concurrently, a pro-to-professionalization of parenting has taken place. On the other hand, the same attention for development can be found in governmental policies, resulting from the influence of child investment theories. Consequently, parenting support interventions—aiming at parents in their central role as child raisers—have gained in importance. These interventions mostly respond to the child rearing questions of parents. Also, interventions are often selected based on their effectiveness. Although these issues are essential in organizing youth care, this approach fails to acknowledge how these interventions perceive and define children and childhood, and how this effect the ways in which children are raised and develop. This paper addresses two of the theme-related questions:

1. What are the dominant definitions of children’s problem’s and which ideas of social order do they respond to?
2. How do stocks of professional knowledge as well as the practices of intervention on children’s problems evolve over time?

The questions are addressed by using both quantitative and qualitative data from the international research project “Governing New Social Risks”, which centers on the turn to parenting from the 1990’s onwards. In the quantitative part, results of the analysis of parenting support interventions are presented. For example, changes in scientific theories underlying the interventions help us in understanding how children are being defined. In the qualitative part we discuss data gathered through interviews with (academic) experts and relevant decision makers about dominant views and changes in the perception of children and families and of state-family relations. We focus specifically on the Netherlands, but information from the other countries included in this research project will be addressed as well when applicable.

**Gender Differences in Happiness: The Effect of Marriage, Employment, and Parenthood in 33 Countries**

Happiness remains an important measure of psychological well-being. Given the current challenges of struggling global economies and political conflict and unrest, psychological well-being has never been more important. While previous studies have focused that females, the young, the unmarried, and people with lower socioeconomic status are more likely to suffer from lower psychological well-being, they fail to fully capture societal-level conditions’ impact on individual happiness. Although previous studies have focused on how societal conditions affect individuals in a given society and shape perceptions of their personal conditions, in this study I focus on gender. Utilizing hierarchical linear modeling on data from the 2002 International Social Survey Programme, I examined gender differences in happiness and how country-level gender stratification affects the relationship between happiness and family-related predictors in 33 countries.

The results show that there are clear and significant gender differences not only in the level of happiness between men and women but also in the factors affecting their happiness. While, on average, women evidenced lower happiness than men, results indicated that there were gender differences in the effects of being married, not working, and the number of children individuals had on happiness. However, despite expectations that country-level gender equality and egalitarianism in gender norms would improve women’s happiness, the measures of gender equality and gender ideology at the country-level showed mixed results in the cross-level interaction and therefore suggestion are made for future directions in this important area of research.

**A ‘Ritual’ of Surgical Mask Wearing in Japan: A Short History**

The practice of surgical mask wearing in Japan has been adopted by a significant proportion of the national population and has become embedded in people's everyday lives. This paper studies the practice as a 'ritual' and outlines its history in Japan. This notion of ritual is employed in this paper, not analytically, but operationally, in order to highlight the structural/functional aspect of the practice, by which individuals come to terms with invisible threats. In the 1920s, the practice of mask wearing, introduced from the West and conveying the symbolism of modern science, replaced pre-modern 'superstitious' rituals against flu in Japan. It spread among the middle class, with healthy individuals in order to avoid infection, and spread as a matter of social etiquette to the infected, so as not to infect others. In addition to this usage, which continues up to the present, by the 1990s masks had become widely used by elderly pollinators sufferers to avoid inhaling pollen. Some people wear masks in order to prevent their throats from drying up or to keep their faces warm, while others hide their faces behind masks for cosmetic or psychological reasons. More recently, radioactive particles from Fukushima and air pollution spreading from China have been added to the list of health risks to be minimised by wearing masks. Wearing a mask appears to provide peace of mind amidst uncertainties. Its instrumental value in reducing health risks is scientifically substantial, but information from the other countries included in this research project will be addressed as well when applicable.
The Invention of Religion Category and the Formation of the Secular in Japan

This paper examines the social construction of the categories of ‘religion’ and ‘the secular’ in Japan. This is a preliminary analysis of how the term ‘religion’ was imported and translated in Japan, how it was indigenised, how it has been employed by the state to establish the secular, and how the term ‘religion’ is used strategically by people in their everyday language. The Japanese concept of ‘religion’ shûkyô was invented amid the power struggle of international diplomacy against the Western colonial powers in the mid-nineteenth century. It also played an integral role in the formation of non-religion (or the secular), more specifically, the modern Japanese nation-state. After the fall of the shogunate in 1868 and throughout the modernisation process thereafter, the invention of the religion category, in turn, demarcated the modern Japanese secular, the category of non-religion, where the centralised state legitimised its authority over the population. The secularity of the state enabled the government to mobilise various groups classified as ‘religious’ for political purposes, while suppressing so-called ‘pseudo-religious’ groups, in order to achieve the ideological goal of the Japanese nation-state. After the Second World War, these categories of ‘religion’ and ‘the secular’ were formulated under the influence of American-style liberal democratic values and sensitivities, which delimit the post-war Japanese secular. The boundary between these two realms, however, has always been ambiguous and often contentious. This paper argues that sociological studies of religion should critically analyse the social construction of the religion-secular dichotomy, by focusing on the social process in which particular meanings of the terms of ‘religion’ and ‘the secular’ have been constructed and the ways in which the two categories are demarcated from each other.

Managing Complex Organizations in A Global World

Modern business organizations are complex dynamic systems in a complex dynamic environment. This environment has the properties of an eco-system rather than those of a controlled and steered system. This holds for the economy and for its particular subsystems like the health care system, both constituting the complex and dynamic environment of internally complex organizations like hospitals. Such organizations often move at the edge of chaos and sometimes beyond. In their operations they need to be understood as actor-systems at different internal levels. Examples from hospitals will illustrate management problems resulting from the combination of high internal and high external complexity and dynamics. This requires to clarify the concepts of both complexity and organization from a sociocybernetic perspective. A generic reference model of organizations will be used for the subsequent analysis.

Central to this is Luhmann’s ‘s2 dictum, that only complexity can reduce complexity. It will be analyzed how this could be achieved by taking a sociocybernetic approach.

For this purpose concepts will be used like: open information, teamwork, task forces, leadership styles, subsystem autonomy, problem-orientation, staff-line organization, matrix organization, Web 2.0 leadership, organizational culture, mediation, etc.

Any activity, also informational, requires energy. Increasing the efficiency of an organization when facing complexity can be achieved by: (a) Changing objectives, (b) reorganizing structures, (c) reorganizing process, including management, (d) depleting stocks (material, financial, but also health and motivation of staff).

The strategy chosen has to be sustainable without unduly reducing the internal complexity of the organization, essential for its capacity to cope with external complexity. This both according to Luhmann and according to Ashby’s ‘Law of Requisite Variety’.

Hypotheses will be presented, how a sociocybernetic approach to managing complex organizations can help to avoid problems and failures.

Apart from this, the paper will present a sociocybernetic but non-luhmanian approach.
ology, state, modernity, family and kinship, civilizations, and human inequalities. A tentative re-interpretation of Parsons' AGIL-scheme in light of Thorburn's life-long preoccupation with the same themes ends the paper. This brings us to the present state of the discipline, its relationship to the outer world and prospects for its future.

Miracles, Giants, Dragons and Small Tigers: Beyond the Unique, Hybrid, World and Model – Asian Welfare States on the Move?

For two decades, comparative welfare state research on developments in Asia was largely confined to five or six cases: Japan, South Korea, Taiwan, Hong Kong, Singapore, and occasionally China. These welfare states have continued to be in the forefront of recent social research. However, with rise of PRC over the last decade this picture has entirely been changed. On the one hand the focus of global social policy research has shifted towards the monumental transformation going on in China also regarding welfare policy. Chinese social researchers have come to the fore in this area to an extent never seen before. In particular western researchers have flocked to this lump of sugar and interacted with the growing stock of domestic comparative scholars in this field. So far, this stream of research is only in its infancy and the outcome is still uncertain not least regarding its impact on the larger picture of comparative research. On the other hand, in the shadow of the rise of China, a fair amount of research of specific cases in particular in Southeast Asia has completely been neglected by both the comparatists of the traditional cases and contemporary Chinese developments. Recent social policy developments in countries such as Indonesia, Malaysia, the Philippines, Thailand, Vietnam and to some extent also India have become a growing concern among social welfare researchers interested in a particular case. Again, this is another stream of research still in infancy, the outcome is uncertain but there is a dire need to bring such studies into the larger picture of comparative, cross-national welfare state research.

Climate Change in Portuguese Media: Global Politics and the Vanishing National Reality

Portugal is highly exposed to risks and vulnerabilities related to climate change, such as a continuing increase of average summer temperature, more frequent and intense heat waves and a reduction of rainfall, and, as a consequence, floods, droughts, fire hazards, air pollution, erosion and changes in water quality and availability. A recent report (IPME 2010) indicated that increased temperature and changes in precipitation pattern contribute to the likelihood that 2010 will be a record-breaking year, with some areas facing extreme droughts, while others are facing severe floods. In this sense, climate change is therefore not only a long-term threat but a crucial concern for the country's future, and media debates are likely to play an important role regarding the choices that have to be made. In fact, the framing of climate change in the media guides public perceptions of reality and offers hints for thinking and acting (Ettman 2004) from the individual to the policy-making level. In line with the COMapon research protocol, newspaper articles were selected by searching for the keywords “alterações climáticas” (“climate change”) in all items published in three dailies (Público, Jornal de Notícias, and Diário Económico) from 2001 to 2010. A random sample of 25% of the articles published between 2007 and 2010 by each newspaper was selected, and the sample was stratified by year. Results show that the Portuguese press tends to reproduce the global political agenda on climate change, mainly focusing on international events associated with global political decision-making processes, while typically reducing the debate to climate change mitigation. Adaptation's low visibility may be explained by a dependency of Portuguese newspapers on the international political agenda and by the news sources used. The lack of mobilization of national leaders for adaptation may also play a part. This type of coverage tends to obscure local and national realities and responsibilities, though they are key to addressing climate change.

Changes in ICT Usage in Times of Scarcity

The information and communication technologies (ICT) market has been showing a remarkable expansion. Considering the severe ICT global and economic crisis in some countries are currently facing, and the restrictions in several forms of consumption due to scarcity, what changes may be affecting ICT usage in everyday life? This presentation tries to address how are individuals adapting to new challenges related to inequality of (material) access to ICT and a growing digital divide in ICT usage which may emerge and be particularly relevant in a context of scarcity such as the one Portugal is now experiencing.

The research adopts an approach based in recent theoretical developments in sociology of communication, which consists in analyzing media as practice. This perspective enables media research to move beyond a narrow focus on audience practices in order to understand the complexity of contemporary media-saturated cultures (Couldry, 2004). Studying the whole range of practices focused directly or indirectly on ICT allows understanding how ICT are embedded in everyday life and are constitutive of routines (Couldry, 2004; Pink and Mackley, 2013). By focusing on social practices, attention is shifted from the individuals' agency and choice to the prosumption (more subordinated than a mere consumption) of ICT, their embeddedness in routines and situations, their use in social interactions through ICT. This paper investigates how ICT usage opportunities may emerge and become particularly relevant in a context of scarcity. Two main aspects are explored: the ICT usage opportunities that are emerging and the strategies that are being developed to cope with scarcity.

Bringing Science and Academia to the Population: Activities to Raise Questions and Make People Think in Vulnerable Urban Contexts

The university role in society has been increasingly framed by models aligned with the academic capitalism, institutional competition and the quantification of activities/results. These, associated to decreasing resources and public funding, are placing the integrity of the university as a social institution at risk. The roles in society that universities are expected to pursue have also multiplied and substantially increased the burden placed on these institutions. One of the new dimensions of the modernisation of universities is the creation of an educational mission of the university – also dubbed as the 3rd mission. This has been gaining increasing relevance in more recent years as a form to open the university to society. Yet, in most countries, this latter mission of the university is somewhat understood as a fuzzy concept, and there is a tendency to associate it with activities associated with commercialisation of science. In this article, we argue that this may be a simplistic view of the service mission, and that this mission in fact can encompass a range of activities that can not only benefit the university – orienting it to fulfill its social mandate and consolidate its legitimacy - but also contribute directly to the benefit of populations in vulnerable urban areas. Using the examples of the UK, Austria, and Spain, I first outline how labour market restructurings since 1975 have led to a layering of labour mobility: the concentration of labour migrants in low-paid urban areas. Through the use of two cases studies focused on activities voluntary developed by academics of a school of engineering in Lisbon, Portugal, we analyze two strategic activities that aimed at bringing the university to vulnerable populations and if not solve, at least raise awareness about risky phenomena and vulnerable situations. These cases represent an overhaul of the more narrow thinking on the service mission of the university, as they combine activities that interact public understanding of science purposes, with hands-on teaching that applies engineering theoretical principles to real life cases, while fostering interdisciplinary research.

HORVATH, KENNETH* (University of Education Karlruhe, horvath@ph-karlsruhe.de)

Differentiated Rights, Segmented Labour Markets: The Emergence of New Guestworker Regimes and the Making of Marginalised Precarity in Western Europe

This paper contrasts current labour migration with post-WWIII guestworker programmes and argues that hierarchical differentiation and exacerbated precarisation for some migrant groups are the main characteristics of current labour migration regimes. My main objective is to show how both low-wage and ‘elite’ migration programmes are structured by (i) the securitisation of migration and (ii) racialised boundary making. These processes are disguised by the hegemonic notion of migration management. Using the examples of the UK, Austria, and Spain, I first outline how labour market restructurings since 1975 have led to a layering of labour mobility: the concentration of labour migrants in low-paid industrial jobs has given way to a simultaneity of (i) even more precarious forms of employment mainly linked to new forms of racialised boundary making, mainly in the context of EU-integration. Developments are very similar across all three countries – although they represent different “varieties of capitalism”, party systems, migration histories, and welfare regimes. Together they illustrate how the neoliberal political-economic project structures life chances of millions of migrant workers, which we can only fully understand if we develop a critical theory of the state.
This research focuses upon the institutional systems which have been constructed by the regional head-quarter managers of Japanese multinational corporations (MNCs) in Asia-pacific. Theoretical frameworks for dealing with these systems or conditions are notably conceptions of institutional entrepreneurship.

The activities of Japanese multinational corporations in the Asian region are non-traditional. They over decades have been characterized by a tradition in which managerial control has been centralized by its home base in Japan. But this has changed with the expansion of production-consumption in the Asian region. Contemporary MNCs are much more sensitive to local conditions. Such changes have induced new organizational forms with the formation of regional networks surrounding these headquarters with active and energetic horizontal exchanges.

These institutional systems effectively function when activities in regional networks are appropriately embedded into related organizational fields. In many cases, such regional activities are initiated by heads of regional activities in Japan, however they require appropriate and realistic organizational procedures. In general, Japanese expatriates who are delegated from the head office in Japan have played vital roles in such system-construction as institutional entrepreneurs. They utilize their positions and authority derived from the head office, and at the same time they have made efforts to advance their local networks and use resources and relationships in the host community so as to develop a new institutional scheme which is responsive to the perceptions of members who are involved in these networks.

For some reasons, their efforts have not always led to successful outcomes. In this research, the entrepreneurial characteristics that have been shown in the construction of appropriate relations between their networks and the fields are presented in order to identify the factors which determine success and failure.

Elderly Prisoners’ Life World - Comparative Study in NZ and Japan

The Elderly Prisoners’ Life World-comparative study between NZ and Japan

In Japan and NZ the crime rate of the elderly persons (up to 65) is dramatically getting upward since 1990s. I and John Pratt(NZ)have engaged in the comparative studies to make clear the backgrounds and reasons to put the elderly persons committing crimes. Both countries did a lot of effort to prevent them from doing crime and take care for them after release from the prisons. Nevertheless, such kinds of crime policy and the welfare trials were found out ineffective for the decrease their reoffending.

Therefore we make our ideas to understand the elderly people in terms of their life world such as their life plans in childhood, dreams, hope, political needs, religious consciousness, love, alterism, family networks, crime and violence aspirations and satisfactions etc.

Based on the research findings (600 prisoners in Japan and 66 prisoners in NZ) here, we would like to construct their life worlds to get some suggestions to step forwards for them in their future without the criminal lives.

The Determinants of Cross-National Variation in Migrant Accessibility to Rights

Nation-states vary largely in the degree to which the economic, social, cultural, civil and political rights enjoyed by the native citizenry are conferred upon foreign nationals, and rarely do non-nationals fully enjoy even those rights that they naturalize. There is considerable cross-national variation in accessibility to the legal institution of citizenship, but extant studies on the determinants of such variation are fragmented, revealing contradictory findings. Comparative studies, though informative, are largely qualitative and geographically limited to Western liberal democracies, making it difficult to make generalizable claims about other parts of the world. Furthermore, there has been limited theorization on the impact of international exogenous pressures on citizenship and nationality laws. Using the 2001 Citizenship Laws of the World dataset to obtain data on the minimum residency and citizenship requirements for naturalization, we examine how and why nations’ access to rights, this cross-national study utilizes OLS regression to compare the explanatory power of world culture variables against domestic economic, political, and demographic variables commonly used in studies on the determinants of citizenship laws. Results show that international non-governmental organization (INGO) membership best predicts cross-national variance in the minimum residency length requirements for naturalization, thereby suggesting that extensive linkages with NGOs and the resulting diffusion of world cultural scripts on human rights into the domestic society and polity influence a state’s willingness to confer the ultimate means to legal membership and rights.

Many Post-Modern Princes? Rival Cosmopolitanisms in the Global Field of Justice Movements

In this article, Hosseini reflects on the recent organizational and ideational shifts in the so-called global justice movements. While some recent studies conceptualize these movements as ideologically mature and coherent, other inquiries, highlighting growing disorganizations, fragmentations, disappointments, and disputes. The former argue that underlying global solidarities are coherent cosmopolitanist or globalist values, whereas the latter claim that the global justice movements lack the necessary ideological vision for uniting the masses behind a global project for changing the world capitalist system. Alternatively, by drawing on his research project (2002-2006) and examples from the post-GFC uprisings including the Occupy movements in 2012, Hosseini argues that there have been four major parallel trends of ideological changes, dividing the global field of transformative practices between rival camps in terms of their orientations towards cosmopolitanism values. There are however significant potentials for traversing the divisions between the cosmopolitanist camps. Among them is the rise of a new (meta-)ideological vision, coined here transversalism by him. Transversalism assumes the possibility of creating common grounds for dialogue, collective learning or actions among multiple progressive identities and ideological visions in the global field of resistance. It appears in two forms: (1) the extension of any of the above mentioned camps to accommodate some of the principles of the other camps, such as regional Bolivarian cooperation between socialist/populist states in Latin America in recent years, or the idea of Democratic global Keynesianism that attempts to improve the conditions for democracy within societies by adopting democratically developed international regulations; (2) in the form of independent integrative projects based on pragmatic adoption and combination of transformative practices from the camps, such as Economic Democracy.

Relationships Between the Components of Sense of Coherence (SOC) and Stress Responses Among Upper-Grade Elementary School Children — Differences in the Level of SOC —

In terms of the health status of upper-grade elementary school children, previous studies have indicated that pupils with a high level of Sense of Coherence (SOC) have less stress responses. However, it remains unclear how each component of SOC (comprehensibility, manageability and meaningfulness) is related to stress responses according to the level of SOC. Therefore, this study investigated the relationships between the components of SOC and stress responses among upper-grade elementary school children according to the level of SOC. An anonymous questionnaire survey was conducted on 402 pupils in 4th to 6th grade at a public elementary school in Kanagawa, Japan. Based on data from 312 respondents, the SOC scores (total score and each score for “comprehensibility”, “manageability” and “meaningfulness”), the stress responses scores (each score of “physical symptoms”, “feelings of depression and anxiety”, “feelings of displeasure and anger” and “apathy symptoms”) and individual attributes (grade and sex) were used for analyses. The pupils were classified into three groups (high, middle and low) based on their SOC total score. The relationships among the scores for each SOC component and the stress responses scores in the three groups were assessed by partial correlation analyses controlled by attributes.

The findings revealed that the component factors of SOC related to stress responses varied according to the level of SOC. For pupils with high or middle SOC, the stress responses related to related to reduced increases in unpleasant feelings and the loss of vigor or motivation. In contrast, for pupils with low SOC, the sense of comprehensibility was related to reduced increases in sluggishness, headache, depression, and the loss of vigor or motivation. To reduce stress responses among upper-grade elementary school children, it is important to strengthen specific components of SOC, depending on each pupils level of SOC.

Mending the Master Programmes: An Effort to Improve Progression and Completion Rates in Graduate Education

Generally, studies of dropout and completion in higher education have been concerned with undergraduate education and little attention has been paid to graduate level.

The Bologna process has led to a introduction of reforms in higher education in several European countries. In Norway a comprehensive reform in higher education – the Quality Reform – was implemented in 2003. Two of the aims with this reform was to improve the students’ progression and completion in higher education. To achieve this, a number of changes regarding the structure and pedagogy in Norwegian higher education system were introduced.

This article addresses completion and dropout in Norwegian university graduate higher education before and after the reform, using register data consisting of students who completed the reforms were implemented (the 1999-cohort) and one after the (2005-cohort). The aim of the article is two-fold: to investigate if there are changes over time in completion rates and dropout rates in graduate university education, and if the changes can be interpreted as an effect of the comprehensive reform in Norwegian higher education implemented in 2003. To what extent can national translations of international reforms make changes in national completion rates?

Preliminary analyses, including important independent variables such as SES and gender, indicate that there has been an improvement in completion rates after the reform, but that the dropout rate might not have changed significantly over time. This is an improvement compared to previous trends completing on estimated time (2 years). Moreover, the process of completing a graduate university degree in general is more rapid after the reform than before.

HOWALDT, JUERGEN* (Social Research Center Dortmund, howaldt@sfs-dortmund.de)

Social Innovation — Driving Force Of Social Change

The importance of social innovation in successfully addressing social, economic, political and environmental challenges of the 21st century as e.g. poverty and inequality is recognised not only within the Europe 2020 strategy but also on a global scale. However, despite this growing awareness of the significance of social innovation, there is still no sustained and systematic analysis of social innovation, its theories, characteristics and impacts.

Since Schumpeter, the concept of innovation has focused predominantly on economic and technical developments, whereas social sciences were particularly interested in the corresponding social processes and effects. This may explain why social sciences, to this day, have been conducting empirical work on social innovations quite comprehensively, but without labeling them as such and, with few exceptions, without a concept of social innovation informed by social theory.

In light of the increasing importance of social innovation the paper looks at the theoretical concepts, areas of empirical research and observable trends in the field of social innovation on a global scale. It gives an overview of the current situation and the perspectives of socio-scientific innovation research that have greatly contributed to the development and spread of an enlightened socio-scientific understanding of innovation.

It will present the objectives and the concept of the global research project SI-DRIVE (7. Framework programme of the European Commission) which intends to extend knowledge about social innovation (SI). Facilitating empowerment within innovation processes driving social change can and shall be a main result of social innovations. Thus, social innovations need to mobilise citizens to take an active part in innovation processes and thereby enhance society's generic innovative capacity. This requires new models of governance in favour of self-organisation and political participation, allowing sometimes unexpected results through the involvement of stakeholders.

Food Markets of Oaxaca (southern Mexico); Culinary Heritage, Gender and the Slow Food Movement

In 2010 traditional Mexican cuisine - ancestral, ongoing community culture - was inscribed on the Representative List of the Intangible Cultural Heritage of Humanity of UNESCO. Significant element of the indigenous culinary heritage of Mexico is the pre-Hispanic institution of a food market (tianguis).

In Oaxaca state, this institution is characterized by its ethnic and cultural heterogeneity and rich biodiversity and its regional cuisine considered to be the most sophisticated in Mexico and well established network of traditional markets. Nowadays, those lively, highly gendered spaces are not merely tourist attraction but still form a crucial part of local economy and communal life.

In the same time, new styles and spaces of consumption have emerged in the region due to advances of globalization and intensified processes of human mobility (migration, tourism, growing expatriate communities etc.). One of them
is recent, western trend of ‘slow food’ markets, shops and cafes established in
geentrified urban spaces as well as middle class suburbs of the state capital.

Based on the results of fieldwork carried out in 2011 and 2014 in the central
part of the state of Oaxaca (Vollas Centrales) this paper analyzes the ambiguous
relation between two seemingly similar, but heavily diversified along gender, class
and ethnic/national lines patterns and ideologies of consumption that can be ob-
served in contemporary marketplaces of Oaxaca City: traditional, indigenous/ mestiço,
peasant usage of food versus those promoted by the local branch of slow
food movement connected with new, transnational urban lifestyle. Moreover, it
points out the implications and dubious outcomes of the ongoing changes in
Oaxacan urban foodways for indigenous communities and especially those who
traditionally produce, cook and sell food at local markets – Indian women.

From Environmental History to Sustainable Future? On the Taiwan Experience and Beyond

In this presentation, I will draw from the lessons of Taiwan’s local environmen-
tal history in 10 counties and cities over the past 60 years to assess the possible
future for sustainable development.

First, I will sketch the overall and particular historical trajectories of how local
environment has been affected and become deteriorated by human actions and
government policy factors such as ill planned industrialization and over urbaniza-
tion in many localities.

Second, I will look into the rise, development, and effect of green local civil society
forces in the forms of anti-pollution, nature conservation, and anti-nuclear
power protests that have tried to stop the pro-growth path and reverse the envi-
ronmental injustice in various counties and cities.

Third, I will then assess if the slow yet steady paradigm shift facilitated by the
green movements has been effective enough to change the government-business
collective mindset and even lead Taiwan to a sustainable and just development
future.

lyhvZ2@cam.ac.uk)
The Unspeaking Shame – the Politics of Memory during Cold War in Taiwan

How do political victims recall and deal with their pasts after prolonged griev-
ous state violence? This is a research aims to account for the way in which the
politically victimised ones in Taiwan look back on their pasts during the Cold War
from the present point. Whilst conducting interviews with the victimised individu-
als, as former state enemy, informants are prone to conceal their pasts as to their
treason crimes, and even tend to deny the pasts in public. The attitude highlights
the impasse of transitional justice work in Taiwan, while the society has not pro-
vided the former state enemies enough rooms to voice their deeds that had once
seemed to be committed crimes. In addition, informants of the research express
an emotion of shame that they even have never voice to the loved ones. Yet,
after the fieldwork for years, the informants disclose their unspeaking shame to
researcher such as me during interviews. It is salient to denote that the emotion of
shame that this research has interested with their memories is not remnants of the state
violence or political stigma. In stark contrast, a shame was derived by the depression
of not revolting the regime successfully. As the society see these individuals as
victims, they tend to see themselves as revolutionaries instead.

The research aims to elicit the hidden context of the collective state of mind of
the former state enemy in Taiwan. With in-depth interviews and collected data,
the paper manages to analyse the subjectivities of these individuals through their
memories. By unraveling the way in which the victimised individuals remember
their life stories, the research aims to deliver another perspective of the politics
of memory in Taiwan.

HSIAO, MIN-YUE* (The University of Tokyo,
miesiao@gmail.com)
“My Girlfriend Said She Won’t Live with My Mom in the Future”: Online Discussion about Relationship in Taiwan

The contemporary self-help culture raises scholars’ interest, through it to
investigate whether the discourse and imagination of intimate relationship or
biographical pattern and life decisions. However, although people still rely on
advises and counsels from self-help books and manuals written by experts and
professionals when they are troubled by problems about relationship and life,
more and more people login to online forums to ask for advises from other or-
dinary people. Not only in new media but in non-western context is the self-help
culture significant and prosperous, though in different ways from western societ-
is on which most studies concentrate. Therefore, this study aims to inquire the
advising interaction about intimate relationship on an online forum (Boy-Girls) of
Taiwan’s largest virtual community (PTT).

Through a yearlong fieldwork and discourse analysis in this community, I ex-
amine the discourses about intimacy in Taiwan and compare with what have been
suggested in the previous studies based on the Western self-help literature in
print media. The online advising discussion shows different concerns and dis-
courses about intimate relationship, and has a different relationship between
advisers and advisees. First, family issues, gender difference, and ethics of relation-
ship are main themes in the discussion. Secondly, comparing to what have been
indicated in the past, the discussion in virtual forum concerns less self-centered
than ethics-centered, less value of self than equality between genders. These
discourses may promote a perspective of intimacy based on rather mutually de-
pendent partnership than ego-centered atomic individuals. Finally, the pattern of
the production of discourse in online forums is different from the way structured
in mass media which allows only one author/expert/advisor preaches their ideas/ ex-
perience/strategies to the mass audience. In this sense, the different relation-
ship between advisers and advisees in new media, I argue, is the reason resulting
in different discourses about intimate relationship and self.

Big Data: The Concept in the Next Society

In our society, each social phenomenon leans on every new concept to clarify.
Concept of “Big Data” reveals the novel route to further illustrate our society.
Combining endless possibility in the society nowadays, connection produces
innumerable different situation since they are highly correlated. These variable
contexts currently become a huge complexity than within the modern society in
the sense of Niklas Luhmann. Therefore, the aim of next society is finding a way
to construct the order of the system (in the sense of Dirk Baecker), not reducing the
complexity instead.
Facebook demonstrated a solution, which has been developed by the society. By
algorithmic programming in Facebook, each loose coupling (uncertainties) click of
the user is now referring to different distinction and building up the boundary of
meaning. Every time user clicks “like” on status that it means he understands
something. Following understanding and meaning, the uncertain state will soon
transform into certainty, namely stable state or the order. Thus, using the endless
uncertainty is possible to construct the order or coexist with other systems.

The novelty of “Big Data” isn’t itself but clarify the targeted question. The paper
illustrated how Facebook reveals the solution to the problem of the next society,
computer society, as Dirk Baecker said.

Living Arrangement, Intergenerational Support, and Life Satisfaction in Japan, Mainland China and Taiwan

The unique style of coresidence in East Asia is a three-generation household. This is not only strongly endorsed by cultural values with emphasis on respect for parents, but this also forms a basis for preventing intergenerational changes between younger parents and adult children. There are three main questions to be answered in this study. First, how does living arrangement influence material and instrumental support between generations? Second, does this influence vary by countries in East Asia? Finally, what are the relations between living arrangement, intergenerational support, and individual life satisfaction?

In this study, we used data from 2006 of the East Asia Social Survey. Results show that coresident children in these three countries tended to provide more support to older parents and also receive more support from older parents. Older parents who lived with children tended to give more support to children; however, coresident parents in Taiwan received less support from children than parents who didn't live with children. Results from logistic regression models suggest that while living with own parents does not appear to affect adult children's life satisfaction in these three countries, greater giving support to own parents was associated with a higher level of life satisfaction of female adults in Mainland China and male adults in Taiwan. Japanese males who didn't live with father-in-law and who contributed more support to in-laws tended to be more satisfied with life. Taiwanese females who didn't live in the same neighborhood with mother-in-law were likely to be more satisfied with life. Furthermore, males in Mainland China who lived in the same neighborhood with their adult children tended to be more satisfied with life. While living arrangement was not associated with life satisfaction of older parents in Taiwan, receiving more support from their adult children would facilitate life satisfaction of older parents.

Sociology As Social Memory: Narrative Identity and Knowledge Construction in the Study of “Chinese Modernization” in Cold War Taiwan

Man is a story-telling animal and sociologists are not an exception. Sociological works are often more informed by historical narratives that function as particular forms of collective memory than sociologists would have admitted. My article aims to show how sociology may be a major agent of collective memory and identity formation by analyzing the sociological study of “Chinese modernization,” especially the case of Kwan-hai Lung (1906-1983) as one of the major founders of sociology, in Cold War Taiwan. The study of Chinese modernization in social sciences in general and in sociology in particular were promoted mainly by scholars of Chinese Mainlander background who exiled to Taiwan, where the Japanese colonial rule just ended, after 1949 owing to the Chinese Communist Party’s victory in Chinese civil war. These scholars dominated Taiwan’s social sciences in the Cold War era up to the 1980s. The Mainlander sociologists in exile were haunted with the bitter memory not only of their displacement, but of modern China’s cultural trauma caused by foreign oppression. Embracing Chinese nationalism and the modernization theory imported mainly from the U.S., they hoped that China could become a rich and powerful nation by modernizing itself. By integrating the metanarrative of global and Chinese modernization and the metanarrative of Cold War into their sociological works, they became a major story-teller who endeavored to narrate post-colonial Taiwan back into relationship with the Chinese nation. As an important source of public narratives, the sociological study of Chinese modernization helped in the construction of collective memory and national identity in Cold War Taiwan. Situated in the context of the political and cultural inequality between the Mainlanders and the local Taiwanese, however, their historical narrative and their study of Chinese modernization per se were ready to be co-opted into the ruling ideology of the Chinese Nationalist Party.

The Effects of Sibling Structure on Fertility Decision in Taiwan

Drawing from theories of son preference and family resources, this paper attempts to construct a sequential fertility model, and then uses it to estimate the probability of parents’ fertility decisions of their first few children by the sibling structure and to elaborate the effects of various socio-demographic factors in Taiwan. The data used in the analysis come from the PSFD (Panel Study of Family Dynamics) in which respondents were born between 1934 and 1986 in Taiwan. The main findings are as follows. Firstly, the sibling structure has a significant effect on fertility decision. Secondly, the gender-balance hypothesis is rejected, whereas the son-preference hypothesis is supported. Parents with daughters in their first three births have a greater likelihood to have a next child. Thirdly, son preference and son investment have an opposite effect on fertility decision. The number of sons tends to reduce the likelihood of parents to have a child.

Fourthly, the hypothesis of social stratification makes similar fertility decisions. Fifthly, the data didn’t support the cohort hypothesis, because the patterns of fertility decisions by different cohorts appear the same. Finally, the significant effect of sibling structure indicates that fertility decisions are made in a sequential decision-making process in Taiwan.

Colonial Legacy and Development in East Asia: South Korea and Taiwan Reconsidered

Conventional wisdom attributes the post-war ascent of Taiwan and South Korea to the role of the “developmental state”. Specifically, the formation of the developmental state in both countries has been attributed to similar causes: post-war geopolitics; land reform; or even, by some, to distinct forms of Japanese colonial rule. A focus on external factors assumes the impetus of post-war East Asian development stems from the external big bang that shook up the existing social orders and molded two different societies into being alike.

Yet, advocates of this position have been unable to explain the different patterns of industrialization and economic organization in Taiwan and Korea despite similar external challenges. On the other hand, the literature that focuses on endogenous factors in the making of contraceptive patterns in Taiwan and Korea has become ahistorical. This paper joins the debate through a reinterpretation of the origins of the post-war political economies of Taiwan and South Korea. While acknowledging the importance of conjunctural forces in shaping the direction of development, I argue that the existing social structure matters: its interaction with the state shapes and constrains state choices and thus can account for the variations in strategies.

I make three claims to explain the divergence between Taiwan and South Korea: First, I illustrate how different configuration of state-society relationships (the state-business relationship) responded differently to similar historical conjunctures. Secondly, I highlight the different responses from society and the dynamics of the state-society relationship in shaping industrial structures and industrialization patterns. The existing social structure played an important role in shaping and constraining state choices at the transition to industrialization. Thirdly, I illustrate how these historical events have helped to reinforce the established patterns of state-society relationship, (Korean state and large capitalists nexus versus Taiwanese state and numerous SMEs alliance), rather than flattening them out.

Constructing a Quality Regime: The Origins of Taiwan’s Export-Led Capitalism

Two key features of East Asian capitalism are the predominant involvement of the state in the economy and success via “export building”. This paper revisits one of the original successful tigers, Taiwan, by examining the mechanisms of state-business relationships in its quest for integration into the global economy. The conventional explanation of East Asian development focuses on the state capacities in shifting to export-led industrialization (in contrast to the lack of such state capabilities in Latin America and India) and the emphasis on industrial policies to induce entrepreneurship. A direct implication of this interpretation is that when the state intervenes, it tends to produce large firms and encourage industrial concentration. Yet, the Taiwanese SMEs as key exporters has run against the evidence elsewhere. If export-led development is an important element in understanding East Asian capitalism, and if the state-centric thesis is to have any explanatory power, we need to show how the East Asian states enforce firms in the world market. Specifically, how has Taiwan, as an example, coordinated a system of SMEs in its quest for integration into the global economy?

Through in-depth case studies of the 1970s key export industries, this paper illustrates the patterns and ways in which the Taiwanese state coordinated and interacted with the decentralized SMEs. The linkages between the state and SMEs were through varieties of technology and export promotion programs carried out by various kinds of semi-governmental organizations with an emphasis on technical standardization (at the firm level) and ensuring quality control. These mechanisms are crucial in overcoming barriers and establishing economies of trust, and they had an impact on the formation and patterns of firms’ subsequent technological learning.

This reinterpretation of Taiwan’s post-war experience is relevant to debates on models of Asian capitalism(s).

HSU, ERIC L.* (University of South Australia, eric.hsu@unisa.edu.au)

On Appropriation and Japanese Sociology: The Case of Postmodern Social Theory

What does it mean to appropriate a social theoretical approach—initially developed elsewhere—into a different social context? The aim of this paper is to interrogate this very question through the prism of contemporary Japanese sociology. While some theorists and researchers have suggested that the practice of appropriation indicates a lack of creativity, others have suggested that something more intricate and innovative has been at work in Japan (Elliott, Katagiri and Sawai 2013: 11-12). In this paper, I substantiate the latter interpretation of Japanese sociology by exploring how postmodern social theories have been used to generate insights about contemporary Japanese society in new and unconventional ways.

Although postmodern social theory is now regarded as a largely defunct—if not also unproductive—area of study in the Western world (e.g., Ryan 2007), Atsushi Sawai (2013) describes how the field continues to remain relevant in the Japanese context. This is because Japanese scholarship on the postmodern has not remained overly fixated on the issue of epistemology, as a sizeable portion of postmodern social theory in Japan has sought to analyze various social transformations and events.

It is also crucial to note that the scholarly debate on postmodernity and postmodernism in Japan has not unfolded in the same way as it has in the West. What is unique about Japanese postmodern social theory is that it has not simply held a ‘diachronic’ view of postmodern culture (Koto 2006). Some scholars have noted that it is possible to detect postmodern features in pre-modern periods of Japanese history, and that postmodern culture may be more ‘indigenous’ to Japanese society than otherwise thought (Katarani 1985).

Post-Developmental State with the “Therapeutic” Turn: The Case of Taiwan

The East Asian developmental states fell for decades due to global economic restructuring and their respective contradictions and dilemmas. Political exploration of post-developmental scenarios remains ongoing. In Taiwan, this exploration could be termed as “therapeutic turn” in three respects. First, the Taiwanese welfare state, that is the implementation of the National Health Insurance, wherein population health became a new ideology of legitimization. Second, health industry in its inclusive sense has been targeted as a promising techno-economic paradigm, along with the descending information and communication industry, for a new mode of growth. Third, there is a ‘managerialistic-developmental’ creation of national system of innovation for promotion of the targeted industries. However, policy paradigm characteristic of marketization of healthcare system, profertilization of health promotion on the one hand, and intensifying workforce rivalry on the other, contribution to a downturn since the current mode of growth, regulatory regime and accumulation strategy, which turning to a more far-reaching organic crisis. Writing from regulation approach, this paper argues that why the Welfare turn is in fact a political project and illustrate how the therapeutic turn of Taiwanese post-developmental state runs into crisis.

Is There a Motherhood Penalty in Taiwan? The Effect of Childcare on the Wages of Women

Does motherhood affect the wages of an employed woman? Because women generally take the major responsibility of childcare, researchers have noted the effect of childcare on the wages of women. At least three theories have been developed in the United States of America and Europe to explain the relationships between motherhood and lower wages. These theories include mainly human capital theory, neoclassical theory of compensating differentials, and statistical discrimination. First, scholars employing human capital theory have assumed that many women spend time at home caring for children, interrupting their job experience. This interruption is likely to reduce the accumulation of human capital such as work experience, seniority, and formal skills. Therefore, the loss of the human capital may have an influence on later wages. Second, the neoclassical theory of compensating differentials suggests that mothers may trade off higher wages for “mother-friendly” jobs that are easier to accommodate their responsibility of childcare and employment. Finally, the main argument of statistical discrimination is that employers may discriminate against women because of their motherhood status. Compared to the rich evidence of childcare wage penalty in the United States, the relationships between motherhood and the wages of women have not been well investigated in Taiwan. Therefore, this paper aims to examine the wage penalty for motherhood by using data from Panel Study of Family Dynamics with fixed-effects models. The research analyzes whether the effects vary by different marital statuses.

The Knowledge Inequity in Hidden Curriculum of Taiwanese Higher Education Under the Trend of Globalization: The Comparison Between Private General University and Technology University

The knowledge condition in higher education under the trend of globalization has been moving toward post modern universities, which is consistent with the argument of Lyotard (1984) – the rise of performativity. Under the dominance of performativity, the curriculum with practice, efficiency, performance or productivity has undoubtedly become the important strategy for universities. Moreover, the vocationalization of curriculum in higher education and the hidden curriculum of performativity especially in higher education institutions.

It is worth studying whether there remains knowledge classification in terms of management and skills among students between the hidden curriculum of performativity in private general universities and those in private technology universities. The inequity as well the corresponding consequence in the workplace is the main issue of this research.'

This paper aims to explore the relevant arguments about vocationalization and hidden curriculum of the higher education under in the trend of globalization. Samples for case study include two private universities, one general university and one technology university, from which the knowledge classification and the inequity in the hidden curriculum of performativity will be explored.

This a qualitative research and the method includes text analysis and interviews. It is expected that the vocationalization of curriculum and the inequality in the hidden curriculum of performativity can be unveiled for the reflection of the undergraduate curriculum related policies in higher education institutions.

Key words: the vocationalization of curriculum in higher education, globalization, performativity, hidden curriculum, sociology of knowledge

Social Capital, Civic Engagement, and Political Efficacy in East Asia

This study attempts to explore plausible mechanisms among social capital, trust, civic engagement, and political efficacy in four East Asian societies. The data are from the 2012 East Asia Social Survey on Social Capital, including data from Taiwan, China, Japan, and Korea. This study differentiates social capital into individual social capital, organizational social capital, and trust. Individual social capital is measured by the diversity of accessed position-generated networks, and organizational social capital is measured by the diversity of voluntary associations people participated in. Trust is classified into three types of trust as well: trust to personal contacts, trust to public agents, and general trust. This study attempts to examine the effects of individual and organizational social capitals on three types of trust, and then furthermore examine the function of all types of social capitals in terms of civic engagement and perception to political efficacy. One dominant and most universal mechanism of effect is that there is a positive effect of position-generated social capital on all types of trust in all East Asian societies except that in China. In China, diversified social capital is vulnerable to trust which quite supports some finding on the vulnerability of weak ties in socialist society. The effects of organizational social capitals on trust to government agents and personal contacts are stronger in Korea and Japan, but the position-generated individual social capital has strong effects on trust to personal contacts and general trust in Taiwan. Both individual and organizational social capital affect civic engagement in four societies, but the effects of these two social capitals on perception to political efficacy even are stronger except for those in Korea. Trust to government agents and trust to personal contacts have direct effects on the perception of political efficacy in four societies, and trust variables also become intervening variables in Taiwan.

Green Home for Whom? Estimating Green Housing Opportunities of Various Socio-Economic Groups in Nanjing China

Although sustainability is considered an integration of society, economy, and environment, it is criticized that the concept of sustainable city is not necessarily accessible or affordable to the majority. The improvement of the quality of life after sustainable plans leads to a significant market premium which can only be afforded by the minority rich. Take Nanjing China as an example. In the transition from an industrial to a post-industrial city, Nanjing government attempts to build a sustainable city by constructing green apartments, improving metro networks, and diversifying social housing in higher income areas. However, the green apartments and metro networks are mainly built in places with good accessibility and neighbourhood quality. The high prices make green apartments as a symbol of luxury for the upper-middle class. To involve different socio-economic groups in developing a sustainable...
city, it is essential to understand the role of housing affordability playing in it. This article estimates green housing opportunities of various socio-economic groups in Nanjing China according to their affordability and housing preferences. It analyses the effects of sustainable plans on housing opportunities by comparing three urban development circumstances: the current situation, after improvement of the metro network and after relocation of heavy industry. Results indicate that in the current circumstance, the lower-middle class has slim chance to have a green home across the city. The improvement of metro network can increase the green housing chances for the lower-middle class in the central areas only if they sacrifice their housing size. The relocation of heavy industry can dramatically increase the green housing opportunities of the upper-middle class in the central urban areas, but will push the lower-middle and middle class moving to the suburbs due to the high prices. To ensure social equity in developing a sustainable city, policy makers need to consider affordability and sustainability simultaneously.

Parental Migration and Adolescents’ Transitioning to High School in Rural China
The transition from middle school to academic or vocational high school or work is a crucial period for adolescents in China. It has profound implications for both the individuals’ lifetime status and the society’s educational stratification and social inequality. Educational reforms beginning in 1980s have raised direct costs of education for individual families and widened regional disparities in education opportunities. Returns to schooling have increased in both rural and urban China. Growing opportunities of migrant work in urban China provide alternatives to economic mobility. Facing unequal opportunities and constraints of pursuing education, how do rural adolescents choose to follow different trajectories of transitioning to high school?
This paper investigates how parental labor migration influences rural adolescents’ transitioning to high school of different levels or migrant work after or even before graduation from middle school. Millions of rural children are left behind in rural China for years as their migrant parents work in the city. Parental migration may lead to increased financial resources, decreased parental supervision, more demands on children’s time and labor on housework or farming, access to parents’ information and networks on migrant work opportunities, and changes in parents’ values and attitudes about children’s education. These mechanisms will in turn affect children’s aspirations, motivations, academic performance and educational outcomes in different ways.
The data used is collected from my fieldwork following groups of students and dropouts from 3 middle schools located in a typical migrant-sending county of Central China. I used mixed methods to obtain detailed information from student participants, caregivers, teachers and the schools. Data from multiple time points and sources allow me to contextualize life circumstances for rural adolescents, and to examine who continues to high school and why. Both qualitative and quantitative analysis will be conducted.

Institutional Divergence in Petrochemical Industry of Mexico and Taiwan: Combined Effect or Failure of State Intervention and Liberal Marketization?
This paper examines the shift from interventionist state to market-led growth in petrochemical industry for both Taiwan and Mexico since 1980s, which leads to the formation of mixed –market economies (MME) in these two countries. Despite the similarity, Taiwanese petrochemical industry demonstrates a backward and forward linkage in a full scale of privatization, whereas Mexico comes to a rupture in backward linkage and importing a large quantity of immediate chemical products with huge trade deficit while implementing privatized contractors.
This paper argues that despite the transition of state policy from interventionism to neo-liberalism in the 1980s, the differences in economic performance of these two countries’ petrochemical industries are determined by the different kind of market institutions-building and state-business collaboration, a result of respective path dependence in Taiwan and Mexico.
The initial finding shows that the Mexican model of state-business coordination via “PEMEX and contractors” and strategic alliance have failed to create incentives for public-private partnership as well as attract investment due to state ownership of oil in the upper stream and oligopoly among big corporations dominated by a few business groups in the middle stream of Mexican petrochemical industry. By contrast, in Taiwan’s case the effectiveness of state intervention lies in developing a state-business co-evolution model, featuring not competing with business but rather complementing to business needs in the market. It seems that the continuity of state intervention in Taiwan has penetrated into the era of neo-liberalism, while lacking monopoly and oligopoly in Mexican case.

The Taste of Home: Food, Identity, and Community Among Chinese Marriage Migrants in Taiwan

This study aims to explore the complexities of boundary-negotiation, identity, and the sense of belonging through examines foodways in cross-border marriages between Taiwanese men and Chinese women. Analyses are based upon data collected through ethnographic research conducted in Taiwan. Food is not only a necessity in daily life, but also a contested site where gender, class, and ethnicity intersect. Chinese marriage migrants are often depicted as opportunistic gold diggers in the Taiwanese society. Not only do they suffer various forms of discrimination from the general public, but even more unbearably, within their own family. This research shows that living arrangement has a great influence on Chinese marriage migrants’ agency. In a “three generation cohabitation” setting, the dining table becomes a battlefield between Chinese immigrant wives and their Taiwanese in-laws. Chinese immigrant wives’ food preferences and cooking habits such as the general usage of oil, salt, MSG, and other condiments are associated with their national origin, further classified as the lack of modern knowledge and inferior. In the name of a “healthier” diet, Taiwanese in-laws often despise Chinese marriage migrants cooking habits and ask them to adapt. Food consumption and cooking styles not only draws a subtle ethnic line between Chinese marriage migrants and their Taiwanese in-laws, but also serve as a marker of status and class. Facing such difficulties in the domestic sphere, Chinese marriage migrants often claim that unlike many restaurants in Taiwan, what they cook are the real “authentic” Chinese food. They develop a nationalist discourse as a means of asserting their subjectivity and the legitimacy of being a good mother. With limited agency in food consumption in their own household, Chinese marriage migrants, despite they come from different regions, have collective memories and establish a special bouding, a sense of belonging through food making and sharing.

“I Want to be a Breadwinner Too”: Chinese Marriage Migrants’ Narratives of Gender, Identity, and Family in Taiwan

This study aims to explore the intricate gender dynamics in cross-border marriages between Taiwanese men and Chinese women. Analyses are based upon data collected through ethnographic research conducted in Taiwan. Gender is not only a major element to immigrant identity, but also a vehicle for minority groups to claim cultural superiority over the dominant group. Taiwanese men and Chinese women have very different expectations of gender roles in marriage. Taiwanese men and their parents expect Chinese women to behave in a traditional way – be a good stay-home wife/mother/daughter-in-law. Yet Chinese immigrant wives, who grew up in communist China, consider such expectations outdated. Most of these women anticipate Taiwan as a more modern and Westernized society before getting married, but only to find out that patriarchal ideology and practices still prevailing. In contrast to stereotypes portraying Chinese marriage migrants as lazy and opportunistic “gold-diggers,” many of these immigrant wives, despite external immigration policies and their lack of local networks, express a strong desire to work. Being confined in the domestic sphere, these Chinese women long for part of their old identity – a financially-independent working woman. Facing stigmas in the Taiwanese society, Chinese immigrant wives criticize that their Taiwanese in-laws are under Japanese colonialism and feudal Confucianism’s influence, thus they are backwards and lack of modern concepts of gender equality. This research argues that these Chinese marriage migrants develop such discourse as a strategy of resistance – a means of asserting their progressiveness. At the same time, gender dynamics in the household (private sphere) has become a public issue – the Taiwanese government launches programs to “teach” Chinese women how to be an “appropriate” Taiwanese wife/mother/daughter-in-law. This study elaborates how the conduct of micro private life has become a public issue – the Taiwanese government launches programs to “teach” Chinese women how to be an “appropriate” Taiwanese wife/mother/daughter-in-law. This study elaborates how the conduct of micro private life is transforming woman. Facing stigmas in the Taiwanese society, Chinese immigrant wives, who grew up in communist China, consider such expectations outdated. Yet, unlike the previous literature emphasizing the importance of “technological fix”, the risk was framed as a social issue associated with the lack of confidence in authorities’ supervision and regulatory capacity which was justified by past scandals regarding shady public projects, food safety as well as the widespread pollution problems in China. The untrustworthiness towards government was initially derived from the short consultation period, procedural unfairness, and inadequacy of information disclosure, and then further reinforced by officials’ inappropriate responses, ill-prepared feedback channels, and more importantly the micro-blogging censorship. As untrustworthiness levels increased, the sense of risk was also enhanced. Besides, the Internet played an important role in revealing the procedural flaws and demonstrating the potential widespread fallout through digital mapping system; it also helped activists counter officials’ discourse head-on. These findings echo previous conclusion that limited public participation in decision-making process is a major cause of untrustworthiness. However, the interactive framing processes suggest that the public’s perspectives on environmental issues are inevitably intertwined with government’s responses and the public’s general perception of the government.

Framing Risk and Untrustworthiness: A Study of Anti-Nuclear Activism in Guangdong, China

This study examines frames and framing processes in the opposition to a proposed nuclear material processing plant in Guangdong province, which led to the suspension of the plan. Systematic analysis of microblog posts belonging to the hashtag of “Jiangmen nuclear crisis” on Sina Weibo revealed two important oppositional frames: risk of radioactive contamination and its hazardous effects on the population, and untrustworthiness towards the local government and the attendant low level of acceptance of the sitting plan. The framing process was facilitated by the Internet and shaped by contextual factors as well as interactions between government and opponents. The sense of risk has been heightened after the Fukushima disaster. The nuclear accident reframed the former movement intended to classify ‘class enemy’. From American imperialism to wrong methods of economic development, and later, dissidents within the Party, the change of the designatum of the CCP’s governmentality from absolute dependence on violence to reliance on mastering and discipline of knowledge and discourse. The second part of the paper further discusses the practice of the new form of governmentality in later years of the Patriotic Hygiene Campaign. Using news reports and official archives, the paper uncovers the changing meaning of the idiom “class enemy”. From American imperialism to wrong methods of economic development, and later, dissidents within the Party, the change of the designatum of the CCP’s governmentality from absolute dependence on violence to reliance on mastering and discipline of knowledge and discourse. The Relationships Among Ethical Ideology, Work Stress, and School Life Adjustment of Elementary School Teachers

The purpose of this study was to explore the relationships among idealism, relativism (two kinds of ethical ideology), work stress, and school life adjustment of elementary school teachers. The data were collected through questionnaires from a sample of 565 elementary school teachers in Kaohsiung city. The major instruments for this study included Teachers Idealism Scale, Teachers Relativism Scale, Teachers Work Stress Scale, and Teachers School Life Adjustment Scale. Structural equation modeling (SEM) was applied to make parameter estimations. Path analysis revealed the following findings: First, idealism could positively predict work stress, whereas relativism could positively predict work stress.
in the common estimation, idealism could positively predict school life adjustment, but relativism could not significantly predict school life adjustment. Third, work stress could negatively predict school life adjustment. Fourth, work stress was not the mediator among idealism, relativism and school life adjustment. The implications of this study to elementary school teachers’ human resource management in Kaohsiung and future studies were discussed.

Inclusionary Housing in China: Achievements and Challenges

Faced with a large national quota for low-income housing coupled with severe budgetary constraints, local governments in China have recently embraced inclusionary housing as a new strategy to achieve housing affordability and social and spatial inclusion. Yet, inclusionary housing in China is complicated by the strong role of the central government in housing policy, the state ownership of urban land and local governments’ right to lease land, and a private sector that historically had little role in the provision of low income housing. This paper evaluates inclusionary housing in the Chinese context, asking: 1) Has inclusionary housing achieved social and spatial inclusion? 2) What are its social, economic and political costs and benefits? 3) What kind of mechanisms need to be in place to make it successful and sustainable? Field work in Beijing shows while inclusionary housing in China is producing a large number of new units due to the strong government mandate, it does not result in increased social and spatial inclusion. As a result, the policy further deepens patterns of spatial marginalization of low-income residents to the urban fringe, increases transportation costs and decreases access to employment opportunities. The government is the main beneficiary of inclusionary housing, while developers and residents have few benefits but face challenges in property management and daily life. We argue that the inclusionary housing policy in China has to be reformed to be sustainable, with a better incentive system to encourage the active participation of private developers and a better policy design and implementation to facilitate social and spatial inclusion.

Where Is Home? Hukou, Non-Local Young People and New Inequalities in Relation to Housing in Contemporary Shanghai, China

In the past decade, housing prices have been skyrocketing and renting prices also have been on a rise in Shanghai. The measures taken by the governments to restrain rising housing price, together with their pursuit of gentrification of the city, when interacting with such institutional hurdle as hukou (household registration) system, ironically, have produced new inequalities between local residents with a Shanghai hukou and those without. This paper aims to unpack the complexity and examine the production of new inequalities suffered by young non-locals, who, according to the 2010 census, account for almost 60 percent of the nine millions non-local migrants in Shanghai. It employs two cases. First, it examines a phenomenon called “group renting” (qun zu) in which existing medium-end even high-end apartments are divided into small cells and let to people. The great majority of the inhabitants are young non-local migrants who cannot afford more than a cell in the gentrified city center. The job opportunities lie. The local government has taken measures to stop ‘group renting’ which leaves many young non-locals nowhere to find a home. The second case is about a recent regulation issued by Shanghai government in which non-local unmarried people are denied the right to buy a home in Shanghai. The effects of this regulation are gendered. Based on interviews and analysis of these two cases, this paper aims to show how the right to the city of the young non-locals has been contested through the unequal citizenship regime which is institutionalized with the hukou system and further reinforced and complicated along lines of gender and class; how the state has infringed on their private life decisions particularly marriage choice (to get married or not) by regulating on their housing right, in order to refrain housing prices.

Breaking the Cycle: Inequality, Social Investment, and Human Capital in Latin America

Latin America has long lagged behind the East Asian Tigers in investment in education. In particular, Latin American countries failed to invest heavily in public secondary education. This has had costs both in terms of economic growth and inequality. After some 20 years of democracy and particularly with the turn to the left, social investment in the form of increasing expenditures on education and health care and the spread of Conditional Cash Transfer Programs has received unprecedented attention. The CCTs are based on the recognition that investment in the human capital of the next generation requires that poverty in the present generation be addressed. We argue that in Latin America social investment, human capital stock and inequality and poverty are linked in a feedback causal process and present quantitative and qualitative evidence supporting our argument.

Torn Between Equality Norms and Risk-Based Governance Stimuli? Comparing the Role of Professions in Occupational Health and Safety Regulation in Germany and the United Kingdom

Risk-based governance provides, inter alia, the means to target regulatory interventions by distinguishing the occurrence of ‘risks’ and their impact. For example, in 2005, the influential British Hampton Review suggested to target workplace inspections in occupational health and safety (OHS) policies in a novel manner: not the threat of injury should allocate resources, but high probability and/or spectacular injuries. However, the unequal treatment of workers in risk-based OHS regimes raises tensions for the professional ethos of occupational physicians or safety engineers. While professions define the critical values of acceptable, tolerable and inacceptable harms and consult companies on their OHS management, their role regarding the (non)spread of risk-based regulation is still underexplored. Based on findings from the international research project HowSAFE this paper identifies key tensions between professional dedications to treating the health and safety of all workers equally and risk-based approaches which would focus on particularly frequent and/or costly health damages as defining element of OHS regulation. To do so, we compare the professional receptiveness towards risk-based OHS governance across institutional settings, focusing on occupational physicians and safety engineers as two influential professional groups in the domain. We compare and explain their role in German and British OHS governance. We argue that variation in treatment of occupational illness across countries depends – apart from historical and legal conditions – on the organisational structure of professions (e.g. regulatory agencies vs. professional associations) within the OHS domain and nuances in professional identity. We thus explain, for example, why the ranking of diseases and risks seems relatively acceptable in the UK, while the medical profession in Germany treats each case as particular and therefore not risk-based. We contribute to the understanding of risk-based OHS governance as a new strategy to achieve housing affordability and social and spatial inclusion.

### Asthma Management in British South Asian Children: An Application of the Candidacy Framework to an Understanding of Barriers to Effective and Accessible Asthma Care

Asthma is one of the commonest chronic conditions of childhood, placing a significant burden of care on families, communities and health services. British South Asian (Indian, Pakistani, Bangladeshi origin) children diagnosed with asthma are less likely to receive reliever and preventer medication prescriptions compared to their White British counterparts; are more likely to suffer uncontrolled symptoms; and are more likely to be admitted to hospital with acute asthma exacerbations. This paper explores the socio-cultural context of asthma management in British South Asian families, drawing on major qualitative study of management and interventions for asthma management funded by the UK National Institute for Health Research, Health Services Research (NIHR-HSR) Programme.

We present findings from data exploring parents'/carers'/children's and health professionals' understandings of asthma and their perceptions of the barriers and facilitators to good asthma management. The paper draws upon an interpretive analysis derived from the candidacy framework for explaining inequalities in access to health services for vulnerable groups, developed by Dixon-Woods and colleagues in the UK (Dixon-Woods et al. 2006). The candidacy framework emphasizes the dynamic, multi-dimensional and contingent character of health-care access and provides an insightful interpretation of our findings in light of the social patterning of perceptions of asthma and health services. Our analyses using this conceptual framework demonstrate how a lack of alignment between the priorities and competencies of British South Asian families and the organization of health services conspire to create vulnerabilities and difficulties in effectively managing childhood asthma.

### Bio-Sociality and the Negotiation of Diagnosis in Cross-Border Infertility Treatment

The expansion and globalisation of medical technologies for the 'treatment' of infertility has taken place at a rapid rate. Solutions to an increasing range of fertility-related concerns (chromosomally abnormal embryos, and oocytes, immunological disorders, reduced ovarian function) have been marketed to an affluent, mobile and technologically literate patient group. The apparent increase in what has been referred to in the popular media as 'reproductive tourism' is engaged, mobile and technologically literate patient group. The apparent increase in what has been referred to in the popular media as 'reproductive tourism' is engaged, mobile and technologically literate patient group. The apparent increase in what has been referred to in the popular media as 'reproductive tourism' is engaged, mobile and technologically literate patient group. The apparent increase in what has been referred to in the popular media as 'reproductive tourism' is engaged, mobile and technologically literate patient group.

In this paper, we engage with infertility treatment as a process that is entangled with broader social and cultural forces. We explore the ways in which the negotiation of diagnosis in fertility treatment is shaped by the bio-sociality of the individual. The paper discusses the implications of this approach for understanding fertility treatment as a cultural practice.
effectively demonstrates both (1) how dominant white racial groups alienate non-white racial and ethnic groups and (2) how dominant white racial groups employ a discourse of alienation—through claiming an unfairly victimized status—as a political strategy to lay claim to resources and reproduce their dominant status. Still, few have employed the concept of alienation to understand how white racial identity is continually reconstructed as a site of ontological crisis that facilitates simultaneous (a) claims to superiority, (b) claims to victimhood, and (c) practices of discrimination. Through an in-depth exploration of supposedly antagonistic white racial projects positioned at different class and labor positions, we can better understand how the social expectations of white racial identity are not distractions from material inequalities, but are a central mechanism in the reproduction of inequality and domination.

L’Innovation Contributive Au Service d’une Résilience Urbaine? Pratiques et Moyens (Numériques) de Transformation de la Ville de Détroit

Détroit illustre aujourd’hui assez bien l’Amérique des laissés pour compte : une métropole ouvrière noire et difficile à situer sur une carte tant elle illustre les atermoiements, les échecs de l’American way of life et la mémoire d’une ségrégation socio-raciale. Les contenus urbains qui faillissent pourraient plonger le lien entre crise économique et apparition de pratiques socio-politiques alternatives mises en place par la société civile. Ces pratiques conscientes orientées vers une économie fondée sur la valeur d’usage traversent le quotidien des gens par nécessité ou par persistance de formes sociales non marchandes. Elles correspondent à des projets de partage des technologies de la communication qui révèlent à la fois une diversité de moyens modestes pour faire face à la crise économique, et un ensemble de pratiques innovantes permettant de penser la possibilité d’un mode de vie alternatif, voire anticapitaliste. Notre contribution consistera à constater cette ville, en veillant à une partie des pratiques numériques visant à la réduction des inégalités d’usages et d’appropriation, à la création de nouvelles solidarités et au renforcement des communautés à l’échelle du quartier. Elle visera également à montrer comment ces initiatives mettent en lumière des questionnements relatifs aux rôles que jouent les usagers dans l’organisation et le fonctionnement matériel d’un réseau social numérique. Car, selon nous, ces moyens qui émergent dans cette ville sont effectivement à l’image d’un mouvement de contestation récent qui révèle de manière plus ou moins directe les enjeux de la démocratie internet et ceux des publics “forts” et “faibles” du Web. Detroit et ses pratiques de transformation basées sur les mondes du numérique illustrent un vivre internet différent et le développement de l’économie de la contribution, vecteur d’empowerment des citoyens utiles et acteurs nécessaires à une émancipation citoyenne.

Legal Consciousness and Labour Insurgency: A Comparison Between China and the U.S

This paper seeks to examine the effects of legalization of labour relations on workers’ collective action in China according to the 1958 Wagner Act of the U.S. Some U.S. scholars pointed out that the Wagner Act has deradicalised the U.S. labour movement by imbuing legal consciousness that built upon contractualism and private property rights into workers and by confining their actions within the legal institutes and practices (Klarre 1978, 1982). Similarly, many scholars in the field of labour studies highlighted that the labor laws used by the party-state to channel workers’ protests into bureaucratic procedures (Lee 2007; Gallagher 2007; Friedman and Lee 2010; Chen and Tang 2013). However, little is known about the grievance-diversion mechanism vested in the Chinese labour laws system. For example, how does the party-state make workers believe that the legal system can protect their interests so that many of them do not launch an insurgency? To what extent do workers trust the legal system? Under what circumstances will they bypass it?

This paper aims to fill up these gaps by analyzing how the Chinese party-state construct the legal consciousness of workers, the characteristics of this consciousness, and when and how workers would act beyond the legal consciousness. I answer these questions from two approaches. First, while not many current studies examine the Chinese labour laws from the perspective of workers, I have conducted interviews with workers in the Guangdong province in order to find out the agents involved in the juridico-political struggle and the characteristics of their legal consciousness. Second, by comparing to the Wagner Act in the U.S., I aim to investigate the impact of this legal consciousness on labour insurgency in China and the possibility of overcoming its effects.

How Parental Absence and Social Capital Influence the Psychosocial Development of Left behind Children Whose Parent(s) Work Abroad? - the Case of Yanji City, China

As a major supplier of migrant labor, China has a large number of people who are moving from rural to urban cities and even crossing borders to search for better opportunities and wish for a better future for their families. This paper focuses on the left behind children in China whose parent(s) work abroad (LBPCWA). The reason is that these children are largely ignored by the country, and such cohort of children are encountering the crisis of the troubles within the context of globalization, which has threaten the quality of life for this vulnerable child population.

Previous literature shows that when compared with children of non-migrant families, the psychosocial development of LBPCWA due to parental absence is mixed. Some studies indicate a significant difference between LBPCWA and children of non-migrant families, while others show the identical results. In this vein, this study employs a resilience perspective that regards social capital as protective mechanism, which can buffer or mediate the impact of parental absence on the psychosocial development of LBPCWA. It adopts a quantitative research method, uses a cross-sectional survey design to collect information from a sample of 1000 LBPCWA and children of non-migrant families in Yanji city, China-an ethnic minorities area, where international migration is a common phenomenon. The findings and policy implications are discussed.

The Mapping of Leisure Value in Chinese Cultural Tradition

In the 5000-year-long history of Chinese culture, leisure culture has played an important role in passing on Confucian, Daoist, and Buddhist culture. From the ancient times to the present day, leisure, as a spiritual cultural form, has often permeated people’s lifestyles and behavioral patterns widely as a force that is direct, intimate, free, sentimental, and humanizing. Not only has leisure aided human beings in a biological sense, helping them to recover their physical strength and energy, but through meaningful leisure activities people have brought forth many beautiful fruits – spiritual sublimation and the release of humanistic concern and creativity. This kind of wisdom helps us to realize that “the leisure life is not a privilege limited to the rich and the successful only, but a product of a carefree mind…”

But, China is entering a new historical stage: a stage of rapid changes when material wealth has been greatly increased, a stage when human beings are not * denotes a presenting author. Abstracts are organized by first presenting author’s last name.
in harmony with Nature, a stage full of competition among people, a stage when everyone is full of many kinds of desires.

Unfortunately, today, traditional values of leisure have in this multivariate social transformation been mutilated more and more; and the essence of these values has been more and more tainted with materialism; leisure value is either distorted or understood in too narrow, too shallow, and too vulgar a way. Most people simply identify leisure with beer and skittles, with entertainment and shopping, or with what is fashionable that the rich like to boast about. This article attempts sort out Chinese traditional leisure culture and style from Confucianism, Taoism and Daoism... as well as reflection on contemporary Chinese face to the confusion and disparity in the loss of leisure value and cultural traditions.

Point of No Return? Neoliberalism and Changing Public Opinion in New Zealand and the United Kingdom

Neoliberalism represents a significant and enduring shift in the politics shaping social policy. Although it is frequently ascribed a hegemonic, all-powerful status that focuses our attention on the coherence found in neoliberal policies, this paper is influenced by scholars highlighting variation in the neoliberal project across different policy areas, national settings and across time. Specifically, it employs Peck & Tickell's (2002) view that neoliberalism has gone through multiple phases in response to both external and internal crises as an entry point for studying neoliberalism's impact on public support for the welfare state. Drawing upon a New Zealand case study with select comparisons with the United Kingdom, the paper argues that public reactions to the early period of retrenchment ('roll-back' neoliberalism) differ from those found in the following 'roll-out' or embattling phase of neoliberalism implemented by Third Way Labour governments in both countries. Continuing public support in many policy areas argued to have been critical in the internal crisis that provoked an adaptation of the neoliberal project. Moreover, the paper explores what has happened to public support for the welfare state following the external crisis provoked by the financial meltdown of 2008-2009: do New Zealand and British public attitudes show signs of resistance against austerity measures or do they indicate a third, 'roll-over' period of neoliberalism whereby the public accepts not only a neoliberal economic agenda but also the need for further retrenchment of the welfare state? Conclusions about the politics of social policy at the level of public opinion are drawn from a qualitative analysis of both survey data over three decades and interview/focus group conducted in New Zealand, offering both good and bad news for welfare state advocates.

Lack of Universal School Education: A Potent Agent for Preservation and Propagation of Inequalities in Developing Nations

Education is said to be a social institution that eliminates inequalities through its individual (formation of social personality, social placement, social mobility etc.) and societal (social stability, division of labour, social change etc.) functions. Multidisciplinary systems in developing capitalist economies like India pose challenges to its functions and marginalise masses. States run schools with school teachers in the possession of unprofessional values catalysing this phenomenon. This paper is based on a preliminary study to investigate the prevalence of unprofessional practices among school teachers. Six undesirable values investigated in the study were absenceism, dereliction of duty, lack of responsibility, discrimination, authoritarianism and commercial venality. A comparative appraisal of undesirable values was also made between male and female teachers.

Generational Orders in Azerbaijan and Kyrgyzstan - Young Adults Between Independence and Interdependence

Our paper is based on field research, qualitative interviews and group discussions with young people of different social origin in Azerbaijan and Kyrgyzstan concerning their biographical plans for professional and private life. In both countries the ethnographic and interview material points to strong obligations of young people towards their families of origin, e.g. obligations to submit to parents' will, to support parents financially, to support them with care work or just with affection and attention. Such obligations are legitimated by what is meant to be tradition, by religion and as well by a generational and gendered order as they may be especially strong towards daughters. These strong expectations young adults are confronted with however conflict with educational and occupational aspirations which young adults hold for themselves or which are held by their parents for them. Educational migration is of major importance in this context. Various solutions are worked out in such conflictive constellations, some being more, some being less realistic planning, and most of them maintaining the validity of an age hierarchical order. By comparing the two countries and the various groups in these countries, the paper will present a theoretical approach identifying constellations that are supportive or obstructive in regard to favorable solutions.

Sidewalk Cafés: Formal and Informal Negotiation of Public and Private Space

Abstract

The School: A Nurturing PLACE for Inefficient Work Force

The health of various social institutions is based on their value system. Some values (truth, justice, equality, humanism, tolerance, peace, etc.) are necessary for the survival of the social institutions and other are desirable (excellence, commitment, studiousness, honesty, empathy, industriousness etc.). According to Emile Durkheim, the value system is passed across generation in the school and the agent of the society for this job is the school teacher. For that he/she should be in the possession of various values. Numerous reports and studies have highlighted the prevalence of undesirable values among the school teachers. Transmission of undesirable values to the generations could lead to inefficient work force. This paper is based on a preliminary study conducted to investigate the prevalence of undesirable values among the school teachers of Roopnagar district of the state of Punjab in India. Six undesirable values investigated in the study were absenceism, dereliction of duty, lack of responsibility, discrimination, authoritarianism and commercial venality. A comparative appraisal of undesirable values was also made between male and female teachers.
of norms defining this space among patrons, proprietors and passers-by the research also explores more formal mechanisms that define it by city regulations, and zoning ordinances that are themselves seen to be another level of negotiation among public and private interests. We also trace the mutual impact of the two levels of informal and formal negotiations. The research explores variations in these negotiations of public and private space across local communities and neighborhoods with respect to differences in ethnicity, and inequalities of social class and power. The research is based on data from participant observation at the informal level as a “consumer” and at the formal level as a city plan commissioner.

A Reflection on Social Class Differences in Australian Mothers’ Experiences of Full-Time Employment and Family Life

In Australia, as in many other countries, a growing proportion of mothers, whether they are wealthy or poor are participating in full-time employment (AIFS, 2008). This paper will examine social class differences in mothers’ experiences of full-time employment and family life. Drawing on qualitative interviews with mothers who live in NSW, I will examine how differently classed mothers in full-time employment negotiate workplace obligations, unpaid labour in the home, parent-child relationships and romantic relationships. This paper will argue that, while mothers in white collar occupations are rich in economic and cultural capital, the inexpressing demands of middle-class employment create a ‘time deficit’, which may deplete women’s capacities to genuinely attain ‘the good life’, associated with their class positions. At the same time, full-time employment is rarely compatible with the ideals of ‘good motherhood’, regardless of a woman’s social class location.

Older Canadian Men’s Perceptions and Experiences of Ageism in Everyday Life

In this paper, we consider the complex and often conflicting perceptions and experiences of ageism among older Canadian men. We draw on data from indepth interviews with 29 men, aged 65-89 (average age of 74), who were diverse in terms of their incomes and levels of education while also being largely homogeneous with respect to their marital statuses and sexual orientation (the majority were married and heterosexual). Our analysis of the data revealed three key findings: a) perceptions that ageism was irrelevant; b) identification of ageism as something that affected others; and c) internalized ageism. Many of the men asserted that ageism was not a factor that constrained or explained their everyday lives. For some, the irrelevance of ageism was because they perceived that the prevalence of age-based discrimination had declined over time. Others reported that they had simply never experienced ageism in their everyday interactions including encounters with strangers, health care providers, peers, or family members. However, the majority of the men also suggested that ageism was something experienced by others, primarily older women (who were perceived to be under intense pressure to look young) and institutionalized elders (who were perceived to be the most likely target of maltreatment, including neglect and abuse). At the same time, most of the men expressed internalized ageism either through the distancing of themselves from those they considered old (both a moral and chronological age category), the expression of biases for young appearances or youthful personas, or the acceptance of negative stereotypes regarding later life (such as older adults as poor drivers, grumpy individuals in poor health, ‘dirty old men’, or persons unable to easily adapt to new technologies).

We discuss our findings in relation to the extant theorizing and research pertaining to ageism, masculinity, and age relations.

Advancing Gender Equality in Nordic Academia: Political Will and Persistent Paradoxes

The Nordic countries – Denmark, Finland, Iceland, Norway, and Sweden – can be characterized as global leaders when it comes to gender equality of society (World Economic Forum, 2012). Political will to advance gender equality in academia is evidenced by the gender equality promotion that has been actively on the national policy agendas since the late 1970s-early 1980s, through various national level interventions, especially so in Finland, Norway and Sweden. Gender equality is addressed in the university legislation in Norway and Sweden, and universities are legally obliged to engage in equality planning. These three countries show the highest proportion of women on scientific boards in the European Union, approaching gender parity, and the highest proportion of women among university Vice-Chancellors in the EU (EC, 2013). Even if many key gatekeeping and decision-making positions in the academic and scientific landscape show greater gender inequality, unequal gendered structures in academic careers prevail. If the proportion of women among full professors is used as an indicator of gender equality in academia and science, Norway and Sweden do not excel in a European comparison, having only reached the same level as the European (EU-27) countries on average, while Denmark has among the lowest, whereas Finland among the highest proportions of women among full professors within the EU. This paper interrogates the Nordic paradox of high overall gender equality in the society, political will and active policy regulation to advance gender equality in academia and science. On one hand, and the persistent unequal gendered structures in academic careers and inequalities in resource allocation, especially in research funding, on the other. Accordingly, differences and similarities between the Nordic countries will be highlighted and discussed, along with historical developments, policy landscapes and continuing resistances to greater gender equality.

Constructing Online Identity Via Picture Sharing: Malaysian Youths’ Experience with Social Networking Sites

By taking the position that youths’ identity is fluid and dynamic, this paper aims to look at the ways in which Malaysian youths construct and manage their online identities through visuals posted on popular social networking sites. A sample of 20 youths aged between 18 to 25 years residing in urban Penang participated in this ethnographic study. Preliminary results show that these youths own sever-al social networking sites with Instagram and Facebook being the more popular ones. While the medium may differ, the identities presented are almost the same and more importantly these visual identities feed from their offline identities. They are engaged in constant picture taking, usually using their mobiles. Upload-ing pictures on their social networking sites, and by extension, sharing these pic-tures with friends and followers online, validates their online existence. As these social networking sites can be used publicly, inviting a wider range of followers, pictures that are uploaded are managed (through a process of selection and edit-ing) so as not to disrupt the presentation of online selves. More personal pictures discussed in closed sites among trusted friends where one can ‘let loose’. From these preliminary results, it can be concluded that online identity construction among this group of urban Penang youths is a reflective activity. Furthermore, the identity that is portrayed online as well as the interactions that take place through the visuals posted need to be managed well so as to ensure that the preferred identity is not disrupted.

Keywords: Online identities; social networking sites; visuals
The crisis of organized labour has given rise to an extensive literature and various policy ideas for trade union renewal. One proposal has been to call for union mergers to create new types of labour organizations better equipped to conduct campaigns to increase union density and influence. Are such mergers an indication of union weakness or, if undertaken strategically, do they hold promise for a revitalized labour movement?

After reviewing past union mergers in selected industrial relations systems, the paper focuses on a recent new union formed out of the merger of two large private sector unions—the Canadian Auto Workers and the Communications, Energy and Paper Workers Union of Canada. The paper provides the background to the merger and offers an assessment of the possibilities for labour movement revitalization.

Objectives for the new union include the organization of non-union workers, especially in private service sectors characterized by a concentration of younger employees who make up much of the difficult to organize precariat. New organizational approaches include building union associations and community chapters. These tactics require innovative union philosophies, organization structures more appropriate to the new general unions, and political campaigns to change legislation. Having critically considered these and other ideas on reshaping unions, the paper makes more far-reaching proposals for recasting unions to advance class perspectives that can provide a counter-hegemonic political culture to that of neo-liberalism.

The paper contributes to theory and policy by arguing that an increase in the size and complexity of working-class organizations need not necessarily compromise democratic worker control. The research draws from a literature review, interviews and recent conference debates on union strategy. The paper has benefited from the author’s involvement in research and education programs for one of the two unions involved in the formation of the new labour organization.

**Socio-Economic Differences in Health Trajectories Around Retirement in the USA**

There is increasing concern about possible widening inequalities in health amongst the older population. There is a growing body of work on the relationships between patterns of labour market participation in later life and health. However, the results are equivocal and little has been done to explore socio-economic variations in the impact of retirement on health. To redress this data from 10 waves of the Health and Retirement study in the USA were used to analyse trajectories of poor health and retirement for different socio-economic groups.

Repeated-measures logistic regression with generalised estimating equations were used to analyse data up to 7 years before and 7 years after retirement from 1992 to 2010. The results show that for the sample as a whole the prevalence of sub-optimal health increases sharply in the years before retirement, from around 16% four years before retirement to 23% at retirement. Following retirement the prevalence of poor health remains high but the rate of increase slows down. Educational differences are evident throughout the period. Those with a lower levels of education have higher rates of poor health for all years and show a more rapid increase in poor health up to 2 years before retirement compared to those with higher levels of education. For four years before retirement 25% (95% CI 20.0-30.0) of those with a lower education reported poor health compared to 12% (95% CI 9.8-14.4) of those with a higher education. At retirement this had risen to 36% (95% CI 31.2-41.2) and 19% (95% CI 16.7-21.3) respectively. The analyses show that poor health is a main driver of retirement in the USA. Also those with lower levels of education continue to be at greater risk of poor health following retirement which might contribute to growing health inequalities in later life.

**Environmental Gains and Social Losses? Critical Reflections on the Sustainability Potential of Telework**

Anthropogenic climate change and its environmental and social consequences are of increasing concern worldwide. Approaches that advocate a ‘greening’ of the economy have often been criticized on several grounds, including that current economic and social systems through technological innovation and development tend to dominate policy responses, especially in resource-intensive sectors such as transport. This position is labeled as shallow Ecological Modernization (EM) thinking whereby technology is perceived in (over)optimistic terms, with limited evidence of challenges to contemporary growth-centric models of development, production, and consumption that cause climate change.

Work takes up a considerable portion of people’s lives whilst travelling to and from work has become a key feature of everyday mobility in many development and developing countries. A significant contributor to Greenhouse Gas (GHG) emissions, transport in its current form is deemed to be unsustainable. In a-
ropean context, telework - an arrangement that enables employees work from home - has been suggested as a virtual mobility option with the potential to reduce the 'consumption of distance' associated with regular commuting. Giving its emphasis on the application of technology to solve environmental problems, the uncritical promotion of telework constitutes a prime example of shallow EM thinking.

Despite the prominence of EM thinking in climate policy and practice, theoretically informed empirical explorations of its implementation and impacts remain incomplete. Drawing on a multi-method investigation of telework in the Republic of Ireland, this paper finds current EM thinking amongst decision-makers to be shallow and largely reflective of neo-liberal environmentalism, contributing little to curbing the consumerist impulses of contemporary economic models and lifestyles. The environmental benefits of telework are also questioned, as is the rationale for existing teleworking schemes. This paper further asserts that actual and potential environmental gains can conflict with potentially negative implications for fairness, equity and well-being, with teleworkers shouldering a substantial social burden arising from technology-aided changes in work practices.

Smart CCTV in Contemporary Crime Control: Policies and Practices of Surveillance

I would like to address risk governance in crime control by illustrating the development and implementation of so called “smart” CCTV systems in Germany. These video surveillance systems are expected to automatically detect deviant behavior by using software algorithms. Since this technology is not based on the psychological or criminological analysis of deviant individuals, but on the analysis of situation and space classified as dangerous, it comes with an expansion of risk perception: everyone who is monitored by these systems is a potential risk. Hence smart CCTV can be seen as a signature of a new rational of crime control, described by scholars as situational crime prevention, new penalogy or neo-liberal governmentality. In this new rational, smart CCTV is seen as an efficient and effective tool for security measures. In accordance with this view both, advocates and critics of this technique draw a picture of new powers of control, that stretch from terrorism and incivilities to mass events. This vision of technology-based security yet faces technological problems (how can indexical behavior be translated into software algorithms?) and the often divergent interests of prospective users (police, public transport, private enterprises). Drawing from empirical research conducted for the German FMER-funded MuViT project and the EU-funded Video-evidence project I want to show, that the development of smart CCTV is on the one hand part of a new rational of risk governance in crime control since it comes with a re-coding of risk and security. On the other hand its practical implications correlate with a multitude of social factors.

RC20-347.3

HÄNZI, DENIS* (TU Darmstadt, haenzi@ifs.tu-darmstadt.de)

A century ago, Max Weber concisely brought Switzerland's character as a "Wilsenschaft" to a nation forged out of will, in a nation of "one strong belief in the unique nature of their habits and morals, the identity of the Swiss could emerge and consolidate. Based on a mythology of rural-alpine nativeness and isolation, this "belief in commonality" entails both the construction of boundaries vis-à-vis the threatening outside world and corresponding semantics of resistance. Given the recent discussions on foreign "attacks" on the Swiss banking secrecy and the increased charismatisation of the Swiss mountain guide (an idealization of the laudable Swiss) at the present time, it becomes apparent that this architecture of "Swissness" still provides important symbolic resources.

Yet, what about those Swiss who do not live on the very "Helvetic island" but are dispersed all over the globe? First, the paper aims at discerning how the EM thinking amongst decision-makers to be shallow and largely reflective of neo-liberal environmentalism, contributing little to curbing the consumerist impulses of contemporary economic models and lifestyles. The environmental benefits of telework are also questioned, as is the rationale for existing teleworking schemes. This paper further asserts that actual and potential environmental gains can conflict with potentially negative implications for fairness, equity and well-being, with teleworkers shouldering a substantial social burden arising from technology-aided changes in work practices.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The paper describes preliminary results of an interdisciplinary research (involving sociologists and architects), funded by the Autonomous Region of Sardinia. The analysis focuses on the experiences of relational public art (or community art), studying the strategies that artists activate to enable citizens’ engagement in the transformation of urban spaces. These strategies are able to “revitalize” models of urban governance in which participation often translates in a mere consultative process. We are facing emergent phenomena that are not only “counter-cultures”, but could also feed into processes of policy formation and decision making. Indeed, the “new genre of public art”, represents a new way in which citizenship is practiced; artists ask the audience to become co-actors in the construction of their works, taking in charge problems/conflicts related to urban spaces, intercepting needs and experiences of people who live in these spaces, and activating citizens’ awareness of their role in the transformation of urban spaces. Starting from a background analysis of significant national and international case studies, the research focuses on Sardinian experiences activated in the urban “border areas”. The aim is to investigate – through interviews to the “citizen-artists” and the other actors involved in the artistic intervention – the practices of production and consumption (active/participatory); the shared meanings of participation, politics, community, territory; the representations of the other actors; the discourses related to objectives and results; the communication strategies; the interaction with the reference contexts. The process of analysis will conclude with the production of three outputs: a “Participatory Research Laboratory” which involves artists and other actors of the urban governance (architects, sociologists, public administrators, stakeholders); an online platform containing informations (texts, video, images, georeferenced maps) about experiences we analysed and the modalities to activate similar participatory processes; a procedural tool for administrators, oriented towards a participatory territorial planning.

The sexual division of labor, the cornerstone of patriarchal society, remains in paid work. After more than 30 years of active employment policies for equality, gender segregation of work is still dominant, and is one of the significant explanatory factors in understanding the wage gap between the sexes. The research group “Women in Men’s Worlds” seeks to understand the career paths of women in traditionally male occupations, because through their life stories we can analyze what factors or social actors are positive and/or negative in these processes. Specifically, we present the first results of a research project funded by the National R + D + i Spanish (MICINN-12-FEM2011-25228) which explores the career paths of women in six very male dominated professions: construction painters, car repair, repair of computers (hardware), police and security guards, airline pilots and depth interviews with these women are accompanied with the vision of entrepreneurs and male workers, in order to understand the processes of change within patriarchy, and especially to identify the factors that help to foster this change.

At this point, the ongoing investigation has already developed typical career paths of women in these very masculinized jobs (Weberian ideal types). In addition to institutional context of the occupations, the human profile of the occupation, ie the type of colleagues, bosses and clients of each occupation have also been important factors. The research also examines how work attitudes, especially reconciliation of work and personal life, are explanatory factors.

The end of the so-called housing bubble with the current economic crisis is having dramatic effects in the urban landscape as construction companies have declared bankruptcy and have left many unfinished buildings and empty lots in the urban space where garbage is being accumulated, while no one seems to be responsible and neighbours suffer the consequences. Thus, it is urgent to develop initiatives and alternatives that provide an answer to the deterioration not only of the urban landscape but, more importantly, to the everyday lives of the citizens who suffer the consequences of years of speculation with the urban space.

In this paper I will show the preliminary results of the research project FUTUR (Filling Up Territorial Discontinuities in the Urban Landscape) that has been carried out in the Spanish city of Burgos with the goal of promoting citizens’ participation in the elaboration of proposals and alternatives that activate sustainable forms of participatory engagement for a better living in urban areas. This research is based on ethnographic fieldwork research with neighbours, independent artists and local authorities (participant observation, interviews, life stories, discussion groups) as well as archival research (year of construction/demolition, name of the constructor, original project). More specifically, in this paper I will discuss the following issues: (i) how neighbours perceive these empty spaces and abandoned buildings in terms of risks (garbage, physical injuries, gang activity, depreciation) and what alternative projects and uses they proposed; (ii) what are the intended projects developed by the local authorities in order to fill up these discontinuities; (iii) examples of successful projects developed from below. The presentation will also include a dynamic chart where I have mapped out both these territorial discontinuities or ‘spaces-in-between’ and the alternatives suggested by neighbours and other actors of the civil society (independent artists).
Graduate programs in medicine assume the social commitment with their performance according to scientific and technical norms of discipline in that field, but it will also demand to carry out this work within the framework of certain ethical, professional, and social values. It is clear that we are faced with emergent field knowledge in higher education institutions. The inclusion of these topics in the university curricula—either as knowledge discipline or transversal axis—is recent and even more so when it refers to specific aspects of this discipline. The research analyzes the perceptions about the professional ethics the teachers and students in medical graduate programs and pretends to know about desires for training in skills and values in public and private universities to make comparisons. In this paper we present the results of the revision, adaptation and implementation in a Mexican public university to discuss how to promote these skills and values. By a joint methodology that includes application of: the instrument validated by Hirsch (2005) from National Autonomous University of Mexico (UNAM), about professional values; the questionnaire for the assessment of the competencies of teachers by the team coordinated by Pérez Pérez (2012), from Valencia University, Spain and conducting interviews. The above-mentioned instruments includes teachers and students that show the condition that prevails about the beneficence principle which, according with Alcubierre, originates in the Hippocratic oath, but goes beyond philanthropy which recognizes the patient as a subject of law: it talks about the expectations of benefits to justify any risk of damage or discomfort to the participants, who sometimes use there transgression to save life at the expense of an unequal relationship between the physician and the patient.

**Culturalism: Its Circulation In East Asia, Development and ‘Clash’ With Nationalism**

The paper aims to address the theme of the session by using the ‘Overcoming Modernity’ symposium that took place in Japan in 1942. The symposium has conventionally been dismissed as ‘infamous’ or even ‘notorious’, not deserving serious attention, and was predominantly viewed that it was an attempt by the intellectuals of the day to legitimise the war and fascism. While the symposium’s portrayal as a sort of wartime protest of intellectuals against Japan’s political and cultural thought has been sporadically re-examined starting with Takeuchi Yoshimi’s essay published in 1959. Takeuchi (1959=1979) dismissed the symposium as intellectually empty but argued that the event represented a historical moment when various contradicting forces in Japan, such as restoration vs innovation, the East vs the West and so on, came into a violent collision as an attempt at ‘overcoming modernity’. He appreciated the intellectuals’ concern with ‘overcoming modernity’ as a worthy endeavour as an exercise to look for solutions to the perceived social, economic and political ills but concluded the symposium failed to contribute to the development of political and cultural thoughts in Japan because of the intellectuals’ failure to recognise the double-sided nature of the Pacific War (as an anti-imperialism war against the hegemonic West and as an imperialist and colonialist war towards Asian countries) in their attempts to understand the world. The paper examines the visions of modernity that the symposium participants sought to overcome and explores the ideas suggested as alternatives to the Western-centric vision of modernity during the symposium. These alternatives were then placed in the background of competing visions of Asia and the world including pan-Asianism, the East Asia Cooperative Community and oriental religiosity.

**Culturalism: Its Circulation In East Asia, Development and ‘Clash’ With Nationalism**

The symposium failed to contribute to the development of political and cultural thoughts to the perceived social, economic and political ills but concluded the symposium as intellectually empty but argued that the event represented a historical moment when various contradicting forces in Japan, such as restoration vs innovation, the East vs the West and so on, came into a violent collision as an attempt at ‘overcoming modernity’. He appreciated the intellectuals’ concern with ‘overcoming modernity’ as a worthy endeavour as an exercise to look for solutions to the perceived social, economic and political ills but concluded the symposium failed to contribute to the development of political and cultural thoughts in Japan because of the intellectuals’ failure to recognise the double-sided nature of the Pacific War (as an anti-imperialism war against the hegemonic West and as an imperialist and colonialist war towards Asian countries) in their attempts to understand the world. The paper examines the visions of modernity that the symposium participants sought to overcome and explores the ideas suggested as alternatives to the Western-centric vision of modernity during the symposium. These alternatives were then placed in the background of competing visions of Asia and the world including pan-Asianism, the East Asia Cooperative Community and oriental religiosity.

**Culturalism: Its Circulation In East Asia, Development and ‘Clash’ With Nationalism**

The paper examines the migration and development of culturalism, ‘a natural conviction of cultural superiority that sought no legitimation or defense outside of the culture itself’ (Durant 1996) in East Asia and its supposed ‘clash’ with nationalism as the face of modernity. Culturalism can be seen as one of models of political community circulation in China before the advent of the modern nation-state. The idea has been developed further as a useful tool in challenging the claim that emphasises the novelty of nationalism as a form of consciousness as proof of radical discontinuity between pre-modernity and modernity suggested by leading theorists of nationalism such as Benedict Anderson (1991) and Ernest Gellner (1983). If the novelty of nationalism as a form of consciousness lies in the co-extensiveness of political and cultural communities, nationalism was not totally novel in China where culturalism providing a similar kind of totalising view of community had long existed. Culturalism, originates from China, naturally migrated to its spheres of influence including Japan, where under Tokugawa shogunate, it stimulated various intellectual responses such as kokugaku, a ‘nativist’ school of learning focusing on the study of Japanese old text which produced a vision of community that bears close resemblance to Chinese culturalism. The conventional view is that culturalism both in China and Japan then experienced a clash with nationalism, a modern idea of political communities originated from the West, and was replaced by it. The paper first outlines the idea of culturalism as developed in China and investigates the way in which it migrated to Japan and facilitated a range of new ideas under Tokugawa rule. It then questions the assumption of the nationalism’s takeover of culturalism in nineteenth- and twentieth-century Japan and China and explores possible transformation of nationalism.
Ageism and Social Integration of Older Adults in Their Neighborhoods in Israel

Purpose: The paper aims to examine the extent to which ageism is connected with the social integration of older adults in their neighborhoods and to identify factors that explain social integration.

Design and Methods: A convenience sample that included 300 older adults aged 65 and over was selected for the study. The participants were asked to rate their level of social integration. The integration index included three dimensions: frequency of participation in activities in their neighborhoods, frequency of interactions with neighbors, and sense of neighborhood. Hierarchical regression analysis examined three groups of independent variables: older adults' socio-demographic characteristics, their perceived health and outdoor mobility, and neighborhoods' characteristics including level of ageism.

Results: Neighborhoods varied by levels of ageism and social integration. Higher levels of social integration of older neighborhoods' residents was explained by a combination of factors: younger age, better self-rated health, and fewer limitations of outdoor mobility, higher levels of ageism reported by a sample of younger respondents, and higher socio-economic status of the neighborhood.

Implications: To enable better social integration intergenerational programs should be developed to decrease ageism and in order to make communities more age-friendly there is need to facilitate accessibility to services and public spaces.

Nurses’ Attitudes Toward Migrant Care Workers in Hospitals in Israel

Aims. To examine nurses’ attitudes on tasks that paid carers of older patients should or should not be allowed to perform and to examine the factors that best explain nurses’ attitudes towards the involvement of paid carers in providing care during the older patients’ hospitalization.

Methods. The study included a combination of qualitative and quantitative research methods. Five key persons in two general hospitals were interviewed and 265 nurses in internal medicine and geriatric wards were surveyed.

Results. There were no formal policies and guidelines regarding the tasks that paid carers should be allowed to perform. The majority of nurses perceived that paid carers should be allowed to perform a variety of tasks except for professional nursing tasks. Type of hospital and ward and nurses’ education were significant in explaining nurses’ attitudes towards involvement of paid carers in providing care to their older care recipients.

Conclusions. Attitudes of nurses towards paid carers are determined mainly by local organizational characteristics and nurses’ education. There is need for explicit policies and practice guidelines and their enforcement with regard to paid carers.

Acquiring a ‘Right’ Combination of Capital: Japanese Nouveau Elites’ Capital Accumulation Trajectories for Children through International Schooling in Tokyo

As economic globalization has been proliferated by nation-states’ espousal of neo-liberal agendas, various domains of educational institutions have been internationalized and valorized globally valid forms of cultural competencies, termed ‘global cultural capital’ (GCC). With the rapid changes occurring in the global fields of education and business, many East Asian families and students have pursued GCC through international schooling, overseas education, and/or extra-curricular activities in order to improve and/or secure their status position in the global stratification hierarchy. However, existing research pays little attention to these factors and their role in explaining the importance of children’s active participation not only in terms of having the right to say, but of the right to choose among alternatives in communication systems, i.e. in terms of practicing agency rather than simply having voice. Supporting and improving children’s capabilities means promoting children’s participation beyond their right to speak and the right to be heard to a wider concept of active citizenship, which means contributing to the structuring of social systems. In this approach, therefore, children’s capabilities assume the social form of children’s agency. In other words, the idea of agency emphasizes that children can condition the actions of their interlocutors in communication with them, above all in interactions and can, in this way, transform the social structures.

This presentation tries to examine how children’s agency and participation can be promoted in a conflict-affected context. With this aim the chapter conducts an evaluative analysis of a project of international cooperation developed by Oxfam Italy and the Palestinian NGO DoEIPs which is aimed to promote social participation and to raise children’s rights awareness among Palestinian children and adolescents.

This analysis is conducted by drawing on theoretical and methodological concepts from recent literature on social participation, sociology of childhood and Sen’s capability approach, and looking at 1. the structures that promote agency in communication processes, 2. the ways in which agency modifies the structures of communication processes. The analysis of video-recorded data permitted some conclusions about social conversion processes and factors of agency, which allow social change. Our datas show that social change can be enhanced through children and adults’ turns, but it is determined only in the self-organisation of a communication system.
within the Kanto region, and its farmers suffered from a sharp decrease in sales following heated media coverage. Under these circumstances, I convened the ‘Round-table Meeting for ‘Kashiban Products for the Kashiwan People’ towards Security and Safety’, and called for various local stakeholders—including farmers, supermarket owners, restaurant chefs and housewives within their childrearing years—to be engaged in that meeting. We deliberately and scientifically discussed a unique radioactivity determination method on local farm products and soil, and arrived at an agreement over our own acceptable standard of radioactivity level in farm products. By measuring radioactivity and transmitting the result, we achieved a high possibility of core meltdown in the nuclear plants and warned citizens of the vulnerability of local farm products. Our primal motivation to convene the meeting was to overcome the ‘gap within the local community’, namely, the pointless conflict between consumers and farmers after the Fukushima accident, which was mainly derived from the asymmetric nature of ‘choice’ and ‘mobility’ between them. Redefining local consumers and farmers as Kashihan citizens sharing the same locality and issues, we strategically aimed to connect the local consumers, who have an attachment to the locality and wish to peacefully eat local products, with the local farmers, who intend to build personal relationships with the consumers. However, our community-oriented risk-communication strategy had a critical limitation: apart from the assumed local customers, it was impossible to reach a wider range of consumers via our marketing strategy. On the basis of this practical experience in Kashiwa, this presentation will discuss social ‘coordination’ and trust-building between people with opposite interests under the risk of uncertainty.

An aim of this presentation is to describe the great distance in risk evaluation regarding the Fukushima nuclear accident in Japan and to analyze its structure and background by applying the insight on a distinction between decision makers and those affected in risk sociology of Niklas Luhmann(1993). After 3.11 in 2011 the most Japanese experts appearing in mass media followed the government report which was underestimating a seriousness of Fukushima and a possibility of spreading of radio activities. In contrast some experts such as Hiroaki Koide and Tetsuji Imanaka from Kyoto University pointed a high possibility of core meltdown in the nuclear plants and warned citizens of the great dangers of the serious nuclear disaster through local or community media from the early on. A distinction between experts and ordinary people, which is very common in the previous risk analysis might be useless to explain this distance, because it appears within the expert communities. Therefore the author focuses on the other distinction and takes into account the diagnosis of Luhmann that the serious conflicts over the perception and evaluation of future events with opposite interests under the risk of uncertainty.

Comparative, Realistic, Communitarian and Public Qualities: Post-Union Democracy

How New Is the Image of Those with Dementia in 21st Century in Japan? an Analysis of TV Documentary Programs in the Nhk Data Archives

Introduction: From the late 1990s to the early years of this century, a new image of dementia (PWD) has been promoted in Japan. The willingness of PWD to speak publically about their thinking and desires around 2004 is considered a significant event. Afterward, their statements became a central issue in dementia care. The mass media and especially the NHK (Japan Broadcasting Cooperation), which produced television documentary programs on this subject, have promoted this trend. The event of 2004 has been definitely important in changing the image of PWD. However, the views and wishes of PWD have been uncovered and constructed in diverse way in each field of dementia care, and the NHK has reported some outstanding care practices. The empirical exploration of this image of dementia (PWD) has been represented before 2000s? How are previous images related to the new image? This presentation explores the presentation patterns of those with PWD in NHK TV documentary programs produced between 1980 and 2003 with using following data.

Method: Thehistorical reconstruction and modifying to broadcast data archives and asking for participants to challenge some themes. As a participant, I obtained access to the video data systems for a year and created the following three types of data:

1. a title and contents list of TV programs about dementia;
2. documentation of the story, the contexts and scenes of each program; and
3. pictures of symbolic scenes in these programs.

Results: Two controversial descriptive patterns of the thoughts and wishes of those with PWD emerged. The first is that descriptions of these characteristics relate to problematic behaviors for caregivers. The second is that when PWD suffers think and feel are important in and of themselves and, therefore, sometimes conflict with the needs of caregivers.

A Pragmo-Semiotic Analysis of “Occupy Nigeria Group” Online Posts on the 2012 Fuel Subsidy Removal in Nigeria

In response to the fuel subsidy removal by the Nigerian government on 1st January 2012, Occupy Nigeria Group, a protest movement, embarked on different mass strike actions and demonstrations including online activism. The civil resistant actions geared towards reversal of petrol pump price increase deployed certain verbal and visual means in portraying the government and its actions. Previous studies on online protest discourse in Nigeria have adopted sociolinguistic and discourse analysis approaches in examining issues of identity and self-determination with little attention paid to visual-pragmatic strategies in representing people and their actions. This paper, therefore, undertakes a pragmo-semiotic investigation of “Occupy Nigeria Group” online posts on the 2012 fuel subsidy removal in Nigeria with a view to examining verbal and visual modes of representing people and their actions in the event. Seventy-five online protest posts purposively sampled from the groups’ page are used to identify and categorize various pragmo-semiotic elements and functions in the representations using insights from Meys pragmatic act, Halliday’s systemic functional linguistics and the semiotic theory. It is observed that the verbal mode complements the visual in projecting the demands and resistance of the group. The findings also reveal the use of various visual-pragmatic strategies such as prayer, negative labelling, humour, mockery, abuse, passionate and fierce appeal, including photo trick. This study has established some pragmo-semiotic patterns in verbal-visual posts in the Nigerian online protest context. An awareness of the peculiar patterns and use is crucial in understanding and interpretation of socio-political realities of such new events by online consumers.

II, TAKAYUKI* (Senshu University, it@cc.hirosaki-u.ac.jp)
Comparative, Realistic, Communitarian and Public Qualities: Looking Back Michitaka Kaino’s Sociology of Law

Among Japanese socio-legal scholars, Michitaka Kaino (1908-1975) remains hidden abroad, though he is unique with comparative, realistic, communitarian and public qualities. Kaino covers the Emperor system/fascism, human rights, the courts, ownership, commons, family, sociology of law and pollution, which are titles of his eight collective works. He wrote many papers and articles in various journals and newspapers, which included opening essays to the monthly legal magazine called Horitsu Jiho. Furthermore, he invoked Western legal doctrine to solve domestic problems, presided over a public book-reading circle, represented as an attorney regional peasants who insisted upon their rights of iaria, and developed the sphere of environmental law.

Above-mentioned Kaino’s qualities seemed to have characterized Japanese sociology of law to some extent. A comparative law perspective has been requisite for most Japanese socio-legal scholars. Realistic view of law in confrontation with Japanese’s social situation has become a matter of course. Kaino’s article on the right of iaria has been reevaluated in light of the study on the commons. In reference to the notion of “public sociology”, Kaino’s stance and works seem to fit “public sociology of law”.

The methodology is a life history analysis, which tries to reconstruct Kaino’s personal experience and life from his written records such as interviews and his biography. It is expected that a relationship between one socio-legal scholar and society would be brought into relief through this approach. Thereafter, qualities, merits and limits of Kaino’s sociology of law will be considered from the point of view of global legalization.

IIIDA WANG, YOKO* (University of Hawaii at Manoa, yokoiiida@hawaii.edu)
Mediating the Professional and the Amateur: Social Activism in a Post-Union Democracy
The COMPON-Japan conducted this survey based on the Japanese translated version of the common COMPON questionnaire sheets to 125 organizations in 2012 and 2013 which can exert political leverage in the field of climate change policies. 72 organizations responded and the collection rate is 57.6%.

As results of our survey, we find that almost all stakeholders share the view that the climate change reality occurs and is caused by human activities, though a few stakeholders conduct natural or social science research by themselves. They can, therefore, concentrate their political resources to bring their opinions to governmental officials by attending at committees and making press releases.

On preferences of domestic climate change policies, there is a cleavage over legal goal-binding measures. Our respondents replied the progress of climate change policies are seriously impeded by the lack of political leadership. This result can be interpreted in two ways. For one thing, they expect the government's coordinating of the crush of interests between stakeholders. And for another, they expect stronger political leadership and media campaigns to introduce more effective climate change policies. Climate change policy-making processes in Japan are stagnated, then we need stronger international stimuli and pressures to change the situation.

This study elucidated multiple layers of vulnerabilities of women in the wake of the disaster, which stem from the pre-existing social structures that disadvantage and discriminate women, and sociocultural norms that reinforce male domination and female subordination.

Community-Based Disaster Management in Super Aging Society: How Age and Gender Interacted to Shape Disaster Response in 2011 Tohoku Disaster

This paper seeks to examine how different attitudes toward gender across generations affected disaster response and recovery in 2011 Tohoku Earthquake and Tsunami.

Substantial population aging had occurred in the coastal areas of Tohoku that were devastated by the 2011 Earthquake and Tsunami. About two thirds of those killed in the 2011 disaster were older than 60 years of age. While elderly persons as a group are one of the most vulnerable population groups, they are key to community-based disaster management in Japan.

Community organizations for disaster management (jishubousaikai) are conventionally established under each residents' association (chounai) or neighborhood association (chounaikai). Men in their 60s and 70s, retired but active, are the main members of jishubousaikai. Women of the same generation also participate in activities of jishubousaikai, but they are seldom engaged in decision-making because of strict gender divisions of labour that characterize this generation. Younger generations with more egalitarian gender attitudes are generally not very interested in disaster management activities.

After the disaster, jishubousaikai managed shelters and distributed relief goods in many affected areas. The national government for the first time issued requests to each affected local government to consider diverse needs of affected women and care-giving families in shelters; however, the requests were not recognized as important in many affected areas.

This paper investigates how age and gender interacted and shaped response processes in 2011 Tohoku Disaster though the analysis of data collected in two studies: 1) interviews with people engaged in disaster response and recovery during the 2011 Tohoku Disaster, most of who were also affected by the disaster themselves and 2) an action research project with three jishubousaikai, aimed at incorporating gender and diversity sensitivity in their activities in Shizuoka Prefecture, where another gigantic Tokai Earthquake is predicted to occur.

The Factors of Japanese Female Workers’ Job Quitting for Childbirth/Childrearing

This presentation will show the factors why Japanese female workers quit their jobs for childbirth and childrearing. Despite the enforcement of Equal Employment Opportunity Act and Parental Leave Act 20 years ago, the female labor force participation rate by age in Japan still forms M-shape curve, because many women quit their jobs at the time of their pregnancy.

C. Hakim stresses on “preferences” between work and home to explain behaviors of female workers with family responsibilities; “work-centered”, “home-centered”, and “adaptive”. She presents the data that many of women are “adaptive” in Europe. She also points out the influences of relaxing labor market regulations.
on increasing part-time work and on intermittent careers which are typical of adaptive women.

I suppose it is also important in Japan to focus on the structure of labor market as influential factors to explain the mass of women's behaviors. Japanese society has experienced long-term depressions during the past two decades, and firms have increased non-regular employees such as part-time and temporary workers instead of regular employees. This severe employment situation has negative influences on many female workers' job continuity, while some firms maintain female regular employees as long-term labor force. Moreover small organizations are not so positive on parental leave while large organizations promote the leave. As a result, the job continuity rate after the first childbirth is increasing only for the regular employees in large organizations.

The results of our data analysis imply that it is effective for employees in small organizations to gain knowledge of work-life balance support systems to negotiate with their superiors and avoid job quitting. And also, it is important to support female workers searching for regular employment with work-life balance systems so as not to choose non-regular jobs in order to balance work with family lives.

The Influence of Gabriel Tarde on the Development of Japanese Sociology in the Early Twentieth Century

The purpose of this paper is to examine Gabriel Tarde's influence on the development of Japanese sociology in the early twentieth century. In the first half of the period, Tarde was an opinion leader of French sociology with his famous opponent, Émile Durkheim. After his death in 1904, Tarde's presence in the French academic community declined gradually, while Durkheim earned a reputation with his collaborators known as "Durkheimian school." Unlike Durkheim, a professor at the Sorbonne, Tarde did not have his own students at the Collège de France, where lectures were open for everyone. It may be one of the main reasons for Tarde's decline, as some historians of sociology think.

However, there were many foreign sociologists in the audience of his course of modern philosophy at the Collège de France. One of Japanese sociologists who attended Tarde's course, Shotaro Yoneda (1873-1943), became the first professor of sociology at the Kyoto Imperial University. Yoneda established his sociological theory based on Tarde's "inter-psychology." In 1913, Yoneda co-founded the Japanese Institute of Social Science with his colleague at the Tokyo Imperial University, Tongo Takebe (1871-1945), who also attended Tarde's course. Yoneda's earliest disciple, Yasuma Takata (1883-1972), a preeminent sociologist and economist in Japan, not only borrowed Tarde's idea for his "Power theory of economics," but discussed Tarde's imitation theory for his system of formal sociology. Therefore, in this paper we propose to demonstrate that the impact of Tarde's sociology was more important in Japan than in his home country.

What Is Happening in the Northern Mozambique Under the Prosoavana Programme and Agricultural Growth Corridor: An Implication to the Large Scale Land Acquisition in the Southeast Asia

This paper intends to reveal what is happening in the Northern Mozambique under the ProSAVANA Programme and agricultural Growth Corridor, and draw implications from a field survey for peasant society in Southeast Asia. Large scale land acquisition, so-called "land grabbing," is extending in Southeast Asia as well as in Africa. Laos and Cambodia are relatively new countries in the sphere of land grabbing. Such countries are expected to promote agricultural growth corridors. Obviously, there is close relations between land grabbing and corridor projects. What impacts will such relations give on the concerned rural communities and peasant farmers?

In Mozambique, some agricultural growth corridor projects have been conducted since the mid of the 2000s. Nacala corridor project in the Northern Mozambique, which connects Nacala Port to Malawi and Zambia, is one of them. In the same area, ProSAVANA programme started in the same area in 2011 under the triangle cooperation among Mozambique, Brazil and Japan. The target area of ProSAVANA covers the Nampula, Zambezia and Niasa provinces.

The UNAC (União Nacional de Camponeses) and international NGOs are claiming to stop ProSAVANA because of many problems causing from ProSAVANA and its related activities of the local and the central governments, and agribusinesses. This paper highlights the process of land deals, real beneficiaries, and severe impacts on peasant farmers examining how large scale land acquisition by foreign investment infringes food sovereignty of the society.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
material state of his/her own family, social activity, satisfaction with ecological situation in the area of residence, interaction with bodies of local authorities, migration moods, life ambitions, etc., draws stable psychosocial climate of a rural area.

Mutual support is a phenomenon in modern society where personal values and disunity dominate. This phenomenon is characteristic of very few rural areas of Russia and it was found in rural areas of Tatarstan. The explanation of this fact lays, in the opinion of the author, in socialistic values of rural population especially typical for the area where the proportion of old people is quite big. Social networks reflecting rural population cooperation in Pestreschinsky area are concentrated basically on mezolevel and in Kukmorsky area on microlevel. Projective trajectories of rural population towards development of all spheres of life in a rural area are connected with intergenerational continuity due to family agricultural business. 

1. Specifics of a demographic portrait of population in Pestreschinsky area reflected on making facilities inside the house. At the same time home improvement in Kukmorsky area is connected with household needs outside the house.

2. Rural residents working on a family farm show high level of satisfaction of fulfillment of his/her reproductive capabilities. 3. Such form of rural residents' cooperation as condemnation of co-residents for not taking part in life of a rural community.

4. Life of rural people living in Pestrescinsky area is concentrated on the development of a social wellbeing while in Kukmorsky area - on personal wellbeing. None of these strategies cannot be viewed acknowledged as the best for the development of a rural society because personal welfare also constitutes social capital of the whole area.

A Visual Retrospect of Istanbul's Galata Neighborhood: Pursuing the Path of Socio-Spatial Segregation

This paper will examine the visual effects of gentrification in the historic neighborhood of Galata in downtown Istanbul, Turkey. Revisiting the research I have done in 2004 and conducting a new fieldwork in the neighborhood, I intend to examine the evolution of visual contrasts between physical proximity and social distance, revealing the differences and similarities concerning residential segregation and neighborhood change. Galata is a historical district which was inhabited by non-Muslim minorities until the first half of the twentieth century when these had to leave the country for various reasons, including the creation of the State of Israel, the events of 6-7 September 1955, the “wealth tax” in 1964 and the cancellation of the residence permit for more than eight thousand Greeks. These years also represent a significant wave of migration from underdeveloped regions of southeastern Turkey towards Istanbul. These migrants have settled in the neglected and abandoned apartments mainly in Galata. In the 70’s, small factories moved into the area, usually in the ground pavements, destroying the walls in order to install machines and thus worsening the condition of the buildings. Since the 2000’s the dilapidated buildings are restored and the migrant population is gradually displaced and replaced firstly by the middle and then upper classes. Using the concept of territoriality, enrolling in both frames of time and space, this study aims to elaborate the interpenetration of these two structures and to identify the visual ways, developed by different social groups living in the district, of appropriating the same urban space.

Is a Non-Violent Way of Resistance Against Violence Possible? Istanbul's Gezi Park As a Battlefield

This paper will examine the interactions between the actors of the Gezi Park urban uprising and the Turkish state in the framework of shifting violent and non-violent strategies. The movement of peaceful, unarmed, non-violent people against the demolition of the Park was faced with violent tactics from the police force, varying from excessive use of tear gas and water cannons to plastic bullets, while streets turned into battlefields. This led to an emotional urban communing while streets turned into battlefields. This led to an emotional urban communing and neighborhood change. Galata is a historical district which was inhabited by non-Muslim minorities until the first half of the twentieth century when these had to leave the country for various reasons, including the creation of the State of Israel, the events of 6-7 September 1955, the “wealth tax” in 1964 and the cancellation of the residence permit for more than eight thousand Greeks. The Focus on Everyday Life As a Turn to the Human Dimension of Social Structures

The focus on everyday life as a turn to the human dimension of social structures is one of the recent paradigmatic developments in the sociology of everyday life. It is characterized by a focus on the lived experiences of individuals and the ways in which these experiences are shaped by social structures and power relations. This approach has been influential in a range of sub-disciplines, including social psychology, ethnography, and cultural analysis.

This paper will examine the visual effects of gentrification in the historic neighborhood of Galata in downtown Istanbul, Turkey. Revisiting the research I have done in 2004 and conducting a new fieldwork in the neighborhood, I intend to examine the evolution of visual contrasts between physical proximity and social distance, revealing the differences and similarities concerning residential segregation and neighborhood change. British Muslim Response to the Post-9/11 Uncertainties

The 9/11 and 7/7 attacks in the US and UK, as well as the subsequent War on Terror and its effects have had a tremendous sociopolitical impact on the British Muslim polity. On the one hand the effects have fostered Islamophobia and the securitization of Muslims. But on the other hand, which is the focus of this paper, the aforementioned events have fostered an atmosphere where sociopolitical and religious reflexivity is taking place among British Muslims.

The paper is based on interviews and virtual ethnography and they identified three main ways in which the Muslim community is changing. Firstly, some Muslims are adopting a literalist reading of Islam, which is performance orientated and piety conscious. Secondly, a small number of Muslims are reading Islam in a liberal reformist way within a modern sociopolitical milieu. The group is composed of born and convert Muslims and ethnically diverse. The reformists tend to focus on human rights, women rights and the rights of the Muslim LGBT community. Finally, an increasingly large number of young Muslims are becoming politically assertive, confident, and organized. These Muslims in the main are concerned with human rights, especially of fellow Muslims. Like the literalist group, this group is composed born and convert Muslims and is also ethnically diverse. This group adheres to a mixture of reformist and literalist reading of Islam and often receives criticism from the literalists.

New Technologies, Therapeutic Zones and Islamist Groups

Communication and entertainment technologies over the last decade have transformed sociopolitical activism. Ayman Al Zawahiri, in his book 'Knights Under the Prophet's Banner' states: 'We must ... get our message across to the masses and break the media siege imposed on the jihad movement ... This can be achieved through the use of the Internet'. In most cases the new technologies were first developed for military purposes and later modified for civilian use –In particular the Internet. In the first instance, the Internet has been well documented in academic literature, and think tank and government reports. However, there is little written about how the aforementioned technologies are used to create psychosocial environments that act as precursors to one joining and acting on behalf of Islamist groups.
In this paper I will detail how social networks, videos, and video games can foster and be used by Islamists to create what I call ‘therapeutic zones’, which make acquiring and acting upon extreme ideas more amenable. I consider these zones as an essential part in cultivating the desire among some individuals to acquire extreme ideas and in some cases act upon them, either with or without the involvement of Islamists. These zones are important because they are spaces where what I call militarized emotions can be cultivated and secondary trauma imparted. The emotions act as disincentives to circumvent ethical and legal references and make Islamist explanations and solutions acceptable.

Almost fifteen years have passed since the rising levels of inequality and insecurity became the social issues in Japan. One of the major reasons of this is clearly rooted in the limited social inclusion of non-regular workers within the institutionalized pattern of social security of livelihood and future prospects. Although the last several years witnessed some attempts of re-regulation of labor markets under the governance of the Democratic Party of Japan such as the revisions of Temporary Dispatching Work Law and Part-time Work Law, the processes and the outcomes of re-regulation appear to legitimize or even formalize the existing structure of inequalities and exclusion. The paper argues that the situation cannot be turned around unless the specific link between unemployment and welfare and the norms that support it is properly recognized. The link is shaped as a specific type of industrial citizenship, a set of rights and duties for employers and workers that is negotiated historically between state, firm and labor. In Japan, it was negotiated by enterprise-based labor unions prioritizing the employment security of workers with standard employment contract who are typically employed by large manufacturers. Social security system was designed to support these male bread-winners. Ironically, this citizenship – negotiated standard of social justice in a society – justifies triple inequalities that characterize the current labor markets in Japan: large firms over smaller firms, men over women, regular employment over non-regular employment with regard to the access to livelihood security and future prospects. The paper points out the necessity to overcome the standard employment centristm that produces the ironic consequences.

In the presentation, I argue the micro-macro problem from three aspects based on the viewpoint of agent-based simulation. First is to examine the mechanism of emergence of social structures between individual and society by a bottom-up procedure. There has been a deep division between the methodological individualism and collectivism. To bridge this division this has been the most difficult work so far. Because of the emergent property of a macro level, it has been regarded as almost impossible to derive the characteristics of macro (society) from the micro (individual). In fact, while efforts to the problem of micro-macro link have been made in sociology, meaningful results have not been achieved.

In summary, conceptualising the alleyway as a contested place and sample for broader social struggles, and locus for generating, proclaiming and negotiating new forms of housing and public spaces and re-appropriated by different fields, the urban alleyway in Berlin-Mitte, which once have been part of people's personal spatial sphere and everyday life, but which have increasingly been transformed by diverse and competing interests. Marginalized through the emergence of new forms of housing and public spaces and re-appropriated by different fields, the urban alleyway in Tokyo, Japan and Berlin-Mitte, Germany, drawing on ethnographic data supported by a conceptual framework derived from theories of place making and identity formation processes, this paper investigates the kind of functions the alleyways fulfilled in these cities in the past, and the qualities of urban life that have been lost or changed. Providing multiple narratives of change, the paper's main purpose is to critically reflect on the recent ‘revival’ of the urban alleyway, arguing that the interstitial nature of these places can be characterized as a boundary between belonging and displacement being on the hand places which are desired and needed to express local voices, thoughts and personal opinions but also places which face different forms of occupation, transformation or destruction.

In summary, conceptualising the alleyway as a contested place and sample for assessing physical, corporeal, and social relations in these processes of micro-scale place making, allows us to view the alleyway as the material expression for broader social struggles, and focus for generating, proclaiming and negotiating different cultural subjects, which are aspects of contemporary urban life. The outcomes of this study should offer more insights and alternative views to understand the potential and future of the urban alleyway in a global perspective.

The focus of this paper is to investigate the impact of structural and individual factors on political participation patterns in Lithuania. What groups of citizens in Lithuania may be distinguished in accordance with their level of interest in political participation? Which mechanisms and factors are inherent in the process of democratic government that help citizens to voice their interests, preferences and needs, and to pressure state officials to take into account their opinions. Active participation in the process of democratic governance provides ordinary citizens with a possibility to have influence on the appointment and monitoring of politicians and civil servants.

In this paper I will detail how social networks, videos, and video games can foster and be used by Islamists to create what I call ‘therapeutic zones’, which make acquiring and acting upon extreme ideas more amenable. I consider these zones as an essential part in cultivating the desire among some individuals to acquire extreme ideas and in some cases act upon them, either with or without the involvement of Islamists. Vocational and Academic Effects on Gender Segregation in VET - a Three Country Comparison, Germany, Norway and Canada

Gender segregated vocational education and training (VET) is usually attributed to gender stereotyped career choices of students at the end of junior high school. However, institutional logics may also promote gender segregation in VET. Empirical findings in German-speaking countries show that mixed-gender educational programs require higher school achievement compared to both male- and female-typed programs.

The paper investigates how institutional logics of the education system impact on the allocation of school leavers to gender-typed upper secondary (general and vocational) programs in Germany (DE), Norway (NO) and Canada (CA). We test the assumptions that (a) the more vocationalised an educational program, the more gender-typed the program (vocational effect), and that (b) mixed-gender education programs require higher academic school achievement than gendered-typed programs (academic effect).

The three countries were selected because of their different educational policies (vocational and academic principles in DE; academic and universalistic principles in CA; NO sharing the vocational principle with DE, and the universalistic principle with CA). We use youth panel data in all three countries (DE: BiBBI Transition Survey 2006; NO: Young in Norway YIN; CA: Youth in Transition Survey YITS) to analyse both the vocational and the academic effect on educational gender segregation. We apply multinomial logistic regressions for men and women separately, with gender-type of the educational program (male-typed, mixed-gender, female-typed) as the dependent variable to test our hypotheses.

Preliminary results show clear evidence for the vocational effect on educational gender segregation in all three countries, including Canada. In contrast, the academic effect on educational gender segregation is strong in Germany but relatively weak in Canada and Norway. We interpret our findings with the unique constellation of different educational policies (vocational, academic, universalistic) in each country.

Shrinking the Ballooning Young Precariat Class in Nigeria: The Need for Youth Empowerment

All over the world, the debouchment of a new class has been observed with new demands for the progressive troika of equality, liberty and fraternity. Far from being the forlorn cry for the establishment of a Marxian utopia or pantosocracy, the genuine demands for egalitarianism necessitating the restructuration of economic, social and cultural capitals has become a desideratum for society's preservation. Social upheavals, civil protests and collective movements led by a determined precariat class to address social ills and worsening inequalities will continue unabated until the political and economic managers of the state capitulate to these demands. In Nigeria, the elite is already aware of the potential vulnerability and precariousness of this class. Existing diurnal narrative in Nigeria indicates to these demands. In Nigeria, the elite is already aware of the potential vulnerability and precariousness of this class.

Bodies-in-Design: Impairment and Embodiment in Universal Design

Bodies-in-design: impairment and embodiment in Universal Design

Designed objects and environments are often inattentive to impairment or bodily diversity that do not conform to particular, yet normalised, conceptions of the body form and performance. This has resulted in a heightened awareness for a socially just design that is sensitive to the complexities of bodily actions and encounters, leading to the emergence of movements such as Universal Design. Drawing on a study on the relationships between impairment, embodiment, and design, this paper considers the diverse ways in which major exponents of universally designed products and services construct the impaired body, or the bodies for which they purport to design. Discussing data from interviews with designers in companies at the forefront of making universally designed products, this paper considers the proposition that hindered bodies are being represented within a particular discourse of impairment, needs, and how for designing for impaired corporeality is possible, and desirable, within the confines of commercially orientated organisations. As our research suggests, while Universal Design purports to design for all, the practices of designers sometimes risk falling back on reductive conceptions of the impaired body that mask the diversity of capabilities and experiences among users of designed objects and environments. We then discuss some of the reasons for such exclusions as well as outline potential ways of sensitising organisations and practitioners to the complexities of bodies-in-design.

Social Stratification and the Formation of Single Parent Household in Japan

It has been confirmed that the children who grew up in a single-parenthood had many disadvantages both on educational attainment and the life course afterwards. This finding is robust in US, but recently Japanese studies have also found it repeatedly in Japan. This is to say that parental divorce limit their children's life chance, and hence reduce their children's intergenerational social mobility.

If we have concern with the intergenerational reproduction of poverty (social stratification), we have to clarify the relationship between social attributes and the occurrence of the single parent households. We use the data of Longitudinal Survey of Newborns in the 21st Century (2001 Cohort) by Ministry of Health, Labour and Welfare of Japan. Respondent were randomly selected from men and women who nurture kids born either between January 10th and 17th in 2001 or at between 10th and 17th in July 2001. Initial survey was done in 2002 and the sample size was 47,015. Afterwards, panel survey has been done for every year, except for 2007.

We set household composition at 9th survey (conducted in 2010) as basic dependent variable. As sample attrition was serious, we dealt with this sample selection bias by propensity score analysis and Heckman's two stage estimation probit model (Heckit). We found that those who did not have college or university degree, those who had married at early ages, and those who had low household income in the 9th survey dropped out from the survey, but they also tended to divorce and form a single parent household in 2010. Marital relationships of those at low socioeconomic status were generally insecure and were likely to disrupt. These findings suggest the mediating effect of divorce between parents' low educational attainment and those of their children's.

The Possibility of “Community” Mediation

Community is made up of the following minimum. (1) Life is dependent on the region (2) Sharing culture (3) Relationship face-to-face (4) Relationships are there grandparents, parents, children, grandchildren, and so on. However, the community, recovery community is fragile, and once lost, injured difficult. 2 About the possibility of community mediation. Community mediation, proceed as follows. (1) Providing a forum for mediation (2) Listening to both parties (3) Promoting the voluntary interaction (4) The parties themselves generating an
Does Trust Promote Generosity?

Both of trust and generosity have been considered as important factors to promote cooperation (Yamagishi 1998, Nesse 2001). Some researchers argue that trust plays a significant role in assessing quality and trustworthiness of unknown others. On the other hand, generosity is defined as a tendency to forgive defects or failures of partners (Exline & Baumeister 2000, McCullough 2008). However, these two cooperation promoting traits appear to be incompatible. Trust helps us to assess partner's trustworthiness, which may lead to a withdrawal from inappropriate relationships. On the other hand, generosity helps us to forgive partner's mistakes, implying that we make a commitment in spite of partner's failures. Therefore, the question is: Are these two traits really compatible? And if so, how do we have developed these two seemingly contradicting traits?

Here, we aim to clarify the puzzling relationship between trust and generosity by using an agent-based modeling. We adopt trust game as a basic building block and then incorporate two further elements into our model. One is related to heterogeneous agents in terms of abilities to fulfill donor's expectation. The other element is related to partner choice, commitment (repeated trust game with the same partner) and an exit. Trust is thus formulated as selective strategies in the context of partner choice, whereas generosity is defined as forgiveness of partner's failures in the context of commitment relationship. We carry out the set of computer simulation experiments to assess the viability of several strategies.

Our first result is: without reasonable trustful strategies, more generous strategies cannot be viable. Furthermore, we find that as group size increases, trust level also goes up, leading to the prevention of degenerating generosity. These two results clearly indicate that trust can promote generosity. Put it differently, there exists a coevolution mechanism of trust and generosity in our social world.

“Battle Hymn of Tiger Mom” As Social Capital Building

This paper aims to describe the process of constructing and transforming research questions through encounters with immigrants in the field of everyday life under the globalized environment, and to indicate two approaches to the fieldwork, based on my research around Kobe city, Japan. The first is research based on researchers' perceptions that categorized immigrants as the “aliens” visibly in the social structure, while the researchers' positions and power to make them other are not critically subjected. Here, encounter is not a research subject but rather a chance to inspect their presupposed research question. On the contrary, the alternative approach that constructs research question from daily relationships with immigrants focuses on the encounter itself as the process of facing the selves that occurs us another belonging and identity in the dimension of existential movement, such as Ghassan Hage proposed (Hage 2005). Based on my research, I experienced these approaches as transition from the former to the latter, that criticized the direct linkage between the notion of “aliens” and their visible by walking away from the ethnic festival to the daily relationships among return migrants from Peru, and by getting involved in a trouble of a family that shaken researcher's existence to remind me my family backgrounds as also among return migrants from Korean peninsula after the colonial period.

This is just one of examples to research another belonging and identity between researchers and informants. However, in the field of Japanese sociologists, there is almost separated between international sociology that focuses on structural social change and life story studies that approaches to individual meaning of life and encounters with informants so long time. This paper shows the possibility and the subject to link these studies on immigrants as one of fieldwork methodology for bridging between social theories and realities of daily life under globalization.

**How Human Insecurity Arose Under International Peacebuilding: The Case of Timor-Leste**

This presentation explicates how new form of human security arose in Timor-Leste during the time of international statebuilding and peacebuilding. Firstly, a raw attention to the influence of neo-liberal economic policy on people’s lives. The introduction of neo-liberal economy had a detrimental impact on domestic agriculture in Timor-Leste, triggering a large-scale urbanisation as many moved to cities in search for jobs. Despite the recent economic growth, however, most of migrants from rural areas remained jobless and the poverty among the new migrants aggravated.

Secondly, I point out the impact of the failure of state-institution building on the human security condition in the country. As many have pointed out the modern state institutions had struggled to build its foundations in of the country. State there was a clear specification resting on the economic policy. At the same time, it is important to note that the decline of customary form of governance had a critical impact on the quality of people’s lives. While the clan-based community and its customary form of governance have provided societal security in rural areas, the population in the urban areas lacked such supports from families and extended families. It was under such a context where a new form of human insecurity emerged.

I will close this presentation by discussing the implication of the case of Timor-Leste to the theory of international statebuilding and peacebuilding. The conventional theories have assumed that political democratisation would automatically bring about peace and security in the post-conflict society. The case of Timor-Leste, however, suggests the need to reframe the theory so that it would be able to include the complexity of political and economic modernisation and to appropriately explain the complex trajectories that the post-conflict societies might experience.

**Towards Adequate and Accessible Psychosocial Care: A Research Working Alliance with Professionals in Treatment and Counseling**

Institutions of psychosocial care do not offer equal access to all members of society, not even to those who are entitled to such services by general health insurance. Immigrant status is associated with lower rates of use of mental health services; this likely reflects cultural and linguistic barriers to care. In the case of Germany, migrants are disproportionally highly represented among in-patients in psychiatric clinics and in compulsory treatment in forensic psychiatry: in many cases, psychosocial care therefore does not function preventively. Institutions of psychosocial care do not adequately respond to the needs of migrants and the relation between migration and mental health needs further investigation, as well as the development of cultural sensitive health care.

Psychotherapists and psychiatrists in Frankfurt am Main founded the "Inter- tural Forum Migration and Psychosocial Care" in April 2010 to address these problems and work towards more adequate and accessible treatment and counseling. In some institutions there are changes in organization and leadership, more professionally oriented transition experience are employed and treatment is offered in different languages. In other institutions, such changes are absent or very slow. But professionals from most clinics and counseling centers take part in the "Forum" and agree that change is needed.

At the University of Applied Sciences, we are founding members of the "Forum" and take part in the ongoing plenaries and working group meetings. We are also conducting a research project on "Diversity and Inclusion in Institutions of Psychosocial Care". Students in the Master Research in Social Work attend the working groups and plenary meetings as focus groups and write ethnographic protocols on their observations. They also ask psychotherapists and psychiatrists for narrative interviews on their professional experience. In my paper, I would like to discuss the methodology, working alliances and findings of this research.
by the powerful. Furthermore, the paper looks at how the formal and informal production, appropriation, transformation, use and management of street space in the case study areas of Manchester and Shanghai are linked and contribute to the formation and maintenance of multiple and hybrid social identities among members of distinct groups. The focus lies on the exploration of the street as a space which makes various types of inequality explicit, a space which is temporally, culturally, economically or, simply, physically in-between, and can thus be regarded as a type of urban borderland.

Widowhood Practices Among the Edo People in Nigeria: Continuity and Change

This is an empirical study involving both quantitative and qualitative approaches. It explores the widowhood practices among the Edo people n Nigeria which is a patriarchal society where majority of women especially those in the rural areas suffer from severe cultural constraints and inhibitions, creating an unequal relationship between men and women. The widowhood rites are often very dehumanizing to the extent that it erodes the self-esteem, potentials and capabilities of women. They are made to suffer emotionally, physically and economically as they are often denied the essentials of life. In terms of their means of livelihood, a woman enjoys access to land for farm purposes when her husband is alive; but at death, she becomes vulnerable to the dictates of her late husband's relations as she is seen as part of the property to be inherited by the family. The case is made worse by the fact that in the cases where no form of adjudication on her behalf ever carries any significant effect especially in the rural milieu where customary law seems to be stronger than statutory law. This is the debilitating situation facing most widows in Edo State, Nigeria, hence the need to examine the prevailing situation and proffer appropriate solutions that would help address the challenges of widowhood practices in the 21st century and beyond.

Keywords: Cultural constraints; customary law; patriarchal societies; rural areas; statutory law; widowhood practices

The Sex Lives Of Sex Researchers

The Sex Lives of Sex Researchers

As sexuality studies develops as a field, recent biographies feature some prominent figures. In addition to several texts on Alfred Kinsey, these biographies include those of Michel Foucault, Richard von Krafft-Ebing, Jeannette Foster Howard, the first librarian at the Kinsey Institute, and William Masters and Virginia Johnson. Some of this work is superb scholarship. Some might be considered “pathography,” Joyce Carol Oates term for “the technique of emphasizing the sensual underside of its subject’s life.” Pathographies of sexuality researchers spin for perversion. For example, James Miller’s biography of Michel Foucault links Foucault’s work to a range of unconventional sexual proclivities like SM. And biographer Thomas Maier begins his book with Virginia Johnson losing her virginity, portrays her as a sexually carnalizing secretary and delights in exposing surprising aspects of the researchers’ sex life together. Historian James Jones biography of Kinsey perhaps most typifies the genre. Jones claims that Kinsey’s research was driven by his own “inner demons” which allegedly included homosexuality, masochism, and a range of sexual compulsions such as masturbating with objects inserted into his urethra. This paper examines a number of biographies of sexuality scholars, and explores the dilemma biographers face in writing about the sex lives of these researchers. I suggest that, despite increased acceptance and even excitement about the academic study of sexuality, sexual stigma is a persistent theme in the stories about researchers themselves. Biographers use sex to frame the story, locating sex research in a brew of perverse desires and practices, and contending that the researcher’s deviance colors or discredits the scholarship.

Does Inequality Matter? Intergenerational Relations in European Welfare States

Intergenerational transfers of money, time and space are important features of parent-child relationships. Previous research reveals substantial differences in intergenerational solidarity, raising the question of causes and reasons for European divergences. Apart from inequality on the micro level, meso level structures (family) as well as macro level factors are important in order to understand different support levels of giving and taking money, time and space within and also between countries. While single types of solidarity have been predominantly analysed separately, a joint analysis is still missing.

Based on the Survey of Health, Ageing and Retirement in Europe (SHARE), 14 European countries are analysed to measure the impact of inequality structures on functional solidarity between parents and their adult children. Multilevel analyses including micro, meso and macro levels indicate that need and opportunity structures as well as variations in family composition and cultural-contextual differences between welfare state regimes matter for intergenerational relations. Children in need of more support than better situated offspring. Simultaneously, parents with better opportunity structures help more. Furthermore, we can observe that parents in low-level service states and high poverty and income inequality countries such as Poland, Italy and Spain predominantly support their adult children by providing living space, whereas in less familialistic and more generous welfare states such as the Netherlands, Denmark or Sweden parents rather provide time and monetary support. Our results moreover reveal that the provision of living space substitutes for time and financial transfers. The latter, however, do complement each other: children who receive time support from their parents often receive monetary help as well.

Money Vs. Space? Intergenerational Transfers in a Comparative Perspective

The provision of living space as well as direct financial transfers are important elements of functional solidarity between parents and adult children. However, previous research reveals substantial discrepancies in monetary transfers and intergenerational coresidence not only within but also between countries. Against this background, the investigation addresses causes and reasons for intergenerational support in terms of money and space. We investigate (1) which parents do provide these kinds of support for their adult children, (2) whether money and space are substitutes or complements, and (3) how one can explain national differences.

Using the Survey of Health, Ageing and Retirement in Europe (SHARE), influences of individual, familial and societal factors are analyzed for 14 countries. The empirical results, based on logistic multilevel models, indicate that especially needs of the adult child as well as opportunities of the parents are important determinants of intergenerational solidarity. In contrast, competing family members reduce support probabilities for each individual. Parents in familialistic and low-level service countries such as Poland, Italy and Spain predominantly support their adult children by providing living space, whereas in less familialistic and more generous welfare states such as the Netherlands, Denmark and Sweden parents rather offer monetary support. Furthermore, the provision of living space seems to substitute direct financial transfers.

Ukrainian New Left and Grassroots Social Protests: A Thorny Way to Hegemony

When and how the emerging radical left new in the post-Soviet societies is able to win hegemony within the rising social-economic protests mobilization? In the context of the post-Soviet ‘weak civil society the new left has a unique opportunity to use the ‘primacy effect’ in order to win strong position within the grassroots social protests. The prior strong position within the movement around some problem gives the privileged position compared to other political groups when the mass mobilization around it erupts. I will analyze the case of Ukrainian radical left student union ‘Direct Action’ organized in 2008 by ideological anarchists and libertarian Marxists which appeared to lead 20,000 student mobilization in over 15 Ukrainian cities against introduction of paid services in the universities in 2010 when established student NGOs were siding with the government or discovering they have no mobilization potential. However, the ‘primacy effect’ has its limits as not so many issues are remaining ‘vacant’ (because of the far right active intervention particularly) and not each issues has the same potential to destabilize the political regime. It means an increasing necessity for the post-Soviet new left to win and retain hegemony in the broad coalitions competing with other politicized and often hostile actors over non-politicized masses. Analyzing the case of highly successful ‘Save Old Kiev’ initiative against the privatization of public space, established in 2007 with the dominance of the new left groups coalition but where the
far right has ultimately won hegemony. I will show the process of ‘double intellectualization’: participation without systematic attempt to establish ideological influence and use of the grassroots protests for the publicity of particular political groups. If these two typical failure strategies are allowed to proceed, they lead to increasing distrust, the collapse of coalitions and isolation of the new left groups.

An Analysis of Imagined Boundary of the “Japanese”: Results from an Internet Survey in Japan

This paper aims to analyze tendencies and differences of imagined boundary and definitions of the “Japanese” among Japanese people.

There is a legal definition of the Japanese, that is, the Japanese is the people having Japanese nationality. However, a personal definition to distinguish people between Japanese (or ‘real Japanese’) and non-Japanese may vary from person to person according to their experiences and social status. Especially, subjective terms of grey zone cases, for example naturalized immigrants or Japanese diaspora, is controversial and delicate issue in Japan.

For capturing people’s imagined boundary and definition of the “Japanese” in detail, I conducted an internet survey with 2,000 respondents in 2013. In this survey, I employed 16 types of vignette questionnaires which describes typical combination of conditions relevant to national identity, i.e., nationality, resident, blood, and language, and asked respondents to judge whether a person who has a certain combination of conditions is regarded as the “Japanese” or not.

By using this data, we can capture a person’s imagined boundary as a Boolean algebraic equation. In the paper, results from the survey will be demonstrated in detail. Besides, the relevance between types of imagined boundary and definitions and demographic and socio-economic status will be discussed in the paper.

Income Inequality and Relative Deprivation: A Formal Theoretic View

In a time of increase of inequality, does people’s frustration or feelings of deprivation rise? If it is yes, many theories of relative deprivation explain these kinds of relevance between objective economic situation in a society and subjective feeling of individuals?

This paper aims to present a formal theoretic view of the relationship between income inequality and relative deprivation by applying and developing Shlomo Yitzhaki’s (1979) defined indices of individual and societal degree of relative deprivation emerged by income comparison among reference group, and demonstrated explicit link between indices and the notion of the Gin’s inequality coefficient.

In this paper especially, I try to describe and explain two paradoxes relevant to relative deprivation occurring in the time of modernization from a formal theoretic view. First paradox regards the tendency that a disappearance of class barrier as reference groups in terms of income comparison rather results in increase of people’s relative deprivation. Second paradox is related to economic growth which tells that increase of amount of income in a society rather increases individual and societal relative deprivation under certain conditions.

A formal theoretic model will be introduced so as to solve these paradoxes. Furthermore, some implications from the model for understanding contemporary situations in advanced countries will be discussed.

Social Network and Job Change in Japanese Youth Labor Market: Embeddedness, Safety Net, and Social Closure

The purpose of this study is to examine whether and how social network affects job change behavior and the result of job change in Japanese young workers. They are faced with high risks of job turnover because of the expansion of fixed-term or part time employment, which is followed by service industrialization and long term recession since 1990’s. It is becoming an important process of career mobility that Japanese young workers find their job in the external labor market today. Social network approach is a convincing sociological framework to investigate the job search process.

There are several explanations based on social network approach. Embeddedness, safety net, and social closure arguments are examined empirically in this study. A panel survey data targeting at Japanese youth is utilized and it is tested whether and how social network affects job change and change in income after changing a job. Heckman’s two-stage sample selection model is applied.

Empirical analyses support the embeddedness argument. We have two main findings. First, social network is not related with job change behavior, but employment status is the definitive factor. Secondly, however, male job changers with ‘weak ties’ get higher income if they experience mobility between different industrial sectors. Social network works especially in cross-border mobility, where workers may lose their human capital and be put under uncertainty about their career. Social network can offset these disadvantages and give them advantages in job searching. And the cross-border mobility is a process of de-embeddedness.

In previous researches in East Asia, social network’s aspects of safety net and social closure are focused. From the results of this study, however, embeddedness argument is still important to be considered.

Baseball Labor Migration: Transformation of Border Crossings of Athletes in Global Diffusion of Baseball

As the result of globalization of a sport, the border crossings of athletes are increasing explosively today.

This study proves that the border crossings of athletes have accomplished the qualitative change from the example of global diffusion of baseball, which has established as professionalism with capital.

The global diffusion of baseball can be positioned on the context of forming a global marketing and scouting network of professional baseball whose summit is the Major League Baseball as North American top league.

This network has assumed Central America-Caribbean region by 1950s and East Asia after 1990s. and has been expanding to the ‘Baseball Barren’, Europe, Middle East, Africa and South American Continent, after 2000s. As a result, new competition terrains, where playing level had been dropped, have emerged in some of the ‘Baseball Barren’, and new types of border crossings of athletes can be seen there.

In the past sport labor migration studies, it has been thought that economic reasons, like salary or bonus, are main factor for the athletes who cross borders, however, not a few athletes are going abroad for non-economic and mental reasons, such as self-actualization these days. These can be seen as a new phenomenon as the conclusion of globalization of sports. In this situation, border crossings of athletes can be regarded as not parts of ‘labour’, but parts of ‘consumption’.

From this analysis, the word of ‘Sport Labor Migration’ is becoming no longer appropriate to represent the border crossings of athletes.

Reconstructing Relationships in a Transgender Family: The Story of Parents of Japanese Transgender Children

Raising and nurturing children is one of the most important functions of a modern family. In the emotional parental bond is typically strong. However, in the case of transgender children, to what extent do their gender issues impact their relationships with their parents? When discovering that their child is transgender, parents either accept them or change or reconstruct their relationship. This study discusses the process of creating new relationships and parents’ view-points by analyzing the narratives of parents of Japanese transgender children.

Ten in-depth interviews of parents with transgender children were conducted. The interviewees included eight mothers and three fathers. Data were collected from November 2012 to October 2013 in Kobe, Tokyo, and Fukuoka.

First, in these families, children’s problems were mainly handled by mothers because fathers had a comparatively tenuous relationship with their children and tended to avoid the topic of sexual minorities. Two types of reactions were seen on discovering that their child was transgender. The first was an “as suspected” response, while the second was extreme shock. The interviewees then began gathering more knowledge about gender issues and LGBT by reading or visiting LGBT communities to understand and generally acknowledge their child’s unique or queer gender identity. And in their life stories, parents tried to reconfirm or reconstruct images of their children and reforify their emotional ties with them.
workers but also because in-home long-term care support providers may lack motivation; as they do not receive subsidies for placing capable care workers with aged persons. Yet, good chemistry between aged persons and their care workers is important because aged persons have diverse needs, which may require specific characteristics in their care workers. To design a policy that will motivate care providers to deploy their care workers more effectively, the presenter interviewed several care workers and other support provider staff members, investigating how care support providers deploy care workers and the difficulties they face. The qualitative interview data revealed that some support providers have aged persons appoint their own care workers at their own expense. This method usually results in successful postings as it enables aged persons to choose compatible care workers and to make particular demands regarding their needs. However, because these appointments are made outside of the Long-Term Care Insurance Law, a designation fee is applicable, which some aged persons cannot afford.

These findings suggest that the government should give subsidies to support providers who appoint large numbers of care workers so that these providers can keep their designation fee low, and aged persons can continue to choose their own care workers. Such an initiative may also restrict social welfare costs in the long run because increased rates of in-home care are associated with decreased medical spending.

### A Political Ecology of Aquaculture Certification: Towards a ‘modernization of Ecology’

The article examines environmental certification regimes in the global aquaculture as an example of ecological modernization. While the fundamental tenet of ecological modernization is to shape capitalism by ecological principles, the study shows instead that through environmental certification regimes, ecology or nature itself is largely shaped, transformed and restructured to fit into, and thus serve, neoliberal governance and accumulation in a normalized manner. Certification regimes offer some avenues for a sustainable aquaculture; however, the internal dynamics of neoliberal capitalism remains largely unchanged. Since economic logic still reigns over ecological and social logics, the article argues that the example of the certification regimes should therefore be characterized not by ‘ecological modernization’ but by ‘modernization of ecology’. It is because through certification regimes, capitalism is not modernized in ecological lines, but ecology itself is modernized in the line of neoliberal capitalism.

Habermas’ Discourse Theory and the Concept of Public Sphere

The aim of this paper is to clarify the concept of Jürgen Habermas’ public sphere in his book, Between Facts and Norms, especially focusing on his perspective and method.

In this book, discourse theory is formulated with “D: Just those action norms are valid to which all possibly affected persons could agree as participants in rational discourses.” However, especially in American context, there is a lot of criticism that the discourse theory is not so effective for the analysis of an actual problem because it is too formalistic. Responding to this criticism, Habermas elaborates a process model of rational political will-formation about realistic problem. Habermas has taken up the public sphere as a concept to support such political will-formation. According to Habermas, the public sphere “is a warning system with sensors that, though unspecialized, are sensitive throughout society” and “can best be described as a network for communicating information and points of view.”

Some existing discussion found that Habermas succeeds to use a theoretical technique, called conversion of perspective and shift the level of a reference in The Theory of Communicative Action. However this paper points out that Habermas already uses similar techniques in Between Facts and Norms. Habermas moves to more concrete level of discussion based on his theoretical understanding of a modern democratic constitutional state. Dealing with experimental problems, to more concrete level of discussion based on his theoretical understanding.

Fourth, during times when economic consolidation intersects with movement radicalization/institutionalization, movement actions have an important effect on its industry counterpart. Fourth, during times when economic exploration intersects with movement exhaustion, the cycle of contention with the industry's position within the cycle of accumulation, I argue that social movements become more important and less important to industry creation based on the intersection of their place in the cycle of contention with the industry's position within the cycle of accumulation. Furthermore, at any given point in time, these cycles are both impacted by the larger political, economic and ideological structure of the society. I develop four different propositions to further clarify this theory. First, during times when economic consolidation intersects with movement diffusion, contentious actions have little, if any, relationship with industry development and technological explanations prevail. Second, during times when economic decay intersects with movement exhaustion, technological and social movement outcome explanations become less important and the macro political-economic environment provides a more robust explanation for industry changes. Third, during times when economic exploration intersects with movement radicalization/institutionalization, movement actions have an important effect on its industry counterpart. Fourth, during times when economic consolidation intersects with movement exhaustion, the economic counterpart may develop in direct contradiction to movement goals.

Re-Thinking of Community Based Pre-Disaster Activities; The Problem of Social Divisions in the Case of Japan

As the lessons learned about local initiative of disaster preparedness, this paper will be re-thinking the role of local community mainly focusing on the case of Japan recent two decades and especially based on the original research findings about neighborhood association “chonai-ka” and “making secure-and-safe community activity” after the Great Kobe Earthquake of 1995. The questions are 1) why and how previous disasters and terrorism have changed local communities’ disaster preparedness and risk perception nationwide, 2) how the local office promoted risk mitigation at the level of local community and 3) whether they worked out or not during the tsunami disaster efficiently.

The findings are 1) that the local communities are one of the best social capitals which are worked as emergent aiding and caring system each other and so 2) the construction of “chonai-ka” based disaster preparedness have become main important program of the disaster planning nationwide. For the “chonai-ka”, the problem of risk became more and more main subject of their activities. 3) This trend was connected to nationwide anxiety and “making secure-and-safe community activity” after terrorism using chemical substance by cult in 1995 Japan. But 4) the initiative of the activities is not belong to “chonai-ka” or local community itself and 5) the social division within local community itself is the problem such as the isolation of disabled people or other minority which Tsunami disaster revealed in 2011. This are connected in the case of unequal gender/ethnic relationships in communities and reflected in the local pre-disaster preparedness.

The discussion is 1) how the disaster studies take up the problem of social division in the theme of local community at global level and 2) how the relationships of the nations and local citizens in the disaster planning should be.

The Role of Japanese Public Health Nurses’ Activities As Post-Disaster Assistance

This paper will examine about the construction of disaster resilient local community based on multiple social networks through the cases of public health nurse activity in the tsunami devastated area.

The questions of this paper are 1) why and how the professional ability of public health nurse are efficient at the post-disaster time and 2) how it is different from volunteer activities such as non-specialized NPOs or neighborhood disaster prevent associations at the community base.

This paper is based mainly on the findings of my own interview with public health nurses that worked in the Harvey disaster in Texas in 2017, and a survey conducted on the post-disaster time and detailed survey on the public health reports about the disaster assistance. The findings are that 1) their activities are focusing on informal care and long-term support for community re-construction as well as official nursing services in the shelter right after the disaster, 2) their professional skills were especially effective in case they conducted their research about the health status for all surviving citizens in the area by using nationwide public health nurse human-resource network. And 3) they can support efficiently the destroyed local public office because they had been long working there and knowing in detail about clients and their community. It is important significantly different from other non-professionalized volunteers that 4) they have professional skills and a long year experiences of local community based caring and they have a variety of wide networks all over Japan.

I will discuss about collaboration of public health services with other local institutions, NPOs, volunteers and organizations for disaster vulnerable people such as elderly women. Japanese public health nurse activities is one of the best examples of post-disaster assistance system which has been uniquely rooted in local communities culturally and historically.

What the Ubiquitous Network Society Brings in Japan: Influences of the Mobile Internet Devices on Teenagers

Advanced technologies sometimes corrode social institutions. “Act on Development of an Environment that Provides Safe and Secure Internet Use for Young People” is a Japanese law which binds every parent to set up mobile web filtering on the mobile phone of her/his child to block “harmful” information in cyberspace. However, recent prevalence of smart phones and hotspots in Japan is spoiling this protection.

In this paper we want to describe current trends of the Internet use among Japanese schoolchildren based on several surveys we exercised in 2010 – 2013 in Gunma prefecture. The results show that many teenagers use their mobile Internet devices in a quite unguarded manner. For example, 20% of high school girls in Gunma prefecture. The results show that many teenagers use their mobile Internet devices in a quite unguarded manner. For example, 20% of high school girls

Expansion of Secondary Education in a Transition Economy: The Case of Vietnam

This paper examines an abrupt expansion and stagnation of higher secondary education in Vietnam during the two decades since the beginning of 1990s. In 1986, Vietnam introduced the Doi Moi policy to shift from a centralized socialist economy to a market-based one. Influenced by this drastic transition of economy, people's aspirations for upward mobilization through achievement of a higher academic level increased significantly. The school enrollment rate of high school increased from 15% in 1990 to 55% in 2010. However, the trend of the upward mobility movement has not continued for such a long time as in other recently industrialization countries in East Asia. By analyzing educational statistics by regions, the author found that the number of enrollments in high school now is stagnating, and is even decreasing in some poor rural areas. This paper focuses on two causes that restricted the rapid expansion of higher secondary education and caused a reduction in its speed. Firstly, a privatization policy of secondary education introduced a number of private high schools with weak management bases. They provided temporary bases for people's aspiration to go to high schools, but could not be continued due to lack of strong management strategies. Secondly, the development of the labor market could not keep up with the rapid increase of the newly produced labor force, high school graduates. People began to realize that only having a higher secondary education diploma was not enough to have a stable job in the metropolises, but was also too much education to work as part of the manual labor force in factories. In conclusion, this paper forecasts the future of post rapid expansion of secondary education in the first two decade of the transition economy.

Embodiment Experiences of Women with Disabilities in Yogyakarta, Indonesia

Embodiment Experiences of Women with Disabilities in Yogyakarta, Indonesia

Abstract

This paper explores the changing embodiment experiences of new disabled women after the 2006 earthquake disaster in Bantul district, Yogyakarta province, Indonesia. As a consequence of the disaster, thousands of people lose their parts of their bodies and become disabled. Not only they faced psychological suffering and trauma caused by the earthquake but also they should deal with many challenges in order to survive in their subsequent lives. Their properties were vanished and the situation was exacerbated by their work inability as a result of their impairment. They have been adapting to improper environment situation such as inappropriate facilities that hinder their mobilities. This situation even worse for new women with disabilities because they have not only to struggle for daily needs, they also have to challenge multiple oppression because they are disabled, because they are women and because they are poor and do not have ability to work. They also have been experiencing changing embodiment. After the disaster they lose their dignity and have to adapt to their new embodiment experiences. They have to follow procedures of medicalization to their physical disabilities in order to close with normality and should involve in some programs such as work skills from government and NGOs. This paper deal with ethnographic approach of the personal experiences of 5 new disabled women in comparing embodiment experiences before and after become disabled. This paper also discloses the embodiment process after 5 years of disaster and how those women with disabilities exercise their bodies to mainstream disabilities in their families and neighbourhoods.

Keywords: Disaster, embodiment, women with disabilities
come and Living Conditions (EU-SILC), which contains a very good measure of income and several indicators on subjective well-being (overall life satisfaction, meaning of life, positive and negative affects). Multilevel regression is employed as a method, in order to study the impact of country level variables, especially related to income distribution, and the differences between European societies. The hypothesis is that inequality may be the missing link between GDP and subjective well-being.

‘Tolerance’ Frame As a Hindrance to Effective Public/Authorities Feedback in Belarus

The report is going to consider ‘tolerance’ as a misconception and an ideological frame. A critical assessment will be done of tolerance on the part of Belarusian people. It is going to be shown that a) tolerance as an invariably beneficent trait of the Belarusian people is quite mistaken, b) that the ‘tolerance’ frame interferes with democratic governance principles as accepted and practiced worldwide, c) that responses to public dissatisfaction (part and parcel of normal governance systems) in Belarus are complicated due to persistence of the ‘tolerance’ frame; and d) that for long-term and sustainable democratic outcomes in Belarus a regular public/authority feedback should be restored by getting rid of ‘tolerance’ as part of the ideological apparatus.

The idea of this paper concerns ‘tolerance’ as it enters democratic governance schemes and might be leading to their malfunction. The word tolerance is widely used in liberal democracies and is ascribed a positive meaning. However, it appears that tolerance is not necessarily a virtue. The word tolerance has negative connotations as it acknowledges a problem. The danger with the ideological frame ‘tolerance’ is that it might enter democratic governance models where it can effectively block public responses to dissatisfaction. This way, the system is incapable of conveying public dissatisfaction, and the stimulus is removed for the authorities to improve their work. This might be evident in Belarus, where people have little opportunity to convey their dissatisfaction, given that they are considered as well as consider themselves ‘tolerant’. In this case, their tolerance, being mere holding on, is a potential volcano.

IVANOV, DMITRY* (St Petersburg State University, dvi1967@gmail.com)

Spatial and Temporal Structures of Inequality in the Super-Urbanized World. Flow-Structures of Glam-Capitalism and New Configurations of Inequality

The economy and society in networked enclaves of globalization – super-urbanized areas like Los Angeles, New York, Tokyo, Hong Kong, Moscow, London, Buenos Aires etc., are considered as glam-capitalism. Preconditions for new form of capitalism have been generated by virtualization of social structures. By the 2000s intensive commoditization of images had leaded to overbranding and triviality of the virtualization strategy that has provoked shift of competitive advantages to hyper-virtuality of glamour. Being since the 1930s specific life style or aesthetic form, glamour has become now rationality of newest version of capitalism.

The idea of this paper is that glamour becomes now newest rationality of capitalism. Glam-capitalism raises for economy of brands and networks as well as for politics of images and media.

The Next Transformation: From Glam-Capitalism to Alter-Capitalism

Globalization has resulted not in the ‘world society’ but rather in networked enclaves of globalization: New York, Tokyo, Hong Kong, Moscow, London etc. People have much experience of globalization through intensive flows of consumer goods, technologies, migrations, money, media-generated images (Appadurai). There capitalism has been transformed into glam-capitalism. Preconditions for glam-capitalism were created by virtualization of social structures. Hyper-reality of simulations and producing copies without original (Baudrillard) is adequate model for networked enclaves and networks as well as for politics of images and media.

By the 2000s intensive commoditization of images has led to overbranding and triviality of the virtualization strategy that provokes shift of competitive advantages to hyper-virtuality of glamour. Being specific life style or aesthetic form, glamour becomes now newest rationality of capitalism. Glam-capitalism raises with new producers at the hyper-competitive market place must glamour consumers and when goods must be aggressively beautiful to attract targeted groups. Value creation process now is related more to trends, than to brands, not only in fashion industry and show business but also in high-tech and financial industries.

Alternative movements like ‘copy left’, ‘open source’, ‘creative commons’, and ‘pirates’ violating ‘intellectual’ property rights challenge regime of glam-capitalism and represent the authenticity revolt against hyper-virtuality of glamour not only in economy but also in politics and culture.

Alter-social movements reinforce functionality and competition against image ambitions and commoditization, and generate glam-capitalism. Prospects for alter-social movements is initially oppression. But now glam-capitalism is absorbing cultural and social protest as corporate management adopts protesters’ tactics. New management approach can be seen in practices of ‘stretching’ brands down, making ‘open source’ and ‘free access’ corporate business models, commercializing torrents, developing ‘guerrilla marketing’ etc. Creators of trends converging patterns of glam-capitalists and alter-social movements give birth to alter-capitalism as a ‘post-Baudrillard’ regime: capitalization on flow of originals without copies.

IVANOVA, ELENA* (Sociological Institute of the Russian Academy of Sciences, ea.ivanova@spbrc.nw.ru)

Reforms in Higher Education in Russia: The Transition to a Market Model

The pressure on universities to increase external sources of funding research became the global trend. This trend is consistent with the basic principle of a modern market economy - the demand of increasing the efficiency of all actors and to reduce government deficits.

In the last 20 years Russian higher education took several reforms. After 1992 many technical institutes have expanded the number of faculties and have become state universities. They were allowed to introduce tuition fees. In 2003 the special foundations, financing the first stage of innovations, were founded, including national and regional venture capital funds. The innovation activity of the universities was stimulated. In 2009 the government introduced status “research university” and began to support research universities with special mega-grants. To receive this status universities prepared for their research development. The amount of funds received by the university from external sources is among the indicators that are taken into account during the competition.

A detailed analysis of the problems that arise after the reforms, shows the positive and negative effects of each reform on the research activities of universities. The positive results of the reform are: the expansion of research in the universities, the emergence of new laboratories and scientific equipment update, involving well-known scientists to carry out joint research projects. But still the main source of funding for research in universities is the state budget. There are significant restrictions on the receipt of funds for research from other sources. Limited income of the population in Russia does not allow to raise tuition fees. The economic crisis and the reluctance of the innovative entrepreneurs restrict the flow of funds from the business sector. There is also a contradiction between the development of innovation activity and basic research.

IVANOVA, TETYANA* (Sumy State University, social_tanya@mail.ru)

Anxiety and Social Change

The purpose of the study: a comparative study of the correlation between the level of anxiety, and some of the economic characteristics of the countries. Indicators: the level of anxiety (Q3B3Q4 – EVS), the level of happiness (Q3 – EVS), the level of social activity (Q5A – EVS), human development index and human development rates.

High growth rates of human development level positively correlate with increased level of anxiety (0, 76) and negatively correlate with the level of happiness (0, 51) and the level of social activity (0, 57).
Low growth human development index are accompanied by reduced anxiety (-0.88), high level of social activity (0.81) and feeling of happiness (0.71). Negative emotions can be an important regulator of social activity. It is necessary to distinguish between the qualities of negative emotions. For example, the decrease in activity occurs in depression. Anxiety is accompanied by disappearing of interests, loss of energy, and fatigue.

Anxiety stimulates social activity, makes people more susceptible towards, first, to social innovation, and secondly, to social dysfunction. High innovative activity leads to a more rapid pace of economic and social development of the country.

Immigration Policy, Gender, Identity and Their Implications For Sub-Saharan Africans Living In Japan

Japan is a relatively new immigrant destination among advanced post-industrial nations. Despite increased immigration since the 1980s, Japanese immigration policy provides relatively few avenues to citizenship or permanent residence and even fewer accommodations for family reunification. Furthermore, Japan has experienced a prolonged internal debate concerning the effects of immigration on national identity and belonging. For the majority of migrants within Japan, the only way to regularize their status and legally remain in the host society is to marry a native-born Japanese citizen. Sub-Saharan Africans represent a novel migrant group to study in Japan because they are racially, ethnically, and culturally distinct from the majority-group (a “visible minority”) and their status as Africans is often denigrated within Japanese society. I use in-depth interviews and participant observations from a 12-month period in the Greater Tokyo metropolitan area to interrogate how Sub-Saharan male migrants negotiate their status within Japanese society. The issues of greatest interest arising from the research are: the gendered nature of citizenship in Japan, strategies for asserting masculinity in perceivably inferior situations, occupational selection, and negotiating cultural and gender differences in maintaining the family structure. I argue that marriage to a Japanese national is not only the primary mode for regularizing a migrant’s legal status, but the most essential avenue for providing invaluable access to social capital and social networks.

RC06-120.2

IVORY, TRISTAN* (Stanford University, tvory@stanford.edu)

Marriage As a Social Resource: Distinctions Among Immigrants In Japan

Classic studies on immigration to traditional receiving destinations describe intermarriage with native-born populations as one of the final steps towards group assimilation (Gordon 1964; Bogardus 1968; Barth 1969). Although aspects of this argument have been complicated (Alba and Golden 1986; Song 2009) or revised (Kalmijn 1993; Rosenfeld, 2001), the basic premise has remained intact (Qian and Lichter 2003; Charlin 2004; Waters and Jiménez 2005). Research on new receiving destinations, however, has been much more conclusive about the nature and sequence of native-born/immigrant intermarriage within the process of group assimilation (Kalmijn 1998). Using interview and observational data gathered from the Sub-Saharan African population residing in the Greater Tokyo Metropolitan Region between July 2011 and August 2012, I show that marriage is substantially different across two distinct classes of migrants. For migrants incorporated as low-skilled or non-credentialed laborers, marriage to native-born individuals is the first step towards assimilation because it is the fastest, most readily available avenue for obtaining legal long-term residence in Japan. For migrants incorporated as high-skilled or professional laborers, stability of legal status and comparatively broad access to human capital and social networks results in a less fluid attitudes on culture and the environment seriously concern tourism practitioners. Consequently, although there is no unified idea and approach, introducing sustainable tourism has come to attract considerable attention especially among Balinese intellectuals, policy makers and NGOs.

A local NGO, Wisnu foundation, has launched a village tourism project called ‘Bali DWET’ in 2010. The project has two purposes: to promote alternative forms of tourism and to preserve the Balinese cultural heritage. In order to publicly demonstrate the necessity of reforming Balinese tourism, Wisnu foundation came up with ethical standards based on the UNWTO’s Global Code of Ethics for Tourism (GCET) supported by urban intellectuals.

This paper firstly illustrates how Wisnu foundation and its collaborators identified the issues of tourism in Bali and promoted its ethical dimension by ‘rearranging’ the concept of tourism. The outcome of the field research reveals that although there is an apparent divergence between active villagers and urban intellectuals, the NGO staffs in terms of their perspectives on tourism, preserving culture and means of livelihood, the usage of GCET is playing a certain role in uniting the participants of the project.

The Impacts of Wartime Mobilization on Postwar Social Stratification in Japan: A New Direction of Quantitative Historical Research

During the World War II, a large number of Japanese men were drafted into military service or forced to work for military factories. After WWII, they returned home from military or moved from military factories to other workplaces. This massive wartime mobilization has influenced the formation of postwar social stratification system. Japanese Social Stratification and Mobility surveys, which have conducted at an interval of 10 years since 1955, have collected work history data of respondents born from 1886 to 1985. This work history data included the information on wartime experiences such as military service. So far, this information has not been utilized in Social Stratification and Mobility research. Using the data, we could reconstruct the information on at what age the respondents started military service, at what age they returned from military or in what kind of job they engaged after WWII. Life histories of respondents born from 1901 to 1925 are thought to be strongly influenced by WWII since they experienced the wartime at their active adult ages. Using 1955 and 1965 Social Stratification and Mobility surveys, this paper, first, attempts to reconstruct life history data of respondents that enable us to analyze the relations between wartime experiences and careers. The analyses of this life history data, then, reveal that there are clear age differences in wartime experiences among birth cohorts. Third, multivariate analyses of postwar occupational attainment indicate that although educational levels strongly influence patterns of occupational transitions from wartime to postwar period among people who experienced wartime mobilization in their twenties or thirties of age, factors of the experience of wartime are more important in the transition period than before. Based on these results, this paper discusses the future possibilities of quantitative historical research.

Who Tolerates the Use of Physical Punishment?

Who Tolerates the Use of Physical Punishment?

In the end of December 2012, a male senior high school student killed himself after he suffered from frequent use of physical punishment by an adviser teacher of his basketball team. Since then, a large number of serious cases caused by massive wartime controlling have been reported in Japan. Before that incident, although the Fundamental Law of School Education prohibits physical punishment, public opinion generally tended to tolerate the use of physical punishment by parents in Japan. Many people think that hitting a child as a way of parenting is unavoidable in some cases. According to JGSS-2008 data, more than 60% of respondents approve the use of physical punishment by parents. Physical punishment by teachers was also more or less permitted in JGSS-2000/2001. It is now necessary for us to understand social and cultural backgrounds of tolerating physical punishment in Japanese society. This paper explores the factors of approving the use of physical punishment, distinguishing the punishments for children from adults. The results of analysis show that gender and the experience of being a subject of violence in childhood are strongly related to the attitude toward approving physical punishment. Young people who suffered violence in childhood are likely to support the use of physical punishment by parents. In addition, women whose father was perceived to ignore her in childhood are likely to support the physical punishment. The results imply that physical punishment possesses ritualistic elements among Japanese people by symbolizing intimate relationships. It is also suggested that new types of ritualistic behavior in intimate relations should be created in order to prevent serious problems by physical punishment.
Great Regions by the Central Statistical Office, IBGE. For the sake of comparison, by sex and regions. Brazil’s 27 states are analytically divided in five homogeneous regions over three decades, from 1979 to 2011, further disaggregating the information by internal causes or 2004 (homicides). The analysis covers mortality data from slight years for several states in Brazil, this decrease is counterbalanced by sharp increases in other states. The proponents of nuclear reactor decommissioning have tried to reduce electricity, as found to be correlated with opinion on nuclear issues: 80% of people have come to try to save electricity in addition to turning off electrical equipment, and other media (national newspapers and NHK), the National Institute for Environmental Studies, and the Atomic Energy Society of Japan, have revealed that the Fukushima nuclear accident have heightened people’s perception of disaster risks, fear of nuclear accident, and recognition of pollution, and have changed public opinion on nuclear energy policy. The gap of opinion on nuclear energy policy between leftists and lay people has widened after the disaster occurred after the accident. The results of Japanese General Social Survey data show that the objection to the promotion of nuclear energy is strong among females, and weaker among young males and the supporters of the LDP. This is similar to the data collected after the Chernobyl accident. Among people who live in a 70km radius of nuclear plants, those who live nearer to plants tend to evaluate nuclear disaster risks higher. Distance from nuclear plants and the perception of earthquake risk interactively correlate with the opinion on nuclear issues: among people whose evaluation of earthquake risk is low, those who live nearer to the plants are more likely to object to the plants. Abolishment of nuclear plants. It is also found that the nuclear disaster has changed not only people’s attitudes but also people’s behavior. People have come to try to save electricity in addition to turning off electrical equipments frequently. It has led to the 5.1% reduction of electrical demands over the previous year in 2011, and 1.0% more in 2012. The level of commitment to energy saving is found to be correlated with opinion on nuclear issues: 80% of the proponents of nuclear reactor decommissioning have tried to reduce electricity consumption. The reduction of electrical demands has been people’s silent movement, that is, their manifestation towards the nuclear energy policy.

The various minority concepts are analyzed particularly in the context of the collapse of the Cold War, and the possibility of reconstructing minority concepts is discussed for future research along with an analytic framework for minority issues.

A Comparative Analysis of Minority Concepts in Europe, the United States, and East Asia

What is a minority? Who is a minority? Different understandings of minority concepts across disciplines and in different countries often cause confusion, hindering accurate recognition of minority issues and development of minority research overall. Recent increases in immigration, however, require a reexamination of the similarities and differences between minorities and immigrant in terms of their needs and rights, and their integration into society. This study has two main purposes: (1) to examine the definition of a “minority” in various countries and (2) to understand minority concept differences in light of the social context and history of the minorities in each country. Our comparative research revealed three types of minority concepts: 1) The traditional/narrow minority concept, in which only national, ethnic, religious, and linguistic minorities are regarded as a “minority” and wherein such people need particular protection and consideration to maintain their uniqueness as a group. This minority concept stems from Europe in the 19th century, and it has been used in Germany, Russia, and China. 2) An “extended/broad” minority concept, which extends concept 1 to include LGBT, persons with disabilities, the homeless, and others—in other words, vulnerable people with little power who have faced discrimination. This type of minority concept is used in the U.S., Japan, and South Korea, with certain differences. 3) An “unacknowledged” minority concept whereby the word “minority” is avoided on principle, an approach found in France.

The Apple Does NOT Fall FAR from the Tree: Offspring of Interracial Marriages in Brazil

Starting from colonial times, Brazil has a long history of racial miscegenation. How do families structure themselves with respect to a common racial hierarchy? Several censuses and surveys from the Brazilian Central Statistical Office (IBGE) incorporates some ethnic enumeration with information on race/skin color of the respondent, though mostly self-reported. Alternatives are: “White”, “Black”, “Asian”, “Mixed race” and “Native Brazilian”. Though it is possible that some subjectivity is involved, the temporal consistency is observable, within a 5% error margin. Analyzing census data, one can perceive a trend towards “whitening” of the population until 1991, with a slight reversal in 2000, resuming the “whitening” trend up to 2010 (the latest census). But how do offspring of interracial marriages self-report themselves? Among possible alternatives, is the race/skin color that to the process, temporal consistency is observed. If the father is “Asian”, is this choice affected by geographical region or social status? Is there a noticeable trend in choices made? The study analysis data from five Brazilian censuses, between 1960 and 2010, in order to identify patterns and trends among offspring of interracial marriages.

Among exogamous couples where one of the partners is “White”, this is the dominant race/skin color alternative for the offspring. When the mother is “White” the difference with respect to other alternatives is even wider, less so, when the father is “Asian”. The reported proportion of “White” children increases with socio-economic status of the child. “Black” offspring, the preference is for reporting “Mixed-race” offspring, with a higher proportion of “Black” if the father is also “Black”.

Assuming a consistent drop in mortality rates by external causes in the last years of the 20th century and other for homicide rates in recent years for several states in Brazil, this decrease is counterbalanced by sharp increases in other states. In spite of (or because of) these contradictory trends, resulting global rates for the country as a whole remained basically stable since 1995 (external causes) or 2004 (homicides). The analysis covers mortality data from slightly over three decades, from 1979 to 2011, further disaggregating the information by sex and regions. Brazil’s 27 states are analytically divided in five homogeneous Great Regions by the Central Statistical Office, IBGE. For the sake of comparison, besides the crude death rate for the population as a whole, similar statistic is computed for the young adult population – those between 15 and 24 years of age, the group more affected by external causes in general and homicides in particular. In order to understand the dynamics of the process, crude rates are broken down by broad groups of death causes (natural, homicide and other external causes). Since the Southeast was the region which presented the sharpest drop, the analysis is replicated for all four states in the region to further enhance the comprehension of the process at a lower level. A seesaw effect is also observed here with Sao Paulo and Rio de Janeiro presenting a strong downward trend from 2003 onwards, counterbalanced by Minas Gerais and Espirito Santo’s upward trend. Results confirm this exceptionality of the Southeast for external causes: it is the only Region that exhibit same level death rates at the extremes of the interval under study, while for Brazilian males rates increase 41% and the Northeast’s almost threefold. Discrepancies are even larger for young adult males.

A Reconsidering the Traditional Postpartum Practices of Laos from Women's Experience

The traditional postpartum practice that keeps mothers body warm for a certain period after childbirth is still practiced throughout the Southeast Asia and has been performed in Laos usually as well. As the biomedicine penetrated into Laos, such traditional practice has been often considered as a “bad custom” which injures women’s health. However, it must be said that this is partial and insufficient recognition which comes from overlooking the experiences of women who have actually practiced it. This presentation attempts to describe the postpartum practice called “yu fai” in Laos through the viewpoints of Lao women. These perspectives were suggested from interview survey which was conducted to 25 Lao women who have given birth, and it shows the following points. Yu fai is a process of caring a postpartum vulnerable body to make it recover to be able to do daily activities through performing a set of practices such as; lying by the fire, following food restriction, taking hot bathes and drinking hot drinks. Interestingly enough, while their practices are generally oriented by a customary framework as a whole, the remarkable differences appeared in each individual way and the time period of yu fai. Through the experiences of monitoring and caring their bodies cautiously during a period of yu fai, women acquire individual knowledge about their own body’s characteristics, and they can reconstitute their body perceptions and ways and period of yu fai based on their realization. Such differences are reproduced through the women’s knowledge based on experiences of practicing yu fai by themselves. From examining above findings, this presentation tries to approach the aspect of yu fai as dynamic practice to care postpartum body based on women’s individual experiences and knowledge.
In previous work I have looked at the claims of indigenous groups and responses at the local, global, and international levels (Iyall Smith 2011). These cases focused on cases in the global north, including Greenland and the Makah tribe in the US. In this paper I will look particularly at cases in the global south, which may present greater opportunities for success for indigenous peoples than discovered in the global north. Again I will examine indigenous rights within global organizations (focusing on issues emerging from the global south), regional organizations (focusing on regional organizations within the global south including the Inter-American System and the African Commission), and local contexts (cases to be identified, including the Miskito one million acres land claim in Honduras). While the global south is very much a part of the neoliberal political and economic system, some areas have managed to create progressive policies that elevate human rights. The extent to which these policies are enforced is also important to consider. Previous examinations of the UNDRIP and the implications for the global south identity strong potentials for the enforcement of rights (Hall and Fenelon 2009 and Rodríguez-Pinero 2011) and also points of conflict (Murray 2011). With this paper I hope to analyze additional cases to shine more light on indigenous peoples’ potential for living human rights within the global south.

**Japanese Single Fathers’ Role Performance and Resources in Family and Work**

In this study, interviews with single fathers were conducted in a semi-structured way, and the balancing of their roles as fathers and workers was investigated. The sampling number was ten and all the samples were single fathers living in urban areas with a child or children aged under 18. The sampling was carried out by network-sampling through two NPO supporting single fathers. All the collected data were divided into two groups depending on whether or not the samples lived with parents to be able to share the burden of child-rearing, and the data were analyzed with the constant comparative method. The results showed that housework and child-rearing skills are required as necessary resources at home, and all the fathers who lived independently of their parents have acquired these skills. The need for these two skills decreases slightly in the case of those living together with their parents, although these fathers have concerns about declining support from their father and/or mother. In terms of career roles, fathers living apart from their parents focus on advanced scheduling in order to receive maximum support from their parents as well as from the public, and therefore a work environment that facilitates making advanced schedules is an important resource for them. On the other hand, fathers who share the burden of child-rearing with their parents pay attention to the politics of the work environment so as to gain an understanding of their coworkers in order to fulfill their parental roles. Finally, for both groups, the sense of a single father and management skills to create suitable conditions for child-rearing are essential in order to accomplish their roles as both a worker and a parent. In addition, it was found that a single father has a unique identity structured by family role, work role, and masculinities.

IWATA, MIHO* (University of Connecticut, miho.iwata@uconn.edu)

**Social Structure, Race, and Racial Relations in Japan**

Literature on racialization processes has predominantly examined the Western societal contexts and societies where high levels of racial/ethnic diversity and conflicts existed, such as the U.S., Europe, Brazil and South Africa. These studies have identified that social institutions, ideologies, and social interactions together shape, legitimize and thus perpetuate systemic racial inequality by classifying individuals as ‘whites’ and ‘non-whites.’ Yet, theoretically grounded studies on racialization in other societies have been limited; we know little about how and how structural forces affect racial hierarchy and meanings in other social contexts. This study highlights the intricate relationship between social structure and historical development of the concept of race and subsequent racialization processes in Japan, using semi-structured interviews of foreign residents in Japan and Japanese individuals. It shows how the state, its structural positioning, cultural representations, and dominant discourses of different foreigner groups together condition Japanese individuals’ understanding of race, racial hierarchy, and their position within the hierarchy. The concept of race in Japan denotes a combination of phenotype, nationality, and cultural desirability internalized among Japanese individuals. Following this conceptualization, Japanese is understood to be a distinct racial group while foreign migrants become marginalized differently based on their perceived racial statuses. This study also highlights the salience of structural forces in creating and maintaining the significance of race, racial meanings and hierarchy, similar to the racialization processes documented in previous studies; since the ideology of homogeneous Japan and importance of maintaining social boundaries have been heavily embedded in the structure, there is a limited opportunity for social integration, which perpetuates the rigid racial boundaries. Thus, it provides deeper understanding of the effects of racially biased structure in perpetuating and even fostering racist acts and attitudes, which is imperative in bringing about positive changes to alleviate the increasing racial tension and conflicts in Japan.

**Indigenous Populations Achieving Human Rights in the Global South?**

The adoption of the UN Declaration on the Rights of Indigenous Peoples has resulted in enthusiasm for the potential it provides and skepticism surrounding the limitations of the Declaration (Anaya 2009, Schulte-Tenchhoff 2012, Watson and Venne 2012, Xanthaki 2010). While there remains much to be skeptical about, including continued human rights violations, little or no legal standing to demand human rights, and a state-centric model of protection and provision of human rights, unexpected victories are emerging.

Catholic Faith-Based Filipino Organizations in Japan

This study looks into the Catholic faith-based groups of Filipino mothers in Japan. This paper argues that organizing or mobilizing such groups enabled the Filipino to cope with their situation as immigrant housewives. It explores how Filipino Catholic communities in Japan organize themselves collectively and how their activities are associated with identity affirmations both in religious and ethnic standpoints at their intercultural homes and the community in which they belong. Discussion of this paper is partly based on an author’s three year stay in Japan as a doctoral student and one of the founding members of a Catholic Church-based Filipino community known as the Kaagayag Ota Filipino Associations or KOFA. A reflexive account, this paper narrates the experiences of the organization as it tries to cultivate a “space” in a Japanese Catholic Church. The views of the author cannot be ignored in this writing as he was involved in the process of founding such a group.

JABKOWSKI, PIOTR* (Adam Mickiewicz University, pjabko@amu.edu.pl)

Who Refuses to Answer the Question about the Income and How Can We Reduce the Item Non-Response Bias By Using the Propensity Score Adjustment?

The main goal of this presentation is to find out whether the refuses to question of income are random or not as well as how can we eliminate the effect of item non-response in point estimation. Firstly, using the Hungarian and Polish data set of ESS 2008, it will be demonstrated that the likelihood to refuse is not random, but rather proportional to the declared level of income. In this part of presentation I will introduce the basic principles of propensity score adjustment (PSA) as a weighting scheme (see Matsuo et al. 2011). The procedure is normally based on the assumption of the lack of self-selection, but I will demonstrate the usefulness of a credit-scoring model for such purposes. In fact it is also based on logistic regression, but it helps to choose the relevant set of predictors as well as to illustrate and understand the nature of income refusals. Secondly, based on the data from the “Polish General Social Survey”, an assessment will be provided of whether PSW or PSA leads to lower total survey error (TSE). By removing the known values of income I will consider three patterns of missingsess (a) the random one, (b) the systematic one without 10% of the lowest income values and (c) the systematic one without 10% of the highest values. Findings are four-fold: (1) PSA is much more effective when missingsness mechanism is systematic, however PSW is slightly more effective when non-response is random; (2) PSA increases variance a little bit more than PSW, but (3) PSA decreases bias much more efficiently than PSW. Taking (2) and (3) together, it turns out that (4) PSA estimator seems to be better on the ground that it implies much smaller TSE.

Classical Sociologists on Music and Society

Music is a social phenomenon and a product of social life. There is no culture in which there would be no music. Throughout history, people have created and reproduced music, at the same time making it an important aspect of artistic, aesthetic and social life. Sociological reflection on music and society is as old as sociology as a science, and has much to offer contemporary sociologists. More or less systematic assumptions about the musical life can be found in the reflection of such great classics of sociology, as Herbert Spencer, Georg Simmel, Max Weber, Alfred Schutz, Pitirim Sorokin, Norbert Elias, etc.

Despite the rich theoretical base and a long tradition of social thought on musical life, the sociology of music (as a part of the sociology of arts) is probably one of the most theoretically and methodologically neglected social science sub-discipline. The problem of its theoretical backwardness was stressed out by Alphons Silbermann (1962) many years ago. Its interdisciplinary character causes many theoretical problems, such as incoherence and lack of consistent conceptual grid. There is also poor debate on the role and significance of classical sociology reflection on music and society in the contemporary sociology.

The main goal of the paper is to consider the theoretical tradition of social thought on music and society in the classical sociology, especially in such aspects as: musical practices of societies, rationalization of music (Weber), musical identity of groups (Simmel), musical roles (Elias) or musical interactions (Schutz). The

leitmotiv of the presentation is to show how theoretical assumptions of classical sociologists on music and society can be useful for contemporary sociology of music.

New Donors of Development Assistance: Theorizing the Future of the OECD Aid Apparatus

This paper explores the new role that non-OECD nations such as Brazil, India, Russia, South Africa, South Korea and, especially, China are playing in providing international development aid. While global aid flows from traditional OECD nations remain significant to the development of global politics and what William Robinson calls the “Transnational State” (TNS) apparatus, these new aid donors are challenging the Western nations’ vision of what development means and what kind of global economy is being built. The consequences of these increasing aid flows for the global economy and for the development of aid recipient nations at this point are unclear. But it is crucial for scholars to pay close attention to the rise in official development assistance (ODA) from non-OECD nations as a key indicator of global political and economic integration. Often considered to be of secondary importance to many globalization scholars (who prefer indicators such as foreign direct investment (FDI) and international trade), ODA is perhaps the most important measure of “economic politics” to use Bourdieu’s definition of globalization) for sociologists of development to observe. Bringing together insights from world systems theory, world politity theory, Robinson’s Transnational State perspective, and Saskia Sassen’s work on deterritoriality and denationalization, this paper will offer some theoretical analysis of the role that new donors are likely to play within the global political economy in the coming decades. Particular attention is paid to whether the so-called “South-South” aid from these new donors is really “South-South,” whether we can expect to see a counterhegemonic shift in aid practice, what kind of future conflicts between donors are on the horizon, what this might mean for world state formation, and finally, whether any of this amounts to the beginning of the end for the nearly 60-year old Western aid apparatus.

Multiculturalism and Minority Well-Being in Fourteen European States

Despite pronouncements of its death by leaders of key European states in 2010, multiculturalism “carries on” (to use the Guardian’s term 9/19/12) in public policies at the national and local level in these same states. Kymlicka (2012: 6) argues that “[m]ulticulturalism is part of a larger human-rights revolution involving ethnic and racial diversity.” Using the European Social Survey (2002, 2008, 2010) for fourteen European states with scores on the Banting/Kymlicka Multiculturalism Policy Index (MPI), we operationalize well-being in terms of the Council of Europe’s (2003) specification of the eight key areas of life (cf. Jackson and Doerschler, 2012). These are employment, housing, health care, nutrition, information, culture, and basic public functions (which include equality, anti-discrimination and self-organization) (Jackson and Doerschler, 2012: 1). Greater well-being of minority populations is seen to result from reductions in disparities and polarizations between them and the majority population (European Parliament, 2007). Scores for the eight dimensions of multicultural policy development (Banting/Kymlicka, 2012) allow us to consider the effects that specific state policies have on targeted areas of minority well-being. We furthermore examine the possibility that the situation of minorities also improves when states turn toward multiculturalism because these policies foster economic growth and free up societal resources from security functions. Do minority group members feel safer in states that have taken a greater turn toward multiculturalism? Are minorities better educated and more likely to be employed in these states? Do minorities report greater trust in the political system where multiculturalism has taken hold? What happens to majority group members’ levels of education, employment and political trust as states implement multicultural policies? These are the questions on which this paper centers. With such information, political leaders can defend multicultural policies from criticism or amend them in directions that will better reduce disparities and divisiveness.

DOERSCHLER, PETER (Bloomsburg University)
Multiple Discrimination, Intersectionality and Vulnerability

In its 2012 report, Amnesty International underscores the consequences of discrimination against Muslims in Europe. “Multiple discrimination” is a special focus of the EU Fundamental Rights Agency. Discussion of the need for a “Horizontal Directive” (EU-MIDIS, 2010: 5) and the “Genderace” project of the EU Framework Programme both highlight multiple discrimination and the “intersectionality” (Gendare, 2010: 272) of axes of discrimination. The GenderRace report (2010: 32) uses the term intersectionality “to define a situation . . . in which several grounds of discrimination interact concurrently.” This report follows the European Commission’s 2007 study, in which the problem of multiple discrimination and the significance of intersectionality on the impact of discrimination are investigated. Using the European Social Survey (2002, 2008, 2010) for fourteen European states along with scores on the Banting/Kymlicka (2012) Multicultural Policy Index and its eight dimensions (available for 1980, 2000, 2010), we examine over time both the reported discrimination faced by Muslims on the basis of their religion, race, nationality, ethnicity and gender and the impact of specific areas of state policy on the trajectory of discrimination. We give particular attention to consideration of the discrimination-reducing impact of state policy in eight areas: (1) affirmation of multiculturalism by the constitution, legislature or parliament; (2) school curriculum; (3) media—sensitivity and representation; (4) dress-code exemptions; (5) dual citizenship allowed; (6) funding of cultural activities of ethnic group organizations; (7) bilingual education; (8) affirmative action (Banting and Kymlicka, 2012: 11). On the basis of the results, we assess the policy changes warranted by the data to enable European Muslims to fully utilize their talents and abilities to the benefit of Europe and its member-states.

Sport, Symbolic Capital and Monopoly Rents: The Cultural Politics of the New Zealand All Blacks

In their bid to globalise, transnational corporations (TNC’s) utilize a diverse range of strategies and synergies in order to insert into, and locate within, local/national cultures. Amongst their strategies TNC’s invest in a range of powerful and innovative marketing and promotional campaigns, in order to create desire and demand for their products, and to attract and maintain consumers. The pressure to attract consumer attention and to distinguish brands has lead to a compulsive search for new images and themes where culture has become a giant mine (Goldman and Papson, 1996) resulting in a range of political, economic and ethical questions. This paper traces the promotional culture of the New Zealand All Blacks since the sport went professional in 1995. The focus is on David Harvey’s concept of monopoly rent which emerges “because social actors can realize an enhanced income stream over an extended time by virtue of their exclusive control over some directly or indirectly tradable item which is in some crucial respects unique and non-replicable.” (2002: 90). The paper focuses on several specific sponsors (Adidas and AIG), and their advertising campaigns, to illustrate their strategies and synergies in order to insert into, and locate within, local/national cultures. Towards a Practice Theoretic Approach to Understanding Sexuality

In our book ‘Theorising Sexuality’ (2010) we re-worked the Interactionist sociological account of everyday sexual behavior drawing on the work of G H Mead (1973) and utilising the notion of sexual scripts (Gagnon and Simon 1973). We do however, accept some of the criticisms of interactionism as overly cognitive and have attempted to overcome this by developing a more embodied understanding of sexuality - using the example of orgasm (Jackson and Scott 2007 and 2010), and developing the ideas of Schatzki/Redclift/ Ware and Shove in order to understand the ways in which sexual interactions are composed. While we have utilized the term sexual practice, and engaged to some extent with the work of Bourdieu we have not, until recently, begun to develop fully a practice theoretic approach to the sociology of sexual conduct. In this paper we will engage with the work of Wajcman/ Schatzki/Redclift/ Ware and Shove in order to set out the ways in which sexual conduct constitutes a practice, and to indicate to what extent this approach, if brought together with interactionist ideas, can support the development of a general sociological theory of sexuality.

Environmental Governance and Risks in Brazil

Environmental governance has advanced in Brazil since the Rio Conference. Different stakeholders have had a relevant role in the process that has permeated in a growing scale the process of decision making and formulation of new public policies. The process of environmental governance has brought into scene stakeholders representing the public and private sector and the social movements, mainly the environmental movement.

The incorporation of new social actors with differentiated demands on the management of natural resources has become more frequent as to issues on water, solid waste, biodiversity and climate. The engagement of these different actors has brought to the environmental arena, a logic of dispute and negotiation on aspects linked to natural resources, sustainability in cities, impact of degradation of water sources, loss of biodiversity, conflicts with indigenous population on land, impact of hydroelectricity projects and more recently on the impacts of climate variability and its multidimensional aspects.

The paper will approach how national policies are taking place adequately or insufficiently taking into consideration the complexity of the process of environmental governance, and what this implies in terms of enlargement of the role and engagement of stakeholders in the process of decision making. The analysis will focus on the the strengthening of deliberative spaces, multipurpose networks that promote awareness and mobilization to face uncertainties and potential risks in cities and biodiverse spaces and the pressure to reduce socio-environmental and knowledge based asymmetries.

Several civil society organizations have had in the last years important role facing environmental governance and risks in Brazil, and these initiatives promoted advancements towards democratizing access to information, besides pressuring for more transparent and participative decision making processes on environmental policies and the need to take into consideration diversities, complexities of transformations taking place in a context of global climatic uncertainties.

Developing Care-Technologies While Balancing Utopian/Dystopian Worldviews: Dimensions of Attention

Collaborating since 2005 in different interdisciplinary pre-competitive care technology research projects in Flanders (Belgium), we learned about crucial dimensions to balance the tendency of supporting utopian/dystopian views on the impact on wellbeing and quality of care due to new care technologies. The goal of these subsidized projects is to innovate in a way added value is created for its future users and valorization potential of the collaborative companies. In general the team is rather utopian on the capabilities of the information and communication technology.

Involving potential users from ideation phase towards valuation of prototypes is a primary way to bring balance in looking at both positive and negative consequences of the future care technology. Due to the involvement of social scientists, over the years we moved from a pathology-centered problem definition, over an age-focused approach towards a care dependent approach. Concurrently, we emphasized the need of a multi-stakeholder approach, grounded in the insights of the Social Construction of Technology perspective (cf Björk, Rip). These premises of user-centered design and not enough to balance the tensions and paradoxes encountered when studying the potential consequences of envisioned care solutions and their impact on care-giving.

Recurrent dimensions of empowerment and disempowerment, that are potential pitfalls, are described in this paper. Essential themes will be: self-determination of care dependent and his/her caregivers, impact of technology on the caring relationship and quality of service by care organizations, role of present and future infrastructure and learning curve of present and future users, ... We also discuss the ways in which we try to balance tensions and paradoxes in this field, in particular in all stages of innovation binder approach (scenario’s and persona’s, tech cards, ...), and supporting the development of CareLivingLabs. We illustrate these with examples from past and current projects.

Media Metacommentary and the Performance of Expertise

This paper considers the extent to which media metacommentary – or, the critical comparative reflection about media formats – constitutes a new form of expertise. We begin by tracing out the history of critical discourse that seeks to explore the possibilities and limitations of different cultural formats, arguing that this is linked to institutional development of critics and the larger aesthetic discourse about modernity. Next, we consider how mediatization has altered the conditions under which media metacommentary can be mobilized as a performance of expertise, or the display of an expert identity. Ultimately, we argue that the proliferation of new media technologies and the growth of transmedia culture have fundamentally transformed the social organization of expert discourse.

Orphans Other Deadends in the History of Sociology: Symbolic Interactionism and the Mid-20th Century American Compromise

To conceptualize deadends in the history of sociology, we examine how intellectual lineages, networks and institutional histories have been narrated in U.S. sociology. Introductory sociology textbooks are strategic research sites because they are a space where sub-disciplines, academic institutions, curriculum, individual intellectuals, and market dynamics intersect. Examining textbook narratives of the discipline, we ask: What has been narrated as central? What has been omitted and why? On this basis, we identify symbolic interactionism as an orphan – a casualty of the mid-20th century standoffs in the United States between what came to be known as the consensus, conflict, and symbolic interactionism perspectives. The three-fold model of US theory remains a central feature of introductory sociology textbooks today, a fact which explains the isolation of symbolic interactionism from the power centers of disciplinary sociology.

JACOBSEN, BRIAN ARLY* (University of Copenhagen, brianj@hum.ku.dk)

Conflict over Confirmation Teaching in Public School – the Impact of Neoliberal Policies on Local Political Level in Denmark

The neoliberal discourse is part of a larger shift from democratic to neoliberal policies that has been occurring over the past decades; a shift accompanied by both discursive and structural changes in society. If the neoliberal discourse is transforming the core functions of government globally, then this must also be true in the case of the close cooperation between the Danish state and the national church in Denmark. In this paper the cases of conflict over and transformation of the position of confirmation teaching in Denmark is analyzed in order to find out if the changes is a result of neoliberal policies in Denmark or simply a matter of structural changes caused by another rational basis. In Denmark confirmation teaching is part of the public schools timetable according to the Primary Education Act. Municipalities in Denmark have according to the Primary Education Act the right to place the confirmation teaching after school but until recently it was the tradition to place the confirmations teaching with the local vicar in school. Local politicians are now beginning to alter this tradition. The basic argument used is that the changes are necessary due to efficiency improvement of the public schools (after the merging of public schools) and more efficient utilization of the public schools timetable. Confirmation teaching is by the reform politicians seen as part of the private sphere and the National Church’s claim for confirmation teaching in school is seen as an ineffective tradition, which is not corresponding to the state policies efficiency requirements for teaching and efficient operation of public schools. The friction over confirmation teaching is not only about the position of confirmation teaching in or out of school but a case showing consequences of how the neoliberal discourse is transforming religious authority in Danish society.

Transdisciplinary Research on Work and Innovation: Co-Production of Knowledge on Contested Terrain

There is a long tradition of funding research to improve the organization of work according to the requirements of changing production processes and in accordance with the demands of the employees for not only damage-free but also personally and socially rewarding working situations in Germany. Background for this tradition is not least the high relevance of qualified labour for the German diversification. This research is crossed by two potential lines of conflict: First, scientists are asked to postpone or defer their academic logics in favour of contributing to immediately relevant knowledge production on-site. This line of conflict is widely acknowledged by concepts of inter- and trans disciplinary research (mode 2, triple helix, entrepreneurial university, techno science). A second line of conflict results from the social organisation of employment in capitalism. Constant re-arrangements by new ways of deploying labour and of relating work and organisations shape the forms of contradictions between interests or forms of action on both sides of the employment relationship. For this line of conflict the concepts of action research and, more recently, approaches to social innovation in the work place give useful instruments for analysis and methodologies. This paper examines how these two lines of conflict in trans disciplinary research are taken up in the innovative work organisation of the German Federal Ministry of Education and Research. It further investigates which solutions are chosen in the funded joint projects to turn potential conflicts productively. Data are derived from a content analysis of programs and project reports. It is shown, that leaving these conflict-lines implicit rather than differentiating between diverse approaches to research in its context of application explicitly, weakens the potential of the projects’ work for stabilising the German production model and shifts balances from sociological towards micro-economic perspectives.

Long-Term Visitors’ Adaptation to the Tourism Context of Costa Blanca, Spain

Tourism and analogous phenomena have assumedly become structural elements of Costa Blanca societies, on the Mediterranean coast of Spain. The large international flows of multitudes of people have assumedly led to blurred frontiers between tourists, holidaymakers, sojourners, drifters, migrants, and residents. Particularly the most economically independent lifestyle and retirement ‘migrants’, residential ‘tourists’ and lifestyle and health-oriented sojourners are still under-researched. On the basis of questionnaire surveys, the paper will explore self-reported adaptation features among Nordic long-term visitors, including language skills, media use and assessments of facets of ‘local’ and expatriate life.

Decent Work and Corporate Social Responsibility: Contemporary Debates about Human Rights and Paternalism in Organizations in Brazil and Portugal

The concept of decent work (ILO) has recently appeared in corporate social responsibility (CSR). The close relationship between the two concepts is based on the idea that the respect for the human rights, respect for the environment and gender equity are themes emerging in business landscape. Despite international instruments for the promotion of human rights within the framework of corporate social responsibility (CSR), such as the Ruggie Report (UN), national discussions and effective practices are not homogenous. The CSR academic debate revolves around the perspectives on what is understood about the role of social organizations. In a skeptical approach, CSR integrates a new form of authoritarian paternalism whose moral function is masking the ‘real intentions’ of corporations in their quest for higher profits (Thorton, 1966; Wells, 2002). On the other hand, there are currents that emphasize the relationship between the company and society, and the prospects that CSR takes

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
to build the legitimacy of organizations in contemporary capitalism (Freeman, 1984).
The aim of this work is to investigate the influence of the guidelines of decent work in CSR in the national contexts between Brazil and Portugal, on a comparative basis. We investigated the existing regulatory guidelines for CSR through document analysis and corporate social reports and comparative studies of the relevant legislation. The results demonstrate that while human rights and decent work appear as topics of CSR agendas in both countries, in Brazil, the corporate actions are voluntary, whereas in Portugal, there are laws that reinforce the communication of business practices within the CSR and decent work.

L’évolution De La COMPétence En Organisation Des Collections De Documents Numériques: Le Cas De L’entrée Dans L’enseignement Supérieur

La fracture numérique de second degrés (Hargittai, 2002) pose le problème des écarts de compétences médiatiques entre les utilisateurs. Dans un contexte où de plus en plus d’informations sont disponibles (Gantz & Reinsel, 2011), où l’accès à ces informations est toujours plus fragmenté entre des contextes différents (Jones & Thorson, 2007), la dominance sociale des objets médiatiques se complexifie, la compétence à organiser ces informations devient fondamentale. Cette compétence d’organisation correspond à la capacité à imaginer des structures pertinentes et à les implémenter à l’aide d’outils matériels ou logiciels. Dans les usages, cette compétence à organiser s’actualise aussi bien dans des activités de recherche, que de gestion des flux d’informations, ou de stockage (Jones, 2008).

Une série d’interviews d’étudiants réalisées avant et après leur entrée à l’université fait apparaître que les plus compétents sont ceux les mieux capables de percevoir, d’adopter et de modifier les affordances (Norman, 1990) offertes par leur environnement. Trois catégories d’affordances peuvent être dégagées: sociales, techniques et informationnelles. En situation, la compétence d’organisation consiste donc pour l’utilisateur à prendre parti des affordances et contraintes des outils adoptés afin d’aménager l’environnement technologique pour le faire correspondre à la structure de l’activité de l’usager, de sorte qu’il soutienne au mieux celle-ci (Kirsch 1995).

Trois hypothèses alternatives sont avancées quant aux facteurs de développement de cette compétence: l’intensité des usages des médias (Schradie, 2011), la variété des contextes sociaux dans lesquels les usages se développent (Ito et al., 2009), et finalement, le rôle de stimulateur des relations sociales de l’utilisateur. Nos premières observations semblent indiquer que, plus encore que l’intensité ou la variété des usages, l’entourage des usagers joue un rôle primordial dans le développement de la compétence d’organisation, en ce qu’il crée des opportunités d’échange et de confrontation de pratiques médiatiques.

Marginalization As the Social Context of Risk Perception in Everyday Life

In this paper, by adopting a constructivist perspective, it is tried to address the question how experience of marginalization and a sense of exclusion could affect the ways individuals perceive risks in everyday life. In general, social constructivist approaches to epistemological status of risk emphasize that the perceptions of risk are socially constructed and cultural and political contexts impact on how risk are made sense by people. The methodology in this research is based on qualitative methods and the data has been obtained through in-depth interview with 28 students from the University of Tehran in Iran. In the interviews we asked the students to describe how they make sense risks in their everyday life. Furthermore, they were asked to describe their experience with a sense of exclusion as a consequence of being marginalized in society. According to the findings, the ways the university students perceive risks have been closely intermingled with their experience of marginalization in their everyday life. Although studying in universities may potentially result in social inclusion, most of the students have had the experience of marginalization and the dimensions of perceived social inequality and economic inequity and also ethnic, gender and generational discriminations. This has led to exclusion and so provides a context for perception of risk and uncertainty. Particularly, when they try to build a desirable personal lifestyle, they face various social restrictions, which cause risks and uncertainty in their everyday life. In the other words, the social conditions of being marginalized lead to perceptions of some types of risk specially, those which are related to their lifestyle.

Creativity and Embeddedness

Creativity, understood as an innovative and novel way to solve problems and characterized with a variety of factors influence both the sociological perspective, as well as psychological. One is the factors influencing the level of creativity might be also the quality of social interactions and the conforming influence the possibility of being misunderstood or socially rejected.

The aim of the study would be to create analyze the relationship between the characteristics of the social structure and individual degree of creativity. The study group was analyzed from the perspective of the declared behavior in different social situations, declared level optimal distinctiveness and tendency to take the social risk. The level of creativity was measured by tests of divergent thinking based on the number of different responses to a given problem. Demographic factors were controlled. A study was conducted using a commercial online tool tracking IP numbers of participants based on the answers given by 306 people.

Analysis shown that people who tended to be more socially independent and less embedded in the social networks gave more divergent responses to the creativity test during the research. The level of individual creativity, commonly regarded as psychological factor, might be influenced by the social milieu of the person.

Are European Fundamental Rights to Information and Consultation Getting Diluted By National Implementations?

Study on Implementation of European Works Councils Directive 2009/38/EC in the Field of Access to Justice

The paper aims at drawing attention to proper transposition of EU directives as a challenge for ensuring effective workers’ rights to information and consultation (I&C). To this end it looks at the example of implementation of the European Works Council (EWC) directives 94/45/EC and 2009/38/EC with a special focus on enforcement provisions. The choice of implementation of EWCs legislations as ‘a lab case’ is relevant in several ways: a) being an EU originating institution re- quiring implementation into national industrial relations (IR) and legal systems they represent a perfect example of tension between coherence of centrally introduced rights and their national ‘conjunction’; b) the original directive 94/45/EC, substantially modified by recast directive 2009/38/EC and recently transposed provides for an apt up-to-date test-case; c) it addresses loopholes in existing research and has both a political and practical relevance for over 1000 active EWCs and over 17 mil. workers they represent.

The paper will provide comparative overview of national transpositions of specific key provisions of directive 2009/38/EC and an analysis of their coherence with the source regulation. Focusing on transposition of enforcement provisions on access to justice and sanctions it will argue that a formalistic ‘copy-paste implementation’ without consideration of the ultimate principle of effectiveness acts as impediment to coherent application of the fundamental right to I&C. To this end it will present jurisprudence of the European Court of Justice and research on the meaning of effective, proportionate and dissuasive sanctions.

The paper will also argue against the lenient approach supporting the view that differences between national IR justify cases of substantial/excessive, divergences in implementation. By means of reference to EU institutional developments and interventionism in the field of financial market and environmental regulation it will also challenge the view that the European Commission has no competence with regard to setting sanctions.

Do Equality Values Differ in Asian and Western Cultures? Results from the Social Inequality Module of the ISSP 2009

Whether certain values are unique or specific to a group, a nation, or a culture, has been a topic of lengthy debates. During the last decades the interest has shifted from smaller to larger collectives and from smaller to larger regions. The European Values Surveys was an early attempt to identify cultural values, first in West European societies, and later in Europe as a whole. Whether the goal of the enterprise has been reached remains an open question. What most European

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
societies really distinguish from other societies is the millennia-long Christian tradition. But has this tradition also brought forth unique values? And if so, are they still influential in modern societies?

In the nineteenth a similar debate started in Asia. Asian values were initially seen as a stronghold against Western value imperialism and against Western democratization. The multi-cultural and multi-empirical research especially to the European findings on value pluralism. Dalton and Nhu-Ngoc (2005) could not identify specific and homogeneous value patterns in the Confucian societies. Rather, family orientations and respect of authorities largely varied in Asian countries.

This will not be the end of the debate on Asian values. There are so many visible differences between Asian and Western cultures that the search for specific underlying Asian or Confucian values will continue. Education and work values, as well as economic and social inequalities might be domains in which specific Asian values have emerged. The paper focuses on values which are related to social and economic inequalities to find out the specifics of multi-level analyses of the ISSP Social Inequality Module 2009 whether and to what extent these values are affected by different cultural backgrounds and whether Asian societies in particular differ from societies with a Christian tradition.

Formal and Informal Female Migration: Challenges of Governance in Bangladesh

In the last three decades, Bangladesh has grown to be an important source of labor migration. Female labor migration, however, has lagged far behind the male migration. Starting with a small number, in recent years the number of Bangladeshi women has grown. Official figures put the proportion of Bangladeshi female labor migrants as 1% of the total number of migrant workers in 2003. In recent years proportion of women as total migrants is estimated at around 14%. Bangladesh female migrant workers go to the Gulf countries, Lebanon, and Singapore to work as domestic workers. Many Bangladeshi women also went to work in the textile industries in Malaysia, Mauritius and Korea. In addition to formal labor migration, an undetermined number of female workers go to neighboring India to work as domestic workers as well as in entertainment industries. The issue of Bangladeshi female migrants in India has created controversies in Bangladesh especially, in view of the harsh treatment they face as undocumented workers. They also take great risk, including the risk of life in crossing the Bangladesh - India borders. The present paper examines how the government of Bangladesh has dealt with the issue of female labor migration and what are the public policies in place to promote safe female migration to the Gulf countries and Lebanon and how concerned authorities of Bangladesh government deal with the informal female migration to India. Using interview methods and analysis of secondary data, this paper will draw attention to the Bangladeshi female migrants in the Gulf Cooperation Council (GCC) countries and Lebanon. Policy issues, especially innovation in migration policies will be examined in this paper.

Inequality of Opportunities and Preferences for Social Policies

The positive relationship between democracy and equalization of income predicted by the well-known Meltzer-Richard has been highly criticized on both theoretical and empirical grounds. In this paper, I analyze whether inequality of opportunities (rather than outcomes) is connected with preferences for social policies and significant impact on preferences for redistribution. In addition, educational inequality has a negative a significant effect over preferences for redistribution at the aggregate level.

New Religious Capital, Conversion, and Drug Rehabilitation: Evangelical Social Projects in Baja California, Mexico

The aim of this paper is to analyze certain changes in evangelical identities and their religious capital in the religious field at Baja California, following the impact of charismatic movements and the crisis of denominational models during the 1980s, and their relation to the expansion of the so-called “Christ-therapy” in Rehabilitation Centers for drug addicts. From a general perspective, religious capital suffered a series of rearrangements within their referents mainly anchored in doctrines, practices and preconceptions relatively unchanged until last decades of the twentieth century.

Therefore, this work raises the question of whether the expansion of a new evangelical model of openness to society in Pentecostals and Charismatic churches, especially in Northern Mexico, may explain the growth of Evangelical Christians, with new forms to mobilize symbolic capital and social participation.

In this sense, many of these churches have found that an increasing demand for rehabilitation of drug users, and the withdrawal of the Mexican State from the health sector, has opened new opportunities for their social change projects based on individual conversion. To study the above, this paper analyzes some cases of Rehabilitation Centers in Tijuana, and Ensenada, Baja California.
by social scientists. One of the most important applications of the use of spatial analysis in sociology, demography and population studies is the socio-spatial segregation. Some countries are studying the spatial concentration of the population with respect to race/color, but in others, such as Brazil, the miscegenation of the population is high, and so it makes no sense to study segregation by this variable. In this case, the income of the person can be the key variable in this process. Spatial analysis techniques, such as isolation indexes, are then used to analyze the spatial segregation according to income, translated by poverty or wealth. However, in each geographical unit (scale) used, the result of the analysis may be different. Then, the main goal of this paper is to create a multi-scale analysis of the effects of segregation in terms of isolation of poverty and wealth indicators. Our assumption is that when we increase the scale of the segregation analysis, the inequalities also increase. And this is what we attempt to show with this paper, using data from census tracts of 2010 for the city of São Paulo, the most populated in Brazil.

**The Changes in the Form of Japanese Integration in Brazil**

The beginning of the 20th century is considered a starting point for more significant flows of international migration in the Brazilian Amazon, with the arrival of different people, especially from European countries as well as Japan, due, among other reasons, to the political instability of the period of war that the world had faced. The arrival of these migrants changed the Brazilian society in several aspects, with regard to the insertion of new cultures, traditions etc. Thus, the object of this work is to analyze the socio-demographic profile of the Japanese migrants in Brazil by regions, including the Amazon, in terms of their date of arrival in the country, their occupation in rural or urban areas, and also of migrants who left the country. This paper is an attempt to understand possible changes in the aspirations of the younger Japanese generations with respect mainly to occupation, which traditionally has been widely recognized for their contributions in the Brazilian agricultural production. In order to do this, data from the Brazilian Demographic Census of 2010 will be used to create maps of spatial concentrations and to compare the Japanese migrants with more long-standing in Brazil with those who arrived more recently to find out until what extent the younger generations are preferring other occupations and other housing locations instead the traditional ones and with this leaving aside their traditions and modifying their forms of integration in society.

**Autochthony, Whiteness and Loss in Outer East London: Tracing the Collective Memories of Diaspora Space**

This paper explores autochthony through the memory practices of in Newham, East London. It addresses how remembering East London as the home of whiteness and traditional forms of community entails powerful forms of forgetting that feed into contemporary ideas of racialised territorial belonging. Newham's formation through migration its 'great time' has ensured that myths of indigeneity and whiteness have never stood still. Through engaging with young people's and youth workers' memory practices, the paper explores how phantasms of whiteness and class loss are traced at the same time as the migrant, a figure of racial decline, is constructed. It addresses how this tracing reveals ambivalence, porosity, and the continued allure of race. Overall, it explores how whiteness and loss develop into autochthonous forms appropriated across ethnic boundaries, and how they are mobilized to produce new forms of racial hierarchy in a 'super-diverse' place.

**Bugs and Future Usage – A Design As Twofold Problem**

My ethnographic field is a design laboratory in which young German designers develop wearable textile-electronic interfaces. It can be observed here that the characteristics of the design-work are quite different compared to the work of scientists, as for instance Karin Knorr Cetina or Harry Collins have put it. In short, two types of practices can be found in the field of design: Designers talk about the use and the benefits of their conceptualized design objects systematically in meetings and informally on various other occasions. They ask themselves, what their design object is it good for and who will use it and when. In a less abstract level of their work, the designers are very concerned to create a functioning prototype. They have to arrange every material detail and technical problem of the prototype, as with the interfaces stitching, wiring, programming, de-bugging etc. According to Bruno Latour, objects are an indivisible compound of contextual meanings and materiality. My data shows that the designers work on both sides of this notion of object: They have to design both, an object's meaning and material function. These two different kinds of goals require two different types of work practices. It shows that these practices interfere heavily with one another, although they are very different in character. Whereas the work on meaning and utility is anticipatory and therefore never concluded, functional and material problems pop up in the present progression of a designer's work and have to be solved or circumvented to keep the work process going.

For analyzing the creation of new technology, it is crucial to observe the designer's anticipation of utility over the whole process. They may vary in substance and become less obvious for the ethnographer, but basically the interplay of anticipations and construction constitutes the outcome of a design process.

**Urban Scenes and Place Identity: The Case of Seoul**

The scene perspective can help us understand cities in terms of cultural amenities. Its abstract characteristics can join Asia with the US and Europe so that social scientists, policymakers, and average citizens can coherently interpret common features of world city systems. Scenes can be defined as the specific lifestyle of a place, thus, a scene is more than a neighborhood or its physical structures. It includes collections of people labeled by race, class, gender, etc. It also includes specific combinations of these groups and activities that join them together. With these characteristics, scenes show the specific cultural tastes of the residents, shop owners, and visitors. They show their own internal logic and dramas that, for instance, shine glamorously rather than fade into anonymity, project warmth and intimacy rather than distance and aloofness, maintain an authentic and real life rather than a phony existence.

Place identity can be formed through interactions between the physical characteristics of specific places and the people using the physical facilities. In this sense, urban scenes are closely related with place identity. Both urban scenes and place identity are considered as contributing to the creative regeneration of a city. In this paper, we present how urban scenes can contribute to developing place identity in Seoul. To do so, we will compare a Seoul scene map with a map of the floating population of Seoul. This will lead us to incorporate the characteristics of people into the facility data of the scene map in the specific place of Seoul. With this analysis, we expect to capture the dynamics of place identity and the influence of scenes on party identity.

**Sharing Information at the Operative Level**

The information is vital in the conduct of war and the whole field of information warfare focuses on how one can achieve superiority over the enemy. Thus we will only know more about how we protect vital information, or how they are obtained than on how information is shared within a specific force. Human and interactional dimensions of war have less been studied whereas “friction” and “fog” act as much between the belligerents as within the armed forces.

My presentation will focus on information sharing, on cooperation around information. Officers are trained in staffs where they learn to plan and conduct operations. How do they train on information sharing? If the control of information is considered a factor of operational superiority, how do they learn to get it? How are they prepared to work in a multinational environment? This is even more important because in the future the national armed forces will have to cooperate in various environments: NATO, EU, ad hoc, multi and bilateral, military or not.

The paper will focus on the decision-making process: assessment of the situation, decision, order transmission, reporting. This presentation will be based on a field work that will take place in the first half of 2014, inside French joint staffs training and operational centers.

Hospitality and Recognition in the Transmedia Age: Mediatization As Social Critique

Recent (trans)media innovations, such as the smartphone and social networking sites, have drastically altered the conditions of everyday life in affluent societies. Such developments have on the one hand contributed to potentially expanding lifeworlds and extended social affordances in terms of mobility and social connectivity. On the other hand, research from various disciplines has pointed to social disorders, or "pathologies", related to the everyday dependency on such technologies, as well as to the socially segregating nature of these developments. Against this backdrop, the suggested paper engages with the ongoing academic debate around mediatization, generally understood as a meta-process of complex socio-cultural change, and focuses particularly on the critical potential of this concept. The argument is developed in three steps. Firstly, a general approach to social critique is presented, based primarily on the works of Axel Honneth and media theorist Roger Silverstone. Here, the concepts of hospitality (Silverstone) and recognition (Honneth) are singled out as key (mutually dependent) facets of a socially sustainable and egalitarian (global) society. Secondly, the paper introduces a model of mediatization as a socio-spatial meta-process, based on Lefebvre's triadic notion of social space. The combined social forces of mediatization are mediated through three regimes of dependency: "material in-human sociocultural change, and focuses particularly on the critical potential of this concept. Social Structure and Daily Behaviours: A Cross-Sectional Analysis of Time-Use Patterns in Poland and Armenia

Sociological and economic literature points to numerous differences across societies and social categories in their patterns of time allocation. For instance, studies of the labour force show that daily behaviours differ significantly between people of higher and lower occupational status (e.g. Kohn and Schooler, 1983). In the same time, behaviours of one social category, e.g. the unemployed, can be substantially different across different societies (e.g. Krueger, 2008). There are thus at least two dimensions that affect people's daily time-use patterns: social norms and arrangements in a particular country, and individual place within the social structure. This study addresses both of them, analysing the influence of the macro-level setting (country) and basic social characteristics (gender, age, and employment status) on individual time-use patterns. This approach focuses on differences in the sequence structure and time allocation (e.g. unpaid work, socializing) analysed in a cross-sectional perspective. Since most of the existing reports on structural differences in behaviours come from developed Western countries, this study uses time-use data from the countries rarely included in cross-cultural research, no research carried out in the field. One time-use patterns of Poles and Armenians are compared in terms of how much they differ across social categories, as well as what are other lines of such differentiation in these societies. The additional benefit of the study is that it compares daily practices in the countries of Central Eastern Europe and the South Caucasus region.

Stuck in the Moment? Time Perspective and Time Allocation Across Social Classes in Poland

Individual's time perspective and everyday time-use patterns have major impact on all realms of human life. They influence the choices for upwards mobility and affect individual life trajectories. As put by Jeremy Rifkin, “those who are most present oriented are swept into the future that others have laid out for them” (Rifkin, 1987). However, time perspective is a multidimensional phenomenon and needs to be studied in relation to the actual time use patterns – in which it is supposed to be reflected. Only combining attitudinal and behavioural data can give deeper insights into socially differentiating role of temporal arrangements. This study analyses daily time allocation patterns in conjunction with temporal preferences and the possible drivers behind them – such as individual time perspective and time constraints. It focuses on the relationship between the perception of time or daily allocation of time and individual position in the social structure. Using quantitative data for Polish population aged 24-65 (n=780), it shows how temporal orientations and perception of time are related to individual social position and how they differ depending on the respondent's genders, age, educational attainment or occupational category (ISCO-based). The study casts light on the much overlooked dimension of social inequality, including the effect of temporal perspective on status attainment, social determinants of the ability to plan long-term and delay gratification, as well as the life course-related choices and their consequences.

JASSO, GUILLERMINA* (New York University, gj1@nyu.edu)
Happiness in the New Unified Theory of Sociobehavioral Processes

This paper explores more deeply the part played by happiness in the recent attempt to unify justice, status, and power theories. Specifically, the paper does three things: First, it strengthens the foundation from Plato and Aristotle for the theory's premise that different people seek happiness in different ways and by different means. Second, it connects those different ways and different means to the attributes and possessions that people care about, as well as to the basic outcome -- justice, status, or power -- that is activated. Third, the paper analyzes a new set of situations in justice theory, in which individuals may compare themselves to everyone who outranks them (on the salient attribute or possessions), everyone whom they outrank, or everyone in general. These situations lead to different outcomes both for individuals and for societies. Further, the paper shows vividly the implied effects of inequality in the distributions of attributes and possessions on average happiness and inequality in happiness.

JAUREUGIBIERRY, FRANCIS* (Université de Pau, francis.jaureugiberry@univ-pau.fr)
Technologies De Communication Et inégalités D'Usage

Il est devenu quasiment impossible de se déconnecter des technologies de l'information et de la communication. Parce qu’elles sont des facilitateurs du quotidien, synonymes d’immédiateté, de sécurité, d’ouverture et d’évasion. Se tenir informé, gérer son emploi du temps, faire ses réservations et achats, se sentir en sécurité et près des êtres chers malgré l’éloignement physique, autant de raisons nous portant vers une connexion permanente. Mais cette connexion est amenée à modifier notre manière d’interpréter les informations non désirées, d’apprendre, de surcharger le travail, de confusion entre urgence et importance, de nouvelles dépendances et de contrôles non autorisés.

Face à cela, des tactiques de réajustement visant à reprendre la main dans la gestion de son temps et de ses occupations apparaissent. Il s’agit de conduites de refus, non pas des technologies de l’information et de la communication elles-mêmes, mais de certaines de leurs utilisations, en particulier celles qui conduisent à des excès, au branchement continu et même à des formes de dépendance ou de contrôle. Or, il s’avère que cette capacité de maîtrise des flux informationnels est très inégalitaire. Dans les organisations, il y a ceux qui ont le pouvoir de se déconnecter et ceux qui ont le devoir de rester connecté, dans la vie privée ceux qui ...
Growing Trends in Non-Standard Employment in Nigeria: Insight from the Food and Beverage Industry

In spite of the effort of the International Labour Organization (ILO), to promote social justice and recognition of human and labour rights, decent working conditions have continued to elude workers in developing countries, job creation has gone hand in hand with the proliferation of non-standard work contracts in Nigeria such as temporary work and part-time employment. The World of Work Report 2008 showed that the incidence of part-time and temporary employment has increased over the past two decades globally. Workers joining the labour market find it easier to secure casual employment without proper contract or access to social security and remain more vulnerable to sudden changes in market conditions, have to accept severe cuts in their wages when fortunes change and are less likely to take part in training. It is estimated that approximately 4.2 million job losses had been recorded in the entire sector between 1983 and January 2006. Apart from job losses, most workers are not adequately protected as most organizations continue to defy labour laws that abolish workers exploitations in any form as well as high workers' violations concerning fundamental human rights at work as entrenched in the Labour Act of 2004. This study explores both primary and secondary data in bringing out clearly this phenomenon in the food and beverage industry in Nigeria. A total of 500 questionnaires was administered to workers in three selected organizations that have high incidence of non-standard employment as well as 20 interview session with some selected workers and union executives. The study found that this kind of employment have tremendous impact on the workers, who have continued to be voiceless at work, lay-off at will, engaged in poor quality of work, casualised, informalised, and are forced to work among others things.

Mobilizing for Immigrants' Rights Online: Creating Symbols of Belonging to the “American” Nation

It's no secret that being an immigrant, especially an unauthorized immigrant, is a challenge these days in the United States. Discrimination, marginalization and deportation loom large, and comprehensive and fair immigration policy seems an elusive goal. In response, the immigrants' rights movement increasingly mobilizes online. Among these cyberactivists' primary tools are symbolic representations of immigrants and immigration rights. I employ the tools of the Strong Program, as articulated by Jeffrey Alexander and his colleagues. They help translate claims of belonging for a particular group into a universal right of inclusion. Using these tools, I examine the ways in which the immigrants' rights movement uses such symbols to perform national identity online. In particular, I employ the tools of the Strong Program, as articulated by Jeffrey Alexander and Philip Smith, among others. The goal is to put meaning and the process of meaning making squarely at the center of analytical attention.

What are the ways in which the immigrants' rights movement creates and engages symbols to signal immigrants' belonging to the nation? How do such structures of meaning work to portray immigrants as part of the sacred social fabric of the civil sphere and to counter images of pollution? How does the deployment of symbols help translate claims of belonging for a particular group into a universal right of inclusion? To explore these questions, I apply a dual methodology. First, I perform a hermeneutical analysis of the website content of 15 national-level organizations – focusing on the visual but paying attention to important textual cues and discourse. I also interview their leaders and webmasters to explore their motivations and goals and strategies. The ultimate goal is to contribute to the understanding of the relationship between symbols, social movements and national identity.

Intergenerational Communication in Transnational Families: A Gendered Perspective

Examining multiculturalism, and combining a postcolonial feminist perspective with intergenerational communication, transnational migrant families are examined with a view to understanding the realities and negotiations between generations as well as how cultural values are transmitted across generations. In particular the communication: varied aspects such as verbal and nonverbal, that grandparents use in relation to their grandchildren will be examined. A nuanced analysis of gender intersecting with race, class, ethnicity and cultural diversity will be used in this study. The goal is to empirically uncover and shed light on the following questions: How do grandmothers transmit cultural values to their grandchildren in the Canadian context?

More specifically, what negotiations do grandmothers make to effectively communicate with their grandchildren about the cultures of their countries of origin?

Interviews, at least ten to twelve, using a semi structured interview protocol as well as focus groups if needed will be conducted in Ottawa among grandmothers and grandsons of a group of respondents from varied cultures as possible representing varied nationalities and cultures will be selected to participate in the study.

Emotion at Work: Between Alienation and Resistance

This presentation endeavors to utilize the concept of emotion in an heuristic and sociological manner in order to investigate the subjective link we have with work. More specifically, we will use it as a means to grasp not only the suffering and alienation that are associated with work, but also the pleasure that can intervene to ameliorate work-related pathologies. Furthermore, if we view emotions as a link to the self as well as to others and to the world, it becomes possible for an investigation of emotions associated with work to reveal how relationships to work can point to forms of resistance. It is also necessary in this regard to take into account the fact that the concept of emotion enables us to rethink the classical oppositions between rationality and affect, nature and culture, and masculinity and femininity. In addition, what Rimé (2006) has written about the social elements of emotion from a psychological point of view can be developed from a sociological and critical perspective. Finally, the concept of emotion is subversive in a manner that is analogous to the way in which care theory is subversive, which Carol Gilligan (2013) has demonstrated. This is particularly the case at the work place, which is characterized by control and self-control. The discussion will thus seek to reveal how the concept of emotion not only is heuristic in character, but also possesses a subversive and critical force.
privatizing previously public or common goods and grounds, the shift is towards conceptualizing care as a public good and as part of the collective societal responsibility. This move implies a paradigmatic shift in the way social sciences have conceived social practices and understood social inequalities – between regions of the world, between income strata, between age groups and ethnic lines, between men and women and among women themselves. Therefore, an integrated consideration of the institutions (states, markets, families) and the belief systems that regulate gender regimes, global migratory regimes, age patterns, ethnic and racial categorizations, can provide the clues that could guide public action leading to redress some of these central global injustices.

At the intellectual and scholarly level, this paradigmatic shift calls for revising and renewing conceptions of the links between micro and macro levels, of the private/public divide, of needs and emotions.
For parents of intersex children, from the moment of birth, if not before, the announcement of sex is replaced with an announcement of a different kind: that of a medical and social emergency. A body that is not clearly male or female as a result of its chromosomal makeup, hormonal balance or external genitalia, is given the diagnosis of ‘indeterminate sex’ (ICD-9-CM code 752.7). But this diagnosis is only a further diagnosis (such as cancer), course classification of the medical problem is necessary for deciding on management and prognosis. In the case of intersex, medical professionals assess additional data to determine the intersex individuals’ true sex, in effect explicitly diagnosing intersex while implicitly diagnosing sex en route to treatment recommendations. In this paper, we examine the diagnosis of intersex as a site that renders visible the process of social diagnosis (Brown, Lyson, Jenkins 2011). As argued in the framework, diagnosis is social because of both the variety of social actors involved in diagnosis and because it diagnoses social structures that contribute to health and illness. In this very small sample (we (1) show how multiple social actors (e.g. parents, doctors, technology, legal and cultural institutions) contribute to diagnosing the individual’s true sex, which, once determined, can be ‘restored’ medically. We then (2) set out to diagnose the social structures that make intersex a medical and social problem. In line with other scholars (e.g. Fausto-Sterling), we view sex in a multi-dimensional space, with male and female representing only two points. It follows that a system that diagnoses intersex, in effect, also diagnoses sex. We argue that since most cases of intersex do not involve physical dysfunction, it is this social compulsion to categorize sex that make intersex individuals ‘sick’ – not their chromosomes or organs.

The Myth of Meritocracy in the American Medical Civil Tradition

The United States currently graduates approximately 40% fewer physicians than are needed to fill postgraduate residency positions. The remaining positions are filled by American graduates of foreign universities, foreign medical graduates and osteopaths. The result is that US medical graduates (USMGs) are the most competitive candidates for residency, getting priority access to the most desirable positions. Last year, for example, over 90% of spots in plastic and orthopedic surgery were filled by USMGs. In contrast, non-USMGs fill lower-prestige residency positions in less desirable geographical locations and specialties (like internal medicine). In some cases, this has resulted in very polarized training environments, with so-called ‘friendly’ programs staffing only non-USMGs, and highly prestigious ‘traditional’ programs training only USMGs. Because of major differences in resources and medical service offerings, these programs have vastly different approaches to teaching which can affect residents’ opportunity structure post-residency, especially in subspecialty training.

This study seeks to comprehend sense and structure in the life-threatening medical problem is necessary for deciding on management and prognosis. But this diagnosis is only a first step; as with other diagnoses (such as cancer), further classification of the medical problem is necessary for deciding on management and prognosis. In this paper, we examine the diagnosis of intersex as a site that renders visible the process of social diagnosis (Brown, Lyson, Jenkins 2011). As argued in the framework, diagnosis is social because of both the variety of social actors involved in diagnosis and because it diagnoses social structures that contribute to health and illness.

The Myth of Meritocracy in the American Medical Civil Tradition

The United States currently graduates approximately 40% fewer physicians than are needed to fill postgraduate residency positions. The remaining positions are filled by American graduates of foreign universities, foreign medical graduates and osteopaths. The result is that US medical graduates (USMGs) are the most competitive candidates for residency, getting priority access to the most desirable positions. the IFIs and global capital markets, easing a key constraint on their policies, continue to develop and urbanise, high natural resource prices seem likely well above pre-2000s levels. As China, and increasingly other large Southern economies, has grown into an established research programme in recent years. If we think about the topic of waste today we have to be aware of its plastic and ambiguous nature, rejecting both the economic view, which sees it as lost and as a negative value, and the socio-cultural view, which associates it with fear and repugnance. “Normal waste” summarizes in a two-word formula the idea that waste is a normal condition of a society of widespread production and consumption, something normal and unavoidable that spans across cultural, economic and technical responses, which in turn shape our history. But because this is a problem which is widespread, permanent and global, with environmental and public health effects on current and future generations, intervention in this field has to be guided by a combination of responsible use of resources, sustain-able patterns of production, consumption and development, and the involvement of citizen-consumers. From these foundations I seek to show, first, that waste as a “problem” is the product of an order of production and consumption increasingly shaped by industrialization and urbanization. This was accompanied by a cultural process of sensibilities, mentalities and philosophical and medical con-victions, which encouraged the sanitizing of public spaces, greater individuality, the refinement of manners and of the sense of smell. Secondly, I see waste as an environmental issue and as a factor which encourages the search for ingenious technological developments, stimulates international political measures, and in-creases concern for networks and institutions. The belief that the “problem” of waste can be only fixed technically is pure fantasy. Facing up to the problem effectively will also depend on co-ordinated political approaches and patterns of develop-ment which achieve harmonious combinations of the social, the economic and the political. Finally, I analyse waste in the context of its commodification as waste management activities are also significant business opportunities.

The Rise of China and Post-Neoliberalism Among Southern Resource Exporters

Studies of the rise of China and its interaction with the rest of the global South have quickly grown into an established research programme in recent years. Ef-forts have generally concentrated on investments in natural resources and ag-riculture, new aid relationships and questions of political non-interference and human rights. I begin from a broader world-historical perspective which analy-ses contemporary China-driven structural transformation in the global capitalist economy and its implications for states in the South. The scale and speed of Chi-nese growth in recent decades has led to a level of import demand for natural resources of sufficient global weight to have prompted the 2002-2008 commodity boom. Even today, with a stagnating global North, fuel and mineral prices remain well above pre-2000s levels. As China, and increasingly other large Southern econom-ies, continue to develop and urbanise, high natural resource prices seem likely to sustain for another decade or more. This provides the revenue which is freeing hard commodity exporting states from the neoliberalising discipline im-posed by the IFIs and global capital markets, easing a key constraint on their pol-icy trajectories and thus allowing for alternatives in political-economic direction of travel which would have appeared highly improbable prior to the commodity boom. I use Qualitative Comparative Analysis (QCA) with a set of 30 Southern states as cases to demonstrate that a high export concentration in hard commodi-ties demanded by China is a necessary but not sufficient condition for a break with neoliberalisation. I find that domestic class structure and (traditional) do-mestic demands are also causally significant and that particular configurations of these conditions can be related to distinct types of post-neoliberal political eco-nomic formation. In world-historical terms, these may tentatively point towards emerging regimes of accumulation centred around a new phase of material-ly-based growth in the global capitalist economy.

The Operational Evolution and Innovation of Korean Anti-Base Movement

The organizational evolution and innovation of Korean Anti-Base Movement – focused on the multi-layered solidarity network is a main feature of Korean Anti-Base Movement (KABM) that it has been affected by the historical tradition and culture of democracy movement. First, KABM started in 1988, directly after the June democracy movement in 1987. Second, democracy movement organizations paid attention to local issues in the 1990s and built many local organizations of KABM as solidarity ones. Third, the activity networks of democracy movement was a main factor of the building of national solidarity network and massive nationwide mobilization. Some factors of successful Maehyang-ri struggle can be explained by these.

But in the early 2000s, there came into existence new innovations of KABM organization. Pacifist activists belonged to small organizations and jikimi-activists made up by voluntary citizens played a critical role in the development of Pyeong-Taek struggle. Two organizational forms, centralized democracy movement and emerging pacifist peace movement sometimes have cooperated and sometimes competed with each other. And both were was combined through the medium of residents’ organization.

KABM has developed multi-layered ABM organizations composed in scale of village, city, and nation. The anti-base committees of city and nation scale have been composed of local and national organizations which experienced democracy movement. On the other hand, residents and jikimi-activists lead village scale movement. The supplementation of three scale movements is important factor of the dynamics and extensive influence of KABM. But in case of Kangjung village of Jeju island, the influence of city and nation scale organizations is weak. It is mainly caused by the geographical isolation and cultural factors, that is developmental-ism and local conservatism. This implies that the objects of ABM has to be more than the mere change of aimed policy or institution.

The Rise of China and Post-Neoliberalism Among Southern Resource Exporters

Studies of the rise of China and its interaction with the rest of the global South have quickly grown into an established research programme in recent years. Ef-forts have generally concentrated on investments in natural resources and ag-riculture, new aid relationships and questions of political non-interference and human rights. I begin from a broader world-historical perspective which analy-ses contemporary China-driven structural transformation in the global capitalist economy and its implications for states in the South. The scale and speed of Chi-nese growth in recent decades has led to a level of import demand for natural resources of sufficient global weight to have prompted the 2002-2008 commodity boom. Even today, with a stagnating global North, fuel and mineral prices remain well above pre-2000s levels. As China, and increasingly other large Southern econom-ies, continue to develop and urbanise, high natural resource prices seem likely to sustain for another decade or more. This provides the revenue which is freeing hard commodity exporting states from the neoliberalising discipline im-posed by the IFIs and global capital markets, easing a key constraint on their pol-icy trajectories and thus allowing for alternatives in political-economic direction of travel which would have appeared highly improbable prior to the commodity boom. I use Qualitative Comparative Analysis (QCA) with a set of 30 Southern states as cases to demonstrate that a high export concentration in hard commodi-ties demanded by China is a necessary but not sufficient condition for a break with neoliberalisation. I find that domestic class structure and (traditional) do-mestic demands are also causally significant and that particular configurations of these conditions can be related to distinct types of post-neoliberal political eco-nomic formation. Sociological Problems and Educational Divergence

OLSON, PAUL (Ontario Institute for Studies in Education at the University of Toronto) 

This talk focuses on the relationship between education and social structure through applying Anthony Giddens's structuration theory to rural Tibetan society in China. In this, we analyse the dialectical relationship among local social structures and three forms of education in Tibetan society, China. The talk also looks at how myth and symbol have parallel and relationship to the social and cultural linkages in the construction of this identity and are reflected in stories, views of nature, the dialectical relationships of world and social beings.

The paper also examines how the use of myth and symbol have helped to reinforce the dialectical and practical understandings of culture and understanding in Tibetan rural society and specifically the evolutionary role of works like Gesar of Ling in the integration of the social order and the practical understanding in day to day life of what structuration means.

Social Problems and Educational Divergence

This article explores the changing labor process and power relations in Chinese State-Owned-Enterprise in The New Era Of Globalization

This article explores the changing labor process and power relations in Chinese State-Owned-Enterprise under the influence of the global economy recession and Chinese newly issued “Labor Contract Law”. It depicts the everyday working life of two groups of workers and the dynamics of workplace conflict based on author's intensive fieldwork during 2010 - 2011 at an old machinery factory, which located in Guangzhou city.

The research finds that, after the contractor teams were invited into the workshop, a new model of labor control - the dualistic production regime - has emerged in a Chinese SOE. The structural positions of different workers were utilized by the managers under this regime. With relative high age and outdated skill, the formal contract workers were disadvantaged in the labor market, so the strategic alliance of labor control was established for their being secure employment, basic benefit, but unsecure low wage. Without city Hukou and legal contract, the temporary workers from contractor teams were threatened by the second-class position in city, and the foreman control were imposed on them based on secure wage but unsecure employment. The disparity between core workers and peripheral workers were blurred, both groups of workers were in the similar disadvantage position, and the dualistic peripheral workers were generated in the workplace. Finally, different workers' expression and reflection were the important elements which reshaped the dualistic production regime. Resistance of the formal contract workers intensified managers' reliance on the contractor teams, while the toleration of the temporary workers placed themselves in the more marginal position.

From this study, people can better understand the potential and limit of Chinese SOE workers and the likely role they may play in the evolution of labor relations under China's changing environment.

The Emergence of Precautionary Chemical Management As A Salient Environmental Policy Issue in China

The precautionary principle promotes preventive measures in face of scientific uncertainty. It has been integrated into a number of chemical regulations and agreements, including Principle 15 of the Rio Declaration, and the European Union's regulation on Registration, Evaluation, Authorization, and Restriction of Chemicals (REACH). China is the second largest producer of chemicals in the world. In recent years, health and environmental issues resulting from chemical pollution in China have frequently taken place, involving industries such as electronics and textiles. Environmentally sound management of chemicals is getting increasing attention from the Chinese government. The development of China's chemical management policy may be observed from its policy amendments in recent years. In this context, what (combination of) principles guide China's chemical management policy becomes an interesting question. Drawing on interviews with key stakeholders, this paper analyzes the precautionary principle's application in China's chemical management policy, including consideration of risk assessment. It also reviews major Chinese chemical management laws, finding that government agencies are increasingly emphasizing chemicals' environmental hazards. The study finds elements of both the precautionary principle and risk assessment in China's chemical management policy today.

Social Formation of Geographic Proximity Effects: Understanding Unequal Access to Higher Education in China

Recent literature has demonstrated that college proximity (such as the number of colleges within commuting distance) enhances college attendance in the United States. But not all differences in proximity affect college attendance. We argue that the causal role of proximity is crucially shaped by the educational institution and family logic of schooling the child generation. We thus focus on the question of what proximity matters and why. The question of what requires a distinction of different types of schools and measures of proximity. The question of why looks at signs of the underlying mechanism of a true proximity effect.

We have created a new database by combining (1) school address data from official censuses; (2) provincial educational and labor statistics from official published sources, and (3) individual-level data from the 2012 Chinese Labor Dynamic Survey (CLDS), which is the first wave of a nationally representative panel survey with over 16,000 respondents. CLDS provides detailed address on the place of residence for respondents when they were in their regular school. The study takes advantage of the fact that CLDS allows us to directly address the research questions. Organizational censuses provide school addresses and founding dates that allow us to estimate the national spatial distribution of secondary schools and colleges over time. Provincial data facilitate the control for confounding variables.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Preliminary results provide striking evidence for the critical role of proximity to secondary schools (the number of schools within commuting distance), viz. the gateway to college. Gateway proximity, not college proximity, enhances college attendance. This finding contrasts starkly with the focus on college proximity by the recent U.S. literature on the geography of access to higher education. To further identify the possible mechanisms underlying the gateway proximity effect, we will also conduct a detailed examination of alternative measures of proximity.

Temporal and Spatial Patterns of Secondary Education Expansion in China, 1980-2010

China has experienced unprecedented educational expansion in secondary education since 1980s while there are substantial spatial disparities across provincial level divisions. This study does not only document the evolution of secondary education enrollment over the last three decades and across 31 provincial level divisions, but also examines how well the key factors of modernization theory—industrialization and economic development are associated with the temporal and spatial patterns of the expansion in lower secondary education and upper secondary education.

Based on pooled cross-sectional and time-series data for 31 provincial level divisions over a 30-year period, results show that the overall secondary education enrollment growth rate increased dramatically, while the spatial disparities are substantial. Additional analyses find that the expansion of secondary education corresponds closely to the economic development and industrialization. Within the provincial divisions, more than 60% temporal variation of lower secondary education is explained by the changes of economic development and industrialization. Across provincial divisions, around 70% variation in upper secondary education is explained by the changes of economic development and industrialization factors. This study provides greater precision in evidence for modernization theory by explicitly measuring industrialization, economic development, and educational expansion of secondary education. In addition, it differentiates spatial and temporal variations between expansion of lower secondary education and upper secondary education to determine whether and how industrialization and economic development correlates in these two patterns.

Sustaining Global Skills Inequality? Skills Transfer and Skills Protectionism in the Nigerian Multinational Corporate Sector

While the vital role of skills in the socio-economic transformation of nations is well espoused in the literature, little scholarly attention has been paid to the international dichotomies in skills and the dynamics that underpin them. In many countries in the global South, there is a plethora of liberal policies that seek to attract industrial investments by corporations in the global North, the hope often being that the transfer of vital skills – and eventual national socio-economic transformation - will result from such investments. Yet, studies have shown that in many developing countries, years of active multinational involvement by multinational corporations in the local economy have not had the desired effects: anticipated positive effects of socio-economic transformation in the developing countries have not occurred. It is against this backdrop that this paper examines the skills development programmes and strategies in Nigeria’s multinational corporate sector vis-a-vis the dominant national discourses on skills development in Nigeria. The key focus is on the extent to which multinational corporations operating in Nigeria have facilitated the acquisition, by Nigerians, of vital skills. From interviews conducted in key Nigerian multinational policy agencies and two multinational companies, each with over half a century of active industrial operations in Nigeria, the paper argues that despite the long period of involvement, multinational companies operating in Nigeria still source vital skills from their home countries. Besides, the levels of investment in skills development in the local economy suggest a possibility of skills protectionism – an active or unwitting process of ‘hoarding’ vital skills rather than transfer them to local employees. The paper thus highlights the challenges and contradictions of aligning the economic calculations and objectives of corporations to national human capital development imperatives, and one of the subtle ways in which global skills inequality is sustained.

Are Science, Technology and Innovation Fulfilling the Needs of Society?

For decades science was considered the major force for the advancement of humankind. Ironically, S&T has notoriously progressed either for the preparation or the realization of war. Likewise, the gigantic technological steps made by humanity during the race to the moon are also of paramount importance. Science was regarded as the answer to the problems of humanity. However, many times science, rather the use that man makes of science is counterproductive to the human ideals. Based on scientific discoveries man has made, and used, weapon- ary for massive destruction. The potential for annihilation of the human race of chemical, biological and nuclear weapons currently stored -- and recently used-- by a number of countries is beyond limits. However, scientists as a whole don't pay enough attention to the development of science for the benefit of humanity. Based on this inattentive to social problems, UNESCO in an effort to catch the attention of scientists organized the conference “Science for the 21st Century”, in 1999. The objective was the formulation of a new relationship between science and society, that is, a new social contract with science based on the assumption that science is to be subjected to public scrutiny. The debate on the need for a democratic discussion of scientific priorities, the size of its budget, its institutional structure, and the use that is given to the results of scientific labor, was recuperated. It was asserted that such decisions cannot be left simply in the hands of scientists and government officials. However, fifteen years later, the results of this global effort seems to be null. This paper gives some insights and examples of the work that is being done, and how it could be more involved on the decision making of the scientific labor.

Renting and Sharing: Housing Options for the Poor

The government of Mexico encouraged the construction industry and the financial sector through massive new housing projects, particularly from 2000 to 2012. Developers built houses and acquired land reserves where the price of the land was cheap: on the far away outskirts of the cities. An important impact of this policy on the poor is that cheap land where irregular settlements would in the past have developed, has now become scarcer and more expensive. Over half of the population do not qualify for the new houses, anyway. Thus the financialization of housing on the periphery of Mexican cities is likely to have pushed the poor back into existing low-income settlements, or forced them to remain there, thus encouraging the already ongoing process of consolidation of irregular settlements. Old low-income settlements, founded more than 20 or even 50 years ago, have earned themselves a privileged location in the cities by now, as they can offer their inhabitants proximity to employment and infrastructure. In these areas, renting or sharing accommodation has become an important option for those with low incomes, either because, as is often the case, it is the only choice they have, or else because it suits their family or economic situation to rent instead of buying. Also, shared arrangements play a fundamental role in the lives of most vulnerable groups: single mothers, the sick, the handicapped, and people of an advanced age. However, we know very little about current conditions in these settlements, and the problems faced by owners, tenants and sharers. To shed light on these parts of the city, I use information obtained from questionnaires and in-depth interviews conducted in Mexico, as part of a major research project into 11 cities in 9 countries of Latin America (the Latin American Housing Network).

Invisibility As Strategy? Understanding the Perceptions Toward Organising Amongst Foreign Farm Workers in Musina, South Africa

In this paper I explore issues of self representation and mobilisation amongst foreign farm workers in Musina, Limpopo. Based on original empirical research on the commercial privately owned farms in Musina, this paper reveals a number of human rights violations against this group, and points to a lack of capacity and inaction by civil society organisations and also by non-governmental organisations to effectively address these problems. Drawing on this context, I make two interconected arguments: first that the political economy of Musina has created and sustained an informal-formal system through which these conditions can be perpetuated; and second that farm workers adopt tactics of ‘invisibility’ to operate within this system. By this I refer to the range of sustained strategies that workers- and foreign workers in particular- engage in to earn livelihoods. Drawing on a global literature of mobilisation, and community relations, I argue that in the face of the poor and inhumane conditions that workers face, silence and invisibility are tactics that they use to fight back and survive.
This paper examines affiliation divestiture process of Korean business groups, chaebol, in 1989-2010. One of the characterics of chaebol is that its head and his/her family members rule the structure, the whole group network, despite their little shares. It is possible because they are major shareholders of the group network’s holding company. Thereupon, the corporate network, composed of individual legal corporations, is the group owner family’s privately owned social structure and succession of ruling right is regarded as if it is a private property. Consequently, some Korean conglomerates have divided itself for succession from group owner to his family members. This affiliation divestiture process differs from a firm’s typical spin-off because it results separation and survival of the business group network. This research, hence, analyzes the process based on three points: how each structure is cohered; how major human agents locate within each structure; and what happens in the structure’s network across time. The result is as follows. First, group network’s cohesiveness is an important factor in making affiliation divestiture. Next, separation experience works as a path-dependency by becoming a logic of succession. Third, business groups which have not concluded their way of transfer select joint succession as a temporary expedient. Last, group network forms plural cores before commencing gradual affiliate division; and what happens in the structure’s network across time. The result is as follows. First, group network’s cohesiveness is an important factor in making affiliation divestiture. Second, experience works as a path-dependency by becoming a logic of succession. Third, business groups which have not concluded their way of transfer select joint succession as a temporary expedient. Last, group network forms plural cores before commencing gradual affiliate divestiture. By those processes, Korean chaebols get on different ways in succession due to how inner network of each structure is organized. In other words, cohesiveness of structure and composition of network show how a network of business group is divided, is transferred from previous owner to his descendants, and maintains its survival. This result provides a key to understand formulation and survival of derivative chaebol, which will continuously come into the world.

This study aims to explain the employment relations in the changing circumsences of Korean labor market. This study aims to explain the employment relations in the changing circumstances of Korean labor market, focusing on the automobile industry. As globalization has developed, the segmentation between the regular workers and the non-regular workers in the labor market has deepened. The wage level of the non-regular workers is about 60-70% of the regular workers, while they engage in the same kind of job within a work organization. The labor movement of the non-regular workers to improve their working conditions has intensified, reflecting the serious situation in the labor market. This study analyzes the dynamics of labor movement of the non-regular workers, based on the segmented labor market in the Korea automobile industry. After then, we will try to present an alternative option to the present situation of the segmented labor market.

This paper is based on interviews with 45 members of Muslim political organizations like Bodu Bala Sena in their counter rhetoric’s. ‘We are all Sri Lankan’s’ says the Muslim politicians who try to face organizations like Bodu Bala Sena in their counter rhetoric’s. We are all Sri Lankan’s is one of the most common slogans that is used by Muslim politicians and other actors in the way of facing Bodu Bala Sena, at the same time they want to safeguard the Muslim interest and the Muslim identity. This “dual-nationalism” is not uncommon in post-colonial societies and in the case of Muslim organizations in Sri Lanka Islamophobia trigs this. can be organized to different degrees, and some phenomena are only partially organized. The least common denominator of organization is that it is a decided order. Without a decision, no organization, not even a partial one. Here, a distinction is made between full organization and different forms of partial organization, the latter consisting of mixes of organization and other social orders; a phenomenon may be a mix of organization and institution (if, for example, it rests heavily on rules, norms and beliefs) or a mix of organization and network (if it lacks a clear formal hierarchy). Organization is a widespread form of social order. Many such phenomena are temporally delimited. Here a distinction is made, regarding the nature of temporariness, between known and unknown time-frames. The latter (when it is not known when a phenomenon will take place) is characterised by a higher degree of uncertainty. Disaster management belong to this category. Different aspects of disaster management are analysed with this theoretical framework.

Change in Daily Eating Habits – Organization and Arrangement of Nutrition Patterns in the Context of Family and Public Compared Between Germany and Japan

Instead of looking at unknown social arrangements far away, comparative sociological research should investigate the alien within the known following suit the ethnographic research of modern industrial society. While comparing the development of a Western industrial states, sociology can get insights in the meaning of social problems, its circumstances and consequences. This perspective will be presented by an on-going project comparing eating habits of everyday life between Japan and Germany. The stark contrast between European and Asian nutrition habits illustrated by the German-Japanese comparison is examined to discuss the correlation of malnutrition, change of family structures, gendered responsibilities, and daily eating habits in regard to cultural differences as well as to numerous similar characteristics of the current social change. Thereby, the focus is to be laid on specific and comprehensive analyses as to how the diagnose of “malnutrition” is made, which shape it assumes and which causes are being named. Ultimately, it has to be questioned what kind of regional country-specific solutions of the stated problem take root and which family-situations to compensate for these functions can be taken by extra-familial agents of socialization in order to teach nutrition skills. Afterwards, different national approaches to a solution of the respective problems of how to arrange daily nutrition in the area of tension between private and public nutrition supply as well as their transnational learning potentials can be discussed.

To compare developed countries with each other in regard to particular problems will not only result in new knowledge about the research objectives but will also help to evaluate and develop the theory of World Society, whether the world is differentiating into a multiplicity of societies or unifies in a way which takes a segmental, regional differentiation into account.

JOHN, RENÉ* (Institut für Sozialinnovation, rene.john@isinova.org)

Times of Innovation – Innovation of Times

Social relevant times are caused only by social events. However the variety of events rapidly increases by the density of possibilities rising the problem of synchronization of social time. Pre-modernity could refer to natural events for this purpose. More important was the reference to the idea of fixed temporal horizons – the past and the future though. These temporal fixations were broken by modernization, presenting the problem of synchronization anew and even exacerbate it by developments like sciences or the European expansion. Thus synchronization means the possibility of a joined temporal orientation by a fixed horizon rather than the alignment of times. At first modern synchronization could be ensured by well content of progress. But once its singularity had dissipated into a manifold moving concept (Koselleck’s “Bewegungs begriff”) the problem occurred again. It could also not be solved by introducing mechanical time measurements or lifetimes. Nowadays innovations have been established as synchronizing mechanisms. The factual specific, recombination re-arranges particular social relationships in regard to their temporal conditions. Organizations shape innovations into plans, they appear as cycles for society. Innovations as plans and as cycles fix the temporal horizons. However innovations do not any more synchronize universal throughout all social different areas. Rather innovations synchronize in a particular way specific factual arrangements for specific social circumstances. In an evolutionist perspective these social structures are addressed by selections and re-stabilizations. The success incident to innovation in a sense of social far reaching and enduring affiliations provokes ever anew de-synchronizing variations of social structure trying to surpass earlier attempts in regard to range and endurance. Therefore innovations as alternative synchronization attempts increase in frequency. Under the current conditions of functional differentiation this can never result in a universal synchronization of world society but results in a highly dynamic multiplicity of temporal regimes.

Intersections Between Western and Indian ChildhoodDiscourses

This paper presents one of the chapters in my Ph.D. dissertation on Conceptualising Childhood, Indian children as a social category are neither homogeneous nor monolithic. “Childhood” in Indian discourses represent “shifting set of ideas” developed over a period of time, and across different sub-cultures. In this paper I requirements that neo-liberalism places on critique. I propose to excavate normative investments that are implicit in this programme that might be marshaled to a guide a critique that weighs up the cultural costs and damages in neo-liberalism's re-working of our normative principles and ideals.

Pedagogies and Practices in the Modern and Postmodern

There is a paradigmatic shift in how pedagogy is conceived and practiced in contemporary discourses. In this paper, I focus on the discourses that arise out of the fragmentation of the project of modernity. I attempt to make a distinction between modernist and postmodernist educational theory, their languages and vocabulary and their tools of measurement. Furthermore I show that issues related to change, crisis, difference, diversity and fragmentation of identity, and of knowledge and power are important aspects of the emerging conceptualization within pedagogy. I try to describe some pedagogies such as the notion of “border pedagogy" etc. have emerged from critical pedagogues who locate themselves within the postmodern. Pedagogies that give students an opportunity to engage in multiple reference points that constitute different cultural codes. Finally I raise the problems that the radical critique of postmodernism pose for education that is central to post-Enlightenment, emancipatory, liberal humanist project of modernism.

JOHNSON, PAULINE* (Macquarie University, Pauline.Johnson@mq.edu.au)

Sociology and The Critique Of Neo-Liberalism

Sociology and the Critique of Neo-liberalism

On all sides we’re hearing that social critique is in trouble. Nancy Fraser’s remarks about a “crisis of critique” confirm Axel Honneth’s account of critique’s “perplexing predicament’. Peter Wagner too observes that contemporary capitalism is “not only a new type of society, but also a new type of critique”. What is alarming everybody is the supposition that the project of immanent critique has been undermined by what Honneth calls the ‘neo-liberal revolution’. Immanent critique, Michael Walzer tells us, judges the present with reference to ideals that are purely internal to a particular socio-cultural context. Immanent critique is having a hard time because the normative principles and ideals internal to our social and institutional practices appear to have been resigned in capitalist friendly terms by a triumphant neo-liberalism. So neo-liberalism issues a peculiar challenge to social critique. The distortions and cultural costs of its strategy of appropriations and resignifications needed to be counterposed will Burdenden with disciplinary commitments to a scientific integrity, the critical sociologist struggles to meet these demands. So what, then, of Wagner’s claims about sociology’s vital contribution to a critical consciousness of modernity? My paper will briefly reconstruct his programme for a critical sociology of modernity and will argue that it falls short of the distinctive features of immanent critique. I propose to excavate normative investments that are implicit in this programme that might be marshaled to guide a critique that weighs up the cultural costs and damages in neo-liberalism’s re-working of our normative principles and ideals.
Organising the ‘Invisible’ Sector: A Case Study on Household Workers in Lima

This paper examines the organisation of household workers in Lima. Household services is one of the biggest employers of female workers in Peru, and roughly a half of all household workers live in the capital Lima. Among other informal workers, household workers are regarded as one of the most precarious and marginalised group of workers in the labour markets. The lack of recognition, and the fact that the work is done in private households, makes the household sector ‘invisible’ and thus the workers’ rights, including working hours, wages and access to social security, are poorly controlled. Lima provides an interesting case for studying household workers’ movement. In recent years, household workers have increasingly mobilised on local, national as well as international level and formed new networks to promote their rights as citizens but most importantly, as workers. In 2011, the international labour conference accepted a convention for domestic workers, setting labour standards for persons working in household services. Peru has not yet ratified the convention, but especially the local household workers’ organisations have been actively campaigning for the ratification. This paper investigates the various forms of organising household workers in Lima. Special focus is given on household workers’ organisations and their networks, and the ways these promote decent work and job quality for workers in household services. Since informality in the sector is high and less than 1% of household workers in Peru are unionised, non-governmental organisations play a significant role in advancing the position of household workers in the labour markets and in the society.

Women Human Rights Defenders: Promoting Women’s (human) Rights in Honduras

This paper explores the recent developments in women’s human rights activism in Honduras. In the past years, political and economic instability, culminating in the coup d’état in 2009, has led to extensive protests and mobilization among a variety of civil society actors, particularly among women’s groups. While promoting gender equality and organizing against militarism, neo-liberal practises and human rights violations, Honduran women’s movements, activists and organizations have been able to assert their voice, and assert the notion of human rights in their claims. Moreover, a wide variety of women’s groups including feminists, teachers, community leaders, labour union members and LGBT activists, among others, have met challenges collectively as ‘women human rights defenders’. I suggest that as a consequence, the discourse on women’s human rights has moved from academic spaces and a ‘feminist project’ to the everyday understandings of a large number of women’s groups and most importantly, a new framing of women’s agency. In doing so, activists have, moreover, enhanced their alliances with supportive women’s groups beyond national borders and entered new regional and international arenas of advocacy. Drawing mainly on social movement theories, this paper seeks to explore 1) the factors that have contributed to the shift in women’s rights framing among women activists in Honduras and 2) the possibilities and challenges arising from the strategic usage of human rights frames for the activist’s work and the women’s movement in Honduras generally.

Sustainable Consumption and the Enactment of the Fairtrade-Market in Vienna

Since the current discussion about the extent and manifestation of a environmental crisis, norms and values as integral part of economic markets gain public attention. According to contemporary findings within economic and consumer research, a range of markets are currently undergoing a fundamental transformation, warning signs and reactions to them in remote island communities in Fiji and Tonga were investigated. On remote islands, people are well connected with their land and environment, and local ecological warning signs have existed and been relied upon traditionally. Knowledge about such traditional warning signs is still alive today, but diminishing as technology takes hold. Traditional warning signs are being overtaken by a reliance on warnings from the meteorological service on the radio. Many of the older people who hold most of the traditional knowledge perceive a lack of interest from young people in learning about those signs, because of the radio. However the young people are using the radio and are changing, which may make this form of warning message distribution less effective in the future. There are moves toward the use of mobile phone technology, especially in Tonga, for distribution of disaster warnings. In remote areas where mobile phone reception is less about being in the right general area than standing under a praxeologic research approach I ask how and in relation to which practices is the so-called ‘fairtrade’ market enacted and, in doing so, moves in a tension between a moralisation of markets and the economic colonisation of morals. I consider these questions with reference to empirical research; starting in a fairtrade district in Vienna, the capital of Austria, I focus primarily on the constitutive practices and settings in which the fairtrade market is enacted. In doing so I address especially the questions how citizen consumers are able to learn about social and environmental risks and to what extent consumption of fair and sustainable products are driven by practices as well as respective sociomaterial orders.

**Sustainable Practices and Behaviour**

Practice theories are at the cutting edge of research on sustainable consumption and new managerial policies. They claim an alternative route to conceptualize the dynamics of social change by addressing both, the persistence and the innovativeness of human behaviour. The focus of this research are daily unsustainable routines, i.e. the everyday doings of people, carried out by bodies with the assistance of things, be it instruments or the surrounding infrastructure. Practice theories draw attention to core issues which remain quite often unaddressed by behavioural approaches such as large scale infrastructures or material agents as participants of everyday life. If it comes to behavioural changes towards a more sustainable way of living practice theories pose the critical question whether at all and how it is possible to steer or to govern social practices. Our contribution gives an overview of the “practical turn” in social science and its reception within the discourse and research on sustainable development. Social practices are especially linked to studies of consumption routines as well as lifestyles and the conditions for changing them towards sustainability.

**What Kind of Power Is ‘Love Power’? II - Continuing the Elaboration of a Theoretical Concept**

Love, more specifically “love power,” is central in my mode of theorizing contemporary western societies. In the article, “What Kind of Power is ‘Love Power’ in 2011?” (2011), I outline briefly, three ways in which I have approached this key question. I have done this, firstly, by comparing “love power” with “labor power,” concluding that the two human powers are both similar and basically different, and that both can be seen as specifically human “world creative capacities” (in the sense explicated by Marx); secondly, by distinguishing care and erotic/erasty, as the defining elements of the internal dialectic in sexual love; and, thirdly, by asking, what kind of power love power is, looking (in vain) for answers among the so-called “power terms” as presented in dictionaries and applied in most prevailing social and political theories. I conclude that love power would add a new dimension and enrich the whole complexity of power terms. In this paper I will continue to elaborate the concept of “love power” roughly along these three lines. The aim is to explore, develop further, and reflect over the strength and delimitation of my love theory. I will expand the comparative view (labor vs. love in Marx) by bringing in and assessing some other, apparently similar or overlapping theories and key concepts where creative and transformative powers are also at the center: some feminist-historical-materialist work—labor-related concepts, and also concepts, generated within other research traditions, in particular “desire” and “erotic power” as variously framed by, or through critical debate with, psychoanalytic theory. Then, drawing on the explorations in the first part of the paper, I seek to explicate further my understanding of love as polyvalent practice and power, and what I am trying to make by theorizing sexual love and love power in a specific historically located context.

**How Brown-Coal Mining Affects the Lives of Older Long-Time Inhabitants of the German Lusatia Region**

Not only the profound shock of events such as war that can shake societal structures and with that throw people of every age off their accustomed paths. Also events like natural catastrophes (floods, fires, storms) can threaten people’s physical and spiritual health.

Another different form of serious influence on human lives is represented by events that emerge neither as a result of war nor through the forces of nature, but rather as a result of decisions made by political elites and politicians. When the Olympic Games required new sports venues to be built, and whole city quarters had to be flattened, or superhighway construction causes many houses or even whole localities to disappear, a severe, all-comprising form of violent intervention acts on and against the existence of the people living in these areas. It is the same for people who live in mineral-rich regions.

In my contribution I examine the influence of renewed coal strip-mining and the resettlements necessitated by it on the lives of older people in the Lusatia region. Many of them will soon have to experience being uprooted from their homes for the third time in their lives – after the first time in the Second World War, then in consequence of strip-mining in GDR times, and now through re-newed plans to mine extensively on what they thought was an area secure from future extraction.

How do older people react to the loss of their familiar environment? How does the necessity of resettlement affect their health, spiritual well-being, as well as their sense of security in old age? What strategies do they develop to face the impact of physical and mental effects of the threatened high increases? The variety of responses to these questions – based on my research interviews carried out from 2010 in the region – is formulated in my presentation.

**2011 and 1968: Transnational Crisis - Transnational Social Movements?**

**2011 and 1968: Transnational Crisis - Transnational Social Movements?**

The Arab Spring revolts, the indignados and international Occupy! protests were presented as harbingers of an international, even transnational, movement capable of displacing political elites’ neo-liberal agendas and politically and economically repressive regimes which. Clues for the feasibility of this transformative potential can be derived from comparisons with the protest movements closest in scale and character: those of the late 1960s. The two upsurges are similar in their lateral, non-hierarchical mobilisation and organisation, rejection of conventional ‘system’ politics, direct, deliberative democracy practices, and equality of participation through personal commitment, initiative and action. Yet sixties’ tests failed to transform or even modify capitalist economic relationships, which assumed even more elemental market forms. Sixties’ campaigners’ radical alternatives were more likely to be subverted than liquidated or subverted. The reversal of their tantalising vision of substantive equality, into nineteenth-century levels of economic inequality, suggests that contemporary movements need transnational, radical alternatives to today’s transnational economic crisis. What lessons do the failures of sixties radicalism in part share with the newer vehicles of global and social media?

Different forms of social movements and political campaigns via their organisational, discursive vehicles and communication media, suggests three possible commonalities for achieving ‘transnationalised’ social movements:

- similar causative grievances;
- adoption of another society’s social movement model;
- and/or convergence of regional/national movements into transnational programmes and goals.

Analysing these potential commonalities indicates that sixties movements achieved little convergence in the sharing of similar perspectives and programmes only through a transnational, but ultimately unworkable ideological paradigms. Yet comparison, with the newer vehicles of global and social media and practices such as Occupy! Suggests these need, but lack, the meaningful and coherent discourse(s) to achieve the transnational force for political change.

**Measuring Corporate Social Responsibility for Consumers: Lessons Learned from Seven Years in the Field**

Which company is more sustainable: Coca Cola or Pepsi? Apple or Microsoft? GE or LG? Or none of the above? While data clearly indicate that we must significantly reduce our overall quantity of consumption, sustainable consumers face a wide range of obstacles when attempting to enhance the quality (responsibility) of their consumption. Reliable data is not readily available, and the practice of “greenwashing” – or deceptive marketing that makes corporations appear socially responsible – conceals legacies of unethical conduct. How can citizen consumers effectively navigate the muddy waters of corporate social responsibility?

Drawing from a seven-year public sociology research project that uses independent, third-party data to evaluate corporate practices, this presentation examines the art and science of measuring corporate social responsibility. More specifically, it explores five tensions inherent in the development of a comprehensive and accessible system of measurement.

1. The Data Integrity Problem: Including all reliable data, on the one hand, while excluding overly-biased data (or data that is the product of greenwashing), on the other.
2. The Data Quantity Problem: Uncovering too little data on some companies and too much (potentially overlapping) data on others.
3. The Past/ Present Problem: Weighing companies’ legacy of positive or negative conduct against more recent indications of change.
4. The Multidimensional Problem: Determining the comparative value of different dimensions of social responsibility (e.g. human rights, the environment, political lobbying).
5. The Simplicity/Complexity Problem: Creating a system that is simple enough for consumers to use while being complex enough to accurately capture the many facets of corporate conduct.
Class and Health Inequalities in Later Life

The author offers working solutions to these tensions and explores the strengths and weaknesses of his methodology. More broadly, this inquiry underscours how, in order to be effective, more sustainable consumption requires increased corporate transparency and better public sources of data on corporate social responsibility.

Reclaiming Corporate Social Responsibility for Activists and Academics: An Analysis of International CSR Ranking Systems

Is it possible for activists and ethical consumers to reclaim corporate social responsibility (CSR) from its current, largely greenwashed, state that seems to merely strengthen much of the same neoliberal agenda it was meant to address? While CSR research in general is expanding rapidly, there is relatively little research being done on CSR measurement, and almost all of this sub-category of study focuses on corporate self-reporting rather than 3rd party tracking of corporate behavior. The solution may be found in nonprofit and academic efforts to develop valid measures of CSR for a public audience. This research project examines four CSR measurement systems created specifically for consumers in the US, UK and Australia in order to understand the current level of consensus/diversity on: 1) definitions, 2) methodologies, and 3) outcomes. Utilizing a combination of text analysis and standard statistical tools, these questions are answered with some surprising results. The rankings of 106 global corporations are compared across all four systems to reveal where consensus can be determined despite significant differences in methodology. CSR rankings results are reassessed in light of some of the most recent publications from Transnational Institute (“State of Power 2013”) and Asia Monitor Resource Center (The Reality of Corporate Social Responsibility) to determine where blind spots may be in each of the systems.

Final recommendations include a call for increased research in the area of empirically measuring overall CSR behavior (with an emphasis on indicator validity) rather than generating additional research on CSR reporting, reputation indices, correlations with corporate profitability, or hyper-specific, non-comparable corporate efforts along particular lines of social or environmental responsibility. The argument presented includes a call for resistance movements to help transform capitalism rather than consuming the economic realm to neoliberal ideologies while focusing on social change efforts in other arenas.

Youth Work in England: An Uncertain Future?

It is easy to paint a pessimistic picture of how young people are affected by the current economic situation. In Britain, almost 20% of 16-24 year olds are ‘NEET’, the acronym for young people who are not in education, training or employment. The Education Maintenance Allowance, paid to 16-18 year olds to encourage them to stay in education by paying them a small weekly grant to help with fares and other overheads, was removed in 2011. Perhaps it is not surprising that UNICEF (2007) found the UK’s children and young people to be the unhappiest out of those living in 21 developed countries. Aspirations for the result included attitudes to education, personal and well-being, home and family life and general satisfaction with their lives. The OECD (2013) has found that young people are most likely to suffer from government austerity packages; they suffer most from cuts.

Youth workers have always tended to look back to a golden age. Currently, the period when government funding was channeled into work with young people via local authorities and third sector/voluntary organizations provides the touchstone. In April 2013, the UK’s magazine Children and Young People Now published an article entitled, ‘Youth sector on a “knife-edge” as third of organisations fold’. It presented a depressing overview of reductions in expenditure and a pessimistic prediction of the future. Youth services have been subject to swingeing cuts accompanied by amalgamation with targeted and acute services.

This paper identifies the aspects of young people’s lives which have been affected by different cuts and other policy changes. Where possible, examples of innovative practice will be discussed. These present exciting ideas which have potential to be replicated if funds are found: although the future is uncertain, we owe the country’s young people a more optimistic future.

Class and Health Inequalities in Later Life

For over sixty years significant research activity has addressed the extent to which the effects of social class over the life-course have determined or contributed to an individual's economic and social fate in old age. This has led to the elaboration and discussion of a whole host of conceptual and measurement issues among a growing body of epidemiological and social researchers. To these we must add, in light of the social changes and accompanying theoretical developments over the same period, questions about the viability of class as a means of understanding social relations and social inequality in contemporary society. This paper will interrogate these issues as they relate to the role of class in later life using the prism of health inequalities. The paper sets out the wider implications of the emergence of a relatively lengthy post-working life have not been fully incorporated into studies of class and health in old age. This is a major lacuna given that the generations entering retirement today in affluent countries are precisely those who have experienced the social changes that have seen both increased prosperity and the questioning of the salience of class in wider society. We therefore need to address two questions. Firstly, how best to describe and explain patterns of social class inequalities in health over the life course? Secondly, what does class mean in later life and how can it be conceptualised in relation to a population which may have been out of the workforce for many decades?

Communities, Connectivities and Later Life

The rapid diffusion of forms of Information and Communication Technologies (ICT), mobile technologies and social media have transformed many aspects of social relationships and enabled new forms of social connectivity. However, the impact of virtual connectivity on community and communication for those in later life is not yet understood. Research suggests that for older people internet use and its impacts are multifactorial and differ according to the nature of social relations. Research in this area has produced ambiguous results. Researchers have found that, where older people were previously socially isolated, by becoming internet users they were able to keep in touch with friends and family often across large physical distances. Others have found cyber communities to have a negative impact in terms of withdrawal from the outside world leading to a contraction in the use of social and physical space. It is certainly the case that the expansion of social networks beyond the local neighbourhood that domestic ICT allows can lead to profound changes in the nature of community in later life. Research on the internet has tended to focus on a digital divide, on the impact on community and social capital and on political and cultural participation. While the most common uses of computers by older people appear to be related to communication and social support, leisure and entertainment, health information, educational interests, and productivity, this is not that different to younger groups. The presentation will address; theoretical approaches to new technologies and social relations in later life, trends in internet use among older people, research addressing the digital divide, patterns of motivation and use, the impact on social relations and social networks and the consequences of technological change for older people in temporal and spatial terms.

JANSSON-JANSEN, LEONIE (University of Amsterdam)

Socio-Spatial Justice and Housing

While the relationship between justice and geography and spatiality is acknowledged and put central in research by several scholars, there is no consensus on the type of relationship. Space is often used as a contextual way and social justice writings are in many cases focused on power and struggles within society. Edward Soja has argued for putting spatiality more central in social justice research. Space may have a great explaining potential, but may also contain a causal power. This paper will further explore the spatiality of justice through an analysis of the Amsterdam housing market. Institutional changes related to housing that especially change the role, position and field of work of the social housing corporations in the Netherlands have changed the provision of housing. Space, landscape or territory shape the effects of institutional changes and are therefore both a means and an end of production and moreover distribution of housing. Amsterdam, by some regarded an example of a just city, is characterized by a high degree of social housing and its impacts are multifactorial and differ according to the nature of social relations and enabled new forms of social connectivity. However, the impact of virtual connectivity on community and communication for those in later life is not yet understood. Research suggests that for older people internet use and its impacts are multifactorial and differ according to the nature of social relations. Research in this area has produced ambiguous results. Researchers have found that, where older people were previously socially isolated, by becoming internet users they were able to keep in touch with friends and family often across large physical distances. Others have found cyber communities to have a negative impact in terms of withdrawal from the outside world leading to a contraction in the use of social and physical space. It is certainly the case that the expansion of social networks beyond the local neighbourhood that domestic ICT allows can lead to profound changes in the nature of community in later life. Research on the internet has tended to focus on a digital divide, on the impact on community and social capital and on political and cultural participation. The Vulnerable Man-Machine: Human Actors As Productive Parts in Work-Networks

As parts of heterogeneous work-networks, human actors need to manage their vulnerability by finding ways of fitting neatly into the network and become reliable man-machines. They also have to learn how to manipulate the network so that they remain a position in it. From a posthuman- and ANT-based perspective, this presentation explores human vulnerability in a male-dominated, internationally successful company. Vulnerability is understood as a consequence of various material-semiotic processes, where individuals are or are perceived as unable to perform certain tasks, relearn, commit and so on. Being or being seen as able can result in vulnerability as well, as this may propel the actor in unknown or even unwanted directions.

Working at “Techno”, human actors help form a work-network put together for increasing productivity and, in the end, profit. They are protected by laws, policies and helmets, but in this network they necessarily remain some of the softest parts with different (dis)abilities and utilities. The analysis of ethnographic data from “Techno” suggests that technology and vulnerability is closely linked. The white collar-domain of the network results in one set of human vulnerabilities and the blue collar in, to some extent, another, but the real difference lies in the actor’s possibility to manipulate the network. Depending on your formal position, who you know, how you are categorized (in terms of age, education etc.), and how well you fit into the network, you will be able to tinker with work schedules and the ordering of new machinery or software to different degrees. Being able to manipulate the network partly, but still retaining a position in some way, is highly important for human actors and their manipulation-strategies differ depending on what resources they possess and how closely they are monitored by management and co-workers.

Finding New Opportunities in Shrinking Cities: Local Citizens, Artists, and the State in Urban Revitalization Projects

South Korea is one of many countries now facing the problem of inter-urban inequality. While Seoul and the capital region have nearly 50% of the national population, many other cities, which developed as the country rapidly industrialized during the latter half of the 20th century, are quickly losing their industries to newly emerging economies, such as China and Southeast Asian countries. In short, a number of Korean cities, once noted for their speedy urban transformation and growth, now face reversed difficult challenges of shrinkage. A good example is Busan, which had been the center of the southeastern industrial core, but is now struggling, with a shrinking economy and population. This paper examines two urban revitalization projects that took place in Busan’s dilapidated old downtown. By utilizing an unusual combination of non-traditional types of development projects of a developmental city, dependent on state-driven top-down approaches with a goal of supporting private capital accumulation, these two projects set themselves apart by relying on the active participation of local residents and artists to bring bottom-up changes that are strongly connected to the local history and social life. Through the two cases, I explore how the changed circumstances necessitated scaling back the roles of the state and capital, and permitted newly emergent civic actors to take much greater roles in the development projects, leading to unexpectedly successful outcomes. Additionally, the paper points out how the visible decline provided an opportunity to change the mindset of the society, which had been rather firmly embedded in development-oriented ideologies, and to seek alternative possibilities amid the shrinkage. Perhaps, with the arrival of more socially aware and inclusive development approaches and goals, shrinking cities may find new opportunities to build more resilient and livable cities.

Recruitment of Women and Persons Born Abroad to the Swedish All-Volunteer Force

This presentation examines the recruitment base to the Swedish all-volunteer force; the applicants for basic military training. So far the recruitment to the all-volunteer force has been satisfactory in respect of qualitative terms; both regarding psychological and physical capabilities. The capabilities of those selected for basic military training have been as good or better in comparison to previous years with conscription. Despite good quality among the recruitment base there have been vacancies, and the future need of personnel will increase. To increase the recruitment base and also diversity among the personnel, the Swedish Armed Forces are working to promote and increase the proportion of women and employees with different ethnic background. Although the all-volunteer force provides a more heterogenic recruitment base in some aspects than the conscript based force, the all-volunteer force in Sweden mainly attracts young men that are born abroad or born in Sweden. This is contrary to some observations in other parts of the world. However there are no well-known changes in the amount of persons born abroad. Studies have revealed that the proportion of applicants for the basic military training born in another country than Sweden decline in each step of the selection process. This presentation will focus on the recruitment of women and persons born abroad in the selection process to the Swedish Armed Forces.

The Locally Oriented Global City: From Iconic to Anti-Iconic Architecture

What does a global city look like? The desire to become a global city prompted many cities to undertake mega-projects that would increase their symbolic capital, such as the tallest or the largest buildings and cultural institutions bearing the prestigious names of world-renowned architects. However, although the allure of the contemporary global city consists of vibrant local communities and a robust and unique local identity. To illustrate this empirically, I analyze the discourses underpinning Seoul’s Cheonggyechon and Toronto’s Distillery District projects, based on policy reports, official statements and interviews. In the former, the Seoul Metropolitan Government removed an inner-city overpass to uncover and restore the historic Cheonggyechon Stream; in the latter, Cityscape Holdings, a private real estate development company repurposed abandoned distillery buildings into an arts and entertainment area. Both projects were completed in the early 2000s, when Seoul and Toronto engaged in active campaigns to establish their reputation in the global stage, and were believed to contribute to consolidating the global city status. Yet neither involves a new conspicuous building. I conclude the paper with a discussion on theorizing the global city as a cultural concept with fluid meanings, which contextualizes and underpins discourses of urban development and globalization.
In spite of being half of the population of the world, having increased access to education and increased labour force participation, women continue to dominate traditional fields in education, health and welfare, social sciences, business and law, and humanities and arts (OECD 2011; UN, 2010) and are still severely underrepresented in science, engineering, technology and emergent industries, accounting for only slightly more than a quarter of all scientific researchers (Hawkins & Ronchi, 2008; OECD, 2011). There is loss of productivity and human capital, and monetary loss when women's potential is fully harnessed. This paper is based on a pilot study looking on the intersectionality of culture, global networks and innovation, investigates the identity practices of a group of Malaysian women medical researchers. It examines the ways in which ethnicity, social relations and power dynamics within the medical research sector shapes this group of highly skilled Malaysian women’s identities working in this research sector and their access to resources and opportunities. The findings will contribute to an initial framework for understanding socio-cultural and scientific dimensions of new industries, and higher level skills vital for women's successful participation in the global economy.

Studying Selected Youth Transition Studies Between the Global North and South: A Conceptual & Methodological Analysis

This paper examines selected youth transition statistics and studies between the Global North and South, and focuses at understanding how conceptually and methodologically these studies may be related and contextualized to researching "transition crisis" in the Philippines. It focuses at assessing unemployment and education performance indexes from selected countries, and identifies how these statistical variations reflect similarities and differences along work-education nexus. Methodologically, the paper evaluates empirical designs of selected studies to recognize what good measure of youth transition estimate may be applicable to Global South countries like the Philippines. In the end, the paper draws insights from youth statistics and content analysis of studies to form the design and texture of conducting local youth transition research in the Philippines.

Theoretical Consistence Between Goffman and Luhmann

At first glance, it could cause doubts when one tries to put Erving Goffman and Niklas Luhmann together. Their thoughts will probably be treated as two different, even opposing approaches. This article attempts to offer another perspective by pointing out the theoretical consistence between Goffman and Luhmann. Furthermore, it hopes to make Goffman and Luhmann more understandable by cross-referencing each other.

In a short journal article “Die Form Person” (The form person), Luhmann defined person as a form with two sides which through regulating the actions offers cross-referencing to each other. In Luhmann’s theory of Social systems, individuals (i.e. psychic systems) are seen as residing in the environment of social systems (and thus not constituting a part of it). It is argued, on the one hand, that this results in an essential, and alienating, differentiation of psychic systems from social systems. On the other hand, the differentiation of systems from their environment (and other systems in it) provides systems with a particular "freedom" in terms of acting according to their own, non-alienating, system logic (i.e. functionally). Neverthelesss, psychic systems want to participate in the communication of social systems and this is possible only through access to system-specific media of communication, which are defined by social systems. In relation to this, psychic systems appear to be condemned to act according to the logic of social systems, which consequently would emphasize the alienating process of social participation and reduce the "freedom" of psychic systems. However, media of communication may be defined in one way in social systems while, from the perspective of psychic systems, alternative ways to access system media through various creative and unexpected processes may be possible. The equal “freedom” of psychic systems in relation to social systems would seem to emphasize such a possibility. It is thus argued that Luhmann’s theoretical perspective provides a possibility for psychic systems of social participation according to their own logic, and that this possibility may provide a key for understanding how the alienation of social participation can be overcome.

Addictive Gaming: Self-Addictions of Analysis and the Biographical Context. Life Story Interviews with Video Game Addicts

Since the 1990ties computer and video games are discussed as being addictive. In media and research the phenomenon has gained great attention and with the appearance of internet gaming disorders research diagnosis in the appendix of the recently published fifth edition of the Diagnostic and Statistical Manual of Mental Disorders (DSM V) addictive gaming made a further step towards official recognition. Looked at addictive gaming from a social science perspective one could say that it is considered a social problem. But how do affected gamers perceive and interpret their gaming behaviour themselves? This presentation tries to give an answer presenting biographical narrative interviews with german male and female gamers who are or were at some point considered to be video game addicts according to a psychological screening instrument (CSAS II) (Rehbein et al. 2010) and/or self-analysis. The main objective is to take the subjective perspectives of the video gamers seriously and to reconstruct their self-perceptions within their complex interrelationship between everyday life and the online gaming world. By presenting exemplary cases it will be shown, without idealising or pathologising from the outset, which everyday and lifestyle problems can be solved using the virtual practices and which dysfunctions and follow-up problems this is potentially linked to.

The project follows Grounded Theory and in the analysis also uses the method of Objective Hermeneutics.

From Protest Event to Protest Wave: A Theoretical Appraisal on the World-Historical Perspective

For a long time social movement studies are strongly influenced by the geographical and historical points of reference. Empirically, most social movement theories have been generated from case studies of short-term mobilization activity in the global North. Methodologically, the study of social movements is overwhelmingly characterized by case-oriented studies. However, one of the most fundamental characteristics about social movement is the ‘connectedness’, both temporally and spatially, of collective actions with each other. This leads us to draw on a theoretical approach that attempts to identify similar processes and dynamics that operate in diverse cases of contention. “Protest waves” as understood in this manner offers us the possibility of constructing a systemic analysis that could identify and then particularly explain contention processes in the...
global South as a whole. The strength and diversity of participating groups in a protest wave are apparently shaped by a country’s specific characterizations and its location in the world-economy structure. These kinds of linkages allow us to pinpoint shared political-economic attributes and structures that are conducive to the outbreak of popular contention by large numbers of people in the global South. Examining contentious protests within the world-historical perspective offers a path to understanding the continuation of struggles and how periods of contention may be just the one wave in a larger sea of long-term resistance. What is particularly crucial to determine is how diverse social movements affect each other and interact with the structures that they are deconstructing and transforming.

This heuristic characteristic of collective action has an elite affinity with the concept of protest wave, which points out the connectedness of each protest cross over time and space in the global South.

**Information Management, Collective Intelligence Within The Context Of Crisis Resolution - Going Global**

Information Management, Collective Intelligence and Knowledge Management within the context of Crisis Resolution - going global.

Crisis Resolution from an international perspective is to be embedded into the problem of escalation and de-escalation of irregular war. Experts during many decades of Cold War had been focusing in research on interstate wars. But Civil war today is the most common form of armed conflict and “irregular wars” are concurrently going global. Therefore it is more than normal to implement those procedures of collective intelligence and knowledge processing into the broader domain of security management and crisis resolution. The international community and the international alliances are affected by their enforced austerity programs, this gave birth to the idea of “security becoming a new paradigm to overcome calamities.” It is useful to look at the cultural and psycho-sociological foundations of collective intelligence and knowledge management for to find incentives but also barriers for pooling and sharing in the military-civil security domain. Collective intelligence and knowledge Management is based on accepted values:

- sharing
- responsibility
- respect

So Pooling and sharing of logistic resources may be successful in this respect, but what about the vast field of pooling and sharing of information, scientific ideas? The processing agencies very often are competitors in this field.

**Saving the Environment? Environmental Policies of Japanese Firms and Their Effectiveness**

In the past decade, a new framework has gained popularity that firms, which aim to make profits, should also address broader social issues, such as environmental protection, human rights, and labor standards. It is no coincidence that this framework of corporate social responsibility (CSR) has become popular under the anti-regulation logic of neoliberalism. Instead of bringing the state back in, the CSR framework grants corporations a way to pre-empt state regulations, by claiming that market mechanisms through corporate voluntarism is more effective in resolving social issues than state mechanisms through bureaucratic supervision. Thanks in part to the promotion by international organizations (e.g., the United Nations), various CSR policies have been widely adopted across advanced industrial societies. Their effectiveness, however, has been largely unknown, raising serious concerns that adoption of such policies amounts to mere symbolism. In this paper, we examine environmental policies of major Japanese firms and their impact on these firms’ environmental performance, using data from Japanese firms between 2006 and 2013. During the period, under the increased global institutional pressures for CSR, Japanese firms have adopted a broad range of environmental initiatives, such as environmental auditing and labeling. But there is little research on whether and under what conditions such initiatives lead to substantive changes. Our findings suggest that without other complementary mechanisms such as government regulations or other third party monitoring, corporate voluntarism alone is unlikely to achieve corporate environmental responsibility and may instead result in corporate carte-blanche.

**Transnationalism and Religion; A Study on Biographies of Immigrant Women in Germany**

This study research into the biographies of South Korean nurses who left Korea in early adulthood and have remained in Germany until now. Between 1963 and 1978, around 11,000 Korean nurses left for Germany as working migrants. Korean nurses were hired under a restricted three-year time period for migration. After the expiration of the contract, many returned to South Korea or chose to immigrate to another country such as Canada and the U.S. But other nurses did not return to Korea but instead chose to remain in Germany. They have formed Korean Communities and organized various Korean immigrant associations in Germany. After deciding to remain in Germany, they established their life over more than a few years in Germany, society and culture. So the research is interested in the way of how they dealt with their life between a home they left behind and a new home. To this end, the data collection was conducted using Fritz Schütze’s autobiographical narrative interview and collected data was analyzed according to his narrative analysis.

We are going to present a case study about immigrant women concerning transnationalism and religion. We will show in which complicated, intertwining and often conflicting ways transnationalism occurs as we consider not only the flows of people but also the flows of goods, especially when these goods are symbolic, as in the case of religious objects. A question we were especially interested in was to learn something about the ‘flow of symbols’. As a result of studying interviews with Korean nurses it is shown how these people find or come to ‘religion’. We ask if religion is becoming an ertsatz for moving back and forth between the home country and the current country of residence. This discussion leads to further considerations concerning the connection between religion, church religiosity, and transnationality.

JUNG, YOOJIN* (The Asia Institute, yoojinj@gmail.com)

**Civil Awareness: A Comparison of the 2011 Occupy Wall Street Movement in the United States and the 2008 Mad Cow Disease Protests in Korea**

The Occupy Wall Street protest that swept the United States in 2011 and the mad cow disease protests that emboldened Seoul in 2008 seemingly occurred in different political and cultural contexts concerning different issues. In fact, although the details of these two protests differ, the protests are similar in that the initial protest took on a larger symbolic significance that captured the imagination of other groups and encapsulated some essential truth about society. Both the Occupy Wall Street movement in the United States and mad cow disease protests in Korea demonstrated how spontaneous protests can strike a chord with the larger population and create a powerful dialectic between the protesters and the public wherein the protesters articulate a theme resonant for the larger population and have immense impact on groups at a distance from the original protest. The very successful performance of protests as intense fusion between protest-er and public perform similarities in a broader sense symbolically, and these similarities emerge in the motives of individual actors and shared inner meanings of the respective protests. It is worthwhile examining the motivations of these two different protests, the ways the discourses were made up among protesters, and interpreted in the mass media, and how the general public responded. The comparison of the two cases offers insights into the process by which a small group can create movement that transfers to other groups that do not share the same interests, discussing how the themes were articulated and how meanings are created beyond a national level.

**Airports As High Reliability Networks and the Inherent Emerging of Security and Safety Threats**

The theory of High Reliability Organizations tries to explain why organizations or its units can achieve error-free results in complex and error prone environments. After the application in the fields of nuclear power plants, traffic control, etc. the theory was deployed to airport security screening procedures after 9/11 (Frederickson/LaPorte 2002). It is argued, that under the vital impression of 9/11 the security regime became enforced and prone to produce more false positives (error type I) rather than false negatives (error type II). Therefore, these false positives may become an argument to reduce security in favor of efficiency. To avoid cutbacks in security it is – according to the authors – essential, that airport screening organizations become high-reliability organizations.
We will argue that the focus on high reliable screening organizations is too narrow – instead the whole airport needs to function as a high reliability network of organizations. Since airports do not solely consist of security producing organizations but rather need to be understood as complex systems of heterogeneous actors such as airlines, airport management, retailers, etc., security regulations often can conflict with their standard procedures and organizational logics. To maintain the processes that are vital for these actors adaptive strategies evolve constantly and are passed on. These adjustments are often not formalized but remain informal since they transgress the rules of the security system. They are therefore not equally impacted in the predominant security regime as they are not intended and the regime builds on idealized assumptions of compliance. Consequently, new safety threats for the airport system can arise due to the attempt to increase the security regulations in this critical infrastructure. The presentation builds on findings of a research project on the social production of (in)security on airports in Germany.

JUNISBAI, BARBARA (Pitzer College)

In this paper, we examine attitudes about the desirability of democracy versus dictatorship in Kazakhstan and Kyrgyzstan, two of the most pro-market economies in post-Soviet Eurasia. Drawing on original data collected in late 2012, we raise a series of fundamental questions about the link between market economis and democratic political culture. Are some social groups more attuned to democratic ideals than others? Are the middle classes, following expansive market reforms and a shrinking of the welfare state, as hungry for political change and as hostile to dictatorship as democratic theorists posit? How do individual experiences with the transition to capitalism affect not only perceptions of current government performance, but preferences for the political future? To uncover answers, we systematically test the effects of a host of demographic and individual-level characteristics using a nationally representative dataset of 3000 respondents (1500 in each country). We look at minority versus titular status, household income, educational attainment, area of residence, and religiosity, as well as individual trajectories in the labor market, understandings of the roots of social inequality, and one's satisfaction with current political institutions and practices. We find that, more than two decades since the onset of independence, post-communist citizens remain divided over basic questions of governance, and this division is especially pronounced in Kyrgyzstan. In addition, surprising patterns of group and individual-level preferences emerge, challenging a number of conventional theoretical expectations.

Family Resilience in Times of Mass Migration: The Case of Lithuania

A decade ago state officials believed that short-term emigration is a rescue for Lithuania during the difficult economic period. They state that short-term emigration reduces unemployment rate, increases income of the population and people gain useful experience abroad. Following Lithuania’s accession to the EU in 2004, the point on emigration radically changes - the de-bordering of Europe and the development of intra-European mobility is seen as one of the main factors of recent wave of the mass emigration from Lithuania giving rise of the family changes. The paper aims to trace the development of the outline to migrant family research through a lens of changes, resources, definitions of the situations and impact management practices. While family resilience and coping with difficulties are seen as the main goals of the on-going research project, Reuben Hill’s family change model is treated as conceptual axis of migrant family research. The authors theorize family resilience and coping with hardships by means of ideas of symbolic interactionism, theoretical constructs of intergenerational solidarity, kin networks, personal networks and conceptions of family practices: doing and displaying family. Presentation of empirical data is based on two quantitative research studies, conducted in 2013 and includes comparative perspective. The focus is put on the analysis of family resources by means of the theoretical constructs of intergenerational solidarity (V. Bengtson), kin networks (B. Nauck) and personal networks (R. Milardo and B. Wellman). Different concepts are utilized purposefully in an attempt to analyse family resources on several levels – the concept of solidarity permits to examine specific features of interaction among individuals of three generations related by kinship ties, while personal networks of family members comprise exchange and interaction networks with significant individuals that transcend the boundaries of family and kinship ties.

Why Do Women Generally Care More Than Men? Processes of Bargaining and Interaction in the Transition to the First Child -- CANCELLED

This paper studies dual-earner couples in their transition to their first child. We perform a qualitative analysis on longitudinal and semi-structured interviews -both individual and couple- gathered in 2011 and 2013 in Spain. This case study is part of the international TransParent study. In this piece of research we compare how the couple intends to care for the baby, before birth, and how the couple’s members describe having shared the care during the first and a half year of the baby’s life. How do men and women describe their roles when it comes to baby care during pregnancy and how do they come up either with more symmetric or more traditional care arrangements afterwards? What distinguishes quasi-symmetric from asymmetric care-sharing couples; their relative resources and employment contexts or their gender and care attitudes? This paper analyses resources in a large sense: from relative income, job security, job sector, job organization principles and work careers to relations with peers and the family. Results show that resources in a large sense matter as a necessary condition for a symmetric share of care, but the key to understand real outcomes is the form of the bargaining process and the mix of gender and care attitudes within the couple.

Transformation of Gender Roles in Lithuanian Society

In 1990 after regaining Lithuanian independence, women organizations started their active performance. The majority of these organizations summoned reconstructive congresses, for example Lithuanian Women Catholic organization which was forbidden in the 1940s when the Soviet Union occupied Lithuania. At the beginning of 1990 the first democratic election to the Supreme Council of Lithuanian Soviet Socialist Republic was held. In 1990 there were 14 women who made up 10% of the elected in the Seimas (Parliament).

A legal measure to eliminate gender discrimination is the Law of Equal Opportunities which was passed in 1999. This law was the first of its kind in Central and Eastern Europe. On September 29, 2008 the Seimas signed National agreement on realizing women and men’s equal rights and opportunities. The agreement was initiated by the National women’s consulting forum striving to enforce equal opportunities of genders in reality.

After Lithuanian society entered the 21st century, with changes in economic and social intercourse, women have become more active while looking for well-paid jobs regarding their specialties. Though tenacious stereotypes about male and female jobs still remain.

Facts of public opinion poll and social inquiries prove that patriarchal attitude, which is based on a traditional understanding of manliness and womanhood, are still popular in Lithuania. It is often stressed that it is men who should take a more important place in labour market and social life. Women’s opportunities to seek for professional career or stay in a leading position are perceived sceptically.

Though in Lithuania changes in labour market are present, a number of unsolved problems still remain. A problem of women – mothers’ discrimination still exists.

However, an important question is open: why women electorate do not vote for women candidates?

Perspectives on Climate Resilient Food Chains - a Case Study from Finland

Climate change has several profound effects on the functionality of food supply chains. Floods, soil erosion and changes in plant species for example make agricultural activities and food production more vulnerable. It is, however, increasingly evident that local impacts of climate change on food chain may vary remarkably not only between countries but also within one country. In this regard, it is a major future task to re-organize the prevailing patterns of the food system in order to make it more resilient. It is important that all stakeholders of the supply

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
chain from food producers to retail and consumers have access to this transformative food chain management. In our paper, we discuss the transformative food chains in climatic conditions of Finland. Our paper is based on a case study, which was conducted in Finland in 2012. The primary data were collected through thematic interviews with 16 different food chain stakeholders, from three regions in Finland: Central Finland, Pirkanmaa and Southern Savo. The interviewed stakeholders comprised mainly of food entrepreneurs, with additional representatives consisting of farmers, trade unions and retailers. Qualitative content analysis was used for data analysis. Our preliminary results indicate that there is a need for a more decentralized food system. Local food chains may act effectively as adaptive strategy. Food enterprises are simultaneously facing other increased challenges, such as increased bureaucracy and market competition which limits their efforts in climate change adaptation.

**JÖNHILL, JAN INGE** (Örebro University, jan.i.jonhill@oru.se)

**The Paradox of Managing Diversity, Observations of a Personnel Management Strategy in Mass Media Organizations from a Systems Theoretical Perspective**

On the background of “anti-racism” legislation, of ideas of cultural diversity and incentives of the market economy, the management strategy of diversity management was developed in the early 1990s. It has since then made success globally as a “new paradigm for management”. – The aim of this paper is to present some results from a research project on diversity management in mass media organizations in Sweden.

The project applies Luhmann’s systems theory as main approach for several reasons. In this case (1) as it allows analyses from different observer perspectives, (2) as the functional and structural conditions of society and its organizations and (3) as well the complexity of the issue must be taken into account, and (4) as the distinction between acting and performing becomes apparent in this communication-based theory.

Social changes in direction of (more) equal opportunity and inclusion chances as to cultural diversity have occurred in the studied media organizations. In a previous study one of my findings was that it is reasonable to assume that diversity management is more adequate than other modes of managing issues of cultural background of journalists, such as quota and also a high confidence as to legal regulations.

Among my findings are that diversity management makes a difference due to a recent professionalization of personnel managing in the media companies. Competence-based assessment as a principle generates a prerequisite for journalists with migrant background to achieve equality in opportunity, when e.g. applying for a position or by team building. The study, thus, shows that focusing on the matter of competence and not focusing on person’s cultural background (but being aware of the social matter of disfavour), paradoxically, is likely to be a functioning or even successful path of managing this issue.

**JÖNSSON, INGRID** (Lund University, ingrid.jonnsson@soc.lu.se)

**Ingrid Jönsson and Yuegen Xiong: Changing Intergenerational Relationships in Contemporary China and Sweden: Consequences for Eldercare**

Changing intergenerational relationships in contemporary China and Sweden: consequences for eldercare.

Although China and Sweden represent different stages of economic, social and demographic development, currently eldercare is an important social policy issue in both countries due to changing social and generational contracts. The paper aims at analysing recent developments of eldercare with regard to marketisation and de-/refamiliarisation departing from the frame of analysis suggested by Daly & Lewis (2000:287). Empirically it means that the division of responsibilities between the state, market, family or community at the macro level will be analysed while at the micro level this will be identified by who performs the caring, who receives benefits and available services, how does the relationship between caregiver and receiver look like, under what economic, social and normative conditions care is carried out and the rate of female labour market participation. This frame of analysis enables us to identify recent changes and point to similarities and differences of how social care for ageing populations is handled in different economic, social and demographic contexts. China and Sweden are chosen for the comparison as they traditionally represent a strong generational and a strong social contract respectively. The paper starts with historical reviews of the organisation of eldercare followed by a presentation of recent changes related to economic, social, cultural and demographic circumstances (e.g. migration, changing filial piety, family structure, size etc.) with consequences for generational and social contracts. Eldercare in everyday life will be discussed in relation to Daly & Lewis’s frame of analysis as well as in relation to the concept ‘care packages’ (used by Knijn, Jönsson, Klammer, 2005 compare income packaging used by Rainwater, Rein and Schwartz, 1986), i.e. which resources are used when caring for elder-ly and its impact on the relationship between caregivers and receivers (dependence/interdependence) and women.

**RC11-207.16**

**JÖNSSON, INGRID** (Lund University, ingrid.jonnsson@soc.lu.se)

**Ingrid Jönsson: Childcare and Eldercare - Different Paths of Development**

Traditionally welfare in Sweden is publicly paid, publicly organised and access is based on needs rather than means. Economic retrenchment, changes of governance and legal frameworks in the 1990s have an impact on the organisation of social welfare with implication for universalism, marketisation and refamiliarisation. The paper will discuss the different paths of developments for eldercare and childcare and whether ideas of social investment currently being advocated by international organisations have contributed to the different paths of development. Although ideas of social investment in Sweden dates back to the late 1930s (Morel et al 2012) recent emphasis on early childhood and care in the context of limited economic resources and changes of governance and legal frameworks have implications for eldercare. Discussing eldercare as social investment in a European context means counteracting future costs related to ageing populations while it for children means capacitating them for changing labour market and family structures with the aim of improving employability and increased economic competition. Historical reviews of childcare and eldercare including changes of governance, legal frameworks, etc. constitute the background for the analysis of recent diverging paths within the two sectors in relation to universalism, marketisation and refamiliarisation. The recent development is socially as well as gender differentiated.
Gender Inequality and Occupational Segregation: A Study of Women Labourers in Areca Nut Processing Units in Karnataka, India

Despite remarkable progresses in many spheres, the gender inequality still persists in India. Waged work is Segregated and Marginalized on the basis of Gender. Employed women in work place are horizontally and vertically segregated and there is a clear distinction between men's work and women's work. Women's work is characterized by lower wages, low status and lower rung on the skill ladder, involved in less interest, more repetitive, monotonous and low status activities. Such pattern of Gender Segregation is exhibited in Areca nut processing units.

Areca nut is a cash crop which has contributed more than Rs.250 corers towards the National income in India. It is largely cultivated in Malenadu region of Karnataka State. The process of, cutting, de-husking and drying of nuts is entirely dependent on hand labour. Women are employed in this process. The present paper discusses the Gender Inequality, Segregation and marginalization of women labourers working in an unorganized sector. The main objectives of the paper are (1) to examine the vertical Occupational Segregation of Women labourers in Areca nut processing units. (2) To study the factors influencing Gender inequality, and (3) to overview the implications of Inequality and Marginalization of women in areca nut processing units. The study is based on the primary data collected through interview technique. The study highlights that, there is Gender inequality and Marginalization in functioning and the payment of wages. There is job insecurity and violation of labour legislations. The study helps to identify the nature and structure of Gender inequalities, Segregation and Marginalization. Further, the paper tries to justify the need for empowering women to bring Gender equality and enhancing their status.

Global Social Governance As Inter- and Inner-Organisational Relations Between Actors

This paper is concerned with the conceptualisation of global social governance as a matter of inter- and inner-organisational relations between global policy actors. Global social governance is commonly characterised as a complex and multi-actored process, driven by more or less powerful and legitimate actors. There are significant overlaps in their agencies, as well as they are bound in various (sometimes) overlapping networks and alliances that cross-cut organisational borders. While global social policy actors differ in terms of types and functions, they do not unfold their respective power in isolation from each other. They relate to each other, part of what they do is driven by what others do. The global social policy literature has discussed a number of examples how different global social policy actors, often international organisations, are involved in fighting over ideas; a process that happens both between and within organisations. This paper engages in a rather theoretical discussion about different ways in which the inter- and inner-organisational relationships can be conceptualised and how related interactions can be understood by drawing on a number of disciplines. The paper will reflect on some insight that can be drawn from sociological, organisational and psychological theory to better understand such relationships.
Children's Leisure Pursuits: A Test of the "Homology" Versus "Omnivore-Univore" Hypotheses Debate – CANCELLED

Recently in the UK academic milieu, there has been a debate as to whether the link between socio-economic status (SES) and adults' participation in cultural activities conform to a “structural homology” rule (Bourdieu, 1984), or present a pattern best characterised as an “omnivore-univore” distinction (Peterson, 1992). The dispute surrounded the issue of whether in contemporary British society, cultural participation (and consumption) still signifies social-class, and in what ways. However, researchers need to analyse class-based patterns of cultural participation and leisure pursuits in children.

The present paper addresses this gap in knowledge by exploring the associations between SES (measured by parental education and occupation levels and by familial incomes) and children's participation in three leisure domains: social-group activities, commercial-public activities, and home-centred activities. Within each of these domains, activities from across the “highbrow-lowbrow” cultural capital spectrum are examined.

The results are used to discuss the debate on the “homology” vs. “omnivore-univore” hypotheses in the context of cultural socialisation and cultural capital acquisition in the middle childhood years. The paper relies on quantitative analyses of data drawn from the British “Millennium Cohort Study” (MCS), a survey of around 19,000 babies, all born between 2000-2002. The current analyses focus on data taken from the third and fourth sweeps of the MCS when the children were aged around 5 and 7 respectively.

The findings indicate that children's leisure pursuits are stratified by SES: children in high-SES groups are more likely than peers in low-SES groups to participate in a range of leisure activities across the highbrow-lowbrow spectrum. This pattern of leisure participation is consistent with the “omnivore-univore” hypothesis. Yet, the results also show that the associations between SES and children's leisure pursuits are stronger for highbrow and midbrow activities than for lowbrow activities, a finding that lends support to the “homology” argument.

The Provision and Expansion of High School Education in Post-War Japan

This study aims to clarify the mechanisms of high school educational expansion and regional variations in postwar Japan regarding the kinds of opportunities that were provided. We focus on education providers and the programs offered by high schools. High school education expanded rapidly in the 1960s when the first baby boomers became high school students. To understand how this extraordinary expansion was made possible and how the opportunities for high school education were provided, we must consider the relationships between public and private institutions and the roles of the private ones. The proportion of students attending private high schools is now around 30%. This proportion became higher during the 1960s. This means it was impossible for high schools to expand if only public schools supplied education. Also, as Ichikawa (1991) points out, a distinctive feature of the Japanese educational system is a preference for general education under a single-track system. The same holds true for high schools. Although Japanese high schools offer both academic (general) and vocational/specialized programs, the ratio of students enrolled in academic programs continues to rise, accounting for more than 70% in 2010. These features characterize high school education in Japan. At the same time, there have been regional variations in provision of high school education regarding above mentioned points. How and why was each prefecture different in providing high school education? To answer these questions, we first classify prefectures into groups using cluster analysis then clarify determinants of regional variations.

The Classed Parental Attitudes Towards the School Choice and Equality of Opportunity in Finnish Comprehensive School

Recent international comparisons and rankings have highlighted the equality and quality of Finnish education system. Throughout the whole 2000s, PISA-test results have demonstrated that Finnish pupils score high; the percentage of pupils reaching only the lowest proficiency levels is small; the variation between schools is low; and, finally, the impact of pupils' socio-economic background to learning outcomes is small.

Traditionally, Finnish comprehensive school system has been built on principles of equality, and the provision of basic education has been governed through school districts. Since the 1990s, reforms, based on principles of decentralisation and deregulation, have reduced direct state control. As a result, local education authorities have developed distinctive policies concerning local models of selection and admission with diverse possibilities to exercise parental choice.

Our aim is to discuss the ways in which social class interwines with parental values towards universal and selective features of comprehensive school within the Finnish social and cultural context of Finland. Based on our previous studies we are especially focusing on 1) the changing emphasis on equality of opportunities, and 2) the new cleavages within social classes, in relation to school choice. We describe classed educational strategies by combining our empirical observations with a qualitative research methodology.
findings of school choice, attitudes towards comprehensive school system and social class (based on family survey, conducted in 5 Finnish cities, n=2617).

Our interpretation is that the lower classes are relatively excluded from the Finnish version of school choice, which grounds on aptitude tests, and urge for more open enrolment in general. Whereas middle classes on one hand, more commonly exercise parental choice in practice, and, on the other hand, are more aware of the segregative effects of free parental choice. Nevertheless, new cleavages, based on occupational status within the middle class have emerged with different emphases on freedom to choose and universal education system.

Structures will be reorganized within a policy of reinforcing gender equality along an outcome of a policy about gender equality will be evaluated and the educational organization of the labor market the evidence will be apparent. In this respect the educational policy implemented towards gender equality. It is estimated for the educational policy implemented towards gender equality. It is estimated that the prolonged education is conducive to the reinforcement of gender equality, and labor. Besides, the variable of gender is studied in combination and in relation to age and years of study.

Through quantitative researches an evaluation is pursued whether education about gender equality, being the aim of the educational policy, was productive; in other words, whether a differentiation based on gender was statistically significant. Additionally, the years of studies are correlated with unemployment or part-time employment of men and women so that the question whether the prolonged education is conducive to the reinforcement of gender equality is investigated, resulting in the same access possibilities to labor market both by equally qualified male and female subjects.

The economic crisis period is regarded by the present paper as a testing phase for the educational policy implemented towards gender equality. It is estimated that in this ordeal with a limited number of working positions and the reorganization of the labor market the evidence will be apparent. In this respect the outcome of a policy about gender equality will be evaluated and the educational structural changes will be within a policy of reinforcing gender equality along with a broader policy about equality conducive to the unification of vindication schemata for both genders.

Employee Driven Innovation - an Organisational Challenge

Employee Driven Innovation - An organisational challenge

The Nordic countries are about to open there eyes for that employees in all sort of workplaces is an important untapped potential of resources for innovation. But many politicians, bureaucrats and top managers lacks the understanding of what it is and how to do it.

During the last decades the technological paradox has influenced industry and innovation policies. Succeeding innovation strategies seems to base the rather one sided notion that essential ideas occur in laboratories and research departments. However a paradigm shift is in the process of getting approval. Major social challenges, rather than more dispersed product priorities, have become evident, also in EU and OECD policies. The value of holistic approaches to innovation is emphasized, rather than a purely scientific and technological focus. And the importance of innovation in services, production and work processes is lifted up. This happens at the same time as the general level of education are rising, and businesses are hiring more people with skills to see and understand the wider contexts and to participate in resolving complex issues.

As part of the Nordic countries adopted the concept of "employee-driven innovation" in their policies. This implies a recognition that the vast majority can and should contribute to innovation. Individuals represent a significant source of insight and problem solving, whether they work in a development device or have operating tasks. Experience shows that broad involvement of local shop stewards and staff in innovation processes has positive economic effects, but also provides benefits in terms of improved job satisfaction, further education and reduced absenteeism.

In this way this development has been promoted by the Norwegian Confederation of Trade Unions. A paper will address Norwegian EDI challenges and experiences based on the Nordic work life model.

Churches and Religious-Secular Interaction in Welfare in Croatia and Finland

The welfare state reforms have changed the position of actors and put cooperation between public and private stakeholders in Europe on the agenda. In this situation, the Churches are also taken more seriously as partners of welfare services and they have an opportunity to expand their activities on the secular sphere. At the same time, the question regarding the position of the religious in the interaction must be taken account. Growing religious-secular interaction serves a different position than the religious institutions had during the modernization process. Thus, the situation differs also theoretically from the classical views of secularization: both differentiation and dedifferentiation are equally relevant viewpoints for the analysis. In the context of predominantly Lutheran and Catholic countries, which are analyzed in this paper, the interaction may also support the impact of the religious on the secular domain.

The paper focuses on the role of Churches in the welfare sector in Croatia and Finland. It presents results regarding the local-level interaction between secular and religious organizations in the field of the welfare sector. The data includes the interviews of secular public sector and the social work of the Churches gathered in 2013 in three regions in Finland and Croatia. On the basis of the empirical work and background analysis the paper demonstrates the multifaceted reality of interactions between religious and secular institutions and discusses theoretical consequences of changing ways of interaction in different social and religious contexts.

From the Educational Policy about Gender Equality to Its Testing in the Labor Market during the Greek Economic Crisis

In the recent recession, the most severe one since the Great Depression, Greece has been considered the Achilles heel of Eurozone's economies. Since 2008 the country has experienced an economic turmoil as well as an unprecedented social and political collapse. Due to the devastating economic conditions, the social fabric has grown more frayed generating a mixture of frustration, insecurity and anger among Greeks which has been directed against immigrants fuelling the upsurge of anti-immigration backlash. The acute augmentation of xenophobic stances has been expressed by the rise of the neo-fascist Golden Dawn which has grown from a fringe group into a nationwide political party propagating that immigrants are responsible for the socio-economic woes of the country. The study attempts to disentangle the complexities of Greek xenophobia during the recession using an amalgam of theoretical frameworks (i.e. realistic group conflict, social identity and scapegoating theory) as well as multiple secondary data sources, i.e. European Social Survey (ESS), European Value Survey (EVS) and Eurobarometer. The analyses unveil the ideologies of Greek xenophobic stances traced in the intense inter-group competition due to the scarcity in jobs and economic recourses but most importantly in the formation of a far right-wing populist identity that tends to displace the blame for personal hardships and misfortunes onto the relatively powerless immigrant group members. The study unearths one of the social facets of the Greek economic crisis in breeding hostility against migrants and highlights that such hostility has recently taken more violent forms of racist attacks and racial clashes. It is underlined that the call to transform the xenophobic climate into a xenophilic one in Greece becomes more urgent than ever; hence immediate policy responses are needed to curtail xenophobia and safeguard the fragile social cohesion and order of the country.

Disentangling Greek Xenophobia during Recession

On the other hand, also in EU and OECD policies. The value of holistic approaches to innovation is emphasized, rather than a purely scientific and technological focus. And the importance of innovation in services, production and work processes is lifted up. This happens at the same time as the general level of education are rising, and businesses are hiring more people with skills to see and understand the wider contexts and to participate in resolving complex issues.

As part of the Nordic countries adopted the concept of "employee-driven innovation" in their policies. This implies a recognition that the vast majority can and should contribute to innovation. Individuals represent a significant source of insight and problem solving, whether they work in a development device or have operating tasks. Experience shows that broad involvement of local shop stewards and staff in innovation processes has positive economic effects, but also provides benefits in terms of improved job satisfaction, further education and reduced absenteeism.

In this way this development has been promoted by the Norwegian Confederation of Trade Unions. A paper will address Norwegian EDI challenges and experiences based on the Nordic work life model.

left-right scale become the core of investigation. During an era of economic and political crisis, DK responses may reflect individuals' perceptions of weakening of democratic institutions, their distrust in political parties to revive the economic growth, their condemnation of the political system and their focus on alternative forms of governing to confront the socio-economic woes. Using data from the European Social Survey (ESS) in 18 European countries, the paper estimates the changes in DK responses in the left-right scale before and during the economic crisis. The analyses unearth specific patterns of DK responses whereas the greatest changes are detected in two countries severely affected by the recession, i.e. Greece and Spain. Multivariate logistic regression analyses unveil the different impacts of political and civic participation, trust in democratic institutions and political parties in elucidating DK responses in respondents' left-right orientation during a period of economic downturn and political turmoil.

Medical Marijuana Laws and Substance Induced Deaths: Evidence from the U.S

This paper explores the relationship between medical marijuana laws and substance induced deaths. The relationship between marijuana and alcohol empirically remains unclear; one strand of the literature shows the substitute relationship while another reveals the complementary relationship. In a similar vein, gateway drug hypothesis (i.e., marijuana consumption results in more harmful drug use) has been subject to empirical analyses, and yet proponents and opponents of the hypothesis have been often unclear about what policies it endorses. That is, it is argued that a policy aims to reduce the risk of exposure to marijuana in order to prevent the use of other illicit drugs. On the other hand, one would claim that the problem lies in the nature of the illicit drug market where marijuana and other illicit drugs are simultaneously provided and supplied. Using state level data, I estimate the effects of medical marijuana laws on alcohol-related deaths and cocaine-induced deaths. Empirical results show that medical marijuana laws result in an increase in alcohol-induced deaths, suggesting that there is a complementary relationship between marijuana and alcohol. In contrast, medical marijuana tends to reduce in cocaine-induced deaths. The results shed light on understanding the complicated relationship between marijuana and substances in the sense that availability of substances plays a critical role in the gateway drug hypothesis. Alcohol is provided in a formal/legal market whereas cocaine can be only supplied in an informal/illicit market. It is therefore suggested that if such drug related policies change the way drug markets function and results in drug market separation, illicit drug induced deaths can be reduced.

Attitudes Toward Non-Normative Sexualities Among University Students in Japan: Quantitative Analysis (Part 2)

Following the presentation by Kazama, et al., we will present the results of a preliminary analysis of attitudes toward homosexuality, transgenderism and other non-normative sexualities among university students in Japan, focusing on the mechanisms through which gender, other attributes and personal experiences might shape their attitudes.

A definite and sizable body of literature on attitudes toward LGBT issues has been accumulated in the Euro-American context. Such studies are limited, however, in Asian countries. Therefore, the present research uses a quantitative approach to explore how non-normative sexualities are situated. As the first step toward filling such a gap, we conducted a survey at three private universities in 2012 and 2013. The questionnaire included knowledge and awareness of, as well as attitudes toward sexual minorities (discomfort, judgment, perception of what is “normal”) and also experiences of contact, including personal, media, educational, of such people/issues.

A preliminary analysis of the data of more than 700 cases shows that in many of the attributes studied, women tended to show more liberal attitudes compared to their male counterparts. Personally knowing someone who is homosexual and/ or transsexual also tends to make one more accepting of variant sexualities compared to students who do not have such connections. In the presentation, we will provide a comprehensive picture based on further analysis of the data, including how such attitudes relate to attitudes toward other issues, such as gender, family and nationalism. We hope to draw implications on how heteronormativity, homophobia, sexism and binary thinking of men and women constitute the experiences of young generation in the Japanese context.

Changes in Family Forms in Japan: Analyses of Subjective Definitions

In order to understand the changes in family pattern, it is crucial to look at how individuals understand and define the family subjectively. In this paper, I will examine the changes in the subjective boundary of the family among Japanese, namely, who among kin are normatively considered as members of the "family".

The preliminary analyses of the 1st (1993) to the 4th (2008) National Family Survey of Japan conducted among married women by the National Institute of Population and Social Security Research show that there is an expanding trend of the normative boundaries. In other words, more and more types of kin are considered to be one's "family member". For example, the proportion responding that a "married daughter" is generally considered as one's family member regardless of whether or not they live together increased from 35% in 1993 to 66.2% in 2008. The analyses also show that the defined boundaries vary by age, education, employment status, household size and its composition, and geographic region.

In the paper, I will further examine how the subjective family boundaries relate to their attitudes toward various family forms and ways of living, such as attitudes toward taking care of aged parents, aged couples living with their children, marriages not having children, and mothers of young children who stay home. Finally, I will compare these results based on individual level data with the macro-level data on family structure to explore possible mutual relationships behind the changes in family pattern.

Effects of the Great East Japan Earthquake on Subjective Well-Being

We study changes in Japanese people's subjective well-being (happiness) and feelings of altruism before and after the Great East Japan Earthquake of March 2011. We use a panel data set compiled by a group of researchers mainly from Keio University. Although the questionnaire is large, we focus on a question about people's altruism. We are interested in altruism because, according to a Japanese Statistics Bureau report on expenditure by Japanese households, charitable donations increased by over 850 percent in March 2011 compared to one year earlier. Using this large panel survey consisting of responses from over 4000 households all over Japan, we found that many Japanese people reported more feelings of altruism following the disaster, even in the most affected areas; this is consistent with the rise in charitable giving. We also found that a large number of people reported an increase in happiness after the earthquake, in fact, as the number who reported a drop in happiness. An interpretation of this finding is suggested by a recent experiment by Dunn et al., who find that spending money on others promotes happiness; according to this study, many Japanese people became more altruistic after the disaster, inducing them to make charitable donations, which in turn made them happier.

We are interested in seeing how changes in altruism affect changes in happiness. However, both variables are subjective, so their measurement errors are likely to be correlated. Therefore, we use a two-step procedure, first identifying the effect of altruism on an objective variable, charitable giving, and then measuring the effect of charitable giving on happiness. In each step of the analysis, we run a two-stage logit regression, which controls for reverse causality. This analysis, which deals effectively with the aforementioned problem of correlated measurement errors, yields results that are consistent with our story.

Social Contribution through Student’s Participation in Village Festival

Kanazawa University embarked on the new project on social contribution in 2010 through promoting students to participate in traditional festivals held in severely depopulated rural villages. This project aims to provide opportunities for...
students to lean the everyday lives of rural Japan, and also to take a leadership role of university in revitalizing the rural communities. This paper explores the reason why Kanazawa University set up this project, and show what to extent this project goal has achieved its initial goal.

In 2004, central government enacted the low to reform the national universities to quality and quantity issues. Thereafter, many national universities including Kanazawa University set up the charters. In Kanazawa University Charter, social contribution is declared as one of the principal missions of the university. Kanazawa University has established Center for Regional Collaboration in 2002. “Matsuri Project” started in 2010 as one of the University’s social contribution activities. Over one hundred of overseas and Japanese students joined the project every year. During the summer, almost every village in Noto region held traditional summer festival, called “Kiriko festival”. Within the last decade, due to aging and depopulation, many villages are now faced with manpower shortage to maintain the villages, and the Kiriko festivals. Young students are pleased to join the festival and walk around with shouldering heavy Kiriko with village people. Before the festival began, gorgeous dinner are sometimes served to students.

For the students, joining Kiriko tour is a good chance to go inside the village and to talk with local people. Planned and arranged by university staff, overseas students can experience the actual lives of rural villagers. So far “Matsuri Project” has weak relationship with student education and academic research by faculty members, local people well acknowledges the leadership of the university for revitalizing the rural communities.

Rethinking the Body through its Disability

A person with physical disability has uncontrollable body. The body’s passive- ness and disability go beyond to the actsiveness and capability. Disability studies associated with sociology of the body examine disability as a social, cultural, and political phenomenon in contrast to medical perspectives, focusing on how disability is defined and represented in society. Both of them have been positioned against medical science; they approach to the body from the society and context while medical science focus on pathology and diseases. But they may be accomplish in the sense that they often ignore persons and their daily lives. Pluralism to which sociology of the body and disability studies owe much emphasizes diversity of human behavior and culture regarding health and illness based on binary comparison (sickness, health) and the unique, weak links between plans and programs for recovery and the needs of impacted populations may impede the capacity of cities to adapt. The approach is intended for application to other cases of urban recovery planning after disaster.

The answer can be derived from the fact of historical conflicts between dependent and sovereignies. The form of the dynamic game between resisting/non-resisting dependencies and oppressing/non-pressuring sovereignities is analogous to that of the well-known chainstore game. This dynamic game has two Nash equilibriums. Based on the replicator dynamics of this game, we can interpret the historical changes in global society.

Capacity for Urban Recovery in Southern Germany after the 2013 European Floods

This proposed contribution deals with the impact of natural disaster on the recovery of urban settlements. In the 2013 European floods, settlement space in the South and East of Germany was severely impacted, including the Bavarian city of Deggendorf situated along the Danube river. Reports point out that early damage appraisals in combination with environmental degradation may significantly affect the decision making process of communities. The goal of this contribution is to identify problems within the urban recovery and its impact in urbanized regions, while enabling disciplines in spatial production access to participatory planning and participatory research opportunities. A case study in the region of Noto in Japan presents the differences in the recovery phases after the 2013 European floods. This may serve to propose knowledge-based planning recommendations for the reconstruction of settlement space following natural disasters, and thus, reduce vulnerabilities of impacted populations against the background of recurring hydrometeorological hazards. In the case of natural disasters in urbanized regions, it is important to develop frameworks for the recovery of the city and of impacted populations. The recovery phases after the 2013 European floods indicate an important role for the construction of resilient communities.

Examining the Structure of Happiness and Life Satisfaction in Japan Utilizing a Large Scale National Survey

Using data from “The Study on the Quality of Life” collected by the Cabinet Office in March 2012, we examined the structures and factors affecting the happiness and general life satisfaction among Japanese.

Both measures are calculated with single questions, and the mean score for happiness (6.64 for the scale of 0-10) is higher than life satisfaction (5.98). Of all satisfactions with various aspects of our life (e.g. housing, childcare, healthcare, etc.), the satisfaction with family is most strongly related to happiness and life satisfaction except for the satisfaction with work to life satisfaction among males.

Multiple regression analyses indicate that the respondent’s age shows a U-shaped effect on the life satisfaction (lowest at age 40 through 50). The happiness is positively affected by the respondent’s education and being married, both of which seem to indicate more psychological, internal state of our life. We also took an exploratory approach and regressed both variables on various psychological, attitudinal variables. We found that our happiness was more strongly related to the happiness of family members than any other including own life satisfaction. Other factors related to happiness but not life satisfaction include tolerance, peace of mind, tenderness, and feeling accomplishment often, which all indicate autonomous and psychological fulfillment, somewhat similar to the concept of Eudaimonism in Greek philosophy.

On the other hand, factors related to satisfaction but not happiness include doing as well people around myself, feeling appreciated by others, feeling confident that I am as successful as others, and often thinking of myself first, which all indicate utilitarian and competitive drives.

The present study is based on one of the first and most comprehensive data sets on subjective well-being in Japan with a national sample. As such, it offers a contemporary and comprehensive overview of subjective well-being in Japan.

KAN, MAN YEE* (University of Oxford, man-yee.kan@sociology.ox.ac.uk)

**Domestic Division of Labour and Marital Satisfaction in China**

This paper analyses data of the Chinese Women's Status Survey 2000, a national- level survey in China, to examine the association between housework participation and marital satisfaction in urban and rural families. Married women’s housework time is 2.8 times that of married men. Yet their level of marital satisfaction is on a par with men. We hypothesize that this is partly due to gender difference in the preference about domestic roles versus work roles. We first test if housework time formed a migration as a transitory state, whose final objective is the return for men (i.e. Do women dislike housework less than men?). We also test if work time has a stronger negative relationship with women's level of satisfaction than men's (i.e. Do women dislike paid work more than men?). Furthermore, we test whether elderly parents' help in housework mainly alleviate women's domestic burden rather than men's. We find supportive findings for these hypotheses in our preliminary analyses. We will employ Structural Equation Modelling to investigate the patterns of associations among different forms of marital satisfaction (including satisfaction with the domestic division of labour, satisfaction with marital life, and satisfaction with economic status), the domestic division of labour and co-residence living arrangement with elderly parents.

KANASIRO, ALVARO KATSUKAI* (University of Tsukuba, kanasiro.alvaro@gmail.com)

**Transnationalism and Schooling: The Case Study of a Brazilian Ethnic School in Japan**

This paper aims at analyzing the relation between migration and education through the case study of a Brazilian ethnic school in Japan. The hypothesis which underlies this work is that the conception of Brazilian schools is related to the logic which drives the migratory flow to Japan: many Brazilian migrants living in Japan experience in their own country as a transitory state, whose final objective is the return to their country. The experience as a temporary high school teacher in a Brazilian school has shown that the ethnic school tends to reproduce this reasoning: the curriculum is the same as that studied in Brazil; the textbooks are imported from education companies, whose educational view are strictly utilitarian; classes are taught in Portuguese and the pedagogical objective is to prepare the students to their return, allowing them to continue their studies in Brazil later on.

The fieldwork highlighted three points to be analyzed: first, given that the curriculum focus solely on the study of Brazil, the daily life and the migratory experience in Japan is set aside – the content of the imported textbooks does not fit to the social reality lived by those children. Second, Brazilian schools are target of severe criticism and receive a suspicious look by the Brazilian community itself. Common criticisms denounce poor infrastructure, lack of skilled professionals, corporate mindset that disrupts the schooling and high tuition fees. Third, most of those ethnic schools are supported neither by the Brazilian government nor by the Japanese government. Arguably, all these factors together contribute to a poor quality of education, hindering the chances for upward mobility either in Japan or in Brazil. Although the ethnic schools face many obstacles, there is still a demand for them.

**Urban Cultural Strategy and Japanese Animation in Nerima**

Culture is now implemented for urban economic development in many advanced countries. Urban cultural strategy, trying to attract investment and human capital, became popular in Western cities from 1980s. At that time, former industrial cities suffered from economic decline. In contrast, Japanese cities had enjoyed economic prosperity because of industrial growth, especially the R&D and hi-tech industry. But from mid 1990s most Japanese cities including Tokyo began to gradually lose the industrial base because new national division of labor had deepened. So new plans for economic development were needed in Japanese cities around the end of the 1990s and culture became to be recognized as a resource for urban competitiveness. In this presentation, I will show detailed case of Nerima Ward, Tokyo. Because many animation companies in Nerima ward, the local government is encouraging animation industries and trying to reconstruct Nerima’s image as Anime Town. It is based on a partnership with Nerima Animation Association, the trade association of anime companies in Nerima, to explain how and why this partnership is formed and policy measures are implemented. Therefore, it is needed to focus on the flow of event that affects the recent situation. It is shown that a civil group that aims to construct a museum for Japanese animation and chamber of commerce played major role to prepare institutional base for recent policies from the mid-1990s. Although they cooperated to lobby for public supports for animation and achieve significant results, they dissolved their partnership. I point there is a tension between culture and commerce. It affects policy formation and inter-organizational relationship in Nerima.

KANAZAWA, YUSUKE* (Rikkyo University, kanazawa@rikkyo.ac.jp)

**What Kind of Trust Do We Measure Using the Generalized Trust Question?: An Approach Based on Latent Class Model**

Despite the importance in social capital research, empirical studies on generalized trust show inconsistent results. For example, trust studies have not shown clear results with respect to the relationship between group participation and respondents’ level of generalized trust (Nannestad 2008). This study shows that a part of inconsistency is due to the measurement of generalized trust. Generalized trust is measured by such questions as “Generally speaking, would you say that most people can be trusted, or that you can’t be too careful in dealing with people?” This kind of question is employed in major social surveys such as World Value Survey (WVS). This study hypothesizes that respondents think some different kinds of trust when they answer the generalize trust question. This study extracts heterogeneity of trust respondents think by latent class analysis (McCutcheon 1987), using Japanese dataset (Social Survey of Residents’ Networks and Health). As a result, this study extracts four types of trustors; (a) active trustors (27.6%), who show higher levels of generalized trust and participate all kinds of social groups, (b) inactive trustors (31.3%), who show higher levels of generalized trust but do not participate any kinds of social groups, (c) parochial trustors (19.6%), who show lower levels of generalized trust but participate local groups only, (d) distruster (21.4%), who show lower levels of generalized trust and do not participate any kind of social group. This result shows that respondents think four different kinds of trust when they answer the generalize trust question. Inconsistent results in previous studies may be caused by the difference of group participation between high trustors.

**Gender Difference in the Influence of Non-Regular Employment on Mental Health: The Case of Japan**

1. Aim

Studies on the relationship between non-regular employment (NRE; such as temporary or precarious employment) and health have been increasing since the 2000s. Most of the studies reported that NRE has a negative effect on various health outcomes (including mental health).

The purpose of this study is to investigate the gender difference in the relationship between NRE and mental health in Japan. The number of NRE workers in Japan has been increasing since the 1970s, when most of them were married women who worked to financially assist their household under the male-breadwinner model. However, male NRE workers has been increasing since the latter half of the 1990s. In the case of men, socio-economic disadvantages of NRE cause a strong conflict between the male-breadwinner model and their socio-economic status. Therefore, we can expect that the impact of NRE on mental health is more serious for men than for women.

2. Data

The “Japanese Study of Stratification, Health, Income, and Neighborhood” (J-SHINE) survey data is used. This is a computer-assisted personal interview survey that was administered in Tokyo and four suburban cities in 2010 (N=4381, age range of 25 to 50 years).

3. Findings and Discussion

In this study, I use three mental health outcomes as dependent variables: depression (K6), mental component summary score (SF8) and suicidal ideation. The results of preliminary analyses are summarized as follows. First, NRE has significant negative effects on three outcomes in the case of men. In contrast, NRE has no effects in the case of women. Second, after controlling for covariates, the effects of NRE are disappeared: marital status (married) and subjective SES have consistent positive effects on outcomes. These results suggest that lower SES of male NRE workers decrease the possibility of getting marriage and it influences their mental health.

KANEKO, MASHIHO* (National Defense Medical College, kaneko@ndmc.ac.jp)

**Policies of Correcting the Physician's Geographical Uneven Distribution in Japan**

Japan has adopted the universal health care insurance system since 1961. It means that the government has to guarantee the access to health resources to
the insured living everywhere in Japan. The other hand, Japanese physicians can practice medicine at their favorite place within Japan. This system has continued traditionally from the 19th century. Therefore, the government has not been able to adopt any policy to directly regulate the practice place of physicians. This presentation examines how the geographical distribution of physicians has changed in Japan under these circumstances. Concretely, it analyzes how the policies after the 1960s, namely the increase of medical schools in the 1970s, the regulation of hospital beds since the 1990s, the new clinical training system in the 2000s, have influenced the geographical distribution of physicians, and shows that the physician's geographical uneven distribution has decreased.

The Transition to Parenthood As Experienced by New Fathers
The Transition to Parenthood As Experienced by New Fathers
Abstract
While many studies have explored the transition to motherhood, literature on the transition to fatherhood remains scarce. This qualitative study sought to broaden the knowledge on the transition to fatherhood by analyzing the experiences of fathers to first children aged one year and under and looking at how they cope with the challenges presented by their transition to fatherhood. Data was collected during an unstructured group interview held in a focus group of 9 married men in Israel. The study findings reveal that, contrary to common gender stereotypes, men were mostly concerned about emotional issues, and not instrumental ones, emphasizing their needs for emotional support.

Four main themes were raised during the men’s discussion, with which they were required to cope in their transition to fatherhood: new insights about the meaning of love in their relationships with their spouses and the changes it undergoes; the way they feel as men; the need to adapt to new circumstances and changes in their relationship with their spouses; a sense of delay in their emotional bonding with the child in comparison to their wives; and with the new paternal identity they must adopt; and finally their emotional experiences of delay in their emotional bonding with the child in comparison to their wives, and role of parent, where they can share their experiences with other men and adopt a new paternal identity.

The study findings shed light on three areas where new fathers grapple with their transition to fatherhood.

Economic globalization caused the fast growth of market economy throughout the world. But it also caused the worsening of social differentiation and growth of social tension. The principle of free movement of capital maintained during the last three decades provoked a mass permutation of social-economic space.

National governments are in a permanent search for new models of economic growth, understanding that previous strategy of growth has lead to market’s distortions. International and regional organizations in this situation need to elaborate common rules, norms and values, that can possibly lead the world or region out the the dangerous way of perpetual crisis. Many global actors, both national and international, agree that rules of the game must be changed, but this strategy faces a serious conservative opposition.

Current analysis is directed towards the reasons and consequences of the global social breakdown through the lens of three regions: European Union, Middle and Near East and Latin America. European Union, being the most powerful international organization in the world, is not only the example of wrong fiscal policies. Founders of the EU considered that the creation of the free trade zone and common currency would bring an end to monetary imbalance. But, on the contrary, it resulted in social imbalance and growing split between the states. The social and political disruption on the Middle and Near East is also caused primarily by national and supranational financial and economic imbalance between the rich Gulf countries and the rest. It, in turn, influences and strengthens the ethnic, religious and geopolitical contradictions. Latin America is rightfully considered by many today as one of the grand social laboratories. Successfully cooperating through regional organizations, national governments have managed to propose innovative social-liberal policies throughout the continent, renewing but not repeating the continental European economic policies of the 1960-70-ies.

KANG, DACHEN* (Research Associate, kangdachen@casipm.ac.cn)
From Theory of Social System to the Theory of Social Harbor
In the new post-industrial era, especially in the sense of ecological civilization, the concept of “society” in the end should be re-understand and re-define. The work is an urgent job. People in the past regarded “society” as a “complex system” and the intercourses, the understanding and studying work is based on the systems methodology to reveal its dynamics mechanisms. In fact, there exist an entirely demands to find a new set of concepts, categories and to establish a new theoretical framework for the sociology. In this paper, the concept of “Social harbor” or “Harbor society” is proposed to reveal the society to help people build a new comprehension or sense to security mechanism.

“Society” or “Harbor” is an abstract concept from the physical world; it can be used to study the problem that how humans can better cope with unpredictable or unavailable changes and bring a new sense of co-existence of social cooperation. Correspondingly, the concept such as “matrix”, “general climate” are important cornerstones. This paper elaborates that the social domain framework of the concept has developed based on the theory of social system and a new kind of insight or ideology which is beyond the concepts of systems and institutions can be established.

Understanding Science Revolution By a Trinity Model
Paradigm change is an ex post summary of Scientific Revolution. How to make out a specific Scientific Revolution is still an unsolved mystery. Philosophy, mathematics and science are trinity, logic is the core real. Logic is mined from mathematics using the methodology of philosophy thinking. In other words, logic is refined from philosophy based on the mathematical framework. When philosophy and mathematics integrated, logic generated. While under the guidance of logic, new sciences are formulated. In order to achieve trinity, transforming from engineering, art and design language to the philosophical language system based on practice’s completely significant.

Why people all think that a solution is no doubt can be found for a problem? If the language system used when searching for the answer is the same with the language system used when formulating the problem, at no time the solution can be found. The only way to eliminate the problem is to completely totally switch the way of practice’s thinking, which means to change the language system. Here, we stress the in-turn transfer of engineering language, philosophy language and mathematics language.
Do Social Networks and SNS Function As Social Capital for Social Engagement?

This paper examines what types of social networks are facilitated by online networking activities and function as social capital for social engagement in South Korea. East Asian Social Survey (EASS) Module in 2012 Korean General Social Survey (KGSS) provides measures for social networks and social engagement, whereas KGSS has a unique module for Internet/SNS activities. Analysis focuses on social eating/drinking and neighbors' social support as social networks, local participation, voluntary activities, and political interests as social engagement, and the presence of Internet and/or SNS activities as online networking. Analyses of 2012 KGSS and EASS Module observe that online networking activities facilitate social eating/drinking, but not neighbors' social support. Correcting for possible bias by counterfactual analysis, it is SNS activities, not Internet activities per se, that facilitate social eating/drinking. It is also observed that both social eating/drinking and neighbors’ support function as social capital for both types of social engagements: local participation and voluntary activities. SNS activities do not directly affect those social engagements but promote political interests, whose effect is robust after counterfactual analysis. Concerning personality traits, more conscientious and open people engage in social matters more actively while less conscientious and more open people are more likely to use SNSs. In summary, this paper finds that (1) both neighborhood-based strong ties and socially outreach strong weak ties encourage social engagements for local and public interests; (2) SNS activities mainly helps social outreachs and promote political interests, but not actions yet; and (3) SNS activities have affinity with specific types of personality and exercise distinctive impacts on social networks and engagements beyond those of Internet activities.

Measuring Community Resilience to Natural Disasters: Implications for Disaster Management and Reduction in Korea

Building a resilient community to disasters has become one of the main goals of disaster management to absorb and mitigate negative disaster impacts. More disaster resilient community often experiences less disaster impact and reduces long recovery periods after a disaster. In this paper, we present the methodology that we constructed a set of indicators to measure community disaster resilience (CDRI) in terms of human, social, economic, environmental, and physical factors. Moreover, this study develops a methodology to aggregate constructed disaster resilience index of local communities in Korea. 229 local municipalities are examined to measure the degree of community's resilience to natural disasters. Geospatial Information System (GIS) is used to analyze and visualize spatial distribution of disaster resilience. Moreover, this study examined a relationship between the aggregated community disaster resilience index (CDRI) and disaster losses using a geographically weighted regression (GWR) method. Identifying the extent of community resilience to natural disasters would provide disaster management officials or decision-makers with strategic directions how to improve local communities’ resilience to natural disasters and to reduce the negative disaster impacts.

Revisiting the Digital Divide: Contributions from Older Internet Users

One among the most prominent current debates regarding digitalization and social inequality is the one pertaining to the “digital divide”. Research shows that this divide is a social rather than technologically driven phenomenon since socio-economic inequalities are the main determinants of it. Since the internet and new technologies are increasingly woven into the fabric of everyday lives the divide is a reality even in the most developed economies. The debate brings attention to particularly socially vulnerable groups such as older people. This paper draws from focus group data (n=30) and focuses on older people (60+) who are active internet users in Sweden, a country that tops the lists of the most developed countries when it comes to Network Readiness Index (NRI). The paper points to the various patterns of internet usage that structure older users’ everyday life pertaining to the access and skills necessary to obtain different forms of information and to the maintenance of their social networks. We argue that these usage patterns can be perceived as contributors to the reproduction of already existing inequalities based on socio-economic factors. Argued hereby is also that as long as one is capable to conform to the imperatives that digitalization builds upon then old age need not be perceived as an obstacle to participation in the increasingly digitalized society.

Tools of Justice: Non-Discrimination and the Indian Constitution

In the years since independence, the Indian subcontinent has witnessed an alarming rise in violence against marginalized communities, with an increasing number of groups pushed to (and outside) the margins of the democratic order. Against this background of violence, injustice and the abuse of rights, Tools of Justice: Non Discrimination and the Indian Constitution explores the critical, ‘insurgent’ possibilities of constitutionalism as a means of revitalising the concepts of non-discrimination and social justice in the Indian legal lexicon. What are the possible implications for a critical engagement with law in a context of perpetration of atrocities against communities and the flagrant denial of liberties to marginalized groups? Stating that, the book attempts to return history and politics to constitutional hermeneutics, suggesting that interpretation is not the exclusive preserve of constitutional courts but, importantly, may be crafted by people's movements in their exercise of a dispersed sovereignty. It attempts an intersectional approach to jurisprudence as a lens for enabling the law to address the problem of discrimination along multiple, intersecting axes. The argument is developed in the context of the various grounds of discrimination mentioned in the constitution — caste, tribe, religious minorities, women, sexual minorities, and disability. The book attempts to bring together an understanding of the social history of resistance to oppression in its specific forms, and the constitutional articulation of non-discrimination. The book plots the possibilities of popular constitutionalism and constitutional morality, inside and outside courts in an attempt to project these as the other, the mirror, in which the existing constitution must validate itself. The constitution itself is not a fixed legal text, but a vision that shapes and is shaped by peoples through daily struggles and upheavals.

This Is a Man’s World? Changes in Disposable Income Predict Sex Ratio at Birth

The human sex ratio at birth (SRB) is long known to be relatively constant at around 105 boys to every 100 girls. In recent studies evidence has been found that SRB might vary according to exposure to chemicals and socioeconomic conditions. SRB has also been declining after World War II in several industrial countries – a phenomenon that remains unexplained. Here we show that changes in disposable income are associated with at birth sex ratios in OECD countries. Positive changes in disposable income are associated with higher proportion of male infants. We apply panel regressions to OECD data that spans the years 1971 to 2011 for 35 countries and UN fertility data in an unbalanced panel. Findings not only partly explain the rises and declines in the sex ratio in OECD countries, but also first time provides evidence of the influence of economic and social forces on SRB that can even be seen in macro level analysis. This opens up radically new research directions in social sciences, where the emphasis on the biological factors has traditionally been on how biological determinants shape social life and in the interaction of the two, not on how social and economic determinants might affect biological facts such as the sex of an infant. This furthermore contributes to debates of gender equality. Our findings suggest that the equality of opportunity differs for genders as the sex ratio depends on the underlying economic conditions: men seem to be born into better economic conditions.

Democratizing Expertise and Enhancing Public Participation in Deliberative Risk Governance: EMF Case in Taiwan

This paper contributes to ongoing discussions on democratizing expertise and building public capacities for deliberative / participatory risk governance of science and technology through an investigation of public participations in risk governance concerning the controversies of electromagnetic fields (EMF) in Taiwan. The author utilizes a qualitative approach, drawing from documentary data and data from two focus groups, as well as in-depth interviews with key actors in this controversy to critically investigate this Taiwan case. This paper reflects on the politics of expert authority permeating practices of public participation, Employing insights from the sociology of scientific knowledge and STS, the author discovers that extensive tensions taking the form of contestation have arisen from discussing a common problem, such as accuracy of scientific literature translation, to what extent EMF exposure is acceptable, versus containing conflicts around how to define the problem under scientific uncertainty and complexity. In addition, the failure of expert authority reflection on their social value positions has played a key role to understand their less-than-successful defence in the citizen perspective. From this perspective, the author discusses some challenges for democratizing expertise in this Taiwan case and then provide suggestions for better public participation in EMF risk governance.

KAPADIA, DHARMI* (University of Manchester, dharmi.kapadia@manchester.ac.uk)

Do Social Networks Help You to ‘Get Help?’: Usage of Mental Health Services Amongst Women of Different Ethnic Groups in England, UK

The way in which people seek help and access mental health services is a complicated and varied process. Contact with, and usage of, services may occur through individual efforts, GP referrals, or informal contacts. Typically, in the UK, mental health service use has been researched within a largely individualistic paradigm, with Dixon-Woods’ candidacy model gaining increasing popularity. There has been minimal consideration of the social processes involved in help-seeking, more specifically, the way in which the resources available in social networks affect usage of services (as theorised by Pescosolino in the Network Episode Model) has not been explored in the UK context.

Pakistani women in England have lower rates of usage of outpatient mental health services compared with women from White ethnic groups. Although there has been an indication that social networks may have a role to play in the usage of services, there is little robust evidence. Previous qualitative studies show that Pakistani women’s social networks can be lacking in social support, leaving women feeling socially isolated. Further, it is evident that Pakistani women’s social networks may not contain network members that facilitate or encourage access to mental health services.

This paper addresses previously unanswered questions of how the content and function of networks are each associated with the access and usage of mental health services, and how these associations may vary amongst women of different ethnic groups. Using qualitative data from an English community survey (Ethnic Minority Psychiatric Illness Rates in the Community, 2000) this paper presents statistical models of the effects of social networks on access and usage of services, and discusses how these vary between Pakistani women and women from other ethnic groups. The findings are discussed in relation to the (lack of) current UK mental health policies to address ethnic inequalities in service use.
New Age, New Economy, New Middle Class: The Case of Jewish New Age in Israel

Albeit the extreme individualization of late modernity, social class still is important in all aspects of our life. Yet, as a social category, remains largely ignored in contemporary religious studies. Based on ethnographic data, this paper sets out to explore the central yet under-researched ways in which class sustains social, cultural, and religious distinctions. In particular, by focusing on New Religious Movements and on New Age spirituality, it aims to explicate how class is determining religious affiliations and practices.

Sociologists of religion have recently pointed to that New Age has become part of the cultural repertoire of the new middle class. However, only rarely have they explored New Age as a leisure practice manifesting class-based tastes. Our paper examines the emergence of a New Ageoption in the Jewish cultural-religious field in Israel, asking why has New Age Judaism become so appealing particularly to the burgeoning cosmopolitan post-materialist, secular new middle class.

Drawing on post-Bourdieuian cultural sociology, we start by describing the theological and experiential hybrid nature of Jewish New Age, and show how these elements were enthusiastically embraced by new middle class followers. We argue that by partaking in Jewish New Age communities, middle class new agers express and further accumulate high levels of omnivorous cultural capital. In line with recent work on cultural cosmopolitization and class privilege, we conclude by claiming that in the Israeli context, high cultural capital is manifested, inter alia and rather surprisingly, in the ability to re-appropriate local religious forms, and to cosmopolitanize them via New Age culture.

KARABCHUK, TATIANA* (National Research University, karabchuk@hse.ru)

Career VS Children: The Effects of Institutional Background on Females’ Subjective Well-Being Across Europe

The paper deals with life satisfaction and happiness among women in European countries. The research question is to disclose in which countries (with more liberal or strict labour market legislation) females are more happy to have job, kids or to combine children with employment. The author claims that women living in the countries with more liberal labour laws and open labour markets are happier to combine their work with caring for those children who have to re-enter labour market in the countries with very rigid labour legislation. The hypothesis is tested with the help of the European Value Study dataset for 2008 year, including 28 countries. The results of multilevel regression analysis proved that hypothesis assumption and showed that females are happier in those countries with family oriented labour legislations and at the same time where it is easy to find a new job, means lebral labour markets. In the countries with high rates of employment protection legislation females are more happy with jobs than with combining motherhood and employment. Conditional effects of multilevel regression models are presented in a more detailed way. The paper could have important implications for social policy in European countries.

KARAISKOU, VICKY* (Cyprus Open University, v.karaiskou@ouc.ac.cy)

From Real to Ideal: Visual Narrations of Collective Traumas and Identities

The paper will focus on the commemorative sculpture in the Republic of Cyprus and comment the role attributed to individual actors in the process of narrating and preserving collective memory. The busts, statues and architectural complexes erected since 1960, when the country gained its independence, are rating and preserving collective memory. The busts, statues and architectural complexes erected since 1960, when the country gained its independence, are rating and preserving collective memory. The busts, statues and architectural complexes erected since 1960, when the country gained its independence, are rating and preserving collective memory. The busts, statues and architectural complexes erected since 1960, when the country gained its independence, are rating and preserving collective memory.

Comparatively, the paper will examine an example which is placed at the opposite: the anonymity of membership in creating the nation and heroic concepts in China. Both countries are newborn states despite their long history and rich cultural background. However, their radically diverse cultural backgrounds determine in a dramatically different way the position and the role of the self within the social group. Greek-Orthodox tradition, under the hue of western Romanticism, mobilized personality cults in Cyprus. On the other hand, in China Socialist Realism summed up deeply rooted traditional behaviors and current political stands and revealed a different version of idealized interpretation of reality. Visual narration in China promotes the joy of the victorious results, the dynamics of the collective national struggles and the solid ground of today’s society heading to the future. Furthermore, in Chinese memorials male and female bodies are mundane vibrant actors vindicating the achievement of a shared goal. In contrast, Cyprus promotes martyrdom and orchestrates powerful connotations with a view to keep alive the collective traumas of the past. Commemoration focuses on the transcendental dimension of the individual heroes, on passivity and loss, and links them with familiar religious connotations.

KARASAKI, MUTSUMI* (Monash University, mutsumi.karasaki@monash.edu)

Normalcy after Stroke: Spousal Caregiving and Management of Uncertainties

Stroke is usually characterised by sudden onset, and what follows may be a fluctuating and long-term recovery trajectory marked by uncertainties. In particular, which is commonly considered a disease of old age, may pose various risks and uncertainties in the life course and biography of working age patients and their carers, who are often spouses. While chronic illnesses such as stroke have been widely conceptualised as ‘biographical disruption’ (Bury, 1982) for both patients and carers, this notion has also been contested on the basis that not all chronic illness can be seen exclusively as ‘disruption’. In this paper, I explore experiences of spousal carers of people who have had a stroke whilst in their working age (25-55). Drawing on qualitative data collected through 17 ethnographic in-depth interviews with spousal carers in Victoria, Australia, this paper demonstrates that their responses to stroke and the caregiving role vary across different social positions and contexts. Some participants were striving to regain a sense of normalcy, others somewhat reluctantly accepted the ‘new normal’, while yet others embraced the ‘new normal’. Departing from conceptualising carers as atavistically mobilising resources and navigating a biographically uncertain trajectory in an attempt to regain normalcy, I argue that their responses are better understood as a course of action enacted by a network of individual, medical and healthcare, social, and political actors. In this respect, I suggest that responsibility as necessarily distributed, and challenge the increasingly common construction in policy and healthcare settings of informal carers as choice-making service users. By doing so, this paper aims to generate a basis on which service providers, healthcare practitioners, policy makers and members of the wider society can engage in a constructive and critical discussion towards creating a ‘caring society’.

GOSLING, ROBERT S. (University of South Australia, robert.gosling@adelaide.edu.au)

Financialization, Crises and the Changes in the Global Income Inequality, 1820–2010

"Table of Contents"
This paper discusses the global income inequality and stratification of the world economy from 1820 to 2012 with a focus on the transformations that take place during periods of financialization and hegemonic transitions. We argue that in periods of financial expansion and hegemonic intensification, intensification of economic crises, inter-state competition and emergence of new developmental strategies transform existing structures of world-income hierarchy. Hence, historical development of world income hierarchy and between-income inequalities cannot be explained merely by the orthodox interpretations of the modernization, dependency and world-systems theories. Through a combination of quantitative and historical-comparative analyses, we discuss the continuities and ruptures observed in patterns of global income inequality in reference to existing theoretical frameworks provided by modernization, dependency and world-systems theories. Our analysis suggests that (1) global income inequality moved from a bimodal to trimodal distribution during the British-led financial expansion period and (2) this transition has been going through another transformation in the contemporary era of financialization. By analyzing the transformation of the global income inequality from 1820 to 2012, changes in the position of individual states/regions within global income hierarchy across time, and conducting a historical-comparative analysis of both periods of financialization, we discuss the prospects and limits of the existing theoretical-conceptual frameworks. Our analysis (1) highlights the transformative role of systemic crises, inter-state rivalries and emergence of alternative “developmental” patterns during periods of financialization and hegemonic crisis, and (2) calls for a new conceptual theoretical framework for explaining dynamics of global income inequality which pays equal attention to continuities and ruptures.

Gezi Uprising in a Macro-Comparative Perspective

This paper examines the class structure of the 2013 Gezi uprising in Turkey in comparison with the 2011 wave of global social unrest. Although the Occupy-type movements that took place primarily in North America and Europe were important segments of the movements which created the 2011 wave of social unrest, they were not a prelude to the Gezi. For instance, the cluster of movements known as the “Arab Spring”, or worker struggles in new zones of global production in South, Southeast and East Asia were also parts of the 2011 wave of unrest. Many studies which discuss the class composition of the 2011 revolutions, however, often rely on single-source macro-comparative models mostly constructed upon the experiences of North American and European protests. Arguing that single analytical models will fail to address the complexity of the contemporary wave of social unrest, in this paper we discuss the class composition and social base of the 2013 Gezi uprising in Turkey in comparison with different segments of the 2011 wave of global social protest. In the first half of our paper, based on a database of newspaper reports on social protests from 1990 to 2012, we provide a global survey of the class structures of movements which constituted the 2011 wave of social unrest. In the second part of the paper, we discuss the class structure of 2013 Gezi uprising in respect to discussion of diverse class compositions of social protests across the world. In the latter part of our paper, we discuss the relationship between the “Arab Spring” and the Gezi Uprising in Turkey.

Conceptualising Re-Migration: The Case of Post-Soviet Nanoscience Émigrés

This paper examines patterns of the outward migration of nanoscientists from the countries of the former Soviet Union during the period 1989-1994 yrs. This period of scientific migration is characterised by its mass character, very limited return rates, and peculiar patterns of diaspora distribution. The paper will focus on the latter.

It is argued that the numbers of emigrating scientists reached as much as 10 000 people leaving in 1993. (Gokhberg and Nekipelova, 2002) And whereas return rates, and peculiar patterns of diaspora distribution. The paper will focus on one compelling image at a time. Janus, looks both ways offering a glimpse of the maker as well as the subject. In this quest, scientists have focused on the role of emotions, especially empathy, in moral thought and action. This research into the workings of oxytocin, mirror neurons, and social cognition may also offer a means to understand the enduring power of photography to evoke an emotional response. Moreover, it offers interesting interpretations as to why viewers respond strongly to some images and not to others. As visual scholars, these findings can also point to possibilities for more self aware image making in our visual methods. Photography can be a transformative act for the image maker, the viewer and the community. As a medium of communication and connection, images rely on empathic impulses to go beyond social differences and engender understanding. Empathy may be in the eye of the beholder but it can also be at the heart of the photographic act. The camera, like Janus, looks both ways offering a glimpse of the maker as well as the subject. In this way, every image can be seen as a self portrait, reflecting the values and vanities of the photographer. If the neurological research is sound, empathic photographers will create images more likely to resonate strongly with others, thus re-engaging those lost social connections -- one compelling image at a time. on, by conducting a series of semi-structured interviews during a multi-sited fieldwork in the US, UK and EU. The main contribution of this paper is theorising migration in terms of a dynamic process, where destinations have organisational, regional and national capacity to attract, extrude, or retain the inherently mobile scientists: there are ‘transit’ destinations, the destinations that ‘capture’ migrant scientists once they come there. A bias towards one discipline can be avoided, as nanoscience stretches over most of the natural sciences disciplines, to which more than 80% of the post-Soviet émigrés belong (Graham and Dezhina, 2008). I also revisited the issue of the reasons for scientific migration, which appears to mostly been studied using surveys.

WG03-910.3

Poetics, Politics, and Possibilities: Visualizing Our Humanity

At the turn of the 21st century, sociologist Robert Putnam warned that bedrock of community--our social connections to each other were disintegrating and leaving our lives and communities impoverished. He found that we were losing touch with our humanity, our sense of belonging, and our ability to care about, and be cared for, by others. Since this alarm was sounded there has been an explosion of research into the neurological basis of social connections. In this quest, scientists have focused on the role of emotions, especially empathy, in moral thought and action. This research into the workings of oxytocin, mirror neurons, and social cognition may also offer a means to understand the enduring power of photography to evoke an emotional response. Moreover, it offers interesting interpretations as to why viewers respond strongly to some images and not to others. As visual scholars, these findings can also point to possibilities for more self aware image making in our visual methods. Photography can be a transformative act for the image maker, the viewer and the community. As a medium of communication and connection, images rely on empathic impulses to go beyond social differences and engender understanding. Empathy may be in the eye of the beholder but it can also be at the heart of the photographic act. The camera, like Janus, looks both ways offering a glimpse of the maker as well as the subject. In this way, every image can be seen as a self portrait, reflecting the values and vanities of the photographer. If the neurological research is sound, empathic photographers will create images more likely to resonate strongly with others, thus re-engaging those lost social connections -- one compelling image at a time.
Facebook as the most widely used social media site in the world has lead the way in using interface technologies to shape user behavior by turning online interaction into algorithms that engineer specific kinds of performances and render others invisible. Like Foucault’s Panopticon, the Facebook Gaze is deployed through the architecture of the site itself. Facebook has created an online space that allows users to enter their information into generic templates which make managing and mining large amounts of data easier but constrains the users participation to those things allowed by the template. Creating a uniform normality through the technical structuring of a way of being, users must adjust their behavior accordingly in order to participate. Edgelink, Facebook’s algorithm for structuring the flow and visibility of information and communication, further disciplines user behavior by through the threat of invisibility (Bucher 2012). Photography plays a key role in social media identity staging and interaction as images are a prime means of increasing your Edgelscore. Similar to the hermeneutic circle which allows the user to gaze (Urry 1990) which disciplines performative travel, this same dynamic is at work on Facebook as users learn to construct images that echo those shared and positively received by others. Images that generate a large number of responses provide a model for expected and accepted contributions. Neuroscientists have also found that receiving ‘likes’ activates the reward center in the brain and these approval responses predict future Facebook use (Mesi et al. 2013). This informal, but immediate, feedback lets the individual know how well their performances are being received and assists them perfecting and refining their presentation to remain visible and included in this new form of society.

Job Is Not Everything. The Case of Return Migration from the UK to Poland in the Wake of the 2008 Economic Crisis

The human capital approach, which is dominant in the EU migration policy, suggests that migratory experience and resources are likely to improve returnee’s competitiveness and foster their successful adaptation on the home country labour market. Based on the analysis of the return migration from the UK to Poland in the context of the economic crisis in 2008, this paper critically examines this assumption.

It is estimated that within 8 years after the EU enlargement in 2004 about 0.7 million Poles went to work in the United Kingdom. At the same time it is suggested that about 250 thousand Polish immigrants in Britain decided to come back to their home country. The financial crisis did not significantly influence the number of return migrants. It rather slowed down the new emigration and those who stayed in the UK employed wait-and-see strategy (Barcevičius et al.). The quantitative data on Polish returnees (Bieńkowska et al.) suggest that return migrants are more likely than the non-migrants to be unemployed (especially women). Si- multaneously, they are much more likely to run their own business and work as a self-employed.

Addressing this apparent contradiction, this paper makes use of qualitative research to understand the conditions and process of successful and unsuccessful reintegration on the home country labour market. Based on the analysis of biographical interviews with the Polish return migrants from the UK to the Lower Silesia region in Poland, we examine the process of labour market reintegration as a result of the interplay of subjective and structural factors mediated by earlier biographical experiences. In the paper, the tentative results of an ongoing empirical study will be presented along with a theoretical discussion on the limits of game theory predictions, particularly with respect to the role of status hierarchies in the socio-economic processes.

Cooperation Between Strangers of Unequal Status

Recent studies of trust and cooperation in social dilemma situations focus on explaining how social identity processes - triggered by differentiation based on a nominal characteristic - affect cooperative behaviors among strangers. Few studies, however, predict and explain whether and how much cooperation occurs among strangers who vary by characteristics that have status value attached - i.e., characteristics that cause actors possessing one state of a given characteristic to be perceived as more worthy than actors possessing another state of that same characteristic. Even studies that incorporate the status hierarchies’ effects into so- cial dilemma models focus on groups’ effectiveness in producing collective goods, rather than on the simplest trust-game type interactions. This might be defensible insofar as game theory predicts that status differences will have no effect on cooperation among strangers. Our paper takes a different approach: Using status characteristics theory, we predict that in a prisoner’s dilemma (PD) where actors are differentiated by salient status characteristics, the rate of cooperation will vary by the partner’s status relative to that of the focal actor, as well as whether it is a simultaneous or sequential game. We report experimental results from a one-shot, two-person PD, before which subject pairs worked on tasks intended to manipulate the status of subject and partner. We test the following hypotheses:

1. In a sequential PD, if actors are differentiated by salient status, the rate of cooperation is higher when the low-status actor initiates the game than when the high-status actor does; (2) regardless of the nature of the game, the cooperation rate among high-status actors is higher than that among low-status actors; and (3) in simultaneous PDs, the level of cooperation among status differentiated actors is at the same level as it would be were they both high-status partners.

Development Interventions, Livelihoods Security and Sustainability of Resources Among Tribal Communities of the South: A Case of Sugali Tribe

There is a direct link between livelihoods security and development interventions by different agencies and sustainability of the resources among the tribal communities of the global South in general and India in particular. The link between them is crucial to achieve the desired results of both sustainability of resources and livelihoods. It reduces the risks and paves the way for poverty reduction among the marginal communities of the South. To achieve the liveli- hood security, the donor agencies and also the State must take cognizance of and balance the existing local resources. This paper tries to address the interface between the poverty reduction strategies and to attain the goal of sustainable development. We are engaging the natural resource base among the tribal communities of Andhra Pradesh, South India. Further, it also tries to address the role of interna- tional donor agencies in bridging the gap between the haves and have nots, which is drastically increasing year by year without any change.

Objectives:
1. To examine the livelihood security and natural resource base.
2. To understand the link between livelihoods security and poverty reduction.
3. To assess the impact of developmental interventions in the tribal communities.
4. To address the donor agencies or NGO’s role in sustainable develop- ment of tribal communities.

Sources of Data:
Paper largely depends on the primary data collected from the field site among the Sugali tribe of Andhra Pradesh, south India. It also bases its inferences based on the data gathered from official reports and records, Census records, published as well as unpublished research reports, papers, etc., with reference to India. Be- sides, it also draws its inferences from the studies made by the authors and other scholars in Andhra Pradesh, India. It also takes into account the studies made in other parts of South Asia.

People’s Politics and Governance in the Countryside: An Ethnographic Profile of Emerging Leaders from the Countryside of Andhra Pradesh

The government initiatives to enhance the situation of the rural mass, especially rural women have paved the way to Integrated Rural Development Programmes (IRDP) in India. As part of the IRDP, the Government initiated the formation of groups in the villages of rural India with the name as DWCRA or Self Help Groups (SHGs). With the help of the Government as well as donor agencies, the programme became successful in some parts of rural India and here are the cases where these groups became the symbol of success to neighbouring areas in the rural areas of Andhra Pradesh.

The present cases are situated in three backward areas of the Rayalaseema region of Andhra Pradesh, India. These three cases are different from each other but the ultimate goal of the three cases is the same as enhancement of lives and livelihood of rural masses. The present paper tries to explain how the members of these groups have emerged as leaders in their respective areas and enhanced the lives and livelihoods of the people in general and women in particular in Andhra Pradesh. Three cases are Rythu Sangam (Farmers Club, Chittoor), Dalit Horticulture (Anantapur) and Village Organization (Anantapur) which have studied and regarded as the backbone of rural masses in the two districts of Andhra Pradesh.

The Three initiatives have shown that people, rural women, have improved their awareness and enhanced their lifestyle. Further, it also explains how they have strengthened their groups by acting as pressure groups in their locality which is benefited them to a large extent. To conclude, the paper has shown the importance of emerging leaders, rural women, in the rural areas of Andhra Pradesh.

‘So Close and Yet so Far Away’: Migrants and Nationals in Greek Agriculture before and after the Economic Crisis

In Greece the structure of rural society has changed profoundly since the 1960s. Rural exodus and consequent demographic ageing, restructuring towards more intensive seasonal farming and social rejection of wage labour in agriculture and living in rural areas created labour deficits. The arrival of international migrants following the collapse of the neighbouring socialist regimes in Albania, Bulgaria and Romania meant new opportunities for the struggling Greek agriculture. The mass availability of flexible, cheap wage labour gave agriculture and rural areas an impetus of development and demographic regeneration.

The employment of these migrants was rather complementary than antagonistic to family labour often freeing family members to undertake other jobs outside agriculture and rural areas. The segmentation of labour markets between the informal and formal implied their smooth operation for the ‘benefit’ of both populations. However, the economic crisis variously affected the situation and the convergence of the labour markets. The crisis was now expected to bring closer the informal and the formal labour markets leading to a stronger competition for the same jobs the two populations.

Drawing from research material collected in a rural area where the intensive cultivation of strawberries was concentrated, the paper analyses labour relations and living conditions developed between old-timer and newcomer migrant workers in the region of Elia in western Peloponneso.

The cultivation of strawberries is a typical example of an export driven industrial product while the employment of international migrant labour reflects the externalisation of reproduction costs and the demand led character of the labour market. It has therefore been true that control over labour costs and labour relations is a critical issue for the competitiveness of the product. Thus, ethnicity, exploitation, racism production relations, irregularity of residence status and arduous and living conditions are examined in the paper as part of this production model.

The Meaning and the Role of Clothing for Elderly Women

The aim of this research is to explore the meaning and the role of clothing for old women by analyzing their life stories. This means to investigate not only psychological but also sociological effects.

In general almost all elderly women have plural diseases in various levels. For example some old women need to be cared in nursing home or hospital, and the others don't need but often go to hospitals from their own houses. We call the former type “dependent elders” such as dementia or bedridden people because of needing professional care and cure, conversely the latter one “independent elders” because of ability of social contribution as the volunteers in many kinds of fields.

But even if which type they are categorized, it would be desirable to wear their favorite clothing. The reason is that it would be helpful for them to maintain their Quality of Life (QOL) as a result of thinking positive and continuing to engage their enjoyable activities. To investigate this issue, this research would emphasize the subjective recognition and experiences of their own clothing, and not the objective beauty of appearance and fashion trends.

Intensive data were collected as life stories of 7 elderly women including both types, “dependent elderly women” in nursing home and “independent” who had engaged the volunteer at medical agency. The interviewer asked all the interviewees to arrange some favorite pictures during their lives. These pictures helped to remember their clothing including some episodes and memories in their youth. As a result of content analysis, it is clear that “the meanings of clothing” and “the role of clothing,” for dependent and independent elderly women, are “Self-expression” and “the switch of identity”. It appears that the satisfied and favorite clothing as social body assist their lives when they confront some hardships.

Adorno’s Style of Citical Theory and Sociology as Chimera

According to T.W.Adorno, this society is full of contradictions, so the concepts of sociology cannot but be flawed and fractured. But he evaluates such a crack as a characteristic of sociological thinking and employs it as the “crack” to grasp the essence of “non-identifiable” thing. If the concepts of sociology become too static and too systematic, sociology views society as the “identical” object and can’t face social contradictions. So Adorno intends to make a new style of sociology for the critical “non-identity” thinking. And his narrative style is formed after art works, especially after avant-garde arts. The purpose of this presentation is to consider Adorno’s unique style of critical thinking. Adorno emphasizes the hybrid character in sociology. He says that sociology has both philosophical and scientific characteristics. From Adorno’s view, sociology is a hybrid discipline that controls a classical sociology that has been employed for centuries and at the same time includes the American empirical science. This view is probably derived from his experience of exile. In other respects, Adorno’s sociology has hybrid characteristics between opposing things. For example, the study of The Authoritarian Personality used both quantitative researches and qualitative researches. By having multiple elements in it, sociology can comprehend a complex structure of social phenomenon. For Adorno, sociology is a jumble of various academic disciplines or methods of study. In
the lecture, Adorno says that sociology needs Chimerism and Quixotic attempts. Culture critique is as important work as social critical theory in Adorno's thought, and these two aspacts in his works are related. Adorno makes methods of modern art or modern music references for creating his style of thought, for instance, collage, dodecahemy, etc. And art works are regarded ideal model for social relation because these have multiple elements with reconciliation. In this presentation, I consider relationship between modernity and critique by analyzing Adorno's singular style of critical social thought.

RC16-278.4 KATAKAMI, HEIJIRO* (Rikkyo University, hglo2ghlo@ybb.ne.jp)
Between “Munesuke Mita” and “Yusuke Maki”- on the Possibilities of Fictional Construction By Sociology.

“Yusuke Maki” is the pseudonym of the Japanese sociologist Munesuke Mita. Mita uses the name “Maki” for creating a new style of sociology. Mita says that the name of “Mita” is used for works within the modern society and the name of “Maki” is used for works beyond the modern rationality. It is remarkable that one person has two names as sociologist, and he uses them for different purposes. Mita uses the fictional sociologist “Maki” for alternative images of sociology. The purpose of this presentation is to consider the possibilities of fictional construction by sociology from Mita's project “Maki,” Maki often uses the word “clarity” affirmatively, and there are two aspects of this word in his works. The first connotation is the clearness and the thoroughness of a theoretical structure. Generally speaking, the social figure of sociological theory is different from that in real society, as in the example of Max Weber’s “ideal types.” But such a fictional character in sociological theory enables us to have a theoretical “clarity.” The second connotation of “clarity” is unmediated interaction between people in society. Maki's definition of “Gemeinschaft” uses this aspect of “clarity.” The fictional sociologist “Maki” creates the image of a not yet extant utopia by combining these two aspects of “clarity.” Here is a fictional possibility of sociology. Maki's social theory intends to create a sociology beyond the modern rationality. But it doesn't ignore or deny the potential of modernity. He seeks to change the direction of the modern rationality. The early works of Mita and Maki largely depend on modern Western social theories, and in the later works Maki creates his original perspective of “comparative sociology” which relativizes the western modernity. A consideration of Maki's social theory probably links to a consideration of social theories in a non-western world.

Strong Family Ties and Demographic Behavior in Japan

This study investigates the effects of intergenerational family ties on demographic behavior such as marriage, divorce, marital fertility, and women's labor force participation during the child rearing period, using retrospective life history data from a nationally representative survey in Japan.

Although Japan is still one of the strongest family countries, intergenerational ties have gradually weakened relative to the past in terms of living arrangements: the shift from intergenerational co-residence upon marriage to delayed co-residence and separation. The proportion of couples co-residing with the husband's parent(s) or with the wife's parent(s) at the time of marriage decreases from about 35% for those born in the 1930s to 20% for those born in the 1960s. However, the latter cohort starts living with their parent(s) soon after marriage, and then over 30% of them co-reside 10-15 years after marriage, showing a decrease in intergenerational residence. The proportion of couples co-residing with the husband's parent(s) or with the wife's parent(s) at the time of marriage decreases from about 35% for those born in the 1930s to 20% for those born in the 1960s. In addition, for the 1960s cohort, the proportion of couples living nearby (within a walkable distance) the husband's parent(s) or the wife's parent(s) is over 20%, higher than other cohorts, from the time of marriage to 10-15 years after marriage, showing a decrease in intergenerational residence. The proportion of couples co-residing with the husband's parent(s) or the wife's parent(s) at the time of marriage decreases from about 35% for those born in the 1930s to 20% for those born in the 1960s. In addition, for the 1960s cohort, the proportion of couples living nearby (within a walkable distance) the husband's parent(s) or the wife's parent(s) is over 20%, higher than other cohorts, from the time of marriage to 10-15 years after marriage, showing a decrease in intergenerational residence. The proportion of couples co-residing with the husband's parent(s) or the wife's parent(s) at the time of marriage decreases from about 35% for those born in the 1930s to 20% for those born in the 1960s. In addition, for the 1960s cohort, the proportion of couples living nearby (within a walkable distance) the husband's parent(s) or the wife's parent(s) is over 20%, higher than other cohorts, from the time of marriage to 10-15 years after marriage, showing a decrease in intergenerational residence.

A series of event history analyses shows interesting results: Intergenerational co-residency and/or proximity have strong positive effects on marital stability, marital fertility, and the labor force participation of married women. It suggests that weakening intergenerational ties can be a key cause of current demographic problems such as later and less marriage, rising divorce rate, very low fertility, and women's labor force exit upon family formation.

In the past decade, much has been written and discussed about the relationship between strong family and low fertility. However, little literature has presented the whole picture of the relationships between strong family and demographic behavior. This paper will try to fill the gap.

RC24-438.8 KATO, KUMI* (Wakayama University, kumikato@center.wakayama-u.ac.jp)
Wolf, Extinction and Fukushima

Iitate, Fukushima is a village designated as 'whole village evacuation' since April, 2011 despite being located over 30km from the Fukushima Daiichi Plant. The village had maintained its traditional rural landscape as one of the "The most beautiful villages in Japan", and was renowned for its high quality beef and dairy products. The farming community's spiritual wellbeing is deeply ingrained in their land, both of which are under threat of being lost in the serious contamination and the prolonged evacuation.

In Iitate, there is a shrine devoted to the local community of Sasu called Yamatsumi-jinja. The shrine's guardian or holy messenger is a wolf considered to protect farming villages from pest animals such as deer, boar, and monkeys. The wolf's mighty power is also considered to deter disasters, illness, fire and theft, and there is a record that at the end of Edo in Ansei period, wolf worship flourished as a series of disasters and unsettling events overwhelmed Japan. Yamatumi-jinja, known for its 237 ceiling paintings depicting the wolf as its holy messenger, kept its door open to the evacuated community in much the same way as the wolf worship supported the community in Edo. Tragically however the shrine burnt down in April this year.

This paper reports on an ongoing project that attempts to record the significance of local beliefs interwoven in the natural environment and restore the legacy of one significant belief of the village people, namely the wolf paintings. It is argued that attending to the spiritual wellbeing of the community deeply ingrained in the 'spirit of the place' is critical in the 'reconstruction' even if the community may not return to the village fully in near future. Clearly the project has an anti-nuclear message though it does not take an overt 'anti-nuclear' action.

RC06-121.10 KATO, KUNIKO* (Utsunomiya Kyowa University, kato925@ca2.so-net.ne.jp)
Intergenerational Relationships Between Adolescents and Their Grandparents in Japan

Intergenerational bonds among family members may be more important today than in earlier decades, because the individuals today live longer and share more years and experiences with members of other generations (Bengtson, 2001). The relationship of adolescents and their grandparents has received much scholarly attention since 1989 as a major social problem in Japan. The main objective of this study is to examine how adolescents' perception of the relationships with their grandparents is associated with the frequency of communication with their grandparents, parents and friends in Japan. Further, I describe differences between face-to-face and ICT communication.

In order to accomplish the above objectives, I collected survey data from Japanese college students in 2011-2013. These data were collected in the government-funded project entitled, "The Process model of building the intergenerational relationships in child care and examining the family. The data include 198 Japanese college students aged 20 to 21. The questionnaire included questions concerning their perceptions of the relationships with their grandparents and ICT communication with their parents, grandparents, friends along with demographic information. A multiple regression analysis was used.

The adolescents are likely to have greater satisfaction of the perception of relationships with their grandparents. In addition, having overly burden of the relationships with their grandparents are associated with little conversation between the adolescents and their fathers. Their higher commitment to their grandparents is related to their increasing the communication with older persons by e-mail and face-to-face communication.

Based on my findings, I suggest that Japanese society needs to consider the ways to facilitate communication between adolescents and their grandparents in order to build intergenerational relationships. It is also important to promote the changes of the perception of relationships between adolescents and their grandparents on influence processes within the grandparent-parent-grandchild triad in Japan.

RC11-199.6 KATTAKAYAM, JACOB JOHN* (University of Kerala, jikattakayam@yahoo.com)
Abuse Among Older People: An Invisible Discrimination

The forces of globalisation, modernisation and technological change, and the rapid transmission of knowledge have resulted in lifestyle changes and corresponding adjustments in cultural values. Improved healthcare, lifestyle changes and the subsequent increase in life expectancy have challenged traditional images of old age. Today, one-eighth of the world's elderly population live in India. The increased life expectancy in India is also leading to four-generation families. Kerala finds itself facing a huge human development challenge in the form of its elderly population that is burgeoning faster than other Indian states. Despite glowing accounts praising the Kerala economy's improved performances in recent years, marginalised groups like the elderly have remained discriminated and neglected.

In many countries, older people are being treated unfairly by stereotyping and discriminating against them. Deprived of work, dependent on charity or old-age pension, they suffer from all types of physical ailments and are regular victims of robbery, assault and other crimes. Elder abuse constitutes different forms of abuse like neglect, disrespect, verbal abuse, physical abuse, financial abuse, psychological and emotional abuse or even sexual abuse. The discrimination that
older people face is also complex; often based on two or more factors, such as age and gender, ethnic origin, where they live, disability, poverty, sexuality, HIV status or literacy levels. Older people without any source of income are particularly vulnerable to discrimination based on both age and dependency. This article focuses on the sociological conditions responsible for elderly vulnerability in Kerala. It also seeks to identify primary abusers within families besides the elders’ perception of abuse. This paper focuses on the extent to which the elders depend on family members for care, as well as the type and level of care they need. An empirical study comprising 300 elderly people were made in the state of Kerala.

KATTAKAYAM, JACOB JOHN* (University of Kerala, jjkattakayam@yahoo.com)

Effectiveness of Social Welfare Schemes for the Elderly in RURAL Kerala, India

By 2050, India will be home to one out of every six elderly persons in the world. While life expectancy has improved, the changed socio-economic conditions have drastically altered the living conditions of the elderly in India. In this changed social set-up, old people face increasing incidence of age-related discrimination, ageism, elder abuse, and mistreatment, which militates against the norms of a civilized society. The least noticed of the destitute in India are the elderly. Most elderly struggle with low incomes and poor health. As income inequalities increase, it is noticed that senior citizens are getting poorer and poorer. Social security thus becomes necessary. Furthermore, inadequate public healthcare facilities and expensive private healthcare healthcare heighten the relevance of social security. In recent years, the social and economic policies of developed and developing countries are attempting to address social security needs. There is a need for social security during old age quite early. The Indian Constitution guarantees social security in old age under Article 41. But ideals have rarely translated into reality at the grassroots level.

Kerala has the most comprehensive safety net among Indian states for vulnerable sections in society. The Kerala Government’s social security schemes primarily target poor families. The elderly in Kerala suffer either by not receiving sufficient economic and/or physical support. The rising cost of living, minimal or no reliable employment opportunities and nuclear families are the culprits. Age-based prejudice against old people is now firmly recognised. There are more than 35 social security and assistance schemes that have been implemented in India. Therefore impact and effectiveness of social welfare programmes on senior citizens is assessed to sensitise the government and the policy planners for their mid-term corrections. This data was collected from 320 elderly persons in Trivandrum district in Kerala.

Informal Caregivers’ Expectations and Experiences of Hospital Admission of a Relative with Dementia

This paper describes findings from a two-phase study undertaken in the UK by a multi-disciplinary research team. 111 pairs of people with dementia (PWD) and their family caregivers were recruited from patients referred to a specialist psychiatric liaison service in two English general hospitals. Data was obtained about their quality of life (QoL-AD and EQS-DL), severity of dementia (MMSE), carer stress (GHQ), activities of daily living (I-ADL) physical illness and depressive symptoms (GDS), and economic data on care services and resources (Sheehan et al 2012). These measures were repeated at six months and at twelve months where feasible. In the second phase caregivers whose relative was planned to be discharged to a long term facility were interviewed several times, the final interview took place about four months after the admission of the PWD to the facility (Katz et al 2013). This paper focuses on a) caregivers’ observations whilst the PWD was in hospital and b) the process of choosing a facility.

Concurrently and retrospectively family caregivers gave detailed accounts of their relative’s care in hospital. They varied considerably in their assessment of the quality of care received, but many focused on the patient’s physical and mental deterioration during the hospital admission. Caregivers noted how their roles vis-à-vis their relative changed, and described their emotional and practical reactions to what they observed. Most recounted a difficult process of being an ‘outsider’ to the care of their relative and feeling guilty and remorseful.

Caregivers described their experiences of having to choose a long term facility (often at short notice) with relatively little guidance from hospital or social services. This paper focuses on their perceptions of the conflicts caregivers face in endeavouring to provide protection for their relative whilst simultaneously carrying out their (filial) responsibilities.

If I Had Cancer I Would Get Loads of Sympathy, ’Cos It’s HIV, I Can’t Even Tell Anyone: Young People’s Understanding of the Stigma of HIV

There is little research which has documented how the stigma of HIV is understanded by young people who have grown up with the virus. This paper presents the experiences of twenty-eight participants living with perinatally acquired HIV in the UK. At the same time as being formally told their diagnosis participants recalled being alerted to the stigma of HIV. They are advised to keep their status secret to avoid discrimination or rejection. The fear and experience of stigma was reported as central to their experiences of growing up with HIV. Participants observed that HIV is viewed differently to other illnesses, and believed that, unlike other health conditions, HIV did not evoke a sympathetic or supportive response. The young people identified the negative and derogatory talk around HIV in wider society as affecting their self image. Through their observations of the negative media representation of HIV coupled with the lack of positive role models, they learn that it could be counterproductive to be open about their status.

This paper presents the strategies participants devised to avoid stigmatisation. Through this an alternative biography to explain hospitalisations and illnesses, conceal medication in the home, hide the taking of medication at school and with peers, deny knowledge and awareness of HIV and learn ‘the code of silence’ and to ‘keep their heads down’. The external negative representation of HIV I/HIV infection forces the stigmatised nature of their condition and young people in turn feel pressured to conceal. Goffman’s (1959) explanation of the stigma of HIV identify the link with sex, promiscuity, racial stigmatisation, fear of infection and association with homosexuality and intra-venous drug use. Participants themselves construct a hierarchy of blame: those perinatally infected are ‘innocent’ whilst those infected through sexual contact or intra-venous drug use are seen as responsible for their own infection.

KAVALIAUSKAITE, JURATE* (VILNIUS UNIVERSITY, jurate.kavaliauskaite@tpsmi.vu.lt)

This Ain’t Mere Eco-Nationalism: Undervalued Cultural Roots of the Lithuanian Green Movement

A nation state embodies the political order of the modernity in contrast to contemporary Green movements foreshadowing its end (Hurrel, 1994; Lash et al, 1996). Consequently, nationalism and environmentalism are considered to be hardly compatible companions (Hamilton, 2002). Therefore a puzzle of the Greens, found at the vanguard of independence movements of Central and Eastern Europe in late 1980s, is often resolved with a simplistic disavowal of their “green” identity. In words of American scholar Jane I. Dawson, here Green movements were no more than a manifestation of eco-nationalism, a mere surrogate for a hidden nationalist strife (Dawson, 1996, 2000). The paper aims to challenge the nationalist thesis, a reductive and homogenising reading of eco-mobilization of 1980s in the region, bringing to the fore a deeper empirical look into complex and diverse cultural origins of pioneer organisations of the Green Movement (Lietuvos Zalies) in Lithuania. Archival analysis and in-depth interviews with surviving fathers and active members of the Movement reveal tangible distinctions in the collective identities (Melucci, 1995) of three earliest voluntary environmental associations, Zemyna, Aukuras and Atgaja, in Lithuania. The identity work and differences among the early Greens are poorly explained by eco-nationalist argument, however, their mutual tensions are well represented by the classical distinction between anthropocentric and ecocentric worldviews (Nass, 1973; Eckersley, 1992), embedded in peculiar local cultural meanings of ‘nature’ and conflicting logics of soviet environmental modernization, (neo)traditionalist apotheosis of indigenous ‘ethnoscape’ (Smith, 1999) and lively postmodernist celebration of the ecology of countercultural lifeworlds. These findings urge for a more rigorous and subtle approach to the play of cultural fields and cultural notions of ‘nature’ in environmental/ ecology movements not only in Europe but also worldwide, including Asia (Thomas, 2002).

How to Conceptualize Social Inequality after Risk Concept?

How to conceptualize social inequality after risk concept?

KAWABATA, KENJI (The University of Tokyo, kawaki@gmail.com)

How to Conceptualize Social Inequality after Risk Concept?

How to conceptualize social inequality after risk concept?
logic of wealth distribution in a society of scarcity to the logic of risk distribution in late modernity”. Thus he pointed out the appearance of risk society “in contrast to class society”.

However, Beck's thesis has been criticized in several researches by showing the contingency of class relevance. Such as Hans-Peter Müller (Müller 1992) or Rainer Geißler (Geißler 1996), J.H. Goldthorpe, (Goldthorpe 2002) etc. Then how can we understand social inequality covering the relevance of risk and class. The issue is to integrate the relevance of risk and class to understand contemporary social inequality. And we need a concept which integrates class elements and risk elements.

This presentation attempts to figure out the issue to integrate class and risk concept focusing on 1980’s individualization dispute in Germany.

Acceptance of Foreign Nurses Based on the EPA in Japan and Future Challenges

Objectives: The acceptance of foreign nurses started in Japan from 2008 under the Economic Partnership Agreements. Over 400 nurses have come to Japan from Indonesia and the Philippines thus far. If they do not pass the exam within 3 years, they basically have to return to their countries. They can work in Japan as nurses if they pass the Japanese national board exam for nurses within 3 years after coming to Japan and they will be paid the same or more as Japanese nurses. Passing the national board exam for nurses is the main issue for the foreign nurse candidates. So far, the rates of foreign nurse candidates passing the national board exam were 0% in 2009, 1.2% in 2010, 4.0% in 2011, 11.3% in 2012 and 9.6% in 2013. Though the pass rate is gradually increasing, realistically, passing the exam is very challenging for them considering the fact that the overall pass rate for Japanese applicants is approximately 90%.

Methods: We conducted a study on the practice national board exam targeting Filipino nurse candidates in Japan and Indonesian nursing students in Indonesia. We requested them to take the Japanese national board exam translated into English and Indonesian and analyzed the exam results.

Results: The percentage of correct answers was low even though the practice national board exam for nurses was written in English or Indonesian.

Conclusions: Because the percentage of correct answers was low even in the study on the practice national board exam for nurses, we believe that there is a difference in the nursing training curriculums and nursing itself in each country. It is necessary to compare and study the differences in nursing training curriculums in each country as soon as possible.

Environmental and Ethical Implications of Food Consumption Affecting Distant Countries: How Aware Canberra and Tokyo Community Gardeners of These Issues

Global food system has developed with the increased power of agri-food corporations. Under the current structure, wealthy people tend to over-consume food, while poorer people are experiencing social inequality and degradation of their environment. Recent studies around ‘alternative’ food systems have highlighted grass roots movements, especially in industrialized countries, for democratic and environmentally sustainable food systems, which often focus on local food production. However, it is still necessary to discuss environmental and ethical soundness of global food production and consumption, because it is unrealistic to expect that local food systems can immediately become the dominant structure. To begin to transform the current dominant system, it is important to explore whether people who are engaged in ‘alternative’ food systems understand and care about the ethical and environmental issues around global food systems, from consumer point of view. Consumption attitude of imported food is a key, as citizens in wealthy countries are the major actors of global food consumption. However, until now, how to choose what to buy, and how to create demand, even though this power is restricted. This study may then point to the possibility of these people engaging in ‘alternative’ food system becoming agents for global change.

This study examined whether community gardeners in industrialized countries have an understanding of, and interest in, the ethical and environmental implications of the current global food supply chain. This study compares Canberra (Australia) and Tokyo (Japan) as case studies. Initial analysis of interview data suggests that participants from Australia expressed a stronger understanding and awareness of ethical and environmental issues occurring outside the country than Japanese participants. The cultural, political and economic differences, including different position in the global food system (Australia as a net-exporter and Japan as a net-importer), underlining these results will be considered.

On Hannah Arendt's Understanding of the Society or the Social: Resisting Unprecedented Crises

Hannah Arendt stated in The Human Condition her intention to understand society or the social as well as provide criticism on society and salvage the political to promote appreciation of and resistance against unprecedented crises. In her pursuing an understanding of society, she has adapted a unique method tracing back to the distinction between the public and the private in ancient Greece as the origin of society, and then referring to the history of theories on society presented by John Locke, Adam Smith, Karl Marx, and sociologists Auguste Comte and Herbert Spencer.

In this paper, I will interpret her understanding of society based on the above method and argue that society is fundamentally ruled by the biological life process. Therefore, human life and activities in society are regulated based on whether each person contributes to the sustenance of the life process and multiplica-

of lives. This interpretation can link Arendt's understanding of society in The Human Condition with her descriptions on unprecedented crises in her other writings, especially The Origins of Totalitarianism. Arendt has stated that when people are extremely forced to contribute to a function of the life process, an ideology forms out of ideas of race, body, and other biological things contributable to such a function. By rise of such an ideology, People not contributable to the function have been removed to a condition of complete rightlessness in imperialism and concentration camps in totalitarianism. Moreover, to accelerate the function of the life process, humans apply nuclear fission to harness nuclear power at the risk of irreversible danger, "to act into nature".

In addition, this paper outlines my attempt to search for a normative theory in her arguments on resisting unprecedented crises by focusing on her concepts of forgiveness and promise.

"I Don't Want to be a Burden": Japanese Immigrant Acculturation and Their Attitudes Toward Non-Family-Based Elder Care

Elder care remains in the family sphere in Japan while elderly Japanese immigrants in the U.S. are actively planning to utilize formal care services. Although social structural conditions may explain these differences, they do not fully explain "how" Japanese immigrants have developed norms of independent living and utilization of formal care services. This paper will focus on how Japanese immigrant women's value acculturation leads to their cultural preference for non-family-based care. They seem to accept the U.S. norms of the independent parent-child relationship and see their children as "other" individuals rather than "inseparable" family members who are obligated to fulfill their filial duty. This value acculturation may manifest in their preference for independent living, friend-based support, and utilization of formal care services. This ensures their middle-aged children's freedom from filial care duty by showing no expectation of it at all.

The Reception of "Art for art's sake" in Japan: Case Study of a Classical Music Festival Audience

The purpose of this paper is to examine how the idea of “Art for art’s sake” is received in contemporary Japan from the perspective of music and the human body. The concepts art and artist are typically described as relatively new conceptions that originated in modern European societies. Modern societies, musicians were usually not regarded as artists, but rather as artisans who produced their work based on orders received from patrons. Therefore, their work was not regarded as art but as extensions of rituals or worship practices. However, during the modern period, a movement started that viewed these activities as art. It appears that the ideal of Art for art’s sake provided impetus to this movement. In this study, we therefore attempted to determine the reception of Art for art’s sake in contemporary Japan. Research data were collected using a survey of the Saint Kinen Festival Matsumoto, which is one of the most famous music festivals in Japan.

The analysis focused on factors that oriented people toward the ideal of Art for art’s sake, and the results demonstrated the following major findings. First, people who attended the festival because of their relationships rather music interest tended to demonstrate an orientation toward Art for art’s sake. Second, participants who were closely involved with classical music indicated a strong ori-

entation toward Art for art’s sake. Third, people who were introduced to classical

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
music by listening to it with media, such as televisions or radios also indicated a strong orientation toward Art for art’s sake. The results indicate that as people consume music through media rather than their bodies (e.g. playing musical instruments or attending music concerts), their musical consumption become individualized and their perspective on the ideals of art more purified.

From Clinton’s Anti-“New Terrorism” Policy to Bush’s “War on Terror”: Presidential Transition in the Anti-Terrorism Policy of the United States

This paper aims to tackle the question of why the United States came to launch the war against Afghanistan and Iraq under the name of “Global War on Terror.” To clarify this problem, I examine the historical usage of the concept of “terrorism” by the two U.S. administrations surrounding the 9/11 attacks in 2001. It is notable that some terrorist scholars were able to “predict” the emerging threat of the religious or ideological terrorism as “New Terrorism” shortly before the 9/11th attack on the World Trade Center. Scholars such as Daniel Benjamin and Steve Simon argued in the paper published in Survival that more lethal and dangerous threat of the religious terrorism was increasing. This poses a serious puzzle; because even those scholars themselves admitted that there were no dramatic statistics or overwhelming evidence before the 9/11 attacks. To answer this question, I focus on the concept of the “religious motivation” in those scholar’s arguments, and perform a conceptual analysis. By doing so, I argue that the advocates of the “new terrorism” did not insist the newness of the “new terrorism” based on the empirical data of the lethality of terrorist attacks at the time, but in fact they redefine the conceptual dichotomy of “religious/sacred” based on the standard of negotiability, by which the “new terrorists” were characterized as non-negotiable and irrational jihadists. This new concept of “religious motivated terrorists” made possible the policy prescription of “war on terror” of the Bush Doctrine, which justifies the preemptive attack to those new terrorists and the “rogue states” which they see as coming from Islam. This paper attempts to unravel the collective trauma that prompts monks to manifest a similar pattern of both self-defense and aggression, and understand the cultural and religious undercurrent that continues to influence people’s aspirations and worldview.

Family Support and Mental Health Care for the Japan Self-Defense Force Personnel

Since 1992, Japan Self-Defense Forces (JSDF) has engaged in various types of new missions overseas, stretching globally from Haiti to Golan Heights, Iraq, Sudan and Gulf of Aden. The 3.11 East Japan Great Earthquake in 2011, subsequent tsunami, and nuclear power plant disaster in Fukushima, resulted in the largest-ever domestic disaster relief operation in the JSDF history, mobilizing more than 190,000 personnel. Given the increased operational tempo, JSDF have tried to improve institutional family support and mental health care programs. This paper describes how the social-psychological support programs have developed, focusing on the Japan Ground Self-Defense Force (JGSDF). In particular, I examine the institutional programs of the Family Support Center, Mental Support Center, and a “Mobile Counseling” or outreach program, to provide mental health care to JGSDF personnel and their families in the Hokkaido area. Also, the effectiveness of the institutional programs from the soldiers and their families’ perspective will be examined, based on both quantitative and qualitative data, including interviews of military families. In conclusion, relevance of “community capacity” model will be discussed in terms of enhancement of social support networks for the JSDF families.

New Middle Class in Singapore As a Global Creative City

I would like to present a new middle class and cultural development in Singapore as a global creative city, particularly focused in the following two points. One is taken in Singapore case and I would deal with the detail content developed during these 20 years. It is very interesting case, because Singapore government has successfully accomplished the cultural institutions. As a result, there have occurred some intensions or class discrepancy among Singaporean people themselves, additionally a famous conflict between foreign workers and Singaporean workers. I introduce the concrete cases and analyze them. During 20 years Singapore government considerably planned and systematically managed some artistic areas including artistic participation, art education, and artistic outreach activities. And it will be included a famous ethnic public policy in Singapore. I would trace the historical transformation and analyze the sociological meanings. Singapore would compare with other Asian cases, particularly I would take both Shanghai and Tokyo. Both cities are also global creative cities just the same as Singapore. Of course each city has had its original history and has making its unique type by itself. But there exists Asian Share-ness among the three cases. Mainly I would point out the relationship between national/city government and people, particularly I would discuss the future of the new class conflict in Singapore and the sociological meanings compared with the two cities.(227 words)

Social Friction in the Community Hosting Evacuees of Nuclear-Disaster in Fukushima: A Case Study of Iwaki City

The Fukushima Nuclear disaster has brought various and complex social divide, not only to those communities forced to evacuate but also to the communities hosing evacuees. Iwaki-City, Fukushima Pref., is currently hosting about 24,000 evacuees from several municipalities, which is the largest evacuee-hosting

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
municipality in Japan. One of the issues in the aftermath of disaster in Iwaki-City is the frustration of its residents to host evacuees and the social friction between evacuees and residents.

The aim of this research is to examine the structural problem of the social friction, based on the data taken by the interviews to the evacuees and the hosting residents and supporters in Iwaki City. The cause of friction can be categorized as (1) the drastic social change and inconvenience of daily life due to the rapid population growth, (2) the relative deprivation constructed by the compensation for mental damage and the sense of risk to radiation and (3) the structural issues of disaster relief assistance for evacuees and to create an environment for the evacuees and residents to interact.

Especially regarding the third issue, as evacuees are widely dispersed, the formal assistance for disaster relief, which differ according to municipalities, have not necessarily fulfilled the needs of their current daily life, and informal self-help groups of evacuees have emerged to reconstruct their existing social network in order to obtain an access to social resources. However, in this situation, the sense and need of belonging to each municipality is emphasized and these differences eventually seem to function as ethnic differences and deepen the gap between them. This issue illustrates the social and economic gap constructed in the process of disaster, the difficulties to organize a disaster relief assistance for evacuees in this nuclear disaster and the need of coordination assistance between evacuees and residents.

Negotiating the Risk of Being Murdered in Turkey: Femicide in Everyday Life

Existing literature on femicide frequently focuses on certain patterns of femicide, characteristics of perpetrators and/or victims as well as some other institutional aspects such as policy orientations to reduce incidence and social changes (like globalization, migration and transformation of family structures and gender order) that would possibly have an influence. However, very little study sheds light on how femicide is perceived in the everyday life. This study brings forward women’s perceptions, and their negotiations with rising phenomenon of femicide in Turkey. For this purpose, this study reveals different aspects of femicide in Turkey at two levels. At a macro level, we aim to figure out violence against women, and femicide as an extreme practice of violence through interrelationality with social and economic changes in Turkey. On the other hand, at a micro level, based on interviews with women of risk groups defined through some demographic factors like marital status, belonging to migrant communities and class positioning, this study analyses women’s emotional attachments to femicide and their strategies to challenge risk of being murdered. Accordingly, we aim to reveal how public visibility of femicide shape women’s practices in everyday life and re-constitute social and cultural demarcations between appropriate and inappropriate gender performativities. Moreover, this study would give us an opportunity to understand potentials and/or limitations of women’s agency across increasing phenomenon of femicide and how it is differentiated in terms of class, cultural and regional differences.

KAYA, TÜLAY* (Istanbul University, tulay.kaya@istanbul.edu.tr)
Turkish Sociology’s Footprint in the History of Sociology

A simple glance at the classical or contemporary sociological theory books is enough to recognise the general tendency of limiting the history of sociology to the West in general without even mentioning the existence of other sociological traditions. The said situation has also a strong relation with the tendency of considering Western history as the main and only source of sociology.

The purpose is to show that the history of sociology cannot be limited to Western traditions only. In that term emergence of sociology in Turkey and its establishment as an academic discipline at higher education institutions is a good example.

As the need for knowledge and practice of sociology in Turkey was different from the conditions the West was facing, development of sociology had its own unique way in Turkey. Sociology as an academic discipline was first taught in Darülfünun (House of Sciences) which was a higher education institution in the Ottoman Empire period. After the collapse of the Ottoman Empire and with the emergence of the new Turkish Republic, new reforms took place in higher education. In 1924 Darülfünun was closed and Istanbul University was founded, then up until now lots of sociology departments have been established at various Turkish universities.

One of the assertions of this paper is that while sociology is considered as a mere Western heritage, the history of sociology’s emergence and involvement in higher education in Turkey also show that particular social and historical contexts of Turkey have created different needs for and relations with it as a science resulting in different approaches and traditions which are also scientific and historical contributions and which should not be overlooked.

Attitudes Toward Non-Normative Sexualities Among University Students in Japan: Quantitative Analysis (Part 1)

Purpose: Although there is a sizeable body of social research on gender inequality in Japan, biases against sexual minority groups have remained largely uninvestigated. Through surveying university students, we examined the feelings of heterosexual people towards sexual minorities.

Method: We conducted questionnaire surveys at three universities (n=724). Members of sexual minority groups in the sample were excluded from the analysis. We used t-test to compare the negative emotions towards different sexual minorities.

Results: We compared feelings towards female homosexuality, male homosexuality, bisexuality, having ambigous (neither male nor female) gender identity, and undergoing sex reassignment surgery (SRS). Firstly, among five items, feeling towards ambiguous gender identity is the most negative and SRS is the most positive. Among three sexual orientations, male homosexuality is the most negative, and female homosexuality is the most positive. Then we compared the averages among feelings towards sexual activity between women, becoming friends with lesbians, having romantic feelings between women, and holding hands between women. The feeling towards sexual activity is the most negative. Finally, we compared the averages among feelings towards sexual activity between men, becoming friends with gay men, having romantic feeling between men, and holding hands between men. The analysis shows that the feelings towards sexual activity and holding hands are the most negative, and romantic feeling the most positive.

Discussion: The findings that feeling towards ambiguous gender identity is the most negative and SRS is the most positive suggest that transgender people that had SRS are accepted due to their fitting into the gender binary, whereas people who have ambiguous gender identity aren’t accepted due to their failing to fit into the binary. Although the feeling of rejection towards male homosexuality is stronger than that towards female homosexuality, it also suggests that gay men tend to be associated more with sexual matters than lesbians.

Social Security and Orphans in Foster Care: The Experiences of Social Workers and Home Based Care Workers in the South African State’s Provision of the Foster Care Grant

South Africa’s HIV epidemic remains the largest in the world. It is estimated that there were 5.6 million people living with HIV in 2009 (WHO, 2011: 24). South Africa had an estimated 1.9 million children who had been orphaned by AIDS by 2009 (SAHRC, 2011: 57) and this figure is expected to increase to an estimated 4 million children (approximately 10% of the entire population) by 2015 (Whiteside and Sunter in Madhavan, 2004: 1443). The South African state has a well-developed system of social security. The state introduced a foster care grant, which is unique to it, in response to the HIV and AIDS pandemic (Hearle and Ruwanpura, 2009: 427). For the state to get the foster care grant to the orphans there are a number of qualifications that need to be met one of which is that the child is not living with either of the parents. The state then meets a number of qualifications of the social security grant in order to obtain the grant. The decision to grant a social security grant is a decision which is made by a social worker at a social worker office.

In this paper, we aim to examine the experiences of social workers and home based care workers in the South African state’s provision of the foster care grant.

Method: We conducted questionnaire surveys at three universities (n=724). Members of sexual minority groups in the sample were excluded from the analysis. We used t-test to compare the negative emotions towards different sexual minorities.

Results: We compared feelings towards female homosexuality, male homosexuality, bisexuality, having ambiguous (neither male nor female) gender identity, and undergoing sex reassignment surgery (SRS). Firstly, among five items, feeling towards ambiguous gender identity is the most negative and SRS is the most positive. Among three sexual orientations, male homosexuality is the most negative, and female homosexuality is the most positive. Then we compared the averages among feelings towards sexual activity between women, becoming friends with lesbians, having romantic feelings between women, and holding hands between women. The feeling towards sexual activity is the most negative. Finally, we compared the averages among feelings towards sexual activity between men, becoming friends with gay men, having romantic feeling between men, and holding hands between men. The analysis shows that the feelings towards sexual activity and holding hands are the most negative, and romantic feeling the most positive.

Discussion: The findings that feeling towards ambiguous gender identity is the most negative and SRS is the most positive suggest that transgender people that had SRS are accepted due to their fitting into the gender binary, whereas people who have ambiguous gender identity aren’t accepted due to their failing to fit into the binary. Centre-periphery relations and academic autonomy in Latin American social sciences: critical comments

The volume edited by Fernanda Beigel is positioned at the intersection of various strands of literature such as sociology of science, sociology of intellectual and internationalization or globalization of the social sciences. It integrates various debates and enriches them with in-depth, historical studies provided by experts in the domain. It provides a conceptual differentiation of the ubiquitous term "academic autonomy" by contrasting it with its various opposites (heteronomy, dependency), by differentiating between its intranational and its international as well as between its disciplinary dimensions. Apart from highlighting the intra-regional variety of cases and thus differentiating the concept of "the periphery", the book thus also manages to restore the agency of the peripheral actors that purely structural analyses tend to overlook. This could only be done convincingly through a set of empirical studies. They clearly show that academic exchange, however unequal, is not unilateral.

Ibn Khaldun – Assessing His Influence in the Foundation of Modern European Sociologies

In the course of recent debates around decentering, decolonializing and prizalizing the history of our discipline, Ibn Khaldun has been (re-)claimed not as a precursor, but as one of the "founding fathers" of sociology. Suspicion has been voiced that his ideas are indeed taken from his Muqaddima. As an important reference in the foundational phase of modern European sociology, this has been lined with the construction of the sociological canon and thus remains today an unacknowledged source. This paper systematically assesses the presence of Ibn Khaldun as a reference in early sociology texts. Starting from a representative corpus of German-language sociological monographs published between 1900 and 1934 (bibliography provided in Käsler, 1984), this study reconstructs the circulation of Ibn Khaldun's works within the German-language and wider European community of scholars. While the overall presence of Ibn Khaldun is quantitatively low, his ideas can be traced to three potential "entry points" into modern sociology. Spanish history of ideas that refers to Ibn Khaldun's heritage; debates between organicists and historical sociologists at the Institut International de Sociologie; as well as Vienna as a place of debate around Ibn Khaldun, possibly through the influence of Ottoman social thinkers.

Health, Work, Caregiving and Retirement in the New Zealand Context

Several features of the New Zealand policy context provide an interesting comparative perspective on the relationships between caregiving, paid work and health status in the fifth wave survey of a national sample of participants aged over 55 years, drawn initially in 2006 from both the general and the Maori electoral roll. Relatively high workforce participation rates for those aged over 65 years, followed the final removal of mandatory retirement in 1999, and a universal national superannuation system has been retained alongside the development of a voluntary contributory fund, known as KiwiSaver (introduced in 2007). Legislation (ISPs) to provide a 'default on' filter to address anxieties about internet pornography and this has provoked renewed debate. These debates have involved many experts from the internet industry, filtering vendors, academic researchers, child advocacy NGOs, civil liberties groups and adult industry representatives arguing for and against the idea that the state can (or should) engage in the regulation of internet content. Drawing on comparisons from both the Australian and British examples, this paper explores how the rhetoric of 'moral panic' and 'risk' are variously used as discursive strategies in recurring policy debates about filtering pornography on the internet.
African American women. Family support and economic strain mediated this relationship for Afro-Caribbean women, while discrimination, economic strain, friends, family, and group evaluation did so for African American women. Our findings speak to the paradox of inclusion. Although the experience of subjective social status is similar for both African American and Afro-Caribbean women, the different effects of education, perceived discrimination and group evaluation suggest the need to avoid homogenization of the life experiences of women of color when examining disparities in mental health.

Father-Child Relationship Quality in Living Arrangements after Divorce

Based on multi-data actor from the Divorce In Flanders survey conducted in 2010, this study examines to what extent the quality of father-child relationships is higher for children in families with joint physical custody arrangements compared to children who live solely or mainly with their mother. We focus on two mechanisms that may explain the association between living arrangements and the quality of the father-child relationship: (1) the level of father involvement and (2) the quality of the co-parental relationship. In addition, we examine whether gender of the child and conflicts between the ex-spouses moderate the association between living arrangements and the quality of the father-child relationship. Our results reveal that children who live in families with joint physical custody have indeed higher quality relationships with their fathers, compared to children who live solely with their mothers, but not compared to children who live mainly with their mother. In addition, our findings reveal that children in joint physical custody report higher quality relationships with their father compared to children who live solely with their mother because in the former families fathers are more actively involved with their children and the ex-spouses have better co-parental relationships. No significant moderating effects from child's gender or conflicts between the ex-spouses were found. Contrary to what is often thought, our results suggest that it is the fact whether or not children live with their father, and not so much the amount of time they live with them that is important for the quality of the father-child relationship.

The Impact of Gender Role Ideology on Direct and Indirect Paternal Involvement: A Focus on Men Who Make the Transition to Parenthood

Using data from the first two waves of the Netherlands Kinship Panel Study, I examine to what extent men's gender role attitudes explain men's paternal involvement after the transition into parenthood. I extend previous work in two ways. First, I incorporate multiple dimensions of paternal involvement. Although father's role of providing is highly important, there is scant research that directly addresses providing as a form of paternal involvement. Second, I aim to unravel issues of gender by focusing on men's gender role attitudes as predictors of paternal involvement before these men enter parenthood. In most studies, scholars use the simultaneous measurement of father's views on parental roles and paternal involvement. As such, father's experiences with paternal involvement may well have shaped their attitudes concerning parental roles rather than the other way around. My results show that men with more modern gender role attitudes indeed spend more time on childcare tasks, also when controlled for relevant background characteristics such as educational attainment, work hours, religiosity, age, partner status, age and gender of the child. In contrast, gender role attitudes have no impact on changes in men's work hours across the transition to parenthood nor on their level of income. This latter finding shows that men's work schedule and their provision are unrelated to men's gender role attitudes, suggesting that being a good provider is of importance to all men who become fathers, irrespectively of gender role attitudes.

Does Greater Equality in Governance Contribute to Greater Health Equity? Lessons from Closing the Gap for Aboriginal Australians

There is growing evidence that providing increased voice to vulnerable or disenfranchised populations is important to improving health equity. In this paper we will examine the engagement of Aboriginal people and organisations in local governance reforms associated with the Indigenous Health National Partnership Agreements (IHNPAs) in Australia and its impact on the uptake of health assessments. The sample included qualitative and quantitative responses from 188 people involved in regional governance in Aboriginal health. The study included data on the uptake of Aboriginal health assessments from July 2008-December 2012. The eligible population was 83190 in 2008/09, 856986 in 2009/10, 88256 in 2010/11 and 90903 in 2011/12. Logistic regression was used to examine the relationships between organisations within forums and the regional uptake of Aboriginal health assessments. The independent variables included before and after the IHNPAs, state, remoteness, level of representation from Aboriginal organisations and links between Aboriginal and non-Aboriginal organisations. The introduction of the IHNPAs was associated with a shift in power from central government to regional forums. This shift has enabled Aboriginal people a much greater voice in governance. The results of the analyses show that improvements in the uptake of health assessments were associated with stronger links between Aboriginal organisations working with other Aboriginal organisations and between non-Aboriginal organisations working with Aboriginal organisations. Higher levels of community representation were also associated with improved uptake of health assessments in the IHNPAs. The findings suggest that further expansion of Aboriginal and non-Aboriginal organisations in region- al planning may play an important role in improving health equity. This study makes an important contribution to understanding the processes through which the incorporation of disadvantaged groups into governance might contribute to health equity.
Finally, the proportion of the sample that experienced poor childhood conditions, financial hardship, or had received social benefits at baseline was successively reduced during follow-up.

The impact of selection processes throughout the life course is commonly discussed in ageing research. However, few studies have explored how these processes change the social composition of longitudinal samples over time.

Eat the Rich, Ignore the Poor: The Welfare State and Income Inequality in 46 Societies

The emergence of the welfare state provided a countervailing force against the social ills of industrial production and capital markets, namely economic inequality. However, issues of legitimate pay and income inequality regularly spark bitter polarizations, debates and protests. In this paper, we investigate the possibility that these attitudinal phenomena are shaped by the welfare state. We test hypotheses that push beyond material self-interest or country-level development in explaining individual attitudes. Namely we use the breadth of welfare state institutions (welfarism) as a way to cross-nationally identify what leads individuals to endorse redistribution and legitimate earnings for low and high status occupations. Descriptive and institutional theoretical perspectives, we find that individual attitudes are attracted to the material returns of the welfare state and envy of those who have high incomes. Using ISSP data, this finding is true in the broadest range of countries investigated to date in either of the legitimate pay and welfare state research traditions (46 countries; 112 country-time points; 120 individuals).

Insights from the Past: Disaster Research and the Second Environmental Crisis

We are living in a time of accumulating hazards that form a universal risk milieu: a concentration of potential dangers across natural, technical, and social systems. Intensifying urbanization, climate change, aging infrastructure, and global economic difficulties combine to create a complex of perplexing hazards for which scientific discovery and policy guidance are both needed and elusive. Yet a real environmental crisis occurred in the United States in the 1960s: a realization of threats to the natural environment that were publicized in iconic works such as Silent Spring and that inaugurated a movement of activists, musicians, actors, public officials, and legislators to enact wideranging laws and regulations to lessen environmental pollution. In less than a decade, the Clean Air Act, the Clean Water Act, and the Environmental Protection Agency were created to tackle toxic challenges to health and wellbeing. This was a time of both rapid policy innovation and moral transformation regarding human interaction with the environment. In this paper, we consider how the experiences of that earlier era can inform needed change now.

Consumption Behavior and Disaster Recovery: Insights From Eight Years In a Living Laboratory

On August 29, 2005, Hurricane Katrina came ashore along the United States Gulf Coast resulting in unprecedented damage and presenting long-term struggles for residents. Since that date, the region has been impacted by other natural disasters, most notably Hurricanes Rita and Isaac, resulting in a rich laboratory for investigating the impact of these large-scale, shared life events on various behaviors. Utilizing data collected over 8 years by several research teams[4] and drawing from extant research in marketing, sociology and psychology, this body of work investigates the short- and long-term effects of these natural disasters on consumers’ consumption behaviors and how these behaviors aid in the individual and community recovery process. Several themes are explored in this research. In addition to discussing methodological challenges and best practices when collecting timely information pre- and post-natural disaster, the role of consumer behavior as it relates to the various stages in the disaster recovery model is examined. Using data collected from 318 individuals, the role of consumption as a tool to regulate emotions is explored as a means to cope with an impending threat. Further, depth interviews and online surveys (n=448) conducted in the weeks and months after impact shed light on the collective stress and resulting positive and negative consumption behaviors and attitudes (i.e., impulsive and compulsive buying and evolving views of possession). Follow-up surveying (n=176) four years after a natural disaster illuminates the role of consumption behaviors in restoration, reconstruction and recovery. The ethical and social responsibility implications for public policy makers are discussed along with future opportunities for social science researchers.

This research develops a new typology of the structure of the world economy, based upon Charles Tilly's (1994) theorization of the emergence of the modern nation-state system. Following Tilly, this research conceptualizes the world economy as a four-dimensional space of economic and military power. These dimensions include 1) size of the economy 2) capital intensiveness of the economy 3) size of the military and 4) capital intensiveness of the military. A typology is constructed that locates countries within this multidimensional space from 1850 to the present, utilizing fuzzy set methodology. This typology allows us to better understand the shifting relationships among countries at any given point in time as well as changes over time, and provides new insights into the dynamics of the world economy such as economic development, inequality, and hegemony.

Insert Coin for the Next Level: Digital Games and the Idea of Regional Development for Less Developed Regions: The Case of Ankara Gaming Cluster

Digital Gaming sector is one of the fastest growing sectors in the world. It is estimated that the growth of the gaming market will reach to 85 billion USD which doubles the cinema and music. In Turkey, Gaming sector has boosted in Turkey with the beginning of new millennium. It looks very new and baby born sector. But, its development pace has been incredible.

The idea of regional development is now crucial concept for the developing countries in highly globalized world in which the competition has increased day by day. Obviously, the developing countries cannot catch the big ones in every field of development. Somehow, they have to develop their production capacities, productivity and knowledge level in specific fields.

Even if economic development processes are highly localized not all ‘locations’ are equally able to succeed in the global competitive environment. In fact, regardless the sector, the success of innovative activities requires a convenient environment which comprise of local social, political and institutional actors.

In the case of digital gaming sector, the only cluster is founded in ODTU Teknokent which is the biggest science park of Turkey. More than 15 enterprises are located in the same region. Besides almost all the stakeholders are located in the same region such as two big universities having M.S: Programme on Gaming and also public institutions funding gaming projects.

In this paper, the digital games sector will be discussed specifically. One of the main questions is that: Can digital games can be a proper factor which contributes to both regional and national development in developing countries like Turkey? Or in what sense such a growing sector can increase the socio-economic level of the country? The gaming cluster of Ankara is used as a case.

Globalization, Uneven Economic Development, Inequality, and Poverty: The Interactive Affects between Position in the Modern World System and Domestic Stratification Systems

Various data sources indicate that in the last decade(s) world poverty has decreased and global inequality between nations has diminished. However, within many less developed countries and even among some of the most developed countries, primarily in the USA, inequality has increased dramatically while poverty has not gone down, or at times increased. From the 1970s, research focused on less developed nations, following the modern world system perspective, has shown that globalization has mostly led to increasing inequality and less long term economic development in most nations, and in some cases even higher poverty. There is increasing evidence that a large part of the increasing inequality in the USA, in contrast to many EU countries, is related to economic globalization.

Recent evidence has suggested that the impact of economic globalization has caused contradictory effects throughout the world. Other data show that less developed countries in Asia, in contrast to African and Latin America, are more likely to have more economic development, less poverty, and less growth in inequality from increasing ties to the global economy.

The paper summarizes some differences between the USA and EU nations that have led to the different outcomes of globalization. It focuses on data and several years of fieldwork in four Buddhist countries in Southeast Asia (Thailand, Vietnam, Laos, Cambodia) to identify some of the causes of the impact of ties to the global economy which vary even within Asian countries, showing some Southeast Asian countries (such as Cambodia) share more characteristics with African or Latin American countries than those related to very uneven economic development, rapidly increasing inequality, and no poverty reduction.

This paper suggests how differences in domestic stratification systems are the key to understanding the varied impacts of economic globalization in both rich and less developed nations around the world.

Literacy Leadership and Accountability Practices: Holding Onto Ethics in Ways That Count

Despite the rhetoric of schools serving the needs of specific communities, it is evident that the work of teachers and principals is shaped by government imperatives to demonstrate success according to a set of standard ‘benchmarks’. In this paper, we draw from our current study of new forms of educational leadership that are emerging in some South Australian public primary schools to explore the ways in which mandated accountability requirements are being mediated by principals in schools that serve high poverty communities.

Taking an institutional ethnography approach, we focus on the intersection of trans-local policy and the everyday work of one principal to show the nature of the impact that standards-based reforms are having on practices of literacy leadership and how principals’ work is increasingly constructed by attempts to classify and measure their professional responsibilities. Institutional ethnography explores the complexity of such coordination in its emphasis on actions of people as they engage with the ordinary, usually textually organised, routines of their local work organisation. School reviews in the form of ‘validation days’, and ‘liter...
acy chats’ between a literacy leader and classroom teacher, are examples of such textually organised actions. We elaborate on these inescapable textual framings and tasks faced by the principal and literacy leader, and those that they create and modify in order to ‘hold on to ethics’. We argue that while leaders’ and teachers’ everyday work is regulated by ‘ruling relations’ (Smith, 1999), it is also organic and responsive to the local context. We conclude with a reflection on the important situated work that school leaders do in mediating trans-local policies that might otherwise close down possibilities for engaging ethically with students and their learning in a particular school.

KUKA, MARTIN* (Catholic University of Leuven, kuka.mart@gmail.com)

Back Home: The Reintegration of Return Albanian Migrants in a ‘Foreign’ Environment

In this paper we explore the Albanian return migration from Greece. Albanian return migration is a neglected field of study and there is little empirical evidence related to it.

In the beginning of the 90s, after the fall of communism in Albania and elsewhere, Greece was the biggest exporter of migrants in the Eastern Block, judging by its proportion to the general population. Over one fourth of the country has lived or is living in a foreign country. Their main destination was Italy and Greece, because of their geographic proximity.

Recently, there is a growing number of migrants that have returned home. Our research is focused on the reasons of their return, the Greek debt crisis being one of them. We mainly explore the difficulties of their re-integration in Albania, and how they perceive themselves in the Albanian society. We call it a ‘re-integration’ because Albania is not the country that they left behind when they first migrated.

It turns changed, pretty much the same way as other closed societies have done after they opened their borders.

We also explore what was the reaction of their family in Albania and their children with regard to their decision to return. What role did their family, their friends, and in general the Albanian government, play during the process of their return? We could include the role of the Albanian government because it has been advertising itself as a facilitator and accommodation for their smooth adaptation.

All Change: The Social Life of Change Management in the UK National Health Service

The UK NHS is going through what is typically referred to as an unprecedented period of change, marked by key priorities of patient choice, innovation, quality, innovation and the minimisation of bureaucracy. These processes are associated with a plethora of paradigms, initiatives and tools designed to support the management of change, including strategies for developing the learning organisation and the role of change agents, predictive change tools, models and processes of personal change, and the rejection of ‘old-style paternalistic’ theories of organisation and culture.

This paper will explore the rise of the change management agenda in the NHS, and the organisational and psychosocial theories and values which underpin it, before moving on to consider how and why we might trace its articulation in the practices of NHS managers, drawing on preliminary data from exploratory discussions and observations with NHS managers working in a large hospital in the North of England. We consider how and why we might go about understanding the social life of change management in organisations by focusing upon manager’s practices and accounts of their experiences of and rationale for change, especially the productive character of change mantras and devices. We end with some critical reflections on the importance and the difficulties of tracking, understanding and articulating the activities and the acts of change in organisations-in-flux and in managing the ways in which we ourselves as researchers are enrolled in the processes of change we seek to study.

Graffiti with Chinese Characteristics: A Longitudinal Study of Campus Graffiti in Northwest China

The current paper, utilizing an original data source of approximately 400 graffiti markings from a single location in Northwest China taken in 2012 and 2013, is a longitudinal content analysis study. The markings were collected from a college/university campus in a predominantly Muslim region of China. The paper engages in a descriptive summation of dominant themes found in the markings and changes in these themes between the collection of original marking in 2012, and the markings that were appearing in 2013. Analysis indicates that themes are consistent with emotional issues experienced by youth embedded in transitional and temporary social networks. Beyond a pure descriptive summation, the paper further explores differences in themes appearing in its data compared to that appearing in documented studies in other parts of China and in other parts of the world.

*Crisis of Multiculturalism*, Neoliberalism and Possibilities for Creating Alternative Narratives in Activism

During the last decade the ‘crisis of multiculturalism’ discourse has characterized media and political discussions in many European countries. Especially Muslims and non-western minorities have been framed as problematic outsiders. The illusion of plural, biliteral cultures, followed by demands on stronger integration and assimilative measures. Notions of gender equality and sexual freedom have played a significant role in such debates not the least in the Nordic countries that build their national identities on being world-champions in achievements in gender equality. Building on interview and media data gathered in Denmark, this presentation focuses on how activists who belong (or are categorized as belonging) to racialised groups (Muslims, non-western minorities) seek to provide alternative narratives and question these hegemonic discourses about migrant/minority families and communities. Public debates on gendered violence in Muslim families, especially forced marriages and honour-related violence, have been on the agenda in Danish media and politics since the 1990s. The othering images of the subordinated, victimized Muslim woman and the threatening, patriarchal Muslim man have circulated in the media for more than a decade, with consequences also for the everyday lives of the marginalized subjects. My paper will analyze how activists create spaces to challenge such images and discourses, as well as to produce alternative narratives and imaginaries. Moreover, it will be discussed how such spaces are shaped by neoliberal rationality that emphasizes individualization and entrepreneurialism. It will be analyzed how governmental ‘role model’ projects, mentor networks for ethnic minority women and media interest in the voice of ethnic minority women shape the spaces from which the studied activists publicly speak from – spaces that means also changes in educational designs.

The Transform of Finnish Educational Policy - the Viewpoint of Special Education

Educational policy in Finland is based on internationally ratified treaties, such as: UN declaration 1993; Salamanca 1994; Dacar 2000, and the Universal Declaration of Human Rights 2007. Since year 1998, educational legislation has been on change towards inclusive principles and values, such as emphasizing equality, participation and shared services. Education is guaranteed for all, regardless of ones background, wealth or origin. According to the official statistics the amount of students who get special education has increased significantly from the year 2005 to 2010. This study examines educational policy in Finland and its implementation in our primary schools. The data of this study contains two educational policy documents: (Education and Research 1999-2004. A development plan and Education and Research 2011-2016. A development plan) What are the essential similarities and differences of these documents concerning special education?
The present paper would like to focus on 1) to assess life satisfaction within low, middle and high socio-economic status. 2) to compare life satisfaction of elderly people living in old age home and in family 3) to assess adjustment of elderly people within low, middle and high socio-economic status. 4) to compare the adjustment of elderly people living in old age home and in family. 5) to compare leisure and life satisfaction of elderly people living in old age home and in family. 6) to compare leisure and adjustment of elderly people living in old age home and in family.

Key words: Leisure, life satisfaction, adjustment, support system

Use of Facebook As a Source of Political Participation Among University Students of Pakistan

Use of Facebook as a Source of Political Participation among University Students of Pakistan.

The Internet has brought about remarkable changes in contemporary societies by increasing access to the information and allowing users to freely express their views to others. Various scholars consider the Internet as a new source of political socialization and a way to bring young people closer to the political process. The Internet facilitates this process in various forms. The use of Social Networking Sites (SNSs) is viewed significant in this regard. SNSs have stimulated the political debate among less democratized societies particularly after the event of Arab Spring. However, there is dearth of scientific evidence that how SNSs are linked with democratic and political participation among the users of developing countries. The following study intends to see that how Facebook, most accessed social networking site in the world, is being utilized by its users in Pakistan for political purposes and influenced its young users to participate in political process. For this purpose, an online survey has been conducted with students of various universities in Pakistan to find out the relationship, if any, between Facebook use and their civic and political participation. The preliminary analysis shows that there is an association between Facebook use and online and offline political participation. However, further inquiry is in process to see the effect of intervening variables to validate this relationship. The study will provide deep insights regarding the political use of Facebook and its influence on civic and political participation.

Islam and the Arab Muslim Refugees in United States

The studies of Arab Muslim refugees in the United States are just in the beginning; research is needed on wellbeing of families. Refugees have more challenges than many other immigrants because of what they have experienced before and after they arrive to United States. Politics, religion, and culture overlap to shape these refugees’ lives. Islam is one of the main factors that influence refugees’ resettlement and adaptation in their new home. New opportunities challenge traditional ways of living. The paper will draw on some of the findings of an on-going research study exploring refugees’ religion continuity and change: fate, rituals, and practices, the role of religion in refugees’ resettlement, adaptation, and emotional support, types of challenges faced for being Muslim, and the role of Muslim communities in refugees’ resettlement. A qualitative approach was used to investigate the perceptions and experiences of female Arab refugees. Semi-structured interviews were conducted with refugees in the middle Atlantic area. Grounded theory was used to build useful theory about Arab Muslim refugees’ religion continuity. Findings emphasize the importance of taking a holistic approach in understanding Arab Muslim refugees’ needs which can lead to successful integration into the American society. Islam is more than religion; it represents a strong emotional support that ties the family together and helps them to assimilate to the new culture, and passing their religious values to their children is one of their priorities. In addition, it appears important for the wellbeing of refugees that they maintain their religious rituals while encouraged to integrate to the new culture. Social ties play an important role on family’s wellbeings and emotional support represented on other refugee friends, relatives, and American friends.
The Peace processes could do no better. There has been a continuous ‘flawed’ peace process in the region providing no solution but encouraging more cycles of violence. The focus of the paper is to explore the dynamics of ethnic conflicts in the region, to examine the engagement of peace process by the Indian state with different communities and to conceptualize ‘Peace as a trouble more than a solution.’

Key words: External powers, India’s Northeast, Ethnicity, Ethnicism, Peace

Participatory Water Governance through Gender Sensitiveisation in the Indian Context

Equity in water, through gender-sensitization of developmental projects in the sector, is now recognised as an international agenda, owing to the commitments made in the Johannesburg Plan of Implementation, and declaration of ‘Water for Health’ as a human right. However, governments in developing countries have been found to be limited by social fabric existing at the community level, strongly held together by long standing traditions and social structures. The study discusses issues and concerns with respect to effective participation of women in governance of water projects, and provides case studies/examples to illustrate the practical implications of successes) and failures) of women for decision-making.

The study concludes that efforts that penetrate into the existing social structure built opportunities for a re-allocation of power amongst different groups of people are required. The study suggests appraisal of projects, inclusive of women, is a key for identification of appropriate entry points for achieving the above objective in water sector. Several intra-gender differences however, impede success of programmes that consider women as a homogenous group.

Inclusion in Continuing Education and Its Unequal Accessibility: An Empirical Analysis for Able to Work Young People in Siberian Region

The data of two surveys conducted by us in Novosibirsk Oblast (in 2012 the economically active inhabitants of semi-urban settlements from 16 to 45 years old were interviewed, N=57; in 2008-2009 it concerned young workers of urban, semi-urban and rural settlements, N=778) demonstrate that in whole a mass demand for further education among the adults has been observed. There is a special need in higher and second higher education, as well as in the courses/programs of supplementary professional education (SPE). The largest need in additional education, professional training and retraining were revealed among those employees whose work is connected with information use or innovative activities (as well as interest in them).

Anyway among all young workers educational activity of different kinds (real or projected) is realized as the most productive means for achievement of fuller self-realization in work. So, for this purpose they prefer increasing of their educational and qualification level in the major profession (41% of answered), also increasing of the general educational level and mental outlook (28,7%), than change of a place of work (8,8%), change of profession or kind of activity (9,8%) or even widening of an area of independent decision-making (15,6%).

However the discovered educational needs essentially surpass real involvement of the adult population in the continuing education. It was revealed the unequal accessibility to SPE services. Thus there is a noticeable part of employees (42,2%) and the unemployed (69%) who never passed before through professional training or retraining. The employees who are available to use a branch system of SPE often have experience of numerous cases of professional development. While the employees of the enterprises without corporate SPE system, become only casual participants of such programs. So it leads to unequal “accumulation” of knowledge among different groups of able to work people.

Artistic Communities: Strategies and Tactics of Creative Products Promotion in Petersburg Market of Contemporary Art

This paper considers the strategies and tactics that young Petersburg artists use to promote their artworks and provide communicative resonance around them. It presents the results of a research project conducted in accordance with the strategy of multiple case-studies: four artistic communities of different scale, structure, integration grounds, ideological orientation, professional background, forms of spatial embeddedness and artistic style were selected for analysis. In the course of data collection, a wide range of field research techniques such as interviews, focus groups, participatory observation were used. These case studies offer a richly textured account of the development of art communities in Petersburg.

Dynamics of Social Indicators of Ukraine

Nationally representative surveys started in Ukraine (along with other countries, that arose after the collapse of the Soviet Union) only in the early 1990s. Several surveys in the framework of the ESS and IPP have been conducted during the last 5-7 years, but these surveys are irregular. Therefore, long series of social indicators are a rarity for Ukraine. The report addresses social indicators available for the analysis, obtained mainly in the polls of the Kyiv International Institute of Sociology from 1991-1994 until 2013. These include indicators of well-being, health, happiness, morality (in particular, the level of xenophobia and modernization (in particular, the use of the Internet). We discuss the possibility of combining the individual social indicators in integrated indicators describing the state of the country.

The Increase in Support of Right-Wing Party in Ukraine: Assessing the Social and Economical Context

The survey data show that right-wing ideology becomes more popular in Ukraine. Far-right party Svoboda, promoting racist, xenophbic views, on the parliamentary elections in Ukraine received 10,44%, and was ranked in the Parliament for the first time (in the previous elections of 2007, it received only 0.76% of the votes). One of the most unexpected findings of the Ukrainian national exit-poll 2012 is that individuals with higher education have greater propensity to vote for right-wing party. Has far-right ideology such strong support in Ukraine or are there other reasons for this success? The analysis is based on the electoral statistics and nationally representative data about the well-being, educational status, ethno-linguistic affiliation, electoral history, basic social and political attitudes, and protest intentions of supporters of the right party Svoboda in Ukraine.

A Challenging View on Religion-State Relationship: Iranian Case

It’s obviously documented and historically recorded that religion has always been a strong factor in Iranian society, and is embedded in social/everyday life of Iranian Muslims. Most of researches also explore that Iranian Muslims strongly believe in spirituality as well as rituals although the states might have followed secular policies in public spheres in past decades.

Since the victory of Islamic Revolution in 1979, the state was formally charged to diffuse religious believes over the society and to control people to follow religious rituals and Islamic duties in public sphere as well as the private space. These new policies made the state to intervene in legislating process regarding the Islamic beliefs to make people to follow Islamic rules in public sphere and do rituals like prayers, fasting, Hijab etc.

But what’s the true reality? A survey on the basis of data collected in 2010-2012 in a few of important vital cities in Iran tries to find answers to this question. Due to the findings of this research it’s suggested that although the state is to make people do rituals in public sphere and all possible efforts are done by the state, media, police etc to convince people to follow the state Islamic rules (i.e. not eating/drinking in fasting days in public spheres) -otherwise they will be punished- but it has not lead to increase in doing religious rituals in their private everyday lives.

This research explores that state’s pressures on people to do rituals have been less successful although it suggest that Iranians are strongly religious and strongly believe in spirituality yet but in a personalized way.

Keywords: sociology of religion, religious legislation, religious status, public sphere, Iranian Studies.

Artistic Communities: Strategies and Tactics of Creative Products Promotion in Petersburg Market of Contemporary Art

This paper considers the strategies and tactics that young Petersburg artists use to promote their artworks and provide communicative resonance around them. It presents the results of a research project conducted in accordance with the strategy of multiple case-studies: four artistic communities of different scale, structure, integration grounds, ideological orientation, professional background, forms of spatial embeddedness and artistic style were selected for analysis. In the course of data collection, a wide range of field research techniques such as interviews, focus groups, participatory observation were used. These case studies offer a richly textured account of the development of art communities in Petersburg.
in-depth interviews, participant observation and qualitative analysis of texts was applied.

The empirical data show that under the conditions of deficient sponsorship and information support, artistic success in Petersburg largely depends on the artists’ constant self-promotion efforts (participation in competitions and collective projects, applications submission, dissemination in Internet). By accumulating material, informational and reputational resources of their members, art-communities make convenient platforms for artistic self-presentation and development both in and beyond the local market. Responding to the specific noneconomic logic of the art world, symbolic recognition policies before commercial success, communities produce unique strategies of defining target audiences, embedding creative process in urban contexts, choosing legitimate exhibition sites, opposing themselves to other artists and art-groups. Community membership helps artists cope with the risks of disintegration, isolation and insufficient information exchange, while enabling sufficient market visibility 

Collective Space Contestation Revisited

With the transition from Soviet state-planned economy to post-Soviet market economy, neoliberal city policy has become central for urban planning and (re)development in Russia. Subject to this policy, contemporary St. Petersburg experiences impetuous commodification and aestheticization of urban space and, consequently, its rapid gentrification. Alternative views on how urban space should be organized make citizens consolidate and buck against the decisions of elites.

This paper considers the processes of urban space contestation by strong and weak advocacy groups in a neoliberal post-Soviet city. It focuses on six research cases embracing struggles of local communities against aggressive urban (re)development in St. Petersburg (spot construction, demolition, renovation of historical areas). To analyze the decisions on urban futures taken by city administrations and developers, we use the theories of urban political regimes (Stone, Molotch, Logan). To describe the resistance of citizens to imposed urban transformations, we apply theoretical frameworks developed by Lefebvre, Scott and De Certeau.

To describe the resistance of citizens to imposed urban transformations, we apply theoretical frameworks developed by Lefebvre, Scott and De Certeau.
Effects of Women Employment on Family Integrity (Case study: Comparative Teachers with Housewife in North of Iran)

Identifying the effects of women’s employment has contributed to the strength and health of the family, and the research in the effects of women’s employment has high scientific and social importance and necessity. The purpose of this study is to identify the effect of women’s employment in Integrity of the families. The research method in this study is survey. Population includes of 400 people of employees (teachers) from 25 to 49 years as a test group, as compared with the same number of housewives as control group. Sample size which were determined by using Cochran formula is 200 that includes 100 of the employed women and 100 of similar housewives women. Samples selection is down, using random sampling and systematic way in employed group and stratified method appropriate to unemployeed groups. The tools of data collection was questionnaire and its validity was using a content validity of face validity, using and reliability using Cronbach’s alpha coefficient (.084) has been approved. For data processing spss software and for data analyzing statistical analysis appropriate in level of variables measurement such as Pearson, Spearman, the mean comparison (t.test) and analysis of variance (ANOVA) was used. The results of the research showed that the Integrity of family among housewives women is higher than the employment groups. More results show that whereas the income has positive relations with the Integrity of Family, the education have negative effect on Family Integrity. Discuss show that the result of this study have been protect with the result of Alaeddini (1993), and André Michael (2003).

Sociocultural Interaction in the North Caucasus: Globalization and Identification

The North Caucasus is experiencing globalization challenges. New information technologies generate frequently the cultural shock, threatening ethnic cultures in the region. Interaction of the global and local in modern conditions strengthens intensity in tradition cultures. Therefore glocality becomes time imperative. Globalization influences greatly the identity, opening a way to set of identities in the global world. Of principal value is conscious familiarization with cultural wealth of other people. We should take such values which do not break internal development of our own culture and do not tear it off from the historical roots, the best achievements and traditions. The ethnic culture can develop and rise to the universal importance only in dialogue with cultures of other ethnoses. One of the findings of modern public consciousness is that it is impossible to imagine any civilized country out of communication with other world, with other cultures. The need of integration of Family, the education understanding and aspiration to learn an inner world of each other lead to expansion of spiritual bonds and contacts. Ideas of preservation and further development of a human civilization are connected with the need of cultural mutual communication.

Efficiency of cultural inheritance depends, first, on ability of a community to claim property and master and use values of others in own ethnic environment; secondly, on aspiration of a community to take unavailable valuable elements; and thirdly, on readiness of a community to see in loan an opportunity to open the best qualitative lines and properties.

In conclusion, the new acquired does not lose ethnic coloring and originality, but on the contrary, it becomes more profound ethnically and at the same time integrated. This statement is especially topical for a modern sociocultural situation in the North Caucasus and in Russia as a whole.
in the capitalist world-system. No wonder, many people distrust authorities and rarely participate in civil actions. Thus, there is a huge gap between awareness of unbearable situation and passive approach. Yet, people should know that there is an alternative: an emancipatory social science, which calls on active participation for implementation of desired change. In the real utopias approach of E.O. Wright that best social real alternatives should be desirable, viable, and achievable. And civil activists who plan changes actually need and lack knowledge about possible models of empowered democracy and techniques of implementation, which proved to be efficient in real utopia cases around the world. And this study is aimed to provide such knowledge. As far as democratic initiatives implemented by authorities have a profound influence on society as a whole, it is reasonable to give priority to civil activism in political realm through symbiotic transformations using the state. Therefore, the research question is the following: what would be a comprehensive real utopia model of desirable, viable, and achievable participatory democracy? The empirical studies, and qualitative expert interviews provide grounds for an integral real utopia model of efficient participatory democracy, relevant for communities and even larger societies. So far, the perspective change in democratic governance should include local community initiatives, participatory budgeting, referenda, free and fair elections, citizen assemblies, electronic democracy, and efficient control of work of authorities. For implementation civil activists should be guided by their emancipatory values and objectives, take into account theoretical implications, consider experience of the existing real utopias, mechanisms of implementation, effects of contexts, collateral institutions, unintended chain-reactions, positive and negative feedback loops, and possible medi- ate reforms. The findings are applicable to semi-peripheral, peripheral, and even core societies.

**World-Systems Approach to Global Inequalities in Effects of Individual Activism on Subjective Well-Being**

The world is experiencing global crisis, yet proactive individuals can promote social change. Still, opportunities for activism and its impact are unequal in the modern stratified world-system. Therefore the following research question arises: what are the differences in degrees of causal influences among proactive or- ientation, individual activism, personal achievement, and subjective well-being between countries of core, semi-periphery, and periphery? The preceding theoretical implications and empirical findings by M. Kohn, S.K. Parker and C.G. Collins, M. Se- ligman, M. Argyle, C. Welzel and R. Inglehart, L. Beer and T. Boswell, were considered. The posed hypothesis is the following: degrees of causal influences among proactive orientation, individual activism, personal achievement and subjective well-being are higher in core societies than in semi-peripheral societies, and in semi-peripheral societies are higher than in peripheral societies. The data shows that there are relatively small differences between degrees of influence of individual activism on personal achievement. This finding signifies that overall human ac-

**The Variant Actuality of Young People in Precarious Transitions in Late Modern Japan—Based on the Interviews with 51 Young People**

In recent Japan, young people have experienced prolonged and complex tran-
sitions from school to work, have been forced to work in precarious jobs, or faced the risk of unemployment, poverty, and social exclusion. The Youth Cohort Study Japan (YCSJ) conducted by The Japanese Educational Research Association is a five-year panel survey that contains 1687 samples aged 20 (first wave in 2007) and 891 aged 24 (fifth wave in 2011). Our analyses of YCSJ data have indicated the characteristics of the transition from school to work in recent years, especially its precarious processes and the factors (familial and educational background, social capitals, gender bias, etc.) which have influence on the differentiation of transitional trajectories. Then we have tried to describe the actuality of youth in precarity based on qualitative analyses of interviews with those young people who have participated in our five all waves and assent to be our interviewees (we interviewed with fifty one cases). Through these analyses, we aim to show some variant types of precarious transitions, and we also suggest how young people overcome or negotiate their difficulties.

**The Role Of Risk In Child Mobility Decisions -- Empirical Evidence From Benin**

Child mobility is still common throughout the West African region. This has been academically approached under the headings of child fostering, child migration, child labor and trafficking. Poverty is considered a main driver, alongside social networking and skills matching. Recent empirical work looks at the role of shocks to child mobility. Yet, it has been hypothesized that vulnerable families do not necessarily wait for a shock to occur, but might relocate children as an ex-ante strategy.

The proposed paper looks at the role of risk in the child mobility decision with data from a fertility based survey of 3000 rural households in Benin, a country known for high child mobility rates. The survey allows for registering children living away from parents, their schooling status and purpose of leaving. The 2012-survey covers three important areas: poverty, exposure to the massive floods of 2010 (shock), and the household head’s level of worry about not being able to provide for his family the next 12 months (risk).

The regression show (controlling for social and demographic factors), that perceived risk correlates substantially and systematically with child mobility. Poverty and shock, on the other hand, do not correlate at a statistically significant level. This interestingly contrasts with the correlates of the schooling decision. While poverty, as previously established, correlates negatively with schooling, risk and shock do not. Focusing only on children who have left and are not in school, both risk and poverty correlate with the mobility outcome.

The results support the notion that child mobility forms part of an ex-ante risk management strategy for families at risk. At the policy level this supports cash-transfer type social policy interventions, supporting findings from South-Af-

Normalizing Precarity? Youth Unemployment and Employment Instability in Poland

In the last decades, there has been a heated debate concerning the consequences of employment flexibility in many European countries. Concerns have been raised that even young adults with few job prospects may live in a precarity environment in which they have to work long hours for low wages. This precarity can be particularly challenging for young people, who may be more vulnerable to the negative effects of unstable employment.

According to the previous studies, about 30% of primary caregivers are sons or husbands, while women's movements are stagnant and cannot achieve a change of generations. This highlights the importance of understanding the gender differences in stress proliferation processes.

What Does the Word "Joshi-Ryoku" Mean in Terms of Gender in Japan?

Recently the word "Joshi-ryoku" has become very popular on the mass media and daily life in Japan. It seems a counterpart of the word "girl's power" in the English speaking world, which means girls' empowerment, ambition, or strength. The word "Joshi-ryoku" is so complicated, and therefore, examining the usage of the word helps us to find the complexity of the modern Japanese culture and society, especially from the viewpoint of gender.

In the last 10 years, the Japanese society has experienced the changes in many points: The economy went into recession and improved, a regime change occurred: social unrest never ceased. The movements by the sexual minority people are rising, while women's movements are stagnant and cannot achieve a change of generations.

The word "Joshi-ryoku" came into use in this social situation. It means the ability that women must learn in any age. The specific meaning changes in context, it varies, from the ability of the wife to the housework efficiently to the ability of a working woman to manage business tasks with alacrity. So it depends on the context where and by whom it is used, conservative or liberal.

This presentation examines the variable meaning of this word depending on different contexts and, by doing so, determines the gender regime that the word implies in the present Japanese society.

Family Caregiving and Stress Processes: Son and Daughter Caregivers in Japan

In Japan, caregiving of elderly parents has been traditionally the responsibility of the family: the wives of eldest sons, or daughters-in-law of the elderly, typically provided care for elderly parents. However, the profile of family caregivers has been changing in the past few decades. One of the major changes is the increase of male caregivers. Presently, about 30% of primary caregivers are sons or husbands of the impaired elderly. A growing concern is that these male caregivers may have different types of difficulties or stress from caregiving, compared with their female counterparts. For instance, a recent national survey on elderly abuse reported that more than a half of the abusers are male caregivers. Evidence suggests the possibility of gender differences in stress processes. However, most previous studies are on female caregivers, and research on gender differences in stress processes is very limited in Japan. Are there gender differences in the stress processes of family caregiving? This study seeks to address this question by drawing on stress process theory (Pearlin et al. 1990). I analyzed data from a survey conducted in 2011 on son and daughter caregivers aged 40 to 64 years old, who take care of their elderly parents at home as primary caregivers. The analysis results show that the stress proliferation processes of son and daughter caregivers share many similarities in terms of pattern, whereas certain differences appear to reflect the gendered nature of Japanese society.

Alternative Food Consumption and Sustainability in South Korea

Under the neo-liberal regime of South Korea, large supermarkets dominate Korean food market. Yet, there has been growing effort to find some alternatives such as local food. There has been relatively little researches done on East Asian alternative food consumption. Our paper attempts to fill this gap by investigating the attitudes and behaviors of Korean food consumers. We attempt to (1) conceptualize the ‘alterity’ in food consumption in the Korean context, (2) develop typology of alternative consumption patterns among Korean consumers, and (3) find the main factors affecting the alternative food consumption.

We have found the followings based on historical analysis and national survey of Korean consumers. First, Korean food system is characterized by low food self-sufficiency rate and alternative food discourse is strongly influenced by political ideology and nationalism. In order to reflect this historical particularity, we have conceptualized alternative food consumption by combining food consumption attitude/values and political orientations. Second, in our typology of food consumers, two types of consumers are most visible, i.e., “consumers without consciousness” and “conscious consumers without consumption.” The former consumers actually purchase organic/local food while they do not have alternative values. In general, these are consumers with high income. The latter have greater consciousness and interest in alternative foods, yet they do/con not consume organic and local foods. Third, among the total consumers, the percentage of consumers with high consciousness without consumption is higher. This might be interpreted as potential for the future of food politics for alternative food system in Korea as these consumers are likely to change their food consumption behavior in accordance with how they think. It remains to be seen whether this potential can fully develop into a social program to build a more sustainable food system in the future.

Different Manifestations of the Public Sphere in Japan and Korea

This paper examines the heterogeneous trajectory of the public sphere in Japan and Korea, especially how it is differently represented by NGOs in the two countries. The state has long been argued to safeguard the public ever since Aristotle laid the foundation for the intellectual tradition in which the state was considered as an agent of the universal interest. In contemporary sociology, however, this myth was challenged by a new tradition that emphasized the distinctive characteristics of modern state that concentrated on the reproduction of political power by the power elite, without paying due attention to the interest of the public.

The emergence of the public sphere in East Asia, more specifically in Japan and Korea, was rather hampered by the overdevelopment of the strong state during the process of economic development. Once the people in the two countries realized the necessity to protect their own interest as well as the public interest, however, NGOs were institutionalized and took a central position in civil society. These organizations tried hard to advocate the public interest in diverse aspects of everyday lives of ordinary citizens. Despite these similarities, however, the ways they represented the public interest were very heterogeneous. Their manifestations of the public interest are not only different in their organizational structures, but also the issues they are concerned with. Generally speaking, NGOs in Japan have small-scale organizations and more voluntary participations, being more concerned with the enhancement of everyday lives of citizens. In contrast, NGOs in Korea have large-scale organizations and are more concerned with the political issues, frequently initiating massive protests against the state.

Gender, Law and Legal Professions in Korea

Gender, Law and Legal Professions in Korea

Since 1945 Korea has gone from colony to dictatorship to democracy. Educational opportunities for women have exploded in quantity and quality. The legal professions, once reserved only for men, have opened up to more balanced gender representation especially in the past few years, and the legal system of education has undergone a paradigm shift that many have predicted will be a boon for women entering the professions of law. At the same time, new laws protecting the place of women in society have been passed and seem to be working for the benefit of gender equity and equal rights. Women judges, legislators and business executives have become common forces often fighting for a more gender-balanced system.

Social Capital, Social Integration, and Suicidal Thoughts Among Korean Youths

Social Capital, Social Integration and Suicidal Thoughts Among Korean Youths

The focus of this research is to examine some of the key factors that influence suicidal tendencies among youths in Korea. The teenage suicide rate in Korea has been one of the highest among all OECD nations, attracting the attention of scholars and policy makers alike. In this study, we examine in particular how to what extent measures of social capital are associated with having suicidal thoughts, ceteris paribus. In a Durkheimian tradition, medical sociologists and social epidemiologists have increasingly relied on the concept of social capital in explaining individual and cross-national health inequality. Much of the extant scholarship focuses on adult populations in the context of Western developed economies. Based on the analysis of the Korean Youth Panel Study, a government-funded multi-year research project, we shift the analytical angle toward a vulnerable population that has not received much academic attention. A number of social capital indicators are conceptualized and measured in analyzing the roots of suicidal tendencies among Korean youths, specifically participation in voluntary organizations, friendships, network size, frequency of interaction with close friends, quality of network members (number of “delinquent” friends), degree of intimacy with parents, and neighborhood trust/fear. Hierarchical linear modeling is used to examine the psychological health effects of social capital simultaneously at individual and contextual (neighborhood) levels. While controlling for a host of socioeconomic and demographic variables, we find that voluntary organizational membership, intimacy with parents (in terms of time spent together), frequency of interaction with close friends, and neighborhood fear are significantly related to having suicidal thoughts. We offer broad theoretical discussions and implications for the social capital literature based on our findings.

Understanding Civic Engagement in Asia: The Role of Social Capital

The question of “who participates” has received a great deal of scholarly attention among political sociologists. Increasingly, students of political participation, both formal and informal, have relied on the concept of social capital defined in terms of trust, networks, norms of reciprocity, and organizational membership. Putnam (1993) is analyzing the conditions under which people choose to engage in political activities instead of opting to ride free on the efforts of others. As Jacobs and Skocpol (2005) point out in Inequality and American Democracy, equal political voice and democratically responsive governments are under increasing threat due to the declining level of political interest and participation on the part of individual citizens. Understanding why some people decide to engage in politics formally and informally, therefore, is of paramount importance not only for the US but for any democratic nation. This study proposes to investigate this topic in the context of Asian countries. Based on the multilevel analysis of the Asian Barometer Survey of Democracy, Governance and Development (2006), which consists of data on 13 countries in Asia, it examines how and to what extent various social capital indicators (i.e., generalized and institutional trust, participation in voluntary associations, and network size) influence the likelihood of engaging in political activities, while controlling for key socio-demographic factors (i.e., income, gender, education, age, and religion). Four outcome variables are examined: two formal (voting and contacting an elected official) and two informal (attending a lawful demonstration and discussing politics in social settings). Findings from hierarchical linear modeling reveal that social capital is associated with different political outcomes in complex ways, at both individual and contextual (country) levels. Theoretical implications of the quantitative results are discussed in relation to earlier findings in the extant literature.

Neoliberal Individualization and the Modified Familism of Korea: The Case of Unmarrieds in Their 30s

As one of countries with the record low fertility rate Korea has the sharp concern in the unmarried among youth. The explanations on the issue has been given to the causes such as economic condition or individualism among them, which seem to be insufficient. This article aims to explain the marriage attitude among the unmarried people in their late thirties focusing on the complexity of their family value. That purpose is to explain the characteristics of the individualization in intimacy in the times of the late modernity relating with the strong familism and the kinship system of the patrilineality privileging the first son. The analysis on the life course is also the main theme in this research. The economic crisis of Korea under the IMF-led bailout programs started to be intensified from the year of 1998 when the cohort group of birth in 1975 started to graduate from the universities. So this article selected 19 unmarried men and women from the target group, who were thirty eight years old.

The result shows the great gender differences in the narratives of family value. Men interviewees tend to tell the sons’ responsibility of the care for the parents and the role of the male provider, while the women as well as to the consumers by the self and making the lives of their own. But the sexual lives of both seemed very limited, and their emotional ties were commonly connected with their parents, especially with mothers. Their living arrangements were never separated from their parents’. So we can call the recent changes among them as ‘the family-oriented individualization’

Korean Wave As a Hybrid Subculture

The Korean wave (Hallyu) refers to the significantly increased popularity of Korean drama and music around the world. Hallyu swept through Japan, China, Taiwan, Vietnam, Philippines, Thailand and other Southeast Asian countries, and then to all over the world. Now, Hallyu has expanded to include the popularity of any ‘Korean subculture’ including cuisine, clothes, cosmetics and language, etc. ‘Gangnam style’ by Korean singer PSY has recently acquired more than 1.7 billion views on Y-Tube in the world within a year. This paper is dealing with the rise of the Korean wave (Hallyu), reasons of success and the current situation of the Korean wave both in the positive and negative perspectives, and then it concludes with some sociological implications for a hybridization of East Asian culture. This study claims that Hallyu is the fruit of hybridization through digesting the influx of culture from Western and Asian sources in Korea. Hallyu in turn builds a hybrid subculture that appeals in Asia based on a long tradition of cultural interactions among other countries.

Organizing Independent Contractors in South Korea: A Case of Insurance Agents Unionizing

The purpose of this study is to understand limitations and possibilities of organizing independent contractors by focusing on insurance agents in South Korea. Among various types of precarious employment, insurance agents are an exemplar case of independent contractor jobs. Since the 1997 crisis, the private insurance industry has shifted market risk on to workers by employment externalization in the form of independent contracting as well as introduction of variable insurance scheme. The labor standard law does not treat insurance agents as workers and most of insurance agents are not affiliated with labor unions. As a result, insurance agents are outside labor protections. Under this context, insurance agents attempted to organize their own union, Korean Insurance Agents Union (KIAU), in early 2000s, and form a branch of Korean Finance and Service Workers’ Union (KFSWU) in 2004. However, the KIAU lost rapidly its membership since the mid-2000s and have failed to revitalize itself until now. This failure might be attributed to some external and internal factors. External factors include the denial of worker status by the courts, the absence of labor market regulation by the government, and crackdown on union activities by major insurance companies like Samsung. Internal factors include the absence of strategic approach on the side of the industrial union (KFSWU), individualized job characteristics of insurance agents, heterogeneity of the working conditions between regular workers of insurance companies and insurance agents. In recent attempts to re-organize insurance agents, the role of industrial union is crucial factor. Some programs turning non-regular workers into regular jobs are implemented by the KFSWU through collective agreements; however, the union focused on directly employed non-regular workers, like fixed-term workers. Moreover, the KFSWU’s strategic and long-term support was not given to insurance agents, because of its internal constraints and the lack of preparation.

Selecting Between Chosenjin and Zainichi: Analysis on the Zainichization Processes of Koreans in Japan

The Zainichi Koreans were brought to Japan during the colonial period and so this foreign group has the longest history of foreign residence in Japan. But success of ethnic identity formation is not easy in a country that determines nationality by jus sanguinis and so many third- or fourth-generation of ZainichiKoreans have some trouble living as a ‘Korean.’ Even though there are lots of studies that address their ethnic identity troubles, many of these focus on the discourse of intergenerational diversification.

Based on Constructivism of Cornell & Hartmann(2007), this paper focuses on the media environment as a field of constructing ethnic identity. Analyzing the influences of exposure to the Korean Wave and ‘abductions’ by North Korea’, this paper considers the three selected Zainichi unmarried men and women from the target group, who were thirty eight years old. The results show the great gender differences in the narratives of family value. Men interviewees tend to tell the sons’ responsibility of the care for the parents and the role of the male provider, while the women as well as to the consumers by the self and making the lives of their own. But the sexual lives of both seemed very limited, and their emotional ties were commonly connected with their parents, especially with mothers. Their living arrangements were never separated from their parents’. So we can call the recent changes among them as ‘the family-oriented individualization’

South Korea’s Developmentalist Worldview and Debates about Its Modernity

South Koreans make a Eurocentric hierarchy between countries according to the criteria of their developmental discourse, the discourse of seonjinguk (advanced country). In this discursive framework, the identity of South Korea tends to be constructed as a country near seonjinguk or “on the threshold of seonjinguk” (“seonjinguk munteok”), which provides both senses of superiority over hujinguk (backward country) and of inferiority over seonjinguk. With this intermediate identity, Korea is still under the project of modernization, actively pursuing the status of seonjinguk as its historical national mission. This paper aims to provide a critical review of the debates about Korea’s modernity in the light of its dominant developmentalist worldview, the discourse of seonjinguk.

International Policy-Translation Among Precarious Women Workers Organizations: Japan and Korea in Comparison

It was Japan that established the women-only labor union, which was influenced on learning and adopting the main idea of organizing precarious, non-standard women workers from the model of SEWA (Self-Employed Women's Association) in India, on the one hand, and from the cases of community labor movement in Japan, on the other hand. Korean Women Workers Association (KWWA) learned the experience of Women's Union Tokyo (WUT) in Japan, and established a women-only labor union, which is Korean Women's Trade Union (KWTU) later. On the contrary, Women's Union Tokyo learned the way of organizing and its role of KWWA, and applied to establishing the Action Center for Working Women (ACW2). Yet, the organizational performance and political impact of the KWTU and KWWA overwhelmed those of the Japanese, WUT and ACW2, in a decade.

By introducing the concept of policy translation, this study searches for understanding the different strategies and results in organizing and reflecting interests of precarious women workers in Japan and Korea. The term of policy translation will be adopted for describing the process of moving policies, programme, ideas or institutions from one time and space to another. Policy ideas may travel via individuals and organizations. It helps to capture the travel of ideas and their modification at the organizational level and helps to analyze the history of women's organization, the labor movement discourse, and the drivers in the process of policy influence.

The effective performance of KWTU and KWWA attributes to the organizational strategy of the movement leaders, the solidarity condition within the civil society, and the rise of the new cultural context emphasizing the women rights in the society. These experiences of the two countries show that policy-translation can occur
and matter within labor movement, and that its effectiveness can vary according to the strategy, environment and context.

Implications of Work-Family Policies and Anti-Discrimination Policies on Gender Occupational Inequality: A Cross-National Study

Whereas the impact of the welfare state on the quantity and quality of women's employment is widely studied, little research has further investigated the ways other (non-welfare) types of policies affect women's occupational opportunities. In this paper, I attempt to explain the level of gender occupational inequality in 2004 in 35 countries through cross-national variations in particular state policies in 1984. I create an original indicator of two types of policies: laws designed to help women combine employment and childrearing responsibilities (measured by a paid maternity leave policy) and laws that promote non-discrimination (measured by a policy that guarantees equal access to all occupations and a policy that guarantees equal remuneration). My data thus include three policies altogether: maternity-leave policies and two distinct forms of anti-discrimination policies. I find that state policies are the strongest determinants, compared to global and female human capital factors, of the gender occupational inequality but different types of policies have different impacts. Specifically, maternity leave is associated with a greater level of occupational gender inequality while anti-discrimination legislation is associated with less occupational inequality within countries. Although a panel analysis for a relatively small number of countries should not be overgeneralized, the results do introduce new information about policy-specific consequences for gender occupational inequality and provide a solid foundation for future research.

New Media and The Social Reconstruction Of Reality

Social constitutive power of media has been increasing continuously as we enter the era of new media driven by digital technology. As a result, media is no longer a simple means of living but a life itself. Building on Peter Berger and Thomas Luckmann's phenomenological proposition: 'Reality is socially constructed', this study first applies said proposition to our current social reality and discusses the changing life-world of the digital age under the theme of "social reconstruction of reality." Next, referring to the results from 2011's survey of 1027 netizens on the behaviors of citizens, narrative logic seems more salient for understanding the behaviors of citizens, narrative logic seems more salient for understanding the behaviors of citizens, narrative logic seems more salient for understanding the behaviors of citizens, narrative logic seems more salient for understanding the behaviors of citizens, narrative logic seems more salient for understanding the behaviors of citizens, narrative logic seems more salient for understanding the behaviors of citizens.

Upon analyzing survey results, the rise of online life-world, as opposed to offline life-world, is witnessed. Online life-world can now be considered a very effective functional alternative to offline life-world. While citizens, the members of offline life-world tend to follow reality principle, netizens of online life-world appear to favor fantasy principle. If causal logic is inherently emphasized in explaining the behaviors of citizens, narrative logic seems more salient for understanding the behaviors of citizens.

Compared to our conventional offline everyday-life which has been existing from the outset of agricultural age, online everyday-life, used to be generally looked down as 'mock reality' devoid of substance. However, empowered online virtual reality is now elevated to an alternative life-world capable of competing against offline actual reality. Moreover, owing to its hyper-real characteristics, online virtual reality appears to reinforce itself up to a point where the possibility of colonizing offline everyday-life cannot be ignored.

South Korean Values: Understanding Who Koreans Are

Attempts at understanding what people think and feel has been one of the major themes in the realm of academia. From motivations to strategies, various studies seek to venture into the unknown. Because human mind belongs to the inner workings of human psyche, it transforms itself depending on the situation, and can be concealed at the face of social taboos. Koreans, by the look from outside seems to be multifaceted, and it is not easy for us to get a grasp on the overall mind map. However, behaviors are governed by motivations and motivations are the reflection of what people value. Identity, when applied to inner-workings of people in general, acts as the starting point. Identity, motivation, and core values are expected to guide us in comprehending who Koreans are.

This study seeks to develop an understanding of who South Koreans are. Following the logic of "magic of numbers" and fully utilizing the power of empirical generalization, overall mind map of South Koreans is drawn. Data gathered from 47 separate assessments by psychoanalysts is used. It could be argued that South Korean mind map consists of following three main branches: 1) Relationalism, 2) Inner-Worldliness, and 3) Returnism. These tendencies are all intertwined and form secular trinity in the sense of supreme bliss. As aforementioned tendencies went through significant alterations, the sense of supreme bliss' sought after differs from that of traditional Korean society. The kind of bliss so many Koreans yearn for nowadays is more of a fortune than happiness. Disenchanted Koreans today seek the sense of supreme bliss by means of meaningful and beneficial personal connections. What we are witnessing now is the reflection of distrust toward ruling ideology and social leadership, resistance to the opportunity structure where fairness is ignored, and remorse over competitive life where winner takes all.

Inequalities in Life Expectancy and Healthy Life Expectancy in Korea: Gender and Educational Disparity

Health inequality is considered as a sensitive barometer of social inequality. Over the last decade, social inequality in Korea has become intensified in multiple dimensions including distribution of population health.

Based on life expectancy (LE) and healthy life expectancy (HLE), we examined the health inequality across social groups by gender and education over time. LE is the expected number of years of life remaining at a given age, derived from the current age-specific mortality rates. HLE is a composite measure of mortality and morbidity, implying remaining years that a person of a certain age is expected to live without disability or in good health status. Through data linkage (death registration, population census, and nationwide sample survey for morbidity status), we calculated LE and HLE by abridged life table method and Sullivan method, respectively.

From 2000 to 2010, LE at birth of men and women increased from 67.9 to 74.3 years and from 77.4 to 82.2 years, respectively. As of 2010, women live 7.9 years more than men. However, gender gap in LE was negligible; HLE at birth was 62.8 years for women and 62.7 years for men, respectively. Also, education disparity was apparent in 2010, for men with less than high school education, LE at 30 years old was 37 years, while that was 49 years for college graduated men. Similar pattern was observed among women; 49 yrs. vs. 55 yrs. Such gap did not become narrower over the last decade in both genders.

These results imply differential experiences of morbidity and mortality across gender and socioeconomic groups. Social determinants beyond individual biological traits, and biological process of social influence within individuals should be explored.

Developmental Multiculturalism In The East and Liberal Multiculturalism In The West?

While multiculturalism is losing its popularity among Western European countries, multiculturalism has gained popularity and continued to play an important role in East Asian countries. This paper examines the extent to which multiculturalism in the East (mainly South Korea and Taiwan) conform to and deviate from Western liberal multiculturalism. In this paper, I define and limit the discussion of multiculturalism as immigrant multiculturalism or a mode of immigrant incorporation.

I argue that at the level of practices and policy instruments, Western multiculturalism and Eastern multiculturalism are similar; both segment and stratify immigrants on the basis of their willingness and ability to assimilate to a host country. But, at the level of discourse, Western and Eastern multiculturalism diverge. While Western "liberal" multiculturalism treats tolerance as a necessary property of liberal West and construes the immigrant others "illiberal, object of tolerance". On the contrary, Eastern multiculturalism presents multicultural tolerance as a necessity for their countries to become advanced liberal democracy. For this reason, I call multiculturalism in the East "developmental multiculturalism". The key difference in the Western liberal multiculturalism and Eastern developmental multiculturalism centers on who has the responsibility to learn the value of tolerance. In the West, it is the immigrant minorities; while in the East, it is the non-immigrant majorities.

The difference in Western liberal multiculturalism and Eastern developmental multiculturalism may suggest one possible reason why the popularity of multiculturalism has declined in the West while it is still in vogue in the East. In the West, multiculturalism is constructed in a way that its failure is blamed on immigrant minorities. In Eastern developmental multiculturalism, multicultural tolerance is constructed as a virtue of advanced, more developed (Western) countries and achieving multicultural tolerance is the role of non-immigrant majorities for their country to become more like the developed countries.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.

The notion of race and ethnicity is central to contemporary immigration scholarship. Researchers routinely compare groups of different origins to assess their immigration trajectories and respective degrees of socio-economic integration. Less attention, however, has been paid to the historical origins of the classification and categorization in immigration. This paper argues that Dillingham Commission Report (1911) marks the pivotal moment, at least in the United States. Responding to the surge of nativism and increase in the number of immigrants and from southern and eastern Europe at the end of 19th century, the leading politicians and intellectuals of the time engaged in the task of classifying and categorizing immigrants: vast amount of statistical data on social and economic characteristics of immigrants within the U.S. were collected to promote a scientifically informed measure of immigration control.

Focusing on the data from the report concerning crime, welfare, and education of immigrants, this paper will display how racial and ethnic categories emerge out of raw data. The initial statistics conveys an extremely complex portrayal of immigrants, often divided by esoteric categories (such as “black Russians”) that are remote from our contemporary understanding of race and ethnicity. As report progresses to the synthesis and recommendation, however, the notions of “desirable” and “undesirable” immigrants emerge as an overarching principle of categorization, and the ensuing recommendation of promoting positive immigration leads to reaffirmation of the pervasive understandings of racial hierarchy. Endless stream of numbers and crosstables align behind this hierarchy to provide substances to racial categorization, and immigration policy follows this blueprint to shape national identity of the U.S. by implementing the national quota restrictions of 1921.

Drawing from original archival evidences, I show how race, ethnicity, and national identity emerge out of statistical data, both through scientific reasoning and political struggle.

Attitudinal Correlates of Cohabitation in Japan

What are the attitudinal correlates of cohabitation in Japan? Cohabitation has been growing more prevalent among young cohorts in Japan, and yet little is known about its relationship with liberal attitudes on family and gender. Exploring this issue is important for testing the Second Demographic Transition theory that predicts ideational secularization as driving force for non-traditional unions like cohabitation. In this article I examine attitudes on family and gender norms that are correlated with current or past cohabitation experience. For this analysis I use the 2009 National Survey on Family and Economic Conditions (NS-FEC), a national, two-stage stratified probability sample of 3,112 Japanese men and women ages 20-49. Individuals with more liberal attitudes toward pre-marital sex and out-of-wedlock birth were more likely to have cohabited relative to those with conservative stance. Also, those who disagreed with forgoing divorce for the sake of children were also more likely to have cohabited. On the other hand, differences in attitudes on other gender issues did not significantly change the likelihoods of cohabitation. The results show that liberalism in only narrow range of family issues are associated with cohabitation in Japan, showing only partial support to the Second Demographic Transition. Also, the results suggest that cohabiters in Japan would be expected to have higher rates of divorce once they enter marriage compared to non-cohabiters.

Care, Welfare State and Multidimensional Social Citizenship: The Case of South Korea from a Comparative Perspective

This study aims to investigate the peculiarities and changes of the childcare in South Korea by applying a theoretical framework of multidimensional social citizenship. To embrace the affluent theoretical arguments on gender, family and welfare states, this study suggests the concept of ‘multidimensional social citizenship’ consisting of decompmodification (state intervention), defamilialization (family role), and degenderization (gender equality) in analyzing care. Using OECD data and Time-Use data, the childcare of South Korea in 2000s were analyzed according to the three-dimensional social citizenship. The main findings are as follows. First, the social citizenship has developed dramatically in the dimensions of decommodification and defamilialization, but not much in that of degenderization in childcare of South Korea. Second, in terms of outcome, the development of childcare policy has hardly contributed to improve women’s labor market participation in South Korea. Finally, the classification of childcare across the welfare states according to three dimensions suggests the existence of East Asian care regime.

A New Style of Labor Movement Among Korean Youth

South Korea has shown high levels of collective interest in various forms of
social movements in the modern history. So far, Korean scholars adopted so-
cial movement theories emphasizing the roles of resource mobilization, rational
choices, political opportunity structures, or social networks; however, they could
rarely include the role of emotions in social movements.

This study focuses on the factors influencing the mobilization of social
movements: Although the youth generation feels anger and dissatisfaction with
the perceived social injustice under the economic crisis, why do they fail to take
collective actions? With the ever increasing economic polarization in the present
neo-liberal regime, the relationship between emotion and social activities among
young people in Korean society has been drawing scholarly attentions. As high
rates of unemployment and unstable employment conditions (non-salaried and
part-time work) become normalized in the society, youth anxiety and depression
are emerging as societal problems. The emotions of the young generation (partic-
ularly anxiety and depression) were not approved as cultural nomos in traditional
Confucianism and modern ideology. However, not in the line of Gustav Le Bon, the au-
thentic expression of collective anger (resentment) can incite proactive behavior
in a late-modern or post-modern society.

In this research, the subjects are youth in their 20s, mainly college students,
involved in “Alba Yeondae” which literally means a solidarity group for part-time
workers aiming to raise the minimum wage. This study employs ethnography and
in-depth interviews to examine how the emotions of youth (anxiety, fear, and
anger) exert a socially bonding influence that moves them to collective action.
“Alba Yeondae” has emphasized the collective expressions of frustrated emotions
against the job market, developed a new style of labor movement while reforming the
existing structures of societal and economic exploita-
tion.

Charm As the Power of Erotic Capital

The purpose of this presentation is to examine the type of capital an individual
possesses to attract others using quantitative data from the 2012 survey conduct-
ed by the Japan Youth Study Group. Z. Bauman (2000, Liquid Modernity) has point-
out that with professions and families becoming more and more fluid, one's
own body has become one of the means of confirming one's identity (Details of
the book is omitted in this abstract). Then, what does this 'body' refer to? Attractive
looks can be one of them. But this is not enough. C. Hakim (2011, Honey mon-
ey: the Power of Erotic Capital) has offered an interesting insight on this point.
That is, in addition to economic capital, cultural capital and social capital identified
by P. Bourdieu (1986, "Forms of Capital"), she has proposed the fourth capital, "erotic
capital". She also suggests that people who are not yielded from erotic capital, which
is lived out of looks and interpersonal charm, are huge and increasingly important.
Nonetheless, conventional sociological studies have not paid enough attention
of people's attractiveness. In particular, in the study of feminism, femininity, which
is one of the attractive characteristics of a female, has been denied. Therefore,
we need to examine the different appearances and those without, and benefits that are gained in this regard. The presentation first exam-
ines constitutive elements of erotic capital in Japanese youth culture. Secondly, it
examines the ways in which erotic capital differs from 'social capital', a concept
which is increasingly receiving attention.

Memory, Community, Identity: Narrating “Chosen” By Zainichi Korean Women in Japan

Memory, Community, Identity: Narrating “Chosen” By Zainichi Korean Women in Japan

Zainichi Korean women invoke lives and experiences that reflect class, gen-
der, hierarchy and patriarchy. The notion of “Zainichi” and “women” has
undergone a vivid transformation provoking the question, “What constitutes Zainichi
womanhood in a transnational context?” Undoubtedly their identities are constantly
changing, an on-going process of construction and reconstruction in the mind of
mobile, hybrid and hyphenated identities, and situational ethnicities. Many situate themselves in more than one nation-state, displaying
the entwinement of language rights with the discourse of disability studies. The
so-called social model in disability studies, which sees the cause of disability not
in the body of the individual but in the society, has ostensible affinity to the idea
of language rights which also focuses on injustices rooted in sociolinguistic condi-
tions. The approach to add options rather than just change the dominant regime,
or the emphasis on improving the legal framework are also features common to
both discourses.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The concept of communication rights which came out of this synthesis seems to have the potential to overcome the limits of the internationally contested concept of language rights which typically seeks to provide a certain status to a certain defined language.

After a short overview of the language rights discourse in Japan, the paper compares this discourse with recent international discussions on the matter in order to assess whether and how the Japanese way of conceptualizing language rights can contribute to put forward the international discussion on inequality related to language.

Education, Employment, and Gender Role Attitudes Of Japanese Married Women In The 21st Century: Declining Significance Of Rational Choice and Cognitive Dissonance Reduction?

Several students of attitude change have utilized models that combine rational choice with cognitive dissonance. Kimura (2007) proposed a hypothesis of "rational choice and cognitive dissonance under the constraint of the segmented labor market" in order to explain the apparently paradoxical associations among education, employment, and gender role attitudes found in the data of Japanese married women in 1980s and 1990s. There was a negative relationship between educational attainment and attitudes towards the gender division of labor, a negative association between these attitudes and employment, and also a negative association between educational attainment and employment. If we analyze the data in the early 21st century, however, we can find that all of these associations are weaker than before. Although this seems to reduce the explanatory power of the hypothesis that postulates rational choice and cognitive dissonance reduction, I will examine the factors that may have contributed to these changes form a rational choice perspective. On the one hand, surveys on gender role attitudes, as well as media reports on these surveys, have pervaded Japan so that respondents might have come to regard a negative attitude towards the gender division of labor as a socially desirable response. On the other hand, protracted recession have reduced the size of the fulltime labor market as well as the husband's income so that even highly educated wives might have become unable to resist working as part-time or dispatched workers. The former implies that another kind of rationality plays a part, while the latter implies that structural constraints on rationality are significant.

Who Support the Death Penalty in Japan?

One of the most powerful reason for retaining the death penalty in Japan is the wide public supports for it (86% of as of 2009). However, it is often criticised that the governmental survey contains a wording misleading the public into retentionists. This is the reason why I have conducted a on-line quota sampling survey in 2013. This paper will present the results of the survey and its implications.

Branding of an Industrial Heritage and Practice of Local People: The Case Study of Gunkan-Jima

This study examines how the branding and the commodification of an ex-industrial area proceed and how they affect everyday practices and historical identities of local people. The island has global harbor city located in southwest Japan. Less than fifteen kilometers away from the port of Nagasaki, there is Gunkan-Jima island. The island was used as a coal-mining station between 1887 and 1974, contributing to the industrial modernization of Japan. In 1890, the Mitsubishi Company bought the island and set about gaining coal from the bottom of the sea. Subsequently, the company built up the island's infrastructure as well as living quarters (such as large concrete buildings, apartments) to accommodate its workers. However, in 1974, the mines were forced to close due to an abrupt shift in energy use, which made the whole population move out of the island. Since then, Gunkan-Jima has been totally uninhabited.

KIMURA, TADAFUMI* (Yes, t_kimura@m.tohoku.ac.jp)  
Situational Approach to "individuality"——from the perspective of Frame Analysis——

The purpose of this study is to examine the concept of "individuality" from the perspective of the definition of the situation and Goffman's discussion in his Frame Analysis. Symbolic interactionists focus individual interpretation process about social reality. They postulate the great influences of the individuality upon constructing social reality. However, can we construct social reality freely? How can we explain the steady coincidence of our definition of the situation?

In Frame Analysis, he investigates the acquisition process of social reality based on his "interaction order theory." He indicates people's impressions for others depends on the definition of the situation. When he engages in this problem, he focuses on the correlation between impressions for the role behaviors and these for the individualities.

Imagine an interaction in an operation room. Some surgeons say jokes or give some nicknames to surgical instruments during an operation. If a patient watches their ridiculous attitude, s/he guesses they might be queer or incompetent. However, according to Goffman, they try to reduce stresses or tensions of other operation staffs and lead the operation to succeed by doing so. From the standpoint of the operation staffs, such behaviors by surgeons do not convey any odd impression about their personalities. In the American hospital culture, these behaviors are accepted as conventional role behaviors of surgeons. As shown in the above example, how people interpret the behaviors of surgeons and their individualities is dependent on their definition of the situation. According to Goffman, it depends on what kind of frame they apply to social reality. The frame in this context is a cultural cognitive pattern of social reality. Whether a behavior is interpreted as a typical role behavior or a unique behavior indicating her/his character depends on the frame of the interpreter.

It's a Girl Thing: Tween Queens and the Commodification of Girlhood

This submission is a 58 minute documentary film to be shown either in a roundtable session followed by a Q&A or as part of a social event.

Description:
Since the birth of Mary-Kate and Ashley Olsen in 1986, the girls' tween market has evolved from almost non-existent into a multi-billion-dollar money-making machine.

- Framed by the structure of a faux interactive website for tween girls, It's a Girl Thing speaks with consumer critics, tween brand marketers, girls, moms, and educators to explore the seemingly benign cultural universe of candy-coated, pastel-colored, hyper-commercialized girl culture (and the tween queen phenomenon) to reveal the complex and contradictory messages directed at today's young girls.

Genre As Social Force: Hollywood Cop Action from the Perspective of Filmmakers

Recent analysis of genre as social construction shows that critics and scholars tend to categorize works of art differently than producers do. The biggest marketers in Hollywood cannot copyright genres and so avoid treating their own product as generic. They sell their films instead as unique combinations of diverse elements, in order to appeal to many audiences and differentiate product. Interviews with contributors to the Hollywood cop action movies discuss the conditions under which they come to work on the projects, the extent to which they see themselves as genre-makers, and how they try to differentiate their own work. This research shows that filmmakers answer to their own demands and priorities, distinct from those of critics, audiences, scholars, and distributors. By showing how such diverse categorizations of film converge and diverge, it demonstrate how a genre of human expression is contingent on social affairs, porous in boundaries, prone to change, often subject to reasonable disagreement, and yet still a compelling force within an industry that remains ambivalent about producing generic work.

Sensing the Right Person. Finnish Recruitment Consultants and Outline of the Ideal Working Body in the Recruitment Interviews

The body's aesthetic and emotional capital in the post-industrial working life has eagerly been examined in recent years (e.g. Hassard et al. 2000; Mckie & Wat son 2000). However, the discussion has not yet brought out the connection between communication skills and the ability to brand oneself in the current labour market context, where the CV advantage has been displaced by the tyranny of the right person. Feminist scholars (e.g. Acker 1990; Bordo 1993; McDowell 2009) have already shown how different corporeal characteristics in terms of sex/gender become categorized as suitable or unsuitable to conduct different kinds of work tasks. However, we still know too little about how the ideal working body, i.e. representing the wanted personality, is concretely performed in recruitment processes.

The paper is based on the interviews of Finnish recruitment consultants. It illuminates their role in assessing and defining the ideal employee when their client companies have mandated them to choose and interview the proper candidates. The paper shows how the candidates should first convince the recruitment consultants in the interviews by stylized bodily performances and communication skills in order to get the job. Recruitment consultants use their own embodied knowledge in determining which candidates would ‘fit in’ with different working teams and environments. In order to fill in their clients’ expectations, the consultants not only attempt to read the bodily performances of the employee candidates. In addition, due to the employment discrimination law, the consultants must be capable of interpreting the non-verbal hints of their clients concerning candidates. In addition, due to the employment discrimination law, the consultants must be capable of interpreting the non-verbal hints of their clients concerning candidates.

This research shows that filmmakers answer to their own demands and priorities, distinct from those of critics, audiences, scholars, and distributors. By showing how such diverse categorizations of film converge and diverge, it demonstrate how a genre of human expression is contingent on social affairs, porous in boundaries, prone to change, often subject to reasonable disagreement, and yet still a compelling force within an industry that remains ambivalent about producing generic work.

KINNUNEN, TAINA* (University of Tampere, tkinnun@gmail.com)

"Strong Ones Manage Alone, Weak Ones on Each Other's Laps”. Love and the Finnish Touching Culture

The quoted phrase is an old Finnish saying which represents the traditional virtue of managing alone. The “lap” is not only a metaphorical expression; instead, it refers to the widely shared attitude to the sense of touch in human relationships. In Finland, the touch is saturated with prohibitions, fears and taboos, even in childcare. This was noticed in touch life narratives written by Finns of different generations that were gathered for the project under discussion. In particular, writers born just before or during the war years in 1939-1945, hardly remember to have experienced any caring touch by their parents. Many of them had suffered from the lack of caring and loving touch throughout their lives.

The paper asks whether the touch as the most archaic human sense and vitally important for the child's development is inevitable for the human love bonds (cf. Ashley Montagu 1979). How could “love” excluded from touch even be conceptualized (cf. Luce Irigaray 1996)? Whether the inevitability of touch is reconciled with the fact that they had been located in the poverty group, there has been a tendency, in the discursive space of 'comfort women issue,' that those women are not recognized as ‘Victims.’ Moreover, those women have often been represented that they devoted themselves to the nation by performing comfort women. As a matter of fact, Japanese comfort women survivors' voices have not been heard enough. Presenter introduces some cases that were known by members of civic movements on this issue as Japanese survivors' claims but were not treated as the matter for the movement groups to make their victimhood known widely in the early 1990s.

To restore Japanese comfort women survivors' history, it is indispensable to describe the aspects that on the one hand those women have been included in the members of a perpetrating country, and on the other hand excluded from the compassion among local community. Being related to that, this presentation explores the otherness and postcolonial context over victims/survivors in the country of the perpetrators from feminist perspective and nationalism theory. In doing so, it aims to re-articulate their experiences.

KIRA, YOSUKE* (Tohoku University, ykira@littlestar.biz)

The Conditions for Sustaining Efficient and Inefficient Norms

Although most rational choice theorists have assumed that social norms are created to prevent negative externalities, some norms spoil the welfare of people. These inefficient norms have been discussed as “unpopular norms,” which typically include the “shirer's new clothes,” self-destructive adolescent behaviors, infatuation, and honor killing. However, it is also true that efficient norms, which prevent uncooperative behavior, are observed in social dilemma situations. In this paper, we hypothesize that long-term relations stabilize both efficient and inefficient norms, but communications destabilize inefficient norms. We analyze a Sub-game Perfect Nash Equilibrium (SPNE) and a Strong Perfect Equilibrium (SPE) in an N-person repeated prisoners’ dilemma with the costly punishment option. A social norm is defined as an equilibrium in which every player is expected to do something (or refrain from doing something) and is punished by some or all other members if s/he deviates from this expectation. Two equilibrium concepts reflect a player’s ability to communicate. A strategy profile is an SPNE if no player can carry out solitary deviations (change his/her strategy). This equilibrium concept assumes a situation such that players cannot communicate with each other, e.g. tacit price collusions in oligopoly markets. As the Folk theorem indicates, there exist efficient SPNEs, in which the Pareto-deficient payoff is sustained by costly punishment. In contrast, an SPE assumes a situation such that self-interested players can engage in cheap talk and collude. If feasible coalition deviation exists, all members of the coalition can earn more by changing their strategies simultaneously. Every SPE is an SPNE, but the opposite is not true. The sufficient condition for existing SPEa is proved using the multi-objective dynamic programming method. In conclusion, we successfully formalize the hypothesized relationship between efficiency of norms, long-term relations, and communications among players. Additionally, we point out some notable implications.

Future Visions and Social Theory

Social sciences in general and sociology in particular are facing a challenge of considering the relation between environment and society in ways that allow the critical dialogue and multiple attempts for creating visions of a sustainable society. Thinking about the future always involves thinking about the future of society. However, in future studies little attention has been paid to how underlying social theories affect our future visions. Since backcasting is a special approach in future studies which starts with a normative vision of the future and elaborates a strategy to reach this normative vision, this issue is even more pressing. Our paper
aims to reveal and reflect upon the role of these underlying social theories in the construction of future visions in backcasting practices.

In the first part of the paper we will present four different ways to think about society and social change. These are structural functionalism, conflict theory, symbolic interactionism and actor-network-theory. We argue that these are not only present in academic papers but also can be thought about as general ways of thinking about society. Furthermore, these underlying models of society also affect the various ways future is presented in public discourses. The second part of the paper especially focuses on the various methodological approaches to involve social theories in the elaboration of future visions in backcasting practices. Methodologies such as functional analysis of institutions, stakeholder mapping, living labs, narrative approaches and system mapping will be discussed both in relation to the above-mentioned social theories and the future vision which can be created by utilizing such methodological approaches. We argue that by constructing upon both theoretical and methodological issues in thinking about the future can enhance the quality of the normative future visions created in backcasting practices.

Emotions As Reason, Rationale and Result of Urban Artist Areas

For the last two decades urban arts and cultural districts, arts neighborhoods, and artist housing and studios have become the focus of social scientists studying the intersection of urban and arts sociology. I will analyze the emotional forms and functions of this type of urban cohabitation. Certain smaller areas have been, from the bottom up, transformed by artists NOT for external political or economic purposes BUT for self-utilitarian – and often emotional – purposes internal to the participating artists and their community. The latter purposes are objectives directly aligned with the participating artists. These artist areas are “reserves” that serve as catalyst for the internal socio-spatial emotional enjoyment of artists, performing and propagating a “liberty of delectableness” not outside but in and outside these specific areas. As a theoretical starting point I interpret texts such as Zukin’s “Loft Living” (1982), Bourdieu’s “Rules of Art” (1992) and Ehrenreich’s “Doing It in the Streets” (2006), plus the literature on the notion of “cultural sustainability” that alludes to emotional values (e.g., Kirchberg & Kagan, Brocchi, Duxbury, Throsby). There is a variety of emotional benefits that can be paraphrased and typologized as “artistic community identity”, “alternative patriotism”, “lifestyle experimentation” and “bohemian sociality” – to name just a few. Furthermore, these emotional benefits will be analyzed applying the extensive literature on the “affective turn” (Clough 2007, Gregg & Seighworth 2010). Empirical illustrations will be provided by my own research in urban artist areas in Baltimore, Maryland, and Hamburg, Germany, plus further collated evidence from Phoenix, Arizona, Minneapolis, Minnesota, and other cities.

Agism and Language in Old-Age Inequality

Nikolas Coupland (2007) has focused on “style” as a productive dimension of linguistic material. He highlights that sociolinguists have not adequately appreciated variation in style as a tool for conveying meaning in social interaction. Coup-land shows that the common sociolinguistic reduction of style to social structural affiliations entails a cost to understanding how users agentially create meaning through choices of style. Separately, Coupland bemoans that linguists have insufficiently studied discursive communication by and involving old people, disregarding a long tradition of largely psycho-cognitive studies of language practises by and toward old people (Buck & Pennebaker et al, 1995; Sankoff & Blondeau, 2007). Expecting gerontologists, social scientists also tend to omit old people from research. General discourse rarely associates old age with matters of style, as if style-based variation is of no interest or awareness after a certain age. Aging of the global population has been widely publicized, generally expressing fears about negative effects on society-at-large – i.e., on younger generations -underlying pervasive public attitudes of agism and disciplinary research inequali-

ity. That agism is embedded in language, and detrimentally affects aging identity-formation often through linguistic practices, has been recognized (Miniciclo et al, 2011) but only minimally examined, with but serious attempt at proposing feasible correction. This theoretically Social Constructivist paper is motivated by the under-appreciated success of a similar, salient situation regarding “ableist” language and the stigmatized identity of disability. The Disability Rights Movement offers a model, led by disabled activists, eventually involving rehabilitation, and other “helping professionals” and governmental policymakers. Long-term resistance by Aging and Disability field leaders to making that connection is now weakening. For data, I analyze style in online recruitment language from key dis-

Methodological Institutionalism Vs. Methodological Individualism

As a Core Principle in Alternative Social Theories of Second Modernity

Modern dominant Western social theories are based largely upon methodo-
dological individualism principle. Attempts to overcome its confines are undertak-

eing in different analytical programs and approaches (A. Giddens, M. Archer, P. Sztompka, P. Bourdieu, J. Alexander, J. Ritzer, V. Yadov etc.) But in fact all these approaches assume an explanation of the social and economic phenomena in terms of individual behavior and follow methodological individualism principle (S. Lukes, J. Hodgson). In the paper the capabilities and limitations of methodolog-
cal individualism as a core principle of mainstream sociology and economics are explored. The recent debate dealing with methodological individualism in Rus-
sian and foreign sociology and economics is considered. Institutional individu-
alism principle (A. Agassi, F. Toboso) is tested. As a challenging view, premises for methodological institutionalism (P. Keizer, S. Kirdina) are offered and consid-
erg as an alternative and complimentary precondition of the different vision for alternative social theory of second modernity. It is shown that methodological individualism and methodological institutionalism express two epistemological predefined and methodological individualism principle will be presented to explain the success and failures of historical trajectories of modernization for non-Western countries as well for Western ones.

Fitness Culture As the Factor in Globalization of Recreational Sports

In the context of globalization, integration in the sphere of competitive and professional sports that receives maximum support from political and economic in-

titutions, International Olympic Committee, and international sports federations expands to a great extent. Increasing need of the modern society for health-rec-

creational technologies unprecedentedly reinforces the role of health culture and health industry known as “wellness”. Fitness is an element of wellness culture, and it presents a universal basis for popularization of health forms of physical and sport activity along with optimization of nutrition and body weight control. It makes health fitness as the direction of recreational sports an effective tool for strengthening population’s health and preventing non-communicable diseases.

Globalization of health fitness culture is primarily determined by the devel-

opment of global fitness industry. Another factor in fitness development is the activity of mass media and advertising, as well as marketing and educational campaigns in the form of fitness conventions. The third factor in globalization of fitness culture is the activities of international organization in the sphere of sports for all and fitness, which include Sport for All Commission of International Olymp-
ic Committee, the Association for International Sport for All, International Fitness Association, Federation of International Sports, Aerobics and Fitness, and others.

Issues in social factors of promoting health fitness on a global scale as well as its scientific, informational, educational, economic, legal and institutional support represent actual direction in integrative sociological research of sports, physical activity and health. Uneven development of fitness culture and inequality in ac-

ess to fitness services caused by of various social factors are of particular interest to sociologists.

Problems of Access to Modern Wellness Culture

Society’s growing interest to the quality of life has predetermined the develop-

oment of modern culture and industry of health called “wellness.” During last

decades, wellness has acquired features of new institutional complex, which in-
tegrates functions of numerous spheres related to health preservation and im-

provement, e.g., medicine, pharmacology, sports, leisure, tourism, manufacturing of health products and cosmetics. The process of popularization of wellness culture is supported by scientific and educational institutions, mass media and advertising.

From a sociological point of view the inclusion of individual into wellness cul-

ure’s growing interest to the quality of life has predetermined the devel-

opment of modern culture and industry of health called “wellness.” During last

decades, wellness has acquired features of new institutional complex, which in-
tegrates functions of numerous spheres related to health preservation and im-

ey, free time and vitality strength for active-health leisure. In this aspect, the maximum access to the values and practices of wellness culture have the elite groups, middle classes primarily in the developed countries (the golden billion”). Not only modern medicine and wellness culture but also basic medical care stay inaccessible for the majority, namely the poor population of the world.

In the increasing societal need for health improvement, the effective strategies of increasing access to wellness culture is determined by the limits of economic growth, amplification of ecological barriers, the need to shift to wise consumption. Such strategies include raising people’s personal responsibility for their health, lifestyle, active-recreational leisure; strengthening financial, institutional and informational support; development of preventive medicine; using potential of leisure and local green tourism for expanding the access to health-recreational practices for people. In general, the study of health-stratification and unequal access to the wellness culture is based on integrative sociological approaches.

The Process Of Urban Change In Osaka City After The Collapse Of The Economic Bubble: The Case Of Horie, Nishi Ward

For the last 30 years, cities everywhere have followed the neoliberal path, including a shift to a service economy, consumerism as a way of life, homogenization of urban spaces, socio-spatial polarization, and urban entrepreneurialism. Japan, with a liberal political economic history but also its own regulatory mechanisms based on the dogmatism of neoliberal urbanism, after the asset price bubble collapse in the early 1990s. Since then, the emphasis on Tokyo as Japan’s sole global city to the neglect of other large cities in Japan has accelerated the further adoption of the neoliberal urban policies. Having lost its previous status due to uneven development, Osaka has nevertheless recently been forced to engage in its imagery by its mayor, Tomy Hashimino, who sees it as the way out of post-bubble economic and demographic stagnation. The contrast of mushrooming fancy mansions and many homeless in the city renders this policy turn questionable.

How Can Trade Unions Improve Quality of Work in Low-Wage Services in Europe?

In the last 30 years, the European Union adopted the Europe 2020 strategy, emphasizing the need for increasing labour market participation with more and better jobs as essential elements of Europe’s socioeconomic model. But there is evidence that quality of work in many of the low-wage sectors in Europe is still problematic (Holman 2012) and problematic configurations produce various forms of precariousness, low-wage work, problems of social inclusion and violence at work (Kalleberg 2009). Increasingly, employment at the lower end of the spectrum of skills and wages in Europe is dominated by services that are spatially distributed and often employ vulnerable groups of employees (e.g. contract catering, office cleaning, waste collection, etc.). In these sectors, work is often outsourced from the public sector or other private sector companies and taken over by private sector service providers (large service multinationals or SMEs). The outcomes for employees often are insecure and problematic working conditions and little representation. This results from companies’ cost-cutting strategies, enhanced by changing regulations, the practices of contract awarding and public procurement, the role of the client, conditions that are likely to be exacerbated by austerity measures in the framework of the current crisis, etc. The continuous debate about the specifics of service work has brought significant evidence about the importance of the tripartite forces: representatives of employees and customers (Korzynski 2009). The paper investigates how trade unions address those challenges at EU level and in selected European countries. It is based on the recent research done in the framework of a European comparative project WALING (www.waling.eu). The findings presented in the paper are mainly results of the analysis of interviews with social partner representatives in those sectors as well as from company case studies carried out in the examined countries.

Frequency of Incarceration, Criminal Thinking, and Sense of Coherence Among Male Japanese Criminals in Offender Rehabilitation Facilities

For former convicts, reintegration into society is complicated by psychological factors, such as mental strains and personality traits, and socioeconomic factors, such as unstable employment. The aim of this study was to investigate the relationship between the frequency of incarceration (at children’s self-reliance support facilities, juvenile reformatories, juvenile penitentiaries, and prisons) and the personality factors of criminal thinking and sense of coherence (SOC).

This study was conducted at two metropolitan area offender rehabilitation facilities and participants were 116 Japanese men who had been placed under parole/probationary supervision or had been recently released from prison. The participants completed a questionnaire survey that contained the Japanese

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
version of the 13-item SOC scale, the Japanese criminogenic thinking inventory (JCTI), and self-reported demographic items. The SOC scale consists of three subscales of comprehensibility, manageability, and meaningfulness. The JCTI contains four subscales including discontinuity, “cut off” thinking, self-deception, and problem avoidance. Spearman's rank correlation coefficients were calculated to assess the relationship between the frequency of incarceration and each personality factor. In addition, the Man-Whitney U test and Kruskal-Wallis test were performed to analyze the relationship between frequency of incarceration and demographic variables including age, dwelling environment, education, marital status, job history, and the latest charged offense.

The results revealed negative correlations between the frequency of incarceration and the total SOC score and the scores on the comprehensibility and manageability subscales. A positive correlation was observed between the frequency of incarceration and the JCTI subscale of “cut off” thinking. The frequency of imprisonment (at conviction only) and the demographic variables of marital status and the latest charged offense were found to be significantly correlated.

Improving offenders' SOC and criminal thinking might mitigate the risk of recidivism and facilitate their reentry into society. Our findings will be discussed further in our presentation.

Young People's Practical Agency: Transitions From FE College To Work In London

This paper presents findings from the Changing Youth Labour Markets and School to Work Transitions in Modern Britain project. The project examined young people's experiences and perceptions about study, work and the future while going through transitions. Our findings demonstrate a complex picture of potentialities, vulnerabilities and resilience of young people in transition. The target group was young people aged between 18 and 24, who were on vocational courses at Further Education (FE) colleges in London. This group is an under-researched 'missing middle' (Roberts 2011) group, who are neither NEET nor following 'ticky' pathways. Drawing on the individualisation theory and agency theories, we explore how diverse and complex transition experiences of the missing middle can be categorised. We apply the conceptual framework of temporal orientations of agency, originally proposed by Emirbayer and Mische (1998). The missing middle group shows a number of potentialities, but they are vulnerable under current circumstances of youth labour markets. The young people do exercise agency in making decisions based on practical and realistic options available to them at 'the present', and thus they develop resilience. We suggest that agency is situated and discussed the interplay between young people's agency and the contexts in which they live, particularly in relation to youth labour market conditions.

KIVELÄ, MIKAEL* (University of Helsinki, mikael.kivela@helsinki.fi)

Deterриториalisering Teaching and Research through Information Technology and Capitalism

Allegedly there is a gap measured in astronomical units between the ways in which the contemporary youths and universities work with knowledge. And thus the universities at least in Finland should gird their organisational loins and adapt accordingly. In this paper I investigate one such attempt to deterrioralisering teaching, learning and research to better suit the future the involved parties have envisioned or wish to create. I do this by concentrating on the use of the concept of Knowledge Practices in expressing and explaining this vision. Deterrioralisisation is used here in two senses: firstly as travelling to new places and secondly as the parameter defining the state of the boundaries and relative internal heterogeneity of an assemblage. With these concepts I try to map out the envisioned future relationship between universities and society by tracing the relationships of different components of a particular assemblage called Minerva Plaza expressed in material form or through language.

This is a work in progress but Knowledge Practices seems to be effective in making various boundaries less fixed and solid by being somewhat amorphous and scalable. It spans recurring everyday activities (practices) from individual to societal level line linking temporal, social, scientific, psychological and cultural-historical activity theory. Furthermore information technology is deemed to have the general capacity of enhancing the joint knowledge creation of humans in conjunction with it. Is the future role of universities to provide such easily adaptable concepts which facilitate bringing in corporate partners by avoiding excessive clarity? Would this contribute to the techno-political utopia of virtual online communities developing the roles of the state and combating transnational corporations as Taul Harper suggests in “Smash the Strat?”

No Wires Attached? Displacement of Power through Information Technology

What have we learned so far is that there is nothing without the Wireless Net- work. This presentation expresses the extent and consequences of the previous sentence in terms of translating two scientific models into material form. It was uttered as a summary of using Minerva Plaza, a set of facilities built within the University of Helsinki in order to utilise the supposed digital nativity of the students. The stated goal of Minerva Plaza is to weave together collective knowledge construction, emerging communication technologies and inclusion into the scientific community in order to prepare especially future teachers for the challenges they are predicted to meet during their careers. These goals have been somewhat incongruent with The University's ICT policies and the capacities of the selected soft- and hardware.

The collection of assembled and interconnected components of Minerva Plaza can be aptly described as volatile. They can facilitate very fast transitions from one state or point of interest to another but also being difficult to hold permanently. Some of this explicitly intended in the design. On the other hand the Wireless Local Area Network has managed to hold its position as an unintended obligatory passage point for the sets of translations of using the Plaza as planned. This paper presents an analysis on how dependency on ICT and project funding has displaced the power to decide who participates and how away from the users. This seems to resonate with David R. Johnson's depiction of technological change as a cause of diminishing professional control within the professoriate. Unlike Johnson I argue this is caused by the volatile nature of the whole assemblage also in cases where the technology use is initiated and endorsed by the teaching professionals.

Old and New Inequalities of Educational Opportunity by Gender and Family Background in Finland

What comes to equality of educational opportunity, in the sociology of educa- tion enduring themes have been, for instance, the Bourdieuan thesis of strong reproduction and the persistence of inequality à la Shavit and Blossfeld as comes to relations between parents' socioeconomic position and their offspring's edu- cational achievements. Empirical studies from various countries have started to report decline in educational inequality. Our own previous studies based on Finn- ish longitudinal data have shown that the equality of educational opportunities, at least measured by differences in participation in university studies by gender and family background (parents' education academic vs. non-academic) has clearly improved and differences narrowed up till the end of 20th century. Gender rela- tions belong to the core interests of sociology of education, too. For long there has been discussion on the persistent gender segregation in higher education, with women according to Carlo Barone (2011) is a key in understanding inequality in the labour market.

In this paper we explore equality of educational opportunity and labour mar- ket effects related to educational expansion in Finland. Our updated longitudinal register data covers five age groups of higher education students and graduates from baby boomers to recent small age groups, including for the first time also students of the universities of applied sciences. We ask to what extent expanding education improves the odds of participation in university studies when analyzed by gender and family background. We also study how the female/male relation, situation by differences in participation in university studies by gender and family background (parents' education academic vs. non-academic) has clearly improved and differences narrowed up till the end of 20th century. Gender rela- tions belong to the core interests of sociology of education, too. For long there has been discussion on the persistent gender segregation in higher education, with women according to Carlo Barone (2011) is a key in understanding inequality in the labour market.
by the currently popular “evolutionary psychology” (Tooby and Cosmides, Pinker) regarding the human nature; (2) the “Homo economicus” criticisms of evolutionary economists in the spirit of A Cooperative Species: Human Reciprocity and its Evolution (Bowles and Gintis); (3) Geoffrey Hodgson’s version of “Generalized Darwinism”; and (4) “niche-construction” approach to human “gene–culture coevolution” (Deacon, Dennett, Laland, Odling-Smee), with its evolution-historical studies on social learning and language evolution.

While evolutionary psychology offers insights into humanity in a long enough timeframe, it unfortunately involves a leap from the face-to-face groups of Pleistocene era straight to modern societies, over all sociologically interesting institutional developments. Bowles and Gintis discuss the evolution of altruism against the idea of selfish individual, providing solutions to “the problem of social order” – timely in economics but familiar to sociologists already since Talcott Parsons. Hodgson’s model in turn utilizes pragmatist conceptual tools well, but its level-onontology and generalized principles of evolution remain less convincing. This paper seeks to pick out the best lessons of these three approaches and synthesize them with the fourth, niche-construction approach. The resulting organism-environment transaction model opens the brain–consciousness–language–society continuum “outside-in” rather than “inside-out” and allows understanding in all of human self-organized and localized organism-environment transactions by means of which evolution can in fact only be understood.

Did Japanese Women Writing on Cultural Issues in Post War Japan Create Solidarity Among Themselves? a Case Study of the “Kusanomi Kai” (Kusanomi association)

In post-war Japan, many Japanese women have been writing about their everyday lives, their opinions on social problems, or politics in major newspapers. These readers’ columns helped in founding the “Kusanomi Kai” (Kusanomi association), an association of writers and readers, in 1955.

In my presentation, I will examine how and why a community of writers was created between 1955 and 1958. First, I will explain why they founded the communication association and made it their primary media. Back in the 1950s, women often found it difficult to get their opinion published in major newspapers, since some editors held the view that women were inferior to men and consequently criticized women’s opinions that appeared in the readers’ columns. To avoid being criticized, some women made “Kusanomi Kai” their primary media to communicate amongst themselves.

Second, I will discuss the practice of writing followed by the “Kusanomi Kai” members and the use of media studies. Those days, most women had little experience of making a speech in front of an audience. However, as they were good at writing, they used the skill for expressing their opinions about gender or social problems and read them out as they appeared in print. To do this, they would go to a meeting of “Kusanomi Kai” and talk about their writing in the media.

Third, I will outline the profile of the women who participated in the “Kusanomi Kai” and the categories of members in the association. The association was made up of not just housewives but also a few working women. They wrote about their opinions on issues that mattered and discussed them with each other in the group meetings. In this view that women were inferior to men and consequently criticized women’s opinions that appeared in the readers’ columns. To avoid being criticized, some women made “Kusanomi Kai” their primary media to communicate amongst themselves.

We maintain that movement politics is a necessary complement of party politics. The democracitess of a country is defined by the quality of both movement and party politics.

Kjellman, Arne* (Stockholm University, kjellman@dsv.su.se)

The Foundation of a Theory of Everything

This paper discusses the basis of a recently developed “Theory of Everything” that builds on a “Subject-Oriented Approach to Knowing.” Its persistent claim is that physics and modern science by their reference to the “given”, most often explicated by the concept of “matter”, have led human thinking astray. This work shows that in the very moment a thinker/knower introduces “matter”, or the like, as something subject alien, he already in the outset introduces a crippling matter/mind distinction from which knowing never will recover. This contamination spreads to other men and their languages and conceptual frameworks, hence many of the perplexities and paradoxes found in modern science. On this view, truth and falsity, right or wrong disappear, as well as the traditional role of science as a pursuit of truth. Along also goes the cleft between the social and natural sciences. This means that all knowledge endeavours can, pace Ernst Mach, be grouped under the same umbrella. The idea of a common reality gives place to many of the perplexities and paradoxes found in modern science. On this view, truth and falsity, right or wrong disappear, as well as the traditional role of science as a pursuit of truth. Along also goes the cleft between the social and natural sciences. This means that all knowledge endeavours can, pace Ernst Mach, be grouped under the same umbrella. Writing a Review Article

We are the people! Street demonstrations as a means of communication

We are the people! Street demonstrations as a means of communication Over the last decades we have witnessed a dramatic rise in the occurrence of street demonstrations. Increasingly, citizens chose street demonstrations as a means of communication. “We are the people!” or more recently “We are the 99%!” are appeals to politicians to listen to the people and to take their claims seriously. Movement politics have become the natural counterpart of party politics. Employing a unique dataset of over 80 demonstrations that occurred between 2009 and 2013 in 9 different European countries, we give voice to the citizens who populated these protest events. Some of these demonstrations were people protesting the austerity measures they were suffering from. For instance, students protesting a raise of tuition fees or public health workers fighting budget cuts. Other were people demonstrating against the way democracy was practiced in their country. Democracy, as we know it for decades, no longer satisfies many citizens. Not only in post-communist and authoritarian regimes but also in mature democracies people challenges democracy as it is done. Occupy London or Amsterdam, or the 15”of May in Spain are examples. We will compare the participants in these two types of demonstrations. What were their grievances? How did they evaluate democracy in their country? Did they trust state institutions? What did they expect from their participation? Did they participate in party politics next to movement politics? Did they give up party politics? How were they embedded in the multi-organizational field?

Scenes of Street Art in Montevideo: City and Creative Processes

La presente ponencia es punto de partida de la actual investigación que desarrolló el autor en el marco del Doctorado en Gestión de la Cultura y el Patrimonio (Universitat de Barcelona).

El objetivo de esta presentación es visualizar algunas líneas claves sobre el papel que asesora el Street art en su diálogo con Montevideo, más precisamente, con respecto a la ciudad, su espacio público y los procesos creativos que nacen de las interacciones generadas entre los propios artistas urbanos (ya sea en su carácter individual o colectivo - crew).

Montevideo es una pequeña ciudad, capital del país más pequeño de América del Sur. Sus características propias de cercanías permiten interacciones entre artistas urbanos, artistitas, etc., generando un crisol heterogéneo de formas creativas en un territorio sumamente acotado.

Asimismo, estos agentes trazan lógicas horizontales en las tareas que realizan, eligen democráticamente y generan fuerzas lazos de solidaridad en las tomas de posesiones al momento de “marcar” el territorio de la ciudad. La elección por el espacio público es tratar de impactar e involucrar al habitante de la ciudad con el graffiti u otras formas de arte urbano, “rompiendo” con su espacio cotidiano, con su familiaridad con la ciudad.

La ciudad se reintegra poniéndola en cuestión a través de sus formas, sus costumbres, su arquitectura, etc., desmarcando los espacios sociales donde se presentan las producciones artísticas, ejerciendo su derecho a la ciudad, buscando reconocimiento en la distancia invisible.

Los procesos creativos son múltiples, y las formas de trabajo creativo también. Las estrategias de generación de arte en ese gran lienzo blanco llamado ciudad permiten construcciones compartidas entre los artistas como puntos de tensión y normas internas de respeto y convivencia.

En definitiva, Montevideo es un pequeño lienzo con multiplicidad de artistas e interacciones creativas que se visualizan y complejizan en territorios locales aco-...

Considering the Theoretical “Status” of Critique

The hereby proposed presentation shall focus on a very specific aspect of the relation or discussion concerning modernity and critique. The aim is to, considering the multiplicities of viewpoints addressing the centrality or relevance of modernity as a centerpiece of sociological interpretation, understand to which extent a predominant and (partially) normative concept of modernity can be taken as a point of departure to define the origins of (dialectical) critique while, at the same time, distinguishing the hegemonic theory of modernization.

Therefore sociological theory as critical theory should be able to establish a profound and rigorous dialogue with distinct theoretical cornerstone(s), and here is where the interest lies in bringing to the debate standpoint(s) from peripheral origins, focusing specially on the contribution of the Brazilian (although from a European and migrant background) critical theorist Roberto Schwarz. One has to take into account that a significant amount of his interpretations was written from the 1960s until the 1970s, and therefore precedes the more or less recent wave of post- as well as decolonial critique.

It is certain that the predominance of European colonization in so called South America was tantamount to the pertinence of recovering modernity - carried foremost under the attributes of civilization and enlightenment - as a fundament for economic, political and social conceptions. Hence, as a centerpiece of the discussion should stand Schwarz’s effort to work out the specific and distinct traits of the so called modernization or state-formation process in Brazil and how this enables us to consider the particularities and generalities of a critical perspective based upon various academic disciplines. This dialogue of critique(s) is appraised as a possibility for putting present sociological theory under ‘cross-examination’.

Segregation Patterns in Dual Vocational Training in Germany: Increasing Advantages for Young Women?

In Germany, gender segregation in the system of vocational training and education (VET) is considerable. This system consists of three sectors: dual vocational training, the largest sector, the much smaller part of school-based training, and vocational preparation measures, bridging schemes for school leavers who cannot find regular training positions. Existing research mainly concentrated on most visible segregation line in this system. Traditionally, dual training focused on male dominated training occupations in industry, craft and construction. In contrast, women were (and still are) heavily concentrated in school-based training, where many health and clerical assistant occupations are being taught.

Less is known, however, about segregation patterns within these subsectors, particularly in the dual training system, their change over time, and their effects on employment prospects of female and male apprentices.

In recent decades, the labor market has undergone major structural changes. Skill-biased technological change and sectoral change have resulted in more challenging requirements for future workers and changing demands for occupations and qualifications, which have been reflected in shifts in the occupational composition of the dual system. Today, the majority of training contracts are found in service occupations. However, we do not know how these long-term structural changes affected segregation patterns in dual training and transitions from training to work in female and male training occupations.

Against this background, this paper aims to answer two questions: First, in what respect have segregation patterns within the dual system of vocational training changed over time? Second, could young women profit from structural labor market changes in terms of smoother transitions from training to work?

These questions are answered by using large-scale registry data of the Federal Employment Agency on dual training and subsequent employment biographies in Germany in between 1977 and 2010.

KLEINOD, MICHAEL* (Humboldt University, michael.kleinod@hu-berlin.de)

Exploiting Untouched Nature? the Social Production of Nature As a Resource at Nakai-Nam Theun Npa (NNT), Lao PDR

The presentation argues that nature conservation is an external imposition on current socio-economic realities in Laos, and as such internal to the country’s social structures and dynamics: the state and its subjects have to make do with biodiversity conservation as a fact established internationally. Therefore, resource protection feeds into extraction with some systemic necessity. Nature reserves are an effect of power differentials, so the extraction it invites or necessitates one way or the other is ridden by inequities, as well. But inequality defined merely by access to and use of the resources within a certain protected area (PA) is a very limited, and in fact ideological, notion of social inequality. The yardstick should rather be the distribution of the general social resources of the country and beyond. Otherwise, there is the risk of naturalizing “stakeholders” as stewards and custodians of biological diversity. Such essentialism, present in the everyday practice of sustainable development, largely misses locally lived realities and aspirations, and with these the systemic and productive relation between nature conservation and exploitation, in Laos at least. Instead, a view where nature reserves are not passive reservoirs but rather “factories” that produce biological and cultural diversity as a result of the process of socially structured practice, is more appropriate. This practice transcends, undermines, ignores or complies with the laws of a PA according to social differentiation. In this tangled and ambiguous way a PA and its productivity is realized.

These issues are discussed with regard mainly to NNT in Lao PDR. The presentation is based on the extensive research carried out by a variety of experts and scholars due to the involvement of the World Bank in the Nam Theun 2 dam project, as well as on my first-hand research in villages of the PA.

Sociology of the Frontier, Frontiers of Sociology? Ecotourism in Laos and the Social Practice of Resource Production

This presentation departs from the overall concern with the nature of power and the power of nature in current global capitalist society. It focuses on one particular part of this society, ecotourism in countries like Laos: frontier economies that, by definition, challenge the well-arranged epistemologies of institutionalized disciplines. I argue that attempts at understanding frontier dynamics must be decidedly sociological, i.e. aware of the dimensions and peculiarities of social practice as the very place where transformations and continuities take form.

On the other hand – since theory itself is bounded by and must reflect the complexities and limitations of time and space – sociology of frontiers must also transcend itself: first, by transcending the inherent bias that “everything is social”, albeit acknowledging that every “thing” is social. Second, just like socio-economic processes “run wild” at the frontier, frontier sociology has to transcend academic boundaries, within and outside the discipline.

Nature reserves are “thick” social facts constituted and maintained by socially organized and differentiated practices, and ecotourism is central in this regard. I analyze ecotourism in Laos nature reserves as a socially organized practice that crosses scales (local-global), dimensions (ecology-religion), and nature relations (subsistence-capitalist) as well as binaries such as “tradition vs. modernity” and “conservation vs. development”, which continue to pre-occupy large parts of environmental thinking and practice. Seeing nature conservation as effective resource production, I suggest a theory of frontiers as social spaces of productive conversion. I will show how a careful, reflexive materialism and an elaborated notion of social practice as the place of symbolic-material crisis regulation provide fruitful methodological grounds for a critical social theory of eco-capitalism. The presentation highlights the challenges and chances for a theory of social nature relations in late capitalism fit to deal with the diverse pitfalls of its frontiers.
Making truth claims, mentioning being censored, or self-censoring do not influence the kind of plots these authors write either in a negative, or positive way.

Developing Home? Transnational and Translocal Return Migration To Ghana

Since the late 1990s a number of Ghanaian migrants living in Western countries have returned to Ghana for shorter or longer periods of time. Return migrants are widely regarded as having potential – and responsibility – for contributing to development in Ghana and are courted as development agents by the Ghanaian government and other policy makers. This perception is shared by some returnees who see themselves as having obtained knowledge and resources through their experiences abroad. However there are different types of returnees and they perceive themselves and are received in different ways.

This paper presents a case study of return migrants from Europe to Ghana, examining three different types of returnees: recent returnees who have returned because of economic turmoil in Europe since 2008; voluntary returnees who have been in Ghana for more than ten years; and involuntary returnees such as deportees. Its aim is to analyze what the modes of return mean for how returnees articulate their return; how they are received locally; how they engage themselves socially, politically and economically; and, finally, the responsibilities and challenges they face when returned.

It shows that in many ways the position and engagement of ‘successful’ transnational returnees resemble that of the local elites who have made it in the capital or other big towns: migrants who are (are perceived to be) successful are expected to contribute to their families and hometown communities no matter whether they have migrated to Europe, other places in Africa, or inside Ghana. The reception of migrants who have received because of deportation or economic problems, however, is more ambivalent and depend to a large degree on what return migrants have managed to remit back either during their migration or when returning.

Polyamory and Political Economy: A Note on Socio-Economic Inequalities

Academic research and popular writing on nonmonogamy and polyamory have so far paid insufficient attention to class divisions and questions of political economy. This is striking since research indicates the concentration of significant amounts of power within relatively small polyamorous communities. This paper highlights the economic conditionality of polyamorous relationships and families.

Theorising polyamory from a materialist point of view allows for a more adequate understanding of the contradictions which riddle poly communities in advanced industrialized societies and define their reach. This particular identity to predominantly white middle class circles. The insertion of poly cultures into an economic and cultural nexus shaped by neoliberal capitalism helps to circumscribe the material and discursive spaces from within which poly relationships and kinship formations are enacted. In this paper, the author is particularly interested in how the construction of polyamory as a style of enhanced reflexivity resituates the production of polyamorous subjectivities and the production of polyamorous cultural belief systems. It shows that commuting, employed to reconcile the new roles of women and men in family and working life, destabilizes couples' relationships under certain circumstances. The societal consequences and possible policy recommendations are discussed.

KLEY, STEFANIE* (University of Hamburg, stefanie.kley@uni-hamburg.de)

Employment Preferences or Family Values - Where Are the Pitfalls for Women's Labour Participation?

A better reconciliation of work and family life is one important issue on the political agenda in many areas of the world. In West-Germany, the male-breadwinner family model is still well established. Only recently, the development of child-care for children less than three years of age offers mothers the possibility to re-enter the labour market early. Apart from such important structural restrictions, family values and gender attitudes play an important part for explaining labour force participation of mothers. With regard to family values, the family-home plays a decisive role. In West-Germany there is a widespread belief that children should grow up in sub-urban or rural as a social norm, so that moving to a child-friendly home can be seen as a proxy for a strong value orientation towards family life. Such moves normally add space between the family home and the workplace, which results in the necessity of long-distance commuting. Hence, an early re-entrance in the labour market might become un-attractive for women, although they had a strong labour market orientation before the move. The goal of this contribution is to influence the estimate of family-oriented relocations on the re-entry in the labour market of mothers, controlling for employment preferences and gender attitudes.

The data comes from the German Socio-Economic-Panel Study (GSOEP). The sample consists of 900 women who had a partner and a first birth between 2001 and 2010, and event-history models are applied. Preliminary results show that a child-oriented move indeed impacts mostly negatively on the re-entry of mothers in the labour market, whereas employment preferences have positive influences. Other important influences like marital status, that are partly interacted with the family values and employment preferences, support the view that both concepts are useful for enhancing our understanding of the underlying processes.

FELDHAUS, MICHAEL (Bremen University)

The Challenge of Female Commuting for Partnership Stability

In modern societies, demands for spatial flexibility are omnipresent. In Germany, as in other European countries, commuting between home and the workplace is widespread. Women often neglect mobility demands when they have a partner and/or children because commuting adds an extra burden to those who are mainly responsible for the household. But of course there are women who are long-distance commuters, and some of them that commuting is as harmful as often feared. Recent findings about the impact of job related mobility on partnership stability show that long distance commuting of women increases the risk of separation for couples in Germany. The goal of this contribution is to get a deeper empirical insight in this coincidence and to explain the mechanisms behind this harmful effect.

This is possible by using the German family panel study (pairfam) which provides rich information on couples' dynamics and spatial mobility. Our contribution makes use of the first three waves of the panel. The sample consists of 2,500 women with partner aged 25 to 28 years and 35 to 38 years in the first wave. Using event-history models harmful effects female long-distance commuting on partnership stability are replicated. In the next step, the data of the pairfam study concerning gender attitudes, employment and family preferences, and other psychological and relationship aspects are used to explain this effect. It is shown that commuting, employed to reconcile the new roles of women and men in family and working life, destabilizes couples' relationships under certain circumstances. The societal consequences and possible policy recommendations are discussed.

Political Arrangements of “Minha Casa Minha Vida” Program - the Role of State, Civil Construction Sector and Civil Society

Historically there is a functional relationship between the development of the civil construction productive sector and the Brazilian State, with a deep impact in housing policies’ decision-making processes. ‘Minha Casa Minha Vida’ program was an anticyclic measure to face the international economic crisis, supporting that sector and implementing Keynesian investments with macroeconomic effects, having few concerns with housing needs.

The Federal Government concentrates program’s normative and financing functions, redistributing from the cities/housing ministry to the economic planning ministry and the government’s strategic political decisions agency. Implementation decision power was granted to a public bank which acts guided by productivity goals, regardless housing needs. The constructive sector was already strongly present in the program formulation and influencing the rules to a better reproduction of the sector’s capital, being also a fundamental actor in the implementation, given that it became its main promoter.

In the case of municipalities – who had almost no influence on MCMV conception – it was assigned a role of appointing the beneficiaries of the first range (limited families), assuring them, without financial/institutional efforts, the maintenance of electoral mandates through clientelistic relations. Social movements’ participation was limited to a category with only 3% of the budget (but that enables them to deliver actual results to their bases). They also informally participate in the appointing process, amplifying their political gains but with results that drift away significantly of their struggle against spatial segregation.

These decision arrangements discourage particularized solutions dialoguing with local needs and represent the State/corporations’ historic imbrication, ori-
ent by the development of construction sector and by its macroeconomic, political and electoral roles. This logic shapes the actual housing policy model and explains housing investments’ decision-making process, apparently deepening territorial inequalities. Then, a pending question is: does this model contribute to or counter inequality in brazilian cities?

Attitudes About Success: Is It Rational To Be Dishonest During Economic Transition?

Success or becoming successful is quite often identified as a goal by many cultures in the world. As former Soviet states gained their independence and opened to the rest of the world the notion of success, especially economic success, became very popular even for children. It is important to note that as economic achievement becomes imperative it is unclear whether the transitional economies are able to provide their citizens with the legitimate means of achieving this coveted success.

Here we propose to compare attitudes of Ukrainian students to success and the means of its achievement to those of American students by conducting a pilot survey in American colleges and Ukrainian schools. The survey questions include the definitions of one’s success, necessary elements of success and the possibility of breaking the law, being dishonest and corrupt to achieve the success. One can hypothesize that the established economy with well-developed democratic institutions (like those of the US) will produce citizens who are less inclined to choose the illegal or dishonest path to achievement. Ukraine, on the other hand, with it’s relatively high level of corruption (according to TI index) and unstable economy might be more likely to influence the population to acquire quite different values and attitudes, more suitable to ‘cut-throat’ conditions of the market.

Is the Ukrainian population’s willingness to ignore the law and basic notions of honesty an indicator of a rational adaptation?

Good without God: Atheists Facing Moral Questions and the Question of Morality

Religious books and stories are a compendium of rules and parables that cause people to consider ethics and behavior, even when many of the rules are questioned in a modern and diverse society. These guidelines remain the major source of morality for many believers; while some consider only their own religion legitimate, others accept all varieties of religion. But to reject a higher power altogether is perceived to be without an ethical basis, and thus immoral.

Based on a research project incorporating over 70 qualitative interviews with both believers and atheists in the U.S, this lecture will examine the concepts behind this accusation, how atheists react to it, what kind of morality they bring into play, and what they think about religious morality.

In what ways do questions of ethics and equality matter to atheists, and what kind of topics do atheists choose for their social and political charity and activism? How is this related to both their status as a social minority and to non-religion itself?

Social inequality is a key focus of many of these moral debates. While many believers associate atheism, directly or implicitly, with communism, there are in fact a variety of approaches atheists take in facing the issue of inequality. What are these approaches share is a common pattern for nonreligious ways of dealing with social change.

These different points will be laid out and illustrated with interview material in order to create a theoretical framework regarding atheist and nonreligious morality and ethics.

Intelligentsia in Modern Russia: Social Status Change

Humanitarian intelligentsia is a specific social group. Throughout its history it is not only developed non-material culture of society, but also played the leading role as civil asset of the nation, its “conscience”. During two past decades transformation in social life put the group in necessity of social adaptation, and so far the social position of the group and its role in the new social relations became unclear.

The paper is aimed to determine the current status of humanitarian intelligentsia in socio-economic, socio-political and professional fields and seek ways to improve its civil and professional positions. The analysis is based on the theoretical and methodological approaches that take into consideration the stratification of Russian society, differences in territorial conditions and professional fields. The study was divided in two phases. Initially, a wave of semi-structured interviews (n = 100) were conducted. After that, quantitative data were collected from questionnaires (n = 1150).

Results identify the strategies of socio-professional behavior, the current socio-political position of the group and its social adaptation level. The factors of status change present different levels: macro - level (socio-economic, political, socio-cultural change in the country), meso - level (the development of the region and current professional sphere), micro - level (individual knowledge, attitude and behavioral strategies).

The Reality of Nineteen Eighty-Four. How Fiction Becomes Social

A literary text, according to the literary theorist Wolfgang Iser, operates by oscillating between the limits of the fictional and social worlds and thereby expresses the plasticity of the human being and its continued evolution of self. Notwithstanding, the question of how these fictional ideas spread into the social domain is rarely tackled. At the heart of this presentation is the task to forward develop an understanding of how the fiction found in literature participates in the shaping of social reality.

The reception of George Orwell’s popular novel Nineteen Eighty-Four (1949) in the German public sphere in the years 1983/1984 will be taken to exemplify the irruption of the fictional into the social. Symbolizing the concept of totalitarianism in its purest and most extreme form, the element of imagery provided by the fictional text moves beyond signification and pretends an ontology. This socio-fictional-figurative referred to either by the novel’s title or the term Big Brother has come to shape the idea of totalitarianism for a whole era. I will introduce the social philosophy of Cornelius Castoriadis into the debate, as I believe it can help us understand the functioning of the fictional within the social as displayed in this phenomenon.

Castoriadis attributes primary importance to the imagination for the creation of social knowledge as well as the interaction between the social imaginary significations and the (individual) radical imagination. His framework of the interrelation between the individual and the social may well be perceived as a gateway for the irruption of the fictional as found in the arts into the social. Following his socio-philosophical understanding of literature, I therefore propose to take the element of ontological pretension provided by fiction into consideration. Fiction can thus lay the foundation for abstract social terms and hence becomes part of social reality.

Dealing with Difference: Exclusion As a Problem of the Subject or the Discourse?

This paper integrates the sociology of knowledge approach to discourse [Reiner Keller] into the debate on exclusion on grounds of sex, ethnicity, or age. The main thesis is that exclusion is not a problem of closed or open structures, of powerless or powerful subjects or of intersectional categories. In contrast, the paper argues that exclusion is mainly a result of the interplay between discourses as structures of power and knowledge and subjects related to an institutional context. Considering empirical results, which stress the relevance and irrelevance of intersectional categories alike, the paper discusses how to deal with difference in institutions, that is how to explain mechanisms of exclusion. We propose a concept, which applies the intersectional perspective to the level of communicative interaction in institutions. Focusing on intersectional categories, the concept regards them as discursive constructions, which are more or less relevant in situations of interaction.

First, the paper discusses the main strands of related theories, which deal with the problem of structure and agency in the field of exclusion from three different perspectives: structures constitute subjects, subjects form structures, and subjects disappear behind the (intersectional) structures. Second, the paper concludes that all three mentioned perspectives miss the decisive point. Neither the focus on powerful subjects nor the dominance of structures of powers nor behind structures veiled subjects can cope with the problem of difference preceding exclusion. They explain this phenomena a broader perspective is needed, which integrates the interplay of discourses and subjects in the context of institutions.

The paper argues that intersectional categories are constructed by discourses. Discourses as structures of knowledge and power, are (re-)produced and transformed in communicative interactions. The main hypothesis is: How institutions deal with difference (and exclusion), based on certain intersectional structures, depends on the institutional context in which communicative interactions takes place.

Consent to Data Linkage: A Focus on the Interviewer Respondent Interaction

Linkage of survey and administrative records is increasingly popular. The survey respondent's informed consent is required to perform linkages and a number of studies have documented interviewer effects in the decision to consent. Whilst studies found that 28-34% of the variance in consent outcomes is attributable to interviewer characteristics, many of the characteristics were unobserved. We use experimental data on consent to data linkage collected in wave 4 of the Innovation Panel (IP4) to examine the role of the interviewer-respondent interaction in the decision to consent to data linkage. IP4 included a number of experiments around the way in which consent is asked and respondents were asked for consent to record their interview and see the data. We report results from multilevel models on selectivity in consent using information gathered from coding the interviewer-respondent interaction around the data linkage request. The code frame considered whether the interviewer read out the question as scripted, with minor or major deviations. Deviations from the script considered whether the change in wording may be viewed as biased toward a particular decision. We coded the interviewer-respondent behaviour for all available interviews which allows us not only to examine the prevalence and effect of non-standard interviewer behaviour and how it affects the consent outcome, but also whether these vary across experimental treatment groups in a nationally representative study. Results will contribute to elaborate on Groves and Couper (1998)'s model of survey response into building a theoretical model that explains better the complex processes that lead respondents to consent.

KNOWLES, CAROLINE* (Goldsmiths, University of London, c.knowles@gold.ac.uk)

Uncertain Landings and Slippery Cities

This paper probes the connective tissue of globalisation through the lens of a simple object, in a pair of plastic sandals. As we follow the flip-flop trail from the oil wells in Kuwait from which plastics originate, to the garbage dumps on the edge of cities like Addis Ababa (a big emerging market for Chinese plastics) to which they are finally consigned, through the larger resonance of a small object it will become clear that globalisation is not what we understand it to be. And neither are the cities it presumes to connect. The cities on the trail – cross cut by pipelines, shipping lanes and dirt roads – were both flip-flop-receiving and slippery. While it looked from a distance as if the trail passed through particular cities, closer examination often proved otherwise, as the trail strayed into particular neighbourhoods, urban zones, exurbs, suburbs, and borders between national territories, presaged by zones of unregulated activity and a trail through a city, flip-flops reveal it from an unusual angle: from the little considered vantage points of feet, streams of commerce passing through markets and garbage. It concludes that in the light of this kind of mobile, trans-local, object-led research we need to rethink cities in ways that admit both this slipperiness and streams of everyday life, as well as rethinking globalisation so as to acknowledge its ad hoc, shifting and unstable character.

Techno-Materiality, Culture, and Climate Change: Japan and the Bilateral Carbon Offsetting Mechanism

Across the Asia-Pacific countries including China, South Korea, Singapore, Australia and New Zealand are embracing emissions trading and establishing their own national systems. Japan is a notable exception. After several failed attempts to develop an emissions trading system, Japan is developing a unique program that pairs Japanese carbon sinks with carbon sinks of developing country partners. Japan's refusal to engage in emissions trading is in part structured by its heavy reliance on fossil fuels, as well as its need to reconstitute its energy supply mix. In the aftermath of the Fukushima crisis securing energy supply is of critical importance. Broad public contestation of the continued use of nuclear energy to meet Japan's demand increases pressure to use more fossil fuels. To that extent that has placed security energy supply in direct conflict with reducing greenhouse gas emissions. However the bilateral offsetting mechanism also reflects interesting aspects of Japan's refusal to engage with more speculative forms of finance. The program emphasizes material outcomes and has the potential to make a bold policy statement in the Asia-Pacific especially as the Clean Development Mechanism fades in significance. This article explores the unique Japanese approach to climate policy, the role of both private and public sector actors in shaping the program, as well as the cultural elements that are reflected in its aims and instrumentalization. The program is particularly evaluated from the perspective of sustainability. Japan's approach to emissions reduction manifests underlying socio-political and cultural institutions. However, the emphasis on materiality and tangible outcomes, as well as longer rates of investment may demonstrate a more sustainable approach to emissions reduction than those advanced by Japan's neighbors in the Asia-Pacific.

KNÖBL, WOLFGANG* (Georg-August-Universität Göttingen, wknoebl@gwdg.de)

From Hegel to Weber: The Peculiar Relationship Between German Historiography and Sociology in the Long 19th Century

From Hegel to Weber: The peculiar relationship between German historiography and sociology in the long 19th century

(Prof. Dr. Wolfgang Knöbl, Institut für Soziologie, University of Göttingen, Germany.)
The first part of the paper focuses on the period when influential German historians tried to emancipate themselves from Hegel's philosophy of history in order to create a truly empirical science – and failed! The problem was that they couldn't solve the problem of relativism which comes up in any historical account that distances itself from Hegel's teleological perspective. Thus, historians such as Ranke and Droysen again and again came up with arguments that in the end were not too dissimilar to the Hegelian ones.

But getting rid of Hegel's teleological philosophy of history was not only a problem of historiography. It was at the centre of the emerging social sciences in general as can be seen in the writings of the most important Neo-Kantians who influenced Max Weber. Weber clearly saw the problem and deliberately tried to cut off all links leading to a philosophy of history. This was accompanied by some costs and Weber's particular conceptual move – the coining of highly robust processual terms which seemingly could not be doubted (and thus could not be relativized) – required their analytical usefulness – was not a necessary one as contemporary developments in other philosophical traditions show. But it was Weber's theoretical apparatus which became most influential so that sociology followed his lines of arguments and continued to base its narratives of social change on the assumption that social reality is to be understood as a cosmos driven by robust processes like "bureaucratization", "rationalization", "secularization", etc. This move, so it is argued, might have been convincing in Weber's days, but it is not any longer.

Differences in Job and Work Mobility of Labor Market Insiders and Outsiders in Taiwan

One emerging issue of research on work and labor market is to study the segmentation trend in job and work mobility in labor markets, and mechanisms behind segregation processes. Recently, some researchers argued further that the division between standard and nonstandard workers has acted as an additional segmentation of labor market. This approach also paves the way to understanding of the link between precarious work and social inequalities. Considering the significant impacts and labor market policy implication of this possible segmentation, detailed research on patterns of job and work mobility between standard and nonstandard workers, and also study if these differences have caused segmentation in labor markets of Taiwan.

Existing literatures provide two strands of arguments regarding consequences of nonstandard work arrangement: the stepping-stone hypothesis and the entrapment hypothesis. The stepping-stone hypothesis claims that nonstandard work provides a stepping stone to a standard job and is regarded as a means to flexibilize the rigid labor market. On the other hand, the entrapment hypothesis, which is derived from labor market theory, assumes that nonstandard work has long-lasting negative consequences on job mobility because it makes nonstandard workers "trapped" in the secondary labor market segment, or leads to unemployment. To investigate which hypothesis is correct in Taiwanese labor markets, I use "Manpower Utilization Quasi-Longitudinal Survey" (2008-2011) to examine job and work mobility between standard and nonstandard workers. As a result, the study found that multi-nominal logistic regression models support the entrapment hypothesis. Segmentation of labor market is reflected in difference of mobility pattern between standard and nonstandard workers.

Determinants of Social Activities Among Older People in China: An Analysis of Family Factors and Community Factors

Objectives: The study investigates the extent of family factors and community factors affecting engagement in social activities (non-market productive activities and leisure activities) by older people in China.

Conceptual framework: Given filial piety and Chinese “quanzhi” value the importance of family in Chinese culture, family factors, including older people's household size, composition and number of financial supporters are tested. In line with opportunity structure arguments, the impacts of community factors (public facilities, community offices and urban/rural communities) on the likelihood of social activities are examined. Research hypotheses are summarized here:

H1: Older people living with more family members are less likely to engage in social activities than are older people living with few or no family members.

H2: Older people living alone are less likely to engage in social activities than are older people living with partners.

H3: Older people with more financial supporters from within their family are less likely to engage in social activities than are older people with few or no financial supporters from within their family.

H4: A community with more public facilities increases individuals' propensity to participate in social activities.

Media Representation and the Cultural Politics of Zainichi (Residing-in-Japan) Korean Athletes: A Preliminary Conceptual Analysis

This paper examines how zainichi (residing-in-Japan) Korean athletes have been represented in the media and mobilised in relation to the cultural politics of Japan. Zainichi Koreans have been the largest ethnic minority in Japan largely due to forced migration during the era of Japanese colonialism. Second and later generations of zainichi Koreans have often strategically hid their Korean citizenship and identity by speaking Japanese and adopting Japanese names in order to avoid daily conflicts with, and discrimination from, Japanese society. Sport is one of the sites where the politico-historical issues of zainichi Koreans are brought to the fore in public consciousness and popular discourse. From the legendary professional wrestler—Rikidozan—to the naturalised Japanese football player—Tadanari Lee, zainichi Korean athletes have been represented in an ambivalent manner—both as ‘Japanese’ and ‘the Other’. This ambivalence of representation is linked to how they self-identify, the role of the media and the context of cultural politics at the time. By examining how representation and perception of zainichi Korean athletes have been maintained or changed over time, the paper highlights the key events and sport stars that have contributed to the re-positioning of zainichi Koreans in Japanese society. Research on zainichi Koreans has been rarely conducted yet deserves attention because it challenges the homogeneous construction of ethnic essentialism and sport nationalism in Japan and reveals the postcolonial politics within a wider context of East Asia. Overall, this paper serves as a preliminary analysis of zainichi Korean athletes with respect to how they might be studied both theoretically and methodologically.

KOC, MUSTAFA* (Ryerson University, mkoc@ryerson.ca)

Dark Side Of The Miracle: Hunger and Food Insecurity In Turkey

Turkey has been praised as a remarkable success story among the developing economies as many countries in the Southern Mediterranean, the Middle East and North Africa suffered the impacts of global financial crisis during the first decade of the 21st Century. The economy grew by 5% per year on average from 2002 to 2012 and per capita income increased up to 10,500 USD in 2011, from the modest 3,500 thousand dollars in 2002. As of 2012, Turkey was listed as the 17th largest economy in the world with a GDP of about 800 billion dollars.

This paper explores the nature of progress towards poverty and hunger alleviation in the country during the same period. It shows that behind the neoliberal miracle of growth, there is escalation tendency for depeasantisation, increase in urban poverty, decline in collective bargaining rights of labour unions, widening in inequality between the rich and poor. Decreasing working conditions, increase in the percentage of workers working for the minimum wage and high levels of youth unemployment. Despite these socially unfavourable social factors official figures celebrate success in terms of food security and fight against hungry.

This paper will provide insights as to the causes and consequences of such “success” in food security while critically assessing the analytical and methodological utility of the concept.

KOCH, FLORIAN* (Universidad del Norte, fkoch@uninorte.edu.co)

Arranged Urbanism: Modes of Informality and Governance Structures in Barranquilla, Colombia

During the last several years a dynamic transformation has been taking place at the northern city fringe of Barranquilla, Colombia: Shopping Malls, Gated Communities and Gated Tower Buildings have been built – a process very similar to other Latin American cities. The aim of my presentation is to reveal the underlying planning approaches and explain the role and influence of the private and public actors involved. The presentation contributes to the discussion on formal and informal practices of urban development in the Global South and shows the blurring borders between the ‘formal’ and the ‘informal’. The main finding of the analysis is the analogy between the interests of private actors, official documents and the spatial transformation which is taking place. This analogy was made through the massive influence of private interests in public planning and a multitude of agreements between the land owner and the public authorities. This form of urban development is described as ‘arranged urbanism’ and stands in a tradition of similar processes of spatial, economic and political development in Latin America, nevertheless, the pace and shape has changed. In addition, forms of ‘arranged urbanism’ can also be found outside of the Latin American context and hence present a new mode of planning governance in Cities in the Global South and the Global North.
view my presentation tries to provide insights on the construction of capacity to act regarding climate change on an urban level: How are climate adaptation plans elaborated, who participates in their elaboration and who not?

Women’s Health and Gender Discrimination In India

Abstract

The greatest revolution in any country is the one that affects positively the lives of women, and there is no doubt that, if women are encouraged to realise their potential, that it’s not only their life which would be affected but the life and situation of the whole household which is the basic unit of our national economy.

Women’s health in India can be examined in terms of multiple indicators, which vary by geography, socio-economic standing and culture.

Women’s health has become an important area of governance in India. Women constitute an important part of the workforce and ensure that the population’s health and productivity is maintained. In the last few years, there has been a growing awareness of women’s health and its importance in the overall health system.

We also need to consider the impact of gender roles on women’s health.

KOESTER, STEPHEN* (University of Colorado Denver, Steve.koester@ucdenver.edu)
LANGEgger, SIG (Akita International University)

Finding Shelter in Denver: Multiple Regimes of Spatial Order and Multiple Coping Strategies

From a homeless person’s perspective, the neoliberal city seems like a virtual minimum-security prison. In order to work, eat and rest, they must negotiate multiple and layered ordinances regulating their activity and movement. For the homeless, simply occupying public space is already problematic. Certain municipalities allow begging, others do not. Scavenging metal often violates land use codes. In seeking services, the homeless must conform to the requirements of state and charitable service providers. Obviously, neoliberal spatial control of homelessness does not germinate from a single control center. Peck (2010) argues that the mongrel phenomenon of the neoliberal state is relationally constituted. His notion aligns with Staehehi and Mitchell (2008) claim that public space regulation does not emanate from a single ideological or practical nexus, but courses many separate interpenetrating property regimes.

In attempting to understand how homeless individuals negotiate a growing phalanx of codes and ordinances variously intended to move them toward service providers and into shelters we utilized ethnographic methods. Talking to homeless injection drug users in Denver, CO, a city wherein sleeping with any protection against the elements in public has recently been outlawed, we found that shelters, due to mandated durations of stay and strictly enforced conditions of confinement were often considered undesirable places to be. Understanding this, it is unsurprising that homeless people resist this degree of control by continuing to use alternative and often illegal places for shelter and attendance to personal hygiene. Other findings prove both ironic and tragic. We learned that as the present paper focuses on the achievements of Odisha through NRHM by presenting the primary data (Bolangir, Odisha, India). There is a significant improvement in rate of decline of IMR, MMR and TRF. In addition the present study also examines gender disparities in nutritional status and concludes that women are more malnourished than male.

Does Inclusion Mean Everyone Every Time?! – Critical Reflection on a Popular Concept

It seems that inclusion is being discussed everywhere you turn; organisations, institutions, government services all claim to be places of inclusion. What does this really mean? Does it mean that every location will be designed so that anyone can access and act in it? Is it enough to declare your intention to work together to be inclusive? Will this concept be able to remove the subtle (and not so subtle) forms of exclusion that have developed over the years in our society? Is it really intended that each person in it’s unique way of being should be acknowledged and accepted as an active participant? How can such processes of change be carried out and supported? My presentation will focus on the inclusion of children with handicaps in public schools; I will reflect on the questions above and consequential topics.

Cleavages and Conflicts in Aging Societies: Generation, Age, Class?

Fifty years ago, inequality in developed societies disadvantaged the elderly. Becoming old could mean falling into poverty, and some sociologists interpreted retirement as a form of social exclusion and alienation. Today, the tide has turned: the elderly have benefited from the expansion of the welfare state, and some sociologists paint the bleak picture of a coming gerontocracy. The discourse on the concept of ‘intergenerational equity’ faults the elderly for monopolizing resources and endangering our future.

However, it remains essential to assess the extent of the generational cleavage per se and the extent to which it masks the continued existence of the “old” class cleavage between wealthy and poor (or owners and workers). There are more over “new” cleavages such as those of gender and ethnicity (or ‘race’). Emphasizing the generational conflict tends to downplay other inequalities, and by this, risks being ideological.

I will briefly retrace the stages of this discourse, and then examine the current extent of cleavages among generations. I will use case studies in terms of economic well-being and social inclusion. How these cleavages turn into conflicts depends on their potential for mobilization, which I will assess by examining political attitudes, participation and voting. The result is that the salience of generational conflicts is (so far) low, which I attribute to the mediating function of political institutions and of generational relations and transfers in families.

Class inequalities cumulate in old age, and class cleavages may thus deepen in future aging societies, but the potential for class mobilization seems to fade away. Generational cleavages may also deepen, not least through the current trends towards welfare state retrenchment. Whether they will lead to generational mobilization depends on the continued viability of the mediating institutions in politics and the family.

Parents’ Home Ownership and Support for Adult Children Across Europe

The degree to which economic well-being depends on the support provided by the family of origin varies considerably across welfare regimes. Thus, while Scandinavian countries are characterised by an high level of defamilialization, Continental Europe follows a model of supported familialism. The Mediterranean countries are best described as adopting a model of familialism by default. In our previous research, we have shown that what changes from one model to the other is not only the relevance and strength of the family ties, but also the strategies adopted by parents to support their adult children’s own family projects.

In the present paper, based on data from SHARE and SHARELIFE, examines how parents’ housing careers are related to the transmission of economic resources from parents to children, and how this varies across different welfare contexts. First, we will analyse the extent to which parent’s home ownership status affects the likelihood that children co-reside with their family of origin. Our preliminary results suggest that, ceteris paribus, parents who rent their home are less likely to support their adult children through co-residence. Secondly, we want to analyse how parents’ own housing experience affects the strategy that they adopt to support their adult children. For instance, does the fact that parents received support in buying their present home lead them to help their children in turn? Also, a number of other experiences – such as ownership status of one’s first home after the exit from the parental home, age when establishing one’s own household, or special events in one’s housing history – are likely to affect the strategy that parents adopt in supporting their adult children. Most importantly, the role played by parents’ housing experience is likely to vary across different welfare contexts.

Friends, Comrades and The Aesthetic Melting Pot: Instagram As a Tool Of Propaganda

This paper examines the ways through which the aesthetic mechanism of Instagram, a social network application designed for media sharing, is used as an
emotive tool in institutional propaganda. My case study is Instagram photographs which were uploaded to the official Instagram site of Israeli Defense Force between 2012-2013. I also examined random Instagram photographs which were tagged IDF and Zahal (IDF in Hebrew). I will suggest that the site administrators attempt to form a conceptual frame embedded in ideological, emotional and aesthetic norms from the users (Chandler & Livingston, 2012). This conceptual frame uses a common ground for the Israeli users, who were raised on myths about the army and the value of value of deep friendship among warriors. The same conceptual frame values these subjective, individual and aesthetic standards which are based on fixed aesthetic norms such as choice filters and the "artistic" square shape, which its similarity to Kodak Instamatic and Polaroid images makes the photographs “sentimentally beautiful” (Enquist, Magnus and Arak, 1994).

Koikkalainen, Saara (2013): Transnational highly skilled Finnish migrants in Europe, Asia and the Middle East.

Koikkalainen, Saara 2013: Transnational highly skilled Finns Living Abroad

The European Union (EU) is a globally unique area, where it is possible for the majority of Europeans to study, work or retire in any of the 28 EU member states, as well Switzerland, Iceland, Norway, and Liechtenstein. European citizens have more legal, transnational mobility rights than any other migrant group in the world and the ease of mobility across intra-European borders has created a common labour market for those willing to be mobile. The presentation discusses the intra-European mobility regime from the perspective of highly skilled migrants: how young, educated Europeans experiment with living abroad, move between European capitals and take up job offers in various countries without the need to worry about visas, work permits, or integration requirements. For these privileged migrants, and Eurostars (Favell 2008), onward migration may be as easy as buying a low-fare airline ticket or hopping on a fast train. The paper draws on the Working in Europe Study (2008-2011) which collected the experiences of 364 Finns working in 12 European countries. Special attention is paid to the features, qualities, and motivations of the serial migrants, those who have lived abroad in at least two different countries. Why did they move abroad in the first place, and why did they move again? Do they display a particularly European identity, continue to identify with their original home country, or see themselves as global citizens (Koikkalainen 2013)? And does the ease of mobility increase the likelihood of remigration?

KOJIMA, HIROSHI* (Waseda University, kojima@waseda.jp)

Correlates of Work Behaviors Among Muslim Migrants in Japan, South Korea and Taiwan

This study analyzes correlates of work behaviors among male Muslim migrants in Tokyo, Seoul and Taipei Metropolitan Areas, applying logit models to the micro-data from the Survey of Foreign Muslims in Japan (2005-2006), the Survey of Muslims in South Korea (2011) and Explorative Study on the Taiwanese Muslims (2012-2013).

The results of logit analysis for the correlates of employment status show that ages 35+, entry before 1990, South Asian origin, intermarriage with a local woman and high school education have positive effects on self-employment but South Asian origin has a negative effect. In Taiwan ages 15-24 and 30-34, entry before 2007, marriage with a local woman or a consensual, high school, junior college and polytechnic education, and speaking proficiency in Chinese have positive effects. Therefore, the positive effects of high school education are shared by the three societies, while the effects of age, year of entry, national origin and the nationality of spouse do not have consistent effects.

As for being an employee, ages 35+ and entry before 1990 have positive effects, in Japan while ages 35+ entry before 2007-2008, Indonesian origin and high school education have positive effects in South Korea and ages 35+, entry before 2007, high school, junior college and polytechnic education, and speaking proficiency in Chinese have positive effects in Taiwan. Therefore, the positive effects of high school education are shared by the three societies. The results for employment type and job hunting method will be also presented.

In sum, there are some variables which have opposing effects in different societies. They seem to reflect the differences in the population composition of Muslim migrants as well as the composition of economically active population in each society.

KOJIMA, SHINJI* (University of Hawaii at Manoa, skojima@hawaii.edu)

Mobile Workers, Mobile Lives: Tourism Workers in London and Lapland

This conference paper focuses on two European tourism destinations that thrive on tourism and are often performed by circular migrants: London, UK and Lapland, Finland. London is an important urban tourism destination in Europe attracting more than 30 million tourists each year. Lapland is a major tourism destination at a smaller scale: the land of ice and snow, the aurora borealis and the land of ice and snow, the aurora borealis. London shops, ski resorts, wilderness safaris and other tourism-related services also require flexible, seasonal workers who return to their countries of origin or to Southern Finland for the off-season. A look at this unlikely pair of case studies can increase our understanding of the migration - tourism nexus, and provide an insight into the differences between the tourist experience and the mobile worker experience. Drawing from the tourism research and migration research literatures the presentation explores how the experiences of tourists and migrant workers differ from each other. It is working at a tourism destination in fact a form of lifestyle tourism, and migrant workers form workplace communities that develop place attachment, and bond with the local community, if they know that their own stay at the tourism destination is only temporary?

KOJIMA, HIROSHI* (Waseda University, kojima@waseda.jp)

Halal Food Consumption Among Muslim Immigrants in Tokyo, Seoul and Taipei: A Comparative Analysis of Correlates

This study aims at clarifying the similarities and differences in immigrant integration from the perspective of religiously regulated food consumption in new immigration countries in East Asia. It analyzes correlates of halal food (which Muslims are allowed to eat) consumption behaviors among male Muslim immigrants in Tokyo, Seoul and Taipei Metropolitan Areas, applying logit models to the micro-data from the Survey of Foreign Muslims in Japan (2005-2006), the Survey of Muslims in South Korea (2011) and Explorative Study on the Taiwanese Muslims (2012-2013). It broadly draws on the analytical framework proposed by Bonne et al. (2007). The dependent variables include the frequency of visits to halal shops and that of visits to halal restaurants.

The frequency of visits to halal shops and restaurants tends to be low in Japan and high in South Korea. The logit analysis for Tokyo shows that white-collar employment, strengthened religiosity and concerns for local customs have positive effects on the visit to halal shops and that other origins, high-school or less education have negative effects. The logit analysis for Seoul shows that the entry in 2005-2006 or 2009-2011, South Asian origin, very strict observance of Islamic rules and adaptation have negative effects. The results show more differences than commonalities among the three societies, possibly because of the differences in the composition of Muslim immigrants and in the availability of these facilities.

“Alternative Unions” and Their Involvement in the Post-3.11 Disaster Politics

Labor unions call alternative unions are increasingly becoming a noteworthy presence in the contemporary Japanese social movements scene. These are individual member-ship-based unions, such as general unions and community unions. I call them alternative unions because from the standpoint of non-standard workers, they serve as an alternative to enterprise unions from which non-standard workers are usually excluded. This paper examines the ways in which these alternative unions, who have made themselves into prominent figures engaged in nonstandard employment issues, became involved in the post-3.11 disaster politics. This study uses ethnographic and archival data gathered during fieldwork in Japan from April 2008 to September 2009 in addition to follow up research conducted in 2010 through 2013. I demonstrate that alternative unions live enmeshed in a complex web of individual and organizational ties, and they thrive by building new ties as they respond to emerging crises. From the standpoint of individual activists who are involved in labor disputes through these unions, they come to be enmeshed in a dense network through union affiliation. They develop new bonds and ties with individuals they meet anew. As a consequence of this organizational social capital being transferred to the individual, some come to participate in social movement activities on their own, separate from union affiliation. The network transfer sometimes leads in the long run to nurturing new activists who respond and engage in emergent crises. I argue that alternative unions serve a double role in the field of social movements in Japan. First, they actively engage in emerging crises by working with other unions and civil societies. Second, these unions serve to connect individuals through these activities, which sometimes lead individuals to participate in movements on the newly emerging crisis.

Depression, Work and Identity in a NeoLiberal World: Perspectives from Australia and the UK

Since the 1980s, job markets in economies such as the United Kingdom (UK) and Australia have been shaped by neoliberal policies directed at increasing competitiveness and productivity. While different national policies and institutions are at work, workers in these countries have been affected by some common trends, including decreased union membership, restructuring, outsourcing, off-shoring, increased workload pressures, short-term contracts, and redundancies, contributing to greater job insecurity and workplace stress. During the same period, the prevalence of depression diagnoses has increased worldwide, with the World Health Organisation estimating that over 100 million people are currently living with depression. Recently, sociologists have theorised about the possible connections between these two trends, suggesting that the increasing demand for workers to be flexible and enterprising has contributed to them feeling stressed, with implications for depression (Rose 2007; Ehrenberg 2010). Yet relatively few qualitative studies have empirically explored the relationship between work, depression and identity. This paper elucidates the connections between work and personal narratives of depression using 77 in-depth interviews with people living with depression in Australia and the UK. Interviews were conducted between 2003 and 2010. In this paper, we provide a secondary analysis of interview transcripts (with original researchers involved), using thematic analysis to explore how people talk about their experiences of work in the context of their illness narratives. We will uncover how people living with depression experience work, including how work and workplace policies (e.g., antidiscrimination, sick leave) can both contribute to emotional distress and protect against it. We locate our empirical findings in the context of theoretical debates about the impacts of neoliberalism on contemporary individuals, and draw explicit comparisons between people’s experiences in Australia and the UK to illustrate our points.

Preschool Teachers in a Changing Institutional Context: Reforms and Prospect of Professional Group

Results of this research are the initial stage of the "Processes of the Actual Russian Market of Preschool Education" project and allow to allocate the following main points of a situation of preschool teachers in the period of institute reforming. Difficult situation of preschool teachers is caused by increase of demand for this service, on the one hand, and an obvious suspense of an array of problems of the sector, defining statuses of profession on the other hand. The cultural resource of occupation is very poorly popularized that making uncertain the symbolical capital of group in the opinion of clients (parents and educational government officials). In this situation private sector is essentially interested in advance of the cultural capital of occupation as the power of authority and expertise of a profession as a basis to increase the status indicators of the group.

At institutional level monopolization by the state of administrative functions administration. The professional organizations in estimate of experts received different treatment. Informants of the "pro-state" sector associated them only with labor unions, taking into account absence at them serious opportunities of change of professional group position. Experts of "pro-market" organizations showed interest in professional associations and the organizations of public control. The preference of a type of expert associations focused on advance of the cultural capital of group and classical "not bureaucratic" ideas of professional independence, testifies higher interest in development of power resource and group ascending mobility.

The current changes in an institutional context can potentially modify structure of professional group, promote legalization and expansion of its private sector and increase of its status indicators.

The Causal Effect of Another Sibling on Own Fertility – an Estimation of Intergenerational Fertility Correlations By Looking at Siblings of Twins

Research have documented persistent differences in fertility between different socioeconomic groups. These differences could over several generations have important population level implications on the social transmission of socioeconomic status as the size of socioeconomic groups naturally are dependent on differential fertility. The reasons for intergenerational fertility correlations are however poorly understood. The current study attempts to differentiate between the causal role of another unexpected child in the parent generation, from the effect of other characteristics that are shared between parent and children, for explaining intergenerational fertility correlations. Thus it is possible to examine if intergenerational transmission of fertility is due to transmission of socioeconomic status, which on average is shared between individual. This is examined through an instrumental variable approach, using a twin birth as a source of exogenous variation in the size in the parent generation. Data is drawn from the complete Swedish population using administrative register data on more than 2,000,000 parent-child links. Findings show that little or none of observed fertility correlations can be attributed to the causal affect of growing up with another sibling as such, instead shared characteristics between parents and children such as fertility preferences, ethnicity, religion or socioeconomic background appears to explain observed fertility correlations.
Science, Technology and (New) Forms of Social Inequalities – Sociological Study of Household Footwear Cluster in India

Dr. Giriyappa Kollannavar, N S Vasagam, Jagathnath Krishna and A B Mondal

CSIR-Central Leather Research Institute, Adyar, Chennai – 600 020.

Key words: Leather industry, household footwear sector, women workers, institutional support, division of labour

Indian leather industry has grown in household sector and part of it is in the process of mechanization today. Footwear is major product produced both in household and factory sectors to meet the export and domestic demand. The Indian leather industry is supporting livelihood to millions of artisans who follows household and factory sectors to meet the export and domestic demand. The post liberalization era brought huge quantity of cheap and non leather footwear to Indian market that affected mostly the household sector. Outdated technology and low scale of production system and primitive designs of the footwear are the major reasons for the household footwear sector, that unable to hold their market share. Faced with the emerging competition and challenges, many of the household units closed down their production system. A few units particularly in clusters are surviving with limited market support of traditional buyers. Women play major role in sustaining the footwear activity in these clusters. The institutional intervention focusing on women workers has empowered them with new production skills and technical training. Central Leather Research Institute (CLRI) has taken up the task of footwear cluster development programme with women specific empowering goal has made significant impact on women artisans in household footwear sector. The study has brought out interesting facts and findings on the women empowerment with decision making through institutional support.

In the field of environmental education, several previous studies mentioned experiences in nature as the factor to prompt pro-environmental behaviors and in the field of environmental sociology, they say environmental awareness and knowledge about environmental issues are the factors to do environmentally appropriate behaviors. The purpose of this study is to examine the effects of those three factors as the determinants of prompting pro-environmental behaviors. In November 2010, we conducted a survey in Minamata, Japan. Respondents are all the 1st grade junior high school students and their parents in that city.

Results are as follows: 1) Both students and parents who try to share knowledge about environmental issues with their family members tend to do pro-environmental behaviors. 2) Both students and parents who try to share knowledge about environmental issues with their family members tend to do pro-environmental behaviors. 3) Both students and parents who try to share knowledge about environmental issues with their family members tend to do pro-environmental behaviors. 4) Experiences in nature are in correlation with only students' pro-environmental behaviors, not with parents' behaviors. 5) For students and parents, awareness of personal responsibilities for and effectiveness of doing environmentally appropriate behaviors have correlation with their pro-environmental behaviors, but doing environmentally appropriate behaviors have correlation with their pro-environmental behaviors.

The “Classical” Concept of Alienation in the Light of Post-Structural Social Theory: Trans-Alienation and Hypo-Subjectivity of Working Man

In general, the studies of alienation can be divided into two strata: 1) processes of alienation in the “developed countries” due to formation of mass consumer society, 2) dynamics of alienation in “developing countries” that takes place in classic terms, like alienation of labor and alienation of the subject. Since the globalization of the world economy we can clearly distinguish types of alienation? Probably today we should talk about rhizome (Deleuze, 1980) of different dimensions of alienation. Using the concepts of diverse trans-phenomenon (trans-politics, trans-economics etc.) of French post-structuralist Jean Baudrillard (2006) I’m representing the concept of “trans-alienation” which is a hybrid of “new” Western and “old” Soviet forms of alienation which are products of the different types of social spectacle (Guy Debord, 2004). The “democratic” Western countries are more inclined to the methods of state regulation of the economy, whereas in developing countries there is still a tendency to anomie and imposing values of the market and the consumer society. Thus, the modern individual is represented as totally alienated, in other words, as a “dead subject”: a vicious circle: alienated labor ↔ alienated consumption. Is there still hope today to reanimate the subject that is not more crushed by the discourses of power, labor, consumption and capital? If the early works of postmodernists abounded statements and attitudes regarding the death of the subject, some of their more recent works show revision of the terms “subject” and “subjectivity” and indicate the possibility of resuscitation active social agent as a full-fledged subject of power, of his will, intentions and desires. This is possible by the development of new ideas about the properties of the social environment (consciousness; a flexible, non-linear, post-bureaucratic, rhizomatic (Deleuze, Guattari).

The Socio-Political Foundations of the Zionist Banking System in British Mandatory Palestine and Its Institutional Change in the Political Economy of Israel

In 1948, when Israel was established, there were more than twenty banks and a hundred of credit cooperatives. This was the legacy of the pre-state period in which this fragmented Jewish banking system was formed by the British liberal legal framework, social and business networks among German origin Jewish bankers, power struggle between not only national but also Jewish banking interests, and the Zionist ideology unites them all.

Thirty years later, in the end of the 1970s, the landscape of the Israeli banking was completely different: it was dominated by only three powerful banking groups which have become almost exclusive actors in the financial and ‘real’ markets. The government has decided to create a ‘state-led’ financial system (similar to France) and brought about an extreme consolidation in the banking sector, in order to control the monetary system and optimize the channeling of capital for achieving industrialization. Through ordinances and informal means, embedded in institutional arrangements, politicians and state bureaucrats adopted and simultaneously applied a triangular policy: giving institutional preference to three specific banks; imposing discrimination against the rest; and prompting mergers in the field. The regulatory authorities also allowed the three largest banks to become ‘universal’ (similar to Germany), what made the implementation of the
Emergent Platform Stage of Japanese Civil Society after the Fukushima Accident: The End of “Winter of Social Movements” in Japan?

After the severe accident in Fukushima Daiichi nuclear power plant, many major campaigns in issues of anti-nuclear power have become variable. Before the accident, these issues were related to the anti-nuclear power plant construction in particular regions and anti-atomic weapon for the risk of causing radioactive contamination. However, this crisis broadened the range of these issues and changed the risk. Not only living environments in Fukushima were destroyed by the tsunami, but also the environments in other regions were influenced by the risk of the unseen health problem which may be caused by radioactive contamination. How did Japanese civil society organizations respond to the arising issues? What are the differences and commonalities of the organizations working through each issue?

To investigate the questions mentioned above, we conducted interviews with leaders of civil organizations on related issues in Tokyo, Osaka, and Fukushima, and a questionnaire survey on hundreds of the organizations which appeared in newspaper after the March 11.

From these researches we find out that the wide range of issues in nuclear power which was caused by the crisis gave way to the emergence of, not only the anti-nuclear power organizations which passed through the “winter of the social movements” before the Fukushima accident, but also new comer organizations which keep sometimes ambiguous or neutral stance on nuclear power. But, for example, a new comer movement proposed a law request for the victims, which was finally got through, to the local government. In other words, a newcomer organizations can have the means of accessing Japanese society. So, these organizations can provide the alternative means to fight against the government for Japanese civil society organizations of the issues in nuclear power. These research findings must make important resources to predict the future of the civil society after the great earthquake.

Local Food Movement and Sustainable Community Building in Seattle

A growing number of consumers are demanding alternatives to the globalized, industrialized food system that fosters and relies upon social relations embedded in a particular place. The food localization movement is an unmistakable feature of the urban corridors of the U.S., where direct farmer-to-consumer relationships are becoming increasingly common. For instance, there has been a 4.6-fold increase in the number of farmers markets across the U.S. between 1994 and 2007, more than 12,500 U.S. farms reported marketing products using the Community Support Agriculture (CSA) model.

This article examines the development and current state of the local food movement in the Seattle metropolitan area of Washington State. We are particularly interested in the roles that different actors play, and how these actors formed connections with one another as the localization movement developed across this region. We also examine the positive effects that emerged from food system efforts, the challenges that were overcome and those which were not, and the emerging challenges and needs. We pay close attention to how low-income residents and indigenous minorities participated in and benefited from local food system development efforts. Data are derived from interviews with local farmers, retailers, non-governmental organizations (NGOs), and government officials conducted between 2011 and 2012. Government statistics and documents, and other archival materials were also collected and analyzed.

Overall, our preliminary findings suggest that a local food policy initiative in Seattle helped not only promote local food consumption and support local farmers, but also provided opportunities to connect various actors in the food system. What is particularly noteworthy is that local food networks connected actors belonging to traditionally different sectors, and with a regulatory schema for the sale of local foods, the localization movement became in many ways institutionalized allowing for accelerated movement toward urban sustainability.

Movements and Counter-Movements in Korean Environmental Politics of Post-Fukushima

This paper intends to explain how the Korean social movements engage in the environmental politics after Fukushima disaster by focusing on the competition between two master frames, eco-justice versus green growth. We believe that Korean social movements have more actively developed local nuke-free society through engaging in various nuclear issues after the disaster. Simultaneously, counter-movements based on green growth frame have more actively supported nuclear plants as an alternative to peak oil or climate change. Each movement tries to seize the so-called master frame, ‘eco-justice’ or ‘green growth’ respectively. As the former is strengthening its relationship with global and local NGOs, so the latter is focusing on the national and local governments, business and media groups. Divergent movements in Korea are converging again after the Fukushima incident with the flag of global justice frame with expanding their activism into transnational arena. Simultaneously counter-movements are also developing a strong solidarity with the master frame of growth. The Korean environmental movements engaging in such contentious politics pay more attention to regional collaboration in East Asia to cope with unexpected high risks at various levels.

Titanic and Mcsex: Accomplishing Masculinities Among Chinese Men Who Buy Sex

It is argued that a profound transformation of personal lives has taken place in late modern Western societies. In particular traditional ‘procreative’ and modern ‘companionate’ models of sexuality have been increasingly supplemented by ‘recreational’ sexual ethics. Hong Kong follows a similar but somewhat different path due to its Confucian Chinese culture, British colonial history (1842-1997) and the rapid advance of globalization. Departing from traditional masculine roles, Hong Kong men are struggling among different discourses of heterosexual male sexuality and are increasingly preoccupied with the construction of a new self.

It is under this background that I would like to explore the newly emerged scripts for Chinese masculinities. Based on 24 in-depth interviews and 2 focus group discussions conducted since 2012 of Hong Kong heterosexual men who buy sex, this paper examines these men’s involvement with commercial sex in relation to their male identity. Following Rofel (2007), I will argue that these men...
are a desiring subject with 'sexual, material, and affective self-interest'. They have a wide range of aspirations, needs and longings for love, sex and relationship. Some are proud of paying for rather impersonal sex with as many women as they wish (McDonaldization of sex, or McSex) while others passionately seek intense emotional intimacy with female sex workers and refer themselves as a member of a ‘sunkens boat’ or ‘Titanic, the local parlance for male clients who fall in love with sex workers. It is through these different engagements with female sex workers that we can understand the emerging Chinese masculinities in Hong Kong.

Through a sociological analysis of men’s commercial sexual experiences in Hong Kong, this research joins the current international debate to rethink masculinity in relation to the changing gender order between the sexes under the new urban sexual culture of post-industrial capitalism.

**KONIECZNY, PIOTR** (Hanyang University, pjkon@post.pl)

This paper contributes to the discussion on Internet mobilization and on international social movements’ ability to influence national policy, by analyzing the motivations and the participation levels of Wikipedia volunteer editors (Wikipedians). The “first Internet strike” of 18th January 2012 against the SOPA legislation proposed in the USA. Wikipedians from all around the world took part in the vote concerning whether Wikipedia should undertake a protest action aimed at influencing American policymakers. Wikipedia editors are shown to share values of the international free culture movement, through experienced Wikipedians were also likely to be conflicted about whether taking part in a protest action is not violating the site’s principle of encyclopedic neutrality. Wikipedia’s participation in this protest action allowed internationally-based netizens to have a visible impact on the US national legislation. As such, Wikipedia can be seen as an international social movement organization, whose participation (24 hour site’s blackout) was a major factor that led to a creation of an international political opportunity structure (worldwide awareness of and protests against a proposed American legislation) enabling a national political opportunity structure (American citizens who otherwise would not be aware of the issue became so and became politically active)

*Social Stratification of Changing Family Life Courses – Results from Sequence Analyses for Seven European Countries*

A major shift of life course patterns occurred in Europe throughout the second half of the 20th century. The post-war period of economic growth and mass prosperity fostered highly standardized life courses, characterized by continuous employment patterns (among men), nuclear family patterns with early and stable marriages, accompanied by medium levels of fertility. Research has proven, that living arrangements have pluralized and become more heterogeneous since the 1970s, while life courses destandardized. Value change, individualization and increasing economic insecurity are assumed to have stimulated these changes. We add to the discussion of the causes of destandardization by investigating which social strata are driving the process. We examine differences in destandardization of family formation between higher and lower educated strata in seven European countries with distinct socio-political systems and economic development. We use representative data from the Generations and Gender Surveys (GGS) for Norway, France, Italy, Russia, Estonia, Hungary and from the National Educational Panel Survey (NEPS) for Germany (n = 70228 respondents). We compare cohort-specific patterns of family formation between the respondents’ 15th and 35th birthday using sequence analysis, which allows examining complex life course patterns.

The empirical results show for all countries that a) ‘traditional’ sequences of family formation are diminishing and b) life courses of the lower educated have become more destandardized than those of the higher educated strata. This is due to the fact that a new standard of family formation emerges among the higher educated, while the lower educated follow a variety of different paths. Specific life course pattern contribute to the social stratification of changing family life courses. Overall, our results suggest that destandardization is a lesser extend fostered by value changes, but much more by social deprivation and failure to establish stable and socially accepted family trajectories among lower social strata.

*Toward a Sociology of “Sexuate” Beings*

Although biological factors underlie human sexual behavior and interaction, sexuality is a distinctly sociological phenomenon, as it is part of the social world that is endowed with and constituted through meaning. In this regard, sexuality does not differ from other aspects of social experience. However, its close connection to the biological body presents an especially interesting challenge for sociological theorizing.

The meaning of sexuality has been explored widely in the social sciences and humanities. One notable theoretical strand in these inquiries is gender theory. Gender theorists share a sociological perspective in that they view sexuality as part of the meaning structure that we constantly create. Another important approach to the theory of sexuality and sexual organizations is rational choice. If collectives are supposed to be rationalized, these theorists have identified multiple ways in which everyday interactions occurring within them are sexualized.

Yet, the body itself is curiously absent from these and other theoretical approaches. Although the only way to know our bodies is through some meaning structure, this does not mean that the body can exist unless meanings are attached to it. The body exerts a powerful influence on social interaction, and sociological theory must account for it.

As social theorist Drucilla Cornell has argued, we are “sexuate” beings with multiple and multilayered sexual identities. Our sexuate status creates the materials with which we construct our social world, which, is shaped through this process. A more adequate theory of sexuality must be based on an understanding of how the real and fictitious possibilities of attraction and repulsion among human organisms are acknowledged, used, and acted upon, on the one hand, or downplayed, minimized, and rejected, on the other, in various social contexts. Building on Cornell’s concept, this study aimed to develop a conceptual framework for a more complete sociological understanding of human sexuality.

* Diversity in Leisure and Leisure Research for Social Justice in Japan: Seeking International Conversations*

Although Japanese leisure research literature has grown over the past four decades, it has not been well recognized at the global level largely because of language barrier. Given the considered patterns that leisure-like phenomena are closely intertwined with each other particularly in non-Western contexts (Fox & Kläiber, 2006; Iwasaki, Nishino, Onda, & Bowling, 2007), the acknowledgment of the existing Japanese leisure literature appears necessary to initiate constructive conversations on leisure and leisure research in Japan among international researchers. Therefore, a critical review of literature on leisure in Japan written by Japanese researchers in Japanese language was conducted. Four major challenges were subsequently identified: leisure research as historical description, the weak linkage between empirical and theoretical research, the persistent influence of a work-leisure binary perspective, and the ambiguity of the meaning of leisure research to contemporary social life. To tackle these challenges, I propose that diversity and social justice perspectives (Parry, Johnson, & Stewart, 2013) can facilitate researchers’ conceptualizing leisure as active and multi-faceted phenomena reflecting social diversity, enhancing the linkage between empirical and theoretical aspects of research, increasing self-reflexivity, and pro-actively addressing social inequalities and social discourses. Rather than simply

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
importing Western perspectives, this paper argues for scholarly analysis cognizant of Japanese history, culture, and contemporary social issues, particularly family issues. I argue that a culturally-adapted communitarian model of diversity perspective on contemporary Japanese family settings will open space for a just research of diverse family issues, including the rapid rise of one-two-person households and the so-called "invisible family" that do not necessarily fit the conventional idea of Japanese nuclear family. This study examines specifically gender and age issues in the contexts of such postmodern family configurations. Given the effects of globalization on all nations, further international conversations are necessary to advance our knowledge on the subject.

Expansion Of Higher Education: Demand, Supply and Differentiation Of Universities

Russian experience of expansion of higher education offers to understand the specific lessons. Demand and supply were drivers of changes.

Part of the national economy has formed a demand for knowledge, qualifications. On the other hand, the mass demand has been formed by employers on a more or less socialized young people whose core competency is the relative ability to learn new subjects and skills of communication. This demand has brought primarily by the service sector and trade, which began to develop explosively now. Mentioned qualities became seen as a result of staying in higher educational institution. Speciality, for which there was teaching is not important for the employer, a possession of a high educational level as a diploma is essential as a certificate of appropriate training. Seller of clothes, for example, should not have a diploma of trade manager, he may have engineer or teacher degree, but availability of a diploma is mandatory.

Demand (both kinds) of the labor market was transmitted into families. The educational system has responded by supply adequate to the families' demand. Now the increment of human capital is developed in some universities; implementation of the signal function, the production of certificates about staying in educational institution take place in other universities.

A second kind demand has led to growth of correspondence departments. There are lower requirements to students at those departments; learning there requires less time and efforts. Thus, it is easier to get a diploma. So enrolment in those departments became set equal to enrolment in full-time departments and surpassed it. Expansion of higher education turned out mainly expansion of the correspondence education.

World Civil Society and Activist Identity in Japanese Environmental Smog

Globalization can standardize the way people interpret their social worlds and act in them. Norms such as environmental protection, human rights and democracy have become more widely accepted. The concept of World Civil Society describes how increased civic communication across boundaries generates political opportunities for citizen groups by creating pressure towards national governments to abide by international norms in a variety of fields.

In this paper, the formation of activist identities within the Japanese Environmental SMOs is studied against the backdrop of global diffusion of norms, ideas and forms of action as well as Japan's role in the international community. Globalization supports activist identity in Japan; Japan's wish to become a recognized and actively contributing member of the international community creates ties with a normative community that many activists can readily relate to.

As Japanese social movement organizations have traditionally derived their strength from their unique ties with the local communities, it is important to ask how the activists interact in the processes of civic mobilization and formation of activist identities. Are we observing increased globalization, or the development of genuinely cosmopolitan ethos and global mentalities?

Awareness of global environmental problems transformed significantly during the so-called environmental boom of late 80s and early 90s. The 1990s have at the same time been called the era of the emergence of Japanese civil society. My paper discusses how the Western-style environmentalism influenced the Japanese environmental movement at two points of time: the environmental boom of the 90s, and post-3/11 era—and how it interacted with the indigenous elements therein. The approach is micro-sociological: I study how environmental activists represent themselves and their role in society in life-story interviews. What role does the juxtaposition of Japaneseess and foreignness have in these discourses? Is there room for cosmopolitan identities?

KOO, ANITA* (Hong Kong Polytechnic University, ssakoo@polyu.edu.hk)

Expansion of Vocational Education and the Social Reproduction of Working Class in China

In post-reform China, the value of education is heightened in the country's development of a market economy. Driven by a neoliberal ideology of human capital accumulation, China has envisioned education as a motor of economic growth and has implemented a series of education reforms. In parallel to the adoption of an export-oriented growth model, the role of vocational education is emphasized in the past two decades – to train secondary school graduates with skills to match the needs of the developing industrial sectors. This paper describes how the expansion of educational opportunity in China responds to the neoliberal idea of human capital development. It also investigates its impact on the life chances of students with rural background, who previously had limited chance for post-compulsory education. Based on the fieldwork data collected in three vocational schools in Chongqing, we find the students have an urge to craft marketable selves through the acquisition of educational credentials. Earning degrees in vocational schools is motivated by their aspiration for upward mobility. However, many students show their pessimism after working side-by-side with other factory workers on the production lines during their internship. This paper argues that under the developmental mode in a globalized market, China relies heavily on labour intensive manufacturing-based economy. The state-capital alliance has already shaped and structured the types of jobs that available in the labour market. The expansion of vocational schooling operates in the guise of training and skill development; but, in reality, these educated youth only becomes part of the new generation of migrant workers for the use of the export-led industrialization.

The human capital argument for national development has failed to deliver on its promise.

Conservative Movements and Political Threat Structure: Focusing on History Issues Related Groups in Post-Cold War Japan

Since the 1990s, a growing set of conservative movements has become conspicuous in Japan. Major movements that have brought media's attention and that have formed new social welfare and active labor market programs relatively early and have relied on more consensus-based policy-making systems, which require the cooperation between government and organized interests for coordinating macro-economic objectives. The results of research show that the countries following higher expenditure on new social risks and concerted policy-making trajectory perform better in terms of reducing unemployment and inequality. We discuss the implications of these findings for the development of new governance model in Korea.

Governance Matters?: Social Concertation and Macro-Economic Outcomes

The contemporary labor market and welfare state has undergone dramatic changes since the 1980s. In most countries, governments have been facing the declining economic growth, higher level of unemployment, rising inequality, and tighter fiscal constraints; just as the context of labor market and welfare state has been changed, the patterns of governance coping with the problems have also changed significantly.

Previous literature shows that the macro-economic outcomes such as unemployment and inequality have something to do with the different patterns of governance. This study seeks to examine the relationship between governance patterns and macro-economic outcomes by analyzing the 30 year trajectories of labor market and welfare reforms and policy-making systems in 20 advanced countries. We do so by proceeding as follows:

First, using the optimal matching technique, we identify different trajectories of labor market and welfare reforms and policy-making systems in the three decades from 1980 to 2009. Second, we group the countries based on the similarities in reform trajectories and policy-making system changes. Third, we compare the levels of unemployment rate and inequality across the groups.

The post-Cold War period has been characterized as a time when the market economy have developed new social welfare and active labor market programs relatively early and have relied on more consensus-based policy-making systems, which require the cooperation between government and organized interests for coordinating macro-economic objectives. The results of research show that the countries following higher expenditure on new social risks and concerted policy-making trajectory perform better in terms of reducing unemployment and inequality. We discuss the implications of these findings for the development of new governance model in Korea.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
ness: where a movement occurs when POS closes. This leads to a shed a new light on political threat structure(PTS). While POS refers to favorable political environments, PTS presumes the opposite like repression. In this regard, this paper focuses on PTS and argues that PTS influences mobilization in the case of Japanese conservative movements. When observing conservative movements the 1990s, movements were triggered though POS closes.

In order to support the argument, this paper first addresses the relations between POS and PTS and what constitutes PTS: threatening cabinet’s ideology and formal speeches like the Murayama Speech, unfavorable remarks and behaviors by politicians. Next, by selecting these ‘major’ conservative civic groups and through discourse analysis of these groups, it explores how they were mobilized under PTS. Lastly, this paper attempts to find whether certain combination of PTS factors exist to stimulate movements.

This paper intends to contribute to understating the mobilization of conservative movements - Japanese in particular - and to the academic discourse of the relation between POS/PTS and movements.

Immigrant Occupational Attainment in Japan and Its Determinants; Is it a “Structured Settlement”?

Japan as a “post-transitional society” has recently shifted into a “new” country of immigration as southern European countries. However there are few studies on the integration of immigrants in the Japanese labor market. The present study aims to reveal immigrant occupational attainment in Japan and its determinants by comparing their occupational distributions to those of the Japanese counterparts with the Japanese census micro-data conducted in 2010. As a result, the following findings are revealed; to the first question, we answered that socio-economic compositional differences cannot explain the differences in the occupational distribution between immigrants and the Japanese, meaning that a migrant might have a different probability of occupational attainment from the Japanese who has an equivalent feature. On the second question, it is revealed that a return to immigrant educational attainments is higher than that of the Japanese, when a migrant is a highly-skilled or a long-term resident such as Vietnamese Refugees in Japan. In addition, there is a gender gap in a return of an educational attainment, which tends to be smaller for females than for males. To the third question, we can argue that the extension of residency in Japan mostly has a positive effect for migrants except highly-skilled ones. To the fourth question, the outcome of occupational attainments shows mosaic situation, implying that the same characteristic plays a different role in their occupational attainment depending on their mode of incorporation. Taken together, it is clarified that selection on human capital, duration of residency and gender difference are important for immigrant occupational attainment. Actually, the relations between those determinants are similar to findings in previous studies in Western developed countries. However, it is also revealed that Japan has experienced multiple modes of incorporations of immigrants simultaneously, or a “structured settlement” as a feature of “new” country of immigration.

Refugee Returns - Experiences of Inclusion Here and There

My doctoral dissertation focuses on the personal experiences of research participants, legally defined as refugees, in relation to their reunions to the region of their origin. From Finland, a fluid concept, adopted from intercultural communication research, illuminates several types of return that appear along a spectrum from normative notions of ‘permanence’ to relatively transnational outcomes. Specific examples in my interview data include forced return, voluntary return, onward migration, patterned visits, following return in Chile, Iraq, or Vietnam. Applying Rosenthal’s biographic-narrative interview as the interview method of study, the participants narrate their life story, which is then analyzed, in terms of phenomena linked to return, especially concerning the biographers’ social networks. My aim in this presentation is to illuminate how the participants narrate their life story, and its reflection on the social context in and exclusion in different settings in Finland and as a returnee, in the region of their origin. In addition, the interviews illuminate other key settings, events, relationships and issues that play a critical role in their lives. Experiences of being different are frequent in the participants’ narratives – both here and there – and they frequently reflect on this, often showing remarkable social acuity and awareness of social and cultural dynamics, in terms of aspiration, achievement, abandonment – or being contextually-abandoned, with the result of either achieving the aspired position or experiences of abandonment.

In addition, normative framing and unquestioned assumptions are frequently encountered, presenting an ongoing and central challenge, for both myself and those I have invited to participate in this research.

Returning Refugees’ Life Stories

My doctoral study looks at refugee returns applying Rosenthal’s biographical-narrative interview as the interview method of study. In return, a concept coined from the field of intercultural communication denoting the immediate experiences of people returning, the applicability of the method is being elaborated on in reference to different types of interview participants, returning from Finland to the region of origin, e.g. the case of three voluntary returns to Iraqi Kurdistan from Finland. The three interview participants held a legal status of a refugee in Finland, stayed there for at least 2 years, and returned under the auspices of an IOM programme of assisted voluntary returns in the beginning of 2013. In order to examine the return processes as a whole, with special emphasis on social relations and networks, and the impact of the time spent in Finland in the participants’ lives, the biographic-narrative interview was chosen as the most applicable method to elucidate the genesis of return, key turning points characterizing the participants’ lives, the various salient social and cultural dynamics concerning the return decision, and what the future looks like from the participants’ present perspective of looking at “the experiences preceding and following the phenomenon in question” (Rosenthal, 2004: 53). For the analysis, the procedure of biographical case reconstructions is followed step-by-step: biographical data, text and thematic field analysis, reconstruction of the life history, microanalysis of certain segments, comparison of life history and life story, and the development of a biographical model. Challenges are apparent regarding other types of biographical data. That said, both the levels of narrated and experienced life history fall within the scope of my study.

Pragmatic Restrictions: Policies and Policy Limitations In Turkish Refugee Regime

This paper scrutinizes how the Syrian refugee crisis affect Turkey’s decades long geographical restriction policy on admitting asylum seekers. It presents how foreign policy goals provide a context for pragmatism in making immigration policies. It also debates how the reaction of societal actors to immigration affects the making of Turkish foreign policy vis-à-vis the Middle East. Thereby, looking at the Syrian refugees crisis, it presents a case of public philosophy clashing with policy. Turkey is one of the last four countries in the world that remain to impose geographical restrictions on admitting asylum seekers. For decades, policy makers appealed to Turkey’s geographical region as a discourse for rejecting asylum applications of those that came outside Europe. While under the Cold War conditions this may have made some sense, in its aftermath this policy remains unintelligible. Given the recent hike in illegal entries to or residence of foreigners in Turkey, this policy in effect serves to keep out informal employment in Turkey. Yet, since the 1980s geographical restriction is pragmatically used when it comes to settling people of “Turkish” descent – serving the interests of Turkish foreign policy inasmuch as its goals did not clash with the public opinion. The most recent Syrian refugee crisis, however, is the first instance whereby there is a clash between the two. AKP government seeks policy pragmatism with geographical restriction once again and provide refuge for Syrians whilst the public philosophy remains opposed to receiving any foreigners, including the Syrian refugees to Turkey. Overall, this paper debates the Syrian refugee crisis as a case study to assess to how far Turkey’s immigration policy can appeal to pragmatic policy solutions rather than drastic changes in policy and public philosophy dealing with foreigners.

The Turkish Dilemma: How Should Islam Relate To Republican Era Collective Memory?

This paper scrutinizes the ways in which the secular Republican collective mem- ory clashes with Islamist collective memory in Turkey drawing upon insights from political sociology and political history. Among others, the ascendance of political Islam in Turkey for the past decade also illustrated cleavages in society regarding the basic tenets of collective memory. Relentlessly, the supporters of secular Re- publicanism retained the ethos that made “Turkish people a singular nation with ancient roots in Central Asia as well as Mesopotamia and racially not different from the Whites” (Inan 1968). In a denigratory context his ethos rejected any connection between Turks and Arabs and recently went as far as appropriating to the Prophet Mohammad Turric origins thanks to his families “mythical” connection to the “ancient Turric” population of Sumerians. While not fully ridiculing

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
this ethos, the supporters of political Islam in response vied to emphasize Islam and its Turkish martyrs as a predominant character of collective memory. In other words, Turk's gallantry, statecraft superior to its neighbors, and finally tolerance to the weak became the underlying theme of such collective memory. It is puzzling to see that while both ideologies underline superiority, history, and continuation in Turkish historiography, but they diverge on how to fit in Islam in this composition. In the end, we face a very pious and conservative nation who call themselves defensively as the “real” Muslims vis-a-vis each other, but not certain about how to fit in the heritage of Islam in the making of their collective memory as a nation. This paper investigates the roots and effects of this dilemma on the relation between politics and religion in Turkey.

Patterns of Substance Use in Entertainment Venues in Latvia: A number of surveys in Europe, including Latvia, show that the level of drug use among young people in entertainment venues is significantly higher than among youth in general (according to EMCDDA). Monitoring surveys carried-out in Latvia in 2000, 2008 and 2012 support this conclusion. Over the last 12 years, changes in the models of drug use and affecting factors is based on quantitative data (n=400 in 2000, n=600 in 2008 and n=800 in 2012) and semi-structured interviews with field experts and owners of entertainment venues. The results show that young people admit the fact that drugs became an integral part of modern youth entertainment and club subculture. Drug use is made to suit particular entertainment purposes and driven by desires of achieving known effect. In order to minimise risks young people avoid injecting drugs and prefer not to use substances with distinct and strong smell (for instance, marijuana), but rather synthetic drugs. This tendency makes the drug distribution market highly saturated and offers wide variety of substances, including legal highs. At the moment the poly-use model is dominating, i.e., using several substances simultaneously (alcohol, legal and illegal drugs). Our analysis of the spread of drug use and affecting factors is based on qualitative data (n=800 in 2000, n=600 in 2008 and n=800 in 2012) and semi-structured interviews with field experts and owners of entertainment venues. The patterns of drug use in Latvia were identified: young people try these substances at very young age, the drugs distribution market is highly saturated and offers wide variety of substances, including legal highs. At the moment the poly-use model is dominating, i.e., using several substances simultaneously (alcohol, legal and illegal drugs). Our analysis of the spread of drug use and affecting factors.

Support A Challenge for an Expert: The Management of Acute Psychosocial Support According to Finland’s Health Care Act, municipalities are responsible for organizing the acute psychosocial support in crisis and special situations. Typical of these situations is the need for immediate and simultaneous help, where obtaining the necessary resources is challenging. Acute psychosocial support includes psychological, social and mental help to the victims, their families and communities. All these parties should be considered in managing the acute psychosocial support. Strategic management is required when psychosocial support is organized for different groups, so that the general view is not forgotten and no one is left without the offered help.

The purpose of this study was to find out what helps the expert to quickly become a crisis and special situation manager and what helps the employee to change back to the expert role. In addition, the study sought answers to crisis and special situation manager’s decision making and what kind of abilities crisis management requires? Both qualitative and quantitative methods were used including for data analysis. The data consisted of initial mapping and a theme interview and a case study interview. The study showed that the feeling of being in control of a situation as well as being in control of oneself are factors supporting the management of acute psychosocial support. Both the employee and the team should have special skills to control the situation, as well as the feeling of being in control personally. Crisis and special situation management consists of management support, structures, capacities and the support of various parties. These factors can be influenced by education and training. Education and training should be planned carefully, for example, by skill mapping to find weaknesses in skills so that training would be targeted correctly.
A World-Systems Methodology for the Study of Inequality

Drawing on historical data on inequality within and between regions of the world-economy, we indicate that inequality within regions in both the core and the semiperiphery of the world-economy tended to rise over a long period extending from the sixteenth to sometime in the nineteenth century. During this same period, inequality between regions of the world-economy remained considerably less pronounced and stable. Beginning during the nineteenth century, however, the trends shifted in significant ways: inequality within many core areas began to decline (as opposed to many peripheral and semiperipheral areas where inequality remained very high), and inequality between these areas underwent a rapid increase. We link these transformations to social forces that acted to expand various rights (e.g., those of citizens and of workers as wage laborers) under the agenda of the modern nation-state, with uneven and linked effects in core, semiperipheral and peripheral areas of the world-economy.

Our data allow us to provide a stylized depiction of within- and between-country income distributions to show a multiple and overlapping matrix of distributions—within which household income inequality is central to the analysis and which is both systemic and historical—characterized by a global income distribution that is both systemic and historical. This is the world-economy, as we think of it, and our data allow us to show how it is distributed.

Specifically, we look at the impact and effects of the development and use of new technologies in welfare services. There is reason to believe that the development and dissemination of these technologies has had significant consequences for inequality within and between countries. The development and use of new technologies in welfare services has transformed the distribution of income and other resources within and between countries. This transformation has had significant consequences for inequality within and between countries.

Global Migration and the Contention Politics of Citizenship

We begin with a review of the history of world migration and the evolution of international migration policies. We then turn to the discussion of the political economy of migration, with a focus on the role of national governments in shaping migration policies. We argue that the political economy of migration is characterized by a complex interplay of factors, including economic incentives, political considerations, and social preferences. This interplay has led to the development of a variety of migration policies, each with its own set of consequences for the distribution of income and other resources within and between countries.

Inequality and social policy in many countries have been shaped by the political economy of migration. In particular, the political economy of migration has played a role in shaping the distribution of income and other resources within and between countries. These distributions have been characterized by a complex interplay of factors, including economic incentives, political considerations, and social preferences. This interplay has led to the development of a variety of migration policies, each with its own set of consequences for the distribution of income and other resources within and between countries.

The Genesis of Educational Inequality in Post-Soviet Russia: The State, School, Interest Groups

In this paper we focus on growing social inequality in contemporary Russia which is being fostered and reproduced by the current setting of its educational system. Particularly, we look at the impact and effects of the education policy both on the federal and the local level.

The results of the study are based on the expert survey conducted in 2013 in three regions (Moscow, the Moscow Region, the Republic of Karelia). The sample includes officials of the federal and regional level directly engaged in the education system reforms of 1990-2000s, as well as school principals. We also conducted a content analysis of federal and region programs and legislation in the field of education in the period under review.

We discuss the restructuring of the education system on the basis of neo-liberal approach, which has become a common trend in globalization era, but we argue that its impact in Russia has had its own particularities with respect to stratification of schools (i.e. quality, resources and context) due to its institutional preconditions. To do this we reconstitute the meanings inserted by various interest groups in the process of restructuring of the education system (i.e. households, school principals, education policy makers, etc.) and set it against the formal institutional design of the reform. We show that these reforms (extension of private schools, the provision of school choice, the legalization of paid services, and rejection of affirmative action) have provided exclusive opportunities for elite groups and extremely limited opportunities for the more deprived population.

Parallel to that we also discuss how the results of pioneering sociological studies in Russia and particularly their dissemination among the expert public have pushed the issue of inequality in access to quality education to become a major point in the national policy agenda in Russia.

KOSIARA-PEDERSEN, KARINA* (University of Copenhagen, kpg@fks.ku.dk)

Multifaceted Party Membership

Party membership is in general in decline; however, both the trends and the membership figures vary among parties, and the meaning of party membership varies among members. Both the degree, type and quality of party member participation vary among party members. Hence, in order to understand how the concept of party membership is filled out by party members, it is necessary to take into account what formal members are actually (not) doing within or for their parties. On the basis of a party member survey in nine Danish parties across the political spectrum, first, party members are grouped into types of party members on the basis of their participation. Second, the characteristics of these party member types are shown. Third, the distribution of party member types across parties is explained on the basis of party level variables, such as level of intra-party democracy, party culture and campaigning strategy. Finally, the party member types are discussed and compared to other, newer forms of party ‘supportership’, and the democratic implications of party membership figures are put into perspective.

Experiences from within the ‘Migrant Hierarchy’: Imposed Categorizations As Definers of Social Identity for Highly-Skilled Migrants in Finland

Studies of ethnic hierarchies in Finland show varying levels of prejudice towards migrants based on their nation of origin and ethnicity. Levels of acceptance are also tied to the role of the immigrants in the economy and labor market (i.e. class standards). In the intersection of these value judgements an overall ‘migrant hierarchy’ is formed. At the bottom of this hierarchy are ‘unwanted’ humanitarian migrants from less familiar cultures, while at the top end are the ‘migrant elite’: ‘wanted’, highly-skilled, and preferably Western, migrants.

I study this hierarchy as a form of categorization that creates a social structure. This structure has an effect on the construction of migrants’ self-defined social group identities; although these categorisations stem from the Finnish society and its views on immigrants, I believe that they are recognised and to certain extent internalised also by the migrants. Drawing from ethnographic and interview data emphasising lived experience and everyday life of skilled migrants in Finland, I will discuss how the imposed categories become strategies that can be used also by the migrants themselves in identity negotiations and to represent value judgements. As such they also point to possible problems with integration: in (re) drawing their group boundaries within this new social structure, skilled migrants in Finland are defining their identities not only as who they are, but also as who they are not: not ‘unwanted’ humanitarian migrants, but also not Finns.

Can Actor Relational Approach be Combined with Institutional Ethnography – What Could be the Benefits When Studying Information and Communication Technology Use in Child Welfare?

The need to make use of an interdisciplinary approach is vital when studying the development and use of new technologies in welfare services. There is research that indicates that information and communication technology (ICT) affect
work practices in welfare services in many ways. So far the effects have only in a limited way been in the focus for critical and constructive interdisciplinary research. In welfare services there is a need to communicate the essence of work especially among professionals planning, purchasing and using ICT.

This presentation is based on an empirical research plan. The research concentrates in studying the development and use of ICT in child welfare units in Finland. The aim of the research is to find out how functional the client data systems are that are used in Finnish municipalities. The question of functionality focuses on how appropriate these systems are in relation to the basic task in child welfare. The research plan has its origin in a small case study in the city of Helsinki. The results of this action research indicate that the use of client data systems may have negative effects on the basic task in child welfare in case there are not enough human resources using the systems.

The theoretical frame of the research comes from the actor-network-theory (ANT) and its critic. In order to communicate the findings within disciplines, the researcher plans to make use of Actor Relational Approach (ARA). In this sense the presentation investigates further whether Actor Relational Approach can be combined with Institutional Ethnography in a fruitful way in this research.

**Mayume's Life History: Between Japan and Brazil**

Although Mayume is from mixing ancestry, her mother is non-Japanese Brazilian and her father is Japanese-Brazilian. Her Japanese name is similar to a girl from a small town in Japan. At the time of the interview she was eighteen years old. When she was at four years of age, and her brother one year, her mother decided to join her father who was already working in Japan. She attended kindergarten, although she didn't understand what they were talking. However, she adjusted very well to the Japanese school and life style. But, six years ago her mother decided to return to Brazil, to see her parents. That's when Mayume faced a difficult adjustment: "I wanted to come here to see the town. I didn't want to remain. I wanted to go back, I wanted until today... because there is enjoyable at least for myself". She compares the Japanese town where she lived to Bastos: "Ja-pan is a different and unique life style. It looks like Sao Paulo, and I thought that here it would be the same. When I arrived here, I said: that's too much land!" Mayume faced a lot of problems at the Brazilian school. She compares the organization and the cleanliness of the Japanese public school, the respect from her classmates toward their teacher, and among themselves to the Brazilian public school and its poor-building, lack of respect toward the teacher, lack of discipline. Mayume's dream is to return to Japan and attend college there. Mayume and other children face ruptures in their socialization process due to their parents' labor migration. However, children as social agents can struggle to change their lives and make the decisions that sound better to them.

**Pension System Based on Sharecropping and Economic Security of Families**

Decisions about giving birth and upbringing of children imply consent to finances the public good. These decisions are generally individually adverse from the point of view of both short- and long-term economic security of families. The way to change this appraisal is to modify the structure of the pension system. The idea of the new system is based on the sharecropping – one of schemes of incentive systems under uncertainty and information asymmetry. The concept underlying this approach assumes that parents and the state, involved in upbringing the children, share both costs and benefits, what results in sharing the risk. The main advantage of the proposed solution is a convergence of interest of the parents and the state.

The practical implementation of such a system would be based on division of pension insurance contributions, paid by a working individual, between the two pillars of the new system, in proportion to the expenditure incurred on the (her) upbringing by the state and the parents in the past. The first part would be spent on financial development and on the second pillar. The concept of contributions made in the past, during the professional activity. The second part of the contribution, the so-called second pillar, would be transferred directly to the parents of this person – increasing their pension capital (if they are still working) or in the form of direct payments (if they are already retired). Additional, capital pillar could be established to improve long-term economic security for those without children or provide an extra protection for individuals involved in the first and second pillar.

The empirical part of the analysis will be done for the pension system in Poland, in the context of its planned restructuration.

**Towards Usages of Europe By Patient Representatives at National Level?**

Following a series of landmark rulings of the European Court of Justice (ECJ) on cross-border healthcare, the access to healthcare has been facilitated for European patients. After ten years of negotiations these rulings have been codified in the EU's Directive on the application of patients' rights. Europe thus now offers national actors various resources to pursue their interests beyond the opportunities of their national healthcare system including challenges and resources for patient representatives at member state level. In do these actors use those European resources inside their national healthcare system? Based on semi-directive interviews, this paper thus investigates if and how patient ombudsmen in the Austrian healthcare system include usages of Europe into their institutionalised routines and which are the national institutional limits to those usages. The paper argues that while Europe has rendered the national institutional boundaries of healthcare systems porous, control over patient flows is kept intact and that there is only limited room for manoeuvre for patient ombudsmen to use Europe at national level.

**Transition from School to Work, and Labour Market of Younger Generations in Japan**

The aim of this panel session is to share with the audience the outline of changing Japanese employment practice. Japanese employment system has been classified as one of the "organization-oriented," and it implies that it ensures long-term employment within the same firm. Japanese industrial relations system, the main feature of which is the enterprise union, appears to have reinforced the employment security. Japanese practice of transition from school to work has been regarded as enabling even graduates to immediately begin their occupational lives as regular employees.

As with the employment systems of other countries, Japanese employment practice is confronted with the pressure from globalization, and it is becoming difficult for it to maintain as high a level and as wide a range of job security as it used to be. In this presentation, I will focus on prevailing insecure job market especially in younger generations in Japan.

**Ideas in Conflict: The Campus Protest Culture in the 20th Century Japan**

In the late 1960s, from North America to Europe and from Latin America to Asia, many countries witnessed a wave of student protests. Since those movements showed distinct features from place to place and shared similar ground such as the Cold War politics and common issues such as antiwar and academic freedom, they provide a good field to examine the critical question haunting recent social movement studies: whether and how culture matters in the emergence and process of social movements (See Johnston et al., 2009; Polletta, 2008).

Against this background, this presentation examines a campus protest at the University of Tokyo, Japan, from 1968 to 1969, using data from in-depth interviews with the participants to show how the students’ ideas shaped their perception and interpretation of the situations in the course of the struggle and influenced their choice of strategy and tactics.

This presentation focuses on a group of students called "NON SEKUTO RAJIKARU" (non-sect radicals). The protestors were not monolithic but divided into three groups in conflict: Democratic Youth League of Japan (DYL) under the guidance of the Japanese Communist Party (TCP), the New Left sects which were seeking a new form of Marxism politics as alternative to TCP, and the non-sect radicals without any affiliation to DYL or the New Left. On one hand, the non-sect radicals and the DYL and New Left students were equally marked by Japan's campus culture dating back to the 1910s; the strong tradition of Marxism as a guiding ideology of social movements and self-cultivation. On the other hand, the non-sect radicals developed principles against the basic lines of DYL and the New Left, including centralized and hierarchical organizations and strict Marxism orthodoxy. Thus, they created decentralized and horizontal organizations and based their choice on their firsthand observations instead of ideology.

Risking It? Upper Social Class and School Choice in Finland

The uncertainties and risks families are facing concerning educational choice have both, local and global influences. The neo-liberal market mechanism promoting educational choice in educational systems move the responsibility of successful choice increasingly on individuals. The individualized responsibility is partly replacing the ‘collective assurance against risk’, and as it increases individual risk, it might lead to social closure and enabling the strengthening of the ‘lines of social divisibility’. In the context of educational choice this touches upon the discourse around choice and distinction between social classes. Despite the privileged educational trajectories can still be obtained by context-relevant use of economic, social and cultural capital, the changes in the educational provision and basis of selection to prestigious institutions produce new arenas for competition. This challenges the privileged position of upper-class children in the competition of the best education available, and makes examining their educational choices relevant.

The aim was to examine the educational discourse of the upper-class parents of children in year 7 of the Finnish secondary school, and investigate how parents’ anxieties and fears regarding their children’s education intertwine both with the considered risks and their trust in the Finnish education system. The data consist of semi-structured interviews conducted in Finland and France (Vantaa, Espoo, Paris) with parents (n=19) who have experience on educational policies and practices in Finland and abroad, and contrasting data, interviews with parents with no such international experience (n=78). The interviews were analysed by using qualitative content analyses. Preliminary results show that parents trust and value Finnish education and especially the value-base behind it. Still, their conceptions regarding competition, uncertainties, risk and the definitive nature of educational choices seem to have absorbed some ‘international fears’. This contributes to the construction of the social reality and subtle social distinctions in the Finnish school choice space.

Why Is It That I Think I Am Better Than You? Antecedents and Consequences of Hospital Employees’ Assessment of Their Own Skills Relative to Those of Their Colleagues

Work in health care organizations requires employees to permanently improve their skills, and taking part in continuing education is a prerequisite for keeping a position or for being promoted. Comparing the resulting skills and abilities with those of colleagues and co-workers is a mechanism of status evaluation and, in turn, may produce perceptions of superiority. In a survey of 1050 employees (physicians, nurses, social workers, etc.) from 49 hospitals we asked respondents whether they were worse, equally, or better skilled than the colleagues with whom they work together on a day-to-day basis. 46% reported to be better skilled (equally: 50%, worse: 4%). This finding is not due to a higher representation of better skilled respondents in the sample and is found in both formally high (e.g. physicians) and low (e.g. nursing assistants) skilled employees, so apparently workers are aware of the conceptual overestimation and underestimate their skills or relative skills to those of a randomly selected less skilled subset of the actual comparison group. We try to explain this finding using theories from sociology, social-psychology, and psychology. Estimating multilevel models with individual (level 1) and hospital (level 2) characteristics, we identify antecedents and clustering of employees perceiving to be better skilled than their colleagues. Linking the proportion of these employees in a hospital to its quality of care we attempt to gain insight into the consequences of this phenomenon: Do hospitals do better or worse with higher proportions of employees that rate their skills better than those of their colleagues? We finally discuss whether the high opinion employees have of their own skills may be a result of the permanent self- and third-party evaluation at the workplace and in contemporary societies as a whole.

Functional Differentiation and the Public Sphere: An Attempt in Theoretical Formalization for Historical and Comparative Research

This study elaborates on the concept of functional differentiation as a structural feature of modern society. Methodological criteria to judge whether society is differentiated functionally remain elusive, although these must be presupposed as the concept of functional differentiation is applied to the comparison of societies. Certainly, a society is not functionally differentiated if judicial decision, for example, is always dependent on external conditions, whether power or wealth of parties, and hence, the legal system cannot operate according to its own logic. However, the autonomy and independence of a functional system never imply the functional differentiation of society as a whole because the case where other functional logics can be violated directly by political or monetary power is not completely excluded. The existence of some functional institutions, for example, the parliament, bureaucracy, courthouse, market, and educational system, does not guarantee a functionally differentiated structure. To exploit

At an affluent urban area, it seems to show spryness and "youthfulness" of today's seniors. The results of this first-wave survey of 80-year-old seniors living in a relatively affluent area indicate that seniors who were healthy at age 80 were more likely to have such activities than those who were not. Not only sedentary activities such as reading and playing games, but also kinetic activities like using a personal computer and/or mobile phone (21.0%; 25.6% in men and 17.7% in women). Among the seniors who had started new activities, 37.4% in men and 53.3% in women, were reported. The most frequently mentioned new activity was hobby (46.8% of respondents). Seven hundred and ten persons answered that they had started some new activities after age 70. Various activities reported their health condition was excellent (72.1% of men and 72.5% of women) reported their health condition was excellent or fair. The details will be presented at the session.

Thirty-nine percent of the respondents (38.7% of men and 39.3% of women) answered that they had started some new activities after age 70. Various activities were reported. The most frequently mentioned new activity was hobby (46.8% of seniors who had started new activities; 37.4% in men and 53.3% in women), followed by athletic activities (35.0%; 33.3% in men and 36.1% in women) and personal computer and/or mobile phone (21.0%; 25.6% in men and 17.7% in women). Not only sedentary activities such as reading and playing games, but also kinetic activities, including walking, swimming, and gymnastics, were indicated. Seniors who were healthy at age 80 were more likely to have such activities than those who were not healthy.

In Japan, where population aging has been rapidly progressing and life expectancy at birth has been rapidly increasing, seniors have become younger and local levels is a set of flexible forms of social mobilization, effective institutions or strategies of economy, government and culture, both at the individual and collective levels. In every contemporary society develops a flexible balance of power between individuals and groups, a specific configuration of social inequality, resources, and efforts. Civilizational order as well as at global and local levels is a set of flexible forms of social mobilization, effective institutions, technology management, cultural controls and patterns. Figurative modifications, meaning moving modernities of contemporary societies, speak about degree of their civilizational variability while maintaining a fundamental proper-

Research on Aged Prisoners in Japan

1 Situation of the research
In accordance with aged society in Japan, the population of people whose age is more than 65 years has been increasing twofold during in the last two decades. In this context, the number of arrested people aged over 65 years has been increasing by 3.8 times and the population of aged prisoners is also increasing rapidly.

2 Purpose and sample size of the research
The purpose of this research is to clarify the actual situation of aged prisoners. Almost 450 male and 150 female aged prisoners are investigated focusing on their life style in society, motivation and situation of the current crime, specific feature of criminal life curve, philosophy of life, future plan after release, etc.

3 Outline of the research
The details will be presented at the session.

Most dominant type of crime is larceny, and then stimulant drug control law violation, and fraud. Half of them were unemployed. 65 % married but not divorced so he did not have any persons who support prisoners when they committed a crime. 53 % have disease. 45 % do not have any place where they can live after they release form prison. Most of them do not have any job after release. Total of 53 % have disease and receive many kinds of medicine.

KOZLAREK, OLIVER* (Universidad Michoacana de San Nicolás, okozlarek@yahoo.com)

Experiences of Modernity and the Modernity of Experience

It has often been argued that a certain loss of experience, even of the ability to have experiences is apparent under the modern condition (Adorno, Benjamin). Yet, at the same time it seems to be true that modernity is quite obsessed with experience (see: Jay 2005). Certainly, there are different understandings of what experience actually means, and it is probably true what Michael Oakeshott has to say about this topic: "Experience, of all the words in the philosophic vocabulary, is the most difficult to manage, and it must be the ambition of any writer reckless enough to use the word to escape the ambiguities it contains" (quoted in: Jay 2005: 9). Although this paper sees itself in the tradition of this 'recklessness', it does not aim to escape the ambiguities of 'experiences'. On the contrary, ambiguous is not only the word, but also what it stands for. But it is precisely this ambiguity of experience, and the acknowledgement of it, that contributes to an often claimed characteristic of modernity: its contingency (Rorty) or its ambivalence (Bauman). In this paper I will argue that the ambiguity of modern experiences has to do with a new kind of world-consciousness that emerges in modernity. I will draw on authors like the recently deceased Marshall Berman, the already mentioned Walter Benjamin, and Theodor W. Adorno, but also more recent authors like Boaventura de Sousa Santos and Peter Wagner. And I will include in my discussion voices from Latin America like Octavio Paz and the philosopher Bolívar Echeverría. They all shall help to outline a theory of modernity for which the experiences that real human beings are making when confronted with the challenges of modernity.

Martin Jay (2005), Songs of Experience: Modern and American. Varia-

tions on a Universal Theme, University of California Press.
active labor force and in particular is reduced. Employment in the industry falls especially in the small cities and provincial locality. The main issue for the farmers is an access of its products to local market and a large labor costs. Therefore it is developing the traditional type of economy, which is dominated by monocultural economy of the farm (horticulture, animal husbandry, small-scale construction, transport services, temporary employment) and commercial businesses. Modernization potential of the rural “backs” in particular in South region of Russia is diverse. The rural population is aging and decreasing. However, there is a surplus of labor force against the backdrop of falling employment. This dissonance is typical for the Black Earth region. Lack of investment, jobs, degradation of industrial and agricultural spheres pushes people to the development of the service industry and trade, to labor migration to the big cities, and social mobility. It is sufficient to note the high level of social and economic infrastructure: electricity, gas, roads, fiber optic lines, public transport, landscaping. There is a stable mobile communication, satellite TV, Internet access. However, rural inhabitants are experiencing social fatigue. They complain constantly about the lack of funds, the futility of life in rural areas. Many inhabitants are focused on internal migration, employment, education, and career in the middle and big cities. Key resources are upgrading a new economic policy of the local authorities, effective budget and private investments, solidarity of local communities, and of course, the willingness of local people to the medium-and-long term investment in yourself and in the development of their area.

Creating an image of «Victim» As a Way of Creating Controlled Conflict Situation

For creating controlled conflict situation and for finding (appointing) an “enemy” often an image of “victim” is being created, meeting goals and tasks of its creators.

An image of “victim” may be classified on the follow types: “victim-hero”, “victim-terrorist”, “victim-as belonging”, “victim-tragedy”, “victim-country”, “victim-nation”, “multifunctioning victim” and other.

Constructed “victim” has to meet such characteristics of real victim as innocence and defenselessness. Therefore innocent children, old people, and women are appointed to the role of “victim”. Violence towards them provokes the tension of passions and promotes desired public opinion.

Process of construction an image of “victim” includes the following steps: actualization, “privatization”, heroization, humanization, institutionalization, historicization (mythologisation), objectivation, legitimization, sacralization, realization of “victim’s” image in the social and political practices.

Generated image of “victim” presuppose execution following functions in the real and potential conflicts:

- identification of people on the base of their attitude to the “victim”;
- creation of enemy image who is guilty attacking “victim”;
- consolidation of people to fight identified “enemy”;  
- upbringing of “new heroes”;
- determination of people behavior in critical situation;
- image of “victim” is becoming the elements of culture.

Deliberately thrusting of “victim” problem generates disadvantageous situation for alleged “enemy”. Direct of potential oppressor’s image constructed, with necessity to oppose or annihilate it. The most important “enemy” characteristic is its mortal terror for person, group and society. Next distinguisher of “enemy” is dehumanization.

Special role in the process of both “victim” and “enemy” image construction belongs to mass media and first of all a television.

Generated image of “victim” may be used as motive for intervention of “third party”, for deliver a “retribution blow” on a real or an appointed enemy.

Towards Emancipatory Ecological Cosmicolonial Commonism Via Positive Ecology in Tasmania, Australia

Adopting earth stewardship appears to be the fate of the human species; it is how we adapt to this challenge that will determine our survival and level of thriving. This paper will outline four areas of an approach to the challenge of earth stewardship. The first is to identify the emergence of a capacity for intentional cultural evolution, for which there exists a variety of indicators across the globe. The second is to sketch a theory of negative ecology, based on the process of dominance that has evolved over history, resulting in the failure of successive systems to equitably meet basic human and environmental needs. This has led to ever increasing social and environmental costs, and indicates the need for radical degrowth. The third is to outline a theory of positive ecology to guide progress towards what is tentatively called “emancipatory ecological cosmicolonial commonism (ECCO),” aimed at ending repressive domination. The equitable meeting of needs is given priority, based on “synergistic satisfiers,” with global cooperation the ultimate goal. The fourth area discusses community-based exchange initiatives (CBEIs) as bottom-up initiatives towards advancing positive ecology in the here and now. Analysis of the potential of some CBEIs currently underway in Tasmania, Australia to progress towards positive ecology and ECCC will comprise the final part of this paper.

Women’s Overqualification: Why It Is Necessary to Account for Additional Individual Characteristics

Women’s labor market participation has been rising in the last years, the proportion of female university graduates increases constantly and ever more women are in executive positions. However, there is also evidence that women are more likely to be overqualified than men. If a person is overqualified, in the sense that an employee’s level of training exceeds the job requirements, parts of the human capital lie idle. This could not only have negative consequences on the individual level, but also be costly on the social level. Current research on overeducation focuses mainly on its magnitude and structure; oftentimes discussions on explanatory factors are limited to only one dimension - such as gender or migration status. But in light of economical, political and cultural globalization that increases societal heterogeneity, it is obvious that the emergence and reproduction of social inequalities cannot be reduced to only one dimension. In the study of social inequalities it is important to consider that people are always part of several social groups at the same time. Therefore, it can be supposed that for instance female immigrants face different risks of being overqualified than male immigrants.

In the presentation I will focus on this research gap. Based on the concept of intersectionality I will discuss the mechanisms of interaction of gender, migration status and social background in the context of overqualification theoretically. Using data from the German Socio Economic Panel, a nationally representative household panel study, I show the effect of gender on the risk of being overqualified as itself and in interaction with the other individual characteristics. I will respond to the question how gender inequality on overqualification varies with other social categories.

Construction of Knowledge Around Risk and Regulatory Practices Among Pipeline Industries in Australia

This research assesses the gas pipeline industry in Australia in relation to risk, regulatory practices and its comparatively strong safety record. It may be held as an exemplar to examine: how is knowledge of industrial risk in the Australian pipeline industry constructed and performed by regulators? In tackling the question, this research takes discourse analysis combined with a semiotics of materiality Actor-Network Theory approach; giving new emphasis to non-human entities (e.g. gas, risks, techno-measuring devices and regulatory apparatus) interacting with actors (e.g. regulators, company safety officers, workers and communities) in generating knowledge-power and actions around the regulatory process of governing industrial risks from hazardous industries. The entry point is technical- and culturally-informed regulators, assumed to have good risk-management knowledge. The research explores three relationships among these entities. First, relationships between regulators and non-human entities: e.g. how regulators develop their knowledge-power and take their actions influenced by a legal concept (as low as practicable – ALARP); and how regulators interpret their responsibility in the process of hazard identification and assessment? Second, relationships among regulators, companies and non-human entities (e.g a concept of responsibility) are considered: how do regulators exercise their discretion either to support or command the companies? Third, relationships among regulators, companies, workers, the public and non-human entities are assessed: e.g. how do regulators perceive the roles and participatory actions of workers and the public in breaking regulatory capture, balancing power, and managing industrial risks? The findings may reveal inconsistencies hidden in processes, leading to a better understanding of how to manage, govern and mitigate risks and improve regulatory practices and effectiveness.

Organization, Identity, and Transnational Citizenship: Mexican Indigenous Migrants in the United States

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Transnational migration challenges the congruency of identity, citizenship, and state territory, because transmigrants identify with their communities in countries of destination as well as origin, and practice citizenship across national borders. The question of transnational identity and citizenship is all the more important when migration involves members of indigenous groups who are ethnically discriminated against politically and economically marginalized in countries of origin and in their adopted countries. How do indigenous migrants negotiate transnational citizenship? Based on the data collected from my ethnographic research in Los Angeles, I argue that indigenous migrants from Mexico’s Southern state of Oaxaca negotiate citizenship through a diverse network of migrant organizations which open wide transnational social spaces to reconstruct the boundaries of ethnic and local membership and belonging. In contrast to Mexican mestizo migrants, they established issue-based migrant organizations in Los Angeles – such as business, religious, or educational organizations – above the level of hometown associations and state-based federations to claim precise rights for indigenous people as workers, believers, or students. In doing so, they collaborate with various political institutions, businesses, churches, and other organizations on different levels – local, state as well as national – in the United States and in Mexico. In other words, pan-indigenous identity and transnational citizenship emerge not only in political response to ethnic discrimination and social hostility, but also cooperation and support in transnational spaces.

Challenges for Teachers and Pupils on a Vocational Program

Challenges for teachers and pupils on a vocational program

This paper aims to analyze teachers’ views on how a good mechanic should be, and how the teachers are mobilizing students to become mechanics through instruction and practice. In another social landscape - before marketization, post-industrial transformation and neo-liberal forms of governance has become a part of the public educational system – a common practice were that students established a kind of counter-culture in schools; Why should I study while I am going to be an auto mechanic? Today, teachers in the vehicle and transport program partly facing a new school logic where they have to deal with pupils that have another approach to education. - Why should I study, I’ll still do not want to be an auto mechanic? Previously the students were to a high extent culturally self-motivated, but nowadays the teachers have to become a car mechanic seem to have changed. My PhD project is linked to a larger research project that deals with issues of multicultural incorporation and school achievement. My contribution to the project concerns an ethnographic study in a vocational high school on a vehicle program, where there are mainly boys with immigrant backgrounds from heavily segregated areas, present in the classroom. The paper contains an analysis of the symbolic boundaries that structure the auto mechanic profession and how these boundaries are expressed by teachers and industry representatives. It also describes how teachers in the vehicle and transport program mobilize students to the mechanic profession both by their teaching/pedagogy and use of social networks within the car industry.

Social Transformation and the Memory in a Postwar Society: the Case of Kosovo

This paper is based on two qualitative research projects conducted ten years after Kosovo exodus, and the dramatic changes related to the war, social organization, environment, daily life, and value system. The first one is “Memory vs. Forgetting” (2009), and the second one is “Socio-cultural Changes in Postwar Kosovo” (2010). Both conducted by the Department of Sociology in the University of Pristina. The data show very interesting aspects of collective memory and human experiences during the dramatic events and the general social transformations. The way how people remember the past, how do they perceive the present, and what they are expecting from the future is important not only for Kosovo society, but for the entire humanity.

The focus of our research is the period after 1999. This period is important in two senses. First, in terms of social change, this period is important because three international missions were deployed in Kosovo and the country has declared its independence since Second. From the aspect of social organization, it is the period of the transition of the self-administered institutions, and the development of the overall transition. The structural changes affected the culture, and the system of values in Kosovo society to a great extent. This period is of a particular importance, because it signifies great changes in lifestyle, the transformation of values and memory for patterns and practices. Research in the field of collective memory and social transformations requires very precise methodological approach. Each of the research projects has included 50 in depth-interviews, and visual elements collected in the field, such as pictures and video materials. The data show that people’s relationship are very strong not only to the family and the homeland, but also to physical objects, tools, pictures, books, souvenirs, symbolic values, plants, animals and the environment.

Explaining Differences in Fertility and Marriage Expectations of Adolescents of Native and Immigrant Origin in Spain. the Role of Socioeconomic Status and Ethnicity

This paper aims to examine aspirations and expectations of adolescents in Spain with regard to family formation patterns, using survey data collected in secondary schools in Madrid. We are interested in the variability of these preferences across generations and between children of immigrants and their native peers. We look at fertility and marriage expectations to account for varying cultural backgrounds and for acculturation and/or integration processes. Furthermore, differentiated expectations of fertility and marriage tempo and quantum among children of immigrants and natives might be an indicator for segmented assimilation with regard to their or their parents’ socio-economic status.

For the empirical analysis of this paper we use survey data of some 2,600 adolescent pupils and 1,150 parents. About half of the students and parents are of immigrant origin. Besides aspirations and expectations linked to family formation processes, the survey provides information about parents’ labor situation and their educational levels, variables that are used as a proxy for their socio-economic status. To complement the survey, contextual data will be included, adding information on origin countries’ actual fertility and marriage behaviors and the ethnic composition of the neighborhoods in Madrid where the youths live.

Multilevel models are computed in order to account for variations within schools and between schools and to disentangle the complex causal process that determines adolescents’ aspirations and expectations. First descriptive results indicate that adolescents’ expectations reflect actual cross-country differences in age at first marriage and first birth.

Most theoretical approaches and empirical studies in this field concentrate on the U.S. Focusing on Spain as a relatively new immigration country can give important new insights into another migratory setting, which may be valid also for other (European) immigrant-receiving countries.

Producing the Collective Subject: Anarchist Practices at the People’s High School in Buenos Aires

This paper analyzes the experience of a “people’s high school” in Buenos Aires, Argentina, and the ways that it engages with anarchist-inspired practices and ideas. In 2001, Argentina experienced a political and economic crisis that gave rise to hundreds of social movements opposing the neoliberal status quo, including “movements of unemployed workers” (MTDs) and factory takeovers. These 2001 movements encompassed much experimentation with the idea of social movement itself, as they abandoned the old political party structures and incorporated social relationships into their political agendas. While many such movements have since dropped their autonomist orientations in favor of aligning themselves with Kirchnerism and the presidential administrations since 2003, other movements remain staunchly independent and committed to alternative models of social change (referring to themselves as part of the “independent left”). One such organization, the people’s high school (bachillerato popular) of the MTD Barracas, uses a non-hierarchical structure and consensus-based decision-making as one of the primary vehicles for organizing grassroots social change within the movement and the neighborhood. Based on a year of participant observation, I examine how the movement enacts these anarchist organizational forms. I argue that the successful outcome of such organizational practices is the creation of a collective subject, which is only produced at the school when these structures are combined with meaningful emotional interactions among activists. Thus this project is a light on how and why some uses of consensus seem to fall flat or collapse into frustrating bureaucratic formulae, while other movements succeed in using such anarchist principles to meaningfully integrate participants into decision-making processes. Within a context of marginalization and oppression in Argentina’s shantytown, the people’s high school is using anarchist practices to create alternatives to neoliberal capitalism.

Human Rights and Humanitarian Relief: The Organizational Mediation Of Ideas In The Global Arena

In talk of the “international community”, many commentators assume that human rights work and humanitarian relief are pulling in the same direction. Others see human rights and humanitarian relief as two fundamentally different modes of engagement. What both of these approaches share is a focus on the content of ideas. This paper examines the relationship between human rights and humanitarian relief in the international arena from the perspective of the sociology of practice and the sociology of organizational fields. Since the 1970s two separate traditions of practice have emerged – one centred around human rights and one centred around humanitarian relief. Based on interview research and document analysis, I examine how professionals in humanitarian relief organizations use the concept of human rights. In the past 15 years, they have used the language of human rights more and more, but the impact this language has had in humanitarian work has never been mediated by the practical constraints and incentives of the humanitarian field.

Rethinking the Theory of Social Becoming: For a Humanistic Turn

According to P. Sztompka (Society in Action: A Theory of Social Becoming. Cambridge, 1991), the modern world is in a state of becoming that occurs in the context of unfinished structural and functional development. As a result social and cultural transitions differ from each other. It is therefore necessary to redefine the concept of the human subject. I have, therefore, worked out a new type of sociological imagination the essence of which is reflexive thinking about social becoming.

Since that time the socium has become even hypercomplex: there appeared “normal accidents” (Ch. Perrow), climate change as well as new risks, vulnerabilities and social turbulence produced by human agency (J. Ury, U. Beck).

Taking into consideration these realities of new catastrophism I argue for a ‘humanistic turn’ in sociology, whereby society should be examined through the patterns and character of their complexity-dependence and human agency-consequences. This implies still a newer type of sociological imagination based on the synthesis of social, hard and humane sciences. The methodological instruments of this type of sociological imagination include both non-linear and humanistic aspects. Thus, I propose a non-linear and humanistic sociological imagination that deals with the acceleration of socio-cultural dynamics and globalisation (R. Robert-

son), synergetically takes into consideration paradoxes, risks, and dispersions of sociohum, searching for new forms of humanism, based on men’s existential needs. The notion ‘praxis’ should be rediscovered: it should mean humane praxis - humanistic creative agency, the main aim of which is to preserve the human capital of all the generations and to maintain the balance between technological innovations and key environmental processes.

KRAVCHENKO, SERGEY* (Moscow State University of International Relations, social7@yandex.ru)

Vulnerabilities to the Network Human Capital

The content and, therefore, the conceptual interpretation of the human capital is multifaceted and many-sided, depends on the historical time, cultural space, nowadays mainly - on the conditions of becoming complex socium, its “normal accidents” (Ch. Perrow), social and climatic turbulence produced by human agency. Taking into consideration these realities we have proposed a network model of the human capital that is adequate to the urgent need of a humanitarian component in the human capital.

There appeared new vulnerabilities to the network human capital. Until recent-

ly in the history of mankind in the implementation of modernization the quest-

tion about the humanitarian ways and means to achieve the goals was not even discussed. Any pragmatic and rational intentions by themselves do not lead to prosperity, harmony, peace, if they do not provide the production of humanism, its penetration into social institutions. The network human capital should be managed on the basis of sociological requirements: management should be in the form of a civilized and humane way of the interactions people; it should take into account the non-linearity of the human capital formation, dynamically complex causal relationships, the factor of social and climate turbulence; we should think about the latency of the formation of the human capital, that is - unforeseen and unpredicted events lead to different ambivalences. Main questions were how workers & representatives can participate in the production process, in works force organisation, decision making etc. The promoters were socialist parties & left wing circles, trade unions & works councils.

In France in the 80-s the “participation” was that base-democratic right which should stamp the “socialism in the colours of France”. Participation was declared as the democratic alternative concept to the French state centralism and to the Soviet model of the state socialism.

The debate in the 90-s went around Japanese participation offers in production processes. Predominantly was – ‘Japanisation’. The following “Flexurity debate”, had the idea to exchange “flexibility of working regime” into the preservation of employment.

Discussions on corporate governance & corporate social responsibility started in the 70ties in US, later on in Germany & Europe. Promoters were stakeholders & shareholders. Bearers of debate were less in trade unions or “left political circles”. Targets were common responsibilities of stake- and shareholders for environment, life on the earth, quality of productions, employment law, work-conditions like child work, dangerous work, over-exploitation of the natural resources etc. in production & sourcing modification of high technology productions.

Trade unions in supervisory boards and works committee member’s support this course; however, they were not any more the sole or key players of debate.

The discourse wins in social and changes away only from conditions of em-

ployment to the responsibilities and the consequences of the application of produ-

cts. ISO 26000 is asked from the supervisory boards, the shareholders’ meetings linked with the influence of works committees.

These ideas were more developed in industrialised countries of Europe and Northern America than in developing countries as well as Eastern European coun-

tries.
