Reference Income and Pay Satisfaction: How Do People Choose Their Reference Group?

When exploring individual well-being, not only satisfaction with life as a whole is suitable basis for analyses – also information on satisfaction with certain domains can provide valuable insight into how people are affected by the circumstances of their lives. Satisfaction with the personal income reflects not only whether people assess their pay as high enough to deal with every day’s expenses but also people’s perception of how their effort and performance is valued by others (the employer), which can be a considerable aspect of mental well-being.

In this context, the comparison with other working people is always an important benchmark when evaluating the own income situation.

As is known, reference groups for income comparisons can be people of same profession, with same education or colleagues, etc. This paper provides further insight into the field of study of whether different groups of people apply different reference groups when evaluating their income and – if applicable – which aspects motivate the choice of reference group (e.g. information disparities).

Data base is the German Socio-economic Panel Study (SOEP) of 2010. Several types of reference groups are defined and the impact of their income on the personal income satisfaction of different population groups is analyzed, applying an ordered logit model.

Towards the Construction of a Composite Indicator of Objective Individual Living Conditions for Europe

This paper provides an approach for constructing an index of objective individual living conditions which is based on micro data and comparable between countries and over time. It summarizes on the individual level how people’s lives are from diverse perspectives, which together form their “objective living conditions”. As the name already indicates, the index particularly focuses on objective indicators, not taking into account subjective (cognitive or affective) perceptions of one’s own life, such as life satisfaction or happiness. The life domains that are included in the index are:

- income / standard of living

Bargaining the „Human Rights“ of „Human Resources“ – Unions and NGO-Networks Advocating Precarious Migrant Workers’ Interests in Japan

Taking the debate concerning recent immigration policy changes, focusing on the so-called Technical Intern Training Program (TITP), as case study, this paper challenges generalizations about the social and the labour movement in Japan. While civil society in Japan has often been portrayed as apolitical and service oriented, being strong in producing local “social capital” but weak in generating “advocacy” on the national level, the labor movement has been described as politically domesticated and oriented towards balancing interests of big companies and their core staff, organized in enterprise unions. As these generalizations are grounded for a great part of the scene, they still ask for qualification, because they obscure a relatively small but growing and significant portion of organization of and bargaining for workers interests in Japan. Irregular employment and migrant labor is especially prominent in Japan’s many small and medium sized enterprises (SME). The unionization of employees in SME through individual membership unions, that has been fostered in the 1970 by the former national union center Sōhyō, has since the 1990s formed the basis for migrant and irregular workers organization in unions in Japan, and as further become the core of new constellations and alliances in civil society, which played an active role in discussions leading to immigration policy reforms. Thus it was not the Japanese civil code or the so-called NPO-law, but the Labor Standards Act (LSA) and the Labor Union Act (LUA), which formed the legal framework for a vibrant civil society in Japan, by providing rights of organization and collective bargaining for precarious migrant workers, and thus enabled political advocacy.

Not No Place: Fragments of Johannesburg

Not No Place is a collage of visual and written fragments on Johannesburg’s historical, archival, found and self-generated. The book is the result of documenting and collecting material on the city of Johannesburg over the course of five years. It interweaves selected quotations with personal memories and reflective accounts. We use fiction in an attempt to explore the city as both lived place and an imagined no-place (the direct translation of U-topia). A montage combining photographs, drawings, archival material and texts, it alternates between the mode of collector, witness, observer and author, taking into account the numerous representations of the city in historical writing, urban theory, film, media and fiction. Not No Place presents a collection of moments in the city’s complex history, its contemporary spatial realities as well as its future projections.

Bettina Malcomess and Dorothée Kreutzfeldt speak to their visual processes and practices informing their book-length investigation into Johannesburg, Not No Place. The book is by no means an official biography of the city – it reads more like a richly illustrated scrapbook of ideas and reflections part made up of quotes from a multitude of sources and part made up of the authors’ personal narratives and ruminations on topics; the subheading Fragments of Spaces and Times captures it well. It is a peripatetic amble through the history and physicality of Johannesburg, stumbling into recurring characters such as the Carlton Hotel and Nongoloza.

Study of Language Use and Language Planning in Education in the South Asian Multilingual Context from the Point of View of Educational Linguistics

Language Problems of multilingual countries, especially those in South Asia differ only in quantity rather than quality (Ferguson et al., 1969). Due to the heavy impact of colonization and political power imperialism of the colonial powers – the role of languages in these nations starting from the 15-16th centuries showed drastic changes especially in the areas of education and that too in the use of languages as media of instruction. Although there were a number of problem due to language use in general, the problems in the domain of education were considered as more crucial and needed to be tackled in order to achieve literacy standard, formal schooling and still later higher and technical education.

Most of the nations in this region are multilingual on the hand and termed as dominant on the other. Languages like English due to the power and dominance started playing a major role at the national / international though they were bilingual or multilingual in actual practice, there existed only a monolingual supremacy in education. In many of these nations local / nature languages were not given any importance at the national international. They were treated under the banner ‘vernacular languages’, and never used as first languages or medium of instruction even at the international level of school education. This kind of dominance controlled the uses of native languages in education and thus the natural choice was only the colonial languages of power and supremacy. Even after the independence of these nations, the situation prevailed then favored the colonial languages like English.

Confronting Vs. Transforming Consumerism on the Path Towards Sustainable Development

The high level of consumerist tendencies particularly in emerging markets pose a question whether environmentally conscious consumerism is an oxymoron. The presentation is based on a series of surveys fielded in 2012-2013 to general populations in 22 countries. The survey results enabled the mapping of consumers in the two-dimensional space defined by “Environmentalist” and “Materialist” attitudes. A large proportion of customers in each of the surveyed markets exhibits a combination of high level of environmental concerns with the passion to consume. In other words, this group is trying to reconcile their desire to shop with a sense of care for the environment and society.

This segment is identified as Aspirational. It may serve as a factor bridging the gap between societal and environmental needs and the business interests of the corporate world. Unlike Eco-Enthusiasts with their ascetic environmentalism and reduced consumption, Aspirationalists may gain gratification from sustainable purchasing and sustainable consumption. Aspirationalists represent hundreds of millions of consumers globally. They are most prominent in countries with a tradition of face consumption such as China, India and Brazil. Due to not sharing the Post-Materialist values, this segment is unlikely to become Eco-Enthusiasts in the Western sense of the word. However, sustainable purchases might be introduced to Aspirationalists as something stylish and fashionable which would add to their social status and further differentiate them from the majority.

This presentation comments on segments distribution across global regions and markets as well as on the members’ demo- and psychographics. The segments’ attitudes will be causally linked to a broad range of socially and environmentally responsible behaviours, and communication patterns.

Resistance to Mining in the Current and Past World-Historical Conjunctures: A Comparison of Mobilization Against Globalizing Capitalism Across Place and Time
This is an incorporated comparison of resistance to destructive resource extraction by mining in the current and past world-historical conjunctures. The analysis is based on long-term participant observation and field research in the most important mining investment areas in Brazil, India and Finland. The empirical value of the analysis of the current conjuncture allows to test world-system theories often based not so much on large-N comparative ethnography. The findings are related to historical ruptures and continuities in resistance, seeking causal explanations and reasons to why mobilization against globalization capital has occurred in some places and times and not others. The mining industry's global and regional trajectories will be historicized and tied into the current events by historical institutional analysis.

Korean Environmental Sociology: History and Characteristics
This article aims to analyze the history and characteristics of Korean environmental sociology since the 1990s. Korean environmental sociology has been developed since the 1990s when environmental movements and environmental awareness started to proliferate nationwide. The Korean Association for Environmental Sociology which was organized in 1999 has been a crucial empirical research and has published Academic Journal ECO since 2001. Seejae Lee summarized that Korean environmental sociology is participation, problem solving, and field research oriented. Sun-jin Yun analyzed that sustainable development, ecological democracy, oil-spill disaster, nuclear waste dump site, environmental justice, and so on are key issues in Korean environmental Sociology.

Korean environmental sociology has the following theoretical and empirical achievements. Firstly, it introduced ecological paradigm and tackled the limitations of anthropocentric sociology. Secondly, environmental sociologists raised environmental justice and inequality issues and accumulated research of environmental and ecological movements. Thirdly, they tried to develop theory and policies of ecological democracy beyond anthropocentric democracy. Fourthly, they tackled the limitation of nation state and economic growth model and tried to develop alternative state, local community, global governance and development model. Korean environmental sociologists have focused on not only analyzing environmental problems, awareness, movements, and policies status quo but also suggesting new theoretical framework and alternative society model.

An Inter-Cohort Comparison of Intra-Cohort Social Stratification: How Do Cumulative Dis/Advantages Evolve Across Cohorts?
The aim of our paper is to analyze trajectories in hourly wages between the ages of 30 and 50 for five different birth cohorts, using the PSID data. More precisely, we focus on processes of intra-cohort stratification by tracing patterns of income as individuals age. Our analysis is informed by the cumulative dis/advantage hypothesis as a process of intra-cohort stratification. Using growth curve models, we seek to describe and explain the patterns of income stratification within and between cohorts. We hypothesize two key patterns: Simple inter-individual divergence and path-dependent post individual divergences. Simple inter-individual divergence is indicated when the relation between initial hourly wage and its slope over time is positive (in contrast to convergence, where this relation is negative, and stability, where there is no relation between initial hourly wage and its change over time). Path-dependent inter-individual divergence is indicated when hourly wage differences between men and women, or between whites and non-whites, increase as individuals age. Our analyses will reveal if the patterns of

The Joint Impact of Paternal and Maternal Parenting Styles on Children's High-School Academic Achievement in Taiwan

The present research used data gathered by Taiwan Education Panel Survey (TEPS) in 2001 and 2003 to explore how fathers' and mothers' parenting styles jointly influenced their children's academic achievement in junior high. Using latent class analysis (LCA), the research uncovered the same four parenting styles for both Taiwanese fathers and mothers. These four parenting styles are consistent with parenting typology often discussed in the literature and can be labeled as authoritative, authoritative, permissive, and neglectful. Since the majority of Taiwanese children lived with both biological parents and not much research has been done to understand how both father's and mother's parenting styles jointly influenced their children's development, the research further used LCA to construct 16 joint parenting styles to investigate how these styles were related to children's academic achievement. The research found that children with both parents adopting the permissive style would have the best academic performance in junior high. Past studies have indicated that authoritative parenting would be conducive to good academic achievement. The present research showed that when one of the parents was authoritative, for their children to perform well in junior high, the other parent should be more permissive. In other words, in the traditional Chinese view of parenting, there should be a combination of being “yan” (strict) and being “tsi” (kind). The research further found that if paternal parenting was authoritative and maternal parenting was neglectful, this type of joint parenting style would have the most negative impact on their children's academic achievement. In short, the findings of present research clearly demonstrate the importance of understanding the joint impact of paternal and maternal parenting on their adolescent children's development in Taiwan.

Renaissance of Ethnicity? Self-Identifications of the Second and Third Generation of Algerian Immigrants in France

The paper presents the results of an empirical research on the self-identifications of people belonging to the second and third generation of Algerian immigrants in France. The aim of the research was to investigate in which situations the Frenchmen of Algerian origin (FAO) feel included and in which excluded from the various communities, the collectivity of the Frenchmen, of the Algerians or of the people belonging to the other important social (not only ethnic or national) categories. The choice of FAO stemmed from the fact of their strong, connected with national and cultural distance both to the country they lived in and its culture (France) and to the country and culture of their origin (Algeria), also from their ambiguous attitude towards the French cities in which they are very often identified with in the context of riots erupting there every few years. The project answers to the questions concerning the variables that differentiate the identifications of FAO with various social categories and give the classification of situations which occurrence is conducive to the appearance of self-identification of a particular kind. The results are based on a content analysis of 25 autobiographical novels written by FAO authors and published in France between 2000 and 2012 and the biographical method by F. Znaniecki and his principle of “humanistic coefficient” was used in the project. Indicating the situations in which FAO still feel different than other citizens of their own country can show the areas of social life that require reconsideration in the terms of the state's integrating policy.

Takao Tanase and Talcott Parsons: The Possibility Of Functional Analysis

Takao Tanase makes a unique contribution to sociology of law because he uniquely applied the sociological framework of Talcott Parsons who elaborated active theories. When Tanase studied abroad in 1970’s, he majored in sociology and was mentored by Parsons. So Tanase was clearly influenced by Parsons in his early works and tried to develop or modify Parson’s theory. But after that he rarely mentioned Parsons and repeatedly referred to normative theories such as critical legal studies. So lately Tanase has been considered a postmodernist theorist in Japan.

But if we read intensively his works, we can notice that he was influenced by Parsons all the time although he never clearly mentioned Parsons.

Tanase frequently used Parsons’ functional analysis uniquely to study law and society in Japan. He decomposed research objects (fort law in Japan, for example) into ideal elements (logic of liberalism, for example) and observed the functions of those modern ideal elements in real social conditions. Then based on the observations and new normative theories such as postmodernism transcending the limits of modern ideas, he proposed what is necessary for modern law imported from the West to function more properly in society. In this way Tanase applied Parsons’ general theory standing on the convergence between idealism (normative theories) and positivism (observations), and his application gives a hint when someone applies Parsons’ general theory to researching the functions of law in other countries.

Though Parsons was attacked severely and his influence declined once, he has been reevaluated since 1980s. But this is not true for sociology of law. So Tanase’s application becomes a nice model of using Parsons’ general theory in sociology of law and it suggests the possibility of researching and comparing the functions of law globally.

Tokyo as No. 4: A perspective from World City Ranking

Since the 1960s, a shortage of lodging in city centers has led to high prices and the development of suburban housing estates. The problems of aging suburban populations are attracting considerable attention in Japan, a society of great longevity. The decline in mobility among elderly homeowners is a major problem in aging suburbs because an aging population and the accompanying social problems have been a threat to the environmental compatibility of housing vacancies, which is closely connected to a lack of security, sustainability, and human bonds among residents in a community, is one example.

This study aims to examine local responses to the increasing number of vacant houses in suburbs. We pay attention to the influence of local regulations on vacant housing; several local governments, including that of Ushiku City, have enacted regulations to promote appropriate maintenance of vacant houses since the late 2000s. Then, we discuss institutional structures that have caused the problem. We also identify the generative process of housing vacancies in the Tokyo suburbs and examine the results of field surveys of several old housing estates in Ushiku City, Ibaraki Prefecture. Based on interview surveys of residents, we clarify the mechanism that produces housing vacancies there. We conclude by examining the attitudes of local communities toward vacancy problems.

Questioning the Promise of English: Language Choice of Japanese Transnational Workers in Asia

English has increasingly been positioned as a global lingua franca in public and academic discourses especially in non-English-dominant countries like Japan. To gain or maintain societal and economic benefits and capital, English language skills with individual and national economic advancement, ideas about English in globalized world have formed a particular language ideology, influencing education policies and raising demands for English teaching and testing. While the prevalence of English is indeed observed in globalized marketplaces and transnational communication, language choice and use should be conceptualized as a local practice (Pennycook, 2010) that reflects, reinforces, or disrupts social, historical, material, and ideological conditions at a certain locality.

This paper reports a qualitative study that investigated the language choice as well as views and experiences of transnational communication among 20 current and former Japanese transnational workers of five Japanese manufacturing companies who were assigned to work in China, Korea, or Thailand. Semi-structured interviews revealed that for workplace communication, Japanese was predominantly used in China and exclusively in Korea, whereas English was exclusively used in Thailand. Almost all interviewees developed transnational repertoire of the local language in order to fulfill daily survival needs (Blommaert, 2010), whereas a couple of workers developed a professional level of Mandarin and used it extensively for work.
These findings demonstrate historical and linguistic relations of power that intersect with practical considerations. Specifically, the language choice seems to be implicated in a colonial legacy reflected in the linguistic hierarchy (e.g., Japanese vs. Korean or Chinese) and the commodity value attached to Japanese as well as pragmatic factors related to linguistic and orthographical proximity. Moreover, the fact that the interviewees were selected by each company reveals a particular feminist, professional, and ethnic communities, and practices of bordercrossing have impacts on how they form the narratives. For example, the asylum seekers in New York City tend to use human rights discourse while those in the San Francisco Bay Area do not. Instead, a common practice of multiple borderseekers in New York City tend to use human rights discourse while those in the workers, access to local queer and ethnic communities, and practices of borderasylum seekers themselves. Although, in most cases applying for asylum is takennarrative construction, this study explores the experience and perspectives of the degree to which they follow the dominant picture of sexuality.

Conflict Management in Prostitution ("性活”=“Seikatsu”) — the Structure and Meaning of Pluralistic Justice

“Conflict management in prostitution” have some meanings especially from the perspective of law. They are also concerned with their own viewing. In Ken-ya, there are also different ideas depending on the situations. The meaning for female who are working as a prostitute (I call them normally as “性活者”= Seikatsu-syä, sex-practical use person) is protection or any system which will help them. This presentation will try to make clear the “real” situation of conflict manage-ment in prostitution (I call it normally as “性活”= “Seikatsu”, sex-practical use). For it, I had researched for 101 prostitutes by interview directly in 2010 to 2013 in Nairobi, Mombasa, Malindi, Nakuru, Kisumu and Meru. The average time of interviews is 1 hour 30 min. And I did the research more than 500 for non-regular women and men as customer by questionnaire. The research for prostitute have more than 100 questions divided into 5 sections, Experiences, Ideas, Ways, STI, and Personal Matters. I will describe here how prostitutes think about and get on with “law” even “living law” in prostitution. And more, I will try to find what is the way and meaning of conflict management for them through my research in Kenya. We can find the idea of original conflict management in prostitution through confrontation against “law” finally. Actually, justice, even law is pluralistic in the field of prostitution. When we think the structure of prostitution from the perspective of conflict management, we feel something poor or strange to the normal idea in prostitution field like that is illegal or illegal. Because the “law” must be different for each in multi-tier pros-tution structure. We need to understand the situation without any bias in first and discuss to pure structure of prostitution later. The idea of strategy of conflict management in prostitution will help it.

Sexuality and Refugee Status: Narrative Construction of Sexual Minority Asylum Seekers in the United States

Since the 1990’s, sexual minority status has been recognized as a basis for refu-gee/asylum claims in certain countries. In the United States, as seen from the recent governmental guidelines for those specific cases, the so-called LGBT asylum is now drawing attention. This study attempts to analyze the issues of gays, lesbi-ans, and transgenders who are seeking asylum in the U.S. from the perspective of narrative construction regarding to the dominant notion of sexuality in the host society appearing in legal procedures. Previous studies have shown that since the credibility and objectivity of those claims are legitimized within a US-centered notion of homosexuality, it marginalizes those individuals who fall outside of this paradigm. However, studies based mainly on legal documents have yet to devel-op an understanding of sexual minority asylum seekers’ experiences and of the degree to which they follow the dominant picture of sexuality.

To further understand this phenomenon, interview research was conducted in New York City and the San Francisco Bay Area. In order to define asylum seeking process as a system which connects the concept of sexuality to past events in the narrative construction, this study explores the experience and perspectives of the asylum seekers themselves. Although, in most cases applying for asylum is taken as an option they find as a choice to legalize their status, a comparison of two differ-ent areas tells us that the strategies and discourse of their advocates and case-workers, gender and ethnic communities, and practices of bordercrossing have impacts on how they form the narratives. For example, the asylum seekers in New York City tend to use human rights discourse while those in the San Francisco Bay Area do not. Instead, a common practice of multiple bordercrossing characterizes the latter as an actor within the asylum-migration nexus.

Gendered Innovations In Hospital Workforce Management: A Scoping Study

An increasing scarcity of health human resources in Europe calls for innova-tions in hospital management and workforce governance, yet policy interations and measurements are mainly concerned with costs. In this paper we introduce an approach of ‘gendered innovations’ that brings both the gendered nature of the professional groups and their importance to the backbone of healthcare system into perspective. The aim is to explore gender-sensitive forms of managing the clinical workforce, especially medicine, and how this may contribute to both gender equality and sustainable health human resources. In terms of method, we draw on a scoping review of the literature and findings from a pilot study in a large German hospital. Here, the focus is on hospital doctors with particular interest in the situation during specialisation. The case study applied comprises data analy-sis of hospital statistics, expert interviews and four focus groups with (male and female) doctors working in different specialties and departments. We develop a conceptual approach that systematically links three strands, namely privatisation and organisational restructuring of hospitals, health human resources manage-ment, and gendered professional careers. There is increasing evidence that im-proving gender-sensitive work and career conditions and linking organisational and professional governance issues may help improving competition of hospitals for qualified doctors. At the same time, the opportunities of gendered innovations are not explored effectively in hospital management, despite an increasingly com-petitive hospital sector. Drawing on these findings and organisational settings, we suggest ways of translating gendered innovations into the day-to-day practice of hospital workforce management, thus furthering more efficient and sustainable workforce management and sustainability.
with overall high density and quality of healthcare services and concentration in the middle-range professions with a lack of upward institutional pathways; (2) ‘elitist professional development’ was found in the more centralised governance in England and characterised by a growing expansion in the high-status segments, but overall weak development in the middle-level and lower segments; and (3) ‘inequality and professional development’ emerges in the context of decentralist and universal governance arrangements in Finland, that foster expansions in both high-status segments and low and unqualified segments of nursing. In summary, the findings highlight connections between professional development and governance. This study further claims that the professional (macro) level of professions, in order to achieve transformative potential, must be connected and backed-up by (macro-level) health and social policy interventions.

Before we can even discuss democratic consolidation, at least three minimal conditions must be fulfilled, according to Linz and Stepan (1996). Beside those consolidated democracies should also fulfill several other conditions that have in scientific analyses not attracted such high attention than three minimal conditions. Among other conditions Linz and Stepan specifically stress the importance of economic consolidation. The proposed paper is going to analyze the challenges of democratic consolidation in the Central and Eastern Europe from the beginning of 1990s, when democratic transition began to take place, to most recent period, when consequences of global economic crisis hit the region. It is clearly evident from the analysis of the country cases that most former socialist countries have reached level of consolidated democracies; authors are testing the thesis that one of the reasons for that was also successful economic consolidation, which is in recent period suffering under heavy pressure of global economic crisis. The consequences of that can already be seen in various democratic consolidation measurements, like Nations in Transit or Human Development Index (HDI), where most CEE countries are regressing in last few years.

KUHONTA, ERIK* (McGill University, erik.kuhonta@mcgill.ca)  
Is The Middle Class a Harbinger Of Democracy? Evidence From Southeast Asia

A vast body of literature claims that the middle class is a critical force for democratic transitions, democratic consolidation, and political stability. Yet, recent events in Thailand and in other Southeast Asian newly-industrializing countries (NICs), indicate that the middle class often challenges democratic regimes or supports authoritarian juntas. How should we reconcile these divergent views of the middle class? This article argues that an explanation for the behavior of the middle class in relation to regime-type must begin by looking at the state’s role in addressing the interests of the middle class. Where a state addresses the key concerns of the middle class – rule of law, economic development, and political stability – this class is unlikely to rebel against the state. Institutionalized states are most likely to satisfy middle-class interests, while patronal or clientelistic states are particularly vulnerable to middle-class rebellion precisely because they are unable to satisfy their middle-class interests and values. A comparison of four Southeast Asian NICs will thus show that middle-class support for democracy is highly contingent on the structural conditions in which they find themselves embedded.

KULCZYCKI, ANDRZEJ* (University of Alabama, andrzej@uab.edu)  
Abortion Policies and Health Outcomes in Latin America: What Are the Relevant Lessons for Africa?

Both Latin America and sub-Saharan Africa have high abortion rates (generally above 30/1,000 women aged 15-44) despite overwhelmingly restrictive moral, legal, and social sanctions. Although data are limited, enough is known to examine how Latin American countries are making progress in negotiating the challenges posed by abortion and compare it with the situation in sub-Saharan Africa. This allows identification of relevant lessons for improving health and social outcomes in much of Africa.

Several decades ago, many Latin American countries had economic levels seen in many African nations today. They have since achieved better contraceptive practice and social outcomes, and are now witnessing declining rates of abortion, unsafe procedures, and related deaths. In contrast, Africa accounts for over half the world’s unsafe abortion-related deaths and abortion rates will increase unless unmet needs are more strongly addressed. We explore several promising steps for mitigating present and future dilemmas.

We review how abortion policies have been changed recently in Colombia, Mexico City and Uruguay, their implementation and effects. Also, we investigate the effects of improved contraceptive practice and the social diffusion of simple interventions (including emergency contraception and misoprostol) across much of Latin America to reduce abortion.

These interventions are being sustained in the absence of legal change and strong social movements, and could potentially be implemented to strengthen the performance of African health systems. This could help overcome scarce resources and confusion about how to deal with abortion, as well as reduce inequalities in health and health care. We stress the importance of strengthening the evidence base, research-policy connections, health systems, and issue networks to articulate reproductive and human rights, health rationales, and to exploit policy windows. Such a coordinated strategic incremental approach may secure social changes, support a broader policy reform, and better outcomes in this deeply controversial policy arena.

KULCZYCKI, ANDRZEJ* (University of Alabama, andrzej@uab.edu)  
State Family Planning Policies in the Islamic and Arab Demographic Giants: Does Indonesia Offer a Path for Egypt to Achieve below-Replacement-Level Fertility to the Benefit or Detriment of Women?

Indonesia is the world’s most populous Muslim-majority nation and Egypt has its largest Arab population. Both countries have similar overall and any modern-method contraceptive prevalence rates (61% and 58%) and levels of unmet need (12-13%). Fertility decline recently stalled in both countries, but at a lower level in Indonesia than in Egypt (2.6 and 3.0 births/woman, respectively). In the mid-1960s, both countries established clinic-oriented national family planning programs with strong bureaucratic and financial support. However, state policies led to skewed method choice with each country relying heavily on a single reversibly intervenable method (accounts for 70% of contraceptive use, reducing choices for women. Also, each program each has recently hit trouble. Indonesian politicians have shifted their attention and resources away from family planning. Injectables are increasingly offered by local midwives with strong incentives and by more private providers. Indonesia now has the world’s highest injectable use rate (32%), but reliance on long-acting contraception is weak. The Egyptian program has poorer informed choice, higher discontinuation rates, and heavier reliance on public sector sources now undermined by ongoing political turmoil. The IUD remains the most widely used method (36%), but 7% of women now use injectables, more than in other Arab states and possibly soon usurping pills as the second preferred method.
most common method. We use survey data, documentary evidence, and key in-
formant interviews to examine these developments further. With certain caveats,
the Indonesian experience offers lessons for instituting more solidly founded con-
traceptive and population policies and for accelerating the path toward replace-
ment-level fertility in Egypt, notwithstanding its major societal turmoil. Increasing
injectable use can help meet demands on the fragile state health system, make
use of Egypt’s underdeveloped community-based channels, and may serve as a
catalyst for other Arab states to help them reach more sustainable population
and development trajectories.

**Depression, Suicidal Ideation and High-Risk Behaviors Among
Underserved Youths in Central Mexico**

**Background:** The staggering cost of depressive disorders and suicide on the
quality of life of patients and families, the increased mortality risk, and the high
economic burden demand our attention. There is evidence suggesting that en-
gagement in risky behaviors, development of negative habits such as using alco-
hol, tobacco, and drugs, and depressive disorders all begin during adolescence.
Further, substance use, in particular smoking and drinking, has been linked to
depression and suicide risk. The study aim was to evaluate the prevalence of de-
pression and suicidal ideation and identify predictors that could inform a preven-
tion program.

**Method:** Using a cross-sectional study design with a probability sample, 702
adolescents were involved with religious institutions and Native spiritual and cultural
worlds. This presentation documents ways that urban AI middle school
tribal areas yet little is known about their interconnected spiritual, religious and
public health significance. The findings can inform the design of interventions
and development trajectories.

**Results:** Almost half (49.2%) of participants showed some level of depression
(CES-D >16), with 23.6% identified as suffering severe depression (CES-D >25).
Logistic regression analyses indicated that controlling for financial status, symptoms
of depression were predicted by female sex, low self-esteem, risky behaviors, con-
fictive parent-teen relationships, and binge alcohol drinking. The same variables
with the exception of binge drinking predicted severe depression. In turn, suicidal
ideation was associated with depression, low self-esteem, high-risk behaviors, and
conflictive relationships with parents. A similar pattern of clustered behaviors among
teenagers has been reported.

**Conclusions:** Predicting and ultimately preventing depression is of enormous
public health significance. The findings can inform the design of interventions
to prevent this early pattern of depressive disorders and associated risk factors
among low-income, rural youth in Mexico and possibly in other contexts.

**Urban American Indian Youth Religion, Native Spirituality, and
Well-Being: A Latent Class Analysis**

Most American Indians (AI) in the United States now live in urban rather than
tribal areas yet little is known about their interconnected spiritual, religious and
cultural worlds. This presentation documents ways that urban AI middle school
students were involved with religious institutions and Native spiritual and cultural
practices, and assessed how these differences related to cultural identities and risk
and protective behaviors. Data come from AI youth (n=205, mean age 12) in
five urban middle schools in a southwestern USA metropolis. Latent class analy-
sis identified distinctive groups of youth according to religious affiliations, atten-
dance at religious services, adherence to Christian and traditional spiritual beliefs,
sense of Native spirituality, and involvement with spiritually significant Native
cultural practices. Five classes emerged. There were two Christian groups, one
attending Christian churches and following Christian beliefs, but uninvolved with
Native beliefs, spirituality, or cultural practices, and a nominal Christian group af-
filiated with but not attending church, and relatively unattached to belief systems.
Two groups followed Native beliefs and spiritual practices, one affiliated with the
Native American Church (NAC) and another unaffiliated with any church. The fifth,
non-religious group, was unaffiliated, followed neither Christian nor traditional
beliefs, and was uninvolved in Native spirituality and cultural practices. ANOVA
indicated that the two Christian groups were higher in SES, had lived longer in the
urban area, were more conforming to social behavior, and better defined, making it
also the most substance using friends. The two groups embracing AI spirituality
(NAC, and non-NAC) had better school grades, more enculturation in tribal
language and strong AI ethnic identity, and the strongest bicultural orientations. The
non-religious group had the lowest scores on parental monitoring, closeness, and
supportive behavior. Findings increase understanding of different ways AI youth
blend Native and Christian religious beliefs and spiritual practices, and their
consequences for well-being.

**Marginalized or Empowered? Conflict Induced Internally Displaced
Kurdish Women's Experiences in Turkey**

This study is focusing on the conflict-induced internally displaced Kurdish
women's experiences. There has been an ongoing internal armed conflict in Tur-
key since 1984 and one of the consequences of this conflict is the internal dis-
placement that occurred in 1990s. In the displacement process, women and other
family members were threatened. They did not only loose their homelands, but
they also had to struggle in the city centers with poverty and discrimination.

After they started to live in the city centers, women may become both mar-
ginalized and empowered. The aim of the study is to understand the situations
that lead Kurdish women to be marginalized and/or empowered in the cities to
which they have been forced to migrate. After the displacement process, which
is one of the major victimization processes for these women, some of them may
be trapped in cultural and gender-based discrimination and may become more
marginalized in the city centers. But marginalization and empowerment are not
fixed categories and there is always a possibility for these women to transform
their marginalized position into empowerment. By political engagement, working
outside home and being head of the household these women may break the
cycle of their marginalization and becomes empowered in the city centers.

**Gender and Medical Specialization: Segregation By Culture or Choice?**

Women taking to gainful employment and professional practice are on the rise in
India and medicine is one such profession which by its nature, prestige and
rewards comes to be sought after most by women. It is precisely owing to these
traits, the medical profession has been strongly aspirated by their male counter-
parts as well, which might bring into play the forces of gender bias and gender
discrimination as has been the case with the phenomenon of gainful employment
in general. The paper seeks to ascertain empirically the considerations, motiva-
tions, and preferences influencing women’s choice of career in the practice of medicine by women in
medical profession. The findings are based on in-depth interviews with 237
women physicians in the City of Bangalore in India. The findings reveal that wom-
en doctors are inclined and constrained to avoid such branches that tend to be
male dominated. It is further noticed that women doctors tend to opt for the soft
specializations in medicine less sought after by their male counterparts and hence
are less expensive in terms of course fees and capitation, and also are relatively
less paid on the one hand and provide less intrinsic satisfaction and recognition
in medical circles and society on the other. The experiences and dispositions of
women doctors appear to indicate that their decisions on specialization tend to
be culturally conditioned and are outcome of their tendency to avoid areas of
medicine over which their male counterparts are assumed exercise a cultural and
professional prerogative and unjustified monopoly.

**Technology Induced Inequalities at Workplace – an Indian Experience**

Inter-industry variations in compensation packages has since long been a
normal phenomenon in industrial circles as it comes to be determined by the
functional importance of respective industry and the levels of skills and expertise
required. The paper deals with recent trends toward increasing inequalities in
earnings in Indian work organizations. It is assumed that growing complexity of
knowledge and skills required, length and cost of training requisite for operations,
increase in capital expenditure requirements and growing sophistication and
specializations in industrial processes and innovations in technology intensive
manufacturing establishments in India over a period of 20 years indicate that
differential emphasis on technology and innovations in different industries has
brought about unprecedented inequities in the levels of income between the industries and even within the industries across the cadres. Such
inequalities are further accentuated by elimination of moderately skilled workers
on grounds of obsolescence and redundancy. The findings further indicate that
the technology induced variations in income in Indian Industries vary significantly
with sector of industrial operations and its functional importance for economy on
the one hand and its potential for creation of wealth on the other.

Nations and Expectations of Democracy Among the Participants of the Occupy Gezi Movement in Turkey

The aim of this paper is to explore the notions of democracy and the expectations around the Gezi protest movement expressed by the protesters of Occupy Gezi movement started in Turkey in May 2013. The protests, which began on 28 May over the plans to demolish one of Istanbul's rare central parks, developed to nationwide rallies against the government. Although the protests have been acknowledged to be a civil unrest participated by people from different political backgrounds, the demographic features of the protestors and their demands remained under-researched and this caused speculations from both the government and the opposition sides about the reasons and impacts of the protests.

A group of voluntary independent researchers have conducted a survey with 1060 protestors, during the actual demonstrations on the streets in Ankara. Data were collected in three days (8th, 9th, 10th June) in two different centers of the protest in Ankara. Participants were people attending the protests at the time of the interviews, in varying forms and degrees (example: just standing to actually fighting with the police). Participatory observation and results of other surveys conducted in the same area were also used as secondary data. The questionnaire consisted of questions concerning the demands, political backgrounds, reasons and types of participation to demonstrations and expectations of the protestors, along with their demographic characteristics.

This paper is based on the analysis of the participants' notions, expectations and demands around democratization in Turkey. Results suggested that the demands of democratization have varied according to a series of factors, including the political background of the participant, gender, the place of demonstration attended and the different understandings about the government's policies restricting individual freedoms. The results have also documented the intense police violence experienced by the participants, which is expressed as one of the major reasons for the growing unrest.

Population Change, Demographic Dividend and Health Care in Aging Population of ASEAN

The purpose of this study was to investigate the change of population from 1967 – 2060 and to study the demographic dividend among ASEAN countries and to study health care among aging using qualitative methods from secondary level of population data. It was determined that the population of ASEAN is approximately 600.8 million people or 8.6% of the world population and this amount has tended to continuously increase for 40 years. Nowadays, the population structure consists of 48.3% of laborers, 39.8% with child dependency, and 8.5% of aging dependency while the death rate is very low and birth rate is declining. The total fertility rate of the ASEAN population is 2.4. The demographic dividend could be categorized into three groups including 1) countries that already have passed op- berty decline and population aging started relatively late in these three Asian countries. The prospects reveal, however, that they will be in the critical situation, i.e., the zero/minus population growth in the foreseeable future, in which Japan has currently been undergoing.

Asian elders must learn to adapt to independent living lifestyles quite different from those of the traditional ones. Making the best use of the modern ICT devices, various programs developed for the care of senior citizens will have significant implications for Asian societies that will soon follow the Japanese footsteps. Japan, especially for the care and health management of the elderly, may hopefully give a good guideline for other Asian families in the years to come.

KUMAGAI, FUMIE* (Kyorin University, fkumagai@com.home.ne.jp)

History of Courtship and Dating in Japan

The marriage pattern in Japan developed from the group/horde marriage in the Primitives to the tsurumado-kon (the groom commuted to the bride residence), to the muku-in (the groom lived with the bride family) during the aristocracy, and to the yome-in (women marrying into men's families) under the Bushi ruling. It was only after the Meiji era that Japanese marriage changed to the Yurai pattern based on the mutual consent of the marriage partners.

Then, two types of marriage selection pattern emerged: the arranged (niai), and the romantic marriage (ren’ai). In the arranged marriage the go-between (nakoudo) arranges formal interviews providing the young with opportunities for meeting possible marriage partners. During the early stage of Japanese modernization niai was the predominant pattern, however the complete reversal has emerged today, and ren’ai has become the dominant pattern instead.

Recently, young Japanese have difficulties in finding ideal marriage partners. Consequently, great many Japanese men and women remain single lifetime (1920: about 2% for both men and women; 2010: 20% for men and 11% for women). Extremely high rates for life-time singleness of Japanese men and women today are one of the major reasons for the fertility decline.

Attempting to provide young people with mate selection opportunities various ‘Kan-Katsu’ services (marriage mate seeking activities) have been established by local municipal offices, commercial matchmaking agencies, and Mochi-Koni (Township Companion where both young men couples and women couples meet in group). Furthermore, the current government will extend monetary support to marriage services organized by municipal offices effective 2014 fiscal year.

Marriage, however, is an individual and private matter. And, therefore, if one decides to lead a lifetime singleness, it matters only to him/herself. Nevertheless, it is hoped that these new styles of courtship and dating will encourage Japanese youth to go forward for marriage.

Car Festivals (Religious Yatras) in India : A Dimension of Leisure Tourism (A Case Of 'Nanda Devi Raj- Jat Yatra' In Uttarakhand, India)

This paper is about the car festivals (Religious Yatras) organized in different parts of India and their impact on the quality of life of its participants. This paper is analyzing how these car festivals provide leisure to its participants which further improve quality of their life through mental well-being, Jogannath Puri Rath Yatra (Orissa, India), Mysor Rath Matoshor Yatra, Mysor (Karnataka, India), and Nanda Devi Raj-Jat Yatra (Uttarakhand, India) etc. are some of the famous religious car festivals in India. Thousands of people participate in these religious car festivals to get relaxed from day to day stress. Nanda Devi Raj-Jat Yatra is one of the most celebrated car festivals of Uttarakhand in India, taking place once in every 12 years during August-September for 19 days. A trek of 280 km remains jam-packed with the experience of nature, flora and fauna, fabulous culture and let one have a glimpse of the Uttarakhand Himalayas. Last car festival was taken place in the year 2000 and more than 50,000 people had been found taking this car festival.

Well established indicators of quality of life are used to explain the results in this study. Simple statistical and participatory tools are used to analyze the information and data gathered from different primary and secondary sources. Case studies are also used to explain the experiences of the participants of the car festivals.
Findings of the study reveal that leisure tourism enhances quality of life by increasing feelings of competency and relaxation, distracting from difficulties, as well as enhancing social inclusiveness and support. Leisure tourism also results in improved mental wellbeing through associated meaningful engagement, self-expression and creativity. Participation in it is considered as a life time experience. This experience not only provides leisure during the event but also provide happiness in memories.

KUMAZAWA, TAKUYA* (Japan Society of Sport Sociology, sd131012@g.hit-u.ac.jp)

The Diffusion of American Football in Japan from 1930's to 1950's

This research examines the diffusion of American football in Japan from 1930's to 1950's from the sociological perspective. The research question is why and how it diffused in Japan during the time. In general, Japanese-American relations during the time was tense because of Immigration Act of 1924, Manchurian Incident in 1931, Second Sino-Japanese War in 1937-1945, Pacific War in 1941-1945 and the occupation of Japan by GHQ in 1945-1952. American football diffused in Japan in these situations although it is one of the most conspicuous American cultures. Why and how did this happen? In my opinion, there are four main reasons. Firstly, at the beginning of 1930's, Nisei students from Hawaii and the west coast of America began to come and study in Japanese universities, and they started to play American football. Secondly, some Japanese politicians, diplomats, business people and the American Embassy staff in Japan supported Nisei students to play American football because they thought that it was useful for promoting friendly relations between Japan and America, or at least, for preventing Japanese-American relations from getting worse any more. Thirdly, the media like newspapers, publishing companies also supported Nisei students to play American football because they thought that it had a potential to become popular content as well as they are capable to provide better living conditions. Study concluded with observation that at present, the seeds of change has sown and now the change is visible and people of the hilly region are changing traditional crops and shifting to cash crops.

KUMSA, ALEMAYEHU* (Charles University, alemayehu.kumsa@ff.cuni.cz)

Conflict In Ethiopia

Colonialism is a practice of domination, which involves the subjugation of one people to another. The etymology of the term from Latin word colonus, meaning farmer. This root reminds us that the practice of colonialism usually involves the transfer of population to new territory, where the arrivals lived as permanent settlers while maintaining political allegiance to the country of origin. Colonialism is a characteristic of all known civilizations. Books on African history teaches us that Ethiopia and Liberia are the only countries, which were not colonized by West European states, but the paper argues that Ethiopia was created by Abyssinian state colonising its neighbouring nations during the scramble for Africa. Using comparative colonial history of Africa, the paper tries to show that Abyssinian colonialism is the worst of conquest and colonial rule of all territories in Africa, according to the number of people killed during the conquest war, brutal colonial rule, political oppression, poverty, lack of education, diseases, and contemporary land grabbing only in the colonial territories. In its arguments, the paper discusses why the Oromo were defeated at the end of 19th century whereas we do have full historical documents starting from 13th century in which the Oromo defended their own territory against Abyssinian expansion. Finally the paper will elucidate the development of Oromo national struggle for regaining their lost independence.

THE PROTESTS AGAINST THE POLITICS OF CRISIS

The protests against the politics of crisis in both the US and Germany are structured along similar patterns: The Tea Party Movement in the US and the right-wing Euro-criticism in Germany stand in opposition to the Occupy Movement on both sides of the Atlantic. These polarized spectra not only deploy parallels in their political messaging, but also in their socio-demographic composition. Beyond this opposition, all four poles seem to be united by a deep mistrust towards their national governments with a focus on domestic socio-economic issues.

The paper uses the concept of the socio-spatially determined Habitus, bridging the gap between agency and structure: resonating with the messaging of the respective protest-mobilizations, but in turn also structuring and shaping the development of these very movements. Participant observations in meetings and protests, group discussions and interviews conducted with participants in all four movements are analyzed relying mainly on the hermeneutics of the sociology of knowledge to reconstruct the Habitus as a sedimented body of practical knowledge shared by the participants.

The paper seeks to contribute to the understanding of the development of the movements and the different inner and outer limits they encountered. Why did the Occupy Movement in different parts of the US and other countries follow such different trajectories after 2011? Why did the German counterpart to the Tea Party never gain comparable traction - despite numerous attempts and significant resonance in the media?

The analysis shows that the polarization of the national protests can be understood as resulting from the different ways in which social classes interpret the social contradictions sharpening in the recent years. While this dispositional schism is mirrored on both sides of the Atlantic, the diverging paths the movements took express the different ways in which the crisis affected the national economies.
Sociopolitical Shocks In Cross-Border Marriages: A Comparison Between Chinese and Southeast Asian Wives In Taiwan

Along with the expansion of international trade between Taiwan and Southeast Asia, inter-ethnic marriages between Taiwanese men and Southeast Asian women have started from the late 1970s. Cross-border marriages between Taiwanese men and Chinese women have dramatically increased starting from the late 1980s after the Taiwanese government has changed the national policy. These new trends make cross-border marriages a significant phenomenon in Taiwan.

Based on the in-depth interviews with marriage immigrants from China and Southeast Asia, the author delineates their daily lives in Taiwanese families after they married. It is clearly that all these marriage immigrants experience sociocultural shocks when they have started their lives in Taiwan. The author notices that both Chinese and Southeast Asian wives wish to work on the job market and be economically independent but are restrained by the government policy. Both of them feel strange about the common arrangement in Taiwan to live with in-laws. They also experience the unreasonable underestimation of their natal family's SES by their in-laws.

Only Chinese wives complain that their husbands never helped with household chores, and their mothers-in-law seldom helped either, and so they have to work like a household servant. Moreover, they are often in conflict with their mothers-in-law or husbands on the issue of child rearing. They are also fussy about Taiwan’s limited living space. Most Southeast Asian wives, on the other hand, emphasize personal privacy and sanitation of living environment, but the real situations often contradict with what they expect. They also frown at the special diet their mothers-in-law prepared for them after they have delivered babies. They are especially angry about their natal mothers being looked down upon by their in-laws.

All this above mentioned sociocultural shocks in turn affect whether or not these foreign wives identify with their families in Taiwan.

The Movement of People’s Politics in Democratisation Process in Thailand

This paper aims to explore the concept of people’s politics and its application to the Thai democratic movement. Although Thailand became a democratic country more than 80 years ago (1932), the problems of ineffective participation, political conflicts and political unconsciousness are still clearly seen today. The attempts to bring top down into bottom up democracy became a new approach in the new Thai Constitution (2007). Both the political development council and local organization council Acts have been established to support people’s active involvement. People’s participation has also been launched throughout the country. Both the most successful and the drawbacks of people’s politics in the political movement towards democracy will be examined in the paper. The grassroots’ movement for human security, equity and opportunity will be studied as an example of the strengthening of people’s politics in terms of deliberative democracy, civic education and emancipatory. The roles of the people’s politics and the movement through the works of Center for People’s Political Development Center supported by King Prayudsichop’s Institute in 48 centers/provinces during the last decade will be re-examined in this paper. The roles of Center for People’s Political Development Center supported by King Prayudsichop’s Institute in 48 centers/provinces during the last decade will be re-examined in this paper.

Constructing the Assessment Framework for Local Disaster Management Capability

Due to the increased magnitude and frequency of extreme climate events, increased population density and land-use intensity, disaster impact that humans need to face in the future can be foreseen as more severe and complicated. Disaster risk is typically conceptualized as a composite function influenced by numerous natural and socio-economic factors. Coping capability is a key factor that influences not only the society’s acceptance to disaster risk but also its potential to take related measures. It is important for a society (especially those vulnerable communities at local levels) to prepare itself so it is capable of responding these natural, technological, and emergent threats more effectively. While there have been numerous studies and practices on assessing social vulnerability, few studies are emphasized on assessing a system’s ability to manage disaster in- cidents. Hence, one worthwhile inquiry is to explore the characterization and measurement of disaster management capability at local levels.

The ultimate goal of this study is to develop an assessment framework that is both comprehensive and feasible in the area of disaster management. The paper first reviews and analyzes the capability assessment systems carried out in the United States, New Zealand, and Japan. We then modify the US national preparedness system (e.g., core preparedness capability) and develop a framework based on Taiwan’s experiences in disaster management. The resultant assessment framework is constructed with a matrix of 19 disaster tasks (e.g., risk assessment, evacuation, and housing) and 11 capability elements (e.g., planning, science and technology, and social capital). It assesses whether a local society has the required institutional mechanisms and resources to execute these tasks in three disaster management missions (i.e., prevention and mitigation, response, and recovery). The result of this capability assessment framework is expected to be applied further in disaster risk assessment and capacity building program.

Public Environmental Concern in Taiwan

One of the top 21 emerging global environmental issues for the 21st century identified by the UNEP foresight report is ‘Social Tipping Points: Catalyzing Rapid Transformative Change in Human Behavior for the Environment’ (#5). It can be thus inferred that humans need to change original destructive actions and need to learn to adapt to changing climate and environment (with combined influences of both natural and human forces). Moreover, these actions need to be taken with a more rapidly speed. However, the factors that trigger people’s behavioral changes are often differentiated due to countries’ different socio-economic contexts. Therefore, it is important to understand how individuals in different cultures think of, know of, and plan to respond to these environmental challenges and to investigate the interrelationship between people’s environmental attitude and environmental behaviors. This paper aims to answer these two research questions. The study reports the data (n=2209) derived from 2010 Taiwan Social Change Survey (TSCS)—a longitudinal face-to-face national survey project conducted each year since 1985. The results find that the Taiwanese public is concerned about environmental issues and they demonstrate a positive environmental value system in terms of protecting the environment, coexisting with the nature and other species, and respecting the earth. However, they show a level of inconsistency in the frequency of taking pro-environmental behaviors. While they often recycle for renewable resources, they rarely consume organic foods and drive less personal vehicles. The preliminary analysis suggests that there are deficits between pro-environmental attitude and actual environmental actions. To overcome this behavior deficit, it is perhaps necessary to provide net-benefit incentives to Taiwanese people.

KUPFERBERG, FEIWEL* (Malmo University, feiwel.kupferberg@mah.se)

The Intellectual Advantages and Dangers of Borrowing, the Complex Relation Between Literature and Sociology

Literature and sociology are two types of intellectual games. Literature is driven by the rules of art. The latter foreground such aesthetic techniques as estrangement (anti-essentialism), meaning gaps (let the reader guess) and the captive mind (manipulated emotions). Sociology is a scientific discipline and is hence bound by the rules of typological construction (essentialism), methodological reflection (transparent language) and distanced role-taking (critical empathy). This does not exclude intellectual borrowing of the insights, imagination and language produced by writers. A good starting-point to reflect on these issues is the methodology of Ervin Goffman. He uses literary sources mainly for their accurate ethnographic observations in particular from the French existentialist writers Jean-Paul Sartre and Simone de Beauvoir in order to investigate issues of identity and identity work and more generally the micro norms of interaction between ego and alter.

What Goffman tends to ignore though is that in particular Sartre in all his novels and dramas describes alter as ‘stranger’. There are never any close emotional bonds between ego and alter. In order to fully explore the imaginative possibilities of literature, other French writers such as Proust and Celine should be looked into as the latter suggest that social relations between strangers can change into intimacy but also return to the civility between strangers in public.

Nor should sociologists ignore how literary theorists analyze the works of fiction writers. Reading such work helps us better to understand both what is specific for the literary text but also how the techniques, imagination and language of fiction writers illuminate important aspects of issues that sociologists have tended to leave out in their interpretative work such as the importance of events, time, place, artifacts, representations, bodies, problem-solving etc.
as the most important source of socially relevant meaning over what is perceived

Sportification as

Structure and Specificity TRUST of E-Zines

Nowadays the Internet has globally changed mass communication. As a result 'civil journalism' has emerged. The urgent problem of trust in networking has become more actual. Media-trust defines relations in mass media communication with the usage of material objects including electronic media and devices. Media-trust is a multilateral phenomenon. Its components: trust of the audience to mass media, trust of the mass media (team of journalists or one journalist) to his audience, or to a concrete reader (a viewer, a listener, a user). The users' status (regular, random, prospective and etc.) is an important factor of Media-trust. Media-trust is a function of the characteristics of mass media audience, characteristics of the audience and the characteristics of the communication process. The peculiarities social media is the social context ('the ideology of the time'), the form and type of information. In particular, the Media-trust importance as a whole and its components depends of the usefulness or uselessness of the information, of connection information to one or another area of subject's life and etc.

Users' trust in e-zines is one of particular cases of media-trust, which is a result of the efficient source integration: trust to information, trust to journal and trust to journalist. The integration of the referred components is constant and absolute, as trust in social information is impossible without trust in its source. The triad of these types of the interrelated trust has three aspects: information, perceptive and interactive. The validity of the conceptual model and the relationship of many media-trust characteristics have been confirmed in empirical study of Russian youth. The relationship trust to e-zines and intellectual, emotional and communicative respondent's characteristics has identified.

Trust, Loyalty, and Culture in Organizations

The trend in business is based on the idea that an employee is the primary resource of any organization, that sincerity, benevolence, trust and loyalty of employees is a major competitive advantage. The purpose of the study was to examine relationship between different psychological organizational phenomena, such as trust, loyalty, and organizational culture in organizations with different spheres of activity. Hypotheses were tested using survey data different organizations: publishing, nanotechnology, banking, PR, marketing. The results of comparative and descriptive analysis of the concept of trust, loyalty, and types of organizational culture have given evidence of all hypotheses. The results suggested that separate components of trust, loyalty and culture are related between each other. Organizational culture is related to organizational trust and employees' loyalty, i.e. different types of culture require particular combination of trust and loyalty indicators. Organizational trust is related to employees' loyalty, i.e. each component of organizational trust will be determined by the specific rate of each type of loyalty (organizational, professional, labor). Moreover differences of preferred and actual culture indexes are inversely related to overall level of trust and loyalty. The study carried out in a unique context of poor explored Russian market could provide further practical and theoretical insights and contributed to the understanding of the nature, development, and maintenance of trust, loyalty and culture in organizations. Yet, this understanding has not been fully translated to the business community in a way that encouraged the actions necessary to reduce the growing trust deficit. It is of strategic importance for organizations to build better practices for communication and employee involvement, along with strategies for reducing employee vulnerability and dependence. These efforts should be integrated into the cultural norms of the organization, where trust is a part of every interaction between employees.

The Sportification of Tai Chi and the Hegemony of Vision

The purpose of this paper is to enable a deeper understanding of modern sport through an examination of the sportification of tai chi (taijiquan) – its transformation from a folk tradition specific to local communities into a modern sport with global competition. While there is considerable literature on the sportification of tai chi (Li, 2008; Ryan, 2008; Zhang, 2010), this paper proposes to understand sportification as hegemony of vision (Levin, 1993) – the prioritization of the visible as the most important source of socially relevant meaning over what is perceived by other bodily senses. This was first made possible by the creation of the Simplified 24 Form in 1956 under the initiative of the New Chinese Government. Whereas traditional tai chi was, and still is, a martial art combined with internal ‘chi’ cultivation techniques impregnated with Daoist philosophy, the Simplified 24 Form is sterilized of the martial, internal and philosophical aspects; it was rendered a standardized, easy-to-learn health exercise for the masses, demanding only the correctness of visible movements. This prioritization of vision enabled objective rules for competition, which systematically allocated social meaning to the visible body. While competition has contributed to the global popularity of tai chi, it has inevitably led to the neglect of aspects that were not subject to visual appreciation, such as the internal cultivation of “chi” and its philosophical implications.

Emotional Infrastructure of Reconciliation

Analysis of several institutionalized reconciliatory actions in relation between Central and Eastern European nations - German, Polish, Ukrainian, Jewish, Lithuanian, Czech and Russian - is made aiming at excavating the basic emotional components underlying the successful reconciliation. This involves the discussion of emotional infrastructure of reconciliation, and, in manifest or latent ways, influence the contemporary vision of university mission. Being initially national educational institutions (with a certain specific internalization of “national” during times of Russian Empire and Soviet time), after 1991 Ukrainian universities faced a kind of “double pressure” from the ideology of nationalism and influences of globalization. How intersection between “national” and “international” is presented in the main criteria and indicators of these university rankings? Do rankings help to create new academic hierarchy in Ukrainian university education? How effective are university rankings as a tool for internationalization of our system of education? These are the main questions for my future presentation.

The Relations Between National and Global in Ukrainian University Rankings

In my presentation I want to analyze how national and global components are presented in the leading Ukrainian university rankings TOP 200 and COMPASS and, in manifest or latent ways, influence the contemporary vision of university mission. Being initially national educational institutions (with a certain specific internalization of “national” during times of Russian Empire and Soviet time), after 1991 Ukrainian universities faced a kind of “double pressure” from the ideology of nationalism and influences of globalization. How intersection between “national” and “international” is presented in the main criteria and indicators of these university rankings? Do rankings help to create new academic hierarchy in Ukrainian university education? How effective are university rankings as a tool for internationalization of our system of education? These are the main questions for my future presentation.
Nearly one in three first-time freshmen in the U.S. are enrolled in some remedial classes. The traditional course in English or math at their college or plans. In this paper, change in (a) disparity in rate and rate of deaths in medical institutions broken down by gender and age, and (c) life expectancy at birth, 20 years of age, and 65 years of age broken down by gender, in post-war Japan will be examined, and by comparing between the patterns of chronological change of (a) and (b), and between those of (b) and (c), it will be analyzed how the change in (a) has influenced (b), and how the change in (b) has influenced (c).

Globalization in East Asia and Contemporary Situation in Northeast Asian Societies

The East Asia and Pacific region continues to be an engine of global growth, contributing around 40 percent of global growth in 2012. Driven by strong domestic demand, the region grew at 7.5 percent in 2012 – higher than any other region in the world. Economic interdependence in the countries of Northeast Asia is getting stronger. Needless to say, the center of economic development is China. For Japan, economic importance of China has increased every year. China is the largest trading partner for Japan now. Japanese population who live in Shanghai is estimated to 100,000, which is greater than New York. Chinese has become the biggest bloc of foreign residents in Japan in 2007, overtaking Koreans, which has been the biggest bloc in Japan in the postwar period. In rural and remote areas, Chinese workers called Foreign Trainees and Technical Intern are an essential labor force to support the local economy since the 1990s.

Although North Western countries share common economic interests, political tensions both between Japan and China, and between Japan and Korea frequently occur in the 2000s, Japan and China are strongly opposed to each other over the territorial problem. Japan and Korea are opposed to each other over the territorial problem and the understanding of history. In the near-to-mid term, it seems that there is no hope for building the East Asian Community.

Japan and China's relationship is often described as comprising "Cold politics and hot economics." It can be said the same for Japan and Korea's relationship. The problem is that violation of human rights may be prone to happen upon foreign residents from North Eastern countries under the situation of "Cold politics and hot economics", as is recently observed in hate speech against foreigners from Korean.

Supporting or Hindering Maternal Employment? Comparing Financial Incentives within Family Policies in CEE Countries

The Central and Eastern European (CEE) countries have often been treated as a monolith in comparative social policy analyses. While there are moderate differences in gender employment gaps of childless men and women in these countries, the picture of employment among parents of young children is completely different. The employment rates of fathers of preschool children are very high in all CEE countries ranging between 88% and 94%. In contrast, the employment of mothers diverges from 36% in Czech Republic to 81% in Slovenia. Previous research has shown that there are different cultural, structural and economic factors influencing

White Trash, Working Class or Just Your Average Guy? the Changing Face of a British Far Right Supporter

The problem is that violation of human rights may be prone to happen upon foreign residents from North Eastern countries under the situation of "Cold politics and hot economics", as is recently observed in hate speech against foreigners from Korean.
ing the gender employment gap in the group of parents of young children. Also the institutional context (work-family policy) plays an important role. However, there are also financial incentives that lie in the rules of family benefits and child tax credits systems, often neglected in comparative research, but influencing material decisions whether to work. In my research I compare these rules in the CEE countries looking for incentives that support or hinder maternal employment. I focus particularly on such pairs of countries that share similar socio-economic and cultural contexts for maternal employment, but differ in financial incentives that lie in the tax-benefit systems and in employment outcomes for mothers of young children. One of such examples is a pair of two, small Baltic States: Estonia and Lithuania. I show that while socio-cultural and structural contexts are more favorable for maternal employment in Estonia than in Lithuania, more generous maternity/parental leave-benefit provisions in Estonia form a strong negative economic disincentive for mothers to work when their youngest child is still in its nursery age. In contrast, the employment of mothers of very young children (nursery age) is much lower in Estonia than in Lithuania, whereas employment of mothers of older children follows the opposite pattern.

Role of Local Governments in Immigrant Integration: Cases from Thailand and Japan

There are much discussion on immigration at the national state level, focusing on their immigration and citizenship status. However, it is at the same time recognized that there are many migrants who do not go through the official procedure of immigration and come to live in the country illegally. Local governments need to face these migrants on a day-to-day basis, since these migrants live there as residents. We focus on this vacuum of migration policy at the local level. How are the local governments coping with migrants and how are they balancing their accountability to local residents and their accountability to national state regarding migration policies? We will take cases from Thailand (Tak and Samut Prakan) and Japan (Yokohama city) to explore the struggles of local governments and communities.

KUSKABE, KYOKO* (Asian Institute of Technology, kyokok@ait.ac.th)

KUSAKABE, KYOKO* (Asian Institute of Technology, kyokok@ait.ac.th)

Sociology has long been interested in individualization or individuality as social phenomena. Classical sociologists found individualization among social changes in modernization. It is said that there has been this process in Japanese society, too.

This paper examines how “individualization” and “individualism” has been talked about, not among sociologists, but among lay people in Japan and explores how people conceive of “individualization” and “individualism” and how they make use of those concepts to understand their everyday life. Those words are not only theoretical terms but also everyday words. This way of approach is based on the idea Ibarra & Kitsuse (1993) proposed as an ethnography of moral discourse; a constructionist approach to social problems that focuses on social processes in which a social problem is defined and discussed.

The words “individualization” and “individualism” in Japan are two concepts often used to problematize social phenomena, people, or events. For example, a movement to change the civil law to allow women to keep their name after their marriage used to be criticized as excessive “individualism.” Eating a meal alone, especially in the case of children or young members of a family, drew attention in early 2000’s as “ko-shoku (individual or solitary on their own),” and is thought to be a problem of individualization that has weakened family bonds. These vocabularies convey moral meaning and they are “vernacular constitutents of moral discourse” (Ibarra & Kitsuse 1993).

By examining how those words are used in moral discourse, I would like to argue how they work for people to approve or disapprove of social conditions, behaviors, and social changes. Talking about “individualization” or “individualism” is a speech act that participates in constructing social realities.

Identity Problems in Global-Local Relations

The categories of identity, identification, state, civil, national, and ethnic identity are being widely used in sociology and other disciplines. These concepts are rather new to Kyrgyzstan’s public domain and scientific rhetoric where the interpretation of a nation as citizens of the state started entering political and academic discourse. According to Habermas, post-traditional, post-national identity is “a more sober political identity” that separates itself from the background of the past centred around ethnic history. Modern civil nation is not made spontaneously and at one step. It evolves as a result of efforts aimed at consolidation of civil society and its institutes in their interaction with the state.

Modernization of post-Soviet Kyrgyzstan in the context of local-global relations of post-traditional world will be successful only when traditionalism is overcome based on the choice of civil Democratism and values. Diversity and homogenous communities which can, however, turn out to be less stable, are asserted that integrate multi-ethnic communities and ascertain cultural pluralism as a main vector of collective identifications. A ‘civil nation’ is not developed by chance, but emerges as a result of the efforts to strengthen civil society and its institutes and their interaction with the state.

The overall problem of the Kyrgyzstan’s identity is a mismatch between its basic elements such as national, ethnic, religious, cultural and political ones. There is a trend for new interpretation of these elements’ composition. While the Soviet identity was mobile home lifestyle in the US southern regions which promises a pleasing climate, seniors actively seek, and even move across the country, to participate in the “mobile home lifestyle” in the US southern regions which promises a pleasing climate, homeownership, leisure activities, community, and friendship to White middle and working class seniors. My paper examines to which extent these expectations by seniors are fulfilled in which kinds of communities, and how social differences, economic struggles, as well as health and personal issues can compromise them over time.

Between Lifestyle and Necessity: Senior Mobile Home Living in Florida

This paper focuses on a community-type that has long been attractive to older people in the Gulf Coast states of the US: the mobile home park. While living in a mobile home is generally more affordable than living in a site-built home, many seniors actively seek, and even move across the country, to participate in the “mobile home lifestyle” in the US southern regions which promises a pleasing climate, homeownership, leisure activities, community, and friendship to White middle and working class seniors. My paper examines to which extent these expectations by seniors are fulfilled in which kinds of communities, and how social differences, economic struggles, as well as health and personal issues can compromise them over time.

The paper is based on an analysis of 150 qualitative interviews conducted with residents in the Gulf Coast Florida between 2006 and 2009, where more mobile home parks are more numerous than anywhere else in the US. Just over half of the interview participants were 55 years or older; roughly one fourth resided in so-called senior parks which restrict residency to persons over the age of 55, while the other half lived in communities that also accommodate middle aged residents and children.

Even though it is not an entirely urban phenomenon, the senior mobile home lifestyle is influenced by urban experiences and cultural imagery, such as fear of crime or racial/ethnic conflict, often creating a longing for simpler, more neighborly and homogeneous communities which can, however, turn out to be less stable, affordable, and personally fulfilling for older people than originally anticipated.

Multicultural Movements In Indonesia: A New Youth Initiative For Social Transformation

The massive process of reislamization of society that started to develop after the time of ‘Reformasi’ in 1998 has brought many social changes in everyday practice of social life in Indonesia. Today, Indonesia has to face almost everyday the problems related with the disruption of harmony of living-together. Besides religious-fundamentalism and terrorism, the intolerance among religious groups, violence against minorities and the demise of cultural diversity respect value have become a serious problem in society. Concerned with that situation, many young people in Yogyakarta in Central Java have built movements for bringing back social tolerance in Indonesian public sphere. As counter-actions and counter-discourses, the movement has successfully gained the public support and built larger networks in local and national levels. The movements also have become the source of ideas and inspiration for wider discourses on diversity in a global
multicultural world. Of course, there are challenges that they have to deal with in order to achieve the social transformation.

Russian Youth: Mobilities, Inequalities and Life Chances

Due to the influence of the global social transformations of XXI century there appeared new forms of inequality (access to mobilities, networks, education, spare time and information, guarantees of security) as well as the "old" inequalities concerning income, wealth, prestige are being changed in the direction of increasing. Russian youth has been particularly affected by the rapid social, political, economic and cultural changes and discrepancies. Furthermore, the breakdown of the USSR has led to the drastic social conversion. These multiple structural factors not only determine but shape the life of youth in Russia. Faced with these uncertainties and turbulences the young people have to make their own decisions and to pattern their behavior on the current "liquid modernity" (Z. Bauman) which possess a lot of seeming life chances and choices.

Our paper addresses the growing phenomenon of social mobility which has become a core motif of the modern society and numerous "new" and "old" inequalities forming the social structure of the Russian society. The theoretical grounds of the research are the classical and the modern social theories concerning social inequality and mobility. We elaborate the "integral" approach to the social inequality which appeals simultaneously the objective characteristics and to the person's perception of his social position and the inequality phenomenon. The paper is based on the desk study of the Russian youth, its problems, choices, social identification, ways of life and on the data of the author's sociological on-line survey of 400 young people at the age of 18-35 years old. I'll present the results of the research showing the influence of the becoming of non-linear inequality on the social mobility and life chances of youth in Russia.

Life Expectancy and Retirement Age: Policy Options and Practice

The trend to early retirement that has been observed in many industrialized countries (e.g., Kohli et al. 1991) seems to have come to an end. The steady increase in life expectancy has led to changes in retirement age regulations, what in turn accelerates the aging of the workforces. For example, the Czech Republic and Poland increase their retirement age by the amount of the projected increase in life expectancy, what statistically keeps the mean duration of the retirement phase in the life course constant, while the mean working phase in the life course extends. Others countries like Germany rise the retirement age in a way that both the retirement and the working phase increase. Regardless of the amount, these changes affect inequality and redistribution by the social security systems as life expectancy is distributed unequally in these societies: For example, better education and higher income result in higher life expectancy. The paper discusses opportunities to change the current three-parted (and dominantly male-oriented) life course regime in a way that both increased mean productivity of the aging workforces and reduced inequalities can be reached at the same time by reorganizing the life course, namely by redistributing education, work, and retirement phases in the life course. By improving productivity, the problems of ageing societies can be tackled at the societal level (e.g., increasing contributions for social security) as well as both the level of employers (e.g., improved health). Discussing such opportunities, other than simply rising retirement age, widens the scope for designing growth friendly social security that help to reduce existing social inequalities.

KÜNZLER, DANIEL* (University of Fribourg, daniel.kuenzler@unifr.ch)
The Politics of Social Policy in Kenya

Since the introduction of the multi-party system in 1992, Kenyan political parties generally had a low programmatic profile and were clearly personalized. Voting was rather based on clan cleavage and personal affiliation than on policies. The inglorious climax was the violence after the presidential elections in 2007 when more than 1000 people were killed and over 300000 displaced. It was thus remarkable when the newly aligned major political camps released programmatic manifestos for the 2013 elections. They included some claims in the field of education and health converging into a common vision to reduce inequality. The financial feasibility of these grand pledges was strongly doubted by Kenyans, as was the winning coalitions' interest and capacity in implementing them.

However, barely three months after the election, President Kenyatta declared free public maternity services, a first step towards free primary healthcare as designated by the Jubilee coalition manifesto. Considering the human and financial resources, there is still ample ground for scepticism concerning the long-term viability of this policy. Nevertheless, this is a significant development in a rather sclerotic social welfare system.

What are the determinants of this social policy change? Functionalist, institutionalist, economic determinist, modernisation or power resources theories have limitations explanatory power. Preliminary evidence from interviews with stakeholders in Kenya and other sources point towards the importance of politics. The recent self-electoral violence questioned both domestic and international legitimacy. Including free maternity care in the manifesto and implementing it quickly is one of the first attempts to restore international legitimacy, as maternal health is an important issue on the international agenda (MDGs). Given the neck-and-neck electoral race of the two big coalitions, it on the other hand also attempted winning the support of other electoral groups and thus domestic legitimacy. Hence, catalysed by a serious electoral crisis, politics finally resulted in policies.

KÖNIG, ALEXANDRA* (University of Wuppertal, akoenig@uni-wuppertal.de)
Faces of Uncertain Transitions to Adulthood – In Different Fields of Education

The faces of uncertain transitions to adulthood vary between different countries. But they also differ within countries. Germany and its manifold fields of education are ideal cases for studying the phenomena in question. Using data from a quantitative and qualitative longitudinal study on orientations, strategies and decisions of adolescents upon leaving school, we will carve out different patterns of uncertain transitions to adulthood.

In our presentation we will (a) show how the transition to adulthood is structured in different fields of education (e.g., in a paternalistic apprenticeship based on an old master-pupil model; in an art academy which offers independence but uncertain job chances); (b) differentiate between situations of uncertainty (e.g., to secure the livelihoods in the long term, to find the scope for self-realisation, to live alone); (c) discuss how the adolescents cope with uncertainty, how they design their future and their self.

The sample of our study contains trainees in vocational training (hairdressers, painters) and university students (art, teaching/engineering). The sample composition allows a comparison of adolescents in different fields of education in Germany.

There are different theoretical options and viewpoints to get a perspective on transitions to adulthood. In forms of our research project, we link theories of intergenerational conflict (e.g., Meads processual concept of “self”; Straus’ concept of “status passage”) with Bourdieus theory of social inequality (and his concept of “field”) to understand the strategies and orientations of adolescents at the threshold to adulthood.

RC04-80.9
KÖNIG, ALEXANDRA* (University of Wuppertal, akoenig@uni-wuppertal.de)
Ornifications and Strategies of Less Privileged Students

In Germany, like in many other countries, the proportion of adolescents with university entrance exam increases and the absolute number of students is higher than ever before. Using data from a quantitative and qualitative longitudinal study on orientations, strategies and decisions of adolescents upon leaving school, we will shed light into the way less privileged adolescents make their choices and shape their self-project. We use the term “self-project” (in reference to Mead and Strauss) to indicate that the decision for a university program is (a) part of a more encompassing “self-project”, that allows identification and this means ascription to a unique self; (b) it is a decision-process (with evaluations, modifications, revisions); and it is (c) embedded in an interactive process with generalized and significant others. The sample of our study contains three subsamples: students of art, of teaching, and of engineering. We want to discuss the following points: a) The structuredness of choices: Choices are structured because requirements and expectations differ depending on the social position. For instance, the less privileged adolescents choose more often university programs offering good job chances (like teaching or engineering). b) The access to different fields of education: While the criteria for access to university are universal and transparent (school grades), access to an academy of arts is unpredictable. A committee of the academy identifies a specific “artistic”, incorporated capital. Mass participation to education at an academy does not exist. c) The relevance of significant others: The quantitative interviews show that students from lower classes more often feel parental misgivings concerning their personal ability. The qualitative interviews allow to deepen the analysis about the role of significant others.

RC04-94.2
KÖNIG, RONNY* (University of Zurich, koenig@soziologie.uzh.ch)
Educational Inequality and Welfare State Patterns

Previous research on social stratification reveals that social inequalities in educational and thus occupational opportunities are still very relevant features of modern societies. Against this background the study focuses on the intergenerational reproduction of educational inequalities and how this reproduction is affected by specific welfare state patterns in 13 European countries (Austria, Belgium, Denmark, France, Germany, Greece, Ireland, Italy, the Netherlands, Portugal, Spain, Sweden and Switzerland). For the analyses micro-data from the Survey of Health, Ageing and Retirement in Europe (SHARE) and macro-data from several sources (e.g. Eurostat, OECD and UNESCO) are used. With this approach it is possible to combine a multi-level perspective in a two-level model. A broad comparative perspective allows the identification of different institutional influences, namely direct or indirect governmental investments in education, national specific shifts in the labour market as well as demographic changes. In general, multi-level estimates on 33,346 individuals – born between 1950 and 1984 – show the perpetual importance of the family of origin and the reproduction of educational inequalities over generations. Furthermore, the overall hypothesis that both welfare state arrangements and labour market indicators have an influence on the educational attainment is confirmed. In addition, contextual characteristics can partly counter the influence of social origin and therefore reduce the intergenerational transmission of educational opportunities.

The influence of generational support on housing pathways: Evidence from the British Household Panel Study (BHPS)

The family home is the single most valuable asset for most individuals and households. In addition, people have strong emotional attachments to their family home, where it is passed down generations. In recent years this idealised housing pathway has become more and more complex. Young people are increasingly depending on their parents, both financially (deposit) and in-kind (guarantor, living rent free at parental home), to acquire their first home. Qualitative evidence shows that middle aged children support their less well-off parents to purchase their own flats via the right-to-buy scheme. This paper contributes to this debate by investigating the influence of bequests and in-kind generational transfers on homeownership. Based on the British Household Panel Study (BHPS) we investigate how housing pathways are influenced by receiving an inheritance and in-kind support by offering rent-free accommodation. Estimates suggest that inheritance seems irrelevant compared to other socio-demographic control variables. Based on the results the timing of such windfalls seems to be crucial. Most individuals receive an inheritance at the end of their work-life and often share the amount of the windfall with their siblings. Hence, at this stage in life few people move into their own flats. Rent free accommodation seems to have an effect on housing pathways. Young people who are living with their parents are benefiting from this in-kind support and are able to purchase their first home earlier than independent mortgagees who are saving up for a deposit while renting. These results are discussed in the wider context of housing policy, welfare and generational support.

LABUCAY, IREMAE* (Social Weather Stations, mae.labucay@gmail.com)

Gender, Work and Family: The Situation in the Philippines

Using three waves of data from the International Social Survey Programme (ISSP) survey modules on Work Orientations, and on Family, Work and Gender Roles, the paper will explore the current situation and the changing trends on how the work-family nexus is structured by gender in the Philippines. At the macro-level, Filipino women have gained greater equality with Filipinos men than its Southeast Asian neighbors. The Philippines was one of the first countries in Asia to have recognized the important role of women as an essential component in nation-building. There are laws enacted laws and policies instituted to ensure the empowerment of women. The Philippines has had two women Presidents, a woman Chief Justice of the Supreme Court, and women in high-level elected positions. Women have much access as men to establish their own businesses.

But what happens when men and women go home from work? Despite the increasing the role of women in the public sphere, the Philippines remains a conservative, largely Catholic society that puts importance on the family. The paper will first examine the gender differences in the domestic division of labor, traditionally the women's domain as "homemakers". Then the paper will examine the possible impacts of gendered domestic division of labor on the work sphere, as measured by potential work-family conflict, and attitudes/behavior on female employment over the life-cycle. Finally, the paper will examine the possible linkages of domestic division of labor and well-being of couples, including satisfaction with family life, happiness and satisfaction with life.

Using the data from ISSP surveys conducted in 1994, 2002 and 2012 will allow the paper to examine the trends in gender, work and family in the Philippines within the context of the changes in the Philippine economic conditions across three decades and the accompanying socio-cultural changes it brought.

Ambivalent Transnationalism. Understanding the Long Distance Engagements of Hometown Organisations

Collective remittances undertaken by hometown organisations for the benefit of their origin area is a well-known illustration of migrant transnationalism. This paper unravels the rationale for these hometowns to engage (or dis-engage) into long distance development practices. The latest evolutions of transnational theory focuses on the spatial extensions of transnationalism embedded into neo-liberal globalization but fails to address the micro level drivers of transnational engagement. It is contended that a revised conception of structure and
Changing Care and Migrations Regimes: New Contrasting Regulations and Their Impacts on Employment and Working Conditions of Care Workers. an Intersectional Perspective

Since the beginning of the 2000, the French care/domestic service sector, like other countries in Europe, has been undergoing considerable reorganisation. These changes in terms of commodification have had consequences on the mobilisation of the workforce involved, the conditions of care work, and the place of care work within the domestic economy.

In this context, this paper aims at analysing the effects of these trends and contrasts on employment and working conditions of care/domestic workers (elderly and child care), in an intersectional perspective. We will discuss in which ways these consequences are similar or not for migrant and non-migrant domestic care workers and if not, why and how.

A European research project coordinated by the ILO has been instrumental in foregrounding issues relating to the role and working conditions of migrants as caregivers. This paper will present results from the French case as an example of mixed care regimes. Data sources include LFS data, policy reports, interviews with union representatives, government departments, NGOs (16) and migrants working in the sector (50).

L’action Et Les Politiques Syndicales à L’épreuve De L’aide Et Des Services à Domicile En Europe. Le Cas De La France

En France, comme pour d’autres pays européens, l’aide et les services à domicile sont le lieu, depuis plusieurs décennies d’expérimentations discrètes en matière d’émergence de nouvelles formes d’emploi et de précarisation du travail. Dans le même temps, des avancées certaines mais fragiles ont aussi eu lieu et ce, depuis plusieurs décennies.

Depuis le milieu des années 2000, on assiste toutefois à des mutations importantes. Les nouvelles régulations engagées par les Pouvoirs publics impactent très fortement les conditions de travail et d’emploi ainsi que les politiques et pratiques des employeurs en matière de management et d’encadrement du personnels. L’on raisonne sur le secteur marchand ou non marchand. Du côté des organisations syndicales, le secteur apparaît comme un nouvel enjeu. De nouvelles pratiques et politiques émergent, tandis que les militant.e.s du terrain continuent d’être engagées dans un travail militant au quotidien, dans un univers où les taux de syndicalisation sont faibles.

Cette communication propose de s’intéresser aux formes des politiques et de l’action syndicales dans l’aide et les services à domicile en France, en articulant les différentes échelles de l’action syndicale et en revenant sur les contradictions à l’œuvre. L’analyse documentaire, d’entretiens réalisés auprès d’acteurs syndicaux et institutionnels ainsi que des observations de permanences syndicales permettront de discuter des stratégies à l’œuvre et de la façon dont elles peuvent peser pour changer le travail, qu’il s’agisse d’actions au quotidien ou de formes d’intervention dans des instances internationales. Les données sont extraites d’une recherche européenne (Belgique, Italie, Espagne, France) coordonnée par la BTF pour l’IFES (Fédération européenne) menée au moment de l’application de la Convention internationale 189. Une mise en perspective avec les autres pays étudiés sera proposée.

The Egypt Sufism Movements in the Aftermath of 2011 Revolution. Critical Study

Abstract:

Experts on Sufi movements often assume a potentially significant position for Sufi groups in framing the political map for change in Arab countries following the Arab Spring. This is particularly true for one of the most vibrant Sufi capitals of the Muslim world; Egypt, holding a record of more than ten million Sufi members. In spite of this, one year after the Egyptian Revolution, political developments began to exhibit the failure of Sufism to gain political ground in the post-Mubarak political scene. This paper discusses the problematic issues of Sufism with respect to politics in Egypt, with particular focus on the political experience of the Sufis in

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Egypt. It seeks to examine the Sufi experience in the process of political struggle, in addition to their contributions in the election held in November 2011 in an attempt to understand the factors which culminated in their gaining remarkably insignificant political support in spite of their massive membership base; and officially favored state support, both internally and externally. This study concludes that the nature of the Sufi practice itself has played a key role in restraining their political presence, in addition to their lack of political awareness as well as poor organization and populism; all of which have had a significant impact on the failure of the political experience of Sufi orders in Egypt.

How Well Do Municipalities Cope with Immigration – System Capacity Versus Cultural Reclusiveness

Switzerland is a country with a relatively high rate of immigration. This puts the municipalities under considerable pressure when it comes to measures to integrate the non-Swiss residents. In about 40 percent of the municipalities top level officials claim that their municipality encounters difficulties to cope with integration problems. On the grounds of our regular surveys among all Swiss municipalities we are not only able to show, which types of municipalities are more successful in integrating residents from other countries, whether this depends, for example, on the size and on the financial situation of the municipality (system capacity, Dahl and Tufts 1973), and to what extent this depends on cultural and political differences between the municipalities. We can also show how the perceived difficulties to integrate foreigners developed and to what extent the countries that immigrants come from render integration more difficult. We expect problems to integrate foreigners to be higher in larger municipalities especially if they are short of financial resources, we believe that municipalities with a more liberal and more left wing oriented voting behavior encounter less problems, and finally it is the percentage of immigrants and their cultural distance which also play an important role.

Exploring the Role of Listening in Participation. -- CANCELLED

This paper will review the work on listening as a democratic skill in participation, particularly online participation. Crawford, writing in the context of the applying listening in the context of online activity, draws on the work of Jonathan Cray who observes there is in our times ‘an ongoing crisis of attentiveness.’ Crawford proposes that emphasizing listening as an approach offers a counterpoint to this. So too listening theorist Beard has written that there may well be “an ethical listening subject.” He argues this subject will make “the choice to listen selectively.” This does not mean Beard explains to only those points at which we feel “safe” but rather to think about why and how we listen and to seek out listening points rather than being passive receivers of endless information. Having explored elements of listening theory drawing on Kennedy and Beard this is then applied in the context of environmental issues. The recent work of Hoffield will also be reviewed; this work argues that listening and ecology have a relationship. Drawing on quite different theoretical foundations nevertheless Beard and Hoffield argue this listening then in turn creates the ‘self’. The listening approach to online participation therefore has value in contributing to cosmopolitan ideas. While it does not create a theory of cosmopolitanism it does deal with common themes from cosmopolitan thinkers who grapple with the universal, the voices of all, and the self. Listening writers therefore offer an important perspective to the project of enhancing democracy.
RUAN, DANCHING (Hong Kong Baptist University)

Educational Transition and Social Networks – Preliminary Findings from Recent High School Graduates in Urban Nanjing

The formation of social networks is not a random process. It is a result of the combined forces of macrostructural conditions, which provide differential opportunities to meet members of different social groups, and the tendency of people forming social relations with similar others. The macrostructural conditions are also presented in the form of social organizations. School is a major social organization in contemporary societies; there many individuals spend an extended period of time on acquiring knowledge and skills. During the course of schooling, individuals often move from one educational institution to another. A change of educational institutions would then lead to a change of macrostructural conditions and social network formation. Existing studies have mainly focused the correlates of social network formation at one time point or social network changes across different time points. Little is understood about the network impact of macrostructural changes associated with life course transitions. The present paper investigates the relationship between educational transition and social networks in China. Data come from a two-wave panel study of 759 recent high school graduates in urban Nanjing, a vast majority of whom (98.4%) were enrolled in post-secondary education in 2012. Two research issues are addressed. First, what is the network impact of transition to higher education? Chinese secondary schools are mainly oriented to students’ entrance exams, and the key ones, which differ significantly in resource input and prestige. Differences in network changes between these two types of universities are compared. Second, how may participation in extracurricular activities and part-time employment, two major aspects of university life, affect the social network structure? Changes in network size and diversity are measured. Preliminary findings show that transition to key university, extracurricular activities, and part-time employment are related to an expanded social network and increase in network diversity. Implications of the findings will be discussed.

Creating Agora Chronotopics on Young People's Political Participation in Transnational Meetings

This paper deals with young people’s political participation in transnational meetings. Methodologically, the study aims to shed light on multi- and global ethnography. Young people are viewed here as a social age group sensitive to critical, alternative and even radical political participation. The diversity of the young actors and their actions is captured by using several different methods. The research sites are the EU Presidency Youth Event (2006 Hyytinmaa, Finland), the Global Young Social Forum (2008 Malmö, Sweden) and three World Social Forums (2006 Bamako, Mali; 2007 Nairobi Kenya and 2009 Belém, Brazil). The data consists of participant observation, documents and media articles of the meetings, interviews, photos, video, and internet data. In this paper the diverse field of youth political participation is studied by using a cross-table of cosmopolitan resources (or the lack of them) and everyday-makers – expert citizen dichotomy. First, the young participants of the EU Presidency youth event are studied as an example of expert citizens with cosmopolitan resources (these resources include, for example, language skills, higher education and international social network). Second, the paper analyses those everyday-makers who use performative politics to demonstrate their political missions here and now. But in order to make the social movement global they need cosmopolitan resources to be able to use the social media tools and work globally. Third, the paper focuses on the difficulties of reaching those actors who lack cosmopolitan resources, either everyday-makers or expert citizens. The go-along method and the use of the interpreters are shown as ways to reach these young people’s political missions. Fourth, the paper underlines the importance of contact zones for deeper democracy and for boosted dialogue between different kinds of participants.

Spaces of Dialogue? the Case of the Wsf Tunis 2013 from the Perspective of Local Youth and Volunteers

The paper focuses on the World Social Forum (the WSF) held in Tunis 26-30 March 2013 from the local youth perspective. The WSF Tunis brought together 60,000 participants from formal and informal social movements and networks all over the world for five days. The authors distinguish the young WSF volunteers from other Tunisian youth who participated in the forum. The data drives from participatory ethnography and action research. Around 15 WSF volunteers and 20 young Tunisian civil society actors involved in the WSF Tunis were interviewed during and right after the forum.

The research questions focus empirically on the dialogue/non-dialogue from the young Tunisian participants points-of-view: 1) what kind of local (Tunisian) dialogue took place; and 2) what kind of global dialogue (esp. together with non-Tunisian participants) took place – inside and outside workshops and sessions. These questions interwove with the questions of why the WSF came to Tunisia and what affect it had to the local civil-society from the young informant’s perspective. The paper also studies the roles and effects of the local youth in the WSF as well as the success and shortcomings of the WSF Tunis from the perspectives of the young volunteers and young Tunisian civil society actors.

The Tunisian author of the paper (Jabbiri) was the volunteer coordinator in the WSF Tunis for around 1,200 volunteers (applying action-research and auto-ethnography), the Finnish author (Laine) was carrying out her post-doctoral research in the forum (and conducting interviews as part of her ethnography). Therefore, the academic dialogue between the local South and North takes also place in the setting of co-authors, carefully reflected in the paper.

Producing Knowledge about Post-Separation Stalking from Children’s Point of View - Children As Social Actors?

In this presentation, the post-separation stalking is understood as gendered violence from the children’s point of view. The post-separation stalking - as a sensitive, morally laden issue - creates a psychosocial and physical threat for children’s and their mothers’ wellbeing. Stalking is defined as seven-dimensional, and a systematic process of violence. Even though the mother is the main target of the stalking, the children are often used as a means to carry out stalking, as targets of revenge and as abused informants. The sensitive nature of the phenomenon emphasizes the ethical demands in the knowledge production.

The presentation is based on the ongoing research project “The Invisible Children – Supporting the Survival of Children and Adolescents in the Everyday Life Shadowed by Post-Separation Stalking” funded by Alli Paasikivi Foundation. The aim of the project is to analyze the stalking in the everyday life of Finnish children. The children have been included in the research as equals. The focus of the study is on the role of the mother’s and other adults’ opinions on children’s voices. The children’s knowledge is approached from different angles in order to reach their everyday experiences. The knowledge is produced together with the mothers and professionals (the Federation of Mother and Child Homes and Shelters) who work with the victims.

The basis of the data collection has been to encourage and strengthen the possibilities for children’s narration. The data is collected by children’s groups based on action and interviews conducted with children as individuals and together with their siblings. The knowledge produced in different forms and relations has supported children as social actors and knowledge producers. The tentative analysis shows that children are able to break the beliefs and taboos concerning the understanding about the family, parenthood, violence, and the best interest of the child. Therefore the question is do we take into account children as agencies who can redefine these issues?

The Realpolitik of Sexual Assault: Cartographies of Gender, Consent, Standpoint and University “Hookup Cultures”

There is significant media attention, especially in North America and the UK, to a so-called “hookup culture” among adolescents, particularly those enrolled in university. Characterization of young people as indiscriminately promiscuous may be reductionist hyperbole and/or cliché, but in any case the value-laden, gendered, classed and raced threads within such discourse obscure a regime of institutional reification requiring interrogation. The current technological phenomena of social media, texting, and smartphone technologies bring with them a culture of immediacy, self-disclosure, and voyeurism that add complexity to these issues and their lived experiences. In this era of rapidly developing technologies, the quality of sexual and platonic relationships is also rapidly and acceleratedly changing. Research is challenged to keep pace with new realities associated with experiences and definitions of abstinence, sex, and dating. Moreover, consent and coercion are under-theorized in the literature, interfering with deployment of effective strategies to prevent or respond to instances of gendered sexual violence and non-consensual or coerced sexual encounters. Political, ethical and moral sensibilities mitigate efforts to nuance, contest, and reframe political discourse. The presentation is based on the ongoing research project “The Invisible Children – Supporting the Survival of Children and Adolescents in the Everyday Life Shadowed by Post-Separation Stalking” funded by Alli Paasikivi Foundation. The aim of the project is to analyze the stalking in the everyday life of Finnish children. The children have been included in the research as equals. The focus of the study is on the role of the mother’s and other adults’ opinions on children’s voices. The children’s knowledge is approached from different angles in order to reach their everyday experiences. Can Sri Lankan Teachers Afford to Spare the Rod?: Teacher Attitudes Towards Corporal Punishment in School

The main objective of the study is to understand the attitudes held by teachers in the Government schools in Sri Lanka regarding the administration of Corporal Punishment (CP) in school and to examine the justifications they have for resorting to CP. The study is a response to a concern raised by the authors in 2012 about the need for more in-depth exploration on the topic.

The purposive sample of teachers who participated in the study was from four Government schools in Colombo. One school was a boys’ school while the remaining three were coeducational schools. 28 teachers were chosen for study based on their gender and years of experience in the teaching profession. Data was gathered through in-depth interviews with the teachers.

It was found that a majority of teachers in the sample have resorted to some form of CP at some point in their career as teachers. Given the teaching-learning culture teachers have been exposed to as children and the authority traditionally attributed to teachers in Sri Lanka, they were of the opinion that CP can have positive impacts on children and their future success. Teachers did not seem hostile to the idea of CP per se but the “form” and “severity” of CP administered on students.

Many were of the opinion that CP was “a fine means of disciplining students” as long as it is administered with the ‘correct’ intent of guiding students. They also thought that CP becomes an “issue” only when teachers use it in brutal/inhuman manner with vindictive intents and as a means of stress release.

High levels of work related stress and weaknesses in the mechanism of appointing individuals to the teaching profession were highlighted as resulting in situations of “brutal/inhuman beating” in schools. These views expressed by teachers raise important policy implications.

The Conflict over Mining in the Heart of the Universe

Mining is progressing over indigenous people’s lands in Mexico. One of the holiest sites of Wixárika people, Wirikuta, has been conceded to mining companies seeking to revive mining in the region. This has caused a conflict over mining of different groups of actors by construction, ownership and control of that territory.

This paper presents an ethnographic study of the conflict based on actor-network perspective. Information was obtained during fieldwork conducted during August to December 2012. The main purpose of this work is to analyze the conflict from a relational perspective, I also seek to highlight the importance of nonhuman actants which participate in conflict. Nonhuman actors have been invisible or objectified in sociological analysis of conflicts over the spread of extractive mining, however at least in the case we are studying, nonhuman actants are central to explaining and understanding the dynamic of the conflict by the construction, ownership and control of the territory in the Natural Protected Area Wirikuta.

LAMPIS, ANDREA* (National University of Colombia, alampis@unal.edu.co)

Conditional Cash Transfers, Job Markets and Capabilities in Latin-America: A Missing Link

The paper is part of an on-going joint project between the National University of Colombia and the University of Buenos Aires that is re-examining the achievements of conditional cash transfer programmes (CCTs) in the region. Within the acknowledgment of their diversity in terms of targeting, modalities and composition, CCTs have been mostly praised by international co-operation agencies, Latin-American governments and the academia. Nonetheless, there seems to be a missing link. Social policy presents a strong relationship with how societies deal with dilemmas concerning social inclusion and justice within an increasingly complex and globalised world. Beyond technical debates related to CCTs financing and implementation there lays a key interrogative: do CCTs increase people’s capabilities and reduce key individual and household-related vulnerabilities? Do they provide access to a key asset such as greater job and income security? In 2012 the research project started to analyse six national Social Programs in the region (Argentina, Brazil, Chile, Colombia, Honduras, Mexico and Nicaragua) and two regional job markets (Argentina and Colombia). The paper present two interesting insights: a) so far the great majority of CCTs evaluations have been unable to present any solid result about medium or long-term improvements in the security of people’s livelihoods and capabilities, b) in the face of substantially unaltered rates of unemployment and informality, CCTs do not seem to have improved the participation of beneficiaries in the job market. These results are based both on the analysis of national and capital cities-based household’s surveys, and on programmes assessments and internally available data through the presentation of quantitative and qualitative the paper aims to contribute to the challenging of mainstream wisdoms on CCTs and to an already renewing debate in the region.
Response Latencies and IRT Person Estimates Using CASI

Computer assisted self-interviewing (CAI) has been used around the world for a long time in order to achieve survey data collection with a reduced cost. CAI can also be useful when the intention is to reach groups of the population who are geographically dispersed, or who cannot be available to be interviewed during normal work hours. However, it has often been argued that CAI may potentially yield low-quality data if the respondents are not motivated to respond honestly and reliably, using their full potential and concentration.

This study proposes a new Item Response Theory (IRT) algorithm for the estimation of the person estimates when an attitude scale or an ability test is administered through a CAI. The algorithm weights less the responses that are given too soon after the stimuli are presented, so they may not be considered as legitimate and honest efforts for a truthful response. The new method is based on the work of Wise and Kong (2005) and Mislevy and Bock (1982) and used a modified biweight IRT estimation method.

The application of the algorithm on empirical data (N=920) in the context of the mathematics National Curriculum in England gave indications of increased validity and usefulness of test results.

The possible practical consequences of the use of this algorithm for survey research are discussed.

Decolonizing Struggles in Latin America Today

In spite of its dogmatic universalistic pretensions, hegemonic social science and liberal democracy should be understood as one of many possible historical options. These constitute distinct cultural alternatives that do not exhaust the possibilities of forms of knowledge or of the construction of plural and democratic coexistence between the human beings. They are the product of a specific historical experience and a particular mode of production, and specific ways or relating to so-called “nature”.

As has been argued by Aníbal Quijano, Enrique Dussel, Walter Mignolo and others who have been working within the modernity/coloniality perspective, the experience of modernity has meant something radically different for the North and the South. What has been characterized as the luminous nature of modernity by the philosophers of the enlightenment is only the bright side of a worldwide historical process that has its dark underside in the existence of the colonies without which the bright side would not have been possible. In the North, modernity eventually lead to material abundance, citizenship, democracy, science and technology. For the majority of the planet’s population, and in the colonized, subjugated South, modernity has been an experience of imperial and colonial domination, genocide and slavery. This dark underside is as modern, as essential a component of the modern experience as the experience of the North. Colonialism, genocide and slavery were not in any way pre-modern. They are constitutive of the modern experience. Eurocentric social sciences have over-erased this history and attempted to interpret a self-centered European history as Universal History and to characterized its particular political system (liberal democracy) as the “normal”, “modern” universal template that the rest of the world has to replicate.

The Tensions between the Struggles against Inequality and the Defense of the Rights of Mother Earth in South America

In the last decade and a half the struggles of South American popular movements and organizations against the military governments, free trade agreements and neoliberal economic adjustment policies crystallized in the election of many left or “progressive” governments. In these struggles and the constitutional processes that occurred in some countries, there are two central trends of struggles and re-exploration: first, the popular demand for the “return of the state” and the policies aimed toward social inclusion, access to education, health, food, social security... and a reduction of the profound inequalities that have historically characterized the continent. The other axis refers to the relationship of humans with their natural surroundings, the struggles of indigenous peoples and peasants for their territories and rights of Mother Earth. This implies a profound critique of the very idea of development and the search for options to a civilization in crisis that has to confront the fact it we have reached the physical limits of the planet. This also relates to a critique of the monocultural character of liberal-colonial South American states in profoundly pluricultural societies. The attempt to achieve these two sets of goals simultaneously has generated deep contradictions. In response to widespread social demands of the most excluded sectors of society and looking to reassert their political and electoral legitimacy, all these governments have prioritized economic growth based on extractive neo-development (economic model based on an increased dependency on the export of non-processed primary goods) in a context of a significant hike in the demand and price of commodities in the world market. The purpose of this presentation is the analysis of some of the socio-environmental impacts of these governmental options and the main social and political conflicts that these have generated.

Tiger Parents in a Globalized World: Class, Immigration and Transnationalism

The reductive image of “tiger mom” has overshadowed the changing practices of and class differences within Chinese parenting. Based on in-depth interviews with parents in Taiwan and Chinese immigrants in the US, my paper examines how globalization has differential impacts upon the styles of childrearing across class divides. By comparing middle-class and working-class Han parents in two societies (Taiwan and US), I explore how the cultural practice of childrearing is mediated by class inequality and reconstituted by the experiences of immigration and transnationalism.

Fifty Years after the Social Indicators Movement: Has the Promise Been Fulfilled? an Assessment and an Agenda for the Future

The aim of this paper is to explore from a gender and class perspective the effects of the on-going economic recession on work-life conflict and well-being of Swedish employees. For many employees, the global economic downturn has exacerbated work-life conflict making it more difficult to find an acceptable work/life balance. Some employees have lost their jobs, others have been forced to child care, accept reduced working hours, lower pay and/or accept work with increased degrees of precariousness with direct implications for work/life balance. Current knowledge indicates that the recession has not affected all employees equally. Due to gender segregation and the gender wage gap women and men are hypothesized as affected differently. Furthermore, social class is likely to play an important role in outcomes for both men and women. Consequently, although...
the global economic downturn has affected well-being of all employees, the ramifications for individual employees’ remain unclear.

The data used to study these issues were collected in the European Social Survey (ESS), Family, Work and Well-Being (FWW), modules for 2004 and 2010. The study is limited to a sub-sample of Swedish employees. To capture gender differences in perceptions of work-life conflict the research problem is approached from both dimensions; work-to-family and family-to-work conflict as previous research has shown that men and women experience these facets differently. In order to capture class position the study adopts Wright’s class scheme based on ownership, hierarchy and autonomy as developed and elaborated by Leifur Fredin, Björn and Jensberg. The study is expected to show that some intersections of class and gender will exacerbate work-life conflict and have a more detrimental effect on work-life balance than others.

What It Needs for a Social Ego: A Survey-Based Comparison of Social Network Measures

In this paper we compare different methods of measuring social capital in conjunction with alters’ resources. Our analysis is based on a survey of two succeeding, complete cohorts of sociology students from one university. This survey includes detailed information on network ties between students. In addition, we use a resource generator and a position generator to assess ego’s social network beyond his/her fellow students. For all social network instruments, we differentiate between relationship strength, the basis for social capital, and the level of resources that are accessible via these social ties. We implement the same distinction with respect to measures of family background.

This unique design allows us to construct methodologically interesting counterfactuals. We can assess how the measured distribution of ego’s network resources differs if the accessibility of resources is not taken into account; how well we approximate ego’s resource distribution when based exclusively on indicators of relationship strength; and under which conditions – regarding ego’s network structure – we can measure social capital and related resources by using solely name generator based instruments. Furthermore, we compare these counterfactuals between different sampling designs. We analyze which path length is necessary to approximate the full cluster solution using a respondent-driven cluster sampling design.

Our study is constructed as a generic methodological study. Based on our results, we can specify which conditions regarding sampling designs and measurement instruments are necessary to adequately represent the social embeddedness of egos. These results are of general importance to researchers conducting larger-scale surveys, e.g. international survey projects which rely on cluster sampling designs and/or name generator based instruments when assessing the social networks of respondents.

The New Middle Classes - Drivers of Both Unsustainable and Sustainable Consumption in Developing Countries

During the last decade, in public debates and particularly in the media, unsustainable patterns of consumption spreading also in the Global South developed into a major concern. The focus is mainly on the ‘new middle classes’. They are imputed to lack any sense of responsibility both in civic and environmental respect and, by their sheer number, to undermine any progress made so far in protecting the climate.

Nevertheless, albeit a pilot group in promoting western lifestyles, above-average levels of education and qualification, according levels of professional responsibility, and above levels of political influence (locally, regionally...) make parts of the new middle classes important players in fostering more sustainable consumption.

Negotiating a Space to Rest: Denver’s Camping Ban and Camping in Denver

On May 14, 2012, camping became illegal in Denver, Colorado. Over the past 25 years, the development of downtown Denver followed identifiable patterns of neoliberal governance. Single room occupancy hotels were upgraded into “loft-living” condos, rundown streetscapes were intensely policed then trendified, a major downtown street was pedestrianized. Urban policies focusing on commercialization and real estate development contributed to Denver’s revitalization while exacerbating the city’s problem with homelessness. As experienced in other cities, concurrently rising property values and increasing numbers of homeless people have led to various municipal ordinances intended to render homeless people invisible to the consuming public. In Denver, a sit-lie ordinance was enacted and park curfews were more strictly enforced to keep homelessness from the public’s field of view. Consequently, for residents without a permanent address, finding a place to rest became increasingly difficult. Then in 2011, playing off of popular distaste toward the Occupy Denver Movement, conservative politicians and the Downtown Denver Partnership, a business improvement district, sought and succeeded in introducing legislation outlawing camping—sleeping in public with any sort of “protection against the elements”.

Analyzing the camping ban did not eliminate homelessness and interested in how Denver’s homeless residents were coping with the ban, we focused on a particularly vulnerable homeless community, injection drug users (IDU). Conducting participant and unobtrusive observation as well as in-depth interviews with 24 IDU, we learned that their continuing survival depends on a mixture of three interrelated processes: a complex moral economy of mutual aid and mutual predation within and between homeless communities, acts of often unexpected kindness by agents of the state officially charged with enforcing the camping ban, and the articulation of public and hidden transcripts playing off various tropes of homelessness, helplessness, and self-help.

“Because You’re a Migrant, They Treat You Really Tough.” Findings of a Qualitative Study on Young Migrant’s Perception of the Armed Forces in Germany

In 2011 compulsory military service was suspended in Germany. In view of profound demographic changes and ethnic pluralisation of the German society, migrants now pose an important target group for recruitment. The question whether recruitment of personnel with migration background is successful not least depends upon migrants’ perceptions of the armed forces, which have a long institutional history of ethnic homogeneity and exclusion of “others”. In order to identify psychosocial factors and dynamics that influence these perceptions we conducted an exploratory qualitative study, using four semi-structured group discussions with young people with different migrations backgrounds in three different German cities. The composition of the group of interviewees allowed for evaluating effects of gender, migration background and military status in addressing recruitment issues to migrants. Our analysis calls attention to three findings: 1. The participants resisted fixed national and ethnic identity ascriptions. Multiple accounts of situational identifications demonstrated their ability to strategically play with identity constructions in different social contexts. 2. The perception of the German armed forces was essentially framed by personal or family experiences with the military or police in the country of origin. Problematic experiences with armed forces in authoritarian countries e.g. negatively influenced the image of the German armed forces as well. 3. The interviewers played a subtle role in producing an environment of interest/disinterest for the armed forces in the group discussions. In unintentionally activating his role as a migrant military member, one of the interviewers was repeatedly addressed as a peer expert for a military career. Hence, with regard to recruitment strategies the study hints at the importance of 1. developing an institutional sensitivity for post-national identities of a younger generation of migrants, 2. considering different migration contexts in addressing military issues, and 3. integrating migrant servicemen as positive role models for their respective communities.

Intimacy in the Research Process – Methodological and Ethical Implications of Examining the Psychosocial Dynamics of Sexual Risk Behavior in Biographical Peer Research

Sexuality is regarded as a highly sensitive topic for empirical research, especially if tabooed and stigmatized issues are at stake and sexuality is conceptualized as part of one’s biography. In general, peer research that is aimed at exploring life worlds as an “insider” is seen as a privileged way for researching sensitive issues because it can facilitate field access, enhance trust and openness, and play an empowering and de-stigmatizing role in the field. However, peer research on sexuality poses considerable methodological and ethical challenges that must be taken into account if the potential of peer research is to be utilised.

The paper draws on a peer research project on sexual risk behaviour of gay and bisexual men in Germany. Based on a biographically oriented approach 58

Tokyo: Rebuilding the Global City in a Context of Urban Maturity

Since the turn of the 2000s, Tokyo has been facing issues which deal with urban maturity, a notion characterized by two elements: stagnation of the economic growth, and population peak, associated with an ageing population. Those issues, which threaten the sustainability of Tokyo as a major and attractive global city, necessitate new approaches for urban management, urban financing, and urban rebuilding projects.

Nevertheless, in spite of the mature urban profile of Tokyo, the city changed sharply during the 2000s. While demographic and economic indicators of Tokyo are not very favorable compared with those of the other Asian global cities, how could the urban profile of Tokyo change as fast and as dramatically as it did? How was the city able to reorganize its structure, to verticalize its skyline, to vegetalize its public and private spaces? After the “Japanese miracle” which occurred from the 1960s to the 1990s according to the period of prosperity, the 2000s also knew another miracle: an urban miracle in time of crisis, as a result of urban maturity.

New phenomena are necessary to understand this urban miracle in Tokyo. The first one is real estate securitization, which allows the financing of the city based on its mature state. The second one is a new approach to urban management, with the ediction of the Urban Renaissance Special Law in 2002. Both of these elements help in rebuilding a world class city in a context of urban maturity. This new urban model is a cutting-edge one which can inspire the management of these elements help to rebuild a world class city in a context of urban maturity.

Two new phenomena are necessary to understand this urban miracle in Tokyo. The first one is real estate securitization, which allows the financing of the city based on its mature state. The second one is a new approach to urban management, with the ediction of the Urban Renaissance Special Law in 2002. Both of these elements help in rebuilding a world class city in a context of urban maturity. This new urban model is a cutting-edge one which can inspire the management of these elements help to rebuild a world class city in a context of urban maturity.

This paper will present the urban transformations induced by urban maturity, and will allow to discuss the notion of urban maturity, taken as a notion in opposition with the model of shrinking city.

Résister à La Précarisation Du Travail Dans Une Sidérurgie Brésiliennne: Malgré Le Syndicat ?

En fonction du principe de l’unité syndicale, le Syndicat des métallurgistes de Ouro Branco et base (SINDOB) est le seul syndicat à représenter les travailleurs de la sidérurgie et de la sidéurgie dans la région de la Vallée du Paraopeba située dans l’État de Minas Gerais au Brésil. Le SINDOB est notamment le syndicat qui représente la moitié des 6,000 travailleurs directs (et un dixième des 4,000 travailleurs sous-traitants) de l’ancienne sidéurgie Açominas, une entre- prise étagée privatisée en 1990 et aujourd’hui détenue par le groupe brésilien Gerdau, 14e producteur d’acier dans le monde. Une enquête par entretiens a été menée auprès de quelques dirigeants syndicaux et de quelques salariés de cette sidérurgie dans le cadre d’une thèse de doctorat sur les formes de résistance non néobourgeoises des travailleurs. Les dirigeants syndicaux interviewés – trois directeurs et le président – affichent leur opposition au groupe Gerdau – négocié ». Ils expliquent que la relation capital-travail dans la sidérurgie est aujourd’hui « tranquille » grâce à ce « partenariat » établi depuis de longues années avec le groupe sidérurgique. Ils évoquent les bouleversements de l’organisation du travail dans cette entreprise – commencés par « l’assainissement » financier et administratif d’avant la privatisation et suivis par la politique managériale du groupe Gerdau – ont changé le scénario du travail et de l’emploi dans toute la région. Dans un contexte de précarisation sociale du travail, nous souhaitons discuter les relations entre la politique syndicale de la « négociation » et la fragmentation des résistances des travailleurs face aux restructurations du travail.

LAPEGNA, PABLO* (University of Georgia, plapegna@uga.edu)

Analyses of Latin America’s “pink tide” (the rise of Left-wing administrations during the last decade) explain the demise of governments that followed the IMF and World Bank’s recommendations as a result of the deleterious consequences of neoliberal policies. I argue that to understand the rise of Left-wing governments we need to pay more attention to the connections between neoliberal policies and neoliberal politics (i.e. the political parties supporting neoliberal policies), and analyze the massive revolts preceding the rise of anti-neoliberal governments. Drawing on archival research and in-depth interviews, I develop this argument by examining a two-day massive riot targeting political institutions during February 2003 in La Paz, Bolivia. I analyze these events and their contentious performances to suggest that these protests contested the political system rather than the institutions of neoliberal governance, thus opening political opportunities for the rise of Evo Morales and the Movement Towards Socialism. The Bolivian case illustrates that collective actions performed during massive revolts are underpinned by moral understandings and the drawing of symbolic boundaries, and that they can create turning points in historical trajectories. I examine the methodological challenges of studying leaderless and spontaneous protests, suggesting that the analysis of symbolically charged performances can be a point of entry for studying such events.

Teamwork Diversity

The study of teamwork is facing two opposite traditions – sociotechnical approach, which is more developed in Scandinavian countries, and production, which first appeared in Japan’s industry. Within the first tradition, the implementation of teamwork is associated with the quality of working life and industrial democracy improvement. On the other hand, lean production management strives to improve organizational performance with the help of teamwork, increasing peer pressure and work intensity. Strengthening democracy or renewing forms of control at work – what is the real meaning of teamwork in today’s workplaces?

Does teamwork represent a breakthrough from taylorism or a strengthening of taylorism? Does it rather represent both depending on the type of teamwork? Far from constituting a single homogeneous entity, teamwork takes diverse forms and can be distinguished depending on the autonomy workers have and the duties they are responsible for. On the basis of a survey conducted in the Quebec manufacturing sector (Canada), two types of teamwork – lean teams and semi-autonomous teams – are examined in this paper. These will be compared with a focus on autonomy, work intensity, task complexity, problem-solving activities and task rotation.

Two logics of teamwork adoption are also contrasted. Lean team adoption represents a logic of standardization, labour cost reduction and incentive pay, without employment security guarantees, representation and partnership. On the other hand, semi-autonomous team adoption is based on employment security guarantees, representation and partnership. Finally, semi-autonomous teams represent an improvement of working conditions compared with both taylorism and lean teams. They also constitute an improvement of democracy at work. However, they require an appropriate institutional context, difficult to implement or to develop in this era of finance-led capitalism. Consequently, it is easy to understand why they are much less diffused than lean teams.
Romanian Youth in Catalonia (Spain). Selfidentification, Languages and Symbolic Capital

The contexts marked by the reception of migrants, with a high degree of multilingualism, represent a scenario that clearly reveals the symbolic capital associated with the cultural and economic levels, and even the level of Catalan competence.

From a quantitative approach, the main results show the importance of variables that refer to the symbolic realm of language – young people’s language attitudes toward Catalan and Spanish and their self-identification with Catalonia.

Undeserved Unhappiness: A Comparison of Philippines and Japan

The social relevance of happiness surveys is that they also tell us about unhappiness. To the extent that such unhappiness is due to different forms of economic deprivation, such as hunger or poverty, is socially undeserved.

Undeserved unhappiness contributes to the advocacy for alleviating poverty, as well as to the understanding of conditions for happiness.

Social Weather Stations (SWS) has a total of 19 national happiness survey, one in 1991 and 18 in 2000-2011. These surveys found that extreme unhappiness was most felt among households suffering severe hunger, and among household considering themselves as poor. The excess unhappiness associated with hunger and poverty is the undeserved unhappiness.

SWS participation in the 2010 and 2012 rounds of the International Social Survey Programme (ISSP) provided data comparing Filipino happiness with that of 47 other member countries, including Japan.

This paper will compare happiness in Philippines and Japan, and the extent of undeserved unhappiness connected with various indicators of well-being and economic deprivation, such as subjective social class, self-assessed health, access to health care, family roles, and social policies related to work.

Legitimation Work: A Social Theory

Due to processes of globalization, digitalization and cultural democratization, publically funded organizations in the culture sector are in need of legitimating their own existence towards three publics. The publics provide different forms of support, that the organizations are dependent on: The producers/artists provide quality and artistic credibility, the government/public authorities provides funding, and the general public provides legitimacy. In satisfying the three publics the actors engaged in presenting the relevance and importance of the publicly funded organizations are conducting legitimation work. Legitimation work is a social process being in motion for as long as there are actors engaged in securing the future existence of such organizations.

In this paper I present a theory of legitimation work. The theory is developed from several empirical studies of various publicly funded organizations in Norway and Sweden. I have studied the legitimation work done in the Norwegian public service broadcaster NRK and the Swedish public service broadcaster SVT, the Norwegian National Opera and Ballet and the Oslo Philharmonic Orchestra. These are all organizations that are in need of legitimizing themselves towards the three before-mentioned publics when conducting legitimation work. In the paper I discuss what characterizes a publicly funded organization’s communication with the various publics and what role they play in the legitimation work.

Dissolving Inequality? Changing Cultural Models, Education and Social Mobility in Ghana

In northern Ghana, cultural models of how to get on have changed drastically within the last generation. Coming from a part of the country that has been economically and politically marginalized throughout the colonial and post-colonial periods, people believe that formal education and modern professional careers - instead of traditional livelihoods centered around subsistence agriculture, labor migration and reciprocity within extended families - provide the only way to be successful and to achieve life chances comparable to those people in the southern part of the country have. Changing cultural models are the result of trends towards educational development that is caused environmental changes but equally rooted in internationally promoted structural adjustment policies that have disadvantaged local smallholders and led to the influx of highly subsidized cheap agricultural imports. But despite serious investment in education by both parents and students, poor educational quality of public schools and the lack of a conducive living enviroment lead to prolonged educational careers and educational malperformance. High cost of secondary and tertiary education further reduces the number of students actually able to achieve meaningful educational outcomes and social mobility. Long-term qualitative and quantitative research shows that education, despite of its potential to promote equity, in the absence of specific public programs addressing the education of deprived members of the Ghanaian society, rather leads to personal frustration, as shifting cultural models of success cannot be met, and societal marginalization, as social mobility is not achieved. This situation has the potential to create social unrest and destabilize the Ghanaian society as adequate employment for the poorly educated youth is increasingly difficult to get by. On the general level research shows that education on the societal level can only contribute to equality, if it is paralleled by policies that specifically target the needs of those marginalized.

LAURENCE, JAMES* (University of Manchester, james.t.laurence@gmail.com)

Dissolving Inequality? Changing Cultural Models, Education and Social Mobility in Ghana

The adoption of 'flexible modes of production' across much of the developed world has been theoretically postited to be a substantial driver of declining macror-levels of social capital and generalized trust. A key facet of 'flexible modes of production' believed to be particularly harmful for social capital are increasing rates of job displacement (e.g. involuntary job loss from redundancy, downsizing, restructuring) and job insecurity. However, in spite of the posited association, very little has research has investigated if, how and why job displacement affects social capital. This paper explores how experiences of job displacement can affect individuals' tendencies to (dis)trust over the adult lifecourse, using two-waves of the Great Britain National Child Development Study cohort data. Applying lagged dependent variable and change-score models, we find that experiencing job displacement between the ages of 33 and 50, appears to significantly scar generalized trust, with depressed trust observable at least nine years after the event occurred. In fact, even after individuals return to employment, distrust remains higher amongst those having experienced displacement. However, the severity of the effect appears dependent on the value an individual places on work: the more central employment is to individuals' lives the stronger the negative effect of displacement. A range of mediators, such as physical health, mental well-being, and personal efficacy fail to account for the effect. This paper keenly demonstrates the importance of understanding how experiences within the economic sphere can spillover into the wider social sphere, both at micro- and macro-levels.

Economic Growth and Institutions: Gender Equality, Beyond Markets in Brazil, China, and Russia

This paper aims at comparing female trajectories in three BRICS – Brazil, China and Russia – since 2000, when a new wave of economic growth opened up new opportunities for both sexes in these new mass-consuming market societies. These countries have some features in common, including their being large economies with a strong manufacturing sector, low fertility rates (under 2.0), an urbanization rate over 50%, and convergent female participation rates in the labor market (between 56% and 65%), but one major dissimilarity in terms of educational attainment: only Russia displays high shares of tertiary education (more than 50%) among the adult population, as compared to China (less than 5%) and Brazil (around 10%) (OECD Factbook 2013; World Bank GHD 2013: Capital for the Future).

For this reason, however, these three countries differ profoundly in the way they have developed different patterns in terms of institutions and norms with regard to social protection schemes, labor regulations, and gender policies.

This paper will systematize major traits of female trajectories and gender gaps in Brazil, China and Russia in the 2000s, gathering statistics from the ILO, OECD, World Bank and other relevant databases. In parallel, it will map how the welfare state has evolved as of late in these countries and how existing norms and institutions either push for or constrain gender equality. After systematizing data and the major characteristics of national social protection schemes with regard to the promotion of gender equality and wellbeing, a logistic regression model will be developed in order to determine the factors that most contribute to explain gender asymmetries in each country.

d'activation, caractérisées par un projet institutionnel d'incitation à l'adaptabilité aux normes d'emploi (Cassiers et al, 2005). Ce mode de gestion spécifique de relation avec les chômeurs comporte en effet des caractéristiques communes avec le paternalisme : personnalisé, il combine coercition, autonomie et vision du bien commun marquée par une logique de contrepartie (Boismenu et al, 2003). En revanche, une différence importante subsiste à travers le poids de la rationalisation gestionnaire, qui s'incarne notamment dans le profilage des chômeurs.

Ces nouvelles formes de paternalisme, qui prennent également pour appui la légitimation de l'asymétrie des rapports entre employeurs et chômeurs au nom d'une rationalisation sur-jouée des entreprises, se situent donc à la croisée de deux visées, la subjectivation et la rationalisation. À partir de 200 observations de rendez-vous entre conseillers et chômeurs, notre communication entend analyser les effets de ces deux visées potentiellement contradictoires pour examiner comment émergent de nouvelles éthiques dans les pratiques et justifications professionnelles.

New Ethics of French Employment Advisers and Their Clients Coping with the Unemployment Trap

This research work focuses on the transformation of the French Public Employment Service through a sociological pragmatic study of discourse and practices of professional employment counselors. We consider the reconfiguration of this profession is an indicator of changes in the welfare state to an active welfare state, which is expressed in particular by an institutional incentive project to the adaptability to employment standards and market principles. Based on a long ethnographic investigation in seven agencies with 87 counselors, and 200 observations of appointments between advisers and unemployed, the paper analyzes the effects of these two potentially conflicting targets: the subjectivation (individualized approaches) and rationalization of the Monopole More Custom, introduced in 2006 on the one hand, and the management streamlining (profiling, strengthening sanctions) on the other.

By changing the standards, organization, this industrial rationalization of a new type reconstructs the structural professional divisions between socio-clinical and socio-technical standards. It brings out a new professional model, marked by an actuarial management of risks, but also supported by a moral dimension based on the individualization of treatment. However, earlier divisions persist and give rise to ethical dilemmas and polarizations (between ethic of work placement and ethic of empowerment, profiling, and strategies of avoidance or neutralization of the most coercive professional acts.

The paper examines also the notion of subjectivity in social policies and the prescriptive strength of standards and tools that accompany the activation. The streamlining and tightening of supervision of unemployed on the ground give rise to the use of social technologies of adaptability, but the observations of professional practices also reveals some areas of negotiation. They are characterized by a use of the processual dimension in assessing the unemployed recruitability, by the establishment of trusted devices or else by the taking account of a “situated rationality” of the unemployed.

Epistemologies of Professional Leisure Sociology: The Canadian Context of Western European Domination

The category of ‘Leisure’ as an object of academic pursuit has historically been derivative of Western European epistemologies dominating the literature, providing the reason and intellectual spaces that scholars must somehow shoehorn their ideas into and making a feedback loop into policy circles that make concrete differences to how we live. This paper explores the domain of thinking about leisure and work, and the question of extension of epistemological breadth to handle the range of cultural truths constituent of professionalism in sociological pursuits and showing an unequal balance of voices from ways of living. The literature extant from Canadian scholarship provides a viable launch point for the main thesis about epistemological diversity and inequality given the nation’s commitment to multiculturalism, encompassing Aboriginal, Asian and Caucasian cultures under its umbrella.

LAW, ALAN* (Trent University, alaw@trentu.ca)

Leisure, Justice and Economic Collapse

This paper explores the roles of leisure to both ameliorate and deepen the catastrophic effects of unemployment. The main issue at stake is the extent to which the distributive justice of time and social legitimacy comes to bear in a way that reproduces social relations that, on one hand lead to social inclusion and on the other, radically marginalize victims of economic collapse. The role of the state is critical in setting the terms of social legitimacy, but the state has become agglomerated in clusters of social and economic practices that mutually regulate legitimacies of diverse peoples. State agglomerations are only one plane of action in a complex of social dimensions that find their roots at the intersections of continuously emergent cultural histories including millennia of globalizations. The paper draws on histories of global economic collapse beginning in the 19th century.

Insights for Healthcare Professionals on Patient Experience of Research Participation

There is limited evidence about why patients might be motivated to share their personal stories about their illness experiences through research initiatives and the impact of participation. Ethics committees and healthcare professionals are sometimes reluctant to support research that involves in-depth qualitative interviews given concerns about vulnerability and/or potential harms. Two studies were undertaken, in Germany and in Canada, to explore participant experiences of participating in qualitative research. The research teams are involved in the DIPEx International collaboration – using common methods to collect and share perspectives of patients and professionals on an ethical basis. Some people, who had been interviewed about either diabetes or chronic pain, were interviewed again about the reasons why they chose to disclose their illness experiences. In Canada, 30 people, who had been interviewed about their family caregiving experiences, completed a survey asking about their experiences of the interview. In both studies, participants were asked about their research participation, perceived benefits, what was difficult and what about the research process could have been better. These studies were conducted independently, using different methods and within different cultural contexts, yet there were strikingly similar observations and experiences.

The Financialisation of Food and Farming in Australia

The ownership of Australian food companies and farm lands by overseas investors has become a national debate in Australia, with some politicians and economists arguing that just as Australia’s past development was assured through foreign capital, so the nation’s future will depend upon continuing (and accelerating) overseas investment. Others are concerned that the present extent and nature of the purchases is not in the nation’s best interests. Critics argue that some of Australia’s most iconic and successful agribusinesses will become a vehicle for takeover by hedge funds and private equity firms that can then make decisions that may be deleterious to the national interest. Others consider that when farms are run by external sovereign wealth funds and food is ‘repatriated’, taxes can be avoided: Australia might not derive income from its own productive assets. Finally, it has been observed that the sale of most farmland is going unrecorded: Australians do not know of the extent of overseas ownership and control.

Following a discussion of the current debate about overseas purchases of Australian food companies and farms, the paper deals with the phenomenon of ‘financialisation’. In an era of projected food, water and fuel scarcity, financial entities are seeking investment in agribusinesses that can be harnessed for global profit-making, and farms that can be owned and controlled directly by financial firms. Speculators in land along with opportunities for more secure food production for oil-rich but land-and-water-poor countries, are but two of the motivations for investment. Framed within a political economy perspective, the paper outlines the nature of recent overseas investments in food and farming in Australia, exploring the types of firms investing, along with their motives for investment. The paper concludes by theorising the sociological ‘meaning’ of financialisation as it affects the Australian agrifood sector.
Pour aborder ces questions on pourra tirer des éléments de la mise en place des techniques de transplantations du visage au cours des années 2000 et de leurs modes de légitimation.

LE MAITRE, FRANCIS* (University of Konstanz, francis.le-maitre@uni-konstanz.de)
ZINK, VERONIKA (FU Berlin)
Sociology and the Myth of the Crisis

Ever since Comte, sociological scholarship is predicated on the legitimizing image of being the science of crises and conflict. The dealing with crises has attended to the question of how they arise, how they may be prevented through sociological insight, and what role they play for the functioning of our socio-cultural reality. According to A. Weber sociology itself is a „daughter of crises“ entering the academic world in the so called saint-simonian time of modernity; a period of change, tremors, uncertainty and unsettledness be it with regard to the political, the economic or the societal order. Even nowadays, we can witness the topos of crisis and conflict as being the ever renewed funding myth of our discipline by e.g. having a brief look at the major themes discussed at various national and international congresses of sociology.

Within our contribution we will show that whilst early sociologist have both attempted to understand the outbreak of crises in order to cope with these anomalous jolts and believed in the eschatology of a cathartic grande crise finale, recent sociological theory mainly regards crises as a part of a social drama and all the uncertainties accompanied as constitutive for the structuring and the stabilisation of the routine of social reality. Herein crises are no more labeled as punctual outbursts but seem to offer an omnipresent model of contemporary social reality. Positioning that the routinization of crises is at the stake of present sociological narrations, we will finally question how this ever-persistent dystopian corrective of tremors can function as a ‘challenge of reality’ (Baudrillard).

Instrumental and Political Asymmetries in Coastal Risks Perception Between the French State, Local Actors and the European Union

Background
• Recent concerns have stressed a probable increase of the frequency of extreme events and new risks linked to climate change.
• Between generic models and emerging big data strategies, best predictive configurations are not firmly established.
• Political tension with legal framework under progress. Tensions occur between the State and local actors concerning the responsibility of risk prediction and preparedness, as illustrated by the case of storm Xynthia (Feb. 2010, 59 causalities mainly in France); while the State has not properly applied its own directives, it is suing local mayors for not respecting them; in turn, following the trend of participative science, local towns are recruiting technicians to have their own measures. Local territories also show growing demand of satellite observation solutions offered by the European Union.

Hypotheses and questions
How cognitive facilities and political margins of maneuver influence each other: whether, to what extent and in what cases an instrumental asymmetry occurs between the State and local actors (i.e., the State using rather generic prediction models mainly in France); how local actors are using rather different specific information. If so, are such asymmetries a condition or an effect of political tensions? Do scientists play a neutral role in the way they produce and disseminate data, models and scenarios?

Terrains and approach
Comparative approach with case studies: geographical comparisons (France-USA-Japan); risk comparisons (oil spills, algal blooms); scientific and socio-technical configurations (instrumental strategies and division of labor).

LEADER, ANDREW* (Flinders University, andrewleader1980@gmail.com)
Perceptions Of Executive Government Leadership In The Age Of Engagement and Community Based Decision Making

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Exploring implications for accountability and democracy related to devolving responsibility for identifying, defining and resolving problems to the community level.

In response to significant policy challenges, such as climate change, health care demands and water availability facing decision makers and the community today new approaches that place the community at the heart of the solution are increasingly being adopted. The consequences of these new approaches and their impact on established governance structures will be a key determinant to their longevity as drivers of public policy solutions.

The research will focus on the three primary subgroups involved in the community engagement process, the community (citizens), senior government decision makers (executive level public servants), and political executive government (politicians, political elite and influencers).

What do different stakeholders (community, senior government decision makers and political executive government) perceive to be the reasons for undertaking community engagement?

What do different stakeholders perceive to be the fundamental outcomes that community engagement can be expected to deliver?

Do stakeholder’s perceptions of the outcomes of community engagement match with the perceptions of engagement’s success?

Are there differences between perceptions of desired outcomes and perceptions of success between stakeholder groups?

The emerging trend to engage with stakeholders to identify issues and collectively decide on action has the potential to significantly impact on perceptions of executive government leadership.

The perception of leadership has the potential to significantly impact upon accountability and democracy as the legitimacy of governments are strongly rooted at least in part through the delivery of policies and services. The increased adoption of engagement and community based decision making may devolve responsibility for decision making to a point where the perceptions of governments’ leadership and accountability reaches a critically low point.

forced out of fields, to open up space. (There is a) model of development that is being imposed . . . let us not be transformed into something that is not compatible with our needs.

Increasing numbers of poor households, primarily headed by women, desperate for jobs, will flock into cities of the South and be stuck in the informal labor market that pays low wages and offers no protections. Land and housing ownership is seen as key to changing the current realities for women. The UN-Habitat and the World Bank have put forth a continuum of land ownership that carries with it different degrees of security but remains weighted towards individual titling.

This paper will offer guidelines that member groups of the Huairou Commission are recommending as an alternative to business as usual. This will be compared to ideas of the “diverse” economy as developed by J.K. Gibson-Graham, authors of The End of Capitalism (As We Knew It): A Feminist Critique of Political Economy (1996, 2006). The nature of the economy is defined by different transactions (alternative market and nonmarket), labor (alternative paid and unpaid), and economic enterprise (alternative capitalist and non-capitalist). On-the-ground practices by Huairou Commission groups in Brazil and the Philippines will be compared in order to assess consequences of gender approaches for the future development of urban spaces.

Global Cyberspace: The Involvement Problem

In the present-day information world the involvement of an individual in Cyber space is an important social marker determining belonging to one or another social group. Your circle of contacts, social connections, profession, qualification and place in the social hierarchy will depend on whether you are or aren’t an Internet user. On the government level we can speak about the loss of the competitive position in the struggle for the spot in the global information structure.

Therefore, an important problem is cyber inequality, when an individual having no physical possibility to use the Internet, is eliminated from many spheres of social and economic life of the society. It is the low level of economic development that determines the Internet technology development in some countries. In other countries there is a political or ideological pressure on the expansion of Internet network access. Both of these factors reflect negatively on the ability of the society to move forward.

Cyber inequality can also exist within one country and this inequality can be significant. We can see it through the example of the Russian Federation, where different regions have unequal access to the Internet technologies and the development is uneven. We can claim that the residents of the regions where there is no access to Internet economy, state digital services and virtual social space are discriminated.

LEBEER, GUY* (Université Libre de Bruxelles, glebeer@ulb.ac.be)

Les Droits Du Patient Et La Dépénalisation De L'euthanasie Comme Lieux De Questionnement De La Médecine Contemporaine : Le Cas De La Belgique

La Belgique a connu au début des années 2000 une activité législative intense autour de la reconnaissance des droits des patients. La loi du 22 août 2002 sur les droits du patient et la loi du 28 mai 2002 dépénalisant l'euthanasie en témoignent tout particulièrement. La Loi sur les droits du patient a fixé les obligations des praticiens en matière d'information et devait, notamment, assurer au patient un accès direct à son dossier médical. L'application de cette loi fait encore problème aujourd'hui, et pas seulement en raison de la volonté du corps médical de maintenir son autonomie de pouvoir mais aussi du fait des carences de la loi elle-même et de la représentation qu'elle cristallise des relations entre médecin et patient, représentation qui est loin de faire l'unanimité. La Loi de dépénalisation de l'euthanasie permet à un patient placé dans des conditions très strictes de demander à son médecin d'abréger ses souffrances. L'application de cette loi fait également problème et le corps médical se trouve ici aussi au cœur de la difficulté, notamment par l'entremise de la notion de “ clause de conscience ”. La question est cependant plus complexe car si l'autonomie du médecin peut apparaître comme un frein à l'exercice de ce type de droit, elle peut aussi constituer le moyen de s'opposer à bien d'autres obstacles d'ordre institutionnel comme la volonté de certains établissements hospitaliers de ne pas respecter la loi, tout au moins dans son esprit. La communication se propose de rendre compte des difficultés d'application de ces deux lois et de déterminer les causes qui en sont à l’origine – et notamment autour de la redéfinition de la figure du médecin – et des tentatives entreprises dans les divers lieux de la décision politique en vue de les surmonter.

The Spaces and Times of Youth Culture in the New Century

It is starkly evident that in the new century young people's biographical constructions come to terms with conditions of: rapid social and cultural change, increasing choice and uncertainty, the loss of institutional reference points as models for action and the widespread perception of intensified risk. These phenomena tend to produce a contingent and situational form of identity, with a markedly individualised imprint that is closely related to the here-and-now. This contingent form of identity finds expression in a re-definition of the relationship with time-space in everyday life – the chronotope. In this process, everyday time-space arrangements progressively lose their traditional meanings in the realm of the taken-for-granted, the home of 'natural attitude'. Rather, young people's creative use of urban time-space assumes the form of a fully fledged strategy of action connected to a contingent and situational type of identity. In this framework of understanding, young people's cultural expressions can be understood as organised not so much as answers to 'problems', but rather as expressions of the active negotiation practices that young people themselves carry out in order to deal with contemporary risks and uncertainties.

The Great Transformation Of Japanese Capitalism

Contrary to the dominant vision, according to which Japan is suffering from "arthritis", we argue that Japanese capitalism has experienced a great transformation from the early 1980s. We get this result from an analysis at three levels:
- corporate level, characterized by an increased heterogeneity in terms of organization and performance
- institution level, characterized by a decay of previous forms of coordination and a revival
- social compromise level, characterized by a surge of multidimensional inequalities

We also show that Japan is not converging toward Anglo-saxon or European types of capitalism but follow its own original trajectory.

Understanding Welfare Diversity and Evolution In Japan, Korea, and China. A Regulationist Interpretation

In this paper, which focuses on Japan, Korean and China, we argue that these previous analyses of Asian capitals have underestimated or ignored in-depth analyses of Asian capitalism from the viewpoint of welfare, in adopting, at least implicitly, a perspective, inspired by the over-simplified typology of Esping Andersen, which can be qualified of "welfare polarization" (Takegawa, 2005). Moreover, we argue that welfare is at the core of the evolving forms of capitalism in these three countries. Our interpretation is that institutional change in Asian capitalism is currently driven by changes in the social compromise. These three economies are experiencing a series of changes that can be interpreted as the manifestations of internal contradictions which require the development of new welfare systems to be overcome. Among these changes, this paper focuses on the ones that affected such institutions as family and firms, as well as ageing, and rising inequalities.

The purpose of this article is to show that effective social policies are the necessary condition in these three countries to promote the emergence of a new "regulation mode" able to overcome the current contradictions at work. As emphasized by Boyer et al. (2001), these three economies indeed virtually suffer from the adverse consequences of export-led growth regimes. At the level of each country, from the early 2000s, non-regular employment has become a distinctive feature of these forms of capitalisms but also the main source of divergence among them.

The NFA Resistance to the KORUS FTA

This paper focuses on the Korean National Farmers Association (NFA)'s failed attempt of social resistance to the Korea-US Free Trade Agreement. Located at the intersection of the local and the global, traditional methods of farming began threatened in the rural farmlands of Korea because of the Free Trade Agreement that assured US imported foodstuff to dominate the Korean market. Despite borrowing from the "Nyelani Declaration" from the international movement of food sovereignty, resistance was unsuccessful due to the fact that "larger strides" of globalized resources did not interweave with NFA's internal strategy and strategic efficiency. Thus NFA's leadership and activists failed to create a social movement to ensure viable economic food sovereignty in South Korea, as the South Korean government continues to take the path toward a neoliberal and profit-driven agricultural future.

Precarious Working Life and Militant Activism of Non-Regular Workers in South Korea

From the early 2000s, non-regular employment has become a core labor policy issue in South Korea. Non-regular labor, comprised of a variety of precarious employment patterns, such as fixed-term workers, part-time workers, dispatched and subcontracted workers, home workers, and dependent self-employed workers, has proliferated in Korea, particularly along with changing corporate employment strategies after the economic crisis of 1997. The diffusion of non-regular employment has led to the growing segmentation of labor markets in the country because those workers suffer from not only inferior working conditions and a vulnerable employment status, compared to regular workers, but also social exclusion from the protection of legal labor standards and national safety-net.

Given their precarious working life, non-regular workers came to the fore as a symbol of militant labor activism over the past ten years. They organized their unions and, under their employers' threat of dismissals and social security, created illegal workplaces and social rights to resist their employers' suppression and protest the symbol of militant labor activism. Their unionizing strategies after the economic crisis of 1997. The diffusion of non-regular employment has led to the growing segmentation of labor markets in the country because those workers suffer from not only inferior working conditions and a vulnerable employment status, compared to regular workers, but also social exclusion from the protection of legal labor standards and national safety-net.

In this context, our paper is to discern why union behavior of non-standard workers is so militant, and to examine causal relationship between those workers' precarious working life and their militancy.

The Impacts of Cultural Heritage Tourism: A Case Study of Ajanta Caves in India

Cultural Heritage Tourism uses the remains of history which the traveler is interested. Cultural Heritage Tourism has positive and negative impact on social-cultural, physical and economic aspects of Indian Society. Ajanta Caves in India which is a world heritage site and caves of Buddhist affinity have been carved in Deccan basalt.

From a social-cultural perspective tourism affects cultural resources through changes in forms and functions of traditional artworks, commodification of living culture, crowded condition and community members. Tourist activities exact physical impacts on precious heritage in form of vandalism, wear, tear and pollution. On a more positive note, tourism from the increasing number of people, helps in creating jobs and taxes and stimulates entrepreneurialism in heritage destinations (Timothy 2011).

This study recognizes the impacts of Cultural Heritage Tourism at Ajanta Caves and its surroundings region in western India. For this research project, primary data are collected through observation and interviews of local community members, visitors, agents and officers of tourism department and on the secondary data obtained from books, journals, survey reports, publication of government at first part of this paper presents understanding of Ajanta caves as general descriptive and significance of Ajanta caves. Second part of this study analyzes impacts of cultural heritage tourism on Ajanta caves through the collected data as well as discusses the multiplier impacts of tourism such as physical, economic, and social dimensions on the Ajanta Caves and tries to study it from an integrated approach. This is part of summary, conclusions and recommendations. Thus, this study about impacts of cultural heritage tourism analyses how for best it can increase the positive impacts and restrict the negative impacts in order to preserve the Ajanta Caves, so that they can be enjoyed by contemporary and future generations on society.

Understanding Stratification in a Global Perspective: The Case of South Koreans

This study distinguishes three perspectives in stratification research based on an unit of analysis. The first is a within-country perspective which has dominated traditional stratification research, focusing on nation-states as the unit of analysis with an assumption that stratification takes place exclusively within nations. Modernization school, with this perspective, argues that achieved human capitals play a central role in social selection processes in industrial societies. The second is a between-country perspective that has usually been taken by development scholars, arguing that achieved human capitals play a central role in social selection processes in industrial societies. The second is a central role in social selection processes in industrial societies. The second is a central role in social selection processes in industrial societies.

Relational Skill Assets and Anti-Immigrant Sentiments

This study introduces a new variable in the area of sociology of professions: relational dimensions of occupational skills. Although previous studies have underscored the importance of cognitive skill assets in migration processes and attitudes toward out-group populations, the importance of relational skills has not received much attention. In this paper, we highlight the role of relational skill assets in explaining native workers' attitudes toward immigrants, using a General Social Survey module (National Identity 2004). We construct two dimensions of relational skills: interpersonal and instrumental skill assets at the occupational level. We conceptualize the former as an entrance skill barrier and the latter as a pulling factor that attracts skilled and unskilled immigrant work forces.

Childhood Poverty Across Generations: A Trajectory Approach

Research on social stratification and mobility has established a strong intergenerational link in economic disadvantage, documenting the ways in which socioeconomic status is transmitted from one generation to the next. Childhood socioeconomic status plays a critical role in the stratification process, as it has been identified as a key obstacle to upward mobility. Ambivalence evidence from the life course literature suggests that early and persistent childhood poverty has adverse impacts on educational attainment, labor market performance, health, and family formation. Incorporating these two streams of research, this paper examines intergenerational analysis that turns around the question of socioeconomic mobility: How is childhood poverty experienced by parents passed on to their offspring's poverty experiences during childhood? Using data from the Panel Study of Income Dynamics (PSID), we extend previous research in several important ways. First, drawing upon recent research suggesting the role of family influence across multiple generations, this paper explores how grandparents' socioeconomic standing affects parents' childhood poverty, which in turn affects children's childhood poverty. Second, we employ finite mixture modeling to construct trajectories of childhood poverty across generations. Specifically, we investigate how different temporal patterns—timing, duration, stability, and sequencing—of economic deprivation throughout childhood in one generation are associated with those in the next generation. This approach thus allows us to address potential limitations of using cross-sectional measures to estimate intergenerational links in childhood poverty. Finally, our analysis examines the mechanisms by which poverty trajectories during childhood are transmitted from parents to children, using family background characteristics at the time of childbearing as intervening factors. We expect this study to generate new insights into the intergenerational transmission of childhood economic disadvantage.

Taiwan universities have been undergoing drastic changes in many respects, since last 25 years, particularly initiated by the neo-liberalism to meet the demands of a globalized advanced industrial labor market, which legitimacy accelerates universities as corporations. The neo-liberalist conception, to be called the corporatizing culture', by an appeal to market-logic freedom, has signaled a radical shift in the notion of higher education/learning. The aims/academic values and serious debates within the group on the effectiveness of violent tactics, and forced revolutionary ideas influenced by Third World guerrillas, and maintained the BPP's violent rhetoric and tactics during his exile in Algeria. The conflict between Newton and Cleaver was a result of the state's effort to destroy the BPP, as well as the two men's personal power struggle.

We intend to argue that the BPP did not have a fixed identity as an exclusively violent organization, but instead created multifarious concepts of black liberation inside and outside U.S. The state agencies, especially the FBI, deeply affected the process of its transformation by repressing the group. The dynamics and dialogues between Newton and Cleaver, which centered around the debate for and against revolutionary strategies for the BPP, will be the key to understanding the interrelationship between the social movement's militancy and the state's oppression.

This paper attempts to do gendering the migration system in East Asia by focusing on the inter-Asian migration. Inter-Asian migration has been one of the key characteristics in recent migration trends (WMR 2012). Jones and Findlay (1998) showed migration system emerged in East Asia by examining the various linkages among origins and destinations including FDI aids, trade and migration. Building upon Jones and Findlay (1998)’s work, I attempt to gendering the regional migration system by examining feminized migration streams: labor migrants and marriage migrants. I examine factors of spatial housing inequality through a multiple discriminant analysis model using statistics data from 2008 to 2012; and suggested a housing polarization index that consisted of housing wealth polarization (HWP) and housing affordability inequality (HAI). The first finding is that inequality, disparity, and polarization of housing in Korea are distinctly different aspects. Therefore, examining housing problems requires each index or method in terms of spatial base, wealth, and affordability, such as HWI, HAI, HWP, HAP, etc. The second is that comparing patterns of PIR and the other subjects in Korea than the level of housing wealth, in view of inequality. The third thing is that the spatial concentration of HWI and HAI shows opposite result to each other. In HWP, only Seoul and Gyeonggi are below the total level, while in HAI, all regions except Seoul, Incheon, and Gyeonggi are below the total level. The fourth finding is that common key factors of largest gap in spatial housing inequality are inflation and remarriage rates and low fertility rate. Therefore, the new discursive frame coincided with the economic crisis has involved the risk on the middle class. The Korean political paradigm has shifted in the direction of welfare provision, but local government has limited flexibility in implementing a welfare agenda outside of the megacity of Seoul. Even so, innovative local efforts continue in the area of cultural policy, where local government has more flexibility to pursue a coherent agenda with broad benefits, including both ones that embrace diverse places and ones that transcend the prior association of cultural policy with place to deliver welfare benefits to people through cultural spending. This study uses pooled data from more than 200 local governments in South Korea across five years to investigate the factors involved in urban development. On the basis of the results in the area of municipal and district-level cultural spending, a number of cities and districts are identified where cultural spending has a clear relationship with local development according to different measures. This study will explain the dynamics of a number of these creative local efforts.

How To Examine Spatial Housing Inequality and Housing Polarization?

To alleviate housing problems including issues of inequality, disparity, and polarization, we need to determine exactly their present status, characteristics, and influencing factors. Hence, this research developed a spatial housing inequality index that consisted of housing wealth inequality (HWI) and housing affordability inequality (HAI); examined factors of spatial housing inequality through a multiple discriminant analysis model using statistics data from 2008 to 2012; and suggested a housing polarization index that consisted of housing wealth polarization (HWP) and housing affordability polarization (HAP). The fourth finding is that inequality, disparity, and polarization of housing in Korea are distinctly different aspects. Therefore, examining housing problems requires each index or method in terms of spatial base, wealth, and affordability, such as HWI, HAI, HWP, HAP, etc. The second is that comparing patterns of PIR and the other subjects in Korea than the level of housing wealth, in view of inequality. The third thing is that the spatial concentration of HWI and HAI shows opposite result to each other. In HWP, only Seoul and Gyeonggi are below the total level, while in HAI, all regions except Seoul, Incheon, and Gyeonggi are below the total level. The fourth finding is that common key factors of largest gap in spatial housing inequality are inflation rate, housing price, unemployment rate, in descending order, and unlike HWI, HAI is affected relatively by unsold housing of region, the number of houses, per capita GDP. Final finding is that polarization in housing affordability is more serious than that of housing wealth in Korea. The primary cause of the disparity in HWP is MB (middle-bottom) section, and in HAP is TM (top-middle) section.

The Transformation of Family Law and Discourses in South Korea: Possibilities and Limits of State Feminism

Since the Korean family law including the family head system was enacted in 1958, the status ‘a head of family’ had been given to the male person- the husband or the eldest son in the legal family institution in South Korea. Women’s organizations in civil society had constantly demonstrated for the abolition of the family head system for 50 years and they achieved their success in 2005. Many research questions have been focused on ‘why the abolition of the family head system was possible in 2005’ and the dominant explanation has been the state feminism. I try to point out the limitation of the state feminism which has oriented toward the actor centered approach and overlooked the wider social context and to make a supplementary view on the transformation of family structure and discourses in South Korea. Therefore my research question is ‘what social conditions created a new family discourse and brought about the abolition of family head system?’ The IMF economic crisis in the late 1990 triggered the increase of discourses on the Korean family crisis and the demographic change. In this transformation of family structure, the frame of family discourse for abolition of family head system in South Korea had also been changed. Before the 2000s, the cons and pros of the family head system was the confrontation between ‘gender equality vs. tradition.’ However, after the 2000s, the change of the family structure with the economic crisis involves the risk on the basis of patriarchal family model and actual decline in marriage ratio, increase in divorce and remarriage rates and low fertility rate. Therefore, the new discursive frame of focusing on particular family problems has appeared for the recognition of the variety of family in society and social right to make one’s family.

The Cultural Industry and the Scenes of Dalian: Culture As a Driver of Development

The Cultural Industry and the Scenes of Dalian: Culture as a Driver of Development

The Cultural Industry and the Scenes of Dalian: Culture As a Driver of Development

China has continued to undergo rapid development in the past decade even as individual cities and provinces have pursued different paths to development. During the top 90 cities in China for the decade from 2000 to 2010 show that culture has become one path to urban development, particularly through the development of tourism and fixed cultural investments. Dalian is a good example of a city that has combined both of these trends. The city considers culture to be one of the five leading industries and considers integration of cultural resources and capital, science and technology, and even urban layout and planning. Spending on culture has been increasing from year to year, increasing five times over from 2002 to 2011. The cultural industry is centered on contents like animated games, film and drama, media contents, new cultural creation, as well as on tourism and has become a new pole of rapid growth. Much of the city’s growth has been driven by the cultural contents industry as well as by tourism driven by a unique mix of amenities, the non-market features that affect the city.

This study details the Dalian model of development by connecting the developmental trends to the city’s cultural industry and tourism features. This is done by detailing Dalian’s overall urban experience through defining the city’s scenes. The mix of amenities in Dalian provides the lived experience of the city residents who provide the workforce in the cultural contents industry driving development in the city. At the same time, the overall urban scene provides an experience luring tourists both domestically and from abroad to the city.

Lee, JONG YOUL* (Incheon National University, jylee@incheon.ac.kr)
Globalization, Localization, and International Coproduction As an Emerging Form of Governance in the Global Animation Industry

This paper examines the interaction of globalization and localization and the rise of international coproduction as a noble governance form in global cultural industries. The expansion of Western media and cultural industries to emerging markets has been intensified since the 1990s thanks to worldwide deregulation and liberalization and the introduction of new media, such as satellite TVs and the Internet, which facilitate the integration of national, regional and global markets. At the same time, the growth of cultural and media markets in emerging countries has presented new opportunities and challenges for both global and local firms. Global media giants have found their strategies should be adjusted to better serve local audience who is not solely satisfied with their global content, and local firms have become more ambitious in bringing their content to overseas. Examining the case of the global animation industry, this paper argues that as global firms seek to tap into local markets (‘localization’) and local producers try to enter foreign markets with their own cultural identity (‘globalization’), international coproduction, a form of cross-national, inter-firm partnership for animation production and distribution, provides both actors with new opportunities to collaborate for
a project amenable in markets across different cultures, languages and regulations. It facilitates global leading firms to better address local markets and access talents in emerging economies, while local firms can benefit from newly acquired skills in creative development, marketing and distribution as well as expanding outlets for their content overseas. The paper concludes with discussion of the challenges for them to create cross-national cultural production networks, and the implications of this new form of inter-firm governance for the future of a global cultural economy.

LEE, JUYOUNG* (Brown University, juyoung.lee@brown.edu)

This study examines public discourse about migrant workers and labor migration policies in South Korea between 1990 and 2003. Using a content analysis, this paper traces how public discourse that appeared in newspaper editorial and opinion columns evolved over time, in tandem with the transformation of migrant labor policy from the Industrial Trainee System (ITS, 1991-2003) to the Employment Permit System (EPS, 2003-present). In particular, I will contrast the period of 1995-1997 during which the efforts to change migrant labor policies were made but ended in failure with the period of 2000-2003 during which the efforts resulted in the successful legislation of the EPS, highlighting two major discourses: (1) the human rights theme and (2) the national economic development theme. The human rights theme was prominent among the advocates of EPS; the national economic development theme was so among the advocates of ITS. The results show that, while the national economic development discourse remained relatively stable over time, the human rights discourse gained its popularity by tapping into Koreans’ historical experiences and further developed by reflecting and changing ethnically homogenous Korean culture. In addition, there were differences in how each policy position (i.e., the Pro-EPS and Pro-ITS arguments) had incorporated these two themes. The Pro-ITS argument relied mainly upon the national economic development theme, and did not succeed in incorporating both two major themes. In contrast, the Pro-EPS argument, which had built on the human rights theme until 1997, later developed to incorporate not only the human rights theme but also the national economic development theme. This study concludes that there were significant changes in public discourse between 1990 and 2003, which may affect the transformation of migrant labor policies in 2003.

The ‘people House’ and a New Move to Organize ‘resident Workers’ in Korea

Recently, a region has become a major area for labor union organizing and its activities in Korean labor movement. The vast majority of workers in small firms located in local regions are both non-union workers and precarious workers. A new move to recognize and organize them as ‘resident workers’ has appeared. The ‘People House’ (‘minjunguijip’ in Korean), which provides a space for workers, residents, progressive party members, labor unions, and community organizations to meet and communicate each other and to form networks among them, was established in several wards of Seoul, Incheon and Kwangju after 2001. The ‘People House’ considers that labor market for non-regular workers is formed based on the locality which they live including neighboring towns. Therefore, it tries to approach labor and livelihood issues of regional workers from a point of view of ‘resident workers’. It provides a space to workers who want to study labor law and to fight for improving their labor conditions. It holds events for residents to meet and talk about labor rights and current social-economic issues such as railway privatization. It also supports small labor unions in the region which have no union office by providing a meeting space, as well as making efforts to organizing ‘resident workers’. This paper has aims to examine practices of the ‘People House’ to organize ‘resident workers’ and to discuss implications of the practices for revitalization of Korean labor movement. Furthermore, this paper compares the ‘People House’ in Korea and ‘Worker center’ in the United States which is community-based organization that engages in grassroots organizing to provide support to low-wage workers and discusses similarities and differences of the two.

Counter Hegemonic Discourse on New Poor in Japan in 2000s – A Case Study of Two Indie-Magazines

Along with the collapse of bubble economy and following extended economic depression since 1990s, people who failed to labor – or people who could be no longer explained by labor as it was – appeared in Japanese society. They were working-poor, net-café refugees, and others who felt into “new poverty.” The emergence of “new poor” who were undifferentiable but already everywhere alarmed the entire society where poverty had been believed to be eradicated with its dramatic economic growth, and provided a chance to reconsider and discuss “new poverty.” This study aims to investigate two discursive struggles by the young new poor who attempted to produce new discursive counter publics on “new poverty/poor.” In order to do so, two Japanese indie magazines – Freezer’s Free którego (2007-2008) and Lost Gene (2008-2010) – are analyzed using textual analysis and interviews with editors and contributors, focusing on their strategies in terms of their contents, narratives, styles-genres, the relationship between contributors, editors and readership and etc. In these two indie magazines, the young new poor attempted to problematize public discourses on them and to produce counter-hegemonic discourse by unfolding and re-appropriating their own experience. Moreover, these magazines provided (counter-)publics where the young new poor could reach to self-acceptance escaping from self-denial and collectively search for alternative ways of life without being captured by neo-liberal capitalism. In this process, the young new poor – not only readers but also new poor – re-identify their subjectivities as laborers, political subjects, and young generation who are situated in the very middle of the social contradictions produced by late capitalism. In addition, this study explores their alternative ways of publishing as a media movement that created and managed their publishing networks as a collective social enterprise and thus struggled to cross boundaries between discursive and real practices.

Japanese Military ‘comfort Women’: Reconstructing Identities, Shifting Boundaries

This paper explores how Japanese military ‘comfort women’ (Japanese military sexual slaves) have de/reconstructed their own identities as negotiating boundaries of nation, state, gender, and political ideology. Based upon ethnographic field research over various documents, and women’s testimonies, I analyze how women, who suffered both from the Japanese military sexual slave system during Japanese colonization in Korea and from Korean patriarchy system that has continued even after national liberation, have transformed their own identities from victims to transnational activists and from hidden ghost to historical subjects, while have been actively engaged in transnational women’s movement against imperialism, colonialism, militarism, and patriarchy. Particularly, focusing on the Wednesday Demonstration and the Butterfly Fund led by former Japanese ‘comfort women,’ I will examine what made ‘grandma’ (halmoni in Korean) not a helpless victim but a symbol of peace and women’s rights across time and space.

Can We Hear Subaltern Woman’s Experiences?: Im/Possibility of Representation in Postcolonial Context of South Korea

The purpose of this paper is to illuminate the implication of feminist oral history as critically reexamining the relationship between hearer and speaker, representative and narrator, the said and the unsaid, and secrecy and silence. Based upon oral (life) history of military prostitutes in U.S. camp towns in South Korea (yanggongju), we tried to reveal the experiences of historically excluded and devalued ‘Other’ not just through the research process but also in the postcolonial society in Korea. Narratives of old women in kijohon (formal prostitutes in U.S. military base) shows how women have navigated the boundaries between inevitability/coincidence, the enforced/voluntary, prostitution/intimate relationship, and domestic/sexual, military/military bride while continually negotiating as well as conflicting with various myths and ideologies of ‘normative woman,’ ‘official nation,’ and ‘normal family.’ In addition, women’s narratives to cause the rupture of our own stereotypical images of military prostitute not only prove the possibility to reconstruct ‘normal family.’ In addition, women’s narratives to cause the rupture of our own stereotypical images of military prostitute not only prove the possibility to reconstruct the identity of subaltern woman, but also redirect the research focus from the ‘object to the subject (hidden) desire to represent others. Therefore, we argue that feminist researchers that represent other’s experiences should inquiry ‘what/how we can hear,’ ‘why we want to know others,’ and ‘who we are,’ instead of asking whether ‘subaltern can speak or not, which shed light on what feminist oral history would be like.'
income in conjunction with the societal level of inequality in 29 countries, using International Social Survey Program (ISSP 2003 National Identity module) data. I create a new dependent variable “ancestry” which measures how much importance one places on ancestry as a core component of national identity. I examine the relationships between country’s characteristics (economic conditions, income inequality, urbanization, habitus and college-educated population) and act- eristics (socioeconomic status, occupational position, religiosity, and political party affiliation), and one’s support for ancestry-based national membership. My findings suggest that, at the individual level, non-college graduates and low-wage earners are more likely to support ancestry-based national membership. However, at the country-level, high school graduates living in highly educated societies and countries with larger foreign-born populations are more likely to support descent-based national membership. In other words, non-college graduates in soci- eties with high percentages of foreign-borns and college graduates may feel more vulnerable for their support for social closure against migrants through restrictive descent-based citizenship. As for income, low-income earners living in countries with greater income inequality are less likely to endorse ancestry as an important criterion of national membership. In line with the relative deprivation theory, this finding indicates that marginalized groups in countries with greater inequality (e.g. income inequality) are less likely to feel discontent and entitled compared to their counterparts in more egalitarian societies.

Becoming-Minor through Shinsengumi: A Sociology of Popular Culture As a Culture of the People

This study scrutinises the rise of a people’s culture into a popularly mediated culture to reconsider the state of popular cultures in contemporary societies. For this purpose, it focuses on Shinsengumi, a group of young men in history who are feverously romanticised in contemporary Japan. Initially, Shinsengumi were main- ginalised from mainstream history as violent insurgents, but they were quickly reincarnated in popular culture to be gradually transformed into a popular cultural symbol through the masses’ relentless fantasising. As a culture borne by the masses, Shinsengumi provides a window onto popular culture in its broader sense as ‘the cultural habits of a particular group of people’ and thereby, a key to explicating the transitions and dynamics surrounding contemporary cultures and society. With this proposition, this study begins with an overview of previ- ous scholarship on popular culture to demonstrate the need to explore popularly produced consumer culture by following by an analysis of ‘Shinsengumi’ as a cultural symbol since its debut in culture in early Meiji. The analysis exposes ontological shifts surrounding the concept of orthodoxy and technological advancements in a mature consumer society have diversified popular culture into different streams. Alongside this transition, Shinsengumi evolved into a Deleuze-Guattarian becom- ing-minor symbol which can be accessed and appropriated by anyone who seeks to transmit their personal romanticisations about the group. In practice, social movements to respectively revive an urban community and to achieve reconciliation function as a node for individuals to become playing selves and to connect with their objectives, these organisations are nonetheless notable for their ability to partake in the remaking of their society by actively recognising and articulating their unique positions in society. Through collective action, they also instigate social changes from the grassroots, propelling studies of social movements to reconsider the state of popular cultures in contemporary societies.

Coming Together and Across through Celebration: How Individuals Change Their ‘societies’

Despite its alienating forces, globalisation is noted for providing unprecedented means of mobility and communication to the masses living in post-capitalist societies. Using these instruments, more anonymous individuals are becoming ‘playing selves’ who redefine conventional social and physical boundaries and partake in the remaking of their society by actively recognising and articulating their unique positions in society. Through collective action, they also instigate social changes from the grassroots, propelling studies of social movements to (re) consider how people foster and utilise their ties as social capital to state and adv- ance their objectives. Following this trend, this study scrutinises the emergence of ‘loose’ collective actions based on weak ties and their roles in advanced capi- talist societies. It introduces two Japanese grassroots organisations, the Old Tokaido Road Shingawara House Community-building Association and the East Asia Collaborative Workshop, which engage in festivities and performances to respectively revive an urban community and to achieve reconciliation in East Asia. Although it is difficult to assess their achievements in reference to their objectives, these organisations are nonetheless notable for their ability to function as a node for individuals to become playing selves and to connect with other like-minded actors. From an analysis of the social interactions within these movements, this study demonstrates collective identities sustain and renew their selves by offering an open forum for diverse stakeholders where they could mutually confirm each other’s differences and form weak ties. Through this process, participants not only build networks, but also gain empowerment as they reflect on their selves and project their reflections onto their social realities. In this light, weak organisational maps may not be suited to initiate social changes, but it could stir individual actors and the society encompassing these actors to review and renew their perceptions of social realities.

Religion, Civil Society and Multiculturalism in Korea

In this study, I examine the role of religion as a socially integrating force in the transition of Korean society toward multiculturalism. In this era of globalization, when most nations are becoming multiethnic or multicultural, arguments and conflicts over multiculturalism are topics of heated debate worldwide. Theoret- ically, I take into consideration Jean Bethke Elshtain’s and Casanova’s “public reli- gion” and examine whether these social theories may have validity for explaining the roles of religion in multicultural social context of Korea. My research tries to compare the roles and functions of three major religions (e.g., Catholicism, Protestantism, and Buddhism) in their social works for immi- grant workers in Korea. For this task, I analyzed statistical data spanning 2001 to 2010 regarding social welfare centers providing services for foreign migrants in Korea, managed by religious organizations. I also conducted in-depth interviews with religious leaders who are in charge of these centers. As a result, Catholic churches are more active in setting up various activities to solve multicultural problems of migrants in close relationships with Korean civil society. Cath- olic leaders work with civil NGOs for the social integration. Protestant churches have most number of social welfare centers for the migrant workers in Korea. There is a problem of proselytizing. Lastly, Buddhist temples, lacking the prophet- ic traditions unlike Christianity, put little effort into these issues. However, every religion, to different degrees, appears to secure its interest in the expansion of religious influence on a society. What is significant in the public role of religion should be engaged in the civil ethos of a “good society” (Bellah).

Contemporary Religious Landscapes in South Korea : From Diversity to Commonality in a Harbermanian Post-Secular Society

The contemporary religious landscape of South Korea is summarized with three major religions – Buddhism, Protestantism, Catholicism – that monopolize 95% of religious ‘market’ consistently. This paper explains these socio-religious phe- nomena with historical approach and tries to diagnose it’s implications through Habermas’s post secular theory. First, Korean religious field has been subordinat- ed and passively molded by exogenous socio-political factors such as Japanese occupation, Korean war, and military-dictatorial regimes, and democratization process. The current monopoly of religious market is the result of inter-play be- tween internal dynamics of religion and external social forces. Although the highly competitive ecology of religions often causes social conflicts, it also makes posi- tive conditions to reflect on Habermasian post-secular perspectives in the public sphere. Also, peculiar tensions between homes and religious market boundaries; the current religious field and post-secular values. This paper analyses religious phenomena in post-secular society and examines whether these social theories may have validity for explaining the roles of religion in multicultural social context of Korea. In particular, Habermas emphasizes the sophistication of epistemic stance of religions in order to actualize conversa- tion between the religious and the secular. The highly competitive religious situation of South Korea eventually facilitates religious-secular conversation by revising and reinterpreting their own doctrines or social principles. This research includes many case studies focusing on social debates between religions, as well as between religious institutions and secular ones.

Privately Public Places; Uprootedness, Care Norms and Home-Making of Migrant Women in Korea

This paper conceptualizes the private/public boundary situated in home as a collectivist condition and the role of care work in such a condition. I delineate the process in which ‘unnatural’ or temporary homes of migrant women in a host country become a place where women run away from as well as a place women run to, and the implications of this process on their legal precariousness. For the purpose of this paper, I focus on two groups of migrant women in South Korea: the Korean war, and the former undocumented women. The paper draws on from field data consisting of participant observation and in-depth interviews with runaway marriage migrants and (formerly) undocumented dom- estic workers. For marriage migrants who have run away from homes (or go- chul jiyos/donghi), their absence from homes (or their husbands’ homes) becomes grounds for their legal precariousness. On the other hand, for undocumented

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
migrant domestic workers, homes are private places from which they can find work and, at the same time, seek refuge from the immigration raid. In this process, one is portrayed as irresponsible mothers who abandon their duty of care of their children while the other is portrayed as victims who have been failed by the economic-nationalist immigration paradigm to pick up after other women. In fact, such perspective has been materialized in real laws and policies which have further reproduced or reinforced migrant women’s precariousness. I focus on women’s presumed normative position as care-giver, and the role that their supposed abandonment/adoption of this position plays in public discourse in shaping the private/public boundaries of homes. Throughout the paper, I present the process in which nationalistic reproduction discourse, gender norms and uprootedness (experiences of migration) are essentialized into the duty of care in a particularized private/public place called home.

Precarious Work and New Class in Post-Industrial South Korea

This paper aims to examine precarious work in post-industrial Korean labour market. Previous studies on precarious work have focused on employment status, work, work organization, and income. However, we suggest not only employment insecurity but also insecurity of market, post-transfer and social income should be included in the conceptualization of precarious work. In addition, we include how individual workers perceive ‘precariousness’ and how this contributes to the definition of precarious work. Then this paper investigates the relationship between precarious work conceptualized in the paper and the new class structure in post-industrial Korean labour market. Discussion on class structure departs from the traditional division of class and highlights the structural transformation from an industrial to a service economy. Gender and age will also be considered in the analysis. We exploit a mixed method of conventional method and QCA (qualitative comparative analysis) to examine how different configuration of precarious work is associated with new class structure, using Korea Labour & Income Panel Study(1st wave – 13th wave). Results from the analysis suggests how precarious work in Korea is structured within the socioeconomic context of post-industrial Korea.

The Impacts of Parent-Child Generational Gaps in Family Values on Subjective Happiness Among Korean Adolescents

Due to South Korea’s (Korea hereafter) competitive education system to enter college, in addition to other developmental stressors, Korean adolescents are more likely to experience a high level of stress. Although the degree of subjective happiness amongst Korean adolescents was higher than the median in the happiness scale, recent studies found that Korean adolescents showed the lowest level of happiness compared to Chinese and Japanese adolescents and those who lived in OECD countries. In addition, due to rapid demographic changes in modern Korea, generational gaps in family values particularly with respect to marriage, parenting, and elderly parent support have become more noticeable. Considering the relationship between precarious work conceptualized in the paper and the new class structure in post-industrial Korean labour market. Discussion on class structure departs from the traditional division of class and highlights the structural transformation from an industrial to a service economy. Gender and age will also be considered in the analysis. We exploit a mixed method of conventional method and QCA (qualitative comparative analysis) to examine how different configuration of precarious work is associated with new class structure, using Korea Labour & Income Panel Study(1st wave – 13th wave). Results from the analysis suggests how precarious work in Korea is structured within the socioeconomic context of post-industrial Korea.

Canadian Women’s Perspectives On Disability, Underemployment and Health

Disabled women are underrepresented in the Canadian workforce due to unemployment or underemployment. Some research has focused on unemployment among disabled persons but few researchers have investigated health and underemployment among disabled women. My research addresses this gap by exploring how women with physical impairments understand and address health experiences resulting from underemployment. In this paper, I review the two theoretical frameworks that guided my analytic approach—the social model of disability and feminist disability research—and present a critical interpretive textual analysis of 10 interviews I conducted with underemployed disabled women about their experiences of disability, underemployment, and health in a Canadian context. These narratives illustrate experiences of underemployment including marginalized identities, lost opportunities, limited income, and wasted energy, as well as the negative impact on physical, mental, emotional, and social dimensions of health. They also explain how disabled women can act as change agents to realize their goals for paid employment, fulfilling careers and self-actualization.
Religious Diversity Management and Reasonable Accommodations in Greater Montreal Schools

Debates over the place and role of religion in the public sphere have gained significant relevance in Quebec, especially since 2006 (Lefebvre, 2008). The arrivals of immigrants with religious backgrounds other than Christian, distorted public narratives over minorities' religious requests and the post 9/11 context contributed to this. As a result, the Consultation Commission on Accommodation Practices Related to Cultural Differences was created in 2007. Education, together with the field of health, stands as an arena for more potential tensions and more needs for religious accommodation (Zubrzycki, 2012). Framed within a larger comparative project, directed by Solange Lefebvre, on the regulation of religion in four national contexts, and based on a qualitative approach, this presentation analyzes how religious diversity is being managed in the context of schools in Greater Montreal. The inquiry pays special attention to the specific "reasonable accommodations" implemented to respond to religious requests of pupils and teachers—in areas such as personal religious symbols and dressing, dietary prescriptions, religious holidays and sports practice—with the aim of disclosing the effects that the so-called Bouchard-Taylor report has had in such institutional contexts.

Statistical Analysis of the Sport Participation in a Population: Some Sociological and Software Considerations

Estimating the sport participation rate in a given population raises the question of what it means to "be sporty." From 1970 to 1990, new forms of sport practice appeared that forced the sociologists involved in general population surveys to enlarge the usual definition in order to really get a whole understanding of the sport phenomenon. The goal is now not only to evaluate the hard core formed by the sociohistorical duet "training and competing" but to go further so as to include sober and more ephemeral physical activity forms. In fine, a scale of the respondent investment in the sport and physical activities is designed, representing a progression from no practice at all to the usual sport participation in its sociohistorical meaning. To this end, the interviewing mode has changed to an emic-and-etic dual approach. Sociologists aim to discover the sociological, cultural, demographical characteristics which may influence this sporting scale. A suitable statistical toolkit readily available in an easy-to-use computing environment is thus needed. No doubt that contingency table analysis is the fundamental technique used by sociologists. The free SPSS software proposes some modern approaches for dealing with two-way tables (Yule's Q, confidence intervals, local and global effect sizes, modality profiles) suitable for a sociological quantitative data analysis, and is specifically powerful in producing statistical graphics.

Finally, explanatory methods appropriate to the researcher's goals (Wheaton, 2006) enable to detect and visualize (Elly, 1999) the sociological, cultural, demographical effects in the 2010 general survey of the sport practices in the French population.

Does Early Schooling Equalize Educational Outcomes Across Social Origins: Evidence from Pre-School Extension in France

Universal preschool is often seen as the mean par excellence of correcting social inequalities in educational achievement. However, evidence on the short and long term effects of preschool is very limited. Over the 1960s and 1970s, France undertook a large-scale expansion of preschool enrollment. As a result, during this period, the enrollment rate of 3 years old children rose from 35% to 90% and that of 4 years old rose from 60% to virtually 100%. This paper evaluates the effect of this expansion on subsequent schooling outcomes (repetitions, test scores, high school graduation) and wages. We examine the average benefit of preschool enrollment and differences across social groups in the benefits of preschool. We find some sizeable and persistent effect of preschool and this points to the fact that preschool can be a tool for reducing inequalities. Indeed, the analysis shows that children from worse-off or intermediate social groups benefit more from preschool than children from better-off socioeconomic backgrounds.

LEFRANC, ARNAUD* (Université de Cergy-Pontoise, lefranc.arnaud@gmail.com)
Over the last fifteen years, an important body of research has investigated the extent of the intergenerational economic mobility. Two main results have emerged from this literature. First, economic outcomes, in developed societies, are much more strongly affected by family background than was thought two decades ago. Second, the transmission of economic inequality varies considerably across countries and high inequality is generally associated with low mobility. However, beyond the above-mentioned stylized facts, the factors that shape intergenerational economic mobility empirically have not been much explored. Why does the degree of intergenerational mobility vary across countries? To what extent does it change over time? How does the level of economic inequality relate to the persistence of inequality across generations? Have changes in the wage structure affected the degree of mobility? What policy intervention in general, and what institutional system in particular, may foster equality of opportunity? Such important questions remain largely unanswered.

This paper analyzes long-term trends in intergenerational earnings mobility in France. I estimate intergenerational earnings elasticities for male cohorts born between 1931 and 1975. This time period has witnessed important changes in the labor market and educational system: large expansion in access to secondary and higher education, important compression of earnings differentials. Over the period, intergenerational earnings mobility exhibits a V-shaped pattern. Mobility falls between cohorts born in the mid 1950s and those born in the mid 1950s, but subsequent cohorts born in the first half of the 1970s, age-adjusted intergenerational earnings elasticity amount to around .55. This is significantly higher than the elasticity estimated for the baby boom cohorts. It is also lower than cohorts born in the 1930s but the difference is not significant. Changes in mobility mostly reflects the evolution of cross-section earnings inequality, rather than variations in positional mobility.

Ce pari se fonde sur des descriptions erronées de ce qui se passe sur la scène des commissions de vérité, et sur des espoirs intellectuels. Une de ces erreurs consiste à croire, en premier lieu, que les acteurs arriveront à l’audition avec des émotions nées de l’expérience de la violence politique, et stockées depuis lors—des « traumatismes ». On suppose, dans ce cas, que ces émotions, traumatiques, sont suscités par la souffrance : peine infligée par la violence, ou souffrance de la perte d’un proche. On imagine, en troisième lieu, que l’expression émue de cette souffrance permet le remplacement d’émotions de déliaison, par des émotions d’adhésion : la victime s’identifierait à un collectif qui la reconnaît enfin ; réciproquement, la nation se refonde dans la communion émotionnelle, dans l’effusion cathartique. On verra comment ce “tribunal des larmes” que fut la TRC met à l’épreuve ces convictions.

Leadership Research in Healthcare: A Realist Review

According to Gilmartin and D’Aunno (2008), researchers were missing the opportunity to develop general leadership theory in healthcare sector mainly because they weren’t stressing enough the role of professionals as leaders and the need of understanding the role of gender in leadership; and because of the barriers to collaboration and the multiple disciplines involved.

The present study aims to investigate which progresses researchers have done in order to understand: 1) Who are the leaders in the healthcare sector and which factors (i.e. traits, skills, competencies, behaviors and styles) are needed for such a role?; 2) How can leadership impact the healthcare sector and what challenges are addressed?; 3) Which efforts are in place in order to educate leaders in healthcare and how relevant are those?; 4) Is leadership in healthcare going towards a systemic, cross-cultural and collaborative approach?

To achieve these goals, we identified the realist review as the best methodology to analyze the relevant researches sample. We have answered questions such as “what works, for whom, and in which circumstances” highlighting: the effectiveness and acceptance of transformational and collaborative approaches; professionalism, expertise, and good task delegation within operational teams; distributed leadership, relationships, and social responsibility at a systemic level.

The relevancy and need of leadership development programs, framed within a wider strategy, emerged. Nonetheless, gaps still exist and require further investigation: particular needs in public vs. private contexts; professionals’ and women’s differentiating characters; generational gaps; associations between leadership and recruitment HR practices research; how (and if) leaders (should) influence the organizational culture and values; and developing countries specific challenges. Also, a greater proportion of relevant findings should be drawn by empirical and more rigorous studies. Finally, major attention could be paid to interactions happening at the team, organizational, and systemic level among different leaders, and among leaders, followers and external actors.

Who Will Do Science? Implications for Science, Technology and (New) Forms of Social Inequalities

Submission to RC23 Research Group: Research Committee on Sociology of Science and Technology

Who Will Do Science? Implications for Science, Technology and (New) Forms of Social Inequalities

Almost 20 years ago, the authors explored the ramifications for science and society of who practices (and will practice) science in the United States (U.S.).[7] Scientists determine who will practice science in the future: academic scientists act as gatekeepers in terms of the production and training of scientists (admissions, funding, training and apprenticeships); and the design, implementation, certification and evaluation of curricular content. Moreover, access to and understanding of science and technology are necessary to function in a global, knowledge-based economy. These issues are still critically important to both the scientific enterprise and society.

This paper revisits these issues and implications for science policy in the contexts of dramatic demographic changes and inequalities in access to science and technology in the U.S. Currently, increases in the percentages of the U.S. population comprised by historical racial/ethnic minorities are not reflected among the U.S. science and technical workforce; this reinforces and exacerbates inequalities among groups. The authors explore inequalities in science and technology by examining trends in the participation of historical racial/ethnic minorities in science and engineering higher education and the workforce over the last two decades.

Embodying the Other As a Self

Based on ethnography of international relief organizations, this contribution explores one aspect of the daily life of aid workers: how emergency contexts bind people together and eventually melt different selves in a temporary, shared body. First, the body is considered as the biological boundaries of human being, with its vulnerabilities. It then becomes the united entity of an emergency team.

What strikes about life in the field is the level of danger commonly accepted by members of the organization (Roth, 2011). Putting yourself at risk, physically and mentally, is a prior condition to humanitarian care. Incidentally, the danger that flows into our perception of aid workers as modern heroes living a life of adventures and self-sacrifice (Dauvin, Siméant, 2002). In concrete terms, kidnapping, rape, beating and robbery are often their reality. While being in the field with the teams, one can observe, even experience, that not only may aid workers put themselves at risks but sometimes also others. Life in a mission creates a high dependence between the staff, relying on each other to ensure everyone’s safety. This dynamic is reinforced by the lack of intimacy and the control over individual privacy. Every day routine is submitted to rules and constraints, particularly for international staff sharing house, office and meal. To a certain extent, these mechanisms of embodying the other operate as well with the local communities.
The Self and the Other are linked in the ethical principle of aid itself. But the way it is translated in the field is still to be described and analyzed. It opens the door to a new understanding of humanitarian bio-politics (Fassin, 2006, 2010; Agier, 2012; Redfield, 2013). Indeed, isn’t the choice of risking one’s life for the others the ultimate way to contest the sovereign power of letting die (Foucault, 1976)?

Are Civil Society Organisations Doing Research?

Legitimate governance of science cannot be achieved by the research community alone. Science governance should take into account issues of broad public concern. Engaging CSOs (civil society organisations) in research design and implementation more effectively could help address these issues.

Publicly funded research has an obligation to produce outcomes beneficial to the public who fund it. In the European Union this obligation is reinforced by a complementary trend toward participatory governance. Momentum is growing to deepen democratic engagement through the participation of citizens, also in the research environment.

Unfortunately, the knowledge base underpinning CSO involvement in research is extremely thin. This knowledge foundation must be strengthened if Europe is to develop a research governance structure capable of accommodating CSO involvement effectively. We need to deepen our understanding of how CSOs are currently participating in EU-funded research - to what extent, in what roles, for what purposes and to what effect...

In a rigorous investigation of unprecedented scope, our study maps these parameters of engagement and analyse their underlying assumptions. The models being identified should allow us to evaluate research outcomes more efficiently and provide contextualized understanding of CSO participation moving forward.

The findings presented in our paper are based on the results of two surveys carried out by the CONSIDER project in 2012. The surveys, which covered all FP7 projects, were aimed at gathering essential information about participation of CSOs in EU-funded research. Survey one was sent to 14,000 FP7 project coordinators and generated 2,959 completed responses. The role of CSOs in research projects is perceived very differently by academic institutions and the CSOs them selves. CSO participation in the FP7 research projects privileges an institutional-dalities and “post-dialogical” devices of sustainable cooperation in the political public place and put in the service of the democratic participation.

The stumbling blocks of the “dialogical” procedures spread in the political public place and put in the service of the democratic participation of the citizens can be limited, by-passed even by the development of mo dalities and “post-dialogical” devices of sustainable cooperation in the public and “private” places, the political spaces and everyday life, with the aim of a both reflexive and constructive democratic governance. The “post-dialogical” way suggests that the “dialogical” devices in the service of the democratic participation are neither a necessary condition, nor a sufficient condition of the mobilization of the actors or the exercise of the citizenship.

The passage of the models and the devices of participation of “dialogical” type in the models and devices of cooperation of “post-dialogical” type allows to envisage sustainable democratic methods of social exchange and governance beyond the public place and beyond the political space, by considering their development and their functioning in the “private” spaces, in particular those of the world of work and of everyday life. The way of the cooperation groups a big variety of approaches and experiences and suggest, beyond the devices of interaction, to question the transformations of the company and the State, as well as their possible evolution towards the forms of “the cooperative company” and of “cooperative State”, major partners, of the company and the State, as well as their possible evolution towards the condition of the mobilization of the actors or the exercise of the citizenship.

Beyond Rational Dialogue: Alternative Modes of Participation

The contemporary global financial and economic crisis has led to a shrinking Dutch welfare state, which encourages citizens to help and support each other on the grassroots level. This paper provides innovative insights in community-based savings and credit mechanisms, called CAF-group. The rationale of CAF-groups derives from informal savings and credit associations in developing countries and migrants in the west. Since the early 1990s, international and local development organisations have learned from this phenomenon and have developed a methodology for self-funded financial groups to improve the well-being of vulnerable people.

Lately, CAF-groups have been successfully implemented in Spain, Italy, Portugal, Hungary, Belgium and the Netherlands. Based on practical evidence in Europe, this paper assumes that participation has a positive impact on human needs such as the generation of significant economic benefits and the improvement of financial management skills. Participation creates self-confidence among CAF-members which in turn leads to feelings of ownership and responsibility for the management and maintenance of their group.

The implementation of self-funded financial groups in the Netherlands is supported by a participatory action research program. This paper discusses the results of this program by exploring whether and how participation of members can improve their well-being based on the capability approach of Sen (1993). Therefore, the capability approach is operationalized and applied to three CAF-groups in The Hague, the Netherlands: (1) men, 40 plus, ethnically-mixed; (2) women, 40 plus, ethnically-mixed; (3) mixed sex, below 30, Aruban ethnicity.

Data is collected through qualitative interviews with members, participatory observations of group meetings and evaluation workshops.

This research provides insights into the operational features of community-based financing mechanisms, here three CAF-group in comparative perspective, and demonstrates how grassroots solidarity economy processes can contribute to the general well-being of vulnerable people in a time of global crisis.

Are Civil Society Organisations Doing Research?

Are Civil Society Organisations Doing Research?

The findings show that online workers celebrated their freedoms and cast the uncertainty inherent in contract work in positive terms, as variety and excitement. At the same time, the lack of structure provided by an organizational context left many of the workers struggling with self-control, resulting in underwork, overwork and ineffective time use. To cope with self-control issues, many workers participated in online peer groups and used sophisticated software tools to track progress and create goals and alerts. Since well-paying tasks were available on the markets only occasionally, some workers felt compelled to attend whenever these tasks alerted, even at night, and structured their daily activities so as to be constantly available. This suggests that for some workers, the freedom of marketized knowledge work may be somewhat illusory: the iron cage of corporate bureaucracy is replaced with a self-imposed digital cage.

In contrast, The Commission on the Accreditation of Programs in Applied and Clinical Sociology (CAPACS) accredits programs. Sociology programs can voluntarily seek accreditation to document their quality and performance. It involves a program self-study and external peer review of the program. Programs must meet curriculum standards in the areas of sociological theory, methods, and practical experience such as an internship. Accreditation provides impartial advice on improving the education of students. The Commission accredits programs at the Baccalaureate, Master’s, and Doctoral Level. This presentation is intended to be an informative one in which both the process of certification for an individual and the process of accreditation for a program will be covered. A closing argument will be made that sociological practice - applied, clinical, and public - can be made stronger if it is populated by practitioners who are certified graduates of an accredited program.

**Urban Land Encouragement and the Greenbelt in the Greater Toronto Area**

In this paper, I look at the implications of the Greenbelt legislation that was introduced in the so-called Greater Golden Horseshoe Area in 2005 and is coming under review now. The main rationale for the main rational for the Greenbelt was the need to (1) protect green space from further land encroachment by Toronto's massive urbanization pressures; (2) to secure the hydrological system that is important for the Toronto region; (3) to safeguard several ecological sensitive areas and its biodiversity. This gets biodiversity. In tandem with this legislation, a second provincial legislations came into place with the purpose to direct growth to already built up areas. While it is hoped that the exurban expansion into the countryside will be alleviated with this policy, the provincial pressures on municipalities to support conditions for growth lead to different local perspectives on what the greenbelt constitutes. This paper looks at the two municipalities - Markham and Barrie - in the “inside” of the greenbelt and Barrie on the “outside” of the belt – and how they negotiate and integrate the physical barrier in their growth agendas, while contributing to further decline in biodiversity. By using these two perspectives, one from the inside, one from the outside, I will investigate how far the greenbelt is seen as a limit to growth, a repository for biodiversity or an important hydrological system. For this, I will look at the few remaining agricultural areas and their relationship to urbanization on the one hand and the protected landscape on the other. This paper draws on elite interviews with representatives in two municipalities (Markham and Barrie), review of the media, and newspapers. It is hoped that the exemplar lessons from it in regards to questions of biodiversity decline and water regime change in the context of urban development pressures where legislation, discourse and social practices are contradicting each other.

**LEICHT, VERONIKA** (Promotionskolleg, Veronika.leicht@fau.de)

**Inclusion and Structural Processes of Young Recipients of “Unemployment II Benefits”**

This paper discusses first findings of a research project that tries to reconstruct biographical developments of young adults who are perceived as especially difficult to “include” – due to their precarious status as recipients of "unemployment II benefits”. I am especially interested in turns of events that appear surprising in the eyes of professionals and of creative “metamorphosis” (Schütze 2001). In terms of biographical analysis a special focus is put on “structural processes” (Schütze 1981) of the young adults. There have been approaches to understand the situation of young people receiving unemployment II benefits in recent studies (i.e. Schreyer/Zahradnik/Götz 2012), but the focus on the biographical context and especially the relationship with relevant professionals is missing so far. Autobiographical-narrative interviews with the target group are being conducted according to Gee’s (Gee 2003), Street’s (Street 1991) and Glaser/Strassler’s (Glaser/Strassler 2010) insights into the interaction with the professionals are gained on the basis of spontaneous narratives of professionals (in this case: counselors in the job center etc.) about the history of their working relationships with clients (Riemann 2000).

‘Covering narratives’ are at the foreground, and for certain experiences it appears that there is no discursive space, neither in the family nor in the social context. This has consequences: inclusion and exclusion are almost inextricably intertwined and occur simultaneously inside and outside the bi-national family; and violence and fear find their way, uncontrollably, barely discussable.

Individual and Structural Causes of Neet - a Case Study of Austria

Compared to other EU member states, Austria has one of the lowest youth unemployment rates, an above-average graduation rate, and a well-developed dual system of vocational education and training. Nonetheless, ongoing structural changes induce labor market conditions that particularly bar less well-educated young people from successfully and permanently entering the labor market. Consequently, between 2006 and 2011 the proportion of Austrian youth (aged between 16 and 24 years) Not in Education, Training or Employment (NEET) leveled off at slightly below ten percent.

In order to investigate the phenomenon of NEET in Austria comprehensively, our research is guided by the following questions: (i) How can the social composition of NEET population be characterized? (ii) What are the relevant key factors that drive young adults on the pathway to NEET? (iii) How long do young adults remain at NEET-status? (iv) What are the key determinants that help overcoming NEET?

Our analyses are based on the Austrian sample census from 2006 to 2011 and we rely on a descriptive analysis as well as on a regression-based path analysis. First results reveal gender-specific risk factors for becoming NEET including early school leaving, poor health/disabilities, involvement in child care activities, and unemployment experiences at the individual as well as an active labor market policy and a broad supply of suitable jobs at the regional level. The heterogeneity of NEET requires individual measures for young people at risk.

Interaction Effects in Nonlinear Models - Testing and Interpreting Core Assumptions of Situational Action Theory

In contrast to the linear regression model, interaction effects—defined as the marginal effect of the moderator variable on the marginal effect of the focal variable on the outcome—are allowed to vary across individuals in nonlinear models. Thus, they do not simply equal the coefficient of the product term variable. Furthermore, even the nonlinear main effects model includes an interaction effect (labeled as structural or model-inherent interaction and/or compression effect) if both covariates contribute significantly to the explanation of the outcome. While some scholars argue that substantive interest is only on the interaction that arises from the product term variable and advocate removing the model-induced interaction from the total interaction effect (e.g. Bowen 2012), others adhere to the interpretation of the total effect (e.g. Ai & Norton 2003). So far, the discussion concerning the idea and interpretation of interaction in nonlinear models didn’t result in a common perspective.

To date, there is a lack of a systematically derived justification for one of the options, based on the combination of theoretical and methodological arguments. In order to overcome this shortcoming, we (1) develop a general perspective on the idea and meaning of interaction in nonlinear models, (2) target at developing an application scheme guiding researchers to the appropriate concept of interaction—either including the model-inherent interaction or separating it from the total interaction effect—and (3) propose statistical tests that allow for an analysis of the interaction effect.

Situational Action Theory, a recently proposed and promising criminological theory (Wikström 2006, Wikström et al. 2012), will serve as theoretical exemplification.

“How People Recount Their Life”: Recording and Analysis of Individual Well-Being over the Life Course

Constructing and structuring life courses through the perceptions of those concerned is a promising approach to the study of life-event histories. Pioneering sociologists have developed the qualitative analysis of turning-points based on subjective quality of life-course narratives (Hareven & Masaoka, 1988); we here present data from a quantitative survey which recorded individual life-event histories together with perceptions of well-being over the life course.

This unique dataset allows to explore the evolution of well-being from birth to age 50 among a representative sample of the French population. Respondents were asked to divide their lives so far into periods, and to explain and interpret these significant phases. They identified the turning points, the general tone of each period and what they saw as the landmark events.

Our initial analyses of this abundant material show how individuals’ life courses are structured around certain factual landmarks, especially landmarks in their conjugal and working lives, and the context of historical events. We also identify how individual characteristics influence the subjective description of well-being: the respondents’ subjective experience proves to be varied, non-stereotypical and not readily predictable.

Having established some of the relevant characteristics of the declared turning points, we then explore the changes in reported well-being from one period to the next within individual life courses. To explore the perceived life courses we apply Optimal Matching Analysis to draw out their main features and establish a typology of well-being trajectory types.

Large-Scale Dissemination of Small-Scale Renewable Energy Technologies in Developing Countries

Access to clean energy services is considered as a requisite for any development in rural places of developing countries. In remote places, decentralised renewable generation of electricity has been considered for a long time as a desirable alternative to rural electrification with the extension of the grid. A number of alternative characteristics for cooking and heating have been designed and promoted by NGOs. But progress in the dissemination of these technologies has been slow. This paper will examine some of the myths linked to rural access to energy and how they have been impeding the implementation of renewable energy projects.

The dissemination of small decentralised clean energy technologies in developing countries seems often analysed in the international development literature in terms of barriers to be overcome or institutional gaps to be filled. Considerable efforts have been put in subsidising clean energy technologies with most of the time limited impact, while other technologies like the mobile phone have spread in Africa quickly.

This paper will determine how a more dynamic approach could help to analyse the way actors interact and build relations around new technological products, so to understand how their dissemination could be accelerated. Technologies have their own life and need to produce a specific context to thrive (Latour, 1996). Markets are created by policies and institutions; a series of stable rules embedded in organizations or networks have to emerge to make them sustainable. Clean decentralised energy technologies are “new” in the sense they need a new environment to thrive compared to established centralised (and often polluting) technologies.

This paper will finally analyse how innovative business models, but also adapted institutions and regulatory frameworks for private public/partnerships are contributing to accelerate the diffusion at a large scale of technologies that can now be considered as mature.

LEMAIRE, XAVIER* (University College London, x.lemaire@ucl.ac.uk)

Urban Planning and Sustainable Energy Transition in Sub-Saharan African Countries

Urbanisation rates in Africa are the highest in the world and in most sub-Saharan countries energy service delivery is inadequate to keep up with the needs. The situation is often dire, with cities scarcely able to provide for their existing population, let alone allocate resources to minimise the longer term environmental risks facing them such as global warming, leading to on-going crisis management and potentially spiralling declines in welfare and economic growth.

Inadequate access to electricity and limited mobility because of deficient public transports are common in major part of African cities, notably within informal settlements. The demographic trend in sub-Saharan Africa and massive migration from rural to urban areas can only aggravate difficulties and deepen the inequalities between the middle class and the poorest relegated in the margins of urban cities.
Strategies to integrate energy issues in urban planning could be built to mitigate these trends, by promoting energy efficient housing, better spatial planning and public transport and also access to energy by alternative electrification approach. This paper presents a research on organisational dynamics and constraints faced by sub-Saharan cities; it surveys capacity constraints in municipal departments and analyses the gap between policies and implementation of sustainable energy transition measures. This on-going research relies on case studies in Uganda, Ghana and South Africa.

**National-Ethnic Identities Of Leaders Of The German Minority In Northern Poland**

The main objective of this report is to present the national and ethnic identities of leaders of the German minority organizations in the context of their activities after 1989. The study is an in-depth case study of social construction, including structure and operating principles, considering internal and external interactions and the dynamics of this system was carried out. The empirical analysis of the leaders' identities are based on the main theoretical concept of ethnic identity that simultaneously constitutes a synonym of ethnicity by John Milton Yinger. The subject of this report includes formal institutions (associations), represented by formal and informal leaders of German minority groups in selected areas of northern Poland. The sample contains associations that operate in Pomerania, a part of Kujawsko-Pomorskie voivodship, the Warmia-Mazury voivodship and the northern part of the Wielkopolska voivodship. The location of the associations coincides largely with former province of West Prussia (1878-1920) and the territory of the former Second Free City of Danzig (1920-1939).

**Cross-National Comparative Lifestyle Research: Theoretical and Methodological Considerations and a Two-Country Illustration**

In this presentation, we offer a comparison of cultural stratification in France and Israel, with a specific emphasis on the association between the social field and the cultural field. Analysis of cultural stratification is interested in the degree to which individuals from different social groups are able to take part in it and develop a meaningful relationship with it. In turn, such a relationship affects life chances in the realms of education, occupation, and social status. So, analysis of cultural stratification is a powerful tool for analyzing social stratification systems and to better understand the similarities and the differences between countries in this realm.

Research on this topic has developed significantly, both empirically and theoretically, these last fifteen years, but relatively little attention has been granted to research that adopts a cross-national comparative approach and that asks whether patterns of association are similar in different national contexts. Such a comparative perspective will be particularly useful to test theoretical predictions regarding levels of cultural participation and their correlates in societal settings characterized by different social structures, cultural policies, market structures, and historical traditions.

We think in this contribution as joining a discussion about lifestyle spaces and cross-national differences to be complemented and continued with similar analysis in other countries. Since research on cultural stratification focuses almost exclusively on European and North American countries, the comparison between France and Israel is potentially very revealing. As all cross-national research entails methodological complexities, we treat the comparison between France and Israel with caution. The general picture shows that cross-national comparison helps us to understand and further theorize the way lifestyle spaces are linked with social positions.

**Contested Multiculturalism in Germany? - the Debate on Circumcision**

In the words of Angela Merkel multiculturalism has “utterly failed” in Germany (16/10/2010). Although the former German President Christian Wulff had stated “Islam also belongs in Germany” only a few weeks earlier (03/10/2010) the debate seemed to be settled. In contrast to other European countries adopting official policies of multiculturalism, German politics did not strive to incorporate multicultural elements into policy making or the legal system. However, with this attitude the German secular state will face challenges with respect to the religious sphere. The 2012 medial outcry due to ceremonial circumcision recently demonstrated this ongoing societal discussion.

In this case, right-wing politicians as well as a coalition of secularist actors, and children’s rights groups opposed circumcision, an essential ritual practice for the Muslim and Jewish religious communities. As a result of this debate, an exception was introduced into the German Civil Code that made circumcision of boys for religious reasons legally possible. After this step the mediatic attention decelerated and left behind what can be seen as an attempt to introduce multicultural elements in an otherwise mostly secular jurisdiction.

My sociological take on the debate goes even beyond this description. I argue from a point of social theory that takes into account the ‘boundaries of the social world’ (Luckmann 1970). From this perspective it becomes clear that it was necessary for secular politicians, jurists, and participants of the debate to adapt the jurisdiction to the reality of the religious communities living in Germany. This included the characterization of circumcision as a ‘right’ to ‘protect’ children’s rights into a means of their symbolic inclusion into the social sphere of a religious community. In my presentation I will elaborate on this theoretical approach as well as its implementations for the analysis of the debate and the concept of multiculturalism.
From Foosball Table to Beer Crate – Ordering Everyday Worklife in an Internet Agency

Internet advertising agencies are production oriented service companies who mainly develop software applications for their customers, like advertising ban-
ner or homepages. They are an instructive example for new forms of organizing working processes in an exceedingly complex working field. By bringing in empirical
data from an ethnographic study I will show that in spite of this complexity, employees are able to finish their work successfully. This is possible because of practices that are not visible. The thing that enters into these practices and of a special configuration these practices carried out: masculine software developer.

The argumentation will begin with introducing theories of practices as an in-
structive theoretical “tool” to analyze organization and materiality, secondly basic points of the conducted ethnography will be presented, following by empirical material from the field. I will show how crates of beer and a foosball table are important parts of the practices that carried out software developer and how these practices are interlinked with practices of doing masculinity. The so pro-
duced configuration can be described as a main agent in the field – in addition to account and creative. I will conclude that the ongoing practices of differentiating, e.g. differentiating the software developers from the creatives, “guarantees” the social order in the observed field.

Involved Fatherhood: Source of New Gender Conflicts?

This paper, based on interviews with 36 couples, focuses on fathers who take parental leave or reduce their working time in favor of participating in family work. Although looking at fathers in family work, it tries to understand the complex dynamics of changing gender relations in the private sphere. Involved fatherhood does not only contribute to more gender equality, it is also a potential source of new gender conflicts. The hegemonic cultural construction of masculinity does not only define what men do not do, also that involved fatherhood must be accomplished against the hegemonic pattern, but that, for involved fatherhood becoming an unquestioned routine, the father’s uncommon attitude to occupational career must be shared and supported by the mother. Otherwise the man’s abstention from career ambitions is a permanent source of conflict.

Another potential source of conflict is who is entitled to define the standards and defined women as mothers and housewives. The the difference based gen-
eral order was established which assigned public and domestic power to men and defined women as mothers and housewives. The the difference based gen-
der order developed as the neopatriarchal authority receded. Formal and legal
dependence was reduced with women’s votes, legal reforms for women’s own rights of property and decision in the family. The worldwide spread of Fordist/Toysint model production established men as core workers and women as house-
wives. Emerging welfare states institutionalised this division of labour with the breadwinner-housewife model. The varieties of gender regimes have evolved in the context of the different welfare state trajectories and the various paradigms of mass production as Fordism and Toyotism, but they also were influenced by the diverse liberal, social democratic or conservative political culture.

The difference based gender order has been eroding by women’s educational advancements, by women’s movements and the resulting legal and social reforms as well as by postfordism and globalisation and flexibilisation of employment. Postfordistic flexible gender order is emerging which is based on a pluralisation of gender and gendered employment and life forms; as various forms of sexuality have become acceptable and men, the integration of women into the labour market and increasing flexibilisation and global mobility of employment. The impact of the diverse forms of gender regimes on these transitions will be investigated.

Homeownership, Social Policy, and the Crisis: How Austerity Policies Fortify Property-Based Private Welfare Systems

It has been argued that the nexus of increasing homeownership rates, accumu-
lation of housing wealth, as well as financialization of housing markets have facilitated the emergence a social policy model in which households and fami-
lies draw on their home as a source of private and collective security, especially at a later stage of the life course. If ever there was opportunity to reinforce such a property-based welfare system, it is the ‘black swan’ financial crisis and its consequent backlash on public budgets, the rationale being that the threat of state bankruptcy and economic breakdowns has substantially constrained the various institutional and political forces working against reforms. To investigate whether and under which conditions policy-makers have acted on these opportu-
unities, be it due to ideological beliefs or actual external pressures, this paper applies a qualitative content analysis of the structure of austerity measures in five distinct European countries (Netherlands, England, Germany, Sweden, Italy) in the period 2009-2013. The main contention here is that if recent reforms or policy proposals have neglected the housing domain altogether, or even more revealing, if housing policy reform has targeted the social/public rental sector (including all kinds of rent allowances) but not the owner-occupied sector (e.g. through keep-
ing tax advantages and allowances in place or even implementing new ones), we might see a more permanent policy transformation towards a property-based welfare model that postulates the availability and utilization of private housing wealth. On the other hand, social policy research has continuously shown that, depending on welfare regime and timing, endogenous pressures are translated differently into reform processes across countries. Hence, with its comparative approach this study also seeks to contribute to the discussion on whether emer-
gencies and crisis situations lead to the convergence of capitalist and social policy models or whether long-standing regime differences persist nonetheless.

La Fabrique De L'autonomie

Dans le contexte de la mise en œuvre volontariste d’un projet utopique, con-
stuction d’un nouveau quartier de ville constitué de mixité, (...) de solidarité et d’innovation sociale », à l’initiative d’une université et de collectivités locales, un « groupe-ressource » pilote les « commissions de mutualisation », lieu incontournable des prises de décisions, de positions ou encore de pouvoir des acteurs. On proposera l’analyse de l’agenda de ce groupe-ressource, les thématiques abor-
dées, les situations et positions, les arguments, les processus de décision.

Les sujets abordés lors de ces commissions vont de la signalisation à l’animation commerciale du site mais sont surtout pour nous l’occasion de questionner les tensions entre les notions de dépendance et d’autonomie. Dernièrement le débat autour de la vente de frites par un « food truck » sur le parvis de l’Université a fait évoquer subtilement le débat entre une « politique de la pitié » (ARENDT, 1967) et le paternalisme des déci-
deurs, les commissions de mutualisation peinent à s’inscrire dans une conception capacitaire des individus et creusent un fossé avec les intentions originales du projet : penser le quartier par et pour les usagers.

nationalism and diaspora advocacy redeem these practices by revealing them to be two rather than one-way flows of socio-political influence and econo-cultural goodwill. Increasing migration from traditionally receiving nations such as Canada and Australia has also hastened the realization of diasporas as assets in the service of national interests. The second body of literature can be loosely grouped under the banner of soft power research. Perhaps spurred on by China’s adoption of Nye’s notion of soft power in recent times, these focus on the management of how one’s own nations is perceived by foreign publics and other nations and include literature on nation branding, national reputations and public diplomacy. Besides the available quantitative data with in-depth qualitative data. The research aims to provide an accurate description of the everyday life's routines, in the consumption practices, in the capability of new situation adopting best practices. Specifically, we concentrate on the changes in the everyday life's routines, in the consumption practices, in the capability of reducing the negative effects of economic crisis, and to overcome it without weakening the society. The analysis has been carried out to enrich available quantitative statistical data, in-depth qualitative analysis has been carried out to enrich available quantitative statistical data, in order to identify possible ways to promote and support best practices able to reduce the negative effects of economic crisis, and to overcome it without weakening the social bonds and, at the same time, promote inclusive, innovative and secure societies. The research aims to provide an accurate description of the everyday practices used to adjust to the current economic crisis, thereby enriching the available quantitative data with in-depth qualitative data.

Young Italians Surviving Strategies In The Social and Economic Crisis

The paper intends to present some preliminary results of a research we are carrying out in Italy to investigate the impact of social transformations, spawned by the 2008 financial crisis, on young people and their working conditions. The research’s main goal is to highlight, thanks to the methodological tools of sociology, not only the crisis’ possible outcomes but also how social actors cope with the new situation adopting best practices. Specifically, we concentrate on the changes in the everyday life’s routines, in the consumption practices, in the capability of negotiating the path of adaptation and belonging. The main goal is to highlight pathways, critical points, tactics and strategies adopted to cope with the economic crisis. The research will also point out the impact of the crisis on everyday practices, on the methods of planning for the future, on the interpersonal relationships. The main research hypotheses concern the influence of cultural capital on the different personal and family strategies. Cultural capital, gender and ethnicity seems to be the most relevant variables to understand differences and abilities to cope with this very difficult social and economic context. In-depth qualitative analysis has been carried out to enrich available quantitative statistical data, in order to identify possible ways to promote and support best practices able to reduce the negative effects of economic crisis, and to overcome it without weakening the social bonds and, at the same time, promote inclusive, innovative and secure societies. The research aims to provide an accurate description of the everyday practices used to adjust to the current economic crisis, thereby enriching the available quantitative data with in-depth qualitative data.

The Dimensionality Of Immigrant Adaptation In Britain: An Analysis Across Generational, Ethnic, and Gender Lines

Many theories have been put forward to explain the long-term experiences of migrants and their descendants (here termed adaptation), from classical assimilation theory, to multiculturalism and the 'neo-assimilation' theories of the 'new' straight-line assimilation theory and segmented assimilation. These hold different assumptions as to the concepts that ought to be used to qualify the migrants' experiences, as well as the paths of adaptation, i.e. the number of dimensions that the immigrant settlement ought to take, but are not always clear as to which they are, and how they link together. Moreover, current research tends to focus more on the individual analysis of various dimensions of adaptation (socio-economic, linguistic, identity, religious affiliation and family formation practices, spatial (segregation), or political (electoral and non-electoral participation) rather than an assessment of the actual number of dimensions of adaptation present across immigrant generations, which has important ramifications for understanding inequalities in the adaptation process across immigrant groups. Research on immigrant adaptation in Britain is no stranger to this trend.

The aim of this paper is to remediate to this issue by analysing recent British data to explore the dimensionality of adaptation that underlie the lives of current and their ancestors in Britain and their descendants. The determination of the dimensionality will follow the work by Bean et al (2012) and use factor analysis to determine the underlying number of factors behind variables deemed to be representative of the immigrant adaptation experience and assess the structural equivalencies in the factor analyses across gender, ethnic, and generational lines. The analyses will provide an empirical evidence base to: (1) assess the extent of inequalities in adaptation across gender, ethnic, and generational lines, and (2) examine the extent to which the uncovered dimensions of adaptation in the British context match existing theoretical views.

Communities of Sense and the Borders of Art and Politics: Graphic Art, Moving Images and Dancing Bodies in Urban Periphery of Rio De Janeiro

Abstract Text:

Duque do Caxias is a city located in Baixada Fluminense, a peripheral area of the Rio de Janeiro state occupied by many poor northeastern migrants attracted by work opportunities in the emerging 1940s and 1970s Brazilian southeast. Transformed into national security area in 1971 by military coup d’état and administered by mayors chosen by the national government until 1985, the Caxias of today is visually experienced through massive images of floods, garbage and violence. Overshadowed by the beauties of the cidade maravilhosa (marvelous city), the neighbor city of Rio de Janeiro, Caxias is, in the words of its youth, “a steamroller crushing all their dreams for generations”[1]. Against the trend we have outlined, a new scene erupts in 2000s Caxias: a youth who perceives the city as absolutely cinematic and responds visually to this finding.

This study aims to approach the intertwining of visual art, politics and everyday life by presenting and discussing the production of cultural activist groups contesting established frameworks of filmic and photographic production in "Cidade Maravilhosa da Baixada" that promotes audiovisual productions and free film screenings that end up in large dance parties, widely advertised by posters displayed throughout the city and also shared on the Internet. Our focus is the visible surface of exchange created between the posters, the movies screened, their film productions and the dancing bodies performing on the floor.

Based on Jacques Rancière’s concept of partage du sensible, we address these graphic art, moving images and performances as a montage, a framing of a controversial world within the given world by the clash of heterogeneous elements that produce new connections, new feelings, new visual syntheses in a new sociopolitical mode of consensus, or otherwise, on dissensual supplements that displace the territories and borders of art and politics.

User Participation in Welfare Service Management – Possibility of Authentic Argumentation Between the Welfare Service Users and Welfare Professionals

User participation is an age-old piece of good practice advice for human services. In Hong Kong, user participation in service management and planning is mandatory by welfare service organizations that receive public funding. Also encouraged by consumerist impetus, many welfare service organizations in Hong Kong include service users in their governance structures to inform the making of management decisions. However, critics often have doubt on the possibility of authentic argumentation between the welfare service users and welfare profes-

In Cape Town, where the persistence and augmentation of apartheid geography most notably temporary relocation areas (TRAs) on the urban fringe. How can a gaps that stand to benefit from further research.

Forces, the paper identifies controversies of particular relevance and knowledge Gen X, Gen Y, Millennials, and post-Millennials. Each of these generations are said on cross-border communities. Effective cross-border engagement when local communities are confronted with cross-border communities but also provide the beginnings of a model to facilitate collaboration, coordination, and cooperation are a function of these communities’ capacity to reduce the transaction costs that differing policy regimes on either side of the border impose. Scrutiny of this hypothesis, however, requires us to control for variation in a local community’s interaction. Two phenomena over the past 20 years provide for such variation: the end of the Cold War resulted in new borders that now divided communities that had hitherto functioned as one; the security measures in the aftermath of 9/11 had a similarly deleterious effect on the way cross-border communities functioned. Narva/Ivangorad across the Estonian-Russian border is an example of the former; Stanstead/Derby Line across the Canada-United States border an example of the latter. To explain variation across each case study’s outcomes, the paper uses collective-efficacy theory to measure each community’s response as a function of existing networks, supportive institutions, spatial dynamics, leadership, rate of change, economic cost, and organizational capacity. The findings not only disentangle determinants of collective efficacy among cross-border communities but also provide the beginnings of a model to facilitate effective cross-border engagement when local communities are confronted with events beyond their control that give rise to national policies with adverse effects on cross-border communities.

The world over local communities broach international boundaries. The borders of the Western liberal-democratic system of states have a differentiating effect on policy regimes. This article hypothesizes that the degrees of collaboration, coordination, and cooperation are a function of these communities’ capacity to reduce the transaction costs that differing policy regimes on either side of the border impose. Scrutiny of this hypothesis, however, requires us to control for variation in a local community’s interaction. Two phenomena over the past 20 years provide for such variation: the end of the Cold War resulted in new borders that now divided communities that had hitherto functioned as one; the security measures in the aftermath of 9/11 had a similarly deleterious effect on the way cross-border communities functioned. Narva/Ivangorad across the Estonian-Russian border is an example of the former; Stanstead/Derby Line across the Canada-United States border an example of the latter. To explain variation across each case study’s outcomes, the paper uses collective-efficacy theory to measure each community’s response as a function of existing networks, supportive institutions, spatial dynamics, leadership, rate of change, economic cost, and organizational capacity. The findings not only disentangle determinants of collective efficacy among cross-border communities but also provide the beginnings of a model to facilitate effective cross-border engagement when local communities are confronted with events beyond their control that give rise to national policies with adverse effects on cross-border communities.

This paper investigates how the armed forces might optimize the skillset of the incoming generation of soldiers. Generational cohorts have widely been associated with distinct attitudinal structures and behavioural patterns: Baby Boomers, Gen X, Gen Y, Millennials, and post-Millenials. Each of these generations are said to encompass generalizable proclivities and attributes. This paper surveys the vast body of literature on generational theories which it contextualizes in wider social trends on diversity and technological innovation. With respect to the armed forces, the paper identifies controversies of particular relevance and knowledge gaps that stand to benefit from further research.

The South African state has delivered more than 3 million formal houses since the demise of apartheid. Yet the same period is marked by a nearly ten-fold increase in the number of informal settlements, the gradual peripheralization of these areas, and the introduction of novel forms of socio-spatial containment, most notably temporary relocation areas (TRAs) on the urban fringe. The impact is said to threaten mainly poorer countries, may in time encourage changes in the way the state oversees delivery and allocations? This paradox is particularly acute in Cape Town, where the persistence and augmentation of apartheid geography is generally accepted in the urban studies literature. In this paper, I examine relocation from informal settlements in Cape Town in the context of emergent forms of socio-spatial confinement. I relate the proliferation of post-apartheid forms – state-provisioned formal housing, rental stock for the working poor, TRAs, and others – to a broader process of dispossession and confinement. Drawing on a year of ethnographic fieldwork in relocation sites across the Cape Flats, I argue that post-apartheid urban relocations can be characterized as dispossession through delivery. Rather than understanding delivery/upgrading and dispossession as antitheses, it is precisely through formal housing allocation that segments of the damage can be discounted to zero. Socially, informal settlements were targeted and removed en bloc – what I call indiscriminate dispossession – post-apartheid removals entail a process of selective dispossession. Under the rubric of “meaningful engagement” and “participatory upgrading,” the City portrays themselves as legitimate representatives are defined as “deserving” and gain formal housing, while contending groups are defined as “undeserving” and relegated to “alternative accommodation” in TRAs and other novel forms of socio-spatial confinement.

The South African state has delivered more than 3 million formal houses since the demise of apartheid. Yet the same period is marked by a nearly ten-fold increase in the number of informal settlements, the gradual peripheralization of these areas, and the introduction of novel forms of socio-spatial containment, most notably temporary relocation areas (TRAs) on the urban fringe. How can a benevolent delivery regime coexist with forced relocations, shack eradication, and the introduction of veritable refugee camps administered by the same municipal state overseeing delivery and allocations? This paradox is particularly acute in Cape Town, where the persistence and augmentation of apartheid geography is generally accepted in the urban studies literature. In this paper, I examine relocation from informal settlements in Cape Town in the context of emergent forms of socio-spatial containment. I relate the proliferation of post-apartheid forms – state-provisioned formal housing, rental stock for the working poor, TRAs, and others – to a broader process of dispossession and confinement. Natural Disaster Mitigation, Public Opinion and a Propensity To Discount The Future

Despite the growing urgency of scientists’ warnings, much of public opinion remains wary of major expenditures and life style changes to mitigate future dangers from climate change. The impact is said to threaten mainly poorer countries, off the radar of wealthy polluters. Economists claim there is a universal human desire to discount the future, decreasingly valued the more distant. The worst dangers will strike many decades in the future and, even if they last for centuries or millennia, much of the damage can be discounted to zero. Sociologists point to the greater salience of local and manifest experience over seemingly abstract and uncertain models and long term global scenarios, but also note that a cultural and social shift to short term values is recent and not universal or irreversible.

A recent increase in manifest and unpredicted climate disasters, which have already struck both rich and poor countries, may in time encourage changes in public perception and a greater willingness to act. Scientists are now focussing on the effect of small rises in average global temperatures on the frequency and intensity of extremes in general, and on the measurable probability of them having already contributed to specific droughts, floods, storms and fires.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
A nationwide Nielsen survey of 7500 Australians, commissioned by the authors, gives some indication of changing values. Williness to contribute ‘substantial but affordable sums on a regular basis’ for mitigation of future risks from natural disasters was systematically greater in younger cohorts and for those with direct or indirect experience of them. It varied little between risks ‘in the next two years’, ‘during your lifetime’ and ‘in centuries to come’, suggesting no progressive discounting of the future.

The Growing Unpredictability Of Climate Disasters - Implications For Effective Responses In An Unequal World

Locally unprecedented and unpredicted natural disasters are already becoming manifest, and will increase in frequency and intensity, around the globe, as climate change advances.

Poorer countries, with the least resources with which to respond, are often the most exposed to droughts, floods, storms, wild fires or rising seas, but there is no universal correlation between inequality and such vulnerability, which can strike anywhere, as hurricane Sandy and the flooding of the Japanese nuclear plant have demonstrated. Accelerating climate change, shifting weather systems and poorly understood tipping points undermine the predictability needed for preparedness by even the wealthy, and few nations have the resources or experience to respond quickly without help or advice.

Transnational assistance can be equally inadequate or inappropriate as illustrated by the introduction of disease into Haiti by UN forces or by the lack of preparedness for radiation effects on US personnel assisting at Fukushima.

The mechanisms for rapid trans-national or local to local assistance are as yet undeveloped and Naomi Klein and others have demonstrated the dangers of external aid, when it ignores local knowledge, brings in highly paid expatriates and foreign profit making companies that undermine or displace local activities.

On the other hand there has been too little attention to the potential in empowering and channelling aid to local bodies, and facilitating direct communication between localities around the world which have had similar experiences.

Notwithstanding the theoretical debates about multicultural education, the challenge of bridging these social boundaries has remained the same. In fact, as it became evidenced during the 2011 social protest (again, in Israel but also elsewhere), for a moment it was as if from ‘bottom up’ has emerged a new vision of society. In this new vision, the challenge for society was to rebuild its unity and solidarity against the division. In education, this implied breaking with the ‘old’ divisions and replacing them with a more cohesive educational vision. In this paper we ask to further explore this vision by interviewing educators (mainly headmasters and teachers) on their conception of multiculturalism in education. Particularly, the research will focus on the Negev area, where we will be tracing the relation between the structural, spatial segregation of education (and habitat) and the possibility of and interest in multicultural education.

Conceptualizing the Bereavement Hierarchy

Abstract submitted to the RC01 Armed Forces and Conflict Resolution. Session: Death in the Military: Towards a New Paradigm?

Scholars of the syndrome of casualty sensitivity exclusively analyze public opinion and its impact on policies. A few studies argued that the mode of recruitment largely determines the outcome of collective actors from different social strata. Some studies argue that the military service and the activities of military personnel shape the character of the bereaved family to a larger extent than other social institutions. In education, this implied breaking with the ‘old’ divisions and replacing them with a more cohesive educational vision. In this paper we ask to further explore this vision by interviewing educators (mainly headmasters and teachers) on their conception of multiculturalism in education. Particularly, the research will focus on the Negev area, where we will be tracing the relation between the structural, spatial segregation of education (and habitat) and the possibility of and interest in multicultural education.

lated to health status and labor market activity); the association between house-
hold debt and the subjective experience of economic hardship; and cross-county
variations in the relationship between household dynamics and indebtedness.
The analysis is carried out using the first and the fourth waves of the Survey of
Health Aging and Retirement in Europe (SHARE). The panel structure makes it
possible to study changes in late life (marital status, labor market, and health)
and their relationship to household debt in 13 European countries and in Israel.
Preliminary findings reveal that household debt is widespread even in advanced
ages; it is not limited to households that are asset poor; but it is systematically
related to changes in health and marital status. Large country differences exist in the magnitude of household debt. We also find com-
plex effects of country context on household level relationships.

Trade Unions and Whistleblowing: Can They Do More Than Protect
Their Members?
The role of trade unions in relation to whistleblowing is frequently seen as
reactive and defensive. They often have limited resources and regard their prime
function as being to advise potential whistleblowers and to represent both those
who feel they have been victimised for reporting concerns and members who are
alleged to have engaged in wrongdoing. Research conducted by Public Concern
at Work and the University of Greenwich in the UK suggests that trade unions are
good at performing these tasks but are not particularly effective in ensuring that
allegations are investigated and wrongdoing rectified. A more proactive and collective role for trade unions would be to negotiate
whistleblowing policies and procedures at the workplace where employers were
willing to do so. Research conducted in several countries consistently shows that
whistleblowers normally report their concerns internally first and that line man-
gegers are often the first port of call. However, if this manager is not appropriate
for any reason (for example, is the subject of an allegation or is regarded by the
whistleblower as unsympathetic/antagonistic), the question arises as to whether,
for trade union members, a lay or full-time official should be regarded as a suit-
able alternative to approaching higher management.
This paper will examine the existing data about how trade unions function in
relation to the whistleblowing process and will consider the ways in which they
could use their collective strength to play a more positive role in dealing with
alleged workplace wrongdoing.

Natural Surveillance: Google Trekker and the End of Wilderness
Natural Surveillance: Google Trekker and the End of Wilderness
For individuals seeking refuge from the increasingly monitored spaces of ur-
burbanized “control societies,” the idea of untamed wilderness has long held a special
appeal. Figuring prominently in various strains of ecological writing and literary
romanticism, wilderness has also been central to various indigenous belief sys-
tems in the Americas, Australia, and New Zealand. In these contexts, wilderness
has often been valorized as an aesthetic, moral, and national resource of the high-
est order, a sacred place for the regenerative experience of living “off the grid” of
temporary techno-culture.
However, new surveillance technologies are rapidly taming the wild, bringing it
under the watchful eye of the governments, corporations, and private individuals
who want to minimize risk and uncertainty in any environment—even where an
element of risk has long been considered a virtue. Indeed, the rapid proliferation
of capturing technologies such as UAVs, night-vision, CCTV, GPS and other forms
of remote sensing is challenging long-held conceptions of nature as refuge. As the
surveillance assemblage expands into the wild, finding an unobserved, or unob-
servable, spot will become increasingly difficult.
While Facebook’s Mark Zuckerberg dreams of an “Open Planet” of total trans-
parency, Google is bringing its “Streetview” concept to nature with “Google Trek-
ker,” a backpack mounted data collection apparatus that is designed to illuminate
the hidden landscapes of the natural landscape. With satellite cameras, drones,
and now Google Trekker looking over our shoulder even on the highest moun-
tain peak, will we continue to imagine the regenerative power of wilderness in
opposition to the enervating qualities of post-industrial life? Is desert solitude a
bygone fantasy? By putting Google’s Trekker into dialogue with concepts of rup-
ged individualism, wilderness, and frontier autonomy, this paper will explore the
implications of “rural surveillance” phenomenon for national imaginaries and
eco-consciousness generally.

The Unequal Structuring of Healthcare Choice: Perceptions of
Australian Healthcare Consumers
The notion of choice in healthcare is a cornerstone of many western developed
health policy settings. In the Australian context, choice has been integral to policy
initiatives encouraging Australians to take out private health insurance (PHI). Pro-
moted by policy makers and marketed by the health insurance industry, choice
of specialist medical provider, hospital, and even complementary and alternative
services has become highly valued. This private system coexists with a universal
health insurance scheme for medical care and public hospital provision. Howev-
er, despite the emphasis on healthcare choice, there has been little exploration
about to the factors shaping, and unequal structuring of, healthcare choice.
Drawing on Bourdieu’s theoretical framework of intersecting forms of capital
(cultural, social, symbolic, economic, and spatial) we explored the structuring of
choice by Australian consumers using indepth interviews. Purposive sampling
ensured a diversity of perceptions and experiences of healthcare choice, as well
as in capacity to draw on healthcare capital when exercising choice. Interviews
explored use of healthcare; purchase and use (or not) of PHI; social networks and
information sources drawn upon when making healthcare choices. Interviews
were thematically analysed.
We found that people have an unequal capacity to make choices in health-
care. Complex, interlinked forms of capital contribute to the unequal structuring
of choice. While people’s choices are most clearly enabled or constrained by eco-
omic capital and education, economic capital is strongly shaped by social rela-
tionships and networks, geographic location and interactions with healthcare pro-
viders. Choice represents an individualised rather than communitarian approach
to healthcare service provision. Therefore the prioritising of individual choice in
healthcare policy and markets contributes to the maintenance of unequal health
outcomes across the population.

China in the British Imaginary: Coverage of Beijing Olympics in the
UK National Press
Categorised as ‘mega-events’, the Olympics have long been an incredibly elab-
orate media spectacle in the guise of a purportedly idyllic and ostensibly shared
global story, which uniquely reveals about host cultures, carrying real implications
for international relations and domestic interests. Such a rich cultural repertoire
shared in the media discourse becomes part of the popular imagination that con-
stitutes the collective memory. It is in this sense that British media coverage of
Beijing Olympics has shaped how a distant culture is discursively constructed
and geopolitically defined. This article will answer the following questions:
-Which themes are focused on in the British press coverage of Beijing Olym-
-How does the character of reportage vary between different titles?
-Which is the general image of China that emerges from the coverage to be
analysed?
This paper looks at how does media narratives of Beijing Olympics relate to the wider context of an
evolving repertoire of Orientalism in a discursive power struggle in the global-
ised context?

The Trend of Educational Inequality in China during 1940 - 2011
Because Hukou system has been existing for long time which resulted per-
sistent and severe inequalities between urban and rural residents, including
educational inequality. In today’s China, urban-rural segmentation is the most
influential factor affecting educational inequality, and educational gap between urban and rural population is much larger than of class, race, gender and nationalities. This paper, based on national survey data of 2006, 2008 and 2010, examines the change of the educational inequality between urban and rural residents over time. It concludes that educational gap between urban and rural children has been continuing to enlarge in spite of rapid educational expansion.

A New Cycle: Understanding the Current Life Course of Rural Families in Western China
Past research has proposed that with the urbanization process, Chinese agriculture is faced with prospects of industrialization and mechanization. However, rather than such transitions, we see more evidence showing a lack of labor and capital investment in agriculture in western China. This article investigates what the economical meaning of agriculture is to the rural families, and describes a generational division of roles apparently stemming from reciprocity. Using logit models and qualitative findings combined, we show that (1) agricultural income is insignificant to rural families compared to what they may earn elsewhere, so only the less capable part of labor remains home and they will not spend much time and capital in agricultural management; (2) a part men, ages in which their parents work in the city. We call this pattern the ‘new cycle’ as opposed to the peasants’ traditional life course which dissolved in the tension between rural-urban duality and globalization.

Gender and Power in the Primary Teaching Workplace: Women’s Fight Against Male Power in Taiwan
This paper aims to explore how gendered power manifests in the primary teaching workplace with reference to the context of the teacher surplus issue by analyzing the responses of the teachers in the campaign against male power. In addition to official statistical data, the data presented is derived from an ethnographic case study carried out in a primary school in southwest Taiwan. Non-participant observation and semi-structured in-depth interviews are the main sources of data collection. The non-participant observation included shadowing six class teachers for a week; and structured interviews were conducted individually with eight teachers, including the six teachers shadowed, one male class teacher and one female subject teacher for a gender balance.

The analysis of data from official statistics and state publications identified the seriousness of and impacts from the teacher surpluses in the Taiwanese context and in the case-study school. The research evidence suggests the image of female teachers as a silent majority in their workplace. However, while confronting difficult challenges rooted in the teacher surplus issue, women’s image may be changing as empirical illustrations of women displayed their capabilities and dedication to fight against the male principal for their ideals. When compared to their female colleagues, the involvement of male teachers in the campaign seemed passive and obscure. More importantly, this campaign process calls attention to gendered power within this highly feminised teaching workplace and reflects the complexities of gender and power; that is, the relations between gender and power exist not only between men and women but also between men. As argued, female teachers seemed to suffer more negative experiences from the principal’s leadership or from the power relations, while male teachers were supportive and reliable allies of their principal to share power and to trust because of their gender.

Income Inequality, the Welfare State, and Economic Growth Across Time and Space
Sociologists, economists, and political scientists have studied the association between economic growth and income inequality, although with different foci. Some scholars have primarily studied the economic implications of inequality, while others have studied the distributive effects of economic growth. In both literatures, the welfare state is implicated as a key mechanism although with different functions. Some researchers posit that high inequality generates public support for social welfare which ultimately slows economic growth. At the same time, researchers contend that stronger economies with faster growth have greater capacity to reduce inequality via the redistributive effects of the welfare state. Yet, to date, no research has simultaneously tested these theoretical propositions. This paper examines the relationship between income inequality and economic growth through non-recurisive structural equation model by examining a cross-national, longitudinal dataset. We find partial support for both research traditions.

Parents’ Commute to Work and Children’s Social and Emotional Wellbeing in Germany
Based on a nationally representative sample from the German Socioeconomic Panel Data (SOEP), we examined the relationship between parents’ commute to work and five domains of child emotional and behavioral problems, using SDQ and controlling for family socioeconomic and demographic characteristics and child gender. The findings show that commute to work by both fathers and mothers when their children aged 3 to 4 years was associated with a higher level of emotional and behavioral problems in their children two years later. In both-parent families, father’s daily commute to work two years prior was associated with higher scores for peer problems and, to a lesser extent, higher scores for emotional symptoms and hyperactivity when the children aged 5 to 6 years. Daily long-distance commutes (40 or more km each way) in fathers was associated with the highest level of emotional and behavioral problems in children. Mother’s commute to work either daily or weekly was associated with a lower level of prosocial (positive) behavior in children. Analysis including single mothers showed that mother’s commuting 20 km or longer each way was associated with a higher level of conduct problems but a lower level of prosocial behavior in children. This is one of two studies on this topic in the literature and much further research is needed to address causality in a more rigorously way, with more waves of longitudinal data and to examine mechanisms linking parents’ commute to work and child outcomes.

Is the Preference for Men an Advantage or Gender Inequality?: A Case Study of the School Management in Taiwan
The aims of this paper are to explore whether and how men are preferred and advantaged in attaining managerial positions within the school context by drawing on the experiences and views of the teachers in a primary school. The study was carried out between 2008 and 2009 in a primary school in southwest Taiwan. Non-participant observation and individual semi-structured interviews are the main sources of data collection.

According to my fieldwork data, in the 2008 academic year, 10 out of 13 males (76.92%) held managerial posts, while only 25% of female teachers were in similar positions. 21 (18 class teachers and three subject teachers) of the teachers having no managerial jobs were female, whereas only three of them were male. That is, it indicates the persistence of gender segregation: male dominance in the higher tiers and a concentration of women in the domain of classroom teaching. Furthermore, there are three important points to suggest the preference for men in the school management. First, men are preferred and advantaged to take on the managerial posts because of men’s abilities and availability associated with masculinity. The second is the alliance between men, which were beneficial to their seeking upward mobility. Third, in contrast to men’s advantaged position, women’s domestic responsibilities and roles are suggested as hindrances for their access to higher echelons. Yet, the quotes give evidence that some male teachers did not agree the preference as an advantage, due to invisible pressure from gender norms. In addition, the findings also demonstrate that some male teachers in the study prioritised their family responsibilities, rather than their own professional advancement. Men’s dissociation may imply that men can also enjoy working with children and the solid teaching profession.

This paper provides a comprehensive review of empirical evidence linking parental nonstandard work schedules to four main child developmental outcomes: internalizing and externalizing problems, cognitive development, and body mass index. We evaluated the studies based on theory and methodological rigor (longitudinal data, representative samples, consideration of selection and information biases, confounders, moderators, and mediators). Of 23 studies published between 1980 and 2012 that met the selection criteria, 21 reported significant associations between nonstandard work schedules and adverse child developmental outcomes. The associations were partially mediated through parental depressive symptoms, low quality parenting, reduced child-parent interaction and closeness, and a less supportive home environment. These associations were more pronounced in disadvantaged families and when parents worked such schedules full time. We discuss the nuances, strengths, and limitations of the existing studies, and propose recommendations for future research.

Impact of Conjugal Living Arrangement on Marital Satisfaction in China’s Rural Labor Flows

In the context of rural people floating out for jobs, one of challenges is marital stability of rural couples who are separated. In a traditional society, women stay at home and their husbands go outside for work. And this model of conjugal living arrangement maintains the harmony in the family for thousands years. However, now more and more women have migration experience.

Using the data from the survey “Population Mobility and Reproductive Health / Family planning Services” which was carried out in two areas of Anhui province of China in 2010 by the Institute for Population Studies of Soochow University, this paper analyzes the impact of conjugal living arrangement on marital satisfaction.

The results show that, more than 60% of rural people have the experience of going out for jobs. More than 30% of rural couples live separately. When men went into work, I was working at home, only a few of their wifes float out at present. There are no signs to show that migration experiences, living arrangement or family values have significant correlation with marital satisfaction.

There are almost half of women interviewed whose husbands live apart from them being migrant workers. For rural women without migration experience, living apart has insignificant influence on marital satisfaction. However, for rural women with migration experience, living apart could lead to lower marital satisfaction than living together. On the other hand, family values are significantly helpful to marital stability.

Diffuse or Enclosed? the Ethnic Communities of Taiwanese Migrant Workers in China

This paper focuses on how the spatial characteristics of cities influence ethnic communities of Taiwanese migrant workers in China. Although Taiwanese migrants and Chinese both fall under a ‘pan-Chinese’ context, most Taiwanese migrant workers still see themselves as a different ethnic group and thus inhabit ethnic communities that are distinct from those of the locals.

Within this context, this paper tries to answer two questions which are directly related to urban sociology and community studies. First, whether the spatial characteristic of cities affects the openness or insularity of an ethnic community and—if it does—why is this so? Second, to what degree does such pan-ethnicity affects the lives of those living in different cities.

By comparing data collected from 35 interviews, as well as by examining other factors such as the cultural practices of Taiwanese migrant workers in Beijing and Shanghai, this paper highlights either the openness or insularity of such ethnic communities, derived from factors not only based on ecological characteristics (such as physical arrangements for work and leisure), or industrial differences, but also on how Taiwanese immigrants perceive and interact with the local Chinese in different cities.

In this paper, I will first define what I mean by the openness or insularity of an ethnic community and how the insularity/openness relates to life styles, social
bonds, and ethnic relations. I will show that openness/insularity is an idea that I have arrived at by combining Claude Fischer’s (1984, 1995) concept of the institutional completeness of a subculture, Louis Wirth’s (1938, 1956) theory on the cultural heterogeneity of cities, Robert Sampson’s (2012) discussion of neighborhood effects, and the subjective experience of the city in which they live. Continuing, I will list empirical indicators of openness and insularity, such as residential pattern, social/ethnic relation, friendship network, and the perception of local societies.

Down to Earth: Environmental Governance and Flexible Bureaucracy in China

The notion of “flexible bureaucracy” is an oxymoron; by definition, bureaucratic institutions are not amenable to change. The sociological literature on the East Asian developmental state has articulated the processes by which authoritarian states relied on rigid bureaucratic apparatus to implement development policies during the late twentieth century. Despite historical legacies, the authoritarian bureaucracies in East Asia have undergone substantial transformations in the last decade. This paper discusses the relaxation of bureaucratic rigidity, and devolution of political power towards non-state actors in the face of environmental challenges.

This study focuses on the case of China, seeking to understand how environmental issues have brought challenges and opportunities to the regime. How have localities in China devised different strategies to respond to pressures from above and below regarding environmental degradation? As different places experiment with innovative forms of environmental governance, what are the resulting differences in policy outcomes? These questions are not only important for understanding the current state of environmental governance in China, but also for contributing sociological knowledge about mechanisms of accountability, institutional isomorphism, and political legitimacy under authoritarianism.

The empirical discussion is informed by ethnographies in four Chinese cities, including Baoding, Duijyanang, Hangzhou, and Tiantin. It also draws from archival research in Beijing. This paper concludes that, in China, environmental protection is the most politically contested policy area. Thus, environmental governance exhibits significant diversity across localities, in places where the bureaucracy remains tightly controlled by the central state, environmental governance reflects a genuine commitment to ecological sustainability, even at the cost of economic growth. Contrarily, in places where the local state enjoys higher levels of autonomy and flexibility, bureaucrats are more likely to pursue partnerships with private businesses and other non-state actors. These partnerships tend to promote business development and political maneuver under the pretext of environmental protection.

The State on the Street: Visible Hands in Creative City-Making in Shanghai

Historically, cities are strategic sites for the penetration of state authority. They are critical posts for taxation, defense, and trade. It is therefore no surprise that cities bear extensive marks of the state. With the rise of creative economy, there are the resulting changes in policy outcomes? These questions are not only important for understanding the current state of environmental governance in China, but also for contributing sociological knowledge about mechanisms of accountability, institutional isomorphism, and political legitimacy under authoritarianism.

In this working paper, we bring the state back in. We critically interrogate the role of the state in the creation of the urban creative economy. The discussion is based on a structured comparison of three art districts in Shanghai, including Tianzifang, M50, and Bridge Eight. We develop the comparison along three dimensions. First, we situate the timing of development in the broader context of urbanization. Over the past two decades, the “norms” of urban development have gradually shifted from massive demolition towards historic preservation. The focus on timing enables us to understand how the state shapes the trajectory of creative city-making. Second, we pay particular attention to the various actors that played crucial roles in each of the projects. We attend to the contribution of different actors, as well as relations between actors. Third, we bring to light the importance of spatial attributes of each project area in constraining and facilitating the exercise of state power.

Our empirical evidence points to a more nuanced conception of the state than previously reported in the literature. We explain why, on different occasions of creative city-making, the state exhibits different levels of intervention, from tacit agreement to active support. We advance a relational conception of the state to better account for the rise of art districts.
A Text-Mediated Buddhist Conglomerate and Its Practitioners: Using Institutional Ethnography to Explore Lay Followers' Religious Experience in Tzu-Chi

The purpose of this paper is to use concepts of Institutional Ethnography (Smith, 2005) to explore the way in which texts coordinate lay followers' religious activities in the Tzu-Chi Organisation (hereafter, Tzu-Chi), one of the largest and the most resourceful Buddhist civil organizations in contemporary Taiwan. Although it started as a small civil foundation with a few Bikkhunis and a dozen of lay female followers in the late 1970s, it has grown into an international religious ‘conglomerate’ within half a century, and owns subsidiaries across charity services, educational institutions, medical centres, media industry, and so on. Offering a wide range of charity services and voluntary programs, Tzu-Chi organization transforms the way in which Taiwanese people think about and practice Buddhism. Scholars are aware of the thriving power and transformative structure of this organization. However, not enough debates have been devoted to a) the way in which lay followers, especially female participants, respond to this new form of religious organization, and b) interweaves the discussion with rapid socio-economic changes of 20th century Taiwan. Therefore, the researcher conducted 10 in-depth interviews on female volunteers of Tzu-Chi in order to find out the way in which the followers adapt Buddhist doctrines and practices through the organization’s modern form. The research findings demonstrate that a) in a rapidly changing society, Tzu-Chi transforms Buddhist groups into a new form of religious organization that offers practices where housewives build up horizontal ties outside the private sphere; b) media texts such as the founding nun’s book publications, monthly magazines, TV dramas produced by its own TV network, and so on, as well as lay followers’ participations in the organisation’s volunteer activities help to consolidate and coordinate lay followers’ religious identities.

Religious Sisterhood Among Female Audience of Da-Ai Dramas

The purpose of this paper is to examine the way in which the audience respond to prime-time dramas broadcast on a widely watched religious channel (and another commercial TV network), owned by one of the largest Buddhist civil organisations in contemporary Taiwan—Tzu-Chi Organisation. Tzu-Chi started as a humble civil foundation with a dozen of lay female followers and a few Bikkhunis that offers charity-based services in the late 1970s. Within half a century, it has grown into a huge religious “conglomerate” which owns subsidiaries across charity services, education institutions, medical centres, media industry, and so on. Among its various types of multimedia platforms, the success of its TV network (Da-Ai TV) draws attention from one of the largest commercial TV network (CTI TV) and started to broadcast the Da-Ai’s prime-time drama (also known as Da-Ai Dramas) on both networks from June, 2013. As Tzu-Chi has increasing visibility and influence in a competitive TV market in Taiwan, this paper aims to explore the way in which the prime-time dramas are watched and interpreted among followers and non-followers. The researcher has conducted in-depth interviews on 13 female audience who have been watching-prime-time-dramas on Da-Ai TV for more than six months. The research findings demonstrate that the audience focuses on the edu-entertainment purposes when choosing to watch Da-Ai TV because a) watching these dramas is seen as an easier alternative to acquire sophisticated Buddhist doctrines, and to practice them in everyday life; b) discussing these dramas with female colleagues or friends can be educational and encouraging, and, thus, helps to form horizontal ties among female audience.

Social Desirability Bias and Mode Effect in the Case of Voting Behavior

Response distribution and data quality are influenced by different mode of data collection. Such consequences are seen as mode effect. One significant influence of mode effect on data quality is social desirability bias, which is related to whether an interviewer is involved, pace of cognition process during interviews, sensitivity of survey questions, etc. For example, social desirability bias is more likely to occur in face-to-face interview when compared to telephone interview. Slower pace and the development of rapport in the former encourage respondents to think thoroughly and provide a socially desirable answer. However, previous research on desirability of mode effect did not obtain consistent findings. The problem of social desirability bias is found to be more severe in telephone interview than in face-to-face interview when dealing with voting turnout (Díaz de Rada, 2011; Voogt and Saris, 2005). The issue of such responding bias with the consideration of mode effect is worth further examination.

This study aims to examine mode effect on social desirability bias by comparing CATI and face-to-face interviews on the voting turnout of the 2004 president election in Taiwan. Data are drawn from two national representative sample conducted the same year after the election to eliminate order effect. In face-to-face survey data from Taiwan Social Change Survey and CATI data from Taiwan Social Image Survey. After weighting by population characteristics, socio-demo- graphic variables will be compared first to examine the dis/similarity of the two samples. Voting behavior, political attitudes and other related variables will be included in the multivariate analysis. Conclusion and discussion will be provided.
Second, social networks and new technologies will be considered inviting a rethink of the inclusion of these non-mainstream tools in the fields of intensive training.

In fact, both the democratic transition and the educational system can be studied from the political point of view as an alliance and strategy for the construction of citizenship where students now have extended power coming out of the classroom and are intertwined with the adult world and “control”. From there, decentralization and participation mechanisms were built in that focused on serving and satisfying the diffuse demands of its citizens.

Thus, the expansion of the democratic base with the introduction of students trained in an irreversible process as is the information era and digital culture has led to a dislocation of representation and alliances.

As such, the discussion here will briefly include how new political consensus, access to education and new social networks have strengthened democratic processes around the world.

In particular, it will be asserted that the new school within and with the democratic context in Argentina comprise a strategic alliance that must be ensured in order to discourage the development of undemocratic contexts conducive to coups or destabilizing conflict.

In the first part, the current situation regarding democracy and education in Argentina will be presented.

Next, an analysis of this situation will be given.

Finally, conclusions and some ideas for future changes will be proposed.

Stigma, HIV Law, and HIV Testing Among Offenders Under Community Supervision

In 2010, the U.S. Office of National AIDS Policy (ONAP) promoted a national strategy for HIV testing and linkage to care (“test and treat”), with emphasis on communities at risk. Potential barriers to HIV testing were cited, including HIV laws that criminalized non-disclosure to sexual partners. In order to identify such barriers, this study assessed knowledge and attitudes toward mandatory disclosure and HIV testing among 197 probationers and parolees in a southern state. Over two-thirds of participants had heard about the law (69.2%) and most believed that it was fair (85.5%). Most participants also supported HIV testing for offenders under community supervision (68%). Despite this support, 66.5% of participants believed that the law was a barrier to HIV testing because of fear, stigma, and potential for arrest. Perceptions of HIV/AIDS as a crime and non-disclosure as murder suggest increased stigma and resistance to “test and treat” among convicted offenders.

Women Foreclosed: A Gender Analysis of Housing Loss in the U.S. Deep South

Women were a focus of subprime lending during the housing boom, increasing their risk of mortgage foreclosure during the Great Recession of 2007-2011. Following Valentine’s (2007) call for a feminist geography on interactions between social categories and spatial production, this article investigates housing loss among women foreclosures in a southern U.S. county with a history of residential segregation. We collected data manually from legal notices and public access property records between 2008 and 2013, and then combined the information with census tract data for GIS analysis. We found significant differences between women foreclosures in terms of marital status, race/ethnicity, and location. While married women foreclosures typically lived in majority-white areas throughout the county, their unmarried counterparts were clustered in low-income Black neighborhoods close to the county seat. Women’s foreclosure activity followed historical patterns of residential segregation, with privilege and disadvantage in juxtaposition with social hierarchies of race and class. We conclude that housing loss in the U.S. South is complicated by racial history and the subordinate status of ‘women alone’ in the property market.

Public at Risk or Public As Risk? Managing Environmental Concerns through Risk Governance

Public relations, risk communication and participatory approaches to risk management have emerged as means to handle diverging interests in society; not least public perceptions could be a source of risk in the sense that public perceptions and opinions could pose a threat to the legitimacy and stability of existing ways of managing risk. Thus, risk governance focuses on how organizations deal not only with the technical calculation of risks, but also with the actors they perceive as possible threats and potential risks to the stability of the organization. This paper analyzes risk governance and the implications of it. The empirical material consists of three interview studies and two studies of public records on how Swedish authorities handled citizens’ and stakeholders’ claims for regulating nature. The analysis finds that the public claims were seen as a particular risk, where public outrage and loss of political legitimacy became part of the risk panorama of the responsible agencies. In particular five mechanisms were used: dissemination of knowledge; naturalization of the problem; development of public action; inclusion of stakeholders; and individualization of responsibility. Through these mechanisms, governmental agencies succeeded to influence stakeholders and citizens understandings and modify their claims. Thus, what took place was not only a process for governing nature, but also for governing people The paper ends by addressing the question whether this conclusion indicates the end of public participation or if it can serve as a trigger for more radical approaches of public participation.

On The Development Of Talcott Parsons' Conception Of Societal Community

On the Development of Talcott Parsons’ Conception of Societal Community During the 1950s and early 1960s, Talcott Parsons tried to write a general interpretive book on American society using the analytic methods he had developed within the function paradigm. Around 1960, he was joined in the task by his recent doctoral student, Winston White. Although the work was interrupted when White suddenly left academia in 1962, over 1200 pages of draft chapters and preliminary working papers were produced. Among the drafts and working papers are Parsons’ first attempts, using the four function paradigm, to develop a conception of the integrative subsystem of society. The initial attempt built essentially on Chicago School ecological notions of community in the sense of local community. It conceived the integration of society in terms of an aggregate of local communities. A later draft, from 1966, explored a range of social institutions that serve to integrate American society as a whole. In this work, Parsons sought to develop in analytical detail and in application to a complex modern society, the conception of societal community that had emerged in early drafts for his Societies; Evolutionary and Comparative Perspectives and The System of Modern Societies. Our presentation will discuss the differences between the two conceptions of the integrative American society and will attempt to compare Parsons’ conception of societal community to current analyses of civil society and to Jeffrey Alexander’s The Civic Sphere. Parsons emphasized complexes of integrative institutions that have strongly equalitarian effects, but in contrast to Alexander and others, included as well institutions that have stratifying effects. He understood differences in levels of influence among individual actors, collectivities, and associations to be essential to social integration.

Misrecognizing the Modern: Japan and the Failure of Social Theory

Modern social theory rests on a series of misconceptions, the most important of which are ethnocentrism and presentism. That is, classical social theorists equated the modern with the west (and particular parts of the West at that) and with their contemporaneous reality. In so doing, as important as they are, their theorizing systematically misrecognized the nature of the modern. Yet “modernizing” Japan, and especially its social theorists, used the culture-bound and time-bound notions and in so doing not only misunderstood the nature of the West but also of the non-West, including most importantly Japan itself. Furthermore, the Japanese misunderstanding would in turn be absorbed by Western writers who were seeking precisely to overcome the limitations of classical social theory and its legacy. Needless to say, I am aware of disparate and divergent strands in social theories both in the West and in Japan but I wish to focus on the leading writers - most importantly, Marx and Weber - and consider the genealogy of misrecognition that continues to hobble the task of social theory today.
Using Factorial Surveys and Stated Choice Experiments to Investigate Discriminatory Attitudes and Preferences

Empirical research on discriminatory attitudes and behaviour grapples with the social undesirability of its object. In many studies using regular survey methods, estimates are biased, and the social context of discrimination is not taken into account. Several methods have been developed, especially to deal with the first problem. In this regard, the estimation of the ‘true value’ of discriminatory attitudes is at the centre of interest. However, methodological contributions focusing on the social context of attitude communication and discriminatory behaviour, as well as the correlation between both, are rare. We present two experimental methods which address those issues: factorial surveys and stated choice experiments. In a first study, the usefulness of factorial surveys is demonstrated with data on German anti-Semitism (N=279). We show that the rate of approval with anti-Semitic statements increases if (a) respondents are told that the majority of fellows agree with such statements, (b) the term “Jews” is replaced by the term “Israelis”, and (c) reference to the Holocaust is made. Apart from the main effects of these experimental factors, significant interaction effects regarding the political attitudes and social status of respondents are observed. In a second study, a stated choice experiment on the purchase of olive oil and tomatoes was conducted in Germany (N=440). We find that respondents prefer Italian and Dutch products (control treatment) compared to Israeli and Palestinian ones (discrimination treatments). There are no significant differences between preferences for a so-called ‘Peace product’ (which is produced jointly by Israelis and Palestinians) and products from Italy as well as the Netherlands. Yet, taking discriminatory attitudes into account, a strong correlation between those attitudes and stated behaviour (purchase of Israeli, Palestinian and jointly produced products) can be found. This adds support to the hypothesis that discriminatory attitudes hold behavioural consequences.

Reconciliation of Work and Family Life Among Welfare Recipients in Germany. Determinants of Mothers’ Ability to Leave the Benefit System Via Employment

In the first decade of the 21st century there have been reforms in German family- and social policy towards an “adult worker model”, aimed at improving reconciliation of work and family, and linking receipt of welfare benefits more strongly on account of the labour market participation. Mothers receiving welfare benefits are subject to both new policies. In this paper it is investigated how these mothers succeed in entering the labour market, to what extent they are able to end their benefit receipt via employment and what the determinants are. Reconciliation of work and family life is a central area of political debate about reducing poverty among families and lone mothers in particular. Therefore the role of mothers’ child care responsibilities in the process of ending welfare benefit receipt is evaluated while controlling for individual labour market resources. Special emphasis is laid on the impact of child care infrastructure and labour market conditions. In a first step, the probabilities to take up employment and leave welfare benefits are estimated from administrative data for lone mothers and mothers living with a partner. Care responsibilities in the household and mothers’ labour market resources influence the process of labour market integration. Lone mothers are more likely to take up work when they don’t have young children in the household than mothers living with a partner. For both groups of mothers employment is predominantly not full-time.

In a second step, determinants of the probability to end benefit receipt with the new employment are estimated, taking into account that there is a selection already at the first step. Care responsibilities only play a minor role in this part of the process, while household size and characteristics of the new job (occupational prestige, working time) are of major importance.

Remuneration of Work and Family Life Among Welfare Recipients in Germany. Determinats of Mothers’ Ability to Leave the Benefit System Via Employment

The Impact of Unemployment on Male Gender Role Attitudes in Germany

Germany has a long-standing tradition as a welfare state with a pronounced male breadwinner orientation in social and family policy. In the last decade there have been some reforms in the direction of a more gender egalitarian “adult worker model”, particularly for families.

In this paper we want to explore the impact of unemployment on men’s gender role attitudes within this new policy framework, assuming that unemployment might lead to a more egalitarian view on gendered work-family attitudes. The new labour market policy in Germany has a general notion that assigns obligations to work to both male and female recipients of unemployment benefits which might lead to less pronounced male breadwinner attitudes among unemployed men living in a couple.

For women it has been shown that employment status has an influence on gender role attitudes. In explaining this phenomenon, it has been argued that there are two mechanisms at work: first, there is a selection effect implying that women with more employment oriented attitudes have a higher probability to be employed. Second, there is an adjustment of attitudes, that is, changing one’s own attitudes in response to employment status in order to reduce “cognitive dissonance”.

We conduct an empirical analysis of the relationship between gender role attitudes and unemployment for men and women who live in couple households. For our analysis we use the German panel study “Labour Market and Social Security” which is covering the general population. In a first step we analyse the impact of unemployment on gender role attitudes controlling for other covariates influencing gender role attitudes and unemployment status. We are particularly interested in the effect parenthood has on this relationship. Fatherhood, in particular, might lead to a persistence of male breadwinner attitudes among men as it fosters male responsibility for family income.

Does Age Matter? Experiences of Prison and Release Among Juvenile Lifers

More individuals than ever before are currently serving long-term sentences. Many of them have been incarcerated as juveniles. Little is known, however, how imprisonment influences these individuals, and how they fare upon release. To assess the dynamics of age during incarceration and upon release, life-histoty interviews with second-degree lifers were conducted. Those who were incarcerated as juveniles were compared to those who were adults at the time of incarceration.

Three hypotheses are discussed in relation to this special group: Long-term imprisonment as a ‘deep-freeze’, prison as a school of crime, and prison as a place of cognitive transformation. The influence of long-term imprisonment is examined with a view to a greater understanding of subsequent desistance post-release.

Mothers receiving welfare benefits are subject to both new policies. In this paper it is investigated how these mothers succeed in entering the labour market, to what extent they are able to end their benefit receipt via employment and what the determinants are. Reconciliation of work and family life is a central area of political debate about reducing poverty among families and lone mothers in particular. Therefore the role of mothers’ child care responsibilities in the process of ending welfare benefit receipt is evaluated while controlling for individual labour market resources. Special emphasis is laid on the impact of child care infrastructure and labour market conditions. In a first step, the probabilities to take up employment and leave welfare benefits are estimated from administrative data for lone mothers and mothers living with a partner. Care responsibilities in the household and mothers’ labour market resources influence the process of labour market integration. Lone mothers are more likely to take up work when they don’t have young children in the household than mothers living with a partner. For both groups of mothers employment is predominantly not full-time.

In a second step, determinants of the probability to end benefit receipt with the new employment are estimated, taking into account that there is a selection already at the first step. Care responsibilities only play a minor role in this part of the process, while household size and characteristics of the new job (occupational prestige, working time) are of major importance.

Does Age Matter? Experiences of Prison and Release Among Juvenile Lifers

More individuals than ever before are currently serving long-term sentences. Many of them have been incarcerated as juveniles. Little is known, however, how imprisonment influences these individuals, and how they fare upon release. To assess the dynamics of age during incarceration and upon release, life-history interviews with second-degree lifers were conducted. Those who were incarcerated as juveniles were compared to those who were adults at the time of incarceration.

Three hypotheses are discussed in relation to this special group: Long-term imprisonment as a ‘deep-freeze’, prison as a school of crime, and prison as a place of cognitive transformation. The influence of long-term imprisonment is examined with a view to a greater understanding of subsequent desistance post-release.

Change of Basic Human Values in Europe 2002-2012

Values research is gaining an increasing popularity among social scientists and there exists several theories, trying to deal with this complex phenomenon. Given study is based on the Basic Value theory by Shalom Schwartz, which while describing a theoretical framework of basic values has created a robust framework for both cross-time and cross-cultural value comparisons.

During last two decades, Schwartz has developed several value instruments, which has been used in numerous surveys around the world. Given analyses use data from European Social Survey (ESS), which includes one of mentioned instruments - a short version of portrait value questionnaire (PVQ-21).

ESS is a comparative social survey with free access and very high quality criteria. It was started in 2002 and is conducted in every second year in most of European countries. Therefor this survey provides a database with nearly 300000 cases from year 2002 through 2012, covering very dramatic period of developments in Europe.

Given study is not analyzing value change only on country level, but distinguishes also major ethnic minorities where applicable, which gives a more adequate picture of real differentiations and enables to described occurred change in more detail.

The broader aim of this analysis is to fit the change of Europeans basic values into larger societal-change context, following the transition from economic prosperity to regression, which would also allow a better understanding of the value phenomenon in general.

LILLRANK, PAUL*I (Aalto University, paul.lillrank@aalto.fi)
The New Normal As a System Challenge

Since the Lehman shock 2008 there has been a growing sense that the economy is out of joint. The world is not as it used to be during the period of Modern Normal, roughly from 1870 to 1970. The growth potential and progress of advanced economies is lost in systemic changes.

There have been several attempts at grand diagnostics. Francis Fukuyama and Avner Offer have described the Great Disruption in the microsystems of social life as a consequence of mass opulence. For the majority of people in the advanced world biological survival is no longer a daily concern, therefore the traditional foundation of morals have been eroded.

The New Normal argument by Tyler Cowen and Richard Gordon has it that "the low hanging fruit" of modern technology, demographics, the cold war, and educational mobilization have been picked.

The fall of the iron and bamboo curtains have opened the world around, and to Moises Naim, created the "more, mobility, and mentality revolutions". Daniel Alpert argues that the main disruption is an oversupply of both capital and labor, which is not channeled into productive investments, but absorbed by new corporatism. Tyler Cowen argues that due to Internet, globalization and smart machines "average is over" and the middle classes are shrinking. Ian Morris builds a historical argument about "growth ceilings" that can't be penetrated without major systemic changes.

In the international debate Japan is seen as an example of things to come. In the 20th century not only in Japan, but also in China as well as other Asian countries (e.g. Korea and India), the Asian intelligentsia had dealt with the modernization. They faced with the essential problem, in which they would want on the one hand to slough off categories of the objectivism such a like an orientalism defined by the western, but also want to transform themselves without loss of their own identity, because the process of Asian modernization at that time had left between Scyllia of nationalism and Charybdis of imperialism. For that reason, one of the notorious Japanese historian, Tsuda Shoukichi, and his colleagues had contended with traditional Confucianism and orientalism of linear development era. They have attempted to de-objectivation of Japan and the whole Asia in the name of 'Great Asia'. On the contrary, Sun, yat-sen, the father-figure of modern China, has attempted with his famous three principles of the people(so-called sam-min doctrine) to find the Asian way of modernization, which consist of democracy, nationalism, and welfarism. Despite of brief contents, he has tried with these principles to pioneer the strategic universal Asianism unless falling into a trap of 'Great Asia', which had been identified as the main obstacles in the way of East Asian integration.

Focusing on the past debate inherited in the present to criticize certain version of called 'duality'; one engages in the universal professional norm of journalists as objectivity, the other adopts a viewpoint as a minority in journalism. This study aims to explore how minority journalists follow their profession in mainstream newsrooms. Japanese academic discourses pivoting around journalism and mass media, the so-called sam-min doctrine to find the Asian way of modernization, which define 'professional identity' over 'ethnic identity' is obvious. Although these works offer valuable suggestions, roles of foreigners inside mass media including journalists have not gained much attention as objectivity, the other adopts a viewpoint as a minority in journalism.

This study aims to explore how minority journalists follow their profession in mainstream newsrooms. mainly from the decades of 1990 and 2000. I also build on a micro sociological
Conselhos (councils) and the ouvidorias (ombudsmen). Each of them sets a particular way of dealing with patrimonialism, a tradition of decision-making democracy in Brazil. The research results indicate that both institutions present considerable limitations to democratic governance inasmuch as they reproduce traditional practices they were supposed to confront. In spite of that, the institutional frame of conselhos is better adapted to absorb social control practices. The work proposes a systematic reflection on the relations between the constitutional foundations of these institutions, the role played by them in politics and the individual perceptions of their agents. The experience of conselhos and ouvidorias are also analyzed in the light of the broader debate on the reformulation of conventional patterns of political representation in contemporary Brazil. The main challenge to improve their democratic effectiveness is to encompass political autonomy and accountability mechanisms in their formal dispositions and daily activities.

Social Justice, Philanthropy and Ecology: The Symbolical Legacy of Brazilian NGOs

This work seeks to analyze the longstanding symbolical legacy that frames Non Governmental Organizations’ experience in Brazil. The main objective is to identify the social values which give sense to the very notion of NGO by analyzing its variations of meaning throughout history. Firstly, I present a macro sociological approach in order to deal with the emergence of the NGO field in Brazil. The connections between church, state and society for the promotion of social welfare generated the three major social values that confer meaning to the NGO’s experience: social justice, philanthropy and ecology. The first two have a common historical origin, the organizations of lay Catholics which were present in the context of promoting social welfare in Brazil since the colonial period. In turn, the consecration of the value of ecology concerns a different context, dating mainly from the decades of 1990 and 2000. I also build on a micro sociological approach to identify these values in the light of the individual trajectory of Herbert de Souza, known as Betinho, the major actor in the formation of these institutions. Betinho’s biography presents individual frames to the macro-historical process of transformation of the value of Christian charity into those of social justice and philanthropy. The research results indicate the social values of social justice, philanthropy and ecology as the main cultural codes that give meaning to the contemporary phenomenon of NGOs in Brazil.

Money Matters for Early Childhood Education: The Effects of Education Subsidy on Preschool Child Readiness in Taiwan

For many children, high quality early learning environment can provide lots of
experiences and skills that help build a foundation for later school success. Among the numerous measures of early childhood education and care quality, some closely linked to later success in school are those which assess school readiness. Many researchers have been claiming that education subsidy is a significant factor related to children’s learning and development. In 2010, the Taiwan authority announced “The Free Education Program for Five-Year-Old Children”. This program which was expected to benefit a larger ratio of population revealed the importance that Taiwan government has attached to early childhood education. However, little information is available about “the effects of this program’s subsidy on preschool children’s school readiness” and “how this program’s subsidy really minimize the gap between disadvantaged and advantageous children”. This study used two waves survey for 1073 preschool students who are 5 years old from Eastern Taiwan to construct a longitudinal analysis, in order to examine the relationships between subsidy of the program and the development of children’s readiness. The results showed that subsidy of the free education program has significant influences on children’s school readiness development. Preschool children who are form lower family socioeconomic status are more likely to accept extra subsidy of free education program, and further will reduce the school readiness gap with their counterparts of non-lower family socioeconomic status. That is to say, the subsidy of free education program for five-year-old children in Taiwan really diminishes the school readiness developmental gap between disadvantage and advantageous children. The implications of the findings for theory, practice, and preschool education policy are also discussed.

Education Faculty Members’ Perceptions of and Responses to the Sci-Oriented Academic Evaluation Systems in Taiwan

The main purpose of this research is first to investigate Education Faculty members’ perceptions of and responses to the SCI-oriented academic evaluation systems in Taiwan, and then to analyze the relevant factors of how the faculty members perceive and respond to these systems. Semi-structured interviews

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
were conducted with 38 academics in the Field of Education from across Taiwan including 17 full professors, 10 associate professors, and 11 assistant professors. P. Bourdieu’s field theories, M. Burawoy’s theory of voluntary servitude, and neo-liberalism that has become globally dominant in higher education policies were referred as the primary theoretical frameworks.

The conclusions are as follows:

1. In terms of Education Faculty members’ perceptions, the SSCI-oriented academic evaluation systems were established top-down and followed in the logic of natural science. The main purpose and underlying logic of the SSCI-oriented academic evaluation systems are against the professional scholarships of Education, and the resistance of faculties thus is inescapable.

2. What Education Faculty members propose to modify the SSCI-oriented academic evaluation systems reflect authentically their calling of re-emphasizing the education core values.

3. The research contributes mainly to unearthing the difference of practical concerns and responsive strategies amongst full, associate, and assistant professors. Theories of field, capital, and social space proposed by Bourdieu present a substantially analytic framework, while neo-liberalism and Burawoy’s voluntary servitude theory offer modest explanations.

4. The research provides delicate analyses of relevant factors in the institutional field, although the difference within gender, university types, and dis/advantaged positions are not yet systematically discovered. The relevant factors in the institutional field include the messages embedded in and transferred from the institutional practices, and the hidden rule of the review process. The factors explain why different faculty members share the same response.

Identity Formation and Social Relations on Facebook for Taiwanese College Students

The purpose of my research is to reveal how Taiwanese college students express who they are through Facebook. Based in Taipei, Taiwan, this study applied a multi-sized approach and methods including interviews and textual analysis to explore the identity work and social relations on Facebook among college students. In Taiwan, which exists under the surveillance of unseen audiences and the influence of technocapitalism in the context of cultural globalization and consumerism.

Facebook has gradually played a substantial role in students’ college life due to cultural globalization facilitated by information and communication technology, and the international mobility of higher education. Specifically, Taiwanese youth culture embodies a hybrid of American, Japanese, and Korean popular culture because of Taiwan’s historical context and geographic location. This cultural phenomenon thus reflects not only the global influence of American site Facebook but also the cultural flow within the Pacific Rim area between Taiwan, Japan, and Korea.

32 participants were recruited from the same department of two universities for analytical purposes, as they offer similarities and differences that make for an interesting comparison of dissimilarities not only in urban and rural areas but also in public and private universities. In each university, 8 first-year and 8 fourth-year were recruited to compare changes of identity formation influenced by each university over time. Within each year, there were 4 male and 4 female students for gender consideration.

The conceptions of performance introduced by Goffman, distinction proposed by Bourdieu, and surveillance developed by Foucault are referred as the primary theoretical frameworks in this research. The preliminary findings are as follows.

1. It’s all/not only about having fun?
2. Awareness of image management vs. ordinariness;
3. Intersection of gender and class.

The results will be situated in debates on subculture versus post-subculture within youth cultural studies.

The Global Crisis, International Migration and Social Change: Increased Needs for Employment Flexibility and Its Consequences for Social Inequalities

The recent global economic down-turn, resulting in insecure and precarious labour markets, is likely to intensify the societal transformations. The paper seeks to provide a deeper understanding of global social inequality and addresses contemporary inequality from the perspective of the multiple discourses of difference. Migration, and porous economic, social and political boundaries burden governance and demand innovative solutions to problems unique to global crisis. Asia is not only a migration-receiving area but it is notable for sending massive emigrants. The author utilizes the mobility paradigm or integrates it with other perspectives of inequality, such as global cultural and political economy. The paper examines mobility as the paradigm for understanding social life, and explores these new migration situations as well as the attempts of management of this new migration landscape. The author articulates three analytic approaches of migration:

1. The first one focus on spatial dynamics bound to the international mobilities of populations whether they are transnational or transborder; the second one, from working sites, consists in analyzing the strategies of mobility and migration that structure labor markets; the third one deals with the temporal dimension of migration, in its family and social components. The paper that should address include: (1) the uneven embeddedness of transnational migrants in the societies to which they are connected transnational migrants’ adaptation strategies to become embedded in more than one society, (2) constructions of cultural hybridity and/or cosmopolitanism as strategies to attempt to maintain and/or increase social integration in more than one society, (3) the issues that arise for transnational migrants when they have crossed national boundaries to live elsewhere in terms of not belonging or feeling integrated in either one society. The author concludes with a summary of the main arguments and recommendations. The methods of the study include literature review and survey research.

Youth Education-Work Nexus and New Configuration of Social Risks. Young People, Inequality and Youth Work

This paper examines the education and work nexus in the lives of young people to demonstrate varied forms of potentialities, vulnerabilities, and types of resilience, and explores experiences of youth in terms of how education and work are integrated and/or disintegrated. The author examines the nature of shifts occurring in informal social policy thinking and practice, examines the analytic details of the labour market reforms, that share the same logic of selective exclusion for younger cohorts, and then considers their social, occupational, economic, and demographic consequences to depict the inequality and jobless scenarios can be predicted for the local communities. The paper is structured according to a number of key topical foci, namely: (a) to seek to determine social, economic and institutional factors account for the different degrees of social vulnerability present in a young population, (b) to explore the causes and (unintended consequences) that globalization has had on market outcomes in different phases of the life course, (c) to understand in youth poverty and young people’s responses to inequalities, (d) to understand economic insecurity, poverty and social protection, (e) to engage youth discourses in potentialities, vulnerabilities and resilience, and to determine how well these themes apply or unsuitably capture the nature of education and work structures impacting contemporary youth, (f) to understand the development of social inequality structures in the course of increasing needs for employment flexibilization, and how the process of globalization has influenced life-course patterns and inequality trajectories in the local communities.

The author would like to debate the results of qualitative and quantitative empirical research, but also focus on the theoretical concepts used in the analysis.

The Unequal Pathways to Adulthood in China: A Holistic Approach of Assessing the Role Transitions

Rapid economic and social changes coupled with constant changing policies have had impacts on the way in which young adults structure their pathways to adulthood in China. Different from previous studies on demographic markers in young adulthood in China where the focuses are on specific life events, our paper applies a holistic approach to the transition to adulthood based on the 2006 and 2008 waves China’s General Social Survey. This study enhances the literature by examining the ways in which social class and structural factors influence the occurrence and timing of major life events as a whole. We have distinguished five prototypical pathways to adulthood. Clear differences are found in the trajecto-

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
ery types between four subgroups defined by gender and household registration status, as well as between father’s social status. We also examine the evolution of transition using the typology built to reflect changes in both demographic and occupational spheres.

**Governing Natural Disaster: State Capacity, Democracy and Human Vulnerability**

The paper discusses how state capacity and democracy interact in affecting human vulnerability of natural disasters. For rule and revenue, political elites have the incentives to build up relevant state capacity preventing disaster impacts on the population and property. The incentive of the elites and the capacity protecting citizens shall be stronger under democratic competitive elections. Thus, strong state capacity effectively reduces human vulnerability especially in democracy. A panel data of 150 countries from 1995 to 2009 are used to illustrate the relationship between state capacity, democracy, and the impact of disaster. The empirical findings from the multilevel models imply that strong state and democracy are associated with the lower disaster death and victim tolls.

**Politics Of Production In a World Factory: The Global Fragmented Despotism In Foxconn**

In this article we describe some special characteristics of the world's greatest factory (in terms of the number of employees) belonging to the Taiwanese enterprise, Foxconn group in Shenzhen, China. We argue that the factory regime has been shaped by three key elements: (1) internal globalization: it refers to the global brand names, especially the Apple group's authority and interventions of the production process in the factory; (2) organizational fragmentation: the fragmented structure of corporate governance, that is, the vertical fraction of business groups (BGs) and the horizontal segmentation of employees belonging to different nationalities. The fragmentation led to the strong autonomy of BGs and incomplete information between BGs; and, (3) workplace despotism: the surplus of Chinese low-skilled rural workers enforced the arbitrary managerial power on the shop floor. According to the three elements, we name the factory regime as the "global fragmented despotism." The organizational structure of world factory may be helpful for explaining Foxconn's poor labor conditions and workers' suicides happened in 2010.

**Visualizing Voices of Women**

There has been a gendered shift in migration from men to women in the past several decades. This feminization of migration is particularly noticeable with the exodus of Asian women leaving their countries - to serve as nurses in the United States, as domestic workers in Hong Kong or the Middle East, as hostesses or sex workers in Japan. A precious commodity and valuable export for their countries, these women are compelled to migrate throughout the world, duty-bound to abandon their families in search of economic opportunity. Migration patterns have been studied and established regarding this gendered phenomenon. However, the main objective of my research is to explore the global feminine experience using the methods of visual anthropology and portraiture by working directly with individuals. What are the personal stories behind these women, and how can offering the means of self-expression contribute to their empowerment and to their collective experience? The act of creating self-portraits will offer these women a chance to express themselves creatively and visually while gaining technical skills. The long-term objective is to contribute to their sense of empowerment and awareness of their rights as women and as workers through this process of self-reflection. Through an intimate process of gaining trust and access to different communities of migrant workers, I carefully build and cater a specific format for each group that will encourage them to share their stories. Local and migrant sex workers in Hong Kong will visualize their own voices by participating in making media themselves. This paper will examine the results of this study and the effects of these personalized narratives and the role it plays on the awareness of gender and migration at large.

**The Effects of Family Support and Friend Support on Adolescent Functioning: A Taiwanese Case**

A number of factors affect adolescent functioning. This study investigates the respective contributions of perceived support from family and friends to various adolescent functioning, including deviance, depression, and self-esteem. Although previous studies have examined the relationships between family support, peer support, and adolescent functioning, these studies have some limitations, such as using a western sample (e.g., U.S.) and cross-sectional data. Using the Taiwan Youth Project (TYP), we employed latent growth curve model to explore how these two supports influence adolescent functioning. We expect to see that adolescents who experience high level of family support may have better functioning (e.g., high self-esteem and low depression) than adolescents who have low level of family support. We also expect to see similar results when support from friends is in the model. In addition to the individual effect from the two sources of support, we also investigate the moderating effects of these two supports on adolescent functioning. We expect to see significant interaction between these two supports such that high level of family support may have stronger effect on adolescent outcomes when friends' support is at high level. In contrast, low level of family support may have negative impacts on adolescent functioning even when the level of friends' support is at high level.

**LIN, YA-FENG** (Louisiana State University, ylin7@tigers.lsu.edu)

**A Multi-Level Analysis of the Effect of Age on the Female Employment Rate in Japan and Taiwan**

Do women overcome the limitation of their life cycle in Japan and Taiwan? Scholars have seen that the relationship between female employment rate and age in Japan is an M-shape in these two countries. More women enter the labor market after graduating from high schools or colleges, leave labor force due to marriages and/or childcare, return after their children are somewhat grown, and leave for retirement. Some scholars assert that this M-shape reflects the dilemma between families and jobs for women, while others believe that the curve is only due to cohort differentials in women's behaviors. The OLS regression model cannot entail the independent effects of age, period, and cohort because of statistical issues, and thus we need Age-Period-Cohort (APC) model to do so. Using this method, we attempt in this paper to clarify how age, period, and cohort each affect female employment and whether women's participation in the labor force correlates with their family obligations or cohort transitions of women in Japan and Taiwan.

This research indicates that the M-shape is more suitable to describe relationships between female employment rate and age in Japan. The female employment rate has a dip around the late twenties and early thirties. This indicates that Japanese women choose to leave the job market because of marriages or childbirth and they will later return to work when their children begin to attend schools. Nonetheless, the present research produces more like an inverse U shape in Taiwan. Compared to their Japanese counterparts, Taiwanese women nowadays rarely give up jobs once they enter the job market. Taiwanese women's re-entry to the labor force around 35 to 44 years old was observed in 1980 through 1995 or so. Since 2000, however, this re-entry has not been readily observed.

HAZY, JAMES (Adelphi University)
Emergent Innovation - Towards a Complexity Theory of Innovation Research and Management
During the last decades, there has been a broadening of the field of innovation management. Models of innovation have moved from simple linear models towards increasingly complex interactive models (Rothwell, 1992, Lundvall, 1994, Chesbrough, 2003). Innovation management is moving from an expert function to a function integrated in R&D and units towards an integrated organisational, market, organisational and institutional dimensions (Tidd, Bessant & Pavitt, 2001) implying a need for broad interaction of a multiple of actors (van der Ven, et al., 1989, Sawyer, 2005). Innovation is recognized as complex self-adaptive systems with a need for not only all members of organizations but also external partners, customers and other agents in the ecology. Based on these developments the paper aims to clarify emerging innovation as a novel paradigm. It is a perspective that describes innovation as something that is continuous (Burnes, 2009, Weick & Quinn, 1999), can emerge everywhere, and wherein anyone can become an innovator (Novelty is understood as emerging through fine-grained human interaction in interaction with containing coarse-grained structures (Gell-Mann, 2002, HazylAshley, 2011) in what Stacey, et al. (2000) call complex responsive processes. The ways in which human interaction dynamics generate emergent innovative structures can be clarified using complex systems models that include the ecological interactions and processes. Skeptical and pragmatic epistemology can illuminate the way knowledge and cognition is situated in concrete physical, social and cultural environments and innovation is emerging in spaces from within this ecology (Peschl & Fundneider, 2008). Continuous self-organizing by multiple agents driving innovation need to be accompanied with complexity oriented leadership (Goldstein, Hazy & Lichtenstein, 2010) providing enabling structures from an eco-organizational perspective. We propose a complex system model of organizing emerging innovation.

The International Migration of Nurses and Doctors into Healthcare Systems: A Look into the Philippine Case
The international migration of health professionals, such as nurses and doctors, has been a growing phenomenon in the globalization of the healthcare labor market, with serious consequences on the source countries’ capacity to maintain sustainable domestic healthcare systems. One consequence is an estimated shortage of 4.3 million health professionals required for delivering essential health care services to populations in need, posing a major barrier to providing the essential lifesaving health services. A significant contributing factor to this shortage is the transnational migration, export and/or recruitment of health professionals from low and middle-income countries.

The general pattern of the international migration of nurses and doctors—where the movement is generally from the periphery/semi-periphery to the core economies—is not only about the movement of people from one country to another, but also about the structural relationships that enable these movements. It involves complex networks of relationships and institutions, including governmental and non-governmental organizations, healthcare providers, and international organizations. It also involves the flow of capital, technology, and knowledge, which can have both positive and negative impacts on the source and destination countries.

This paper focuses on the Philippines as the top-ranking source country for nurses and doctors, with a significant number of nurses and doctors who migrated to the US, Germany, and Denmark as part of a multi-year research project on the international migration of nurses and doctors into healthcare systems. A look into the Philippine case can provide insights into the uneven outcomes of labor migration in the global care economy in the context of neoliberalism and their policy implications.

Changing Water Cultures To Achieve Water Sensitive Cities: The Importance Of Communities and Households

Achieving the vision of water sensitive cities in Australia (and elsewhere) is a complex task involving simultaneous social, institutional and technological change. In this paper I review key concepts and findings from the socio-cultural literature on domestic water cultures and argue that four key domains need to be considered to enable positive change: 1. more flexibility in systems and infrastructure so the public could escape ‘path dependency’ including flexibilisation of large scale water supply, drainage and sewage systems and water governance systems including water policies and pricing. 2. The development of water sensitive practices in local communities and households. Bringing water sensitive practices to the core of community life in diverse public spaces, enabling community building around local water projects. Developments would take geographic diversity into account and ensure greater water recycling and reuse. Enabling people to access alternative water sources and recycle water themselves. 4. Attending to everyday practices and values around water including risk and trust. Enabling the everyday activities of achieving ‘cleanliness, comfort and convenience’ (Shove 2003) while using less water. I argue that we need to know more about the ‘meso’ level of the water sensitive practices of diverse communities and households to effectively promote and achieve change.

Managing Social Unrest through Risk: Reinventing the Debate

Sweden has in no way been spared from riots similar to those that took place in Parisian suburbs in 2005 and in the UK during 2011. Two events well known to the Swedish public were the manifestations of civil unrest in Malmö during the winter 2008 and Stockholm 2013. Recently municipalities in Sweden have begun to include the notion of social unrest in their local risk- and vulnerability analyses. Hence, social unrest is placed at the same ontological level as for example natural and manmade disasters, pandemics and climate change. Put differently, social unrest is managed by being represented as a risk phenomenon which consequently legitimates specific measures to reduce the potential threat of societal disorder. Within the horizon of Foucauldian theorizing risk is employed here as a technology allowing calculations about probable futures in the present followed by interventions in the present in order to control that potential future (Rose 2001:7). In documents pertaining to local risk- and vulnerability analyses social unrest is thus considered a phenomenon with an existence in itself, while at the same time specific groups are defined as being both at risk and being a risk to societal order. With this background there seems to be reason for returning to an old sociological debate on the status of social unrest. During the 1970s, Herbert Blumer (1971; 1978) engaged deeply in the nature and role of social unrest, arguing that social problems are fundamentally products of a process of collective definition rather than phenomena existing independently as objective social arrangements. In this paper I return to Blumer’s writings aiming to find out what he has to offer in a discussion on the present development. In addition I describe through a Foucauldian lens the process through which social unrest is made manageable using the technology of risk.

Religious Socialization and Dimensions of Spiritual Violence

Young adulthood is a critical period of life in religious communities, with regard to whether a person stays in a community or diverges from it. The continuity of many Christian movements is based on not only the recruitment of new people, but rather the fact that a person remains in the community she or he has been raised in. Joining a religious community in adulthood constitutes a rather dramatic change in one’s life. The situation is definitely different when one is born into a religious community. I.e. a child is socialized, or brought up in a religious community from birth. Socialization in religious communities takes place through concrete activities as well as the spiritual teaching undertaken by the community. In addition, the socialization of children and young people takes place with the help of family, relatives, friends, and acquaintances.

The socialization of a young person in a religious movement can occur without problems. In this presentation however, the focus of the examination is in those dimensions of socialization which may show up as being problematic for young persons. Socialization is analyzed as a potential form of spiritual violence, which is understood as a mental or physical violence articulated through one’s belief or existence in the religious community. It is an exercise of power against members of the community, which reduces the ability to determine one’s own future. Birth into a religious movement is not in itself a spiritual violence, but in the socialization process, there are many factors that are relevant to the emergence of such violence. Empirically, the presentation focuses on two religious groups: the Jehovah’s Witnesses and also Conservative Laestadianism, the largest revival group in Scandinavia. As dimensions of spiritual violence, the presentation examines themes of human rights, “non-alternativity” and the asymmetric use of power.

Digital Use As a Mechanism to Accrue Economic and Symbolic Capital: A Bourdieusian Perspective

The digital divide is a social side effect of the information age. The technological mechanisms that enables people to band together also serves as a wall to separate and stratify populations that have access to it, and the skills required to acquire information through it, and those who do not. This study examines the “second level” digital divide, which characterizes the surfing patterns of those connected to the internet, between the Jewish majority and Arab minority in Israeli society. The study of this paper was to examine the digital divide between these two groups: to examine the connection between digital uses and economic and symbolic capital and to characterize the link between the digital divide and social stratification. The study is based on the Israel Central Bureau of Statistics Annual Social Survey data, collected by means of face-to-face interviews conducted in 2011 among 5,972 interviewees aged 20-65 years old. Jews were found to have an advantage over Arabs in terms of internet access and capital-enhancing digital uses. Capital-enhancing digital uses were found to be useful for predicting between-group gaps in income level, beyond the impact of classic socio-demographic factors such as education and language proficiency. Moreover, capital-enhancing digital uses were the factor that transformed the gap in social benefits at the workplace between Jews and Arabs from significant to insignificant, after controlling for other socio-demographic and labor market variables. In addition, a positive correlation between capital-enhancing uses and occupational prestige was found. This finding indicates that the investment in digital literacy in the Arab sector in the long run may contribute to narrowing gaps on a national basis in Israeli society. However, digital technology can also serve as a mobility channel for the Arab minority group to attain social and economic equality with the Jewish majority.

When Risk-Analysis Needs Hazard-Assessments - Is Risk-Based Regulation Actually Part of the General Risk Discourse?

Beck describes modern societies as preoccupied with the management of novel risks. Recently, this notion of risk was widened by the idea of risk-based regulation as a rational strategy of governance: risk assessments justify the selective investments for less significant events. The focus on risk in decision-making represents a paradigm shift away from the idea that government ought to ensure ‘security’. Economic rationality and to characterize the link between the digital divide and social stratification. The study is based on the Israel Central Bureau of Statistics Annual Social Survey data, collected by means of face-to-face interviews conducted in 2011 among 5,972 interviewees aged 20-65 years old. Jews were found to have an advantage over Arabs in terms of internet access and capital-enhancing digital uses. Capital-enhancing digital uses were found to be useful for predicting between-group gaps in income level, beyond the impact of classic socio-demographic factors such as education and language proficiency. Moreover, capital-enhancing digital uses were the factor that transformed the gap in social benefits at the workplace between Jews and Arabs from significant to insignificant, after controlling for other socio-demographic and labor market variables. In addition, a positive correlation between capital-enhancing uses and occupational prestige was found. This finding indicates that the investment in digital literacy in the Arab sector in the long run may contribute to narrowing gaps on a national basis in Israeli society. However, digital technology can also serve as a mobility channel for the Arab minority group to attain social and economic equality with the Jewish majority.

Resisting the Neoliberal Turn in Swedish Housing Provision

Listerborn, Carina*

Malmö University, carina.listerborn@mph.se

Molina, Irene*

Uppsala University, irene.molina@ifj.uu.se
Sweden is commonly regarded as a country with some of the best housing standards in the world. The provision of ‘good housing’ has been at the core of the Swedish post-war welfare model, but, over the past decades, a systematic process of marketization has led to increasing housing shortage, and the lowering of housing standards, particularly affecting low income groups. A large amount of housing is also in urgent need of renovation. Those who do not have the possibility to buy a dwelling are dependent on a shrinking rental market due to the systematic conversion of rental housing stock to tenant-owned housing, and the current reluctance of developers to start up new building projects.

Adopting a neo-institutionalist stance, I analyze the genealogy of this new kind of expertise in the field of nuclear waste management, tracking the idea of bringing social scientists in the process back to controversies in the late 1940s in the US. This genealogic account enables me to argue that this use of the social sciences can be seen as a way to maintain the prominence of technocratic rationality in participative decision-making processes.

LITTLE, STEPHEN* (The Asia Pacific Technology Network, little@stepheneillittle.com)

Social Resilience: Learning From Hanshin and Tohoku

Disasters inevitably expose social relationships and processes that in more normal times are harder to discern. The 1995 Great Hanshin earthquake inspired attempts to address the multilevel governance failures exposed by that disaster. However, neo-liberal narratives still focus on technical and individual responses at the expense of engagement with any broader social context.

In 1995 older buildings in low rent areas fared worst and poorer residents faced extended periods in temporary housing. In the 2011 Tohoku triple disaster buildings resisted a more severe earthquake but extensive tsunami protection measures failed. The third component of the disaster was exacerbated by institutional complacency in the administration of nuclear power.

The immediate mobilisation of defence force resources reflected lessons learnt in the hiatus following Hanshin. A flexible, combined military command structure developed to coordinate overseas humanitarian intervention was rapidly redirected to the co-ordination of domestic relief operations.

However, the focus remains on physical components of resilience even though technical interventions in the form of tsunami barriers actually eroded traditional aspects of social resilience such as nursery rhymes telling children to ‘go to the hills’. Effective resilience requires a social dimension which in turn can only be developed in a bottom-up and inclusive fashion. Communities in the area affected by 3/11 created a range of short and medium term fixes for the loss of infrastructure and logistic support, the longer term response of formal governance structures is less clear. As the third component of the triple disaster resolutely fails to respond to remembrance, a new type of institutional hiatus becomes evident.

This paper draws on recent literature on ‘place branding’ and ‘place leadership’ to identify the creativity in national and international grass roots responses, not least in support of the recovery of identity and location, that offers cause for optimism.

Struggling Against Capitalism: Informal Education, Insurrection and Everyday Life of Russian Anarchists

This paper examines attitudes towards education and explores informal educational structures inspired by the urban community of anarchists and DIY (Do It Yourself) activists. Informal education is one part of the lifelong learning that implies the process of gaining knowledge and skills while individuals intercede with their social environment. Many anarchists tend to criticize prevailing educational practices and maintain the concepts of libertarian pedagogy and postmodernist critique of formal education. They suggest that governmental institutions reproduce social inequality and constrain people from getting knowledge in order to create governable and disciplined subjects. My findings show that anarchists realize their own learning needs and carry out appropriate learning activities that are congruent with their values and beliefs. Offering opposition to formal education and suggesting authentic ways of knowledge and skills producing and sharing (distro, workshops, open sources, etc.), anarchists embody them into their daily routine. Their rhetoric, deeds, consumption practices and forms of communication are tightly connected (in dialectical way) with those attainments that are distributed through channels of anarchistic knowledge and skills sharing.

This paper is based on the case study of young people (age 17-30) who identify themselves as anarchists. The empirical data includes 28 in-depth interviews (from one up to five hours), field diaries (app. 100 pages) and video files (more than 20 hours of shooting). The case study was conducted within the framework of international MPPLACE (Memory, Youth, Political Legacy and Civic Engagement) project.

The Marriage Squeeze for Aboriginal Men in Taiwan: The Impact of Ethnic Intermarriage Between Aborigines and Han Chinese People

Before 1970, the main stream of ethnic intermarriage in Taiwan was the elder veteran from Mainland China marrying aboriginal women, but the pattern of ethnic intermarriage between aborigines and Han Chinese has been changed due to a slow economic transformation. In the past three decades, aborigines moved from their native villages to large metropolitan areas increasing their spatial segregation from Han Chinese was decreased substantially. Accompanied by the population redistribution, the intermarriage rate of aborigines and Han Chinese has increased, and now the likelihood of marriage for aboriginal men declined. Although men and women both leave their hometown, the shortage of marriageable partners only appeared in specific local marriage markets, i.e., their hometown areas in the mountain or the peripheral southeastern coast. The spatial distribution of indigenous population become unequal and sex ratio heavily skewed in some areas due to the migration selectivity of sex and education. The propensity of migration of aboriginal women is higher than men and the well-educated tend to stay in urban areas where they are more likely to marry Han Chinese. With the social constraint of the marriage gradient and mating threshold, the less educated aboriginal men who stayed in hometown are compelled to stay single due to the shortage of marriageable women in local marriage market. Using the 2000 Taiwan population census, we try to reveal the complex relation among intermarriage, migration and marriage market. The ultimate goal is to provide some empirical evidences to revalue the impact of ethnic intermarriage in the perspective of marriage squeeze.

Conjectures on Labor-Environment Alignments

This paper examines different historical contexts under which labor and environmental movements have taken their current shapes, and offers some conjectures about possible future trajectories. We put forth a broad schema for explaining the character of labor and environmental movements according to two historical determinants: the historical strength of organized labor, and the overall character of the state (i.e., whether or not it bears an authoritarian legacy). In contexts where organized labor is historically strong and remains dominant, environmental movements are more likely to incorporate livelihood and class politics issues in their agenda, cases such as Germany and Brazil. However, once the hegemonic labor movements show signs of decline, environmental movements are likely to engage in fierce ideological competition against the dwindling left – cases such as Germany, England and Korea. This competition might take two different paths: the greens attempt to absorb the left (e.g., Germany), or the greens in no small measure cut themselves off from the leftist tradition and do so intentionally (e.g., Korea). In contexts where organized labor is chronically weak, environmental movements are more likely to incorporate livelihood and class politics issues in their agenda, cases such as India and Brazil. In other words, the closer one moves toward the right, the more likely they take an active way to defy the center; the farer they are from the center, the more they are likely to take a passive stand without the intention to do with the moral centre. By way of the relational ontologia, this paper presents a figurational approach to explore moral narrative of different social space, and their response to drug consumption. Data were collected by reinterpreting the existing researches inTaiwan, as well as by the fieldworks implemented in Taipei City and Pingtung County by way of semi-structured interview. It is confirmed that individual pleasure is the reason to take MDMA in both regions and ‘peer pressure’ plays no role in their use of MDMA. Taking a relational ontologia, this paper finds that there are two kinds of moral narrative in term of their attitude toward the moral centre. Those who live in Taipei City are more interested with, and capable of challenging the moral discourse that MDMA is illegal and dangerous, while those living in Pingtung County take a relatively detached view from the moral centre. In other words, the closer one moves toward the center, the more they are likely to take an active way to defy the centre; the farer they are from the centre, the more they are likely to take a passive stand without the intention to do with the moral centre. By way of the figurational approach, this paper concludes that there exists two kinds of individualization developed along with the democratization, and their capacity to challenge the moral centre is unequal.

Relationship Among Fathers’ Occupation, Fathers’ Parenting Behaviors and Children’s Academic Performance during Early Adolescence in Modern China

The purpose of this study is to clarify two points: (1) whether or not there are differences in parenting behaviors of parents depending on strata and (2) how parenting behaviors of parents influence the accomplishment of children’s education. By incorporating cultural capital in Bourdieu’s theory of reproduction, therefore, an empirical study was conducted by putting together a study concept of “economic strata of fathers (occupations) → fathers’ parenting behaviors → accomplishment of children’s education” by considering parenting behaviors of parents as cultural capital. The subjects included 746 groups of second-year high school students and their fathers and mothers, and a questionnaire survey was conducted in the rural part of the Shansi Province in 2009 and in the urban area in 2010. The most important aspect as a result of analysis was the strong influence of the “father’s occupation” on academic performance of children. Therefore, it was successfully confirmed that economic strata cannot be ignored and Bourdieu’s theory of reproduction can be applicable to society in China, with a significant influence from fathers’ parenting behaviors on self-esteem and academic performance of children. First of all, all parenting behaviors of parents in the blue-collar stratum including farmers and temporary workers have a weak influence on self-esteem and academic performance of children, with a higher reliance on school education than home education. On the other hand, fathers in the white-collar stratum who work for government institutions, corporations and organizations gain a relatively higher income than the blue-collar stratum and emphasize more on parenting; therefore provide more home education to children. Self-employed fathers have higher income than blue-collar and white-collar
XI. The Role of Local Institutions in the Development of Urban Villages in China

This article examines the paths of local economic transition over the past thirty years in Wenzhou and Wuxi of China from an institutional perspective. Chongqing will serve as a minor case in comparison. It argues that local institutions matter in explaining divergent paths of development in the era of market transition. This article further traces the historical origins of different local institutions in Wenzhou and Wuxi, arguing that a historical contingency of self-liberation in Wenzhou at a critical juncture of the 1949 socialist revolution explains an inactive local state with a more lenient attitude toward the local private peasant sidelines, in contrast to the liberation by Mao's regular Army from north in Wuxi and Chongqing, which disrupted the local status quo and switched the loyalty of local power hierarchy to socialist transition in Mao's era. Thus the initial genesis of institutional arrangements as a result of punctuated equilibrium in localities shapes the way in which local institutions evolve for decades to come.

the psychosocial development of senior middle school students, and whether and how resilience and self-efficacy could serve as mediators for the relation between various forms of social capital and development outcomes. 231 senior middle school students in Zhongshan participated in the survey. Results show that school quality concerning students’ interaction to school and teachers display significantly positive relation with adolescents’ mental health, behavior adjustment, clear and positive identity, but not with students’ social capital. Family social capital as parental supervision and community social capital as reciprocated exchange also positively relate with students’ behavioral adjustment. Students with more encouragement in life and reciprocated exchange in the community are more likely to develop clear and positive identity. Moreover, students who scored higher on teacher encouragement, structural bonding and perceived mutual help with peers, and child-centered informal social control in the community are also more likely to have higher score on social capital. However, not all sources of social capital have significant relations with students’ development outcomes. In addition, according to the research findings, resilience and self-efficacy also mediate the effect of social capital on mental health, clear and positive identity, and social capital, while only resilience could have the mediation effect on the relation between social capital and behavior adjustment. Implications for family service and family policy, everyday educational practice at school, and community development programme are discussed.

Educational Expansion of the Upper Secondary Schools in Taiwan

After planning and designing the ‘Twelve-Year Compulsory Education Policy (TYCPEP)’ for 30 years, Ministry of Education in Taiwan finally officially announced in 2011 that the policy will be implemented in 2014. However, despite the Taiwanese government has promoted the policy for more than two years, the issue is still continuing to cause intense disputes and to gain numerous opposite views. In particular, the proportion of normal to vocational school students and the ratio of public to private schools, both of these two pre-existing structural issues of the upper secondary education in Taiwan will be the main problems to implement TYCPEP.

Therefore, this study suggests that for TYCPEP, it is necessary to clarify the importance of these two key issues and review the impacts on the educational opportunities for high school students. Thus, this study aims to explore the history of educational expansion of Taiwan’s upper secondary schools and to analyze the backgrounds and major factors of developments of those two structural issues through the literature and field survey. Furthermore, this study scrutinizes ideas, impacts, and challenges of TYCPEP’s implementation.

The Development of Inter-Firm Trust: Cases from the Animation Game Industry

Nowadays, technology has played important role in the society and even shaped the way business operates. However, there is also an awareness of the “soft sides” of business, among which is the inter-firm trust. This is particularly observed in the animation game industry where increasingly more internationalization and inter-firm collaboration takes place. Such topics as “how to select a trust-worthy partner,” “how to continuously maintain good relationships with collaborators” are of great value for both academic studies and business practice. This paper explores the inter-firm trust issues in animation game industry. This creates a trust development process model together with an evaluation system. From literature review, the questions of “how inter-firm trust is developed”, and “how to continuously maintain good relationships with partners and collaborators” are summarized from interviews and observations, which are further developed and outsource studios/operators/character manufacturers. Prioritized values are expected to facilitate men’s leisure. In contemporary times, the gender gap between leisure provision and participation has narrowed with observations of separate pathways in times of recreation and leisure. The interaction of these professions entails a lot of uncertain elements. Furthermore, an increasing number of disability insurance applications and benefits are faced on mental illnesses, the situation has become even more challenging before. This paper studies expert practices to disability insurance and rehabilitation in Finland. The focus is on informant disability insurance system. The main question is: how do different experts and institutions interact as they make decisions on disability insurance benefits and rehabilitation? The empirical material consists of interviews of medical, legal and other insurance experts, observation of institutional practices and technologies in insurance companies, and some key documents. The study shows how decisions on disability benefits and rehabilitation are a result of complex and case-specific negotiations between different professions and organizations, including (occupational) health care. Disability is not only a medical condition but thoroughly a social, political and judicial phenomenon. Hence, the ability to recognize the limits of expert knowledge and the related uncertainties has a crucial effect on the practices of insurance companies and the treatment of the insured.

Disability is one of the most significant insurable risks in human life. Insuring disability, either statutorily or voluntarily, is not an easy task for insurance companies. Ability to work is more or less subjective, but insurance companies are expected to evaluate it objectively and unambiguously. Disability insurance as well as rehabilitation involves different kinds of expert knowledge. Disability is a construct of medical, legal and insurance institutions which are entangled with each other. Experts of these institutions try to prevent disability, define it and continue to cope with disability in distinct ways. The interaction of these professions entails a lot of uncertain elements. Furthermore, an increasing number of disability insurance applications and benefits are faced on mental illnesses, the situation has become even more challenging before. This paper studies expert practices to disability insurance and rehabilitation in Finland. The focus is on informant disability insurance system. The main question is: how do different experts and institutions interact as they make decisions on disability insurance benefits and rehabilitation? The empirical material consists of interviews of medical, legal and other insurance experts, observation of institutional practices and technologies in insurance companies, and some key documents. The study shows how decisions on disability benefits and rehabilitation are a result of complex and case-specific negotiations between different professions and organizations, including (occupational) health care. Disability is not only a medical condition but thoroughly a social, political and judicial phenomenon. Hence, the ability to recognize the limits of expert knowledge and the related uncertainties has a crucial effect on the practices of insurance companies and the treatment of the insured.

Conflicts Between Artisanal Miners and the Government in Mongolia

In autumn 2013, Mongolians witnessed gun shootings and an attempt to blast bomb near the Parliament House, motivated by the Civil Environmental Movement of Mongolia. The country's basic economic revenue comes from mining sector and since the democratic transition; the country started using the mineral resources with the ratification of ‘Gold Program’ in 1994.

As a result, the number of artisanal miners who exploit gold in abandoned areas has increased extensively and they have been one of the main factors to the environmental degradation as they operate in a semi-legitimate manner. Since then about 65,000-100,000 people, so-called “micro miners” have been working and living without any legal coordination and official registration for the last decade. The Government made an effort on dissolving those illegal and environmentally hazardous groups in 2005, but it led to extremely acute conflict between the two sides. Remarkably, national comprehensive survey was conducted on this newly generated community in Mongolian society. Accordingly, a research was carried out to determine forms and consequences of conflicts between the artisanal miners and the Government on example of cases in Mongolia. The fundamental conflict theory and approaches were applied in this paper. As a result, the main conflicting parties in artisanal mining were identified as local authorities and the root cause for long term dispute was defined as having no mediation and facilitation in the process. Eventually, the conflicts resulted to unsustainability in artisanal miners’ activities, more risks in safety issues and many people were injured during their rudimentary operation.

The research, carried out deep study on essence of the artisanal miners and process of their institutionalization, has been recognized as significant project which will contribute to effective natural resource management and resolution methods on conflicts over natural resources.

Leisure in an Unequal World: Gender Differences in Australia

This paper traces the development of leisure in Australia along gender lines. Leisure in Australia has been male-dominated. Historical analysis paints a picture of women in supporting roles with regard to leisure. They have been placed in an inferior position. The home care role of women has been contrasted with the breadwinner role of males. While men dominated recreation resources, women were expected to facilitate men’s leisure. In contemporary times, the gender gap between leisure provision and participation has narrowed with observations of separate pathways in times of recreation and leisure. The interaction of these professions entails a lot of uncertain elements. Furthermore, an increasing number of disability insurance applications and benefits are faced on mental illnesses, the situation has become even more challenging before. This paper studies expert practices to disability insurance and rehabilitation in Finland. The focus is on informant disability insurance system. The main question is: how do different experts and institutions interact as they make decisions on disability insurance benefits and rehabilitation? The empirical material consists of interviews of medical, legal and other insurance experts, observation of institutional practices and technologies in insurance companies, and some key documents. The study shows how decisions on disability benefits and rehabilitation are a result of complex and case-specific negotiations between different professions and organizations, including (occupational) health care. Disability is not only a medical condition but thoroughly a social, political and judicial phenomenon. Hence, the ability to recognize the limits of expert knowledge and the related uncertainties has a crucial effect on the practices of insurance companies and the treatment of the insured.

Temporal Scales of Justice and Sustainability: Aboriginal Peoples and Environmental Governance in the “Wild” Landscapes of Northern Australia

Sustainability evokes concepts of social and environmental justice that are inherently temporal. It assigns rights to future generations and works to apprehend risks to human well-being stemming from as yet indeterminate environmental change. While the future-oriented temporality of sustainability is of manifest importance, research in environmental justice highlights the parallel importance of contemporary social and spatial relations, and the historical roots of those relations, in the determination of social-ecological futures. This presentation explores the temporality of sustainability and environmental justice in context of Aboriginal peoples’ involvement in environmental governance in Far North Queensland, Australia. It argues that while indigenous Australians are ascribed unique legal and moral rights in environmental decision-making, aboriginal involvement in environmental governance is often restricted, in practice, to conservation of natural and cultural heritage. As passage of the Wild Rivers Act 2005 illustrates, aboriginal aspirations for futures that integrate natural and cultural heritage with the development of natural resources, diversification of remote economies and/or political self-determination often meet active state resistance.

Partners in Change: Using Patient Narratives for Service Co-Design

Objectives: To use a national video archive of patient experience narratives to develop, test and evaluate a rapid patient-centred quality improvement approach ('Accelerated Experience-based Co-design' or AEBCD).

The intervention was an adapted form of Experience-based Co-design (EBCD), a participatory action research approach in which patients and staff work together to redesign care. EBCD draws on transportation theory and narrative persuasion, using locally collected video patient narratives to help staff see through patients' eyes. The accelerated intervention used national rather than local patient narratives (in lung cancer and intensive care). This shortened the timetable from 12 to 6 months and halved costs.

Results: A total of 96 staff members and 63 patients participated in the four AEBCD projects. The accelerated approach proved readily acceptable to staff and patients; using films of national rather than local narratives did not adversely affect staff engagement, and may have made the process less threatening. Local patients felt the national films generally reflected important themes although a minority felt they were more negative than their own experience. However, they served their purpose as a trigger to discussion, and the resulting quality improvements were similar to those in traditional EBCD projects. But the element of the intervention that has left both staff and patients feeling energised and empowered is the direct encounter with each other; the active partnership in co-design to achieve change; and the sense of tangible results. Staff feedback suggests EBCD can reconnect staff with fundamental values of care and compassion. Patients, too, report a different level of appreciation for staff, a belief that they will be listened to and that change is possible, and a renewed sense of trust in healthcare services.

Participatory Guarantee Systems: Alternative Ways of Knowing in Agri-Food Systems?

Over the past twenty years, sustainability standards have been used in agri-food systems as a way to link sustainably produced products with consumers who are looking for these types of products. This system of certification has generally relied upon the third-party certification (TPC) model as a way to ensure that producers are complying with standards. Over the past five to ten years, critiques of this model have emerged in both practitioner and academic circles. These critiques focus on the appropriateness of this model based on the type of knowledge that is privileged, the cost of the model and conflicts of interest. This paper examines these critiques by exploring how participatory guarantee systems (PGS) are used to accommodate some of the critiques of the TPC model. We draw upon examples from Japan and Bolivia to illustrate how PGS are rethinking some of these concerns. Through our analysis we explore new institutional arrangements and where there might be spaces for empowering alternative ways of knowing.

Employment and Health Consequences of Care-Giving for Older Workers in Australia

In Australia there is continuing policy pressure on older adults to remain in paid work. For many, especially women, participation in paid work is undertaken in conjunction with providing care for sick, disabled or frail family members and/ or grandchildren. Recent policy developments in Australia such as the National Carer Strategy Action Plan (2011-2014) articulate a commitment to ‘recognise and respond’ to the needs of carers including supporting their right to participate in social and economic life. To this end, the Fair Work Act Amendment Bill 2013 extends the right to request flexible working arrangements to mature-age workers over 55 and workers with added caring responsibilities. At the same time, The Australian Human Rights Commission Report ‘Investing in care: Recognising and valuing those who care’ (2013) acknowledges the potential disadvantages, particularly for women, associated with unpaid caring responsibilities and the impact on workforce participation, retirement income and health.

This paper explores the relationship of paid work and care-giving, with a particular focus on Australia’s early baby boomer cohort and the gendered nature of care-giving. Analysis of longitudinal data from the Household Income and Labour Dynamics in Australia (HILDA) survey indicates that being female, having a health condition, higher education, being partnered, and being engaged in paid work and care-giving in 2002 increase the odds of engagement in concurrent activities in 2010 relative to engagement in paid work only. The finding that prior engagement is consistently related to future engagement in the same activity eight years later highlights the value of examining engagement over a longer time period. These findings will be interpreted within Australia’s policy context and the potential employment and health related consequences of care-giving on those providing the care, their families, employers and the community.

LOISEAU, HUGO* (Université de Sherbrooke, Hugo.loiseau@USherbrooke.ca)

Cyberspace: A New “Fieldwork” Experience For Sociologists

While cyberspace clearly is a new research field, scholars are just starting to study how to grasp the full meaning of social relations in cyberspace. This question puzzles numerous disciplines of social sciences. Traditionally, the explanation of the process of research means that researchers have to go back and forth between the theoretical perspective and the empirical reality. They essentially start from one of these two starting points to get towards the other. But how to do that in the digital world? This space shares characteristics of both theoretical and empirical worlds, but nevertheless, differs greatly from both. The paper proposes a transformation of the tools and concepts used in social research to properly use cyberspace as a tool of investigation and analysis in social research. To do this, the paper addresses a shortcoming found in the literature i.e. the lack of a clear definition of the concept of fieldwork in social sciences. Thus, the paper exposes the main reasons why and how cyberspace should be designed as a field of investigation: 1) because it is a place (cyberspace is a space in the geographical sense), 2) there are several methods to do research in cyberspace and 3) there is an ethic of research inherent to it. We therefore believe it is possible to say that cyberspace is not a field like any other. It is rather a new mediator between theory and reality. A better understanding of this cyberspace field should provide better tools and concepts to apprehend the social reality in the digital world. The originality of the paper is based on the current inability of different research methods to understand and analyze cyberspace as a research object but also on their inability to understand and properly analyze the social phenomenon of cyberspace.
Deus Ex Machina? Religious Texts, Spiritual Capital and Inequalities – in Continuation of the Current Debate

This paper is borne from three impulses: broadly, the presently ubiquitous influence of liberation theologies within mainstream Christianities; narrower, the widespread religious assumption that the divine addresses the world through the “Holy Word” of the Bible; most specifically, a current South African debate (in which the author is a participant) on the contextual relevance of scholarly exegesis of these texts. The contention here is that the usual “application” of biblical texts to modern issues of inequality is undertaken in unsophisticated ways. First, the hermeneutics of texts are often left unacknowledged. Second, the exegesis is oft-ten poor and seldom new, because the prime concern is a pressing modern issue. However, third, with little academic background in socio-political, economic and related fields of study, the pressing issues are often analysed superficially. Thus, good intentions flounder on poor scholarship, based on a critical (by now, cliché) rejection of methods of interpretation,* that is combined with a theoretical and methodological conservative “Western” biblicism. The underlying assumption is that Bible texts can be directly brought to bear on modern issues. The concepts of spiritual or religious capital can ameliorate this. The history and implications of these concepts are therefore reviewed. In constituting the religious identity of individuals, the Bible may well be an influence, but one among many. The thus-molded religious identity of persons so inclined may lead them to address social inequalities, pursuing a less unjust and, usually, more egalitarian society. Agency is mediated by such a constructed religious identity. The issues addressed, almost exclusively socio-political, of moral and religious capital and its relationship with anthropological studies will be presented with firm conviction, may in this less instrumentalist engagement with the religious heritage be expanded to include the theological, with greater humility, seeking clarity.

Lombardi, Denise* (Ecole Pratique Hautes Etudes, lombardi.denise@gmail.com)
Embodying Another Self for Western Shanmanic Voyage

New Shamanism is one of the many answers provided by Western countries in order to satisfy the new spiritual urgencies proposed by modernity. Spiritual research and physical well-being are the two basic constituents through which the argumentation about health is built up in contemporary Western world. Both spiritual and therapeutic research share the same objective attainable through activities borrowed from other disciplines like yoga, traditional medicine, Eastern philosophies and neo-shamanic practices.

My analysis is focused on how new-shamanism is being developed and conjugated in Western world, being it considered a form of therapeutic primitivism populated by small fleeting groups gathering together during meetings and seminars (with fee) in France in order to learn new “exotic” healing techniques.

In this context, the Shaman plays the role of a teacher-therapist in front of the novice-patient; both are involved in a healing and education process where teachings are all about the possibility to raise awareness in exotic cosmologies by learning visualization techniques capable of carrying participants into the shamanic universe fitting the western world demands.

The purpose of this paper is to lay special stress on the modalities used by western participants (mostly middle class women, aged 40-50) to embody and assimilate the techniques they learn during seminars. The common objective to such techniques is to allow participants to bring effect the so called “shamanic voyage” without resorting to psychoactive drugs.

It is my opinion that the possibility to reach a different, transitory and unknown cosmology implies the ability to embody another self.

It relates to a self which possesses a specific “ritual face” capable of manifesting itself during the symbolic interaction taking place in the social microcosm of shamanic seminars for western people in France.

LONGHOFER, WESLEY* (Emory University, wesley.longhofer@emory.edu)
Foundations of Global Giving

Social scientists have long been interested in the origins of generosity, altruism, and compassion in society. However, a relative handful of studies have looked at the effects of social context on organized charitable activity, particularly from a cross-national perspective. This talk will introduce an ongoing study examining the effects of global and domestic institutions on charitable activity among individuals and organizations in a large number of countries. I study philanthropic and charitable activity in what world polity scholars have called a ‘global moral universe fitting the western world demands.

The current crises, however, should also be seen in conjunction with its organizational dimensions. On the one hand, these dimensions can be traced to the beliefs held and the actions undertaken within a multitude of organizations, including banks, insurance companies, credit institutions, etc. On the other hand, these dimensions should also be regarded in conjunction with a range of historical developments within organization studies (OS) itself, where the core object of ‘the organization’ seems to have been problematized to such an extent that it is rather unclear what remains of this foundational theoretical construct. By attending to these latter historical developments, the paper argues that specific, yet highly diverse, modes of theorizing within OS progressively seem to have undermined organization studies’ core object. This loss, the paper claims, have made OS ill-suited to adequately respond to the organizational dimensions of the economic crisis. Only by reconecting with and re-appropriating this core object can OS revitalize itself as a practically useful and relevant academic discipline.

Pharmacisation and Performance Consumption: Differences Between Young Workers and University Students

In the current modernity, the management of personal capabilities gave rise to a broad market and a booming performance industry. Medications play an increasing role in this offering, focusing mainly on cognitive/mental and body performance. The so-called life-enhancing drugs and smart drugs are the most visible side of this modern logic of self-management. The production of both pharmaceuticals and natural medicines/supplements participates in this range of purposes,
and the boundaries between them gradually fade as far as their social perception. Sociological approaches in this area have been aware of these more structural changes expressed by this type of consumption: (i) the therapeuticalisation of performance; (ii) new dimensions of pharmaceuticalisation; and (iii) commodification and consumer culture in the production of new needs. In this communication, we intend to discuss performance consumptions focusing on the subjects' contexts - particularly labour and academic contexts. The goal is to shift the focus from the mechanisms of consumer culture to the contextual effects. We aim to discuss how social contexts structure individuals' investments on performance; how they generate legitimacy to consume; and how they shape performance expectations. For this purpose, it is intended to compare the performance consumptions between two young population groups – university students and young workers (without university education) – exploring the analytical triangulation between consumption, performance pressure perceived by respondents, and shared expectations. The empirical support for this questioning is based on extensive as well as qualitative data, collected within a study carried out in Portugal on young population [18 to 29 years old].

LOPEZ, JOSE* (University of Ottawa, jlopez@uottawa.ca)

Human Rights As Political Imaginary

The language of human rights has become one of the most important normative and political imaginations of our time. Along with the struggle for democracy, this quest for human rights resonates with a striking number of societal and political projects; indeed, for some, it is the uncontested emancipatory project of a globalized world. Due to their ineradicable normative nature, however, normative approaches predominate in the human rights field; this remains the case even in the important emerging sociological scholarship.

This paper draws attention to the fact that human rights do not exist as a ready-made object of sociological analysis; hence their sociological “thingness” needs to be elucidated. The paper addresses the type of conceptual and theoretical work that is required to make human rights an object of sociological analysis in order to avoid normative restatements of the origin of human rights in a sociological register.

A model of human rights as political imaginary is proposed and used to constructively review contemporary sociological accounts of human rights. However rather than a mere review, the conceptual framework proposed by the political imaginary model makes possible a cartographical approach to the field. Thus the goal of the paper is not simply to catalogue existing approaches, but to theoretically relate them to one another in order to contribute to the development of a more synthetic sociological framework for analyzing human rights.

La Formación De Profesionales Ante La Inequidad. Desafío ético De La Educación Universitaria

La educación superior en México tiene hoy día el desafío de formar jóvenes ante un mundo altamente inequitativo. La ética profesional en los procesos de formación universitaria puede contribuir a la comprensión de este fenómeno social y, consecuentemente, a desarrollar la moralidad de la juventud tendiente a la constitución del ethos de los futuros profesionales. La racionalidad técnica combinada con la cultura de la rentabilidad inhuma está predominando en la educación, particularmente en el nivel terciario, cuyos efectos en el desarrollo moral de los educandos son preocupantes, si tomamos en cuenta el desinterés que muestran por contribuir desde sus campos de conocimientos a la mejora de la democracia y la justicia en sus ámbitos de vida. Una de las necesidades prioritarias en la universidad mexicana es concebir a la ética profesional no sólo como códigos de buen comportamiento sino, además, como un dispositivo intelectual y moral para hacer la crítica a la ausencia de equidad en la distribución de los bienes que la sociedad ha producido. Al observar lo que acontece en los escenarios institucionales y escuchar las opiniones de los estudiantes, así mismo, al identificar las limitaciones y desigualdades de los profesores en una universidad del noroeste del país, la cual seleccionamos para nuestro estudio, nos permitió apreciar los rasgos de esta problemática de la educación superior, analizada desde la perspectiva de la ética profesional. Crear conocimiento en este campo, hace posible imaginar alternativas para la intervención educativa con un sentido transformador y progresista.

LOPEZ-CALVA, MARTIN* (Universidad Popular Autónoma, juanmartin.lopez@upaep.mx)

Socioética y Antropoética Profesional Para Una Educación Universitaria Contra La Desigualdad

La modernidad que postuló a la razón como el camino hacia la libertad, la fraternidad y la igualdad, implicó la exclusión de la ética como medio para ter- ministas de los planes de estudios. Por el lado de la ilustración y el liberalismo porque la ética se consideró un elemento subjetivo, no científico y se apostó por la construcción de una sociedad igualitaria a partir de los avances de la ciencia y sus aplicaciones tecnológicas. En la vertiente marxista porque la ética era un elemento de la superestructura ideológica que justificaba el statu quo mientras que el modelo socialista construiría la igualdad cambiando la estructu- ra socioeconómica a partir de la eliminación de la explotación que implicaba la propiedad privada de los medios de producción.

En este contexto, la educación universitaria tendría que estar sustentada en una capacitación científica y técnica de alto nivel, lo que produciría profesionales que fiadoría de su práctica promovería una sociedad igualitaria.

El desarrollo histórico demostró el fracaso de ambas vertientes de la mod- ernidad y la imposibilidad de que una sociedad sustentada en el racionalismo eliminara las desigualdades sociales que se han profundizado, produciendo la búsqueda de la ética como una disciplina que se ocupa de la reflexión y pro- moción del diseño social de la vida humana para vivir de manera de morín, 2005).

En este contexto, la educación universitaria está recuperando en los planes de estudio la ética profesional como una dimensión formativa indispensable para orientar la práctica profesional hacia el combate a la desigualdad. A partir del principio fundamental de "exclusión de la exclusión" que sustenta la socioética y la antropoética que conforman la ética planetaria que propone Edgar Morín, esta ponencia presenta elementos teóricos y metodológicos para una formación ética profesional que contribuya a la construcción de una ética profesional que promueva la igualdad.

A Multidimensional Measure of Social Stratification: Composite Indicator of Inequality

In previous works (Fachelli, 2009; Fachelli & López-Roldán, 2010, 2012) we analysed the changes in the social and economic model of Argentina in the period 1997-2010, we observed that the social structure, measured by a variable that typifies stratification, remains basically unchanged during the years analysed in spite of the profound crisis that occurred at the end of 2001 and along 2002. With- in this general framework, we developed a multidimensional model where are combined 4 dimensions (work, education, housing and income), 6 variables and 38 categories. With them we obtain a typology with four basic types. The method- ology we apply is called “structural and articulated typology”: we use factorial analysis, including multiple correspondence analysis (MCA), in order to reduce the initial attribute space into “m” factors. Then we apply cluster analysis to classify individuals into “key” groups or “types” on these factors.

Our goal is to obtain a single measure of social inequality. However, the multidi- mensionality of the concept of social stratification makes difficult to obtain a complete ordering of households according to “inequality” level. The question that arise is how generate a composite indicator, that we call “social distance”, based in a multidimensional measure taking into account the principal factors components. We follow the work of Asselin (2009) who applies this strategy in the context of the analysis of multidimensional poverty. The communication will show the results based on the analysis of the Labor Force Survey of Argentina in 2012.

From Induced to Spontaneous Circular Migration: The Case of Seasonal Labor Mobility Schemes in Spain

For the past ten years, the management and promotion of circular migration flows has been a pivotal element of migration management policy in Spain, particularly of low-skilled workers in sectors such as seasonal agriculture and hospitality. It was commonly considered that this type of international mobility allows migrants to adapt to receiving countries labour market needs without incurring in the social costs of permanent settlement. Additionally, circular migration is regarded as a beneficial form of international mobility for migrants themselves and countries of origin. The aim of this paper is to analyse the Spanish policies developed in relation to the seasonal migrant workers for agriculture. We try to answer two key issues: (a) how Spanish policies regarding seasonal workers have been designed (b) and what purposes they responded to. We take into account three dimensions of the policy making: (a) national labour market demands (b) interna- tional relations framework (c) and the legitimation and meaning of these policies in the domestic political arena and economic relations between enterprises, trade
Guestworkers Programs in Uncertain Times. Economic Crisis and Seasonal Labour Mobility Schemes in Spain

Since the 1970's, the global economy has been characterized by liberalization of trade and capital, but also by transnational movements of people. Recruitment of migrant workers has become popular in states facing the ever-changing nature of labour workers. Temporary labour migration has become an attractive resource in several low paid jobs within the agricultural, service and construction sectors. Accordingly, there has been a growth in temporary migrant worker programs in several countries in Asia, Europe, and North America. New immigration countries, such as Spain, implemented also TWP during the economic boom in the 2000's.

In this paper we aim to shed light into the process of policy-making and implementation of these programs in the Spanish agri-food industry during the last decade focusing on three dimensions: a) country selection and recruitment process, b) recognition of rights and transitions to permanent migration and c) actors and multilevel governance.

The final part of the article focuses on the impact of the economic crisis on the implementation of these programs since 2008 and its prospects in these new uncertain circumstances.

Guestworkers Programs in Uncertain Times. Economic Crisis and Seasonal Labour Mobility Schemes in Spain

After 9/11 security measures, especially in the air traffic system, have been increased enormously. Complex technology is employed to protect the global circulation of passengers and goods. Recognizing this venue as a network of heterogeneous actors, it is instructive to see how they can manage to keep this more and more complex security system moving. In our contribution we want to interpret security as complex technology – in the sense that it transforms an unknown, potentially dangerous person into a safe passenger through a combination of different cause-and-effect chains – that is reliably embedded in the daily activities at the airport. Against the background of growing passenger numbers, ever increasing security measures around the world and increasing economic competition on different levels, we want to explore how it is possible to ensure this reliable embedding in spite of different dimensions of heterogeneity. We discuss findings of a comparative study of three airports in Germany which focuses on practices managing those diverse demands arising from 4 different sources of heterogeneity:

1. Differences in educational background and professional views on security
2. Differences in organizational backgrounds (bureaucracies, free-landers, etc.)
3. Differences between passenger and participants, staff
4. Differences in institutional backgrounds (ministries, security services, airport management)

Each of these differences presents special challenges, inhabits various risks and is met by distinct sets of practices that buffer them in a way that the security processes do not collapse. Therefore the aim of our contribution is also to discover how these special forms of managing differences are interconnected and dependent on, but also irritate each other.

Self-Fulfilling Teacher Expectations in the Context of Ethnic Educational Inequalities

Self-Fulfilling Teacher Expectations in the Context of Ethnic Educational Inequalities

The role of teacher expectations in pupils' achievements has been heavily researched during the past 50 years. Experimental research as well as analyses of field data stemming mainly from the US showed that low expectations can undermine academic performance whereas high expectations can have positive effects on learning opportunities and on pupils' academic future. Another line of research suggests that teachers often have lower expectations for the academic performance of children from low socioeconomic status and/or immigrant or minority background. If such low expectations create self-fulfilling prophecies by leading to behavior that undermines intellectual growth, they could be regarded as a subtle type of discrimination contributing to the widening of the achievement gap between more and less privileged pupils.

However, despite the fact that there is evidence speaking against discrimination in grading or track assignment against pupils with low socioeconomic background and/or immigrant background on pupils' academic future. Another line of research suggests that teachers often have lower expectations for the academic performance of children from low socioeconomic status and/or immigrant or minority background. If such low expectations create self-fulfilling prophecies by leading to behavior that undermines intellectual growth, they could be regarded as a subtle type of discrimination contributing to the widening of the achievement gap between more and less privileged pupils.

We assess the state of Japanese capitalism by taking a fresh analytic look into pupils' academic performance within German primary schools. The first part of our work is a systematization of the current state of research. On that basis we propose the application of the frame-selection model in order to theoretically explain self-fulfilling prophecies within the schooling context. In doing so we identify conditions under which broad teacher expectations for certain groups of pupils may emerge and how they may be mediated through the classroom interaction. In a final step we empirically test the hypotheses and answer whether teacher expectation effects contribute to the emergence of social and/or ethnic educational inequalities or not.

Employment Expansion, Wage Increases, and More Equal Opportunities: The Suspicous Disregard of Strong Labor Market Performance in Japan

We assess the state of the Japanese capitalism by taking a fresh analytic look into its labor market. Our findings strongly indicate that the general dictum of „lost decades(s)“ stands in stark contrast to economic reality. What is more, we find that the purported view of strong and rigid gender inequalities in the labor market is entirely flawed.

Analyzing employment and wage data for the period from 1988 to 2010 we find that the Japanese economy has seen very stable employment conditions in a long-term perspective. In fact, Japanese businesses have created some 10.1 million more jobs than were to be expected if the 1988 labor force participation rates of both sexes had stayed constant. 1.4 million of these additionally created jobs are jobs in regular employment, and what is more, 0.9 million of these newly created...
regular jobs are occupied by women. Increasing labor market participation by
cwomen reportedly largely went into non-standard employment. While this is
esentially true, we can evidence a strong tendency toward closing wage gaps both
between men and women, and between regular and non-regular employment.
As the latter effect is particularly strong for women, we cannot draw any evidence
for any potential gender inequalities for our investigation period. On the contrary,
our findings suggest that women have made significant inroads into formerly
male-dominated regular employment.

Hypothesizing about potential reasons for this bias, we suggest (a) that this
negative perception stems from a general “adaptation problem” referring to the
transition from high to low-growth economy, and (b) that the ongoing strong
prevalence of the societal ideal of a male breadwinner in Japanese society effect-
tively forecloses a positive appraisal of young women increasingly finding their
way into regular employment where this happens at the expense of men.

Civil Liberties or Civil Rights? Muslim American Advocacy Organizations

This paper considers the extent to which two of the most prominent Muslim
American advocacy organizations have been able to follow the pattern of advok-
cacy established by the Civil Rights Movement as they have sought to confront
Islamophobia in the USA. These two organizations – the Muslim Public Affairs
Council (MPAC) and the Council on American-Islamic Relations (CAIR) – have long
been at the forefront of Muslim American advocacy. The analysis considers the
trajectory of MPAC and CAIR given the cultural and political context of the current
post-Civil Rights era. I begin with an overview of what I call the “civil rights mode”
of advocacy, a race-conscious strategy historically used by many civil rights advok-
cacy organizations. This is then contrasted with a “civil liberties mode,” a race-neut-
ral or “color-blind” strategy that has recently gained favor in contemporary
American advocacy politics has played a crucial role in limiting the effectiveness
of Muslim American advocacy efforts.

Etched In Stone: Preservation Of Cemeteries and Cultural Identity

Cades Cove was a thriving Appalachian mountain community in the United
States prior to the establishment of the Great Smokey Mountains National Park.
The creation of the park effectively brought an end to this community. It now
exists within the park as a tourist destination (approximately 2 million visitors
per year) with a few remaining ‘primitive’ homesteads and cemeteries. Everyone
knows what cemeteries are, but in that familiarity, there is dismissal, for few know
that cemeteries are far more than what they know them to be, and in that regard,
cemeteries are far more than sequenced repositories for the deceased. Ceme-
teries constitute libraries of stone and are proxies or microcosmic expressions of
the communities they represent or represent and are an important element
of community.

The first task of this research has been to conduct a sociological examination of
Cades Cove and the associated cemeteries, archiving the socio-demographic data
of the former communities and their residents. The second objective has been to
collect precise GPS coordinates of all known stones & markers in the cemeteries
of Cades Cove.

A major disaster can strike at any time, endangering precious cultural property.
Our cultural preservation efforts of these cemeteries are an important compo-
nent of disaster preparedness in Cades Cove and to members of the surrounding
communities with direct familial ties. These cemeteries have tremendous reli-
gious and spiritual importance to the families with ancestors buried there and are
a significant marker of their cultural identity. Without these preservation efforts,
a major disaster could destroy these libraries of stone and they would be lost
forever. This would potentially threaten the future continuity of the communities
and their cultural identity, destroy the artifacts of their ancestors and their family
histories, and hinder recovery efforts.

Role of Sociological Theory in Deconstructing Sociological Phenomena In Africa – the Social Exchange Theory and the Small House in Zimbabwe

Sociological theories continue to illuminate various sociological phenomena
found in Africa and act as conceptual and analytical tools in deconstructing sociological
knowledge. This study uses the lens of the social exchange theory to analyse the small
house practice in Zimbabwe. The ‘small house practice’ is the trend among married
men in Zimbabwe to maintain a single woman as a quasi-permanent sexual partner
of social marriage. This relationship is considered subsidiary (small) compared to
the official marriage yet it is important to the welfare of both man practicing it and
the unmarried woman being looked after. The study reveals that those engaged in
small house interactions arerationally seeking to maximize the profits or benefits,
especially in meeting basic individual needs of both the man maintaining a small house
and the woman being looked after.

LOW, KELVIN* (National University of Singapore, socleyk@nus.edu.sg)
The Spatial Politics of ‘Noise’

This paper attends to sounds and noises as sociocultural phenomena taking
place in everyday sonic environments. If noise is considered as sound that is out
of place, then how and where does this evaluation transpire in order for noise to
qualify as an aural transgression? In defining what constitutes as sound or noise,
the process also involves locating how noise is dealt with in different places that
we inhabit (public space as shared/private space), at different levels (small/large-
scale) and by different social actors (individuals, groups, social institutions etc.).
Cases of auditory alterations in urbanity will be analysed in order to demonstrate
how sounds and noises acquire socio-cultural valences in the ways that urbanites
regard and utilise spaces in city life. By interrogating how places are experienced
and contested vis-à-vis auditory encounters, the paper attempts to shed light on
the relationship between sound, noise, and sociality in place, and also illuminates
how aural information structure social positionings, divisions and hierarchies in
everyday life.

LOW, MARTINA* (Technical University of Darmstadt, Martina.low@tu-berlin.de)

Space as Material Culture

The concept of space continues to represent a challenging category in the field
of sociology owing to its implicitly referring to the material dimension of things.
Following the “spatial turn” in the social sciences, relational definitions of space
have prevailed, yet there is still a clear lack of systematic research. However, the
concept seems ideally suited to grasp the configurational nexus of complex rela-
tionship between performativity, iconicity and materiality more accurately. The
presentation introduces space as a cultural sociological concept and shows recent
examples of how space constitutes social meaning.

LOWENSTEIN, ARIELA* (University of Haifa, ariela@research.haifa.ac.il)
BIGGS, SIMON (University of Melbourne)

Approaching Generational Intelligence: Complexity and Agency in an Intergenerational World

‘Generational intelligence’ (GI) proposes a psychosocial approach to the ques-
tions of cultural adaptation to demographic change and a reconceptualization of
ageism. It places age related generational identities in the domain of intergenerational
relations and contexts such as families, workplaces, in policy development
and in civil society. GI suggests three dimensions, key to addressing the
degree to which it is possible to place oneself in the position of another age
group. These include: the degree to which one becomes conscious of self as part
of a generation, a relative ability to put oneself in the position of other genera-
tions, and a relative ability to negotiate intergenerational connection.

It is argued that dominant forms of adaptation provide limited opportunities
for personal development and for age-specific identities to take shape. The val-
ue of empathic understanding, negotiated solutions and complementary roles
between generational groups are examined as we move toward the discovery
of age-specific contributions that may also throw light on the wider human con-
dition. As such the approach works phenomenologically and is not overly con-
cerned with refraction based on lineage, cohort and chronological age. It also
draws on a critical psychodynamic understanding of social relations in so far as a
preconscious ‘unthought known’ is seen to play an important role in the mainte-
nance of legitimized social identities and inequalities based on age. Implications
for policy and the conduct and training for research are also critically examined.
This exploratory paper investigates the modality between data collected using an online questionnaire filled in on a mobile phone device and a paper-and-pencil questionnaire. An experiment was conducted on 5th of July 2013 in thermal comfort conditions of a lab at the University of Ljubljana, excluding external effects. A total of 75 students were randomly assigned to three experimental conditions. A short questionnaire included questions on knowledge, attitudes and behaviour towards organic food products. The two online questionnaire versions were designed in a way that the visual design was most similar to the paper-and-pencil version. In order to explore the participants’ willingness-to-buy and willingness-to-pay for organic certified food, the paper-and-pencil version involved the actual presentation of a glass bottle of organic apple juice of 1 L and a package of organic spaghetti of 500 gr, while the online surveys involved the video projection of both organic foods. For the online versions, paradata on time and changes of answers were collected. The recorded experiences from the three data collection modes will be explored in order to answer questions on the time differences between the modes, on the data quality, and on respondents’ performance. This experiment is one of the first studies on mode effect for mobile phone online questionnaires as the lab conditions guarantee the exclusion of confounding effects of self-selection and non-response which typically limit the measurement of the pure mode effect.
This study examined patterns and predictors of changing young adults' attitudes toward gender-role during Taiwan's social transition in the beginning of 21st century. Based on panel data from 2000 to 2011 and latent growth curve modeling methods, the study identifies patterns and predictors of attitudes formation and change from adolescence to adulthood. The young adults showed an attitude of high salience for gender equality, which was following by the declining egalitarian outlook during their transition to adulthood. The findings indicate that the parental characteristics and their gender-role attitudes have significant influence on the formation of adolescents' gender-role attitudes. Moreover, the socialization background has far reaching impact, not only shaping the initial adolescents' attitudes but also affect the trajectory of the attitudinal change through the various social-interaction contexts.

Furthermore, the results of the latent growth curve analysis evidence the inter-Weaving mechanism of socialization and symbolic interaction. Therein the socialization background has far reaching impact, not only shaping the initial adolescents' attitudes but also affect the trajectory of the attitudial change through the various social-interaction contexts.

Copreneurship and Gender Dynamics in Small Family Firms in the Transitional Economy of Taiwan

This study explores the relationship between entrepreneurship and gender relationships in family firms during the global recession in Taiwan. Although previous literature on conceptualized women's involvement through participation in family businesses, certain studies have indicated women's substantial contributions and indispensability. The gender dynamics within an entrepreneurial setting remain under-investigated. In this study, the power dynamics within day-to-day entrepreneurial processes in Taiwanese copreneurial firms during the global economic recession are explored from a family embeddedness perspective.

Qualitative data generated through in-depth interviews of 24 family firms across economic sectors in 1995 and the follow-up interviews in 2010 show the diversity of the gender relationships and the complexity of the power negotiation between copreneurship and patriarchy. The market uncertainty and the firms' adaptive strategies provide a context in which women are able to negotiate the patriarchal system and reconstruct their position by using their entrepreneurial capability. The findings show that gender dynamics and wives' bargaining power in copreneurial firms may vary with copreneurs' entrepreneurial capability, the nature of their specific industry, and family relationships. Wives' adaptive entrepreneurship based on years of accumulated tacit knowledge and capability, is crucial for firms' risk management in coping with market uncertainty. Wives' roles tend to be characterized by greater autonomy in industries that utilize female health professionals, and the roles they assume in this context shape the process.

Authorities in the United States

I submit, however, that using the measured incidence of prejudiced attitudes is the appropriate focus of analysts attention. From here, there are some questions to solve: Is this a merely external communication issue? Is there a meaningful contribution that the comprehension of social networks to the organization? In the other hand, far from the importance of implementing social media as a resource in the internal communication it is also important to point out on the challenges that a "brand new" type of communication demands to the organizations. Introducing new technologies could be adopted very fast but the social comprehension of subtle changes, like those in communication, requires extra analysis.

Prejudice Incidence and Estimated Exposure to Prejudiced Authorities in the United States

Analysts have debated why substantial declines in the estimated proportion of persons prejudiced against women and blacks has not been accompanied by large declines in key indices of race and gender socioeconomic inequality. Some analysts contend the measures of prejudice are flawed, and this has spawned an exciting effort to measure prejudice unobtrusively. While accepting the research on implicit prejudice, I note that the sociological debate has presumed that the incidence of prejudiced attitudes is the appropriate focus of analysts attention. I submit, however, that using the measured incidence of prejudiced authorities and accounting for the social organization of exposure to those authorities produces better estimates of the exposure probability. Data limitations made it necessary to focus only on women and blacks, but the methods used can be applied to any group for which measures of prejudice exist. The results of the analysis indicate that, with levels of prejudice obtained for the year 2012, African Americans are almost certain, and girls are even more certain, to encounter authorities prejudiced against them. After presenting the findings, the implications of the findings for a thorough-going asymmetry of experience are noted. It is suggested that this asymmetry, and the double as to others' sincerity it fosters, undermines prospects for positive societal response to the problem posed by prejudice as well as any effort to inhibit the transformation of prejudice into discrimination.

Hukou Intermarriage and Mate Selection Process of Rural Migrants in Urban China

China is a natural case for understanding the relationship between internal migration, rural-urban marriages, and stratification. Past studies show that during Mao’s era when internal migration was banned, rural people married within 25 km from their villages. Social mobility through marriages and migration for work was hindered. After the ban was lifted in 1978, boards of rural migrants escape rural poverty and flood to the urban areas to improve their life chances. It is logically expected that spatial mobility brings people with rural and urban origins closer culturally, socially and economically, and thus increasing the odds of rural-urban marriages. However, this is not happening. The urban and the rural marriage markets are not overlapping despite migration. Based on 62 in-depth interviews with urban and rural people and participant observations in various parts of South China, I found that opportunities for rural-urban marriages are seriously constrained by the ascribed stratified "hukou system" (household registration) in various ways. First, this system links people’s accessibility to state-provided opportunities and benefits for urban people like housing, education, and health care, which cannot be enjoyed by the rural migrants. They are thus degraded as second class citizens in the urban areas and become the least desirable in the urban marriage market. Second, spatial segregation in education, housing, and workplace has reduced the opportunities for rural migrants to meet urbanites and/or developing urban ties that facilitate rural-urban marriages. Third, day-to-day discrimination against rural migrants has forced some to self-eliminate from “marrying up.” However, factoring these constraints, some individuals employ strategies to break the social and spatial segregation by using Information Communication Technologies in dating and by-upholding and adopting “modern” urban cultures and values so that their status is comparable to the average urbanites.

Power without Representation: The Coherence and Closeness of a Transnational Governance Network

Transnational governance networks usually claim to represent at least an important part of global public opinion. In the absence of institutions that sustain these claims they must construct these levels and act in accordance with two opposing principles: coherence and openness. Both the legitimacy and efficacy of these networks depend on their ability to strike an appropriate balance between such principles. To analyze the practical challenges that derive from this need, this paper focuses on the North American Section (NAS) of the Trilateral Commission. A network-like organization bringing together leaders of several influential think tanks and outstanding personalities from business corporations, political organizations, academic institutions and media firms, NAS is a major player in North America’s transnational arena. To analyze it, we approach it in two steps. First, we review the membership of NAS and the NAS committee, and its three national groups. This analysis shows that even though NAS is highly coherent, it is excessively endogamous: rather than reflecting the diversity of North America, it only reunites a select group of U.S. or protest leaders, members of transnational corporations, and parliamentarians from the whole. Then we focus on the agendas of the NAS’ annual regional meetings. This makes clear that, judged by the origins of participants and the subjects discussed, these meetings are very exclusive. Thus, our general conclusion is that NAS is a coherent but closed network, very powerful but scarcely representative. Although it is extraordinarily influential it represents the views and interests of a powerful elite, it fails to articulate the diversity of North America’s public opinion. Ironically, a network that promotes the use of “soft power” in the international arena—a power founded on opinion, rather than on force and material interests— heavily depends on the hard power of established hierarchies.

Working on Futures, Reducing Risk – University Graduates in Mali and Their Strategies of Action

The research examines the conditions and opportunities of university education in Mali. The West African state counts two state universities, five state graduate schools and various private universities. The capital city’s University of Bama- kok with more than 80,000 students is obviously the center of higher education. Facing precarious conditions due to the shortage of means and professors the majority of students manage nevertheless to successfully graduate. Being young and highly qualified, university graduates are still strongly affected by unemployment. Given the problematic conditions of studies and the major difficulties entering the labor market, a university degree does not create the certainty expected, but provides and even provokes risk again. Consequently, the main questions to be answered are: Why do young Malians study nevertheless? And how do young academics cope with a situation characterized by uncertainty and unpredictability?
The Work of Producing Quality in Changing Academia from the Standpoint of Junior Female Scholars

This paper is a chapter in my doctoral thesis. It builds on another chapter in which I explore the gendered work of ‘boasting’ in the context of changing academia, and how this work is essential for furthering ruling purposes and interests connected to the marketization and global competitiveness of Finnish academia. I pick up from there to study the evaluation ideology from the standpoint of junior female scholars. This involves explicating: how particular managerial texts, textual technologies and artifacts, including those related to tenure track recruitment, hold people accountable in ways that lead to the production of particular notions of quality; how this is part of furthering particular organizational and managerial purposes; and how the work related to producing this quality involves the (re)production of a particular gendered order in academia. I work from there to suggest a reworking of the concept of homo-sociality in academic recruitment. In the analysis I draw mainly on an in-depth interview with one female scholar; the various versions of an article manuscript she wrote as it developed over a lengthy review process for publication in a top journal within her field; the review documents; as well as the correspondence with editors of the journal in question. Furthermore, I draw on interviews with differently positioned scholars and academic managers, field notes from various events, and text material produced over a period of three years.

LUNDBERG, JANNA* (University of Lund, janna.lundberg@uvet.lu.se)
Social Science and Alienation In School

School can in many ways be seen as a place distant from life in general: in classrooms students are kept separate from the familiar parts of life. School and life outside of school follow different schemes so many students seems to put their real life on hold.

Social science class ought to be one occasion where life in school become more real and more similar to life outside of school, since it is supposed to be all about life in society. According to the curriculum for the Swedish upper secondary school it is not enough to learn about society, the students should also become a part of society through active participation – by doing democracy, not only learning about democracy (a legacy from John Dewey). In spite of this we do not appear very well equipped for taking an active part in society even after the twelve years in school that the majority of Swedish citizens complete. The importance of active citizenship is emphasized, but in the room where students and teachers do their daily work something stops the development of active citizenship.

My doctoral study focuses on the intriguing tension between what is told, said and written in theory and what is being done in practice within the field of education and democracy in general and active citizenship in specific. Alienation theory can reveal why the well-intended work within the frames of social science is failing. Alienation in school could be seen as one part of the greater social tendency to postpone life by not living in the present. This paper will examine alienation theory and in addition to how it can be used to understand the tension mentioned above and thereby search for a path that may have the potential to lead to changes of the situation.

Young Consumers In Sweden

In this presentation the question of how economic resources influence children’s peer relations will be addressed, with focus on the Scandinavian setting. This question is of particular importance in times of changing discourses surrounding children’s role in the consumer society. The ways Scandinavian children are portrayed of as young consumers have gradually changed, from being seen as mere observers towards competent actors in their own lives. In total, 48 Swedish children aged 9 were interviewed in focus groups, using a projective vignette technique and pictures. The children were asked if and how children in general could gain new friends through material possessions and money. The findings indicate that children perceive possessions as multi-functional tools in peer relationships. The ability to fit into the peer group, by the use of different possessions, was perceived as especially important. Additionally, the children perceived money as an altruistic tool to demonstrate kindness. As the Scandinavian countries become more liberalized, with higher economic differences between households as a result, we need to address the question of the consequences. We should consider the significant effects of increased consumption on children’s social relationships. If children perceive peer pressure of having “cool” things, and if they believe that they can use material goods to become more popular and accepted, they may be highly vulnerable to the internalization of materialistic values.

Surveillance often sparks responses relating to “privacy.” The era of state surveillance, read through warnings like Orwell’s, makes being watched seem negative, undesirable. We want to escape, to hide, or just be “private.” But this approach seems myopic in a world of mass media and now social media. The world of celebrity makes being seen a matter of privilege, of desire. The consequences for surveillance are far-reaching – from the unwanted eye to welcome watching. The desire to be seen may help to naturalize and legitimate surveillance of all kinds, to encourage new modes of cooperation of the surveilled with their surveillors. The desire to discover (large scale surveillance) meets the passion for publicity in social media. Flexibility, mobility and connectivity are sought through social media but users find themselves tracked and recorded using the same media. How do we account for the apparent willingness to be visible to all, or to have a secure or desirable position, when it is known that daily routines and whereabouts are tracked and traced constantly? While social media allows everyone, a new celebrity to surveil, it also facilitates in fresh ways classic activities of state agencies. Such forms of surveillance penetrate the time-space paths of everyday life (using constant updates, location tracking). This paper explores these questions sociologically and critically.

**Transformation – Reality or Simulacrum?**

In this report the concept of transformational societies will be revised. The concept was widely applied to address post-communist societies and especially value-ue, institutional, normative change and related phenomena. However it is unclear whether the change is accomplished and what a post-transformational society is or should be like. Besides, a broader context should be considered. Are transformational societies only those with the communist past or can other societies, for example, experiencing economic crisis or different kinds of social instability such as revolutions or wars, or even those who enter the European Union also experience a transformation? Surely, the contemporary context is totally different from the change meant by Durkheim when he wrote about the transition from the traditional society to the industrial one. Contemporary societies are characterized by what Urry calls complexity and certain changes became their permanent characteristic. So is it possible to differentiate between a transition and a societal change? These and other questions will be addressed in the report.

**Unique Societies-Common Alienation? Revisiting Alienation in Contemporary Context**

The paper is aimed at examination of the difference of nature and characteristics of alienation and in post-Soviet and Western countries. Recent findings (Lytkina, Welzel 2013) show that in such post-Soviet countries as Russia and Kazakhstan anomie can be measured by powerlessness and normlessness whereas meaninglessness, social isolation and job dissatisfaction form a measurement of alienation. The linkage of powerlessness and normlessness might be explained by the general Mertonian assumption of discordance between the culturally defined goals and the means the social system provides an individual with. Hence, lack of control over desired outcomes (powerlessness) causes anomie behavior (normlessness). Still, powerlessness is commonly used as an indicator of alienation (Seeman 1982, Olsen 1965, Dean 1961) whereas meaninglessness is sometimes used as an indicator of individual anomie, or anomia (Seeman 1982, Legge 2008). These arguments make formulate the following problem: are thus alienation and anomie in post-Soviet and Western countries different? If yes, what are the reasons for its difference and how can the differences be captured theoretically and empirically? Post-Soviet countries can be conceptualized as the ones who underwent the process of social transformation, thus they can be conceptualized in Durkheimian logics. One can assume that in the time of transformation the level of anomie rose significantly. Western European societies, on the contrary, experienced a relative stability. Post-Soviet countries experienced a dramatic change in the value and normative systems which before the collapse of the Soviet Union were characterized by the collectivistic nature, whereas Western societies were characterized by pluralism of normative and value systems together with high level of individualism. Which phenomena and which indicators are thus relevant for the two types of societies? These and other considerations will be taken into account.

**Gender Change and Constants. the Case of Swedish Police and Gender Equality Policy**

The aim of this paper is to present the case of gender equality policy and politics within the Swedish Police Service. The main object is to investigate the relation between gender equality change and local gender formations and experiences. The paper provides an outline and a theoretically and empirically informed discussion of specific organizational, historical and socio-demographic factors that are key in an understanding of gender and police work in Sweden, and putting this within a framework of political and policy development. Sweden is often portrayed as world-leading when it comes to issues of gender equality, and state policy has put forward ideals of equal opportunities in all areas of society. In this context the national police service is interesting, as a male-dominated, masculine, state organization where gender change is visible.

Ideals and discourse concerning gender as well as gender equality policy and gender equality projects have been a part of police organization since the 1980’s and the female-male ratio is slowly but constantly evening out. There has been a symbolic change and a statistic demographical change when it comes to women in policing. The issue put forward in this paper is the impact of these ongoing transformations in everyday police work. Rather than evaluating the gender equality regimes, this project investigates into the micro politics of changing gender regimes at the work place. The results show that change is undisputable but unevenly distributed in the organisation with regard to the gendered division of labour and gender symbolism and the grand narrative of gender equality is put under scrutiny. Further the author argues links between processes of professionalisation and academization of policing, as well as altering organizational ideals as pertinent in this process.
The rapid development in Information and Communication Technologies (ICTs) has drawn scholars’ attention to a new social problem—the digital divide. However, there has been little work examining the link between national contexts and students’ experiences with ICTs. This research combines two groups of literature: micro-level accounts on the inequality of digital usage and macro-level studies on the global digital gap. Using data from the Organisation for Economic Co-operation and Development (OECD) Program for International Student Assessment (PISA) 2009 data, I utilize hierarchical linear modeling to examine how institutional variables at the country-level are associated with students’ digital usage across 40 countries. I use Cook’s distance to diagnose the influence of data points from the cluster level. Three institutional factors are examined: economic development, income inequality, and educational expenditure. Results are twofold: (1) The digital divide between socially-advantaged versus socially-disadvantaged students is wider for countries with lower income, higher inequality, and lower educational expenditure. (2) The effects of institutional characteristics on digital usage only matter for low SES students, but not for their high SES counterparts. This research helps scholars identify key national characteristics that influence the inequality of digital usage.

Exploring the Impact of Birth Cohort Size on Education Achievement of Cohort Members
Using the data from China General Social Survey 2005, this research explores the major and modulatory effects of birth cohort size on education achievement of cohort members in China, from longitudinal and cohort perspective. Results show that birth cohort size has significant impacts on education achievement of cohort members, and cohort members in larger size birth cohort have lower education achievement. However, the impacts of birth cohort size on male and female, on urban people and rural people are different, and the reduction of birth cohort size will narrow the gap between these two groups. Besides, this paper decomposes net effect of birth cohort size by simulation and points out that it is the discordant change between population reproduction and education capacity that leads to this result.

Cybercultur @ and Cultural Management For Development
México is a multicultural and mega-diverse country. With this richness and abundance in natural and cultural resources, Why Mexico is a country with a high index of poverty and low social development? How could we work in terms of community development? This paper focuses primarily on a proposal for the development of a thinking culture development as a large system formed by multiple sub-systems. We argue how Theoretical Policies let us understanding and explaining the culture as an ethno-ecosystem. In this proposal, Central System is the culture for development, and each sub-system is related and complemented with each other in building concrete procedures of observation and analysis units, as the elements of a larger system analyzed from a constructivist operational method. Specifically each subsystem may have different value and processing degree, and they are part of “culture for development” system. Each subsystem invites communities to making decisions and taking actions with a methodological model by the Sociocybernetics proposal and from a cybercultural perspective. Then, we explain how Sociocybernetics allow us to construct a methodological proposal based on an Emerging Community of Local Knowledge system, CECL’s, in order to understand culture and development as an ethno-ecosystem; we explain how the ethno-ecological processes in a community are multidimensional and multi-relational processes. These processes permit the culture to appear as a fundamental component of a sustainable development.

MÁBUCHI, HITOSHI* (Osaka Jogakuin University, mabuchi@wilming.ac.jp)
Global Education in Japan
Global education has become a trendy phrase in Japan. A recent international symposium entitled “Primary and Secondary Education in the Global Age,” held in August 2013 by National Institute for Educational Policy Research (NIER) and Japan International Cooperation Agency (JICA), attracted a large audience confirming interest in this area. Among the discussions at the symposium, a central one was the debate about the meaning of “a global person.” For some, especially those in economic circles, diversity is regarded as a source of competition. For others, particularly multicultural educators, diversity is regarded as one reason to implement changes to the social welfare policies and education in an increasingly global society. With these two polarized positions in mind, I examine what Inter-cultural Education Society in Japan has tried to achieve since it first introduced the word “intercultural” into Japan 30 years ago. Because of the efforts of the society, the largest Japanese association in this field, most people in Japan are now aware of the term “intercultural.” However, research from the society has concentrated on promoting dichotomous viewpoints based on comparisons between Japan and other countries such as the U.S. The focus of the society’s research is primarily on the differences between nations, while it has scarcely put any effort into the investigation of diversity or power differences within society. In other words, in spite of the organization’s goals, it has failed to scrutinize the idea of “intercultural” in terms related to internal diversity or issues connected to social justice even and Japan has experienced a number of changes related to these in this age of globalization. In this study, I examine and analyze the context above and consider the reasons for the tendency identified in this field of Japanese education.
Judgments about Inequality and Economic Elite Among the Middle Classes: Discontents and Sociology of Critique

This paper will present the preliminary results of a research on the Chilean middle class and its perception of the socioeconomic elite. The global emergence of the middle class in different countries (also known as "unknown persons" or "dictator" games, respectively) has created a renewed interest in "new" middle classes in global sociology due to its rapid growth and the socio-political challenges that these poses. How do those who belong to the middle classes in emergent countries feel about this, especially about one of the more salient expressions of world inequalities, the socioeconomic elite – i.e. the 1%? Does a perception of injustice, discontent or critique emerge towards the elite? How does that happen – or not? Our team conducted a study using an experimental methodology based on games that replicate similar exercises applied by social scientists through studies in different countries. The simulation was conducted with participants from five strata of Chilean middle classes and one from non-qualified manual workers. This method allows the study of feelings and perceptions that arise in simulated situations of social interaction, which could not be observed through surveys or interviews. We will present the preliminary results, especially subjective elements that nourish or give meaning to middle classes and one from non-qualified manual workers. This method allows distinguishing by type of territory where they live and work, the simulation was presented from the theory of complexity, such as different discourses in middle classes, their feelings, perceptions of justice/injustice, discontent or critique towards the socioeconomic elite.

Longevity, Leisure and Landscape

This work seeks to develop a critical reflection on leisure from the interaction with natural and cultural landscapes, declared patrimony of humanity, in the city of Rio de Janeiro, in the neighborhood of Copacabana. This site has the second highest concentration of seats in the region, considered by Municipal law "preferred tourist destination of the third age". The site will be presented from the theory of complexity, dialoguing with assumptions regarding sustainability and active aging on longevity.

The methodology presents the translation of perception of 60 to 100 years of elderly, residents at the site and through in-depth interviews with women political appointees by two different governments in Brazil, such as, Fernando Henrique Cardoso (FHC), Luiz Inácio Lula da Silva. This site has the second highest concentration of seats in the region, considered by Municipal law "preferred tourist destination of the third age". The site will be presented from the theory of complexity, dialoguing with assumptions regarding sustainability and active aging on longevity. Leisure will be analyzed in its subjective and contemplative dimensions, and its contributions to re-signification of the quality of life of the old guy, and the strengthening of intergenerational relations, solidarity-based and participatory governance. In this context, the effective relationship will be addressed with the landscape, a place of memory, whose presence preserved is relevant in the biography of who gets old. Thus, these leisure activities, from the aesthetic contemplation, are compatible and suitable for various limitations arising from aging.

Gender, Food Security and Climate Change Adaptation in Bangladesh

This paper examines the links between gender, food security climate change and adaptation in Bangladesh, and investigates how a social justice approach to adaptation – with a commitment to participation, recognition, equitable governance and environmental integrity - may work to improve local level food security, and address social vulnerability. Southwest Bangladesh is facing a range of ecological and climate changes, including rising sea levels, cyclones, variable rainfall, habitat loss and salinity. Smallholder farmers, agricultural labourers and poor women are particularly vulnerable, with ecological changes interacting with other layers of vulnerability, including poverty, gender, political and social discrimination. A range of ideas are present in development and climate change literature, making links between gender and food security, both in terms supply and demand. In particular, women's role in household food security is highlighted. Here, I critically examine these theories and assumptions, within the contexts of existing social, cultural and other vulnerabilities, with reference to projects and research from Bangladesh. I then discuss these ideas in relation to climate change adaptation. Socially just adaptation theory argues that for adaptation to be sustainable, transformative and effective, initiatives need to be responsive to existing social inequalities, while working to reduce vulnerability and create transformational change. Many NGOs, the Bangladesh government and other key stakeholders, have recognised the complex vulnerabilities facing women, both within their households and communities, and are attempting to incorporate these ideas into adaptation responses. However, it is unclear whether these efforts represent...
strategic change for women from poor households, involving a transformation of gender structures, or only practical changes, in helping women survive.

MACPHERSON, ROBERT* (University of California Irvine, rmacpher@uci.edu)
The Right to Democracy and the State in Moments of Crisis: Lessons from the History of Radical Unionism

For the last four years square occupation movements have formed the core of a revolutionary wave calling for radical forms of directly democratic organization. It remains an open question to what degree these rights to democratization can be accommodated by states and the larger structures of global capitalism – or all. Solving this puzzle requires understanding the democratic claims of the syndicalist unions which are the most long-standing example of a directly democratic mass social movement organization on par with the square occupations. Toward that end, I take a world-historical perspective that allows a comparison of syndicalist attempts at extending democratic rights across two time periods: the early 20th century crisis of British hegemony and the syndicalist resurgence in the current crisis of the Eurozone. The focus is on examining how syndicalist-state interaction differed from the more hierarchical worker organizations putting forward much narrower sets of rights claims. Studying the manner in which crises-timeshaped different sets of democratic rights claims of the syndicalists reveals the trajectories of state-movement interaction to be conditioned by processes of global capitalism and the specifics of local structures of dependency and exploitation. Existing social movement theories of democratic movement development have been to both enrich and reconfigure our understanding of this long-term perspective. In addition, this study reveals how the movement’s rights claims to economic democracy (both inside and outside the workplace) underwent a transition from largely implicit to explicit human rights frames, thus facilitating connection with non-labor democratic movements. Finally, tracing state-movement interaction in unstable economic contexts bears on questions of economic rights; the crucial test of such rights to explicit distribution of economic rights; the crucial test of such rights claims in periods of crisis becomes the degree to which workers and other state-holders have democratic input on policy and thus avoid “cost shifting.”

MACPHERSON, ROBERT* (University of California Irvine, rmacpher@uci.edu)
Uneven Development, Austerity and Worker Organization Response in the Eurocrisis

The response of labor federations and left parties to the Eurozone crisis has provided a stark demonstration of the ways in which these organizations can perform widely different roles despite similar institutional forms. Some workers organizations have become willing participants in the imposition of austerity, while others have sought to delay or modify austerity measures via formal political channels. Yet others, most especially the Communist and syndicalist union federations, have sought to create a real movement-like structure of labor opposition to austerity and control via austerity. Moreover, some organizations have forged links with square occupation movements such as the indignados via the use of unorthodox tactics and democratic organizational methods. Traditional social movement analysis might look to the ideological or organizational aspects of the organizations themselves, and the more recent political opportunity structure and political mediation approaches would seek to explain these outcomes by laying out the local state context in which they contend. In reality, neither of these approaches can explain how both labor opposition and mobilization are effected by ostensibly similar worker organizations across the continent. Instead, formal comparative methods such as QCA and ESA can be used within an incorporating comparative method in order to address these outcomes from a world-historical perspective. Only an analysis carried forward on multiple temporal and spatial scales can properly situate the worker organizations of Europe and the crisis itself within the history of the world-economy. The results of long-term processes of capitalist development such as the Eurozone’s neomercantilist core-periphery structure and the global financialization of late US hegemony can be related to, and thus become essential to understanding, how worker organizations come to aid or resist capitalist attempts at crisis management.

Completely Included, Partially Included or Partially Excluded in the Labour Market? an Exploratory Schema of Social Vulnerability in Late Careers

Life course sociology corresponds to an area of study traditionally interested in the analysis of vulnerability during early and middle adulthood careers. Yet, given an increasing attention over the last occupational period in Western countries, the current article aims to analyze the vulnerability confronted in late careers, focusing specifically in Switzerland. To this end, a new exploratory schema of vulnerability based on seminal life course notions and an inclusion/exclusion theory, is proposed for the analysis of late careers. Moreover, another aim corresponds to analyze how different life course determinants -such as life experiences in different domains and positional factors- impact the likelihood of confronting, or not confronting, social vulnerability during this occupational period. Longitudinal data comes from the Survey of Health, Aging and Retirement in Europe (SHARELIFE). Used methods are cluster, optimal matching, and discrete regression models. Results allow concluding first that the proposed conception of vulnerability based on an inclusion/exclusion schema has an acceptable empirical support. Second, it would be interesting to rule out social vulnerability during late careers depends mainly on early life experiences in family and occupational domains, as well as the positional status of workers.

MAEDA, TOMOHIKO* (Meijo University, tompeda@meijo-u.ac.jp)
The Legal Cultures Observed By and Observed Among the Pioneers of Japanese Socio-Legal Studies

Since Professor Takeyoshi Kawashima provoked the debate by his classic work, Legal consciousness of Japanese, in 1967, theories of legal consciousness and legal culture continue to keep the issues of scholarly controversies in various fields of socio-legal studies. With an eye to the controversies on the globalization and local cultures, theories of legal culture (and legal consciousness of local populations) seem to provide suggestive viewpoints for socio-legal studies on globalization and local adaptation. I would argue that theories of legal consciousness and legal culture serve for studies on globalized law and society in two ways. First, they would provide viewpoints for studies on legal reform and adaptations in various countries. We should keep an eye on the culture and social consciousness shared by elites leading legal reforms in our empirical studies on the legal culture adaptation to globalization around the Pacific. We could observe what kind of legal consciousness and legal cultures the leading groups have and what kind of impact they have in molding new legal systems or institutions. Second, we would keep their positions in the socio-legal grand theories on use of law, legal adaptation, legal conversion, and so on, though it would be difficult to test empirical validity of such theories.

I would illustrate that Japanese theories of legal culture themselves were reflection of the legal culture shared among the pioneers of Japanese socio-legal studies. I would straight up the key factors of Japanese theories on legal culture and relate them to the social and academic backgrounds and interests shared among the pioneers of Japanese socio-legal studies. I would also try to reconstruct theoretical framework, in which legal consciousness and legal culture serve as key factors for our contemporary empirical studies.

Revolution from below: The IMPACT of Market-Oriented Management of Hospital Employment in Germany

Internationally, health care has seen the advent of (quasi-)market governance in a public service environment and, concomitantly, the rise of organisational polices derived from private business. Hospitals are a case in point. While still being accountable for the universal delivery of medical services, they are expected to behave like enterprises geared towards earning revenue, sometimes in a regulatory environment featuring free user choice and provider competition. Thus, ‘market accountability’ becomes an issue for hospital management. Exploring the case of Germany, the paper explores how this translates into managerial concepts related to workforce issues including the roles of doctors, nurses, and further staff seeing the patient. We depart from the assumption that employment norms are shaped at sector level rather than in a single hospital but wonder whether this configuration will persist. Following a brief (statistical) overview of the evolving employment patterns throughout the German hospital sector, we examine the labour-related discourse of two sorts of actors: those of major intermediate regulatory bodies (which are critical players in the German health care system) and those entrusted with leadership functions in the hospital itself. Using a mixed-methods approach, we explore what kind of employment policies are advocated, how they are discussed, and how this discourse is reflected in evolving employment policies. Overall, ‘market accountability’ puts long-established professional concepts under strain. However, the ‘sense-making’ is different between

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
regulators and those who have to implement regulations. This suggests that the rationale of hospital employment is changing bottom-up, often against what regulators conceive as an adequate design for hospital work.

Childcare and Elderly Care in Bologna

Family is the main provider in the Italian welfare system. As a consequence, supports for care in Italy are underdeveloped since care is almost totally delegated to women, who are more likely to have one of the lowest fertility rates in all of Europe and will be suffering in the next years from an increasingly higher age dependency ratio, thus worsening the female care overload. Nevertheless, Bologna is a best practice in this worrying scenario. Thanks to a strong social democratic tradition, local welfare policies have been developed to address care needs and it has been the first to introduce childcare services in the 60s, while promoting a wider support for dependency in addition to the national provision. The result is that Bologna has the highest female participation rate to labour market in Italy. However, the financial crisis and the consequent reduction of public funds have put in question the sustainability of Bologna’s model in recent years.

In the present paper, we will show results from a series of 8 focus groups involving 34 working women conducted in Bologna during 2013, which have been selected because they have care responsibilities. Stemming from an investigation of both individual and social factors, the analysis will focus on the work-life balance of women, assessing the role of their partners, their family and the local welfare system in it. The comparison between women with childcare duties and women with elderly care will also show how the overload of women in their 50s will be the real challenge for Bologna in the next years, as long as they combine the roles of grandmothers, children of dependent elderly and worker.

Possibility of Area Management Organizations for “Bulwark” Against Neoliberal Urbanization – Thorough the Cases of Public Development Authorities (PDAs) –

In some cities in US and in Japan entirely new organizational structures have sprung up to promote urban development in the new contextual situation. In this presentation, a new structure, “Public Development Authority” (PDA) is treated, which has mainly developed in west coast of US, and is getting attention in terms of neo liberal urbanization. PDA is quite unique-style entity that is established by cities (municipality) as special purpose government for promoting specific purpose (such as area management, or historical and business management of historical market), equipped with business specialist-staffs, and also it is governed by volunteer citizen board members. “Half private, half government”entity is run or governed by citizens.

Some PDAs has been observed to behave as “developer” in the “neo-liberal” urbanization process. But considerable PDAs, for securing neighborhood’s core and culture, are trying to build the devices for helping local business owners and individual citizens mentally and physically, as of Seattle Chinatown International Bazaar project and “IDA Space” project for assisting local small businesses, using “visioning”method. These trials are expected to be effective “bulwark” against diverting impacts of neoliberal developments. This presentation concretely gazes at the PDAs’ efforts and the like’s of area management organizations to keep local core of cultures, local “life economy” with concrete devices from the stand point of citizens eyes and “advocacy”. And the conditions for preventing PDA to fall into “developer” are sought.

Just for accessing the present big picture in terms of area management organizations in neo-liberal trends in US, Japan etc, CDCs (Community Development Corporations) in US and “Machizukuri Kaisha”, special purpose agency in Japanese PPPs are shortly mentioned as well.

Instrumental Action and Rhetoric: Framing Rational Action on Language Field

The paper makes a theoretical reconstruction of a model for instrumental action in language, using the notion of rhetoric. It takes persuasive language to be constitutive of instrumental reason, and analyses the possibility of bring to the theory of social action some concepts from linguistic field. The first step establishes an analogy between instrumental rationality and rhetorical movements like projection of future, or reconstruction of past. In those operations we use rhetoric in order to create the persuasive frames of reality and use them for self-persuasion and for persuade other people to go into a specific course of action. Since deliberation is a problem of collective action and rationality we can understand rhetoric in terms of building a new descriptive model of rationality, in other words, we can describe rationality as a rhetoric operation: it consists in giving different degrees of truth to the information available and then create conditions for choosing a specific way. This approach builds a critical view to the notion of information as objective data collected by rational actors, and points to the deliberation as a cognitive way to deal with framed discourses about reality. Based on this model we can criticize some analytical problems from the theories of rational choice concerning collective action, here represented by M. Olson’s paradox and, in the same way, criticize Jon Elster’s paradox of indeterminacy, based on the concept of optimal amount of gathered information. The concepts of rhetoric give to the theory of rational action a key to understand how in empirical situation words, and sometimes just words, are enough to create action.

Social Norms and Policy Influence on Family Formation in Sweden

This paper seeks to extend existing knowledge about gendered transition to family formation and parenthood by looking at whether and how public policies influence fertility. Our research is part of a larger international project on gender equality and low fertility in postindustrial societies. The theoretical framework is derived to explore the ways in which family- and gender-role norms, institutions, and economic context intertwine with the family formation intentions and behaviors of young adults. We focus on two sets of social norms (family- and gender-role norms) in influencing individuals’ intended and achieved fertility. The two sets are viewed as separate constructs, the first dealing with the definition of the “normal” family, and the second dealing with the appropriate roles of men and women in the family and in the public sphere, especially the labor market. Our analytical model seeks to attribute equal explanatory power to men’s as well as women’s opportunities for engaging in positively viewed activities in the spheres of family and work. In our empirical analyses we rely on a mixed-methods approach. In this paper, we combine a quantitative analysis based on data extracted from the Swedish Young Adult Panel Study on attitudes to work, family and gender roles and their possible impact on family formation (intentions) among Swedish young adults in the first decade of the 21st century, with a qualitative analysis of narratives in in-depth interviews (N=80), carried out with women and men aged 24-35 years in two metropolitan areas in Sweden in 2012. The findings for the qualitative part indicate that young adults view Swedish family policies as good even when having little first-hand knowledge of them. We discuss similarities and differences across gender and family status, as well as the implications of our findings for research and for policy design.

Development, Modernity and Nanotechnology: The Challenges Of a Time

This paper aims to raise some thoughts on the present time and the relationship between modernity, environment and development, starting from some questions: if we continue to follow the current economic model, of neverending development and capital expansion, what awaits for us? Is there a future? Will the human species take part in it? How to divert the course of this rudderless state, which is called Progress? In search of clues that point to the possible answers, we walk at some tracks left in late 1960s and early 1970s, by Josué de Castro, on the changes that had already been felt in his time and the threat that hovered in the world due to environment imbalances arising from the development model based in the expansionary logic of capital, the rampant belief in science and technology, then to reflect on the reality of our time and the progress and achievements in the field of science and technology, and the challenges we face against the advance of new technologies - and this is the case of nanotechnology. Nanotechnology is a technology that can have and already has numerous applications. It’s, in the point of view of the market, a safe investment for the future. In this sense, we must discuss the ethical and legal issues that should regulate the use of nanotechnology. There is no certainty about the possible impacts that the use of nanotechnology may have, regarding the health of people and the environment. This paper is the result of the research “Nanotechnology and development. Recent applications to food and biofuels: recognizing the essential elements for the development of indicators of risk and regulatory frameworks that protect health and the environment” (898/2009), funded by CAPES, a government agency linked to the Brazilian Ministry of Education.
Women's experiences have been the nucleus of domestic violence literature, discourse, and policy, and have shaped the therapeutic and/or punitive measures that are characteristic of domestic violence prevention – measures that research has shown are largely ineffective in curbing violence. Consequently, we still know relatively little about why men batter, and how they make sense of the negative “batterer” credential that corresponds with their offense. The few studies that explore batterer behavior are primarily psychological, reducing their violence to individual pathology that can be “treated” in therapy. Accordingly, non-psychological studies are characterized by evaluations of the utility, effectiveness, and/or therapeutic techniques of Batterer Intervention Programs, thus missing the sociological roots of batterer behavior. Drawing from in-depth interviews with 15 male batters, my research shows that these men make sense of the offenses of which they have been accused in different ways, both with regard to the role they attribute to the state in their felt disempowerment and emasculation, and the role the state itself plays in the enforcement of their battering. These different meanings are attributable to a number of factors – factors I argue must be addressed to the extent that they are linked to recidivistic risks of battering. The analysis presented in this paper therefore provides a foundation for creating more effective social remedies for battering behavior, and it provides an opportunity to reconsider gender-based theories of interpersonal violence more generally.

The Social Fabric of Solidarity Economy Initiatives: On the Emerging Creative and Collective Action Devices

Solidarity economy initiatives are not obvious. They need specific contexts to emerge and develop themselves. We have to better understand conditions under which individual and collective processes of initiatives can emerge, be designed and implemented. As Hans Joas formulates it, the sense of action builds itself at the heart of the very action. So, we need to consider solidarity economy initiatives as a social construct. This proposition questions and participates in current researches on social entrepreneurship. My point of view emphasizes on the social contexts and conditions of alternative entrepreneurship.

A second idea, continuing the first one, leads me toward two hypotheses. As a first hypothesis, I consider that solidarity economic initiatives find their dynamics within creativity of action develops by alternative collectives of actors and social entrepreneurial communities. We should better know these collectives in order to differentiate their actors at the same times social activists and entrepreneurs. My second hypothesis involves concerns their devices which give its sense to collective actions and the processes of their design and implementation. These acting devices should be observed and analyzed in depth as far as they gather, promote, mutually develop and capitalize solidarity economy initiatives. Then these processes and the connecting devices permit to female the role of the social fabric of solidarity economical alternatives.

In order to develop and begin to validate these hypotheses, I shall present and discuss first results of a qualitative research focus on several collective action devices as developed by social actors in France. These alternative collectives and their acting and learning devices are developed at the very heart of co working
spaces and other "third places" described by Oldenburg but also through collabora-
tive web sites and their acting platforms.

Urban Waste and Our Day-to-Day Chaos

There is litter on most streets of the more privileged neighborhoods of the city
where there is cleaning services comparable to the first world; in the under
privileged neighborhoods, urban sanitation is on par with African or Indian quality
levels: this is the reality of Rio de Janeiro and the majority of the 16 Brazilian cities
with populations of over one million inhabitants. Rio de Janeiro is a city charac-
terized by enormous inequality in income and in geographic distribution of the
population, as well as in public services. Erratic urban expansion has made Rio de
Janeiro one of the hallmarks of segregation and social degradation, which makes
the populace's standard of living a challenge to manage. Due to this inefficiency,
most the city's periphery has open sewage that runs in ditches, rivers, the sea
and on the streets. The system of rainwater drainage does not undergo periodic
maintenance where there is a system at all, causing frequent floods and public
damage from heavy summer rains. Litter clogs drainage pipes and exacerbates
flooding and the contamination of rivers and the sea. It is still possible to see the
accumulation of garbage in outlying areas. In favelas, present throughout the
entire city, the habitation conditions and urban infrastructure are precarious, and
environmental degradation leaps out of control, thereby contaminating the sea
and making it impossible to swim and go to the beach in many important parts of the
city. Only a few areas have been cleansed since the 1970s. The objective of this article is to present a diagnostic of the impact of urban waste on the city of
Rio de Janeiro. The research was conducted using quantitative methods, as well
as secondary data from official sources.

Migrants Remittances and the Family

Abstract: Contrary to the perception of the relationship between the individ-
ual and the family as a structure, this paper offers a conceptualization of this
relationship as a process whereby individuals selectively identify with various
available forms of family. It builds on 30 in-depth and unstructured interviews,
complemented by ethnographic participations, with the Bangladeshi immigrants
in Los Angeles. Conceiving migrants’ remitting as a socially motivated economic
act whereby the migrants invest both financial and emotional resources to main-
tain and further develop social relationships, it recognizes migrants’ relationships
to their family in Bangladesh as central to their remitting practices. It recognizes
multiple forms of family and community organizations to which the immigrants
belong. Two factor analysis is conducted, complemented by ethnographic
participations in order to compare their respective orientations to work and their reconciliation strate-
gies. Mothers in both groups articulated a strong intrinsic, social and instrumen-
tal orientation to their work and a distinct worker identity, separate to mother-
hood. As working mothers they had all overcome the first penalty.

Migrants Sending Money and the Family

Abstract: To know why migrants send money to home, this paper introduces a
new conceptualization of the relationship between the migrants and their families.
It builds on 30 in-depth and unstructured interviews, complemented by ethn-
ographic participations, with the Bangladeshi immigrants in Los Angeles. Conceiv-
ing migrants’ remitting as a socially motivated economic act whereby the migrants
invest both financial and emotional resources to maintain and further develop social
relationships, they recognize migrants’ relationships to their family and orig-

in household. As working mothers they had all overcome the first penalty.

The exceptional mothers in our focus groups with low educational levels were
facilitated by getting childcare place in a local community crèche with fees of 95
euros a week full time and pro-rata reductions for part time. (Only 30,000 parents
nationally have access to these). Mothers without a childcare place (if married)
relied on their unemployed partner to provide childcare, or both parents worked
together. Grandparents or siblings also provided care. These constitute a mixture
of advantageous and disadvantages which facilitated their full-time employment, but at considerable financial cost. But low income earning mothers could not afford the 800-1,000 euros a month fees. This ex-
plains their lower participation rates.

Peru is currently understood as one of the fastest growing economies in Latin America, one whose wealth is highly concentrated in the capital, fueling an increasingly centralized and unregulated flow of labor. Many indigenous internal migrants work as trabajadoras del hogar in Lima, situated within a vulnerable context since their work is highly gendered, private and contained within the intimate space of the home, where discrimination based on race, ethnicity, gender and class looms. Colonial relations persist in the apartments and homes across wealthy districts of the capital yet meanwhile Lima moves ever so forward by pushing costly modernization projects, developing its booming tourism industry, and promoting its global culinary fame.

Peru passed national labor protections for trabajadoras del hogar ten years ago, with negligible improvements in the lives of its household workers. Based on nine months of in-depth interviews and ethnographic fieldwork, I investigate the nature of the outcome of political inclusion and state-granted labor rights in Lima for household workers, privy to capital's growth and yet (arguably) further marginalized through labor regulation, which grants few benefits, offers no overtime wage, and lacks real enforcement in practice.

When the state steps in to regulate the informal sector, what possibilities and potential problems result? How does the implementation and specifics of legislative attempts to bear on the lives of those it attempts to protect, offer benefits to, or bring into political inclusion? My dissertation grapples with the intersection of gender, law, the state, and the political economy of domestic work in Peru with specific attention to new organizing strategies for household workers in the face of myriad obstacles. When and how can the law matter in the case of informality, and what else is to be done?

Perceptions of the Concept of Physical Activity Among Older People and Staff in Residential Homes

Annensofie Mahrs Tråff, PhD-candidate
National Institute for the Study of Ageing and Later Life, Linköping University, Sweden

This presentation aims to present parts of my doctoral work focusing on the ability and desire to be physically active when you live in a residential home for the elderly. The aim for this part of the study was to identify and describe variations in perceptions of the concept for "physical activity".

Physical activity is described as positive and important for all people. My thesis is to investigate how people are interested in, and able to, maintaining physical activities even though they often have significant disabilities. And also to investigate how older people in residential homes are experiencing opportunities for physical activity and how their physical environment affects these opportunities.

The part of my studies that will be presented have a phenomenographic approach was used to analyze semistructured interviews with elderly people living on residential homes and with staff. This took place in four residential homes in two municipalities in Sweden.

The interviews show that the older people often describes physical activity in on the one hand activity about what the concept of physical activity means to them and sometimes also states that physical activity is something that they do not perform. Later in the interview the very same person can describe the activities of a physical nature which they do in everyday life, for example to walk. A number of staff do describe that physically activity is one thing when it comes to themselves, but something else when it comes to the older people.

To have different perceptions of a central concept can affect both hopes and expectations.

Global Arenas of Knowledge: Perspectives from the Brazilian Case

This paper aims to present the major guidelines of the project 'Global Arenas of Knowledge' and its first results. The project involves theoretical work to reformulate the Sociology of knowledge in contemporary global perspective, and three empirical studies dealing with key elements of global knowledge production and circulation. The study runs first in three southern-hemisphere countries which are part of the post-colonial periphery or (in world-system terminology) semi-periphery, but which are not part of the impoverished third world, and where knowledge institutions are well established: South Africa, Brasil and Australia. It will then move to linked institutions in the global metropole, in the USA and UK. The empirical work takes three domains of knowledge as starting-points (HIV / climate change / gender studies), and examines them in several ways, combining ethnographic work, interviews, documentary work and quantitative methods of citation-context analysis to study the patterns of centrality, inclusion and exclusion of researchers across the global arenas. In this paper, I present the results of the first part of the study, which involves interviews conducted in Brazil with senior researchers in three different domains of knowledge and historical analysis of each domain. I discuss in specie: a) how the dynamics center/periphery affects knowledge production in the Brazilian case; b) how Brazilian social scientists in these different domains of knowledge build their careers in a global scale.

MAICH, KATHERINE* (University of California, Berkeley, kmaich@berkeley.edu)

When Does the Dust Finally Settle? Peruvian Household Workers, Reproductive Labor, and Sweeping Changes

Peru is currently understood as one of the fastest growing economies in Latin America, one whose wealth is highly concentrated in the capital, fueling an increasingly centralized and unregulated flow of labor. Many indigenous internal migrants work as trabajadoras del hogar in Lima, situated within a vulnerable context since their work is highly gendered and isolated in the home, where threats of discrimination based on race, ethnicity, gender and class loom.

This practice of domestic labor is broadly accepted in Peruvian culture, demonstrating the profoundly deep entrenched nature of colonial relations within contemporary Lima society.

I analyze domestic work as both a daily, lived-out practice and a culturally inscribed phenomenon within Peruvian society. Peru passed national labor protections for trabajadoras del hogar ten years ago, with negligible improvements in the lives of its household workers as the law offers minimum wage, few benefits, and lacks real enforcement in practice. Based on nine months of in-depth interviews and ethnographic fieldwork, I investigate outcomes of political inclusion and state-granted labor rights for these women workers, privy to capital's growth and yet (arguably) further marginalized through labor regulation as they continue to sweep, iron, cook, and care for the future class of Limaños.

My research finds that rather than Lima paving the way for a modern, egalitarian Peruvian state, inequality and colonial relations are alive and well in Lima society, with serious consequences for a future, more egalitarian, and 'modern' Peru and Latin America.

How does the implementation and specifics of legislation come to bear on the lives of those it attempts to "protect"? My dissertation grapples with the intersection of gender, law, and the political economy of domestic work in Peru with specific attention to challenges facing women workers confronting the burden of colonial history on a daily basis.

From Political Protest to Sectarian Violence: A Sunni-Shiite Split in Lebanon?

From Political Protest to Sectarian Violence: A Sunni-Shiite Split in Lebanon?

The year 2005 has been a turning point in the history of Lebanon. The assassination of the former Prime Minister Rafic Hariri in a car bomb on February 14th, 2005 triggered the largest demonstrations in the history of the country. Hundreds of thousands of Lebanese added to the street protests denounce the Syriac political, as well as the Western and newspaper archives in order to compiled a dataset of all protest movements and events of violence/clashes that have occurred in Beirut between 2000 and 2010. I analysed this dataset in order to depict the shift in political salience and the moulding of political, confessional as well as national identities. I have used official records and newspapers archives in order to compiled a dataset of all protest movements and events of violence/clashes that have occurred in Beirut between 2000 and 2010. I analysed this dataset in order to depict the shift in political salience and the moulding of political, confessional as well as national identities. I have used official records
assassination was a “political earthquake” that shifted the attention of the Leba-
nese society from mainly Arab concerns, to internal concerns and anti-Syrian
activism. The analysis of our findings suggests that a change in political relations
leads to sectarian tension when two main conditions are met: (a) the majority of
the sectarian group follows one leader and; (b) when the two opposing communi-
ties are equal in size and in power.

Australian Carers’ Income Support Since 1983 – Changing Frames and Persistent Gender Inequality

Many Australians provide unpaid, informal care for a relative or friend with a
disability, illness or age-related frailty, and women are more likely than men to
be the main ‘carer’ in these circumstances. A dedicated income support payment
for some Australian carers has been available since the 1980s. Unlike many other
forms of income support, which have been progressively restricted as part of a
wide-ranging neoliberal reform process, eligibility for Carer Payment has been
extended to an increasing number and range of carers in recent years.

This paper reviews the history of this policy area, focusing on the manner in
which reforms to the social security legislation have been framed. Drawing on Fio-
ni Williams’ analysis of the claiming and framing of European care policy claims (2010),
we argue that changes to Australian carers’ income support have developed with-
in competing frames of social justice and social investment. The social investment
frame, which prioritises paid work over care, has become particularly prominent
in recent years. This echoes the increasing concern with paid work participation
in other areas of social support, such as unemployment benefits. We utilise data
for sole parents. However, the changes to carer policy reflect a unique tension be-
 tween competing goals of promoting paid work participation for all working-age
people and ensuring a supply of unpaid carers in the community.

Neither of the dominant policy frames addresses Australian women’s ongoing
responsibility for the bulk of unpaid caring, and income support policy potentially
reinforces this inequality. We argue that these issues must be addressed in future
reforms to ensure that the competing pressures on women to care and to engage
in paid work do not lead to greater disadvantage for carers and the people they care.

Middle Class Women’s Work and Childcare in Paris

Today, France draws attention from neighbouring countries because of its high
birth rate. French women are also relatively active in their labour work participa-
tion. In Paris, the number of women in work is especially high, and the number of
nurseries is inadequate. How do women manage to find a place or person to look
after their children while they are at work? How are women and class related to the
issues of childcare? These are the main interests of this paper. In France, the
most widely used form of childcare is the registered childcare, the so-called
“Assistants maternels”, and not nurseries as in Sweden. The paper will put the
emphasis on this French registered childcare system.

According to a French national report on childcare, in 2011, 37 % of children
under three whose parents worked full time were left with registered childminders
who were approved by the local authorities and received children mainly in
their own homes. 18% of children had places in nurseries, and 4 % were left
with unregistered childminders, usually professional nannies who worked in the
children’s home.

The French “Assistant maternal” system was passed into legislation in 1977 to
clarify the undeclared work, and progressed during the 1990s to increase jobs in
the domestic sphere. Local authorities conducts home inspections, and 120 hours
of professional training is required for approval. The state takes charge of the
social security cost of childminders.

Now in Paris, many childminders are immigrant women and they help middle
class French women to work outside the home and to get higher wages than the
childminders do. Mothers are generally satisfied with this system because of the
flexibility of working time, which means the longer and less well paid work of
immigrant women supports the work and families of French middle class women.

The Transformation Of Self-Confidence In Japanese Youth: From 1992 To 2012

Japan’s economy entered a long period of stagnation, known as the “Lost Two Decades,” after reaching its peak in the late 1980s and early 1990s. In this peri-
od, many politicians, business person, and intellectuals criticized Japanese youth:
tending to lose their temper with the darkness of mind, chasing their unplanned
dream without regular jobs, and not leaving their nests. Critics also told fragile
and self-consciousness: the lack of confidence of the Japanese youth. But we can
get another figure of Japanese youth from the outcome of the research of Japan Youth Study Group, conducted in 1992, 2002, and 2012. For instance, most Japanese youth love them-
selves, and feel senses of themselves. They are anything but fragile. By the way,
our core merit of comparison of three or more time point is that we can distinct-
guish between temporary trend and long-term trend. For example, the ratio of re-
pondents of feeling sense of onself has declined by degrees from 1992 to 2012.
The ratio of keeping one’s individuality in any situation has declined too. And the
ratio of changing oneself depending on the situation, and engaging in superfi-
ciality has decreased from 2002 to 2012. These means long-term trend of diversi-
ﬁcation of the self. On the other hand, the ratio of loving oneself had increased from
1992 to 2002, but has decreased from 2002 to 2012 (temporary trend). What causes
for these? We can consider two matters. First, the cultural-social change underpinning long-term trend, for instance, the diffusion of mobile media and social
network service accelerating the diversification of the self. Also, we need consider
what happened in 2002 (about temporary trend). We try to explain the
structure of self-afﬁrmation by comparing the determinant and related item of
self-afﬁrmation on each year. Finally, we discuss the effect of intertemporal re-
search on public opinion in Japan.

A Method to Construct the New Framework for the Equitable Water Distribution -the Case Study of the “Water War” in Bolivia-

Why does the water resource problem in Bolivia remain despite the victory of
“Water War”? “Water War” in 2000 was an anti-privatization movement towards the public
water service and it changed the water law and forced a private company to with-
draw. The goal of the social activists who had played a main role in “Water War” was
to improve water resource accessibility. However, the success of “Water War” did
not solve the water resource problem in Bolivia. Does it mean that the other issue
was needed to improve the water resource situation?

Existing literature has mainly focused on the strategy of water war, and the
water situation not mentioned. In order to investigate a ‘real’ driving factor that
had caused the problem, analysis of the Water War should be revisited from dif-
ferent angle. A water shortage is classified into two factors: “Real scarcity” and
“Manufactured scarcity” (Mehta 2003). While real scarcity refers to a shortage of
volumetric quantities, incurred mainly from population growth, industrialization
and an ecological system, manufactured scarcity is constructed by powerful ac-
tors such as politicians, bureaucrats and irrigation farmers to gain profit at the
exclusive possession of water resource.

I assume that the goal emphasized in “Water War” was directed towards manu-
factured scarcity, it prevented its focus from real scarcity, which is also pivotal
in order to solve the water resource problem. This study uses the original data of
fieldwork and local newspapers from three times of fieldwork by the author. I
will use discourse analyses to expose the process of why social activists chose to
focus on “Manufactured scarcity” in order to gain the civilian support. I present
the importance of recognizing the each characteristic of water scarcity to improve
the water resource problem. This research intends to provide a new framework
for equitable water distribution.

Pathways Of Aging: Old Women’s Gendered Narratives and Cultural-Historical Locations

Pathways of Aging: Old Women’s gendered narratives and cultural-his-
torical location

Cultural-Historical Locations

Cultural gerontology has moved away from a focus on old age per se to the recog-
nition of old age as part of the life-course, and more importantly, as the result of a
lifetimes experiences. In this paper I explore the themes that old Mexican women
themselves identified as important in shaping their pathways towards old age. I
do so by employing a thematic-narrative analysis of multiple in-depth interviews
with 32 women aged 50 to 85.

Throughout their life-course the women’s personal biographies, their current
social, cultural and economic locations have been informed by a range of struc-
tural factors, institutions and personal attitudes, choices and opportunities. My
inquiry is to stress the importance of structural and personal meaningful events
that underpin the socio-cultural construction of aging and old age: the relation be-
tween the objective reality and subjective experiences of aging. By making refer-

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
verses to the women's historical and cultural location and their gender socialisation, I contend that not only is there an individual biography, but also a collective story. There is however diversity amongst these women's life experiences. Through some specific actions such as attaining higher education and continuing to work after marriage, they enacted their individual agency and challenged the prevailing patriarchal narrative. Their actions although offering 'liberating' narratives, become more evident in the experience of their daughters and granddaughters.

The women's formal and informal participation in the labour market has not brought them real benefits in their old age, as most of them do not have their own occupational pension, thus making the role of the family central to their well-being in old age. This is relevant in relation to family arrangements and commitments that define the contexts of care and the social and economic capital these women have access to.

The Complex Adaptive Systems Approach. A Sociocybernetic Reading

Since the foundation of the Santa Fe Institute in the United States in 1984, and especially during the 90s, was formed a new wave in the science of complexity: the Complex Adaptive Systems (CAS) approach. CAS is based on modeling and simulation of complex systems using advanced computational techniques such as cellular automata or agent-based modeling. With an interdisciplinary and universal claim, its mainly methodological approach has dominated the scientific discourse around complexity. Numerous interdisciplinary complex adaptive systems centers have spread throughout the world, from United States to Europe, from Latin America to East Asia.

We need a more reflexive and critical approach to CAS, taking into account its epistemological limits. Sociocybernetics, through authors such as von Foerster, Varela, Maturana, Luhmann or Morin, is very useful here, because of its emphasis on the question of the observer/subject and its construction of the observed/object. Something that CAS models ignore, seeking to determine objectively and algorithmically probabilistic patterns in complex systems, without considering that system and context they are primarily attributes of an observer, an operation of "punctuation" in his knowledge of the world. The simulated systems are doubly result of the intervention of the observer: the real system is an "invented reality" (von Foerster) and the system that simulates the real system would be doubly so.

CAS-epistemic limits become more evident in its sociological models called "Artificial Societies". The intervention of the modeler/observer here is even more evident in self-reflexive systems that are able to observe themselves, "self-referential" (Luhmann) systems of meaning in which both the constructed nature of the subjects themselves (Foucault) and the structures or social spaces of objective positions where the subjects are located (Bourdieu) cannot be ignored in favor of a mere behaviorist study of patterns of interaction among agents and their resulting and irreducible emergences.

Not No Place: Fragments of Johannesburg

Not No Place is a collage of visual and written fragments on Johannesburg-historical, archival, found and self-generated. The book is the result of documenting and collecting material on the city of Johannesburg over the course of five years. It interweaves selected quotations with personal memories and reflective accounts, as well as fiction in an attempt to explore the city as both lived place and an imagined no-place (the direct translation of U-topia). A montage combining photographs, drawings, archival material and texts, it alternates between the mode of collector, witness, observer and author, taking into account the numerous representations of the city in historical writing, urban theory, film, media and fiction. Not No Place presents a collection of moments in the city's complex history, its contemporary spatial realities as well as its future projections.

Bettina Malcomess and Dorothée Kreutzfeldt speak to their visual processes as cellular automata or agent-based modeling. With an interdisciplinary and universal claim, its mainly methodological approach has dominated the scientific discourse around complexity. Numerous interdisciplinary complex adaptive systems centers have spread throughout the world, from United States to Europe, from Latin America to East Asia.

Mattersing Difere Cervical Cancer, HPV Vaccines and Global Health

Vaccines are a contested technology. On the one hand, they have been presented by health policymakers, researchers and practitioners as the most powerful weapon in the war against global disease. On the other hand, vaccines have been an object of criticism and distrust by anti-vaccines social movements. Cervical cancer is a woman's disease in that it is a deeply gendered disease. It has had an important capacity for embodying historical power relations and material conditions of women experience. Cervical Screening programmes and a general improvement in healthcare services in the "developed" world has meant a significant reduction in its incidence and mortality. However, such improvement has not occurred in the "developing" world at the same rate. HPV vaccines dwell between these worlds. HPV vaccines are not only a good case for understanding the convergence of such tensions, but also they make visible new problems such as co-production between gender, technology and disease.

This paper presents the discourses on cervical cancer and vaccines as the framework used in the production of narratives about HPV vaccines. I use the terms politics of disease and politics of prevention in order to describe the arrangements of objects, narratives and institutions that involve the contemporary perceptions on cervical cancer and vaccines. I describe the tensions that make vaccines a contested technology and cervical cancer a marginal disease. On the other hand, cervical cancer has a particular story as a malady associated with poverty and sexual stigma. I discuss the permanence of these narratives in the contemporary policies and practices on cervical cancer and development. Finally, HPV vaccines establish a connection between the worlds of cervical cancer and vaccines. These technologies not only gather such tensions, but also they make visible new problems such as co-production between gender, technology and disease, the development of "anticipated" cure.

The Impact of Fukushima on Evacuation Preparedness in Case of Nuclear Disaster in Slovenia

Krško Nuclear Power Plant (KNPP) located in Slovenia has met expectations about safety and stability of operation so far. Stress tests conducted by the EU a few months after Fukushima disaster in 132 NPPs in 14 EU member states proved that KNPP was one of the safest installations. However modern technology brings inherent risks therefore failures and accidents are in some way inevitable or even "normal". The nuclear disaster in Fukushima proved that this can happen in one of the most developed countries in the world. There is no reason to assume that such disaster could not occur elsewhere including KNPP.

Drawing on results of the survey among inhabitants and interviews with the highest representatives of institutions and companies conducted in a 3-kilometer radius around KNPP, the paper seeks to establish the level of preparedness of population, institutions and companies for the evacuation in case of disaster in KNPP. The analysis reveals that despite communication efforts made by the authorities almost three quarters of the population in the potentially most threatened area are not familiar with the locations of reception centres assigned to them in case of disaster, whereas two thirds of them do not know the evacuation routes. The level of preparedness of institutions and companies is also rather low due to fatalistic attitude, and poor nuclear disaster planning, training and coordination. These facts suggest that crisis management actors, including Slovenian military, would face extremely demanding situation in case of nuclear disaster similar to one in Fukushima. The role of the military will be especially scrutinized in this context taking into account previous experiences of military's involvement in disaster management.

Transnationalization of Labor Mobility Development Trends and Selected Challenges of Its Regulation

Ever since the early development of the industrial mode of production paid employment has been strongly structured by regional or at least national mobility structures until the end of the 20th Century. Ways to the workplace were primarily daily oscillations; spatially varying work assignments concentrated on relatively small groups of experts and construction workers. However, this picture changed dramatically. Labor mobility becomes transnational for a constantly growing share of the working population. This concerns inner-European labor migration as a crisis-induced labor migration, as well as contract and subcontract work, but also the growing cross-border mobility within profit and non-profit organizations as well as the increase of locally recruited employees who have the nationality of the "parent organization". In our contribution, after conducting an empirical assessment of selected types of new transnational labor mobility, the related challenges of regulating their labor, employment and participation conditions will be discussed. Along with secondary data this paper refers back to the results of a project funded by the German Research Foundation (DFG) on cross-border personnel mobility in organizations

MALICK, MIRA* (Waseda University, lequin@ruri.waseda.jp)

Leisure based youth subcultures are often depicted and best remembered in the common imagination as the material manifestations that they occupy at the height of their popularity. The styles, behaviors and symbols of these subcultures are often thought to reflect how participants feel, what they value and the lifestyles they desire. Often times dismissed as mere 'fashion fads' or instances of deviance, subcultural participation is characterized and reduced to a passing period of youth to be outgrown or resolved as one moves into adulthood. Visual Kei refers to an aesthetic movement in Japanese rock music as well as the subculture surrounding the consumption, production and practices of its performers and fans. This paper critiques such notions of subculture as tied to a generational shift and continuous participation in order to shed light on the well into adulthood from within an established leisure-based subculture such as Visual Kei, which is now in its third generation of practice and reproduction.

To this end, this paper will compare the difference between each generation of the subculture by focusing on subcultural symbols and how the meaning attached to these symbols (in the form of dress, discourse and performance) transforms over time. It is suggested that these symbols form both the basis of a common shared history that links the members of different generations and at the same time functions as a resource for newer members to utilize creatively, allowing for the continuation of the subculture, albeit not without contestation as the emergent styles and behaviors of such symbols vary across the generations. The article concludes that potent symbols that continue to resonate with the values and orientations of people over time say much about people's feelings regarding larger, hegemonic socio-cultural norms as they do about individual values.

MALINAS, DAVID ANTOINE* (Paris Diderot University, davidmalinas@gmail.com)

Youth and Social Movements In Japan Characteristics Of The Rebellious Youth And Its Mobilization In Japan

Though not as spectacular or massive as in other countries, recent mobilization of the youth in Japan is however a major phenomenon that triggers the attention of the media and the general public. Especially, the mobilization of young non-regular workers since 2000 had a major role in strengthening the national anti-poverty movement. It supported, for instance, the reform of the assistance income law and the reform of the temporary workers law. However, this mobilization has been only rarely analyzed or has been simply bypassed by some researchers. As a matter of fact, we still know very little about the social mobilization of the Japanese youth.

By analyzing results of our research focusing on members of the « Union of the Young of Tokyo », a leading organization of the anti-poverty network, I would like to present new findings concerning two dimensions of this mobilization:

1) What are the characteristics of the young people who mobilize (in terms of age, gender, income and socioprofessional class)
2) What are the characteristics of their mobilization (primo-mobilization or not; short term or long term mobilization).

Our findings are based on quantitative and qualitative data: the archive of the SU (630 entries) and in-death, longitudinal interviews of 50 members that started in 2008, during and after their mobilization in the « Union of the Youth ».

Uneven Development and Social Equity in American Shrinking Cities: Can the Growing Social and Economic Gap be Narrowed?

The phenomenon of uneven development as a way of differentiating growing and shrinking cities is well-established, but emerging patterns of uneven development within many shrinking cities have been less extensively examined. While there has long been significant internal variation within United States shrinking cities, these variations have become markedly more pronounced in the past decade. A conjunction of market shifts, demographic trends, and economic pressures have resulted in some areas seeing regeneration at levels not seen for many decades in these cities, while decline appears to be accelerating in other areas. The evidence of central core revitalization on the one hand and the accelerating decline of many traditional single-family neighborhoods on the other is particularly striking, with population growth, job growth and housing market strength increasingly spatially concentrated in the core, leading to a growing polarization of these cities by race and income, and raising important questions of economic and social equity. This paper will begin by summarizing the evidence from research into economic, demographic and racial change over the past decade in a cluster of ten large American shrinking cities including Detroit, St. Louis, and Pittsburg. The paper will explore the challenges and implications for policymaking and governance of this increasing polarization, leading to a proposed conceptual framework for how governmental and NGO actors, particularly community development corporations, can foster more equitable revitalization in American shrinking cities. This framework will address the question of the policy space available for such localized strategies, as well as the need for structural reforms to expose and respond to the underlying structural and policy constraints, and the extent to which that in turn dictates rethinking governance roles and responsibilities in shrinking cities.

MALLICK, BISHAWJIT* (Karlsruhe Institute of Technology (KIT), bishawjit.malllick@kit.edu)

Resilient Or Vulnerable? Analyzing Disaster-Triggered Migration Process Of A Tropical Cyclone Prone Coastal Community

The capacity of coping with the effects of a disaster is not only an economic capability; it is also a result of socio-politically constructed vulnerability matter of the survivors. Thus, the migration decision by the disaster victims is not solely reasoned by it as a long-term consequence of societal mechanisms that is determined through unequal distribution of resources, opportunities and power. Consequently, the aftermath intervention programs in disaster affected communities succeed to social inequalities as well as population displacement. Taking this theoretical and conceptual debate into consideration, this paper explores how the aftermath intervention programs influence the community resilience or social vulnerability in coastal Bangladesh? Do such interventions introduce social disparities, and finally, result to a migration decision of the cyclone victims? Results are derived from a field survey with 1555 respondents. The survey was conducted during 2009 and 2010 in 48 southwest coastal villages; those were severely affected by cyclone Aila. Applying principle component analysis (PCA) in SPSS, a social vulnerability index (SVI) is constructed and then the respondents are classified according to their socio-demographic characteristics. Findings show that socio-politically vulnerable population is proportionately more displaced than the socio-politically resilient population. Thus, it increases the dependency of powerless on the powerful classes in the society.

Contested Proprietary Technology: In Search Of A Non-Proprietary Technology in Agriculture In India

The paper reviews the strategies by the Government of India over time to improve the state of agriculture. The strategies and the institutional and organizational framework within which these strategies were conceived of and implemented have contributed to improvement in agricultural productivity have led to larger consequences – exclusion of some regions, communities in the region and crops and marginalization of knowledge of those engaged in the cultivation of such crops and their marginalization from the process of development, exasperation of inter-regional and intra-regional socioeconomic disparities, and environmental problems in raising questions of equity, sustainability, justice – distributed as well as cognitive. Further, productivity based on green revolution strategy has
reached a plateau and substantial yield gaps still persist. In this context, modern biotechnology tools having potential to improve crops assume significance. The paper focuses on the potential of non-controversial, genomics-based Marker-Assisted Selection (MAS) technology for addressing biotic and abiotic stresses and yield enhancement in agriculture. As a corollary the institutional, organizational and regulatory issues associated with the development, application and deployment of MAS technology for innovations in agriculture in India are important. In other words, the national innovation system especially with reference to agriculture has to be restructured by establishing productive linkages among public R&D institutions, policy making, regulatory issues and large scale production of products including seed based on MAS. Priority setting with respect to which crops and which traits in a given crop has to be made and adequate resources, physical and human, and institutional and organizational arrangements have to be developed to achieve useful results. Further, MAS is a non-proprietary technology, and hence conflict with existing patents and ownership and control will be kept to the minimum. The MAS has the potential to promote more inclusive and user-centered innovations in agriculture in all the regions including rain-fed areas.

Telling the Stories of Disasters Study Juku: A Series of Workshops in 3 Disaster-Affected Areas in Japan

What are the ways that disasters are memorialized, and how are the lessons of disaster transferred to future generations though preserving objects as well as the actual experiences of people who experienced the disaster? The Telling the Stories of Disasters Study Juku is a series of 3 workshops held in 2013, in 3 areas of Japan that have experienced disaster: Tohoku, Chetsu, and Kobe. Each workshop includes a tour of the local area, with a focus on the way that local institutions pass on the stories of the disaster experience, involving local community members.

In recent years, large natural disasters are happening throughout Japan: in 1995 the Great Hanshin-Awaji Earthquake, in 2004 the Chetsu Oki Earthquake, and in 2011 the Great East Japan Earthquake. Yet in the disaster area those terrible memories are not being forgotten. Many efforts have begun to preserve and pass down these memories through sharing experiences, items, documents, video, etc., towards the creation of a future society which is stronger against disasters.

The “Telling the Stories of Disasters Study Juku,” visits each disaster area, engages in practical activities related to the collection and preservation of documents in the disaster area, listens to the local people who are involved in passing on the stories of disaster, and learns in the style of a study retreat. Incorporating the discussions of the participants, we consider the ways to pass on the stories of disaster. This paper will review the experience of the Study Juku, along with the different memorialization and disaster storytelling examples from the 3 disaster areas in Japan.

MAMADA, ROBERT* (University of California, Irvine, himamada@hotmail.com)

A Mathematical Extension Of The Resource Mobilization Approach Of The Social Movement Theory: An Analysis Of The Emergence Of The Arab Spring

This paper proposes a mathematical extension of the Resource Mobilization approach of social movement theory to answer the questions: Why does a particular social movement occur at a certain time of history? Does the social movement inevitably occur at that time? Or is it simply a historical coincidence? Current social movement theories are adept at providing us with the analyses of social structure of social movements; however, many of them, with several exceptions, do not seem to be ready to answer these questions. In this paper, I incorporate the Resource Mobilization approach of the social movement theory into a mathematical model of the propagation of information and attempt to ascertain that the shock wave of information and the subsequent information vacuum are the fundamental driving forces of the emergence of a social movement. This paper suggests how the shock wave and the information vacuum have played a crucial role in the emergence of the protests in Tunisia that ultimately triggered the subsequent Arab Spring. Prior to the emergence of the protests, social networks and social movement organizations have to be prepared so that the shock wave and the information vacuum can propagate in society. Thus, the Resource Mobilization approach paves a road to the emergence of a social movement. But for a movement to emerge, a shock wave and the subsequent information vacuum need to propagate in society because, during the information vacuum, people are attracted into the “field” of the protest, and the subsequent activities are coordinated there. Thus, this paper argues that the combination of the Resource Mobilization approach and the analysis of the propagation of information clarifies the detailed steps of the emergence of a social movement.

I would like to submit my paper for the Best Graduate Student Paper competition.

The Making Of “Homo Financius”: The Emergence Of The Financial Literacy Field In Israel

In the era of financialized capitalism, states not only supervise and regulate financial markets, but also discipline individuals, requiring them to take responsibility for their financial decisions and their current and future economic situation. Attendant to the privatization of risk, varied actors attempt to instill among individuals the knowledge, skills, predispositions and attitudes considered as necessary to function as responsible and wise consumers in the financial sphere, thereby creating a capable and reliable “homo financius”. In the last years, the constitutive traits of homo financius are being specified and promoted using and diffusing the concept of financial literacy, which refers to a set of capabilities that are seen as underpinning proper and responsible financial conduct. Based on a detailed process-tracing study, this paper examines the emergence of the new institutional field of financial literacy in Israel, analyzing the role of the array of actors populating it, and the various notions and practices that are being formulated, negotiated and institutionalized. The emergence of the field has been the result of interactions among actors responding to numerous changes initiated by state agencies in the local financial system and to the institutionalization of financial literacy as a compelling global standard. Following these developments, new opportunities were created for many and varied actors – both state and non-state – most of them existing before the emergence of this field. These actors propose varied notions and practices of financial literacy, drawing different field boundaries and promoting varying rules of interaction between the actors populating it. Patterns of cooperation and conflict among the actors surface mainly around the establishment and institutionalization of boundaries and rules of this emerging field.

Social Housing in Sustainable City

The paper investigates how the issue of housing has been treated by urban policy in Brazil to meet the legislation defining the social function of urban property as one of the goals of reaching sustainable city. The object of evaluation is the federal government programs of the past 10 years since the adoption of the Urban Policy City Statute, aimed at reducing the housing deficit of low-income by the use of the instrument of regularization involving, in the Brazilian case, the regularization of the community resident in the project area, the implementation of infrastructure and titling of land to families. It is found that urban sustainability in the Statute, has focused on social equity and democratic management, essential aspects for sustainability, but not exhausted. It is noteworthy that much of the land regularization programs occurs in urban areas environmentally fragile, specifically borders of rivers and hillsides. The results of urban land regularization processes of social interest are unimpressive considering the research on the irregularity of urban occupation. Illustrates the fragility of these results, the confrontation between the database Brazilian Institute of Geography and Statistics 2010, and numbers of the federal program of regularization. The 2010 Census showed that 11.4 million people live informal settlements, which corresponds to 3.2 million residential units. The program's goal was to serve 364,000 homes, but reached in fact 46,000, which means less than 2% of the total residential units located in areas irregular. As the principal results of the analysis: misconceptions of statistical measures, that considers a single house as different types of irregular, or because there are areas not surveyed in the census; inconsistencies in the definitions of program indicators, whose main focus is on the titration, not considering improvements in the areas of infrastructure and urbanization; low investments in regularization programs.

The authors aimed to analyse the typical socio-ecological problems in contemporary Russia, Belarus, Ukraine and Moldova and the main reasons of their appearance in terms of socio-ecological consequences of Chernobyl nuclear disaster. These tragedies - Chernobyl, Russia 1986 and Fukushima, Japan 2011 - have shown that everything people do is not enough to prevent the damage to environment and societies if the country is not nuclear free. The findings of the expert survey presented their view of socio-ecological context of the period of exploitation even after 25 years of this event. The data selected in the article is the result of comparative sociological research, conducted in Post-Soviet area since 2006 till the present. Observation, content-analysis of mass-media devoted to ecological problems and expert survey were used during the research. The conception of reflection of ecological environment to social behavior and orientations of different social-demographic groups of population was adapted and developed as well as conception of socio-ecological monitoring and conceptual scheme of origin and development of social-ecological (socio-economic) conflict in Post-Soviet dimension. The conceptualization of reflection of socio-ecological interests in mass behavior of different social communities in transformation was approved. Such important issue as a problem of availability of information on environmental activities is presented. It is characterized by: establishment of united federal unified information system on nature protection; introduction of up to date information technologies and systems into the process of the decision making in the areas of nature use and environment protection; provision of state guarantees of public participation in solving of environmental problems, development of effective social partnership; organization and implementation of the environmental education of population.

Strategies for Change: Immigrant Women Confronting Dekilling and De-professionalization

This paper is based on empirical data from a research study on the experience of highly educated Chinese and Indian immigrant women who were professionals in their home country. In particular, this paper aims to discover how the women utilize their agencies to mobilize a myriad local and transnational strategies to confront and change their situations in the context of neoliberal restructuring and the concomitant deskilling and de-professionalization of immigrant women in the new country.

The study found that despite their education, immigrant women professionals are routinely being deskilled, and are channeled into precarious positions which are low paid, part-time, flexible, with no security nor benefits. In order to survive in a racialized and gendered globalized labor market, some women lowered their employment expectations, and took on menial, precarious employment in the new country in order to gain “Canadian experience” and to make ends meet. Others tried to improve their situation through formal retraining processes by returning to college/university so as to gain formal Canadian education, knowledge and skill. Our research also found that the immigrant women were actively participating in transnational practices. For examples, some immigrant women who were unable to juggle their paid work and looking after young children, sent their children back to their home country to be cared for by extended family members so they could focus on their job search or engage in paid employment to make ends meet.

The data selected in the article is derived from the project “Transnational Migration Trajectories of Immigrant Women Professionals in Canada: Strategies of Work and Family” (2009-14), supported by SSHRC through a research grant to Guida Man (PI), Tania Das Gupta (CI), Kiran Mirchandani (CI), and Roxana Ng (CI).

Education-Inequality Trap: State Contributions to the Vicious Cycle

Intervening in this vicious cycle is government. It has a no-tuition policy for basic education levels and operates more than a hundred state universities and colleges. On top of these, it regulates and sets the standards for the whole education sector. Thus, government policies and programs have the potential to define the possible connections between education and initial inequalities. In this paper, state actions or inactions that strengthen the education-inequality trap are identified through the examination of public policies that impact the education sector in the Philippines. To provide context to the state’s role, this paper also presents the education inequality situation and evidence of the education-inequality connection in the country. This investigation of the different paths through which the state actually prevents some sectors of the population from fully enjoying their right to quality education can aid in understanding the complexity of the policy, political, economic, social and historical environment facing the millennium challenge of "education for all." Viewing high inequality negatively as a necessary impedes growth but also restricts people’s exercise of their freedoms, the paper also attempts to partake in the discourse of inequality/ies and its relation to development.

The data selected in the article is derived from the project “Transnational Migration Trajectories of Immigrant Women Professionals in Canada: Strategies of Work and Family” (2009-14), supported by SSHRC through a research grant to Guida Man (PI), Tania Das Gupta (CI), Kiran Mirchandani (CI), and Roxana Ng (CI).

Global labor markets and the internationalization of economies have changed the kind and nature of social risks. Life subject to comprehensive job security systems is questioned in different societies. In this context, the paper considers contradictory hypotheses on occupational life course related with work uncertainties:  

- Standardization process: progressive concentration of biographical transitions on specific ages related with tripartition of work careers: education-work-retirement.  
- Individualization of occupational life course: pluralization and de-standardization of individual labor trajectories.

The main of the paper is to analyze the links between job uncertainty and life course in Argentina and Mexico, in three cohorts. The aim is to develop an empirical approach to life course perspective linking it with a sequential analysis to:  

- Model individual trajectories of occupational status related with job uncertainties (identifying different typologies of risks).  
- Assess the social conditioning of these trajectories, namely the influence of socio economic status, educational level, family structure and birth cohort.

Optimal Matching Analysis is applied to model time-related processes in order to identify labor trajectories typologies. The premise of this method is to consider empirical sequences of events in labor trajectories and compare them to existentially identified labor trajectories typologies. The premise of this method is to consider empirical sequences of events in labor trajectories and compare them to existentially identified labor trajectories typologies.

The results of the analysis suggest:  

- The tripartition model exists but it is gendered and different for each cohort.  
- There is no unique model to link individualization of occupational life course and risks typologies. Rather, this link is dependent on: 1. Family and occupational constraints; 2. Social resources and; 3. Institutional performances in each country.  
- These results indicate new kinds of social inequalities, by means of widespread labor uncertainty and individualization of work trajectories, that implies new challenges for how we do research in the fields of social risks.

**Role Of ICT In Mitigating Social Problems**

In India children from poor families get enrolled in free government primary schools. However, due to poor quality of schooling majority of them drop out without completing primary education. To address this problem the present research explores the use of ICT to provide web based quality teaching by developing and also customising already available teaching materials in the internet. The project also aims at identifying potential teachers from among the aged who are willing to take part in the proposed web based teaching are provided training in web based teaching with the help of materials developed for the same. Along with providing a low cost solution for improving school quality and checking drop out, the project also improves the living condition of the aged by helping them to overcome the problem of loneliness and spending meaningful time by teaching disadvantaged children, without moving out of their homes. Through this initiative of using ICT to the elderly people, we also aim at informing them to make use of ICT to meet their other needs (by using email, Skype, net based purchasing and availing of other needed services). We have made trials in web based teaching making it very interactive, in a tribal boarding school for girls, with very positive results which is discussed in the paper. After few more trail runs we will arrange for regular supplemental teaching to deficient schools to improve the teaching quality and assess the learning outcomes and aim at replicating this model for wide impact.

**Rethinking the Paradox of Welfare States and Gender Inequality**

Although most comparative studies of welfare-states and gender inequality highlight the favorable effects of work-family policies on women, a growing number of studies, including my own, provide evidence of the unanticipated, and negative, consequences of work-family policies. The conclusion from these findings is that state interventions to reconcile paid and unpaid work, which are considered “mother-friendly,” have, paradoxically, negative consequences for the labor market attainments of working women.

In this work, my aim is to locate these findings within a wider context – not to close the book on the questionings themselves, but to question the conclusions that arise from them. My arguments are twofold: First, I argue that the impact of work-family policies is conditioned by class. The negative implications of family-policies for women’s labor market attainments, found in previous studies, are, in fact, a consequence of their impact on highly skilled and highly educated women. Among lower-skilled women, these effects not only diminish, but also reverse. Second, I argue that when the focus is shifted from a single aspect of gender inequality to multiple aspects that are analyzed simultaneously, the implications of work-family policies for gender inequality no longer appear paradoxical, for it becomes possible to see the inherent tradeoffs between the different aspects.

These arguments are examined using a wide range of country-level indicators, aggregated from the ISSP data, of 14 welfare states. The indicators encompass most aspects of women’s economic activities that have been investigated in comparative research. The indicators are divided into two groups: one that is relevant to advantaged women (e.g., women’s representation in managerial positions), and the other to disadvantaged women (e.g., poverty rates). The relationship between welfare-state policies and each group of indicators will be examined and discussed in light of the tradeoff between participation and occupational attainments, and the class divisions among women.
the “choices” made by the system (Bourdieu). In public schools, where most of the students belong to low middle class families, judgments made in this context are predominantly moral, therefore more social than academic. Learning problems are considered as being originated outside of the school. Students’ personal dramas influence grades, their families are also subject to judgment. Teachers’ work is not part of the debate, teaching strategies that promote learning are not discussed, which ultimately leads to school failure. The institution investigated attends middle to upper class students and has been evaluated as one of the best schools in Brazil after several national assessments. How would be the trial in an institution, where the student body is already selected socially? It was observed that the evaluation criterion has an academic origin, but the criterion is not strictly academic. Disposition’s considered fundamental at schools of excellence are: docility and academic aptitude (Bourdieu). The social selectivity in this school is a distinctive selectivity. Cutting class will operate in the kind of attitudes towards school, and the possibility of ascension through school. The student desired profile is the middle class one, whose families adhere more easily to the school values, since they have the cultural goodwill as Bourdieu defined.

What role does organized crime play in determining the success of separatist movements? My paper explores the role of organized crime in the separatist movements of Kosovo in Serbia and South Ossetia in Georgia from 1989-2012, two cases that share remarkable similarities but have generated different outcomes in the level of successfullness of the separatist movement. The crucial difference, I will argue, is that while both Serbia and Georgia were thoroughly criminalized states in the 1990s, the former took negligible and the latter substantive steps towards curbing the extent of organized crime. This crucial difference accounts for Kosovo’s greater success in nearing sovereignty compared to South Ossetia’s more limited success. Exploring the relations between separatist movements and organized crime in these two cases sheds light on different opportunities for resource mobilization afforded by criminal enterprises, and on differing strategies of states, crime networks, and separatist movements towards each other.

Cultures of the Future: Habitus, Reflexivity and Capacity to Aspire

Human action, as Schutz observed, is constructed within an imaginative horizon of multiple plans and possibilities. While we move in the temporal domain “with great agility, pirouetting and swiveling to face both past and future, twisting and turning in the knowledge realms of perception, memory and anticipation” (Adam 2006), the sociological understanding of the same process is far from easy. The analysis of the cultural dimensions of projectivity (Mische 2009) is a very important task cultural sociology has to achieve to understand action and social change.

The imaginative process of projection requires what Appadurai (2004) calls “capacity to aspire” that is to say the set of cultural resources shaping the ability to project into the future. In this presentation I try to explore the very complex field in which the capacity to aspire emerges as stretched out between the forms of practical anticipation incorporated in the habitus (Bourdieu, 1997) and the cultures of the future inhabiting the public domain (as produced by technologies, media, institutions). Strongly connected with the concepts of reflexivity and creativity the “capacity to aspire” has to be seen mainly as the ability to project present opportunities using socially relevant narratives. These ideas are explored through the analysis of ca. 200 essays on the future, written by young boys and girls of age 17-18.

The Rites of Institution As an Instrument of Public Policy. the Example of French Municipal Rituals

This contribution addresses the issue of the performance of contemporary municipal rites of institution. I will start from the findings of my doctoral research in political science which is related to municipal rites of institution in France. A rite of institution (Bourdieu 1982) is a symbolic event marking someone’s transition from one status to another. In my research, I identify four ideal types of municipal rites of institution: kinship rites, like civil weddings and Mother’s Day; citizenship rites, which include naturalization ceremonies, coming of age ceremonies, conscription rituals; honor rites providing municipal or national medals; and work rites, which encompass welcome receptions and retirement ceremonies.

Through my communication, I will show the importance of these rituals in public action. First, I will demonstrate that these rites can be considered instruments of public policy (Lascounes and Le Gaëls 2004). Here, I will focus especially on two examples: naturalization ceremonies and Mother’s Day. Since their invention, both rituals have been the instruments of migration policy and family policy, which aim to make virtuous citizens and mothers from foreigners and women. In both cases, the rites of institution have been considered the most convenient policy instruments to let foreigners and women see themselves as virtuous citizens and mothers, and therefore, behave as such.

Nevertheless, how does it occur? To answer that question, I will focus on the performative dimension of these rites of institution, that is, on how status and social roles are assigned to participants in these rituals. Drawing evidence from ethnographic observations and from interviews that I conducted, I will study the sequencing of these rituals and the verbal and non-verbal performative practices they happen during these rituals, as well as the representations of the participants related to them. Thus, I will consider what social conditions allow for effective performance.

Reflections on a Rural Community Traversed By the Process of Globalization: The Case of the Tupé Reserve (Amazon, Brazil)

This paper aims to present preliminary results of a PhD research that focuses on the dynamics of social relations of rural population living in a sustainable development reserve, the Tupé Reserve (Manaus-Amazon, Brazil). In this area, agriculture is related to local and regional economy and since 2009, it features a resort – an uprooted space geared towards international luxury tourism. In this context, specific elements of the globalization process are involved, such as financial (global and regional), touristic and political interests. The Tupé Reserve appears as an arena of interaction among several actors, being a battleground of consumer demands and new lifestyles in which imageries, values and worldviews are shared. Thus, the social relations there are no longer constrained by the local context of interaction, as various forces (local, national and global) are at stake. These, far from being seen as separate, are perceived as part of a dialectical process of socialization of a particular culture. In short, we propose a paper that discusses the effects and constraints of the transformations and conflicts in the relations between global
social changes and local reality, its cultural representations, and identities of the people who live there. The question of how, and to what extent rural communities produce, and are made by, globalization is central to our work. Therefore, we are led to discuss, among other things, the vitality and renewal of topics related to rural communities.

Seeing Both the Trees and the Forest: Closure and Social Capital in the Indian Interorganizational Network

The Indian economic context is characterized by the importance of business communities such as the Parsis or Gujarathis. These communities enable trust and norms in interorganizational transactions, and substitute for weak legal institutions. Current research in the interorganizational network context has focused on closure in the local network, and does not do as well in explaining how trust and norms can be maintained within large communities. We go back to the original Colemanian conceptualization of closure and social capital which describes the operation of trust and norms in large communities. In addition, this theory emphasizes the importance of closed structures and also the importance of having "good standing" with closed structures. Hence the theory is two dimensional, and has a positional and structural element. Current interpretations conceptualize closure as a closed triad, but this conceptualization is reductive, and (a) reduces the collective element of closure to a property of actors' local network, and (b) loses the second positional element of Coleman's theory. We rely on the latest advances in network methodology and a complete population network of Indian firms to look at macro closure, and position of the actor within macro closed structures. Using this macro conceptualization of social capital, we find evidence for both the structural and positional dimension of Coleman's theory.

MANKY BONILLA, WALTER OMAR* (Cornell University, wmb264@cornell.edu)

In 1993, Peru experienced one of the most radical neoliberal reforms in Latin America. In its attempt to attract international investors, the government deregulated the labor market, undermined labor rights and created a non-interventionist legal environment for collective bargaining. As a result, the number of unions, strikes and collective agreements felt dramatically, while the labor movement almost disappeared. Nowadays, Peru is the Latin American country with the best economic projections—in spite of its increasing inequalities—, it is the second world producer of copper and gold; and multinational corporations control 85% of the country's mineral resources.

In this context, miners have mobilized to get better salaries and working conditions, and have started organizing to bargaining with global mining companies. Most of the studies about these efforts have focused on the contention between labor and capital—particularly within specific workplaces—, but have overlooked the role that State has in the dynamics and outcomes of the collective bargaining and the labor conflicts.

Using unique quantitative data of all the state's interventions in the mining industry's conflicts from 1993 to 2012, as well as qualitative evidence of two in-depth case studies, this paper analyzes the role of the state in the configuration and outcomes of labor disputes. The study shows that, in spite of the commonplace ideas about the "neoliberal state" and its pro-employer tendencies, Peruvian workers have been able to engage in face-to-face negotiations with public workers and politicians in order to confront global companies. This paper offers a typology of the main negotiation mechanisms between state and labor unions; analyzes their main differences with previous strategies used by workers' organizations; and discusses its implications for a theory of the relationship between the labor movement, the state and the global capitalism in Latin America.

MANKY BONILLA, WALTER OMAR* (Cornell University, wmb264@cornell.edu)

Negotiating the Margins: The Trajectories of Subcontracting Laws in Peru and Chile. the Case of the Mining Industry

In spite of their different development levels, Peru and Chile have several elements in common. In both cases the basic principles of the neoliberal reforms have persisted— in contrast with the political transformations of other Latin American countries—; mining is the most important economic activity; and more than 70% of this industry's workforce is subcontracted. As in other societies, this labor market segmentation has produced precarious employment, from which global companies have largely benefited in the last thirty years.

Additionally, both countries experienced the biggest and longest strikes since their return to democracy in the last decade, and in both cases subcontracted miners worked organized the main mobilizations. Although miners were not the only group claiming for a reform in the labor legislation, because of the industry's importance, they were the most visible and powerful one. As a result, both countries changed some parts of their subcontracting laws in the last years.

Based on a comparison between Peru and Chile, this study analyzes the relationships between workers' mobilizations and labor law's trajectories. Whereas previous studies have focused on how workers struggle, this one attempts to explain and theorize the results of that contention. Using news clips, legal archives and interviews to union leaders, the study argues that, in spite of the similarities between their contexts, workers' mobilizations produced divergent outcomes. In Chile, the subcontracted workers had their own national federation, which helped them to build a strong identity, whereas in Peru the traditional mining federation rapidly absorbed workers' struggles, making them unable to unify their demands in a national scale. I suggest that the networks and structures of the subcontracted workers' organizations affected the reforms they got: restrictive in Peru—they are not for all the workers in the industry—and more inclusive in Chile.

**MANSOURI, VALI** (George Mason University, vmansour@masonlive.gmu.edu)

**Similar Roots and Diverging Outcomes: Uprising and Revolution in Iran and Egypt**

Recent uprisings in the Middle East have increasingly been characterized by spontaneous mobilization, decentralization, and the lack of dominating charismatic leadership. This research will demonstrate the salience of Horizontalism in comparing and contrasting the Iranian Green Movement of 2009 with the Egyptian Revolution that started in 2011 through the use of ideal types. Attention is devoted to assessing the strengths and added resilience of these decentralized movements against their Authoritarian states. Analysis through identification of different processes leading to variations on success, stalemate and repression, will build on previous studies of revolutions to better understand contemporary social and political change.

The Green Movement, despite months of sustained mass protest and delegitimization, the government, solicited little to no concessions or change from the state; while the Egyptian Revolution within only 18 days was able to topple the head of state, ushering in a struggle for the future polity between shifting alliances and elements of the old regime. Identifying key political institutional arrangements illuminates potential vulnerability or resilience to uprising. Construction of state is key, in the case of civil society and large networks of power in institutions such as the Supreme Leader, the government and Revolutionary Guards, combined with limited but competitive elections allow for flexibility, making for added resilient state. On the other hand Mubarak's National Democratic Party (NDP) of Egypt was more closely characterized by Patronymic bureaucratic rule, which led to competition and conflicts in interest between NDP members and affiliates who rose since the Infitah and the Supreme Council of the Armed Forces (SCAF). By looking at these social uprisings and the changing states will help to explain the current divergent and potential directions of these two movements and their future.

**Patterns of ICTs Using and Information Flow: A Study of Rural India**

Patterns of ICTs Using and Information Flow: A Study of Rural India

**ABSTRACT**

Information and communication technologies (ICTs) are widely acknowledged as important resources in all the aspects of socioeconomic development and this is especially articulated in national policies. Among developing countries, this perspective incorporates ICTs into the development agenda because of their relevance in transforming human activities and in presenting new opportunities for economic growth. Even if ICTs appear ubiquitous in this day and age, it still exists, the growing presence of digital divide and social exclusion. A considerable number of marginalized groups, such as rural folk, women, and low-income youth remain un-reached by the benefits ICTs are supposed to offer. The vision of a so-called “information society for all” as stated in both developed and developing countries’ ICT policy documents today does not apparently include all (Chiumbu 2008).

This paper presents the patterns of people’s ICTs using and information flow perceived in India, especially in the rural areas. India is a country of multiple divides as social and economic divides already exist in the country and now with the emergence of new ICTs new divisions are shaped on the basis of many factors involved in its use and access. Today growing ICTs and the telecommunication in country has given opportunities to the excluded sections to be part of this new information society. But the impact of ICTs in rural areas is still very limited, despite its penetration into every corner of modern life. There is need of relatively good flow of information and special skills to make full use of ICTs for socio-economic gains.

**Homeless Diaspora: The Impact of Return Migration on Latin American Japanese Communities**

Currently more than 2.5 million Americans living on the South and North American continents are Nikkei or descendants of Japanese migrants. The history of these communities’ emigration and returnings is accompanied by considerable social and cultural variation. Their interest in issues of living in the diaspora, the meaning of ethnicity and citizenship has been renewed by the recent wave of sojourner migration by Latin Americans of Japanese origin into Japan. Virtually nothing is known so far about the impact of “return migration” and the “returnees’ remigration” on the diaspora in Latin America. To what degree have ideas of ethnic or political loyalty and cultural identity been shifting one way or the other due to the increased proximity to their ancestors’ place of origin and the influx of material and immaterial goods from Japan? And how have narratives on the experience of hostile or discriminatory treatment by the Japanese impacted on the collective image of the Nikkei in Latin America? The Nikkei abroad bears the potential for rethinking the meaning of diaspora. As the Nikkei’s return home migration, to the land of their ancestors, has not fulfilled the postulated ‘negation of a diaspora’ (Clifford 1994), it has squared the tension of being diasporic in the sense of being displaced twice and having multiple relationships with distinct nations which are neither just homeland nor hostland. Based on multi-sited fieldwork in Japan, Argentina, Bolivia, and Paraguay, I argue that the Nikkei are entangled in a squared diaspora in which the juxtaposition of homeland and hostland itself becomes questionable, unstable and fluctuating.

**Community Politics and the Middle-Class Desire for Diversity and Difference. Evidence from 40 Years-Span of (super)Gentrification in Brooklyn’s Park Slope**

The transformation of New York City into a global corporate city and the consequences of social effects on small firms and on dwindling employment opportunities for some and to exacerbate displacement problems for others. By encouraging suburban home ownership, discouraging rental housing construction, and upwardly redistributing income through federal and municipal tax policies, Brooklyn’s Park Slope, at the beginning of the 1970s faced a racial and tenure status division between its neighborhood residents. Reform institutions emerged from neighborhood civic organizations and broad-based interest groups.

Drawing the evolution of its demographic and housing resettlement, I found that different social groups had different class interests and ideologies, and therefore they were differently affected by abandonment and resettlement processes. The involvements and influence in community politics of twenty community organizations were analyzed through archival and bibliographic researches from the late 1960s to the present time; among them four historical institutions – which still exist - and four more recent ones, were followed through the ethnographic activities and other researches and are reported in this work. There is, in fact, a social and ‘moral pluralism’ to understand (Schumaker 2013), especially when a neighborhood has been dealing with racial, ethnic, class, and religious changes.

This longitudinal study on the process of Park Slope super gentrification investigates the middle class’ desire for diversity and difference (Lee et al. 2004) as well as the influences of housing-abandonment and resettlement processes on 1) the types of institutions that emerged to represent different class interests; 2) the types of social groups that came to inhabit the neighborhood; 3) the pattern of that emergence over time; 4) the particular goals, scope, and strategies that these organizations evolved; and 5) developmental changes in the relationships between local institutions, government agencies, and private investors.

**Cool Streets: Attitude or Commodification? What - and Who - Is Driving Gentrification Along Two Changing Boulevards in Milan and Brooklyn**

Streets do possess attitude. What usually community preservationists define as “spirit” or the ‘soul of place’, here is re-interpreted both in terms of design attractiveness - human scaled, fine grained, mixed use, or highly walkable – and urban lifestyles (Jacobs 1969, Zukin 1995, 1998, 2010, Parham 2012). Especially during a gentrification process, we can discuss how streets embodied essential elements of ‘cooleness’ – showing off trendy styles and great flavors - which seems a reflection of the commodification of cultural production.

Using the concept of tool as a framework, understanding it as a cultural category in its own right (Pountain and Robins 2000) – this work explores the ways gentrification interconnects with the development of an individual habitus as a
spatial manifestation in which the street coolness is crucial to the construction of stylish individual personae. This exploratory paper describes the relationship between aesthetics, symbolic meanings, understandings of street character, and patterns of socio-spatial change on local shopping boulevards in two neighborhoods - Milan and Brooklyn - which are discussed with reference to sites of financial speculation and gentrification. These neighborhoods, once considered a symbol of blight in the 1970s, today are one of the most appreciated places for Milan and New York’s wealthy and educated people. As I have observed, their street practices sometimes overlapped with working class people. Superficial and sometimes do not. However, with hip bars and cafés, used-books stores, yoga studios, and renovated townhouses, they are ‘no longer regarded by the public as blighted, but instead are both celebrated as sites of cultural consumption for a new middle class’ (Ossman 2011:8).

Drawing on several years of field research (2007-2013), empirical quantitative and ethnographic data on the current, and historical aesthetic characteristics as well as types of stores, and value-creating practices are considered.

South Africa within Brics: Emerging Society and Sociological Discourse

The formation of the BRICS contingent opened up new political and economic debates and discourses. The BRICS members are all developing or newly industrialised countries, and they are distinguished by their large, fast-growing economies and rapid industrial development. The normative component of culture, namely values, norms and sanctions will also be part of the picture. Closely linked to social structure, the following critical processes will in an integrative way be put under the magnifying lens, against the BRICS background: ideological reconciliation, nation-building, economic transition, nationalisation, migration, globalisation and post-globalisation.

In the final instance, the paper will sought to – from the South African perspective – analyse the controversy (BRICS) as a whole and the role of South Africa in it, specifically in terms of participation (e.g. politically, economically, culturally and militarily), autonomy, inter-dependence, and a designated leader role in certain parts of the world.

Can the Racialised Other ‘Belong’? Rethinking Race, Racism and Belonging in Australia – Perceptions of Skilled Black African Migrants

This paper centres the perspectives of a group of black skilled African migrants to interrogate the notion of ‘belonging’ within the Australian context. Specifically, the paper explores how participants’ constructions of belonging are grounded in narratives (and experiences) of racism, racialisation and racial discrimination. There is a significant body of work that explores the migrant’s experiences of mobility and constructions of belonging. However, to date, not much has been done to explicitly link these with experiences of racism and racial discrimination. Drawing on data from a qualitative study on identity and belonging among skilled ‘black’ African migrants, we argue in this paper that experiences of racism, and racial discrimination is entwined with ascriptions of ‘otherness’ evoke feelings of the perpetual stranger or outsider who does not belong. We therefore interpret the participants’ perceptions of belonging as existing an ‘other’ paradox of skilled migration: where feelings of being ‘needed’ (invited) into Australia to fulfill an identified need (the labour market) co-exist with experiences of discrimination to construct an ‘other’ who simultaneously belongs and does not belong. In the end, while the discussions in this paper are mainly concerned with belonging as subjective, personal and emotional attachment to particular groups and constructs of ‘home’, they also expose the power relations, contestations and complexities inherent in the notion of ‘belonging’ particularly when one has to contend with racism and racial discrimination persistently and consistently.

Social Innovation in the Housing Policy in Spain

The context of this research is the economic and financial crisis that has had the effect of exponentially increasing unemployment and evictions across the country. This research has one general objective, and two more specific objectives. The general objective is to broaden the research on social innovation in housing policy in Spain, since the beginning of the crisis (2008) to the present. The first specific objective is to review the scientific literature in order to find successful actions at the international level in the fight against the loss of housing that have allowed more people, belonging to the most disadvantaged social groups, to have adequate housing. The second and final specific objective is to identify if there is a presence of some of these successful actions in the field of housing in the context of Barcelona, where I place this research, and how social movements have influenced the implementation of these initiatives. The results show that there has been a change in housing policy and citizenship, and crucially, it contributed substantially to this change through innovative solutions and social pressure towards the Spanish political system. The innovation introduced by the social movements are both at the individual level (processes of financial literacy, empowerment, deliberation and participation) and at the civil society level (collective action, collaboration with organization promoting new models of housing, such as cooperatives). These innovations have open a new path for the future development of the housing policy in Spain and also has turned civil society more powerful and a significant actor in the dialogue with the State institutions.

Female Migration in Greece and Integration Issues: Access to Welfare System and Political Participation

Greece has turned in recent years into an immigration region. While immigration started in the early 1980s, it was only in the early 1990s that significant numbers of economic migrants started arriving and became a new destination country. An additional important feature of the immigration process in Greece is the large proportion of women who migrate alone in search of employment. With regard to the integration problem of migrant women many studies indicate that housing policy is closely linked to the role of social participation and at the civil society level (collective action, collaboration with organization promoting new models of housing, such as cooperatives). These innovations have open a new path for the future development of the housing policy in Spain and also has turned civil society more powerful and a significant actor in the dialogue with the State institutions.

In the context of the problematic for the social integration of women migrants in new immigration countries a nation-wide survey on a sample of 600 economic migrant women migrants who had residence and work permit was held by EKKE (National Centre for Social Research) in 2010. This paper refers to some issues related to the integration of women migrant women in our country based on the results of the above survey. More concretely we will analyze the access of migrant women to social – welfare services, investigating issues related to social security coverage and the use of public health services. We will also discuss the interest of immigrant women in political life, and their participation in collective political activities and organizational schemes.

MARCHADOUR, GUÉNOLÉ* (University Lyon 2, marchadog@gmail.com)

The meaning of transparency is seemingly obvious and simple, however, in political terms transparency is more “the condition of being transparent”. It arises in opposition to corruption, secrecy and lack of clarity in the management of organizations and institutions. Today, it is more relevant than ever as a consequence of all kinds of recent scandals. Citizens of democratic societies demand a more open and transparent government.

This requisite of transparency is a political goal, which is supported by the possibilities for openness produced by the microelectronics revolution. This has modified the technological, social and political scenarios. It is more than the Internet; it is reaching the global ICT system where available information is increasing daily, as are the possibilities of accessing and processing data.

In this context this paper proposes, first, an analysis of public policies according to the principle of traceability of decisions. This means that it is possible to identify the full cycle of a public policy and its relationship with the different actors in the policymaking process. Second, imitating food processing traceability tools, it is possible to propose a “policies processing software” for recording all the traces of public decisions and an open system to retrieve and access this data. Third, it describes the theoretical conditions and prerequisites for a “barcode” to reveal who proposed an action and how it was designed, implemented and evaluated.

Multigenerational, Demographic, and Spatial Aspects of Stratification and Mobility

This paper reviews three closely related developments in research on social stratification and mobility: (1) studies of a broader range of kin connections in the reproduction of inequality than just parent-child connections, including the effects of grandparents and other more remote kin on the achievements of individuals in a given generation; (2) studies of the interdependence of social mobility processes with the creation and dissolution of families and other social groups that are related to stratification; and (3) studies of the interdependence of socioeconomic and geographic mobility. The review will touch upon conceptual, empirical, and methodological issues involved with the study of multigenerational effects; the interdependence of stratification and demographic processes (including two-sex marriage markets, assortative mating, fertility, and mortality); and how geographic and spatial mobility contribute to socioeconomic and other forms of spatial segregation. The paper will use empirical examples from the author’s own research on China, Sweden, and the United States, as well as related work by other researchers.

Against All Odds – First Generation Immigrants in Upper Secondary Education

The paper focuses on first generation immigrants who arrive to Sweden in the later school years. This group of students is at a major disadvantage compared to native students as well as to second generation immigrants and even to first generation immigrants who arrive before school entry. Statistics imply that a low number of “late arrived students” enter upper secondary education, and of those who do the drop-out rate is high. The educational gap between young students in Sweden is thus increasing, creating larger social inequalities between natives and foreign-born residents. In this study, however, I am interested in those examples that are exceptions to the rule – first generation immigrant students who against all odds make it to the college preparatory track. The object of the paper is to investigate aspects that contribute to school achievement and success for this group of students. An initial survey study in Malmoe, Sweden’s third largest city, showed that a majority of late arrived students had entered the same upper secondary school. The additional material consists of interviews with school personnel as well as interviews with ten students at this school who arrived to Sweden between the ages of 15 and 16 years old. The student group is heterogeneous, different nationalities, different reasons for immigrating to Sweden and different family contexts. The material reveals that in order to get a better understanding of the aspects contributing to school achievement, school culture as well as the individual migratory experiences and social capital need to be considered, and in particular how they interlink. The paper also discusses the obstacles they face, especially concerning language acquisition, and the strategies involved in overcoming them.

Is There a Unified Recipe to Predict Civic Engagement? Comparisons of 47 European Countries

This presentation is focused on comparative framework of civic engagement in contemporary Europe. The database of the European Values Study (2008) is used as a main set of information, though some indexes (e.g., World Bank’s, Freedom House’ indicators) are used as a supplementary source. The scope of the research takes into account 47 countries. Civic engagement is conceptualized in three aspects: cognation-orientation (the content and actors of civic engagement in Europe) and 2) factors that shape civic engagement in its two parts, namely Post-Socialist and developed Europe. In such a way, the main idea of the paper is to clarify whether in the latter prevail contextual, external factors, while individual factors of civic engagement are major in the former. Thus, the levels of analysis include both individual and country, main methods are correlational and regression analysis. The research is implemented individually under the guidance of Laboratory for Comparative Social Research in the National Research University “Higher School of Economics”, Russia.

Hasidic Pilgrimage As a Cultural Performance: Challenges and Opportunities

This presentation deals with the research of Hasidic pilgrimage in nowadays Ukraine on the examples of two settlements, Uman and Medzhybizh. The research is aimed to shed light upon the Hasidic pilgrimage through the lens of cultural sociology and the theory of “cultural performance” elaborated by Jeffrey Alexander as the most suitable theoretical and methodological tools in the analysis of this issue. Despite long standing historical prerequisites, Hasidic pilgrimage is still a new issue in Post-Soviet Ukraine which has become a special “core” in the world context. The understanding of performativity in the issue helps unveil its stable and emerging elements, as well as show the most problematic areas and possible consequences. It is shown that the Hasidic pilgrimage in Ukraine does possess all characteristic features of a successful cultural performance: collective representations (as well as background symbols and scripts), actors, means of symbolic production, mise-en-scene, power and audiences. Research methods (which included visual observation, media documents analysis and interviewing) help outline and analyze typical resources, lines of communication and possible conflict areas both in time (2000-2012) and space (two mentioned settlements) perspectives. The author pays attention that the Hasidic pilgrimage is far from becoming an established phenomenon with defined areas of sacred and profane in the contemporary Ukrainian society, though it is constantly bringing new challenges and opportunities.
The Image of the City Between the Local and the Global

Within the global competition among cities for recognition the ‘image’ plays a significant role. Cities work carefully on their iconic representation to attract tourists, knowledge-workers and investors. Therefore, they have the challenge to create a coherent as well as a distinctive image. One can argue that the field of city marketing is a profession, and operates with standardised practices and similar beliefs. On that account, the images would be quite uniform, displaying rather a global culture than a local one. At this very point, the argument is reinforced by the claim that the ‘self-representation’ of a city is highly contested within the local context. Hence a study of the globally distributed images within their production and negotiation processes draws light on the local ‘urban imagery’ (Strauss 1960).

The presentation is focusing on the image production of two globally intertwined cities: Frankfurt, Germany and Glasgow, UK. Throughout several fieldtrips, city marketers and journalists have been interviewed. Thereby an insider’s perspective of how city marketing operates in daily business and a critical, independent opinion about the ‘outcomes’ of these efforts could be achieved. In addition, local archives have been combed out to discover how different campaigns are displayed rather a global culture than a local one. At this very point, the argument is reinforced by the claim that the ‘self-representation’ of a city is highly contested within the local context. Hence a study of the globally distributed images within their production and negotiation processes draws light on the local ‘urban imagery’ (Strauss 1960).

MARIANO, DANICAR* (National University of Singapore, danicar.mariano@gmail.com)

The restrictive Assisted Reproductive Technology (ART) laws and ‘moral safety valves’ in Singapore and their role in creating Singaporean reproductive tourists or exiles

The paper analyses why some Singaporeans are crossing borders to avail of Assisted Reproductive Technology (ART) treatments like In Vitro Fertilization (IVF), Pre-implantation Genetic Diagnosis (PGD), surrogacy, et cetera. A major factor that hinders or discourages couples from getting ART treatments in Singapore is the Bioethics Advisory Committee’s (BAC) strict regulations on ARTs—one of the most stringent in Asia. Formed as Singapore’s counterpart to the UK’s Human Fertilisation and Embryology Authority (HFEA), the BAC prohibits certain technologies like surrogacy, PGD for sex selection as well as “race or traits shopping” through selection of egg and sperm donors. It also denies fertility treatment access to certain people, gay and lesbians, women over 40-45, single, and women who cannot gestate. The BAC’s ban on payments reveal a logic of racial hierarchy that perpetuates a local versus outsider divide at the guise of protecting “weaker classes” and “not importing Singapore’s fertility issues to other nations.”

As a result of the BAC’s ban on donor payments, there is a huge sperm and egg cell deficit in the country. Many Singaporeans do not want to donate or acquire genetic material within the small city-state for fear of incest or custody issues. Internet is enabling many to circumvent these ‘moral safety valves’ that the BAC had set in place, and many fertility hospitals are lobbying to the government to revise some of the stricter regulations or else “lose out” to neighboring India, Thailand, and Philippines who are establishing their niche and reputation as fertility tourism destinations. Their lower cost, exotic appeal, and most importantly, loose regulations and “bioavailable” citizens are their major selling point and competitive advantage. Since many technolog- ies and services that Singapore prohibits are allowed in these countries, many of their fertility brokers and clinics report serving several Singaporean clients annually.

MARKHAM, WILLIAM* (University of North Carolina, william.marklund@sh.se)

Organized Hypocrisy – Disorganized Technocracy: The Assumed Retreat of Politics in Contemporary Governance in Historical Comparison

Today, it is widely assumed that a power shift has taken place over the past few decades – a shift away from politics and in favor of the market. According to this view, neo-liberalism has since the 1970s and onwards reduced the scope of “the political”, limiting the exercise of public power in general and planning in particular.

Despite this assumed retreat of politics, politics is still, at least medially and rhetorically, tasked with providing some guidance for the future, based on scientific evidence, and to generate tangible results in a logic of input and output legit- imacy (Scharpf 1999). Public power is still held accountable as if it possessed the power which is by now to have been lost. Political control is still to achieve results as if it would be possible to exercise public power without the use of planning, raising the question: Why do we expect more from politics at a time when it is supposedly able to do less?

This paper proposes that this conundrum – which could be seen as an organ- ized form of hypocrisy (openness) coexisting with an increasingly disorganized form of technocracy (transparency), to paraphrase Nils Brunsson (2002) – can be analyzed by confronting Karl Popper’s concept of “open society” with Gunnar Mårtensson’s concept of “social engineering” and Karl Polanyi’s concept of “double movement”, as generated in the context of pitted conflict between laissez-faire liberalism, totalitarianism, and democratic socialism of the 1930s and 1940s, a conflict which in some ways resemble the contemporary contest be-
between neoliberalism, progressivism, and traditionalist backlash but also provide some instructive contrast.

MARKLUND, CARL* (Södertörn University, carl.marklund@sh.se)

**Shaping the Things to Come: Concepts of Planning and European Modernity**

Planning—in the sense of purposive action geared towards the anticipated future—has usually been seen by anthropologists and social psychologists as a characteristic of universal human reason. As a specific socio-political practice and scientific theory, however, historians and social theorists have often identified planning as a specific trait of European (Western) modernity, for better and for worse.

This classic analysis of scientific social and political planning speaks of politicalicians, revolutionaries, reformers, and scientists infuriated with the success of the natural sciences, dreaming of a brand new world. According to this view, the social sciences would be as closely integrated with politics as the natural sciences had already been adopted by business, medicine, and the military. In some more extreme “technocratic” interpretations, planning and science would eventually replace politics altogether.

Either planning has been seen as a largely technologically determined, if not outright “neutral” response to the complexity of the modern world. Or, more commonly, it has been criticized as a misguided attempt at controlling human relations and social circumstances in the same way as humans have sought to control nature. As such, planning is a key concept in European modernity. However, the many applications and diversification of planning belie a simple categorization, making it an appropriate topic for conceptual historical analysis.

Yet, it is a key concept whose conceptual history is yet to be written. This paper maps out points of disjuncture between the historiography of concepts of planning, such as cybernetics, management, planning, rationalization, social engineering, and technocracy on the one hand, and the actual historical usage of these concepts on the other. Thereby, the paper brings previously isolated historiographical and theoretical strands into dialogue with one another with a view of initializing a new take on “critical planning studies”.

MARKOVIC, PETAR* (University of Donja Gorica, Montenegro, petar.markovic@udg.edu.me)

**Foundational Political Myths in Divided Societies: The Case of Montenegro**

This paper provides an analysis of the constitutive role of founding myths in the formation of nation-states. In particular, it aims to elucidate the odd cases of identity formation in complex and ethnically divided societies where, it is argued here, the historical and cultural legacies are passed on rather differently than in the case of homogeneous societies mostly analysed in the literature on political mythology. With the intention to submit a phenomenon that belongs to the family of the most basic and yet arcane and essentially contested concepts of political theory and political culture to an impartial political investigation, the founding myth is firstly reconstructed with respect to the general theory of myth and political myth. In the second part, the role of mythological legacy in the genesis of the statehood of Montenegro both in the past and present is analysed. The author argues there are two founding narratives in Montenegro, explaining their ethno-nationalist character and attempts to deduce patterns of their instrumentalization by the rulers of the Petrovic-Njegos dynasty and the current government. The paper ends with concluding remarks about the controversial status of “competitive foundational mythology” and the need to set forth new and repubicanized forms of legitimisation that would disengage the regressive dialectics induced by the myths discussed thus far.

**Environmental Trust: A Cross-National Study**

Environmental issues, topics, and concerns are some of the most pressing global challenges of our times. Research demonstrates public opinion on environmental concerns is global, yet simultaneously wide-ranging and varied. Despite its importance, however, our understanding of the within-country dynamics related to the expression of environmental views remains understudied. This research examines environmental trust using the International Social Survey Program. Environment data from 2000 to 2014 advances the literature on the globalization of environmental concern by articulating its content and expression in three regional clusters derived from previous research. Important similarities are shown across regions regarding the model overall. Some intriguing differences are revealed in the model when examining results for countries individually within the three regions.

**RC24-427.5**

MARQUART-PYATT, SANDRA* (Michigan State University, marqua41@msu.edu)

**Pathways to Environmental Activism Across Time and Place**

This paper tests a model of pathways to environmental activism using three waves of data from the International Social Survey Program. Given expectations from the theory of planned behavior and value-belief-norm theory, a path model is specified that examines how individual resources, knowledge, awareness of consequences, attitudes, willingness to contribute, and efficacy affect environmental activism. The mediating effect of willingness to pay or make economic contributions is investigated in detail given previous research. Results demonstrate support for the model across the countries indicating commonalities in resource availability, awareness of consequences, and attitudes combined affect environmental activism. Moreover, mediating tests were conducted that demonstrate a prominent yet not exclusive role of willingness to contribute in promoting activism across nations, uncovering relations that are masked in previous cross-national research. Results reveal that the model is robust over time and across places, with some exceptions, yielding insights for future comparative and cross-national studies.
MARQUES, ANA CRISTINA* (CIES, ISCTE-IUL, anacristina.hmmarques@gmail.com)
Families’ Control and Youth Sexuality As Meaningful to Young Peoples’ Transitions into Adulthood

Nowadays, in Western societies, youth transitions into adulthood are, usually, considered to be obtained through a gradual, diverse, complex, nonlinear and irreversible process. However, some authors point to the importance of continuities, social positioning and the epistemological fallacy in the lives of young people and in the representations of youth and youth transitions into adulthood. Although the family context tends to be recognized as important to young people’s trajectories, sexuality is often forgotten or, even insignificant in their transition to adulthood. Thus, the sexual transitions can be seen as non-important, disconnected from other transitions, and having no decisive consequences; being just a hobby or children’s play. Based on 60 in-depth interviews conducted in Central Portugal, with 60 young adults, aged between 18 and 29 years old, I intend to look for possible articulations between family control over young people’s leisure times, sociability and sexuality, young people’s representations and experiences of sexuality, and their transitions into adulthood. I will argue that the family context and the domain of sexuality are not meaningless for young people’s trajectories into adulthood. Instead aspects related with family control, as: prioritization of gender relations and sexuality, ways in which young people go from young to adults, especially in what concerns educational paths, leaving home, conjugality and parenthood. This happens especially in two main ways. First, the maintenance of some control concerning young women’s leisure time, sociability and sexuality can be associated with a smaller period of sexual experimentation for these young women and with some of them leaving home, entering into conjugality and/or parenthood earlier than the others. Second, the problem of “coming out” and/or assuming a non-heterosexual identity can be related with the need to lie, being (or being afraid of being) kicked out from home, the search for autonomy and the difficulty of becoming a parent.

MARQUES, ANA CRISTINA* (CIES, ISCTE-IUL, anacristina.hmmarques@gmail.com)
“Is Heterosexuality That Bad? Questioning Some Presuppositions and Asking for a Sociological Analyses of Sexuality”

“Is heterosexuality all negative? Why is heterosexuality so dangerous or bad? Are heterosexual women all submissive, victims and passive subjects? Should people be ashamed of being heterosexual? These are some of the questions that came through my mind as I was working on my PhD dissertation and attending conferences about sexuality. Giving credit and importance to the work of feminists, as pioneers in the analyses of gender relations and sexuality, is to be valued. The female attention that caused attention for problems related with power in gender relations, male dominance and women submission, commodification of sexual female bodies, sexual double standards or sexual violence, and that brought the personal into the political agenda, I still felt that something was missing in those discourses. Notwithstanding, simultaneously I was reading the work of some social scientists that problematized “my concerns”. I felt more reassured. I have to say then that this presentation is also personal. But from a personal unease I wanted to insist in the threads that link past, present and future in intelligible ways . The ways we predict, memorize, accelerate and decelerate time and how we sew the asexist links, and invented traditions. Finally, uchronian thought offers insights on the levels of temporal continuity and discontinuity that characterize specific societies, making perceptible the creation of foes, imaginary foundations, communitarian links, and invented traditions. In this paper, based on the contributions of Tarde and Renouvier, I’ll try to signal that Sociological Theory has conceded an important place to utopias, and utopian thought, either as a device to envisage new and just worlds or to imagine dystopian counter examples. However, and despite some brave attempts by Max Weber, uchronian thought (either as a device to envisage new and just worlds or to imagine dystopian counter examples) never seemed to enjoy the same and widespread attention as their spatial imaginary counterparts. In this paper, based on the contributions of Tarde and Renouvier, I’ll try to signal that Sociological Theory has conceded an important place to utopias, and utopian thought, either as a device to envisage new and just worlds or to imagine dystopian counter examples. However, and despite some brave attempts by Max Weber, uchronian thought (either as a device to envisage new and just worlds or to imagine dystopian counter examples) never seemed to enjoy the same and widespread attention as their spatial imaginary counterparts. Tortured Bodies, Ravaged Flesh, Killing Machines: David Cronenberg and the Sociology of Disgust

Over the past two decades, reflections on disgust and repulsion have been piling up in Social Theory. Moving away from an analysis entirely centred on biologically rooted or emotional expression, theorists of disgust became an important instrument to understand moral boundaries and civilizational constructions. Disgust seems to fulfil a position akin to incest prohibition – adequately universal to be declared biological, and sufficiently particular to be deemed cultural. If the traditional views on disgust revolved around the issues of purity, pollution, and contamination, having the body at the centre stage, some of the contemporary approaches are linked not to external threats to the human integrity but to the transformative capacity of science and technology, breaking barriers, violating in-tendancies, and destroying moral boundaries. The danger of the body snatchers becomes the menace of the creators of resulsion. Terror and horror movies, tend to epitomize the dilemmas of disgust for us, their audience for their agonizing, their mutilated, and transformed bodies of the victims of epidemics, and serial killers or on the creative and uncontrolled hubris of the brilliant but mad scientist that aspires to play a demiguric role in a new but demented universe. This double feature of disgust is paramount on the films of Canadian director David Cronenberg, representing both the civilizing and uncivilizing roles that disgust can play, especially when linked to scientific projects. If science is seen as a cornerstone of modernity, a civilizing process and symbol of progress and enlightenment, reducing human suffering and enabling longer, healthier and happier lives, it is also possible to see it as a new social boundary of the artificial-natural divide or the human-animal partition. Cronenberg’s filmography is a clear example of how the medical, biological and chemical sciences have entered the realm of disgust, side by side with porn or sexploitation.

Developing a Pattern Language For Science-Engineering-Art-Design (SEAD) Collaborations

Acknowledged similarities and prospective synergies underlie the work of artists and scientists in perceiving and describing the natural world; however, there are few formalized or easily recognized methods to utilize those commonalities for enhancing art-science collaborations. The notion that observable or archetypal patterns could represent a form of communication or a language among professionals from different fields was explored by architect Christopher Alexander, who introduced a pattern language consisting of hierarchically arranged patterns that are linked together in countless ways. Whereas the use of patterns and rhythms to communicate art or music is relatively straightforward, the utility of spatial or temporal patterns to portray or explain scientific data is less obvious. Some branches of science focus specifically on nature’s patterns and rhythms; however, most scientific data can be expressed in terms of frequencies, cycles, and other common descriptors of temporal patterns, as well as distributions, geometries, and similar descriptors of spatial patterns. The use of a pattern language for art-science communication would initially identify and collect numerous patterns to be labeled and categorized, but discernable similarities among seemingly different patterns would likely reduce this number over time. Distinguishing among natural, ideal, and abstract patterns could be a first step in categorization and might provide a handy framework for users to perceive relationships among different forms of information (e.g., ideas, data, designs). The precise structure or syntax of the pattern language (i.e., naming, ranking, illustrating, exemplifying, and referencing patterns) should be less important than an unambiguous depiction of the collected patterns and their links. Patterns and rhythms may be more recognizable to people than are words, numbers, or symbols, thus providing a means of communicating across disciplines and cultures.

Social Origins and the Access to Public Higher Education in Brazil

According to the well know MME hypothesis (Raftery and Hout, 1993; Shavit and Blossfeld, 1993), the class inequality on the distribution of educational opportunities tend to decline only when attendance rates reaches saturation at given educational levels for the upper classes. Lucas (2001) challenged this view introducing the EMI theory which proposes that, even when saturation is achieved for a given educational level, inequalities tend to persist in a qualitative sense, with kids from privileged socio-economic background having more chances of going to the better schools or universities. This means that IEO had to be analyzed not only in reference to attendance to a certain educational level, but also in reference to which segment (or track) in the educational system the individual accesses.

The present proposal aims at analyzing the association between social origins and educational destinations through the selection process of a prestige public high er education institution in Brazil. Drawing on the notion of tracking, we want to
evaluate (a) given the high competitiveness of the selection process, how is the association between social origins and chances of obtaining a place at this elite institution; and (b) if this association varies depending on which undergraduate course option the student applied for. Research has already shown how students from private schools have more chances of progression in all educational levels (Ribeiro, 2011; Montalvão, 2011) in the country, but the IEO between different tracks in public higher educational institutions in Brazil has never been analyzed before. Also this proposal relies on the use of data collected in the moment that the application is made, and it contains information on the entire universe of candidates in the selection process of this specific institution, which is another contribution to the empirical literature on the theme in Brazil, based mainly on cross-sectional household surveys.

Examining the Long-Term Effects Families: Preparando La Nueva Generación, a Culturally-Specific Mexican American Parenting Intervention

The purpose of this study is to test the long-term results of the efficacy trial of a culturally-specific parenting intervention called Familias: Preparando La Nueva Generación (FPNG), designed to increase the effects of keepinIt REAL (kiR), an efficacious school-based drug abuse prevention intervention targeting middle school students. Randomized at the school-level, parents and youth in nine schools were assigned into one of three conditions: (1) control condition, (2) youth-only condition, and (3) parent + youth condition, receiving FPNG and kiR. Youth and parents completed a wave 1 pre-test prior to implementation, a wave 2 short-term post-test after the last lesson, and a wave 3 long-term post-test 12 months later. Using a path analysis in Mplus on adolescents whose parents also participated (N=462), both direct and indirect effects of participating in FPNG were examined. Findings indicate that participation in FPNG and kiR had a significant direct effect in lowering adolescents’ amount of substance use. For alcohol and cigarettes at wave 3 in comparison receiving only kiR. These effects, however, were completely mediated by anti-substance use norms – youth whose parent also received FPNG had significantly stronger anti-substance use norms, which in turn resulted in significantly lowered amounts of alcohol and cigarettes used. These results are consistent with the EcologicalDevelopmental Theory and provide further evidence to the theoretical premise that strengthening parent-child communication of norms can have a positive effect in preventing adolescent substance use. In addition, these results support the assumption that involving parents in prevention efforts has a major effect in enhancing the efficacy of youth-only classroom based intervention. Because FPNG was designed with Latino parents and for Latino parents, FPNG is emerging as a curriculum that can positively influence and parent-child influences that characterize Latino youth and families and reduce substance use among Latino adolescents.

Preventing Youth Substance Use and Dependency: The Long-Term Effects of Keepin It REAL in Guadalajara, Mexico

Despite high rates of substance use in Mexico, only 43% of young adults report receiving a substance use prevention program. In response, keepinIt REAL (Mainténité REAL), a substance prevention program developed in the US for Mexican American youth, was implemented in central Mexico by a bi-national team of investigators. Two middle schools in Guadalajara, Mexico, were randomized into a treatment (N=226) and control (N=206) condition. Students completed a pre-test prior to implementation of the 10-session post-test after the last lesson, and a long-term post-test 12 months later. Substance use measures were 30-day amount and frequency of alcohol, cigarette, and marijuana use. Baseline adjusted OLS regression models predicted short-term outcomes, while growth curve models with missing data imputation examined program effects on trajectories of substance use. OLS regressions showed significant relative reductions in use of alcohol and cigarettes for youth participating in keepin' It REAL compared to youth in the control group. Growth curve models indicated that over time the effects of keepin' It REAL are gendered. Females in the treatment group drank alcohol significantly less frequently over time. Males in the treatment group, however, showed a relative reduction over time in the amount of marijuana used. This pilot study provides support for the global applicability of efficacious substance use prevention programs originally developed in one country, but also the importance of assessing for cultural fit and adapting the programs to achieve maximum efficacy. The results indicate that keepin' It REAL can be an effective tool in teaching drug resistance strategies and reducing substance use and dependency among adolescents in a major urban area in Mexico.

From the Family to the Market – the Complexity of the Care Finance

From the family to the market – the complexity of the care finance. The problem of paying for the care delivered to old or/and disabled persons, because of its complexity, is rather difficult and not very popular. Simultaneously, it creates the significant element of the state’s social policy, sometimes being shaped in the previous political regime and strongly connected with the constitutional guarantee of the special rights given to the dependent persons. Dependency, despite the development of anti-discrimination legislation and the public perception of disabled, is still one of the main factors of poverty, the stigma and exclusion. Moreover, it affects not only directly a dependent person, but indirectly this persons friends and family, who (in many countries) are legally expected to deliver the care and become fully dependent on the system of public care services. Along the change of economic regime, we can observe the strengthening of the care recognized as a commodity. This care, no matter the source of finance (public or private) has to be bought on the market.

This paper presents the initial effects of the research grant focused on the theoretical model of financing the care delivered to dependent persons, especially in the situation of social structures evolution and resources limitation. This project finalizes the few-year studies on the original theory of the costs of disability, which systematizes the expenses on disability policy and called for transparency and concentration.

The elaboration will focus on the financial situation of caregivers in different social systems. It will compare legal solutions across selected counties, the impact of the financial advantages and disadvantages for the family of dependent person, connections between public and private sources dedicated for care delivery. The discussion over types and forms of care will be tested introducing financial aspects as one of the recommendations.

Rethinking the Marketisation of Australia’s Employment Services

In Australia the dominant construction of citizen obligation for the unemployed has legitimised a host of policies and practices, including ‘strong paternalism’, punitive financial sanctions and tightly scripted employment pathways that allow little room for the exercise of autonomy. Moreover, the Australian Government has devolved responsibility for the exercise of rights and obligations to a ‘quasi-market’ network of private and non-profit organisations in the form of Job Services Australia. The institutional design of unemployment policy combined with the privatisation of employment services has created a number of unintended consequences over nearly two decades of reform. The ‘helping relationship’ has been commodified, front-line staff discretion has been reduced and the employment outcomes for the long-term unemployed have seen little improvement. Incremental reform by successive Australian governments has done little to address the power imbalance and unintended consequences associated with disciplinary power and governance. This paper seeks to examine how these processes and outcomes might be transformed so that employment assistance can become a key plank of a more just and respectful society. To this end, the paper will employ a historical and comparative analysis to problematize governance of the unemployed in Australia, reviewing recent evidence. I will argue that a new system does not lie within the current framework of contract governance. Non-profits can play an enabling role in the field of employment, but they must be freed from compliance burdens and strong paternalism that has subverted their capacity for public accountability, social advocacy and a mutually beneficial alignment of employer and worker needs.

NGOs in Complex Global Social Governance Arrangement: Drivers of Policy Synergy or Policy Conflict?

Global social governance is increasingly characterized by complex and fragmented institutional arrangements. In this paper, we study the role of NGOs in these governance arrangements. In particular, we are interested in the question whether NGOs have the potential to be drivers of policy synergy or policy conflict. We understand policy synergy as a situation in which the interaction of different social actors and their policies leads to more favorable outcomes than would have been achieved independently. Policy conflict describes then a situation in which the interaction of different policies results in more negative outcomes than if these

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
would have been implemented in isolation. To study the impact NGOs have on these questions, we first take stock of their engagement in global social policy and then assess to what extent their role has been adequately captured in the academic literature. In a second step, we examine their potential to influence the institutional integration, norm conflicts, and actor constellations in such a way that either makes policy synergy or policy conflict more likely. Thirdly we draw on the governance literature to investigate the impact this has on the larger field of global social policy.

**Family trajectories and transitions, union formation and dissolution, are strongly linked to or framed by economic and cultural context. In that perspective, family life has to be considered more as a result or the expression of contextual parameters than a universal phenomenon that could be looked at isolated from these parameters (like work conditions, economic assets, etc.).**

The 2008 financial crisis and its consequences on housings revealed in different countries such a relationship between external macroeconomic factors and family transitions: the case of couples who continue to live together while considering themselves to be separated. We have studied in parallel some of these ‘living together apart’ situations in collaboration with Andrew Cherlin and Caitlin Cross-Barnet. We have collected in different social classes, the main arguments delivered by people concerned with such situations of forced cohabitation. Among them, we identify situations where residential separation is not possible, either because of the need to keep up appearances, often for the children’s sake, or because total separation is too frightening or living in separate homes is unaffordable.

In this contribution, we want to go beyond a typology of these situations to use them as a mean to compare our respective national family culture concerning marriage, divorce, cohabitation. France and USA are effectively two very different nations regarding family issues. The common economic trauma of the financial crisis that we are still facing in our respective countries is an occasion to reveal these cultural dimensions.

**Managing Organisational Religious Diversity in Finland**

The paper will discuss and analyse how the Finnish public administration copes with religious and spiritual diversity in the 2010s. In the post-World War II times, state’s involvement with religious affairs was on a low level with the exception of the two national churches: The Evangelical Lutheran Church of Finland and the Orthodox Church of Finland. During the 1990s and 2000s the presence of different religious traditions and organisations has grown considerably. The main contributors to new religious diversity have been (1) Pentecostal and Charismatic Christianity, (2) religions of immigrants and (3) New Age and similar types of spirituality. Simultaneously the historical churches have experienced continuous secularization. There has been both a novel interest in religious affairs by the Finnish public administration and a shift of governing religions from church law to networks (e.g., representative councils, interfaith associations). The new model does not solve the historical church-state relations, but it works alongside it. The paper argues that in order to analyse how states’ aim to regulate and manage contemporary religious diversity, we should look at how the historical church-state relations function together with new forms of governance networks.

Everyday Life: Ageing, Lived Experiences, Time and Space funded by the ESRC, this paper explores the significance of the body in everyday life for 62 women and men aged 50 years and over in the UK. Participants took photographs of their different daily routines to create a weekly visual diary, which was explored through in-depth interviews to make visible the rhythms, patterns and meanings that underlie habitual and routinised everyday worlds. This paper explores the ways in which lived experiences of gender and ageing intersect and are performed and represented through the visual accounts of participants about their daily lives. In doing so, it focuses on two key aspects: (1) the ‘everyday’ appearance and body practices of participants visually depicted – which include work done on and with the body, through engagements with clothing, hair, make up application and shaving; and (2) representations and discussions of dieting and weight loss. The paper further highlights the potential disruptions, bodily betrayals, and moments of flux, in experiences of constructing the body in everyday life, and in representing the body through the visual. We argue that these visual representations, and participant narratives discussing their daily practices, indicate that the body is a process of ‘becoming’, a continual bodily ‘project’ (Gill et al., 2005), which is both socially and physically constructed through the practices participants engage in to maintain, discipline, and work on and with their bodies. The paper overall highlights participants’ negotiations of, and sometimes resistance to, dominant ideas and discourses surrounding gender, ageing and the body.

Cultural Representations of Widowhood: Social Media and the Declaration of a Status

The lens of widowhood research has moved from a focus on role loss to challenge dominant public narratives of misery and decline, pointing instead to a complexity of experience rooted in personal biography and in gendered life courses. Cultural gerontologists promote further enquiry beyond one’s local community – through widow conferences and meetings, with mainstream sources of scholarly knowledge in the social sciences, to reveal an even more complex and varied picture. Theatre and film have emerged in some cultural contexts as powerful tools to inform and emancipate widowed women from degrading widowhood rituals and norms. In addition, the rise of social media, with structured ‘social gerontologists’ in the network interaction burying on mainstream social media, and their interactions in the real world ‘representations of widowhood. While older women in particular have traditionally had access to a reference groups of widow age peers, the defining quality of those interactions is different from the new world of social media. As with structured ‘social gerontologists’ in the network interaction burying on mainstream social media, and their interactions in the real world, where the focus is more on interaction between strangers, is to come in contact more anonymously (visiting websites, reading blogs) or highly publicly (creating a website, authoring a blog, filming an online video) and then may lead to intersections and connections beyond one’s local community – through widow conferences and meetings, with some becoming sustained interactions. In historical context, one thus sees, over the period of about 75 years, cultural shifts from the public ‘wearing’ of one’s widowhood (widow’s weeds and other aspects of dress and appearance) – that end by the 1930s; to the subsequent ‘visibility’ and denigration of widowhood and bereavement for some decades; to use of social media as a declaration or even reifying of widowhood, especially amongst younger women, those for whom widowhood is off-time, or for those experiencing dis-enfranchised grief.

Indigenous Female Farmworkers in Northern Mexico: Workers’ Rights Violation Under the Veil of Better Jobs

In Mexico the implementation of macroeconomic policies has resulted in the indigenous population experiencing great disadvantage, being deprived of benefits and subject to profound inequalities. Despite the fact that in the northern Mexican states living conditions are generally better than in the rest of the country, development is unequal and inequitable. This situation particularly impacts the female indigenous population that works in the agricultural fields in northern Mexico, as reflected in their low educational levels, unemployment or unstable employment, inadequate housing, poor nutrition, lack of social support and great poverty.

This paper discusses the point of view of female indigenous farmworkers in terms of social inequalities and their effect on living conditions. It is based on research conducted over three years in an agricultural valley of the state of Baja California, regarding working conditions, workers’ rights and the health of indig-
enous women who work in the agricultural fields. Using qualitative methods, the objective of this research was to recover the voices of the farmworker women regarding the inequalities to which they are subject.

The instability and insecurity of their employment produces and guarantees a situation in which they do not have access to quality services and adequate care. This situation reflects the invisibility of these women in the eyes of the state, which leaves them in a condition of social vulnerability. The asymmetry of social relations explains how the state can offer low-quality services to this population and reduce their working conditions. It is important to emphasize the consequences of this situation, which correspond to the precariousness of their living conditions. The socioeconomic vulnerability in which this population is faced is reflected in job insecurity and the inability to defend themselves against the state.

RC32-556.2

MARTÍNEZ, MARÍA* (Universidad del País Vasco, maria m g@hotmail.com)

The crisis has had a big impact in Spain and specially on those who were already in increased precarity situations as women. But in order to understand women’s situations in a time of crisis, we need a longitudinal analysis that show us the weak points of the population and the precariousization of their living conditions in the last years. The aim of this paper is to analyse the evolution of women’s living conditions and the process of precarization in Spain between 1995 and 2010. We will address the common hypothesis that women constitute a more precarious social group than men, and we will try to complex the research on that approach. In a first moment, we will analyse women as a precarious group as a whole depending on other social positions (employment, salary opportunities, marriage, migration or being a mother...). But in order to understand this process and the relevance of identity within the Japanese migration system (1970s and 1980s) will be discussed.

From Latin America to Spain, Migrants Trajectories of Integration in a Rural Province

Recent migration patterns are characterised by their global nature and the preference for urban destinations. In Spain, immigrants tend to settle in the main cities of the country. Social network play an important role in both the decision to emigrate and the choice of place of residence. From the perspective of migrants and their social network, very little is known about patterns of integration and community participation in rural and low population density contexts in Spain.

This communication explores these issues and is based on a study, in the province of Teruel (Spain), using a sample of 324 Latin American migrants over the age of 18, selected by sex and place of residence. A standardised test – the Musitu

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
and Gracia AC-90 Community Social Support Questionnaire and open questions were employed. ANOVAs analysis showed significant differences in community integration and participation in accordance with socio-economic, motivational and social interaction variables.

Results show us that given the changes in lifestyle, customs, language, etc., the peer group, the family and the neighbourhood provide the base from which feelings of self-esteem and self-efficacy are derived, although contact with local people (Spaniards) is one of the main agents of social support; it is therefore important to examine the relationships that are established between the indigenous populations, the immigrants. Prejudices and stereotypes are easily identified in a climate of mutual ignorance and isolated rural enclaves are no exception. In addition to policies of control and regulation, Spain's immigrants require support in the development of the processes of integration and peaceful coexistence.

Being Wives, Mothers and Sisters in the Absence of Men: Bargaining Power of Women Left behind on Oaxacan Rural Areas (Mexico)

This paper analyses how men's international outmigration affects traditionally extended gender family dynamics in some indigenous areas of Oaxaca (Mexico). From the early 1960's, not the individual but the family or the household has been considered the most appropriate decision making unit to understand how migration and development are linked. Since then, gender dynamics in rural sending areas have been mainly analyzed in terms of marriage transformations. However, other relevant feelings such as solitude and alienation have not been widely studied. This paper highlights the importance of including mothers and sisters of migrant men to completely understand how traditionally gender norms and discourses, especially those related to inheritance and access to land, reproduce or change in rural Oaxaca.

The main argument of the paper is that sons' and brother's migration along with other structural changes on sending societies has broken down the traditional system of protection based on son's inheritance. It is also argued that mothers try to build new family alliances with their daughters to be cared in old age. In terms of marriage, the paper shows that changes in wives bargaining power must be seen within a cultural context to really understand if women did improve their situation. Without establishing direct causality relations as women's paid work greater bargaining power.

Two Oaxaca communities were selected following 5 criterions: rural areas, indigenous communities, high-medium index of poverty, and men’s migration to USA and finally unused y costumers (ruled by indigenous customary law). The methods used to carry out the investigation were long interviews, to measure shifts on gender discourses and the analysis of quantitative secondary database, to measure functions and capabilities.

On the Relation Between Well-Being and Communication: The Ethical Turn in Conceptualization of Communication with Case Analyses of Negotiation and Decision-Making in PEPFAR

Conceptualization of communication has a crucial effect on communication itself and on communication research. This paper explores how communication affects and is affected by psychological well-being with case examples from an HIV/AIDS international treatment program (PEPFAR) in Southern Africa. It calls for a re-evaluation of Weaver's metaphor on communication as exchange of information and develops Buber's and Peters' ideas on communication as a manifestation of the ethical, where the ethical is described as openness to otherness. For the authors, the vision is viewed as a tension between reproduction of Self with alterity. Mutuality is not viewed as a necessary condition for the ethical because it involves intimacy that can only be discretely expressed. It is assumed that the end of theodicy is not the end of the ethical because the ethical is a space of profound intimacy, beyondpreachment. Extreme cases of annihilation of otherness can be identified. Deterioration in communication is a process of disconnection, and have deeper roots than modernity. The paper identifies challenges for the ethical turn in communication such as patrarchal order, implantations, involvement of the ego, dehumanization, isolation of larger contexts, traumatic disorders, and states of denial. It also identifies what enhances communication as an ethical process: reciprocal adaptation, intercultural communication, nurturing of hybrid cultures, and distance taking techniques such as time, distance, attention/topic shift, emotions such as feelings of awe, and art. Case analyses of negotiation and decision-making in PEPFAR are discussed. Implications of effective interpersonal & intercultural communication through the process of reciprocal adaptation for program success, reduced participant stress, and higher participant morale and psychological well-being in HIV/AIDS treatment programs in Southern Africa are described.

Science without Borders: An Academic Mobility Program from the Brazilian Government

At the international level, contemporary higher education has undergone profound transformations in its organization and dynamics due to the globalization process that has reached a majority of countries in various ways. In addition to the worldwide growth in school enrollments from the institutional differentiation of the international circulation of knowledge, a notable increase in the mobility of students, professors, educational institution administrators is being observed. In various parts of the world, national governments have developed specific policies to bolster academic mobility. Ranking sixth among industrial nations, Brazil has a long history of revamping its system of higher education in order to produce highly qualified professional staff. There are currently 7.5 million students enrolled in higher education. Going back to the 1970s, the country has instilled a postgraduate system covering all areas of knowledge. Stemming from this, a scientific community was created with high potentials for academic mobility. In 2011, the federal government created the Science Without Borders Program with the goal of sending 100,000 undergraduates, graduate and science/ technical students to centers and research facilities of renowned international standards located abroad. The program also envisages attracting researchers from foreign locales to settle in Brazil. Through intensifying mobility, the Program wishes to stimulate and refine the research applied in the country, seeking scientific and technological development and to increase the competitiveness of national businesses and the country on the global stage. The study being presented allows to analyze the results of the program as well as the possible difficulties it faces in achieving its goals.

Intellectuals and Development: Reflection from Diverse Latin America Statements

Intellectuals and development: reflection from divers Latin America statements

Paulo Henrique Martins

Summary: In this paper I will try to reflect about two points: the difference between economic growth and development, on the one hand, and the existence of different national statements about development, on the other hand. The first point is important to remark that the idea of development in Latin America is connected to the traditional criticism about imperialism and dependence. This understanding is particular to the region and it was born in the World War II when Latin-American economists such as R. Prebisch who noted that international economic reactions to question that general rights of privatization. Additionally, they suggest a new social justice hierarchy that underlines the priority given to collective and natural rights in public policy management. Latin American cases, particularly Bolivia's, are interesting ones to reflect about this change of development paradigms.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The bond between grandparents and grandchildren is of special interest as it involves a relationship cutting across generations. Grandparents are in a unique position to offer love, advice and receptive ear enhancing their ability to provide emotional help. Their financial aid at critical junctures is not uncommon. In the absence of an inability of parents, the adult grandchildren generally provide care for their grandparents. In the absence of established expectations, obligations and rights permits both in the dyad have enough flexibility to build their relationship tailored to their needs and wishes while allowing freedom to minimize their contact or withdraw from the relationship.

The present paper examines the intergenerational experiences in terms of proximity, contact, time spent with, engagement and exchange from the perspective of 304 grandchildren residing in 9 villages in two districts of Tamil Nadu, India. The districts and the villages were selected using lottery method and the respondents each village were selected by systematic random sampling from interview method was used to elicit data. Analysis provided percentage, mean, paired analysis of difference and analysis of variance.

The findings reveal lineage and sex of grandparents are significant factors in shaping grandparent-grandchild relationship. In general, proximity, contact, time spent together and degree of exchange are greater with paternal grandparent than with maternal grandparents. Likewise grandparents have greater integration than grandmothers. However, age and sex of the grandchildren play no significant role. The findings also underpin the role of joint family and large family size, which may imply joint living with grandparents, in enhancing the quality of intergenerational relations.

The paper explores home-making practices of immigrants living in the historical centre of Desio, a small city in Brianza, an industrial district up north of the Milanese metropolitan area (Italy). The process of everyday construction of domesticity is explored taking into account the symbolic and material engagement with the house and the home area. Aspects related to housing tenure, processes of self building and care, forms of cohabitation, various uses and forms of private/publicness of the domestic space, will be analysed in order to account for different forms of belonging and ways of “feeling at home”.

The research question explored in the paper is that different forms of investing in the house and the domestic space - varying accordingly to status and socio-economic gaps, habits, cultural traditions and migratory paths - together with the local government practices and discourse, coalesce in defining different trajectories of immigrants’ emplacement in the local society as well as transnational social spaces and urban fields.

HOPKINS, ANDREW (The Australian National University)

**Paying Bonuses for Safety: Pitfalls and Proposals**

Recent events including the Global Financial Crisis and the BP Texas City refinery disaster have highlighted that incentive structures for senior executives worked against process safety. Equally, the Global Financial Crisis was found to be precipitated by people whose behaviour was a direct consequence of their financial incentive regime. Financial incentives have long been used to influence professional values, and at their core are assumptions about the nature of human motivation. Neo-classical economic theory starts from an assumption that people are rational, self-interested calculators and therefore respond in predictable ways to financial incentives. By contrast, work from within sociology has emphasised a breadth of human motivation beyond self-interest.

This paper engages with this debate both empirically and theoretically in the context of the present and potential role of incentives to manage major accident risk in hazardous industries. Incentive schemes are one way that organisations are seeking to manage these risks that have extensively depended upon financialization. We explore the extent to which people respond to financial incentives in this environment, the potential for perverse consequences, and approaches that most appropriately focus attention on major hazard risk. This analysis is based on qualitative interviews and document analysis on the incentive schemes in oil, gas, chemical, and mining companies.

We argue that despite discomfort with the concept that safety decisions might be influenced by money, financial incentives do influence priorities and behaviours. We conclude that financial incentives matter in corporate environments because they do not rely for their effect on economic self-interest alone. Instead they tap a number of human motives, among them the need for approval, the need to belong and the need to be recognised as making a valuable contribution.

**Risk Management: The Effects of Militarization and Surveillance within the Canadian Context**

Since the inception of the ‘war on terror’, Canada has been among the group of new democratic countries that have responded to threats and risks. This has sometimes been a reflection of its prevalence and success as a mechanism of conflict resolution and therefore countries like Canada will continue indefinitely to militarize and rely on surveillance technologies. This proposed paper will examine sociologically the relationships between on the one hand, popular discourses and practices of militarization, and on the other, the adoption of surveillance systems whose software and hardware have become routine aspects of negotiating everyday life for all citizens. While government uses such risk management knowledge to seek security, decision makers are increasingly aware that surveillance is a precursor to greater government control; constructing ideal citizens that are permanently and indistinguishably driven by economic rationalities, very often at the detriment of adequacy, security and equity. On the other hand, social policy literature mostly focuses upon the consequences of these decisions on pension income, rather than upon the governance of pension funds investment decisions that cause them. The paper argues that research on pension fund governance is either driven by economic rationalities, or focused upon insulatd aspects of governance or regulation or the role of actors involved into decision-making. Within the latter, I aim to adopt a holistic approach in order to deconstruct the way in which actors interpret regulations and proceed to pension funds investment decisions, along with their implications for pension systems objectives.

---

**Governance of Pension Funds Investment Decisions Between Financial and Social Returns**

Funded mode of pension financing has been a common ingredient of pension reform agenda in the context of international efforts to cope with demographic and economic challenges that pension systems face. However, a central concern involves the consideration of additional risks in funding and how these are addressed in order to maintain core pension system objectives, like adequacy, security and intergenerational equity. Governance, including regulation of investment decisions around pension resources is a crucial variable to these concerns, given that related decisions carry risks and implications for pension system objectives. Despite an increasing interest in the governance shaping pension funds decisions, evaluations of the latter are overwhelmingly driven by economic rationalities, very often at the detriment of adequacy, security and equity. On the other hand, social policy literature mostly focuses upon the consequences of these decisions on pension income, rather than upon the governance of pension funds investment decisions that cause them. The paper argues that research on pension fund governance is either driven by economic rationalities, or focused upon insulated aspects of governance or regulation or the role of actors involved into decision-making. Within the latter, the paper proposes to adopt an integrative approach in order to deconstruct the way in which actors interpret regulations and proceed to pension funds investment decisions, along with their implications for pension systems objectives.
to deal with the challenges of teaching about citizenship, yet without directly confronting the system that requires from them to teach only the official version of citizenship. We specifically explore, based on the teachers' own perception, what practices are used in delivering their own conceptions of “citizenships”, and how they confront the explicit and implicit supervision of the Ministry of Education.

*The Ick Factor: The Resignification of the Grasshopper*

This paper offers a theory of cultural innovation derived from engagement with Saussurian semiotics, Sahlin's analysis of Western industrial food production, and Judith Butler's performativity of gender. Marshall Sahlin (1978) set out to turn historical materialism on its head by demonstrating that the industrial complex of meat and protein production is organized around the cultural logic(s) of the edible, around understandings of humanness and cultural proscriptions such as the incest and cannibalism taboos. "Edibility is inversely related to humanity," he argued. Particular animals such as horses and dogs, and the internal organs of edible animals, are closely associated with humanness, and the idea of consuming them precipitates feelings of disgust and betrayal. Sahlin was right that edibility is related to understandings of humanness. However, in addition to symbolic proximity, too much symbolic distance, such as in the case of the grasshopper, may also produce feelings of revulsion and disgust. In this paper I develop a theory of cultural innovation, whereby objects associated with disgust may be transformed into concepts containing edibility, pleasurable even such as a source of nourishment. An insect on an American dinner plate, except in rare and select places, represents "matter out of place" and will produce a ritual cleansing of the plate. Variable across time and culture, the signifier of the grasshopper has been associated with pestilence and filth. Nonetheless, efforts to resignify these creatures are currently taking place. The challenge is overcoming "the ick factor – the eyes, the wings, the legs... people won't accept it beyond novelty," one proponent, or agent of resignification, states. Building on the above as well as on Douglas and Durkheim, I examine contemporary efforts to place bugs and grubs on American and Western European dinner plates, or to turn these creatures into "mini-live-stocks," ones that are interpreted as not merely edible but as desirable.

*Building Local Peace in the Middle of a National War. Community-Based Noncooperation Strategies in Colombia’s Civil War*

Despite of the high risks involved and the high levels of uncertainty, unarmed civilians organize themselves to collectively defy armed groups in order to avoid displacement, seek protection from violence, reclaim autonomy over daily affairs, and/or build local zones of peace in the middle of war. This paper presents findings from an empirical analysis of two communities that, in the midst of Colombia’s civil war, chose noncooperation as a strategy to cope with war and live a life free from armed groups’ violence and rule: the Peace Community of San Jose de Apartadó (PCSAJ) and the Peasant Worker Association of the Cararé River (ATCC). Although both are instances of community-based noncooperation strategies, they form this strategy to cope with war while PCSJA unilaterally declared itself neutral without any bargaining with armed groups, the ATCC negotiated its noncooperation strategy with armed groups. The aim of the paper is, therefore, twofold: explain what drove these communities to chose noncooperation over other possible responses (e.g. flee, obey, actively collaborate) and explain the determinants of variation in the form of noncooperation. The paper explores rational, moral and emotional considerations behind the choice; attention is paid to both the capacity and the desire to defy armed groups, and both exploration of two communities that are endogenous to war are analyzed. The paper is, therefore, twofold: explain what drove these communities to chose noncooperation over other possible responses by examining in detail rational, emotional and moral considerations behind the choice. Mechanisms such as pay-offs reassessment, belief (trans)formation, anger and resentment, norms of reciprocity, and moral outrage are spelled-out. Attention is paid to both the capacity and the desire to defy armed groups, and both exploration of two communities that are endogenous to war are analyzed. A unique dataset on violent events at the village level and two rounds of fieldwork, including individual and group interviews and memory workshops with members of both communities, inform the analysis of the emergence of non-cooperation in warzones.

*Japan’s New and Old Concept of Ethnic Policy with a Comparison to a Multicultural Policy*

Globalization has changed Japan’s population composition significantly by the 1990s as a result of the arrival of a relatively large number of foreign workers for the manufacturing industry. This prompted the development of the concept of “Co-Living among Many Cultures” to facilitate the settlement of new foreign residents who have come mainly from South America and China. Many of the residents have taken up permanent residence or citizenship, instead of remaining as foreign residents on temporary visas. Japan’s large and long settled Korean community who have been treated unjustly in the past are reacting cautiously to the new concept of “Co-Living Among Many Cultures”.

A new issue affecting the experience of Japan’s growing Chinese population is the rise of China-Japan tensions which also poses a challenge to the new co-living policy. A major aspect of the troubled relation is the emergence of transnational political action, including the Beijing Olympic torch relay incidents. Such incidents, as widely reported in the Japanese media, have triggered concerns among Japanese in general who treasure “Wa”, or harmony and peace, a traditional Japanese value and practice.

In this presentation, I would like to point out what the Japanese new concept “Co-Living Many Cultures”, the traditional philosophy “Wa” and the Australian “Multicultural Policy” concept have the common idea despite significant differences in demographics and ethnic relation policies in the in two countries.

*Building the National Identity through the Religious Identity in R. Macedonia*

After getting independence, in R. Macedonia the national sense of identity is followed by the religious sense of identity. The religion is classically sacral: “love all other nations as you love your own”. We will emphasize that in fact a nation is an act of faith and believing. Through faith persons better understand characteristics of their own nation. Therefore in R. Macedonia, as a rule, representatives follow one faith (almost no exception each ethnic Macedonian is Orthodox, such as every ethnic Albanian is member of Islam). But, there are a few cases when representatives of different ethnic communities follow the same faith. For example most of the ethnic Macedonians are Orthodox, but still there are some Macedonians who are Muslims. Typical examples for this are Torbeshi who are ethnic Macedonians who follow the Islamic religion. But most of them on the last census declared themselves as ethnic Albanians, even though they don’t know the Albanian language. This proves the fact that the religious identity is a key factor in forming an ethnic identity. The appearance of such strong ethnic enclaves can be expressed only if the religious feelings are weakened. That is what’s happening in the Macedonian state, despite the influence of its basic religious institutions (Macedonian Orthodox Church). The Orthodox Church has the main role in preserving the national identity of the Macedonian people in their entire history. It kept and secured the Macedonian identity in the most difficult times of the Macedonian people. In 1991 it was forgotten and suddenly everybody in R. Macedonia was proud of being a subject of the Macedonian ethnic community. In that moment the Macedonian state as a world institution took the leading role from MOC, as a sacral institution.
Subjective assessment of happiness maintains that happiness is a global and subjective measure of whether a person is happy or unhappy (Lyubomirsky and Lepper, 1999). Social support networks and perceived level of satisfaction from support networks contribute to happiness. The present study aimed at exploring relationship between subjective happiness and dimensions of social support (structural: number of persons, and functional: level of satisfaction) of aging respondents classified on the basis of working status and gender. The study was based on a sample of 139 respondents drawn from Jaipur City, (India) identified using snowball sampling, following clear inclusive and exclusive criteria. The respondents completed Subjective Happiness Scale (Lyubomirsky & Lepper, 1999) and short form of Social Support Questionnaire (Sarason et al 1987).

Results indicated that structural social support is positively and significantly related with subjective happiness (r = .291, p<0.05) for ageing males whereas functional social support is positively and significantly related with subjective happiness (r = .427, p<0.01) for ageing women. Hence, the importance of diverse support networks for ageing males and an enhanced level of perceived satisfaction for ageing women as related with subjective happiness is reflected. Subjective happiness is positively and significantly related with only functional social support (r = .516, p<0.01) for retired persons. However subjective happiness is unrelated with both the dimensions of support in case of pre-retired and post-retired persons. Perceived level of satisfaction becomes critically important when people retire. Conversely, due to changes in family structure, death of spouse and loss of companionships; subjective happiness remains unrelated to social support in post retired years where as a sense of personal liberation and interest in personally meaningful leisure activities surface for both ageing men and women.

The Interplay Between CEDAW, the Brazilian Women's Movements, and Global Feminisms Agendas

In this paper we investigate how Brazilian women's participation in transnational feminist networks and the UN Conferences on Women and Brazil's ratification of CEDAW have profoundly shaped the two more recent waves of the Brazilian feminist movements: third wave of the 1980's and the ongoing fourth wave. Our paper presents a case study of the interplay of the national and transnational dimensions in shaping women's movements. The third wave of the Brazilian feminist movements encompasses the civic participation of Brazilian women and their position from a social movement to a political movement regime as well as participation in the transnational women's movement and Brazil's ratification of CEDAW in 1982, during the military dictatorship. The ongoing fourth wave of the Brazilian feminist movements has focused on the institutionalization of feminist demands through public policies for women; the creation of executive managerial organs for such policies at the national (the National Secretariat for Policies for Women), state and city levels etc. We argue that the reciprocal impact or feedback mechanism between transnational feminism and the Brazilian feminist movements can not be overstated. Brazilian women played a key role in building a broader and inclusive agenda for transnational feminism – currently reflected in the intersectionality of gender, class, and sexual orientation. CEDAW also was utilized by Brazilian feminists as a crucial tool to legitimize a very broad intersectional agenda. Based on our case study of the Brazilian feminist movement and CEDAW, we would like to argue that the feedback mechanism operating between local, national and international agendas have proved crucial to the growing intersectionality of gender, race, class and sexualism of the feminism movement worldwide. In sum, we would like to suggest that globalization the local and localizing the global should be at the center of both feminist activism and scholarship.

Reconciling Work and Family: Do Japanese Fathers Take Advantage of Policies?

Japanese working parents today are entitled to various work-family-balance support measures such as parental leave, nursing leave for children, and shorter working hours. However, studies reveal that most working fathers in Japan fail to utilize such policies.

The primary purpose of this paper is to further explore the reasoning for Japanese fathers to reject or abstain from using the aforementioned workplace support measures. Furthermore, some critical factors including workplace culture, and the values and beliefs of Japanese fathers must be analyzed, in order to understand their reasoning for justifying their practices.

This study is part of a collaborative research project of work-life-balance led by B. Hobson and others in the European Union. The data was collected from face-to-face interviews, which were conducted in the Kansai area between April and November in 2010. There was a total 104 respondents, which included 51 women and 53 men. All of the respondents were dual-working parents with preschool aged children.

The results of this study showed a number of ways in which the fathers discussed their work-family-balance related practices. Among the 53 Japanese fathers, an estimated 40% of fathers worked more than 50 hours per week and a majority of them worked longer hours by “their own choice”. Moreover, in most cases, fathers were afraid of burdening their workplace by altering their work plans, due to family needs. Some fathers also had fears of damaging their career by actively utilizing paid leave and child care policies. However, there were some fathers who chose to prioritize family over work. Reasons for this include: wives being distressed or child care needs. These fathers appeared to have more bargaining strength or the ability to overcome workplace critics.

The Issues Related to Care-Giving Conducted By Male in Japan

The issues related to care-giving conducted by male.

-Through the example of a husband and the son caregiver participating in the self-help group-

Matsui, Yuka

Recently, the number of men caring for their wives or their parents has gradually been increasing in Japan.

In this study, I will first summarize current status and difficulties of male Japanese caregivers. Then, I pay attention to a meaning of the care experience of the male caregiver and survey care in Japan and a relationship of the gender.

Traditionally, family care has been thought of as a female role, so the existence of male caregiver has been largely overlooked. However, according to the latest investigation, one of three families of the family caregiver is a male.

Therefore this study interviewed it for a male caregiver and investigated it and investigated a meaning of their care experience.

As a result, I understood that a male caretaker faced various problems. Their problem is difficulties with continuing work and doing housework, and the reduction of local relations, enclosure of the care, difficulty of talk of the problem.

So they had a risk of the abuse for the family.

And they got possible to arrest a self objectively by participating in the self-help group and evaded a risk of the abuse.

This study showed that a support function for them that a self-help group was apt to stand alone. This study explained that their problem is affected by a gender model.

And they experienced an identity crisis as the man through taking care of their family. However, there was the man who got new identity as the caregiver after having experienced an identity crisis in them.

The existence of such a male caregiver may reorganize care and relations of the gender.
of perpetrators versus victims, from the viewpoint of the sociology of science and technology. In particular, the paper brings out the process through which double under-determination has influenced the formulation, implementation, and evaluation of public policies preceding and following the Fukushima accident.

Three points are made based on the analyses of the guidelines for the utilization of HLW (High-Level Radioactive waste) it issued as of September 2013. First, the guidance confused the issue of long-term storage of HLW with that of its disposal, thus continuing the trend of burying the problem. Second, the appeal to the correlation structure, multivariate analysis was used.

The correlation structure, multivariate analysis was used.

For the analysis of the correlation structure, multivariate analysis was used.

Study focuses on the rate of the item nonresponses, "Don't Know," the degrees of trust in their organizations, and correlation structures of them. For the analysis of the correlation structure, multivariate analysis was used.

Thirdly, the paper highlights the possibility that social decision-making, with a very long horizon and high degree of uncertainty, can bring about infinite responsibility, and eventually lead to collective irresponsibility.

Based on the insight into the novel dimensions of these three social mechanisms, which have been difficult to understand by utilizing the framework of perpetrators versus victims and its variants, the paper argues for the importance of evaluating and allocating social responsibility to ex-ante expertise rather than ex-post expertise provided with hindsight. In conclusion, based on an ongoing project by the special committee on scientific integrity in emergency situation of the Science Council of Japan, a policy proposal to redesign institutional structures after “structural disasters” will be made.

Therefore, the study shows that different expression of even the similar words changes the rates of the item nonresponses and questions using abbreviations and non-familiar words may increase item nonresponses. On the other hand, it doesn’t find the strong associations between demographics (sex and age) and trust in nonprofit organizations except religious ones. From the results of multivariate analysis, the paper deems the case of HLW (high-level radioactive waste) to be the most important case in the context of public participation among the case of religious organizations and voluntary organizations (volunteer and civil activities organizations). These findings are found commonly in each country. It implies measurability and comparability of trust in nonprofit organizations.

Therefore, the study shows that different expression of even the similar words changes the rates of the item nonresponses and questions using abbreviations and non-familiar words may increase item nonresponses. On the other hand, it doesn’t find the strong associations between demographics (sex and age) and trust in nonprofit organizations except religious ones. These findings are found commonly in each country. It implies measurability and comparability of trust in nonprofit organizations.

The postrevolutionary Iranian “Islamic revivalists” (who now call themselves “principiants”) still evoke an early twentieth-century event that—in their collective reconstruction of the past—cruelly crafted politics onto religion. A foreign-backed military coup d’état elevated an anti-Islamic modernizer to the position of power, enabling him to tragically crush the only voice that genuinely represented the anti-dictatorial and anti-colonial popular will. “Our religion is the essence of our politics, and our politics is the essence of our religion,” a saying attributed to “Martyr” Seyyed Hassan Modarres (d. 1937), the prominent Shi’i mujtahid and long-term political opponent of Reza Khan, thus served as the emotional and (formerly counter-) intuitive basis for the continued necessity of an Islamic theocratic state as a bulwark against secularizing forces inside and outside the country. Against this backdrop, religiously-minded postrevolutionary reformists (known in Iran as “religious intellectuals”) who dare to suggest separation, in one way or another, of religion from politics run the risk of being labeled as “secularists.” It was not a mere coincidence, therefore, that both the December 2012 issue of the most liberal Tehran monthly Mehrnemeh and a June 2013 principial political documentary featuring them adopted as their title “We are not secular,” a quote from prominent reformist-intellectual Saeed Hajarian.

After reviewing past-evoking claims made both for and against separating religion from politics and dynamic contentious interaction between the two opposing camps in Iran for the last two decades, this paper will reflect on two important questions. Is re secularization, be it generally conceived or analyzed in one national context, simply the reverse process of desecularization? Does historicizing secularities (and, for that matter, de-secularities) serve as means by which not only fresh reconstructions of collective memories are facilitated but also institutional reforms for accommodating pluralistic understandings of the religio-political unity may become possible?

Therefore, the study shows that different expression of even the similar words changes the rates of the item nonresponses and questions using abbreviations and non-familiar words may increase item nonresponses. On the other hand, it doesn’t find the strong associations between demographics (sex and age) and trust in nonprofit organizations except religious ones. From the results of multivariate analysis, the paper deems the case of HLW (high-level radioactive waste) to be the most important case in the context of public participation among the case of religious organizations and voluntary organizations (volunteer and civil activities organizations). These findings are found commonly in each country. It implies measurability and comparability of trust in nonprofit organizations.

Deciding ‘Quality’ Surrounding Umbilical Cord Blood Treatments in Japan and the UK

Stem cell treatments, such as those derived from umbilical cord blood, are relatively novel in the UK and Japan compared to other countries, such as Spain and America. Hence, the policy and practices surrounding the treatments are still emerging (Brown et al., 2011), and as a result creating uncertainty in the decision-making of haematologists and oncologists in the UK and Japan. In particular, when do they deem an umbilical cord blood treatment suitable for a patient, and how do they choose between umbilical cord blood banks when more than one unit is available for a patient? In essence, how do they ‘know’ what constitutes a ‘quality’ cord blood sample?

These are important insights to be gained when the cost of a single cord blood sample can reach between £16,000 to £25,000. Factors such as where the cord blood treatments are carried out and by whom have been considered as influential by policy makers in determining the success of treatments. How such a move to establish ‘clinical expertise’ around cord blood treatments would impact upon perceptions of ‘quality’ cord blood in the two countries is significant as it challenges the notion that the success of cord blood treatments is determined by the inherent properties of the cord blood unit. Furthermore, a connection between cord blood collection and banking practices and the perceived ‘transplant quality’ of a cord blood unit for stem cell treatments is also emerging from recent policy discussions, due to the proposed ‘best practice tariff’ to reimburse hospitals for securing a high quality cord blood collection.

Emerging findings from a three year project, funded by the Great Britain Sakakawa Foundation, to explore through qualitative interviews how those working in Japanese and UK transplant centres perceive ‘quality’ in cord blood in a global context, and what factors influence their perceptions, will be presented.

Collapse Of Vacant Japanese Accepting Migrant Care Workers Policy

Why has most Japanese migration policies ended in failure? Since 1990 the Japanese government have argued that we will positively accept highly skilled workers for competing economic globalization. By 2006, the Japanese government had concluded EPA agreements with the Philippines, Indonesia and the other East Asian countries. The Japanese care industry strongly disagreed with this agreement. The Japanese government also asked for the abolishment of a tariff in exchange for accepting care workers. Though the Japanese care industry is suffering from a serious labor shortage, Japan has designed an absolute strict tariff for stem cell treatments for accepting care workers.

At the beginning of this program, hundreds of candidates came to Japan and trained for the National Nursing Examination which is the same for a Japanese examinee. The first examination was held in 2008, 82 candidates took this examination but no one could pass. The next year, three candidates could pass this exam from 254 candidates. In addition to this low pass rate, nurse candidates can take this exam three times in three years and care workers have only one chance in the fourth year. Obviously candidates who can’t pass the exam must return to their country. How can they keep their motivation?

Five years have passed since this program started, the number of candidates is declining each year. The most significant problem with this program is foreign care workers were unwanted by the Japanese care industry. Japan takes no account of their former job careers, even if they have a nurse license in their home country. These skills and experience are just a prerequisite for being a candidate. Even though Japan has the most aging population coupled with lowest birth rate in the world, Japanese government are still lacking a long wide vision in regard to migration policy.

Beyond the Skill Migration: Middle Class North-South Mobility in Asia

Favel’s famous work, Eurostars and Eurocities(2008) arouse wide academic interest in mobilities in EU. Under the popularization of international migration, migrants’ social background and migration flows from/in North has been diverse. As Scott(2006) claimed, it has “become a ‘normal’ middle-class activity rather than something exclusively confined to an economic elite.” However, these works are limited on the research area. This paper tries to theorize the middle class North-South mobility in Asia, based on empirical work among young Japanese migrant workers in Asian cities, including Shanghai, Hong Kong and Singapore.

In decades, the destinations of Japanese migrants have been gradually shifting from Western countries to Asian countries. This occurs in the economic transition or power-shift between Japan and other Asian countries. Young generation increasingly prefer economic opportunities in Asian global cities. They are not typical expatriates transferred from headquarters, nor project-based temporary professionals, but contract-based and locally hired workers moving individually. This represents a new trend of migration, which has emerged in the last decade.

This new system has formed in Hong Kong and transplanted to other areas and discuss the characteristics of the migrants. The phenomenon formed a market-based migration system arranged by staffing agencies. Now Japanese companies abroad have two types of Japanese workers; expatriates sent by the same company and locally hired contract workers positioned under the local company. Workers’ career plans are often inconsistent with the actual achievements, since they are excluded from the companies’ promotion system. Consequently, many of them use their working experience and social networks acquired while abroad and find another career track with entrepreneurship. This shows a pattern that is distinct from career-based skill migration. Through these discussions, I propose a different perspective on the middle class migration in Asian context.

Identification for Career: Contemporary Young Japanese Diaspora in Asia

Most literature on contemporary Japanese diaspora has been focused on male expatriates and their families following the offshore transfer of Japanese companies. Under the popularization of international migration, however, the flow, period or style of migration and the social background of migrants are getting increasingly diverse. This paper focuses on a new type of young Japanese migrant workers in Shanghai, Hong Kong and Singapore.

They move individually and are locally hired, usually through staffing agencies. In most cases, they find positions under expatriates in Japanese companies abroad which leads them to be marginalized in Japanese communities. They speak local language and work with local people under the management of expatriates. Therefore their identification becomes more complicated when compared with expatriates, who are strongly embedded in Japanese companies and communities. In addition, their identification influences and is influenced by their choice of staying/moving/circulation. They are contract-based workers and can easily change their jobs and working/living place. It means their mobility is connected with their career planning. Considering these situations, they are drawn to 3 directions: localized, globalized and national under their working conditions and future plans. Localized and globalized identities are necessary for daily working and career building in abroad. Japanese has to be preserved for re-entering Japan labor market after return as well as for business communication with Japanese companies abroad. These identities coexist, conflict or are combined in each context.

What forms their diasporic identity, how does it change, and how do they try to control/fail to control it? Based on rich empirical work since 2009, this paper reveals the process of Japanese young diaspora’s identification.

Industrial Heritage and Memory : A Case Of Miike Coal Mine

In recent decades a new gaze has appeared upon architectural remains of modern industry. This gaze makes it possible to turn these remains into cultural heritage, or more precisely, industrial heritage. Architectures such as factory, dockyard and coal mine pit which used to be symbols of modernity have turned, after changes of economic structure, into symbols of degeneration of local towns which had depended on these industries. Industrial heritage is a way of revitalization favored by these towns.

The process of heritageization, this past of modern industry is reconstructed from the point of view of new perspective. Reconstructed industrial heritage assume public memory of the place. On the other hand, these remains used to be the places not only of labor, but also of conflicts and tragic accidents whose painful memories last long upon local people such as ex-workers and their families. It happens that local people have their own view about the past of the place of their labor different from the gaze of industrial heritage.

In this presentation I will discuss this cultural gap between industrial heritage and lived memory. How are modern industries’ remains heritageized through re-construction of the past ? How local people remember the past of their labor, especially tragic moments ? How the perception of the present heritageization is different as a function of the the past experiences ? I will adress these questions
This paper presents analysis of interview data from a study of ‘knowledge mobilisation’ as a social process. In doing so it contrasts concepts of ‘knowledge transfer’ with those of ‘knowledge mobilisation’ which it sees as a non-linear and iterative process involving social organization, institutional cultures and human interactions. It is based on interviews with researchers from two major science labs who are investigating the way in which misfolded proteins (i.e. prions) produce spongiform illness in animals (e.g. Mad Cow Disease, BSE, Chronic Wasting Disease) and spongiform-like illnesses in humans (e.g. Cruicksheld-Jacob Disease, Alzheimer’s Disease, ALS, Parkinson’s Disease). The focus of this paper is not on the science per se, but on knowledge development and transition as social processes. On the one hand, it seeks to provide insight into the way that knowledge is developed and transmitted, as these processes are understood by the scientists who are directly involved in the process. On the other hand, it employs sociological perspectives related to networks, social capital, and new institutional analysis to provide a more systemic insight into the knowledge mobilization process.

Comment/like/Retweet: Public Discussions of Economic Crisis News Information through Social Media and the Mobile Internet

The rapid popularisation of social media services, and the even more current popularisation of mobile internet devices raises important questions about the everyday appropriation of new media technologies and increasing numbers of people, everyday individuals use these new media technologies to access, discuss, share, and engage with current topics on the difficult state of our world, such as austerity, economic crisis, and financial policies that impact everyday inequalities. It is important to explore the everyday use of these new media technologies in order to learn more about how the public is engaging with challenging news topics through recent developments in new media.

Do users really engage with these devices and online interactions in a fleet- ing and less engaged manner, or does the ubiquity of the mobile internet afford greater engagement with news information? Does the algorithmic filtering of online information by new media organisations in control of social media services lead to greater agenda setting by the individual users of news, or does it reinforce established news media organisations as the primary or authoritative sources of news? And how may the various affordances of differing and fragmented web and mobile apps impact the discourses of everyday users?

This paper aims to explore such questions through initial findings from research using qualitative observations of online social media discussions on austerity, economic crisis, and financial news, in combination with interviews of participants who regularly engage with such information through social media sites and mobile internet devices. The paper aims to explore how current and recently popularised trends in the use of new media technologies may be affecting or constraining behaviours and habits of everyday users when engaging with online news and information on issues that impact social inequalities like austerity and economic crisis.

Knowledge in the Wild - from Mad Cows to Alzheimer’s: How Knowledge Mobilization Works

This paper presents analysis of interview data from a study of ‘knowledge mobilisation’ as a social process. In doing so it contrasts concepts of ‘knowledge transfer’ with those of ‘knowledge mobilisation’ which it sees as a non-linear and iterative process involving social organization, institutional cultures and human interactions. It is based on interviews with researchers from two major science labs who are investigating the way in which misfolded proteins (i.e. prions) produce spongiform illness in animals (e.g. Mad Cow Disease, BSE, Chronic Wasting Disease) and spongiform-like illnesses in humans (e.g. Cruicksheld-Jacob Disease, Alzheimer’s Disease, ALS, Parkinson’s Disease). The focus of this paper is not on the science per se, but on knowledge development and transition as social processes. On the one hand, it seeks to provide insight into the way that knowledge is developed and transmitted, as these processes are understood by the scientists who are directly involved in the process. On the other hand, it employs sociological perspectives related to networks, social capital, and new institutional analysis to provide a more systemic insight into the knowledge mobilization process.
The PhD Degree and Weber’s Concepts of Rationality

The decision to pursue a PhD degree is attended by considerable uncertainty over career outcomes. This is becoming increasingly so, as the gap between the demand for full time academics in the university workforce and the supply of PhD recipients continues to widen in many countries. No longer does a PhD guarantee secure employment. Add to this the large amount of time and student fees invested in a PhD, and it raises the question of why would anyone undertake a PhD? Using Weber’s concept of rationality, the paper will argue that attention must be given to the substantive rationality that is involved in the decision to pursue a PhD. The PhD degree has a dual character: as an institutionally based course in which successfully producing an original contribution to a field can result in the award of a certificate that serves as a gateway into a career; and as a powerful social symbol which is associated with certain myths, values, status and aspirations that can be personally rewarding.

As higher institutions increasingly become subject to neoliberal trends that are transforming the way that PhDs are conceived and structured (such as the growing preference towards theses-by-publication over traditional monographs, which is associated with certain myths, values, status and aspirations that can be personally rewarding), the relationship of substantive rationalities of PhD students to more formal rationalities of higher education institutions is becoming increasingly problematic. As pressures grow on PhD students to align their studies with institutional expectations and also those of a competitive career market, our paper will examine the ways in which students and institutions are negotiating the risks and uncertainties surrounding PhD degrees in light of the push and pull of multiple rationalities.

ICT and Local Development in Globalization

Abstract

In modern times, development is more or less interconnected with globalization. On the other hand, globalization processes are more or less interconnected with the use of ICT. The use of ICT is defined as the access in modern communicative systems, and as a result marks the “presence” or the “absence” of a specific area in the world map, and consequently the ability of this area to attract investments in multiple fields of entrepreneurship.

But what is globalization in analytical terms? Is it a system consisted of state entities which maintain their authority in the regulation of their internal affairs, or is it a system which functions autonomously, transcending states? This paper examines the possible answers to this crucial question up to a final conclusion. Further on, it depicts statistical data from all over the world, in an attempt to document the interconnectedness of the presence of ICT services in a certain area with the economic growth and the development of this specific area. Finally, it examines the problem of “exclusion” of certain areas from the world map of the economic transactions and the relevant processes of development, under the light of the arguments presented above.

Social Science Knowledge and Welfare Expertise – a Closely Intertwined Development

The development of the social sciences in the 19th and 20th century has produced knowledge about societies that informed other areas of social and political life. In this process, specific knowledge propositions have been chosen, others neglected, mostly depending on the actors and institutions that acted as carriers and recipients of this knowledge. The paper in hand addresses the question of how social science knowledge and its translation have contributed to the construction of welfare states, especially at their outset around 1900. In this paper, I will analyze a twofold translation of knowledge: The first is how academic social science knowledge diffuses into police: I will examine how the idea that society was a structured entity, that was put forward by early sociologists such as the Historical School of Economics in Germany, informed social policy experts. Social science knowledge contributed to the insight that the Social Question was induced by societal structures. If this was accepted as a novel insight state-administered social insurances could be justified and planned. The second translation happens between countries: Social policies that had proved useful could be translated to other countries, but the standing of the newly developing social sciences within these countries had a strong influence on how successful these translations were.

I will illustrate my theoretical considerations with examples about how different welfare knowledge propositions influenced the early set-up of state-administered social policies in Germany, Great Britain and the Netherlands (ca. 1870-1920). Thus I choose to compare two pioneers of public social policies and one “welfare laggard”. I will analyse historical sources in order to analyse how text-based academic knowledge can be translated into policy expertise both within and between countries.

The Influence of Sociology on Establishing Social Hygiene in Germany (1890-1920)

In the course of the nineteenth century, epidemics and contagious diseases proved to be a considerable threat to society. Ideas to promote prophylactic medical care that was directed at larger collectives (instead of relying on a curative doctor-patient relationship) were put forward in Germany already in the 1850s. A professionalization of this expertise and an acknowledgement by public and political discourse however only started slowly in the 1890s, with a high phase in the Weimar Republic in the 1920s. Why was “Social Hygiene”, as the new field of expertise soon was to be called, successful in exactly this period of time?

In my paper I propose that this acceptance of Social Hygiene can in part be attributed to the emergence of sociology in Germany. Sociology put forward ideas of a structured society, sometimes with analogies to organisms like the human body. Reinforced by processes of nationalization, this led to ideas of a societal body, or “Volksgesundheit”. Medical experts could use these ideas in order to legitimize Social Hygiene as a new profession that led to paradigmatic changes in the fight against diseases: Social circumstances needed to be changed. New statistical methods hinted at the stratification of morbidity, therefore fighting germs was not sufficient, instead living and nutritional conditions needed to be ameliorated. Social Hygiene led to a multitude of academic publications, from 1920 onwards medical faculties established professorships in the field. However, as the proposed means were diffuse and hard to apply, the actual implementation of measures varied widely, and mostly was far away from being included in national legislation. Although the interpretative knowledge put forward by Social Hygienists proved to inform the contemporary debates, the actual application of sociological ideas in political and medical programmes remained incomplete.

Japan and Mexico As Global Players in the Horticultural World Market

Abstract: Horticultural trade reflects the major features of current globalization. The first one is the multi polarization of the economic world, whereas especially three great centers are dominating, namely: the USA, the European Union, and East Asia (China and Japan). The structure and trends of this trade can be explained by the Food Regime analytical approach, which states that during the Third Food Regime, which started in the mid-1980s, vegetables and fruits became the most relevant part of international agricultural trade flows. In this context both Mexico and Japan are playing an important role, Mexico as major exporter of fresh products and Japan as main buyer of these items. Mexico is located in the sphere of influence of the USA and Japan is the axis of the East Asian economic bloc. Mexican exports are depending strongly on the USA market and Japan's demand of Mexican fruits is still quite high and mostly imports are coming from USA and China. At the same time, Mexican fresh vegetables are losing competitiveness in their principal market, and the Japanese consumer is losing confidence on the safety of imported foods from China and the USA. All these facts make clear both countries need to diversify their markets. Therefore it is necessary to explore the possibilities of enhancing the horticultural trade between Japan and Mexico, and also to analyze the Mexican experience as successful supplier of several fresh products to the Japanese market, for instance, mangos, avocados, melons, asparagus, kabocha pumpkins and others. At the same time it is a good moment for an evaluation of the Free Trade Agreement Mexico-Japan, started eight years ago.

Social Systems Form Simulation to Observation

The cognition-computing short circuit is still affecting both neuroscience and computer science today. Social systems theories, on the one hand, and agent-based simulations on the other have once more pin-pointed the traditional sociological dualism between macro- and micro-sociology. However, the advent of ‘Big Data’ has paved the way to new techniques of investigation based on the study of new types of data, such as conversations taking place on popular web sites like Twitter and Facebook, traces left by our mobile devices or data generated by wearable sensors. Thanks to these techniques, we can go beyond simulation and observe the operation within the social ‘black box’ in the same way that neuronal functional magnetic resonance imaging (fMRI) does as regards to the brain. This paper discusses the potential as well as the limitations of these new methods of sociological investigation and their spill-over effects on the theoretical development of the discipline.

Career Advancement for Women in the UK Military - Opportunities, Risks and Responses to Gain Acceptance

The number of females holding senior posts in the United Kingdom’s military is around 1% compared to an average of around 30% in the rest of government. This paper reports on a study which sought to examine why the rate was so low using an entrepreneurial lens. As there is a paucity of research on female entrepreneurship in the public sectors and none in the UK military, the study helps to provide some fresh insights into an issue which to date appears to have been intractable.

Using entrepreneurial literature, a model was developed to research the potential barriers faced by female officers in the UK military when seeking promotion to the most senior ranks. The model was designed to examine the relationships between institutional and individual determinants in relation to promotional outcomes. These determinants included structure and agency, social capital, homophily, support and how women deploy a series of other strategies to accommodate institutional and network orientated logics and norms to gain promotion acceptability.

Semi-structured interviews were used to gather data from 48 female officers and a sample of 5 male officers over a four month period in 2013. Candidates were drawn from a stratified sample at the senior ranks. The overall research paradigm was critical realism. All interviews were recorded and transcribed and then analysed using Miles and Huberman qualitative methodology for coding and analysis of data.

The findings from these interviews demonstrated that the interplay between stress, the policy and played a crucial role in the generation of promotions. Factors such as emotional support, conflict resolution, reputation and legitimacy also determined the contextual social capital perceived to be necessary for promotion by deeply embedded bespoke male networks.

The originality of this research is in the use of an entrepreneurial framework to examine promotion within a government agency.

Heritage, Culture and Politics of Tourism Along the New Silk Road

After twenty years of the UNWTO’s Silk Road programme, there seems to be a new impetus to revive and re-envision the project to bring the heritage and cultural attractions along this ancient set of trading routes to a new prominence. A recent conference in Dunhuang in August 2013, the addition of a 30th nation into the Silk Road project, together with an action plan for the future that will build a sustainable and competitive tourism product suggests a fresh impetus and a desire for collaboration and tourism development. But to what extent does the Silk Road project offer real potential for sustainable tourism development? And what lies behind the rhetoric of the Silk Road Action plan? This paper seeks to address the politics and discourses of international collaborative tourism marketing projects with a focus on the Silk Road initiative. Whilst the aims of the project are laudable, the paper seeks to understand the power dynamics at play between these nations and the role of the UNWTO. The countries along the Silk Routes that have signed up to the project include some of the most politically unstable in recent history and the paper hopes to shed some light on the tensions between an ideal of peace and intercultural understanding through tourism development and a political, economic and social reality. The paper approaches the issues through the adoption of discursive analytical perspectives on texts: policies and planes, strategies and media items.
style of governance. This raises the question of who is central to the process of increasing individual's quality of life through leisure activities: users, workers or the state. In exploring this question, this paper provides new empirical evidence that leisure workers are key agents in negotiating the relationship between leisure and quality of life. Through utilising their discretion, ground-level workers can deliver activities that impact individual's quality of life on multiple levels. On the other hand, workers are restrained by managerial, structural and hierarchical limitations. The paper concludes that only by exploring the relationships between users and ground-level workers can insight be gained to the relationship between leisure services and quality of life.

Comparing the Design and Implementation of IT Skill Standards in Britain and Japan: IT Human Resources, Institutional Innovation and Path Dependency

At the beginning of the twenty first century, government administrations in Britain and Japan pinned great hopes on IT for economic development but feared that the rapidity of technological developments frustrated the effective workings of labour markets, education and training to develop and deploy effective IT labour forces. The speed of technological change meant that employers, educators and IT professionals produced piecemeal solutions and lacked a common language to describe IT skills and guide employment, training, education, and careers. In Britain, the government sponsored the development of a matrix of IT functional areas and levels of responsibility, the Skills for the Information Age (SFA), within which tasks and skills could be appropriately described. This ‘one page framework’ stimulated Japanese administrators to sponsor an IT framework for Japan, the Information Technology Skill Standard (ITSS). At first sight, comparing the design of the two skill standards appears to be a case of IT policy transfer and institutional innovation in response to common technological challenges in IT skill formation. However, closer examination of the institutional innovations and policy implementation in the two countries underlines the importance of path dependency, for the innovations were mediated through distinctive institutional histories and cultures. Being locked into different institutional histories and resources does not mean that ‘learning from abroad’ cannot occur, but that policy transfer and institutional innovation will be heavily conditioned by the past and develop different forms and practices. Using official documents and interviews with key participants, the authors demonstrate the continuing importance of different British and Japanese institutional histories on the respective institutional linkages and ownership of the skill standards, the respective provisions for dissemination and updating the skill standards, the respective links of the skill standards to competency, examinations and qualifications, and the international dimensions of the two national skill standards.

Addressing Diversity Trends in Rural America

Background: The new trend in US immigration is an increase in the number of Hispanics, the largest minority population, into rural America. This growing trend in racial and ethnic diversity found in small and rural America is expected to continue for the next decades. This demographic change is highlighted by rural immigrants of specific national origin that are defined by migrant labor composed primarily of Hispanics. Most often this definition is one of supposed “decline in community.” This presentation proposes one strategy for integrating migrants into these communities in order to strengthen the community and to save them from putative decline. We focus on the differential HIV risks and access to HIV care and treatment of newcomers and long-timers. Migrants who have been in the community for 5 years or more (long-timers) have greater HIV risk behaviors (more risky sexual behavior and greater alcohol use) and have greater access to primary care. Newcomers (5 years or less) report lower HIV risk behaviors and have less access to primary care. Methods: This is an analysis of adapting an evidence-based health intervention utilizing a sociological theory. This discussion will show how community structures can be strengthened by incorporating the social networks of the growing Hispanic minority into the health care system. Fundamental Cause Theory postulates that access to health care resources will improve the health of disadvantaged migrant workers through strengthening social support within the networks, thereby reducing HIV sexual risk behaviors and excessive alcohol use. Results: Amigos Hacen Cambios, the proposed intervention, will assess migrant labor’s health and social networks for inclusion of newcomers and long-timers in order to take advantage of their strengths. The heterogeneity of the networks increases the probability of diffusion of the innovation or new ideas.

Institutional Ethnography and the “New Materialism”

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
In the introduction to their 2010 collection, New Materialisms: Ontology, Agency, and Politics, Diana Coole and Samantha Frost write of an increase in “scattered but insistent demands for more materialist analysis” (p. 2). While not seeking to “deny [the] rich materialist heritage” (p. 4) that informs their work and the work of others taking part in this scholarly conversation, Coole and Frost call for the development of “renewed materialisms” up to the job of grasping and analyzing our “materially and discursively fast-changing world” (p. 4). This paper examines these theoretical and analytic trends from the perspective of institutional ethnography. I approach this literature with a friendly curiosity and share my discoveries in terms of what it’s all about and what new materialists and IE materialists might have to say to each other.

Schneider, Barbara (University of Calgary)

**Older Bodies, Dancing Together: Gender, Embodiment and Aesthetics in a Canadian Square Dance Club**

Square dance in North America is a social activity primarily enjoyed by older women and men. In square dance, eight people (four couples) move with and around each other, forming elaborate moving patterns in response to on-the-spot instructions issued by a caller. In the structure of the dance moves and the names of the calls, as well as the caller’s patter, square dance encodes an idealized version of heteronormative, “old time” gender relations featuring gallant masculinity and girlish femininity, which is further expressed through traditional 1950s-era square dance costumes: western shirts and bold ties for the men; full, flowy skirts and puff-sleeved blouses for the women. In the present day, these “invented traditions” coexist amidst a range of self-presentational options, as frequent urgings from within the square dance community to “update the image” of square dancing.

Since 2011 we have been researching the organization, practices and experiences of square dancing through an ethnographic study of a square dance club in Calgary, Alberta. Although not designated as a seniors’ club, almost all of the members are over 50, and most are in their 60s and 70s, with some in their 80s. Our research has involved participant observation as club members, interviews, focus groups, photographs, and a survey of 200 dancers from 13 square dance clubs in Calgary. In this paper our focus is on square dance as an embodied, gendered activity of aged and aging men and women who meet every week to dance. We examine the gendered forms of square dance (calls, moves, dress) as resources that actual, individual dancers take up, play with, alter, embody and resist. We also consider the ways dress-up and collaborative dancing offer older bodies the almost transgressive pleasure of countering stereotypes of old people as infirm and unlovely.

McDaniel, Susan* (University of Lethbridge, susan.mcdaniel@uleth.ca)

**Duel of the Dualisms: Production and Reproduction Reconfiguring**

The processes and mechanisms by which inequalities are produced and reproduced globally are serpentine and rapidly changing. The standard historical narrative that economic life left the household, leaving nurturance behind in a separate sphere of family, has moved to another separate sphere: The two separate spheres of work and family, of paid and unpaid work, a significant blurring is occurring. Work is more often unpaid. Nurturance is more often paid. Economic inequalities leak into and out of care inequalities. Relying on two of the author’s current research programs, on care migration and on life course effects of the Great Recession of 2008+, the duel and dance of the dualisms of production and reproduction in comparative contexts are explored.

**RC11-202.2**

McDaniel, Susan* (University of Lethbridge, susan.mcdaniel@uleth.ca)

**Global Ageing in Precarious Times**

Growing inequalities worldwide and within nation states, global financial crises, massive urban migration, austerity and shrinking public spheres – all contour ageing as a macro, meso and micro process. As the coup d’état in slow motion, as population ageing has been termed, sweeps across all regions of the world, although in different ways, instances of previously hidden terrains are being revealed. Among these are the globalization of care, the effects of growing inequalities on risks to older people but also on youth and those in mid-life, and counterintuitively the greater availability of potential paid caregivers. In this proposed talk, McDaniel draws on her extensive research on the policy implication of global ageing, on her comparative research on life course ageing in various countries in times of economic challenge, and her current research on transnational ageing and care supply/demand.
Japanese Olympic Committee complaining of violence by two coaches, including the head coach of the women’s team. Both these cases caused a national debate about the practice of corporeal punishment (tai-batsu) in sport in Japan.

This paper is based on the outcomes of focus groups that were conducted with students at ten universities from across Japan in 2013. In particular we examine the ways in which gender and violence are constructed in the context of expanding online cultures of violence from coaches, accepting them as necessary forms of discipline and, in many cases interpreting such acts as indicative of caring coaching and kindness. Further, we consider the responses of students, which suggest that these forms of corporeal punishment are necessary in producing a sense of shared identity. The combination between sport and education in Japan suggests that attempts to change the ways in which sports clubs operate, including coach/athlete relationships is problematic and may require major reconsideration of the role of sport in education.

MCDONALD, BRENT* (Victoria University, brent.mcdonald@vu.edu.au)

‘If It Weren’t for Rugby I’d be in Prison Now’: Pacific Islanders, Rugby and the Production of (un)Natural Spaces

Drawing on research conducted with Pacific Island men, this paper considers the ways in which rugby becomes a legitimate space, both for the confirmation of Pacific Island identity and the demonstration of successful integration into 21st Century, multicultural Australia. However, in positioning neo-liberalism as the reengineering, rather than the deregulation, of the state, sports such as rugby enact considerable disciplinary capacity over the bodies of minority ethnicity. The disciplinary logic is underpinned by bio-racism and commodification inherent to the discourse of post-colonial Australia. The overrepresentation of the bodies of Pacific Island men in the rugby codes, in prisons, in security, and in manual labour, suggests the structuring effects of such discourse. Such effects shape the legitimacy of access to physical spaces and also to the range of agency that Pacific Islanders’ enact. Of specific interest to this paper are the ways in which spaces, and the means to occupy them, become naturalized. This naturalization serves to obscure the actual regulating and exploitative function of such sports, instead positing them as exemplars of individualism and self-governance.

MCDONALD, KEVIN* (Middlesex University, k.mcdonald@mdx.ac.uk)

Agency and the Vulnerable Body

Sociological approaches to agency have largely been framed in terms of intention and strategy, considering the body to be an instrument of action. However contemporary forms of collective action highlight the increasing importance of embodied experience and the senses, associated with bodies in place, mobility, and embodied publics. Such embodied experiences are not simply acts of claiming space, but experiences of displacement and vulnerability, evident in the embodiment of space. The embodied and embodied experiences of art are more important than programmes and demands. These transformations are evident in the shift from the incorporating rhythms of the protest march to embodied grammars evident in occupations, from Tahrir Square to Taksim Square. This paper explores this transformation of action, as unity and collective movement to an ethical grammar grounded in displacement, vulnerability and embodying another self. The paper considers the implications for an embodied theory of agency, and the implications for the sociology of social movements as older models of identity-action give way to acting as embodiment.

MCDONALD, KEVIN* (Middlesex University, k.mcdonald@mdx.ac.uk)

From Indymedia to Anonymous: Agency, Public Spheres and Internet Action

The social sciences are polarised with regard to the internet and communicative action. Some authors see blogging and social media as a form of circulation characteristic of communicative capitalism, shaped by a fear of emptiness and an illusion of action. Others consider the internet to be structured in terms of openness and networking, and argue that such supposed technological qualities can ‘reverse engineer’ freedom. More nuanced forms of this technological optimism are evident in the experience of strangeness and modes of action where evocative experiences of art are more important than programmes and demands. These transformations are evident in the shift from the incorporating rhythms of the protest march to embodied grammars evident in occupations, from Tahrir Square to Taksim Square. This paper explores this transformation of action, as unity and collective movement to an ethical grammar grounded in displacement, vulnerability and embodying another self. The paper considers the implications for an embodied theory of agency, and the implications for the sociology of social movements as older models of identity-action give way to acting as embodiment.

Charisma and Subcultural Bureaucracy: Challenging Weber’s Ideal Typical Distinction

What role does charismatic authority play in the inculation of subcultures of Weberian bureaucratic practice within otherwise non-bureaucratic environments? My research investigates the conditions that support the emergence and flourishing of subcultural niches of administrative excellence, which are characterized by proto-bureaucratic practices uncommon in the broader administrative environment. Subcultural niches facilitate bureaucratic practice by concentrating scarce administrative resources—especially bureaucratically experienced and inclined personnel—and incubating transformative administrative practices. Using interview, observational and documentary data from cases in the Ghanaian state, including more than 100 interviews with civil servants and expert observers of the state, my research documents the critical importance of charismatic leadership in establishing niches of bureaucratic excellence. My research finds that charismatic leaders play pivotal roles in the early establishment of bureaucratic subcultures: their charisma and cultural competence at navigating social networks enables them to attract high quality personnel even in the context of human capital scarcity. Such charismatic leaders strategically offer subordinates “high profile” work that connects them to “big men” who are influential within the larger patronage culture. By strategically leveraging these social capital rewards, charismatic leaders can cultivate meritocracy and the corporatist ethos of generating high quality human capital and focusing their efforts on achieving organizational goals, despite operating in low-resource environments with organizational challenges. In this sense, charismatic leaders bridge conventional patronage political cultures and the Weberian bureaucratic ethos. This suggests that, in contrast to Weber’s ideal typical distinctions between charismatic and bureaucratic authority, charismatic authority may be a crucial sequential step in the transition from conventional to bureaucratic organization of power within state structures.

Cultural Entropy
This paper 1) introduces the concept of cultural entropy, 2) sketches out the perspective it implies, and 3) discusses the centrality of materiality in such a perspective. Cultural entropy describes the process whereby the intended meanings and uses for a cultural object fracture into a choice of alternative meanings, new practices, failed interactions and blatant disregard. If entropy broadly describes a tendency for cultural entropy is the tendency toward disorder at the level of meaning. While objects are often thought of as stable, durable, finished things, I argue (by drawing on ideas from anthropology and ANT/STS) that objects are inherently unstable, contingent, and incomplete because of their materiality. As such, in the long run, entropy is inevitable. This is especially true for objects—drawing on Goffman (1959), I argue that disruptions are much more likely during object-to-person than person-to-object interactions because objects can’t engage in “impression management.” As such, it takes a great deal of cultural work to successfully communicate through objects and maintain a consistently clear resonant meaning over time.

Although any cultural object faces entropy, I find that entropy is most visible in objects that people intend to affect belief and behavior. These instrumental uses of objects are commonplace: health pamphlets, commercial advertisements, protest placards, political speeches and more. As the intended meanings and uses for these objects are knowable, so too are the moments when these objects fail to work according to plan. I build upon my work on the materiality of AIDS campaigns (McDonnell 2010) by broadening the set of material mechanisms that encourage entropy beyond discordant settings, displacement and decay to practices of translation and juxtaposition. Ultimately this work contributes to the possibilities for a happy and healthy retirement.

Territoriality and Roma Nationalism in Europe

The Roma community is one of the most marginalized and persecuted minority groups in Europe. Facing hostile policies at home, the rise of right-wing populism, and widespread negative ascription of their collective group identity, Roma elite groups in Europe face a number of challenges. One of the acknowledged goals of marketing is to ascribe meaning over time. This paper explores the ways in which ascription of meaning happens through a variety of material objects and networks, which support the construction of Roma as a European minority. As Roma become figuratively and symbolically removed from the local and national socio-political space they reside in it leads to claims by the majority that Roma do not belong or do not fit in the dominant nation, be that Italy, France, Hungary or Czech Republic. This in turn could lead to further marginalization and persecution.

An Unequal World: Class, Leisure and Health Outcomes in Older People

In this presentation, we look beyond the direct physical and social effects of leisure activities on health and wellbeing. Instead, we explore the effect of leisure on the health of older people within the context of socio class and structural inequalities.

Occupational class, as a proxy for social class, may be less theoretically robust in defining stratification and life chances once people retire. In Bourdieu terms, it is reasonable to suppose that the secondary properties (lifestyle) linked to occupational class may be more important in determining the life chances of people post-retirement, than the specific occupational capitals that marked their development during working life. Yet both structural (e.g. past unemployment) or their former lifestyles and leisure activities may also develop new activities that are linked to their material circumstances, social connections and skills. In this way, the leisure activities of older people may be central to their ‘space of possibilities’ for a happy and healthy retirement.

This presentation outlines the results from a longitudinal path analysis of the relationships between social class, leisure activities and health status, conceptualised within a Bourdieu framework. This study used panel data from the English Longitudinal Study of Ageing (2002-2010) with variables lagged at different time points to maintain temporal/ causal order. The findings show that the main effect of occupational class on health for these older respondents was indirect, via economic assets, cultural and social activities and perceived social status. In terms of the role of leisure in promoting healthy ageing, the strongest effect from cultural and social activities was via perceived social status. It seems that activity such as museum-going life, attending the theatre may make older people feel better about themselves and, as a result, be good for their health.

Fighting Complacency and Retrogression: Reawakening Gender Equity Activism in New Zealand

Fighting complacency and retrogression: reawakening gender equality activism.

New Zealand enjoys an impressive reputation for gender equality. It was the first self-governing nation to grant women’s suffrage in 1833 and scores highly in international indexes such as the World Economic Forum’s Global Gender Gap at sixth out of 135 countries. In recent political history women held the top four constitutional positions: Prime Minister, Governor General, Attorney-General and Chief Justice, for a short period of time. Yet as feminist academic Prue Hyman (2010) notes, New Zealand has moved from a relatively equal society to one of its most unequal in terms of earnings and income. The paper explores the recent mobilisation of feminist civil society and female-dominated trade unions who are beginning to collectively advocate and lobby on human rights for women such as equal pay. They are using international human rights treaties, such as the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW), to harness their frustration, benchmark progress and hold the State party accountable for the implementation of women’s human rights and their retrogression. The paper explores and analyses the re-awakening of women’s civil society activism around social and economic rights in a nation with a strong self-regard for its international reputation for gender equality. It uses data collected from New Zealand’s seven periodic reports to the Committee on the Elimination of Discrimination Against Women in relation to Article 11 of CEDAW relating to equal pay and assesses the State party’s response to concluding observations and recommendations. It also reflects on the patterns of response of women’s groups moving from complacency through frustration to mobilisation legally, politically and at the community level.

MCINTYRE, JANET* (Flinders University, janet.mcintyre@flinders.edu.au)

The Challenges For Social and Environmental Justice Posed By The Global Panopticon, Penal States and Disappearing States In An Increasingly Vulnerable and Unequal World

Facing up to an Unequal World has praxis implications for sociologists. The most important challenges are understanding the interconnected social, economic and environmental problems pose an ‘existential risk’ to life as we know it. The environment of the problem and the range of inter related ways in which the challenges can be addressed requires not merely transliteracy and cross cultural capability when designing policy responses, but the will to grasp the nettle as to why some live at the expense of the majority in this generation and the next. The paper makes a plea for a different form of governance that weighs up the social, ecological, economic and environmental indicators of wellbeing, in order to enable the equitable distribution of resources and to ensure that some are not living at the expense of others and future generations of life. It moves beyond a critique to suggesting an alternative form of governance and democracy that spans communities of interest at a planetary level.

The study aims to address the five areas of priority drawing on the cosmopolitan agenda of Danielle Archibugi as:

i) Control over the use of force;
ii) Acceptance of cultural diversity by ensuring internal sovereignty based on rules that enable freedom and diversity to the extent that the freedom and diversity of others is not undermined.
iii) Strengthening self-determination of people based on participatory democracy and the ‘absence of domination’ over others
iv) Monitoring based on democracy and governance;
v) Participatory management of the global commons as the fabric of life.

Currently the role of the state in Western democracies acts as protector of residual welfare rights in terms of the social contract applied to citizens within the boundaries of a state or federation. Those outside these constructed containers do not receive protection in states that are becoming increasingly like fortresses.

MCKETTY, CAROL* (University of Aberdeen, ccm63@cornell.edu)

When 'the Other' Poses the Questions: Turning the Tables to Produce Data on German National Belonging

After a change was made in Germany's census categories in the year 2005, which is called the ‘Other’ category, it became possible to track migration within Germany. Germany's population was divided into ‘Germans’ and ‘persons with a migration background’. The latter category captures, in one basket, some German citizens—born and bred in Germany—along with immigrants newly arrived to the country. What makes one German? How does one come to belong to the national community? The question of national belonging and national identity is often addressed theoretically. Empirical studies, when conducted, tend to rely on data produced through surveys and apply quantitative methods. Both of these approaches fail to capture the meanings people themselves bring to the idea of nation and national belonging. Research into the social world informed by the epistemological position that there is no reality ‘out there’, independent of the shaping efforts of the mind, demands that one employs methods which access an inside view. In-depth interviewing is one such method. How, though, does the researcher's person (his/her social locations as a raced, gendered, classed, etc. research instrument) affect access to participants or impact the data produced? I—a dark-skinned, native English speaker living in Germany—interviewed Germans (German citizens) in a mid-sized city in Germany. Each participant discussed understandings of what makes one German. Rather than hinder access or curtail discussion, I found that my status as outsider spurred vigorous discussions on the notion of Germanness. My ‘otherness’ seemed not to have hampered free expression but, rather, may have even opened the door for persons who felt themselves marginalized to voice their views. In this paper, I look critically at the process and reflect on the peculiarities of the data produced through the interviews.

Does it Pay to Play? Gender, High School Sport Participation, and Young Adult Attainment

Despite differences in the cultural meaning of sport for girls and boys, popular rhetoric implies that sport participation is always good for kids. Indeed, many youth sport organizations were built on the assumption that sport reinforces shared values—such as hard work, cooperation, leadership, and fair play—that help prepare youth for their future roles as engaged citizens. While there is ample evidence to suggest that sport positively affects educational attainment (Hartmann 2008), it is unclear whether such benefits extend beyond the college years to include long-term career trajectories or subsequent employment. Evidence from a small number of empirical studies suggests that sport participants tend to report higher earnings, though the bulk of these studies focus exclusively on men. Those studies that do include women are often outdated, considering the influence of sport participation for U.S. women prior to the passage of Title IX of the Education Amendments in 1972 (which prohibited sex discrimination in education, including school-sponsored sports). Using longitudinal data from the Youth Development Study, this study explores how high school sport participation affects individual earnings and combined household income throughout young adulthood (ages 21 through 34). Multilevel mixed-effects regression models reveal that high school sport participation is positively associated with young adult attainment. This relationship is due, in part, to participants' greater educational attainment: sport participants are more likely to enroll and graduate from college, which translates to greater earnings throughout young adulthood. At the household level, female sport participants, but not males, report higher income than their peers. While male sport participants report the highest individual earnings, female participants report the highest annual household income. Taken together, these findings suggest that focusing on individual earnings alone does not fully capture the gendered effect of sport participation on attainment.

Gender and Cohort Differences in Work-Family Life Courses and Objective Markers of Health in Mid-Life: Evidence from the United Kingdom

The United Kingdom has seen dramatic changes in the nature of work and family life in recent decades. Cohort differences in the gendered divisions of labour over the past forty years. Participation in paid work is now a fact of life for the majority of women, including those with family responsibilities; fathers are more involved in childcare, and family forms have become increasingly diverse. In addition, these processes of change are occurring within the context of, and may be partially driving, increasing socioeconomic inequality between households and between women. While these changes in the work and family lives of men and women are well-documented, their relationship with health and wellbeing remains unclear. This study uses the wealth of longitudinal data now available in Britain to describe gender & cohort differences in work-family life course sequences across the three national birth cohort studies in the UK: the National Survey of Health and Development 1946 birth cohort, the National Child Development Study 1958 birth cohort, and the 1970 Birth Cohort Study. Sequence analysis is used to derive life course sequences from a small number of empirical studies suggests that sport participants to report higher earnings, though the bulk of these studies focus exclusively on men. Those studies that do include women are often outdated, considering the influence of sport participation for U.S. women prior to the passage of Title IX of the Education Amendments in 1972 (which prohibited sex discrimination in education, including school-sponsored sports). Using longitudinal data from the Youth Development Study, this study explores how high school sport participation affects individual earnings and combined household income throughout young adulthood (ages 21 through 34). Asian Developmental States: Innovation, Industry, and Investment in China and Japan

- This paper examines the transformation of Asian Capitalism tracking innovation policies in China and Japan. Chalmers Johnson’s seminal study of Japan as a “plan-rational” polity initially challenged the neo-liberal assumptions of development in the West. State intervention to discipline companies where necessary to achieve national goals of development proved similarly successful in the Asia’s newly industrializing countries (NICs), leading to a mid-range theory of state/market ties termed the “developmental state.”

- China followed a far different trajectory, but again with a prominent state role, I look here to the current status of the developmental state in China and Japan, to assess capitalism, I focus the study on the coordination of private and public capital in the two countries, paying particular attention to higher value-added exports. I then look to the role of major firms in shaping innovation policies in China and Japan. Chalmers Johnson’s seminal study of Japan - RC02-63.3

The Elite Potlatch: Gifts, Girls, and Distinction Among the Global VIP

As income and wealth concentration reach historic highs, sociological research on inequality has begun to focus on the social and cultural lives of the world’s “one percent.” This article presents rare ethnographic data on spending behaviors among the increasingly global elite and documents how the nouveau riche convert their economic capital into symbolic and social capital. Central to such conversations are the gift giving rituals and exchanges of women. Based on two years of observations at high-end nightclubs in the global VIP leisure circuit, as well as 70 interviews with club organizers and guests, I document how gift giving is a central condition of conspicuous consumption among nightclub patrons, who desire to distinguish themselves through the display ofmovability and the display, wasting, and gifting of high-priced bottles of alcohol in ritualized potlatches. I develop the concept of girl capital to describe women as a resource for status-seeking men. Club promoters work to accumulate and mobilize girl capital through the circulation of gifts, perks, favors and intimacies to establish reciprocities, thereby free goods sustain relationships between paid brokers (men) and unpaid women, thus masking the labor behind conspicuous leisure and framing economic relationships as friendships. Additionally, women are themselves circulated as gifts among men, largely through their symbolic presence on display. Thus this article documents two levels through which gifting practices sustain structural gender inequalities and uphold a traffic in women system: gifts to recruit women and women as gifts. This article also demonstrates how gifting practices are fundamental to stratification among elites. Lastly, this article genders elite space by revealing the logics of gendered worth within a contemporary high-society arena, one which recognizes and rewards economic capital for men but bodily capital for women.

The Effects Of Divorce On Children From Life-Course and Family Systems Perspectives: Example Of Denizli In Turkey

Divorce has negative socio-economic and interpersonal consequences on adults/children consisting of behavioral and emotional problems. They are more likely to divorce, more likely to marry at young ages, to report problems, perceived instability, conflict, lack of trust in their marriages. Many two-parent families don’t offer a happy environment for children. Parental divorce may disrupt the life course, with lifelong consequences for children well-being: lowered socio-economic status and problems in interpersonal relationships. Compared with individuals who grew up with both parents, children of divorce have lower levels of education, occupational status, and income, higher levels of economic hardships more often marry young, divorce and remarry several times, find themselves in unhappy relationships, and mistrust people in general. However they do not have lower levels of social support in their life. These relations may vary according to age, minority status, sex, parental education, parental death and socio-economic status.

In our research, we indicate the effects of divorce on adults/children who live in Denizli. The sample was randomly selected from living with divorced parents in Denizli. The effects of divorce are determined according to the adult’s age, gender, parental conflict, post-divorce family stability, parent-child relationships, education, socio-economic status. These variables are significant to understand the effects of divorce on children. We examine the association between child depression and childhood parental divorce using a representative sample of 354Denizli (177 male and 177 female). Firstly, in our research, methodological issues area examined, as an ‘abstract social norm [that] may inhere within the deepest fibres of our bodily being’ (Shilling 2007: 13).

Drawing upon empirical analyses of contemporary phenomena ranging from the growth of ‘British Military Fitness’ as a popular leisure pursuit in the UK, the technologies of affective captivating of immersive military video-gaming, and the intimacies and intensities of helicam footage recorded by soldiers in the ongoing conflict in Afghanistan, the paper highlights multiple practices of corporeal and sensory militarization that travel beyond traditional sequestered sites of classical military discipline, reshaping the wider sensorium and bodily pedagogics and projects in numerous domains of everyday social life. As such, the analysis emphasizes how desires for neoliberal self-actualization, thrill and bodily transformation increasingly articulate with wider military imperatives and corporeal practices to produce specific contemporary forms of embodied, voluntaristic and individuated militarism. The paper concludes by discussing the importance of locating these particular visceral militarisms with reference to shifts in the modes of embodiment, somatic apprehension of the world, and deterritorialized flows of affective experience associated with contemporary transformations in war-lighting.

Poverty and Unequal Development in Central America

The five Central American countries analyzed in this paper (Guatemala, Honduras, El Salvador, Nicaragua and Costa Rica) have a very uneven level of development where it exceeds Costa Rica, which some have considered the Switzerland of America. For having a great democratic stability and a good standard of living of the people that attracts the migration of his poorer neighbor Nicaragua. The rest of the countries (Guatemala, Honduras, El Salvador and Nicaragua) have very low levels of human development that join Bolivia and Haiti as the continent’s poorest nations.

This paper provides a brief overview of the emergence of the Central American countries showing different political trends in the twenty-first century governments and offering also a diagnosis of the situation of poverty. The causes are not natural but due primarily to historical internal social groups that have taken for themselves the social wealth of the nation and due also to uneven development scheme where transnational corporations in industrialized countries, especially through the extractive model, have taken over the natural resources of the region. To escape poverty, it is necessary the effective political will of governments, with the awareness that the inequality is not a manifest destiny of nature but a work of men; a best strategy is not only giving a fish to the poor but teaching them how to fish. It is necessary a public policy of redistribution of social wealth but primarily the effort in education with creation of capacities.

Social Investment at Sub-National Level in Mexico: The Role of Actors and Institutions

Sub-national governments have been largely considered to be better equipped to respond to local preferences and needs more effectively than central governments. While this capacity has been mainly associated with the role of sub-national governments in delivering social services, their role in as policy innovators has been scarcely studied, especially in the Latin America context. Nonetheless, as the case of Mexico shows, in the context of increasing political and financial decentralization, sub-national governments have been more active in implementing their own policy initiatives. This paper explores the most important factors that may explain the increasing activism of sub-national governments in the social policy realm, measured by the size and type of social investment, apart from their spending in health and education services. To do so, we produce a qualitative comparative analysis that comprises three different states in Mexico; state-level is the second-tier of local government in the Mexican union. This comparative analysis looks at the relationship between social policy and different political and institutional variables, including the actual capacity of the government to get financial resources, as well as the type of actors in charge of social policy in each state.

Globalization and Human Rights

The concern for the human rights becomes popular particularly in the twentieth century, though it had its roots in different forms since the time immemorial. The horrors of the Second World War led to the birth and recognition of the modern human rights. The global framework of human Rights was laid down by the United Nations General Assembly on December 10th, 1948.

The idea that the protection of human rights knows no international boundaries has gradually captured the imagination of mankind. After the Vienna Declaration (1993), there seems to be a global consensus on the fact that all the Human rights are universal, inseparable, interdependent and interrelated.

The respect for Human rights is enormously essential for achieving the global priorities of peace, development and democracy. Today, the concept of human rights has assumed universal proportion, accepted virtually by all states and societies regardless of historical, cultural, ideological, economic, or other differences. Almost all the countries of the world have clear provisions about the human rights in their respective constitution.

Human rights are rights which the individual has, or should have, in his society. Though the International Human rights imply rights for the individual against society, but they are not seen as opposed to the interests of society.

Despite human rights becoming the subject of concern to the legal fraternity, the Asians countries criticize the western concept of human rights is that there are no universal human rights as there is no single human nature, and thus no universal moral law to which appeals across cultures can be made.

Keywords: International sphere, Vienna Declaration, global consensus, legal fraternity

Transformation of Lifestyle and Leisure Activities of Tribals in Rajasthan(India)

Leisure is a complex phenomenon pervading every society. Leisure has meant different things to different people and the concept of leisure has changed with the times. Leisure and lifestyle experiences are culturally determined and each region has its own values and traditions.

The study focuses on a significant social change and transformation of leisure activities and life style of tribals in Rajasthan (India). Modernization, globalization and urbanization lead not only to the growth of commercialism, but also transformed the leisure and lifestyle of tribals, hectic and busy.

Group- oriented activities in the tribal region like Chaupal, circus, puppet shows and village fair in tribal area are about to ruin and are replaced by tea stalls, flimy songs and dances, cinema going, watching TV and satellite cable, use of mobile, etc.

Traditional games like kho-kho, kabaddi, wrestling, gilli-danda, maradadi playing cards and chaupad have been replaced by modern games like cricket and football.

Family-oriented activities like folk songs, dances, music, during festivals and marriages are now restricted from week to one day activity and more within domestic sphere rather than public sphere.

Artistic, religious (visiting temples and attending religious discourses or sermons) and cultural activities have been declining and are replaced by watching cinema, smoking, chewing tobacco etc.

In the present paper an attempt has been made to see the different forces of changes and their effect on leisure activities and lifestyle of tribals in Rajasthan and suggestions can be given to restore the traditional leisure activities and life style of tribals.

Keywords: leisure and lifestyle, Chaupal, Traditional games, family-oriented activities.

The Impact of Social Structures on Adolescents’ Deviant Behaviors: The Study of 402 High-Risk Street Drug Users in Iran

Aims: This study investigates the social underlying factors which impact on substance abuse in Iran’s society.

Method: A comprehensive social approach, a sociological analysis was conducted on the triple dimensions of social structure: institutional, relational and embodied structures which impact on individuals’ behaviors by using the results of a secondary analysis of a survey carried out on 402 high-risk abandoned drug users in 2009 and plus evidence from some documentary findings of sociological studies to confirm the arguments about the impact of social structures on adolescents’ deviant behaviors. The paper is drawn up on theories’ Durkim, Giddens, Putnam and also on empirical refer to the situations of social anomie and social capital exhaustion that illuminate the role of society institutional and relational structures on forming the embodied structure or the same actors’ behavioural habits and skills in society.

Findings: The most effective factors of substance abuse were individual factors, bonding with unhealthy social networks, exhaustion of bonding social capital, and lack of social support. During the period of social transition, emergence of uprootedness in modern life and disorientation of social actors in a space of discontinuity of old social bonds creates an ontological insecurity that can lead to the confusion of social actors to organize their social world and to deal effectively with not-so-complicated realities of social life.

Conclusion: Substance abuse is acknowledged as a social deviance which is stemmed from weakness of institutional, relational and embodied social structures during the modern era. The findings indicate the necessity of prioritization of substance abuse prevention by using a comprehensive model which includes interventions, i.e. promoting an established social order by structural policies for improving social capital, emotional and social skills and social support for individuals in society.

Saving Electricity in Private Households: Results of a Field Trial with Smart Meter Based Feedback Systems and Innovative Electricity Tariffs in Germany

In response to the nuclear accident in Fukushima in 2011, the German government decided to withdraw from nuclear power. This turnaround accelerated the transition of the German electricity system from a fossil fuel and nuclear power dominated electricity system to a renewable energy dominated one. The national aim is to reach a share of renewable energy sources of 80% until 2050. However, the major disadvantage of power generation from renewable energy sources like wind or photovoltaic is that they are hard to predict and to control as the availability of these resources is unstable. The challenge is therefore to manage supply and demand of electricity efficiently. In order to meet this challenge, the development of an intelligent electricity grid (“smart grid”) has started. This smart grid private households should play a role as adaptive consumers who shift their electricity consumption according to the electricity production (from periods with low production to periods with high production) and who save a significant amount of electricity.

Based on this development my research focuses on the following questions: How to enable private households to play this role as adaptive consumers? Is it possible to make electricity saving behaviours part of the household members’ everyday routines? To what extent are feedback systems and variable electricity tariff models able to support overall electricity savings?

The results of a field trial on advanced electricity meter (smart meter) with 650 private households from April 2011 to May 2012 in Northern Germany will be presented. Three different types of feedback systems (including an iPod Touch based feedback application) and two different innovative and flexible electricity tariffs were tested. To answer the research questions, multivariate longitudinal analyses with regard to their effect on overall electricity consumption of the participating households were conducted.

Story Telling Debt in Trading: The Topos of Urban Public Space in Financial Crisis Narratives

A major challenge of narratively portraying the 2008 financial crisis consists in representing the debt and the multiple ways in which debt – as the underlying asset of divergent financial derivative instruments – is traded today. In particular, the representation of financial securitization, connecting private and public debt with mechanisms of financial market speculation, requires narrative techniques that make it possible to meaningfully interrelate a multiplicity of private and institutional actors, temporal and geographical coordinates, as well as political and technological influencing factors.

In view of this challenge, this paper explores various filmic and literary narratives that deal with the 2008 financial crisis and its far-reaching socio-economic impacts. In particular, the paper explores how urban public space is portrayed in such narratives. I argue that urban public space in popular cultural representations of this crisis features as a narrative instrument – a topos – that points out how both the individual and organizational risks upon which contemporary speculation draws are obscured due to strategies of financial abstraction and digital trading. However, as a critical gesture, the topos of urban public space often only alludes to the inequalities that are produced due to financial speculation, while largely leaving its concrete practices and instruments unquestioned.

This paper forms part of a research project that applies anthropological and socio-semiotic conceptualizations of myth to narratives of the 2008 financial crisis. The project explores how certain narratives act as both social and cognitive strategies of dealing with complex phenomena, and as means of ideological communication.
Aspects of Measuring National Identity: Insights from Online-Probing

Since 1995 the ISSP runs a module on National Identity. With increasing number of participating countries a need to test the data for cross-national comparability has become necessary. Besides data analytical approaches, cognitive interviewing has become a popular tool to uncover differences in item interpretation. Two studies conducting cognitive interviewing could already detect problematic items in the ISSP module for Austria (see Latcheva 2009, Fleiß et al. 2009). However, these studies focused on one country and problems of cross-national comparability may not have been found.

One way to assess the existence of cross-national comparability is the application of online-probing which implements probing techniques of cognitive interviewing within web surveys. The project “Optimizing Probing Procedures for Cross-National Web Surveys” already conducted a cognitive pretest and an online pretest in Germany and will run its international survey in Germany, US, Mexico, Spain and UK in January 2014. A variety of items from the ISSP module on National identity are being analyzed. The data from the project give a unique insight into interpretation differences across respondents in a cross-national perspective.

The presentation will present results of the item battery on specific national pride which has been shown to be particularly problematic in the previous studies. The following questions will be addressed: Which problems appear in a cross-national comparison of the data? Which time horizons, for example, do respondent from different countries apply when they judge their pride on their countries history? What do Mexicans understand under the term “social security” for Cross-National Web Surveys? What do Mexicans understand under the term “social security system” and is this comparable to the definition given by German respondents? How comparable are the understandings of “fair and equal treatment” across countries? How can these outcomes be combined with current data analytic approaches? What recommendations can be derived from the existing data?

MELLO E SILVA, LEONARDO* (University of São Paulo, leogmsilva@hotmail.com)
Brazilian Unionism and Global Union Networks: A Shortcut to the New Labor Internationalism?

Internationalization of trade unionism is not a new phenomenon. It is currently presented as a “new internationalism” as opposed to an “old” labor internationalism. The new internationalism has also been presented in a variety of ways and with many different goals. In this paper, we aim to explore the different issues (thematic approach to social movements) and with the means (the use of social networks) due to the “old” internationalism. In Brazil, there is a widespread belief among unionists that the constitution of trade union networks based on multinationals’ goals can function as counterweight to the advancement of neoliberal globalization. The supporters of that view bear that such initiatives could eventually update the notion of international solidarity, which is part of the labor movement historical heritage. The global union networks of multinationals are nowadays relatively well organized in some branches (chemical, metalworkers), though many accuse them of encouraging an enterprise microcosm and at the expense of any collective wider interest. Additionally, the labor law reform initiated by the State promotes wage flexibility and encourages subcontracting. The picture is one where “internal” front points to a worsening in both employment conditions and use of labor force, while the “external” front is open to experiences of collaborative participation with corporations. The paper aims to explore this apparent paradox. Evidence brought are: the quantitative dimension of the union networks, their distribution across economic sectors, their guidelines and prospects, all captured throughout available secondary data, as well as interviews with managers and workers. The deepest reach of the union networks is intended to be sociologically measured in a scenario of restructuring, privatization and attacks on social rights. Thus, the paper seeks to raise the point that, in fact, the gap between the “old” and “new” labor internationalism unveils an underlying material and symbolic cleavage which opposes an “old” to a “new” working class.

Festivals and Living History. Tourism in the Age of Edutainment

The festivals of living history are perhaps among the most interesting aspects of the new cultural tourism and the new tourist culture based on festivals. These innovative processes of individual and collective identity construction entail complex interaction between re-enactors, tourists and local community; strategies of tourist and territorial marketing; and new forms of exploitation of heritage. At the same time, however, we can single out some salient features of society and tourism in the late modernity: the consolidation of forms of leisure, tourism and cultural fruition intertwining education and entertainment; the increasing loss of historical knowledge; the growing need of territorial and historical authenticity; and the acceptance of new forms of relative authenticity.

The festivals of living history are effective instruments of governance and tourist development and can meet the needs of different types of tourism. However, in many contexts – as in the case of Italy – local authorities and scholars appear unable to take full advantage from the contribution of these activities and do not support them properly. Furthermore, the “seriousness” of the festivals devoted to local heritage or the new culture of slowness, as well as the inability to properly manage edutainment, are stifling not only the potentiality of living history, but, more generally, of the whole tourist culture related to festivals.

MELOTTI, MARXIANO* (SUM Foundation - Foundation of the Italian Institute for Human and Social Sciences, marxiano.melotti@gmail.com)
Heritage and Sensory Tourism: The Long Way Beyond Post-Modernity

The increasing attention to the sensory and emotional aspects in tourism undoubtedly reflects the profound cultural transformations of late modernity and, in particular, how societies most influenced by the Western consumption patterns. This attention involves - and at the same time reflects - a new concept of authenticity, of a hybrid and relative kind, more oriented to emotional and experiential aspects and less tied to contents and material aspects.

This change entails effects that appear to be particularly significant in the field of cultural and, even more, architectural tourism: tactile and sensory museums, light and olfactory installations, practices of living history and experimental archaeology. These and other activities of consumption and leisure, aimed at recovering a supposed historical and territorial authenticity and characterized by forms of historical theming, are profoundly transforming our relationship with heritage and the past.

However, we are in a historical phase of possible cultural change, in which, both as a result of the financial crisis and because of the specific traits of the increasingly important Asian tourism, the current sensory, “liquid” and post-modern orientation could be overcome by a return of “solid” and material aspects.

With specific examples, this paper outlines some characteristics of the new cultural and archaeological post-modern tourism of sensory type, focusing on the relationship between edutainment, consumerism and the processes of identity construction, and tries to single out the possible developments of the current trends.

Educación Inconsistente; ejercicios Profesional Desigual

Educación inconsistente, ejercicio profesional desigual.
José César Mendoza-Cornejo

[1] Profesor investigador. CUCBA-UdeG. México
Email: cesaro@cucre.edu.mx

En la historia del hombre se evidencia, la desigualdad es patente. Crea las condiciones económicas y sociales para ésta “diferencia”.
Este dominio es desigual, el rico aprovechándose del pobre, el estudiado del iletrado etc. términos que provocan divergencia y estancamiento.
Esta desigualdad es parte de nuestro actuar, lo mismo da ignorarla que ejercerla, se presenta en las instituciones educativas al no existir similares posibilidades económicas. Se debe inducir una educación con sentido humanoista, con ideas que converjan en la solidaridad y por consiguiente, hacia una visión de interés colectivo.

Las cátedras sociales no significan minimizar las relacionadas con las técnicas, ambas aportan capacidad crítica, reflexión, análisis, razonamiento lógico para la formación integral del estudiante.

Los egresados despojados de una educación comprometida, pierden interés en retribuir, provocando desigualdad y falta de oportunidades. Esta actitud anula el esfuerzo de las generaciones anteriores. Las generaciones futuras que enfrentarán la globalización estarán más profundamente desatendidas y marginadas.

Las cátedras sociales no significan minimizar las relacionadas con las técnicas, ambas aportan capacidad crítica, reflexión, análisis, razonamiento lógico para la formación integral del estudiante.

Conclusiones
La universidad y su comunidad deben ser ambiciosos y asumir un objetivo humanista y reorientar programas escolares y acciones como el Servicio Social.

Cross-Border or out-of-country Voters? Citizenship and Elections Across the Frontier Between Brazil and Paraguay

Brazilians living in Paraguay are the largest immigrant group in that country and the second Brazilian population living abroad. Although Brazilian nationals are allowed to vote from abroad in homeland elections, those residents in Paraguay prefer not to be registered as out-of-country voters in favour to cross the frontier into Brazil to go to the polls on election days. Furthermore, the Paraguayan residents in Brazil are traditionalist and tend to casting their ballots in Paraguayan elections. In the frontier region, the cross-border ties have a far-reaching impact on the political life among emigrants and their descendants, and it takes a leading role in the construction of a citizenship which merges the local, the emigrant and the extraterritorial dimensions. The paper discusses how the electoral processes blur social categories such as resident and expatriate, analyses the cross-border political ties and the political participation of Brazilian and Paraguayan emigrants in local and national elections of both countries, and then examines the implications of the cross-border and the out-of-country voting in the construction of an extraterritorial citizenship in Brazil and Paraguay.

MENENDEZ DOMINGO, RAMON* (La Trobe University, ramonmenendez21@gmail.com)

The Culture of Authenticity: An Empirical Study of University Students from Diverse Cultural Backgrounds

This paper is an empirical study of the influence of individuals’ cultural background on their different experiences of authenticity. Due to a lack of consensus in the definition of the concept, sociologists have only recently started to study authenticity in an empirical way. This paper tries to contribute to this new field for sociologists. It consists of a quantitative analysis of open-ended responses to Ralph Turner’s True-Self Method with 138 students from La Trobe University in 2013. It constitutes a partial replication of, and a complement to, another research study conducted by Turner at La Trobe forty years ago, in 1973. Today, La Trobe’s student body is more culturally diverse than it was at the time Turner did his study. Around 25% are overseas-born students, most of them coming from Eastern societies. This is an opportunity to capture experiences of authenticity of individuals from diverse cultural backgrounds and compare them. Building on the works of Ralph Turner and Ronald Ingehart on self-conception and values respectively, this paper establishes two cultural hypotheses that reflect the Eastern/Western societies divide in relation to experiences of authenticity. Turner found no relationship between respondents’ cultural background and their experiences of authenticity. However, considering the more culturally diverse conditions of contemporary societies, cultural hypotheses seem to be worth exploring.

Drifters and Borinage: From the Filmic Subject to the Historical Subject

This communication analyzes two important films in the history of sociological films: Drifters (1929) from John Grierson and Miseré ou Borinage (1933) from Joris Ivens. The first one show the herring fishing out of the coast of England, in the North Sea, as a struggle between men and boats against the difficulties of the rough sea on the way to find and catch the herring shoals. The second one show the very ard and difficult life of the Belgian miners of Borinage, focusing in their hard and dangerous working conditions of labor that has lead to a major strike in 1933, after the world-wide crisis of 1929 in the USA.

Drifters show a very interesting process of overcoming the old artisanal fishing work by the introduction of the new methods from the industrial revolution by changing the animal driving force for the power of steam in a harmonic process but questioning the “natural” approach of a film like Manook of the Sea by D. W. Griffith. This new way of labor also makes this process acquire international dimensions showing the British Empire now as a huge commercial and industrial force. Borinage show that against the power of capitalism, that in the process of reproduction of capitalist labour reproduces the miner in the worst living conditions despite his arduous work, the only solution is the organized working class that struggles against them with their most important weapon: stop using the force of labor and consequently stop making goods and profits.

So, if Drifters is remarkable as the first documentary film in history to put the working man in the central place as a film subject, Borinage is the first one to show the working class in the process to become an historical subject to change the world, like fiction has already made in Eisenstein’s Potemkin (1925).

MENEZES, PAULO* (University of São Paulo, paulomen@usp.br)

Is There a Difference Between a Sociological and an Anthropological Approach to Cinema?

This communication deals with the special construction of reality made by films which acquire significant epistemological interest when we are dealing with documentary cinema, where the confusion and the merge between the reality of
images and the exterior "reality" that the camera faces are more fragrant and undeniable, based on the theoretical assumptions made by Foucault in What is an author, and by Pierre Sorlin in Sociologie du Cinéma.

It discusses the documentary cinema by analyzing their relationships with the social knowledge possibilities they offer and the access to knowledge of the social reality they allude. This analysis criticizes the positivist foundations that organizes the documentary films and the positivist watch that audience gives to them, fundamental for the misperception of a film as the "real" itself and not a construction about it, inquiring the epistemological potentialities of the kind of information those images submit. So, if we can think that these films bring information about what is shown by its images and sounds, we can also think that they bring more information about the values, evaluations and hierarchies that institute the filmic narrative made by the film maker.

Finally, I interpret the film Les Maîtres Fous, by Jean Rouch, as a Discourse and not as a documentary. This option force the analyst to catch an epistemological detour where the film is no longer seen as evidence of their stories but inquired in the fundamental concepts of its filmic narrative, dialectic units of form and content. The analysis point out the principles and elements imbricated in the options assumed by the director in order to constitute a filmic narrative discourse that should be seen as a general and natural truth about the "other" (a ritual) and not a discourse that alludes something else (the French colonial heritage).

Authorship and Curatorship: The Active Face of the World Music's Passive Work

This is a research about Putumayo, a NY based label of World Music collections. On its own words, the label's work consists in organizing collection that gather music from "exotic places where the music originated" so the rest of the world could know about that culture "as it is". But what we observed in the research activity is that the curatorship work of the label brings a strong authorship signature: the label isn't only (passively) exposing the cultures in their own native terms, but (actively) substantially constituting them based in its New Yorker grammar. In light of this, the article aims to show how passive and disinterested curatorship processes are also active and interested acts of authorship: world cultures are not merely being organized, but formed too. The one who selects, believing that can do it, is also the one that creates. In this way, the article lays on the mediation issue, aiming to analyze how intermediary instances, precisely because they see themselves as capable to live in between poles, start escaping to this poles, constituting them more than making they dialogue. In general terms, this is a work about exotization practices of construction of the other that intends to show how this exercise of coming out of itself searching the other, when based in its own believes, it's always a jump into itself. We want to discuss these issues inside the modernity debate, showing how the problem of "other voices" is a central analytical topic.

Title of Paper: Multisided Violence and the State in the Lives of Guatemalan and Salvadoran Women

This paper examines the root causes of violence in the lives of Guatemalan and Salvadoran women, who currently experience some of the worst levels of violence in the world in the form of feminicides (i.e., killings of women in which the state shares responsibility through omission or tolerance), as well as the state response to such crimes. Both countries have recently created governmental offices and enacted a battery of laws to combat these crimes and both countries have ratified the 1994 Convention of Belém do Pará, Brazil, yet, levels of crimes against women have continued undiminished. Impunity is rampant and only a small fraction of crimes are investigated and the one who selects, believing that can do it, is also the one that creates. In this way, the article lays on the mediation issue, aiming to analyze how intermediary instances, precisely because they see themselves as capable to live in between poles, start escaping to this poles, constituting them more than making they dialogue. In general terms, this is a work about exotization practices of construction of the other that intends to show how this exercise of coming out of itself searching the other, when based in its own believes, it's always a jump into itself. We want to discuss these issues inside the modernity debate, showing how the problem of "other voices" is a central analytical topic.

Effects of Rating Scale Polarity on Attitude Measurements with Latent Variables

Beside the item content, rating scales represent a central data base for survey measures. Attitudes are often measured by a certain number of items thought to present a latent concept. This paper focuses on the polarity of rating scales and its impact on the attitude measurements with latent variables. With respect to social-political dimensions of planning procedure is applicable to other similar contexts and that will contribute to global DRR.
the problems of recognition of the materials that aimed at promoting extremism and to implement actions that destabilize the political situation in the country. 2000 respondents were interviewed. They are representatives of different social groups. The study shows that 67% of people consider that extremist information provides different methods of manufacturing explosives. Using it, one can see people who suggests ideas of how to use it. Thus, the groups of teenagers appear who are able to commit dangerous acts against law enforcement and private citizens. 57% of people believes that extremist information calls for the approval of the advantages of one nation over the other, 53% of respondents believes that extremist information means call for terrorist acts. In this case, 17% of school students and college students mention the difficulties in discerning which information is really extremist. 65% respondents expresses the need for training, especially young people in order to identify the information in the Internet which encourages extremism.

MERINO MARTINEZ, SUSANÁ* (National Autonomous University of Mexico, sus626164@unam.mx) 

Local Development Agencies

LOCAL DEVELOPMENT AGENCIES

In order to fight the origins of generational poverty, the Mexican government has promoted the joint participation of the benefitted communities, fostering a culture of co-responsibility. The Social Development Ministry (SEDESOL) designed the Productive Options Program, the support modes are: Local Development Agencies; Integrating Funds; Mentor Networks, and the Joint Financing Fund. These Agencies focus on developing the skills and abilities of individuals, families, social groups and POs (producers' organizations) that live in areas classified as critical, such as native zones in the rural milieu, which are marginalized and made up of settlements or towns of up to 14,999 inhabitants.

The purpose of this study is to analyze Local Development Agencies as social policy instruments to fight poverty from the micro-regional standpoint.

The structure and legal framework of the Agencies in question correspond to that of a civil society organization, whose challenge is to foster micro-regional development. This model involved a cut in the budget for social policy and a reformulation of the objectives and scope thereof. From the mid-90's to date, programs to overcome poverty have become income transfer instruments to invest in human capital.

The neoliberal proposal set forth by Milton Friedman, crystallizes on how it mediates societies relationship with science and technology. In the process of technological development, a "green technology" is conceptualized, I probe at the concept of 'trust' and 'lay people' meet to discuss the "green economy". Considering the various ways in which technological options that will affect the nature of these arrangements. Focus on a "disaster mitigation" approach in a United Nations World Heritage Site in South Africa, where a "disaster mitigation" approach in a United Nations World Heritage Site in South Africa, I have positioned myself at the access points at which experts and "lay people" meet to discuss the "green economy". Considering the various ways in which a "green technology" is conceptualized, I probe at the concept of 'trust' and how it mediates societies relationship with science and technology. In the process I ask: What makes an expert an expert? What empirical factors make-up and account for conceptual innovation? When does an object become a technology? When does it become a problem? And might the object of that problem offer any analytical and methodological tools that are interdisciplinary and area specific?

Indigenous Pathways in Social Research: Addressing Inequities Part I

Indigenous populations live the issues of human rights violations as part of their legacy of colonialism. The ray of hope that emerges in relation to this experience is that Indigenous researchers in Mexico have successfully negotiated the Northern educational system without losing their indigenous cultural heritage. The indigenous researchers and their allies in this group of papers frame culturally responsive research to confront regimes that have restricted their rights in the past. The voices of indigenous researchers explore their pathways of social research and the use of research to address human rights in their communities. Shawn Wilson, a First Nations member of the Cree tribe, provides insights into how research can be used to address human rights through an indigenous lens in his presentation: Conducting the Ceremony of Research. Exploring the sacredness of relationships in research with consequences for supporting human rights. The second presentation, by Motheo Koitsiwe, a member of the Bathlhako tribe from South Africa. His research in Indigenous Knowledge systems challenges the restrictive educational and governmental systems and supports the realization of human rights, not only in his tribal community, but more broadly in South Africa. The third presentation will be by Teresa Sorde, a researcher from Spain, who works with the indigenous Roman community by building their capacity to work as co-researchers to address issues related to the injustices experienced by Roma. The fourth presentation is by Cesar Cisneros from Mexico; the basic premise of the global dynamics of capitalism is discussed in relation to a knowledge divide that is associated with epistemic violence. Donna Mertens, a transformative researcher from the United States, will provide the final commentary in a presentation titled: Indigenous Researchers and Social Transformation.

Japanese Artistic Traditions: Mimēsis, Politeia and Re-Interpretation

My paper analyses the representation and perfecting of reality (mimēsis) by visual arts in Japan and how the different traditions of art have been connected to changes in Japanese society and culture. The Japanese state was slow to realize how important visual arts for the Japanese society and culture and that visual arts have a huge influence home and abroad. The idea of state being responsible for promoting the cultural life of people or the idea of cultural rights of people are rather foreign to Japanese society. However, the whole idea of ‘being Japanese’ is very much a cultural reconstruction and the Japanese state has been actively engaged in shaping that reconstruction together with other pillars of establishment in Japan, such as the educational and economic institutions.

The invention of tradition does not mean that they are all false or invented from a scratch. The refined tastes of upper classes served as a basis for artistic traditions that are officially associated with the essence of Japanese art and culture. The modern Japanese state presented the Japanese cultural traditions as a proof of Japanese cultural superiority and, therefore, there has all along been a tendency also to protect the “Japanese” cultural traditions. For instance, nihonga was seen by the early modern policy makers as more Japanese than yōga, regardless of the theme of painting and without much of critical discussion whether nihonga really is that uniquely Japanese. After all, both Japanese nihonga and yōga are influenced by foreign art and Japanese art is influenced by each other. My paper reinterprets the tradition(s) of Japanese visual arts and places it in its social and political context, as well as develops theoretical tools that would better suit analysing Japanese artistic traditions.

TG04-947.6

MERVIÖ, MIKA* (Kibi International University, mm@tintti.net)

While the Japanese state has used its power and financial resources without hesitation in some fields such as public construction it has conserved resources by making people face many social risks, such as most family-related risks and unemployment, the best way that they can. If people fall ill or face other individual problems Japanese society often has surprisingly little room for such values as social solidarity and compassion. On the other hand, there have been social practices that have served to soften the image of Japanese working life practices, such as the strong emphasis on lifelong employment and relatively small wage differences among employees, especially among the elite salarymen (saramari).

The characteristics of the Japanese model of risk society are that the weak political leadership muddles along with the rest of the societies with globalisation and social problems of the society need to adjust to the changed realities the best way they can. On the one hand Japanese society has its cultural values emphasising the merits of social harmony and virtues of intersubjective practices. However, conflicts have always existed openly or been managed under the facade of

MEUTH, MIRIAM* (University of Frankfurt, meuth@em.uni-frankfurt.de)

Supported Housing for Young Adults: An International Comparative Perspective (Germany/England) on Housing Related Social Welfare and Social Inequality

In youth research the housing transition is considered one important transition to adulthood amongst others. Nevertheless it is not sufficiently taken into account in academia. As long as young adults have the resources to go smoothly through their housing transition because they have enough resources (financial, social, biographical and educational) this transition tends to be invisible. One of the reasons for this is that it is not as institutionalized as the transition from school to work for example. However, the complexities and reversibility of housing transitions, as well their ties to other youth-related transitions and social inequalities, become forcefully visible when the homelessness of young people is taken into account. Within social welfare systems, special housing related aid for this age group is rare, and usually given in extreme situations when housing has already become problematic. Therefore it is also often connected to other requirements, such as involvement in employment, training or education.

In this paper I will present the results of a qualitative study comparing two specific supported housing schemes for young adults in Germany and England. Both focus their support on housing as well as on the labor market oriented transitions of young people. My international comparative approach, which is theoretically informed by the model of “youth transition regimes” (Walther 2006), takes into account how the housing transitions of young people are structured by specific housing markets as well as by the housing related supports within specific social welfare systems. On this basis I will highlight differences and commonalities with respect to how social welfare systems can increase or reduce housing related social inequalities.

Social Capital, Organizations, and Disasters: Theoretical Insights from Four Communities

Sociocapital, especially among community organizations, is central to the US Federal Emergency Management Agency’s “Whole Community Approach” for disaster resiliency, in which four of the six resiliency themes focus on social/capital. Organizational social capital benefits the whole community and produces collective benefits for the whole network, including knowledge creation and sharing, generating financial resources, and creating innovations (Cohen and Pruskal 2001; Lesser 2009; Reagans and McEvily 2003). Further, it affects efficiency and effectiveness important to social service and nongovernmental organizations (Boer et al. 2007). In disaster settings, social capital among emergency management organizations fosters more efficient response (Kapucu 2006; Kopcu et al. 2010; Varda et al. 2009).

Yet, social capital research on organizations in disasters focuses heavily on emergency management agencies. Less research includes non-disaster response organizations. I follow the conceptualization of social capital in disasters (Boer et al. 2007). In disaster settings, social capital among emergency management organizations fosters more efficient response (Kapucu 2006; Kopcu et al. 2010; Varda et al. 2009).

In this paper, I describe theoretical insights for organizational theory and disaster theory drawn from case study research on social capital among community organizations in four communities. The case studies were all completed between 2012 and 2013 and include two communities that had recent disasters and two communities that have not. Further, three are rural (populations less than 50,000) and one is a small urban area (population 270,000). Based on interviews with nonprofit, emergency management, religious, and social service organizations, I discuss the benefits and difficulties of using social capital for community disaster response and recovery. Disasters present both obstacles and opportunities for the survival and growth of community organizations. Further, I argue that how organizations interact in networks, including legal and mission-related struggles, is key to understanding social capital for community disaster resilience.

My results address how the ‘Whole Community’ is practiced as well as contribute to organizational theory about social capital’s effect on organizational and community outcomes.

MEYER, MICHELLE* (Texas A&M University, mmeyer@arch.tamu.edu)

The Family Burden of Disaster Assistance

One commonly proposed, but under-theorized, component of community disaster resilience is social capital. Social capital describes the resources available through a social network that can be activated to affect the outcomes for the individuals and members of the entire network (Bourdieu 1985; Lin 1999). This concept captures the interactive aspects of a community that imply a capacity to respond, adapt, learn from a disaster, and effectively reorganize community life quickly following an event (Cutter et al. 2008; Norris et al. 2008). Thus, social capital can be both a private and public good that generates resilience for individuals and families along with communities as a whole.

Using surveys and interviews with residents of two Florida counties, one rural and one urban, I discuss disaster social capital and its role in families’ resilience. I apply a common social network measure—the name generator—to measure the availability and source of disaster-specific resources in individuals’ social networks. This network-based approach to disaster social capital shows the importance of family to disaster assistance. Individuals turn to family first for all types of assistance, and almost exclusively for financial assistance. This reliance on family results in extreme racial homophily of disaster social capital networks. Further, older family members are more often indicated as sources of financial assistance, which results in further pressure on their often limited resources. Finally, low-income and high-income respondents have similar disaster assistance networks, but high-income respondents will only use family for nonfinancial assistance and...
use insurance or savings for financial needs. This result shows the increased pressure on low-income families to help each other “get by” during a disaster (Stack 1997). At the community level, my results indicate that privatized social capital may not result in outcomes for the entire community, instead following familial lines that are often racially and economically homogeneous.

Use insurance or savings for financial needs. This result shows the increased pressure on low-income families to help each other “get by” during a disaster (Stack 1997). Collective Action and Collective Actors in Fields: Some Ontological Clarification of a Recent Debate in Neo-Institutionalism

The concept of “fields” has a lively history. Starting as one of the crucial concepts in Bourdieu’s theory, it became a foundational concept of sociological neo-institutionalism. Today, different attempts exist to transform it into a general concept of collective action (Hoffman 1999, Fligstein/McAdam 2012). This interesting development is, however, accompanied by some weaknesses: Currently, individuals and collectives, especially organizations, are analyzed symmetrically as actors within fields. Collectives are only described as fields nested within other fields. What is urgently needed is an elaboration on how individual and collective actors are constituted, and how they are related to individual ones.

We take the distinction between agency and actors immanent in theories of power (especially in the work of Giddens 1984, even Latour 2005), as a point of departure to discuss this problem. Actors – individual as well as collective ones – are special constructions of western modernity (Lackmann 1980, Foucault 1984, Luhmann 1984, Meyer/Jepperson 2000). They are often confronted with the obligation to act consistently in line with different kinds of rationality, often stemming from different field-levels. Agency, in contrast, is the essential possibility to make a difference in the stream of daily activity (Giddens 1984: 9), which is grounded in mental control over bodily activities. Although agency and actors are often actualized in an intertwined form, they sometimes only occur in a loosely coupled way.

Following a conceptualization, we can offer a more complex and clarified picture of individuals and collectives. It allows for a clearer distinction between (a) the properties of individual and collective actors, and between (b) agency and attributed attribution. In addition, it allows (c) for a more elaborate description of how fields are nested within fields, for example how agency and actors are constructed by fields at the same time as they constitute them.

Modern Times: How Organizational Time Structures Influence Society

At the latest since Max Weber, we have known that organizations strongly shape modern life – and also time. Modern society has been described as organization society, in which organizations diffuse across every sector. Organizations can, and do, operate with different societal macro-logics that contribute towards operationalizing and implementing them: Enterprises strive for economic profit, media organizations disseminate information and schools educate. However, in doing this they use their own specific structures and procedures. Among them are time structures. We focus on such time structures such as projects, deadlines, timetables, time routines and rhythms, and show that these are not necessarily compatible with the societal logics they address. As a consequence, organizations act as Procrustean bed regarding societal macro-logics. In the same way in which Procrustes “adjusts” people to the size of his bed, organizations impose their time structures on society.

As examples, we use the impacts organizations have on media and science. Media logic dictates that new information is provided continuously. However, editorial departments of television channels or newspapers need stable temporal routines. So, editorial departments often privilege the coverage of planned events like international conferences or sport events. As a consequence, organizational temporal structures play an important role by selecting news.

The logic of science implies that the time needed for research and scientific findings can hardly be defined in advance. However, organizations, such as universities, have to plan ahead. So they prioritize research proposals which can convincingly promise deadlines. In the social sciences for example, this gives an advantage to empirical surveys which – in comparison to theoretical analyses – can be more easily planned.

MICHAUD, JACINTHE* (York University (Glendon), jmichaud@yorku.ca)

The Dilemma of Feminist ‘double Activism’ and the Pressure of Separatism

Feminism shares boundaries with other political movements, often acting in synergy with many of them. The term “double activism,” coined by Italian feminists, describes the position of feminist activists who are simultaneously involved in political organizations of the left (parties, movements, unions) and feminist collectives. The act of moving across boundaries – between the left and feminism – came to light when this double allegiance was presented as conflicting loyalties in the 60s and 70s by feminists advocating a complete separation of their movement from the traditional political activism of the left (parties, movements, unions) and feminist collectives. This double allegiance was – and still is – shedding light on the political evolution of the feminist movement. This is especially the case today, with the renewed synergy found between feminists and other political actors such as young queer, anti-authoritarian, anti-colonial and anti-racist political groups. The paper will focus on the complex consciousness of double activists: the existential aspect of presenting oneself as a member of a political group while helping to create feminist collectives; and the simultaneous activity of bringing social struggles within the frontiers of feminism while seeking to bring feminist principles and feminist struggles within leftist groups.

MICHEL, PATRICK* (École Hautes Études Sciences Sociales, patrick.michel@ens.fr)

Elements of a Socio-History of the Relation Between Nation and Religion – The Case of Catholicism

The nation has been, simultaneously, a privileged tool of modernisation (that is of disenchantment) and of the political, and also a potential tool of perpetuation of a new type of enchantment (which is a privileged space for the refusal of modernity). Indeed, should the nation become an object of sacralisation, it is ancient politics, funded on transcendence, that is then maintained.

One of the main actors involved in this perpetuation of enchantment has been the process of forced homogenisation aiming at producing “sameness” in a fictional way. If the nation was calling for a progress of differentiation, it was only
imposed in the 19th and 20th centuries while (re)producing indifference, and result-
ing in violence.

Today, the reality of pluralism makes this fiction of ‘sameness’ globally incred-
ible. Should a space which can bring back the current evolutions carried by the
acceleration of globalisation exist, the best option would be the one that carries the
resistance against this process. In a situation that is characterized by the
disqualification of the absolute and the passage of ‘sameness’ to plurality, there
should be no surprise to the fact that we are witnessing some actions towards the
reaffirmation of the absolute and of ‘sameness’.

To explore this problematic, this paper will draw on the paradoxical relations
(and the successive reorganisation of these relations) maintained by the catho-
lic church towards the nation. In an orientation to follow the sign of the times (if not
to transform it, at least to inhabit it), religion and the nation are both categories
which share with intimacy the avatars of legitimacy, that is the rebuilding (and the
partial overimposing) of complex dispositions to organise the religious. What it
at play around religion and the nation can only make sense when dealing with the
contemporary redeployment of these devices.

The Isomorphism of Practices and Discourses Between the Corporate Realm and the World of Culture in the Flexible Capitalism

Culture plays a central role in the “flexible accumulation”, but does so as a “resource”, as a way of generating economic value. It is in this context that arise no-
tions bringing together seemingly antithetical terms, as “economy of culture” and “creative economy”. The study aims to show that this new isomorphism of spirit, the world of culture seems to incorporate both practices and discourses from the
new corporate world, which in its turn seems to feed on the cultural sphere. In this
increasingly intricate intertwining between economy and culture, it seems to be
an isomorphism between the practices of companies of the flexible capitalism and
certain agencies of culture. Under the rhetoric of “organizational innovation”,
these agencies replicate business models such as the networking, horizontal, an-
ti-hierarchical organization, based on crowdsourcing and / or crowdfunding, etc.
In these new models of “cultural business”, content producers find themselves in
precarious work. The promise of creating and of eventually monetizing their creative
capital, they experience temporary and outsourced contracts. As Max Weber
teaches us, each form of capitalism needs a corresponding “spirit”, so that will
also be a discourse isomorphism between the world of flexible economy and the
sphere of culture. The discourses about the non-separation between profes-

sional and personal life, between work and leisure that flexible capitalism took
from counterculture is easily extended to current artistic and cultural activities
because such ideas refer to the historical separation between art and work that
transformed into economy and culture, the study will show how the precariousness has been rhetorically transformed into flexibility and freedom and how, even under the rhetoric of alter- nativeness, culture in the flexible economy has contributed to the reproduction of an unequal world.

Parenthood, Well-Being Inequalities and Welfare State. Comparative Study of 20 European Countries

1. Income and wealth inequalities have represented a central issue of social policy analysis in the past. Nowadays the nature of inequalities and types of inequality are changing. The paper aims at analysing the inequalities in subjective well-being and its relations to life chances and key life course events determined by welfare state. The main questions asked in the paper: Does the welfare state reduce inequalities in people’s overall subjective well-being? Does the welfare state reduce inequalities in people’s satisfac-
tion in various domains of life such as health or work-life balance?
2. The goal of the paper is to measure and compare, across European coun-
tries, inequalities in overall and domain specific subjective well-being (SWB) based on subjective indicators of well-being. Doing so allows for the evaluation of changes in subjective well-being over time and to provide information on well-being of different groups in the European societies. In the first question asked is of diagnostic nature: what are the inequalities of well-being of parents and non-parents among European countries? Are there cross-national differences in the level of inequalities in subjective well-being belonging to the vulnerable groups due to specific life course stages (parenthood, marital status)?
3. The paper considers the broadly defined cross national, comparative analy-
sis of contemporary family policy as well as gender regimes. The paper will assess the cross-national differences in the level of inequalities in sub-

Weber’s Ethic of Responsibility As a Framework for Professional Ethics

Max Weber coined the term ethic of responsibility in his lecture on Politics as a Vocation in 1919. The ethic of responsibility demands to take account of both the means and the ends of one’s activity. Weber contributed to neoliberal development policies. In Kisumu, the increased presence of street traders in urban public spaces has however fomented a ‘clash of cultures’. On the one hand are private property interests (of capitalist investors) and the planners’ modernist vision of an orderly city, while on the other hand are urban residents seeking alternative livelihood opportunities in the wake of diminishing formal jobs. The aim of this paper is to unravel the conflicts that arise out of these two contradictory worldviews on the use of urban public space. Using in-depth interviews, focus group discussions, mapping and ethnographic fieldwork, the paper interrogates a range of planning responses that have on the other hand devised elaborate socio-spatial strategies aimed at cementing their insertion into the emergent social and built environment. The paper analyzes these adaptive and defensive practices of immigrant households and situates their place-making practices in the broader urban morphogenesis over time. The study addresses vital questions of social inequality and structural power relations embedded in the production of urban space, together with the internal contradictions that typify the urban development process within rapidly transforming cities of the global South.

Networking “Cool Japan”: Re-Considering the Notion of “Network” through the Global Spread of Japanese Popular Culture

It has been more than a decade since the global appeal and presence of Japanese popular culture (hereinafter called “J-pop”) became significant and was labeled as “Cool Japan.” Even Japanese government has recently committed itself to the overseas promotion of J-pop, and the resulting policy set has been called “Cool Japan” policy. However, few previous studies related to this topic focus closely on the efforts of players in J-pop sector to promote J-pop overseas, especially their cooperation with government and players in overseas markets. This paper focuses on the efforts of players in J-pop sector to promote J-pop overseas, especially their cooperation with government and players in overseas markets, although such a J-pop’s overseas project is planned and implemented on the basis of their close collaborations and relationships. In this presentation, therefore, I propose to understand J-pop’s global spread in terms of the network of agencies with central focus on the players of a certain overseas business project of J-pop and government. What kind of “power” “energy” and “motivation” is shared and circulated among their entanglements? How can we develop an understanding of the “network” concept through the global spread of J-pop? Being a researcher, fieldworker, and ex-government official of “Cool Japan” policies and business projects, I will discuss about possible answers to this set of questions.

Public Participation and Deliberation about Nuclear Energy Policy: A Case Study of “National Debate” after Fukushima Accident

This paper explores the possibilities of public participation in decision-making on nuclear energy policy through a case study of “National Debate” on energy choices after the Fukushima accident in Japan. Japan has been pressed to fundamentally reform its national energy policy in order to break away from the excessive dependency on nuclear energy. In the summer of 2012, the DPJ (the Democratic Party of Japan) coalition government at that time presented a set of national energy policy options, which ranged from the complete phase-out of nuclear power to partial abolition. In order to stimulate public discussion whether to withdraw from nuclear energy, the then DPJ government introduced the method of deliberative poll and invited about 290 randomly selected citizens around the country to discuss the energy choice. The deliberative poll was the first-ever public participation and deliberation about nuclear energy on a national level, and this paper focuses on the efforts of players in J-pop sector to promote J-pop overseas, especially their cooperation with government and players in overseas markets, although such a J-pop’s overseas project is planned and implemented on the basis of their close collaborations and relationships. In this presentation, therefore, I propose to understand J-pop’s global spread in terms of the network of agencies with central focus on the players of a certain overseas business project of J-pop and government. What kind of “power” “energy” and “motivation” is shared and circulated among their entanglements? How can we develop an understanding of the “network” concept through the global spread of J-pop? Being a researcher, fieldworker, and ex-government official of “Cool Japan” policies and business projects, I will discuss about possible answers to this set of questions.

Women and Men As Providers of Informal Social Assistance: The Case of Lithuania

Viewed from configurational perspective, family is a complex set of personal ties and interdependencies that extend far beyond it's boundaries and include not only more distant kinship, but also friends (Widmer, 2010). Basing on this theoretical approach, the roles of women and men in the informal social support networks are explored in the paper. This makes a novelty of research, because most commonly gender differences in provision of informal care and assistance within a family of procreation and a family of orientation are discussed in a literature. Leaving aside the commitments to the other persons.

The paper examines the peculiarities of informal mutual social support networks, focusing on the place of women and men - close relatives, distant kinship or friends / neighbours in these networks. Individual experiences in giving and receiving assistance are discussed and personal views regarding the expected potential providers of instrumental and emotional support (i.e., persons who would be addressed and asked for a help in case of urgent need) are analysed from gender perspective, basing on complex Lithuanian data: (1) the results of the questionnaire survey carried out at the end of 2011- beginning of 2012 (a sample - 2000 respondents, representing national population born respectively in 1950-1955, 1960-1965, 1970-1975 and 1980-1985); (2) the findings of the in-depth interviews with 23 fathers (representing of the same birth cohorts), conducted in summer of 2012 in the six regions of Lithuania.

The investigations were accomplished in a frame of the four years research project "Trajectories of family and non-family social networks: intergenerational dimension", financed by the European Social Fund (ESF).

The Well-Being Gap Between the Married and the Never Married: Time Trends and Macro Processes

Growing divorce and falling marriage rates in contemporary societies suggest that the institution of marriage is in crisis. Indeed, analyses for United States suggest that the quality of marriages, as well as the well-being premium of married over the never married persons decreased over time (Amato et al., 2003, Corra et al., 2009, Glenn, 1991, Glenn and Weaver, 1988, Rogers and Amato, 2000, Waite, 2000).

This paper examines how the well-being gap between the married and the never married changed over time and it tests the hypothesis that this trend has been shaped by the changing socio-economic conditions. In particular I focus on the hypothesis that the well-being gap narrowed because the level of economic specialization of spouses within marriage decreased. The idea that economic specialization builds the marriage premium has been formalized by Becker (1981) and is currently adopted in analyses of married couples (see, e.g. Stutzer and Frey, 2006).

I use data from the World Values Survey and the European Values Study for 87 countries on various levels of development, for a period of almost 30 years. Multiple regression allows me to distinguish between the cross-country differences and the withincountry differences across time.

Results show that the life satisfaction gap between the married and the never married decreased over time at a rate that could close the well-being gap between the married and the never married in about 25 years. The changes of economic specialization do not affect the well-being gap among women, and have a weak effect among men. Therefore the study does not support the hypothesis that the narrowing well-being gap between the married and the never married may be explained by lower level of economic specialization within marriage. This result is policy-relevant, as it shows that enhancing traditional gender arrangements may be inefficient way of improving conditions of married couples.

---

About connections between public deliberative/participatory exercises and decision-making in energy policy.

---

The paper is based on a national survey that will be made in Mexico next November by the seminar Subjective Satisfaction about Life and Society. The paper will present the results of a group of variables associated to happiness according to the following levels. At the individual level, it will explore the conscious of freedom in decision making, the expectations horizon assumed, and the perception of control over the future life. At the medivel level, it will explore two dimensions: a) social cohesion levels in terms of quality of social relationships (social capital), homogeneity of them, and conflict (family, friends, neighbors, work); c) quality of social relationships and decision practices in organizations (voluntary, club, civic

Hospital Board Oversight of Quality and Patient Safety: A Narrative Review and Synthesis of Recent Empirical Research

Context: Recurring problems with patient safety have led to growing interest in helping hospitals’ governing bodies provide more effective oversight of the quality and safety of services. National directives and initiatives emphasise the importance of action by boards, but the empirical basis for informing effective hospital board oversight has yet to receive full and careful review.

Methods: This article presents a narrative review of empirical research to inform the debate about hospital board oversight of quality and patient safety. A systematic and comprehensive search identified 122 papers for detailed review. Much of the empirical work has appeared in the last ten years, is from the US, and employs cross-sectional survey methods.

Findings: Recent empirical studies linking board composition and processes with both patient outcomes find clear differences between high- and low-performing hospitals, highlighting the importance of strong and committed leadership that prioritizes quality and safety and sets clear and measurable goals for improvement. Effective oversight is also associated with well-informed and skilled board members. External factors (such as regulatory regimes and the publication of performance data) might also have a role in influencing boards, but detailed empirical work here is scant.

Conclusions: Health policy debates recognise the important role of hospital boards in overseeing patient quality and safety, and a growing body of empirical research has sought to elucidate that role. This review finds a number of areas of guidance that have some empirical support, but it also exposes the relatively inchoate nature of the field. Greater theoretical and methodological development is required if we are to secure more evidence-informed governance systems and practices that can contribute to safer care.

Dark Shades of travel: Death Tourism with its Legal and Social Implications

The growing interest of dark tourism, namely death tourism, where the confrontation with grief and mortality is met with the expressed purpose of confronting travel that culminates in assistance to end one’s life is becoming more a central focus on the debates in the right to life arguments. This paper describes the emerging phenomenon of death tourism, to present briefly the social and legal aspects of assisted suicide in conjunction within the tourism industry. By employing both digital media and government documentation, the paper explores the methodologies of this article. Whereas much of the contemporary research in dark tourism focuses on sights, experiences, and actual memorialization, death tourism tends to comprise a holistic view of the emerging phenomenon by viewing supply and demand management (and promotion), political interpretation and control. The final component of the paper views societal interpretations of death tourism and its potential for market expansion. There have been several social movements and legislative attempts to curtail the spread of assisted suicide and death tourism; however, the demand for the services has grown to the point where jurisdictions are considering measures to allow this practice. Such an expansion of legalized assisted suicide will allow those seeking the right to die more options for a death within a diversified tourism industry and how the trend of death tourism is potentially spreading to other countries beyond Europe.

Researching Virtual Realities – Methodological and Conceptual Issues

The first decades of the century have seen profound transformations of societies through digital media. One effect of these new means of contact is that a death within a diversified tourism industry and how the trend of death tourism is spreading and legislatures are considering measures to allow this practice. Such an expansion of death tourism is possible in the physical sense, virtual worlds can be very real in their effects and are independently evolving societies. They have economies that interact with economies in the ‘real world’ and it is possible to make a living or become rich in the real world through your activities in a virtual world. Even in their present, rudimentary form, some persons prefer their virtual identities and lives to those in their ‘first lives’. Driven by strong economic and technological imperatives, human/computer interfaces and virtual realities will become radically more immersive in the near future. It is not hyperbole to speculate that this could have profound effects for what it means to be human and social in the 21st century. This paper will explore some of the myriad issues – ethical, methodological and practical – that arise from conducting research, particularly biographical research, in virtual worlds.

The first decades of the century have seen profound transformations of societies through digital media. At the macro level, it will be taken into account two dimensions as well: a) cooperation and public goods (for example, environment care or taxes payment), and b) quality of government. We intend to show that happiness is positively associated with the capability of making decisions freely and with the sense of control of our lives; with the presence of interaction spheres, informal or for formalized, without social fragmentation and regulated by reciprocity patterns; and, with the perception that our lives are built on cooperation with others and with governments that listen to us and consider our demands.

New Fatherhood? Post-Separation Parenting Roles and Responsibilities In Australia

This paper addresses parenting roles, responsibilities and outcomes following marital separation in Australia (involving 15% of families with children). Recent research suggests a fathering paradox: although the proportion of lone fathers has increased in Australia over the past decades (now approx 2.2% of families with children) time use surveys show the level of involvement of fathers in everyday child care has increased very little. Despite fathers' general lack of 'hands on' parenting skills, ideological changes to the Australian Family Law Act in 2006 mandated post-separation 'shared parental responsibility', which has been widely interpreted by lawyers and parents as a basis for equal (50-50) shared custody of children. However, a 2009-11 qualitative study, entailing three, in-depth interviews found that gender inequality in post-separation parenting responsibility leaves many mothers reliant upon welfare payments. This study included 'tonge' fathers and mothers – 'primary time' parents whose children live with them most or all of the time – as well as parents sharing the care of children more equally.

The socio-political policy underpinning the Family Law changes assumed a degree of interaction and cooperation between separated parents predicated on a new construction of gender in 'doing family'. However, there is little empirical evidence to support this assumption, since (a) most separated mothers and fathers spectacularly fail to successfully negotiate parenting duties on a daily basis and (b) fathers appear more concerned with their own 'rights' while mothers shoulder a disproportionate burden of everyday 'responsibility' for children (even in 'equal shared care' situations where the children live half the time with each parent) – and this inequity mirrors the continuing greater levels of maternal responsibility within 'intact' families. Such findings reinforce the disparity between stated attitudes of concerned fathers versus their actual behaviour.

Tourism Promotion and Disaster: Ethical Issues Faced in Promoting Tohoku Since March 2011

The series of disasters following the 2011 Tohoku earthquake severely affected Japan's ability to attract tourists. This has led to a government-directed international tourism campaign of unprecedented scale for Japan. While international tourist numbers quickly rebounded nationally in 2012, those to the disaster-hit areas remain low.

The primary cause of deflated tourist numbers in Tohoku seems to be fear of nuclear radiation. This concern was also central in Tokyo's recent successful bid for the 2020 Olympics, and is likely to grow as the Olympics approach. Public and private institutions in Japan involved in tourism, along with guidebook publishers and others, face a serious ethical dilemma: How to promote foreign tourism to the disaster-hit areas and support their economic recovery while being open and informative about potential health and safety dangers.

This paper focuses on this ethically-charged dilemma through examining changes in discourse in international tourism promotion amongst these organizations. The appeal to support both Japan's and the disaster-region's recovery through tourism activities was central to many of these discourses in 2011 and 2012. This included multiple-entry visas for Chinese tourists on the condition that they visit Tohoku, and JNTO encouraging travel agencies to offer tours for foreign volunteers.

In 2013, locally-based internet tourism sites and foreign guidebooks still draw on recovery in disaster-hit regions as a central motif in promotional discourses. However, at the national level there seems to be a shift away from focusing on the disaster-hit regions and of promoting international tourists to these areas to help revive these economies. This paper looks into causes of this divergence in discourses. It considers how these organizations and institutions face differently the ethical dilemma of helping those hit by disaster in guiding the practices of international tourists while keeping tourists aware of potential safety dangers.

Contemporary Greek Myths: Visual Resources for Self-Transformation

This paper focuses on the use of visual media, including music videos, television programmes and films, by young people living in kinship, foster, residential and secure care in Scotland. It draws on a two-year exploration of practices of belonging that employed audial and visual methods (photo elicitation around spaces and objects; drawings of actual and ideal ‘homes’; recordings of sounds including music tracks then discussed in two interviews). The data produced suggested the potential importance of such visual media to participants in both blanking out and exploring difficult relational legacies and current circumstances. In particular, like contemporary Greek myths, television shows and music videos often portrayed difficult family situations similar to their own including parental separation, police raids, the absence or loss of a parent. Such representations and their usage by participants point to a complex interweaving of absences and presences cross-cutting the private and public spheres, and (often reflected and reproduced by academic disciplines). In spite of living in a somewhat ‘confessional’ culture, prevailing normative family discourses generally discourage these young people from open discussion of such family circumstances. At the same time, the semi-public nature of these young people’s family lives is reflected in often voluminous case files, and the static histories they contain, repeated many times over at case hearings. Further such circumstances are often used as exemplars of dysfunctional/troubled families in stigmatising public, political discourses that direct attention from the structural inequities that often underlie them. We argue that such visual media help to provide such young people with more fluid, more culturally accepted and semi-public representations of their experience and potentially provide them with resources for self-valorisation and transformation.

‘Taking Photos! I Don’t Do That Anymore’: Critiquing the Photo-Diary As Method in Ageing Research

Over the past 15 years there has been a burgeoning interest amongst researchers, policy makers, and funders in using methods that encourage deeper engagement with communities and offer participants greater involvement in the research process (Mitchell, Milne and de Lange 2012). This desire to use more emancipatory and decolonizing methods (Smith 1999) has led to ‘an explosion of participatory media projects’ (Luttrell and Chalfen 2010: 197). Little has been written, however, about how participants regard or (dis)engage with the visual as a method of choice. Over the past 17 months, a team of researchers from the University of Edinburgh and the Scottish Centre for Social Research have been exploring day to day kindness, help and support and the increasing role it plays as we age www.liveablelives.org.uk. The research, funded by the Joseph Rowntree Foundation, adapted Bartlett and Milne’s diary making method (Bartlett 2011). Following an initial mapping exercise and semi-structured interview, participants were asked to keep a diary for two weeks recording mundane acts of help, support and kindness, offered, received, wished for or rejected. Participants chose the mode of production from a selection of visual (photo or drawing), audial (sound diaries) or textual (written or text). Based upon semi-structured interviews and 45 diaries, this paper presents a critique of the visual as a diary making method and an exploration of its limitations.

Authoritarianism and Paths of Resistance in Latin America

How does political crisis and, more specifically, repression, transform artistic movements and their evolution? And how do the paths that artists take in contexts of crisis shape the cultural environment in which citizens respond and resist? Authoritarianism in Latin America during the 1960s and 1970s spawned bifurca-

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
tions and the re-drawing of boundaries in and between artistic movements. This paper explores the separation of political from cultural resistance as one such bifurcation among groups of musicians facing military dictatorship in Uruguay and Brazil during this period. Comparison of four musical movements sheds light on how repression transformed artistic trajectories in each country. Politically engaged musicians built on shared experiences, and ideological commitment to produce music that could be used as a tool for sustaining anti-authoritarian identities and supporting mobilization. Countercultural re-actions attacked authoritarianism from a different angle, challenging established national identities in search for foreign identity and thereby also threatening the cultural status quo. The bifurcation of political and cultural responses to authoritarianism produced distinct paths which diverged or converged depending on the institutional conditions in which artists carried out and disseminated their work. In some mediating contexts, competition between the two currents prevailed, producing polarization and countercultural artists. In other environments, the two paths converged as artists collaborated to combine political and cultural responses to repression. These dynamics in turn shaped the cultural and political environment of resistance to authoritarianism, just as much as social movements and, sometimes, in the absence of openly manifest social movements. Building on this comparison, the author draws broader conclusions on the long-term impact of resistant art on the cultural, political and social landscape in which it develops.

MILSTEIN, DENISE* (Columbia University, denichom@gmail.com)

From the Inner Workings of Innovation to Historical Accounts of Artistic Development

What mechanisms drive innovation in art? How does exploring this question incite broader understandings of the history of artistic movements? This paper examines how Latin American artistic movements developed in the 20th century, with a look at the local, regional and national dynamics that impacted these movements. This study reveals repeating mechanisms that both facilitate and limit innovation. The study of Brazilian artists and movements reveals processes relevant to the broader, historical development of artistic movements in Latin America. Methodologically, the focus on innovation in art worlds requires constant shifting among analytical levels in order to grasp transnational influences, the interactions of local and global actors, and the impact of change and transformation in art worlds. Adding a relational focus to this multi-level approach helps to unveil the channels through which artists and their movements develop. The study describes three stages in the evolution of art movements in Brazil over the 20th century. First, a concern with authenticity that led to explorations of ‘native’ Brazilian cultural heritage; second, a fragmented notion of national culture that built on mid-century populism; and third, the critical and grounded incorporation of diverse cultural elements within an international and, in some cases, global cultural sphere. The identification of mechanisms that repeat over time with each step in the development of an artistic trajectory is a tool that may be applied beyond this case. These mechanisms shed light on widely recognized phenomena such as revivalism, nationalism, counterculture and political engagement in art. The paper demonstrates, both empirically and analytically, how it is possible to study innovation through the development of artistic movements. The study builds a broader narrative of the struggles through which artists and their audiences built identities within national contexts.

The Socio-Spatial Polarization of Large Housing Estates in East German Shrinking Cities: A Governance Perspective

The paper investigates the influence of local governance and planning practices on the increasing social polarization of neighborhoods in large housing estates in shrinking East German cities.

Despite significant outmigration of middle-class families the housing estates did not experience a collective downgrading as predicted in the early 1990s after the reunification. Instead 20 years after there can be observed a small-scale patchwork pattern of stable and impoverishing neighborhoods. The author attributes this to the uneven development that is not only triggered by the demand-driven housing market in the shrinking cities and by segregation patterns caused by the GDR housing policy. Likewise this development is reinforced by specific planning and governance processes: (1) The Federal Government of Germany supports the development of sustainable urban structures in shrinking cities with large-scale funding programs. The approval for funding is based on defining areas of preferred investment and areas of disinvestment and demolition. (2) There are a growing number of real estate investments in low-quality housing stocks. These private market actors often pursue investment and rental strategies that are contrary to the municipal development/demolition plans. (3) Municipal social housing policies and the allocation of low-income renters by housing companies are spatially selective. Hence, the author assumes that the small-scale social polarization in the housing estates is reinforced by conflicting investment strategies of public and private actors, by contrasting rental policies of public and private landlords and by the withdrawal of the municipalities regarding to socially stabilizing measures from areas of disinvestment and demolition. Apparently dealing with urban decline is highly restricted by the unequal distribution of power and resources to the actors, their divergent interests and the lack of incentives to cooperate. To develop these arguments the author analyses the case of the continuously shrinking East German city Cottbus.

Model Minority and Discrimination: Case of the Second Generation of Cambodians Refugees in France

It is said that immigrants and foreigners in France posed a problem of socio-political order in the middle of 1970s. While the Maghrebian immigrants have undergone the experience of discrimination and exclusion in French society, South-East Asian immigrants have been considered to be a ‘non-problematic’ or ‘silent’ group in the integration process at the local resettlement and benefited from a warm welcome (Gilles 2000; Simon-Barouh 2003). They have a conscience to take advantage of their positive image based on ethnic category. It is suggested that for French people, receiving Southeast Asian refugees provides an opportunity to justify the status of non-racist citizens (Roquejoffre 2009:118). With this good reputation, they became a ‘model minority’ in France. As Asians have a fairly positive image compared to other immigrants, it is difficult to say that there is a feeling of hostility and racism against them (Gayral-Taming 2000). However, the idea that Asian can be accepted because they are silent while other ethnic groups without such a personality could be rejected is itself a radicalized stereotype. In the context of French society, the position of Southeast Asian refugees as ‘exceptional’ resulted from colonial history and the politics of compassion. But this exceptionality risks generating racialised practices. Regarding Second generation, their educational success in science and their typical choice for the sector of the communication industry has been noticed (Le Huu 1996; Meslin 2006; Masse 1996). Are they really success in their schooling and professional career? It is doubtful if they

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
really benefit from their positive image in their living experience. By examining educational and occupational attainments of the second generation of Cambodians refugees in France, I will show aspects of discrimination encountered by them as a model minority. I use interviews collected from my field research conducted between 2010 and 2011 for this analysis.

MINAMIKAWA, FUMINORI* (Ritsumeikan University, fminamikawa@gmail.com)
How Is Multiculturalism Americanized and Japanized?

The idea of “multiculturalism” has spread globally and impacted on the ways of being “nation-state” since the 1970s when Canada and Australia enacted the official policies of multiculturalism. The United States is one of the earliest adapters of the idea to redefine its legacies of cultural diversity in the 1980s. Japan, one of the “weak” states in the strength of multiculturalism policies, modified it to a vision of “multicultural coexistence (tabunka kyosei)” for incorporating foreign residents in the 2000s. This paper compares how to accommodate multiculturalism as an image of national society in United States and Japan in entangled three layers: community legacies, national discourses, and global values. Both countries have had historical legacies to incorporate minorities at the level of the local communities. Renewed tensions regarding national homogeneity redefine the relations with between multiculturalism and nationalism although the opponents usually attempt to define it as a threat to the nation. The national modifications also depend on what extent people perceive it as a global value. The interconnection of the layers explains how multiculturalism has or has not become a part of the national image. The USA’s liberal modifications help to implant a multicultural ethic on its national image while Japan’s transnationalist interpretations fail to nationalize it. Based on analysis of governmental reports, public polls, and reactions from local communities and minorities, I will discuss the ways in which USA and Japan establish two versions of multiculturalism to adapt it in the different socio-cultural contexts in the era of global migration of idea.

MINATO, KUNIO* (Ritsumeikan Universty, minato920@gmail.com)
Nationalism, Exclusivism, and Purism: An Analytical Description of National Identity in Mongolia

In recent years, Mongolia has witnessed the rise of ultra-nationalists and even neo-Nazis. Their campaigns pillory foreigners, especially Chinese and Koreans, as threats to the “purity” of the nation, and are often accompanied by vandalism and violence. Their target is not only limited to foreign people and enterprises but also to their fellow Mongolians who live in a state that is further fragmented and marginalized by their fellow Mongolians as foreigners, as well as sexual minorities, are typical examples of domestic scapegoats and objects of violence.

As ultra-nationalists and neo-Nazis themselves are very few in Mongolia, the problem is whether public opinion is tolerant of them. However, the use of the public opinion in Mongolia are conflicting. Some argue that nationalism and prejudice against foreigners is common in the country, and that exclusivists are gathering popularity, against the backdrop of public fear that Mongolian, the country with so small population, might be easily swallowed up by the massive influx of foreign people, investments, culture, and others. Meanwhile, others explain that these ultra-nationalist groups do not represent the majority of Mongolians, and that their activities are still in the margins. Which is closer to reality? Resolving the contradiction and portraying an accurate picture of public opinion will help in forecasting the future of nationalism and exclusivism in the country.

This paper presents a study of issues on the national identity of ordinary Mongolians, such as exclusivism, national pride, and aspiration of “national purity.” Using data from cross-national public opinion surveys, the study examines Mongolian attitudes toward those issues, by comparing Mongolia with Asian societies and post-socialist ones. This study also explores correlations among these attitudes, as well as factors associated with them. Hence, the study aims to offer a vision of “multicultural coexistence (tabunka kyosei)” for incorporating foreign residents in the 2000s. This paper compares how to accommodate multiculturalism as an image of national society in United States and Japan in entangled three layers: community legacies, national discourses, and global values. Both countries have had historical legacies to incorporate minorities at the level of the local communities. Renewed tensions regarding national homogeneity redefine the relations with between multiculturalism and nationalism although the opponents usually attempt to define it as a threat to the nation. The national modifications also depend on what extent people perceive it as a global value. The interconnection of the layers explains how multiculturalism has or has not become a part of the national image. MINIAN, ISAAC* (Universidad Nacional Autónoma de México, minian.economia@gmail.com)
A New Stage In The Fragmentation Of Production: Economic and Social Implications For Development Countries

This paper deals with the implications on production activities, income distribution and institutional changes due to the significant changes taking place in the world. One of the more relevant characteristics of globalization in its productive and commercial aspect is the segmented organization of national and international production. A new feature of the present international division of labor is the participation of countries that opened recently to the world economy. This is the case of large countries such as China, India, countries of Eastern Europe, and Latin American ones, like Brazil, Mexico.

The incorporation of these new actors in the global economic stage gives way to deep concerns, analyses and debates on the evolution of the economic special- ization of developed countries and the industrialization strategies which are open to emerging ones.

Emerging countries have their own concerns regarding segmentation and the new trade model as it implies a great dependence to the MNCs in terms of mar- kets, technology and organisation. The new strategies require adjustments to modify the structure of specialization and reduce production in sectors with price competition. They need institutions and incentives for the creation of knowl- edge and innovation. Thus, this paper deals with the following questions. What institutional arrangements are needed in order to make possible the insertion of emerging countries in knowledge intensive activities with high value added? Are the implications concerning employment the same as those of the international trade of final products? Do the observed tendencies towards a more uneven distri- bution of income, in both developed and developing countries, arise from the interrelation of national labor markets? Does fragmentation increase the negative effects in the distribution of income? Which should be the new economic and social policies and the institutional changes?

GEERTMAN, STEPHANIE* (Institut national de la recherche scientifique, geertman.stephanie@gmail.com)
Youth and Public Space in Hanoi, Vietnam

Since Vietnam began to integrate with the global economy and culture in the mid 1980s, public spaces have been greatly transformed. They have increas- ingly been privatized and commercialized, and become subject to surveillance and rules, mirroring the global trend. However, in Hanoi, a very dense capital with scarce public space, the consequences of this trend are not only a decline in public space, but also an intensification and diversification of use of public space, including increasingly informal activities. These processes resulted in restricted access to the city’s largest public spaces, which are mostly fenced off and for which an entry fee is charged. At the same time, the city witnesses an increasing use of smaller public spaces as squares. They have become heavily populated by urban youth because of their easy access (no fees or fences). The Vietnamese youth that grew up in the new era of globalization are today developing a new urban culture in the squares of Hanoi, manifested in skating, biking, rollerblading and street dancing.

Based on the results of 40 interviews with youth held on two squares in Ha- noi – one located in the inner city, Lenin Square, the other one in a residential peri-urban area, Trung Hoa-Nhan Chinh – and 15 interviews with professional and institutional planners, this paper provides an understanding of the use of public space by urban youth and examines how they negotiate rules and restrictions and deal with other users. The paper aims to give an insight in the role of public space in the context of a new emerging urban youth culture in Vietnam, and in the dichotomy between tightness and looseness of control over public spaces.

Routines, Rhythms and the Mobilisation of Musical Practices

Despite the increasing interest in mobilities and cultural practices, the specific mobilities of musical practices have been sparsely addressed in the scholarly lit- erature. This paper advances the notion of mobilisation of musical practices and its relationship with routines, rhythms and bodily gestures as a way to analyse the transportation of ways of making and experiencing music across networks of relations. The paper is added to explore and discuss this notion. Son jarocha is a musical practice originated in southeast Mexico and is believed to be product of the encounter of African, Nahua and Spanish-Andaluz traditions. It is nowadays reproduced, appropriated and recreated in various loca- tions of Mexico and the United States, partly due to the migratory flows between these two countries. Practitioners have used son jarocha to elaborate discourses of authenticity and preservation of a regional musical heritage; however, it is cur- rently also sustained, informed and reshaped by transnational linkages. I suggest that son jarocha is no longer confined to a bounded and coherent community or ethnic group (namely Mexicans, Jarochos, Mexican-Americans or Chicanos), but constitutes a complex form of socially established activity in which repertoires of bodily gestures, rhythms and routines are reproduced, re-appropriated and recreated across transnational social fields.

MIRANDA, DANIEL* (Faculty of Social Sciences, P. Universidad Católica de Chile, damiranda@gmail.com)
Inequality in Students’ Citizenship Participation Across Countries

Citizenship participation is a key element to sustain and legitimize the democratic system. Although citizens are assumed to have similar rights, the empirical evidence suggests that participation is characteristic of those with higher socioeconomic background (Brady, et. al., 1995). Furthermore, these inequalities would have an intergenerational transmission (Verba, Burns & Schlozman, 2003): children with well-educated parents have the knowledge, skills and attitudes for participate in a more effective way. The main objective of this study is to analyze the individual and contextual (school and country) elements that can mitigate/ strengthen the impact of the social background on student’s citizenship participation, guided by the following questions: To what extent students’ participation levels differ across countries? Are these differences related to contextual factors? Do contextual factors affect the link between students’ background and participation? The central hypothesis in this study is that country contextual economic indicators as well as demographic indicators influence both participation and the impact of background on participation. In particular, we expect that in countries with higher inequality indexes the influence of students’ and school socioeconom- ic background on participation is stronger, reason why we pay special attention to Latin America, the region of the world with the high income inequality worldwide.

The present paper analyzes data from the International Civic and Citizenship Study 2009 (N=140,000, 38 countries). The main object of study is citizen participation, composed by two dimensions: present-future and civil-civic. Whereas civil participation refers to activities that involve interaction with the local communities, civic participation is conceived as related to formal institutions. Preliminary multilevel results show that the association between socioeconomic background and participation is strong and varies across countries, however shows different patterns depending on the kind of participation. Some country context dimension has an effect on the levels of participation. Comparison among regions will be discussed.

Leisure Unites and Strengthens Family Bonds --- a Case Study on Families That Spend Quality Time on Holidays Together

Family will always continue to remain in one form or other as the basic building blocks of society. Today’s world is one that is riddled with competition deadlines stress. With high profile jobs to be managed and education degrees to be attained because women are able to utilize capital productively. Women in the unorganised sector set up small business, that require little capital. These are essentially low productivity undertakings. However they are generally relatively more efficient than the small business set up by men because women are able to utilize capital productively. With the expansion of microfinance facilities credit is also now available to many of these small businesses, enabling the women entrepreneurs to expand their activities. Providing capital to micro businesses, set up by women has emerged as an important means of women’s empowerment. Empowerment of women is another important indicator of development of a nation and an economy.

The Researcher tries to unfold the following objectives:

* To identify the growing problem of gender inequality in cities.
* To identify the need for micro financing.
* How micro financing contribute to support and empowerment.
* How marginalized women’s lives are impacted by micro financing and the importance of replicating this phenomenon.

TEJERINA, BENJÁMIN (Universidad del País Vasco)
Exploring a Model of Inter-Disciplinarity Based on Collective Action Theories

The objective is to develop a theoretical model to analyse and facilitate trans-disciplinary dialog and collaboration between art, science, engineering and humanities (SEAD). The model is inspired in key concepts taken from sociological Theories of Collective Action, which usually are applied to analyse different kinds of collective actions. We propose that these theories can be pertinent to understand the interaction between the main dimensions, agents, resources, contexts and strategies of trans-disciplinary action.

The hypothesis is that interdisciplinarity action can be considered as a form of collective action according to the following definition: Collective action is “the result of a social action (or collective challenge) carried out by the set of formal and informal interactions established between (1) a plurality of individuals, collectives and organized groups and (2) other social and political actors with which they come into conflict. This conflict is triggered by the appropriation (of), participation (in), and transformation of relations of power to achieve social goals, and above all, through the mobilization of certain sectors of society” (Tejerina, 2010).

When collective action forms groups it is crucial to understand how these collective entities are shaped by means of discussions, negotiation and re-negotiation processes and not take their existence for granted. There is a need to develop a typology of different kinds of interdisciplinarity collaboration in which the emphasis is on what structure it are reflected. This paper will focus on the key elements to construct a theoretical model for interdisciplinarity action and intend to contribute to improve the vision on how interdisciplinarity actions change knowledge production and how the aims, motivations, and interactions among interdisciplinarity problems synchronize and find resonance (or not) in an environment of limited resources and changing opportunities in which there are collaborators and opponents that need to dialog. Supported by the National Science Foundation under Grant No. 1142510.

Methodological K/Nots: Designing Research on the Enforcement of Labour Standards

This paper traces methodological considerations in designing a research project which aimed to challenge the enforcement of labour standards in Ontario, Canada. It documents the discussions of a multi-disciplinary team, situated in both universities and community settings, which met over a three year period to develop the project design. Discussion of methodological possibilities often began with “notes”; that is, consensus on methodological approaches the team collectively rejected. Out of these discussions emerged suggestions and approaches through which we navigated dilemmas in research design. Three such “knots” are presented in this paper, specifically: (i) epistemological tensions around mixed methods and the politics of mixing, (ii) the attempt to capture the relationships between policies and their practice enactment, as well as research and its impact (iii) the need to develop interviews which both establish respondents as knowers, and simultaneously focus on that which is unsaid/normalized in life history accounts.

New Gendered Practices in Auxiliary Services in India’s High Tech Firms

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Transnational corporations have radically altered the urban landscape of many cities in India. They are housed in gleaming, well-maintained buildings with round the clock security. Within these workplaces, primarily middle class virtually mobile workers interact with clients and customers from North America, Europe and Australia.

This paper focuses on the workers who “service” India’s high-tech workplaces. Based on interviews with workers who provide security and housekeeping services we trace newly emerging patterns of gendered work. Traditionally female-dominated sectors, such as cleaning, have experienced a large influx of men as a result of the rhetoric of professionalism which is used to promote this work within foreign corporations. Men and women in cleaning make sense of the stigma associated with their jobs (in the context of both gender and caste expectations) while simultaneously stressing the technology-based, standards driven nature of their jobs. Similarly, men and women in security jobs highlight the militaristic precision demanded for their jobs while recognizing the low waged, unstable nature of their work in the context of subcontracting. In making these normative claims, workers define and inscribe new gendered rhetorics of masculinization and feminization. We argue that these rhetorics support the gendered segregations of these occupations, which are poorly paid precarious jobs for primarily male workers.

Institutionalizing Community Participation and Sustainable Irrigation Management: A Case Study from India

Community participation has become a key method in contemporary development projects. Most of the projects have given emphasis on community participation. Learning through experiences for proper operation and maintenance of irrigation systems and supply of irrigation water in adequate quantity according to a farmer’s need on time in a predictable, reliable and equitable manner, decentralised governance of irrigation infrastructure has recently been emphasised as an essential pre-condition. Centre as well as some States in India has adopted various Acts to encourage farmers’ participation in irrigation management. Using anthropological techniques, the present paper attempts to see the villagers’ participation in traditional system of irrigation management among the tribal communities in Kalahandi district of Western Orissa. It also critically examines the intervention of new institutions in irrigation management and their impact on age-old traditional system of community management. It is observed in our study that the collective action or community participation was quite prevalent in the traditional system of irrigation management of tribal communities. The local knowledge, community cohesion, social capitals, traditional practices, values and beliefs were playing the most important roles in the traditional system of management. The government sponsored Water Users’ Association, which is not devised based on the local culture and needs of the local tribal communities, is not able to evoke their participation in the Water Users’ Association. The culture of ignorance, drinking alcohol, feeling marginal, poverty, illiteracy, the improper co-ordination between irrigation officials and beneficiaries, Physical structure of canals, dominance of head reach, higher caste large farmers have influenced the participation of marginal farmers. Moreover, some of the factors like social norms define domestic works and childcare as women’s work and social perceptions discount women’s abilities and opinions restricts women’s participation in WUAs.

Gender Inequality and Education for Women

Due to rapid population growth, poverty and politico-economic reasons, the number of illiterates is increasing continuously in the world. In most society’s women have lower status, no access to education, less food and no health care. Work longer hours, have lowered incomes and little or no access to ownership of property. Normally in developing countries, the proportion of women literates is less than that of literate men.

Girls receive less health care and food than boys thus girls are malnourished. Due to illiteracy they also mostly work in informal sectors where pay levels tend to be lower. Gender specific inequalities are reinforced by unequal access to education. Girls often are simply not sent to school or drop out later, thus increasing the level of illiteracy among women.

Those who live in semi literate families, there is no pressure on women to receive education. Even when the motivation is there, other obstacles are permanently present. Women have to perform so many roles that they do not find enough time for fulltime or even part time educational activities. Fatigue, frequent or early pregnancies, caring for children and families, agricultural and cultural activities and formal or informal employment, are among the many reasons for lack of time. Gender specific inequalities are reinforced by unequal access to education.

Present study will explore the dropout’s girls from schools and how it affects their future life and in turn loss to nation.

Healthy Ageing, Happiness, Quality of Life for Rural Marginalized People and E-Health
"Health for all" is a Millennium Development Goal. Medical Science is developing by leaps and bounds. In India it has brought in more awareness, longevity and a number of other advantages. At the same time availability of health care in India is uneven and unequal. Healthy ageing and living simple but quality life is the right of all. But it is a distant dream.

This paper explores the nature of health care practices in India. While analyzing the issues concerning the health care, it tries to highlight the major concerns affecting health care in India. An attempt is made to provide an alternative to revitalize the provision of public health care infrastructure in the country.

Quality of life through good health is an essential resource that enables individuals, communities and nations to overcome poverty and develop their potential. Healthy ageing is prerequisite for progress and development. This paper will explore the relevance of equitable distribution of health care services to the poor and unreachable. It creates awareness about the new health care concept of telemedicine (E-Health) which can bring the best health care services to people of remote areas. Changing health and morbidity patterns in rural and urban areas are drawing global attention in recent years. Investing in hospitals with good infrastructure may not be much advisable in poor people of rural areas because of the lack of well qualified and experienced medical personnel. Also people find it too costly. The introduction of Information and Communication Technology in healthcare by some hospitals in India in the form of telemedicine is bringing about a revolution in the health care services. Research shows that such activities have tremendously helped the people of rural and remote areas of India who are not able to afford good healthcare facilities.

*San Francisco and The New Economy Of Desire*

Based on extensive research and in an ethnographic incursion of seven months in San Francisco, this paper discusses the relations between new forms of work and leisure, the changing urban occupation, technology development and how they shape the search for love/ex partner. Despite the apparent universality of technology it is intrinsically connected to the culture in which it is created. Because of the concentration of tech industries, start up companies and research centers, San Francisco and its region is a privileged site to explore the interconnections between economic changes, gentrification and the use of mobile digital media. Its local life also allows a clearer comprehension of the rising of a new economy of desire marked by phenomena like the consolidation of the hook up culture, the decadence of monogamy and a rising new morality concerning love and sexual relations. Based on sexuality studies, sources on urban gentrification, and digital media investigations this paper aims to provide an initial analysis about the growing use of apps on mobile devices like smartphones and tablets in search of love and/or sexual partners. One of the main arguments is that this new economy of desire has also created a new sexual ethic and is changing moral patterns about monogamy and partner-ship. *From Agitation to Political Autonomy: Interlinks in Three Movements in a Northern Province of India*

This paper attempts to explore the impending continuities in people’s mobilization by identifying the inter-linksages in three contemporary movements in a northern province (Utralakhand) of India. In an empirical study of the three movements; the movement against felling trees (chikpo i.e. hugging trees), the movement against alcoholism (Sharab-bandli), and the movement for a separate hill state, it has been found that these movements are entwined in terms of issues, leadership, organizations and ideologies. The present paper highlights the role of the middle class in contributing to evolve and articulate the issue/demand of the protection of a customary right of the local populace into a demand of political autonomy and the right to self-development of a regional community. Secondly, the paper focuses on pathways of the growth of specialized organizations from a spectrum of a people’s groupings. Thirdly, the paper explains the nature and role of leadership and intelligentsia in creating and articulating symbols, discourse and narratives of a distinct identity. Furthermore, it also pinpoints the role of middle class youth in dissemination of partial and total ideologies and debates which engender the conditions of mass awakening and thereby broadening the political sphere and rousing people to provide a critique and organize unmitting struggles. The assiduous mass mobilizations by way of intensifying issues/ demands, strengthening organized efforts and upgrading ideological inputs has produced conditions for civil society to collectively engage against state and eventually increasing people’s space i.e. moving a step forward in democratization.

*The New-Petty-Embourgeoisment of Professionals in the Age of Globalization*

Ever expanding global corporate capitalism has all-encompassing influences; processes it is capable of withing itself and within the nation state. Professionals once considered liberal and noble are being transformed into intellectual workers of the corporate sector of all kinds of societies. Professional expertise and intellectual capacities are being utilized for commerce and maximization of profit rather than in the interest of the client and the public. This applies to scientists, doctors and lawyers who work in the function of corporate capital on the one hand and perform the task of labour by producing the surplus. The growth of the knowledge economy world over has created vast opportunities for this kind and concomitant growth of the new middle class consisting professionals. A study of Indian professionals, working in various kinds of corporate sectors operating in different countries, where they are understood under the framework of economic development.

The autonomy of the new middle class is grounded in the specialized professional knowledge; however, they work like intellectual white-collars and able to exercise lesser degree of professional independence. Furthermore, the ascendancy of new technology in all spheres of work organization has brought about a change in formal organizational relations which leads to work autonomy a class character of the new middle class, but at the same time it leads to ‘diskilling’. It has been found that more homogenoeus life chances and life style are on rise among the professional middle class at the global level. It can be argued that they are moving from the old petty bourgeois nature and location to the new petty bourgeois class location as also subjective identity.

*Reconsideration of Isigami Research By Aruga Kizaemon: Based on the Tutiya Takao's Field Notes*

We aim to reexamine both the distinguished monograph “The large family system and the Nago (serf) system at isigami hamlet, Ninohe county, Nanbu district” written by ARUGA Kizaemon in 1939, who is one of the founder of Japanese urban sociology, and some field notes and documents by TUTIYA Takao, who is a professor of economic history and participated in this research as a coworker but withdrew from it in midstream.

In this monograph, the serf system which was present at Isigami was investigated and analyzed in detail. From this monograph, ARUGA was going to form the "Douzoku(cogmate groups) theory", which is the base structure of Japanese society.

However, when we read this monograph, we feel ARUGA did not pay enough attention to the lacquer ware which a head family of isigami produced in those days. It is thought that the production using forestry materials such as the lacquer ware or the porcelain was important for the cash income, because in this area the scale of rice fields was not so large. However, ARUGA does not describe the concrete situation of the lacquer ware production. How was the family system related to the lacquer ware production system?

On examining this question, we discovered some field notes and documents of Isigami research by TUTIYA. In this report, we try to consider the following points in reference to these notebooks and other documents. 1) Why did TUTIYA abandon a joint investigation? Was what the critical issue for him? 2) In this critical issue, what position does the data of the lacquer ware business occupy? 3) Can we see something new when compared to the monograph by ARUGA?

Through these questions, we try to relativize the Douzoku theory and to examine the dispute over the Japanese capitalism.

*Net-Base Theory of Social Capital*

The concept of social capital has been widely accepted; however its theoretical significance in sociology is not clear yet. In this paper, we propose a theoretical device in order to make this analogical concept the key to integrate relation-theory, sociological theories of social relation, social networks, and social structure) in sociology. Social capital is analogy, the aim of which is to capture such mechanism that is similar to capital accumulation process in social structure. Every element of social...
structure and every relation-theory as well should have relation to this concept to some degree. As a rule it inevitably has multiple meanings; on the other hand, it should work as a hub by which various relation-theories are consistently connected to each other. In order to extract this unifying power, we introduce the ‘net-base.’ Net-base is a common attribute that provides a basis of social ties. Thus net-base implies a corresponding socio-centric network that consists of all the members who share it; moreover, configuration of various net-bases implies interrelationship between multiple socio-centric networks. We assume that accumulation of social capital is oriented by socio-centric networks embedded in social structure; then, net-base is an indicator in terms of which we can infer how network mechanisms in social structure condition the accumulation process of social capital. In making the inference we often need to access different type relation-theories, which will provide an opportunity of theory integration. Additionally, net-base is easily measurable by questionnaires on personal networks and official data (Favor, 2017). On the other hand, informal individual experience makes it possible to locate ‘social capital’ in the storage house of relation-theories and to empirically find valid inference in regard to network mechanisms of capital accumulation. More extensively, it should have integrity with the rational choice research program of social capital proposed by Flap and Volker (2004).

MISZTAL, BARBARA* (University of Leicester, bm50@le.ac.uk)
The Prime Function of Intellectuals and New Conditions of Framing Social Imaginary

The paper aims to enrich the existing reflection on the political role of public intellectuals by exploring the impact of the changing nature of the political and intellectual spheres on their potential to connect with an audience. It argues that the significance of public intellectuals’ influence in the political arena is determined by their ability to imprint themselves on a wider social imaginary through their capacity of creating and spreading its versions, with definitions of selfhood and otherness and visions of the past and the future. The paper’s theoretically informed empirical exploration of the intellectuals’ prime function, that is, the elaboration of these symbolic configurations, focuses on the fate of East European intellectuals who assumed the role of the creators of the post-communist identity. These dissident-turned-politicians tried to prove that they could ‘live in truth’, approached politics without any illusion. Yet their most effective performance in politics was not when they were in office but when they were in opposition. Today, East European intellectuals, like their counterparts in modern western democracies, are without much chance to be the practical politicians of tomorrow. The paper argues that the present diminished role of public intellectuals is a result of the new conditions of forming the collective imaginary. Following discussion of these changes as indicative of the new complexities and uncertainties of modern world, the paper concludes that the public intellectuals’ role is being recalibrated through the proliferation of imageries that do not identify a dominant conception of the present and underlying structural transformations and therefore are unable to provide dependable political and cultural interpretations of the present and a reliable guide for knowledge of the future.

MISZTAL, BARBARA* (University of Leicester, bm50@le.ac.uk)
Trust and Modes of Cooperation

The paper asserts that presently – as a result of the growing importance of networks of interconnected relationships, the complexity of the system and the innovative use of knowledge as sources of productivity gains – there is an increasing demand for cooperation. The paper critically evaluates theories that assume that today’s society increasing depends on externally regulated behaviour, so not on trust, to sustain cooperation (Cook et al 2005) and theories that argue modern society deskills people from cooperative competence (Sennett 2012). It illustrates that although today’s society increasingly ensures their solution to the problem of cooperation by setting their foundations in formal rules, yet attempts to act in the spirit of rational formalism are always complemented by the practical importance of various informal, based on trust, non-hierarchical voluntarily negotiated forms of self-coordination. Moreover, many current processes increase the scope for not role-bound and role-obedient conducts and therefore facilitate trust based social encounters. At the same time, these trends, which lead to the loosening of formal hierarchies, de-conventionalisation of organized practices and the rise of the demand for trust, also create favourable conditions for trust abuse. In order to enhance cooperation, in the context of the growing level of education, expanding access to information, new digital technologies and the process of globalization, we should simultaneously rely on the both formal regulations and informal means, such as trust, to secure conditions for socially beneficial exchange. In order to foster a culture of cooperation in which all participants gain a measure of self-respect, autonomy and agency and in which there are neither winners nor losers, we need to search for ways of tuning the formal and informal means supporting social exchange.
issue as a problem of observation by different observers within a functionally
differentiated society. The paper shall discuss the technological, economic and
public opinion issues surrounding Japanese nuclear power, demonstrate how
these are first-order observations of different observing social systems, and how
Japan's political system acts as a second-order observer of these observations. By
understanding politics as a social system which acts to manage system expecta-
tion by introducing binding resolutions upon society (and thus deals in risky deci-
se-making), the limits of Japanese political action when faced with technological
risks on one hand and the desire to maintain Japan's economic and strategic po-
sition on the other will be illustrated. This paper concludes that despite the risks of
and public hostility towards nuclear power, the rationale of Abenomics and
emerging strategic threats in East Asia leave Japan with little choice but to restart
its reactors, a conclusion which is consistent with current Japanese nuclear policy.

The Role of Demographic and Social Factors in the Use of Licit Drugs Among University Students from One University in Kingston

In Jamaica there is a growing concern related to the excessive use of licit drugs
among young people. This is due in part to the rapid social changes that have been
driven by larger global and local factors. These factors may predispose young adults to use licit drugs such as alcohol and tobacco. There has been limited research on the role that demographic and social factors play in the use of licit drugs among university students in Jamaica. Socio-demographic factors appear to have little influence on the use of alcohol and tobacco than others such as stressful life events, the quality of family relationships, and entertainment practices. The results of this study cannot be generalized to the population of university students in Jamaica.

Police-Community Relations in the Capital Cities of the North Eastern States of India: A Study of People's Perception in the Perspective of Community Policing

Apposite police-community relationship in India is still in a nascent stage owing to the asserted attribute of the Indian society. Caste, communal and religious discord acts as a barrier in developing widespread awareness of the common interests of the community. Community policing in India operates at the level of some programmes and not as a philosophy internalized by police officers. The present study seeks to explore the people's perception of police-community relations in the north eastern states of India. The study seeks to evaluate whether the awareness, sensitization and participation of the people in the community policing initiatives by large, global and local factors in the north eastern states of India have been successful in bridging the gap between the police and the public. The north east of India has not aroused much inquisitiveness in academic research and more specifically in so far as governance is concerned. It has been an area shrouded in mystery due to its geographical locations and unique ethnic culture. The tribal culture has suffered discrimination and has been marginalised because of prejudices. The police too has been suffering from this malaise. To restore the trust of the people, it is necessary to appraise the diverse cultures and involve them in community development programmes of which community policing is surely a must. In this regard, the findings of the present study can contribute in analysing the nature of police-public relations and the impediments to stronger police-community interactions in the north east of India.

I Was Not Really Imagining Myself in Terms of Becoming a Big Scholar or Academic... Academic Mothers: Power and Powerlessness in Academia and in Homes

Power and powerlessness are two poles of the continuum of life that Academic mothers inhabit by virtue of simply playing these roles in convergence with each other.

There's is a double edged problem. Traditionally women are denied the thinking and reflecting acumen and are seen as substandard contributors to the academic discourse. Interestingly, mothering is defined in many cultures as a full time responsibility and one that is the most treasured attribute of women. One the one hand, the thinking and emotionality are seen as opposed traits that logically imply academic mothers to be lacking in the basic requisite of mothering, on the other, women's intuitive emotionality is seen as coming in the way of a scientific approach required of women as Academics. This study seeks to understand women's experiences, positive and negative in terms of transgressing these straight jacketed boundaries and combining the role of mothers and academics in India, Brazil and South Africa and seeks to explore how strong traditions of family values in these cultures influence and impact women in the Academia. Some of the questions it seeks to address are as follows:

In what ways do women live these roles which are very demanding and challenging, also satisfying and fulfilling? What are women's obstacles, what are their strengths? How do academic mothers do a different kind of academics, maybe or a different kind of mothering, so as to satisfy their aspirations from these two roles, two lives? What are their tensions, how do they resolve them, what kind of adaptations do women make? What kind of a philosophy on life and work do the women have and how are they functioning in their roles and responsibilities simultaneously? The paper is based on in depth qualitative data that is deeply reflexive and drawn from 15 women Academicians in India.

MITSUI, SAYO* (RC46, s-mitsui@hosei.ac.jp)
Inclusion through Communication: Support Activities for the Learning-Disabled and Autistics in Tama, Tokyo

In Japan people are encouraged to include the disabled in such places as regular workplaces and schools as in some other countries. However, even now, one third of adults with learning disability and autism are placed in facilities for the mentally-handicapped, because many persons concerned do not altogether consent to the idea of inclusion as such, particularly when the learning-disabled and autistics inflict harm on things and people in the community.

This paper is based upon my research conducted in Tama District, the most populated suburban area in Tokyo, to see how those who attend on the learning-disabled and autistics in the district act in response when they are exposed to a variety of such harm in the community. The attendants are apt to assume that harmful doings by the learning-disabled and autistics are connected with what was done by others, including the attendants themselves. Thereupon, they attempt to instil an unprecedented feeling of confidence in the nature of the learning-disabled and autistics with other persons, trying to see what caused each individual with learning disability and autism to turn to be harmful. This attempt leads to their attaching importance to painstaking communication with him/her as a measure to include him/her in the community.

I will discuss this way of dealing with the problem in the light of the concept of double contingency first advocated by Talcott Parsons and later modified by Niklas Luhmann, believing that it can empirically be applied.
On the other hand, Big Data has been criticized for collecting all the action histories of people and reusing these as industrial resources, giving rise to the social movement opposed to excessive surveillance and marketing.

At an intellectual dimension, especially in the field of human science, the appearance of Big Data is expected to enable statistics technology and behavioral science to attain people’s decision making and mechanism of action selection, and help predict people’s behavior objectively. On the other hand, there is a concern that the development of surveillance society or sales promotion may infringe on people’s free will and humanness, and may seriously change the relation between an individual and social society.

These social and intellectual antinomies are homologous to the thought situations of the 1960s in France, the confrontation between objectivism and subjectivism, where Bourdieu elaborated his sociology and the concept of Habitus. Today’s antinomies of information technology could be considered by using Bourdieu’s sociological methods of overcoming dualism.

MIWA, SATOSHI* (Tohoku University, miwa@sed.tohoku.ac.jp) TOMABECHI, NATSUHO (Tohoku University)

The Effects of Child Birth on Marital Satisfaction in Contemporary Japan

Marital satisfaction has been studied in family sociology all over the world. In Japan, many empirical findings regarding the determinants of marital satisfaction have also been accumulated. However, most prior researches in Japan have limitation of data quality because they use cross-sectional datasets or panel datasets without much effort to verify. For example, the relationship between child birth and marital satisfaction by longitudinal analysis would be important for Japan in an era of low birthrates and high rate of unmarried people.

We examine how child birth, years from marriage, amount of time of conversation with spouse, occupational career, and socio economic status affect the levels of marital satisfaction and marital dissatisfaction. These findings indicate the necessity of detailed research on the changing of marital satisfaction and child birth effect could be shown.

Datasets from the National Family Research of Japan, 2008-2012 Panel Study (NFR-P8P12P) are used. Fixed effects regression models are applied to analyze that panel datasets.

Our analytical results show that the expected relationship between child birth and marital satisfaction. As the same with findings by prior research, first child birth has negative effect on marital satisfaction while second or later child birth points are whether or not the finding that first child birth just has an impact on marital satisfaction could be reproduced, and the interaction between gender and child birth effect could be shown.

Differentiating Gender Roles Onstage: An Analysis of the Takarazuka Performance

The Takarazuka Revue Company is a unique musical company in Japan made up of only female performers. The performers are divided into male-role players and female-role players. Many foreign studies have examined the gender dimensions of the company. Adopting a feminist perspective, they have suggested that the Takarazuka performance—especially with regard to the male-role players—reveals new possibilities for challenging traditional gender roles.

My examination, however, will show the opposite side and clarify how gender consciousness is reinforced through Takarazuka’s performances. Most studies on Takarazuka have focused on the male-role players and neglected the female-role players. In fact, the latter is more important from a gender perspective because the popularity of the male-role players can only be achieved based on the discrimination or marginalisation of female roles. In this study, I will analyse certain Takarazuka productions and show how the female-role players are treated onstage and offstage. Given women-only stages, there is an unequal construction of gender.

I will also discuss the audience’s approval of gender hierarchy. The male-role players have far more fans; moreover, their fans seem to wield a kind of power over the female-role players. It should be emphasised that most fans are also women. This preference for the male-role players among female fans is reflected in the staging itself for commercial reasons. It might be said that the Takarazuka stage and its fans contribute to the underpinnings of Japanese society’s gender consciousness.

MIKAWA, SHINICHI* (Soka University, hgwdp816@yahoo.co.jp)

The Formation Process of the “National Orthodoxy” Regime in Contemporary Russia

Through dramatic domestic and foreign changes over the Soviet Union’s extinction, Russia has historically reappeared on the world’s stage. Although contemporary Russia does not have a firm unification principle, a “National Orthodoxy” regime is being formed. The “National Orthodoxy” corresponds to “the state religion” as the core element of national unification. Separate from “the private Orthodoxy” as a live faith, “the public Orthodoxy” emerged as a principle to unify the people. “The National Orthodoxy” regime is the national ideology that the Russian Orthodox Church should unify with the people of Russia and is a unification principle.

The Russian Orthodox Church has been revived in contemporary Russia. While the movement from the bottom known as the private side mixes with the policy from the top known as the government side, “the National Orthodoxy” regime formation process in Russia is promoted. In addition, it is observed that the centralization of the Orthodoxy assumes that the Orthodoxy is a unification principle. And at the same time, the marginalization of the non-Orthodoxy suppresses and removes religion except the Orthodoxy. In this country, dual structure exists separately while the various schools of religion in the private sphere overlap with “the National Orthodoxy” in the public sphere. The contemporary Russian national identity may say to be reconstructed, with the principle of unification known as the “the National Orthodoxy” regime at its core.

MIYAKE, TOSHIHO* (Ca’ Foscari University of Venice, miyake@unive.it)

Doing Occidentalism through Mangaesque Convergence

This paper addresses contemporary Japan-Italy relations in the field of popular culture, which are shaped by the asymmetrical and mutually constitutive process of Occidentalism, Orientalism and self-Orientalism. In spite of the hegemonic and diversified impact of modern Occidentalism (F. Coronil 1996, K. Iwabuchi 2002), there is still a unified field of systematic academic investigation on the ‘West’ as a concept, which has become a kind of blind spot in the Humanities and Social Sciences (H. Helle 2007). Occidentalism still continues to be examined through a body of disconnected works on the one hand, or through methodological civilizationalism, nationalism and culturalism on the other (the West without quotation marks).

In this regard, modern Italy and Japan offer a heuristic alternative to the center/ periphery model conventionally applied to Occidentalism, due to their ambivalent status of sharing a history both as orientalizing imperial powers, but also as orientalized exotic countries. Interestingly, in the last two decades, Italy has become the most loved foreign country in Japan among the whole young and female population (T. Miyake 2010), while Japan has witnessed a similar boom of popularity in Italy, thanks in particular to the country with the highest number of anime series broadcast on television outside Japan (M. Pelliteri 2008).

The diffusion of Japanese popular cultures in contemporary Italy will be investigated firstly, by situating it within the process of Occidentalism, which will be explained through a theoretical perspective inspired by relational, intersectional and positional sociology (M. Emirbayer 1997, P.H. Collins 2000, P. Bourdieu 1984). Secondly, this study will address more specifically the transmedial constellation of Japanese popular cultures (manga, anime, videogames, character design, etc.) by bringing together an aesthetic theory of the mongesque (J. Berndt 2012) and a media theory of convergence culture (H. Jenkins 2006).

MIYAMOTO, NAOMI* (Ritsumeikan University, nmiya@sd5.so-net.ne.jp)

Musicology in Post-War Japan: German Influence and Social Context

Japan is famous for consuming Western classical music. Since the Meiji era, Japan has eagerly imported Western music and produced many musicians, orchestras, and concert halls. Today, the classical market is large, but it is much smaller than the market for popular music. Nevertheless, extensive studies of classical music have been conducted in Japan.

This research will explore Japanese musicology in the late twentieth century through a case study of the department of musicology at the Tokyo University of the Arts, which has the longest tradition of musicology in Japan. Japanese musical research was strongly influenced by German musicology, especially after the war. The primary interest has been in examining scores and historical documents related to the great German composers, such as J.S.
Bach and Beethoven, and analysing their compositions, as opposed to cultural studies or ethnomusicology. One of the most influential German musicologists was Carl Dahlhaus. His book The Idea of Absolute Music was widely read in the Japanese music world. This highlights the preference among Japanese researchers for instrumental music. From another point of view, however, Dahlhaus’s social and ideological background in post-Nazi Germany. As some researchers in the English-speaking world point out, Germany after the war needed to distinguish the ‘great German music’ from the country’s guilt and emphasise the autonomy and purity of music.

This study clarifies how this situation in Germany influenced Japanese research on music and music aesthetics. Further, it analyses the Japanese social context for the reception of Western classical music.

New Urban Childhoods? Globalisation, Socialisation and Urban Informality on Children in Ghana

Globalisation has fuelled rapid and unprecedented levels of urban expansion. The consequences of which for children’s socialisation have been profound. ‘Urbanisation without industrialisation’ is how Davis (2006) terms this process, as economic dislocation, widening inequalities and rapid social change have undermined the capacity of cities to meet the needs of their rapidly growing populations. Many cities and towns no longer equate with the ‘engines of growth and structural transformation’ (UN-HABITAT 2005, 2010) attributed to them by classical urban theory, but instead appear both cause and symptom of lasting economic and social ills to society. It is argued here that one aspect of this may be productively explored through the notion of ‘urban informal childhood’. Focusing specifically upon Ghana, the paper examines the growth of informal ways of working and living in urban areas and considers the implications of this for children and their socialisation.

The Effects of the Ethnic Business Enterprise on a Local Shopping Mall in the Central Tokyo

This paper is concerned with the way the development of global migration has made its impact upon Japan’s urban communities. Nowadays in Japanese metropolitan areas it is common for individuals from various backgrounds to be found living together and in recent years the rate of such interaction has been growing. The major focus in this paper will be upon the Ikebukuro district, one of the major transportation terminals in the central Tokyo. Previously, the district surrounding the City centre was descending into urban decay as this community confronted a serious shortage of appropriate local labour combined with its ageing population. Since the late-1980s, this district has attracted newcomers, among workers in the 20 to 30 age-group, from foreign countries owing to its business development, offering many jobs especially in service industries. Subsequently, and particularly since the 2004-2005, the district has become the subject of media investigation of plans to establish a new ‘Chinatown’. But this is a new kind of ‘Chinatown’. Here we do not see the traditional Chinatown gates that can be seen elsewhere in Japan’s other major Chinatowns, such as Yokohama. Nor do we see the collection of Chinese shops, restaurants and Chinese business development that is evident in selling Chinese cuisine and groceries. Rather, the unique character of this area is ascribed to the numbers of Chinese business development that is evident in selling Chinese cuisine and groceries. This is the place for publishing the many Chinese community papers with considerable circulation, and hence this district has become the location of an ethnic town for commuting compatriots.
be with the child. This role is rooted in 5 structural dimensions that came to light in the course of the qualitative analysis: selectiveness of link choices versus their contingency; balanced mobilisation of the parental networks versus skewed emphasis on one or two SPs or NSPs' network; presence of facilitating figures within the broader family circle; presence of individual networks within the network of friends of the children; and emergence of the degree of embeddedness of close personal relationships within organised collective practices. The study present an analysis of the social capital of the family environment and its role in shaping, defining and fixing the obligations of the non-statutory parent, stemming from a will to consolidate and increase the parental role despite an unfavourable legal context.

The study is based on a sample of twenty couples living in various family configurations, i.e. hetero and homosexual step-families with whom we carried out three successive rounds of in-depth interviews; first with both members of the couple in order to reconstitute their conjugal and parental history; then with the non-statutory parent, to collect information about his or her experience and strategies deployed to consolidate his or her status within the family and in relation with society in general; finally with the couple once again, with the goal of analysing the conjugal and family dynamics.

Inequalities Between Man and Women in Social Work

Inequalities between women and men stem from the assignment of the “care” work to women in Switzerland, in certain fields of social work male professionals are quite numerous, but these disparities are not reduced. They take a different form. My demonstration is based on a study by semi-structured interviews as well as direct observation carried out in various public social work services. The type and intensity with which social workers mobilize their emotional and relational skills within the framework of their professional practices denote two different ways of conceiving the place of “care”. “Care” is a stake in the context of the “active social state”, because social work is now evaluated in terms of its efficiency and productivity. Whilst this management orientation may be viewed positively as a way of heightening the visibility and value afforded to the profession, it may also place an undue emphasis on measurable professional acts versus professional attitudes and relational work- the latter being seen as non-measurable. Professionals are thus faced with the impossible challenge of balancing two alternatives, one being characterized by measurement and focused on efficiency, the other typified by unpredictability and immoderation constitutive of the nature of relational work. Our study shows that when confronted with this dilemma professionals who display typical feminine career patterns take it upon themselves to carry out “bad” care work that takes time and is largely invisible while professionals who exhibit typically male career patterns dispense the “good” care, which can be organized rationally, is measurable, and is thus considered more productive.

Emerging Society and Sociological Discourse in India

The sleepy, slow moving and traditional Indian society which has a historical past of several thousand years is undergoing through a process of rapid social change and unprecedented social transformations. The biggest change has been the emergence and strengthening of democracy. While people in several countries all over the world are still struggling and clamouring for a democratic state and institutions, the Indian citizens are exercising their democratic rights strongly whenever occasion arises. The civil society in turn is also becoming stronger and empowerment of the marginalized sections of society such as women, tribals, dalits and the so called backward classes and communities is also taking place. Indian society moved from three percent “Hindu rate of growth” to eight percent in recent years, which was one of the highest in the world. This unprecedented economic growth not only led to the emergence of a massive middle class but also created lot of confidence in the masses about the capability and the strength of the Indian State as well as their own. However, this sudden economic growth and the consequent all round development while on the one hand raised all round prosperity and riches, it also led to the growth of inequality in society and to the marginalization of certain other groups which until recently did not felt marginalized. It is commonly said that while the rich are becoming richer, the poor are becoming poorer. Such a situation has also led to the increase of corruption in all walks of life. As such Indian sociologists are facing several contradictory situations and are becoming conscious to focus their attention and to study the emerging phenomena and are trying to go beyond to what they have been studying for long and as such moving towards a new sociological discourse.

The Work – Family Interface Among Dutch Navy Personnel and Their Spouses

Perhaps even more than other military personnel, Navy personnel and their families face the challenges of managing frequent and often prolonged family separation. The impact of these military demands on the family and of family factors on the readiness and retention of Navy personnel is scarce and nonexistent among Netherlands military personnel. We collected data among sailing Navy personnel and their spouses at home regarding various work and family experiences. This paper presentation presents the first results of this study.

The Middle Eastern Origins of Dictatorship and Democracy

How do we assess Arab Spring/Occupy almost 3 year later: the hopes for the emergence of popular democracy have now faded or have they? We might note that the traditional dynamics of the rise of democracy or dictatorship in West, contestations/alliances of various groups, esp landlords/peasants did not really apply today. Most of the MENA countries were the legacies of anti-colonial struggles and struggles for independence and democratic self-government, but Enlightenment ideals did not emerge. Contemporary conditions differ, 1) neoliberal globalization has enabled the rise of a transnational capitalist class leading to economic growth-concentrated at the top, 2) there are growing classes and cadres of the discontented, educated precariat youth, (today’s lumpenproletariat and the disenfranchised peasants, wretched of the Earth), but 3) Today most people, even in developed countries have access to ICT/social media. To understand the ‘waves of democracy’ and their receding tides, we need note, the movements took place quite rapidly and following the abdications or implications of dictators, the only groups that were well organized were the various activists from Moslem Brotherhood to Enhada-which were ill equipped to shepherd a modern economy. But without having experience in actual govern-ance as opposed to critics we powerless they did quite poorly. However dismal the short term, and it may get worse, structural factors intersect, with changing subjectivities, embracing openness, equality, empathy and care, portend an optimistic forecast. However undemocratic the post Arab Spring governments may have been/are in practice, they were democratic in form and now there can be no going back to unselected ‘presidents for life’. Dictators now face growing the popular power of numbers of youth that challenge inequality, authoritarianism, cronyism and corruption, articulating new kinds of identities based on dignity, popular power of numbers of youth that challenge inequality, authoritarianism, cronyism and corruption, articulating new kinds of identities based on dignity,

Living Parental Home: Hopes and Constraints of Young People of Immigrant Background in France

Young adults of immigrant background live with their parents longer than do those in the mainstream population (Moguéró, Santelli, 2010). The great majority of young people from non-European immigrant backgrounds are from working class homes and often the poorest and most economically insecure segments of the working class (Frickey & Primon, 2002). Research in recent years has shown that unemployment rates are very high among young people from immigrant backgrounds, especially North African backgrounds. Their disadvantage at the start of their adult lives partly explains why they defer moving out to live independently. Another factor is the cultural and subjective attitudes towards independent living that the young people share with their parents (Hamel et al., 2011).

This paper examines the impact of social and family constraints on whether and when young people of immigrant background leave home. It first reviews the factors that encourage young people to defer their departure. It then looks at their projects for leaving home. While it is recognised that more flexible relations between parents and children make it easier to continue living together, the difficulty of finding a job to support oneself is a major obstacle for young people's entry into adult life. How do those most centrally concerned experience this prolonged family life? Do they want to leave and what prevents them from doing so?

Dysfunctional Schools: A Mentoring Framework

During transformation (1994 onwards), the South African government instituted different interventions within Education as an attempt to redress learner achievement and throughput. However, various researchers and opinion leaders still view education in South Africa as deficient as well as characterised by an increasing prevalence of dysfunctional schooling systems. Therefore, this research aimed to design a generic mentoring framework through which transformation within dysfunctional schooling systems can be facilitated. In order to achieve this, a micro-level analysis of schooling systems, using the functionalist perspective, specifically enabled through the contributions of Parsons and Merton was undertaken. In addition, insight gained from a broad range of literature and other secondary resources on mentoring, best practice and quality education was used to develop a number of premises. Based on these premises, the generic mentoring framework can be adapted to enable a fit-for-purpose mentoring system within a school to allow facilitation of a process of school improvement, an important task in the attempt to transform dysfunctional schooling systems into sustainable, efficient and effective systems.

MOHANTY, ADITYA* (Central University of Bihar, mail.adityamohan@gmail.com)

Informality and the Forging of an Assemblage Urbanism in the Indian City of Patna

Right from the Almirat Patel case of brandung slums as public nuisance (Ghertner 2001) to the conceptualisation of slums as sites of ‘deep democracy’ (Appadurai 2001), critical urban scholarship on the Indian city acknowledges the resilience of ‘informality as a way of life’ (Roy 2004) in the Global South. In another strand, the state is increasingly withdrawing from the hegemonic construct of the aesthetic urban space of the new bourgeoisie persuades urban planners to cleanse slums off the map of neo-liberal cities (Baviskar 2011). In fact in recent times, processes of urbanization in the Global South seem to have engendered shifting patterns of formalization and informalization so much that new logics for claim-making has re-invigorated the very salience of ‘splintering urbanism’ (Graham and Marvin 2001).

It is in this context that the proposed paper shall elucidate upon these issues by presenting a comparative ethnographic vignette of one in situ rehabilitated and another displacement-induced rehabilitated slum site in the Indian city of Patna. The key templates of assessing the resultant assemblages within such an formal/informal labyrinth are: (a) the economy-induced exigencies of relocation and (b) the grading of formal spaces of habitation. Most importantly these exist virtually on the role that circuits of materiality play in re-configuring the very imbrications within the formal vs informal dichotomy. Lastly in so doing, the paper squints at the emergent forms of urban citizenship, by catapulting the understanding of the formal/informal labyrinth from the ‘political economy’ framework to that of, what may otherwise be termed as, an ‘assemblage urbanism’. In other words, the paper probes into the ways in which stratagems for urban renewal array in the right mix of communitarian ethos, historical circumstance and political location, so as to make it possible for agency to effectively mutate itself.

Cultural Capital and Educational Inequality: A Lesson from India

Cultural Capital and educational inequality: a lesson from India

Byasa Moharana, SAI Thakur and Shweta Choube

Education is supposed to play a major role in bridging the gap between the haves and the have-nots through generating cultural capital. In case of third-world countries such as India, the quality of education that is provided to the poor has been grossly inadequate for the purpose. As a result the gap between the elite and the masses is increasing every passing decade. With liberalization of economy in India since 1990s, the state is increasingly withdrawing from welfare sectors, and therefore, the quality of education has suffered. While the elite depend on the private schools, the rural and the urban poor depend on the poor quality of education in government schools. In terms of content of the syllabus and the pedagogical methods adopted to teach them, schooling is not a pleasurable experience for the children coming from disadvantaged backgrounds. Thus they drop out from the school or are poorly qualified to receive higher education.

While this is the dark reality, there is a ray of hope as some of the organizations have stepped in to help tackle the situation primarily through alternative pedagogical methods. The new methods of teaching science and mathematics etc. have helped the poor students to perform better in schools and get motivated for higher education. In fact, the program was adopted by one of the provincial governments in all schools, but later discontinued due to pressure from World Bank.

Analysing field-based data, the authors argue that some of these methods, though not the only solution, are one potent way of providing an enabling platform for generation of cultural capital for the rural and urban poor to compete with the elite students.

**Micro Sociological Analysis of Nationalism: The Fluidity of Ethnic and Civic Identity in the Workplace, Malaysia**

Ethno and civic nationalism are seen as dichotomous and a single track evolution. Studying the essence of nationalism in post colonial society may often show the dichotomous nature of nationalism. However, the forces of development, modernisation and globalisation show that ethno nationalism might prevail but embracing civic behaviour might be the emerging nationalism. In global organisations, ethnicity is often regarded as static cultural container, and ethnic conflict as traditional but unusually stubborn impediment to modernization. Our main initial assumption in this research states that experienced acculturation is one of the main forces to shape identity formation at workplace. Being concurrently a cultural marker and an identity catalyst, taste is powerful vessel for identity shaping in our studied workplace. The findings of this study were based on empirical data collected between 2008 and 2010, via qualitative methods, from a specific empirical field: 5 star international-brand hotels in Kuala Lumpur, Malaysia. There are 4 hotel departments within these luxury international hotels where transfer of knowledge and skills take a particularly direct and tangible form: food and beverage and kitchen. Empirical evidence presented here may qualify “the Hotel” as an “advanced social laboratory” for the study of ethnic relations. Focusing on social actors, this micro-sociological study shows that ethnic identity, belief and behaviour are not static but fluid. A specific organisational model such as “the Hotel” can help us redefine how we see ethnic differences, not as divisive, but as inclusive, when contingent forces at work trigger “cross-cutting ties” along group boundaries. Transforming these inter-ethnic differences in “the Hotel” may lead to the discovery of ethno nationalism embracing civic behaviour in the service industry.

**Refugee Fathers: Negotiating Fatherhood during Resettlement**

The rise of globalization, visible through the increase of international mobility and advances in communication and information technology, has had a significant impact on families. Currently, the analysis of globalization has focused almost exclusively on the macro level impacts, especially on politics and economics. There has been a dearth of research focused on the micro level impacts on globalization within families such as refugee and forcibly displaced families. Moreover, much of the research examining refugee and forcibly displaced families has been predominantly focused on mothers and children, failing to incorporate fathers as important within the family system. This gap within the research is concerning due to the changing trends of family structure around the world. Across the globe, traditional gender roles are being challenged as fathers take a more active role within the family and mothers are working more outside of the household. The scant research that does examine fathers within the context of forced migration has found that fathers hold unique values and beliefs about fatherhood in relation to distinct aspirations they hold for their children, their interactions with their children, as well as how they negotiate their roles within the family in relation to their partner. Furthermore, many of these values and beliefs are put in flux due to post migration challenges, such as unemployment, lack of social supports, racism, social isolation, and role changes. The purpose of this paper is to critically review the existing literature on fatherhood within the context of forced migration and refugee resettlement, to discuss its limitations, and to bring forth the implications to distinct aspirations they hold for their children, their interactions with their children, as well as how they negotiate their roles within the family in relation to their partner. Furthermore, many of these values and beliefs are put in flux due to post migration challenges, such as unemployment, lack of social supports, racism, social isolation, and role changes. The purpose of this paper is to critically review the existing literature on fatherhood within the context of forced migration and refugee resettlement, to discuss its limitations, and to bring forth the implications for future research and policy development.

**Poverty Reduction Effect of the Taxation and Benefit Systems in Finland 1993-2013: Comparing the 1990s Depression and Post 2008 Recession**

The poverty risk rate, measured as 60% of the median income, increased in Finland from 7 to 14 per cent between 1993 and 2008. The poverty risk rate increased even more in the late 1990s, when both benefits and income taxes were cut after the severe depression in early 1990s. The current (post 2008) recession has evoked very different social and fiscal policies compared to the 1990s and the recession has had a little impact on poverty risk rate so far.

We use microsimulation models for evaluating the impact of reforms on the poverty rate. We used the SISU microsimulation model of Statistics Finland. Household disposable incomes are simulated for each year by using the same households but varying the taxation and benefit legislation according to the existing enactment.

The benefit cuts during the 1990s depression had a rather modest impact on poverty risk rates and the impact was nullified during 2000s by series of benefit raises. Even after 2008 there has been several increases in the basic benefits that have reduced the poverty risk rate. Changes in taxation had a considerable larger impact on the poverty reduction effect than changes in benefits. The poverty risk rate would be 2.5 percentage points lower if the tax legislation were the same in 2010 as it was in 1993. However, the level of benefits has decreased compared to the average income level. If the level of benefits would have remained at the same level compared to the average earnings in 2010 as in 1993, the poverty risk rate would be four percentage points lower in 2010.

**The Evolution of Language-in-Education Policy in South Africa**

During the apartheid era, South Africa's language in education policy was ideologically driven by racism and the desire to suppress the indigenous languages of the majority of South Africans. The policy was fiercely resisted and led to unprecedented episodes of collective violence.

In post-apartheid South Africa, the language-in-education policy takes into account the socio-linguistic reality of South Africa's multilingualism and bestows upon the individual the right to choose his or her own language of learning and teaching.

The political climate in South Africa underwent dramatic changes with the unbanning of political organizations in 1990. A new policy, emphasizing multilingualism, evolved. The sociolinguistic reality of multilingualism in South Africa was eventually recognized. The new Constitution of the Republic of South Africa (Act 108 of 1993), which was hammered out and forged by South Africans of all political persuasions, reflects the linguistic diversity of South Africans and recognizes their right to exercise their freedom in choosing their own languages. Constitutional Principle XI provides that “The diversity of language and culture shall be acknowledged and protected, and conditions for their promotion shall be encouraged.”

In the presentation, I intend focusing attention on the apartheid language policy in schools in South Africa. The major thrust of the paper will be devoted to sketching the genesis and evolution of a new language policy for schools in post-apartheid South Africa.

**MOL, ARTHUR** (Wageningen University, arthur.mol@wur.nl)

**The Declining Relevance of the Environmental Nation-State**

The Environmental state is not a formal category, but a substantive one. It came up in the late 1960s/1970s, changed in character since then and we will have to see how long it will last and in what outlook. A historical analysis of the environmental state in the OECD region should distinguish at least five periods: until 1960 (near absence), 1960-1980 (establishment and institutionalization of the environmental state), 1980-1990 (state failure and neoliberalization debates, pressure), 1990s (redefinition and legitimation of environmental states internationally). Many scholars note that since the new Millennium a new period has emerged: the environmental state shows a growing irrelevance.

The claim of weakening environmental state institutions seems to be part of wider concerns of the positions of states versus markets under conditions of globalization. Quite some scholars claim that under neoliberal globalisation the strengthening of the power and influence of (global) market institutions came together with declining roles of political state institutions. But that is not clearly evident: regarding all agendas, as the recent regaining influence of political institutions on global financial institutions. So, is there something special at stake with respect to environmental state institutions? Is the interpretation of the current waning role and position of environmental state authorities correct? If so, how can we explain this decreasing power and position of environmental state authorities and how is it related with our capacities to cope with environmental problems? And how do we normatively assess this decreasing impact of state authorities in mitigating environmental problems? These questions are central in this paper.

MOLITOR, VERENA* (University of Bielefeld, verena.molitor@uni-bielefeld.de)
“Media Diasporas - Diasporic Media” - the Construction of Regional Identities through Radio Programmes

In this paper I will focus on minorities, not often described in the context of media research, namely minorities which result not from movement of people, but from shift of borders, here especially of the German speaking minority in Poland.

The main focus in my research lies on the German-speaking radio shows which are broadcasted in a border region in Poland, near the German and Czech border. The situation of the German media there is very interesting because it is a relatively new phenomenon that there are Radio and TV shows available in German. The minority language media were prohibited in Poland during the socialistic period, and could be introduced during the transformation period first. Not being based on a continuous minority media traditions, these radios are free in creating the understanding of their mission and their belonging to a community of listeners or to construct their listeners.

My research demonstrates how radio programmes represent a region in order to foster a regional or local identity and how they create a picture of the self and the others. The presentation demonstrates, how the contents and composition of the programmes describe boarders and a strong belonging to the own local group as well as to the traditions of the minority.

The presentation demonstrates the integrational function of the radio and simultaneously its function within a diasporic consolidation, and hence focuses on the challenges of minority radio stations with regard on both creating minority identities and belongings and representing a region or a local community.

Cross-National Policies and Relative Household Income of Families with Children By Family Structure and Parental Education

Focusing on an array of European and North American welfare states between 1985 and 2005, we consider how welfare state policies are related to households’ relative incomes, taking into account cross-national and temporal differences in income distributions. We consider work-family policies including public child care and family leave generosity, tax progressivity, family allowance generosity, and levels of wage coordination. We also consider how two of the central factors that may be driving income inequality at the individual or household level - parental educational level and family structure - may be related to a household’s relative income. This research fills a gap in the literature because there are surprisingly few studies that examine inequality by both family structure and education, and when few that examine relative income cross-nationally and longitudinally. Our contributions are to structural vulnerability theory. Structural vulnerability theory aims to consider how the individual, or the household, is structurally located within a context. Our analysis provides a better test of structural vulnerability theory than previous studies because structural vulnerability is operationalized in both the independent (through cross-level interactions) and dependent variables. By creating a dependent variable that standardizes household income relative to societal-level income inequality, we are able to get at the very center of structural vulnerability.

Rethinking the “Exploitation of Self-Realization” Model in Japan

The purpose of this report is to examine the problem of the “exploitation of self-realization.” In recent years, it is said that young people increasingly seek self-realization in their work. Masahiro Abe has analyzed the problem based on his own experience as a provider of motorcycle delivery service, and Yuki Hon- da has called the same problem the “exploitation of “Yarigai” (the word “Yarigai” refers to the pleasure derived from doing decent work). They point out that cer- tain companies exploit young people who seek self-realization out of work. These days, such companies are called “black companies” and have become a serious social problem in Japan.

However, when we examine national statistics and opinion research about work and employment, we find no evidence that the number of young people who seek self-realization in work has increased in the past ten years. Rather, ac-

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
cording to surveys by Japan Productivity Center, more and more company recruits claim that they want to work for a single company and do not want to change jobs. It is thus not accurate to say that young people today seek self-realization above all. This leads to the question of why the discourse of the “expansion of self-realization” has become so popular in Japan even though the number of young people who seek self-realization in their work has not actually increased.

In conclusion, this report will bring to light how excessive globalization and the fluidization of employment have made many people feel unstable and unsure about the future. As a result, many people set a high value on stability and relief, rather than self-realization in work. Instead, national opinion surveys tell us that an increasing number of people seek work that allows them to make a “contribution to society.” This viewpoint compels us to rethink the “expansion of self-realization” model.

Emotions and Collective Identities in Contexts of Exclusion. The Case of the Protest for the Rights of Asylum-Seekers in Germany

Emotions and Collective Identities in Contexts of Exclusion. The Case of the Protest for the Rights of Asylum-Seekers in Germany.

Since the 1980s, social movements’ scholars recognize that emotions and collective identities are crucial for the construction of collective actions (Polletta and Jasper, 2001). The extensive literature on emotions and identities shows how these two dimensions interrelate and influence social movements’ strategies, grievances, emergence, evolution, and impact.

Few authors have analysed these dimensions in contexts in which activists face processes of exclusion. This focus raises however important perspectives (Einhoven, 2006). In particular, it leads us to discuss the strategic dimension of the emotional and identity work done by activists. Moreover, it permits us to relate the analysis of emotions and collective identities with more general contextual dimensions.

In this paper, I propose to follow this perspective through the focus on a network active for the defence of asylum right in Germany: ‘Caravan for the rights of refugees and migrants’. This network mobilizes against what is defined as a context of exclusion: the ‘residence obligation’ law, which strongly restricts the mobility and social inclusion of asylum-seekers and refugees living in Germany. Through the concept of ‘identity construction for emotional benefits’, I will show how activists strategically shape collective identities in order to trigger feelings of emancipation among asylum-seekers and refugees in the course of protest.

Two methods have been used in order to explore the construction and interrelation of emotions and collective identities in this network: an analysis of the documents that it published between 2000 and 2010, and a series of in-depth interviews undertaken in the German pro-asylum movement.

MONFORTE, PIERRÉ* (University of Leicester, pm260@le.ac.uk)
The Symbolic Representation of Borders in the Protest Against ‘Fortress Europe’: The New Geographies and Strategies of the Movements for the Rights of Migrants

In the last two decades, the integration of member-states’ immigration and asylum policies at the European Union level has led to a process of transformation and delocalization of borders. In particular, the external dimension of these policies is related with the diffusion of borders across member-states and third countries territories. Consequently, the binary demarcation between the inside and outside of states’ territories is increasingly blurred, and the specific governmental practices and technologies that were once situated at the edges of territories can now be found within the boundaries of national states.

In this paper, I propose to explore the consequences of these evolutions on the social movements for the rights of migrants in Europe. Focusing on the symbolic dimension of protest events, I argue that the changing nature of European borders has influenced their organization and strategies. In particular, I show that, since the end of the 1990s, these movements have represented and used the border as a symbolic space in which new forms of protest are constructed.

This analysis is based on the selection of a sample of the visual and social media depictions of migration rights in Europe. The evolution of the symbolic dimension of their protest since the end of the 1990s has been investigated through three complementary methods: protest-event analysis, frame analysis, and visual analysis.
moderate work (less than 20 hours a week) can actually help the student to acquire professional and soft (sense of responsibility, independence and self-improvement) skills; 2) is the result of spurious relations the negative effect of work on school success is actually result of differences in preexisting individual orientations and aspirations that make some students more inclined to pursue experience in the labor market than invest in school. This paper aims to analyze, first, the extent to which preexisting aspirations and orientations toward school and work can account for the observed negative effect of work on school performance in Brazil. Second, it examines, among workers, how work intensity is related to these outcomes. In order to achieve these goals, we draw upon data from the National High School Exit Exam (ENEM) and from the Minas Gerais State Household Sample Survey (PAD-MG). These data sets combine information on school outcomes, family background, demographics, labor market situation, and orientations toward school and work. Results show that prior orientations and aspirations can predict actual labor market behavior and school outcomes, and account for part of the effect usually credited to work itself. Research on this issue in developing countries would benefit from incorporating fundamentals from social psychology to understand how inequalities are reproduced through orientations and aspirations.

MONTANARI, ARIANNA* (University of Rome, arianna.montanari@uniroma1.it)
Old and New Models of Federalism in Europe

The contradictory and complex unifying process of European Union does not seem to resemble the classic federal model, such as the United States, but rather refers to the historical legacy from the Holy Roman Empire as argued by Le Rider. The Holy Roman Empire, as it was defined by the Treaty of Peace of Westphalia, was a factor of stability, that while preventing to fall back into bloody wars, created an institutional set of institutions allowed to control the imperial power.

In the same way the tragic experience of the II° World War was at the basis of the European Union as an antidote to possible future nationalists conflicts. The European unification process has been an element of law and peace, representing at the same time an old and new imperial model. According to Khanna European Union is the result of three great empires, the United States, China, and Spain.

Policy Advisors and Scientists’ Mental Models Of Policy-Making: Validating An Elicitation Method

Policy development is characterized by connecting problems with viable and equitable solutions. Individuals’ mental models (cognitive structures that define reasoning, decision-making and behavior) influence how problems are defined and alternative solutions prioritized. We used qualitative (interviews and influence diagrams) and quantitative methods (self-report and repertory grids) to elicit senior policy advisors and scientists’ mental models of the role of scientific evidence in invasive species policy-making. Thematic analysis of the interviews revealed four mental model types which suggested that the majority of scientists supported evidence-based policy (risk management and scientific authority mental models), while policy advisors supported more community-oriented approaches to policy-making (political and community accountability mental models). Network analysis of the influence diagrams supported these results: the majority of policy advisors believed the community was more influential and connected in the policy-making process than evidence; scientists believed evidence was more useful in decision-making. We triangulated these results with the quantitative data, which showed that the vast majority of policy advisors and scientists believed that policies should be at least 70% evidence-based, and all participants considered evidence to be more credible, and most considered it to be more effective, than input from the general community. For the policy advisors, these results contrasted with the qualitative results. Our results suggest that senior policy advisors’ mental models of the policy-making process were influenced by context, social norms and responsibility, revealing a difference between what they say (espoused mental model expressed through qualitative methods) and how they act (in-use mental model expressed through quantitative methods). Using appropriate methods to elicit and share mental models is critical in redressing complex environmental problems.

Framing Matters: Effective Framing and Movement Success

This article examines variations in framing among four different Korean women’s movement campaigns, only two of which succeeded. This study contributes to a more systematic understanding of the impact of framing on legislative outcomes by comparing successful and failed campaigns paired by the same issue area, as well as by overcoming methodological limitations of previous research built on single-case studies. Two cases deal with a family issue: The Abolition Campaign of the Family Headship System (succeeded) and the Revision Campaign of the Healthy Family Act (failed). The other two cases, the Legislative Campaign of the Anti-Sex Trafficking Act (succeeded) and the Revision Campaign for the Special Act on Sexual Violence (failed), are centered on the feminist idea of women’s rights to sexual autonomy. I analyze organizational documents of the Korean Women’s Association United, who led all of these four campaigns, in order to compare the effectiveness of framing in each campaign. My findings suggest that three qualities of frames were common in the successful campaigns. They are articulate frames, empirically credible frames, and de-radicalized frames. The two campaigns with desired outcomes included all three conditions for effective framing while the other two did not. Since these campaigns took place under the same contexts of political opportunity structure and resource mobilization capacity, I argue that my findings highlight the relative significance of framing in movement outcomes.

Position of Labor in US and Japanese Agrifood Cooperatives: A Class Analytic Perspective

Producer cooperatives emerged, in part, as a means of protecting the appropriation of surplus value from labor and often involved long struggles to institutionalize this economic form. Today, producer cooperatives constitute a significant component of the agricultural economies of most developed capitalist economies. Much work on cooperatives focuses on agent/principal problems or the tensions between producers and management in directing/controlling the cooperative. Given the historical origins of producer cooperatives in the concerns of labor, surprisingly less attention has been paid to the role of the labor that ‘adds value’ to agricultural production in cooperative organizations. This paper raises theoretical questions concerning the class position of various actors in cooperative enterprises. We consider this issue in terms of farmer (production and marketing) cooperatives as well as (food) consumer cooperatives. We ask what possible forms of organization might be introduced to cooperatives to make cooperative ‘labor’ more equal members of cooperative enterprises? We briefly examine these questions with respect to the historical development and current condition of cooperatives in the U.S. and Japan and call for a need to examine this question more systematically and comparatively from a larger international sample.

Agricultural Mindsets Across Social Networks in Four African Countries

Smallholder agriculture is coming under increasing pressure to intensify production practices for food security. Conservation agriculture (CA), involving the three principles of (1) minimum soil disturbance, (2) permanent vegetative cover, and (3) rotations or intercropping, has been identified as a sustainable way to do so. However, indigenous knowledge is not sufficient to support a transition
to this new production system; nor is simply the introduction of new agricultural production norms and practices by a transforming agent (extension or NGO). Many observers note that conservation agriculture requires a change of mind-set for smallholder innovation to occur (Hobbs, 2007; Wall, 2007). Successful cases of CA development have also demonstrated the active engagement of a network of producers and their partners throughout the agricultural sector (Coughenour, 2003; Swenson and Moore, 2009). The fundamental agricultural development question is how to bridge the gap between these new mindsets and those of the ‘risk averse’ small farmer that has informed indigenous knowledge for generations. The youth are completing in-depth interviews and taking photographs of elements of their everyday life that they define as particularly “Peruvian” or “Japanese.” Preliminary findings indicate that the youth report a range of identities (Hāfu, Nikkei, Peruvian, Japanese, Japanese+Peruvian), but they struggle to articulate how being Peruvian is a part of their daily lives. Instead, a Peruvian identity is described in terms of expression in birthday cakes, Christmas dinners, and occasionally speaking Spanish. The youth plan to remain in Japan, including obtaining Japanese citizenship, with few diasporic ties to Peru. Several factors are encouraging their assimilation, including the declining presence of co-ethnic migrants, the lack of ethnic institutions in the community, the pressure to assimilate in Japanese schools, and the transition to high school and tertiary education, where immigrant youth attend school with few co-ethics. Nevertheless, this weakening of a diasporic Peruvian identity to symbolic status is surprising, given that Japanese identity is popularly defined as homogeneous and monoethnic. Immigrant and mixed-race people in Japan are also racialized as gaijin (foreigners, outsiders). This has resulted in identity quandaries for many Nikkeijin migrants, including the immigrant parents of the second generation, weakening their sense of belonging in Japan and strengthening their national (Brazilian, Peruvian) or alternate ethnic identities (Nikkei, Okinawan).

MOOREHEAD, ROBERT* (Ritsumeikan University, robertsm@fc.ritsumei.ac.jp)
Am I Japanese, Peruvian, or Both? the Ethnic Identity Formation of Second-Generation Peruvian Youth in Japan

Based on ongoing research, this presentation explores the ethnic identity formation of second-generation Peruvian high-school and college-age youth in Japan. It asks what ties, if any, does the second generation have with the two countries, and what is the nature of those ties? How do the youth interpret what it means to be Japanese and/or Peruvian in Japanese society? What role, if any, do the youth’s parents’ experiences in Japan play in shaping the youth’s ethnic identity? The youth are completing in-depth interviews and taking photographs of elements of their everyday life that they define as particularly “Peruvian” or “Japanese.”

Flourishing Under Pressure: Islamophobia, Resilience and Muslims In Britain

Muslims in Britain encounter Islamophobia in politics, news media and everyday encounters. Since Muslims in Britain are racialised as non-white, the Islamophobia they face often simultaneously merges with racism. In this paper, I consider the effect that the pervasiveness of Islamophobia has on Muslims in Britain. I will argue that Muslims in Britain are often highly sensitive to the presence of Islamophobia and that this phenomenon is a powerful impact on their mental health, including the risk of developing mental health problems. I will also argue that the presence of Islamophobia in Britain is a problem for the mental health of Muslims in Britain. Muslims in Britain are quite determined to assert themselves as British Muslims. Even though they may be labelled as ‘traitors’ by some, British Muslims not only typically declare themselves as loyal citizens, but also show various practical signs of being comfortable reconciling their Muslim identity with life in Britain. Muslims in Britain have shown much resilience towards Islamophobia in the last decade, establishing various groups, campaigns and coalitions which I will argue is proving effective in countering the backlash of Islamophobic rhetoric. Since much needs to be achieved in tackling Islamophobia, the successes that have been made, and the increasing stigma attached to Islamophobia as a term, will be argued to be a sign of a Muslim community that is flourishing under pressure. This research is based on ethnographic encounters with Muslims in Britain between 2008-2013.

MORAGA CUBLILLOS, MARCELA* (Pontifical Catholic University of Chile, memoraga@uc.cl)
The Use of Tobacco and Marijuana with School Bonding: A Longitudinal Analysis from the Perspective of Social Control

Comparative data from Latin American countries in 2006 locates Chile among the countries with the highest rates of tobacco consumption in the last month throughout various ages. Additionally, Chile has shown the highest rate of marijuana consumption within South America during the last decade, and consumption among Chilean students has grown in the last years related to an important decrease in risk perception on marijuana use. This research analyzes the pattern taken by the relation between school bonding and the involvement with behaviors that usually are considered as risky, like substances use, from a perspective based on social control applied specifically in the Chilean context. The previous descriptive analysis shows i) an increasing prevalence of truancy as students get older, ii) a reduction of students happiness in school, iii) a decrease in the importance of good grades, and iv) reducing the importance that students connect to the generation of positive opinion on teachers. Besides, truancy more than duplicates the odds of tobacco and marijuana consumption in the last years. While the students happiness in school, the importance of good grades and the relevance assigned by students in the generation of a good impression on teachers reduce the odds.

The analysis was based on a panel data from a longitudinal study of tobacco, alcohol and drugs throughout school populations, made by The Pontifical Catholic University. They collected information from variables related to family, school, pairs and substance use of Chilean students in seventh grade during 2008 (N=4.387) from townships with a population over 30.000 across the metropolitan region. The students were annually re-interviewed until 2011.

The Effects of Socio-Economic Background and Parental Involvement on Children's Early Cognitive Development: The Case of Chile

Children’s development has been demonstrated to be an important factor in later life outcomes. Studies have also shown that income and parenting style, school, and substance use of Chilean students in seventh grade during 2008 (N=4.387) from townships with a population over 30.000 across the metropolitan region. The students were annually re-interviewed until 2011.
Steven Vertovec will relate the conditions of super-diversity of present-day urban spaces which affect migrants’ positioning in the host society, their social milieus that cross-cut ethnicities, and cross-cultural social relations.

Ewa Morawska will reconsider the premises informing our concepts/theories of immigrant integration challenged by a new phenomenon of the continuous, highly skilled, high-paid out-migration of travellers seeking self-development and exciting adventure.

Thomas Faist will reflect on the role of class, ethnicity, religion, and sexual orientation in structuring inequalities in present-day multicultural societies characterized by cross-cutting identities and practices of their members, and its implications for integration/assimilation theories.

Peter Kivisto will attempt to interconnect three concepts which have informed theories of immigrant integration/assimilation: that of pluralism which informed the earliest (American) conceptualizations, the notion of ethnic options/optional ethnicity which emerged in the second half of the past century, and the recent idea of cosmopolitan canopy.

More than half a century ago, Michael Banton (1958) introduced the idea of cosmopolitan canopy. This idea refers to the complex interplay of different ways of life that converge on a common cultural lexicon. This lexicon is shared by a wide range of people, including those who are not members of the same ethnic group.

More recently, Steven Vertovec (2007) has extended this concept to include the super-diversity of present-day urban spaces. He argues that the super-diversity of urban spaces has led to the development of new forms of social relationships, which are characterized by a combination of multiple identities and practices.

In his paper, Steven Vertovec will discuss the implications of super-diversity for social policy. He will argue that policies aimed at integrating migrants into host societies must take into account the complex interplay of different identities and practices. He will also discuss the role of education in facilitating social integration.

Ewa Morawska will challenge the assumptions of current social theories about migrant integration. She will argue that the current theories do not adequately take into account the complex interplay of different identities and practices. She will propose a new theoretical framework that takes into account the role of education in facilitating social integration.

Thomas Faist will reflect on the role of social inequality in structuring inequalities in present-day multicultural societies. He will argue that social inequality is a central factor in the structuring of multicultural societies. He will also discuss the role of education in facilitating social integration.

Peter Kivisto will attempt to interconnect three concepts which have informed theories of migrant integration/assimilation: that of pluralism which informed the earliest (American) conceptualizations, the notion of ethnic options/optional ethnicity which emerged in the second half of the past century, and the recent idea of cosmopolitan canopy.

The idea of cosmopolitan canopy is based on the idea that people from different cultures and backgrounds can coexist and interact in a way that is mutually beneficial. This is achieved through the development of a shared cultural lexicon that is accessible to all members of the community.

More recently, Steven Vertovec (2007) has extended this concept to include the super-diversity of present-day urban spaces. He argues that the super-diversity of urban spaces has led to the development of new forms of social relationships, which are characterized by a combination of multiple identities and practices.

In his paper, Steven Vertovec will discuss the implications of super-diversity for social policy. The presentation will deal with the topic of ‘world art cities’. The main body of research about global cities has primarily emphasised their function in the global economy (with Frankfurt, London, Zurich, Tokyo and New York as the main examples), thus limiting our understanding of the role of urban spaces as a microcosm and breeding ground for cultural and symbolic activities. This paper highlights the production and creation of a global artistic symbolism through a specific configuration of the artistic milieu, where a high number and a mutual interlinking of artistic activities are crucial for the formation of interactions, networks, exchange and collaboration through which a highly vivid, active and innovative atmosphere can develop. Furthermore, the paper discusses how these activities are embedded into a wider symbolic infrastructure of galleries, music venues, fringe theatres, museums and other spaces of the city. These venues enhance and reinforce certain artistic symbols because through a mutual interlinking of many spaces, they can confirm the innovative character of the work, thereby making them well known outside of their immediate locality. The paper will focus on the development of a theoretical framework that incorporates these different aspects, e.g., art districts, artistic milieu, artistic infrastructure, innovation and global reach.

MORGAN, CHARLIE* (Ohio University, morganc3@ohio.edu)
The Utah Minuteman Project and Symbolic Boundaries: Legal Status, Nationalism, Culture, and Race

The boundaries that groups like the Minutemen construct not only leave a record of how these boundaries were constructed, but also a view of what these boundaries will look like in the future. The literal and symbolic meanings attributed to the U.S.-Mexico border were the motivating factor for Utah citizens to go to the border as Minutemen and to establish the Utah Minuteman Project (UMP). We used fieldnotes and interviews with 20 members of the UMP and found that the importance of the literal border gradually faded as the group expanded to include members who had not gone to the border and shifted to symbolic boundaries within the state of Utah as issues centered on crime and employment. In spite of the unifying identity surrounding the literal and symbolic U.S.-Mexico border, individual members of the UMP constructed symbolic boundaries using the following boundary markers: legal status (illegal vs. legal), nationalism (American vs. un-American), culture (English vs. Spanish), and race (white vs. Latino). The legal status boundary is the most salient boundary among the UMP, and became the key symbolic boundary that all other boundaries are measured against. We found that a wide variety of members conflate legal status with nationalism, culture, and race, whereas other members maintain clear distinctions between these symbolic boundaries. In the end, this calls into question the social boundary that defines the group they are fighting against as the symbolic boundaries are used to create the social boundaries between the average Utah citizen and undocumented immigrants. It is the accumulation of symbolic boundaries that defines the social boundary.

BRADBY, HANNAH (Uppsala University)
Religion, Organ Donation and Disparities in Transplantation Among Minority Ethnic Groups in the UK

With a high rate of end stage renal failure and a low rate of deceased organ donation, unmet need for kidney transplantation among Black and South Asian populations in the UK is disproportionately high, with these groups comprising 26% of the active kidney transplantation waiting list. None of the main religious groups in the UK formally prohibits organ donation. Faith-related barriers have however been linked in previous research with a reluctance to donate organs, although there is little detailed knowledge regarding specific ethnic/faith groups. This study explored influences on donation among minority ethnic groups as part of a wider effort to address the inequality of opportunity to receive transplantation services.

We undertook two qualitative studies: 1) 22 community based focus groups with five ethnic/faith groups: Nigerian (Christian), Caribbean (Christian), Indian (Sikh and Hindu), Bangladeshi (Muslim) and Pakistani (Muslim) origin, and 2) semi-structured interviews with 19 hospital chaplains representing Abrahamic and non-Abrahamic religions.

The centrality and compatibility of religious beliefs with organ donation varied between ethnic/faith groups and generations. Although few regarded organ donation as ‘divine’, religious scriptures there was considerable uncertainty, particularly among older people and people of Muslim faith who commonly required guidance from religious leaders. Hospital chaplains generally accepted the principle of donation. However few had much experience of deceased organ donation and many felt they could not personally endorse this, although variations existed within religious affiliations. Concerns included possible delays to burial, injunctions to modesty, a need for bodily integrity at the time of death, and a belief that the body and soul remain sentient for some time after death. These findings illuminate the gap between formal statements by national religious leaders, the views of chaplains and the lay population. Greater engagement between health professionals and local communities, possibly via chaplains, might address disparities.

World Art Cities: Theoretical Considerations

The presentation will deal with the topic of ‘world art cities’. The main body of research about global cities has primarily emphasised their function in the global economy (with Frankfurt, London, Zurich, Tokyo and New York as the main examples), thus limiting our understanding of the role of urban spaces as a microcosm and breeding ground for cultural and symbolic activities. This paper highlights the production and creation of a global artistic symbolism through a specific configuration of the artistic milieu, where a high number and a mutual interlinking of
as a quasi-colonial part of Empire of Japan from 1879, under the occupation of the US Forces from 1945 to 1972, and the continuous concentration of the military bases until the present. Facing on the situation above, the people in Okinawa have been seeking to relativize their ontology and change themselves through the external connections of social movements over the world.

Capitalism and Militarism after the WW2, lead by the US, had a significant influence not merely to Okinawa, but also East Asian countries, and the subjectification of Asian people. As Sakai Naoki (2008, Kibo to Kenpo, Ibusnna) clarifies that the regime of the Post-WW2 imaginary space of Japanese people was the inter-panic artifact by the US-Japanese homo social “complexity”. In this perspective, the power formation after the WW2 has shifted from the Hegelian understanding of the nation-state with the anthropomorphism to the homo-social complexity among the nation-states. Therefore the (cultural) naturalization of representation of Okinawa, Japan and the US has to be questioned radically from this perspective.

Considering two still dominant streams of the social movement theories, namely the European tradition of Marxism and American tradition of the resource mobilization theories, I want to seek to interweave the theories of the Postcolonialism with them. Postcolonialism here indicates three streams of critiques, cultural studies, internal colonialism critique, and the Orientalism critiques (Shoh, Kokichi, 2006, Shosugiku no Shatori, Toshindo). By doing so, the effect of the colonialism, imperialism and nation-state can be added to those theoretical models in order to trace the ties and networks of the social movements transcending the time and space, cultural differences, and the nation-state borders.

Growing Regional Gaps in Compulsory Education in Japan: A Case Study at an Aging Rural Area

Since the 1990s, mainly in advanced countries, policy makers have been paying increased attention to the terms of school systems that work in partnership with local communities, as the closed nature of the public education system has faced criticism in the context of “neo-liberalism”. Within these global contexts, the Japanese government began prompting a new system of community-based schools named the School Management Council System in 2004. This school council system is extremely different from the existing public school system in that the citizens’ participation into school management is definitely institutionalized.

In contrast, in recent Japan, the advent of an aging society combined with a low birthrate has had a serious impact(4,6),(996,989) on the whole public education system, making it more important to consider the consequences of school policies from the aspect of population problems. Especially, in aging rural areas, the number of abolished schools is rapidly increasing due to depopulation, and there are heated debates on the regional gap in educational opportunities between urban areas and rural areas. Thus, one of the most urgent problems in rural Japan is to design new forms of community-based school systems appropriate to the realities of local residents around the schools in the population-declining areas.

Accordingly, this paper examines, from the perspective of sociology, the problems and the possibilities of community-based school systems by focusing on the collaboration between compulsory schools and the local residents in Japanese aging rural areas, in order to search for the new public education forms open to the local residents.

Understanding Care Giving and Care Taking Experiences throughout the Life Course - a Comparative Study of Older Couples in Denmark and Japan

The systems of providing welfare services interact with older people’s everyday lives in a very complex way. Not only the arrangements of systems as such but also the availability of services influence their possibilities and constraints at an everyday level that roles they play within the social network of their everyday lives. These interactions are long-term changing processes as both the systems and wide-ranging conditions in everyday life are neither static nor immutable. In particular, the present paper draws attention to how older people understand the ways that the welfare systems interact with their everyday lives throughout the life course. Older people’s understandings of their interactions with the welfare systems at the everyday level reflect upon both their past and present experiences and practices, and this reflection results in forming a significant part of their views and expectations for the future.

Guided by life course approach, the analysis focuses on older couples in Denmark and Japan, and explores the following questions: how have older Danish and Japanese couples experienced care giving and care taking over the life course? How do they perceive these experiences? How have older Danish and Japanese couples experienced mutual support and communication with children, grandchildren, and friends? How do their neighbors and friends help them? These interactions are long-term changing processes as both the systems and wide-ranging conditions in everyday life are neither static nor immutable. In particular, the present paper draws attention to how older people understand the ways that the welfare systems interact with their everyday lives throughout the life course. Older people’s understandings of their interactions with the welfare systems at the everyday level reflect upon both their past and present experiences and practices, and this reflection results in forming a significant part of their views and expectations for the future. The empirical core of the analysis is the qualitative data derived from semi-structured in-depth interviews with couples aged 65 and over in Denmark and Japan. The interviews are ongoing and will be concluded by February 2014.

MORRIS, ALDON* (Northwestern University, amorris@northwestern.edu)

W.E.B. Du Bois was one of a handful of scholars of the 20th century who founded the American scientific sociology in the United States; that is, American scientific sociology was founded in a segregated black university by a black man. This paper disconfirms the accepted wisdom that American scientific sociology was founded solely by white sociologists in elite white universities. This paper will explore the methods Du Bois pioneered and his novel theorizing that laid the foundations for subsequent sociological analyses. The paper will offer an account of the dynamic forces that generate scientific schools of thought and that undergirded knowledge production in social sciences during Du Bois’ era.

Negotiating Safety in Relationships: Children’s Agency in the Context of Family Violence

This paper reports on the findings of qualitative research undertaken in Australia with children (n = 23) and mothers (n = 18) from a primary care population. The participants had all experienced family violence perpetrated by the father or step-father and were recruited from medical centres and a larger family violence study of women from primary care. The methods included in-depth interviews and focus groups; informed by a theoretical framework of hermeneutic phenomenology, ethics of care and dialogical ethics.

The aim of the study was to hear children’s voices in primary care research about children’s safety and resilience in the context of family violence. The research questions sought to understand children and mothers’ perspectives on children’s safety and resilience; establish how children’s safety is realised in the context of family violence and determine how children’s voices inform a primary care response.
The main findings revealed that children needed to negotiate their safety in the context of family violence and post separation. Key to this was whether the child had agency to negotiate their safety; which was dependent on four interrelated factors. These factors will be presented to explain the ‘Model of Children’s Agency’. Informed by the model, implications for policy, practice and further research will be considered.

MORRIS, BRIGIT* (University of New South Wales, brigitmorrison@yahoo.com.au)

Moving Through Space

Spaces in urban geography are rich with symbols and signs related to national as well as personal narratives. Artists who construct public art installations in sites symbolizing hegemonic power and cultural identities are able to rework or reclaim the meanings attached to these spaces.

I am interested in artists who engage in performative, site-specific installations that aim to recreate historical or contemporary political events in a symbolic way. I will argue that by reframing the meaning of significant sites using artistic devices of affect and temporality, installation artists are in a unique position to critically analyze political and social questions which ‘trouble’ our society.

I will examine two case studies. The first is Gregory Schneider’s 2007 work, 21 Beach Cells. This installation involved a series of interactive metal prison cages, symbolizing Guantanamo Bay. The installation was placed on Bondi Beach in Sydney. At the time, the Australian government supported the US government’s actions of indefinitely detaining so-called enemy non-combatants. Bondi Beach symbolizes the free and egalitarian spirit of Australian national identity – a jarring action of indefinitely detaining so-called enemy non-combatants. Bondi Beach references the free and egalitarian spirit of Australian national identity – a jarring action of indefinitely detaining so-called enemy non-combatants.

Salcedo and Schneider reclaim these meaningful sites to create affect between artist and viewer, between citizen and nation. The implicit value of these locations facilitates a conversational or reflexive relationship with the viewer where the past is effectively brought into the present. This dialogical relationship makes the viewer complicit in both the artwork and the subject matter it addresses. Therein lies the transformative power of the artwork.

MORRISON, IAN A* (The American University in Cairo, imorrison@aucegypt.edu)

Secularism and the Foundations of Pluralism: The Crisis of Reasonable Accommodation in Québec

In recent decades Québec, like many other Western states, has been a site of debate regarding the limits of pluralism and freedom of religion. In Québec, these debates emerged within the context of a restructuring of the nature of nation and citizenship. Since the early 1990s, the Québec state has undertaken a project of the construction of a citoyenneté québécoise, seen as the culmination of a transformation of the boundaries of the Québec nation that began with the Quiet Revolution of the 1960s, marked by the shift from an ethnic to a civic conception of the nation. The de-ethnicisation and secularisation of national identity in Québec is presented as an expansion of the boundaries of the nation and an opening towards otherness.

Yet, contemporary Québec has also been described as the site of a ‘crisis’ related to the measures adopted to promote this conception of such a nation. Of particular focus have been the practices of ‘reasonable accommodation’ for religious practices. Opposition to such measures are made on the basis of two arguments. The first suggests the need to narrow the scope of pluralism in order to protect universal values, and secularism itself. As such, it posits the paradoxical need to limit pluralism in order to protect pluralism. In doing so, it appeals to the need to protect the universal (as host body) from the particular (as contaminant). The second argues the need to protect ‘national values’ from the dilutive and assimilatory forces of relativism and multiculturalism. As such, it demands protection of the particular (as host body) from the universal (as contaminant).

The paper examines the manner in which these two seemingly oppositional arguments can be present within a common discourse that problematizes the presence of certain religious subjects and practices within the public sphere in Québec.

MORROR, VIRGINIA* (University of Oxford, virginia.morrow@geh.ox.ac.uk)

Modern Morality? Children and Social Change in Vietnam

This paper explores the effects of ‘modernity’ on children’s lives and on their aspirations in Vietnam. It draws on qualitative research undertaken with children and their parents as part of Young Lives, a longitudinal study of children growing up in four developing countries (www.younglives.org.uk). The paper explores how social, political and economic changes are affecting social realities, moral norms and expectations in relation to intergenerational relationships between grandparents, parents, and children. For example, there is clearly a rapid process of marketization taking place, with consumer durables like mobile phones and the internet becoming widely available. At the same time children describe clearly the centrality of family relationships, and especially reciprocity in the form of caring for parents, siblings, grandparents, and an expectation of filial duty by parents. Thus, three sets of values are colliding, (a) there is a combination of Confucian notions of filial duty combined with Communist values relating to the importance of reciprocity in relationships, yet (b) there is State-led concern about ‘social evils’ affecting children and youth by parents (while these are nearly universal, they seem particularly marked in Vietnam) and (c) new technologies that are perceived bringing risks to children and young people. Children themselves are aware of shifting moralities. They perceive there to be corruption among adults – some teachers, employers and others express concern about unfairness and injustice. The paper explores whether there are ‘new’ moralities emerging, and describes how parents and children are managing these processes.

MORROR, VIRGINIA* (University of Oxford, virginia.morrow@geh.ox.ac.uk)

‘I have to help and improve their Life’: Young People’s ‘transitions’ in Ethiopia and Andhra Pradesh, India

This paper explores the lives of young people growing up in Andhra Pradesh, India, and Ethiopia, drawing on data from Young Lives, a longitudinal study of children growing up in four developing countries (www.younglives.org.uk). The paper explores the ways in which boundaries between childhood, youth and adulthood are blurred, by exploring young people’s past and present experiences of school and work, and their anticipated futures. The paper uses descriptive statistics to show trends in leaving school and then draws on qualitative longitudinal research from a series of case studies to explore children’s experiences of leaving school and why. The paper argues that many of the assumptions underlying international policy discourse that conceptualise early school leaving as ‘dropping out’) fail to engage with the realities of young people’s lives in rural areas that experience numerous economic and environmental ‘shocks’. Gender, poverty, and other social differences combine with a strong sense of obligation to parents and wider family to constrain young people’s choices and trajectories. The paper questions the utility of the concept of ‘transition’ and suggest that it must be used critically and not simply imposed on contexts that are in a process of rapid social change and economic development, but that are generating powerful inequalities that mean that some groups of young people are ‘left behind’.

Beyond the Respondent-Interviewer Interaction: Exploring the Performance of a Self-Administered Life-History Calendar

Life-history calendar (LHC) methods have been increasingly used in surveys in the last two decades. There is indeed a general consensus on the fact that the highly structured but flexible approach of the LHC facilitates the memory of past events. Respondent’s past experiences provide a context for retrieval of autobiographical memories and they are used as anchoring points and time landmarks for respondents. The paper argues that the LHC methods improve accuracy of retrospective data even for different populations and cultures with a non-linear representation of time, the reasons for this performance (i.e., retrieval processes) are less clear. The literature suggest that the LHC performance is amplified by the interviewer-respondent interaction via conversational and flexible interviewing, either in CATI or CAPI. However, studies using self-administered LHC on youth sex behavior argued that LHC can be used also used in self-administered modes reducing social desirability bias.

In this paper we present data from two surveys conducted in Switzerland (the Swiss Household Panel pilot study and the Family tMes study conducted between 2011 and 2013. Results show that self-administered LHC could produce equally valid data in terms of completeness (measured with five indicators: number of residential moves, number of intimate partners, number of children, number of jobs, and number of years of unemployment) than interviewer-respondent interactive interviewing. Moreover, self-administered LHC transmitted by mail data had even...
higher levels of internal coherence than self-administered LHC completed during face-to-face interviews. We argue that improvements in the layout (i.e., graphical visualization) of the LHC, as well as an increasing popularity of life calendar models in social media, may have increased in recent years the accuracy and feasibility of self-administered LHC for data collection.

Three Generational Continuity in Achievement Orientations: New Evidence From The U.S. Youth Development Study

Growing inequality in families has prompted great interest in the intergenerational transmission of advantage. Guided by three complementary theoretical perspectives, we examine the continuity of achievement orientations across three generations. The first posits that contemporaneous parental orientations and attainments influence children. Children of more highly educated parents receive more parental investment, and observe more successful parental behaviors. The second approach posits that prior parental pathways matter for children. Earlier parental behavior may also provide a model of more or less successful action, and impacts children indirectly through parental attainments. A third “selection model” posits that parents’ stable traits, observed during adolescence, influence parents’ pathways, their attainments, and children’s orientations.

The Youth Development Study followed a cohort of over 1,000 Generation 2 youth from age 14-15 (1988) to age 37-38 (2011), and also surveyed their G1 parents’ pathways (during G2’s adolescence) and 422 of their G3 children age11-21 (2009-2011). An SEM model, based on 384 G1, G2, and G3 triads, provides a three-generational assessment of the transmission of achievement orientations. Confirming the first perspective, contemporaneous parental educational expectations were strong predictors of both G2’s and G3’s orientations toward academic achievement during adolescence (self-perceptions as intelligent, a good reader, and having high ability in school). Providing additional support for the second approach, a high agency G2 parental pathway (with high aspirations, career certainty and active job search, age 18-30) strongly influenced G2’s educational attainment and entirely mediated the effects of G1’s expectations and G2’s academic orientation in adolescence on G2’s achievement. Finally, supporting the third perspective, G2’s academic orientation during adolescence significantly predicted G2’s expectation for the G3 child more than 20 years later. The G2 parent’s orientation, measured during adolescence, thus indirectly influenced G3 orientations. This analysis supports Conger and Danas’ (2007) integrative model of intergenerational transmission, including both selection and socialization processes.

What’s Another Word for “Ruling Relations”?: Translating IE in Medicine

This presentation highlights the work of using institutional ethnography (IE) in applied health research. I illustrate how my IE study on fetal alcohol spectrum disorder (FASD) both facilitated and complicated the process of knowledge translation (KT). I will discuss this in the context of KT with diverse audiences including community stakeholders, government policy and decision makers, and academics in medicine. It is the work of research to contain and limit the amount of data to collect and analyze in order to keep a study focused. Applied health research also commonly includes KT plans to strategically engage target audiences with meaningful research findings. As an applied health researcher, I considered each primary audience as I decided how and what data to analyze as well as how the findings would be disseminated.

The purpose of this IE study was to examine how institutional supports and services are activated and coordinated around youth with an FASD diagnosis. My study included in two Canadian communities – one remote Aboriginal community and the other an urban provincial capital. In each setting, three distinct teams were interviewed: 1) caregivers of children with an FASD diagnosis; 2) front line workers from healthcare, child welfare, education and social services with direct involvement in the lives of children with an FASD diagnosis; and 3) policy and decision makers who manage the interview frontline staff. In addition to interview, I collected and analyzed clinical and service-related forms, training manuals, policies and assessments. This large volume of data required focus and prioritization in order to produce results that meet the expectations of my three main target audiences: community, government, and academics. I argue that the utility of IE in applied research is only as strong as the ability of the researcher to “speak IE” in a language that can be understood.
These attempts at physical regeneration have coincided with efforts to enhance the commercialisation of space and the destruction of public housing. Reinvestment and regeneration processes in Johannesburg have been driven by a desire to attract foreign investment, and to compete with other cities in the Global South. The commercialisation of space and the destruction of public housing have been accompanied by a process of gentrification, which has led to the displacement of low-income and social housing residents.

Strategic Collaboration As Means and End: Views from Members of Swedish Mental Health Strategic Collaboration Councils

Mental health care professionals are under pressure – both from their own organisations and professions and from external legislation and policy – to collaborate. This article reports the views of collaboration held by influential mental health care professionals who participated in strategic collaboration councils. Semi-structured interviews were conducted with 31 participants in three groups: personal ombudsmen and managers of social care and health care. The participants presented generally homogeneous opinions of collaboration, although they differed in outlook: the personal ombudsmen maintained an operational perspective, while the care managers had a more strategic focus. All participants saw collaboration as necessary to a functioning organisation. They joined the collaboration councils expecting to form interprofessional relations that would lead to greater efficiency, better knowledge of other organisations, and professional support. The participants' adherence to a positive norm, together with further institutional pressures, contributed to homogeneity in the participants' responses. All guardians of their points of view while collaborating in networks adhering to a social norm. Strategic collaboration was thus both means and end.

Communities in Transition: Security, Policing, Appropriation and the Formation of Community in Inner-City Johannesburg

Johannesburg’s inner-city was once an area notorious for crime, grime and urban and social decay. It has been described by academics as a ‘vortex of belonging’ (Gott and Simone 2003) and a hyper-ghetto, home to prostitutes, drug dealers, criminality and violence (Murphy & 2011). In recent years, however, there have been considerable efforts to regenerate the urban environment, particularly through the provision of low-income and social housing. These attempts at physical regeneration have coincided with efforts to enhance security in the area as well as foster a sense of community. This presentation examines the relationship between urban regeneration and security as well as the practices and methods utilised to achieve these aims. Of particular interest is the relationship between physical and social space and how this structures social relationships and notions of belonging. Furthermore, it explores the ways in which community is formed in a context of urban transition, insecurity and hyper-diversity. Utilising the framework developed by Henri Lefebvre (1991), it examines the perspectives of residents living in the inner-city and the ways in which they are able or prevented from exercising their spatial imaginations and abilities. Personal focus is on residents living in social and low-income housing’s perspectives about what community, security, appropriation and belonging mean in a situation of urban transition, social decay and insecurity, as well as what the limits of community are in these conditions and how these boundaries are drawn and reproduced.

Neoliberal Reconstruction or Urban Regeneration? the Private Sector and the Provision of Low-Income and Social Housing in Inner-City Johannesburg

In academic literature, urban regeneration is more often than not treated as a code-word for gentrification or dismissed as a term developers use to sugar-coat the commercialisation of space and the destruction of public housing. Reinvestment in urban spaces and public housing is seen as part of a global strategy of capital and both a cause and symptom of the spread of neoliberal politics and practices around the world (Smith 2002). Using the case of inner-city Johannesburg and the provision of low-income and social housing in the area, this presentation argues that more nuanced and context-sensitive approaches are required. In Johannesburg, the provision of low-income housing has been led by the private sector, who have also taken the lead in the regeneration of the city. However, this has not resulted in a solely revanchist or exclusionary city being created, but has had the contradictory effects of fostering increased social cohesion and meaningful regeneration, whilst simultaneously increasing the cost of land and housing in the area. Utilising Pierre Bourdieu’s notions of field, capital and habitus, this presentation explores the multiple factors which have shaped the reinvestment and regeneration process in Johannesburg and shows how a diversity of outcomes and imperatives are possible and in fact present, even in a context shaped by neoliberal approaches to city-building and housing provision.

Cities are part of broader social contexts or milieus and are therefore shaped by competing fields and forms of capital. This presentation highlights the multiple impulses and concerns which have shaped housing provision and reinvestment in Johannesburg’s inner-city and discusses what the effects of these have been on communities living in the area and invites scholars, whilst still remaining critical, to adopt new, more nuanced and context sensitive approaches to questions about urban renewal, particularly in the Global South.

Youth Policy in Ireland and India: A Comparative Study

Youth Policy in Ireland and India: A Comparative Study

Contemporary policy discourse about youth is frequently trapped in the dichotomous paradigm of simplistically portraying them as either ‘a problem’ or a ‘human resource’. This broadly applies both in Europe and in Asia. However, while significant comparative research on youth, youth work and youth policies has been conducted within Europe, there has been relatively little research which compares the European and Asian contexts, and there is none to date specifically comparing Ireland and India. Based on recently completed PhD research, this paper explores and compares the youth policies of Ireland and India through the analytical lens of Gough’s (2008) “five Is”: industrialization, institutions, research, industries and international environment. It examines the major ‘factors and actors’ that have influenced the historical development of youth policies in both countries and situates these in their broader regional contexts.

There are many obvious differences between India and Ireland in terms of location, economy, culture(s) and other economic, social and political factors. There are also significant connections between them, stemming not least from their common colonial experiences, meaning there are important parallels in political culture and public administration.

The voluntary sector and its relationship with government agencies hugely influences policy making in both countries (the principle of ‘subsidarity’ in Ireland can be fruitfully compared with that of ‘Panchayati Raj’ in India). In India, however, there is no forum for NGOs and the government to come together whereas ‘social partnership’ has been central to Irish social policy. In both countries most youth have little or no opportunity to participate in making decisions that affect their lives and are not aware of their own rights, or the policies and programmes that affect them. New policy initiatives are underway in both countries, however, which hold out the possibility of redressing this.

Gender Differences in Reactions to Coming out: The Reaction of Mothers of Non-Heterosexual Children and Their Roles

Gender Differences in Reactions to Coming out: The Reaction of Mothers of Non-Heterosexual Children and Their Roles

In a heteronormative society, disclosing one’s non-heterosexuality to others can be very stressful, but it can be heightened considerably when coming out to parents. Parents to whom the child has disclosed their non-heterosexuality also struggle with feelings of inability to accept their own non-heterosexual child. Coming out thus causes a “family crisis” (Williamson 1998), because family members have to reconstruct a family model which was previously based on heterosexuality. Yet what does “family crisis” mean to the parents of a non-heterosexual child?

Previous research on parents’ reactions to coming out in the West have shown that mothers and fathers react differently; mothers are found out to be more likely to react positively, and feel less guilt and responsibility than fathers (Ben-Ari 1995). Moreover a parent tends to be more accepting of a non-heterosexual child of the same gender than that of the opposite gender (Ibid). However, what are the reasons for these differences? Moreover, can the same be observed in the case of Japan?

This paper explores how gender influences a parent’s reaction to coming out in a variety of social settings. In particular, it discusses how mothers assume gender roles in coping with their children’s disclosure of non-heterosexuality. Data gathered since December 2012 from interviews with family members of non-heterosexuals and observation research at a support group for family members. The
Contentious Politics and the Global South

Referring to new challenges in the study of contemporary social movements, Tarrow claims that “To the extent to which we have allowed the examples of civil Western movements from 1960s to shape our models, we will not be able to understand them” (2011). The author refers to ethnic wars and terrorist movements, in particular Islamist groups; other movements from the Global South rarely appear as empirical applications of the framework Contentious Politics, but never in the role of challenging it to revisions like Islamists. The thesis of a movement society in two trends, a more contained in the “West”, and a more transgressive in the “Rest”, leaves out many issues around which movements in the Latin America are built.

Sociologists and Believers: Alliances and Protectorates in Brazil

In Brazil, probably more so than in other countries, sociologists often hold the Comtean opinion that Sociology stands to religion as the positive stands to the theological stage. As secularization theory has been called, the “holiness” of social scientists and cultists, the former often imposing on the latter a kind and subtle theoretical protectorate. Such alliances also exist, in greater or lesser degree, with the Catholic Church (especially with the sectors linked to the theology of liberation) and with the historical Protestant churches. Highly emblematic of this tendency are the graduate programs in “sciences of religion” that have sprouted all over the country and Facebook like sites through which social scientists (who often claim to be believers) and believers (who are at times social scientists) engage in dialogue. Contrarily, there is in the country a process of open, so far only verbal, warfare between social scientists (again of the highest reputation) and the Pentecostal and Afro-brazilian community as authoritarian and intolerant of all forms of individual diversity.

fighting GM Crops in Argentina and Brazil: Global Constraints, National Opportunities?

When one looks at current figures, in which Brazil and Argentina are, respectively, the second and third world’s biggest producers of genetically modified crops (GM crops of GMOs), the social movement struggles that surrounded and keep revolving around the issue are difficult to visualize. However, the adoption of crops (GM crops of GMOs), the social movement struggles that surrounded and keep revolving around the issue are difficult to visualize. The Challenge of Sociology of Language: Living in Society, Living with Words

Nowadays, «sociology of language» is explicitly identified in the research groups within the I.S.A. although the sociological associations all over the world don’t seem to have equivalents at their national extent. Alongside, this domain of sociology has an uncertain situation within the university systems: few scholar jobs and chairs, research programmes, articles and books are clearly dedicated to «sociology of language». The cause is probably that it is difficult for sociologists to win language even though by definition, linguistics is a specific disciplinary field aimed at investigate language. Moreover, linguists have developed their general framework from the canonics principles of Saussure for whom language has to be studied beyond the social context; it is significant that a scholar as influential as Thomsky still follows the «saussurean dichotomy» and considers speakers as basically identical and interchangeable. For their part, sociologists usually keep language questions out from their study domain. Thus, they forget that society is spoken by the individuals and with all the words they have learnt by living and doing; moreover, since Austin, we know that it is often as long as certain things are told that they can perform, change the reality. So, knowing that each science tends to consider its object of study as its exclusive preserve, sociology of language is an academic challenge. However, it is worth the effort because social
realities is always something we reach with language (that is socially constructed) – how could we do things to each other without words? Do we need an autonomous sociology of language indeed? Or should we try to persuade the sociologists that all sociology is inevitably a sociology of language (in the same way, for Labov all linguistics is necessarily social)?

**Homogenous or Not?**

"Homogenous or Not? Content Analysis of Japanese Anti-Nuclear Editorials, 1954-1970"

Abstract: This research contributes to the debate on Japanese media homogeneity by demonstrating that anti-nuclear editorials exhibit more diversity than homogeneity overall for the period from 1954-1970. Several observers have noted that Japan’s views on anti-nuclear strategy were informally diverse. Anti-nuclear narratives that emerge in anti-nuclear editorials differ from those in pro-nuclear editorials, and that Japanese news coverage of the anniversaries of the bombings of Hiroshima and Nagasaki is ritualistic and avoids controversy. This research uses content analysis of the editorial sections of five daily newspapers from 1954-1970 in the Asahi, Yomiuri, Nikkei and Sankei newspapers and coded for indicators of progressive-conservative and universalist-particularist continua, with the Asahi the most progressive and universalistic of the four publications surveyed. While relative unanimity of opposition to nuclear arms is found, the analysis indicates that nuclear arms were opposed for a variety of motives which could be characterized as either universalist or particularistic. Further differentiation is observed on contextual issue positions such as aid for hibakusha, United States accountability in the bombings, and the influence of the domestic communist and socialist parties on the anti-nuclear movement.

**The Efficiency of Exclusion: Gated Communities, Informality and Social Mobilization in Mexico City**

This paper analyzes the double-edged meaning of informality at the intersection of urban inequalities, landed property, and power in urban Latin America. Our study of the Zona Poniente in the fragmented western periphery of Mexico City allows us to identify situations of social interaction in which the narrative use of informality is central to social and cultural distinction. We find that the standard story – an explicitly disorganizing construction – of urban informality exercised by marginalized urban poor people must be complemented by an analysis of upper class elite practices, particularly in private-sector real estate development. The real estate development industry occupies a critical place, materially and symbolically, in structuring the urbanization in which wealthy profit interests employ the attribute of informality to stave off "Third World" settlements and enable a "First World" lifestyle in gated communities. In the discourses and practices of neighborhood organizations, public planning authorities and real estate developers the referent "informality" takes on defensive and exclusionary functions and serves as referent to social mobilization against the perceived informality of the local elite.

Fieldwork in this peripheral, fragmented and contrasting area provides insights into the link between informality and confinement on various levels. Firstly, the self-enclosing of the urban elite in "gated communities" is a result of informal modes of negotiation between public authorities, neighborhood organizations and real estate developers. Secondly, the spread of such First-World urbanism has negative effects on social and physical mobility of the dis-enfranchised urban population living in deprived islands surrounded by the defensive walls of gated communities. Thirdly, our fieldwork allowed us to identify diverse types of interaction between these private urban developments and surrounding marginalized settlements. These interactions, ranging from conflict to alliances, suggest to question the hypothesis of a generalized confinement.

**Network Analysis For Discovering Political Conflict In Standardized Interviews**

This paper proposes a new usage of standardized interview data: instead of studying contingency tables of individual attributes, the author suggests to analyze the hidden, implicit network structures among the respondents of these interviews. The proposed analysis is based on the idea of virtual encounters between survey-respondents, which allows to identify relations of conflict or consensus between dyads of persons. The relational information gathered this way can easily be complemented with additional survey-data about the social attributes and the group-membership of the persons representing the nodes of the analyzed network. Hence it becomes possible to calculate inter-group conflict of different status-groups and to compare it with their intra-group conflict. Similarly, by looking for isomorphic coincidences of different types of network relations, this kind of analysis may also be used to identify reinforcing social cleavages.

A standard survey has generally about 1 to 2 thousand interviews, which corresponds to a universe of 0.5 to 2 million possible dyads of persons. Hence, the analysis of virtual network structures requires to focus on samples drawn from this universe. Consequently, this paper also describes the construction of such samples by presenting an exemplary analysis of the European Values Study (EVS) 2008. Among others, this survey contains a political self-evaluation on a left-right scale, which is used in the example for the construction of relational arcs of conflict and consensus: dyads of persons with both a leftist or both a rightist political orientation linked by a relation of political consensus. Other dyads with very different positions on the left-right continuum are similarly linked by relations representing political conflict. Hence, by this exemplary analysis it will be possible to assess, how much different income groups (classes) are politically polarized and how much consensus there is within each of these groups.

**Active Citizenship and Rights Awareness Of Roma In The Czech Republic**

The goal of this paper is to question the reasons for low participation rates of the Czech Roma in political and civil society organizations considering such participation is theoretically perceived as crucial for excluded minorities' empowerment. Issues related to active citizenship and rights awareness are somewhat low on the political agenda compared to other priorities of social inclusion. Although most Roma face discrimination, there is no mobilization process that would lead to significant empowerment when it comes to political or civic engagement. The Czech government in its annual Report on the State of Roma Community in 2007 defines as one of the 3 priorities of Roma integration the human rights dimension focused on equality and protection from discrimination. However, there have been no Roma political parties either in national, regional or local elections therefore there are no Roma representative in the Czech Parliament or any other elected body. Furthermore, the Czech Statistical Office does not desegregate votes by ethnicity, so it’s not possible to say how many Roma vote and for which political parties. However, there have been rumours in media about Roma selling their votes to some parties. Such rumours have not been confirmed before the court but further damage the public image of Roma and possibly discourage their participation. There are 52 civil society organizations concerning in various ways Roma related issues. It is hard to divide them into Roma and other civil society organizations since often bigger civil society organization have special Roma programs and often employ Roma. It’s noteworthy that Roma organization the Association of Roma in Moravia came out of a Roma political party, the Roma Civil Initiative. There are other Roma organizations in the field of media and culture.

**Segregation Of Roma Children In The Czech Educational System**

One of the most serious forms of discrimination in the CR is the discrimination against Roma children in primary education. Despite conclusions by the ECHR from 2007 in the case of D.H. vs. CR, which stated that there was discrimination and a violation of the right to education of the Roma children by placing them into so-called special (currently called practical) schools, a third, and in some matters only, of Roma children have even receive education in these type of schools.

The Concept of Roma Integration adopted by the Czech government also includes the removal of obstacles in regard to Roma children’s access to education and a violation of the right to education of the Roma children by placing them into so-called special (currently called practical) schools. Hence, by this exemplary analysis it will be possible to assess, how much different income groups (classes) are politically polarized and how much consensus there is within each of these groups.

Perceiving, Managing and Negotiating Risky Behaviours from Adolescence to Early Adulthood

Young people’s transitions from adolescence to adulthood are individualized, risk taking is normalized, and individual choices, behaviours and actions can have significant implications for future social and economic outcomes (Beck, 1992; Giddens, 1991). Yet young people’s choices and behaviours are also set within and influenced by their peers, families and communities (Bronfenbrenner, 1986, 1977). While previous research has examined risk taking behaviours of young people and the influences and drivers of these, we have a limited current understanding of how, why and under what circumstances young people from different family, community and economic contexts negotiate and make decisions about risky behaviours and who and what they draw on to make these decisions. Based on an Australian Research Council grant, this paper uses Australian Bureau of Statistics data and interviews with 70 young people from different social, economic and community contexts across Australia to understand how young people define, perceive, manage and experience risk taking behaviours and the supports and resources they draw on in making their decisions. Using an ecological framework, this paper aims to identify areas of support at the kitchen, community and policy tables that may assist young people in negotiating risk as they move through adolescence to early adulthood.

Losing Control in Western Canada: Private Equity Firms and Land Purchases

My paper will investigate the changing nature of land ownership in Western Canada. This is occurring largely because of the activities of Canadian private equity firms in purchasing vast tracts of farmland as investment properties, and the concomitant social and economic transformation that is happening among the rural population as their lives are affected by it. These are striking developments whose effects remain largely unknown and unstudied given that the practice was non-existent in Canada five years ago. However, they have the potential to fundamentally alter the relationship of people with the land. What will be the medium and long-term effect of this development on agriculture in Canada? Is there a transfer of ownership and control of farmland in Canada, with the resultant loss of communal culture and food supply, and a deteriorating environmental and ecological condition? What effects, if any, will this have on land quality, use of resources and food security?

While private property is strongly engrained in the socio-cultural experience of farmers, as well as corporations, their definitions could collide when those of the former relate to identification of time and place and those of the latter relate to profit and exploitation. Is it the case that the cultural, spiritual and social importance of land to individuals is often ignored when the value of land is determined? Through an analysis of federal and provincial policy, examining the content of interviews with various officials and politicians from both levels of government as well as with farmers and senior management from private equity firms, and an evaluation of industry documentation, my paper will seek to answer the questions posed above.

The Democratic Deficit: The Rise of Private Agri-Food Standards in the Global South

The past few decades have seen a tremendous expansion of private authority in global governance. No exception, the agri-food industry has become increasingly privatized in its ownership and governance. Illustrative of this point has been the declining authority of public international bodies such as the UN’s Codex Alimentarius in the governance of agriculture. These developments are the result of a normative shift from government to governance. Such trends have proven particularly hard hitting on agriculture in the Global South, where numerous experts have documented, for example, the impacts of cash-crops for export, land grabs and agricultural speculation on the most disadvantaged.

My presentation will examine the development of agricultural standard setting and certification as a case study of private agricultural governance. Using GlobalGAP, a business-to-business standard setting body, the paper has two purposes.

The first is to use private certification and standards to highlight the very real and harmful impacts private regulatory developments are having on poor agricultural suppliers in the global South. This will be done predominantly from a governance perspective. The second is to explain the broad-based shift toward a preference for private governance that has occurred within agricultural governance over the last few decades. In particular, I will examine the ideas and logic of neoliberalism and globalization frequently used to justify this shift. By addressing the impact private regulatory standards have had on suppliers in the global South the presentation will also indirectly focus on a number of theoretical questions revolving around globalization and global governance. These include questions regarding the arrival of new political actors as key regulators of global industries; the role of the state and public regulation in agricultural global governance; and the ability of private actors to govern in the interests in mind of the broader public and the disadvantaged, in particular.

Cross-Border Marriage: Tale from Haryana, India

A significant social consequence of the skewed sex ratio is the marriage squeeze in some regions of India, like Haryana which receives its brides from various eastern states of the country and also from Bangladesh. Hanayinis of higher caste and class refuse to acknowledge existence of any such practice publicly as they consider it demeaning of their esteem and collective identity. So on one hand, scenario reflects the dynamics of continuity of such marriages with difference in the structure and denial of the other hand. The内置 centrifugal mechanism pushes the women in Bangladesh, who are on the socio-economic fringes of their country, to come out as brides. It is interesting to note the changes that surface in the cultural matrix of Haryana society due to such marriages. The present study attempts to examine the social, demographic and economic factors responsible for continuity of such a process over time.

The paper also deliberates on the strategies of adaptation and building resistance to the stigmatized images, by the children of these marriages. There is a palpable anxiety of the upper class and upper caste men over the stereotypical images of migrant brides and their children as ‘inferior others’. These women are facing a situation of paradoxical hypergamy as they are getting married to men of low status and therefore their status is further low in society. Resource allocation for improving their political, economic and social life in Haryana society needs active citizenry. Unless their cause is taken up by the upper sections of Haryana society, such women can be expected by way of state induced policies and citizenship rights. The need for policy recommendation towards the protection of these migrant women and their children has been deliberated briefly in this paper.

Between State and Market – Non-Profit Housing Organisations in Four National Contexts

This paper presents the results of an international collaborative study of non-profit housing involving researchers in four countries using a common methodology to engage the leaders of non-profit organisations themselves in the research process: The paper draws on earlier work on the hybridisation of social housing provision (Mullins, Czischke and van Bortel 2013) and the competing logics of state, market and third sector. It uses a modified Delphi methodology to collect information from leaders of non-profit housing organisations in four countries about how their organisations are negotiating these hybrid influences on their strategy and operations. This method involves collation of responses to scaled surveys from panels of 15-20 organisations in each country, playing back the results to the participants and follow up depth interviews to explore and interpret the meanings of their responses.

Local Construction of Global Standards: How Gender Diversity Has Become Corporate Social Responsibility in Japan

After decades of reluctance and resistance, Japanese firms have recently begun to embrace the cause of workplace gender diversity as part of their response to the emerging global standards of corporate citizenship. We examine how gender diversity has been locally constructed as an urgent CSR issue for Japanese
firms, focusing on the role of two professional groups—corporate social responsibility (CSR) and investor relations (IR) managers. CSR managers have made the case that the CSR performance of Japanese firms lags behind that of their global competitors because of their failure to address the historically low level of gender diversity. In cooperation with IR managers, they have theorized its economic benefits, by arguing that improving gender diversity can send a positive signal to foreign investors. This constructed advocacy of gender diversity by foreign investors has substantive changes. Using panel data on more than 800 major Japanese companies from 2001 to 2009, our analyses show that foreign share ownership and the within-firm influence of CSR and IR managers significantly improve gender diversity, especially at the board-director and managerial levels. By emphasizing the role of professionals in translating global standards into local contexts, our study makes a contribution to understanding the role of local actors in generating variation in the outcomes of global diffusion processes.

MUNIA, RAFAEL* (Waseda University, ndebud@hotmail.com)

Resistence or Alternative Alienation?

This paper has the goal of discussing how the political project of Japan, based on its ideology of homogeneity, alienates the Japanese youth, limiting their individualization processes to, instead, focus on a single model of Japaneseness. Through some narratives examined, the Japanese youth showed to be sensing a lack of possibility to fit in society. When analyzing the societal structur in Japan, the rigidity of its job-hunting system: the curriculum of homogeneity and individuality suppression that begin in the school and echo in society; the rigid gender roles presented in the classrooms and companies; the work culture of permanent availability to the company; all become apparent as the sources of the lack of belonging perception amongst the youth. Since there is a lack of imaginal structural change, the youth produce narratives of escaping this hegemonic Japan, adopting strategies of marginality (NEET, Freeter, and some counter-hegemonic sub-cultures); or even strategies of actual escape (prioritizing non-Japanese firms to work, or seeking for opportunities to live abroad.) This paper, thus, argues that these strategies come from a feeling of alienation and purposelessness that comes from the hegemonic Japanese society. However, through the study of the phenomenon of Visual Kei, narratives of individuality and subjectivity can be composed and professed, both by language as well as by behavior and appearance. Through Visual Kei, it is argued, Japanese youth find a way to resist the oppression of their individuality in the name of the group mentality and the ideology of harmony that causes a lack between what youth is made to achieve, and the impossibility of fitting this commodified life with no appeal to individuality. However, such communities of resistance bring forth new cases of alienation and normativity that operates in addition to the ones from everyday life.

The Effect of the Great Recession on out-Migration Self-Selection of the Foreign-Born

The scientific literature on the permanence of immigrants in host countries has faced the empirical challenge of measurement and characterization. Along this line, research on the impact of self-selection is crucial for a better understanding of international migration and assimilation process in the host countries. In this paper we present a comprehensive empirical analysis on the (re-)migration of foreigners in Spain. Using panel data from the Spanish Labor Force Survey we explore the relationship between out-migration patterns and the labor market situation. We focus our analysis on the self-selection process of out-migration and its change with the economic downturns. To model out-migration patterns we estimate a detailed event history analysis. Our findings confirm results from previous studies. Preliminary analyses reveal that the likelihood of leaving the host country is strongly determined by family configurations and the labor market situation of household members. Those who are unemployed have a higher probability of outmigrating, especially when other incomes are absent in the household. The findings also show differences with respect to national origin, sex, and education. Moreover, the effect of recessions on the less successful foreigners (in terms of labor outcomes) have a higher probability of leaving the country. Surprisingly, its intensity is weaker during the Great Recession than during the expansive economic period.

MUÑOZ COMET, JACOBO* (UNED, jcomet@poli.uned.es)

The Impact of Unemployment on Temporary Workers. Why Foreigners Are Most Vulnerable during the Great Recession?

The current economic crisis is having a strong impact on the whole society in all developed countries, but especially on vulnerable groups such as immigrants. The case of Spain is unique and at the same time remarkable for three reasons. First, because of its high unemployment level, well above those of other countries in the OECD. Second, because of the strong incidence of the temporal rate, with levels close to 30% since the first Labor Reform in 1984, and third, for the extraordinary inflow of migrants in the first decade of the 21st century, representing a foreign population of 3.6% in 2000 to 14% only ten years later. This paper aims to examine to what extent nationality influences the risk of job loss among the most precarious workers, in particular those with a temporary contract. This study seeks to test the assimilation thesis in a segmented labor market during a recessionary economic period. To do this, panel data from the Spanish Labor Force Survey (2008-2010) are used. Analyses based on logistic regressions show that some differences in the socio-demographic profile contribute to understand the initial disadvantage of immigrants. However, controlling for education, time of residence in the host country and tenure does not fully explain the gap between groups. Only after taking into account professional status (occupational level and sector), we can understand their disadvantage since the collapse of the economy. The results of this study show that immigrants are harmed twice. First, by their greater propensity to hold fixed-term contracts; and second, and above all, because the nature of their temporal contracts is associated with activities related to low-skilled jobs and seasonal work, typical in sectors like construction, agriculture and tourism. It seems that the precariousness faced by foreigners is chronic rather than a step towards more stable jobs.

Effect of Economic Crises on Work Orientations Among European Countries

An extensive body of research in social sciences has analyzed the change of values in developed societies, assuming that as populations experience higher levels of wealth and security there will be a shift in their goals to show an increasing focus on self-actualization and self-fulfillment in detriment of the expressive work orientations, to work, it will be expected a relative decrease of extrinsic work orientations -those related to external aspects of work and based on the notion that work is mainly a means of obtaining instrumental resources- in favor of intrinsic work orientations -those linked to working tasks and based on the supposition that work in itself is an enriching experience that allows one to enhance their personal development and self-expression.-

The current context of economic crisis has brought up a new scenario that could alter the direction of the predicted change in work orientations, producing a return to the instrumental views of the expressive work orientations, as a response to the uncertain and risky labor conditions.

The aim of this paper is to compare work orientations in several European countries in two moments of time, analyzing the differences among countries as well as the evolution of work orientations in order to test the impact of the economic crisis on such evolution. Data analysis will consider the impact of the crisis on work orientations at a double level-aggregated and individual-, and will be based on relevant data from the European Social Survey (2004 and 2010).

Evaluación Del Uso De Edublogs Desde Una Perspectiva Comunicativa

Nos proponemos analizar exponer los principales problemas y las ventajas encontrados en la aplicacion de edublogs en la docencia universitaria. Recogemos la existenecia de las experiencias prácticas desarrolladas en el marco de una red de innovación docente, formada por un grupo interdisciplinar de 43 profesoras y profesores de 9 universidades diferentes, en un proyecto financiado por la Universitat de València. La principal herramienta desarrollada en esta red han sido los edublogs (destinados a asignaturas diferentes), orientados hacia el mensaje (relacionada, entre otros aspectos, con la gestión de los contenidos), el contexto (cómo se inserta el edublog en el programa docente) y el feedback o retroalimentación.

Esta revisión de la dimensión comunicativa es imprescindible para superar la posible emergencia de situaciones cercanas a lo que Adorno y Horkheimer llamaron asimilación por comunicación: las distracciones o simplemente las dificultades en el proceso comunicativo dificultarían la efectividad de los edublogs. De este modo, nuestro trabajo pretende contribuir a la mejora, desde la práctica, del uso.
The Influence of Linguistic Inequality on the Vitality of Two Otocamean Languages of Mexico: Chichimeco Jonaz and Tlahuica

In this paper we explore the influence of linguistic inequality on the vitality of two related Otocamean languages spoken in Mexico, Chichimeco Jonaz and Tlahuica, both of which are endangered languages being displaced by Spanish.

First, we compare the similarities and differences in the social, geographical and historical contexts of the two languages. Then we apply international criteria found in the UNESCO Vitality Index which determines degree of linguistic vitality in order to analyze and compare the use of Chichimeco Jonaz and Tlahuica. Finally, the role of language ideology as shaped by Mexican political economies and their institutions is touched upon. How changes in language policy have influenced language maintenance and shift is also discussed.

Japanese Food: An Analysis Of Culture Through The Values Derived From Attributes

The Japanese culture has expanded its horizons in many countries and regions. In special, Brazil, where the Japanese immigrants represents the second biggest Japanese descendant group out of Japan, its values and habits has an important presence in Brazilian territory. One of the important aspects of this culture is the Japanese food. In order to analyse the culture deployed from this habit, this article has the objective to identify the values linked to the attributes pointed by the consumers of Japanese food. The research applies the methodology of Theory of Means End Chain - MEC. Within this perspective, product attributes allow the consumer to achieve certain benefits that are linked to a higher level, allowing the ranking of personal values. The latent values cause consumers to recognize products that lead them to achieve their goals and desired end states. Thirty in-depth interviews with consumers of Japanese food were made between the months of November 2012 and April 2013. The ladderising technique is applied, using personal interviews, with questions that express the goal in a game of links between perceptive elements. This technique is based on the implications glimpsed in the Theory of MEC, with the central concept of 'ladder', exploring three levels: attributes, values and consequences. This technique provided the construction of an implication matrix and the hierarchical value map, to confirm the main elements of such behaviour. The survey results showed, among consumers, values such as openness, exciting life, satisfaction, pleasure, happiness, self-esteem and affectionate relationship. These values suggest an alignment with the Japanese culture mainly happiness, affection and friendship relationship.

Local Policing in the Global City: Community Safety Development in Tokyo

In large Global Cities, the ‘command centres’ of the global economy, most aspects of everyday life are subject to surveillance. Forms of Neoliberal urbanism have spread public space video surveillance, homogenized theme-park malls, gated private apartment blocks suburbs and exclusionary policies towards urban others: the homeless, undocumented migrants and so on. I have labeled this as a globalizing form of technocratic surveillance, however in previous work on Tokyo, one of the preeminent global cities, I have argued that in the Japanese capital, particularly in a liminal and transitional urban human surveillance is still undergoing an uncertain transition in the encounter with global neoliberal capitalism.

Since 2002, under the last Governor of Tokyo, crime prevention has been managed through the Anzen Anshin Machzikuzu Jourei (or Community Safety Development Ordinance) which decentralized responsibility for crime prevention to communities, supported by local (ward) government. However, both National and Metropolitan Police Authorities have also initiated their own schemes, including publicly-funded video surveillance, crime mapping and so on. This paper reports on empirical research from five case study areas in Tokyo with very different characteristics: a central district partly dependent on the night economy and associated disorder, a wealthy central residential ward, a working class neighbourhood with a large traditional outcaste population, and two middle-class suburban areas. It analyzes the different community-based initiatives that have emerged in each area, their compatibility with and connections to central police initiatives, and considers what combination of local or global forces are the predominant drivers in emerging crime prevention policies and practices.
There Are Few Cases Around Here: Structural Problems of the Japanese Nuclear Compensation Scheme

The Fukushima Daiichi Nuclear Power Plant accident resulted in mass evacuations and the formation of wide areas as a result, 1.5 million people are assumed to have legal claims against Tokyo Electric Power Company (TEPCO). The Nuclear Compensation Act provides a settlement procedure (ADR) based on guidelines issued by an ad hoc administrative committee to be set up after an accident. In other words, the law envisages that such an administrative procedure of paying damages would satisfy victims of a nuclear accident. However, the scheme of the law has not worked as well as the law expected. As the law did not provide how damages should be paid in case a total amount of damages would surpass the expected amount, guidelines for payment have been issued piecemeal. Moreover, the guidelines have been challenged even in settlement procedures. The nuclear ADR was initially designed for an out of court procedure against the backdrop of the extremely small lawyer population. However, the nuclear ADR has been operated as a rational settlement procedure rather than a procedure of traditional style of compromise, which requires lawyers’ involvement to handle cases. The Japanese society has grown to require legal intervention in handling mass claims but the existing structure of the legal system is unable to provide necessary amount of legal services to victims of the nuclear disaster.

Effect Of Men’s Educational Attainment On Their Fertility

We are interested whether the effects of men’s educational attainment on their fertility diminished over time across welfare regimes and by partnership types. Some research questions will be under study:

- What is the effect of educational attainment of men on their fertility? Is it different for men in consensual unions and in direct marriages? In which national context men’s fertility level specific to consensual union may be close to the total fertility rate of married fathers. Our hypothesis is that, in gender egalitarian societies, with more similar gender equality across welfare-state institutions, the total fertility of men (and women) depend less on their educational attainment but more on the type of union patterns. In more traditional societies the effect of education on male fertility is more important, despite the fact that is often the opposite of what it is for women.

- GGS data for available countries will be used to compute duration-based total union specific fertility rates in the spirit of parity-progression ratios developed by Hoem and Muresan (2011) and to analyse life-time fertility determinants. The following variables will be included in the analyses: family background, gender, age, social background, partnership status, parental status, educational enrollment, educational attainment, calendar year, etc.

Knowledge Workers’ Subjectivities. Precarization and Transitions of Young Highly Qualified

Over the past decades, many EU member States have registered a large raise in the use of temporary employment. Young people are far more likely than other groups to be employed in precarious jobs, independently from their education and skills. In the age of the global economic-financial crisis, the attack to the conditions of knowledge workers goes on, according to the different lines of the neoliberalist logics, that juxtapose to the current precarization processes phenomena like under-payment and misalignment between subjects’ education and their working activities (Eurofund, 2011; Standing, 2011; Samek, Senzena, 2012).

Which relation does it hold between educational levels and possibility of effectively developing knowledge workers’ capacities and skills? How do knowledge workers represent and face their precarious conditions?

Our reflections are based on results obtained in two recent researches conducted in Italy (Armano, 2010; Murgia et al. 2012) – in the areas of Bologna, Milano, Torino and Trento – during which narratives of about 70 subjects, aged between 25 to 50, have been collected in reference to the transitions between education and employment. All interviewees were holding high degrees of education (bachelor, master or PhD) and at the time of the interview were employed with autonomous or dependent temporary contracts.

The research inquires on the one hand the risks of depauperation of knowledge and deskilling of highly educated young workers; on the other hand, the strong lack of adequate forms of representation and of policies aimed at facing the specific precariousness of knowledge workers.

In the present article we discuss the precarious and invisible face of the condition of knowledge workers, that collides with the official one, that superficially considers them as “independent and professionals”, though they are experiencing the effects of the further precarisation brought about by the crisis, without a union or political representation.
Interlocking Directorates and Transnational Corporate Political Unity

The extent of a dominant transnational capitalist class hinges on whether members of the global business community tend to act in a unified manner. Research on corporate political behavior within a national context indicates that formalized ties in the business community, such as those formed by interlocking boards of directors, function to facilitate unified political behavior by the corporate elite. However, due to differing national identities and class interests within the global business community, the effect of transnational interlocks on political unity is unclear.

Combining data on political contributions to U.S. candidates with information on board of director interlocks among the 500 largest corporations in the world between 2000 and 2006, I test the effect of transnational interlocks on business cohesion. I find that the more connected two firms are through the transnational interlock network, the more unified their political donation patterns are. In addition, I find evidence that suggests that a transnational class-wide rationality is becoming more prevalent in the interlock network, to the point that the group G500 firms that are connected to each other through the transnational interlock network exhibit political unity comparable to that of the U.S. capitalist class.

Position of Women in Sociology or Female Founders in Sociology

Sister’s founders in sociology as a coin term are formed by Mary Jo Deegan, in order to explain, demarginalisation of female stream sociological theory. Even though there are more than 52 women considered to be founders of sociology, they are still not recognized in sociology, especially in Bosnia and Herzegovina. Aristotle’s distinction between male/female, according to authorship Shipley, represents the key moment to ideological foundation of the women exclusion from academia and public life, because their identification with natural and irrational. Results of Wars, global ecological movements, and movements for the rights of the minorities were joined together in creation of significant subversion and counterpart of male stream patriarchal ordained theories in eco feminist movement. Many The women and nature in male stream theories are considered to be the insignificant Other, formed as counterpart for male principal which is culture, religion and identity. Logic of domination and its objectification, imperialism, colonialism, patriarchy and European West racism must be rendered with the logic of nurturing as the prevailing concept of successful bioregional cooperation and interpersonal relationships, pacification and peace agreements. Key terms: logic of dominance, logic of care, masculine/femalestream, independent man versus. independent women, Aristotle’s misogyny.

NGOs and New Trajectories of Engagement and Youth Power in the Occupied Palestinian Territory

Youth civic and political engagements are not distinct or separated from each other, and in many cases they overlap and interlink, they result in diversity of youth engagement forms. Youth organizations play an important role in the occupied Palestinian territory (oPt) in terms of being a recourse, catalyst, and supporter for youth engagement, whether civic or political. As youth organizations were trying to cope with changes of sociopolitical context in the oPt, they reinforced different trajectories of engagement than the ones that existed within the Palestinian society between the 70’s, 80’s, and early 90’s. The organization’s type (Social movement organization, politically affiliated organization, youth development organization) is a vital factor in deciding how the organization dealt with changes in the context and the frame and trajectory of engagement reinforced.

This paper aims at understanding the change in the trajectory of engagement in the oPt; how does it differ from the trajectory of the engagement that took place between the 70’s and early 90’s; how does this change impact youth power and position in the oPt; How do different types of organizations provide different strategies, forms, of youth engagement?

MUTA, KAZUE* (Osaka University, muta@hus.osaka-u.ac.jp)

Sexual Violence and the Issue of Comfort Women in Contemporary Japan

The “comfort” women, in reality sexual slaves for the Japanese military during the Asia-Pacific War, demand but have yet to obtain an official apology from the Japanese government. Rather, their demands have been met with insulting reactions from right-wingers, including influential politicians, whose main reasoning is: 1) Those women were not forced but were licensed prostitutes; 2) It is a kind of universality that soldiers of many nations have perpetrated wartime violations of the dignity of women; and 3) therefore Japan’s issue of comfort women is not peculiar in the history of mankind, so it is not necessary for Japan alone to apologize. This reasoning is not a relic of a bygone era, but sounds familiar and even resonates with current ‘rape myths’ and rape culture in Japanese society which encourage male sexual aggression and support violence against women. Regrettable, tolerance of sexual violence against women penetrates even the law. Consequently, CEDAW, in its 2001 Concluding Observations urged Japan to revise and change for the better the sections of the Penal Code on sexual crimes against women (Paragraph 33-34, CEDAW/C/JPN/CO/6, 7 August 2009). The Government did not address this point in its response issued in August 2011. Furthermore, in recent years the Supreme Court of Japan has overruled several judgments by the lower courts in rape cases, usually deciding that the victim’s witness was not reliable.

My paper will examine in detail the connection between the reactionary response to the issue of comfort women and the reluctance to uphold women’s rights in cases of sexual crimes, and will discuss the deeply rooted misogyny in Japanese society.

Language Shift and Maintenance of Tamil Language in the Malaysian Multilingual Context

The prevailing multilingual situation of Malaysia reflects the gradual shift in the use of minority languages like Tamil, both in formal and informal domains of language use. This paper analyzes several reasons for shift to take place language maintenance, and one such is the existence of power that goes with language(s). How far language attitudes, linguistic views and power based policies will foster the use of concerned languages for the benefit of society at large is indeed a challenge and seems to be a question mark. The Malaysian Tamil society is gradually shifting in languages like English and Bahasa Malaysia as media of instruction to achieve education needs in different disciplines of knowledge, considering the modern economic-scientific and technological – occupational development progress and needs of the society. Moreover, this kind of existing rigidity in attitudes towards language use and emotionally motivated views might cause problems in the long run for society in getting education on employment opportunities. Language policies has made mandatory use of Malay in education, use of the English language at different levels with power and efficiency, use of mother-tongue languages in education and mass media as far as possible. The present day generation prefers training in job-oriented, application and practice oriented education, so they are forced to shift from their mother-tongue to the national language or English for specific purposes. This is because of the restricted use of their own languages. The present day use also reflects the shift from spoken Tamil to English as the home language of the Tamil community. So, this paper emphasizes the social relevance of the sociolinguistic research that is more concerned with a developing community, especially their language use. More so are the language policy activities in order to approach the problems faced by that community in formal domains of language use.

Facing the Inequalities in Integration and Reintegration: Indonesian Children of Migrants in Japan

Facing the Inequalities in Integration and Reintegration: Indonesian Children of Migrants in Japan

Successful integration into the home country begins in the host country (Kathleen Newland and Aaron Terrazas, 2009). Children are usually not reckoned as vulnerable when migrating with their family. Parents and common people often think that moving temporarily to a developed country will give no distress. However, the true problems have arisen both in integration and reintegration. Indonesian children of migrants have to encounter challenges and inequalities when practicing cultural and religious norms in a country where those are different or do not exist. The interview with Indonesian moslem children revealed a fact that they felt a little “different” when their Japanese friends asked about why they were fasting. Meanwhile, in the reintegration, most of them experienced the phase of silence when they did not feel belong to the society while they know they should. One respondent had experienced an unsuccessful reintegration when his school became one terrifying place because he was bullied for his unreadiness to face language and cultural challenges. He remains friendless until now. In the findings, it is revealed that parents usually claimed that there were no significant problems in both phases. They were all worried only about getting a school and financing the children. While, some children showed the opposite behaviors, telling that their parents did not know their feelings. Some even felt traumatic in migrating to Japan. All children deserve to have a safe place wherever they are in the world. This issue should be well-addressed by parents, schools both in Japan and Indonesia, and endorsed by the government policies to properly support these children in undergoing the adaptation phases, especially the underestimated reintegration.

A Game Theoretical Analysis of Heterogeneous Network Formation

Jackson and Wolinsky (1996) using information value is a typical game theoretical model to explain network formation, however they assume homogeneous actors while real world actors are various. Real world actors choose their friend homophobically, then they form diverse communities. Actors are often familiar to each other in one of these communities inside, but they tend to have no relations mutually on inter-community. This kind of communities are often called Takotsu-bo (octopus pots) in Japanese. Moreover ranking and inequality often arise in such a community. However few game theoretical models explain the community formations. Therefore, I propose a new approach to these models.

Reflections on the Future Development of Institutional Ethnographic Inquiry

Institutional ethnography (IE) is a robust sociology committed to empirical investigation of social organization of contemporary ruling relations. While the conventions of scholarly writing within IE privilege reporting results of original research, IE practitioners have begun to produce a reflexive consideration of the nature, form and future directions of institutional ethnographic inquiry. This paper responds to the invitation to consider ‘issues and developments in institutional ethnography’ by contributing to this emerging trajectory of dialogue. The paper draws on three principal sites of reflection to structure its engagement with key issues related to the future development of IE inquiry. They include: (1) a critical reading of recent published work that methodologically and/or theoretically problematizes IE; (2) my experiences, over the past 7 years, of teaching IE in a graduate sociology program; (3) my efforts to enter IE into dialogue with insights from Science and Technology Studies and Foucauldian work on governmentality in two recent research projects. Among the issues that the paper raises as areas for ongoing reflection about the practice of IE are the limits and possibilities of a dualistic perspective of the place of social theory in IE inquiry, and the relationship of IE to other intellectual projects that investigate contemporary forms of governance or rule.
ership with a call for parliamentary democracy. Fourth, the ‘democratic socialist’ vision which sets as its goal a political-economic model which is based on both egalitarianism and constitutionalism.

It is concluded that all of the four visions enjoy sufficient support among different social classes and interest groups to stand a realistic chance of becoming dominant in shaping Chinese capitalism over the next decades: While the two first visions describe a current split within the Party-state elite, the two latter visions represent two different political-ideological shapes for a potential counter-hegemonic social movement from below.

Music As Youth Culture: Case Study in Japan

NAGAI, JUN'ICHI* (Kobe-Yamate University, nagaijunichii@gmail.com)

The objective of this report is to discuss how Japanese young people relate to music based on “A Generational Comparison Survey on the Lifestyle of Urban Residents and Their Sense of Awareness,” a survey of young people (age 15–29) and middle-aged people (age 30–49) conducted by the Japan Youth Study Group in 2012.

Globally, circumstances surrounding music have drastically changed since the advent of the Internet, continuing to push compact disc sales down. This fact is often interpreted as young people’s trend away from enjoying music in Japan, where many people believe that music is something for young people. The survey results indeed show such a trend. However, our data indicate that this trend away from enjoying music is observed not only among young people, but that it is particularly pronounced among middle-aged people. Therefore, I suggest that as people age, they tend to enjoy music less.
Obviously, many young people are interested in music. However, it is not their level of interest in music but the length of time they spend with music that has the largest impact on their musical behavior. This is supported by the fact that Japanese young people are often willing to use music as a communication tool. Focusing on this fact, this report discusses what music is all about for young people and how young people relate to music—how music affects their everyday lives, self-consciousness, and relationships with friends.

Poverty and Mental Illness in People Excluded from the Labor Market in Japan

The unemployment rate in Japan remains at around 5%, with the proportion of the long-term unemployed higher than in other OECD countries. Our objective is to examine whether and to what extent labor market exclusion is associated with poverty and mental health, using data from the 2004, 2007, and 2010 Comprehensive Survey of Living Conditions. First, we categorized jobless people as “job-seekers,” “jobless people who have a desire to work, but do not seek a job,” and “jobless people who do not desire to work.” Then, we compared the economic and health conditions of jobless people to those of working people.

In conclusion, we found that being jobless may increase the probability of poverty and mental illness, even if employment is not being sought. Furthermore, we speculated that even if men neither search for jobs nor have a desire to work, they are not necessarily satisfied with their lives as jobless, and therefore they might be socially excluded. However, this is not true for women as Japanese society is based on a strong male-breadwinner model. Therefore, the meaning of being jobless differs for men and women in Japan.

Political Coverage of Japanese Newspapers in Brazil

Today in Brazil, there are several papers written in foreign languages directed to immigrant communities which appeared in the history of the immigrants. Which characteristics are present in those minority media? This work focuses on explaining activity of Japanese newspapers in Brazil, which are written in Japanese for the Japanese immigrant community and published in São Paulo, the most important city of Japanese immigration in Brazil. Generally, these ethnic media for minority community have tendency to seek and keep traditional values and culture. However, it is interesting that these Japanese newspapers in Brazil report not only culture events or education's subjects, but also frequently political subjects. In the political subject, they report especially activity of Japanese descendant politics from the Japanese immigrant community. This work tries to describe the political coverage of the two Japanese newspapers, Nikkey Shimun and São Paulo Shimun, and to analyze that comparing with immigration's history and content of immigrant descendant's advance in the Brazilian politics. Qualitative content analysis was adapted to analyze the articles. We conclude that during the electoral campaigns, these newspapers represented some subjects with a favorable way to Japanese descendant candidates and showed guidance to vote on them by the journalistic persuasion, especially guiding the readers to concentrate their votes on some specific candidates to elect them with enough votes.

What Is Social about the Network?: An Analysis of the Application Program Interfaces of Popular Websites

API (Application Program Interface) is the method of continuous asynchronous sourcing of data between various ‘applications’. It facilitates exchange of data between the ‘network’ and the ‘networking’. By examining at the nature of the data extracted by the API and its use of the data in defining the utility of the ‘application’ we can produce a critical appraisal of the nature of the techno-social interaction afforded by the ‘networked’/’networking’ society.

The promise of communications technology among other things is the democratisation and the user defined nature of interaction of players constructed by it. But the use of ‘bubble’ (Pariser, 2011) produced in the human-computer interaction to fashion online activities alerts us to a bias in the nature of such interactions while enforcement of technologies like unique identity based governance systems further complicates the digital divide bringing up the question of equality.

This paper is based on the analysis of API codes and its mechanisms, offered by Google, Facebook, Twitter and YouTube. The analysis looks into the nature of the ‘bubble’ generated in order to define the character of the network. This is in a bid to argue that the randomness promised by it is being reined in order to create patterns of interaction that are arbitrary and unequal compounding the problems experienced in infrastructural access and the lack of ‘cultural’ capital.

Technology is best analysed in technological terms in order to arrive at an understanding of its sociological dimensions. Such orientation is politically necessary to make apparent the the hardwiring of inequality in the era of big data.

Costs for Survival

The necessary cost to continue the life increase year by year. It is said a baby woman in Japanese assume a debt 7 million one’s back just now. A fact is not able to pay to survival cost have not the method unless everybody depend on pitiful death or the help of others with obvious reasons of not income. Our viewpoint has, now a day, a nation must guarantees because of the system is organized by a nation, if the guarantee is not, everybody dies fields or only lives by personal responsibility. We are aware of the nation is not without persons. For the nation is considering the social-welfare that only taxes increase is able to reform. We examine the cost for survival. This paper continues The 86th Japan-Sociological-Society-Meeting, 2013 in Japan present. We know already cannot adopt finding employment, when companies are not more than initial incomes. Furthermore, we understand the same everything compensation as 

Expenditures = {welfare, pension, public-works, public-employee-salary, subsidy: childcare-allowance},

for Incomes = (bonds, taxes, contribution, monetary-easing). The cost for survival includes expensive structure of various taxes. Why does the cost for survival occur? Who have costs carry on theirs back else way to pay? Can they not pay costs by service and contribution to the society? Our study picks up a 15 villages’ example simulation to answer that question modeled on Japan where a mayor live and a staff who order public works, a youth and an old on welfare, grant a pension and three children. A bank employs president and a clerk. A company employs top and a worker. We understand that the cost for survival increase according to the nation's expenditure and income up as various taxes. Our conclusion is that the best situation on the cost for survival lightens the burden.

Transformation of Labor Market and Legitimacy of Income Inequality in Japan

Many advanced countries have witnessed a growth of economic inequality in the age of economic globalization. However, economic inequality is not always regarded unfair. Historical and institutional contexts in each country frame citizens’ perceptions about to what extent and among which social groups economic inequality is regarded as legitimate. If citizens consider it legitimate, such economic inequality is likely to be reproduced. Therefore, transformation of labor market caused by economic globalization has grown inequality between different social groups to different extent according to how each country has legitimated economic inequality historically and institutionally.

The present research focuses on a Japanese case and investigates what inequality Japanese people regard as fair and how it relates to Japanese historical and institutional contexts. Japanese welfare-employment regime has supported citizen's life differently according to one's industry, firm size, and gender. We examine how this condition relates to Japanese perceptions about fair income gap
by analyzing what determines “what amount of income people think that they should earn.” To be more specific we investigate whether actual income gaps between social groups such as gender, those with different educational levels, occupations and employment status, are reflected by Japanese perceptions of ‘just income gap’ between these groups. As a result, we find that gaps of perceived appropriate income between different employment statuses and between different firm sizes are larger than actual income gap between these groups. Furthermore, employment status and firm size play more, or at least equally, important roles than occupation. It shows that Japanese people assume disproportional distribution of income according to firm sizes and employment status is more legitimate than one according to human capital.

Leisure and Mental Health: Sociological Study Of Women Experiencing Leisure During Their Mental Illness

This paper reports the findings from interviews with 194 mentally ill women who are seeking treatment in government hospital, Gurgaon in Haryana State, India. The respondents were questioned about their participation in leisure activities, and also about the overall experience of leisure activities. The results show that the women tended to feel that leisure was not a part of their routine activity and hence they do not get benefits of leisure in their mental and physical health. Further, respondents reported that leisure activities gives feeling of physical and mental health and also provides experience of pleasure and freedom. It is argued that, contrary to the notion that leisure helps in maintaining good physical and mental health, doctor do not insist on participation in leisure activities. It is concluded that leisure and mental health are all embedded in the surrounding social contexts and, indeed, that leisure activities in general are inextricably entwined with their broader cultural and structural context.

When Poverty Alleviation Perpetuates Inequality. Struggles of the Poor in Johannesburg Post-1994

Although the institutions of apartheid began to be dismantled in 1994, South Africa still bears the scars of inequality and poverty it etched so deeply along the fissures of race, class and gender. Although the African National Congress (ANC) government has committed itself to eradicating poverty and ensuring “a better life for all”, it has also embraced an approach to macro-economic policy largely neoliberal in character that has resulted in the enforcement of the duty to pay for basic subsistence needs in the formal sector among the poor. Between 1999 and 2006 in Johannesburg residents in several of its townships (including Soweto, Alexandra and Orange Farm) came together in protests and formed social movements to demand that the municipality put an end to its experimentation with different forms of punishment and prevention of non-payment for the consumption of water and electricity (from cut-offs to prepaid meters). In these struggles, residents identified largely as poor people and demanded that the municipality acknowledge their inability to pay due to being unemployed or indigent by other means. Growing from illegal reconnaissances and mass marches and pickets, to include legal interventions and a constitutional court case, these struggles forced the municipality into its own series of policy formulation processes in response. This paper will explore the culmination of these processes in the City of Johannesburg’s most recent indigent management policy, which it will show, puts forward a “pro-poor approach” that brings together a targeted model of partly decommmodfied access to services for those identified as ‘the poor’, that are nevertheless delivered within a system that is run along market principles overall. It will argue that the nature of this differentiated system perpetuates inequality even though it might address poverty by encouraging a particular form of life for those identified as “the poor”.

Examining the Impact of Health and Housing on Poverty Among Older Australians

As with most OECD countries, the Australian population is ageing. It is predicted that by 2050, over 20 per cent of the Australian population will be aged 65 and over, compared to 13.4 per cent in 2010. The Australian retirement income system is heralded as an exemplar of the World Bank’s three tiers approach, with the means-tested government-funded age pension complemented by occupational pensions subsidised by taxpayers. Home ownership is also widespread among the current generations of older people (‘the fourth pillar’) and the government provides a range of additional supports to those in old age, including provision of health and aged care services. Existing studies indicate that Australia performs below the OECD average in terms of poverty, defined narrowly in terms of income, but these studies ignore the critical role that home ownership and health care provisions play in maintaining a decent standard of living for older people. This paper compares a range of alternative approaches to measuring poverty beyond the conventional income approach by taking account of the role of housing wealth, housing costs, health costs and health needs in affecting the poverty rates of older people—relative to general living standards and related to the risks facing other demographic groups. Attention is focused on comparing poverty rates before and after allowing for housing and health care costs and the sensitivity of these findings to poverty line variations. The results are based on integrating reported and imputed data from two national household surveys: Wave 10 of the Household, Income and Labour Dynamics in Australia survey and the 2009-10 Survey of Unemployment and Household Income, Expenditure and Wealth (SUHIES) highlight the roles that home ownership, public housing provision and free access to public health services play in alleviating poverty among older Australians and point to the limitations of a narrow income approach.

The Centrality of Housing Tenure: Further Perspectives on the Lives of Older Public and Private Renters in Australia

Recent estimates indicate that around eight out ten older Australians are homeowners, with 70 per cent outright homeowners. Much research has focused on exploring the implications of this high rate of homeownership, however, research on older public and private tenants has been limited. This paper is part of an ongoing investigation exploring and comparing the life circumstances of older public and private renters and the centrality of housing tenure. It is based on in-depth interviews with older renters in the private rental market and in public/social housing and a quantitative analysis of socio-economic household and individual data from the Household, Income and Labour Dynamics in Australia (HILDA) survey. The study focuses on the relationship between the cost of the accommodation, security of tenure, type and quality of accommodation, location and socio-economic status of the household and financial stress, income manageability, physical and mental health and subjective well-being. The results highlight the central role housing security and cost play in ameliorating or exacerbating the well-being of older tenants and their ability to lead a decent and valued life. The older public housing tenants because their rent is fixed at 25 per cent of their income and their security of tenure is guaranteed are able to lead a decent life and their subjective well-being is high. However, the subjective well-being of older private renters is generally poor. This is mainly due to their negligible security of tenure and the high cost of their accommodation.

A Labor Time Bomb? Workers’ Unrest in the Automobile Industry in India

In the Suzuki-owned Maruti-Manesar automobile plant in Gurgaon near New Delhi, in 2011, striking workers immobilised a human resource manager. These migrant workers, who were employed informally in the formal industrial sector, demanded the right to represent themselves through independent unions. The insurgency has been one among a series of protests in the automobile sector in India, starting with the contract workers strike at the Honda plant in 2009. In Pricol, an auto part plant of the Toyota in Coimbatore, and in the Graziano Transmissions unit at Greater Noida, the vice-president and CEO were killed by agitated workers. Bloomberg news termed these protests as evidence to a ticking labor time bomb. In this paper, I examine how far these protests signify the resurgence of labor movements in India. The strikes were remarkable for their show of collectivism, use of disruption and violence, and demands that pertained to the workers as a whole. They implied a move from conventional union-based articulation by formally employed workers, to new demands for independent unions by migrant laborers. These protests were organically linked to production and socialization processes in the formal sector, and were themselves inspired and impelled by transnational imperatives. However, these protests, especially the disruption and violence involved, were indicative of a shrinking of the democratic space for struggle in India, which were equally evident in the rising number of disputes in the industrial environment. They occurred in companies owned by foreign owners, who have less supportive networks to sabotage and suppress them, compared to local owners. Finally, these protests were cellular in nature, rarely extending beyond the factories to become industry wide associations and coalitions.
NAITO, ASAO* (Meiji University, naitoao@kisc.meiji.ac.jp)
From Analysis of ijme (Bullying) in Japanese Schools to Constructing Theories of Psycho-Social Orders

In this paper, we examine ijme (bullying) in Japanese schools and, so doing, propose hypotheses about the basis of wholesome civil society. Japanese (especially middle) school adopts the extreme groupism, which forces all people involved to live a highly controlled collective life in a totalitarian and closed environment. It denies not only the civil liberty but also the civil society order that ensures the liberty outside of it. This provides us with the functional equivalent of Philip Zimbardo’s experiment in which he analyzes how human beings are transformed, and what reality and psycho-social order are generated among members under certain conditions, though this kind of experiment is now prohibited from an ethical viewpoint of research. Bullying can be observed in almost any school in the world but the Japanese bullying, ijme, deserves close examinations for those particular conditions that Japanese schools force on the students. Many cases of ijme can be ascribed to the psycho-social order imposed on the students’ everyday life in the classroom. Examining the psycho-social mechanisms that accompany the order above, we can abstract the basic theories about violent and persecutory psycho-social properties of human beings (e. g. various psycho-social explanatory models, ecological models of psycho-social orders, and combination of them with evolutionary theories), which are potentially applicable to various types of violent and persecutory phenomena among human beings. We can expect several outcomes of this study: (1) Psycho-social analysis of countermeasures against bullying in school; (2) Several findings about psycho-social orders where dense interactions within groups bring about inner changes of individuals, which leads to violent and persecutory psycho-social orders—these processes loop spirally; (3) Based on the aforementioned outcomes, a framework for countermeasures against violence and persecution from domestic violence to genocide as well as for the stable liberal civil society.

Clarification and Visual Representation of Concept of Power

Key Words: two ways of inference about power, an “actor-structure-situation-process” model, “conceptual formula” on power, a visual diagram on power

During the last decade, discussions about concept of power became unnecessarily complicated and confusing. Some arguments on power such as one of M. Foucault are “philosophical-sociological” theory rather than empirical-sociological theory. This state of affairs resulted in confusion about concept of power among students of sociology. In addition to this, there is not much effort to visually represent concept of power so that students may conceptually and easily understand power.

Therefore, there is a need to reorganize and clarify concept of power. The purpose of this presentation is fourfold. First, two ways of inference about power will be suggested; a “prospective way” that indicates “power as potential” and a “retrospective way” that indicates “power as an effect on the outcome.”

Second, a “situational-process” model will be suggested to understand power conceptually. In this model, an actor means a person (or a group), structure means symbolic-systems, social rules such as customs and laws, and organizational structure in addition to physical structure. Situation means a state in which persons or groups are placed in. Process means interactions processes and communication modes.

Third, “conceptual formula” on power will be suggested as below:

- Simple Power = (power resources {knowledge}) -communication skill -interaction power = ([power resources {knowledge}) -communication skill] × Other’s Perception (truthfulness & legitimacy)

Fourth, a visual diagram on power will be made to make it easy for students to understand concept of power.

These four, i.e., distinction of two different ways of inference, an “actor-structure-situation-process” model, “conceptual formula” on power, a visual diagram on power, will enhance understanding of students about power.

NAKAGAWA, CHIGUSA* (Research Institute Humanity & Nature, chigusanakagawa@chikyu.ac.jp)
The Knowledge Production By the Community Against Inequality of Development Assistance Programs; The Case Study of Mangrove Forests Conservation Activities in the Republic of Guinea

This study analyses that inequality in the project on mangrove ecosystem conservation programs and its result. The mangrove ecosystem is established only in the limited area and is one of valuable one to support biological diversity. The Guinean mangrove forest has the value as “an economic forest” producing firewood. Therefore it is important natural resources supporting the everyday life of coast inhabitants. The mangrove in Guinea is used mainly for salt manufacturing of seawater boiling-style and smoked fish. However the mangrove ecosystem is easy to catch the pressure of the development. So it is weaker than other forest ecosystem, and the sudden destruction is reported. Based on such values, wave of conservation and the management activity flockes from the foreign country as the urgent matter.

However, most of these activities or programs entails inequality. The target selection is based on the frame of the donor agents. In other words, the donor agents usually choose communities in an area where achieve their goal easier. Therefore, we, some communities make every effort to receive the benefit of the program without noticing the attitude of pre-established harmony of donor agents. So, does local community that is off a target accept the inequality like this? The question to the answer is to illuminate that the local community has the power to replace process of such inequality with process of growth. This case study would like to evaluate adaptability of local community and conclude possibility of the community-based environmental conservation activities.

NAKAGAWA, KAZUAKI* (leisure, gawacyan@gmail.com)
Positive/Negative on Leisure: From the Perspective of the Difference of Enjoyment and Pleasure

This presentation aims to examine positive / negative on leisure we partici-pate in. In the examination, we helpfully apply flow theory described mainly by Csikszentmihalyi. he has found out the significance of Intrinsicly Reward leading to Enjoyment, as the most recent examined the case studies such as Rock climbing. everyday work. This study distinguishes the positive from the negate, applying critically flow theory. The main issue is the difference of Enjoyment and Pleasure. According to Csikszentmihalyi, enjoyment is useful for the growth of self. Pleasure is useful just for keeping the order of self, it exists just on time. On the one side we have examined the former studies which focus on leisure from the perspective of consumption, we can take positive parts in leisure. But we demand Pleasure when we regard leisure as consumption. On the other side, we have examined the former studies which focus on leisure from the perspective on the growth of self, we can take positive parts in leisure. So is the chance which we create Enjoyment.

It is the meaningful that we have found out the difference of two meanings of positive, which differ the case we regard leisure as the growth of self from the case we regard it as consumption. That is to say, on the one side, it is the chance of the working off the energy that we take positive parts in leisure regarded as consumption. On the other side, it is the chance growing self that we take positive parts in leisure creating Enjoyment.

Women On Top: The Temporal Status Of Gender In Elite Professions

The recent growth of women’s integration into “high-status” professions over time has been documented around the world, but stark variation exists across fields of education, government and corporations. However, while there has been much focus on women’s labor force participation generally, the literature has largely ignored the temporal status of women in high-status careers. Previous research has documented that women’s share of more senior positions varies across industries and organization types, but there remains a need for more studies using comparative frameworks. For instance, across the world, most governments have far less than 50 percent of women members making critical decisions in their countries. In corporations globally, women have progressively taken over greater numbers of high-status positions, but top C-suite levels continue to be dominated by male.

On the other hand, some communities make every effort to receive the benefit of mangrove ecosystem as the urgent matter. Based on such values, wave of conservation and the management activity flockes from the foreign country as the urgent matter. However, most of these activities or programs entails inequality. The target selection is based on the frame of the donor agents. In other words, the donor agents usually choose communities in an area where achieve their goal easier. Effects of Wives' Relative Resources on Husbands' Gender Role Attitudes Among Dual-Earner Families

This study examines how in Japan, husbands' gender role attitudes among dual-earner couples with children are associated with their wives' relative resources, namely, their educational levels and managerial posts; in Japan, Japanese men have more traditional gender ideologies compared with their American counterparts. However, gender ideologies among Japanese men are becoming non-traditional. Previous studies reported the threat hypothesis, in which husbands among dual-earner couples insist traditional gender role attitudes when wives' economic contribution exceeds the family income exceeds theirs. This paper reports the result of a questionnaire survey conducted in February 2011 on 342 dual-earner Japanese husbands who had children less than 12 years of age.

Two results are obtained through path analysis. First, when wives' educational levels or managerial posts are higher, wives' incomes will be higher. The wives' higher incomes are associated with the husbands' more egalitarian gender role attitudes. However, the wives' educational levels or managerial posts are not directly associated with the husbands' gender role attitudes. Japanese husbands may tend to hold egalitarian gender ideologies when they hold lower breadwinner roles, and their wives have a higher economic status. In this regard, the threat hypothesis is not supported, whereas the benefit hypothesis is supported. In addition, the husbands may not care about their wives' social positions, in terms of educational levels and managerial posts. Therefore, Japanese husbands' gender role attitudes concern their wives' provider roles within the family, not with their wives' social roles in public. Second, it is speculated that the smaller the difference between husbands' incomes and their wives' incomes, the lower the level of husbands' tendency to adopt traditional gender role attitudes.

The Self Measuring Radiation Movement for Alternative Food Networks

This report argues that measuring radiation by civic groups plays an important role for Alternative Food Networks (AFNs) in current Japan. Since the 1990's, the localized agro-food movements have spread in several countries; the United States, European countries and East Asian countries including Japan. The movements have mainly dealt with economic issues, social justice, ecology and inheritance of indigenous food culture. Today, the AFNs groups in Japan face the new issue, which is contamination of foods by radiation.

On March 11, 2011, the Great East Japan Earthquake and the tsunami triggered a series of serious accidents at the Fukushima Daiichi nuclear power plants. Since then, Japanese have been concerned about the effect of radiation on domesticaly grown agricultural products. In the cases of AFNs, members tend to connect with each other directly because someone of farmers, consumers or coordinators between them have to check the food secure by themselves. Since the winter of 2011, many grass-roots groups to measure radiation of foods have emerged. There are 110 groups as of June 2013, and most of them are located in eastern Japan. The total number of samples which those groups already have been measured equals to the number of samples officially measured by the Japanese government.

This report is based on the author's participatory observed research in one of such civic groups in Miyagi Prefecture from January 2013, where is one of the most severely damaged area. I found the major roles of measuring radiation are that the members can judge the level of safety by themselves based on their own experiences. They can share not only the data of radiation but also the information about how to minimize the effects of radiation. Finally the implications of this study for AFNs will be discussed.

The Making and Unmaking of the Global Social Movements in the Japanese Sixties

Preliminary scholarships in the field of global social movements more or less has been focusing upon successful cases that were able to create alliances with the movements abroad and/or various transnational activities they conducted. However, in order to comprehend the substantial mechanisms of the global movement, investigation of its difficulties and limitations including various obstacles as well as structural and cultural constraints particularly while the social movements attempt to cross national boundaries is decisive. Thus this paper explores, what makes the global practices possible and how it affects the development of global movement through comparing two social movements that aimed to create anti-colonialism in the 1960s and 70s based on the Japanese Anti-Vietnam War movement, which created alliance with the movements in the First World western societies and the Japanese New Left that were influenced strongly from the Third World revolutions and aimed for global revolution through international hijacking and terrorism. My socio-historical investigation of the movements in the 1960s, which I consider as the beginning of the contemporary global social movements, therefore will reveal the way in which external political factors, differences in terms of network structure and culture as well as capitals, ideology and taste of the activists influence the making and unmaking of transnational actions and thereby shapes the distinct characteristics of the global movements.

The Impact of Intra-Party Democracy and the Party-Membership in Japan: The Interaction Between Parties and Citizens

In the literature of comparative politics, there is a growing interest on the causes and consequences of the intra-party democracy such as the adoption of primary for the leadership selection. Our paper examines the dynamics and the developments of intra-party democracy in the main political parties in Japan and its impact on citizens' political participation and partisanship, based on the newly constructed comprehensive dataset on the party-leader selection in Japan.

The second section briefly presents the theoretical framework, including the definition of key concepts as well as the causal relations between the intra-party democracy and the party membership or public support, drawing upon the theoretical debates and empirical findings in the existing literature.

The second section demonstrates the contextual information about the Japanese party politics, including the electoral system, the party system and the party organizations, as well as the summary of the development of intra-party democracy in the main political parties in Japan.

The third section then investigates the impact of the intra-party democracy on the citizens' participation and partisanship, using both quantitative and qualitative methods. This section examines how the change in the method of party-leader selection, such as the adoption of primaries, affected the citizens' party support and party membership, based on the empirical data such as Japanese monthly-based opinion survey. It also presents some compelling case studies on the impact of intra-party democracy on the party support and party membership.

This paper has interesting implications on the changing nature of the party membership in Japan and will be able to contribute to the discussion on the party membership from the Asian and comparative perspective.

Mutual Cooperation Due to TFT Strategy Observing Fixed Number of Cooperative Players

Reputation theories that give a solution to 2-persons Prisoner Dilemma have a common assumption that all players observe what happened in all other players. However, the assumption that a player has to observe all others seems to be unrealistic. To overcome this problem, Nakai and Muto (2008) proposed us-Tit For Tat (TFT) strategy that requires a player to regard another player who did not cooperate with himself/herself and his/her “friends” as a friend, and they showed emergence of a mutually cooperative society. They assume that the us-TFT player doesn't have to observe all other players and observe him/herself and his/her friends. However, when all players become mutual friends, they observe all other players, and hence us-TFT suffers from the same weakness of previous studies. To solve this, we propose a new us-TFT strategy with which a player observes a small fixed number of other players. The players to be observed are selected based on how cooperative they are toward the us-TFT player. We performed evolutionary simulations with ALL_D, ALL_C, the us-TFT etc and found emergence of a mutually cooperative society. Especially, in case that the number to be observed is two, mutual cooperation is the most likely to emerge. Therefore, it is concluded that mutual cooperation can emerge without observing all others and it is a new finding. In addition, we examined what mechanism works. The takeoff begins when a player changes into an ALL_C player by an accident. After that, there appear a few ALL_C players and us-TFT players such as the ALL_C player is positioned at center of the network, and us-TFT players surround the ALL_C player. Therefore, the network looks a star-like one and grows into a mutually friendly network.

Solution To Problem Of Free Rider Through Division Of Production and Sanction

The meta norm (Axelrod 1986, Yamagishi 1990) is one of solutions to the problem of free rider. The norm requires all persons to be engage in a production and a sanction at the same time. However, it seems impossible for a person to play both roles because one is different from the other as a professional job. So we suppose the division of roles meaning that a person can't play both roles, and examined whether the division can solve the problem of free rider. So in Aumann's model, two types of players: One is a person who doesn't engage in a production (that is, he/she doesn't pay a sanction cost), focuses on a sanction against a free rider with a sanction cost, and is presented a payoff by the other role. We call the player the "guardian." The other is a person who focuses on a production of collective goods with a production cost, doesn't engage in a sanction against a free rider (that is, he/she doesn't pay a sanction cost), and presents a payoff to a guardian. We call the player the "triburuty." With a guardian and a triburuty in addition to a free rider, we executed evolutionary simulations to examine whether a guardian can exclude a free rider and a guardian and a triburuty work together for mutual benefit. As a result, we found that the division of roles had established and the coalition could exclude a free rider. Especially, it is found that guardians account for up to the same rate of a society as a presented payoff divided by a total production, which reminds us of a kind of tax rate.

Cosmopolitanism, Nationalism, and Colonialism: The Manchurian Motion Picture Corporation and The Production Of My Nightingale (1943)

This paper contributes to emerging studies on cosmopolitanism by presenting a sociological, historical-institutional analysis of the production (and, to a lesser extent, reception) of an arguably "cosmopolitan" film, My Nightingale (Watsuki no uguisu, dir. Shimazu Yasujiro, 1943), produced at the height of Japan's ethnic-nationalist period during the Second World War. I ask the following three research questions. First, what aspects, if any, of the film text can be considered to entail cosmopolitanism? Secondly, whether, how, and why could the possibly cosmopolitan aspects of the film text emerge under the existence of ethnic-nationalist policies, institutions, attitudes, and behavior existent in the Japanese colonial empire? Thirdly, what implications does this case study have on the ongoing debates on cosmopolitanism, nationalism, and political space? By providing answers to these questions, I argue that an ahistorical, normative call for cosmopolitanism may hinder our grasp of the possibility that some forms of claim to cosmopolitanism entail a rationality of narrow ethnocentric nationalism. As a historical hindsight, it is easy to dismiss Manchuria's slogan of gozoku kyowa (peaceful co-existence of the five nationalities) and deo rakudo (heavenly place of virtuous rule) as simply political propaganda. But it may also be the case that this apparently cosmopolitan justification might have strengthened the degree of repression and discrimination of the Japanese colonial rule in Manchuria. In other words, I contend that the case study of the Manchurian Motion Picture Corporation and the production of My Nightingale suggests a possible coexistence of cosmopolitanism, nationalism, and colonialism.

The Challenge of Supporting People Suffering Ambiguous Loss: An MPS Case Study

This presentation examines the challenge of supporting people suffering ambiguous loss. "The theory of ambiguous loss" was introduced by Pauline Boss to define the sort of unclear loss that defies closure, such as having a family member go missing during a natural disaster and caring for a loved one with dementia. Boss provides detailed strategies for professional therapists to treat people suffering ambiguous loss, but does not sufficiently explain how supporters with key information should negotiate these delicate situations. In order to evaluate this aspect of ambiguous loss, I observed and analyzed the activities of the Missing Person Search Support Association of Japan (MPS), a non-profit organization dedicated to helping families search for their relatives who suddenly disappeared. Families in these situations experience ambiguous loss, as they do not know if their loved ones are dead or alive. My analysis shows that MPS volunteers have to provide mental and emotional support to the families of missing persons while assisting with search efforts. The volunteers listen to families' anxieties about their relatives' safety almost every day. They primarily try to be sympathetic and receptive to the families' narratives of loss, like a strategy Boss recommends. However, sometimes they must impose upon or contradict these narratives when they obtain new information during their search. In these situations, they struggle with the decision to inform the families that their loved ones may never return to them, despite their hopes to the contrary. This case study illustrates that clarifying ambiguous situations often conflicts with mental care goals when supporting persons suffering ambiguous loss.

The Meanings of Childhood Mental Health Problems and Children Behaviour: A Comparative Study Between Brazil (Santos) and France (Paris 19ème)

Epidemiological studies developed in the last 10 years, mainly in the Western countries, indicate a global trend of an increasing number of mental health problems in children and adolescents, as confirmed by epidemiological studies conducted also in Brazil and France. To understand the phenomenon in these countries, the study had as objective to understand the meanings of mental problems and children's behavior from a sociocultural perspective, by analyzing children's experiences beyond adults' discourse, namely of health professionals and children's parents. The research was based on the ethnographic method and took as its starting point the experiences of children with mental health problems who receive care from the health services. The fieldwork was carried out in two mental health services: the Child Mental Health Service of the Northwestern zone (SCVC), in Santos, Brazil; and the Medical and Psychological Centre of Flandre (CMP Flandre), in Paris (19ème), France. To apprehend the different meanings of childhood mental health problems in these contexts, in-depth interviews were made with health professionals of both services and with the children's parents. The discourses about the problems and complaints concerning the children's behaviour were analysed and grouped by categories to allow the identification of similarities and differences among the adults' discourses, as well a comparison between the two services.

Adults relate childhood mental health problems to children's behaviours that they consider as strange, disruptive or disturbing, as observed at home and mainly in the school. The analysis of the different meanings of childhood mental health problems in these countries point to the interpenetration between mental problems and children's behaviour in a common sense, which solutions are sought in mental health services. We observe a displacement of children's life problems towards mental health field, which makes it possible the solution to general children's behaviour.

Logic behind Life Reconstruction in the Mt. Unzen-Fugen Eruption Disaster

Areas that sustain damage in a natural disaster are forced to choose between restoring the original area and relocating to another area in order to reconstruct residents' lives. At the same time, SABO plan (erosion and sediment control) are undertaken in damaged areas in preparation for another disaster. In the initial stage of minimization of disaster loss, people unite and undertake one direction in order to defend their life. However, in the life reconstruction stage, individual issues emerge such as family structure, livelihood, economic conditions, and disparities in degree of damage, making it difficult for the whole community to keep in step.

Following the establishment of the Basic Act on Disaster Control Measures, the Mt. Unzen-Fugen eruption disaster was the first disaster to establish a hazard area in a residential area. This report focuses on the villages that fell within the SABO dam site under the plan to prevent expansion of eruption damage to central city. People in these damaged area faces two major issues. One was that the village was divided up into areas included in the SABO dam and areas that were not. The other was that the villages included in the SABO dam had to make difficult decision to dissolve their community and vacate their homes. People consented to these unacceptable terms at an early stage because people feared prolonging a decision would cause a delay in the construction and result in a man-made disaster.

Furthermore, villages were against moving to reclaimed land on the coast provided to them by the government. Concerned with the reconstruction of their way of life, they found their own land for relocation. This report seeks to clarify requirements for life reconstruction in this area pertaining to the issue of having to relocate due to disaster prevention projects.

Involution in Tourism and Bodily Changes: Long Braided Hair and Beaded Neck of the Pastoral Samburu

The body of the pastoral Samburu of northern Kenya is in the process of re-organization under the tourism context their beaded adornments or their “tra-ditional” appearances become commoditized. In this presentation I will introduce examples of heavily beaded neck, long braided hair, and holed earlobes, etc., which have played significant role to indicate the persons’ social and ritual status, are now drastically changing in their meanings. I indicate the process that the interaction with the tourists, for example, makes people redefine their body parts and manipulate their ethnic or personal identity.

Regional Variation of Gender Stratification Among Japanese Lawyers

This presentation focuses on regional variation of gender stratification among Japanese lawyers. In terms of specializations, Japanese female lawyers seem to be bifurcated in a way. A large number of Japanese female lawyers engage in family law in solo practice or smaller firms than their male equivalent, while an increasing number of female lawyers work for large scale international law firms, specializing in corporate law. Such bifurcation is related to regional differences. For example, in non-metropolitan areas, traditional female gender roles are stronger in non-metropolitan areas, and it may affect and limit specialization for female lawyers. On the other hand, the relative shortage of lawyers in non-metropolitan areas could lead to better advantage for female lawyers in finding jobs in those areas. Thus, this presentation is set out to statistically examine regional variation of gender stratification among Japanese lawyers. The index of gender stratification to be used includes specializations, current firm sizes, positions, and income. The data to be used is lawyer’s census (Keizai Kihan Chosa) conducted by Japan Federation of Bar Associations in 2010.

Social Resources and Accessibility to Care: A Case Study of Persons with Disabilities in Tanzania

In Tanzania, which is one of the low income countries, governmental organizations (GOs) and non-governmental organizations (NGOs) have put more and more emphasis on the rights of people with disabilities (PWD) after 2000s. The National Policy on Disability 2004 and the Persons with Disabilities Act 2010 have put in force, and surveys on PWD are conducted in 2002 and 2012 Census. In 2008, the government carried out the first comprehensive survey on disability in the country. According to the survey, 7.8% of the population aged 7 and above have some form of activity limitation.

However, there is no actual service provided by GOs for PWD. Some PWD get information about the services provided by NGOs and can access to the services, but others may not. The accessibility is dependent to the social resources which PWD have. Social resources include the social network, the physical environment around PWD, and the economic situation of the persons themselves or their care givers. It is apparent that there are many factors cause inequalities in accessibility to care.

The applicant is going to consider what kind of social resources are important to get care in the Tanzania mainland context. The applicant puts the focus especially on the importance of the social network, because in Tanzania mainland people rely on the social network to move and can gather money from the network. The social network gives chance to PWD for changing situations around them such as the social environment and the economic circumstances on a temporary basis. The data used in this presentation will be documents on GOs/ NGOs' activities for PWD, and findings from on-site observation and interviews with PWD in Dar es Salaam and Dodoma, which the applicant has conducted in 2013.

Impact of the Long Recession on Japanese Careers

The aim of this presentation is to examine the effect of the long recession on Japanese careers. After the Lehman shock economic crisis from 2008, many social scientists discussed the changes that took place in the Japanese labor market and the problems of unstable employment. The smooth transition from school to work has been one of the unique characteristics of the Japanese labor market. However, the number of young people who could not follow the typical career path increased, and it has become more difficult to obtain regular jobs. Additionally, opportunities for regular jobs are said to be unevenly distributed on the basis of educational backgrounds. Many social scientists focused on the lifetime employment system, and they presupposed that continuing in the same workplace was a better option rather than frequently changing jobs. However, the present condition of the labor market appears to be anything but simple. Today, if persons with high educational backgrounds change jobs often, they might still be able to get another regular job easily. On the other hand, even if those with lower educational backgrounds continue in their jobs as nonstandard workers, they may not be considered as regular workers.

Social Care at Japanese Snack Bars

Snack bar is a special statutory place, where a female attendant (usually there is a female owner called “mama” by customer) is allowed to entertain the customer solely by talking and drinking together. Physical contacts being not permitted, all kinds of talking strategies, including wide range of topics from politics to intimate affairs, are employed to allow the customer feel at home or healed after the day's hard work.

Most of the customers are married and belong to companies. They go to Japanese snack bar to see “mama” and after talking and drinking (sometimes singing Karaoke), they feel better than before. It is possible to say “mama” does mental care for Japanese men who needs some kind of care, not physical but mental. So that “mama” has great skills of talking strategies that Japanese men want women to do.

It might be said that Japanese men is not satisfied with communications with their wives or women who is coworkers. “Mama” and this kind of place playing the role of mental care (easier than going to hospital) is necessary in Japanese society and should be positioned one of the social place with guarantee as same as other companies.

Distributive Equity in Waste Disposal Facilities Siting and the Perception of Necessity: In-Ward-Waste-Disposal-Principle in the 23 Wards of Tokyo

What affects the realization of an idea of distributive equity in the siting of waste disposal facilities? This study shows how the realization of an idea of distributive equity in waste management of Tokyo, In-Ward-Waste-Disposal, was significantly influenced by the degree of the perceived necessity for more incinerators. The siting of waste disposal facilities often faces conflicts with neighbors due to the negative impacts on a host community. Distributive equity is one of the most crucial aspects in these conflicts as the facility siting brings the sense of unfairness to those who are told to accept them. In the 23 wards of Tokyo, how to redress inequity in the distribution of waste disposal facilities has been one of the biggest concerns in waste management. In the early 1970s, In-Ward-Waste-Disposal, which meant that waste of a ward should be disposed of within the ward, was adopted as a significant principle in waste management and translated into One-Ward-One-Incinerator-Principle. However, this idea of distributive equity was not completely realized and abandoned in 2003. By comparing the four periods between 1971 and 2003, this study argues that the progress of One-Ward-One-Incinerator depended on how much more incineration capacity was assumed to be necessary given the estimated amount of waste in the future. The incinerators to realize In-Ward-Waste-Disposal was facilitated when the urgent necessity to build more incinerators was perceived by the government under the rapid economic growth and the dominant influence of Incinerationism as the policy paradigm in waste management, while the sitting became stagnant when the urgency was eased as the economy became sluggish and the influence of Incinerationism was undermined by the emergence of Sustainable Waste Management as the new paradigm. When the necessity was denied, In-Ward-Waste-Disposal was abandoned and the attempt to find another way to redress inequity began.
**Chance and Risk of Qualitative Interview Methods in an International Comparison**

The study aims to identify problems in conducting and interpreting qualitative interviews in an international comparison and present some solutions. With the help of new relational communication technology and increasing cross-border mobility, qualitative interviews enjoy favorable basic conditions. Methodological innovations and quality criteria lag still behind. Since foreign language and alien culture come into play, qualitative interviewees need native speakers as interviewers or translators and, in the same vein, insiders as cooperation partners and co-interpreters. To study strategies that intervention of natives needs more reflection. Researchers should know in which context an insider is situated with regard to age, gender, classification, and social position in his or her own country. In addition, there are usually interest conflicts, perspective differences, trust or mistrust, power distance, and pre-knowledge between two countries. In the light of that, thorough and profound research for cross-border interviews is of great importance. In my study small experiments with interviews about “civil society” with German and Korean interviewees will be conducted. Questions about “global civil society,” “global values,” and “global discourse” will be asked first with insider’s information and second without. By comparing the two settings, results will show how intervention of an insider works in a qualitative interview and how to reduce one-sidedness, distortion, or misunderstandings.

*Viet Kieu* or Overseas Vietnamese and the Future of Viet Nam: The Case of Viet Kieu Association in Thailand

The Socialist Republic of Viet Nam (SRV) or Viet Nam is one of the countries on the Indochina Peninsula in Southeast Asia which had many times faced severe circumstance caused by colonization. However, Viet Nam finally surmounted all difficulties and has been gradually developed by great help of its own people, particularly overseas Vietnamese, including those who have already returned and who are still abroad. “Viet Kieu” or overseas Vietnamese has a long history closely linked to the protection and construction of Viet Nam. Approximately, there are 4 million “Viet Kieu” or overseas Vietnamese currently living, working and studying around the world. “Viet Kieu” is playing an important role in preserving Vietnamese language, national culture, tradition and knowledge outside the country, contributing to Viet Nam’s economic growth as well as developing the foreign relations of Viet Nam.

The study aims to analyze role of “Viet Kieu” community, particularly in Thailand, in strengthening overseas Vietnamese regime and making great contribution back to the country. The study further highlights view of the Viet Nam State on the “Viet Kieu” community and their role in strengthening overseas Vietnamese regime. In doing so, the researcher will interview “Viet Kieu” Association in Thailand, analyze case studies of “Viet Kieu” who benefits from the Viet Nam’s policy, and review relevant literature regarding the issue.

With illustration of the “Viet Kieu” Association in Thailand, importance of the “Viet Kieu” or overseas Vietnamese community in constructing and developing Viet Nam will be emphasized in the study. Finally, this study will envision how Viet Nam avails itself of these “Viet Kieu” or overseas Vietnamese for the forthcoming ASEAN economic integration in 2015 and beyond.

Goverance As an Emergent Compromise: Access to State Service Delivery in an Islamabad Squatter Settlement

Compromise between the formalizing imperatives of modernization and local-grounded informal networks can provide the basis for stable governance in the cities of the global south. This paper examines urban governance in Pakistan as seen through the experiences of an Islamabad squat settlement accessing electricity supply through the state-run electricity utility. After a crackdown on illegal connections, community leaders negotiated a compromise with the utility leading to the installation of two official electricity meters for 600 households, with billing and individual connections handled by a committee of residents established for this purpose. Some households in the squatter settlement did secure individual contracts for service delivery, only to retreat to the communal arrangement when they found that formal contracts could also be used to reinforce patterns of exploitation and inequality rather than simply securing their rights of access and claim-making. The emergent pattern of governance – more stable than its predecessors – is one of compromises between formal contracts and the lived reality of an Islamabad squat settlement. These local struggles with modernization are echoed at the policy level as well, where the state has retreated from market ori-

We thus propose 5 hypotheses to assess the impact of these specificities on Indian corporate networks: 1° The 1991 liberalization policies had an impact on the shape and density of networks. 2° Networks are still very much shaped by the stakes the State has in PSUs companies. 3° Companies belonging to a business group are likely to be more connected to other companies than independent companies. 4° Connections between firms are likely to be structured by caste and family networks. 5° The density of corporate networks in India is likely to be both relatively low due to the recent liberalization of the country and to show pockets of strong density on the basis of business group, regional, family and caste ties (overall low density of connections but a high number of multiple connections held by specific actors).

Social Objects As Tokens for Social Eigen-Behaviors

This paper puts forward the concept of ‘Social Object’. A ‘Social Object’ would be a sort of imaginary hanger (or better, an imaginary hanger shared by a community of social individuals) which works as a referent consistently targeted by a particular family of social actions and interactions. This set is somewhat fuzzy, and it would be made up by the actions and interactions that satisfy— to some acceptable degree—such social object. For instance, the social object we call ‘greeting’ would be the ‘hanger’ or ‘imaginary shared referent’ of the (fuzzy) set of actions and interactions which satisfy that specific object (namely, which accomplish an acceptable greeting) in a given situation. That set of actions and interactions would include those solving (accomplishing) the act of greeting in that situation, and would exclude those failing to do so. In other words, a social object would be the ontological assumption that enables and orient our interactive success (as our interactive failure, in case we misfire and act in a way unacceptable for our interactive partners).

This notion of ‘Social Object’ is cognate to the conception of physical objects as “tokens for (eigen-)behaviors”, put forward by Heinz von Foerster. From this viewpoint, objects are not realities independent from our actions, but assumptions that guide the cognitive and practical processes of the subject—a subject who “constructs” such objects through his actions. Different types of societies are structured by means of different kinds of social objects. The sort of social objects that are emerging as typical of today’s global society are Social World-Objects (namely, social objects which define their dynamics as unitary systems on a global scale). Many of those Social World-Objects are being generated within, and by the Internet.

Corporate Interlocks and the Specificities of Indian Capitalism

This paper aims at studying the interlocking directorates among Indian firms as a way to better understand the specificities of Indian capitalism. It draws on a study of interlocks among the top 250 companies of the NSE in 2000 and 2012. It also compares indices of centralization, compactness, density, etc., with those of similar-size networks in other countries in order to evaluate the specificity of the structure of the Indian corporate network and to locate it within a comparative typology. This paper more particularly intends to bring a contribution to the embeddedness theory. Drawing on existing socio-historic studies, one could argue that the Indian capitalist system distinguishes itself by five characteristics: 1° A very recent liberalization that makes it a newcomer in the game of free-market economy; 2° The importance of State owned companies (PSUs); 3° A long and lasting tradition of conglomerates among business groups; 4° The importance of family ties among Indian groups; 5° The importance of caste in business networks.

Los procesos de agencia y resistencia de la mujer mexicana se dan dentro de una cultura de la colonialidad que configuran un modelo centro-europeo-norteamericano; pero las nuevas condiciones de la globalización planetaria hacen que se generen perfiles que rebasan esta primera clasificación por lo que habla mos de una “cuarta mujer”, después de Lipovetsky (1997), que responde a las categorías de contemporaneidad en el tránsito de construcción. La cuarta mujer en tanto sujeto sostiene posiciones de liderazgo que van más allá de la división del trabajo y si establece soportes de sus propuestas de vida como un sistema decisional y/o socialmente reconocido. Aparentemente la cuarta mujer encuentra un campo propicio para sortear las desigualdades. Las desigualdades de la cuarta mujer están delineadas por tres estructuras que obedecen a la educación, productividad y empoderamiento que configuran un perfil estándar del comportamiento social contemporáneo; el ir sorteando las diferentes construcciones de esos tres sistemas las hacen una mujer flexible, educada, ocupada económicamente y con pretensiones de empoderamiento en base al éxito profesional. Es capaz de regresar a valores como la maternidad, pero busca embarazarse sin requerir de la presencia permanente del hombre; es una “mujer emancipada”, “dueña de sí misma y de la situación”; sin embargo, las condiciones de resistencia a los peligros de regresar a la tercera mujer hacen, que obedeciendo a la educación, productividad y empoderamiento que configuran el sistema decisional, en base al éxito profesional, una mujer que se ha emancipado de la dependencia de la familia por tener una ocupación que le permite su libre creación. ¿Dónde queda la masculinidad? La masculinidad que funcional en la cuarta mujer es la que ha abandonado el disfrute del poder total o del goce de la dominación.
Esta ponencia resume y profundiza el análisis sobre la influencia de la globalidad en el estatus de la mujer mexicana contemporánea, y de los pormenores e implicaciones que tiene la lucha por edificar el sujeto femenino.

Another Look at Sibship Structure and Educational Achievements

Studies have shown negative correlations between both number of siblings and educational achievement and between number of siblings and cognitive ability. These findings are consistent with the Resource Dilution Hypothesis, the Quantity-Quality Trade-off Theory, and the Confluence Model. However, recently some scholars have questioned the causal interpretations of the correlations and have simulated quasi-experimental studies to test the hypothesis that it is largely spurious. The results of these tests are inconsistent so far.

This paper attempts to further the understanding of the sibship size effect and its causality. We employ a retrospective life history data set on some 2000 Jewish Israeli men who were born in 1954 and interviewed while in their mid-twenties. The database includes information on several educational and cognitive outcomes measured at different ages; socio-economic background variables, and detailed sibship and household composition measures. We use fixed-effect models to evaluate the causality of the sibship-achievement association. The availability of detailed histories of household composition allows us to estimate the effects of siblings present (in the household) at different stages of the life course on cognitive and educational outcomes. This is a more precise measure than the measures that have been common in the literature so far.

Preliminary results show that the number of sibling present in the household at ages that precede the measures of outcomes is more detrimental to its achievement than the overall sibship size.

Violence Against Women: The Indian Scene

This paper examine violence against women emanates from the social hypot-hesis of superiority of superity of men over women. Insubordination of women legitimizes gender violence and grants social sanction to the ignoble treatment meted out to women. Manifestations of violence encompass physical aggression, such as blows of varying intensity, burns, sexual abuse and rape, physiological violence through insults, humiliation, coercion, blackmail, economic and emotional threats and control over speech, action and behavior. In extreme cases the result of this violence is death. The incidence of violence prevalent in man-woman relationship takes place in the context of the family, state and society. In most cases the male aggression towards women and girls remains tacit, hidden or unrevealed.

Prevent or Cure – the New Philosophy of Health Care

Prevent or cure – the new philosophy of health care

Health care systems evolve at the same time in many different ways: in area of developing technologies, the development of the medical knowledge, because of demographic changes and particularly - aging of the society. This induces modifications of the priorities of the health policy, new methods of organization and more complex funding mechanisms. Individual components of the health care system - illness, basic health care, hospital care have different contribution into the health care systems of different countries. The worlds growing awareness that for keeping and improving the population health the governments must create effective and efficient health system leads to the effective illness prevention. It shouldn't be expected that the health effects and economical efficiency of the health care system will improve, without appropriate expenditures on actions which delay or prevent illness, and also allow early diagnosis and effective (usually cheaper) treatment

In the first part of the paper there will be discussed issues connected with modern health conceptions which create the fundamentals of the approach to the illness prevention as well as the arguments for the state engagement into health care. Health care is the specific public goods. This induces the choice of criteria, used by policy makers, to allocate public sources. The second part will present characteristics of the prevention actions, rules of the program creations and its place in the health care systems. The crucial significance is to specify the determinant of the changes of the health benefits structures financed from the public means. The last part of this elaboration, based on gathered empirical data, will discussed experiences of the selected European countries on prevention of the selected illnesses, indicating the links between expenditures and the effects of the prevention activities.

Modern Social Communication in the School System

Elena Nazarova

Modern social communication in the school system

Information technology today is perhaps one of the most rapidly developing areas, which directly affects the dynamics and to some extent determines the vector of development of a society and a system of communication.

The rapid pace of changes in contemporary social and professional spheres determines the need for such specialists , who would have not only availability, but also the ability to equally rapid self- transformation. Modern specialist is in a situation where information and communicative movement causes him to be creative, constantly speaking in a variety of roles. This fundamentally changes the status and purpose of education.

Education loses its autonomy and isolation, losing the functional role of the* incubator for growing professionals." In a sense, the whole society is the educational system, where experts will not only accumulate information and knowledge in preparation for life, but also to fully live, applying them in practice in process of development.

Communicative competence and information, creative movement and toler- ance come to the forefront in the formation of man , describing him as a specialist , who can be integrated into the mainstream of the movement of professional knowledge, and as a full member of the ever-changing multicultural social reality. This is an important aspect of the communicative component of education.

According to most of the school is the main element in the process of becoming a person , is to teach people to think, to respect labor, to encourage children tolerance, and develop entrepreneurial skills to real life, and not just theoretical knowledge.

The Dynamics of Migration Processes in Modern Russia: Analysis, Problems and Prospects

For the present stage of social and socio-economic transformation in Russia is characterized by sharp increase attention to the migration processes, the dynamics of which every year is losing its momentum, a negative impact on the demographic situation in the country. The immigration influx is now no longer compensates for the natural decline in population - as it was in the 90s.

However, in today’s globalized world for the skilled workforce Russia to seri- ously compete. Thus, according to the UN, the total annual immigration resource in the run up to 2050 will be approximately 2.2 million people. Half of them will qualify for the United States, 200 thousand - Germany and Canada, with 130 thousand - United Kingdom. Moreover, a number of European countries are already developing programs to attract Russians . Russia left more than 100 thousand scientists involved in such traditionally strong areas of the country, such as mathematics, chemistry, physics, biology . This is mostly educated people aged 35-45 years.

We believe that now in force , with sufficient clarity migration policy came into conflict with the objective needs of the country.

Cohort, Gender and Socioeconomic Inequalities in Trajectories of Frailty: Findings from a Growth Modelling Approach

We have seen a rapid and continuing growth in life expectancy. This, coupled with the baby boomer cohort heading into post-retirement life, has led to signif- icant policy concern with the financial pressures resulting from an increasing proportion in the population of older, non-productive and dependent people. In contrast, the baby boomer cohort is also presented as extremely fortunate, or selfish. As a result of benefiting from social welfare reforms post Second World War, it is suggested that baby boomers are able to retire early and in some luxury, at the expense of younger generations - hence the accusation of selfishness. Cou- pled with this, there are also suggestions that we are also seeing a compression of morbidity, or a delay in the onset of death. This, alongside increasing life expectancy we are also seeing a shorter proportion of later life spent in illness or disability. Baby boomers appear to be a truly fortunate generation.

In this paper we will examine age cohort differences in frailty trajectories to test the extent to which we are seeing a compression of morbidity, and then we will examine the extent to which any change in frailty trajectories is distributed
similarly across socioeconomic and gender groups. To do this we use data from the English Longitudinal Study of Ageing, which allow us to examine overlapping frailty trajectories for different age cohorts.

Financialization and (Global) Class

The concept of financialization has become a prominent issue in sociology and political economy. As a multi-dimensional phenomenon it affects different levels and social spheres - from the macroeconomic level to states, firms, households and individuals. While most explanations focus on the macroeconomic deregulations since the mid-1970s, its cultural aspects and the actors propogating it remain often under-explored. Our contribution represents an attempt of a cultural approach towards the issue of financialization. We interpret the process of financialization as the assertion of a global "market culture", emanating from symbolic struggles between social actors over economic valuations. Thereby we aim at highlighting the role of social actors and cultural narratives in economic transformations. We ask whether the global phenomenon of financialization can be attributed to the formation of a "global financial class".

Defence and Security Policies in the EU: From Decision Making to Political Culture

What is the contribution made by the armed forces during and in relation to security operations, both in international contexts and to protect public order and homeland security? Based on the assessment of the contribution and skills currently at the disposal of the armed forces, we have identified possible areas of further use of the military force in security contexts. In the international arena, thanks to the growing use of instruments for civil and military cooperation, the military is in crisis management, conflict prevention and peace-building processes. As concerns internal security, the involvement of the military - and the use of their logistic assets - is increasingly common in response to threats such as terrorism, environmental disasters, protection of critical infrastructure and other emergency situations which the country has to deal with. This trend is also confirmed by the involvement of military forces in European "Security Research" activities, sponsored by the Commission with the objective of developing technological capabilities, tools and methodologies in "civil" security. The research was conducted through the consultation of political, institutional and regulatory sources (at national, EU and NATO levels), the academic and scientific literature, the media, qualitative interviews with experts in the field.

MOREAU, NICOLAS (Université d'Ottawa)

Les Représentations Sociales De La Dépression Et L'accès Aux Services De Santé Mentale Des Jeunes Dépressifs : Une Question D'Identité?

La question de l'accessibilité aux services de santé mentale ne peut se réduire à celle de l'offre. D'une manière générale, la demande des services de santé mentale varie selon différentes variables sociodémographiques dont l'âge. Les études démontrent ainsi que les jeunes ont généralement moins tendance que la population adulte à demander de la faide. C'est dans cette perspective de tenter de mieux saisir la question de la demande de soins des jeunes en proie à des troubles dépressifs que nous avons analysé des entretiens effectués auprès de 31 répondants âgés entre 18 et 30 ans qui ont porté avant avoir souffert de dépression au cours de la dernière année. Cette enquête qualitative panafricanienne a été réalisée dans quatre sites : Moncton, Ottawa, Sudbury et Winnipeg par la méthode du réseau d'associations et des entretiens individuels semi-dirigées. L'analyse des résultats obtenus a été effectuée selon la méthode d'analyse intégrée de contenu des représentations sociales et culturelles. Le contenu de la représentation sociale de la dépression ayant émergé du discours analysé est organisé autour de deux éléments principaux : désespoir et stéréotype négatif. Ces éléments renvoient à des dimensions descriptives et socioculturelle de la dépression. Le discours actif par ces deux dimensions contrastée avec la nouvelle normativité sociale (autonomie, initiative, responsabilité individuelle, etc.), ainsi qu'avec les caractéristiques stéréotypées attribuées aux groupes de jeunes (dynamisme, enthousiasme, joie de vivre, etc.). Cette double tension de nature normative et identitaire mobilise une résistance par rapport à la disposition des personnes à consulter les services spécialisés en santé mentale.

Cynical Vs Empathetic Worldview Schemas and Fairness Perception

This research explores the contrast between cynicism, as a component of Kwok Leung human social axioms construct, and a more empathetic or altruistic view of the social world. As such it looks at the contrast between what game theorists call “zero-sum” perception and “positive-sum” perception. What are some of the attitudinal and behavioural differences between people who believe they live in a you-OR-me world, and those who believe they live in a you-AND-me world? Given its implications for inequality, political conflict, and ideology, this seems to capture a critical dimension in human social worldviews. Preconceptions about whether others can be trusted and whether one can afford to cooperate extensively with others to solve difficult problems have many implications for social capital building and dispute resolution between individuals and groups in society. The research explores ‘cynical’ and ‘empathetic’ orientations to social interaction, and the ways in which these worldview schemas relate to (1) social fairness perceptions and (2) related aspects of personality and self-conception. Data were gathered using a multi-construct written questionnaire instrument administered to undergraduate students in New Zealand, Jamaica and Hong Kong. Results across several cultural contexts show significant differences in both personality attributes and in social fairness attitudes between participants who are predominantly cynical in their worldview (higher scores on 20-item Leung cynicism scale, relative to empathy) and those who are predominantly empathetic in their worldview (higher scores on 14-item empathy scale, relative to cynicism).

Emerging Dimensions of Senior Friendly Built Environment in Aging Societies

The purpose of my paper is to explore the methodology of my empirical research concerning analyses of senior friendly built environment in aging societies. This methodology is based on a framework of nine emerging dimensions, which result from the relationship between design, spatial experiences and quality of life define senior friendly care housing. The nine emerging dimensions are: 1. Building organisation. Through this emerging dimension summarise buildings in a way that is relevant to the residents’ quality of life. 2. Safety and health and architectural design of senior care housing. 3. Regulations and guidelines as well as their impact to the feeling of well-being in senior care housing. 4. Privacy. According to several researchers, privacy is a most important aspect of the environment for older people (Morgan and Stewart 1998, Duffy et al. 1996). 5. Ability to personalise the surrounding (personalisation as a factor, which allows the transformation of a care housing setting to a home). 6. Orientation – Disorientation – Confusion regarding place, time, personal identity, or social situation – is common among people with dementia (Cohen & Weissman, 1991). 7. Sensory simulation is concerned with the different elements of sight, smell, hearing and touch. 8. Conflicts between different building users (because senior care housing is not only a living setting but also a staff's working place). 9. Participation and contributions of older people.

The objective of the presented method is to compile a comprehensive review of senior care housing features essential for residents and exposing potential and importance of design to improve senior quality of life.

"No Time like the Present": Lessons Learned on Timeliness of Disaster Donations

In the aftermath of each disaster, material goods flow into the disaster affected area. Given with the intention to help survivors, the influx of items often generates situations which could be termed as “second disaster” or, in other words, an over abundance of items that are inappropriate, difficult to sort, costly to transport or store, and challenging to distribute. This paper takes a closer examination of one contributing factor to the problems associated with the disaster management process: the timeliness of donations. Drawing interviews conducted following several disasters events that struck the United States in 2012 and 2013, as well as interviews following Hurricane Katrina's devastation in 2005, this study explores the extent to which donation supply is often incongruous with donation demand. Lessons learned from these disaster events suggest the need for a system that accounts for the progression of need in affected communities.
The social and logistical pressures on organizations to accept non-priority items are discussed, as are the benefits reaped by organizations that employed time-
lines of donations management.

Education As a Key to Tackle Inequalities in Shrinking Cities. Examples from East Germany

In East Germany political and economic transformation after 1990 led to demographic change, massive loss of jobs and high levels of out-migration. Just like in many shrinking cities over the world (see Mallach/Brachmann 2013 for US or Fol 2012 for France) outmigration was selective: predominantly talented and skilled people left for better prospects, less qualified and less mobile parts of the population remained. The same migration pattern can be observed on a micro-level. The most fragile parts of the population with lowest educational background are left behind in the least attractive neighbourhoods.

In Germany this poses a problem for the future because statistics show that poorly educated parents tend to have poorly qualified children. Bonjte and Musterd (2012) have pointed out, that if there is a shortage of well qualified people in a shrinking city, it becomes less attractive for companies and investors, which may cause more people to leave.

Some cities in Germany have realised that a shrinking society cannot afford a poorly qualified younger generation that is unable to keep or attract businesses and pay the pensions of an aging population. Theses shrinking cities regard investment in education as a key to survival and a key to tackle inequalities. The city Bernburg shall be presented to show how the challenge can be met. In 2005 it had 50% less children than in 1990. 20% of them did not complete school. In consequence Bernburg thoroughly reformed the educational landscape and developed new school concepts. Approaches from other German cities that focus on identity building and link education strategies to urban regeneration, may be presented to complete the picture.

Could it be a positive effect of shrinkage, that more emphasis is put on a just educational system? This argument shall be put forward for discussion.

The Influence of Housing Policies on Urban Fragmentation in Large Brazilian Cities

Urban fragmentation is one of the most important characteristics of the recent urban development in Latin America (Coy 2010, Maricato 2011, Pereira/Hidalgo 2008). Typical causes are impacts of globalisation on job markets. The emergence of residential fragments is related to the building of gated communities for high-income households as well as the provision of housing for the poor by informal markets (Abramo 2009). The housing deficit in the urbanized areas of Brazil amounts to approx. 5,6 million units, of which almost 90 per cent belong to the target group of social housing (households with less than three minimum wages). Do the strategies for intervention developed by the government for reducing housing deficit help to dissolve residential fragments? Or do urban development and housing policies and/or their execution lead to the emergence of new informal housing? This paper will present the concept and first findings of a case study in São Paulo.

The research project of which the concept and first findings of a case study in Fortaleza shall be presented, aims to investigate the influence of housing policies and their implementation on urban fragmentation in Brazil. The study includes the analysis of public interventions in the realm of social housing (new housing estates and regeneration of existing squatted areas) and the influence of development plans and interventions on socio-spatial structures. The objective of the study is to discover which prerequisites assist housing policies’ implementation to counteract urban fragmentation and which parameters (i.e. value of lots, development costs) were decisive: predominantly talented and skilled people left for better prospects, less qualified and less mobile parts of the population remained. The same migration pattern can be observed on a micro-level. The most fragile parts of the population with lowest educational background are left behind in the least attractive neighbourhoods.

In Germany this poses a problem for the future because statistics show that poorly educated parents tend to have poorly qualified children. Bonjte and Musterd (2012) have pointed out, that if there is a shortage of well qualified people in a shrinking city, it becomes less attractive for companies and investors, which may cause more people to leave.

Effects of Work Related Factors to the Schooling, Health and Recreation of Filipino Children

Children in the labor force are a social phenomenon that has become link with other parts of the welfare state have been subject to reiteration. However, research on affluent countries shows that these developments have been far from unilinear. Instead family policy diverged cross-nationally, both in content and scope. Consequences for child well-behave have also been varied. Typically, variations in child-poverty among affluent countries are frequently attributed to differences in broad welfare state regimes; leaving unexplored the ‘black box’ of program specific characteristics. Almost four-fifths of the world’s population live in low- and middle-income countries – additionally including higher proportions of children than most affluent countries. This paper extends the comparative analysis of links between family policy and child poverty on a more global stage. A multilevel regression approach is used to investigate the role of different family policy dimensions in reducing the incidence of poverty among families with pre-school children. We use household income data on 38 countries from the Cross-National Data Center in Luxembourg (US) and new family policy indicators from the Social Policy Indicator Database (SPIN). Results indicate somewhat different associations between policy and poverty in high- and middle-income countries. Policies promoting female labor force participation have the greatest poverty reducing effects in high-income countries. In middle-income countries, the general level of support appears to be conducted nationwide to collect data on the demographic and socio-economic characteristics of working children ages 5 to 17. In 1995 and 2001, four response variables present attendance in school, dropping out of school, effect of work on schooling and reasons for dropping that characterize education status of working children were modeled. Results in 1995 and in 2001 show that the nature of employment, working days per week, normal working hours per day and doing heavy physical work affect school attendance. Factors affecting schooling in 2001 are activity during free time, and status of employment. The number of working days and hours per week, increases, the odds of dropping out from school also increases. Factors that help a child to stay in school are engagement in less permanent job, “boss” is a relative, less exhausting work and does not require heavy physical exertion, less activities that the child do during his free time as well as when he is unpaid worker. The health of working children is affected most when they work in the industries and development and housing policies and/or their execution lead to the emergence of residential fragments? Or do urban development in Latin America (Coy 2010, Maricato 2011, Pereira/Hidalgo 2008). Typical causes are impacts of globalisation on job markets. The emergence of residential fragments is related to the building of gated communities for high-income households as well as the provision of housing for the poor by informal markets (Abramo 2009). Just Generational Welfare Contracts and Poverty

Citizens in affluent countries face a great number of social and economic risks, from birth until the very end of their lives. Many of these risks are associated with specific phases of the human life cycle when the earnings potential of households decreases. How are these age-related poverty risks linked to the often “implicit” generational welfare contracts that are embedded with social policy making? Such generational welfare contracts may seem just in their institutional design if rights for income protection are equally distributed across age groups. We argue, however, that a generational contract cannot be considered to satisfy important demands of fairness if it fails to substantially reduce poverty among citizens in different phases of life. In this paper we link the idea of generational welfare contracts to poverty outcomes in 18 affluent countries. We combine new comparative data on social rights from the Social Policy Indicator Database (SPIN) and micro-level income data from the Luxembourg Income Study (LIS). For some countries we have income data stretching from the 1960s until 2010, something that provides possibilities to analyze long term trends in policy developments and outcomes. The empirical analyses show that there is considerable degree of correspondence between the design of generational welfare contracts and age related poverty risks, particularly in terms of financial vulnerability. Higher welfare state generosity for a particular age related social risk is generally linked to less poverty in the specific target group.

Conditional Cash Transfers: A Social Investment Instrument in Times of Economic Crisis and Austerity?

Conditional cash transfers receive recognition as a way to address poverty within present and future generations while also promoting economic growth by investing in human capital. Such policies have been used extensively across Latin America and are now being promoted as part of the European Union’s Social Investment Package. We assess and compare these policies in Latin America and in Europe. Specifically, we question whether they can be considered social investment policies and, in doing so, illustrate the various factors that condition the success of such policies. We draw particular attention to the need for policy approaches to be based on a life course perspective and the risk of ‘policies crowding out’ in the European context. Finally, we elaborate on the implications of a uniform trend in the passage of these policies, the timing of their implementation in the aftermath of economic crisis.

Living with Uncertainty, Struggling with Possibility: A Study on Radiation Effects from the Perspective of Atomic Bomb Survivors

This paper will examine the reality of radiation effects from the point of view of Atomic Bomb survivors. Radiation is a unique material which people cannot see, smell, and feel the touch of. But it can be harmful for human body. Today, especially since the horrific accident of Fukushima nuclear power plants in 2011, radiation and its effects on human have become a focal point in Japan and the world. Historically speaking, the issue of radiation and its effects has been studied predominantly in medical and physical fields. However, a study on narratives and life-stories of people exposed to radiation shows different aspects of this issue. First, in addition to actual health problems which radiation may cause, people frequently suffer from anxiety, fear, and distress about the possible effects of radiation. Moreover, their reality of radiation and its effects are often socially constructed through their interactions with medical and scientific knowledge. In this paper, I will explore the complex relationships between radiation, people, and science, through the narratives and life-stories of Atomic Bomb survivors from Hiroshima.

This paper will consist of three parts. First, I will briefly describe medical and scientific knowledge about the physical effects of radiation on human body. Second, by drawing on the survivors’ life-stories and narratives, I will illustrate how they have suffered from and struggled with their anxiety and distress, caused by the uncertainty of radiation. Lastly, I will examine how the survivors’ reality of radiation and scientific knowledge affect with each other.

However, little is known what the effect of such policies is: Do policies which fa-
vour the traditional marriage family increase marriage rates and stability of mar-
rriage families? Do policies with a focus on single parents, patch-work families etc.
accelerate the trend to more instable family relations? Do social policies as an
alternative to family security increase cohabitation and divorce rates?
The analysis is based on official national statistics for OECD countries and cov-
ers the time span from 1980 to 2010. The analysis shows that social policies and
family policies such as child care services provide alternatives to the traditional
marriage families and family at all. Such measure increase cohabitation rates and
divorce rates while fertility rates decrease. A generous and benevolent welfare
state seems to provide alternatives to the traditional marriage families. Marriage
is no more a precondition to avoid or escape poverty. Social security and family
policies have lowered the material necessity to enter marriage, and increased the
opportunity to exit unpleasant family constellations.

Family Support and Quality of Life: Structured Ambivalence As Bridging Concept Between the Individual and the State

The relation between family support and the welfare state as providers of
support has been extensively researched in Europe. Most studies thereby focus
on the quantitative dimensions, e.g. who provides how much support to whom.
However, receives little attention, e.g. what are the motives for providing support
or who provides what support to whom.

A qualitative dimension that might contribute to the theoretical discussion,
however, is no more a precondition to avoid or escape poverty. Social security and family
policies such as child care services provide alternatives to the traditional
marriage families and family at all. Such measure increase cohabitation rates and
divorce rates while fertility rates decrease. A generous and benevolent welfare
state seems to provide alternatives to the traditional marriage families. Marriage
is no more a precondition to avoid or escape poverty. Social security and family
policies have lowered the material necessity to enter marriage, and increased the
opportunity to exit unpleasant family constellations.

Can Teacher's Gender Explain The Growing 'Boy Crisis'? In Educational Attainment?

Gender inequalities in education have seen much change, with females gaining
advantages over males in ways that have not been anticipated just two decades ago.
At the same time, the share of female teachers has grown in almost all countries
of the western world. There is an ongoing, contentious debate on whether this
growing “feminization” of the educational system, in particular at the lower
levels, can account for the growing educational disadvantage of males. In this talk,
I review the literature on the “feminization of teaching” argument and present
findings from two empirical large-scale studies conducted in German elementa-
ry schools which allow me to identify the effect of having a same-sex teacher
for different scholastic outcomes (gender-blind test scores and more subjective
teacher’s grades) and across different subjects (Reading, Literacy, Mathematics, and Science). My findings suggest that the popular call for more male teachers in
primary school is not the key to tackle the growing disadvantage of boys.

NEUMANN, ROBERT* (Technische Universität Dresden, robert.neumann@tu-dresden.de)

The Validity Of Response Latency Measurement In CatI Surveys

There is agreement among researchers that the measurement of raw response
times from surveys requires a treatment for baseline speed of respondents and
interviewers. There remains disagreement about the appropriate procedure to
transform raw response times to response latency and there is no study that
evaluates the different approaches with regards to their potential measurement
error, which may have an affect on modeling and causal inference. This article
fills this gap by examining the measurement validity of different ways raw re-
sponse times are treated for baseline speed (survey vs. experimental approach).
We apply a Multitrait-Multimethod approach to examine four different operationalizations for
response latencies and their relationship to attitude accessibility and indicators
of response quality. We conclude with remarks about the levels of validity and
potential biases when latencies are used as independent variables.
based or as an unconditional propensity to exhibit trustworthiness. Hypotheses were tested with pooled data from two CATI surveys (n=706) conducted in Germany in June 2012 and January 2015. Using the techniques of both response latency measurement and Cox regression models we are able to conclude that measurement of trustworthiness either lack convergent validity or are subject to theoretical deficiencies. Consequences for future research are discussed.

**Worth a Thousand Words: Conducted Energy Devices, New Media Events, and The Public Eye**

Between April 2003 and November 2008, 26 men died in Canada during events where a conductive energy device (CED) was deployed on them. The death of Robert Dziekanski, a Polish immigrant, in 2007 at the Vancouver International Airport, was recorded on a mobile phone and its footage subsequently uploaded to the popular video site YouTube. The video, which documented Royal Canadian Mounted Police (RCMP) officers deploying a CED on Dziekanski, was viewed by thousands of citizens of the world and expanded its footprint beyond the Internet as traditional media organizations incorporated it into their coverage of the event. Unlike previous CED-related deaths, the recording of the Dziekanski death was an integral piece of the event’s anatomy and granted members of the mass public, as scrutinizers if not legitimate bystanders, entry into how it unfolded. Following Fiske (1996), we treat the recording, its dissemination via the Internet and broader news media, and its mass consumption as a ‘new media event’—one that amplified and articulated competing narratives of risk. We synthesize the work of Beck (1992); Giddens (1991; 1990), Hall et al. (1978), and Lupton (1999) and others in our examination of the YouTube video of Dziekanski’s death and over 400 reports in three major Canadian newspapers, the Globe and Mail, the Toronto Star, and the National Post. Using a broad critical approach, we assess how groups like the RCMP, government officials, and the general public made sense of the recording. The recording’s electronic nature, we argue, complicated an ‘open-shut’ case narrative commonly articulated by law enforcement official when describing how they respond to and neutralize threats to the public. The existence of the recording allowed for competing assessments of threat and harm while altering the credibility of the police as sole purveyors of risk assessment.

**Explaining Pathways to Party Activism: Case Studies of Hong Kong Young Adults**

Young people in many advanced industrial countries are unwilling to join political parties. The situation in the Hong Kong Special Administrative Region of China is even worse as it is a semi-democracy where political parties are relatively underdeveloped and legally prohibited from winning governing power through election. Despite these conditions, there are still a small number of young people choosing to join and take active part in political parties. The aim of this paper is to improve our understanding of how some young people come to get involved in political party activism. Qualitative life history interviews with 23 young active members from five major political parties in Hong Kong were carried out to explore this question. Based on a preliminary analysis of the interview data, I single out four distinct paths to party membership, namely 1) the socialization path, 2) the critical experience path, 3) the occupational path, and 4) the social network path. Informants taking the first two paths tended to initially get involved in party activism for political reasons, while those taking the last two tended to get involved for non-political reasons. Theoretical and practical implications of the findings will be discussed.

and the Knowledge Society Framework indicators: an enabling policy environment, opportunity and capability, and women in Science and Technology and innovation systems to understand the status of women and girls in different spheres of South Africa’s reality as well as their participation in the knowledge society. It is argued that the policy environment in South Africa has ensured that a gender equality narrative has been put into place and operates in all the realms of government. A lack of funding, human resources’ constraints and insufficient co-ordination mechanisms have hampered the effective implementation of some of the policies. Statistics around access to quality education for girls and boys are provided and a discussion around some specific projects and mechanisms that have been put in place to encourage the uptake by girls of science and mathematic- ics at school level are presented as case studies of the opportunities available to ensure gender parity in STI education. Lastly data is presented on women’s partic- ipation in the STI system in South Africa. South Africa has an aging, predominantly white male scientific and engineering workforce. In this regard, there is a need to focus on both tertiary level education as well as women in science leadership in the country.

For Our Children’s Future: Inequalities in Rural Development in Vietnam

The previous literature on Vietnam’s growing urban landscape shows a great deal of rapid change in Vietnam. The 1986 Đổi Mới initiative set up by the central government to gradually transform rural communities into urban communi- ties. This program had opened up private businesses which incentivized ru- ral communities to urbanize in an effort to modernize Vietnam. These cases of rapid urbanization seem to widen the economic gap of a population over time. Although some people are able to enjoy the benefits which come with urbanization, many are still left in impoverished conditions. These glaring differences in lifestyle and the distribution of wealth which were once reduced by strong government policies are now being superseded by transnational businesses. This structural gap formed by larger movements in globalization, I imagine would create similar differences in personal perception of the world. Differences in ex- perience in this national effort, changes how individuals understand their own identity, their responsibility to the land, and their sense of security for the future. This research is grounded on a 1080 rural households surveyed through an East West Center, National Science Foundation funded research on Avian Influenza and coupled Anthropogenic systems. My findings show that there are key dif- ferences in how traditional, transitional and modern farming communities are affected by and understand rural development. Particularly interesting findings include significant perception differences found between the men and the wom- en surveyed. I predict that the cognitive differences of Vietnamese citizens would not simply be due to differences in resources or education; however, a gradual process in which cultural practices becomes embedded in everyday behavior.

Self-Employment in Tourism Business Among Japanese Expatriates in Bali, Indonesia

This study aims to identify the characteristics and motivations of Japanese expatriates establishing their tourism business in Bali, and its impact to local community. Bali as one of the most famous international tourist destination, the number of foreign tourists to Bali is increasing every year. Japan is one of the top five most visit Bali and the number of Japanese settlers in Bali is also increasing. As a result of this, there has been increase in the visible presence of Japanese entrepreneurs, particularly in tourism areas. This study is based on fieldwork with a qualitative research approach. Entrepreneurial activity among Japanese expatriates community is studied in four tourism areas in Bali, such as Jimbaran, Kuta, Sanur, and Ubud. The result of this study showed that: 1) The primary reason for migrating to Bali was amenity factors such as tropical climate, myriad of traditional and uniqueness of Balinese culture, natural landscape, and slow pace of life. This also means for them to escape from drudgery of city living in the country of origin; 2) Tourism experience influenced their decision to migrate and kinds of enterprises established in Bali; 3) High involvement of women in self-employment; 4) They recognize the business chance of their area after set- tling; 5) To maintain a peaceful lifestyle is a higher priority than to extend their business. Entrepreneurial activities among Japanese expatriates community in Bali make a significant contribution towards tourism development, supports local effort for job creations, and deepen mutual understanding between Japanese ex- patriates and local community.

Ecological Disasters: The Political Economy Of Floods In Pakistan

“Ecological Disasters: The Political Economy Of Floods In Pakistan”

EC, 2010-11, Pakistan was struck by two successive flood disasters that wrought mas- sive destruction all across the country, especially three of its provinces that sit ashore the Indus River—Punjab, Pakhtunkhwa and Sindh. Thousands of people were killed, while twenty million, mostly rural residents of Pakistan’s farmland, were displaced from their homes and hearths. The dollar value of these losses was estimated at $20bn, which equates to 9% of Pakistan’s GDP. The state and its institutions failed to live up to their obligations to protect the citizens during or after the disaster. Their role, however, goes back to the very making of the disaster that arose from the flawed pattern of development. This project, thus, explores the economic and power relations in society that “manufacture” such disasters. In particular, it explores the “man-made” aspect of Pakistan’s floods that were presented by the state and its institutions as a “natural” disaster. The paper seeks to embed the disaster in Pakistan’s political economy that broadly manifests in its development patterns. In this regard, three empirical indices are chosen to document the development pattern that best explains the flood disas- ters: (a) movement of the Indus waters in modernization and development extend to the building of dams; and (c) deforestation in the mountainous regions of northwest Paki- stan, which was caused by development as well as timber industry.
ed aim of fostering more intentionality in the collective project of selfhood and evade closure or imposition of identity.

Societal Conditions to Produce Effective Knowledge on Sustainable Food Security at Global Level: A System Theoretical Narrative from African Cases

This paper aims at presenting consequences if we conceive the concept of Food Security (FS) as normative. The intention of FS is to create conditions, where no human being is insecure with food. Such livelihood conditions have to be instituted in social systems. The international community has declared the war against hunger as well as food insecurity. The Universal Human Rights - including the Right to Food- over 60 years ago. Still, around 1 billion people go hungry to bed and 2 to 3 other billion suffer from malnutrition. The various disciplines of sciences dealing with FS- agricultural sciences, economy, sociology and others- are far from providing effective knowledge in order to solve the problem. If these observations are correct, than the main question arises: what can be done better within sciences in general and what can sociological observation contribute in particular? We test four hypotheses based on the Luhmannian system theory but limited to African cases. (1) The normative character of FS has to be enforced and institutionalized in order to guide both science and practice. (2) The full and equal involvement of peasants, farmers, indigenous communities and social movements has to be enforced in all major scientific and technology development processes, in order to repair environmental damages done and enhancing FS. (3) More resources need to be mobilized by the various collectivities in order to educate a new generation of agricultural scientists and citizen enlightened with social sciences methods and ethics, (4) in order to transform the current faulty food and agriculture into sustainable, just and viable systems, languages have to be used which are understood by people. Recognized indigenous knowledge will result as a new regulative force and strengthen not only the functional system of Food and Agriculture, but contribute to more balanced rural-urban relations and sustainable livelihoods.

Aging and China's Silver Industry: Based on a Sociological Survey of Urban and Rural Beijing in 2012

By 2012, China's population reached 1,354,040,000. The 60+ age group accounted for 14.3% while the 65+ age group alone accounted for 9.4%. Every year, the 60+ age group continues to increase by 8.6 million and will reach one third (32.8%) the population by 2050. At this rate, the 65+ age group will equal 14% of the population by 2026 and by 2040 will reach 316,720,000 making China a super-aged society. While the population ages at an accelerated rate, traditional care provided by families is declining. In response, the 12th Five Year Plan (2011-2015) encourages China's central and local governments to promote the introduction of private capital into the senior care industry, to cultivate growth of related industries and to take active measures to foster a society which meets the needs of the aging population. Preferential measures and tax benefits for private investors in the senior care industry have also been implemented. The industry is wide-ranging with new opportunities surfacing and growth is expected. However, China's senior care industry, situated in the largest consumer society worldwide, still lags relatively behind in terms of investment, human resources, awareness, and policies or funding. There is a massive potential market and yet demands both soft and hard are overwhelming the supply and China cannot keep up with the needs of the aging population. From this backdrop we examine challenges facing China's aging population from a macro perspective including an overview of related policy trends followed by the findings of research funded by the Japanese Government and in cooperation with related institutions throughout China. We surveyed over 400 subjects aged 50+ (August-November 2012) in urban and rural Beijing regarding their lifestyle and consumption yielding a glimpse of their current situation as well as potential opportunities.

Current Social Welfare Conditions in China

China's old-age pension scheme originates from the nation's 1951 labor insurance regulation. It was primarily for people unable to participate in the workforce because of age or disability and provided for old-age, disability and survivor benefits. Prior to China's 1978 reform and door-opening, employees of government and state enterprises were entitled to receive pension without paying into the system. Since 1978, the market economy has undergone rapid growth and at the same time the pension scheme has undergone rapid reform. We will take a brief look at how the pension scheme was reformed and how the scheme is currently organized as a result of the reform. In this context we'll examine how it is affecting people in reality. Based on surveys supported by Grants-in-Aid for Scientific Research from the Japanese Government conducted in two urban and three rural areas from 2008-2011 we'll look first at the present living conditions of seniors comparing urban and rural settings as well as regional differences. Second, we'll look at a survey of the pension system in four major cities worldwide, still lags relatively behind in terms of investment, human resources, awareness, and policies or funding. There is a massive potential market and yet demands both soft and hard are overwhelming the supply and China cannot keep up with the needs of the aging population. From this backdrop we examine challenges facing China's aging population from a macro perspective including an overview of related policy trends followed by the findings of research funded by the Japanese Government and in cooperation with related institutions throughout China. We surveyed over 400 subjects aged 50+ (August-November 2012) in urban and rural Beijing regarding their lifestyle and consumption yielding a glimpse of their current situation as well as potential opportunities.
Neighbourhood Effects on Migrant Youth’s Educational Commitments, an Enquiry into Personality Differences

In the neighbourhood effects literature, the socialisation mechanism is usually investigated by looking at the association between neighbourhood characteristics and educational attainment. The step in between, that adolescents actually internalise educational norms held by residents, is often assumed. We attempt to fill this gap by looking at how educational commitments are influenced by neighbourhood characteristics. We investigate this process for migrant youth, a group that lags behind in educational attainment compared to native youth, and migrants are particularly vulnerable to neighbourhood effects. To test our hypothesis we used longitudinal panel data with five waves (N=4179), combined with fixed-effects models which control for a large portion of potential selection bias. These models have an advantage over naïve OLS models in that they predict the effect of change in neighbourhood characteristics on change in educational commitment, and therefore offer a more dynamic approach to modelling neighbour- hood effects. Our results show that living in neighbourhoods with higher proportions of immigrants increases the educational commitments of migrant youth compared to living in neighbourhoods with lower proportions. Besides, we find that adolescents with a resilient personality experience less influence of the neighbourhood context on educational commitments than do adolescents with other personalities.

Neighbourhood Socialisation of Youth’s Employability, the Moderating Role of Personality

Youth growing up in disadvantaged neighbourhoods are more likely to be exposed to unemployment in their local area than youth in more affluent neighbourhoods. In disadvantaged neighbourhoods, youth may adopt more negative attitudes towards work, which subsequently may lead to higher unemployment chances. In the literature studies often only test the relationship between the neighbourhood context and occupational outcomes, neglecting the step in between. In an attempt to cover the whole socialisation process, besides unemployment, we look at how the neighbourhood shapes work commitments as well. Additionally, because some youth may be better able to cope with environmental stressors than others, we test whether adolescents with different personality types are affected differently by the neighbourhood. An influential typology of personality distinguishes three types: resilient, overcontrollers, and undercontrollers. Resilients respond relatively more adaptively and flexibly to situational demands, while both overcontrollers and undercontrollers are relatively inflexible. We hypothesise therefore that resilient youth are less likely to be affected by exposure to neighbourhood disadvantage than overcontrollers and undercontrollers. To test our hypotheses, we used panel data (N=203) with longitudinal information on adolescents from age 16 through 25. The findings show, contrary to our expectations, that overcontrollers’ and undercontrollers’ work commitments are positively influenced by longer exposure to neighbourhood disadvantage. Resilient youth’s work commitments are not influenced. In turn, work commitments do not affect the likelihood for unemployment, suggesting that adolescents’ unemployment is unlikely to be, and is not socialised by the neighbourhood context. Furthermore, undercontrollers’ work commitments and unemployment and overcontrollers’ work commitments are influenced by the neighbourhood, while resilient youth remain unaffected. This finding is in line with the idea that resilient youth are better able to cope with environmental demands, while overcontrollers and undercontrollers are more likely to be affected by their environment.

Space, Time and Symbol in Urban Indonesian Schoolboy Gangs

This paper uses theories of honour and masculinity to look at the phenomenon of male youth fighting in the urban space of two cities in Central Java, Indonesia. The masculine habitus of lower middle class Javanese schoolboys is referenced in local collective violence. Acknowledging the long history of heroic warfare and factionalism in Java, the data point to the pleasurable sense of oneself as a kind of warrior fighting with a band of brothers on specified 'battlefields' in the city. Four points emerge from the analysis. First, peer fighting is a temporally-bounded activity that ends with the school-to-work transition, thus bearing out Messerschmidt's (1993) argument about the conditional and compensatory nature of collective masculinities. School plays an important role in amplifying peer conflicts and honour disputes. Third, getting a girlfriend demands the expression of a different kind of masculine habitus from that operationalized in peer fighting. Finally, Muslim schoolboy youth squads (yaga) are intense formations for the construction of warrior masculinities, employing theologically-informed imagery in battles with boys from secular-and Christian schools. The spaces of battle are identified with names that anchor them to the global Islamist struggle.

Using Local Cultural Forms To Talk To Youth In The Global South

This paper uses material from two research projects, one in Fiji and the other in Java, Indonesia, to discuss the value of using local cultural forms of group talking to engage youth in everyday situations. First, although the convention of talanoa as a decolonising methodology has become popular in the Pacific, talanoa refers to storytelling. In Fiji the kind of talking which is closest to a focus group discussion is veivosaki-yaga, which in Fijian literary parlance means 'worthwhile discussion or conversation'. The term veivosaki connotes a neutral sense of conversation and dialogue rather than storytelling. Yaga literally means 'useful or worthwhile'. By engaging in veivosaki-yaga, Indigenous Fijian participants are tuned in to a form of communal dialogue that demands their serious consideration and response. It is therefore useful for discussing a range of issues with young Fijians concerned about their future. Second, the cultural convention of nongkrong as a decolonising methodology has become popular in Java, Indonesia, to discuss the value of using local cultural forms of group talking to engage youth in everyday situations. This paper will explore the use of group talking in the Taloro village of the K颜色族. The term nongkrong is Extraordinarily difficult to translate. It is culturally distinctive, but nothing much really happens. In some ways it is like talanoa in that the silences may be as meaningful as the comments. None of these cultural forms of group talking matches the rigid definition of focus group discussions (FGDs) typically offered by Western books on research methodology, yet they are far more culturally appropriate to the everyday lives of young people in these two countries.

Discovering Ideological Codes in the Professional Work of Daycare Personnel

During the last decades there has been a tremendous growth in the enrolment rate in daycare centers in Norway to the extent that 96% of all children attend daycare centers before they reach school age. Thus, daycare has become an important socialization arena, supplementary to parents, and a place where the demarcation line between ‘the private’ and ‘the public’ is rendered indistinct. The private becomes public when problems associated with the private sphere, for example behavioral disorder, child neglect etc., become a public responsibility. The daycare personnel’s appreciation of parental practices and their gaze on the children. Alongside the increase in daycare centers there has been a demand for increased professionalization of the sector, which in general is dominated by personnel lacking formal education. Important in this respect is early intervention; the obligation of daycare personnel to intervene when a child does not develop adequately or has a worrying home environment. The development of standardized tools aimed at mapping children’s cognitive and emotional skills are increasingly being introduced to sort out children who are in need of extra concern. However, daycare personnel report to rely on their own embodied sensitivity in regard to concern for children. In this intersection between standardization and personal ‘stomach feeling’, some distinct ideological codes come into play. What constitutes ‘normality’? Is normality absolute, or are there different definitions for different children? And how is normality and abnormality (not) spoken of? The paper addresses these questions in relation to the concepts of ideological codes and ‘ruling relations’.

The Practice of Control in Risk Activities

In this paper I would like to challenge the dominating understanding of voluntary risk-taking as activities with a focus on risk (Lyng). Instead I argue for a shift in focus from risk to control, which is the outcome of a successful interaction with risk. Based on ethnographic fieldwork on climbing and scuba diving, I analyse the practice of control as what Foucault calls “a technology of the self”. With this new focus on control, participants in risk activities are understood as practicing a dominating ideal in the post welfare era, where the individual is increasingly supposed to be responsible and in control of his/her own life (Simon).

Legalizing Internet Piracy through State-Invented Religion? A Case Study of the Swedish State’s Acknowledgement of the Missionary Church of Kopism As Religion

In 2011 the Swedish Kamarrokko, the oldest public authority in Sweden, acknowledged The Missionary Church of Kopism (Det missionerande kopi-mistsamfundet) as a faith based community (trossamfund). The Church is built on the idea that copying and the spreading of information is an ethical right. As a registered faith based community the Church qualifies as an organized and by the state approved religion, as such it is protected by Swedish constitutional law where it is stated that freedom of religion is absolute. Regardless of the sincerity of its creators, does this mean that the Church has found a way to legalized piracy for its members? If so, what future implications could this case have? The overarching question we would like to ask in this article is how the category religion enables the state apparatus to produce legitimate and illegitimate subject positions and what the consequences of this production are in relation to power and ideology.

Network of Support Centers for Gender Equality in Greek Armed Forces

The paper presents the analysis of data from a research project for gender equality in Greek armed forces. The legal framework of gender equality in armed forces as well as the operation of the network of support centers under the funding of the European project “Artemis – Equal” will be presented.

The specific goals of these support centers were: the recording of inequality problems which take place in the armed forces, the provision of the information of interested parties about legislation and the official procedures in order to face the problems, the information about similar cases and good practices and finally the most important goal is Psychological, legal and Social support.

A Discourse on Transnational Crisis of Legitimation

Historically, instances of transnational interactions between dominant and subordinate societies, through the instrumentality of the political state, had been anchored on particularistic vested interests that may quite often be of asymmetrical advantage, or may not necessarily be of mutual
benefits. It is argued that transnational socio-political, economic, cultural, military expressions of hegemony (or pervasive domination) are invariably in tandem with the particular vested interests of dominant forces of imperialism. By the same token, parties (i.e., societies/political states) in situations of subordination suffer deficits, as a consequence of their vested interests being determined due to exigencies of unequal exchange. However, imperialist forces of hegemony are quite often challenged, as expressed by counter-hegemony or crisis of legitimation, in reponse to conflictual vested interests. Pursuance and propagation of multi-lateral vested interests are quite more easily accomplished by transnational hegemonic blocs, irrespective of potential or actual resistance. Hence, the enduring widespread global instances of legitimation crisis, which may be construed (or mis-construed) as acts of “terrorism”.

Temporary Transnational Migrants from East Asia to Japan As Unskilled Foreign Workers and Methodological Transnationalism in the Age of Globalization

The objective of our presentation is to show the juncture between the sociological concepts on transnationalism and people’s practices while referring to the transmigratory transnational migrants in Japan. In contemporary Japan since the 1990s, a large number of unskilled foreign workers (=trainees) from East Asian countries have been introduced to the urban and rural areas as temporary labors under the foreign trainees’ system. We focus on those trainees, called ‘Kenshusei/Jisshusei’, at agricultural villages as well as the fishery manufactures in fishing villages, severely damaged by the Great East Japan Earthquake and Tsunami in 2011.

Based on the field research, we will discuss a sociological concept named ‘methodological transnationalism’, in parallel to ‘actual transnationalism’ and ‘ideational transnationalism.’ While recalling ‘methodological cosmopolitanism’ as a critique on ‘methodological nationalism’ by U. Beck, we will examine the meso-level perspective between methodological cosmopolitanism and methodological nationalism. In the present situation of North East Asia where nationalism and political tensions are continuously rising, the meso-level perspective in methodological nationalism is required to examine the specific trainees’ transnationalism. This is also a standpoint that associates with a critical viewpoint against the traditional perspective of sociology.

Another concept we discuss here is the ‘mediators,’ a proximate concept to the G. Simmel’s. However, we took further analysis on the concept and categorized them according to the level: from informal/sympathetic type up to formal/businesslike type. We particularly pay attention to the ‘bridge-type mediators,’ regarding as inevitable actors in transnational interactions.

Based on the discussions above, we will examine an implication on conceptions of the nation-state and (civil) society as the most decisive points in sociology. It is the conception of society beyond the nation-state along with the perspective of methodological transnationalism, that is also required to contemporary/future sociology.

Concepts of “Bonds” and “Romantic Love” in Japanese Women’s Culture—The Representation of the Contemporary Japanese Male Idols

The purpose of this paper is to consider the representation of Japanese male idols, one of the largest genres in Japanese popular culture aimed at women, and characteristic of larger recent women’s culture that it is part of. Specifically, through an analysis of articles (text and images) in female oriented magazine media, I will clarify how the image of male idols is constructed by the media. Building on this analysis, I will expand further on the concepts of “bonds” and “romantic love” in recent Japanese women’s culture.

Until recently, Japanese male idols, like those from ‘Johnny’s Entertainment’ were ascribed with the role of the ideal love partner for Japanese women. However, in recent media dealing with male idol groups popular in the 2000s, strong friendship and relationships of mutual trust between the members of the group are represented frequently. “The every day” of idols, including events at school and community activities or friendships, are depicted, and many of the physical contact and conversation are made to look like expressions of heterosexuality. Situations that consist of silly tomfoolery and play by these idols are usually represented frequently. “The every day” of idols, including events at school and community activities or friendships, are depicted, and many of the physical contact and conversation are made to look like expressions of heterosexuality.

In other words, the current male idols is represented as “ideal love partner” for women, but at the same time as someone who could not possibly ever enter into a heterosexual relationship with the reader of these media. In the social background of this peculiar development, links can be made with “yaoi” culture (female made and oriented fiction on romantic and sexual relationships between men) in Japan, as well as changes of heterosexual values. In this way, I consider characteristics of recent Japanese woman culture through magazine media.

Polyvalent Meaning of Community Wind Power Movements: Comparing with Anti-Nuclear Movements in Japan

After the nuclear disaster in Fukushima, the opposite opinion to nuclear power plants and the expectation for renewable energy are growing in Japan. Because the electric supply is monopolized by major electric power companies, people cannot choose the company which sells electric power. Furthermore, the electric power companies are trying to carry out re-operation of nuclear power plants and to keep the exclusive structure of an electric supply. Therefore, the number of citizens who protest against the monopoly has increased, and people who desire to abolish the nuclear power plants, hope for the expansion of renewable energy.

Therefore it’s said that these renewable energy movements are connected with “anti-nuclear” movements. Those who support the anti-nuclear movements construct the dominant discourse—“anti-nuclear”, by relating various points at issue with anti-nuclear feelings after Fukushima disaster. However, does the strategy of anti-nuclear movements have the backing of public opinion?

This report aims to clarify this question by answering why the community wind power movements become popular in Japan, using data of investors for the community wind power. The community wind power movement has started from ten years before. 12 sets of wind power have already worked now.

The results are as follows: The participants in early community wind power movements were those who had joined in the anti-nuclear movement. As the number of the investors increased, their social attitudes became wide, and they have various motivations for the investment, not only environmental consciousness, but the commitment to windmill and the expectation for a dividend.

If the administration of community wind power emphasizes the anti-nuclear too much, the number of the participants in a renewable energy enterprise will decrease. This result shows that it’s significant for sustainment of social movements to keep participant’s various motivations, and the renewable energy movements related with “anti-nuclear” is too simplified.

Re-Entering the Labor Market after Childbirth Among Japanese Women

This study explores the women’s working career after childbirth in Japan. Many Japanese women quit working around the time of their first childbirth, and re-enter the labor market when their children get somewhat older. This study focuses on the process of re-entering the labor market. Some previous research already investigated on the issue. However, most of them only focus on the getting a job for the first time after childbirth. This study further explores what happens in women’s career after they get job for the first time after childbirth, because it seems that many women experience the changes of their employment status even after re-entering the labor market. Data used in this study is Japanese Panel Survey of Consumers (JPS). This study uses data collected from 1993 to 2008. Those women who had their first childbirth during above observation period, and did not working in the year of their first childbirth are selected to describe the working career after childbirth and analyze the determinants of it. Results of Cox regression model show that university graduates are less likely to get a job compared to those who completed high school, however, it seems that husband's income is more influential than education on whether a woman get a job or stay out of labor force. Then, focusing on the women who started their first job after childbirth as non-standard employees, their working career afterward is analyzed. The results imply that those who graduated from university are more likely to keep their employment status compared to those who have high school diploma. Based on these results, Japanese labor market structure and the difficulties of women’s career development there will be discussed.
Politics of Science Online: Discursive Negotiation of Risk and Uncertainty Regarding Radiation Contamination

As the details of nuclear accident in 2011 unfold, many Japanese were forced into the world of scientific jargons that might determine their life. Some believed the scientific assessment of "no immediate harm," others alert the danger of both short- and long-term harm of radiation contamination. As Beck (1992) notes that "the sources of danger are no longer ignorance but knowledge" (p183), the knowledge itself confused their understanding of radiation and political stance. While the national discourse was seemingly splitting into two "dangerous" and "safe" camps, there have attempted to assess the risk themselves by negotiating their ideas about safety, health, and lives through various discussions in mass, print, and online media. Especially the open discussions in the social media, whose popularity is tied to the activities in the triple disaster (Sater, Nishimura and Kindstrand 2012), is an important sites where laypeople's experience, knowledge, and logic are constructed and negotiated.

This paper attempts to illustrate how popular epidemiology (Brown 1987, 1997; Murphy 2006; Novotny 1994) and scientific knowledge about radiation contamination is negotiated in Japanese online discursive space. I compare and contrast two major rhetorics: one that is skeptical of, and another that claims immediate harm of radiation. I center my analysis to those on Twitter, due to its open architecture and ability to identify individual participants. My aim is to explore the different ways in which participants of online discussion are making sense of the situation, from their living space, food, water to their health, family, job, etc. Furthermore, I look at the debates around Yamamoto Taro, an activist politician who was elected to Upper House in 2013 by centering his campaign around anti-nuclear policy, and how such online discursive space may have ramifications to the transformation of political in Japanese society.

"With a Little Help from Outside" – "Outsourcing" of Domestic Work in Germany

Unpaid household labor and the provision of care within families present an important determinant for individual and collective welfare. However, in the past decades, market-based structures of household management have undergone significant change. In particular, the increase of dual-earner couples and demographic shifts challenge traditional arrangements of paid and unpaid labor within the household. Households are thus increasingly confronted with the decision whether to produce these commodities by themselves or to buy services on the market. While common explanations emphasize the relevance of time and labor costs for such make-or-buy decisions, empirical results call for further explanations.

From a sociological point of view the relationship between supplier and the household contains many issues which generate trust problems. Moreover, the outsourcing of household activities is embedded in a normative framework about family and gender, affecting the choice of what and how to outsource specific tasks. Although time pressures of households are increasingly relevant, the topic has so far been understudied. Especially in Germany there is little empirical evidence about the outsourcing behavior of households. The paper thus analyses the determinants of outsourcing decisions of households in Germany. The analysis is based on the waves 1992-2013 of the German Socio-economic Panel (SOEP) applying panel data methods. Theoretical the analysis draws upon new home economics, family sociology and economic sociology. The article gives insight into the decision-making processes of households and how these boundaries are created.

Mobility Decisions of Dual-Career Couples- New Evidence on the "Co-Location" Problem

Working couples in general face a "co-location problem". Since it is unlikely that both partners will find their individually best job offer at the same geographic location, at least one partner will have to make concessions when joint locational decisions are made. So far research on regional mobility of couples has shown that it is mostly women who make these concessions and who suffer disadvantages with respect to career opportunities. A common framework for explaining such gendered outcomes has been proposed by Mincer who assumes that a joint move will occur if the gains of one partner outweigh the losses of the other partner. Since women are (still) mostly in the role of secondary earners, their losses can be outweighed more easily. However, with the rise in women’s employment participation the potential for couples co-location problem has grown, especially for the higher educated with more specialized careers. One implication of the Mincer model would be, that in particular dual-career couples should be significantly more mobile than other couples types. However, recent research is less consistent on this topic, suggesting that dual-career couples are even more mobile than other couples. This contribution aims to explain these contradicting findings and to shed more light on the mobility decisions of dual-career couples by analyzing more thoroughly the circumstances of such migration. In particular it tries to combine mobility research with regional sociology and economics which emphasizes the relevance of regional opportunity structures, especially those of urban labor markets. Theoretically an extension of the Mincer Model is proposed by referring to a bargaining model of household decisions. The empirical analysis is based on panel data analysis of the German Socio Economic Panel, waves 1992-2011. The paper also gives insight into recent developments in urban settlement and the changing social structure of large metropolitan areas.

Institutionalizing ‘living Heritage’: Ecomuseum Development In Rural China

In 1997, China established its first ecomuseum as a new cultural strategy to safeguard ‘living heritage’ and develop local cultural economies. China has since experienced a wave of ecomuseum projects across the country, developed as ‘museums without walls’ encompassing the entire cultural landscape of a locality with a mission to involve the local population in the interpretation, management and protection of their cultural heritage. The ecomuseum marks an urgent need to address the pressures of modernization on the retention of local cultural traditions and a recent focus of heritage and museum work on intangible heritage preservation. With the establishment of ecomuseum projects in rural ethnic minority regions, local populations have become the agents of tourism tourism discourse that aims to integrate them and their ‘living heritage’ as objects and subjects of a modernizing China. In this paper, I offer an ethnographic perspective on the unfolding of the first ecomuseum project in Guangxi in the Yao village of Huaili. Given the emphasis of the project on a community-based approach to safeguard ‘living tradition’ and promote rural development, I examine how the process of ecomuseum development not only changes the rural locality itself but also the local community’s view of its heritage and ability to control it. Particular attention is paid to understanding how the ecomuseum and the intangible heritage discourse impact the local community and shape the system of identity as multiple forms of imagination and authentication of heritage come into play through the ecomuseum contact space.

Blurring Work-Home Boundaries and Their Impact of Work-Home Conflict and Enhancement

Recently, growing interest has been turned toward the inherent boundaries between the work and home domains and how these boundaries are created. There have been discussions surrounding the increasing permeability of these boundaries and even their disappearance. Research on regional mobility of couples has shown that for these tendencies an increased flexibility in the hours and place of work (e.g., teleworking from home), causing work and home to become more intertwined. Other contributing factors include modern technical conveniences, such as the Internet, mobile phones and laptops, which make it possible to work and be reached by others almost anywhere and at any time. In light of the increasing disintegration of work-home boundaries, the question arises as to its consequences. Do blurring boundaries lead to more conflicts or do they have a positive impact? Data for this study were collected through an online survey among employees in the German micro- and nanotechnology sector (n=321, response rates between 65 % and 95,5 %). Work-home/work-enhancement were measured using the four scales of the Survey Work-home Interaction—Nijmegen (SWING) questionnaire (Geurts et al., 2005). The extend of a blurred work-home boundary was measured with 6 items focused on the work to nonwork permeability (e.g., “I am also available during my leisure time for work concerns (e.g. via cell phone)”). A structural equation modeling (SEM) analysis was applied. Work to nonwork permeability showed a positive association with work-life conflict, but no significant effect on life-work conflict and the both- enhancement scales. We finally discuss the implications of these results.

Re-Building a Conservation Organization: The National Trust for

This paper will examine how general practitioners (GPs) deal with ambiguity in order to perform medication discontinuation. I examine the case of statins as it is a strongly recommended drug for reducing the risk of cardiovascular disease, however there several possible complications with taking the drug such as side effects, drug-drug interactions and lack of effect because of old age. Discontinuing the drug is therefore not a straightforward task, rather it involves a great deal of ambiguity. I draw on interviews and observations of Danish GPs and document analysis of two independent drug recommendation bodies in Denmark, I analyzed GPs’ strategies for dealing with three important problems related to discontinuation: 1) assessing the validity of patient reported side effects as a reason to discontinue; 2) discontinuing a hospital specialist’s prescription; 3) assessing the likelihood of a positive outcome after discontinuation. Drawing on sensemaking theory, I outline the strategies a GP may use for dealing with ambiguity and selecting alternatives with regards to patients drug prescription. I show how these strategies are shaped by professional qualities, including: terrain of responsibility (whose responsibility is it to discontinue), prioritizing ability (how comfortable is the GP prioritizing from a long list of medications), shared communication with patients (how two way is the communication) and discontinuation confidence (are individuals and identify themselves on the basis of this knowledge, which is nevertheless continuously socially constructed. Drawing from approaches of the sociology of knowledge, I would like to present preliminary findings of my PhD research focusing on the construction of knowledge of masculinity in media products. Since my methodology is based on the “discourse analysis as well as sociology of knowledge”, my paper is dealing with the issue of how knowledge is produced in non-fiction publications. By revealing the process of knowledge construction, I am going to analyze the role of the social actors, the subjective positioning and the given social positions as important aspects. The contradictions of social upheaval knowledge and the broadening of the social knowledge pool could be the key to adapt and form alternative ways of living, given of course there is “new everyday knowledge” and not only repetition of long established knowledge. Therefore the question arises how knowledge, what has the potential to form and distribute new “everyday knowledge”, is being produced by the media.

Up taking the discourse around a media buzzword such as sôshoku danshi (grass eating or herbivore men) – describing young men who are said to shy away from women, and by doing so seem to uphold another form of masculinity – will help to understand whether and how these media products are distributing socially important topics to the public. Furthermore, I am concerned with the process in which academic and everyday knowledge is forming a part of the knowledge stock of Japanese society and in which ways mass media is taking up the role to form “new everyday knowledge”.

The growth of conservation organisations was one of the more striking features of post-war social change in Britain. With their roots in late Victorian and Edwardian ideas of preservation and conservation, the membership of these organisations expanded markedly from the 1960s. The two biggest national organisations – the NT and RSPB – saw their combined memberships grow from just under 300,000 in the mid-1960s to over 5M by the turn of the century, making them the two largest conservation organisations in Europe. The increasing size of organisations like the NT and RSPB has given them greater influence as lobbyists in their dealings with policy makers at both the national and supra-national level. It has also, however, generated difficult questions about their relationship to their mass memberships and their internal forms of governance. In particular, it has forced these large conservation organisations to confront the nature of their organisational souls and to ask what kind of organisations they are and what kind of organisations they might become. In this paper, I focus on the National Trust and the soul-searching undertaken by the organisation in the late 1960s. As the organisation grew, disputes about the purposes, policy and management of the Trust emerged. These concerns prompted the NT to conduct a review, drawing on evidence from both inside and outside the organisation. Led by Sir Henry Benson, the subsequent Benson Report of 1968 proposed significant reforms to the organisational governance of the Trust, including the relationship between its ruling council, its full time officials, its volunteers and its members. The paper reflects on the source of these organisational reforms within existing management thinking and organisational theory and the model of organisational governance which the Report proposed, considering the family resemblances between the NT’s re-built organisational structure and that of other ‘conservation bureaucracies’.

“Everyday knowledge” is constructed in the mass media by debating or interweaving knowledge and common knowledge. It can be assumed that individuals act and identify themselves on the basis of this knowledge, which is nevertheless continuously socially constructed. Drawing from approaches of the sociology of knowledge, I would like to present preliminary findings of my PhD research focusing on the construction of knowledge of masculinity in media products. Since my methodology is based on the “discourse analysis as well as sociology of knowledge”, my paper is dealing with the issue of how knowledge is produced in non-fiction publications. By revealing the process of knowledge construction, I am going to analyze the role of the social actors, the subjective positioning and the given social positions as important aspects. The contradictions of social upheaval knowledge and the broadening of the social knowledge pool could be the key to adapt and form alternative ways of living, given of course there is “new everyday knowledge” and not only repetition of long established knowledge. Therefore the question arises how knowledge, what has the potential to form and distribute new “everyday knowledge”, is being produced by the media.

Taking up the discourse around a media buzzword such as sôshoku danshi (grass eating or herbivore men) – describing young men who are said to shy away from women, and by doing so seem to uphold another form of masculinity – will help to understand whether and how these media products are distributing socially important topics to the public. Furthermore, I am concerned with the process in which academic and everyday knowledge is forming a part of the knowledge stock of Japanese society and in which ways mass media is taking up the role to form “new everyday knowledge”.

Comparative Research on Contemporary Youth Social Movements: The Case of the Genind Project

The year 2011 has witnessed the emergence of new types of social movements, transnational in scope but especially intense in the Mediterranean area, one of which precipitating factors has been the leading role of the new generations and the urban middle classes. The year began with the so-called ‘Arab spring’, continued with the ‘Spanish revolution’ of 15-M, the Chilean student protests, riots in some English working class suburbs, the Occupy Movement in the United States and ended at least till date with riots in Turkey and Brasil. The antecedents date back to the ‘anti-globalization’ movement emerged in Seattle in 1999 and in Porto Alegre after 2001, the revolt of the French ‘banlieues’ in autumn 2005 and the Greek mobilization in winter 2008, coinciding with the start of the international financial crisis. This paper presents the results of a research project funded: The Indignant Generation. Space, culture and power in the youth movement of 2011 (GENIND). While it is early to assess the impact of such movements, it seems evident that they respond to a new cycle of social protests, which manifest in public space (both in the squares of cities and in the Net).The project aims to shed light on the nature, causes and recent drift of such movements, taking the Spanish case as a reference point and comparing it with the mobilizations in four Mediterranean countries (Portugal, Italy, Greece, Egypt), and other territories where there was also mobilizations (England, USA, Chile, Brazil). Although it is based on on-going ethnographic research, their orientation is primarily theoretical. The main
Labour flexibility is a hallmark of a new economic model marked by the rise of entrepreneurship, awaiting the arrival of public subsidies mainly funded by the European Commission as well as its Spanish wealthiest sisters regions. The Northern Spain have said enough to the South. Rather than showing a Hegelian spirit of the people, the SpanishRevolution is a cry for the modernization of Spain.

The study is a part of a larger project funded by The Swiss National Science Foundation investigating the narrative identities of Muslims active in voluntary associations.

In this presentation, we attempt to clarify the nature of antinuclear movements in Japan after March 11, 2011, from the viewpoint of participants’ mentality. On March 11, 2011, a big earthquake and a gigantic tsunami hit the northern part of Japan. The tsunami also paralyzed the emergency power system of the nuclear power plant in Fukushima, causing power plant explosions. The nuclear accident and subsequent radioactive contamination send a majority of Japanese people in fear and anxieties.

March 11 (3.11) ignited a volume of civil actions. Day in and day out, one spontaneous action was followed by another. The movement also spread out geographically, so that residents in different localities have witnessed protest actions taking place successively.

Resurgence of protest actions has prompted researchers to inquire into the nature of the post 3.11 antinuclear movements in Japan. With only few exceptions, however, studies have focused on objectively observable events and other morphological features to understand today’s movement. This practice leaves us with little understanding about cultural and mental aspects of the movement.

In this presentation, we focus on participants’ mental aspects to characterize today’s antinuclear movements in Japan. Using handouts and written materials, we extract meanings campaign participants subjectively attribute to the nuclear threat for unions to refocus on the “organizing model” and invest these segments (Bhowmik, 2005; Agarwala, 2008).

It is in this spirit that LEARN-Dharavi, an NGO, has successfully launched organizing drives aiming to stir collective action involving women working in the slums of Mumbai. Building on our previous research in the shipbreaking industry (Nature & Health, 2013) and empirical data collected through interviews with representatives of LEARN-Dharavi (local leaders and female workers/members involved in different «industries» – like domestic services, canteen workers, embroidery, garment industry, street vending), the paper will present the result of a case study conducted in 2011-13 using the analytical framework developed by Correia (2005); it will first examine elements of contextualization regarding the State’s role in the development and “regulation” of the informal economic activities, then present the struggle’s chronology and discuss practices, strategies and demands put forwards by the different grassroots unions that emerged from LEARN’s actions. Finally, it will take a look at the “raising issues” in order to highlight the gap between discourses and practices and identify the difficulties facing traditionally organized labour when seeking to transform itself in order to meet the needs of the so-called “informal workers”.

The success of the Anti-Minaret Referendum of 2009 in Switzerland was due to a long, intensive campaign of the far right political parties. The so-called "informal workers" were part of the "army of the right" that was formed against the vote for the FDRP. As such, the "army of the right" was able to mobilize a large number of people in fear and anxieties.

The current study investigates the identity politics of ICCS as well as its strategy to cope with what its members regard as a "conspiracy" of the far right political coalition to "subjugate" the Muslim minority. The paper draws on in-depth interviews with active members of ICCS as well as on data collected through participatory observation of the public events of the association. It is argued that ICCS, very much inspired by identity politics of other minority groups, strives for what Jürgen Link (1999) would call "production of normality" – namely the recognition of Islam as a "normal" religion equal to Christian and Jewish communities.

The paper also highlights the following strategy of ICCS: Whereas the far right claims to be eliminating the visibility of Islam in the public spaces, the ICCS activists try not only to publicly observe an orthodox Islam, but also to propagate it. It is finally argued that the dialectics of stigmatization and provocation seems to serve the xenophobic agenda of the far right much more than the ICCS strategy of establishing the normalcy of Islam in Switzerland.

However, 2) the aides-domestiques migrantes embauchées dans le cadre du Programme des aides familiaux résidants (PFR) ; 3) les travailleurs migrants temporaires dits “non qualifiés” embauchés dans le cadre du Volet des professions peu spécialisées.

Le Travail Migrant Temporaire Au coeur De La Dynamique De Centrifugation De L’emploi Vers Les Marchés Périphériques Du Travail : Une Perspective Canadienne

The communication (qui se fera en anglais) présentera trois exemples de programmes mis en place par le gouvernement canadien et favorisant l’essor de ce que nous appelons le travail migrant en régime dérogatoire sur les marchés périphériques du travail : 1) les travailleurs agricoles saisonniers migrants embauchés dans le cadre du Programme des travailleurs agricoles saisonniers (PTAS) ; 2) les aides-domestiques migrantes embauchées dans le cadre du Programme des aides familiaux résidants (PFR) ; 3) les travailleurs migrants temporaires dits “non qualifiés” embauchés dans le cadre du Volet des professions peu spécialisées.

Partant d’une analyse de l’évolution de ces programmes, il s’agira donc de bien mettre en relief, au-delà du fait que les travailleurs migrants temporaires jouent le rôle d’une “armée de réserve, que les programmes de travail migrant en régime dérogatoire agissent comme une interface entre le cadre national et international afin de faire jouer la concurrence entre les travailleurs dans des marchés qui ne sont pas — pour toutes sortes de raisons — “externalisables”, tout en préservant l’un des plus grand paradoxes du libéralisme réellement existant — qui fait de la liberté de circulation pleine et entière, l’apanage exclusif des biens et services et non des travailleurs. De manière à établir la cohérence d’une politique du travail visant en premier lieu la mise en concurrence des travailleurs, l’analyse montrera comment les travailleurs migrants temporaires ont également été instrumentalisés lors de la récente réforme de l’assurance-emploi au Canada. Nous mettrons ainsi en relief l’instrumentalisation non seulement en termes d’exploitation de cette main-d’œuvre au rabais, mais, plus encore, aux fins d’une stratégie d’éclatement d’un régime de travail de type universeliste. Ultimement, nous montrerons qu’en dépit de l’engagement, la logique de mobilisation place le travail migrant temporaire au cœur d’une dynamique de précarisation par la centrifugation de l’emploi vers les marchés périphériques du travail.

Organizing Female Workers In The Informal Sector: A Case Study Of Learn-Dharavi

Labour flexibility is a hallmark of a new economic model marked by the rise of informal and precarious work. Given this structural transformation, many scholars have invited unions to organize the unorganized “at the rough ends of the labour markets” (Heery and Adler, 2004) because it is from this engagement that new forms of unionism will emerge (Murray, 2004). India is no exception. The NCEUS have shown that the economic liberalization process of the 1990s have triggered a “jobs’ centrifugation dynamic” that pushed employment towards peripheral labour markets. Since then, Indian scholars have also stressed the importance of unions to refocus on the “organizing model” and invest these segments (Bhowmik, 2005; Agarwala, 2008).

It is in this spirit that LEARN-Dharavi, an NGO, has successfully launched organizing drives aiming to stir collective action involving women working in the slums of Mumbai. Building on our previous research in the shipbreaking industry (Nature & Health, 2013) and empirical data collected through interviews with representatives of LEARN-Dharavi (local leaders and female workers/members involved in different «industries» – i.e. domestic services, canteen workers, embroidery, garment industry, street vending), the paper will present the result of a case study conducted in 2011-13 using the analytical framework developed by Correia (2005); it will first examine elements of contextualization regarding the State’s role in the development and “regulation” of the informal economic activities, then present the struggle’s chronology and discuss practices, strategies and demands put forwards by the different grassroots unions that emerged from LEARN’s actions. Finally, it will take a look at the “raising issues” in order to highlight the gap between discourses and practices and identify the difficulties facing traditionally organized labour when seeking to transform itself in order to meet the needs of the so-called “informal workers”.

The success of the Anti-Minaret Referendum of 2009 in Switzerland was due to a long, intensive campaign of the far right political parties. The so-called "informal workers" were part of the "army of the right" that was formed against the vote for the FDRP. As such, the "army of the right" was able to mobilize a large number of people in fear and anxieties.

The current study investigates the identity politics of ICCS as well as its strategy to cope with what its members regard as a "conspiracy" of the far right political coalition to "subjugate" the Muslim minority. The paper draws on in-depth interviews with active members of ICCS as well as on data collected through participatory observation of the public events of the association. It is argued that ICCS, very much inspired by identity politics of other minority groups, strives for what Jürgen Link (1999) would call "production of normality" – namely the recognition of Islam as a "normal" religion equal to Christian and Jewish communities.

The paper also highlights the following strategy of ICCS: Whereas the far right claims to be eliminating the visibility of Islam in the public spaces, the ICCS activists try not only to publicly observe an orthodox Islam, but also to propagate it. It is finally argued that the dialectics of stigmatization and provocation seems to serve the xenophobic agenda of the far right much more than the ICCS strategy of establishing the normalcy of Islam in Switzerland.

The study is a part of a larger project funded by The Swiss National Science Foundation investigating the narrative identities of Muslims active in voluntary associations.

In this presentation, we attempt to clarify the nature of antinuclear movements in Japan after March 11, 2011, from the viewpoint of participants’ mentality. On March 11, 2011, a big earthquake and a gigantic tsunami hit the northern part of Japan. The tsunami also paralyzed the emergency power system of the nuclear power plant in Fukushima, causing power plant explosions. The nuclear accident and subsequent radioactive contamination send a majority of Japanese people in fear and anxieties.

March 11 (3.11) ignited a volume of civil actions. Day in and day out, one spontaneous action was followed by another. The movement also spread out geographically, so that residents in different localities have witnessed protest actions taking place successively.

Resurgence of protest actions has prompted researchers to inquire into the nature of the post 3.11 antinuclear movements in Japan. With only few exceptions, however, studies have focused on objectively observable events and other morphological features to understand today's movement. This practice leaves us with little understanding about cultural and mental aspects of the movement.

In this presentation, we focus on participants’ mental aspects to characterize today’s antinuclear movements in Japan. Using handouts and written materials, we extract meanings campaign participants subjectively attribute to the nuclear...
explosions and their subsequent act for denuclearization. We try to reconstruct a web of meanings existent in the 2012 campaign, also identifying central meanings and important subsets of meanings. We employ a comparative design, comparing the 2012 campaign against the 1954 campaign, to highlight important features and characteristics of the movement today.

Our major finding is that, while 1954 movement dominantly drew its significance from collective memory of Hiroshima and Nagasaki and risk on food safety, post 3.11 movement was strongly driven by motherhood mentality to protect a child and a concern over local environmental protection.

**Social Movement Transformations in the 20th Century: Japanese Experience**

In this presentation we investigate causes and conditions of social movement change in the post-World War II Japan.

Social movements in Japan have experienced tremendous transformations after the World War II. Starting with the movement surge in the 1950s, Japan witnessed a sharp rise in popular protest in the early 60s, culminating in the peak in late 60s. After a sharp decline in the early 70s, the entire civil action has stayed relatively stagnant. Japan also witnessed huge transformations in repertoires of contention. In the 1950s, Japan saw a rise in labor movements, along with anti-capitalist, student, and environmental movements in 1960s.

Why did Japan, as non-western democracy, experience such a huge transformation in social movements after the World War II? Big shifts in quantity and quality of social movements have been recorded in some other countries. In such cases they often experience huge structural transformations. The Japanese case, with no structural change during the latter half of 20th century, does not allow us to lay out the same explanation. Also the shift is not toward a “social movement society.” Japan seems to have become a society content with what they have.

We employ both qualitative and quantitative methods to investigate into the causes and conditions for social movement change in the post WWII Japan. Quantitatively we use event data analysis to identify changes in volume and categories. Qualitatively we look for cognitive change that involve shift in values and perceptions towards social movements.

Our finding is that change in international politics along with growing global civil society had to do with the change in social movements in Japan. Also past experience of the 60s may have had a negative effect on the perceptions and motives of the later generations to give rise to social movements.

**Routines As Competency. New Medical Routines for Hybrid Health Care Professionalism**

Organizing health care services increasingly encompasses hybrid forms of medical professionalism. Relations between managers and medical professionals become less binary and oppositional; organizational forms become less performance-based and less strictly managerial; medical professionalism itself becomes more organizational. In this paper we focus on the latter trend, as most studies on hybrid professionalism tend to focus on the other two. The rise of "organizing professionalism" (i.e. medical professionalism that includes organizational and managerial capabilities) is usually approached in terms of new competencies. New competency models, such as the CanMEDS model for medical professionalism, frame the new roles and acts that (medical) professionals have to perform, including collaborative and managerial roles. We take another approach; we see competency as an institutional phenomenon, instead of an individual one, and we focus on medical routines in order to analyze institutional competency. Medical routines represent institutionalized aspects of medical acts and practices and might help of hinder the rise and spread of (innovative) hybrid service delivery that is collaborative and was organized. We especially focus on the many practical and everyday sides of medical routines. We focus on the everyday sides of organizing health care by medical professionals, including multi-professional collaboration and quality and safety management. We (a) explain what we mean by medical routines as institutional competency, (b) describe current changes in medical routines that enable the rise and spread of collaboration and quality and safety management by medical professionals, and (c) trace effects on medical outcomes. Empirically, we focus on changing routines in a Dutch academic medical center.

**NORDLUND, CARL** (Central European University, nordlundc@ceu.hu)

**Patterns of the Semiperiphery: Using Valued Blockmodeling Techniques to Map and Specify the Relational Characteristics of Semiperipheral Countries**

Although the trichotomy of the world-system often is specified in terms of predominance of each stratum, particular the global division of labor, an increasing number of studies specify and define such strata in relational terms. Parallel to this, the core-periphery concept has also been specified by network scholars as a structural template that captures some of the original relational connotations.

However, even though the semiperiphery has a distinct role in world-system analysis, with several scholar focusing explicitly on this particular stratum, very little has been said about the relational patterns of the semiperiphery. Rather, in relational (network) analyses, semiperipheral countries are typically those whose relational properties fit neither the core nor the periphery.

Combining a novel approach for blockmodeling of valued networks with a novel heuristic that identifies dependency and dominance in core-periphery structures, this paper addresses the following questions: does the semiperiphery, similar to the core and the periphery, have its unique patterns of ties? If so, what patterns? What are the characteristic patterns of ties between the semiperiphery and the core or the periphery? Using pre-determined core-semiperiphery-periphery partitions of the contemporary world-system as specified in the qualitative literature, the novel network-analytical methods are applied in the analysis of international commodity trade matrices in search of would-be ideal blocks that characterize semiperipheral relations. Finding such would not only allow for identifying semiperipheral countries based on their relational features, as something distinct from similar blocks for core and periphery, respectively, but it would also allow for mapping patterns of dependency and dominance within the semiperiphery and its patterns to the core and periphery strata. Additionally, it would provide the formal network-analytical toolbox with a specification and possible structural definitions of core, semiperiphery and periphery that actually stems from the actual context from which the trichotomy stems, i.e. world-system analysis.

**Higher Education of Women Between Heterogeneous Logics: Gender-Equality and Scientific Excellence As Conflicting Requirements in University System**

At present the German university system is undergoing a number of reforms to improve its models of teaching and research. Equality politics have a high priority in the new structures. Gender equality in the higher education sector is still unrealized. Despite the fact that now equal numbers of men and women start studying, there is a big gap out of women in higher level of education systems, known as the “glass ceiling effect”. Because of that, equality politics also have take into regard later stages of university education, namely the doctoral and postdoctoral phase. This contribution is based on a scientific study from 2012, which analyses the benefits of the new measures to promote women within the junior researcher program of a scientific cluster, measures created as part of a new governmental funding policy. The German “Equality Initiative” is one of the most important initiatives in higher education reform to strengthen international competitiveness and high-quality research. New incentives were created for universities to take into account both scientific and equality policy requirements, in order to reduce the well-known problems of women in this phase. By analysing the situation with the theoretical framework of Neoinstitutionalism, it can be shown that gender equality and scientific excellence are two different logics that came into conflict with each other. These measures partially lead to paradoxical consequences for the careers of women through the constantly changing interplay between heterogeneous environmental requirements and organizational structures. Instead of better support for women, new obstructions appeared in their careers. These unforeseen consequences arise out of conflicting institutional logics and were never foreseen intended by any of the institutional actors involved.

**NORUS, MARIA** (Technical University Berlin, marianorkus@gmx.de)

**The “Invisible Hand” of Oppression - Symbolic Violence in the Precarisation of the German Labour Market**
When we think about oppression and global inequality, we also have to ask why it is that many underprivileged groups suffer from oppression without any real resistance? With the analytical framework of Bourdieu’s theory of practice I will argue that any theory that draws on the concept of intersectionality has to take into regard the symbolic dimension of society in which social practice takes place and is reproduced by social structures of domination. Symbolic violence, this “gentle violence [...] invisible to victims” (Bourdieu 2001, 1-2), is the key to understand how oppression reproduces and legitimatises itself. It contributes both to the recognition of oppression and at the same time to the misrecognition of its arbitrariness.

This contribution deals with the precarisation of labor in contemporary Germany. This field is mainly structured by race, class and gender. Women, immigrants, disabled persons and lower classes are disproportionately affected by adverse working conditions, lack of job security and lower payments, and are furthermore badly integrated into the national security system.

I want to argue that the precarisation of labor and life is a new form of symbolic violence, which affects different groups in different ways for the purpose of labor exploitation. This process cannot be understood solely by looking at economic constraints or pure violence. Deterioration of working conditions is legitimised by the apparent naturalness and inevitability of economic development.

To theorise the different axes of oppression in the field of precarious work, I will consider not only different categories of inequality but also the very processes of categorisation through labour. Taking into account this symbolic dimension of oppression in society may lead to a better understanding of its inverterate persistence.

NORSTEDT, MARIA* (University of Lund, Maria.Norstedt@soc.lu.se)

The main question I will address in my paper is: what does the use of institutional ethnography help me see analytically that I would have risked not seeing with other methodological glasses? In order to discuss this, I will draw on and exemplify with my first analysis of the empirical material from an on-going workplace study about hidden disabilities and working life. In this moment I am in the process of doing this analysis. The study takes its starting in the experiences and work knowledge of individuals with hidden disabilities in one of its understand individual, interactional and institutional aspects of importance for people with hidden disabilities when they decide to tell – or not to tell – others in the workplace. While discourse analysis is a relevant methodological approach in a study about people with hidden disabilities I argue that institutional ethnography (IE) through its historically oriented, institutional perspective relevantly understand of their material consequences in workplaces and on every day experiences. Discourse analysis could stay at the level of representation, not showing what people actually do with discourses and thereby risking seeing neither agency nor material practices. IE enables an understanding of how marginalization works in individual, interactional and institutional practices in workplaces and of how the everyday life and agency of persons with hidden disabilities are impacted by these practices. Another advantage is that IE does not accept an ontological divide between individual and structure and an analysis based in IE thus can provide an answer to the long debated paradox among disability researchers: how to theoretically understand disability as a consequence of inequality/social structures without neglecting individuals’ bodily experiences of living with a disability. This is also something I will discuss in the paper with the help of my empirical data.

“What Do I Do Now?” Post-Retirement Leisure in Japan

Japan’s dankaikai, the generation that was the foundation of the country’s “economic miracle,” are retiring. As their careers come to an end, Japan’s “greatest generation” seem at last to be in position to enjoy the fruits of their labors. But can they? Japan has the greatest average longevity but its post-retirement leisure opportunities are more than sufficient for the needs of the retired. does not have a clean line between employment and leisure activities. Like other advanced societies, Japan has a large number of people who have multiple roles in their lives. These roles are often defined by the needs of the society, and their importance varies depending on the situation.

What Makes Fathers Involved? Exploring the Relationship Between Paid Work and Childcare

Although fathers’ roles have been adapting over the last three decades financially, the lack of involvement and the way this is associated with fathers’ employment is a key factor that shapes the difference in childcare in male and female work. However, the relative impact of fathers’ and mothers’ employment on paternal involvement in childcare is unclear, and little is known about the longer term impact, that is, whether the way parents’ organise their work and childcare arrangements in the first year of the child’s life impacts on paternal involvement as the child grows up.

This paper, based on work by Norman, Elliot and Fagan (Community Work and Family, forthcoming), investigates some of the tensions between employment and a father’s involvement role. We open with a review of the qualitative and quantitative results from previous studies concerning father’s contributions to childcare, including facilitating influences which standard parental leave policies and other reconciliation measures have played in some countries. Then we focus on employed couples to explore the association that mothers’ and fathers’ employment hours have with paternal involvement when their child is aged three. Multivariate analysis using the UK’s Millennium Cohort Study reveals it is

the mothers’ employment hours when the child is aged three that has the largest association with paternal involvement in childcare at this stage in the child’s life, independent of what hours the father works. Furthermore, both parent’s employment hours when the child was nine months old have a longitudinal influence on paternal involvement when the child reaches three, but it is the hours a mother works when the child was aged nine months that has the stronger association with paternal involvement at age three. This suggests mothers’ work schedules are more important for fostering paternal involvement in both the immediate and longer term.

NORTHCOTE, JEREMY* (Murdoch University, j.northcote@murdoch.edu.au)

Who’s the Terrorist?: Humanism and Moral Ambivalence in the Discourse on Terrorism

Abstracts are organized by first presenting author’s last name.
Labeling political enemies as terrorists became the new trend in the new millennium. It has not only become the cornerstone of discourse surrounding US foreign policy, but also a rhetorical tool employed by authoritarian dictators (such as Gaddafi during the Libyan crisis, and Assad during the Syrian civil war) in maintaining their grips on power.

It is argued that the threat of terrorism is successful in garnering public support for military intervention and authoritarian practices precisely because it plays on public fears and anxieties concerning anomie and unpredictable violence. The construction of a terrorist threat reinforces the authority of the State to ensure security and public safety, even sanctioning extreme measures (such as torture, intrusive surveillance and the outlawing of public gatherings) that would normally be viewed as antithetical to the humanistic principles of liberty, justice and tolerance. However, these measures are justified on the basis that terrorism is ‘evil’ and therefore requires a ‘means justifies ends’ rationale where humanitarian ideals are cast aside in the ultimate concern. ‘Terrorist’ groups, meanwhile, also cast their activities in terms of humanist and religious responses to oppression and aggressive foreign policy, even as they reject certain humanitarian principles and modernization as forms of Western imperialism.

By examining speeches and writings from key political figures, it will be shown how humanism and religion merge in the political discourse surrounding terrorism in ways that indicate uncertainty and/or duplicity over the moral foundations of contemporary political action and State power. Do such tendencies reflect differences associated with an emerging post-secular humanism, or are they a Machiavellian bricolage of ambivalent and contradictory rhetorical elements? The answer is relevant to understanding to what extent the enunciation of humanitarian ideals can serve to arrest the violence surrounding terrorism.

*Investigation Social Factors Influencing on Educational Opportunities Among High School Students of Tehran*

This study sought to determine the contribution social factors on creation and maintaining inequality in educational opportunities among students in Tehran. Reproduction theorists believe that strong solidarity exists between family background and the level of access to the educational facilities. Network analysis theory holds that inequal transfer of resources and opportunities leads to inequal educational opportunities. This means that people have inequal opportunities in achieving social possibilities and maintaining relationship with those who control the resources like information and bureaucratic influence, which makes the educational opportunities inequal. Having information of school programs, education and job consultation, friends in upper economy section would be some good examples.

The surly method and questionnaire technic used for this study. The sample volume is 300 and the sampling method is cluster-sample. Face and content validity used for questionaire confirmation. Cronbach a has been used for reliability and 78 percent is result.

According to research data, Tehran school are run 5 ways: heyat-e-emanaye, people specimen, governmental specimen, non-governmental and normal governmental. In recent years, normal governmental schools that had more facilities or better quality of education became heyat-e-omanaye or governmental specimen. Low-income families have problem to access appropriate schools while upper-class can register to better schools by using their connections network and affording the school fees. Stepping up in socio-economic class leads to increasing educational sensitivity level of parents, as well as increase in communicational kills of students and boosting up their educational motivation also dire need for access, resulting in educational progress and reducing inequal educational opportunities.

Continuing the recent trend will bring about depravement of talented students in low-income families from proper educational facilities. This will deprive the society from part of the nation’s talent. Moreover illiteracy and semi-illiteracy portion of society would lead to subsequences such as inefficien-cy, crime, disorder and in security.

**ABSTRACT**

When one examines the subject of Japanese globalization, it quickly becomes apparent that international migratory movements occupy a special place of interest. This is due to the characteristics of this country, particularly its insularity, both in the physical and mental plane (sooku). By focusing on the Japanese migratory phenomenon from a historic and structural perspective, this study would analyze possible Japanese population profile scenarios into the middle of the 21st century. The study will focus on migratory movements to the Americas, foreign workforce acceptance in Japan and inter-ethnic relations involving Japanese nationals and their descendants. The analysis has the tentative title of: *The Sociology of Japan in the Post-Globalization Era*.

Within Japan, the labor market as a whole has not been deteriorating. In fact, workers in the most important firms and in the public sector have been protected, while those on the periphery are exposed to ruthless foreign market competition. The nikkeijin, people of Japanese descent living abroad, fall into the latter group. Generally, this social grouping does not work for large institutions and firms. This phenomenon has contributed to increasing inequality between the two types of workers.

Persistent Japanese xenophobia is more apparent during transitional periods and has always been a characteristic of internal and foreign policies of the country. It has acquired distinctive traits with the opening of Japan to the world –Meiji age- and the consequent development of a colonialist mindset and territorial expansion.

Will the nikkeijin of Latin America be able to overcome the deplorable mentalit-y of sooku and become the solution to the serious demographic problem that Japan is facing?

Key words: Sakukan, Japanese xenophobia, Nikkeijin, Americas, Japanese migratory phenomenon.

*Woman Leader, Woman Employee and Ethical Organizational Culture in High and Low Gender Gap Index Contexts*

Considering widely reported differences among countries in terms of innovation development levels, achievements in such fields as gender equality, organizational responsibility and other alike implementations (especially comparing American, African and European, North-South-East-European, Post-soviet-socialist countries), the paper focuses on women’s (and men’s) status in modern organizations. More specifically, the paper concentrates on perceptions of women leaders and organizational climate in the organizations working in such societies as Finland (Northern country) and Lithuania (East European post-soviet country). Quantitative data were collected by a web-based survey in Finland (2011) and Lithuania (2013, still under process). In this study, indicators of 2 scales are in the focus of empirical analysis: the Corporate Ethical Virtues scale of 58 items comprising eight dimensions of organizational virtues: clarity, congruency of supervisor, congruency of management, feasibility, supportability, transparency, discussability and sanctionability; the leadership practices scale of 7 items, depicting interrelations between a supervisor and a subordinate. Striving to ensure reliable comparability, one public Finnish (N=477) and one public Lithuanian (n=76 at the moment) organizations were selected for comparison.

Results of preliminary statistical analysis demonstrate that the respondents’ average evaluation of male leadership practices is higher than female leadership among Lithuanian respondents, but lower among Finns; also gender differences in the evaluations of corporate ethical virtues and effects of leader’s gender on the evaluations of CEV are almost absent among Lithuanian respondents, but rather obvious among Finnish ones. The findings not only indicate effects of gender equality developments in countries with a high and low gender gap index (respectively, Lithuania and Finland), but also shed some light on interrelations between such phenomena as gender and leadership, gender perceptions of the ethical dimension of organizational culture, etc. in a comparative perspective. The analysis will be repeated at the end of 2013 after data collection process will be finished in Lithuania.

**NOVIKOVA, NATALIA*** (University of Tsukuba, novikovanaty@gmail.com)

*Post-Disaster Literacy of a Japanese Local Community*

More than two years have passed since the Fukushima Dai`ichi Nuclear Power Plant accident of March 11, 2011. The first phase after the accident, “collective moral confidence” (Petryna, 2013), suggested that the existing system will over-come the disaster, yet evolved into feelings of desperation and disorientation about actual risk. An escalated sense of the unknown and unexpected fostered a flow of voluntarism and participation in local decision-making processes. Engaged in the process of information sharing, consensus-building, and mobilizing their resources and connections, local activists have been trying to influence local governmental decision-making.

This paper examines the process by which the Fukushima accident has been dealt with in radiation-contaminated communities, yielding insights into local government responses to the nuclear accident and probing whether government-citizen relations have been altered in the aftermath of such a disaster. Through
fieldwork undertaken in 2013 in Abiko City, Chiba Prefecture, this paper traces the nexus of the community-NGO-government relationship, focusing on the after-effects of the Fukushima Daiichi Nuclear Plant accident. Utilizing civil society concepts and the expanding role of civil society in governance, we argue that civil society in a post-disaster community is an arena in which new ideas concerning governance are formulated and citizens’ civic education is carried out. What is more, this paper provides what Charles Tilly called the “repertoire of collective action,” in which people engage in modern post-Fukushima modes of political protest. While observing how people from a radiation-contaminated community have overcome some of the risk-perception problems, this research gives insight on the modern Japanese capacity to deal with unpredictable human-made accidents, extending previously known scenarios of post-disaster management.

**Characteristics of Becoming Sociology in Russia**

Russian sociological thought XIX - early XX centuries was closely associated with the ideas of Russian philosophy and literature. The becoming of sociology in Russia was initiated in the framework of social journalism. The first sociological articles were published in the periodical press as a “Notes of the Fatherland”, “Business”, “Knowledge”. One of the founders of Russian sociology N.I. Kareev highly appreciated journalistic contribution to the development of sociology, noting that the “Notes of the Fatherland” was the first in the Russian sub-faculty, which has participated in the creation of generation of sociologists.

In the West the institutionalization of sociology, sociological deployment of higher education took place earlier than in Russia. Recognition of sociology at the state level in Russia was only after the February Revolution of 1917 largely due to P.A. Sorokin. The first sub-faculty of sociology was established in 1919 at the general education faculty of 2-nd Petrograd State University. Only in 1916 was an attempt to create a “Russian Sociological Society name M.M. Kovalevsky”. The Russian government prevented the development of sociology. The desire to prove with the help of positivism, Marxism or another theories led to unreasonable politicization of Russian sociology. On this occasion P.A. Sorokin said: “In Russia the scientific arguments for sociology were: prison, exile and hard labour. Disinterested search for truth and the presentation of the results of this search were impossible”. Therefore, the hallmark of Russian sociology was its oppositional political preconception. Probably for this reason Russian sociology was prohibited in 1929-1958 and officially named as pseudoscience.

**Emotional Work During Biographical Research: A Researcher's Personal Reflection: Researcher's Experience (ongoing biographical research projects)**

Social research are entangled in experience of researchers, who are emotionally affected by the work that they do. Particularly in qualitative research researchers' engagement could influencing on the resulting of data. Since during the biographical interview facing many difficult situations. So it is in my case. In my biographical research with veterans I am often in difficult emotional situation. I am going to refer how I manage with this problem and provoke methodological discussion in that field. Biographical interviews required hard emotional work of researchers. Therefore in my paper I take a distinctly approach to provide a personal account of my experiences of doing emotional work while conducting my postdoctoral fieldwork. To add context, my research focuses on the biographical interviews with the polish former soldier of the military operations in Iraq and Afghanistan. In my research I define this social category as veterans because respondents identify themselves as such, too. Thus, through collecting stories, the research seeks to explore experiences and understandings of former soldiers wounded and injured in mission abroad, both in terms of these constructions, and the ways in which people manage and negotiate them. My paper focus on two ways of biographical research reflections. Firstly, on the considerable emotional challenges encountered during the research process and the ways in which these were managed through both successful and unsuccessful coping strategies. Secondly, I detail the ways in which my identity and biography impacted upon this emotional work and my relationships with participants. In order to embody such discussions I use excerpts from my own research diary and quotes from participants. Conclusions in my paper concern to the ways in which we, as the community of researchers, can do more to share our research experiences with each other for the benefit of ourselves and our work.

**Locating the Materiality of Music Artefacts**

This paper aims to reissue states of materiality within the study of music consumption. While music sociologists usually focus on notions of taste, mediation or repertoires of preferences, the materiality of music artefacts are often neglected in the studies on music consumption. From the iconicity of vinyl discs, the hтипness of iPods, to the aesthetic features of posters, artefacts play a major role in how individuals develop and maintain a relationship with their favorite music, artists and genres. The material interactions between audiences and music artefacts are aesthetic and embody their preferences in return.

In the digital age of music consumption, there is an increasing trend towards the fragmentation of modes of music consumption. Music audiences are driven towards the use of different material artefacts to surround themselves with music throughout everyday life. Henceforth, artefacts relate music to different forms of interactions and associate it with everyday activities.

In this paper, I argue that both fields of sociology of music and of material studies need to be intertwined to effectively account within researches of music consumption. By doing so, it becomes possible to uncover the meaning of differentiated types of music consumption and look at forms of aestheticization of everyday life through music and the objects that embody it.

**Reconstructing Processes of Risk Awareness/Regional Development at Tsunami Disaster: The Case of Otsuchi-Town before and after the Great East Japan Earthquake**

In this report, I explain how regional developments changed people’s risk awareness and could add to the damage of disasters. I adopt a case study about Otsuchi-Town (Iwate-Prefecture), which was particularly heavily damaged by the tsunami disaster in The Great East Japan Earthquake, and where regional developments in the waterfront were strongly prompted before disaster. Before disaster, reclamation of the waterfront and the location of houses, factories, and tall coastal levees for protecting them in the reclamation areas were the main ways of the regional development, because this area had less flatland when industrial conversion occurred and population increased. Otsuchi-town had been damaged by tsunami disasters historically and old inhabitants had the awareness that living in this area was risky (eg. “My house is located at altitude but the 1st floor was flooded.”). But in the process of regional development, this risk awareness changed (eg. “My house has been flooded but now tall levees will protect me. At the worst, I should evacuate to the 2nd floor”).

In the emergency evacuation phase, because big factories were located within a confined geographical area, evacuees rushed to a particular refuge and evacuation routes to the refuge were crowded. People with the converted risk awareness previously described failed to evacuate from the refuge. Now, in the reconstructing phase, for less flatland, in the local governmental reconstructing plan, many of the places of work must be relocated in the waterfront and many of the houses must move to around the mountain. Currently, people are concerned about the risk of landslides.

Conclusion: In the process before and after disaster, regional development changed risk awareness and added to the damage. It’s important to note that developments or ideas that generally reduce risks (levees, lessons learned from past disasters, moving to around the mountain) can add to the damage or bring on new risks.

**Shifting and Persisting Forms of Gender Inequality, Higher Education, and Women’s Life Trajectory: Views from the United States and Japan**

**Title:** Shifting and Persisting Forms of Gender Inequality, Higher Education, and Women’s Life Trajectory: Views from the United States and Japan

One of the most significant worldwide transformations in education over the past several decades has been the drastic increase in women’s access to colleges and universities. However, the narrowing gender gap in higher education does not necessarily mean that gender inequalities in various spheres of society are narrowing simultaneously.

This presentation, first, examines comparable data from the United States and Japan, concerning the following questions: How has women’s higher education enrollment changed over time in the context of higher education system develop-
opment, transition, and expansion? How are men and women distributed across higher education? Which fields of study remain predominantly female (or male)? The study then proceeds to explore the persisting patterns of gender segregation across different academic and professional fields of study, and considers their meanings from the perspectives of women's labor market participation and the shifting forms of marriage, childrearing, and other family dynamics. It argues that we should take both labor and marriage market forces into account in order to understand women's agency to make their own education and career trajectory choices.

NOZAWA, ATSUSHI* (Meiji university, anozawa@kisc.meiji.ac.jp)

A Characteristic of Private Sector in Japan about Climate Change Mitigation Measure – Corporate Culture That Puts Strong Emphasis on Harmony and Among the Sector-

Climate change has received growing attention in both political and public areas, and now has been one of the most pressing environmental issues. This presentation will focus on private sector in Japan, and analyze their perceptions of global warming and measures to reduce greenhouse gas emission. How Japanese companies act against global warming issue? and what kind of characteristic can be found among the private sector?

The analyses are based on data from an international research project, Comparing Climate Change Policy Networks: COMPN. This project explores characteristics of decision-making process around climate change policies and the Japan team conducted face-to-face questionnaire survey to 125 organizations during February 2012 to June 2013. In this presentation, special attentions are paid to comparisons between companies and industrial associations. Careful examination will show a roll of industrial associations that adjust a diversity of opinion among the surveyed companies. On the one hand, each company has its opinion and measures toward global warming issues. On the other hand, industrial associations have functions to equalize these various opinions. In the process of summarizing claims within the industrial associations, various opinions tend to become conservative to keep strong solidarity as one industrial sector. As a result, it can be observed strong emphasis on harmony among private sector. This tendency can be explained by Japanese word “Harmony”, is a key concept to understand Japanese culture and in general imply negative aspect.

Although the surveyed companies and industrial associations agree the fact of global warming on the whole, they disagree to implement some regulations to mitigate greenhouse gas emission. However, the important point is that this corporate culture has a function to prevent a company from emerging negative actor about global warming issues. This can be a characteristic under the times of neo-liberalism.

A Comparison of Social Process for Wind Farm Construction: The Case of Jeju Island and Hokkaido

As an alternative energy source for nuclear power and fossil fuels wind power is increasingly considered among the most promising energy sources in the twenties first century. Accordingly, many of nation states have shown a great interest in promoting wind energy. However, when wind farm construction project is proposed involving local places, different interpretations, values, and meanings are expressed for wind farm construction by local people. Therefore the rejection and approval of wind farm construction in local places are based at different logics depending upon specific context of local situations.

In this paper we present two case studies for successful wind farm construction projects in South Korea and Japan. Our observation was made for Jeju island located at northernmost part of the Japanese Archipelago. In order to collect information as to locally involved process, we have interviewed leaders of local communities and NPOs from the winter of 2012. In this paper we demonstrate that wind energy can mean different things to local people than anti-nuclear and mitigation measure of climate change. The local people accept or reject the construction plan and its operation according to their economic situation and social, historical contexts.

Territorial Behaviours As The Regulators Of Interpersonal Space

Presentation of the research results concerning mental representation of physical space and territorial behaviours of socially excluded people, carried out with the use of visual methods.

Human territories illustrate the interdependent nature of the exchange between the man and the environment. Territories provide order and stability, as well as enable ‘mapping’ of such types of behaviour as they are observed in specific places. In this way, they help us plan and organize our daily lives. Territorial behaviours understood as such have been the subject matter of my research, the results of which will be discussed in hereby presentation. The research aimed to identify the relationship between occupation of a certain site and the way of schematization of space, and, on the other hand, it served the purpose of recognition the relationship between knowledge about the environment and territorial behaviours. It sought to answer the question: how do the people who are experiencing social exclusion – either having a house or homeless – shape their knowledge about the environment? How can physical space be treated a social distance? The mobile method – photo walk, which was used in the study, provided visual material for the analysis of territorial behaviours, and completed descriptive and graphic material obtained through space mapping, projective methods, in-depth interviews and surveys. In the presentation I will draw attention to the way physical space resonates with its ideas and the way of creating its own territories, which are a stage where social interactions are implemented. The ways of perception and organization of the space and the use and creation of its sociopetal and sociofugal character, by which it acquires the regulatory role for interpersonal relations and relationships, will be visualized as well.

Single Motherhood and Anti-Social Behaviour Outcome in Children

Family disruption through divorce and separation is increasingly becoming a common phenomenon in many sub-Saharan African countries. A few studies have documented the trend, patterns, determinants and effects, yet, much of the effect on children has not been as well documented as in the more developed countries. In particular, the effect of family disruption on children’s involvement in anti-social behaviour has remained largely speculative. This study aimed to contribute to literature on the relationship between single motherhood and children outcome in sub-Saharan Africa using data obtained from Nigeria. Although official census record shows that crude divorce rate in Nigeria was 5.5 per 1000 population and 13.4 for ever married population in 2006, there are indications from the media and public opinion that the incidence of marital disruption through separation and divorce in the country is higher. This paper utilized a survey of 249 randomly selected inmates of prisons in Osun State, Nigeria to examine the effect of single motherhood on children’s involvement in anti-social behaviour. The major research question was: are children of single mothers more likely to be involved in crime than children in intact homes? The mean age of the respondents was 29 years (sd = 7.8). Of the 237 inmates who responded to the question on mother’s marital status, 60% had mothers currently in a union, 18% were from homes disrupted by divorce or separation and 22% had mothers who were widowed. Preliminary analysis showed that mother’s marital status was significantly related to involvement in any type of crime and the odds of being involved in stealing or armed robbery, violence-related offences and other forms of crime was higher for inmates whose mothers were divorced or separated than for those whose mothers were currently married or widowed. Increasing education and high-wage opportunities for women is recommended.

RC41-689.6

NTOIMO, FAVOUR C.* (Federal University Oye-Ekiti, ntoimof@yahoo.com)

Socio-Demographic Factors Affecting Women’s Fertility Preferences in Nigeria

This paper examined socio-demographic factors associated with fertility preferences of women in Nigeria. Women of reproductive age in the country prefer more children than men and women’s preferred family size is close to children ever born for women aged 40-49. The country’s population is currently estimated at 174m, with the current 2% rate of natural increase. The Total Fertility Rate of 5.7, Nigeria will be the third most populous country in the world by 2050. The overall aim of this study was to contribute to research, for more effective fertility-related policies and programmes in the country. Socio-demographic factors examined as independent variables were age, marital status, education, religion, husband’s desire for children, level of autonomy measured by final say in certain household decisions, number of respondent’s siblings, number of respondent’s co-wives, age at first birth, and age at first marriage. Dependent variable was reproductive preference measured by a single indicator - ideal number of children. Nigeria demographic and health survey 2008 women’s individual recode dataset was used. Result of multinomial regression analysis showed that the odds of pre-
ferring 6 or more children significantly declined with decreasing age, rising educa-

tion, non-Catholic Christian affiliation and husband's desire for less children. Higher

autonomy significantly increased the likelihood of wanting less than 6 or more

children, having or not having siblings and co-wives were not significantly

related to reproductive preference for 5 instead of 6 or more children. Age at first

birth and age at marriage significantly raised the likelihood of preferring 6 or more

children instead of five. High fertility in a country like Nigeria is rooted in cultural

beliefs about children and number, pre-natal control measures should be target-

ded more at women's attitude to large family. If Nigerian women's reproductive

preferences decline, overall fertility level in the country will also decline.

NUGRAHA, SUSIANA* (Nagasaki University, susiana.nugraha@gmail.com)

The Extent of Socio-Economic Factors and Its Influence in Mental

Health Condition of the Sixth Batch EPA Nurse and Care Worker

Candidates

The migration of skilled workers such as health care workers has been inex-

tricably linked with globalization process. Although migration can be a stressful

event for migrants (Stillman et.al, 2006), people migrate to improve their well-

being through an expansion of economic and social opportunities. This research

tested to figure out the extent of socio-economic background and its influence in

mental health of the sixth batch EPA nurse and care worker candidates.

A six-pages long questionnaire has been distributed to 42 nurse and 106 care

worker candidates, during pre-departure orientation. Questionnaire contains of:

socio demographics background (education, age, gender, education degree, socio

economic status), degree of preparation to migrate, degree of knowledge about Japan,

Japan work life, Japanese language training program, motivation to go to Japan and

number of social support. The General Health Questionnaire (hereafter 'GHQ') was

used as a marker of mental health status of the respondents.

The result of this study indicated that the 6th batch EPA candidates indicated

healthier mental health in care workers than in nurses (p<0.05), being younger

(p<0.05), being economically difficult to survive in Indonesia (p<0.05), being unem-

ployed at the time they applied for the program (p<0.05), having better degree of

knowledge about Japan (p<0.001) and having larger number of social support

(p<0.001). While language proficiency, satisfaction with pre-departure Japanese

language training program, motivation to go to Japan, had no significant correlation

with GHQ scores. One can assume that the mental health status of the 6th batch EPA

candidates mostly influenced by socio-economic status of the candidates prior to the

departure to Japan. It can be noted also that sufficient number of information as well

as social support must be provided for maintaining a good mental health status

before leaving for Japan.

Politics of Representation of the Workers’ Movements in Indonesia

The paper will discuss the politics of representation of union and different cat-

egories of its constituency in the post authoritarian Indonesia. Amidst the pres-

sure of labour market liberalisation that erodes the union power in the workplace,

union starts to develop the strategy of community unionism and tries to play a

broader political role through local electoral politics. The purpose of such experi-

ment is aimed for mobilizing broader support to increase union political bargain-

ing position in front of the state and employers. The union includes other local so-

cial groups such as urban poor, informal workers, and peasants as new categories

of constituency. Consequently the integration of workers and the non-workers

groups into union constituency results in increasing heterogeneity of the con-

stituency. Workers are not a homogeneous category, let alone the non-workers

groups. While the union is mobilizing the constituency, groups within constituency

are actually still fragmented within their partial identities and interests. The

relations between them and the union are vulnerable to contestation. This condi-

tion creates vulnerabilities within the body of constituency. This paper will show

the interplay between the strategic homogenization and the heterogeneous real-

ities. It will discuss the power relations within the process of mobilization in deal-

ing with the problems of representation gap. On the other hand, it will also

look at how the labour process as well as external social context influence the

dynamics. The discussion in the paper is based on a case of study on a workers’

movement in one industrial city in the province of Central Java, Indonesia.

NUKAGA, MISAKO* (Wako University, mnukaga@wako.ac.jp)

Becoming “Cosmopolitan Japanese”: How Japanese Adolescents

Employ Transnational Experiences for Their Empowerment

Reflecting the imperatives of the global economy, both the Japanese govern-

ment and private companies have recently begun stressing the need to raise

‘global talent’, especially placing value on English and various other transnational

competences. At the local level, such global forces have led overseas Japanese

middle-class families to adopt transnational education strategies, which enable

them to accumulate what is called ‘global cultural capital’ (Kim 2011; Waters et al.

2006; Weenink 2008)—English skills and cosmopolitan sociability particularly, at

the same time preserving children’s Japanese language and cultural attitudes (Nuk-

aga 2013). However, the question remains as to how these children are incorpo-

rated into the US host society and how they readapt to the Japanese society when

they finally return home. Based on interviews with Japanese adolescents who had

stayed in the US with their parents since their childhoods and later decided to

return or actually returned to Japan for university, this study examines how they

 perceive and employ their transnational experiences to increase integration both

in the US and Japan. Acquiring transnational habitus, a double consciousness that

analyzes aspects of both life ‘here’ and ‘there’, these adolescents are capable of

assessing the value of their global cultural capital and “Japaneseesseness” in the US

and Japan respectively. Although feeling a sense of marginalization in both soci-

eties, they attempt to maintain transnational connections and learn to use trans-

national assets in appropriate contexts for their empowerment. From their own

experience, these adolescents are often critical toward inequalities in both soci-

eties, yet they show a strong preference to become fully bilingual and bicultural

by keeping their feet in both countries. Such strategy leads these ‘cosmopolitan

Japanese’ adolescents to choose a job that transcends national boundaries and

allow them to stay connected to two or more countries.

NURMI, JOHANNA* (University of Turku, johnurmi@utu.fi)

Let Go and Remember. Collective Memories and Narratives of

Mass Violence in Finland

Due to its inexplicable and inconceivable nature, mass violence causes a con-

siderable sense of insecurity, the impacts of which are felt far from the center

of the incidents. They extend out to those who are indirectly affected, and

even people who are not personally disrupted by the events. Bystanders to these

incidents are involved in the complex process of making sense of violence and

death through collective memorialization practices and narratives recounting the

incidents. These practices provide a sense of community while also being a source

of conflict. Should the community remember and memorialize the incident, or try
to push it out of their minds and move on?

In this presentation I explore the bystander experience in two school shooting

cases in Finland that occurred in 2007 and 2008. The analysis is based on qual-

itative interviews with residents of the targeted communities – people who vicar-

iously experienced the shootings. The presentation is especially focused on how

these bystanders formed memories of the incidents and recounts their personal

experiences in the interviews. To understand how the bystander experience is

constructed through collective practices, I examine the collective narratives, rec-

ollections, and emotions shared in everyday interaction and the media. Public

memorialization, such as attending vigils and contributing to spontaneous memo-

rials, is identified as a defining feature in the bystander experience.

NUSS, SHIRLEY* (Nuss & Asssociates, nussphd@yahoo.com)

From International Professional To Caregiver In Rural America

In 2002 my father asked me to care of my mother as he was going blind. This

meant I give up professional activities for specialized UN agencies and become a

full-time caregiver. Within two weeks, I moved from an Asian city of 13 million to

a rural community . As I traveled from east to west, I entered a new world where

I never lived and where I knew no one. A new socio-culture came into view as I

saw road signs cautioning drivers about a United Nations take-over of the coun-

cy. My new responsibilities would be complicated by this unexpected envi-

ronment. In order to care for my parents, I would be forced to employ my

sociological imagination while also drawing on all skills I learned while working,

living and traveling alone in more than fifty countries.

This paper uses participant-observation as its methodology and, thereby,

draws on extensive notes documenting this transition from international profes-

sional to caregiver. It discusses methods used to organize support and outreach

beginning with the few adult children who also became caregivers for elderly par-

tners. As I became more and more involved in the medical responsibilities and
caretaking duties I placed on better nutrition leading to improved health, I used

the internet for overcoming obstacles to quality care as well as to address legal

remedies for limiting their financial exploitation in this rural community.

Some of my findings may be shocking, but most surprising is the revelation

that the elderly are not dependent in this rural community; to the contrary, they

form the hub of economic activity and income for a wide range of entrepreneurs.

The paper concludes with recommendations for caregivers and policy-makers

that take account of the elderly as increasingly forming this emerging economic

hub of rural areas, rather than viewing them as economically dependent.

**NUSSE, SHIRLEY* (Nuss & Associates, nussphd@yahoo.com)

**Predators, Parasites and Ambulance Chasers: Financial Exploitation Of The Elderly In Rural America**

This discussion is based on more than a decade of participant-observation in a rural community with 8,000 residents and fifty churches. At the beginning of the decade, the author became a resident exclusively engaged in the full-time care of elderly parents. During the decade, a dramatic increase in overt hostility towards the rural elderly was observed and documented as a new culture was emerging to replace respect for the elderly with three main agents: predators, parasites and ambulance chasers.

This paper discusses variations among these agents as they accomplish their objective of financial exploitation of the elderly. The predator waits for an opportunity to exploit the elderly by profiting from their limited ability to defend themselves. Older children form a major predator group, along with those associated with assisted living and nursing homes. For parasites, economic survival flows from exploiting the elderly through provision of services and products that they are no longer able to access or acquire without assistance. Children and grandchildren increasingly operate as parasites. Observation suggests parasites at least double their profits from work for the elderly relative to other age-groups. The parasites operate from local shops and businesses or as attorneys engaged in servicing the elderly, with financial gain being similarly disproportionate as their primary objective. Medicare beneficiaries are often primary targets of parasites. Ambulance chasers may be engaged in provision of health care as well as entrepreneurs who offer people released from the hospital with assistance in selling everything they own, including their home; when met with resistance, phone calls to parasites in social services often facilitates the acquisition of a power of attorney for this final stage of asset appropriation. It concludes with observations suggesting 50 churches serving 8,000 are financially viable with these agents.

**NYKLOVA, BLANKA* (Charles University in Prague, nyklova@email.cz)

**Stumbling over Emotions When Researching the Czech Feminist Scene**

Since the fall of state socialism in what is today's Czech Republic (CR), a feminist scene has emerged. It consists of sometimes contradictory activities on the level of (limited) grassroots activism in the form of zines and festivals, NGOs (such as the Gender Studies, o.p.s... Czech Women's Lobby, Czech Women's Union) and academia (a BA programme in Brno, an MA programme in Prague and a research centre within the Sociological Institute of the Academy of Sciences of the CR). The theoretical stances of those constituting the scene via their various, sometimes contradictory and conflicting activities has become the focus of my research. It consisted of a discourse analysis of materials produced by the scene as well as of interviews with the scene's representatives.

Despite having been driven to the research mostly based on my own long-term interest in feminism and familiarity with the omnipresence of emotions in all walks of (not only) social research (e.g., Hesse-Biber 2012), the share of emotions manifested in the research was surprising. In my paper, I try to address the different emotions as they emerged in the research process in order to show how they impacted on the analysis. Besides the emotions informing the focus of the research and its design, three main sites were detected. Firstly, there were emotions showing up in the process of conducting the interviews. Secondly, there were emotions revealed in the coding process. Thirdly, there were my own emotions in response to the former two areas. Positive emotions are related to successful cooperation and achievement. Frustration and vanity stem from tensions and perceived unequal distribution of power and agency across the feminist scene as well as from the resulting limited potential to protest.

O’BRIEN, REBECCA* (The University of Sydney, rebecca.obrien@sydney.edu.au)

A New Analysis of Claims to Identity and Belonging: The Importance of Knowledge within Australian Native Title Claims

Within Australia success in native title claims for Indigenous peoples has come to be heavily based upon the ability of Indigenous groups to establish ongoing connection to land by presenting proof of the continuity of their identity and cultural practices since colonization. This paper explores the processes through which these claims of identity and belonging are made, and challenged, within Australian native title processes. It seeks to extend previous work examining what is creating the difficulties that prevent Australian Indigenous peoples from articulating and presenting their culture and identities in such a way that can be understood within the non-indigenous courtroom. Specifically, this paper will present a sociology of knowledge that enables new insight into these issues by bringing processes that underlie the legitimation of knowledge to the forefront. It will be demonstrated that engagement with the sociology of knowledge can be used to uncover the structural relations that inhibit Indigenous voices within native title claims. In order to do this the Australian Yorta Yorta native title case will be explored in depth using this approach. In particular the paper will deconstruct the arguments that led to the judgment that ‘the tide of history’ had ‘washed away’ the traditional laws, customs and culture of the Yorta Yorta people in direct opposition to their own claims. Through this analysis it will be shown that it was not simply the content of the knowledge itself that affected the final judgment, but a disconnect between two different understandings of the basis upon which knowledge may be considered ‘legitimate’. Finally, it will be argued that the sociology of knowledge can be extremely useful in analyzing the ways in which different groups of people present their identity and senses of belonging, as well as the ways in which these claims are received by others.

RC04-93.2

O’CONNOR, PAT* (University of Limerick, Pat.oconnor@ul.ie)

Towards a Theoretical Model for the Reproduction of and Change in Gender Inequality in Higher Educational Institutions

This paper identifies key elements facilitating/inhibiting the reproduction of gendered inequality in the professoriate and senior management in higher education. Gender is seen as a social institution (Yancey Martin, 2004) and a multilevel phenomenon (Wharton, 2012; Risman, 2004). It is reflected in the societal allocation of power and resources; in state policies; in gendered organisational cultures, narratives and structures; in interactional stereotypes and perceptions and in gendered selves. Its multi-layered character can potentially exacerbate the difficulty of initiating change. However, in specific contexts, change at any of these levels may consciously or inadvertently affect change at other levels (Walby, 1990). Cross national structures are a particularly important potential source of change since gender inequality inhibits economic growth (OECD, 2012; EU, 2012). At national level, the salience of gender issues varies. There is an underlining tension in the fact that women are disproportionately represented among knowledge workers, but are under-represented in those disciplines that are seen as most economically important (EU, 2012). Gender inequality is affected by the strengthening/weakening of other structures and the promotion of other societal or organisational priorities (including neo-liberalism; managerialism; definitions of excellence). At an organisational, interactional and individual level, agents of change include men and women who embody resistance as ‘tempered radicals’ (Meyerson and Scully, 2001) on any basis (gender inequality; care; other occupational experiences; collegiality etc). Finally, experiences in particular contexts may not be gendered (Rodgeway and Correll 2004), thus increasing the possibility of the emergence of coalitions. This framework will be located in a cross national study of senior management, focusing particularly on Irish universities, and including a case study of one university where the proportion of women at professorial level increased from zero to 34 per cent over a 15 year period (O’Connor, 2014a &b)

RC48-793.1

O’DAY, ROBIN* (University of Hawaii, roday@hawaii.edu)

The Street Politics Of The 3.11 Disaster

In the weeks and months after the Tohoku disaster on March 11, 2011, tens of thousands of people took to the streets in Japan to protest and voice their concerns about the government’s role in exacerbating the crisis. Of particular focus within these protests were the perceived mishandling of the Fukushima Daiichi nuclear accident, and the broader dangers associated with relying on nuclear energy. These protests were significant since they were some of the largest street protest to occur in Japan since the 1960s and 1970s when hundreds of thousands took to the streets of Tokyo to oppose the revisions of the US-Japan Security Treaty (AMPO). How should scholars, therefore, interpret and explain the recent anti-nuclear street protests within a broader perspective on popular forms of political dissent in Japan? What can these protests tell us about the nature of civil society in Japan? How did such a catastrophic event affect civil society groups already engaged in different social struggles? In an effort to help answer these questions, this paper approaches these questions ethnographically from the perspectives of different Japanese activists that were organizing public protests around irregular employment and growing economic inequalities before the disaster. What role did these groups play in the post-3.11 protests? How did they shape the street politics of the 3.11 crisis? Conversely, how did the crisis shape their politics?

O’NEILL, PATRICIA* (University of Oxford, Trish1385@gmail.com)

Inequality and Emotion Management in Parental Caregiving By Chinese Daughters

In the past, normative values in historically Confucian societies strongly demarcated the roles of sons and daughters with regard to the care of elderly parents. Whilst sons were charged with responsibility for parents’ wellbeing, daughters-in-law or daughters carried out the hard work of hands on caregiving. Today the rigid family hierarchy is undergoing change due to ubiquitous educational and professional employment of women. Asian daughters are becoming self-sufficient. Their domination by and dependency on the family has diminished to a great extent. Gender based roles and obligations associated with family membership have nonetheless not abated. Though daughters may now contribute as much as sons to parents’ financial support, culturally sensitized norms suggest caregiving remains within the woman’s purview. And, perhaps surprisingly given their modern lifestyles, daughters continue to be committed to this filial obligation.

Within the framework of Hochschild’s theory of emotion management, this paper explores the emotion work Chinese daughters undertake to justify and sustain their caregiving activities. Specifically, it examines the importance of emotional investment in caregiving and how daughters overcome unhappy feelings related to son favouritism in order discharge kinship responsibilities. In furtherance of this research, fifty-five Chinese women born between 1946 and 1962 participated in semi-structured, in depth interviews in Hong Kong and Singapore during 2011 and 2012. Findings indicate feelings of affection rather than duty may mediate the quality and length of care daughters are willing to provide to elderly and disabled parents. If feelings of affection are absent or weak, caregiving may be unsustainable and alternative behaviours may be result. The ability to manage emotions, therefore, may not only be critical to the relationship between caregiver and care recipient but determinative of whether care is subcontracted to foreign domestic workers, parents and in-laws are placed in nursing homes, or parents are abandoned or abused.

O’REILLY, JACQUELINE* (University of Brighton, jo72@brighton.ac.uk)

Strategic Transitions For Youth Labour In Europe: The State Of The Debate

We examine how different comparative frameworks for international research have defined the ‘problem’ of youth unemployment. Reviewing national and European policies we argue that increased labour market flexibility in the context of an expansion of higher education and the legacy of long-term unemployment results in increasing polarisation for youth. Understanding youth unemployment cannot be limited only to the sphere of economic production and a narrow focus on skills attainment; it also needs to incorporate the role of families and social reproduction to understand how differential trajectories for young people have been created and are being reproduced. What distinguishes this phase of youth unemployment in comparison to the 1980s are family legacies inherent from previous recessions and the growth of work-poor households, the consequence decline of traditional employment careers as a result of labour market flexibility, and the very significant role of the European Union in funding new policy initiatives. This paper draws on the EUFP7 large scale projects funded by the European Commission on ‘Overcoming Youth Unemployment’.

From Underneath the Radar: Japanese Alternative Activists and Urban Protest after 2000

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The post-3/11 demonstrations against nuclear power have been regarded as a sensational development in Japan, where disruptive protest movements had been conspicuously absent since the 1970s. In contrast, I argue that collective public protests have been part of the repertoire of urban activists since the early 1990s, albeit rarely noticed by the larger public.

One prominent activist network is the group *Shirōto no Ran* in Tokyo, who have been at the forefront of a number of protest movements from the early 2000s in Japan, e.g. the *Freeter*-movement or protests against urban regeneration and restrictive legislations. Not a pronounced environmentalist group, they neverthe-

less enact as the main organizers of the early 2011 anti-nuclear demonstra-

tions, utilizing their network and long-rehearsed creative protest repertoires.

Besides these symbolic demonstrations, they enact prefigurative politics in their daily lives, implementing their alternative visions of urban sociality, entrepreneurship and empowerment. What distinguishes their network from other organiza-

tions is their strong cooperative and creative commitment beyond the restraints of conventional association like NGOs or political parties.

By interpreting their framing of the 3/11 crisis in a larger context of social change, the struggle against precarity and new developments in (proto-)politi-

cal activism, I will explain how *Shirōto no Ran* as a non-environmental group did respond so quickly to the disaster — despite their low level of organization and professionalization. The key issues to be explored will be how they 1) organize themselves 2) develop protest agendas 3) mobilize participants, all seen under the larger topical and temporal trajectory within this group. By uncovering the workings of such seemingly "invisible" activist networks who operate outside the established civic organizations, the understanding of current forms of social movements in Japan will be broadened, re-thinking the terms of civic participa-

tion.

**Reclaiming Their Streets: Prefigurative Politics on Contested Urban Grounds in Tokyo**

The social vicissitudes of post-bubble Japan left many young Japanese looking for escape-routes not only from the restrictions of Japan's societal norms but also from his privatized metropolitan layout. Addressing both issues, a few dozen activists of a countercultural scene in Tokyo have long experimented with alternative urban lifestyles, staging protests that oscillate between the symbolic and the prefigurative: struggling with the oppression in the public space, they introduced a countercultural infrastructure of small ‘autonomous zones’ in some lesser- gentrified pockets of Tokyo, where they carve out free spaces for everyday living and flexible forms of political, social and cultural participation.

Moreover, long before “Occupy” even became a global catchphrase, they chal-

lenged the configuration of their urban surrounding (as well as local police) by staging disruptive yet playful events, like carnevalsque demonstrations, ad-hoc street picnics or the blockade of contested spaces. They tackle issues ranging from homelessness to insecure employment, from state legislation to nuclear power; resistance to the 2020 Tokyo Olympics just emerged as their most recent urban battling ground.

In terms of movement studies, their relative successes are puzzling, consider-

ing their lack of a clear political agenda or single common cause. In addition, they form a radically unstructured and heterogeneous network that is characterized by a low level of professionalization and deliberate externality to the mainstream social and political institutions. Tackling this seemingly “invisible” network, this paper analyzes the unique characteristics of this network, and proposing ways to re-think categories of “social movements” in Japan on the basis of concepts like subpolitics, prefigurative politics, and DIY-politics.

**Bridging the Gap Between Overseas Filipino Workers and Their Families through Social Media**

The National Statistics Office (NSO) estimates 2.220 million overseas Filipino workers (OFWs) working abroad at anytime during the period of April to Septem-

ber 2012. The concept of analyzing how social media influences in communicating among families with OFW members.

The birth of modern technology and its advancements, in this day and age, bridges the proximity between families who are separated in an attempt to im-

prove their quality of life. It is argued that there are inherent tensions in this process of communication with their families becomes a challenge. A specific purpose of communicating with their families through social media and internet is a factor that needs to be identified.

Using data from the quarterly surveys of Social Weather Stations among Filipi-

no adults in the Philippines, this paper attempts to answer the following questions: (1) What platforms of social media do migrant workers use to communicate with their families in the Philippines? (2) How often do migrant workers communicate with their families in the Philippines? (3) What challenges do families encounter when communicating with their families using social media? (4) How does mediated communication affect the dynamics of family relationships? (5) If a member of the family is non-digit-

ally-literate, how then do they communicate with one another?

Here, utilizing empirical research and Filipino familial theory is analyzed to explain the benefits and disadvantages of communicating among families with migrant workers through social media.

**Care Regimes and De-/Familialization in Asian Seven Societies**

As the first paper of the panel based on an international joint research project on care in Asia conducted by Asian scholars from Korea, Japan, Taiwan, China, Singapore, Thailand and Vietnam, this paper introduces the research framework, social background information for comparison and major outcomes.

Care is one of key social issues today. It is usually claimed that population ageing, increases in women’s employment, changes in family life and welfare re-

trenchment are the reasons behind people’s growing concern on care. However, these phenomena observed in western countries. The social conditions in Asian societies are different. This paper first clarifies the background of growing concerns on care particularly in Asian societies. Then the paper reviews studies on care in Asia which were accumulated in the past decade.

Then the paper introduces theoretical frameworks on care, such as “care di-

amond,” and discusses how to modify the frameworks to apply for Asian cases. The concepts of familialism, facing-down, de-familialization and re-familiali-

zation are defined and discussed carefully.

The 2000s observed various significant changes in care regimes in all the soci-

eties under consideration. The major findings are;

1) The role of the state is increasing in most societies. However, the state is playing its role not always in a direct way, but more often in indirect ways through promoting market and community. Not only de-familialization policies but also familialization policies are implemented in the Asian region.

2) The role of the market is increasing dramatically in most societies.

3) People’s expectation in consumption (Cicchelli and October, 2013). However, recent research reveals that in France and Quebec (Donnat, 2008; Octobre et al, 2010; Pronovost, 2013; Poirier, 2012), there is a growing proportion of foreign products and contents in cultural consumption, as well as in tastes, norms, references and repre-

sentations, especially among young people. Without eluding the dynamics of local cultures, hybridization and mixing (Amselle, 1992), this “de facto” cosmopolitanism is deeply intertwined with the globalization of cultural industries. It may produce in individuals a feeling of cosmopolitanism regarding interests, attachments and imaginaries (Appadurai, 1996), or a feeling of belonging (Gallant, 2012).

4) Young people become cosmopolitan via the globalization of the cultural products they consume and their cultural habits (information media, cinema and theater attendance, Internet use and language practices, etc.)?

This perspective enables a reformulation of the question of “distinction” (Daloz, 2013) in two ways which are central to both the sociology of culture and the sociology of social groups. First, it questions the “cultural distinction” and the cultural legitimacy it is based on, either in Bourdieu’s classical view (1979), or in modernized versions, such as omnivism (Peterson, 1996), or individual plurality (Lahire, 2006). Second, it calls into question the “social distinction”, through the recon-

figuration of secondary factors which mark new lines of fragmentation in young people’s cultural universes (Octobre, 2010). This talk will address these questions through a comparison between France and Quebec, within a mixed-method (qualitative and quantitative) research program.

**From Cultural Globalization to Aesthetic Cosmopolitanism**

‘Cosmopolitanism’ is often used in relation to ethics, politics and migration. But it is seldom employed regarding common and ordinary situations, such as everyday consumption (Cicchelli and October, 2013). However, recent research reveals that in France and Quebec (Donnat, 2008; Octobre et al, 2010; Pronovost, 2013; Poirier, 2012), there is a growing proportion of foreign products and contents in cultural consumption, as well as in tastes, norms, references and representations, especially among young people. Gender Wage Gap in Japan: Comparison Between Regular and Irregular Employment and within Irregular Employment

In the last 40 years, the gender gap in the labor force participation rate has significantly decreased in many Western capitalist countries; however, the gender wage gap remains relatively large. In Japan, female labor force participation rate and years of continuous employment, which are major factors in the lower wages of females, are still fairly lower than those of males. The gender wage gap in Japan is the second largest among OECD countries.

Sociologists and economists have investigated the relevant factors, including the gender identity and sexism of the labor market. Previous works emphasized employment status. In Japan, regular employment is full-time and permanent, whereas irregular employment is on a fixed-term basis. Women are largely irregular employees, and this has become a major source of gender inequality in wages. Further, the gender wage gap is not only seen in the bias in regular employment, but also within irregular employment types.

This study examined how the gender wage gap in Japan is affected by employment status using data from the Employment Status Survey conducted by the Ministry of Internal Affairs and Communications in 2002. I analyzed micro data using a multiple regression model: the explained variable is personal income; explanatory variables are sex, age, other human capitals, employment status, and family situation, including marital status and number of children. I likewise established the interaction between sex and other variables.

Results showed that differences in the gender wage gap mechanisms between regular and irregular employment are not significant. In the wage gap between regular and irregular employment, the female gap is smaller than that of males. In factoring in the families of employees, having children makes males’ wages go up and females’ wages fall.

Japanese Brazilian Migrants’ Views on the Status of Ethnic and National Categories in Japan

Recent studies have tried to avoid the pitfalls of essentializing international migrants as homogenous ethnic “groups” or “communities” by focusing on the transnational spaces and the hybrid practices that connect migrants’ sending and receiving countries. However, by restricting its attention to a duality between the country of origin and the country of destination, these efforts frequently neglect other important relations that lie beyond this dualism. Some scholars have responded to this difficulty by adopting a new kind of transnationalism that investigates migrants not based on ethnic or national categories, but on aspects that are more comprehensive and diverse, such as the religious practices of migrants.

In this presentation, however, I examine the specific case of Japanese Brazilian migrants in Japan, and argue that one other possible strategy to deal with essentialist ethnic or national categories that are rather essentialist as a starting point, but then, by critically examining the way they are interpreted by migrants themselves, develop a perspective that undermines the very essentialism of these categories. Based on fieldwork and life story interviews, I investigate how Japanese Brazilians in Japan often make use of essentialist and national categories about Brazilian and Japanese identity, but at the same time produce discourses that connect these categories to a much wider and even surprising horizon that includes other ethnic and national categories such as other migrant groups from Asia, North America and Europe. While also treated in an essentialist fashion at first, these unexpected new categories also allow Japanese Brazilians to move beyond this essentialism, for as they unveil new kinds of conflicts and relations, Japanese Brazilians are able to point out and make sense of social spheres that are not restricted to ethnic or national boundaries. These include, for instance, issues related to urban lifestyles and consumption culture.

Disaster, Violence and Women: The Case of Van Earthquake 2011 Turkey

The debates concentrated on the relationship between disaster and violence assume that in case of disaster the rate of violence increases; this is also true for the case of intimate and domestic relations, particularly men are the dominant actors in this disaster related violence. In order words, since the loss of economical, social, and cultural power men feel the high level pressure on themselves. The reflection of this pressure can be seen in domestic relations, the violence emerged that time can have some different aspects such as physical and psychological violence. beating and sexual harassment (including incest) are some of them. In this presentation the relation between disaster and gender is examined in Van Earthquake 2011 Turkey by depending on the assumptions above.

Child Bearing and Good Mothering: The Case of Turkey

According to most critical social scientists, the body of woman is accepted as a means of political aspirations of politicians. In this presentation, how the capacity of woman to give a birth is politicised by government of Turkey today. Almost one year ago, the Minister of Health Affairs in Turkey started to not give permission to use the method of caesarean. And support this policy by using the good mothering discourse. This presentation is examined the attitude and behavior of pregnant women related to this policy by using qualitative techniques. How the participants express themselves as good mother and is there any relation between this feeling and this discourse are the basic questions of this presentation.

Dealing with Multiple Roles As a Medical Worker, and a Hemophilia Patient with HIV and HCV

Objective: To describe the difficulties of dealing with multiple roles in a work setting experienced by a haemophilia patient with HIV and HCV, who is also a medical care provider, and to identify the ideal behavior of medical providers towards patients with a positive HIV/AIDS status.

Method: A narrative interview that was conducted in 2009 with a male hemophiliac in his 30s, who had HIV and HCV and who was working at a hospital was analyzed.

Results: At first he concealed his hemophilia, HIV, and HCV status after receiving ‘notification of HIV’ status, because of prejudiced and discriminatory public perceptions about AIDS at the time and worries about restrictions at work, or dismissal. Then, after ‘two hospitalizations for the side effects of interferon treatment’, he quit his job, because he had experienced “a sense of crisis about revealing his HIV status,” which became necessary because he used public health insurance and medications. Also, he had experienced “medical workers’ true feelings” and noticed “the prejudice of other professionals.” However, at the same time, he had begun to reconsider living with HIV, and began to selectively reveal his hemophilia and HIV status. When working in a different medical institute he talked about his illness experience and revealed his HIV status. Here, he was “accepted by professionals.” This was a turning point for him. Revealing his status enabled him to work flexible despite his condition.” However, he faced new difficulties caused by ‘confusion about his multiple roles as a patient and a medical worker.’ This case study identified the characteristic difficulties faced by patients working in medical fields. To solve these problems, medical workers should develop a deeper understanding, more profound than the level of understanding seen today.

Intermarriages and Inclusion. Time and Space of Love, Laws and Norms

Based on a number of case studies of women and men involved in intermarriages in Europe, the intervention explores how these marriages and their consequences could challenge the concepts of inclusion and exclusion. “Intermarriages” refers here to couples formed by a European Union citizen and a “Third Country National” (TCN). A TCN is a citizen of a non-EU country who resides in a European Member State, and is thus affected by some specific regulations and administrative practices. Furthermore, the distinctions found in migration laws and administrative practices seem not to be limited to citizenship (e.g. dichotomy of UE citizens/TCNs), but extend to features that differentiate certain TCNs from others on the basis of categories such as ethnicity, religion, gender and social class – all of them included in anti-discrimination laws. The requirements included in compulsory integration tests for TCNs who apply for residence or naturalization (Strik & al., 2012; Hajat, 2010) display an overlapping of these categories (Groenendijk, 2006).

Moreover, if laws and family codes (e.g. Personal Status code, civil codes) influence the legal definition of inclusion, other unwritten norms that normalize homogamy may affect the sense of inclusion and modify the concept of “otherness” according to the configurations in which the members of these couples act (Saska & al., 2011).

Bi-national family biographies suggest that what is “normal” for the members of these families vary according to time (e.g. before or after 2000) and to space (e.g. European Union vs. outside).

The method of “biographical policies evaluation” (Delcroix, 2013; Apitzsch & al., 2008) allows understanding the effects of categories as citizenship, denizenship (Bosniak, 2001) and dis-citizenship (Wodak, 2013) on these families and the
The Influence of Population Growth on Land Tenure and Ethnic Conflicts in Benue State of Nigeria

The high growth rate in human population and the increasing scale of human activities on land have resulted in tremendous environmental degradation and climatic change which have grievous consequences on the security and live of people. Benue State today faces with ecological and demographic problems for which they are largely responsible. The most recent are the flood disaster resulting from the over flow of river Benue and incessant conflicts with Fulani herdsmen. Man’s activities with the environment have led to problems such as global warming, ozone layer depletion, loss of biodiversity, desertification, deforestion and climatic change. What these translate into is decreasing landmass that will be available for farming and grazing Benue State is an agrarian society with rapid population increase. The high poverty profile in the state has aggrated stress and appetite for natural resources such as plants, animals, water, minerals, air and land and so on. The aftermath of such activities is the disruption of the ecosystem. Benue State today is experiencing recurrent communal and ethnic conflicts as a result of competition over land. There is unequal access to land in the State. These problems have great effect on the health and security of the people. The paper examines how the increasing population growth, utilization of primitive technology, pressure on the natural resources etc. are affecting the land tenure system and social and food security in the state.

Forms of University Elite Sport in South Africa

The paper looks at the phenomenon of elite sport at a university in South Africa, for possible comparisons with other types and institutions, and how this has unfolded at such a university. It seeks to distinguish such sport in the context of three institutional complexes that foreshadows particular institutions. There is the enlightened context of sports practices, and there is the resistant context that sees forms of resistance against such ‘elitism’ of sports, and there are the benign forms of elite sport practices or contexts.

While all three types are not strictly of the mode that they occupy, they do have the main characteristics of such types. Due to the fact that even if S.A. sport is competitive, it’s organizational base is low, universities see a growth spurt in sport through private-public understandings (e.g. “Varsity Sport”), and thus the changing context’s that sees forms of resistance against such ‘elitism’ of sports, and there are the benign forms of elite sport practices or contexts.

The paper examines the trajectory of one or more of these sports types at (a) particular institution(s) in South Africa, in the three dominant sportspersons of this country, i.e. soccer, cricket and rugby from which a comparative perspective can be gained. While sport remains non-core to most universities globally, it has shifted somewhat on the ground, particularly with elite sportspersons emerging from that level. Various forms of elite sport thus need to be studied in terms of the forms they assume in different university contexts.

FOURTH, BEN (University of Technology, University of the)
Transitioning from higher education into the labor market is a major life event for graduates and determines and stratifies paths of future career success. However, labor market entry patterns are different by field of study with those from hard study areas (science, technology, and engineering) following a smooth transition, whereas graduates from softer fields of study (humanities and social sciences) experience a longer, more winding road into employment where spells of marginal employment and unemployment are frequent.

This research looks at Germany, a country which is highly standardized and stratified, and compares these subject-specific school-to-work transition patterns before and during the financial crisis. It analyses the pathways into employment and shows that these are more diverse during times of economic paucity such as after the Great Recession; however, this should not be the case for all subject areas. Instead, hard fields of study are less impacted by economic downturn as they are more protected by their specialized knowledge, showing a clear and direct link between higher education and the labor market, while graduates from softer academic fields are affected more significantly by the crisis and show even more diverse and fragmented transition patterns.

Using data from the German Socio-Economic Panel and employing methods of sequence and cluster analysis, I look at differences and similarities within and across fields of study before and during the economic crisis within the first 24 months after graduation. I demonstrate that there are distinct labor market entry trajectories between hard and soft studies, which differ substantially for latter before and during the Recession. I explain the diversity of career transition patterns as produced by difference in human capital specificities which favors specialized over general skills. Economic fluctuations have a bigger impact on demands of general skills which translates into more fractured transition patterns.

OGAWA, REIKO* (Kyushu University, reigoawa@law.kyushu-u.ac.jp)

Coping with the Ageing Society: Migration of Care Workers to Japan and Taiwan

Challenged by the demographic change of low fertility rate and rapid population ageing, Japan and Taiwan are trying to cope with the crisis of care in a very different way regarding its policy to introduce migrant workers to undertake long term care. Taiwan has started to invite migrant caregivers since early 1990s and approximately 200,000 migrants from Southeast Asia are currently working mainly in private homes. Japan started to introduce the migrants since 2008 under the bilateral agreements with governments in Southeast Asia under the condition that they have to pass the national exam on caregiving in Japan within a certain period of time.

Unlike migrants in the highly skilled sector or productive sector, care work provides the intimate space entails not only the political economy of care but a normative value underpinned by cultural notion of what care ought to be in each specific context. The comparison aims to situate the Southeast Asian migrants within the nexus of migration regime and care regime in Japan and Taiwan and discusses the discursive construction of the migrants as well as care work in East Asia.

The concept of the ‘good’ in order to raise both the status of care work and the migrants at the same time to ensure the safety and security of the elderly and migrants alike. The presentation will compare Japan and Taiwan which receives migrants from the same countries, the ways in which the migrants are situated within the two regimes reveal different construction of care work as well as different entitlement of migrants. It aims to unpack the otherwise naturalized notion of care work and suggests to perceive migrants as a ‘regional common good’ in order to raise both the status of care work and the migrants at the same time to ensure the safety and security of the elderly and migrants alike.

OGAWA, KATSUNORI* (The University of Tokyo, shu16384@gmail.com)

Employer Evaluation and Transition from School to Work: Reexamining the Impact of Institutional Linkages on the Japanese Labor Market

The purpose of this study is to investigate how employers evaluate high school graduates and to determine whether they make hiring decisions. The process of job-attainment includes two components: one is the entry of job seeker into the labor queue and the other is the assessment made by employers. However, past studies that used a simple regression model typically assumed supply and demand sides were in equilibrium. Such a model may not be appropriate for the analysis of a highly-structured labor market like Japan. This study makes a distinction between job seekers’ preference and employers hiring decisions by using partial observability probit model(Sakamoto and Powers 1995). This model assumes two underlying equations for one observable outcome and can make a behavioral process more explicit. Using a nationally representative data, we analyze how high school graduates’ attain their first jobs. Previous studies have shown the importance of long-term networks among schools and employers(Rosenbaum and Kariya 1989). We examine whether employers in fact highly appreciate such institutional linkages. Dependent variables are the attainment of regular employment, white-collar jobs, and large-firm jobs. The result observes institutional networks are important for employers’ hiring decisions, rather than students’ vocational skills or academic achievement. Moreover, the result doesn’t confirm the impact has weakened after the economic crisis since 1990s. This suggests in Japan, where vocational signals are weak, employers exclusively rely on social relations that are embedded(Granovetter 1985) in the labor market.

Unequal Distribution of Surveillance: Data Processing of Nuclear Workers in Japan

Inequality has been a central question in surveillance studies because personal data have been sorted to categories and the data-subjects have been treated differently depending on the categories in which they are placed. The word of “social sorting” shed a bright light to those activities of dividing people behind the curtain, although data-collecting systems are usually established in the claim of equality of everyone’s benefit, either all customers or all citizens.

Surveillance does not serve everybody. Furthermore, surveillance society inevitably contains times and places that are intended to be outside of intensive scrutiny. Instead of its ubiquitous appearance, distribution of surveillance differs with the targets, more precisely, with the relations between watching power and watched population. In turn, such times and places disclose whom the surveillance system serves.

In the Japanese context, such sites, particularly unveiled after the earthquakes on March 11, 2011, are nuclear power plants. Nuclear power plants are operated using numerous electronic monitoring systems. But the workers are not consistently surveilled. Their data of exposure to radiation have been often unrecorded, underestimated, or distorted. The government has tracked their data only for research purposes, never using the data for the workers’ own safety. The lack of reliable records allows electric companies to keep hiring the workers temporarily and contributes to reproducing labor power at the plants.

Based on the research of data processing on nuclear workers in Japan, this paper shows how the unequal distribution of surveillance plays a part of surveillance society. The workers at risk seem to be most in need of monitoring, but are excluded in the middle of highly-wired plant. The mass surveillance and intricate system serves.

Searching for the Nexus Between the Care Regime and Migration Regime

The discussions on the nature of welfare states in East Asia tend to focus on the link between the economic development and social policy or emphasize on the historic influence on the family to provide care. However, what has not been explicitly discussed is the role of migrants in providing long term care. As the population aging accelerates care work has been increasingly undertaken by migrants who constitute an integral part of the care workforce in East Asia.

The presentation will compare Japan and Taiwan which receive the migrants from the same sending countries in Southeast Asia namely Indonesia, Philippines and Vietnam and situate the globalization of care in East Asia within the nexus of care regime and migration regime. The paper argues that even though Japan and Taiwan receive migrants from the same countries, the ways in which the migrants are situated within the two regimes reveal different construction of care work as well as different entitlement of migrants. It aims to unpack the otherwise naturalized notion of care work and suggests to perceive migrants as a ‘regional common good’ in order to raise both the status of care work and the migrants at the same time to ensure the safety and security of the elderly and migrants alike.

OGIDO, ROSALINA* (Faculdade de Medicina PUC, rogio@pucsp.br)

The Working Mother and the Access to Childcare

In Brazil, the attendance in daycare and preschool are guaranteed by the Federal Constitution, as well as the Statute of Children and Adolescents, as a right of all children from birth to six years.

In a research with interviews of mothers who work in various capitals of Brazil (SOS Corpo, Data Popular, 2012), the main difficulty, reported by 34% was to get nursery vacancies, and this demand does not vary with social class.

Objective: To understand the trajectory of teenagers who became mothers during training period for insertion in the labor market at Campinas.

Methods: Eight mothers aged 19-23 years who were part of the 17 teenagers who became pregnant between 1992 and 2009 were interviewed. Qualitative methodology was used for analysis.

Results: Three mothers stopped studying and working. Of the other five, four finished high school and one was studying. Two were unemployed and three
were working. Of the two unemployed, one had no one with whom to leave her son and for the other, she received help from relatives. Of the three who were working, two have daycare for their children and one received aid from their parents.

Thus, it becomes apparent that the young mothers reported difficulty in getting aid for the care of their children during working period, is a difficulty common to working women and, unfortunately, it remain current.

Moreover, given the lack of childcare facilities, the mother who does not work and that only studies, situation of many teenage mothers, suffer a disadvantage when trying to place in daycare, further hindering the continuation of studies and future insertion in the labor market.

Postmodern View of Time in Sociology

In modernism, there are two perceptions of time. One is that of modern philosophy, in which history is seen as the process of the liberation of mankind. The second is the postmodern view, which draws the schematics of human liberation, but also the postmodern perspective, which questions those plans. The postmodern perception of time does not, however, oppose the modern view of modernity, after all, has both modern and postmodern aspects and would not exist without both of them. This theory applies in Japan as well but, as is described in the following section, those two aspects present themselves in different ways than in the West. It is possible to discern that modernism and postmodernism form two sides of the same coin in Japanese modernism, just as they do in the West. The difference, however, is that postmodern thinking remained in the shadow of the modern in the West until people started to question the validity of modern philosophy, whereas in Japan, modernization was spurred by a postmodern spirit. So, while in Japan this postmodern spirit constitutes the driving factor, in the West it plays simply a bit-part and, conversely, the modernism that stole the spotlight in the West remained in the shadows in Japan. Theoretical framework of Sociology is based on the postmodern view of time. This paper try to show the possibility of this perception of time in order to make a general theory at the time of globalization.

Women's Decision-Making Autonomy and Exposure to Maternal Mortality Risks in Nigeria

The statistics on maternal mortality clearly show that Nigeria is lagging in the struggle for significantly improved maternal health. Annually, an estimated 50,000 to 59,000 Nigerian women of reproductive age die because of pregnancy and childbirth. One of the main reasons for this high rate has been the low level of involvement of women in decision-making process. Men generally view some of these issues from the perspective of their wives is taken for granted. The study employed the women's data from the women who had at least a birth in the last five years (preceding the survey).

In this kind of school affects students' learning and career choices, this study aims to show the possibility of this perception of time in order to make a general theory at the time of globalization.
Healing Programs for School Bullies and Their Parents in South Korea

This study presents several social problems related to the South Korean government's efforts to deal with bullying at school to be one of the four major forms of violence (sexual abuse, domestic violence, school violence, and harmful foods), and addresses why only the bullies and their parents are faced with legal liabilities and social responsibility. In particular, this study addresses the problem of schools and the government shifting the responsibility for school bullying onto bullies' families. School administrators and policymakers hope for “deviant” families to transition into a “normal” condition through healing programs. Recently, healing programs are springing up for a wide variety of psychological problems. In this social context, school bullies and their parents are being required to participate in healing programs.

This study employs ethnography an in-depth interviews with participants in art healing programs. The interviews target healers, program staff, bullies and their parents. The bullies are 14- to 16-year-old middle school students. Findings report that staff and participants in the healing programs do not regard bullies as “deviant.” In addition, participating students and parents believe that schools have great social responsibility for the bullying problem.

The importance of this study lies in its exposure of the fact that bullies and their parents receive recognition as “normal” in the healing program, but this is a context outside of school. Therefore, after they complete their course at the healing program, they are still treated as bullies and potential perpetrators of school violence. Consequently, they are confused about their social identity. Bullies and their parents are confronting the problem of liminality (i.e., the psychological threshold when transitioning from one stage to another) or social normality.

Religion, Trust and Public Society in the United States

Social integration beyond constituents’ diversity becomes a pivotal theme in the public sphere of a democratic society (Charles Taylor); the major conundrum for a post-secular society (Jürgen Habermas). Although religions have played a crucial role for collective consciousness in a traditional society, their roles for social integration in a modern and pluralistic society have been put into questions. Therefore, focus on “trust in immigrants” as a particular socio-psychological phenomenon which could reflect a religious orientation and their public attitude toward social integration.

This study, utilizing the Baylor Religion Survey (2005), examines empirically how trust in immigrants is related to various dimensions of religiosity and spirituality. Besides socio-demographic control variables, explanatory variables include (1) various forms of religious identities (including theists, spiritualists, and non-affiliation), (2) cognitive types of belief (including images of God, New Age interests), (3) ideologies (religious pluralism, moral liberalism), (4) experiential types (traditionally religious experiences and spiritual/mystic experiences), and (5) practices (religious service attendance, prayer, civic group participation).

The findings demonstrate all forms of religious identities other than affiliated theists (i.e., affiliated spiritualists, atheists/agnostic, and the unaffiliated) show significantly higher levels of trust in immigrants. The image of God as judge appears to be related to the lower levels of trust in immigrants whereas New Age interests do not have a significant relationship to trust in immigrants (p<0.05).

Neither religious pluralism nor moral liberalism appears significantly related to religious experiences. Religious experiences and social identity, however, are significantly related to trust in immigrants whereas spiritual/mystic experiences lead to higher levels of trust in immigrants. In terms of practice, both religious service attendance and civic group participation – not merely prayer alone – appear to be highly related to trust in immigrants.

Acquisition of Ballet Technique: Collective Teaching in the Ballet Studio and Social Control

This paper examines the acquisition of body techniques in a ballet studio from the perspective of social control theory (Hogetsu 2004). To achieve this objective, I conducted participant observation at a ballet studio in Takasaki, Gunma Prefecture, Japan, and interviewed 3 teachers and 10 students who belong to this studio. There are three notable characteristics in the institution of the ballet studio. Firstly, students are divided into classes according to their skill level. This division is practiced primarily as the prohibition of students from joining classes intended for higher skill levels. Secondly, since there is only one instructor in each class, the instructor does not always pay attention to every student, but normally addresses particular individuals to correct her posture with words and gestures. Thirdly, even when the instructor is addressing individuals, those who are not addressed responds and reacts as if she were addressed individually each student responds as if, even though, in reality, another student being the focus of attention by the instructor, the instructor is personally addressing her. On the basis of these dimensions, students acquire ballet technique through what we might call “over-understanding” of teacher's coaching.

Influence of Childcare Experience on Women's Dietary Habits: Analysis of Public Opinion Poll on Health

In Japan, food and people's eating habits have changed quickly in the postwar era. Externalization of household functions has reduced domestic work; however, people have lost the opportunity to acquire sufficient skill and knowledge in cooking. Notably, a social problem of children's unhealthy dietary habits has arisen. Furthermore, some studies have found that mother's food consciousness or dietary behavior affect the related dietary habits at home. However, few empirical studies have examined the correlation between women's dietary habits and whether they have children or not. This study examines the effect of childcare experience on women's dietary habits by focusing on their food choices and dietary habits. Analysis of a public opinion poll on health data with logistic regression reveals that childcare experience affects dietary habits in women. Compared to childless women, women with children “eat all three meals” more regularly but are not conscious of “avoiding eating snacks.” Moreover, women who are more conscious of their food choices tend to be older, unemployed, and have a high standard of living. The result revealed the following points. First, women equate the responsibility of nurturing children to disciplining them rather than caring for their children's physical health. Second, childcare experience has both positive and negative effects on women's dietary habits. Therefore, these factors should be considered when encouraging and promoting improvement in women's dietary habits.

Past, Present and Future Of Japanese Cultural Sociology

This paper examines the historical development and the theoretical features of Cultural Sociology in Japan. By discussing the past works such as views of ShotorayaNODA(1873-1945), Jurichiro Matsumoto(1893-1947), Kazuta KURAI-Chi(1896-1988), the present works such as Keichi SAKUTA(1922-), Munesuke MIITA(1927-), Shun INOUE(1938-), and the contemporary several movements toward the future cultural sociology, we will elucidate the historical and theoretical characteristics of Japanese cultural sociology in the following way. It is true that Japanese cultural sociology has been influenced by the Western sociological thoughts such as German sociology(especially, Alfred WEBER, Max WEBER, Georg SIMMEL), the French sociology(Emile DURKHEIM, Gabriel TARDE), the American sociology(Talcott Parsons, Jeffrey ALEXANDER), the English CULTURAL STUDIES, etc., However, today, Japanese cultural Sociology is going to present its originality or uniqueness by fusing these Western cultural theoretical impacts with the Japanese cultural tradition and contemporary social situations in a global context. That is, Japanese cultural sociology should advance from “moon-light sociology”(Yasujiro DAIDO)—a passive mode of sociology— to “sunshine sociology” —an active mode of sociology. Thus, we will make clear one aspect of Japanese cultural sociology.
Social Exclusion and Health Outcomes of Single-Mother Households in Japan

Single-mothers and their children are one of the most economically-disadvantaged groups of people in industrialized countries. Japan stands out from other OECD countries with regard to its high incidence of poverty and the high employment rate of single-mother households. Previous studies in the Western countries have shown significant differences in physical and mental health between single-mothers and their married counterparts. They also have found that children of single-mother households are more likely to have health and behavioral problems. However, it is still unclear to what extent these differences are attributable to low-income or lack of social support. Employing a unique panel survey on women with children, this study investigates how poverty and lack of social capital affect health outcomes of mothers and children in single-mother households in Japan.

Major contributions of this study are as follows. First, it employs multiple measures of poverty. In particular, it uses not only the poverty line but also the Minimum Cost of Living calculated by the Public Assistance system to define the poor. Second, subjective as well as objective measures of health outcomes are used. Third, the effect of past experiences that may affect health (such as childhood abuse and family dissolution in childhood) is examined to control for unobserved heterogeneity.

Tentative results confirm significant health inequality between single-mothers and their counterparts. Although poverty has a negative effect on health of married mothers, it has no significant effect on health among single-mothers. In addition, even after controlling for age and other socio-economic factors, mental health of single-mothers significantly deteriorates as their children grow-up.

Structure of Cultural Rejection

What does it mean to dislike a piece of culture? This study explores the idea that culture is being used as the focus of coordination among individuals. The central topic is cultural rejection. The proposition is advanced that individuals reject cultural practices as the proxies of disfavored groups who are perceived to be associated with them. In turn, this will allow individuals to distance themselves from disfavored groups and maintain the identities separate from disfavored groups. This study argues that the pattern of cultural rejection can be seen as a reflection of individuals' perception of differentiation within society. Using data on musical preferences from 1993 General Social Survey, it applies blockmodeling – the methodology originally developed in social network analysis – in a new way, to analyze the structure of cultural rejection within U.S. society. The results indicate that blockmodeling based on cultural rejection is effective in uncovering sociologically meaningful positions among the respondents, while providing unique insights into the structure of cultural divisions within U.S. society. In addition, the identified positions correspond with individuals' perception of the degree of unity (or lack thereof) among Americans, consistent with the theoretical assumption of this study. The results also show the important roles that popular culture occupies in U.S. society.

The Relationship Between Financialization and Accounting Standards: A Japanese Perspective

This study considers global financialization in terms of the dynamics of corporate accounting standards. Accounting standards play a crucial role in financia- lization by measuring corporate financial performance. Since the definition of “financialization” is ambiguous, this interdisciplinary study can benefit future research. Taking the perspective of Ryuji Takeda, a legendary Japanese accounting researcher with knowledge of sociology, this study focuses on the transition from production-oriented accounting to finance-oriented accounting. This transition is analyzed using Jean Baudrillard's concepts of "simulacra" and "hyperreality." This study also analyzes the recent changes in Japan's accounting standards as a backlash against excessive finance-oriented accounting. Further, the backlash is considered from Takeda's "spiral development" perspective. Although this study is essentially conceptual, data are presented in support of its argument, and its interdisciplinary perspective can further financialization studies.

This paper is structured as follows. The first section reviews studies on financialization and summarizes their essential points. The second section describes the relationship between the financialization process and accounting regulations (particularly accounting standard-setting) based on Takeda's framework, which distinguishes between production-oriented and finance-oriented accounting. This framework introduces Baudrillard's concepts of "simulacra" and "hyperreality" to explain the financialization mechanism by considering the transition from the former to the latter type of accounting. The third section focuses on the new dominance of finance-oriented accounting standards in Japan. Post-financial crisis Japanese accounting regulations such as the development of accounting standards for small and medium-sized enterprises are reexamined using Takeda's theoretical framework. Finally, this paper argues that new accounting regulations have emerged through a spiral development within the bipolarity between traditional material production-oriented accounting and finance-oriented accounting as a reaction to excessive financialization and finance-oriented accounting standards.

This paper compares Japanese and English emphases on effort from two analytical perspectives: cultural and institutional. The cultural perspective examines the Japanese cultural belief that natural gifts are equally distributed in society, while the institutional perspective examines the competitive entrance examination selection system, colloquially known as "examination hell." It is clear that an emphasis on effort has permeated Japanese society. However, recent rapid economic growth has made Japan more affluent, which in turn has undermined cultural emphasis on effort. On the other hand, English culture suggests that the concept that natural gifts are unequally distributed, which also undermines cultural focus on effort. In this paper, I will discuss the similarities and differences in these two societies' approaches to effort and examinations.

Analyzing the Institutional Work: The Case of a French Social Security Local Organization

Social security and its solidarity policies play a central role on poverty reduc- tion. To analyze how does it work in practice and its limits to reach its aim, it is interesting to wonder how it is elaborated, implemented by organizations and actors, and how it is questioned by policy evaluations. Hence, examine the institutional work (Lawrence, Suddaby, Leca, 2009) is a good way to better understand the complex institutional configuration where different actors interact to conduct and question policy. Studying the case of institutional work in a French social security local organization commissioned on family and solidarity policies, this compari- son is led to analyze how organizational context, economic crisis, and New Public Management affect social intervention and its targeted public. This paper is based on a three years ethnographic immersion in this organization with participant observation as a policy evaluator, a research on a minimum income scheme non-take-up, with some forty interviews and document analysis. Firstly, it explain how does the organization work, its missions, partners and professional cultures. Secondly it examines how in time of crisis, this social organization has not only to deal with an increasing demand to mitigate crisis negative effects on most disadvantaged people, but also with important budgetary restrictions and performance management optimization which impact the service delivery. Then, it analyze how do street level bureaucrats (Lipsky, 1980) react in front of these paradoxical injunctions and elaborate collective and individual performance strategies which are not always focusing on social right accessibility for vulnerable people. Finally, it study how policy evaluation question this situation, giving some perspectives for improvement without really put into question the institutional work influence on actors strategy. More broadly, this paper tries to understand how institutional configuration impacts policy implementation focusing on initial preoccupations more than in policy potential outputs for beneficiaries.

Giving Sense to Social Policy Implementation and Its Evaluation

This paper compares Japanese and English emphases on effort from two ana- lytical perspectives: cultural and institutional. The cultural perspective examines the Japanese cultural belief that natural gifts are equally distributed in society, while the institutional perspective examines the competitive entrance examination selection system, colloquially known as "examination hell." It is clear that an emphasis on effort has permeated Japanese society. However, recent rapid economic growth has made Japan more affluent, which in turn has undermined cultural emphasis on effort. On the other hand, English culture suggests that the concept that natural gifts are unequally distributed, which also undermines cultural focus on effort. In this paper, I will discuss the similarities and differences in these two societies' approaches to effort and examinations.

Structural Rejection
ways in which these programs of temporary work are an aspect of the shaping of relations between Australia and these neighbouring regions.

In Australia as elsewhere, temporary work carries inherent vulnerabilities. These are likely to be felt more keenly in the lower skilled sectors of the workforce. It is not insignificant that there are concentrations of temporary migrant workers within the lower-income states in Asia and the Pacific working in low-paid work, in casualised sectors of the economy. While not surprising, this is a way global and regional divisions of labor are constituted and that this migration is temporary, is one of the ways regional patterns can become embedded in the workforce. The argument is not that there is a singular economic logic to the formation of these patterns but rather a number of regional factors at play. These issues are explored in this paper drawing on an analysis of the different categories of temporary migration in Australia.

Transnational Engagements: Footscray, Transnational Migration and the Making of Place

Footscray is an ethnically diverse and rapidly transforming suburb in Melbourne's inner West, formed in part by overlapping waves of migrants. The Vietnamese have been the most recent population of migrants to the suburb, with the arrival of the first young Vietnamese in the 1970s. These waves of migrants have been accompanied by periods of temporary migration, including through the Vietnamese market.

Migrants' transnational experiences, connections and networks are part of the uneven incorporation of migrants into the local society. For many migrants, transnational relationships are embedded in places. For migrants, such networks can be understood, to degree, as contained but geographically disparate "ethnic worlds" (Werbner 1999: 25). But the places in which these networks are located shape the forms of these networks and the resources they offer. Drawing on Smith (2001), these networks "criss-cross" space and in doing so, create a complex world of migratory flows and movements.

The study of these networks is a way to understand the ways in which these networks are embedded in places. For migrants, such networks can be understood, to degree, as contained but geographically disparate "ethnic worlds" (Werbner 1999: 25). But the places in which these networks are located shape the forms of these networks and the resources they offer. Drawing on Smith (2001), these networks "criss-cross" space and in doing so, create a complex world of migratory flows and movements.

ABSTRACT

This study assesses the perception of security operatives on the challenges they face as security operatives in the fight against corruption in Nigeria. The study adopted both primary and secondary sources of data collection. Primary sources are observations of security operatives at security checkpoints. Questionnaires were distributed to 120 security operatives in Kaduna metropolis and 6 in-depth interviews were conducted with key informants. For secondary source, data was sourced from Security Operatives Disciplinary Records on corrupt practices emanating from complaints lodged against them by victims (members of the public) or caught by officers /colleagues while on visiting or visiting rounds to assess performance. Findings show that causes of corruption among security operatives includes over-centrality of authority within operative structures, recruitment processes, lack of discipline, poor work ethics and lack of adequate training and support.

Young People with Debt Problems: Uncertain Transition to Adulthood in Finland

Gaining financial independence is a part of becoming an adult in Finnish society and culture. In this paper, we discuss the debt problems faced by young people who struggle to gain agency in their early adulthood of age 18–25. The aim of this paper is to see what the transition to adulthood means in relation to debt problems. Official data on registered debt problems by young people will be analyzed in this paper. The data was gathered by using the official debt enforcement register of the Finnish Legal register center (on debt collection rulings, fines and other sanctions). The analysis of this register-based data concentrated on showing how debt problems increase dramatically and what kind of specific debt problems young people are facing. Socio-demographic background is taken into consideration in the analysis. Our results show the debt problems of minors under 18 years of age result mostly from fines or other sanctions imposed upon them by public agencies, or because of their parents. Approximately at the age of 19 problems increase dramatically and involve most importantly debts from consuming. Registered payment defaults by young people have been increasing in recent years in Finland. Instant loans with high interest are one major source of the occurrence of debt problems, and new concerns have arisen on unpaid debts. Finnish young people are a generation growing up in a period of economic independence, but at the same time they have to balance the financial risks they are taking. Since most of the young people and young adults study until their mid-twenties, youth in Finland are placed in a waiting period between youth and adulthood. The current economic crisis in Europe has intensified the risky outcomes of this age of transition.

Patriarchal and Medical Discourses Shaping HIV/AIDS-Related Stigma and Its Management in Turkey

The paper explores the discursive formation of HIV/AIDS-related stigma and its management by people living with HIV (PLHIV) in Turkey. Based on biographical narratives of 24 PLHIV, semi-structured interviews with 32 key informants, participant observation in PLHIV networks and documentary analysis, the paper focuses on the role of medical and patriarchal discourses in shaping HIV/AIDS-related stigma at the state and societal levels and highlights the implications of stigma on PLHIV's agency in managing physical, emotional and social aspects of living with HIV in Turkey. The findings are overviewed in two sub-sections:

First, I identify the two conflicting discourses around HIV/AIDS in Turkey: 'cultural immunity' and 'rights-based' discourses, at the state and civil society levels, respectively. Here I investigate the role of medical profession and of patriarchy in the formation of these discourses in relation to the socio-political context of Turkey, particularly referring to the perceptions about sexuality, 'modernisation' and religious discourses.

Secondly, I focus on the ways in which PLHIV understand, reframe and challenge stigma individually and collectively. I focus on family and healthcare as the main institutions where the context-specific ways in which HIV/AIDS-related stigma interferes with the formation and management of HIV-positive identities. Participants' reconstructions of HIV through narratives of 'injustice' and 'neglect' are shown, to address the links between the subjective understanding of and resistance to HIV/AIDS-related stigma and the overarching discourses shaping stigma.

The paper aims at contributing to further understandings of HIV-related stigma by focusing on the power relations in the formation of stigma from a discursive and intersectional approach, by exploring the understandings of stigma from the perspectives of the stigmatized, with a specific focus on the agency of PLHIV in negotiating and challenging stigma and by offering data from a cultural and geographical setting which remains under-researched.

OKUDA, SHOKO* (Keio University, okusho35@sfc.keio.ac.jp)

Pharmacization and Social Inequalities: An Examination of Problems Relating to Depression in Japan

The growing number of people suffering from depression has become a social problem in Japan. Over the last decade, the number of those consulting medical institutions about depressive symptoms has more than doubled, and the number of those taking sick leave from work due to depression has increased. Accordingly, mental health strategies have become an important issue for both the nation and companies. The problems associated with depression in Japan have been influenced by the pharmacization of mental health. This trend further promotes the individualization of social problems and encourages people to seek hospital consultations. Since selective serotonin reuptake inhibitors were introduced to Japan's pharmaceutical market in 1999, demand for anti-depressant medications has rapidly expanded. It seems likely that then the efforts of pharmaceutical companies, as part of their marketing strategies, to increase people's awareness of mental illness have led people who are not actually depressed to have medical consultations and drug treatments for it. This phenomenon is known as ‘disease mongering’ and has been reported on. Problems exist from the medical perspective also and include the following: expansion of the diagnostic criteria for depression as formulated in the American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders, treatments that rely greatly on drugs; and biomedicalization. Another reason for the increase in medical consultations is the declining function of communal bodies such as companies and local community, a move that has left individuals to deal directly with organizational and social problems. This study intends to find out what sort of dialectical features are used in the current community as a result of contact between different dialects which were brought by the first migration to 1897. Mexico has hosted the mass influx of Japanese immigrants, resulting in the formation of the largest Japanese community in Mexico City. Although Japanese is often used for communication amongst the community members even today, linguistic aspects of the language used there have not been well investigated in previous research. Since the first generation of immigrants in the community migrated from various places in Japan, there must have been contact between the Japanese regional dialects among them. This study intends to find out what sort of dialectal features are used in the current community as a result of contact between different dialects which were brought by the first generation. The data consist of over 5000 minutes of collected through my fieldwork in 2012 and 2013 in various places in Mexico City. The immigrants migrated from over eighty Japanese immigrants and their families. The linguistic variable examined in the analysis is negation suffix. The negation form is realized in different forms according to dialect. The major variants are -nai and –n, the former is mainly used in

OKURA, TAKEHIRO* (Azabu university, okhura@azabu-u.ac.jp)

**Edgewise Community: Real Estate and Asian Settlers in Tokyo**

After the latter half of the 1980s the number of Asian people has increased as “new comers” in the inner area of big cities. As more than 25 years have passed since then, a question appeared if there was an appropriate term which expressed the situation of the community. In this paper, two area in Tokyo: Ikebukuro and Shin Okubo, are examined as case studies, and they are called “edge-wised community.” Edge-wised community is a community which has plural cultural basis, in which there exists a system designed from the bottom, and in which there exists a circuit which makes the system function.

This paper consists of the research regarding the foreign residents’ motives in acquiring the housing and in having relationship with the network and other surroundings. Especially, focusing on the function of housing land and building dealers in the ethnic community, the actual condition for foreign residents to purchase the housing is clarified.

Focusing on the above mentioned two themes, this paper aims at the structural understanding at the mezzo-level of the society. According to Hughes(1931): Chicago School third term, in his research of “Chicago real estate Board” housing land and building dealers are classified in five groups. In this report, combining both Hugh’s classification and the reporter’s classification of the number of renewal times of license of housing land and building dealers, characteristics of gate keepers are clarified. There, the phenomenon of circuit-izing between “cooperative channel” and foreign customers is seen.

Then, what promoted foreign residents to acquire residence? In addition to “cooperative channel” centering housing land and building dealers in “edge-wised community,” improvement in the civility in foreign residents is thought to be a factor. In this regard, the actual condition is reported referring to the case studies of Ikebukuro and Okubo.

**The Medicalization of “Depression” Across the Globe**

Recent decades have witnessed an increased reliance on the American approach to mental illness as a global script. These definitions of and treatment responses for mental health problems have been transmitted despite classic and new concerns from consumers, professionals, and scientists about the categorical stance and the need to understand whether and how individuals across societies, construct the set of symptoms that are used in formal psychiatric diagnoses of depression. Specifically, this question of global medicalization raises issues of how individuals label problems of living and what attributions they report as underlying the problems. Drawing from the “layers of belief” concept, we examine the multiplicity of attributions and labels that individuals across 17 societies assign to a scenario meeting DSM-IV criteria for an “official” diagnosis of depression. The ability to examine the social construction in a standardized survey results from the design of the instrument. The vignette was followed immediately by an open-ended question, without prompts or lists of possibilities, asking what actions should be taken. Using latent class analysis, we construct the patterns of suggested actions that make up the cultural toolboxes of lay diagnosis of depression across countries, examining their similarities and differences cross-nationally. Our results show that lay diagnosis is embedded in a broader context of national medical cultures and individual cultural beliefs about mental illness.

OLAGNERO, MANUELA* (University of Turin, manuela.olagnero@unito.it)

**Housing Well Being and Social Inequality in Europe: A Comparative Analysis**

Two phenomena characterize, in a seeming contradiction, housing conditions in Europe over the last three decades: on the one hand there has been an extension of home ownership and the spread of a high standard of living, on the other hand there is an increase in housing costs and in social inequality. Though around three quarters of Europe’s citizens own their home, maintaining a home has continued to rise and cannot only jeopardize housing security and quality, but can also stand in the way of life projects.

The paradox is that home ownership does not exclude housing deprivation. The hypothesis is that households’ social class plays a role in enabling owners to combine home ownership and well-being. On the basis of Eu-Silc (European Union Statistics on Income and Living Conditions) data a comparative analysis is carried out about housing conditions in European countries by focusing on social class. This perspective provides further insights about the divergence/convergence hypotheses stemming from the analysis of trends of living/housing conditions throughout Europe.

To support this claim, two main dimensions of housing inequality are identified: tenure and housing well-being. A micro level data analysis is performed, in order to take account of individual family costs and consequences of maintenance of ownership in settings and in periods (such as the present day) of rising housing prices and income resources that decrease in terms of amount and stability. The aim is to demonstrate that, despite differences in well-being in Europe between owners and non-owners (on the average the firsts are better off), home owners cannot be regarded as a privileged category per se. Italy represents a paradigmatic case in this respect: a longitudinal analysis (2005-2012) will be provided to investigate the crisis effect on facing housing costs.

**“Cultural Toolboxes” of Mental Health Care: Depression and Public Construction of the Set of Appropriate Responses in 17 Countries**

Central to understanding illness behavior is an understanding of how the public constructs what constitutes an illness and what are appropriate responses to potential illnesses. However, we know little about these cultural toolboxes of scripts, schemas and habits for depression. Here we ask: How do individuals construct the meaning and response to a set of behaviors that are consistent with DSM-IV diagnoses of major depression? And, how do individuals’ past experiences with mental health problems shape these patterns? Using data from the Sigma in Global Context – Mental Health Study (SgC-Mhs), we examine how nationally representative samples of individuals in 17 countries label and suggest what individuals should do, if anything, in response to a vignette describing an individual meeting a criteria for a depression diagnosis. The ability to examine social construction in a standardized survey results from the design of the instrument. The vignette was followed immediately by an open-ended question, without prompts or lists of possibilities, asking what actions should be taken. Using latent class analysis, we construct the patterns of suggested actions that make up the cultural toolboxes of lay diagnosis of depression across countries, examining their similarities and differences cross-nationally. Our results show that lay diagnosis is embedded in a broader context of national medical cultures and individual cultural beliefs about mental illness.

PESCSOLIDO, BERNICE* (Indiana University, pescsolo@indiana.edu)

**Cultural Toolboxes of Mental Health Care: Depression and Public Construction of the Set of Appropriate Responses in 17 Countries**

Central to understanding illness behavior is an understanding of how the public constructs what constitutes an illness and what are appropriate responses to potential illnesses. However, we know little about these cultural toolboxes of scripts, schemas and habits for depression. Here we ask: How do individuals construct the meaning and response to a set of behaviors that are consistent with DSM-IV diagnoses of major depression? And, how do individuals’ past experiences with mental health problems shape these patterns? Using data from the Sigma in Global Context – Mental Health Study (SgC-MHS), we examine how nationally representative samples of individuals in 17 countries label and suggest what individuals should do, if anything, in response to a vignette describing an individual meeting a criteria for a depression diagnosis. The ability to examine social construction in a standardized survey results from the design of the instrument. The vignette was followed immediately by an open-ended question, without prompts or lists of possibilities, asking what actions should be taken. Using latent class analysis, we construct the patterns of suggested actions that make up the cultural toolboxes of lay diagnosis of depression across countries, examining their similarities and differences cross-nationally. Our results show that lay diagnosis is embedded in a broader context of national medical cultures and individual cultural beliefs about mental illness.
Representations of the Social in Digitalized [and Cyber] Domains of the Non-Dedicated

The paper is a part of the Author's project focused on creating new kinds of the natural by the social. The main thesis is that the social creates autonomy of the natural. Communication is abounding with symbolisations enough to force out traditional perception of the natural as something external. Civilization and culture are abounding with symbolizations enough to construct the autonomous natural. Up-to-date culture is dominated by hermeneutics, re-creations, and re-productions of achievements. It is not only a testimony of civilizational crises shaped with up-to-date popular discourses but also it shows that the social is autonomous because it exists as something creating nothing new.

The Author argues that there is a transitory/preparatory stage of the social being dominated/occupied by new digital skills and possibilities. The beginning of the next stage will be characterised by the dedicated and it will be directed towards creations and constructions of the natural. An individual human beings become autonomous-as-non-dedicated subjects of the social. The up-to-date social accepts huge number of homogenous variants, the future social will expand its cyber heterogeneity as the natural. The consciousness introduces itself as the natural. New kinds of cognitive and non-dedicated absorption will re-define—but without reference to ethics-Socrates' cognitive valuation. The subject is the reason.

Handling Money in Close Relationships in Young Family Households in Poland

The paper discusses the monetary practices in close relationships in young family households in Poland and shows mutual influence of life and economic strategies made by young Poles who constitute the "free market generation." Young adults aged 18-39, who were growing up in the socio-economic reality after the transformation of 1989, are now in crucial age for making a wide range of life and economic choices. This generation is interesting as underlying the transformation of models of family life, the process of individualization, and a shift in family roles. They develop new habits regarding money and consumption, and are subject to new kinds of risks and uncertainties.

In order to show the social context in which young family households' monetary practices are problematized and represented the paper uses the qualitative content analysis of the internet message boards. Discourse analysis is focused on reconstruction of underlying assumptions ("common knowledge" and "taken-for-granted" issues) about money in young family households and on identification of language patterns related to the issue. The research has identified money and "monetary rules" as one of the most discussed problems in the household. Young people have serious doubts about money decision making and money in a relationship is a fodder for ongoing moral and economic reasoning. Examples of such problems are: Should childcare provided by a grandmother be rewarded financially by her daughter working part-time? How many bank accounts should a cohabiting couple open: one that is shared, two where each has a separate one, or three where each has a separate one and there is an additional one for household expenses? With a wide range of existing patterns related to the monetary practices in young family households the paper focuses on the process of rules establishing in the making.

Moving out of “Their Places” - Structural Factors for Post-Independence Ukrainian Migration to Australia

The Al Capone Method in the Danish Police

The challenges and the scope of organised crime and gang violence (including outlaw motorcycle gangs) in Denmark have increased during the last years. This critical development has led Denmark to toughen the anti-gang laws and caused a more interdisciplinary approach to police work (also called the Al Capone Method). The Al Capone Method combines monitoring and registration of high-risk-profile gang members. According to my research the method has not yet shed light on the unintended consequences associated with the method in a Danish context. Taking the viewpoint of the gang members I will highlight and discuss these unintended consequences and examine their impact. My research is based on interviews and follow-up-interviews with 41 ex-prisoners. The interviews and follow-up-interviews have been carried out in Denmark during a 2.5 year period. In-depth insights into the ex-prisoners' indebtedness and living conditions confirm that ex-prisoners share a passive attitude towards the labour market and the education system. The pay-profit of having a job, compared to receiving government transfer income, does not have any (present) effect to the indebted ex-prisoners financial flexibility or everyday life in general. The financial boundary between the welfare poor ex-prisoners and the workforce poor ex-prisoners is unclear.

Legal regulation based on indebtedness will serve as an argument, to consider debt as an indirect criminal risk factor, which makes the preventive factors less effective, and drives the indebted ex-prisoners' further from the legitimised socio-economic affiliated advantages because of their debt to the state.
itself when policemen and staff members of the Tax Authority e.g. execute visita-
tions and confiscations, tries to levy distress and conduct stop-and-search zones
in high-risk areas.

OLESEN, THOMAS* (Aarhus University, th@ps.au.dk)
Social Movements and Transnationality: A Conceptual Discussion

In June 2009 a short grainy video shocked people all over the world. The video,
recorded by a bystander, showed a young Iranian woman, Neda Agha Soltan, dy-
ing from a gunshot inflicted by a regime related shooter during protests against
the fraudulent Iranian presidential election. Neda almost instantly became a
transnational injustice symbol representing the unjust nature of the Iranian re-
gime. The case of Neda is interesting for social movement scholars for a variety
of reasons, including the role of new media and the power of photography and
citizen journalism (Olesen, forthcoming).

The present paper, however, employs the case to ask a range of conceptu-
als as well as methodological questions about the transnationality of transnation-
 al movements. Because while Neda's televised death, motivated various activist
organizations and interest organizations to act and criticize the Iranian regime,
the activities around the Neda injustice symbol was much broader. Apart from
activists, three categories of actors in particular were vociferous and active: poli-
ticians/political parties, media, and networked citizens all expressed outrage and
demanded changes on the basis of the Neda case.

This propels us to ask how we can best conceptualize the activities surrounding
Neda's death. Was it a transnational social movement – or something else? In the
paper I argue that it was in fact a social movement. Accordingly, I contend that the
defining element of a movement is not the actors involved, but rather the kind
of action expressed. I thus propose that this way of understanding social move-
ments may be especially pertinent in a transnational context where information
circulates rapidly and where actors are increasingly networked, connected, and
visible and able to engage in numerous and often different political issues at the
same time.

On Policy-Making and Legitimation of the Law in Contemporary Pluralistic Society

The paper's aim is to discuss the substantive dimension, quality and content of
current law-policy making and socio-legal legitimation of law in present-day
highly mobile, complex, multiethic society. A special focus will be devoted on the
coupling of the epochal crisis of formal-official State-nation law and the rising dif-
ferentiation of social and legal sub-systems. Most relevant problematic variables
related to traditional value-oriented identity patterns and interests will be con-
sidered. The quest for new models of citizenship and representativeness related to
the search for new participatory rituals and institutional ceremonial events and
high-tech interactions will be analysed also in relation to their current reliability
and accountability.

Economic Crisis and Health Inequalities in Italy

In recent years Italy has been hit by a severe crisis, not only economically, with
worrying consequences on the health of its citizens. In fact, the current economic
situation threatens to undermine all dimensions of well-being of a population.
The situation is still ongoing, the timing and outcome is impossible to predict, but
that poses huge questions for those who deal with health and health planning.

A preliminary analysis of the international literature (Anderson, 2012; Binkin
et al., 2010; Cylus et al., 2012; Artazcoz et al., 2004) and data made it possible
to substantiate the effects of unemployment and increasing poverty on health
inequalities.

In this paper we will try to verify the consequences of the economic crisis on health in Italy, what is the state of health inequalities and which are the risk factors
for proximal (material, psychosocial, occupational, environmental and behavioral),
most affected by the economic situation.

Using data by “Health for All Italy” will rebuil the health status of the Italian
population in the last 10 years to demonstrate the changes and estimate the con-
sequences of the current crisis, and increase social inequalities.

In time of crisis it is even more necessary to ensure access to health services,
especially to the weaker member of society, since the health needs may grow
rapidly. Moreover, given the particular situation and conformation of Italy will
place the focus on geographical differences between the north and south of the
country.

The first results show that, indeed, in recent years are increasing cases of sui-
cide and depression, and all diseases related to the area of mental health (Costa
et al., 2012). Health outcomes that are affected by an economic crisis ranging
from subjective health, physical health, mental health and may vary in relation to
socioeconomic status and place of residence.

OLIVEIRA DIAS, PATRICIA* (PUC-RS, rappatiro@gmail.com)
Generational Change and Persistence: Gender Equality in the Life Course of Low-Income Brazilian Women

Social, economic and political changes in the Brazilian society since redemoc-
ratization have strongly impacted relational and material conditions of low-class
families. Acute transformations took place especially in the realms of mother-
roles. Generational change and participation in the labour market, division of domestic labor and
domestic violence throughout the last decades, as reflected in the life course of
women. This paper presents results from qualitative research with two or three
generations of women in urban, low-class families in Brazil. The interviews were
conducted with several families as part of two research projects in recent years.
The reconstruction of women’s life stories and biographical self-presentation
will highlight the reproduction or transformation of social patterns against the
backdrop of new socioeconomic configurations and social policies. This recon-
struction will trace, on the one hand, the changes in the perception of women’s
role in the modern family as it relates to gender equality. On the other hand, it will
be discussed how women experience their embeddedness in family structures as
influencing decisions on migration, access to labor market and to education.

For that, the life paths of two or three generations of women from large cities
in Southeast-Brazil will be presented. The analysis of the narrative interviews, fol-
lowing the reflexive-reconstructive biographical method, focuses on how the in-
terviewed women define their life course between opportunities and constraints.
This is seen in close relation with the social developments taking place around the
subjects, as postulated by the biographical policy analysis. The research results
can also cast a light on different patterns of generational intercontingency found
in the same social milieu.

The Experience of Disrespect and the Genesis of the Recognition Paradigm: Empirical Research and Normative Philosophy in Axel Honneth’s Critical Theory

Together with Charles Taylor, Axel Honneth is among the most important pro-
ponents of a theoretical paradigm for the social sciences centered on the idea
of “recognition.” This notion has, of course, entirely different meanings in the vari-
ous contexts in which it is called upon. In Honneth’s specific case, it is of decisive
importance the fact that his theorizations around the centrality of recognition
relations for human self-realization are rooted precisely in the negative expe-
riences of denial of recognition: disrespect or misrecognition. Despite the more
than twenty years that separate us from the publication of Honneth’s Struggle for
Recognition, however, it seems that the theoretical genesis of this important book
has not yet been grasped in its full potential for understanding today’s modern
societies and for a revitalization of the social sciences in general, and of Critical
Theory in particular. This is due, as I see it, to the misreading of Honneth’s works
as much as to the author’s insistence on making the philosophical work of Hegel
the logical point of departure of his theory.

In this presentation, I intend to cast light on other motives that animated
the formulation of this recognition-theoretical critical model, aside from the Hege-
lian works from the period of Jena: namely, the sociological and historiographical
studies that convinced Honneth of the undeniable moral character of social strug-
gles, that is, the American and especially British Quakers and the Wei hang Class-
es that flourished in the 1980’s. This influence reveal a closer relation between
Honneth’s work and empirical social research than is made visible in his books. I
argue, finally, that this connection is a most fruitful one and that Honneth, howev-
er, partially abandons it in his recent works – despite its precise meta-theoretical
formulation under the name of “normative reconstruction” in his latest book, Das
Recht der Freiheit (2011).

Indicators for the Social Impact of Social Sciences and Humanities Research: The FP7 IMPACT-EV Project

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
There is a big concern in the international scientific community to guarantee that Social Sciences and Humanities research (hereafterSSH) has a social impact in relation to the major concerns shared by all its citizens. This is in fact a key goal of all SSH research, on the one hand, because citizens and politicians are interested in research outcomes which serve to improve society, and on the other hand, because the creation of SSH knowledge will be appreciated and maintained if it is relevant for society, and not only for researchers. Nonetheless, these impacts have recently been critically contested. Lack of adequate tools for comprehensively assessing impact, particularly concerning social impact, and indicators of poor institutional change. Mexican student movement is part of this trend.

In the democratic transition -from a seven decades hegemonic party rule to a right wing government- Mexican citizens believed that the presidential alternation, reached in 2000, would be the alternative to authoritarianism and for an institutional renewal. However, the young democracy was soon eroded with electoral frauds and social unrests. 2012 elections erased any possibility of improvement, when the old party burst with renewed signs of corporatism and complicity with the media.

In this context, neoliberal education policies fragmented the youth access to higher education. The expansion of the private sector in this field was the cornerstone of social polarization, because it deepened inequalities both in opportunities for access to education and the struggle for democracy. Part of the explanation is a differential educational discourse, between public and private. This makes perceptions on democracy and social justice impact contradictory the identity of student groups.

Thus, in the middle of the election campaign the student movement “#yosoy132” emerged. It claimed the defense of democracy and faced the impossibility of improving student’s rights.

In decision-making processes.

The purpose of the presentation is to describe how different modes of expert knowledge gives rise to relational interdependence between doctors and nurses, using the management of oxygen therapy and mechanical ventilation of preterm newborns as illustrative cases. Based on findings from the studies, questions to be discussed are; how is the collaborative relationship experienced and perceived by nurses and doctors, and what determines the exchange of knowledge between nurses and doctors in concrete clinical situations. The discussion is informed by a theoretical framework that captures the relational aspects of professional work performance.

OMENMA, J. TOCHUKWU* (University of Nigeria, Nsukka, Nigeria, tochukwu.omenma@unn.edu.ng)

This paper is premised on the nomination of 17 council chairmen (not Chairwomen) by Peoples Democratic Party (PDP) for November 2, 2013 local council election in Enugu State. The issue of underrepresentation of certain groups, particularly women, brings to fore the contradiction of the party’s policy of equitable representation of women in party organs by using affirmative action of at least 35% of women. The claim to be a democratic nation cannot be sustained when political parties are not inclusive and the candidates they nominate for all the elections remain male dominated. Most worrisome, is the grave yard silence from the marginalized women group of the local communities. The paper will centre attention on the process of candidate nomination by PDP, highlighting the particular obstacles that women face in the process. The paper examines the likely relationship between the prevalent culture of political ‘godfather’ and women underrepresentation in municipal politics in Enugu state since 1999.

Patronage in Pre-Colonial and Colonial Ibadan, Nigeria

This paper conducts a comparative analysis of patronage in pre-colonial and colonial Ibadan, Nigeria. Starting up first as a camp of marauders and later a military settlement after the collapse of the Oyo Empire, Ibadan thereafter emerged a military entity; to which lived an elite. In the colonial period, the society was divided into two groups: the chiefs with economic and coercive powers, and those of course sustained a transformed clientelistic system. The "babaogun" clientelistic system. The "babaogun" system entailed a network of military warlords who had clients who provided military and civil services in exchange for protection. Indirect rule introduced by the British integrated the "babaogun" system into governance, equipping the chiefs with economic and coercive powers, which of course slave sustained a transformed clientelistic system that was only subverted by the educated elite by the 1950s in preparation for independence. Hence the foundations of contemporary patronage system in Ibadan in particular and Nigeria in general can be traced to the colonial period. The paper examines the likely relationship between the prevalent culture of political ‘godfather’ and women underrepresentation in municipal politics in Enugu state since 1999.

The “Romantic Love” of Young Adults in Japan

Since the 1980s, the late marriage and non-marriage action has become remarkable and increase-in-the-birthrate problem has started gaining people’s attention in Japan. In these social backgrounds, the importance of research on “romantic love” with sovereignty was also started recognizing. However, the study accumulations of “romantic love” are still not enough in the area of family sociology. This study aims to consider how young adults in Japan meaning their “romantic love” by focusing on their rhetoric and gender perspective. The research data are based on 4 group discussions and 4 semi-structured interviews with heterosexual sexual single men and woman, born in 1983 to in 1993. Each group is divided by social positions such as students, company employees and gender. Using these data, I found that Japanese young adults tie the construal relationship by declaration and whether they are dating officially or not is quite important to have sex because it can be the permission, which shows their sexual relationships are right socially. Moreover, the analysis proves that there are not big differences about sexual behavior by gender; however, it shows that there are some differences in awareness of the marriage and “romantic love” by gender. Especially, women group members tend to set the time limit to 30 years old to get marriage and to think that they should date for a while and then get married otherwise they feel they are wasting time. However, from the narratives of survey respondents, it suggests conditions required for marriage and conditions required for romantic love are ambivalence. In Japan where a modern family ideology and a love marriage ideology are left firmly, it could not make not only marriage but also “romantic love” difficult.

Transformation of Framings of Seafood Sustainability Certification Schemes

International sustainability certification schemes have been widely accepted at industries and markets partially because of their common basic structure represented by transparency, science-based measurable standards, and third-party auditing. In result such certification schemes provide alternative regulatory mechanisms beyond market and borders depending on types of commodities targeted. Particularly certification schemes dealing with seafood, both wild and farmed, have been showing great expansion in the world. As they come to the fore, the number of research pointing out their shortcomings also increases.

While maintaining common basic principles of third-party certifications firmly for their credibility purpose, the framings of each scheme shows gradual transformation corresponding to criticism. Drawing on three different international seafood-certification schemes namely Natureland’s organic seafood, Marine Stewardship Council and Aquaculture Stewardship Council, this paper analyzes the transformation of framing of seafood certification schemes in which each scheme integrates knowledge other than scientific ones into standards and structure of scheme. In other words, it is a new function in certification framing to achieve fine balance between credibilite and critical mass.

Comparative Sociology of 11 to 18 Examinations in Thailand, England, and Japan

This paper proposes a comparison of 11 to 18 examinations and the changes they have undergone in Thailand, England, and Japan. This has valuable significance as a focus of Comparative Sociology; this series of examinations has had common and persistent importance in various societies, which makes them an appropriate frame of reference for comparison.

The first objective of this paper is to demonstrate, by using the socio-cultural network concept, that there are profound similarities and differences in the changes in 11 to 18 examinations in these areas. These results will reveal a process that have not been detected by previous single-case studies.

The second objective of this paper is to propose methodological innovations for Comparative Sociology. It combines qualitative and quantitative methods, not by simple mixture but by close connection. Through this innovation, the Comparative Sociology of 11 to 18 examinations will serve as a way to resolve the eternal tension that sociologists face between science and literature.

Reconstructing Sustainable Communities through Mutual Help Networks in East Asia: A Comparison of Mutual Help Networks in Japan, South Korea and China

One way that man has maintained society throughout history is through networking of mutual help. The purpose of this paper is to show that such traditional mutual help persists in East Asia, but has been transformed in the transition to modernity and has contributed to the development of both South Korean and Chinese modern society. Mutual help in these two societies is compared with the already well-studied Japanese case. The phenomenon is divided into three categories. One is reciprocity in helping to plant rice and re-roof houses by exchanging labor. The second is redistribution. In exchange for the right to get foods from a common store, local people have the obligation to maintain a common pool of resources. Finally, unidirectional help refers to support in funeral and wedding
ceremonies requiring no monetary exchange. While the traditional forms of these customs have almost disappeared from modern life, they can still be clearly identified in all three societies. This paper reports the results of an interview survey and fact-finding fieldwork of South Korean and Chinese contemporary mutual help and shows that systems of mutual help arising from indigenous conditions have continued to contribute to sustainable communities in the evolution toward full modernity. The paper concludes that modern societies might do well to take note of such mutual help networks and incorporate them into official strategies as they search for solutions to both public and private social problems raised by the reconstructing of communities in East Asia.

Life Experiences of the Children of Marmara Earthquake and Adults of Today: An Example from Adapazari

Study will be focusing on the impact of disasters to the life experiences of adults of today but who were the children at the time of Marmara earthquake in 1999.

There are inadequate number of studies basing on merely findings which were derived from children of disaster periods. The coexisted studies reveals that there are differences in the impacts of disasters on children in disaster processes. Survival rates of children according age, gender and accumulated disaster culture may differ according to different factors (cultural, economic, social, political etc.) This study aims to find out post earthquake impact of disaster on children up to their adult ages.

Methodologically study bases on a field work which will be conducted on a student group of a primary and secondary school teacher’s classes at the time of Marmara earthquakes in 1999. Students will be traced 14 years after through snowball sampling in the Adapazari, Turkey in 2013.

The data will be derived from questionnaires, interviews and video records. Literature reviews and visual data analysis will be used. Qualitative and quantitative approaches will be used together in triangulation. SPSS program will be used for quantitative analyses.

The findings will be presented within comparative perspective, through references to findings from coexisted studies and examples from the world.

The study will be consisted of five main parts: namely introduction, methodology, review of coexisted studies, findings and conclusions.

RC24-436.4

ONER, ILKNUR* (Firat University, ihgmavi@yahoo.com)

The Second Group of Keban Dam Studies in Upper Part of Efrat Basin

The first group of the Keban Dam studies were carried on rural and urban areas in many fields in relation to construction process of the dam, resettlement process and latter on; similar to many projects in the world. However, there are ongoing high dam projects in many countries on the neck of major rivers and river basins. Kariba, Aswan, James Bay I-II, Three Georges, Hoover and Keban are known examples. The lower-upper parts of dams and themselves are still focussed of future development projects. Therefore second, third and many more studies can be named in relation to known dams.

Initial studies were focusing on the construction of dams. Their human and environmental issues such as power, equality, aging and right issues, recognition of upper-lower and dam areas; short, medium and long term impacts have become visible in time. However studies are not enough yet to see all or policies not powerful enough to encounter all findings from the fields (human and nature).

This study consisted on four sections. The first section will be revealing introductory knowledge on a necessity of an approach to merge lower, upper and dam areas; short, medium and long term impacts have become visible in time. However studies are not enough yet to see all or policies not powerful enough to encounter all findings from the fields (human and nature).

The second section introduces methodological foundations of the study. The discussion will be the third section. This will be based on three pillars: Findings from the known high dam projects from the world; general evaluation of the Keban Dam Project and recent developments, rural-urban and environmental policies in the upper part of the Keban dam and upper part of the Firat Basin. The findings will be discussed separately. A special attention will be given on rural and natural areas (by public-by law) and changes in them. The last section consisted of conclusion and recommendations.

International / Military-Public-Private Cooperation in Disaster Relief | Lessons Learned from Great East Japan Earthquake in 2011 | Abstract

The Great East Japan Earthquake which occurred on March 11, 2011 was a complex disaster including the massive earthquake, enormous tsunami and large-scale radiation leaks from the Fukushima nuclear power plant. It was the one of the most serious natural or man-made disasters in the history of Japan.

On the occasion of this tragic disaster, various military, public and private actors from inside and outside of Japan were engaged in disaster relief. These international/military-public-private actors conducted various activities and made remarkable accomplishments. However, we noted that numerous survivors endured immense suffering, chaos and deprivation in the affected areas. We wondered whether international/military-public-private actors responded to the urgent needs of the survivors as quickly and effectively as possible. This question was the basic motivation for our research.

Our research summarized several issues concerning the state of affairs and lessons learned regarding trilateral cooperation from the view point the MOD and JSDF. First, it was discovered that there was considerable room for improvement in international/military-public-private cooperation in Japan, even though they have a half-century record of collaboration under the Japan-U.S. alliance.

Concerning other foreign military forces, construction of framework for cooperation is also desirable.

Collaboration with local governments produced a lot of lessons. Although local government should assume a leading role in disaster response, in some cases damage caused by the disaster was kept from exercising their normal disaster relief functions. This led to a dramatic increase in the volume of aid needed and demands on local organizations following the Great East Japan Earthquake.

A framework for collaboration between JSDF and the private/public aid sectors is also necessary in order to properly prepare for the next large earthquake.

ONODA, SHINJI* (Hosei University, shinji-0219@hotmail.co.jp)

After spending more than two decades for consideration, Japan introduced the carbon tax (officially named “Tax for Climate Change Mitigation”) on October 1st, 2012. Japanese carbon tax adds a tax rate of JPY289 per ton CO2 emissions above tax rates to the petroleum and coal tax. Compared to the carbon taxes in European countries, its features can be seen in its low tax rate, revenue increase and earmarked for energy-oriented CO2 emissions.

Generally, a policy is established through a certain policy making process where not only rationality of policy contents are considered but also the interests of various stakeholders under political, social and economic circumstances are adjusted. In order to introduce appropriate policies for achieving a low-carbon society, it is essential to find problems of policy making processes and constantly strives for their improvements. Therefore, this study aims at approaching for elucidation of the characteristics of Japanese policy making process by investigating the carbon tax consideration history.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The analysis will be divided into three stages: (1) from start of consideration (beginning of 1990s) till the establishment of the petroleum and coal tax (2003); (2) from 2003 till the change of government (2009); and (3) from 2009 till the enforcement (2012), so that it makes easier to grasp the trends of discussion. For this analysis, the chronological method and a sociological theory called "organization theory" forwarded by Michael Crozier and Erhard Friedberg will be applied. The organization theory is one of analytical methods for organizations/systems, which assumes that individual persons/groups pursue "rational strategies" under "structured conditions" defined by various factors such as political systems, procedures, historical legacies and international trends. Data will be corrected from materials of study commissions for carbon tax, the Diet and related organizations as well as from interviews with politicians, ministerial staff, industries, NGOs and researchers.

Politics As Life-Sphere: Youth Activism and the Question of Multiple Transitions in Mubarak’s Egypt

Vibrant debates have emerged on the role of young people in revolutionary movements since the so-called ‘Arab revolutions’ in 2011. Some attribute the young protagonistic agency more with agency than the latter would themselves consider having. Others point to a certain hype around youth in this context and argue that the role of complex and contradictory social, economic, and cultural processes should be acknowledged in the making of popular uprisings in Tunisia, Egypt, and beyond. Young activists are, however, depicted often as somewhat one-dimensional social actors.

This paper argues that locating young people’s activism in the wider context of their everyday experiences helps to unravel the multiple and at times contradictory transitions the young have to negotiate when engaging in youthful dissent under authoritarian settings. Although it is important to recognize that political activism in late 2000s provided crucial formative experiences for many young Egyptians, it is useful to remember that periodic street protestings, online campaigns, awareness raising stunts, and other forms of public dissent occupied only one aspect of their everyday lives. During in-between moments, that is, most of the time, they engaged themselves in other spheres of life such as studying, leisure, work (or finding work) and family. Thus, multiple life-spheres and trajectories within them represent an everyday dynamic in which the young had to navigate in their transitions to adulthood. For instance those, whose parents were opposition politicians, who had secured a job in civil society organizations, and whose friends were supportive of their oppositional activities, benefited from crucial synergies between work, family, friends, and activism. But others were not so privileged, while sustained participation in pro-democracy movements was further structured according to gender, class, region, connectedness, etc. The paper bases on 12 months of ethnographic fieldwork in Cairo between 2007 and 2011.

Taming the Uncontrollable Situation?: Towards a Critical Re-Examination of Cosmopolitan Modernization from a Socio-Spatial Perspective

What are the significance and problems in Ulrich Beck's concept of cosmopolitan modernization? How do the particular characteristics of a society change in relation to the influx of 'outsiders' across the nation-state? This paper aims to develop a new theoretical approach to the concept of cosmopolitan modernization by integrating a socio-spatial perspective that moves beyond nationalism and the nation-state. The argument has important implications for conceptualizing the future of modern society by drawing attention to the ways that boundaries between insiders and outsiders are constantly being erased and redrawn, ultimately his model of cosmopolitan modernization aims to locate alternative forms of ‘with-ness’ (or being together with fellow citizens) and thus shares basic traits of nationalism. To this end, this presentation firstly examines Beck’s concept of reflexive modernization by focusing on the changes in territorial formations, individual conceptions, and the linear growth model. Secondly, this paper critiques Beck's concept through a specific focus on critical discussions of social space developed by Gotan-Pagé, Ursa Narro and Harvey. Building on these insights, this paper argues that socio-spatial conceptions that represent ‘outsiders’ need to be re-examined in relational terms. Specifically, this paper offers Harvey’s idea of relational space as a way of taking into account the shifting and emergent boundaries of inside/outside and self/other that characterize the ‘uncontrollability’ of social space. This perspective suggests that integrating socio-spatial perspective for understanding the dynamic tensions within ‘cosmopolitan modernization’.

How We Cope: The Study of the Gendered Dimensions of Conflict on Women in the Niger Delta Region

Recent conflict events in the Niger Delta region have seen the changing faces of the impacts of the conflicts on women. There is an increasing use of violence and rape of women as a tool of warfare by both the militias and the State security forces, thereby exacerbating the rise in new HIV infections in the region. Also a number of women have become widows with enormous family responsibilities to cater for. Thus there is an increase in the number of female headed households (HFI) in many parts of the Niger Delta region and Nigeria due to the death of a spouse in the conflict. A key argument advanced in this paper is that the women in the Niger Delta and Nigeria as a whole bear the brunt of the conflict in the region due to their low socio-economic position in the patriarchal society. Their limitations and resulting conflicts affect them disproportionately. Women constitute the most vulnerable group since they have limited access to land and resources, which is a crucial determinant of their access profile. This places women in a vulnerable position in terms of adaptation and resilience to shocks and stresses associated with the conflict. Despite their limitations, the women are not impas- sive observers of the situation in the conflict, but are active actors in the quest for survival and peace. By studying the gendered dimensions of social conflict, armed violence and peacebuilding we will be able to understand the gendered relationship which goes on from the household level to the general society, and how these relations invariably affect women’s vulnerability to conflict and conflict resolution.

Structurally Heightenstructurally Heightened Mobility of Population and Community: Case Studies from the Suburbs in an Indonesian Metropolitan City

Based on both qualitative and quantitative data of Indonesia, this paper is trying to accomplish two goals. First, the author grasps the current condition in the suburbs of Asian metropolitan cities whose mobility of population is structurally heightened. Second, the author examines the community in detail whose members are changing dramatically and whose old community it has replaced.

The rapid development process of Asian metropolitan cities is one of the most important issues in recent urban studies. Industrial products for global markets are produced in these areas. It turns out that the driving force of this development is deeply embedded in suburban areas which have newly developed towns and industrial estates established by local and foreign investment. These industrial estates require a large pool of low-paid workers who are inevitably employed on a very short-term basis. Thus they are constantly forced to move to the new areas and new workplaces due to the effects of new practices governing the international division of labor.

Although previous community research has focused on community structure and participation rate, it has not grasped the fact that currently, community members are constantly changing. This paper explains the mechanism of heightened mobility of community members, and describes the community around Jakarta mainly based on my own door-to-door survey of 659 suburban households. This data revealed that almost all of the residents (83.9%) are newcomers. The people who had lived there before building the industrial estates have already moved, so the activities of the old neighborhood associations (called Rukun-Tetangga /Rukun-Warga) have almost stopped. Nevertheless, 62.3% of newcomers still join Gotong-Royong (traditional mutual assistance activities) and 32.6% of them are involved in religious (Islamic) activities. This implies that people are trying to search for new ways to enhance social unity, away from the old community structure.

Governing Sustainable Seafood

The worldwide consumption of seafood is increasing year over year leading to more pressure on the remaining fishstocks and to expansion of aquaculture. The environmental consequences are substantial and create growing pressures for more adequate environmental governance responses. Recently, market-based approaches to sustainability seafood governance have gained considerable traction in global seafood provision. Born in part out of perceived failures of the state, a range of private-led governance approaches using price signals and market access as incentives for changing production practices have emerged. This paper provides an overview of these approaches in fisheries and aquaculture, including but not limited to NGO-led initiatives such as the Marine and Aquaculture Stew...
ardship Councils (MSC and ASC), and industry-led initiatives such as GlobalG.A.P. and the Global Aquaculture Alliance (GAA). The paper then discusses how these arrangements have led to the inclusion of new categories of private actors in the regulation of sustainable seafood (e.g., auditors), and to a new round of contestation between NGOs and industry actors such as retailers, who are seeking to counter the regulatory risk through a series of benchmarking exercises. The paper concludes with a discussion of whether and how the investment made in these market approaches have supplemented (or even replaced) state governance arrangements in promoting sustainable seafood production and consumption in the context of globalisation.

ORELLANA, GERARDO* (Universidad Nacional Autónoma de México, gorenlanaster@gmail.com)
The Role of Social and Cultural Factors in the Involvement of Physical and Sports Activity in Mexico

Mexico is the greatest consumer of carbonated drinks and has the highest percentage of people who are considered overweight. Government actions have not adequately considered sports as a factor that drives social development. Part of this weakness in Mexico is a lack of specialized studies that identify the needs for physical activity, as well as the capacity of large corporations to exert influence on legislators through lobbying, thus limiting the national Government's possibilities to foster social development.

This paper presents results from a study that identifies some of the social factors that influence the population's involvement in practicing sports and physical activity, such as infrastructure, socialization experiences and different needs by gender, age, regional and cultural conditions. The study was carried out in the central-south region of Mexico, with students of upper high school of a semi-rural community. It is an exploratory study using a mixed methodology that was conducted between September and December 2012.

The results show differentiated consumption of physical and sports activities among the student population. The important role that public institutions play in marginal communities with low economic resources regarding health care, and the promotion of physical and sports activities within this population is highlighted. The results also suggest the vulnerability of communities when faced with the economic interests of corporations due to the lack of regulatory policies to mitigate health risks.

Canadian Police and Legitimization Of Conducted Energy Devices (CEDs)

This paper focuses on the increasing adoption and deployment of Conducted Energy Devices (CEDs), one of a range of ‘less-than-lethal’ force options, by Canadian police. The paper explicates the legitimization of CEDs as a function of the intrinsic dynamics of organizational change, such as growing professionalization and concomitant credentialism of police practice and the agency of CED manufacturers. Four landmarks in the policing field generated by the legitimization of CEDs are outlined as gatekeeping and structuring ideational processes. The paper concludes with a trilemma of resultant effects of the symbolic institutional value of CEDs in the policing field in Canada.

ORMOND, MEGHANN* (Wageningen University, meghann.ormond@wur.nl)
Intermediaries, Facilitators, Agents, Guides: Steering International Medical Travel to Malaysia

Malaysian authorities’ desire for foreign patient-consumers from higher-income countries and the spectacular medical tourism infrastructure being developed to cater to them exists in contrast to the actual everyday flows of intra-regional lower-income patient-consumers who, comprising the bulk of medical travellers to Malaysia, have been fundamental in both constituting and sustaining the country’s medical travel destinations. This paper draws on interviews with medical travel companies in Malaysia and Indonesia that promote Malaysian private health care to prospective patient-consumers from both higher-income and lower-income countries. It compares and contrasts the functions of these companies, their relationships with patient-consumers and the ways in which they represent and negotiate the differences between health care in patients’ countries of origin and in Malaysia.

Moralistic Trust and Rationality: The Individualization of Trust

This study focuses the post-materialism argued by Ronald Inglehart. We can expect that trusting based on the prediction is rational for materialists who emphasize the existential security. On the other hand, over the last decade, abundant literature relating to the individualization of trust is an emerging concern creating trust in belonging group, and it is generalized to strangers outside the group. This approach implicitly assumes that generalized trust cannot be explained by prediction, but it is based on moral values. Thus, generalized trust has the predictive and moralistic aspects. We can call the shift from trust based on the prediction to trust based on the moral value as “individualization of trust.” Then, what is the condition of the individualization of trust?

"New Ways of Recruiting – an Evaluation of the SAF Efforts of Recruiting Ethnic Minorities"

The transition to an all-volunteer force in Sweden has meant that the Swedish armed forces (SAF) need to try different ways to recruit personnel. For countries that abandon conscription, there have almost always arisen recruitment problems. The new direction for the SAF, going from an invasion based defense to a more operational defense force with international focus, puts demands on cultural awareness and language skills among soldiers and officers to another extent than before. In November 2012 the SAF, together with the Swedish Public Employment (SPES) Service, started a joint project called preparatory military training. The aim of this project was to attract 500 individuals with a cultural background from outside the European Union, and language skills in other languages than Swedish and English, to start a 10 weeks long preparatory military training. Preparatory military training aims at giving participants an insight into the armed forces. A lot of the participants in the armed forces would look like, as well as get the opportunity to develop academically. Out of these 500 individuals, the SAF aims at recruiting 300 individuals to start the basic military training in the SAF. All participants live at the military barracks and receive free meals and they are allowed paid travel home four times during the course and are paid activity support from the Swedish Public Employment Agency. Men and women live separately with services facilities. The SAF and the SPES share 50% of the education and training at the barracks.

Phase two of the project starts in the autumn of 2013 and aims at attracting 300 individuals to start the preparatory military training.

The paper assesses the effectiveness of this new and original project.

Comparative Analysis of Regional Governance

This presentation illuminates regional variations of industrialization through comparative analysis of governance for resource management on porcelain industry in Japan. The presenter analyzed how specific arrangements were formulated that designated the ways of managing resources for porcelain production and distribution. With comparative analysis of arrangements of porcelain manufacturing in three regions, the presentation shows how the relationships of political authorities and those who were engaged in the industry shaped the distinctive ways of governing resources in each of these regions. Analysis illustrates regional variations of ways of managing resources for porcelain industries by different ways and degree of involvement by regional political authorities and those who were engaged in porcelain production and distribution. The pre-existing practices and relations shaped the ways of organizing resources for industrialization in each of the regions even after the regime change in the late 19th century. In the region where the regional authority had claimed a strong command over resources for porcelain production and distribution, producers and merchants relied on guidance and support from the political authority to receive funding and other support for a further development. In the region where the political authorities did not interfere the way of using resources, producers and merchants organized resources to enlarge their activities on their own without little public support. The ways and degrees of involvement by the regional political authorities and their relations with those who were engaged in production and distribution shaped the distinctive styles of managing resources for porcelain production in each region.

Comparative analysis illuminates different ways of governing resources for porcelain production within Japan at the end of the 19th century. The presentation will invite a further discussion of social changes by bringing other experiences in the world.

Quality of Lawyers in Civil Litigation in the Era of Drastic Changes in Legal Education and Lawyer Population in Japan

My presentation is based upon our empirical study on the quality of lawyers conducted in Yokohama District Court and Tokyo District Court. The number of lawyers in Japan has been rapidly increasing in the 21st century, e.g., 17126 in 2000 to 32088 in 2012. We have introduced the U.S. style graduate law school system on top of the traditional undergraduate law faculty system in 2004. The legal aid system has been drastically expanded with the completely new system of “Furusato Terasu.” These reforms were intended to enhance the student’s access to justice and improve the quality of legal services, so that the Japanese legal profession is able to satisfy the increasing demands for quality legal services caused by the globalization. But these judicial reforms have been criticized by the bar associations and many lawyers. The rapid increase of lawyers is most severely criticized. One of the main reasons of criticism is that the increase yielded poorer quality of lawyers. We have been doing several empirical researches to test this and other claims. The study I will report at this session is modeled after Prof. Richard Moorhead’s study on the quality of legal aid lawyers in U.K. One of the
striking results of our research is that the quality of legal services in civil litigation by younger lawyers is better than those of older lawyers.

**Gender Pyramid Politics: Trends of Global Changes**

Gender Pyramid Politics: Trends of Global Change

Nowadays in the contemporary world the gender pyramid of power is maintained. The low representation of women at the making-decision level is observed both in the public and private areas of employment. It is most evident in the political sphere - the sphere of traditional male domination. There is the opinion, that women can expect to realize their ambitions in this sphere in the last place. At the same time we can speak about some changes in the presented social scheme. Over the past decades, some states have demonstrated not only the increasing number of women in the government, but also the obvious mental shifts in sharing of gender roles. In this case, it is typical that the culture of these countries have not been traditionally presented as gender-focused, the movement for women’s rights has not existed, and the women themselves do not consider their political advancement as “the social breakthrough.”

On the contrary, in the states where the issues of gender equality have been raising at the higher levels for many decades, significant neutralization of the principle of gender pyramid can’t be noticed.

In this regard, the following questions rouse great interest:

- What are the social, cultural and legal reasons caused this situation?
- Does the economic aspect of the pyramid change with the political advancement of women? Or is the stay of women in the authority only the question of formality?
- What are the prospects of gender equality / inequality in the epoch of globalization?

**Subsidized Housing and the Concentration of Poverty in the U.S.**

For several decades, federal housing policy in the U.S. has been used to address issues of segregation in American cities. Since the 1970s, assisted housing policies have aimed to integrate low-income renters into lower-poverty neighborhoods. New programs including housing vouchers, the demolition and redevelopment of public housing, and the use of new project-based developments were adopted with the expectation that they might lead to a decline in poverty concentration in U.S. cities. However, little is known about whether assisted housing policy has successfully reduced poverty concentration. Using national data, I test whether the geographic deconcentration of assisted housing units, which occurred as the new policies were implemented, led to a deconcentration of poverty in metropolitan areas from 1980 to 2005-09. Results show no relationship from 1980 to 2000. After 2000, assisted housing deconcentration is positively associated with poverty deconcentration, suggesting that deconcentrating assisted units allowed low-income families to move to lower-poverty neighborhoods, tempering rises in poverty concentration that occurred since 2000. However, the magnitude of the relationship was quite small, suggesting that the broad shift in housing policy over the past several decades has contributed little to the deconcentration of poverty in U.S. cities, despite substantially reducing the geographic concentration of assisted units. Potential explanations for this weak relationship include the small proportion of poor residents living in subsidized housing and impacts of new subsidized housing on the mobility of non-poor residents.

**SARC (Scientists/Artists Research Collaborations)**

This is the story of a pilot project that was aimed to enable creative collaboration between five internationally chosen artists and New Mexico scientists from Los Alamos National Laboratories and Sandia National Laboratories. The SARC (Scientists/Artists Research Collaborations) project was part of the well-established, international electronic festival called ISCA, which occurred throughout the state of New Mexico in Fall of 2012. The project was also given major support on the University of New Mexico campus in Albuquerque by SARC (the Center for Advanced Research Collaboration). The SARC Summer 2012 pilot initiative accomplished some intended objective outcomes, garnered partners that could serve as the impetus for the program’s next phase development. There is currently no policy related to SARC’s ongoing programmatic life and works, though. This White Paper, therefore, lays out SARC resources, structural considerations and intentions. At this point, SARC reality and creative potential is being dedicatedly developed, but uncertain. It is from the grounded reality of SARC development that we will form some action points.
Current Situation and Problems of Commercial Sex Workers (CSWs) in Japan

According to Japan’s National Police Agency, 30,133 businesses were reported in 2012. The number of CSWs is estimated to amount to at least a few hundreds of thousands. Japanese Anti-prostitution law establishes in 1956 prohibits paid sexual intercourse. As a result, many kinds of sexual work which avoid this law have been created. Most of them offer a variety of services except for sexual intercourse, such as “Fashion health” and “Image club”. But there also exists sex work which includes “unpaid” sexual intercourse, such as “Soap land”. In soap lands, CSWs have sexual intercourse with their customers of their own free wills, not as a part of service, though it is an unspoken agreement that sexual intercourse is included. We conducted semi-structured interviews with 17 CSWs who work for a soap land in Tokyo mainly in order to study their psychological tendencies and problems. We found that all of them had experienced other kinds of sex work not including sexual intercourse before they began working for the soap land and that they liked a soap land job best. Despite a lot of social and psychological disadvantages due to sex work, they gave more importance to advantages. It can be said that Soap land is a gray zone legally, but this problem has been left vague for a long time in Japan. In 1990s, there was a heated discussion about “Should prostitution be made legal?” in Japan. But little attention was paid to the feelings and opinions of CSWs. Presently Soap land seems to coexist with society in harmony with Japanese original culture and law systems. It is an important challenge for the future sex work in Japan how to keep this harmony unchanged.

What lessons have been learned from this pilot program? Jack Ox will discuss the problems we encountered and what is necessary to move forward. These issues will be discussed in context with the art-sci world as it develops at breakneck speed. What are the dangers art-sci collaborations will be likely to confront in the cycle of art world attention and what that means. What is the best mix of art and science? should one domain dominate the other? A most important question is how do we judge the collaboration; are some collaborations between an artist and a scientist not art/science?

Accountability To Environmental Policy: Renewable Technologies and Sustainable Housing Development

Complying with policy requires of practitioners that their actions are held to account; and one of the contexts of sustainable development of the social housing sector and its use of renewable technologies. The building of ‘sustainable housing’ is integral to UK government initiatives to reduce energy consumption, fuel poverty, and carbon emissions, and to generate renewable energy. In this article, we examine how ‘accountability’ is promoted by both the UK government’s environmental policy and local councils in their planning criteria. We investigate how accountability is enacted in, and generative of, the practices of sustainable housing development by housing professionals. We identify a key process of accountability – a politics of making environmental sustainability visible through demonstrating the utilisation of renewable technologies. For housing developers, the choice to install such visible renewable technologies is part of their practices to strategically and creatively meet the policy criteria and the local council’s target for planning permission. These practices reveal much about the competition and politics that underpin how local planning authorities and housing professionals together shape environmental accountability in a bid to comply, win building contracts, and demonstrate their sustainability credentials. We demonstrate how these practices have implications for potential energy provision and consumption.

Transforming Energy Provision and Reducing Carbon Emissions

Our society is increasingly using more electricity. We have recently seen many changes in consumer and domestic electronics: mobile phones, tablets and Internet hubs are, for instance, now part of our everyday scenarios. It is also expected that radical changes in heat and transport services, such as domestic electric heat-pumps and vehicles, will happen in a near future. As a result of this change, it is anticipated that domestic and commercial electricity consumption will rise, which then will increase a level of carbon emissions. The problem is how our society deals with it. Various actors are engaged in initiatives seeking to tackle this problem. Engineers are developing a number of possible solutions by attempting to ‘re-engineer’ the ways in which electricity is provided to so-called end-users: for example, voltage reduction. Focusing on the proposed socio-technological aspects of these solutions, this paper discusses how engineers conceive of the problem of ever-increasing carbon emissions, investigating the framework and assumptions about socio-technological provision and usage. This includes, for example, an analysis of how transformation processes in energy systems are understood and configured. We will present our findings from interviews with engineers who are involved in a large-scale European research project that seeks to offer a solution.

Masculinity, Racist Experiences and Repudiation Of Homosexuality: How To Deal With Research Results In a Racist Public Discourse?

The results of our empirical studies about male young people in Germany show that young immigrants are often confronted with institutional and everyday racism, experienced as a form of stereotype threat. At the same time, they are actively stereotyping and discriminating others. As researchers, we are challenged to not take our concept. He thinks that the concept is essentially imperialistic representation. The sign is a system preceding the individual's birthand given by the social groups. While the former constitutes the 'tolerant' side, void of any negative attitudes towards gay and lesbian people, the latter is constructed as deeply homophobic. These discourses have polarizing effects and facilitate exclusionary attitudes towards immigrants. In this paper we present key findings of our studies and we will share our experiences with the publication of such results. Our aim is a discussion not only about ethical considerations and responsibilities but also about how to actively engage in altering the racist public discourse.

OZEKI, AYAKO* (Wakayama University, ozeki@center.wakayama-u.ac.jp)
Sociality and Individuality of Language in Durkheim and Bergson

The purpose of this presentation is to discern the role of language which we use to recognize ourselves and objects, and the phase of the sociality and individuality which language has. With this intention, I'll compare the category theory of abstract concept and, by exchanging this concepts, he can communicate with others who have their own experiences.

About this language, Durkheim emphasizes that it is given by society. A concept is objective concept. He thinks that the concept is essentially imperialistic representation. The sign is a system preceding the individual's birthand given by the society. Not until he thought abstractly by the sign did a man became a human being.

Bergson opposes two plans of the object recognition method, that is, the analysis that comes from the outside and the intuition that come from the inside. He doesn’t consider that the essence of the object can be perceived from the outside, express itself by symbols, being incommensurable with all something else. In opposition to it, he considers that what is gotten by the analysis of the outside
Gezi Park protests were an expression of the “pluralist” anxieties and democratic hopes of the people. Gezi Park Resistance revealed at least two important things. First, they showed that the opposition in Turkey is not weak, but fragmented. Second, and more importantly, they showed that the popular opposition cannot adequately express itself through conventional political channels. The disconnectedness between the protests and the institutional/traditional politics makes the democratic role of the opposition more critical. There is need for discussing (new) methods and instruments to make fragmented popular opposition politically more effective on a pluralist democratic basis. The outcomes of these discussions may be helpful in analyzing the social movements of the 21st century.

In this presentation, a qualitative analysis of the texts which appeared during the Gezi Park events on pro-government and non-pro-government press will be used to discuss the structure and the aims of the popular opposition in Turkey, and to investigate the similarities and the differences of Gezi Park protests with other social movements of the 21st century, such as the Arab Spring, and Occupy Wall Street.
Transnational Pentecostal Entrepreneurship: From Africa to Europe, the Challenge of a New Competitive Christianity

African Pentecostalism is not confined to Africa. As Africans move into Europe, many bring their new way to interpret Christianity. The empirical research in Nigeria, Ghana and Italy supports the idea that African Pentecostalism produced a socio-religious innovation in the religious world-wide. Two elements in particular emerge: the high mobility in the individual religious choices and the fluidity of the boundaries of religious affiliation. The migration processes have emphasized even more this second aspect. The most important result of this innovation is, on the one hand, the radical change that affects the church model and, on the other, the emergence of a charismatic religious leadership. The paper deals with the idea of the charisma as transnational company or religious enterprise. In this way, the new African churches (although this argument can also apply to those Latin American and South Korean or Chinese) that are transplanted in Europe contribute to weaken the traditional boundaries of Eurocentric Christianity and to loosen the link between national identity and belonging to a Christian denomination.

The new model of interpretation of Latter-days, introduced by the Global Pentecostalism, tends to destabilize the national-bourgeois European Christian-ity and promote exchanges between the new Pentecostalism coming from the former Third World and Charismatic movements present in many Christian de-nominations and churches in Europe, including the Orthodox Church as is well demonstrated by the huge success of the Pentecostal Church of the Nigerian pastor Sunday Adelaja in Ukraine.

Regulation: The Third Party in the Transformation of Patient-Professional Relations

Regulatory arrangements have the capacity to codify elements of the relationship between patients and professionals. They can articulate the expectations that patients can reasonably have of their treating health professional, and also provide a mechanism to notify and address instances where defined standards of professional practice are not met.

This paper reports on a project exploring the institutional design of a new national regulatory system. It draws on an analysis of government drivers for reform, including instances of regulatory failure that led to patient harm. It also incorporates a systematic analysis of key practical texts including the regulatory impact statement and the consequential legislation to explore how the reforms were designed to affect relations between patients and professionals.

The introduction of the National Registration and Accreditation Scheme for Health Professionals in Australia in 2010 consolidated arrangements across fourteen professional groups who were previously registered separately across each of Australia's eight jurisdictions. Each state and territory also had separate arrangements to assess the qualifications and experience of health professionals who qualified outside Australia. These new arrangements brought into place consistent requirements across continuing professional development, criminal history records, English language, insurance and recency of practice for over half a million practitioners.

The transformative effect of ongoing consumer advocacy efforts is also reflected through the legislative requirement for community members to sit on all decision-making bodies that administer the Scheme. Another significant outcome of the Scheme has been the provision of single register of practitioners that provide improved transparency with patients now able to directly access information about the registration status and qualifications of their health professionals.

The Culture of Women's Soccer in Senegal: Reconciling Dissonance Among Representation

What does it mean to be a “footballeuse” (a soccer player) in Senegal? In Senegal, women’s soccer is more than a game; it is a counterculture that promotes provocation and antagonism of mainstream social norms and conventions. It is a culture framed by the shared experience of struggle that embodies strength, aggression and unconformity. In this paper, I show how the “footballeuse” culture is often in conflict with the dominant gender ideology, religious beliefs, sexual norms and social practices of mainstream Senegalese society. I then discuss how this dissonance creates perceived dilemmas in the experience of the footballeuse around questions of identity and religion. My analysis explores these dilemmas and demonstrates how these women reconcile inconsistencies among cultural representations by constructing new flexible meanings of femininity. Finally, drawing on Jacques Rancière's theory of dissensus, I show how the “footballeuses” in Senegal use this space of dissonance to claim a stake in society, to break the current order of governance, making the practice of women's soccer in Senegal profoundly political. Data was collected through nine months of participant observation, 40 in-depth interviews as well as analysis of secondary sources such as print, online and televised media.

Bitcoin: Network Based Currency and Its Self-Organizing Emergence

Bitcoin is a form of virtual or digital money, a peer-to-peer, electronic cash system. Bitcoins are based on an open-source cryptographic protocol that is independent of any central authority like a Central Reserve Bank or another administrative institution. Bitcoins are created and administrated decentralized within a computer based network. They can be transferred through a computer or smartphone without an intermediate financial institution. The currency exists since 2009 and is in the meantime accepted as a legal instrument of payment in various countries but first of all for worldwide Internet transactions. In June 2011, Wikileaks and other organizations began to accept bitcoins for donations. That became very important after Master-Card, Visa, PayPal and other tried to block WikiLeaks from money transfers obviously because of political pressure by the US-government.

In my contribution I want to analyse this currency-system from a sociocybernetic point of view. After presenting the basic mechanisms of Bitcoin money creation, the value regulation etc. I want to focus the basic processes of self-organization in this high-complex system.
The paper will end with a discussion on the potential of sustainable platforms of dialogue which necessitates a strong presence and proactive reproduction of social capital. What is the long-term potential of social mobilization in a) sustainably and collectively building-up of social memory for future resilience, and b) identifying and addressing possible weaknesses and challenges faced by the different bottom-up agents in their relations of cooperation, including with the state?

**Systemic City Interdependencies In Advanced Producer Services: The European Space In Transition**

The paper reports on an analysis of systemic city interdependencies generated by key agents in world economic transformations - global advanced producer services (APS) which use world/global cities as nodes for flows in their worldwide occupational networks. The analysis draws on and develops work undertaken in a major study funded by the European Spatial Observation Network (ESPO) which set out to examine Europe's position in the networked global economy and the implications for policy: TIGER - Territorial Impact of Globalization for Europe and its Regions.

Europe provides a unique contemporary territorial frame through which to observe the success of policy transfer and upscaling relevant to sustainable cities in globalization. EU urban and regional cooperation programmes and funding has been a major strand of cohesion strategy for over a decade, moreover European geo-political rescaling in successive waves of enlargement has extended policy collaboration to an ambitious supra-state / regional level.

The authors identify two intersecting spatial processes in European APS-generated city interdependencies: A process of intensifying city-network links and functional specialization at a macro-region scale; and a process of extending city links and scale specialization connecting urban Europe to distant economic macro-regions. The interaction between these two processes points to the complex nature of city interdependencies in economic globalization and a need to de-territorialize urban sustainability prescriptions.

**Positive Aging and Leisure: Role of Health in Healthy Ageing of the Elderly in India**

The ageing of the population is a world wide trend; anticipated to have wide spread and significant social, economic and infrastructural impact. WHO defines healthy ageing as a state of complete physical, mental and social well being; and not merely the absence of disease and infirmity'. Healthy ageing depends upon genetic, environmental and behavioral factors, as well as broader environmental and socio economic determinants. It is particularly important for the elderly to remain physically active as this can decrease the risk of many age related conditions. The study aims to find out the role of Leisure in promoting healthy ageing among the elderly in India urban society.

Hypothesis constructed to direct the study are:
1. Involvement in Leisure activity results in healthy ageing.
2. Type of Leisure activities play a role in the health of the elderly person.
3. Every Leisure activity does not have a positive role in healthy ageing.

206 respondents aged 60 and above from urban settings of a fast developing town of India were selected through a stratified disproportionate random sampling. Semi structured interview schedule was used to collect the data; there after statistical method was used for the data analyses. Findings reveal that:

Health has two broad parameters, mental health and the physical health. Type of the leisure activity affects the mental and physical health differentially. Passive leisure activities may have a positive role in the mental health but can negatively affect the physical health.

**La Transferencia Tecnológica Como Problema Político En América Latina**

La transferencia tecnológica como problema político en América Latina

Una de las cuestiones que viene causando importantes polémicas en la región latinoamericana, es el establecimiento de alianzas estratégicas internaciona-
les, con el objetivo de generar nuevo conocimiento y fortalecer las capacidades científicas y tecnológicas existentes.

La naturaleza de esta cooperación se basa en los principios de las relaciones internacionales y también en el desarrollo de particulares alianzas estratégicas, como es el caso de China.

Otro objetivo, para el caso de los países de la región, la cooperación científica y tecnológica continúa ocurriendo de forma semejante a la década de los ochenta y noventa, una relación entre países dominada por la oferta-demanda de tecnología, que si bien tuvo en su momento un importante apoyo al desarrollo económico de estos países, hoy amenaza con acelerar el deterioro de las capacidades para la producción científica y tecnológica y en consecuencia el desarrollo social y productivo, pero también altera el escenario político.

Al mismo tiempo, el poder gubernamental posee una cultura caracterizada por el analfabetismo tecnológico que impide reconocer los efectos negativos de este tipo de cooperación y en consecuencia limita la actividad de formulación e implementación de políticas en ciencia y tecnología que conciban la transferencia tecnológica de un nuevo modo.

El siguiente trabajo, no sólo caracteriza la situación arriba planteada utilizando como referencia la experiencia actual de algunos países de la región, también permite evaluar la pertinencia o no del modelo de transferencia tecnológica hasta ahora desarrollado, lo somete a discusión y proporciona elementos de análisis para describir los aspectos negativos del mismo. Finalmente hace una propuesta hacia dónde debería apuntar la transferencia tecnológica en estos países.

Technological and Political Illiteracy: Its Effect on Social Change in Latin America

Technological and political illiteracy: Its effect on social change in Latin America

The political dilemma between capitalism-socialism or the political power struggle between the right and the left wing, in Latin America, has been accompanied by an anachronism related to problems of social inequality. The increase in this problems has had an effect of generating more conflict between rich and poor, and therefore has become a catalyst in the process of decision-making by the political power.

In some Latin American countries, where are trying to experiment with political processes that resemble with the left thinking, social inequality has generated within the political power the need to confront all areas in which acts the capital model, with regarding to the value and the role of science and technology in the transformations and social welfare.

As a result, it has been created a social symbolism within society, which influences negatively and pushes away the true role of science in social and economic transformations of these countries. At the same time, this symbolism influences and suffers an arrangement within the political power.

What happens is a combination of political and technological illiteracy. This combination is also a clash of ideas and political decision (political inequality) for those who in society own and generate scientific knowledge in reference to those who do not. Thus, it has distorted the development of coherent public policies.

This work attempts to make some comparisons of these practices in Latin America, analyzing more deeply the case of Venezuela.

From Self-Management to Representative Democracy – the Case of Two Kibbutz Industrial Plants

Theories of new organizational forms usually assume that in the 21st century the official trend in the majority of small industrial organizations in Western Society is more worker oriented, more democratic, with flatter hierarchical structures and more worker oriented.

In this paper we would like to show when and why an organization abandons its self-management praxis and changes from a neo-organizational structure into an almost Weberian structure. In order to do so we will show the parallelism between praxis. Thus, occurring in many kibbutz communities by analyzing two case studies of kibbutz plants. This is done by studying the interplay between changes in the kibbutz culture and changes in the plant through life cycle theories and organizational culture theories.

Our research methodology was qualitative and ethnographic interviews were held with kibbutz members employed by the organization, with kibbutz members and with CEOs that had held jobs in the past. The interviews were conducted between 2009 and 2013. This enabled us to better understand the social and organizational processes that occurred in the community and in the plant.

The main findings show that both kibbutz communities underwent far reaching changes and at the same time so did their industrial plants. But, while the kibbutz communities limited their steps towards privatization the plants went all the way – the plant has diminished in size as it sold out most of its manufacturing activities and now it concentrates mainly on selling and servicing products it used to manufacture. The other plant has grown and thrived but abandoned most of its democratic characteristics in favor of bureaucratic ones.

What Are the Opportunities for Social Investment in the Continental European Welfare States?

With their passive, employment-based, status-preserving, social insurance and male-breadwinner oriented welfare states, continental European countries are the least likely cases for social investment policy innovation. Nevertheless, some continental welfare states have introduced social investment reforms. While both the Netherlands and France have a similar legacy of a typical continental European passive social insurance-based welfare state, they have changed in various ways since the early 1990s. The Netherlands has made a strong social activation turn in social security, coupled to a more “flexicure” service-based labour market. In France, there has always been a strong policy legacy of pro-natalist child-care support. Recently, an important policy focus has been paced on the Youth in France. In both these countries, social investment policies have come under pressure after the 2008 financial crisis. Some policy areas (like work-life reconciliation policies) seem to have been hit harder than other areas (active labour market policies).

Moreover, there is also substantial variation across countries. How to account for this? By analyzing the reform trajectories with respect to social investment both before and after the 2008 financial crisis, the paper assesses the (variable) opportunities and related feedback effects for social investment in continental Europe.

Feelings of Ambivalence: Ageing Labour Migrants in Vienna

Feelings of Ambivalence: Ageing Labour Migrants in Vienna

This paper analyzes feelings of ambivalence first generation migrants in Vienna are confronted with, particularly in relation to their sense of belonging and place in society. It focuses on the two biggest migrant groups in Vienna, who came as labour migrants from Turkey and former Yugoslavia. Most of them immigrated to Austria as young adults and – despite of the original plan to remain only for a short period of time – they stayed and grew old there. These labour migrants have now reached retirement, a phase of life that is characterized by reflecting on the personal migration history as well as by thinking about plans for later life.

Vienna’s labour migrants have long held the dream of returning to their country of origin, at the latest when they would retire. By the time of retirement, however, feelings of estrangement from the home country prevail and many labour migrants realize that the old home is only preserved in their memories. On the other hand, they do not fully feel at home in Vienna either, even when their children and grandchildren live there. This is complicated by the status loss many experience with retirement. Once welcome as important work force, in the post-retirement phase labour migrants face marginalisation and a lack of state responsibility for ensuring their well-being in old age (e.g. inadequate state pensions and lack of culturally sensitive care). The paper analyzes these feelings of ambivalence among ageing migrants in Vienna and the strategies they assume in dealing with them. Finally, the potential of the notion of ambivalence for the experiences of migrants beyond the particular case study is discussed.

Informalization of Labour: Recent Trends in India’s Urban Economy

Informalization of labour: Recent trends in India’s Urban Economy

Urban way of life is generally considered to be associated with industrial production. Reality in most third world cities, however, indicates otherwise. Only half and sometimes less of urban population finds employment in factories or similar organizations. Rest all are engaged in ‘informal’ economic activities which are casual, unskilled, with no fixed working hours, low income, with nature of work largely fluctuating and seasonal. Several studies and reports have come

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
out in last twenty years, which depict the miserable working conditions of India's informal sector workers.

While workers in the informal sector contribute a considerable amount of output to the country's GDP, the conditions under which they labour are usually deplorable. Although precise data is not available, we can safely say that nearly all workers in the informal sector lack any form of social security. India has a labour force of nearly 400 million persons, about 13 percent of the entire world's labour force. More than 70 percent of the nonagricultural labour force is in informal employment. If we include agriculture into this, it will be over 90 percent. Work in the informal sector is so common today that it is almost a norm.

Today, due to policies of globalization, facilitated by advances in technology, labour is losing its formal and organized character. Workers are divided into two groups, who are employed and who are in the reserve army of labour, willing to do anything to obtain employment. Large number of workers in India, who form this reserve army, miserably wander to and fro between cities, town and villages, living in different phases of employability in seasonal cycles.

This paper attempts to understand, based on available literature, trends of informalization in the fast changing employment scenario in Indian urban economy.

Examining the Manifest Function and the Latent Function of Japanese Class: Focused on a Example of Public Middle Schools in Osaka

This presentation examines, from the viewpoint of the manifest function and the latent function, extensive adaptive function that Japanese classes could potentially perform. To better understand this issue, the author conducted an investigation at public middle schools in the Kansai area in Japan from 2009 to 2012. The investigation combined participant observation, semi-structured interviewing, and description-type questionnaires. M-GTA technique was used to analyze the field research data.

Results obtained from data collected via participant observation and interviews suggest the follows. Besides functioning as a supplementary lesson for Japanese language and other subjects, the Japanese class also provides a place for "feeling of security" as well as "maintenance of mother tongue and native culture". We can say this is the manifest function of Japanese Class. Apart from such conventional role, Japanese class has demonstrated a crucial role in facilitating intercultural understanding and cultural exchange. Newcomer students, sharing the mutual identity of a minority in class, were observed helping one another to cope with problems and thus create a more comfortable learning environment in school. Then, Japanese class also offers a career role model which could potentially affect newcomers' career choice in the future. And this is the latent function of Japanese Class that we cleared.

In summary, the Japanese class offers a place for interaction with Japanese students and teaches new students' an opportunity to re-identify one's own root; a place to obtain sense of self-realization and recognition; as well as a channel for resource procurement. Hence, it is not only the manifest function but also the latent function of the Japanese class has been observed in this study.

Cyberspace and Cross-Cultural Relationships Online

Previous studies claim that intermarriage dating sites are new digital technologies that have transformed the mail-order bride industry. It is generally assumed that, when women from developing countries turn to intermarriage dating sites to escape poverty, they are driven by economic gain rather than cultural assimilation. This study shows that, when women from developing countries turn to intermarriage dating sites, economic deprivation and opportunities are the main driving motivation. What is ignored in such accounts is the role of desire for love and intimacy. Does the presence of economic and social gain in cross-cultural relationships exclude the idea that women are seeking 'intimacy' in online contexts?

This research seeks to understand why women in Thailand turn to intermarriage dating sites to pursue romantic partners. This paper presents the findings of a study that examined intermarriage dating sites and identified the usage patterns of Thai women. The findings suggest that the Internet plays a crucial role in facilitating cross-cultural understanding and connecting women from different cultural backgrounds.

Delivery Of Quality Education In Global Era

However, education and skills have also played key roles. Education has generally supported rapid economic growth through encouraging foreign investment, enabling technology transfer, promoting productivity and progressively upgrading the skills base as required for each successive economic shift to higher value-added manufacturing and service industry. Education has also played a critical role in fostering a stronger integration between specific domestic social systems and the global economy.

This paper attempts to understand, based on available literature, trends of informalization in the fast changing employment scenario in Indian urban economy.

'Supply Chain Solutions' at All Costs: The Case of Linfox and the Transport Workers Union in Thailand

Linfox is Australia's largest privately-owned logistics and supply chain company which provides transport and delivery services across the Asia Pacific region for the world's biggest consumer goods companies and retailers. In Thailand, Linfox provides services for four distribution centers of Tesco Lotus (a joint venture between a Thai company and Tesco PLC, the world's second-largest retailer after Wal-Mart). Work conditions have steadily deteriorated over the past ten years (serious injuries including deaths caused by stress, exhaustion and falling asleep at the wheel) and reached a breaking point in January 2013 – the same time as a nationwide minimum wage policy was put into effect on January 1st 2013 – a controversial policy that prompted many companies to increase working hours, reduce benefits, lay off workers and/or close down their factories. The Linfox truck drivers had no choice but to go on strike but their action only resulted in the dismissal of fifty-six union members and refusal from management to further negotiate with the workers. This paper examines the 2013 dispute between management and 430 members of the Transport Workers Union who work as truck drivers for Linfox – a multinational transport company which first started its operations in Thailand in 1992. Based on interviews conducted in the field, this paper will provide an analysis of the struggle confronted by workers (whose several attempts at forming a labor union were shut down by management) with the aim of better understanding global corporate strategies and the challenges posed to worker solidarity. Since these are not new challenges, are there really opportunities then for new forms of resistance?

The Future with Powerful Consumers: A Case Study of Kickstarter

In our technologically advanced modern age, the power of production has shifted from the producers to the consumers. Everyday consumers are taking a more proactive role in the way they buy, use, and mold products to their needs and purposes. These new-age consumers are changing the way corporations produce products and are forcing corporations to acknowledge the wisdom, knowledge, and creativity that consumers have to offer. As part of this developing phenomenon, crowdsourcing has become a new practice of corporations and small-time producers. Crowdsourcing is the idea of soliciting contributions (be it money, ideas, or labor) from a large group of people (such as a virtual community). Kickstarter is an American-based, private for-profit company founded in 2009, dubbed "the world's largest funding platform for creative projects" (http://www.kickstarter.com). A platform in which producers of any kind (films, games, music, art, technology) can ask donations for creative projects, Kickstarter puts the power in the consumers' hands. People have the option to donate as much money as they want to the over 100,000 projects open for funding. The design seems simple, yet it is rife with controversy. Kickstarter does not provide any regulation in terms of completing the projects and delivering to the consumers. Unsurprisingly, there have been numerous projects that have been funded but not finished and delivered to the 'backers' (i.e. funders). By analyzing the Kickstarter community through Consumer Culture Theory, particularly focusing on the activities took place, the record is already subject to substantial distortions. This fact has important implications for the time-data validity. If filling in of the time-use diary is postponed by the respondent until, for instance, the day after the activities took place, the record is already subject to substantial distortions. Some episodes are simply being forgotten. It results in diminished sequence variability, and extended episodes of the particular activities - at the expense of the less usual ones. What is more, it has an effect on the differences in time allocation across the society. This fact has important implications for the time-data validity. If filling in of the time-use diary is postponed by the respondent until, for instance, the day after the activities took place, the record is already subject to substantial distortions. Some episodes are simply being forgotten. It results in diminished sequence variability, and extended episodes of the particular activities - at the expense of the less usual ones. What is more, it has an effect on the differences in time allocation as shown in cross-sectional analysis. The day when the diary was filled in can thus have a significant impact on the results as well as conclusions drawn from time-use research. Using the German Time Use Data 2001/2002 and Polish Time Use Data 2003/2004 (both surveys conducted within the Harmonized European Time Use Survey framework) we show how gender differences in time allocation differ depending on when the diary was filled in by the respondent. By the means of multivariate analysis we also show how sequence specificity (such as number of episodes and their duration) differs depending on whether the diary was filled in on the same day as the recorded one – or the day after.

Participation in Voluntary Organizations and Civic Integration of Immigrants in Crisis-Stricken Greece

During the last two decades Southern European countries, which were in the past a labour reserve for Western Europe and North America, experienced migration transition to host societies. A number of factors explain this transformation; their geopolitical position, the improved socioeconomic situation and the fact that they are part of the European Union. The recent economic crisis seems to have affected the size of immigration flows in Europe while it raised new issues related to the integration of immigrants in southern European host countries and the challenges faced by the latter for maintaining social cohesion.

Migration research in Southern Europe focuses on the immigrant characteristics and the integration opportunities of immigrants. The recent emergence of immigrant associations and voluntary organizations has not been accompanied by an extensive study of the networks between immigrant organizations in voluntary associations and civic integration in Southern Europe and more particularly in Greece. Moreover, the ongoing economic recession has had an immense impact on the participation and civic engagement of immigrants in host countries.

The paper aims at unveiling the factors which are related to the participation of immigrants in voluntary associations and the implications of immigrant participation for their social and civil integration in host countries. Firstly, the paper will review the relevant literature in Southern European countries and then the situation of immigrant participation and civic engagement in Greece will be presented. The paper will be solidly based on a comparative analysis of research findings emanating from two consecutive research projects aiming at the study of immigrant participation in voluntary associations at the start (2009-2010) and in the midst of crisis (2013) in Greece. Both quantitative and qualitative data will be used to reflect on the deficits and the challenges of the EU and Greek migration policy towards immigrant participation and civic integration.

WG03-912.1

PAPAKOSTAS, APOSTOLIS* (Södertörn University, apostolis.papakostas@sh.se)

The Creation of Peaceful Neighbors and Calm Swedes

The Creation of Peaceful Neighbors and Calm Swedes

A discreet aspect of everyday life in Scandinavia is the relative absence of feuds between neighbors and the peaceful atmosphere that prevails in neighborhoods. It is rather difficult to find shouting Swedes and in criminal statistics there are rather few incidents of killings between neighbors. Another aspect of Swedish everyday life is that that, when asked, two of three Swedes state that they trust other people.

In this short historical expose the author connects the absence of feuds between neighbors in everyday life and the high degree of trust prevailing in everyday life in Swedish society. It is argued that the regulation of "neighbors war against neighbors", in essence the regulation of the inter-human space between neighbors, early in Swedish history pacified the relations between neighbors and created a fertile ground for the generalization of trust from few people to many people and for the creation of a environment of trust. The author argues that it was the spread of topography and cartography through agricultural reforms before industrialization that created objective representations of property and thus eliminated boundary feuds between neighbors. By examining topographic maps before and after the reforms the author analyzes the regulations and objective representations of the physical space regulated the inter-human space.
In 1989, the city of Porto Alegre in southern Brazil implemented the world's first experiment in participatory budgeting (PB). Twenty years later, an Alderman in Chicago established the United States' (US) first experiment in PB in the city's 49th ward in 2009. Over that time, PB has spread to over 1500 municipalities in countries across Latin America, Asia, Europe and North America (Baiocchi and Ganuza, forthcoming). The United States’ first experiment in PB in the city of Porto Alegre utilized “elements” for a practice that has been associated with grassroots mobilisation and which holds the potential to reconfigure existing power structures within capitalist democracies.

For proponents of PB and other transformative movements, there are valuable insights to be gained from studying the mechanisms by which the diffusion of PB has taken place. For example, events such as the World Social Forum, where Chicago Alderman Joe Moore first learned of PB, may have played a considerable role in spreading PB beyond Latin America. But once PB lands on American shores, what kind of support is needed, who are the organisations that provide such support, and which actors from civil society and the state commit to building its success?

In this paper I consider the diffusion pathways for PB, in terms of both the information networks that spread the idea, and the support environment that makes its implementation possible in a given location. Drawing on social movement diffusion literature, I conceptualise the factors that influence the differential spread and success of PB, particularly in relation to current experiments in the US. I argue that the study of the diffusion mechanisms for PB provide important insights for activists and civil society actors seeking to promote transformative change.

1) Narratives about traitors, spies, and other “foreign agents” actually or potentially tresspass real or symbolic external borders of the Soviet space. These were used for excluding foreigners-emigrants, certain national minorities, Russian re-immigrants, Soviet diplomats and spies; people who contacted foreigners or simply changed surnames, etc.

2) Narratives about saboteurs, “socially dangerous elements”, and anti-Soviet conspirers, terrorists, and propagandists acting from beyond the symbolic borders of the ideal Soviet social, political and ideological structure. These were used for excluding “kulaks”, criminals, tramps, “bourgeois” engineers and scientists, openly religious people, former members of the long-defunct Russian political parties, former members of oppositional groups within the Bolshevik party, suspended officers of the secret police, and others. Narratives about “monsters” and “scum of the earth”, who trespassed all sorts of symbolic borders. These were used for excluding suspended high-rank Bolshevik party leaders, both opponents and proponents of Stalin. Narratives of this type were built in the framework of the special ideological meta-narrative based upon archaic mythological imaging of witches and shape-shifters – apparently innocent creatures that turn out to be demons.

The international educational evaluation programme PISA analysis the variances of school achievement of different countries. In several PISA reports there are described the criteria of successful schools, and the ways the social backgrounds can be overcame. In the PISA framework educational opportunities are distributed equivalently if the student's education is independent of their own family background. Based on PISA reports one can have a detailed picture about the school integration of migrants, the factors which have impact on their educational outcomes.

“A note that is important to underline at the same time that based on PISA results there is no detailed analysis of non-migrant or native national minorities. In some countries the results are presented following the (regional) minority language of test (e.g., Belgium, Spain, Canada), however a comprehensive analysis of native national minorities is failed.

Using PISA databases one can gain some relevant information about national minorities’ school outcomes (in at least 20 countries). By a cross-tabulation of the language spoken at home and of the language of tests (state language or minority language) one can distinguish at least three main student groups: minority students who learn in their mother tongue (language spoken at home: minority language), minority students who learn in state language, and majority students (who learn in minority language, of course). Having these subgroups one can test two basic research questions: 1) rather the mother tongue education or the mainstream language education outperform among minority students? 2) rather the native national minority or majority students outperform? These comparison could tend us to interpret the variance in student performance in linguistic/ethnics terms. Moreover if after accounting for socio-economic background these variances still remain we can assume that exists hidden, ethnic-linguistics inequalities among students.

The Fluidity of Texts and Structures: Exploring Institutional Ethnography of the Child Protection System in Dominican Republic

This presentation discusses the challenges experienced in using Institutional Ethnography (IE) in a context other than Global North. I discuss the challenges in attempting to translate both linguistically and culturally some of the important concepts of IE into Spanish and the culturally different institutional structures of Child Protection System in the Dominican Republic (DR).

Based on a five year international collaborative project (Canada-DR) this presentation discusses some of difficulties involved in conducting a national study of the child protection system, when institutional structures were not clearly identified, and when institutional texts were not clearly defined outside the legal discourse –Child welfare Act. The team of researchers used different IE means of data collection: 1) Mapped out the “fluid” structures of the different institutions working toward the protection of children and youth; 2) completed textual analysis of the rules and regulations –or lack of; 3) completed six months of direct observations and finally interviews of different actors within the system. What characterize the child welfare system in different provinces in Canada is a highly regulated and clearly structured system with standards of practices. What characterized the child welfare in the DR is relations of ruling in constant flux where practices were not based on any written forms of protocols of practices, but in personal experience and political influence of those engaged in the protection children and youth.

Since the team of researchers are now engaged in new project both in the Dominican Republic and working toward future projects in other countries of the Caribbean and Central America, the questions of applicability and universality of IE outside the Global North becomes very important.
The Managerialization of International Collaboration: The Silencing of Social Justice Solidarity

There is an extensive literature on the process of "overmanagerialization of academic work" (Todd, et al 2013). Academics' programs that continue to engage on programs of issues such as social justice or global solidarity face difficulties in negotiating the disjunction of the entrepreneurial university and solidarity of international collaboration. "Internationalization" of programs has become a buzz idea that most universities in North America are pursuing, but the question remains "What kind of internationalization? And who is benefiting from this process?"

Using Institutional Ethnography, this presentation discusses the negotiation process with which the author has become involved with in the development and implementation of an "international Youth Right project" during the last two years. The author discusses the steps taken to textually transform the "ideal realities" of the everyday experience of youth advocating for the protection of their rights into textual instruments of control-financial, managerial as relations of rulings that reflect the managerial realities of the Northern institutions (the entrepreneurial university and its funders). Through mapping out the different "project managements processes" required to develop and implement international projects within the entrepreneurial university context, this presentation will discuss the disjunction of local realities of those who are supposed to benefit from this kind of project -children and youth and the institutions that are supposed to manage them.

The following questions are discussed: What challenges children and Youth face in achieving their rights? What are the consequences of extremely legalistic discourses of rights on the everyday living experiences of youth in the Global South?

How is the managerialization of international collaboration within university context affecting the everyday practices of solidarity?

Life History and Family Changes in Korea and Japan

This study examines important characteristics of family changes and modernities embedded in the life history of Korean and Japanese elders born in the 1920s and 1940s. The elderly born between the periods of the 1920s and 1940s underwent very compressed social changes, such as the imperialism, political turmoil after liberation and ferocious national building, wars, diaspora, and the high economic development. Modern families have been developed and transformed in this vortex of social changes. Reconstructing the memory of the elderly people's own life history, this study aims to discover characteristics of family changes and modernities in Korea and Japan.

Surveys and interviews were conducted in Seoul, Korea and Nagoya, Japan from 2009 to 2011. Questionnaire covered detailed information about family in origin, education, experiences of adolescence, marriage and their own family, work, and later life. 100 cases in Korea and Japan respectively were collected considering age, gender and economic status of the elderly. In-depth interviews were then followed for the cases with importance in the study and elders' willingness to interview.

Several important concepts of modern and family changes are interpreted by comparing life histories of Korean and Japanese elders. Modern construction of patriarchal family and its change are compared. In regard to the period of childhood and the youth, the mixture of kinship and modern rearing, gendered education, and influences of imperial war and Korean war, diaspora and repatriation were investigated. In the interplay between the individual adulthood and the social period of high economic growth, mixed relation with extended and nuclear family and ideas of gender role division were compared. Finally, attitudes in inheritance, after-death, and family support in later life and social changes were compared.

_The Structured Dynamics in the World-System: A Network Analysis of Trade Patterns 1985-2004_  

The purpose of this paper is to analyze the hierarchically structured dynamics of the modern world-system using the network analysis. While the modernization theory presumed that the increase in international trade lead to economic growth for all the participants, the world-system perspective argued that there is persistent underdevelopment among the Third World because all the nation states participating in the world economy are unequally structured. These conflicting perspectives have continued to debate the matter of development. Of all the researchers concerning international relationship, those who used the network analysis did made a great advance in empirical field due to the relational nature of the world-system. However, previous studies have shown the static characteristics of the network of the world-system. In this paper, using bilateral trade data of Standard International Trade Classification(SITC) over 133 countries, we focus on the dynamics of the world system; the range and effects of the international division of labor depend on the sort of commodity. We used three commodities of SITC over 20-years for making clear our research question. We confirmed the main theme of the world-system perspective; a) The relationships between the core were denser than the periphery, b) The semi-periphery acted as a broker mediating the core and the periphery. Also, we found that there are differences among trading commodities in the world-system; a) Machinery(SITC-71) had been transmitted from the core to the periphery, b) Plastics and synthetics(SITC-58) maintained their superior status as the core industry, c) Footwear(SITC-85) showed secondary transmission and division of labor in the periphery and semi-periphery. This dynamics in commodities need to be more sophisticated argument in the field. The long-term changes in the international trades explained how the nation states were structured and also fluctuated by their structural position in the world-system.

_Social Patterns of Energy Consumption and Lifestyles: Towards a Low Carbon Society? a Study in Chilean Society_  

The growing demand for primary energy consumption in many Latin American (LA) countries is carbonized raising a challenge to move towards low-carbon economies. Promoting social patterns of low-carbon energy consumption involves analyzing the lifestyles associated with the current energy consumption. Indeed social patterns of primary energy consumption (lighting, cooking, heating / cooling and transport) are associated with lifestyles. According to the thesis of Beck (2000) environmental pro would be a more typical of affluent societies, typical of a post-materialist era. Following this thesis...
social patterns of low-carbon energy consumption would not be found in developing countries, or be found only in its upper-middle and upper classes. The few sociological studies do not allow to a conclusively answer.

Sustainable development in Latin America is being challenged. Population growth is not driving the increase in GHG emissions, but rather growth in consumption (Satterthwaite, 2009). In this global context, Chile is an example of an emerging economy whose growth affects the environment.

It is possible to hypothesize that the energy consumption in emerging countries is often fraught with challenges, not the least of which is public opposition to areas with below city-wide means for burglary in the previous year. Evaluation is designed to see if we can reduce these predicted high burglary areas.

Predictive Policing: The Case of Burglary

This study is designed to utilize large amounts of data from previous time points in the City of Indio, Ca., to analyze the predictors of burglary rates, commercial and noncommercial, to test the idea that a predictive model of burglary could be developed. Using predictions as to sub areas in the community that are expected to have the highest burglary rates, based in part on an observed relationship, lagged across time, between tranquility and burglary, we develop an intervention model and apply it most heavily on the predicted high burglary areas. Evaluation is designed to see if we can reduce these predicted high burglary areas to areas with below city-wide means for burglary in the previous year.

Future Energy Landscapes in Canada: Discursive Renderings of Renewable Energy Alternatives through Q Methodology

The transformation of energy landscapes toward more sustainable energy futures is often fraught with challenges, not the least of which is public opposition to altering of treasured spaces and places. Drawing on Charles Taylor’s social imaginaries, Zeubravel’s socialization theory and Nassauer’s notions of culture and landscape, this paper identifies the discursive and visual structures that anchor the socio-ecological world to existing modes of energy production and limit the potential for energy landscape transformation. Within this analysis, culture is understood to be inextricably linked to landscapes and energy development – from wind mills and solar arrays to oil sands and hydroelectric facilities – having a profound effect upon landscape preferences. The landscapes humans create as they meet their needs and desires are not always beautiful or healthy, but they comprise heritage that contributes significantly to an individual’s sense of place or identity. Therefore any meaningful transformation of these landscapes toward sustainable futures will require careful and incisive analysis of these social and cultural anchoring points. These points are examined in this study through Q method analysis of 48 statements on energy production in Canada. Research involves three diverse case study areas (Alberta, Ontario and New Brunswick) aimed at gaining insights into the discursive underpinnings of energy production. Results offer nuanced and regionally specific understanding of citizens’ deeply rooted and often conflicting values surrounding landscape change, aesthetics, governance, ownership, renewable energy alternatives, and identity with the energy sector.

References

Scott (plus Hirst 2005) and the historical sociology of resistance provide an access point for the first of these; Foucault for the second; and Bourdieu an account of ideology that illuminates the third. The paper will draw empirically not only on the history of colonialism and its end, but also on the many histories of popular resistance. The purpose is to read the historical sources with this particular blend of theory, showing the contradictory impulses within which actual power develops.

The aims of this paper are twofold; (1) to forecast mortality for a wide range of more developed countries from 2010-2050 and (2) to simulate the effects of the forecast mortality patterns on economic support ratios under the continuation of current fertility, migration and labour force participation. The mortality forecasts are prepared for eighteen countries using the Poisson Common Factor Model proposed by Li (2013). The effects of mortality on economic support ratios are estimated by comparing the results of projections under the best estimates of the forecast mortality change to the results of projections which assume that mortality remains constant over time. The results of the mortality forecasts show that the projected gains in life expectancy for both sexes are greatest in Japan, Israel, and men are examined through interviews with 32 men.

Nature Grabbing or Successful Practices for Nature Conservation? Blurred Boundaries in Chilean Protected Areas

Literature on protected areas (PAs) constantly reanimates an ancient debate that opposes conservationist scholars, considering the world history of PAs, as a testimony of human progress, to critical voices counting this history as a record of failure (Brockington et al. 2008; Stolton, Dudley 2010). For, as several social scientists have emphasized, conservation regulation has in many cases been part of coercive colonial strategies and disempowerment of indigenous groups. More recently, contributions on “nature grabbing” have joined the debate, revealing processes through which property rights and control over natural resources are transferred from ‘poor’ to powerful hands (Fairhead et al. 2012).

Based on case-study research in two Chilean regions, the Atacama Desert and Green Patagonia, this paper examines the shades of grey between what may be acknowledged either as a success or a failure in the contemporary governance of PAs. This paper argues that there is a need for examining PAs and their governance by using more sophisticated analytical frameworks that help to capture the social complexities in which these areas for nature conservation are embedded and reproduced.

This paper is structured in five parts. Part one combines literature on socio-ecological systems, environmental sociology and political ecology to discuss critical social sustainability issues in the contemporary governance of PAs. Elaborating on these theories, part two offers an analytical framework drawing attention to the social embeddedness of PAs, including politics and power dynamics, economic forces, institutional transformations, as well as culture, discourses, values and justice in local histories. Section three discusses conservation policies and land uses in a neoliberal country that has allowed a wide proliferation of private PAs. Section four zooms into two Chilean regions and the remaking of their PAs histories. The paper concludes with reflections on the blurred boundaries between successful conservation and nature grabbing leading to injustice.

Rio Museum of Art in Times of Trouble

Given the growing diagnoses of musealization processes, of the spreading of cultural centers and of the new status assigned to curators, this research investigates the emergence of exemplary institutions as instruments for intervention in the urban space, in times of social change. I shall here analyze the foundation of the Museu de Arte do Rio, in March 2013, at the Rio de Janeiro harbor district. The aim of the research is discussing the possibility of building an art institution, taking on account the formation of social networks and the negotiations for the emergence of a shared project. To think about these issues, I have been investigating the idea that museums and biennials are a way to build consensus around the concepts of modern, contemporary, and a global (and / or creative) city. Built through a decade of disputes, the Museu de Arte do Rio seems to be revealing both of the place destined for museums in contemporary times, and of the negotiations between organized groups and institutions in Rio. Proposed in times of optimism and prosperity in expectation for megaevents such as the World Cup in 2014 and Olympic Games in 2016, the museum was conceived as a new icon for the city’s image. Nevertheless, just when it was founded in March, 2013, the museum was, however, the target of demonstrations that anticipated the massive protests that spread in the country since mid-2013, taking to the streets of the city more than a hundred thousand of people in June 17, 2013. This paper seeks to understand how the institution has been the target of new disputes in the city and has been incorporating new categories to face the demands for change.

Affective, Symbolic, and Family Ties Among Palestinians in the West Bank and Israel: A Multi-Sited Ethnography and a Transnational Research Agenda

Melding insights from recent works on the affective, embodied, and symbolic dimensions of transnationalism with multi-sited fieldwork in Palestinian localities across the Green Line between the West Bank and Israel, this paper aims to develop a transnational research agenda on Israeli and West Bank Palestinians. It argues that a focus on emotional ties, symbolic practices, and subjective views can help overcome the scholarly tendency to use the spatial and legal divisions imposed on differently situated Palestinians as boundaries for research and to assume that these imposed divisions are the most salient factors in the everyday lives. It also sketches a transnational research agenda on these two segments of Palestinians, discussing how a focus on everyday life and a multi-sited research design can help explore their various transnational engagements from the expression of feelings of solidarity and the pursuit of cross-border family practices through the negotiation of border-crossed parental and familial ties. Secondly, beyond the case of Palestinians under Israeli rule, this paper problematizes the privileged focus on mobility in transnational studies and calls for more attention to the role of transnational histories and forms of belonging in the lives of people experiencing forced spatial immobility and legal exclusion.
“He Is Not Clean:” an Ethnography of Surveillance and Emotions Among Palestinian Arabs in the West Bank and Israel

Drawing on insights from works on the affective dimension of the law and on recent theorization of emotions as transpersonal and collective phenomena, this paper explores how the power of political information of the modern state's security agencies can shape emotional relationships among members of targeted populations. Specifically, based on ethnographic fieldwork within and across a West Bank refugee camp and the Arab districts of an Israeli city, I explain how the state practice of recruiting “collaborators” (informers) produces distinct meanings and emotions in these two localities. Camp dwellers react to political informing through collective informal social control, personal investment in the camp residents’ reputation, and support for the physical expulsion and even violent death of alleged “informers.” City residents experience political informing as a form of “symbolic diet” that circulates in all public and private spaces, ambiguously mixed with criminal forms of informing, and mediates affective and social ties among neighbors, friends, and family members. I also explore the distinct predicament of former “collaborators” who were relocated by the state's security apparatus from the West Bank to the Israeli city where I conducted fieldwork. By focusing on the entanglement between political informing, moral claims, feelings of belonging and betrayal, and practices of physical expulsion and relocation among differently situated Palestinian Arabs, this paper aims to theorize the role of the state's security apparatus in shaping emotional relationships and responses among targeted people.

Returns to Higher Education after the Bologna Process: How Different Are Italian Tertiary Degrees?

This paper analyses the short term occupational returns of different tertiary degrees provided by the Italian educational system after the implementation of the ‘Bologna process’.

The University reform has entailed a great vertical differentiation of higher education and resulted in the transition from a unitary system - based on four-to-six years courses - to a new sequential system of ‘bachelor/master/doctoral program’. The new bachelor/master reforms have been accompanied by the introduction of long courses (‘Ciclo Unico’), which lasted five years and reflected the old unitary structure. In this scenario, the public decision-maker has determined the tertiary qualifications to be considered equivalent. On the one hand, bachelor degrees are legally less valuable than masters and long degrees, and does not give access to doctoral programmes (ISCED 6). On the other hand, masters and long degrees are legally equivalent and give direct access to doctorates.

In the empirical analysis we use data from the ISTAT -2011 ‘Survey on the transition to work of University graduates’ to examine the early labour market returns of young educated graduates from bachelor’s, master’s and long degrees in terms of employability, class position and wage. By means of binomial, multinomial and OLS multiple regression, the empirical results show that the labour market rewards of the three types of degree do not reflect precisely the legislative arrangement. According to expectations, four years after the completion of studies, bachelor graduates are less successful in gaining jobs and rewarded occupations than masters and long degrees. However, labour market outcomes of long degrees and masters vary widely, although they are legally equivalent. Net of other relevant personal characteristics, graduates from long degrees are less likely to be employed, but gain higher wages and have higher probability to reach the apex of the social hierarchy compared with graduates from master’s programmes.

Literate and illiterate Tribal Youth and Leisure

Literate and illiterate Tribal Youth and Leisure

The Education is the one which teaches the edifying many ways of spending his leisure usefully and constructively. The various objects of culture such as literature, music, art, religion and philosophy are the creation of leisure. But it is not developed automatically follow if leisure is provided. The role of Education will be different between them. These variables are following below. Economic Condition, Morning activity, Noon activity, Evening activity, their talking subjects, drug addiction, visits of cinema, gossip places, their desires, etc. I found tribal youth spend their leisure time an average 3 to 4 hours per day. Educated youth spend their leisure time in positive activities. Always they are thinking in positive way where illiterate tribal youth mostly do negative activity and thinking negatively. Illiterate youth mostly meet in a public places like bus stand, grocery shops, near by schools, near by temple, etc. when literate youth meet mostly their parents house. Where parents can watch their activities and some time guide them.

Colonial Legacies, Low and Discourses of Inequalities. An Analysis of Poverty Alleviation

The paper uses the example of a revolutionary poverty alleviation programme (which now is given legitimacy as a law) to understand and assess the discourses that structure inequalities in India. The focus is on a law called National Rural Employment Guarantee Act which provides as a right, employment to one member of a poor household for 100 days of a year.

On the basis of case studies, this paper argues this discourse does not have a language to comprehend the complex processes of cultural forms and processes that organize inequalities in India at three levels. First, the attention of this Act is on objective quantifiable attributes of inequalities and wealth disparities such as poverty line, income and food consumption, an understanding which it inherits from 19th century colonial liberal discourses. It thus cannot recognize the fact that the poor work and labour in economies that combine and exchange low value labour goods and services which are rarely quantifiable in terms of the rational economic language created by contemporary capitalist discourse. Second, this colonial legacy has further froze a range of differentiated cultural practices of domination and subordination that organise inequalities into a few standard Orientalist categories. We argue that not only are these practices varied but they range from stigma, discrimination, intolerance, prejudice and hatred. These may manifest as individual discrimination but are moored in group based representations of domination which are reconstituted from colonial classificatory systems. The Act has little comprehensions of these differentiation and cultural practices as these remain invisible and thus unquantifiable. Third, these representations are unevenly organised across localities and regions defining the nation state creating a complex pattern of exclusionary intersections that manifest differentially in varied economic and social contexts of the territory. These cases help to rethink and understand the theory of inequalities.

The Global South and Postcolonial Perspectives in International Sociology

A powerful current development in our discipline is the emergence of postcolonial and global-south sociologies. This is not a new specialization, but a change in perspectives that will affect all fields of sociology. New possibilities are currently being explored in sociological theory, sociologies of disability, education, gender, modernization, the history of sociology, and more. This session is planned as an interactive event in which leading colleagues in this movement of thought will debate issues raised by the participating units and by other ISA members. In the later part of the session, comments and questions from the floor will open a dialogue with members of the panel. Among the themes for the session are questions of centrality and marginality, changing methodologies, changing agendas for research, new audiences, and changing curricula for teaching sociology.

Gender Inequality and Women's Health: Indian Perspective

Gender Inequality and Women's Health: Indian Perspective

Indian women face most of the health problems due to discrimination. The high risk pregnancy in their lives are early childhood and reproductive you inadequate and poor nutrition, non-access to primary health care, poor reproductive health and discrimination against girls are four major causes for higher female mortality between ages one and five and high maternal mortality rates.

The practice of sex determination tests and subsequent induced abortion, small family size are added to decrease sex ratio. Sex-selective abortions are indicative of the low value to girls. Gender disparity in nutrition starts from infancy to adulthood. Girls are breastfed less in infancy. Malnutrition is an underlying cause of death among girls below age five. Nutritional deprivation amongst girls leads to improper growth and anaemia. Anaemia is more prevalent amongst girls, pregnant, and lactating women. This not only complicate childbirth and result in maternal and infant deaths, maternal depletion and low birth weight infants, but also severely affect women's productivity and quality of life. Infertility poses a serious social and emotional threat to women.

Women also face reproductive tract infections and related infertility. The reasons for maternal deaths include sepsis, abortion, haemorrhage, and anaemia, etc. Sexually transmitted diseases, HIV, have serious implications for women. Women tend to seek medical help only if an illness is advanced, thereby reducing their chances of surviving. Many deliveries take place at homes, with untrained assistants in proportion of moderately skilled workers by automatic systems, of task performance, which again could have weight implications for the remaining workforce resulting in greater inequalities. This assumption was tested in eight steady decline in proportion of moderately skilled workers by automated systems.

The practice of sex determination tests and subsequent induced abortion, small family size are added to decrease sex ratio. Sex-selective abortions are indicative of the low value to girls. Gender disparity in nutrition starts from infancy to adulthood. Girls are breastfed less in infancy. Malnutrition is an underlying cause of death among girls below age five. Nutritional deprivation amongst girls leads to improper growth and anaemia. Anaemia is more prevalent amongst girls, pregnant, and lactating women. This not only complicates childbirth and result in maternal and infant deaths, maternal depletion and low birth weight infants, but also severely affect women's productivity and quality of life. Infertility poses a serious social and emotional threat to women.

Women also face reproductive tract infections and related infertility. The reasons for maternal deaths include sepsis, abortion, haemorrhage, and anaemia, etc. Sexually transmitted diseases, HIV, have serious implications for women. Women tend to seek medical help only if an illness is advanced, thereby reducing their chances of surviving. Many deliveries take place at homes, with untrained assistants in proportion of moderately skilled workers by automated systems, of task performance, which again could have weight implications for the remaining workforce resulting in greater inequalities. This assumption was tested in eight steady decline in proportion of moderately skilled workers by automated systems.

paper analyzes the causes and social implications of educational inequities in Indonesia. In terms of causes, this paper focuses on the socio-economic background, culture, and access to resources. While on social implications, it will cover four issues. The first two deals with the fact that educational inequities will increase inequality in income and competitive ability among individuals in labor markets. Thirdly, educational inequities will widen inequality of vertical social mobility chance among social strata. The more educated have higher probability to advance to higher social strata than those with lower level of education. This may give rise to social exclusion, which is the final impact to be discussed in this paper.

Mobilizing from Appropriate Technologies to Sustainable Technologies (based on Grassroots Innovations)

This paper offers an understanding of the concept of Appropriate Technology (AT) and points out its historic relevance from the standpoint of developing countries. The paper focuses on the evolution of AT movement in India and ideological contributions by various thinkers like M. K. Gandhi, E. F. Schumacher, J C Kumarappa, and others to this movement. It stresses that AT movement as a discursive one is not about mobilizing activities and people but is about academic discourses on AT. And the paper presents an empirical case study of a social movement organization named Honey Bee Network, emergent of the said movement that does not represent the original discourse of the movement any more rather represents the later turning point of the discourse, i.e., the shift toward sustainable technologies. This shift is perceived on the basis of experiences of a developing country like India with regard to mitigations of western industrial technologies and their non-sustainability. Noteworthy that this case study of the Honey Bee Network at Ahmedabad is in fact a network of three organizations namely, SRISTI, NIF, and GIAN which are to scout, document, register, and inculcate the grassroots innovations that are based on traditional and indigenous knowledge systems and lastly to transform these grassroots innovations into commercialized technologies. The Honey Bee Network as a social movement organization has been analyzed from the vantage of the well-known resource mobilization theory of social movements. Lastly the paper brings out the socio-cultural embodied character of the grassroots innovations and their resultant technologies. And it is further argued that this bottom-up approach of technological development paves the way for sustainable technologies that are socially and culturally embedded and are founded on social participations. Such technologies are perceived to be representative of an alternative paradigm to that of modern western technologies.

Rise of Self-Help Groups As a Social Movement: Experiences from the Indian State of Odisha

Studying and participating in the process of development has been the approach of governments in developing countries and Non-government organizations (NGOs) through which they have taken plethora of initiatives following both top down and bottom up approaches. Some of those (initiatives) succeeded while others failed. But no programme for socioeconomic development was so wide-reaching and popular than the Self-help group approach. Self-help group (SHG) is a small, economically homogeneous and affinity group of poor people who come together to save some amounts regularly, mutually agree to contribute to a common fund, meet their emergency needs, adhere to collective decision-making, resolve conflict through collective leadership and provide collateral free loans on terms decided by the group. These groups try to empower the least empowered sections (mostly women) socially, economically and politically. Involving millions of women (through SHG), thousands of NGOs, MFIs, and bank branches give this phenomenon a movement perspective.

This paper is an earnest attempt to examine the evolution and development of the phenomenon of SHGs from social movement perspectives. It is an attempt to créate an alternative theoretical perspectives to study it. The paper uses the resource mobilization theory and constructivist approach as the analytical frameworks to explain the emergence and working of SHG system. The political and cultural opportunity structure in Odisha has been very much supportive to make the movement wide spread. At the same time operation and control from the top (Government of Odisha) affects the rigor of the movement. The paper discusses some such complex issues of collective actions.

The Transmission of the Chineseness to Chinese Descendants in Thai Society through the Understanding the Meaning and Religious Symbols

The research entitled “The transmission of the Chineseness to Chinese descendants in Thai society through the understanding the meaning and religious symbols” aims to investigate the existence of Chineseness in Thai society focusing on transmission patterns and how Chineseness being transferred to the young Chinese generation born in Thailand, which include the transfer of knowledge and understanding of the meaning of important Chinese festivals and traditions, problems related to the transmission of Chineseness, and the factors supporting the success of the transmission of Chineseness. This study is an applied research integrating both quantitative and qualitative data which collected by questionnaire and an in-depth interview. The findings are that a majority of the research participants still have their beliefs and faith in gods and sacred or holy items. Most of them still pay their respect to gods on Chinese Sabbath Days as well as to their ancestors. Chinese New Year and Chinese Autumn Festival are two Chinese traditional practices inherited to every Chinese family in Thai society. Chinese New Year, Chinese Autumn Festival, Vegetarian Festival, Moon Festival, God’s Thanks Giving Day, and Fifth Moon Festival are among the most important festivals which the young Chinese generation agreed that these festivals should be inherited to the next generation. Most of participants have knowledge and understanding of the meaning of Chinese New Year, Chinese Autumn Festival, Vegetarian Festival and God’s Thanks Giving Day. The transmission patterns of Chinese festivals and traditions are either direct or indirect. The problems regarding the transmission to the young generation relates to social, cultural and economic factors. The factors supporting the success of the transmission of Chineseness are accurate information given by the old to the young generation, a refining process in a family, encouragement of the sense of Chineseness to the young generation.

A Generalisable Promise of Risk? Risk-Based Self-Regulation and the Inherent Limits of State Intervention in German Occupational Health and Safety Governance

In Anglo-Saxon academic discussions risk-based governance (RBG) has been identified as a method for rationalizing corporate and public governance processes top-down, i.e. offering a central management vision that can be ‘colonized’ by other domains and organisations in regulatory processes. As such, risk seems to entail a universally applicable promise for central governments to remedy blame for failure all while managing tight budgets. But does this hold true in distinct institutional settings?

Starting from the empirical observation of occupational health & safety policies (OHS) in an international research project (HowSAFE), we find that, in Germany, risk approaches largely emerge in arenas outside the central state, with normative justifications, governance forms and organisational logics that seriously contradict Anglo-Saxon state-centric RBG notions. Moreover, regulation of workplace risks in German policies is characterised less by a coherent risk strategy than by pockets of risk-based governance. These have emerged, for instance:

- in the funding structure of the public accident insurance (classifying companies into risk groups)
- in research priority setting and prevention campaigns of mutual trade associations
- in inspection strategies of the Lander (risk-rationalizing the use of limited control resources)

These fragmented and scattered risk approaches in German OHS raise the issue of risk-based self-regulation as a so far rather misrepresented form of risk governance. To enlighten this blind spot, this paper examines the role of territorial self-regulation by the sixteen Lander in OHS policy enforcement and public self-regulation by nine para-public organisations which govern the accident insurance, compensation and prevention in specific economic sectors. We show how self-regulation absorbs blame for failure and cost-bearing and contains RBG relatively unencumbered by the state. We argue that self-regulation inherently limits accountability pressures for central government, thus dismisses the promise of risk, and challenges some key conceptual and empirical claims of the Anglo-Saxon risk regulation research.

Restorative Justice Approaches in US-American Cities – Smart Responses in Stressful Times?
In 2010, about 750 adults per 10,000 of the US population were incarcerated. Mass incarceration in the United States affects nearly solely poor urban communities of color. US American cities are focal points of racial divide. Since years, the withdrawal of public welfare and intensified criminal prosecution are two sides of one medal. Current processes like urban gentrification and the on-going economi- 
crisis are widening the gap between upper and lower strata of urban society further. As social cohesion is harmed and cities are bankrupt, the level of stress experienced by the responsible and mostly local authorities increases. Does this stress turn the responses of authorities to the most vulnerable groups towards more innovative approaches to meet minorities needs best? Restorative justice approaches may offer more effective avenues to conflict resolution and enhance social cohesion and the communities’ capacity to build up resilience against crime and victimization. The main objective of the case study based research is if authorities in US cities made experiences of implementing new approaches of demonstration-oriented police practices in urban areas (1) where minority people lived. Could new practices guide the way for general improvements of the relation among police and minorities in the US? The cases under qualitative study will be northeastern rust-belt cities, where industrial decline and financial austerity triggers further social divide and structural disadvantage of the urban African-American population. As it transpires that the predicted differences in the basic structure of police-citizens relations between Anglo-American Common Law 
cultures (where Restorative justice philosophy first originated from) and contin- 
ental European Civil Law societies can be observed very clearly as a common de- 
nominator, results enable a comparative perspective among policing minorities 
with regard to Restorative justice in urban settings in Europe and the US.

In the investigation, the social integration of migrant children is analyzed through semi-structured interviews with migrant children aged 8 to 15, as well as by participant observation in state offices of Rights Protection. It is taken to be the exercise of its rights and the development of transnational practices and how social intervention hinders and/or provides that integration.

The concept of “Normative Power Europe” is one of the most actively debated among international relations scholars. It is usually presented as an alternative way to conceptualize the role of the European Union as a new type of interna- 
tional actor. According to Manners (2002), the distinctive feature of normative 
power is its “ability to shape the conceptions of ‘normal’”, and thus provide classify 
certain actions as legitimate or illegitimate. Achieving the status of a normative 
power is considered by most scholars and politicians as the greatest success of 
European integration, which has opened new perspectives for the EU as an actor on 
the global political arena.

The concept of normative power has been developed to account for the EU’s distinctive role as a foreign policy actor, but this paper is based on the prem- ise that its applicability is much wider, and seeks to explore the conditions for the emergence and functioning of normative power in non-European countries by comparing discourses and political practice in the EU and Latin America. Us- 
1999, 2005S) and taking the EU as the model case, it then looks at the normative as- 
pects of foreign policy discourse and practice in Latin America. This paper focuses 
on the pan-regional discourse, later to be complemented by individual country 
cases. The hypothesis is that a strong and independent counter-hegemonic dis- 
course, based on the struggle against world neoliberal injustice, exists in Latin 
America, which contributes to the emergence of normative power.

The Immigrant Childhood As Subject in Social Policy in Chile
This paper presents part of the results of a FONDECYT investigation, conducted 
by the author who has been financed with public funds, and whose objective is 
to analyze the integration of the immigrant children and adolescents, addressing 
the public policy and social interventions carried out by the State and ONG with 
migrant communities.

The study is based on the Sociology of Childhood that covers the childhood as a 
three dimension concept. The first one, as a social construction, which is dis- 
tant from the essential idea of the childish being, and expressed in different ways 
across the history in every sociopolitical context.

The second one, as a permanent sociological category of the social structure, 
although his members are constantly renewed, and the third dimension, which 
comprises children as “social actors with an agency capacity”, that open genera-
tional and gender relations of power with other actors, in their families and other 
social areas. Nevertheless, that social action is not often recognized in the soci- 
eity and in the academic field, due to the adultcentrism that discriminates them 
against because of their age and economic dependence (Jenks 1982; Qvortrup 
1994; James and Prout 1997; Mayall 2002; Gaitán 2006; Unda 2009).

Across semistructured interviews to migrant children aged 8 to 15, and by par-
ticipant observation in state Offices of Rights Protection, and in an ONG, the social 
integration of the migrant childhood is analyzed and taken to be the exercise of 
its rights and the development of transnational practices and how the social inter-
vention hinders and/or provides that integration.

Finally, it is complex that migratory trajectories and diverse social factors 
(such as gender, age, language, place of birth, nationality, social position among 
others) have an impact on the accommodation and social integration of the new 
imigrant generations, living in Chile.

The concept of “Restorative justice” is represented as a new type of interven- 
tion that migratory trajectories and diverse social factors such as gender, age, 
language, place of birth, nationality, social position among others) have an impact on the accommodation and social integration of the new immigrant generations living in Chile.

In Search for Collective Identity, the Production of Estonianness By Means of Choral Singing in Contemporary Estonia
This presentation explores the role singing and performance of national song 
plays on the (re-)production of Estonian national identity (Estonianness). Start- 
ning from the revitalization of the ethnic-civic debate (Brubaker 1996) in Eastern 
Europe, most scholars have assessed Estonian nation-building as being preva-
ently ethno-cultural (Latv 1998, Mole 2012). In particular, choral singing tradition that plays on the (re)-production of Estonian national identity (Estonianness) is interpreted through the prism of nationalism (Böhland 2011). This paper initiates a critique to the above ap-
proach by introducing three new dimensions: globalization, Europeanization, and 
multiculturalism. Informed from a structuralist constructivism (Bourdieu 1989) it 
combines analysis of social structures and institutions with perceptions of in-
dividual social actors. The main focus is on power relations incorporated into 
singing as a tool for identity production. In particular, it will be explored how the 
singing tradition responds to identity tensions between ‘ethnic Estonians’ and 
‘non-Estonians’, namely Russian speakers who constitute 26% of the population 
(census 2013). Considering singing tradition (1) in a network of social spaces – 
national and supranational, as well as (2) from the joint perspective of individual 
experiences and objective structures such as the state, allowing us to examine 
collective identity building mechanisms in post-socialist context in a nuanced and 
less deterministic way.

Doing Social Sciences on the Military Field: A Special Operation?
The purpose of this paper is to analyze the production process of scientific 
knowledge on the military and to reveal the complex and diverse relations – and 
their effects - between:

- the researcher and the military staff he or she is studying (depending on 
  the social background, the age, the gender, the academic level and 
  the military socialization of the former)
the researcher and the military institution (understanding of the functioning of the hierarchical organization and its values)

- the researcher’s academic environment (university or think-tanks affiliations) and the armed forces

The present paper aims at giving a thorough understanding of the complexity of the researcher social position during his/ her social sciences investigations in the army. It is based on a personal experience as a Ph.D Student working on the French Land Forces. Being at the same time a female Ph.D Student in political sciences working on the French Army, a junior academic and a reservist who enrolled as a private and evolves now in a high level headquarters, generates a very particular inquiry context and can be used as an asset if and only if the researcher is fully aware of the consequences of its presence on the military field.

This paper will also debate the importance of a personal and physical commitment from a methodological viewpoint and will discuss the opportunity of developing a comprehensive approach based on the simultaneous use of qualitative (sociological interviews, ethnographic observation), quantitative (questionnaire inquiry) and comparative methodologies. The usual case-selection problematic will be treated by focusing on a specific population: the French reservists. Lastly, the “specificity” of the army as a special social field that requires specific scientific tools (to gain access, to evolve in the institution) will be pondered.

Ecological Modernization as Discourse: A Media Analysis of Irish Newspaper

Ireland has had a very mixed response to the challenges arising from the fact that climate change is perhaps the greatest threat to this planet and to our current way of life. This research investigates how Ireland’s most important newspapers have raised awareness and disseminated information about the issues related to the challenges we face. Analysis of the trend in the coverage of climate change between 1997 and 2011 was undertaken in order to map the peaks and troughs in the media coverage of the issue, and to see if there was a correlation between the peaks in newspaper coverage and significant climate change events. A second stage of the analysis sought to uncover how the issue was framed by the newspapers. New types of issues were most commonly discussed. The final level of analysis sampled and coded the statements made by the actors whose views appeared in the Irish newspapers in 2007 and 2008 in order to generate the affiliation network database. This database was used to create four separate discourse clusters, each of which represents a different sub-discourse network within the overall climate change discourse network. Within these clusters actors are tied to each other through their shared positions on related issues. An analysis of the clusters and the complete discourse network found that the climate change debate was dominated by key economic and political actors that the discourse of ecological modernization was used to reconstruct the issue of climate change as a technological and economic challenge rather than an environmental one.

PEACOCK, DAVID* (University of Queensland, david.peacock@uqconnect.edu.au)

Institutional Ethnography and The Uses Of Critical Discourse Analysis

For Dorothy Smith, IE is both a social ontology and social scientific procedure that seeks to empirically investigate discourse as social relations that are organized by the activities of people. Such an approach creatively connects ethnographical methods to the local accomplishment of the social with a Marxist insight into people’s active participation in extended social relations that can ‘overpower’ and implicate them in wider ‘ruling’ relations and injustices. Critical discourse analysis has often been used by Institutional Ethnographers as a means to examine certain texts as they are embedded within a field established through sequences of institutional action. Yet the discourse analysis performed in much Institutional Ethnography to date has not paid close linguistic attention to the way the specific local actors utilise texts and discourses in an active appropriation of the ruling relations established by official discourses. Using data from an Institutional Ethnography in Ireland now in a high level headquarters, this paper illustrates how a Fairclough-inspired Critical Discourse Analysis of the hybridity of a sample of institutional texts and interview transcriptions is able to provide greater analytical purchase on how texts are actively appropriated within an institutional field of action. Retaining Smith’s focus upon texts and discourses within ongoing and daily interactions, I seek to experiment within this analysis how genres, discourses and styles (Fairclough) are assembled within a text within a given (higher education equity) social practice. This paper demonstrates how this kind of linguistic focus, when joined with an analysis of the functions that texts play in organising and sequencing a field of institutional action, offers possibilities for more nuanced accounts of individual and collective social agency in the process of semiotic and social change.

Dependency Denied; Health Inequalities in the Neoliberal Era

It is now well established that unequal societies have higher rates of health and social problems than more equal ones. Those adopting a psychosocial perspective see shame and invidious social comparison as one means by which inequality impacts the body, and the social body (Wilkinson & Pickett 2009). Whilst social epidemiologists have been interested in the measurement and quantification of this “objective inequality” and marginalisation of agency, for example, people are not passive recipients of inequality, they resist and endeavour to protect themselves, and there are debates about the place of political discourses such as neoliberalism in this process.

In this paper, findings are presented from a study of women in northern England which used Free Association Narrative Interviews (FANI) to explore the experience of life in an unequal, neoliberal society. Shame and social comparison were present in their accounts, but not in the ways anticipated. Women in the study did not know their place in a hierarchy, and detailed knowledge of the extent to which they were tipped into the bottom rungs was sparse. Women reported various shame avoidance strategies focused on protecting children from the stigmatising impacts of living with a lack of appropriate goods, and shame and shame avoidance were also seen in relation to the women’s body and homes. Most striking was a discourse of ‘legitimate dependency’ - an often painful discourse, where all aspects of dependency were disavowed and self-relation valorised, leading to considerable strain and distress.

We argue that this discourse represents a partial internalisation of neoliberalism; often expressed colloquially, using the language of therapy. It is manifest, especially to the holding of the self to impossible standards of non-dependence, and through the “othered” of those considered insufficiently responsible. This is an unstable and unhappy discourse, but one which seemed unavoidable for participants, in the absence of available, alternative explanations for inequalities.

Backbreaking Work: Female Food Vendors, Globalization and The Legacies Of Indigenous Systems In Southwestern Nigeria

The Emerging Trust in Clinics of Alternative Medicine

The demand for the services from practitioners of alternative medicine has increased within the last decades in those nations in which western scientific evidence has not been able to provide a satisfactory health care solution. The impetus for this paper is to examine how trust between practitioners and users emerges in clinics of alternative medicine where practitioners are self-regulated and the users pay out of their own pockets for attending non-authorised treatments with a limited scientific evidence of effects. Trust is a key concept for healthcare outcomes and has been mobilised in research of health. However, most studies focus on formalised institutional settings and only few sociological studies of trust have contributed knowledge into how alternative practitioners win their clients’ trust. Drawing on three qualitative studies (in sum 124 in-depth interviews and 3 focus groups) of different forms of alternative medicine, conducted in Denmark from 2006 to 2009, we explore how uncertainties are managed and trust emerges in the treatment encounter. By informing the empirical findings with a concept of intersubjective trust (i.e. Barbalet 2009), experiences among clients and practitioners are in focus to contribute new empirical insights on how trust is performed since the basis for trust is not evident. The analysis demonstrates that trusted in the alternative encounter comprises relational, bodily as well as material aspects.

PEDERSEN, INGE KRYGER* (University of Copenhagen, ikp@soc.ku.dk)
The Lifestyle & Health Jurisdiction: A Danish Case about Reducing the Development of Lifestyle Related Chronic Diseases

The objective of this paper is to contribute new insights on the intra- and inter-professional responses to, and dynamics within, an emerging jurisdiction of health problems related to lifestyles. It is examined how health professionals and hospital administration mobilised to reduce the risk of developing the most common and deadly lifestyle related chronic diseases. How are socially contested issues such as dieting, smoking, alcohol intake and physical activity (in Danish the so-called KRAM factors) defined and managed in terms of medical problems? A Danish case to illustrate the issues of disease prevention as they emerge in clinical practice in Danish publicly owned hospitals is: ‘KRAM screening & intervention’, that is registration and detection of patients’ so-called risk factors to strengthening the efforts on disease prevention. This intervention program followed up by disease prevention counseling is a free service provided by publicly owned hospitals. In the present in the Northern part of Denmark, eventually all over the country. One key jurisdictional dynamic to be analysed in this paper is: jurisdictional disputes and professional settlements (Abbott 1998, 2005): What is the division of labour between medical doctors and other professional groups within the interventions programs, and how is this division of labour maintained in professional practice and organization? Empirical materials include documents (standard procedures, registration forms a.o.), qualitative interviews with patients and counselors about goals and practices, and observations of counseling situations. It is discussed how medico ideas feed into the policy process and how governance networks are linked to explain why lifestyle problems are turned into the medical public agenda. It is discussed how medico ideas feed into the policy process and how governance networks are linked to explain why lifestyle problems are turned into the medical public agenda.

PEDERSEN, ANDERS* (University of Gothenburg, anders.pedersson@lir.gu.se)
Old Ways and New Ways: The Relation Between Criminology and Sociology in Post-War Sweden

The trajectory of criminology in 20th century Sweden can be described as that of a discipline under the influence of medicine in the first half of the century, and of sociology in the second. The change from one scientific perspective on crime to another took place in the decades following the Second World War. This shift has been explained by factors such as the decline of medical explanations of society and human behavior following the atrocities committed by Nazism, and the growing influence of American sociology on Swedish academia during the post-war decades. The validity of these explanations is still to be proven. And even if there is truth to them, the question of how the shift came about is still to be answered.

Lifecourses, Pensions and Poverty Among Elderly Women in Belgium: Interactions Between Family History, Work History and Pension Regulations

The precarious financial situation of many elderly women in developed countries is well-established. Nevertheless, in-depth insight into the persistent vulnerability of this group remains largely absent. In this article, we demonstrate how a specific focus on the interaction between work history, family history and pension regulations can provide greater insights into the mechanisms that produce poverty among elderly women in Belgium. To that end, we use data on some 9,000 women aged 65 to 71. Data on the poverty risk of these women is linked to career and family data, spanning over 45 years. We find that pension policy can indeed account for the higher poverty risk of some groups of elderly women (e.g. divorcees) as compared with others (e.g. widows). Similarly, pension policy can, to a large extent, directly or indirectly explain how previous life course events, such as marital dissolution or childbirth, affect old age poverty risk. However, our study also reveals some unexpected findings. Most notably, pension regulations fail to account for the beneficial situation of married women. Indeed, our analyses suggest that capital (income) may prove more decisive than pension rights to explain the low poverty risk of married women when compared to other marital groups. Drawing from our findings, we conclude with some suggestions as to where pension policy should go from here.

Conflicts within Finance Capital and Implications for the Climate Crisis

Particularly in the era of financialisation, the logic of financial capital is focused on (short-term) profits, often at the expense of environmental concerns in general, and climate in particular. Indeed if this were not so then there would likely be no climate crisis. Yet in recent times many groups, including elements of finance capital, have called for greater emphasis on long-term considerations including on climate. What is it that makes some parts of finance capital focus on climate issues while other parts eschew them? What motivates climate-interested investors and what is their potential for addressing the climate crisis? We address these questions through a combination of qualitative analysis of interviews and other disciplines of social science. Finally, it illustrates the complex character of the interdisciplinary relations needed to produce a fundamental change in the scientific perspective on a social problem.
Performance Consumptions, Sleep Management and Risk Perceptions

This paper aims to discuss the management of sleep as a focus for performance investments among youth, through the consumption of pharmaceuticals or other therapeutic products, such as natural medicines or supplements. In this context, sleep plays a particular role as a depharmaceuticalized resource to achieve a certain level of (cognitive and/or physical) performance. While being an object of normative discourses about “healthy lifestyles”, sleep is simultaneously presented as a feature that can be artificially optimized through performance consumptions that place it at the frontier between treatment and enhancement. The investigation that shapes these consumptions directed at sleep management not only reveal particular risk gradations attributed to therapeutic resources for those purposes, but they also express forms of management whose instrumentality organizes differentiated consumption practices, which are context-dependent.

Our analysis is supported by the results of an ongoing research about therapeutic consumptions to enhance physical, intellectual and social performance, among young people in Portugal (aged between 18 and 29). A mixed-method approach was used, including a nation-wide survey (n=1500), followed by semi-structured interviews (about 50 individuals, selected from the questionnaire respondents). On the one hand, the survey originated a set of quantitative indicators about youth sleep patterns, consumptions and predispositions to consume sleep management products, as well as perceptions of risks associated with them and ways of dealing with those risks. It also revealed how these indicators were socially distributed (in terms of gender, education level, occupation and scientific area of study). On the other hand, the interviews enabled the qualitative exploration of the specific purposes that lead to the consumption of products to help one sleep or stay awake, and provided information about the manner in which young people weight between risk and effectiveness and between the immediate and the deferred benefits regarding these consumptions.

Ontological Struggles: New Materialisms and the Challenge of Impotentiality

According to Giorgio Agamben, the most devious operation of power today is not its hold over our potentiality – what we can do – but over our impotentiality – what we can not do. Following this insight the paper interrogates the recent turn in cutting-edge social theory from cultural constructionism to new forms of materialism and naturalism. On one side the emancipatory import of deconstructing traditional accounts of knowledge, reality and subjectivity is questioned for its eventual ineffectiveness against domination and inequality. On the other, cultural constructionism is deemed incapable to account for the materialities emerging from technoscience advancements. Traditional ‘negative’ modes of critique are replaced by ‘affirmative’ orientations which celebrate the dynamic, vital, ‘agential’, ever-changing character of the organic and inorganic world, and their active engagements in distinguishing epistemic and ontological states, substance and information, matterality and virtuality. The puissance of life is increasingly played against the constructions of pouvoir. The paper analyzes new materialist standpoints, with special reference to feminist and post-Marxist positions, focusing on two problems. First, as if overwhelmed by technoscience’s success, new accounts of matter and subjectivity rely heavily on the former’s, hardly normatively neutral, images and metaphors. Second, the growing replacement of ‘being’ with ‘doing’ implied in new ontologies, suggests we are confronted with a most accomplished expression of the operational paradigm that underpins Western metaphysics. As a consequence, emancipatory puissance and dominating pouvoir are increasingly blurred in an ontological politics which seems today the ultimate terrain of social struggles — as testified by actual difficulties in distinguishing neoliberal human enhancement programs from new materialisms’ post-humanist pleas. Fighting inequality and domination, it is argued, entails pointing to the opposite direction to much proclaimed futures of, i.e. towards ‘impotentialization’ of matterality and impotentiality. The paper discusses the indications provided in this regard by Agamben and Adorno.

Eating Organic, Growing It Yourself

There are many things to talk about when discussing organic food, from class to gender, ethics, health, cross-border supply chains, environment, food-security. In Cambodia the discourse of organic food has emerged during this past decade, especially as result of the increasing unregulated food import from neighboring countries. It has become even more worrisome as local farmers wildly use chemical inputs without proper skills and State control. Ironically, for many rural Cambodians, the question of organic food seems to be less relevant. For them, organic food is normal. It is what they produce or source locally in the village. Instead, their important questions are about feeding their families and balancing this immediate need with caring for nature, ensuring that their land remains fertilized and cultivable for the younger generations.

This paper focuses on organic rice, the main agriculture crop in Cambodia. Even though the country is self-sufficient at the national level and produces surplus for export, pressure to reach export targets leads to big farms using more chemical inputs, which they can easily get from the market. Hence rice is not always organic as local people have thought. As such, many high-income households carefully source it from local markets or directly from farmers they know, creating a unique network of producers-consumers. Interestingly, some people have started farming rice for their own consumption and have minimize purchasing it from the

...
market. We have also seen increasing number of ethical organic food suppliers, those managed by non-governmental organizations or private owned businesses. This paper uses two contrasting cases of organic rice farming from two provinces in Cambodia to illustrate how this organic rice is produced differently and how social status, household incomes, and community development programs influence and shape the decision of producing and consuming organic rice.

**Securing Food While Caring for the Field: A Case of Rice Farmers in Kampong Speu, Cambodia**

Since the adoption of Rice Export Policy, Cambodian rice export market has emerged and the country recently joined the top ten rice exporters. While nationally it produces surplus, many poor rice farmers cannot produce enough for home consumption. Small farmland, unfertilized soil, unsecured land ownership, limited access to irrigated water and unpredictable precipitation are some major causes of their low productivity.

Furthermore, around 43% of rural population depends on purchased foods. The increase of export volume potentially puts more pressure on these consumers, especially the poor, because it is uplifting local prices to as close as the international prices.

Facing food insecurity and having to cope with agricultural production challenges, some smallholders still continue their conventional approach of sustainable land use. Instead of trying to increase productivity through using chemical inputs, these rice farmers choose to preserve and improve their soil quality using organic fertilizers. This is particular for poor smallholders interviewed in Kampong Speu province.

Because rice farming alone is not enough and with limited supports from Government, alternative coping mechanisms that these farmers have adopted include diversified agriculture activities i.e. vegetable home garden, crops farming, livestock raising; seasonal agricultural and non-agricultural works within the village, in nearby villages, or in neighbouring countries; and work related migration to industrial towns.

Using data from a fieldwork conducted in Cambodia early 2013, this presentation will examine these above approaches undertaken by farmers in a district in Kampong Speu province. All interviewees, except two, are part of livelihood programme supported by a local organization, Action for Research and Development, which recruits these beneficiaries based on their economic and social status: families without or with small farm land; families with many children; families that are heavily indebted; poor families with disabled members; or elderly people without support from their children.

**Reshaping and Reframing Gender, Care and Migration: With Focus on Asia-Pacific**

In the recent decades, changes in economic structures and women's shift into paid labour have strained the family's capacity to perform care, while worldwide population ageing has led to increased demand for paid care workers. The resulting "care deficits" represent a challenge for individuals seeking to reconcile work and family as well as for national policymakers who must balance demands for care with those for equal opportunity for women, and for the full development and utilization of human capital. The need for care has also reinforced "global care deficits" represent a challenge for individuals seeking to reconcile work and family as well as for national policymakers who must balance demands for care with those for equal opportunity for women, and for the full development and utilization of human capital. The need for care has also reinforced "global care needs" need to ensure sustainable development, and for the full development and utilization of human capital.

In the context of the family, the need for care leads to the identification of "care deficits" that draw women from poorer nations employment as care workers in wealthier ones, creating not only care deficits but also a "care drain" in sending countries. This highlights the changing global context for care and migration, the new forms of gender and global inequalities, and critical roles that policies can play in reducing inequalities while providing essential care to those in need.

The paper examines political, institutional and cultural factors that have shaped, and are reshaping, ideas and norms of care, focusing on Asia-Pacific context. Definitions of care determine what care is and should be, and who will provide care – family members, communities, and/or paid workers; native-born people or migrants – and the extent to which care may become commodified. How do these definitions shift and adapt as conditions change? How do migration regimes (the laws, regulations and practices surrounding immigration) shift in response to changing demands for care workers?

**The "New" Social Investment Policies in Japan and South Korea: Social Inclusion through Social Care Expansion**

China's internal labor migration has attracted worldwide attention during the last three decades. While studies on rural-urban migration and its implications for China's development proliferated, the reverse flow of these migrant workers and their lives in rural villages or townships upon their return have been largely ignored. In China, many women migrant workers have chosen to return to their rural villages upon their marriage and pregnancy. This paper explores the meaning of city working experience for migrant women and the role of women play both in decision-making of return migration and in establishing their new lives in the changed rural context after staying in cities for an extended period of years. It challenges the stereotypical images of Chinese migrant women who are always depicted as passive recipients of the structural constraints such as the patriarchy system, capitalist market and state policies. Rather than severing their connections with rurality and upholding the modernity they gained from urban experiences, many of them are actively trying in their own ways to reconcile their liminal identity by working on "ruralizing" some "modern" values while others are "modernizing" the "rural" values. Either way they are reconstructing a collective identity for themselves with meanings only they themselves would understand and appreciate. Besides, through critically employing Bourdieu's theory of practice, it puts forward a multi-field perspective in understanding these returned women's identity reconstruction and daily practices and highlights the importance of localization of western theory in Chinese context.

**From Motherhood Penalties To Husband Premia: The New Challenge For Gender Equality and Family Policy, Lessons From Norway**

Given the key role that processes occurring in the family play in creating gender inequality, the family is a central focus of policies aimed at creating greater gender equality. We examine how family status affects the gender wage gap using longitudinal matched employer-employee data from Norway, 1979-1996, a period with extensive expansion of family policies. The motherhood penalty dropped dramatically from 1979 to 1996. Among men the premia for marriage and fatherhood remained constant. In 1979, the gender wage gap was primarily due to the motherhood penalty, but by 1996 husband premia were more important than motherhood penalties.

**Relocation and Perceived Social Support Among Elderly Persons in Rural China**

In China, recent relocation policies have seen millions of people moved from their homes in efforts to reduce poverty, address environmental and disaster-related concerns, and make way for major construction projects. Many of those who are being relocated are older adults, moving for the first time in their lives away from their rural ancestral homes and villages. Yet, little is known about the implications of relocation for older adults, including its implications for access to social support and social capital. However, this is an important outcome in the Chinese context where, for centuries, older individuals have relied on family members for support. This study addresses these issues using data drawn from the 2011 Ankang Study of Health and Well-Being (ASHW) conducted with a representative sample of 613 rural residents aged 60+ living in the Ankang region of China. Over the last 10 years, the provincial government has implemented policies designed to relocate 2.4 million residents or 80% of the total population in the region.

Multivariate regression analyses show that construction-related relocation has no impact on perceived support. However, poverty-reduction and disaster-related relocation are associated with a reduced level of perceived support available from others with the exception of social interaction in the case of disaster-related relocation. Ecological relocation also had a negative impact on emotional support. These findings support the view that relocation reduces older adults' perceived access to social support. This is particularly evident with regard to poverty-reduction and disaster-related relocation. Possible explanations for these differences are discussed as are the potentially important implications of these findings for future health care policy in rural China.
The material convergence that occurs in disaster-affected areas is well documented, as are the associated complications that arise. Among these challenges, research has documented the arrival of donations in excess of the need, of material donations instead of monetary contributions, and the donation of items inappropriate in the time, place, or cultural context (Holguin-Veras et al. 2007; Neal 1993; Neal 1994; Rodriguez et al. 2006). Despite the discrepancy between what is needed and what is donated, people continue to make these kinds of contributions. This paper examines the subjective meanings and understandings people who participate in disaster relief give to donations and need. Using Entman’s (1993) definition of framing, this research examines how donors frame post-disaster needs, including their problem definitions, causal explanations, moral evaluations, and treatment recommendations, as well as what information and sources inform those frames. Preliminary analysis suggests that participants frequently construct involvement in disaster relief as a moral obligation, though the source of that moral obligation can vary in form, including religious motivation, the mission of the organization to which they are a member, or a personal connection to the area. The donation is not only the treatment recommendation to meet a subjective construction of need developed by internal rationality and information attributed to other sources. Some view the donation of material goods specifically as a treatment for the perceived problem of recipient misuse of monetary donations (be they a disaster relief organization or the individual information attributed to other sources). Some view the donation of material goods specifically as a treatment for the perceived problem of recipient misuse of monetary donations (be they a disaster relief organization or the individual identifying as a disaster victim). Though not always explicitly stated, participants see the cause of the need as external to those affected by the disaster. Donations are determined accordingly based on these frames. Thus, how these frames are constructed has implications for disaster response.

Interconversion of Capital and Structure of Inequalities – Managing Transition Toward Adulthood in Transforming Society

This paper draws on Bourdieu’s concepts of ‘capital’ and ‘field’ to examine how different social groups of young people negotiate the transition into the labor market and toward adulthood – particularly the interconversion of various forms of capital, in the process contributing to the reproduction of inequalities. The transformation of the Cambodian society toward a modern industrial and service economy has entailed a new context for youth labor market participation. The emergent occupational and mobility field has become characterized by the stratification of passages into poorly-paid, labor-intensive workers and university graduates, and by a dual youth policy discourse of promoting the enterprising subject and protecting the ‘at-risk.’ Based on a study of the life experiences of young female and male, middle-aged, and UK-born workers in Cambodia in 2011–2012, this paper demonstrates how different forms of capital are drawn upon by differently positioned youths in managing their transition toward adulthood. The rural youth rely heavily on their social network and embedded cultural capital to produce economic resources for mobility and future security. On the other hand, those with relatively higher economic capital, mostly the urban youth, concentrate on accumulating institutionalized cultural capital, and sometimes developing new embedded cultural capital, for mobility and successful adulthood. The results are to be interpreted in the context of a new life course sequence, a welfare state, and the instrumental family of Cambodia. At the interactional level, the transforming society has entailed two differentiated capital conversion strategies for the rural poor and the (often urban) resourceful in the transition toward adulthood, but neither group/strategy is insulated from new risks and uncertainties of the life course. At the socio-structural level, the process contributes to an altered structure of inequalities broadly tantamount to the emerging working and educated middle classes.

Life Course Opportunities and Uncertainties in Transforming Society – Managing the Transition into the Labor Market in Late-Developing Cambodia

The generalized ‘late’ modern change, including post-industrial capitalism and increased individualization, has by now become a powerful tool for youth and life course sociology to describe emerging patterns, risks and uncertainties of modern lives. Although research has increasingly been focused on the risk and uncertainty experienced as part of personal biographies via their socially differentiated positions, a Eurocentric standpoint remains influential as recent life course changes and risks are seen as diverging from the modern industrial ‘normal’ life course. This paper attempts to address this by designing an altered structure of inequalities, opportunities and risks in the individual’s social context and biographical experiences. First, I will position the contemporary transformation of Cambodian society in the context of modernization theory (Beck 1992; Giddens 1990) and debate on the various aspects of modernity (Chang 2010; Eisenstadt 2011) to make a case for a more specific examination of change toward a modern society. I will then reconstruct the processes of Cambodian transformation and how they feed into the opportunities and risks for new life courses. A theoretically informed but empirically grounded typology of biographical management, based on a study of the life experiences and expectations of different social groups of Cambodian young people (n=51), will be used to illustrate how the opportunities and uncertainties in the new life course are differently managed based on socio-cultural and individual resources during the transition into the labor market and toward adulthood. This shows that in the context of compressed modern transformation, not only does the life course encounter both new risks and opportunities, but it also requires a mix of traditional and modern frameworks and resources to deal with inherent uncertainty.

A Brief Historical Overview of Gender Studies in Our Region: The Cases of Argentina and Brazil

In recent years, the term “gender” has gained visibility in social discourse. That is why expressions such as “gender violence,” “gender identity,” “gender equality” among others appear everyday in mass media. Such discursive proliferation can not be properly understood without taking into account the discussions held within feminism as a social movement and an academic stream.

The area of knowledge we now call “gender studies” was first consolidated at the universities of the central regions (United States and Western European countries). Our Latin American region has not been left out of this epistemological, theoretical and methodological renewal. Therefore, in this paper I am looking forward to: 1) exploring the origins of the category “gender” as a tool for analysis in contemporary social sciences and humanities and 2) focusing on the historical configuration of this interdisciplinary field in two national cases, Argentina and Brazil (and also highlighting some similarities and differences between them).

Who Settles For Less At Work? Subjective Dispositions, Job Characteristics, and Job Satisfaction

In recent years there has been growing interest in individuals’ self-perceptions of their wellbeing on the grounds that these complement well-established objective indicators of welfare. Wellbeing in relation to work, captured for instance by measures of job satisfaction, has not been an exception. The discourse on work in post-industrial societies has shifted from perceiving labour as a means for subsistence to conceptualising it as an important aspect of individuals’ identity and self-realisation. Consequently, the utility people gain from their work has become an important feature of modern working life and subject to increasing academic attention. However, individuals’ assessments of this utility depend on both the objective circumstances that they experience at their jobs and workplaces and their subjective, idiosyncratic dispositions, such as their aspirations, expectations, or personal evaluation criteria. We add to the literature by formulating and testing a modelling strategy that unscrambles how the latter subjective dispositions differ across population groups. We do this by estimating a within-job fixed-effects model which, by controlling for all objective characteristics of the job and workplace, enables us to explore how subjective judgements concerning job satisfaction and other work arrangements are made by different types of workers.

To achieve this, we use data from a large-scale matched employer-employee dataset collected from the UK – the 2011 Workplace Employment Relations Survey (WERS). Following reference group and relative deprivation theories, we expect to find significant differences in the way in which individuals with different socio-demographic characteristics rate the same objective working conditions. More specifically, we expect female, young, elderly, and migrant workers to be more satisfied with their jobs and arrangements than their same-sex and age counterparts, respectively. Any such findings would have important implications for how subjective evaluations of working arrangements are to be collected and analysed using survey data and used to inform evidence-based policy.
The main goal of this paper is to describe the professionalization process of sociology in Argentina during the last five decades. First, it examines both the role of sociologists in Argentina during different historical stages and the situation of the teaching of sociology, trying to identify different traditions and tendencies. Second, the paper additionally describes diverse organisational frameworks in which local sociologists have tried to set their professional and academic issues. Third, it presents some data from a research that focusses on the working conditions of sociology graduates in Argentina from three different cohorts. One, a group graduated from 1961 to 1974. It had an early and successful professional insertion, linked with teaching and state planning. Two, another group which received their degrees from 1984 to 1992 had more problems in searching for jobs, but new opportunities in public opinion polls and consultancy were expanding. Third, a young cohort of graduates since 2002 who found an institutional scenario of new social demands and requests for sociological knowledge at academia, state and private sector. The paper looks for an answer to what were their jobs and how they started and followed a professional career in sociology, trying to identify the socialization process of their actions and the political and social networks to which they were affiliated. Methodology combines the use of previous data, the job situation of sociologists in Argentina at different historical stages with a survey, trajectories reconstruction and in-depth interviews. Finally, this paper reflects upon the multiple challenges that sociology in that country faces at the present: institutional expansion, funding opportunities and social recognition combines with institutional fragmentation and lack of consensus on sociologists as workers and professionals.

Emotional Control in the Financial Marketing
In the scope of a major research program about emotional normalization in the contemporary capitalism, I would like to focus on the emotional normalization of the financial investor. By analyzing Behavioral Economics texts about the emotions of the economic man in the financial market, I pretend to show how this bibliography: 1) explains economic crises as consequences of emotional based decision taking, a irrational behavior of the economic subjects responsible for breaking the market equilibrium; 2) normalizes emotions of the investors and offers self control techniques; 3) teaches how to predict and to use the emotional conduct of others investors to obtain economic profits. This bibliography, recognizing the investor as a emotional being, converts emotions in a professional competence that requires previous training to develop human capital. In this way, emotions are regulated and subordinated to a economic logic.

The Potential of Telecare/Aal Technologies for Enabling ‘Ageing in Place’ in Rural Areas in Poland and Germany
The vast majority of older people wants to continue living independently in their own homes for as long as possible. This preference poses a particular challenge in rural areas where family members are often not available for support since they moved to the economic hubs in the big cities for earning a living and care providers have to travel long distances. Telecare and other ambient assisted living (AAL) technologies can provide an alternative if linked to emergency care services. This paper will explore the potential of these technologies for enabling older people in rural areas to ’ageing in place’ in two regions in Poland and Germany with a particularly high share of older people – the Malopolska region surrounding the city of Cracow and Upper Lusatia (Oberlausitz) – to the east of the city of Dresden. Both areas are characterized by outmigration of the younger generations, declining fertility and growing shares of older people.

This research analyzes the potential of telecare/AAL technologies for improving older people’s quality of life based on two explorative pilot studies focusing on the provision of telemedical services to senior citizens. Thereby, the analysis considers opportunities as well as risks of telecare/AAL application in older people’s homes. In the Malopolska region, a group of older people was provided with telecare/telehealth equipment monitoring bodily functions, such as ECG or blood pressure, which are monitored by telemedical/telecare systems enabling remote examination, consultation, and diagnosis. The German study takes a slightly different approach in focusing on matching older people with an interest in AAL/telecare technologies with providers of the latter. The process will be evaluated in a longitudinal user survey measuring their experiences before, during and after using the technology, which in turn will be compared with findings from an independent sample.

**Work Social Representation Among Young People and the Ambiguity of the Development Policy in Poland**

This paper aims to examine the perception of the meaning of a "good job" among young generations in Poland. The economic policies implemented in recent years have emphasized the importance of entrepreneurship among new generations. The immobility of generations raised during the communist period is usually seen as an inconvenient that stop a major development. This is very clear judging by the number of public advertisement that encourage students to start up their own business, the invitations to take part on competition for the "best business project", the highlighting of entrepreneurship related subjects in the universities’ curriculum and the emergency of certain entrepreneurship icons within the political spectrum. By mean the conduction of focus groups, in-depth interviews and participant observation, the current research inquiries on the idea of a "good job" among young people, with a special stress on how entrepreneurship is seen. Despite the pessimistic and dominant discourse about the low wages, working in some of the many foreign corporations that has invested in the country in recent years is seen as the top of the mind job. This accounts for the importance given to the symbolic meaning of belonging to an "international" organization, the social status provided by it and the need of constructing a "modern" identity of themselves. All these things, despite the usual low wages and lack of career opportunities provided. Asked directly about the possibility of becoming entrepreneur or employee, it is seen as a step subjected to first success in a corporation. Entrepreneurship incentive policies might not have the expected results. The fault might be, among other reasons, the contradictory nature of the public discourse between, on one hand, the importance given to entrepreneurship and, on the other hand, the persistence for attracting globally-driven investment by established corporations and elites via tax break and low salaries policies.

**Mobilization and Performance in the Public Space in 2011: A Comparative Approach**

From the Tunisian Revolution onwards the increase in social mobilizations around the world shows not only a significant shift in the political sphere but also some heavy evidences of social change. Young people, who have been at the center of those mobilizations, are especially susceptible to provide evidence of change when cultural, moral or attitudinal issues are involved. Furthermore, such mobilizations possess significant symbolic and cultural dimensions, and constitute unique experiences in which a great charismatic power, able to trigger off social and cultural change, is generated. These experiences may or may not have a ritual nature. According to J. Alexander, in the less complex and differentiated societies, social cohesion is generated by rituals, understood as periodic repetition of symbolic interaction in which participants fuse in the whole. However, in more complex and differentiated contemporary societies, the ritual is unable to keep fusion by itself, thus allowing for social performance to achieve the re-fusion of those social elements no longer cohesive. The main goal of this paper is to approach some of these mobilizations in which youth occupied the streets as social performances, and to explore its consequences for social change. The four 2011 cases to be analysed are: the Egyptian Revolution, the Spanish Revolution (15-m), the London riots and the Youth World Day in Madrid (27/8/2011). They are analyzed following the basic elements that shape social performances: actors, audience, collective representations, meanings of symbolic production, mise-en-scène and power

**The Values Of Scientific Ethics: A Way To Face Inequality**

Scientific work is one of the most socially valued activities, as it is a complex task that requires specialized professionals and very specific knowledge and skills. Science characterizes itself because its permanent growth and its self-regulation. It means that any proper or formal research has to be necessarily subject to scrutiny, refutation and peer approval. Scientific work can be profitable and advantageous. In fact, nowadays, science and technology are usually considered strategic areas to the economic growth, innovation, productivity and competitive-ness.

However, impacts of scientific research cannot remain only in the economic field; on the contrary, it must also help the social, communal and personal development. In this paper, we talk about the social responsibility of science and how their results can contribute to improve the living conditions of individuals and to reduce inequality. At first, we analyze the values that support scientific ethics and then we discuss about the ethics of commitment and social responsibility.

We focus mainly on three principles: 1) the observance of the integrity and the respect of the human rights, 2) the social commitment of research and 3) the assumptions of the individuals, communities and countries where the research is carried out. Then, we present the results obtained from a study developed with a group of professors-researches from the Juarez Autonomous University of Tabasco. The objective was to identify the values that distinguish their work as researchers.

The results showed us that, regarding scientific ethics, some values such as objectivity, self-regulation, confidentiality, professional collaboration and the pursuit of knowledge are deeply seated in the researchers’ practices; however, social commitment and responsibility seem to be less important to the researchers’ work, especially when they have to compete for funding or when complying with the deadline and amount of production.

**Working Circumspectly: What Are the Implications for Teaching in Multicultural Australia?**

Migration, in the era of globalisation has created unique learning environments in Australian schools. While teachers’ chatter and media debates focus on the merits of current education reform agendas a deadly silence reigns over the question of teaching and learning in culturally diverse communities. Government reforms increasing emphasise the importance of national testing regimes as a measure of student achievement, school performance and teacher quality. Such emphases have, according to recent research, impacted negatively on curriculum and pedagogy (Duller et al, 2102) and created classroom environments that are neither responsive to the needs of students nor inclusive (Thompson, 2013).
This paper presents a methodology for investigating teachers’ everyday practice that draws on Institutional Ethnography, Critical Discourse Analysis and Ontological Inquiry as a means for uncovering, not only the being of social relations in everyday practice but also how that relation can be understood ontologically. It addresses, in particular, how the mediation of teachers’ work relates to the influences and interests of others by tracing the constitution of social relations disclosed in relations that emerge between teachers’ perceptions of practice and their enactments. In doing so, the being of the social comes into view.

IE’s recognition of being in practice is acknowledged. To better understand the impacts of this ontological dimension on practice, analysis of data, extends IE by drawing on Heidegger’s (2005) conception of ontological inquiry. This has been chosen for its dual focus in explaining the significance of Being, itself, and to reveal explicitly the Being of people and equipment in teachers’ work.

Analysis of research data offered by practising teachers, confirmed textual mediation in everyday practice. It revealed, too, teachers who practised circumspectly. In doing so, the ontological significance of who we are to how and why we enter into social relations was exposed.

*Women’s Schooling behind Infant Survival. Modeling Demographic Dynamics in Non-Affluent Countries*

This paper examines the critical relationship between women’s education and infant mortality. This relationship is a key to the demographic transformation of the global south. This quantitative study examines the relationship between female education and infant survival in 80 developing countries. It is found that the relationship between women’s schooling and infant survival is shaped by a set of social and health-related variables. These variables have been rarely studied simultaneously. Evidence in the paper is drawn from datasets some of which have only recently become available from agencies including UNICEF, UNDP and UNESCO. The data is controlled by income level, population size, as well as by the extreme epidemic or political instabilities. Missing data is replaced by regional averages. The path-models on infant survival provide new estimates showing the extent to which women’s education influences infant survival in the global South. The study shows that the most powerful societal covariates determining the relationship between infant mortality and women’s schooling are income poverty, child health services and breastfeeding. Women’s education explains 30-40% of the cross-country variation of infant survival. A key finding is that influences outside the health sphere improve health practices and performance. This global update is in line with what smaller N country-studies and survey based community studies have shown. The results stress that the universal social policies including women’s education, poverty alleviation and multiple health policies intersect in fundamental ways for better infant survival. And that universal social policies are fundamental in explaining the pattern of demographic transition in the global South.

*The Making Of Obedience To Authority: From Binet To Asch To Milgram*

The design of Milgram’s Obedience to Authority can be traced back through Asch’s classic experiment on conformity to Binet’s experiments on memory and suggestion. Binet and Milgram used what is now termed exploratory experimentation which is not guided by theory or hypotheses but consists of carrying out systematic variations to formulate empirical rules. Binet conducted two experiments. Binet and Henri (1894) wondered what would happen if school children were given a suggestion so slight that they did not notice its existence? Children were shown a model line on one board and then had to identify the model line on a second board that contained a set of lines including the model line. When the student picked a line on the second board, the experimenter would quietly ask, “Are you really sure? Is it not the next line?” In a second experiment Binet (1900) showed a group of three pupils six objects on a poster board for a few minutes and then asked them a series of questions about what they remembered about the objects recently seen. It was revealed that the students performed this task jointly and the students competed with each other to be the first to give an answer. Years later Asch (1951) would combine Binet’s two experiments in his classic study of conformity to groups. The group viewed a model line and then the naive subject would find himself disagreeing with the others on matching the model line. Milgram knew of Asch’s experiment but wanted to generate sufficient social pressure on an individual in a one-on-one situation. The Binet and Henri experiment with its questioning of the choice of line provided the bridge between Asch’s group conformity and Milgram’s (1974) researcher/experimenter prodding the teacher/learner “to please continue” and “the experiment requires you to continue.”

*Transnational Solidarity Of Trade Unions In Europe: Two Cases Of Institutional Work Against The Background Of The Euro-Crisis*

Trade unions and labour movements have emphasized solidarity as a universal principle based on common interests of all workers, regardless of borders and boundaries. Despite this rhetoric they have primarily organised national or sub-national collectivities and contributed to establish common identities and moral norms in these contexts. Modern notions of solidarity are thus firmly established at the national level, while at the European level liberal market principles and social indifference predominate. This prevailing social indifference has been challenged by at least two developments: (1) the introduction of a common currency, and (2) European economic governance in response to the Euro-crisis. Both developments have led trade unions to transnationalize their strategies: (1) As monetary integration abandoned the option to devalue currencies as a strategy to improve international competitiveness, wage setting institutions have come under pressure. This in turn induced trade unions in some sectors to coordinate their wage bargaining policies across borders. (2) Far reaching austerity measures in EU countries had a big impact on labour market and social policies - trade unions responded to these demands by organizing and mobilising resistance at transnational level, e.g. the European Action Days.

Our empirical research in both fields (wage bargaining and protest movements) is guided by the following question: What constrains and opportunities have trade unions in Europe encountered in their strategic attempts to create and maintain solidarity enhancing institutions at transnational level?

Our central argument rests on two assumptions proposed by the classic sociologist G. Simmel (1908): He states that conflict is an important step from mutual ignorance to social integration. However, the integrative impact of conflict is dependent on legitimized institutions and practices of conflict resolution (Vobruba 2013), which themselves are contested. To explain union strategies in multi-level fields we use sociological institutionalism (Scott 2008; Lawrence/Suddaby 2009) and power resource theory.

**PERO, DAVIDE** (University of Nottingham, davide/pero@nottingham.ac.uk)

**ALBERTI, GABRIELLA** (Leeds University Business School)

This paper discusses collective practices of migrant workers in Britain who organise to improve their disadvantaged work and life conditions. It will draw on ethnographic data and cultural productions about labour organising initiatives in the cleaning sector such as ‘The 3 Cosas Campaign’ and ‘Justice for Cleaners’ whereby migrant workers have been struggling for more dignified and equitable working conditions with the support of their communities, within and without formal and recognised trade unions. This discussion will critically consider the complex relationships that developed between these workers (many of whom are from Latin America) and local labour and community organizations, focusing on the tension between the class-based and so called ‘ethnic’ identities of the grassroots groups under study.

The paper aims to contribute to the theoretical debate on how to apply the framework of intersectionality (Yuval-Davies 2011) to the study of migration and labour movements. Inspired by recent critiques of the resilience of methodological nationalism (Glick Schiller and Caglar 2006; Glick Schiller 2008), our examination will question prevalent theorizations of collective action and migrants’ forms of political engagement persisting in social movements and migration studies. It will also question the ethnocentric and institutionalist focus of traditional industrial relations literature highlighting the benefits of an interdisciplinary approach to the study of migrants’ politics across the literature on migration and labor relations.

Elles font preuve devant la rigidité des conditions d’immigration imposées.

- la mobilité, les possibilités de socialisation hors du foyer de travail, et l’implication de l’isolement chez les travailleuses interviewées, et comment celui-ci se traduit-il dans le quotidien des répondantes? Comment les participantes s’adaptent-elles aux contraintes de logement? Une douzaine d’entretiens semi-dirigés a été réalisés auprès de femmes immigrantes en cours de réalisation ou ayant récemment complété le PAFR nous indique que certains facteurs tels que le degré de réalisation des besoins non-méthodes de la satisfaction des besoins non-économiques, l’isolement et/ou la mobilité peuvent être considérés comme des obstacles pour la réalisation des besoins non-économiques.

Relational contracting is a partnership contract where asymmetries arise. The main asymmetry is about information access, which is selective among and within cities in the digital era. A second asymmetry is about the capacity of expertise to make decisions and to be experts immediately usable without being “real” members. Second, this concurrence of intra/extra-party legitimacy can be understood practically also as a better and quickest application of experts in the state or local management to the detriment of class- and sectoral members. Thirdly the other face of this phenomenon is that the less party socialized experts are less disciplined or that they are more prone to defections or change of party affiliation during their mandate.

For this paper we will focus on some aspects but we will discuss mainly the the-sis of a practical mix of intra-extra-party legitimacy in the sense of the response to the need of new members seen as specialists or experts. For instance a problem can occur at the time when party came to the power and it gives to members some places or functions (retributions).

Our hypothesis, facing the question of intraparty democracy, is that there should be a conflict between two diverse legacies but overall that such a need for experts contribute highly to undermine the importance of intraparty socialisation and, at the end, weaknesses the party organisation: the members have not to be active for the party as itself, but they have to be experts immediately usable without being “real” members. Secondly this concurrence of intra/extra-party legitimacy can be understood practically also as a better and quickest application of experts in the state or local management to the detriment of class- and sectoral members. Thirdly the other face of this phenomenon is that the less party socialized experts are less disciplined or that they are more prone to defections or change of party affiliation during their mandate.

Internet Chess and Chat As Interaction Order

Abstract. While playing Internet chess and at the same time using a rudimentary chat function with fixed lines, I have been observing the chess and chat as a rudimentary interaction order. In this paper I will analyze this interaction order, on the one hand on the basis of observations made while playing Internet chess, on the other hand by using the perspective on the interaction order developed by Erving Goffman. My point of departure is that individuals interact with each other whenever they meet, but under different circumstances and those circumstances condition the interaction. The paper aims at answering the following research question: How can the interaction order that is developed on an Internet chess site be understood given that the social interaction between the chess players is restricted to the game itself and to a rudimentary chat function? The paper contains a detailed description of the chess play and the chat function at an Internet chess site. What possible interpretations can, for example, be made of one player’s offer to end the chess game with a draw? And, how can one understand the expression “Oooops!” in the chat given the different contexts that present themselves in a chess game? And, finally, how can one use Goffman’s division between expressions given and given off to understand the two mentioned and other interaction situations in Internet chess?

Socio-Geographic Effects On Higher Educational Choices

The main object, in this presentation, is to explore the relationship between socio-geographic background and higher educational choice. Social space can’t be isolated or ignored when it comes to understand human action. The individual socio-geographic setting permeates the way individuals understand and act in the social world. It contributes to social possibilities and constrains, often understood as habits. This presentation put a socio-geographic focus on a special group of students in a special municipality in the south of Sweden. The municipality is characterized by low progression rate to higher education and a high, but diminishing, rate of low blue-collar workers. The educational level is below national average. Despite these traditions a minor group of pupils do attend theoretical education and receive high grades from upper secondary school. Most of these students progress to higher education. An observation made is that in this group most of the students are attending and applying low prestige higher educational programme at local universities despite the universities offer different possibilities. This goes for students with middle-class backgrounds as for students from working class. One suspicion is the existence of a sociogeographic effect on higher educational choices that makes it possible to talk about a sociogeographic habitus, collective in the same way as class-habitus but also unique in relation to other geographic areas.

This paper this is discussed in relation to in-depth interviews with students representative to the above described group.

The Ontology Of The Global City-Regions

The ontology of global city-regions. The global world is made of hundreds of city-regions interconnected and networked. Yet the ontology of the global city-region is still to be defined. It includes a different substance than the XXth century metropolis, or the generic and endless city of today. It is a web of contracts much wider and global than in the National epoch. In the past the contract was Principal-Agent: the Principal being the State, the Agent being the City. Whose main role was to provide streets and social housing, schools and welfare. Today the agglomerating substance of global city-region is relational contracting among actors which are global in many cases: enterprises, services, networks. Their places have a variable geometry and geography, functionally defined and no longer territorially bounded.

Relational contracting is a partnership contract where asymmetries arise. The main asymmetry is about information access, which is selective among and within cities in the digital era. A second asymmetry is about mobility which is still more selective: those who can move (financial markets, multinational enterprises, big buyers, world experts), those who simply cannot (sub-contractors, client enterprises, contingent labour). Within global city-region governance mechanisms should include new constitutional orderings by bridging social capital and linking divided actors and fields.

Migratory Experiences of Portuguese People in Macao during and after the Portuguese Administration of the Territory

Migratory experiences of Portuguese people in Macao during and after the Portuguese administration of the territory.

The transference of Macao’s administrative power from Portugal to China, in December 1999, has represented for Portuguese people who lived there until the 1960s and 90s of the XXth century the end of a migratory experience in a very specific context, frequently characterized as being almost ‘colonial’.

Following the hand over, while many Portuguese migrants have returned to Portugal, some choose to stay in that Chinese territory; others have later decided to go back again; and a few others, who have never lived there, elected Macao as their host society. How was the integration process of those Portuguese migrants

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
who settled in Macao in the beginning of the XXith century? Did they keep the same benefits - concerning leaving conditions and life styles - that Portuguese people used to have during the Administration period? What kind of relationships have they developed with the local people (mainly Macanese and Chinese) in this 'new' political, social and cultural living context? Were they more prone to assimilate local references than their counterparts who lived in Macao in the 'colonial period? Basing our study on a qualitative research supported by interviews to two groups of Portuguese migrants - those who lived in Macao during the Portuguese administration and those who moved to the territory after that period - it is our purpose to analyse and compare their migration experience (in social-economic, cultural-symbolic and identitary terms) highlighting the continuities and changes observed.

Portuguese Youngsters on the Move after the Macao's Migratory Experience

Macao has been for the last two decades of the XX century the host society of young Portuguese people, whose parents, mainly high qualified workers, have preformed professional functions in the public or private sectors of the territory. Once this migratory cycle came to an end, and after their return to Portugal, a large number of these young Portuguese has migrated again, some to Southeast Asia, others to different places, this time as protagonists of their own flow. Basing our study on their life stories, our purpose is to analyse to what extent the migration experience of these individuals in Macao has contributed to the formation of their cosmopolitan identities, as well as to create a predisposition to re-migrate.

PETERS, VERA* (Institute for Climate Impact Research, vera.peters@pik-potsdam.de)

The Carbon Footprint of German, Scottish and Czech Households and Its Determinants – the Influence of Infrastructure, Lifestyles and Socioeconomic Conditions

Climate change is on its way, and individual consumption decisions contribute substantially to it. About 40% of all GHG emissions come directly from private household energy consumption, and the figure is even larger if indirect effects of private consumption are included.

In order to further explore the conditions that lead to smaller GHG emissions, we present results from a quantitative household survey (n=1.532) in three European countries (Germany, Scotland, Czech Republic), which was conducted within the framework of an EU FP 7 project (GLIDED) in 2011 and 2010.

A CO2 behavior on self-reported behavior were used to estimate households’ carbon emissions in the field of residence, mobility and nutrition. Beside site specific conditions such as infrastructure and socioeconomic factors, major individual and social motives for sustainable behavior are explored by applying psychological and sociological concepts such as the ‘Schwartz value inventory’, people’s perception of climate change and a lifestyle segmentation. We focus especially on the explanatory power of the lifestyle approach for predicting carbon footprints. Lifestyle or “milieu” segmentations represent popular concepts used in everyday clinic practice. For example, at the clinics, “drug-free” and “drug-abuse” are two frequently occurring concepts that are difficult to define because they are not related to the drugs themselves, but to the question of when and how the narcotic substances have been used, as well as who has decided that they should be used. Analysis shows, that according to the professionals’ talk, it is possible to live a “drug-free”. “normal” life with methadone, as long as it is distributed by the clinics and ingested according to the staff’s recommendations, while taking the same amount of drugs obtained from a source other than the clinic is defined as “drug abuse”, legitimizing sanctions of more disciplinary kinds. However, the effects of the disciplinary exercise of power are counteracted by the clients’ modes of resistance, such as subversive interpretations of staffs’ arguments or “narratives of resistance”.

Does Social Economy Really Constitute a Solution Against Poverty and Social Exclusion?

This paper examines the correlation between poverty, social exclusion and social economy at the local level. Particularly, it attempts to discuss the appropriate conceptual and theoretical models of social economy at the local level and to establish multidimensional poverty and social exclusion indices under a relative perspective. The research question is: “Do social economy initiatives contribute to the fight against poverty and social exclusion at the local level and what is their impact?”

The analysis is based upon the results of both qualitative and quantitative research of selected areas in the broader area of Athens. More precisely, statistical data and the results of the focus group interviews with key informants, stakeholders and vulnerable people will be discussed with a view to focusing on the appropriate design of social policy and social protection at the local level.

The Stigmatizing Semantics of Methadone Maintenance Treatment

People who use heroin are often described as one of western society’s most stigmatized and marginalized groups. In public discourse, people associated with heroin use are construed as unruly, lacking self-control and generally bad persons. Negative representations of the heroin addict are also reflected in the regulatory framework surrounding Swedish methadone maintenance treatment (MMT) – the most common treatment practice for heroin addicts which is based on a basic idea that the treatment not only could, but also should lead to a normalization of the clients’ lives.

In this paper, the everyday semantics of Swedish MMT is put under scrutiny. The analysis based on a local, qualitative study exposes that the professional power is not as objective, neutral and fair as portrayed by national guidelines, policy documents and the professionals’ talk. Methods developed in critical discourse analysis and discourse psychology are used in order to analyse a number of key concepts used in everyday clinic practice. For example, at the clinics, “drug-free” and “drug-abuse” are two frequently occurring concepts that are difficult to define because they are not related to the drugs themselves, but to the question of when and how the narcotic substances have been used, as well as who has decided that they should be used. Analysis shows, that according to the professionals’ talk, it is possible to live a “drug-free”. “normal” life with methadone, as long as it is distributed by the clinics and ingested according to the staff’s recommendations, while taking the same amount of drugs obtained from a source other than the clinic is defined as “drug abuse”, legitimizing sanctions of more disciplinary kinds. However, the effects of the disciplinary exercise of power are counteracted by the clients’ modes of resistance, such as subversive interpretations of staffs’ arguments or “narratives of resistance”.

presentation focuses on internal forms of violence and specifically on behaviours of suicidal or quasi-suicidal character. Our primary aim will be to outline the many different ways this type of violence is presented by the Greek media. The study has been conducted with a qualitative methodology utilizing content analysis, through the prism of which we examine the way internalized violence is represented by two of the mainstays of the Greek media, namely the press and internet. Specifically, we will introduce a number of popular blogs and sites with a high traffic volume of traffic and some well-known newspapers with a large readership. Secondly, through the method of qualitative content analysis we will focus on the connection between violence and social inequality and the diverse ways in which these social phenomena have been approached by the news information media. Thirdly, we will classify these representations on the basis of content analysis of representative excerpts from articles and reports on the particular self-destructive form of behaviour that has come to be associated with the 'crisis'. Finally, we will analyse the ways in which the electronic and print media target the social status and ethnic background of victims.

PETROVICI, CARMEN* (Novosibirsk State University, v.v.p@ngs.ru)
High Quality Education: Globalization and Problems of National Educational Systems
Requirements of the Information Society and Knowledge Society determine the need for significant improvements, structural changes, shifting priorities in the social system. Such a trajectory of development is already represented not only in the vision systems in North America, Western Europe, countries of the Confucian and Buddhist cultures but also in the Eastern Europe and Russia. While comparing educational systems of Russia and the United States primarily from the aspect of high quality education development there we can see deep differences between these systems that are connected with different historical traditions, regional and local education programs is necessary. Particularly sensitive should be the attitude of the state towards high quality educational institutions: it is necessary to take into account their specificity, to seek additional resources including financial in the form of various additional scholarships for the talented students, and grants to effectively developing educational institutions etc. and at the same time maintaining their maximum autonomy.

Cross Country and Intergenerational Comparison of Income and Wealth using Luxembourg Income Study (LIS)
Abstract
The aim of this paper is to analyse the income and wealth among the elderly (65-75 years old) and people in their prime age (35-45 years old) in a cross-country comparison. Which group is more likely to be at risk of poverty? The novelty of this paper is that includes not only the disposable income (defined as the sum of total revenues from earnings, capital income, private transfers, public transfer net of taxes, social security contributions and other obligations such as alimony) but also a proxy for the net wealth including the net value of the dwelling in the analysis. Within each age group, we will identify the subgroup most at risk of poverty (based on age, gender, citizenship status, education level). We selected the countries that have information on wealth from the last wave of LIS, centered around the year 2010: Colombia, Ireland, Israel, Italy, Luxembourg, South Africa and Japan (with available data from 2008). The paper will contribute to the existing literature through a cross-countries comparative analysis of income and wealth from an intergenerational perspective.

**Robots in Elderly Health Care**

**Tool, Toy or Therapist? the Relevance of Emotion Stimulating Haptic Robots in Elderly Health Care**

Post-war Germany and Australia have, like many other Western societies, seen the emergence of fragmented and heterogeneous Muslim communities. In both countries these ethno-religious minority groups have established a diverse landscape of community organisations, which used to be occupied primarily with the maintenance of their religious identity and internal community ties. This inward-looking nature of Muslim communities in Australia and Germany has begun to change, and more fundamentally, since the early years of the 21st century, triggered by partly similar, partly country-specific developments. An unprecedented number of community groups in both countries have sought to become recognised civil society actors, eager to contribute to the society at large, to engage with non-Muslim groups, media, governments and other opinion leaders and to offer a more accurate public representation of Islam.

This paper explores the motives, strategies and achievements of Muslim community organisations in Australia and Germany, based on extensive desk research and a series of in-depth interviews with Muslim community figures in both countries, conducted between 2011 and 2013. It argues that, while Muslims in Australia and Germany have shared (and continue to do so) similar experiences of social marginalisation, public questioning of their willingness to belong and increasing political scrutiny, their collective struggle for civic recognition has unfolded in different ways. The research findings suggest that Australian Muslim community groups have been much more successful than their German counterparts in utilising and expanding their collaboration and lines of communication with policy-makers and civil society opinion leaders and in establishing themselves as an important voice in the public and political debate.

The paper concludes with a discussion of the reasons for these country-specific differences, identifying a combination of historical, political and social factors, including the divergent political opportunity structures and the different socio-economic resources of Muslims.

**Diversity of Gender Arrangements and the Work-Family Relationship of Women with Small Children in Europe**

The central question of the paper is: Which are the main patterns of the ways in which women with children 0-2 years combine employment and childcare in European societies? And how is it possible to explain cross-national differences? The paper introduces the theoretical approach of the “gender arrangement” of the author as an explanatory framework for cross-national differences. This approach considers the interaction, interrelations and dynamics between culture, institutions, social structures, economic structures and actor’s constellations and action, which form the societal context for the structures of care work in a society. The paper applies this approach for the explanation of the differences in the work-family relationship of women with children below age three in eight European countries. The comparative analysis finds that the countries of the study cluster into four different patterns of the combination of women’s employment and care for children under three. It is shown how the differences in the cultural, social and economic context and in welfare state policies in different European societies, and the ways in which they interact, make a particular contribution to explaining cross-national differences in the patterns of mother’s employment and childcare. This analysis demonstrates that family policies alone cannot explain cross-national patterns for organizing child care, and that considering cultural models, family policies and socio-economic differences together leads to a more satisfactory explanation of the societal relationship between women’s employment and child care.

**From Users to Adherents – Anti-Aging As a Way of Life. Qualitative Interviews and Biographical Perspectives**

At least since the founding of the A4M (American Academy of Anti-Aging Medicine) in 1993, anti-aging medicine has formed a discrete discipline, implementing scientific findings for purposes of prevention, early diagnosis, reversal or treatment of age-related changes and loss of body functions. In recent years, anti-aging has also been established in Europe, as the institutionalization of anti-aging medicine in Germany shows in an exemplary way.
These two phenomena have turned Athens into a space in-between the Global for migrants and refugees from Eastern European, African, and Asian countries, and impoverishment. At the same time, the metropolis has developed into a risation by the 'Euro-Crisis' are drastic: intensified unemployment, bankruptcy, and a number of indicators converge which allow us to expose this tendency, and demonstrate the existence of a system of inequality characterized by segmentation, hierarchization and conflict. After this presentation, some thoughts will be put forward on the words and categories that are used in certain sociological theoretical frameworks. This alternative sociological discourse was pervasive between 1980 and 2000 and continues to be used today, even though it has long since been largely refuted by the facts. We will focus on the discrepancy between the rhetoric of these theories, which deny the existence of 'social class' and the undeniable reality of a growing polarization within French society.

*Women's Empowerment As a Determinant of Fertility Change in Southeast Asia*

The fertility levels of Southeast Asian countries have been dropping dramatically since the 1950s. The case of Southeast Asia challenges classical theories on demographic transition, which suggest that economic development is the key to demographic changes, whereas, in Southeast Asia, even low- and middle-income countries also experienced rapid fertility declines long before the socio-economic development. This paper suggests a relationship between the empowerment of women and fertility decline. Despite decades of standing in the literature as one of the key indicators of social development, the concept and measurement of women's empowerment has not reached a consensus. Women's empowerment is a multi-dimensional concept, which includes measurements at both country and individual levels. At country level, measurements of women's empowerment includes the percentage of women's education in relation to men, percentage of female labor force participation, proportion of female in parliaments, and percentage of women's holding manager's positions. At individual level, women's empowerment can be measured by women's educational attainment, their involvement in household decision-making process (including fertility choices), contraception use, and employment status. Cultural factors such as son preference and preference for high fertility should also be taken into account while measuring women's empowerment. Most studies have been looking at women's empowerment in either at country level or individual level but not at a comparative regional level. In this paper, the key debates in the concept and measurement of women's empowerment and the framework of relationship between women's empowerment and fertility changes will be reviewed. Furthermore, the current situation of women's empowerment and the amazing fertility decline in Southeast Asia will be examined. A closer examination of fertility change and women's empowerment indicators in Cambodia, Indonesia, Philippines and Vietnam suggests that women's empowerment plays a role in the region's demographic change.

*Violent and Non-Violent Logics in Contemporary Greek Protests*

The research is focussed on crisis ridden Athens as radicalisation becomes accentuated during economic and political turmoil. I will analyse radical views of political activists based on 19 ethnographic interviews conducted with the creators of alternative urban spaces: migrants, anti-nationalists, anarchists, neighbourhood activists, and radical leftists. From the data discursive strands will be extracted about perceptions of state, society and the extreme right, constructions of oppositions, and reflecions on violence performed by themselves and others.

**background**

In the case of Athens the consequences of increasing cleavages and precarisation by the 'Euro-Crisis' are drastic: intensified unemployment, bankruptcy, and impoverishment. At the same time, the metropolis has developed into a hub for migrants and refugees from Eastern European, African, and Asian countries. These two phenomena have turned Athens into a space in-between the Global North and South.

Athens resembles a militarised zone (Kurtovik 2013). The government is perceived as EU-dependent by most citizens, and chooses to demonstrate its strength by demarcating different groups as ‘deviants’ (Dalakoglou 2013: 30). Radical left and anarchists, as well as migrants and refugees, are construed by the ruling parties as threats (Zenakos 2013): for public security (Philipp 2013), or as dangerous ‘hygienic bombs’ national health (Parsanoglou 2012). Newly-deployed and heavily-armed police forces are ordered to fight the ‘undesired’ objects. The increased establishment of far right discourses and neo-Nazi-activism support this development (Philipp 2012).

The atmosphere of austerity and oppression has deeply influenced activist activism of this two groups: methods of protest become more extreme, constellations of alliances alter, and clashes between different forces intensify.

**presentation**

With its extensive ethnographic material, my research contributes to fill the desideratum (Andronikidou & Kouvaris 2012) of empirical in-depth analysis of contemporary contention in Europe.

*Kāpō Māori Counter Narratives: Transformative Research Practice*

Recently a research paper on the eye conditions of Māori children was published in New Zealand. The paper sensationalized the reasons for non-accidental eye injuries by highlighting the role physical abuse plays in vision loss and blindness in Māori children which in turn was picked up by the media. Not surprisingly, the kāpō (blind and vision impaired) Māori community was not only unhappy with the authors’ conclusions but also with the way the story was covered in the media. The community’s view was that this was another example of Māori bashing that could potentially undermine kāpō Māori whānau engagement with science.

The twin aims of this presentation are to: 1) critically reflect on the methodological implications of doing research bereft of its socio-political and cultural contexts and undertakins by ‘outsider’ researchers who persist in deficit theorising to provide a ‘standard story’ of poverty and disability, and 2) argue for a kāpō Māori approach by kāpō Māori approach to research that leads to socio-politically and culturally nuanced readings and understandings of the issues that face kāpō Māori and their whānau. We do this by discussing the methodology and outcomes of the recently completed research project ‘Growing up kāpō Māori: accessing paediatric ophthalmology services’. This project provides a counter narrative to the standard story and as such is more likely to transform social spaces and health practices.

*Social Inequality & Academic Achievement Gaps in Developed Countries*

International comparisons of cognitive skills suggest that equitable educational performance in education is as important as high performance. Therefore, minimizing achievement gaps between wealth and poor students is important for countries’ economic growth (Hanushek, et al. 2008; Coulombe and Tremblay 2006). Even within high-income countries that share similar levels of economic development, socioeconomic-based achievement gaps vary in size and shape. Nevertheless, the direction of these achievement gaps is consistent—with wealthier students having both greater opportunity and greater achievement (Hampden-Thompson and Johnstone 2006).

This study offers a cross-national examination of the relationship between socioeconomic achievement gaps, societal-level inequality, and the role of social safety nets in reducing inequality in both income and cognitive skills. The cross-national variation in income inequality, social safety nets, and academic achievement gaps facilitates a direct examination of societal-level factors that are hypothesized to be important in determining the shape and size of country-specific achievement gaps.

To identify country-level measures of income inequality, social safety nets, and academic achievement gaps, we use data from the OECD Programme for International Student Assessment (PISA) as well as the Luxembourg Income Study (LIS). In an attempt to draw comparisons between countries at similar levels of economic development, we restricted our analyses to 26 countries that belong to the World Bank high-income group (World Bank Country Classification 2013) and also participated in both PISA and LIS.
Our preliminary results suggest that developed countries with the smallest achievement gaps are likely to have higher performing low-SES students, and high performing high-SES students. Preliminary results also suggest a relationship between income inequality, social safety nets, and gaps in student achievement. Because our work identifies social and economic contexts that contribute to achievement gaps, our study demonstrates both barriers and possibilities that influence academic mobility.

PHILLIPSON, CHRISTOPHER* (The University of Manchester, christopher.phillipson@manchester.ac.uk)

Ageing and Class in a Globalised World

Discussions about the role of social class in the lives of older people have often occupied a marginal position in social research into ageing. Despite the importance of themes linked with inequality and latterly social exclusion, the tendency has been to examine these only loosely through the lens of social class, with researchers often preferring to emphasize individual characteristics or life histories, other statuses (e.g. gender and ethnicity), or more general features associated with the social organisation of age. In consequence, social class has had limited influence on many of the concepts deployed to understand the lives of older people. This paper explores the implications of these developments for theoretical work in ageing. A combination of globalisation and long-term economic change is re-structuring the ground to a halt during the 1980s and have continued to be affected by a combination of globalisation and economic change; fourth, the paper concludes with an assessment of possible developments in the application of class analysis to the study of ageing.

PHILLIPSON, CHRISTOPHER* (University of Manchester, christopher.phillipson@manchester.ac.uk)

The New Political Economy of Generations: Social Class and Social Divisions in Old Age

Increased inequalities within nation states have influenced social structures in a variety of ways. For older people, one consequence has been greater differentiation within generations driven by contrasting experiences of economic recession and life course events. Generations, in western society from the mid-20th Century, were underpinned by near full employment, orderly transitions into and out of work, intergenerational mobility, and declining levels of inequality. These processes ground the idea of generations as a meaningful unit of analysis; the emergence of new political and social identities in later life; and the growing importance of divisions operating within generational and related social groups. The paper will explore the implications of these developments for theoretical work in the sociology of ageing.

PIATTI, CINZIA* (University of Otago, cinzia.piatti@otago.ac.nz) CAMPBELL, HUGH (University of Otago) ROSIN, CHRISTOPHER (University of Otago)

Beyond Alternative/Conventional: Māori Worlds of Food

Within popular understandings of the food crisis, the global food system is often portrayed as a clear differentiation between ‘alternative’ and ‘conventional’. These two constructs generally distinguish between means of provisioning and consuming food according to narrow and readily measured economic, social and ecological criteria. This categorisation results in a strict dichotomy represented by antipodal views and explicit characterisations of value – what in terms of convention theory would be organised within orders of worth. In fact, the reframing of popular understandings of the food crisis require a more open engagement with food (its production and consumption) that recognises the diverse sites of action at which change can be enacted and realised. Such an approach sees continuity from mainstream activities to the small individual, independent and value-oriented ones.

This paper uses the theoretical framework of regimes of justification from convention theory (Boltanski and Thévenot 1986, 2006) to elaborate a Māori world of worth in order to demonstrate the potential for marginal economies (Gibson-Graham 1999, 2006) to reframe popular understandings of food and society. Within the New Zealand context, there has been some ferment around Māori groups – a minority whose culture is based on the concept of sustainability as a cornerstone-who recently implemented economic activities around a western-values frame in terms of economic organization. Using two case studies, both expressions of the Māori community but with different approaches in terms of strategies, a reflection is presented on community organisation, food systems innovation and the role of market in food relations.

Who Needs Age-Friendly Cities? Exploring Representations through Participatory and Trans-Disciplinary Research

This presentation bears on the first two years of a six year participatory and trans-disciplinary research programme exploring what an ageing society means for the city (facts), what the latter could become (ideas / scenarios), what can be done (actions / what is feasible) and what should be done (ideals). The programme stems from societal concerns in the province of Québec (Canada) regarding the rapid absolute and relative increase of people aged 65+ and 80+, and the projected impacts this will have on collective services, manpower, and public as well as private financial programmes such as pension funds. It specifically examines how these concerns and trends might transform the city, including housing, mobility patterns, activities, services and the spatial and material form of the urban matrix. The methodology includes, on the one hand, more traditional research methods such as policy and research reviews, survey data analysis, qualitative case studies, fine grain studies of person / environment interactions, and, on the other hand, participatory, trans-disciplinary and trans-sectorial panels for scenario development and assessment. This presentation focuses on the wide variety of and numerous discrepancies in discourses and representations encountered in the process, and how old age is socially constructed through numerous power relationships shaping these representations and the interactions between discourses. The analysis confronts the discourses and representations of individuals, communities, experts and institutions in terms of what might be the case. It illustrates the wide gap between normative discourse aimed at reforming and shaping the elderly through urbanism and the variety of ageing experiences, to the point that one must ask: “who needs age-friendly cities?”. In conclusion, a word will be said on how participatory and trans-disciplinary research can contribute to reducing this gap and innovate in how we approach age-friendly cities.

PICKARD, SARAH* (Université Sorbonne Nouvelle - Paris 3, sarah.pickard@univ-paris3.fr)

Austerity and The University In Britain

Austerity and the University in Britain

Over the past decade, young people in the United Kingdom have been facing a variety of factors which have impinged on their opportunities to enter higher education and their chances of finding a job once they have graduated. Whilst the Labour government has been more concerned with increasing access to higher education and it raised substantially the cost of annual university tuition fees starting in 2012-2013. At the same time, the rate of unemployment among graduates has been rising and getting a degree is no longer an automatic boost to one’s life chances. For many it results merely in unpaid internships and/or employment schemes.

This talk will examine British “youth in austerity” regarding prospects for studying in higher education and subsequently entering the labour market over the past decade. It will include young people’s responses to the recent decrease in higher education funding and increase in university tuition fees.

PICKARD, SARAH* (Université Sorbonne Nouvelle - Paris 3, sarah.pickard@univ-paris3.fr)

Divided and Ruined: The Failed Student Protests In Great Britain

The current decade has been marked by both the global economic crisis and a growth in social movements around the world spearheaded by young people. In particular, we have witnessed collective action – demonstrations, direct action and civil disobedience – regarding higher education. In Britain, there was a series of demonstrations and sit-ins in the winter of 2010-2011 about the Conservative-Liberal Democrat Coalition Government’s plan to cut dramatically public spending on higher education and it raised substantially the cost of annual university tuition fees. In fact, both of the policies were enacted and the ceiling on annual fees went up to £9,000 (approximately 1,500,000 JPY) in 2012-2013. Just after their introduction, a demonstration took place organized by the National Union of Students (NUS).
Strikingly, this #DEMO2012 had three themes: "Educate, Employ, Empower," rather than only higher education and it was attended by far fewer demonstrators.

This talk will analyze the social movements organized by young people against higher education reform since 2010 in Britain. It will focus especially on the 2012 demonstration, in order to ascertain to what extent it can be gauged to have been a failure. Drawing on interviews I made with protestors, as well as photographs I took of the demonstration, the talk will reveal that the different types of participants were very polarized about the best course of collective action to take. For example, the extreme-left wing radicals and anarchists accused the NUS of cooperating with the Government, whilst the NUS claimed the extremists were not focusing on the issues at stake. This lead to highly confrontational scenes during and after the demonstrations which detracted from criticisms of the Conservative-Liberal Democrat Government and its youth policy. Instead of uniting and fighting, the protestors were divided and ruled by Government cuts in an era of austerity and lack of social change.

PICKEL, ANDREAS* (Trent University, apickel@trentu.ca)

National Cultures Reconceptualized for the Social Sciences: Basic Elements for an Analytical Framework

Globalized state-societies in the twenty-first century are framed by national cultures. This cultural metaframe is insufficiently understood by sociologists and other social scientists. Yet national cultures are full of social mechanisms that shape domestic politics, economic success and failure, and the evolution of global society. To make use of this framework for explanatory purposes, it needs to be underscored that nationalizing mechanisms are sociocultural mechanisms that work in conjunction with better known political and economic mechanisms. Based on a novel conceptualization of national cultures, the contours of which this paper will lay out, it quickly becomes evident why and how in general terms nationalizing mechanisms operate in a broad range of social systems from small groups to large movements and organizations. Where, where and to what extent the inclusion of nationalizing mechanisms can make a substantive contribution to explanation is an open empirical and theoretical question. The argument presented here reconceptualizes existing empirical and theoretical knowledge on nations and societies in order to open up a fresh perspective and sketch out a basic framework for one of the most misunderstood areas of social reality in the global age. This paper further develops the author’s previous foundational work on social systems and nationalizing mechanisms aimed at rehabilitating the central significance of nation for the sociological enterprise.

PIERIDES, DEAN* (University of Melbourne, d.pierides@gmail.com)

Institutional Contradictions and the Organization of Emergency Management

This paper provides an institutional analysis of Australian emergency management from the early twentieth century to the present and highlights the institutional contradictions that generate conceivable barriers for effective organization. Building on the literature in organization and management theory that focuses on institutional logics, I argue that to understand why emergency management is riddled with these contradictions it is useful to describe the different logics that are elaborated in organizations. Institutional contradictions in emergency management carry traces of tensions between the church and entrepreneurs from as early as the twelfth century, traces of a style of statistical reasoning that emerges in the seventeenth century and traces of the ongoing struggle to produce a legitimate form of government for the state.

Since the 1990s, Australian emergency management organizations, like many other organizations, have been exposed to various forms of state and political risk, and are now attempting to pursue strategic goals, to meet performance objectives and to ensure accountability. The reliance on risk calculation and management has intensified in the aftermath of disastrous floods and fires in the early twenty-first century. These technologies of risk bring into effect markets that deal with the uncertainty of different objects such as water, fire, and health. Emergency management organization participants are also tasked with the sovereign responsibility to protect the population, a task that is arguably at odds with the dynamics of markets. When the sovereign and entrepreneurial logics are elaborated in emergency management, risk can materialize in monstrous ways, well beyond the reach of formal organization.

PILKINGTON, HILARY* (University of Manchester, hilary.pilkington@manchester.ac.uk)

‘Loud and Proud’: Youth Activists in the English Defence League

This paper considers the meanings young members of the ‘new far right’ English Defence League (EDL) attach to their activism. Based on an ethnographic study (2012-13) including interviews with over 30 grassroots activists, it argues that the movement’s trademark slogan ‘Not racist, not violent, just no longer silent’ denotes more than a cynical PR strategy. In contrast to a ‘politics’ they reject (understood as ‘debating’, ‘listening’ and ‘reading the Sunday Times’), participants in EDL actions provide young people with a way of ‘getting your point across’, ‘speaking out’ and ‘standing strong’. This, it is argued, is indicative of the experience of the political sphere by some young people as characterised by a ‘politics of上课’ in which legitimate insistences on the social distance between ‘politicians’ and ‘people like us’ and the legal and cultural circumscriptions on ‘acceptable’ issues for discussion. Drawing on Mouffe’s (2005: 6) argument that right wing populism has made inroads in those places where traditional democratic parties have lost their appeal to an electorate no longer able to distinguish between them in the ‘stifling consensus’ that has shaped the political system, the paper traces the resonance of these tropes in the narratives of ‘the political’ among a broader sample of (non-activist) young people in the UK (based on representative survey and interview data gathered for the FP7 MYPLACE project of which the EDL ethnography is also a part). The paper asks whether the desire to engage in politics in a ‘loud and proud’ way might confirm Mouffe’s argument that a democracy that ‘works’ for ‘the people’ may not be one based on ‘a universal rational consensus’ managed through institutions that ‘rec-oncile all conflicting interests and values’ but rather one in which there is a vibrant public sphere of political contestation (ibid. p.3)?

PILLAY, KATHRYN* (University of Kwazulu-Natal, pillaykt@ukzn.ac.za)

“Nation Under Siege from Foreigners”: Exploring Notions of Belonging and Exclusion in Post-Apartheid South Africa

South Africa finally became a democratic country in April 1994 after the first ‘free and fair’ general elections took place. A commitment was made by the ANC led government to ‘non-racialism’ based on a Constitution which was inclusive of all the ‘races’, accepting shared citizenship. In this paper I contend that even though the democratic state acknowledges South Africans of Indian descent as part of the national discourse, and continually affirms ‘their’ part in the national democratic revolution, it nevertheless still perpetuates the notion of essential ‘differences’ between ‘peoples’ which originated in colonialism, was entrenched further after the formation of the Union, and legitimised through various policies during apartheid. Even though the Population Registration Act (PRA) was repealed, the racial categories that were reproduced and legitimised by the Act still exist. ‘Race’ then continues to be an axis around which South African society revolves. I argue that the continuation of ‘race’ classification through legislated and bureaucratic guises perpetuate racialisation and ‘race thinking’, which is evident in self-perceptions and the perceptions of others. The argument is demonstrated by empirically examining how South Africans of Indian descent are homogenised and labeled as a separate and distinct group, and in addition how they are perceived as ‘a people’ or ‘community’ with fixed and essentialised identities and ultimately ‘belonging’ to another country, to which they could easily ‘return’, as evidenced by calls to ‘go home’ heard at various points in time during the post-1994 democratic era. Empirical evidence will be provided to reveal how, as a result of this perpetuation of difference based on ‘race’, similar processes of othering and anti-‘Indian’ sentiment, reminiscent of the political eras prior to democracy, persist in public and popular discourse in contemporary South African society, and is exposed at various junctures.

PINEDA OLIVIERI, JESUS HUMBERTO* (University of Goettingen, jesus.pineda@ocides.org)

From Being Excluded to Becoming a Triumpher: Higher Education Massification Policies in Venezuela and Their Biographical Meaning

In 2003 the Venezuelan government started to implement a variety of social programs known as “Bolivarian Missions”. These Missions addressed a variety of social problems that the traditional systems of education, health and social services had failed to overcome. The creation of these programs rapidly became one of the most distinctive symbols of the new revolutionary government and the promise of a better life for the poor and excluded groups. In the education sector, different “Bolivarian Missions” offered literacy programs, basic education, high school and higher education for all. Over the years, these educational programs have been strongly linked to the political legitimation and support of the government by those who have perceived the missions as a benefit. Official reports claim to have solved a historical debt with some marginalized groups of the country, which has shaped the lives of those who have been recently included to both the education system and the Venezuelan society as a whole. This article seeks to explore how this process of inclusion has been experienced by those who have been educated, which represents an important gap in the literature that deals with the Venezue-
elation is based on my ongoing doctoral research and presents some reflections on social and political polarization in a system like the one under consideration. This implementation of a parallel offer to include students from disadvantaged environments in Sucre and will analyze the paradox of inclusion in the Venezuelan context from a democratic perspective using insights from Bourdieu’s work. I conclude that the implementation of a parallel offer to include students from disadvantaged environments or backgrounds may exacerbate the educational gap, as well as, the social and political polarization in a system like the one under consideration. This analysis is based on my ongoing doctoral research and presents some reflections coming from the literature review, as well as my empirical work in Venezuela.

PINIÉ, NICOLÁS* (Université Paris Diderot - Paris 7, npinet@wanadoo.fr)

Elements for a Grammar of Revolt: Comparative Sociology of the September 1991 Lootings in Kinshasa, Zaïre

Popular politics and resistance, in Africa as elsewhere, take shape both through the ordinary (Asfet Bayat, Life as Politics) and the extra-ordinary. This paper focuses on one extra-ordinary case of popular unrest: the riots and lootings that occurred in Kinshasa, Zaïre (now Democratic Republic of Congo) on September 23rd and 24th, 1991.

Contrary to previous studies that focused mainly on the historical context, this paper sets the analysis in a broader context through a comparative approach. Drawing on both primary (media and testimony) and secondary sources, it intends to scrutinize these two days of lootings while confronting them to the mirror of contemporary Latin American riots: the Caracazo (Argentina, 1993) and Santiagueñazo (1993). This allows to delineate elements of a shared grammar of revolt: lootings always occur in a temporality of breach (Martin Breaugh), they are akin to carnival both because they are festive and because they momentarily invert the ongoing power relations; they oppose groups of actors whose positions on both sides of a social frontier appear with more accuracy during this cathartic moment. In Kinshasa, the lootings opposed people who considered they hadn’t benefited from the distribution of resources and privileges made by President Mobutu Sese Seko, and those who perceived as having benefited from them. The discourses made by the protagonists claim that direct action was made both necessary and legitimate by social inequalities, injustice and deprivation, as noted by E. Thompson in a complete different context (“The Moral Economy of the English Crowd”, 1971). Finally the collective violence unleashed in the lootings expresses a desire to put an end to a situation deemed unbearable – the generalized use of fire is symptomatic and start things anew. This last point invites to take also into account, with Carlo Ginzburg, the ritual dimension of lootings.

PINIÉ, NICOLÁS* (Université Paris Diderot - Paris 7, npinet@wanadoo.fr)

Subaltern Tactics and Spaces for Decommodification: Non-Institutionalized Political Practices in a Tokyo Working-Class Neighborhood

This paper draws upon a 2-year ethnography (2012-2014) in a Tokyo working-class neighborhood, with a focus on subaltern political practices. Building upon the distinction between the two meanings of the “political” (Claude Lefort, Essais sur le politique; Manuel Castells, La Question urbaine) – one related to the institutionalized sphere of the ruling, the other to the social system of power relations and its transformation –, subaltern political practices can be defined as practices that allow their actors, collectively or individually, to free themselves from such-and-such subordinate positions in the net of power relations. Through this theoretical lens, one can observe an array of collective or individual political practices that contest, bypass or elude unfavorable power relations.

With the ever-increasing commodification of society, quite blatant in large cities like Tokyo, domination often make oneself feel as economic domination. In this context, subaltern political practices take notably the form of tactics (Michel de Certeau) aiming at getting loose from economic dependencies through the building of small and frequently temporary autonomous spaces.

Since these dependencies are experienced more strongly as we go down the social ladder, this paper focuses on tactics devised by homeless people living in the area I’m engaged in, before showing that practices that are most easily discernible in this radical life-situation can also be noted among working-class neighborhood inhabitants. Urban agricultural practices found among homeless groups and individuals as well as in working-class neighborhoods are an especially interesting case. Growing their own food allows the persons involved to build a small autonomous space, both real – one get a fair amount of free food – and symbolic, as they constitute de-commodified spaces in which other types of relations and non-monetary practices can take place (exchange of seedlings between homeless groups, fruits and vegetables’ gifts to visitors or neighbors...).

Leisure and Family : A Mutually Supportive Relationship

W. H. Davies in his lovely poem ‘leisure’ states the wonder of a life worth living where one has no time for leisure, why are we so full of worry that we can hardly steal little time to stand still and watch the world go by. What is this life if, full of care we have no time to stand and stare. No time to stand beneath the boughs and stare as long as sheep or cows. No time to see, in broad day light streams full of stars like skies at night. A poor life this is, if, full of care we have no time to stand and stare.

The loneliness and isolation of an individual has been a persistent theme in twentieth century. We were all born social and need company to live a happy and fruitful life. The institution of family has been with us with a set of cultural patterns that specify the social and institutional practices that contest, bypass or elude unfavorable power relations.

This paper draws upon a 2-year ethnography (2012-2014) in a Tokyo working-class neighborhood.
it is new and was desired and such movements are not deeply rooted and emerged in the last 25-30 years. This paper presents an ethnographic fieldwork conducted mostly in Poland, also in the Czech Republic and Hungary where I collected numerous in-depth interviews with squatting activists, made several participant observations and analyzed media coverage (both mainstream and activist/ independent media). In this paper I want to focus on the intersections between the radical squatting movement and moderate movements such as tenants movement to show the transformative power of the squatting movement on other actors. I will be basing primarily on two case studies from Poznań and Warsaw implementing them with examples from other countries from Central and Eastern Europe and the results - in my opinion - can be addressed to other developing societies.

PIOTROWSKI, GRZEGORZ* (Södertörn University, grzegorz.piotrowski@sh.se)

Youth Social Movements and Democratization

In mid-1980s Central and Eastern Europe have witnessed an interesting aggregation of anti-communist struggles. Parallel to the pro-democratic dissidents new movements populated by young people and connected to youth subcultures have emerged, in particular the anarchist and environmental protection movement. These new movements were not only inspired by groups from Western Europe and the US but were also an expression of critique of the dissident movement. Slowly shifting to (neo)liberal positions and losing the touch with the workers base as well as the young people whose demands (i.e. regarding compulsory military service) were largely ignored. These newly emerged movements were capable of bridging structures and agency in a unique way. The popularity of these youth movements partially lies in attractiveness of the subcultures that were the vehicles of the new ideas and not in the topics they were bringing. Moreover, this subcultural-political connection seems to have an impact on today’s radical movements making them mostly a young people’s domain and activity. This has far-reaching consequences and recent mobilizations in the region (anti-ACTA protests in winter 2011/2012, many protests in Bulgaria in 2012 or the earlier alterglobalist mobilizations) prove the point that coalition-making possibilities and support from other actors are limited.

The paper is based on long-time research and fieldwork among social activists (alterglobalists, anarchists, environmentalists, squatters) and former dissidents that took an active role in the 1989 transformations for various research projects. Empirical data were collected from in-depth interviews, participant observations and from movements’ publications (printed and online) collected over the years.

Potential, Strength and Weakness of Argentinian Social Sciences to Analyze Contemporary Society

This paper attempts to describe the current state of the Argentinian social sciences in terms of institutionalization, research capabilities and agenda. It is framed within a research program called PISAC, implemented by the National Council of Social Sciences and co-financed by the Ministry of Science and the Secretary of University Policies. PISAC has three main objectives, each one linked to a specific research project: a) a critical assessment of the Argentinian social science system (institutions, agenda, researchers’ profiles, publications, etc.); b) a review and systematization of the research findings produced in the last decade with regards to key issues addressed by the Argentinian social sciences; c) a structural study of current social, political and cultural trends in the country. In this paper, in particular, we present some preliminary findings and discussions related to the first research project (a). In this sense, we maintain that Argentinian’s scientific field is currently featured by a dynamic, predominantly public and professionalized system that has witnessed a geometrical growth in the last decade. Both the public universities and the National Scientific Council (CONICET) have benefited from this growth. Accordingly, social sciences have experienced an expansive phase visible in the consolidation of postgraduate studies, international publishing and collaborative research. However, some important problems still persist:

1) In terms of institutionalization, professionalization and full-time research positions the social sciences are still well behind the natural sciences;
2) the structural heterogeneity of Argentinian’s scientific field, featured by the split between CONICET and the public university system;
3) the national-continental circuit of the social sciences is still weak, both in terms of domestic and international circulation of knowledge produced locally.
4) There are significant differences in the levels of institutionalization, professionalization and internationalization that the academic activities related to the social sciences bear in different regions of the country.

Domestic Workers As Agents for Development? the Migration-Development Nexus Debate Revisited Though the Decent Work Agenda

At the global and regional level, the current policy discussion of international migration is dominated by a revived interest in the linkages between migration and development. To date, this debate has left out certain forms of migration and alternative understandings of development, and remained especially unfavourable to particular forms of migration that women undergo. Despite the evidence that domestic workers are numerous and that domestic work is increasingly an important source of waged employment for women, domestic work is often specifically excluded from national labour instruments such as the labour standards or the minimum wages mechanisms in many countries in Asia. Moreover, many migration regimes purposely exclude domestic workers from accessing rights that other labour or skilled migrants in the country are entitled to. With growing interest in return migration and its relationship to development, there have been efforts to place domestic workers ‘back’ on the trajectories of the ‘productive’ economy, especially in the form of entrepreneurial programs and the teaching of return migrant women to use their remittances money productively by becoming entrepreneurs. Common failures of such programs requires us to question the fundamental bias in creating such programs and the placing of emphasis on productive labour, instead of re-examining the importance of reproductive labour in development.

This paper will provide a systematic deliberation on the meaning of decent work for non-industrial, reproductive work, focusing on fair wages, working conditions and industrial relations. Its overall objective is to trace discursive and research frameworks around gender and labour migration from a development perspective to test the place of domestic work within it and to prompt greater attention needing to be paid by development studies to the realm of reproductive work. We will base this on the specific experience of domestic worker migration in Southeast Asia.

The Role of Social Movements in Youth Political Participation

In the debate of youth political engagement social movements have a crucial role to play. In many contemporary democratic societies political culture is facing a crisis of legitimacy. Scholars around the world have stated that the level of traditional political participation is decreasing, especially among young people. On the other hand, there are opposite views, claiming that instead of being politically disengaged, young people are looking for (new) forms for participating in society, as they simply address social issues differently. Thus, new social movements (as well as Internet and single-issue activism etc.) are considered to be new platforms for young peoples’ political activism. This paper is based on case study of ethical-moral values promoting animal rights movement in Estonia. A youth group that consists of politically minded young people who actively participate in and address different issues of the society. The paper explores the importance of social movement activism in sphere of political participation. Especially, it first analyzes how young people conceive their participation and role in society. Secondly, how young activists address political issues through social movements. And thirdly, what challenges they face when participating in socio-political sphere through social movements. The empirical data set includes open-ended interviews and informal conversations as well as participant observations and secondary data sources.

Orthodox Online Communities in Social Russian Nets As an Object of Social Research

Social nets is new social communication environment and the majority of people are involved in them all over the world. The leader among existing social nets in Russia and Russian-speaking area is Vkontakte.

In the social net of Vkontakte there is an orthodox audience which consists of approximately 10% on the part of active audience of this social net. The most active and numerous representatives of the orthodox audience are three age groups which expose relevant portraits of the orthodox audience in Vkontakte: under 18, 18-24, 25-34 years old.

Communities in the social net is main communicative core around which users’ interests are formed. For our purpose all orthodox communities in Vkontakte can

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
be divided into four groups: communities of general orthodox theme, communities where the main content is presented by the quotations of revered fathers and modern members of clergy, and also parables and cautionary tales, issue-related communities (question to priests, for youth, family, devoted to beneficence, etc.), and at last territorially united communities (the communities of bishoprics, youth orthodoxy diocesan ).

Each orthodox group in VKontakte and its own unique target audience on the basis of which the group administration chooses content: by format (articles, news, fillers, quotations), by form (text, photo, audio, video), by the functionality of VKontakte social network (discussions, meetings).

In orthodox communities VKontakte the model of social interaction ‘online-offline’ is actively developed. Within the framework of this model the participants of communities are informed about offline events running (rapidly erected temples buildings, beneficence, meetings with interesting people, etc.) via VKontakte functional (messages, meetings). Due to communities participants high degree of loyalty the information about future events is spread by ‘virus’ method by the means of likes and repost system.

PITASI, ANDREA* (Gabriele D’Annunzio University, profpitas@gmail.com)  

The Fourth Paradigm

The paradigm shifts which featured the systemic thinking from the 1980s to the end of the last century and the very beginning of the 21st lead to some radical epistemological changes at the crossroads between communication sciences and sociology. This paper on one side reconstructs the key paradigm shifts in system theory from the whole part one (P1) to the system environment one (P2) and then to the autopoietic paradigm shift (P3). Kuhnian normality was rather unlikely in systems theory and still the key global economical, technological, social challenges of our times required revolutionary shifts. The other side of this paper is essentially focused on theorizing a fourth paradigm shift which selects the fragments of the late XX century epistemological debate turning them in a systematic (in the Mertonian meaning of the term) redesign of the concept of system itself revealing that design and evolution are two faces of the same coin.

“In any event, we have changed our own evolution but not ended it”.

(Barash 2008: 25)

"Some increase in plasticity is to be expected [...], it represents the extrapolation of a trend toward variability already apparent in the babaos, chimpanzees and other cercopithecoids what is really surprising however is the extreme to which it has been carried. Why are human societies this flexible?”

(Wilson, 2000: 548)

RC09-176.6
PITASI, ANDREA* (Gabriele D’Annunzio University, profpitas@gmail.com)

“Hypercitizenship” and the Evolution of a Global Identity

The idea of the paper moves from the consideration of autonomous agents and global flows eventually converging by means of autopoietic systems. This work reframes the topic of the reconfiguration in the evolving social scenarios within Pitasi’s concept of HYPERCITIZENSHIP, sketched out by designing a multidimensional and multipartite convergence among different kinds of citizenship.

With its four conceptual dimensions, Hypercitizenship, features the strategic attitude of those areas in which capitalism is turning into turbogenetic capitalism. Its main features are the following: Cosmopolitan, scientific, societarian and entrepreneurial.

The Hypercitizenship concept is focused on the fact that communication about key challenges of our times is increasingly meaning communication and public understanding of science and technology for governance and policymaking on a global, global and cosmopolitan scale.

From this point of view, law becomes one of the à la carte products to be bought by browsing a global “catalogue” (Mundus) surging on a technological global platform (Globus) of which the internet is the best metaphor and which can be seen as the most important platform for convergence developments and as a driver of several, key, changes. New media platform is cosmopolitan and global while the mass media often still fall into the methodological nationalism trap. Indeed, the emerging scenarios are more and more shaped by supranational (UN, EU, NAFTA) or multinational (Standard & Poor’s, Moody’s...) entities and by new localisms which cannot survive outside a global network.

Thus, the emerging glocality is witnessing that the “national state” citizenship is too big - bureaucratically speaking, - but too small - in competitive terms-, to be strategic in the merging scenarios.

Hence, the importance of a new conception of citizenship in the glocal age is rising, which we refer to as “Hypercitizenship”.

PITLUCK, AARON* (Illinois State University, Aaron.Pitluck@IllinoisState.edu)  

How to Tether an Investment Banker: Observing Innovation and Control in Islamic Finance

Scholars of alternative economies have noted that financial markets are particularly resistant to social experimentation due to the absence of institutionalized dialogue between finance industry insiders and outside critics. A noteworthy exception is the recent development of Islamic investment banking in Malaysia, where (external) Islamic scholars are in an institutionalized dialogue with (insider) investment bankers.

This dialogue has created an ongoing experiment to create “sukuk,” a novel financial instrument designed as a moral replacement for sovereign and corporate bonds. “Conventional” bonds are understood by many Islamic scholars as immoral because they are untethered from “real” economic activity and produce revenue streams based on “interest.” In contrast, sukuk are alternative asset-backed securities (ABSs) putatively tethered to the real economy and generating moral revenue streams without recourse to interest. This intervention is ambitious and global: in 2012, $137 billion sukuk were created (issued) world-wide in a number of currencies.

To theorize the social mechanisms and governance structures that enable such dialogue, this paper investigates two questions centered on how theologians understand and control investment bankers. How do Islamic scholars and financial engineers speak with one another with sufficient expertise so as to co-construct new asset-backed securities that conform both to theologians’ interpretations of law and as well as to bankers’ perceptions of marketability and profitability? Moreover, how can religious scholars control financiers sufficiently to enforce minimum standards of moral compliance?

To investigate these two questions, this paper draws on 48 focused, ethnographic interviews conducted in 2012 and 2013 in investment banks with financial engineers and Islamic experts who co-produce sukuk. The paper and presentation summarizes the case, theorizes social mechanisms and governance structures, and hypothesizes implications of the case for other morally-committed financial reform projects seeking to dialogue with and control investment bankers, such as Occupy Wall Street.

PITTI, ILARIA* (University of Bologna,ilaria.pitti@gmail.com)

Contemporary Adults: Understanding Youth through Intergenerational Comparison

Although sociology has already deeply analysed the profound changes occurred to youth and paths of transition to adulthood in the last decades, it is often possible to notice two glaring deficiencies in many sociological works: firstly, young people are frequently conceived as a category of its own, a specific social group that is somewhat isolated and studied separately, making it most a comparison with the previous young generations; secondly little attention has been payed to adulthood, the final destination of youth. Adults should be a model for young people’s transitions, but within the contemporary context this stage of life’s standard model is threatened by contemporary transformations and late-modern processes (individualisation, flexibilisation, globalisation, juvenileisation) and it’s become more and more complex to define what is ‘young’ and what is ‘adult’, where youth finishes and where adulthood starts, which functions characterise these two ages and which are their reciprocal connections. All that has huge consequences on the (individual and social) identity both of young people and adults, on their intergenerational research and on youth transitions.

The intent of the proposed contribute is to think youth in a generational way by studying young people in relation and in comparison to the co-present adult generation, lighting up the contemporary features of adulthood. The proposed contribute - based on an empirical research which involved 30 Italian young people aged between 18 and 24yo and their significant adults - hypothesizes implications of the case for other morally-committed financial reform projects seeking to dialogue with and control investment bankers, such as Occupy Wall Street.

The Embodied Mind and Epistemic Difference: Lessons from Disability Studies

Embodied mind theories in neurocognitive science and philosophy of mind are increasingly cited as a conceptual bridge between neuroscientific and social
scientific epistemologies. Theories such as enactivism, embodied realism, and extended cognition share a preoccupation with grounding mind and consciousness in the lived, active body, with situating these in environment, and with challenging the abstract, disembodied Cartesian subject. In this sense, they echo sociological and feminist views on the epistemic significance of the body. Yet sociologists and feminists argue that an embodied mind and mind must involve the recognition of differences between knowers, while neurocognitive theories assume a generic or universal body and pay little attention to epistemic multiplicity. In this paper I argue for the importance of epistemic multiplicity in forging interdisciplinary theories of embodied mind. I also put difference in more literal terms by addressing corporeal variation. How neuroscientific embodied mind theories come out on the epistemic significance of phenomenal variation can be gleaned from the debate over multiple realizability, or the idea that the same mental state can be achieved through multiple physiological processes. This debate focuses on difference only to reinstate epistemic sameness. For more considered reflection, I look to disability studies, particularly the work of Jackie Leach Scully, Tobin Seibers, and Rosemarie Garland-Thompson, to consider what phenotypical variance teaches us about the embodied mind. Disability scholarship shows us that all bodies are variant in some way; this work puts pressure on assumptions of biological universality. The example of disability also shows not only how problematic it is to assume a generic body, but also a generic fit between body and world. I argue that embodied mind theories can best grasp epistemic difference by resisting an *a priori* body-subject whose relevant properties are fixed in advance.

PIXLEY, JOCELYN* (Macquarie University, jocelyn.pixley@gmail.com)

Central Bank ‘Independence’

The global financial sector still has very little regulation over its capacity to manufacture money (or to refrain from doing so), even though the credit crash occurred nearly seven years ago. Many hopes are placed on central banks but surely they have been forced to play an ‘unfair game’, as Hyman Minsky said many years ago. This paper investigates ‘independence’, not only as a sociological misnomer, or a form of central bank ‘dependence’ on what financial markets think (as Fed members say) but also the effects of central bank quantitative easing since the crisis. The Fed’s QE has enormous impact on most other economies. The ECB is (or was) a test case for hopes of international agreements over the control of money creation. Although the field shifts rapidly, it appears to be dominated still by bond vigilantes behind which lie coalitions of interests that defend the status quo ante. So far few effective oppositions have risen to urge a firmer path for the Fed, such as that taken by the Swiss National Bank. In 2012 it called the bond trading firms’ bluff; in contrast the Bank of Japan is under some ‘control’ by Treasury. I report on my current interview material in Europe with central bankers and treasury officials.

Barrier and Risk Free Environments for Older People. a Survey Applied to State Provided Units in Chile, the Need of a New Policy Approach

Increasing ageing and urbanization are two tendencies which together characterize the 21st century as an unprecedented demographic revolution. In this context a large proportion of older people, particularly in Latin America, will live in vulnerable social, economic and cultural conditions in inadequate habitats which should be addressed by public policies. The effects of the built environment have been less attended in Chile, despite its relevant impact in both the physical and perceptual dimensions of life affecting its quality reflected in inclusion, social participation, autonomy and independence of this age group. Adequate habitability of housing and urban space should be provided allowing ageing in place as long as possible. Urban studies in Chile have focused in providing housing for those unsheltered through the provision of new units which have not considered the needs of older persons. Considering than more than 80% of seniors in Chile own their homes (SENAMA-INTA 2010); the addition of public policies focusing in improvement of existing housing is relevant. Considering the high accident and mortality figures related predominantly to falls due to aspects of the built environment and the high personal and economic costs for families and the medical assistance system, design issues become relevant issues.

This paper presents findings related to the design and use of an evaluation instrument developed for the detection of risks and barriers in a sample of housing provided by the State of Chile, using objective and subjective techniques. (Direct observation of performance of Basic Activities of Daily Living, (BADL) focus groups regarding findings and dimensional evaluation both of users and spatial conditions). Findings reflected barriers and risks mainly associated with Mobility, in around 30% of BADL operations, due to inadequate object and/or architectural design mostly related with height, presence of uneveness or lack of elements.

National sociologies are often referred to, either directly or implicitly, but the methodological basis for doing this is normally taken for granted rather than discussed, and relevant data are not evaluated critically. The commonest formulation is probably in terms of the thought of those identified [in ways not specified] as leading national social thinkers, though there are also some cases where the contexts of leading national journals [identified as such in ways not specified] are treated as sufficiently representative to be used. There are also problems about what to define as the nation. What if the state and its sociology are divided in important ways, for example by having different language communities? What if the sociological work done within state boundaries is closely integrated with sociological work done elsewhere, or significantly influenced by the work of recent immigrants? Such questions raise issues about what could be defined as a national sociology. This paper explores the practical possibilities of empirical work on the characteristics of national sociologies as variously defined, giving special attention to some sources which have not commonly been used in this context.

**Public Trust in Health Information Sharing and Health Systems in the United States: A National Survey**

**Background:** The U.S. Institute of Medicine’s Report, Digital Infrastructure for the Learning Health System, calls for “weaving a strong trust fabric” among stakeholders, including the general public, to facilitate broad data linkage and sharing. The texture and quality of this “fabric” is understood, particularly with respect to attitudes and beliefs about information sharing held by non-experts. This presentation adds to a growing body of trust research by measuring trust at the individual, institutional, and system levels. It examines four key dimensions of trust—fidelity, competency, integrity, and global trust—and key determinants such as awareness, beliefs, and previous experience. **Methods:** To understand the dynamics of public trust in broad data sharing as a common practice in the context of the U.S. health system, we are administering a 232-item questionnaire (n=1000) using probability-based web panel designed to be representative of the United States and administered by the GfK Group (formerly Knowledge Networks). **Findings:** Preliminary results from a pilot survey (n=500) indicate that 60% have a somewhat or generally favorable view of information sharing among health care providers, hospitals, public health, and insurance companies. 62% feel that it is fairly or very likely that the quality of health care will be improved with increased data sharing, while 49% see health information sharing as likely to benefit personal health care. Most feel that the health system is inadequately regulated (54%) and that the system would be improved by monitoring by independent oversight (63%). **Discussion:** The public’s trust of technological change that promotes information sharing in the U.S. health system is not a foregone conclusion. Unfettered information sharing in the U.S. health system is not a foregone conclusion. Unfettered information sharing in the U.S. health system is not a foregone conclusion. Unfettered information sharing in the U.S. health system is not a foregone conclusion. Preliminary results from a pilot survey (n=500) indicate that 60% have a somewhat or generally favorable view of information sharing among health care providers, hospitals, public health, and insurance companies. 62% feel that it is fairly or very likely that the quality of health care will be improved with increased data sharing, while 49% see health information sharing as likely to benefit personal health care. **Concepts and Practices of (Counter-)Democracy in the 2010s Movements**

This paper proposes a cross-analysis of democracy as demand and practices as defined and implemented by young activists in recent social movements. It draws on first-hand empirical material from three qualitative research: democratization movements in Mexico (12 interviews, 2012-2013), Moscow (23 interviews, 2013) and Rio de Janeiro (32 interviews, 2013); progressive activists in Europe (7 countries, 37 interviews and a focus group, 2012); and ecological transition activists in Brooklyn (22 interviews, 2010-11) and Belgium (34 interviews and 2 sociological interventions, 2012-13), as well as 7 interviews with Occupy Wall Street activists. **Text analysis (NVivo) and consolidated methods of discourse analysis suggest that four themes can be isolated in young activists’ discourses: direct democracy, responsible democracy, argumentative democra-...
Vast reconstruction and building of orthodox churches in Russia is a new architectural landscape of modern Russian cities as well as forming of separate social establishments - parishes and their communities. Such communities are varied and have own features demanding on different factors (mainly of territorial and administrative character).

The sociological researches within Kashirskoe and Nikolsky deaneries afforded an opportunity of distinguishing the orthodox parishes models, which develop as a result of religious activity of last several decades.

1. “The churches with elderly communities unclosed in soviet period”. The core of such communities is formed by aged people - as a rule, women and old-timers of church who remember the life of parish in soviet and relating to perestroika periods. The characteristic feature of such churches is a presence of several generations of congregants: those who were in the church in soviet times and those who came there in post-soviet period;  
2. “The parishes with constantly varied community” are typical for churches at hospitals, shelters and prisons where there is a frequent change of congregants looking for mysteries and services of Church;  
3. “The churches in holiday villages with cottagers communities” and “The guest church”;  
4. “The parishes with the community of “the active” are formed around an enthusiastic and active priest, who unites people of the most diverse age and social rank;  
5. “The parishes of specific destiny”. There are parishes which are known for their unparalleled features, as for instance one of Satio-Russkoe of Nikolsky deanery: here we find both the deposition of respected warrior Evgeny Rodionov (numerous groups come to his resting place), and complicated reconstructed building of the church, apogee background of luxurious houses raised around and even its own parish tragedy – the murder of a priest.

PORIO, EMMA* (Ateneo de Manila University, eporio@ateneo.edu)

Asian Prosperity and Inequality: Gains and Injuries of Success

During the past decade or so, the Asian region has experienced rapid growth and expansion. While rising prosperity has led to poverty reduction, social inequality has also widened within and across societies. This paper will interrogate and differentiate the drivers of growth and inequality and its varying consequencnes to different income groups in the region. In particular, a sizeable lower middle class is fueling the growth of urban economies. By examining the differential gains of economic success within and across income classes, particularly among the emerging middle class, the paper characterizes the intersecting/intertwining social injuries of prosperity, poverty and inequality. In doing so, the paper extends the understanding of injuries of income inequality from the physical to the social and political.
Informality and Policy Making: Evidence from Post-Socialist Spaces

Informed by participant observation in public places, informal interviews and a large scale survey this paper explores the ways informal practices may impact on policy making in the post-socialist region with case studies drawn from Lithuania, Poland, Russia, Ukraine and Uzbekistan. It offers a new perspective on what some have defined as a "culture of corruption" to introduce the concept of (non-) state socialism, defined as a system for redistribution of welfare based on human interaction and relationships established by the state agency, replacing state agency where and when this latter is ineffective or absent. (Non) state socialism refers to the fact that informal practices of redistribution are so complex, and comprehensive, that they may be seen as an alternative, and more equitable, system functioning parallelly to state-driven welfare distribution. When a substantial number of actors engages systematically with informal economic practices, the alternative system generated may be seen as persistent and unofficially reshaping national policies, especially when not tailored for a given context, place, or category of citizens.

By doing this, this paper proposes a differentiation of corrupt practices: those harming the state (like fiscal fraud or bribing) and those harming the fellow citizen directly (trafficking, narco-trafficking). Although both "illegal" the first one might allow redistribution of welfare in areas where the state is absent or ineffective. Survival of such practices lies in lack of strict control by the state, that lets the citizens relatively free to act. When this happen, even if the state is not effective, the society re-regulates itself and there is no need to put forward political or economic claims. However, when an ineffective state tries to control too much, the main effect could be to boost deprivation without proposing any viable alternative.

Renegotiating Social Policy through Informality: A Post-Socialist Perspective

This paper demonstrates that informal practices may allow for the participation of a wide variety of citizens in policy making processes. In particular, it focuses on the renegotiation of the formal and informal level of social and welfare policies in post-socialism.

Two main paradigms, informed by development theory, have characterised the study of social policy and welfare in transitional countries. The first one, springing from modernisation theory maintains that developing countries will eventually converge into the path of industrialisation one. A result, research has been poor directly (trafficking, narco-trafficking). Although both "illegal" the first one might allow redistribution of welfare in areas where the state is absent or ineffective. Survival of such practices lies in lack of strict control by the state, that lets the citizens relatively free to act. When this happen, even if the state is not effective, the society re-regulates itself and there is no need to put forward political or economic claims. However, when an ineffective state tries to control too much, the main effect could be to boost deprivation without proposing any viable alternative.

The 1978 World Cup in Argentina, from within Its Political Prisons and Clandestine Detention Centres

Situated at the crossroads between the study of political repression and the media coverage of a sports event, this paper focuses on the reception of Argentina's 1978 World Cup among those who were imprisoned in clandestine detention centres, in a political context that some have described as state terrorism. Our examination of testimonial accounts from the oral archive Memoria Abierta has shown that a number of survivors who were illegally imprisoned during the World Cup recall and express feelings about this event. While we expected concomittal spaces to be fully hermetic and insulated from outside information - as total institutions (Goffman, 1961) --, we observe, in contrast, the precarious, as well as the conditions through which the prisoners accessed and either celebrated or scorned football and nation. Indeed, rather than having been censured or concealed by the repressors, the World Cup, as a national festivity and media event, was to some extent integrated to repressive practices.

We will discuss a number of situations evoked by the survivors in which the World Cup and its media broadcast intervene in the power logics of military personnel and their relationship to the inmates (better described as "disappeared") in the case of clandestine detention centres. We will also discuss the effects of the "informational porosity" of the total institution in the inmates' experience. Our paper will be centered on the subjectivity of social actors: their opinions, expectations, and causes of suffering. We will also discuss the limits of such an attempt to reconstruct these positioning, given the passage of time and the contentious nature of this international sports event.

Feeling Intensely and Changing Radically. How Emotions Felt in Protest Lead to a Cultural Change

The aim of the paper will be to present our proposal of analysis that links the emotions felt in protest and the transformations of consciousness and behaviour considered as outcomes of the protest.

Aware of the emotional intensity these experiences have and the importance of incorporating this dimension to the analysis, our objective will be to show how emotions motivate, discourage, radicalize and generate new outcomes out of the experience of struggle, giving a new meaning to the experience of protest. In order to do this, we will analyse the role of emotions in crucial moments of the protest.

Based on previous empirical research we have studied different experiences of movements, protest and resistance in Spain and Mexico (Indigodias, #yosoy132, two Oaxaca's women collectives, Mexican anarcho-punk movement and a few resistances against dams and environmental conflicts in both countries) we propose an analysis that inverts the look to ordinary people who participate in these experiences in order to understand their deepest and least visible dynamics which macro-structural literature cannot perceive. The methodology that we have
developed throughout our research is based on depth interviews, life story telling, focus groups and narrative analysis of the biographical material.

All in all, we want to prove that the emotional dimension is vital to understand and analyse the change of worldview that ordinary people experience when participating in protest and resistance; as well, it leads to a change in the perspective where protests are seen.

Local Resistances and Social Change. How Local Environmental Protests Lead To Citizens’ Empowerment and Democratization

Currently, thousands of communities and collective groups all over the world are struggling to defend their territories from devastation which leads to the construction of railway, energy and hydraulic infrastructures, only to mention a few. Both in Europe and Latin America, the complicity of the institutional left wing, engaged in the construction of infrastructures and in the limits of the transnational social movements focused on following the agenda of power rather than the problems of the local communities, has led to the emergence of thousands of autonomous experiences of struggle that arise from below.

In our article we will show that these experiences are social and political laboratories where self-organized citizens are experimenting new political practices and are also proposing new discourses, turning these resistances to defend their territory into experiences of democratization, political participation and empowerment.

Focusing on the subjective dimension of protest, we will show the role of emotions, such as place attachment, motivation to action, participation and radicalization of discourses and practices, in order to describe how the experience of resistance produces a transformation of consciousness and behavior.

We will base our analysis on an item of empirical research carried out during experiences of resistance in Spain (the struggle to defend the Riaño valley and the Grande river) and Mexico (the struggle against the reservoir of San Nicolas) all of them analyzed with techniques of qualitative research. The approach selected has been focused, in other words, centered on the experience of participants and activists of local communities.

Finally, what we intend to highlight is that these resistances are struggles for a significant democratization of territory and resource management, and eventually, of society.

Images des latino américains dans la direction de la composante militaire de la MINUSTAH (Mision des Nations Unies pour la Stabilisation en Haïti)

The United Nations Security Council, through Resolution 1540, adopted in 2004, decided to send a multinational force in an effort to reestablish civil stability in Haiti after the political crisis of the Jean Bertrand Aristide government which erupted on February 29, 2004. More than eight years since the implementation of the United peacekeeping force, the opinions presented here are of two national sectors of Haitian civil society, namely, educators and farmers, and are investigated in relation to the perceptions each group holds about the presence of military force in Haiti through the United Nations Mission for the Stabilization of Haiti (MINUSTAH). The opinions of the two organized civil society sectors researched, the perception that MINUSTAH could be interpreted as a military occupation characterized by neo-colonialism, a humanitarian mission or a mission to support and reinforce institutions in the country. In confronting these different thoughts, and in line with the historical trajectory of the Haitian people, represented in the time after the foundation of the Nation-State, in 1804, by the antagonism and divergence of viewpoints between the elites and the masses, it is possible to note that the image that the two researched groups have of MINUSTAH result, in the first place, in the way in which each group constructs the idea of the Haitian nation or of the “imagined Haitian nation.”

Gender Roles In Television Commercials In Asia

Television advertisements are a rich source of data for social scientists to investigate because they can be seen as a reflection of prevailing cultural values. Gender value is also one of the critical factors in developing marketing strategies via advertising messages.

Advertising gender role stereotyping has been a prominent topic in literatures since the 1970s. Over the past decade gender stereotyping in television commercials has received particular attention. Most studies reveal that advertisements reflect the construction of gender roles in society. However, research of gender roles in advertisements is plentiful in the United States. There has never been any comparative research concerning the gender roles in television commercials between Asian countries. Therefore, this paper compares the gender roles in Japan, Korea, China, Taiwan, Thailand, and Singapore.

This comparative content analysis of 2,205 sampling advertisements, collected randomly during August and October in 2012, suggests that the image of gender roles in television commercial does not correspond with the construction of gender roles in reality. In contrast, advertisements create the attractive image of gender roles in society. However, the most findings of this research are similar to the previous result of literature in term of gender of main character, voice over, age, and roles of male and female character in television commercial.
An “Area Studies” Program in France: Scientific, Institutional and Geopolitical Rationales

Institutionalizing and developing “area studies” programs are commonly associated with the Cold War context, while the strengthening of knowledge about foreign areas became a goal of public research and educational policy. These developments came within scientific, academic and geopolitical rationales. Their importance could vary according to the strength of the national intellectual traditions in studying specific foreign areas, the connections between disciplines, and the need for expertise due to the position of a particular State in the international relations. In the case of the US, these evolutions are less explored for the Western European countries, and that would allow probing their particularities. The paper focuses on the set up from the mid-1950’s of the Area Studies, and particularly of the Russian and East European Studies, by a specific actor of the French academic field: the 6th Division of the Ecole Pratique des Hautes Etudes. Outlining the national and international conditions determining such a process, it also points out the particularities of the local (academic, scientific, political) context and of its main initiators’ background. Thus, it questions the specific path taken by the implementation in France of this new scholarly infrastructure. Furthermore, the paper takes into account the social, professional, political characteristics of the team initially recruited for working on a “sensitive” geopolitical area and their productions, while it explicates the scientific content of research, documentation and teaching programs. They are meant to implement interdisciplinary approaches relying all the same on various disciplines, which were differently connected to the State and political power. Finally, the paper questions how the knowledge elaborated in this framework was placed in relation to approaches implemented by pro-communist committed social scientists and to what extent it could be itself of use not only in the academic milieu but also in political and economic circles.

An Epistemological Look at the Concept of Transnational Families

The study of transnational families is a recent one, and although many contributions have been produced in the last decade, it is still necessary to look at the theoretical and epistemological characteristics of the concept. Transnational families are not only an outcome of family member’s strategies, but they are also part of broader transnational dynamics particular to global capitalism where a hierarchy of mobility rights exist, depending on skills and talents. As stated in recent literature, the constitution of transnational families is part of contemporary mobility trends. But the use of the concept presents some difficulties that in my point of view need to be addressed. First, it’s hard to find a unique definition general enough to take into account the diversity of families (different migratory contexts) and to determine its boundaries; for instance, to determine who are involved in the transnational family practices. Second, the predominance of the network’s approach (informal connections, remittances, individual strategies) provides a broad historical perspective to their experiences. More interesting is how the grandparents, mothers, daughters and granddaughters negotiated their changing needs and opportunities and how they balanced tradition, duty, affection and innovation.

Sustainable Consumption Among Brazilian Young: Daily Practices and Political Participation

Several evidences point to changes in Brazilian consumption practices that might be interpreted as a growing greening and politicization of consumption, similar to what has been occurring in other countries. In this process, consumption practices are perceived and used as a way of political pressure to improve social and environmental conditions. In this article we present the results of a research aiming to map political consumerism phenomena in Brazil, focusing on young people. The research was divided into two different methodological phases, a quantitative and a qualitative one: (1) a survey conducted in 2010 among 457 young people aged between 16 and 25, belonging to upper, middle and lower middle socio-economic segments, all living in the two biggest cities of the country, Rio de Janeiro and Sao Paulo; and (2) a focus group with a total of 51 young with the same socio demographic characteristics, conducted in 2012. The research shows that involvement in sustainable consumption among young people in Brazil is low. It can be explained, partially, by the way that young people in Brazil remain under the influence of the family much longer than in Europe and North America, and therefore do not have to perform household tasks or face the dilemma of making consumption choices at their daily lives. It also can be explained by the importance and activism of Brazilian social movements that are responsible for many social changes, thereby rendering individual action in daily lives secondary. We finally point to another relevant cultural aspect of Brazilian society, namely the way that individuality and a sense of responsibility are formed. We conclude, therefore, that while global tendencies may be identified in many countries, the way these develop depends on the institutional configuration of each society.

Le Héros Handicapé Ou L’autonomie Comme Norme Généralisée

Le point de départ de cette communication est donné par l’existence d’une double manière de présenter le handicap et surtout des personnes handicapées à travers les médias. Les individus y apparaissent le plus souvent comme des victimes ou des héros, les hypostases intermédiaires n’y trouvant qu’une place réduite.

Dans cette présentation nous retenons donc la figure du superhéros associé au handicap. Ce personnage est souvent apparié et donc pourvu d’une prophylaxie lui permettant de dépasser ses propres limites. Une image de l’homme réparé et/ou de l’homme augmenté y est construite tout en partant de la réalité des dispositifs techniques de compensation qui encouragent la performance et l’autonomie.

Several evidences point to changes in Brazilian consumption practices that might be interpreted as a growing greening and politicization of consumption, similar to what has been occurring in other countries. In this process, consumption practices are perceived and used as a way of political pressure to improve social and environmental conditions. Generation and Reproductive Health in Newfoundland

This paper presents a linking piece between a comparative study of the Reproduce somewhat secondary. We finally point to another relevant cultural aspect of Brazilian society, namely the way that individuality and a sense of responsibility are formed. We conclude, therefore, that while global tendencies may be identified in many countries, the way these develop depends on the institutional configuration of each society.

From Technical Innovation to Inclusive Education for Students with Disabilities

Since 2006, public policy in France has strongly been encouraging young people with disabilities inclusion within the regular school system. This has found a direct application through technical innovation, intended to help students being more independent within their learning activities. The purpose of this presentation is to underline the manner in which using assistive information and communication technologies may improve the inclusive education for people with disabilities. Moreover, we will base our work on the distinction between technical invention and technical innovation. If technical invention is generally responding to a need at some precise moment, and is sometimes identifying itself with an unique user and use (Simondon, 1968), the technical innovation has a more collective and social dimension (Mulkay, 1972). Hence, we analyse the use of a software and hardware assistive kit intended for students with disabilities who have visual and hearing impairments, as well as learning disabilities. A hundred students from Paris area are expected to use this technology within classes during 2013-2014 school year. The study is then both based on quantitative and qualitative methods, including log folder analysis, questionnaires, interviews and participant observations. We eventually submit that the assistive technology kit becomes a kind of “prosthetic device”, intended to improve cognitive performances. Nonetheless, the technical abilities of its users (Dodier, 1993), as well as the environmental conditions have to be taken into consideration. Technical innovation could, at some point, be seen as a first step towards social innovation, and therefore towards social inclusion of young people with disabilities.
overlooks other important structural elements, such as the role played by public policies. Third, the evident prevalence of a posteriori perspective in the study of transnational family ties makes it difficult to deeply understand their sociological production; in particular the institutional framework that produces, or at least encourages, the separation of family members. Hence, I strongly consider that we must enrich the knowledge about transnational families by adding a solid background from the field of sociology of the family, instead of only the background from migration studies. Despite their local and culturally determined roots, some contributions related to kinship, parenthood, maternity and patriarchy are essential. Also, we must include the contribution of gender studies in order to better understand individual and collective experiences of participants, men and women. This epistemological view will thus increase the heuristic value of the concept of transnational families.

PORTILLA, HILDA JOYCE* (University of Ottawa, hjportilla@hotmail.com)

“Transnational Families” Analysed through the Intersectional Prism

This communication stands at the crossroads of the sociology of migration, the sociology of family, and the sociology of gender relationships. It focuses on Latin American women and men who migrate unaccompanied to Canada for a given period of time, as part of specific government-sponsored temporary work programs for “unskilled” workers. The participants work in Canada, usually for many years, as either live-in caregivers (mostly women) or as agricultural seasonal workers (mostly men). As a result of a significant increase of temporary immigration in Canada and a more restrictive and selective law for permanent immigration, we have observed the creation of a permanent-temporary labor migration dichotomy. Thus, the migrant experience and the relevant life-challenges that both groups face are not the same. Literature review, forums and other related migrants’ activities show that one of the most important challenges faced by temporary workers is the configuration of transnational families, particularly because they are not allowed to bring their families to Canada, as permanent immigrants do. In fact, in addition to a global hierarchy of mobility rights related to their professional skills, many other factors determine the transnational families’ lives: differences in legal status; their access to resources, mobility and lifestyles; their origin or ethnicity; their age; their gender, etc. The intersectional approach will allow us to include the diversity, complexity and analytical challenges of this particular contemporary phenomenon.

Encrucijada Latinoamericana en Bolivia: El Conflicto del TIPNIS y Sus Implicaciones Civilizatorias

The present essay seeks to interpret the implications civilizatorias that we present in the conflict of the TIPNIS (Bolivia), resuming the importance that for the country and for the transnational territories, social, ambigencies, the development of the conflict of the TIPNIS. In the first part we make an analysis from the multiple spaces and spaces that are included in the conflict. In the second part we analyze the analysis in the current presions from dynamic socio-spatial, especially of amplification of the capitalism in front of expansion/invasion, that constitute tensions territories sobre and alrededor del territorio and territorialidad of the peoples indigenous of the TIPNIS. The essay resalta el papel de los movimientos sociales bolivianos en la configuración de las nuevas luchas políticas emancipatorias en el mundo ancladas en los concursos lógicos teórico-políticos como territorio, autonomía, autogobierno, buen vivir, madre tierra, derechos de la naturaleza, estado plurinacional comunitario, resigificando la antigua lucha por la tierra en una otra clave teórico-política, distinta de la liberal y/o marxista. El ensayo destaca la importancia de entendernos las propias dimensiones que el TIPNIS nos plantea para tomar las decisiones que estamos en juego, y que constituyen toda una encrucijada en el continente, el mundo y también para los gobiernos progresistas que intentan empujar cambios en la actualidad.

Incivility and Disorder in Urban Public Space of the Czech Republic: Normativities and Instrumental Interests

The paper focuses on the changing definitions of incivility and disorder in urban public spaces of the Czech Republic. After the fall of the totalitarian regime in 1989, the notion of urban public space as a site of social interaction, negotiation and conflict appeared, first legally defined in 1990. The following years saw a process of negotiation of the limits of acceptability in urban public spaces. The terms disorder and incivility were employed by various actors, including courts of justice, local municipalities, activist groups, NGOs and the media, to define acceptable conduct and exclude undesirable elements from the newly emerging public spaces of Czech cities. This paper focuses on how the meanings of disorder and incivility were defined in the process. Two perspectives are identified in the discourse: (a) normative perspective, identifying the notions of disorder and incivility with respect to values of public order, safety, health and others and (b) instrumental perspective, where the notions of disorder and incivility are used by various actors to promote their particular interests in the conflicts over the use of public space. The conflation of these two perspectives and their mutual relationships are discussed, using the empirical material of local and municipal ordinances and regulatory plans of city administrations. The data shows that the conflicts over the definitions of disorder and incivility point to a larger dispute about the nature of public space and about the notions of citizenship and social inclusion.

Out of Control and out of Sight: Defining Deviance in Czech Shopping Malls

This paper presents an empirical study of how deviance is defined with respect to sensory experience in Czech shopping malls. The rise of shopping malls is one of the most important recent developments in Czech cities: the first mall was opened in Prague in 1998. In recent years, in 2008, there were over 70 shopping malls across the country, making it one of the world’s fastest developing countries in this respect. With this development, an idea of a “new public space” came to be prominent, with strict rules of conduct and social control based on surveillance and exclusion. The paper builds on a large body of empirical evidence, including a) field research, b) interviews with mall management and developers and c) interviews with homeless people, in order to understand how deviance and deviant behaviour is defined in these new consumption spaces. It will be argued that visual appearances play a key part in the prevention-based regulation and control over mall space. The data shows that, in the dominant representations of deviance, visual cues are conflated with the potential of uncontrollability, which is seen as a threat to the order of the mall space. The definitions of undesirability, applied to groups such as the homeless, are built on visual images and they are associated with specific types of conduct. The rules of acceptability are, on the one hand, vague and open to interpretation by the security staff, and, on the other hand, tailored to exclude groups which, by their appearance, are considered prone to undesirable conduct. This conduct is often defined as a sensory disturbance to the image of the mall.

POSSAMAI, ADAM* (University of Western Sydney, A.Possamai@uws.edu.au)

The i-sation of society and post-secularism: towards new inequalities?

In Jameson’s classic work, the end of the 20th century was claimed to face the third phase of capitalism, that of late capitalism, the world space of multinational capital. Around the same time, Ritzer wrote about the McDonaldisation of Society which refers to the permeability of (what Weber made reference to as) rational bureaucracy into our everyday life. This paper will argue that we are now in a fourth stage of capitalism, the cyber space of ‘denotionalised’ capitalism, and that with the help of new i-technologies, this penetration of rational bureaucracy has filtered further from everyday life to our personal biographies. Linking these two theories, this paper will present the argument that we are going through a process of i-sation of society (1) in which capitalism is not only dominating our outer life (e.g. global capitalism) but our inner life as well through its expansion on the internet facilitated by various i-technological applications and (2) in which the McDonaldisation process has now been normalised and religion has been standardised. This paper will address the new inequalities at hand in this i-society, its impact on Habermas’ project of post-secularism, and will project the role that various religions will have in supporting and/or countering this process.

Public Religions and Same Sex Marriage

It is widely recognized that marriage, and more generally family life, has changed profoundly in the last half century. The causes of change are very diverse.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
but one important issue has been legal change. The introduction of no-fault di-
vorce in the post-war years contributed to the rapid increase in divorce, and more
currently the idea that same-sex marriage will be sanctioned by law has stirred up
significant public controversy.

Debates around the legal recognition of same-sex marriage and other related
matters have been in the public domain – over creationist teaching in schools, veiling in public, cir-
cumcision, gay marriage, and Sharia law – illustrates the ideas of ‘public religions’
(Casanova, 1994) and appears to confirm recent commentaries on post-secular-
ism. The argument presented by Habermas (2008) of post-secularity will be used
as a framework to examine the impact of religion as a cultural resource in debate and
decision making in the public sphere. The proposed paper seeks to examine
whether the inclusion of religious and spiritual arguments in the public debate
on same sex marriage positively influences, as Habermas claims, the democratic
quality of deliberative outcomes and contribute to the enhancement of social cohesion
or whether on the contrary public religions play a divisive role in demo-
cratic debate.

Our paper draws on an Australian research grant to study the same-sex mar-
diage debate in Australia and New Zealand, and on a second grant proposal to
undertake a comparative study of legal change in relation to marriage in Australia, France and the United States.

Political Decisions in the Area of Public Security and the Action of Death Squads: The Case of the Violence Crisis in 2012 in São Paulo, Brazil

The purpose of this communication is to present our findings of an original research that is being conducted at the Center for the Study of Violence of the University of São Paulo, regarding the cycle of violence that took place in the Met-
ropolitan Area of São Paulo, which among other incidents, led to a crisis in the public security sector in the State, in the year of 2012.

Since there is no official data on the matter, our data were mainly collected
from the media. According to it, during the second semester of that year 30 state
agents, (specially Military Police officers) and 274 civilians were killed and 200 in-
jured in similar situations – hooded men, shooting their victims from a motorcycle or a car in movement. This suggests that death squads or equivalent group strat-
egies of execution were used. The novelty here seems to be, amongst others, the familiarization of groups oriented to killing out of duty police officers.

The research aims at identifying the trigger(s) of these sequences of actions, around which a dynamics of action-reaction seemed to be installed. For now, our
main hypothesis is that previous political decisions, taken in the realm of public
security policies, worked as the main trigger to initiate a process of mutual killings between members of the State of São Paulo Military Police and members of the PCC (First Capital’s Command) organized crime group.

Truth and Politics: The Case of the Truth Commissions in Brazil

This presentation will seek to clarify the underlying principles as well as the
routines and different sources of tensions surrounding the politics of truth com-
missions that are currently convening in Brazil by systematically cataloguing them
and presenting reports from their public sessions and interviews with commis-
sion members and deponents. Unlike similar initiatives convened in other coun-
tries that have transitioned from authoritarian regimes, the truth commissions
in Brazil did not occur at the onset of the emerging democratic regime. Instead, they are a recent phenomenon, appearing in the context of an already mature democracy, and acquiring a multiplicity of forms, as they are established at dif-
f erent levels of governaments, legislatures, universities and many other forms of
organization of civil society. Established by Brazilian president Dilma Rousseff in
May of 2012, the National Truth Commission (NTC) forms the main axis of a large
net of independent commissions. Through the NTC, the Brazilian State takes upon
itself the responsibility of investigating the human rights violations that were per-
petrated by its own agents during past military governments (1946 to 1988), but
4) does so without revoking the Amnesty Law of 1979, which explicitly prevents any
criminal investigation or punishment of any transgressions of human rights that
may have occurred during this period. Therefore, the NTC holds the clarification
of the historical human rights record as a value in itself, and not as a means of
informing judicial action. However, this paradigm is not uncritically accepted by all
the auxilliary commissions, which, despite operating under the same legal frame-
work as the NTC, often question the general amnesty principle. The value of his-
torical truth as either a goal in itself or as a potential instrument to legal reform
and judicial action remains the topic of much controversy, and forms the main
analytical thread of this presentation.

Ranking Regimes, “World Class” Universities, and the
Impoverishment of Intellectual Life

This paper considers the pressure felt by scholars publish in journals that are
highly ranked according to their “impact factor.” A world-wide movement has
pushed scholars to publish in English-language journals, to the detriment, we ar-
gue, for intellectual life at the national level. We first document evidence for this
pressure, then discuss the consequences of funding mechanisms and research
assessment for higher education. Then we review several factors in this move-
ment: 1) the rationalization of expertise as a feature of Weberian bureaucratic
authority; 2) the politics of higher education regulation and control, as manifest in
the new managerialism and standardization exercises; 3) the pricing and finance of commercial scholarly publishing, which takes advantage of the preceding developments by charging high prices to maximize profits; 4) decisions by editors and their journals to play by the new rules even when they are
personally opposed to them and when they value journals for a different purpose.
We draw on national case studies from Japan, Taiwan, Argentina, Singapore, the
UK, and South Africa.

The Overseas Chinese Population in Circa-2011

In circa-2011, there were over 40 million Chinese people living outside China
(broadly defined). We discuss the data on the overseas Chinese; we show their
distribution among the world's countries and regions. We discuss their patterns of
change in past decades. We present recent data on the larger of the non-Chinese
diasporas to enable us to better evaluate the significance and importance of
the Chinese diaspora. We discuss the major patterns of previous Chinese emigra-
tions. Then we present our data on and analyses of the overseas Chinese around
2011. The overseas Chinese population in the world in 2011 is larger than the
population of Poland and Canada, and almost as large as Argentina. The Chinese
diaspora is the third largest in the world, behind Ireland and Germany. The over-
seas Chinese continue to have important and significant influences in many host
countries and are certainly not an inconsequential population.

The Residential Segregation of Homosexual Households from
Heterosexual Households in Metropolitan Areas of the United States, 2010

Residential segregation is a major area of research in demography and sociol-
ogy. Most of the research has focused on the segregation of racial/ethnic minori-
ties from the majority race/ethnic group in cities of the United States and several
other countries. Few if any analyses have dealt with the spatial segregation of
sexual minorities from the majority. In our paper we analyze homosexual-to-het-
eronsexual household segregation. There is a void in the literature about the ex-
tent to which gay men and lesbians are residentially segregated from heterosex-
ual households. There are some studies of “gay spaces” and enclaves, but most
are case studies of single cities (e.g., San Francisco) or analyses of gay enclaves
and political force and activism. There are no systematic empirical studies of met-
ropolitan areas in the U.S. (or elsewhere) of the degree to which gay male and
lesbian households are residentially segregated from heterosexual households.
Our paper addresses this void. We use two dissimilarity measures of residential

"Table of Contents"
segregation with the same-sex partnering data from the 2010 U.S. census to calculate segregation scores for the 100 metropolitan with the largest homosexual populations. We show that there is a sizable amount of residential segregation between these two groups. We also show that the level of segregation varies positively across the metropolitan areas with the size of the gay male and lesbian population. Our research contributes to the general literature on residential segregation by focusing on a non-racial minority that has heretofore received very little attention.

Towards Better Education and Less Inequality? Trends in Geographical, Generational and Gender Inequality in Education

In our paper we provide an overview of past, current and possible future trends in disparities in education following the traditional patterns of inequality along gender, generation and geography. Magnitude and recent trends in inequality vary across regions and countries. Educational differences by generation indicate the speed of change in human capital formation over time and we identify different patterns of educational transitions that are closely connected to societal, political and educational contexts. We focus on pathways from female disadvantage to gender equality and new forms of inequality. The closing of gender gaps is typical mostly of developing countries, where recent gains in education are often more pronounced for women compared to men, but are not always sufficient to remove the limitation in access to education; whereas the issue of male disadvantage especially in higher (i.e. post-secondary) education remains.

We base our analyses on a unique global dataset on educational attainment -- encompassing the reconstruction and projection of educational attainment from 1970 to 2060 for 171 countries by age and sex -- developed at the Wittgenstein Centre for Demography and Global Human Capital.

HIV, Dating and Mating: An Analysis Of Stigma In Self-Presentation

While the Universal Declaration of Human Rights counts among its fundamentals the right to marry and found a family (Article 16), it is often informal societal discrimination that inhibits this right (UN 1948). Gay men living with HIV/AIDS deal with the stigma of their status from both external to and from within the gay community. Often they are legally required to disclose their stigma prior to sexual activity, in essence moving them directly to what Goffman (1963) calls discrediting. Despite overwhelming evidence that sero-discordant couples can effectively manage HIV transmission risk through safer sex practices, positive men must negotiate their status in a dating landscape often characterized by stigmatizing language that polarizes gay men in to “clean” or “dirty” states, the latter referring to men who are HIV positive; in effect making their sexual history their calling card. This paper begins with a critique of Goffman that offers an alternative for those who are perceived to be inherently and irreparably discredited, and then presents an analysis of a comparative sample of three hundred personal advertisements across three differently populated American cities: large metropolitan, medium urban, and rural. Extracted from the free and open website craigslist.org, the advertisements are qualitatively analyzed for stigmatizing language such as “clean only,” “drug and disease free (DDF),” and other text used to communicate sero-status. The paper concludes with a discussion of implications and suggestions for researchers interested in studying inherently stigmatized groups.

Persistent School Segregation or Change Toward Inclusive Education? the Convention on the Rights of People with Disabilities and Reform Mechanisms in Germany

The United Nations Convention on the Rights of People with Disabilities (UNCRPD) was ratified in Germany in 2009. Article 24 requires that nation-states implement an inclusive education system. This ambitious goal poses great challenge. The institutionalization of special education systems can facilitate—or hinder—inclusive education. Germany is one of the countries worldwide that, to achieve the UNCRPD’s goals, must transform its highly segregated education system. In fact, for decades Germany has maintained one of the most differentiated and segregated education systems in Europe. Inclusive education contradicts not only contemporary special education structures, but the entire highly-stratified general education system, addressing a core conflict in German education policy. The consequences of segregation, such as social assistance receipts over the life course, are dramatic even if they have not often been calculated.

Thus, this neo-institutional analysis examines both the barriers and the reform mechanisms that impact the implementation of the UNCRPD in a decentralized national context. German federalism guarantees the sixteen Bundesländer authority over educational matters; however, ratified human rights conventions demand fundamental reforms regardless of regional policymaking preferences and priorities. Based on historical process-tracing and expert interviews (with policymakers, administrators, scholars, and advocacy groups), we contrast “leader” Schleswig Holstein with “laggard” Bavaria. In the northern state, inclusive education has diffused broadly since the 1970s. In the southern state of Bavaria, implementation is just beginning; indeed, the law’s intents are being subverted by government actors, exhibiting considerable backlash.

Comparing these cases enables an investigation of specific mechanisms of institutional persistence and change: power-based, legitimacy-based, utilitarian, and functional. This analysis contributes to the theoretical literature on institutional change and path dependence, to studies on the human rights revolution in education (UNCRPD in particular), and to research on inclusive and special education, long marginalized in the sociology of education.

Becoming Worldly: Developing Global Cosmopolitan Perspectives On Diasporic Homeland Tours

Diasporic tourism—structured group tours to natal, symbolic and ancestral homelands—is a growing industry where globalization, migration, leisure and the symbolic economy converge. Using ethnographic material from three diasporic tourist populations, this article examines the process of narrating a collective self-identity through diasporic homeland tourism. While tourists travel through space to homelands in order to travel through time and discover ancestry, they also move in scale by claiming membership in a global community. Framed within the theoretical intersection of tourism and diaspora, this comparative project reveals the utility of cosmopolitanism—as a category of practice—for domestic displays of identity and community.

No One “Likes” Sandy: Facebook and Post-Hurricane Recovery In Long Beach, NY

Technologies, like social media sites, have made it easier to communicate and can capture the “ephemeral” cultural artifacts found during periods of upheaval and change (Stallings 2006). However, due to its relative newness, social media’s role in recovery efforts after natural disasters has not yet been thoroughly explored. This report adds to existing literature and demonstrates how social media technologies supported and facilitated localized recovery efforts and memorializations from below in Long Beach, New York. The Long Beach Hurricane Information Facebook page, created by two transplants to keep out-towners informed has since morphed into a virtual bulletin board that provides support and information for local residents. Residents both near and far see this site as a place to share information, organize local responses, and importantly remember. Referencing their personal memories of Long Beach, posters reference local symbols and sayings to perform solidarity and community in this virtual space. This site bears witness to the resiliency, frustration, and strength as well as the shortcomings and failures of institutional recovery efforts. While they struggle to rebuild, they work together; defined and connected by the “Long Beach sand in their shoes.”

Crisis and (re-)Informalisation Processes: The Cases of Barcelona and Berlin

With the economic crisis and the retreat of welfare services, European cities are witnessing the reemergence of informal practices creating reciprocity mechanisms and informal markets as well as non-formal, reciprocity-based forms of provision of housing, healthcare and other services. Nevertheless, the strength and the emergence of these practices takes place unevenly across these cities, depending on the impact of the crisis, the nature of the state and its multi-level governance and the institutional culture on the provision of policies.

This paper analyses through historical and qualitative analysis, the role of informal practices in the provision of resources in two European cities in crisis: Barcelona and Berlin. As in many other southern European cities, the emergence of informal practices in Barcelona is key to understand the capacity of its inhabitants to overcome the perverse effects of the crisis. Historical analysis will show the scenario of informal practices until the eighties and that part of these practices are reappearing now. In Berlin, which fell into a deep economic and financial crisis with the reunification of the city in 1990, informal practices have been an element explaining the redevelopment of the city. Local administrations have tried to formalise informal activities negotiating and tolerating certain practices.

Both case studies show that processes of informalisation taking place in the current crisis are rooted in previous practices and the historical development of cities, that never saw a complete disappearance of these practices. Besides, the analysis shows how these practices have been selectively allowed by local administrations to ensure certain form of social cohesion.

PRANDNER, DIMITRI* (University of Salzburg, dimitri.prandner@sbg.ac.at)

With the financial crisis, responses to environmental problems in European cities are increasingly based on privatisation of water and energy companies, and the promotion of technological approaches to increase efficiency and reduce pollution and energy consumption under the policy concept of ‘smart city’. This paradigm promotes energy efficiency without discussing the systems of production and supply. Nevertheless, there also exist alternative approaches from civil society fostering new models of energy production, distribution and consumption.

This paper focuses on these proposals and their institutionalisation possibilities through the analysis of a cooperative initiative (Som Energia) spreading in Barcelona and other Catalan cities. Following the experience of initiatives in northern Europe, this cooperative proposes new relations with green energy through the redistribution of both decision-making and energy power. This brings an increase and diversity of actors in the field of renewable energy, moving from traditional large private corporations and public companies to common citizens, who act both individually in the private-domestic sphere and collectively through socially innovative experiences.

The paper analyses a) how the cooperative emerged in its institutional and governance context, strongly dominated by an oligopoly of large private electricity companies and a complex and inefficient regulation that entails economic, social and environmental deficits, and b) the potential of this approach to create a greener and more democratic model of production and supply of energy. Results show that the co-op must tackle barriers and obstacles adapting itself continuously to changing frameworks. Despite this apparent unfavourable scenario, it develops different strategies to ensure its activity paving the way for the strengthening of alternative forms of organization led by civil society that go beyond state and market-oriented logics. These experiences demonstrate the limits of technological innovation in moving towards a post-carbon society. Urgent changes in how socioeconomic activity is organized are also claimed.

PRATA, ANA* (California State University Northridge, ana.prata@csun.edu)

The recent economic crisis affecting Southern European countries has been singular in both its intensity and complexity, and as such, it has had a profound impact on the economic, political, social, and institutional realms. I compare how the Spanish and Portuguese governments, women’s state agencies, parliamentarians, and activists in both countries have inserted issues of gender equality and women’s empowerment into narratives about the economic crisis, and the austerity measures intended to mitigate it. The fiscal consolidation in Spain and Portugal has had a more severe impact on female employment rates, working conditions, wages, and welfare provisions than in the rest of Europe. In this comparative research I address the following questions: What policies have the Spanish and Portuguese governments pursued to mitigate the effects of the economic crisis on women’s position in the labour market and in the domestic area? How have these governments framed the various problems and the solutions directed at increasing gender equality and empowering women? Which political groups or social movement organizations have voiced women’s interests on these issues and what strategies have they devised to deal with those challenges? Which problems affecting women are these groups framing as a priority (e.g., employment, poverty, violence) or even as ‘a problem’ at all? And finally, how are these groups framing potential solutions? Findings show that it is mostly women’s state agencies (not parliamentary members) that highlight how the economic crisis has impacted women disproportionately. The agencies’ focus seems to be more on the increase in domestic violence, and less on issues of women’s unemployment or the gender pay-gap. The print media does not highlight how the recession is affecting women, although some articles mentioned the strains families have had to deal with since the crisis and the strategies they adopted in response.

Residents’ Responses to the May 1-4 2010 Boston Water Contamination Incident

This study used the Protective Action Decision Model to examine local residents’ warning sources, warning receipt times, message content, warning confirmation, risk perception, and consumption of untreated tap water, bottled water, bottled water, in temporarily chlorinated water during the May 1-4 2010 Boston water contamination incident. Most residents received warnings from news media and peers and these warnings mentioned 2.3 of five recommended elements of a warning message—most commonly the threat and the recommended protective action. Consumption of untreated tap water declined, consumption of personally chlorinated water remained negligible, and consumption of bottled water and bottled water increased. First warning source was significantly related to protective response but message content was not. Unexpectedly, risk perception was more strongly related to water consumption before the incident than after the incident. This finding calls attention to the need to recognize that, although increased risk perception can increase protective action, successful implementation of protective actions can decrease risk perception.

Families Apart: Long-term Implications of Canada’s Live-in Caregiver Program for Filipino Migrant Workers and their Families

Canada’s Live-in Caregiver Program (LCP) is one of Canada’s largest and oldest temporary foreign worker programs. Throughout the first decade of the new millennium, the program grew four-fold, in line with a more general national and global expansion in temporary foreign worker programs. The majority of those coming through the LCP are Filipino women, part of a vast labour diaspora of over nine million Filipinos working in roughly 200 countries. An unusual feature of the LCP is the opportunity it affords to migrate permanently to Canada if the worker completes 24 months of live-in care-work within a 48-month period. In 2010 the Philippines displaced China and India to become Canada’s top immigration source country; by 2009 40 percent of Filipinos migrating to Canada came from the Philippines. This study examines the experiences of 24 migrant families residing in Canada, and explores how they deal with the challenges faced since the migration experience can look and be thought about differently from the same migration experience.

Workplace Innovation and Consequences for Employees and Organisational Performance in the Netherlands

Based on ‘Netherlands Employer Work Survey’ (NEWS) data this paper investigates the consequences of workplace innovation for employee and organisational performance in The Netherlands. The NEWS is a unique, two-yearly held survey among 5,000 establishments of public and private organisations on policies and practices of Dutch employers, concerning work related issues, such as working conditions, employment relations, HR and innovation management.

Workplace innovation is defined by Pot (2011) as “the implementation of new and combined interventions in the fields of work organisation, HRM and supportive technologies. Workplace innovation is considered to be complementary to technological innovation”. Taking this definition, which is rooted in the ‘theory of modern sociotechnology’ (De Sitter) and ‘the job demands - control model’ (Karasek), as a point of departure, we constructed a Workplace Innovation Index (WPI) that consists of the following characteristics: ‘active jobs’ (flexible but tailor-made employment relations), ‘employee voice’ (dialogue and autonomy), ‘flat organisation’ (limited hierarchical levels and teamwork), and ‘innovation orientation’ (openness to renewal and seeking new knowledge externally).

The relationship between this WPI-index and several performance output measures, such as labour productivity, performance (turnover, profit), sickness absence, work stress, and perceived employee commitment will be examined. Control variables are sector (industrial branches) and organisational size (number of employees). To date, research investigating the relationship between workplace innovation and organisational performance has been scarce. Our analyses will be executed in the end of 2013 and will be fully reported in the paper. Implications for theory and practice will be discussed.

PRENTOULIS, MARINA* (University of East Anglia, M.Prenoulis@uea.ac.uk)

Emotions and Values: From the Greek Riots of 2008 to the Movements of 2011

It is not uncommon for theories of collective action to differentiate between ‘conventional’ and ‘unconventional’ protests. This paper argues, however, that although riots are ‘unconventional’ protests, they are an important element in the process of collective identity construction. They signal a crisis in representation and the need for improved or renewed ‘civic politics’. As practiced in social movements. Riots, although lacking the clear demands, degree of organisation and duration of social movements, offer an insight into the network of emotions and values that subsequently crystallise into more coherent forms of collective action. In this respect they should be thought of within the theoretical framework of social movements. The intense and extensive notoriety Greece in November 2008 was one of these instances which although not purposeful in the traditional sense, provide an insight into the networks of values and emotions leading to the movement of the ‘Aganaktismenoi’ (Indignants) responding to the economic crisis in Greece in 2011.

PRENTOULIS, MARINA* (University of East Anglia, M.Prenoulis@uea.ac.uk)

Responding to the Greek Crisis: Social Media, Horizontal Organization and Networks, then and Now

The use of social media during the first wave of protests responding to the crisis and the lending agreements in Greece, enabled the emergence of a new political discourse. The main website of the Greek ‘Aganaktismenoi’ (Indignants) was anchored around the concepts of horizontality, autonomy and leaderless (www.real-democracy.gr). The analysis of the website reveals an attempt to divide the political field in pro and anti memorandum forces and expresses the widely felt hostility and suspicion towards the existing forms of democratic representation (Prenoulis and Thomassen, 2013). Although the lack of coherence and permanency of this movement points towards processes of identification (as failed attempts) rather than new forms of collective identity, this paper is concerned with the influence of the ideological and organizational elements emerging from the use of social media during the protests and their displacement on a variety of socio-political sites: First, the ideological and organizational influence of social media for the creation of Solidarity Networks. Second, the use of social media by the radical left coalition Syriza, which is currently the opposition party in Greece.

What Drives National Differences in Intensive Grandparental Childcare in Europe?

Grandparents play an important role in looking after grandchildren. The provision of intensive grandparental childcare varies considerably across Europe, with figures ranging from less than 4% in Sweden and Denmark, to almost one quarter in the Netherlands. This paper investigates whether contextual-structural factors (such as formal childcare and labour market structures) and family cultures influence the level of informal childcare support from older parents to their adult children, using data from the Survey of Health, Ageing and Retirement in Europe. Multilevel analyses suggest that grandparental childcare variations are mostly driven by macro-level factors. Both parent and grandparent socio-demographic and economic characteristics were associated with intensive childcare and were consistent with existing literature. However, even accounting for socio-economic and demographic differences between national populations, country-level variations in the level of provision of intensive grandparental childcare remain. Most of such variation can be explained by structural and cultural factors. In particular, in those countries where both parents and grandparents are expected to work, formal childcare is generally well provided and appears to be the norm; thus, there is a lower level of grandparental childcare. In contrast, in countries where there is a high percentage of women who are not in paid employment, maternal care for pre-school children appears to be the preferred norm. In such countries, provision of formal childcare is limited as care is expected to be provided by family members, and mothers in particular rather than grandparents. If, however, a mother is not expected to work in a country where children are expected not to work (but look to children), she tends to rely on grand-maternal support on an almost daily basis. Recent European policies which encourage older women to remain in the labour market are likely to impact on mothers’ employment, particularly in Southern European countries where there is little formal childcare.
emulated family breakdown, loss of land, environmental degradation, increased indebtedness, etc. This notion therefore suggests that migration will result in ill-being of rural dwellers. This paper explores the implication of migration on well-being of return migrants in the Northeast of Thailand. This paper argues that while migrant leave their village in seeking material wealth, they continue to maintain a high value on bonds and relationships to their natal village. The bonds they have to their rural village limited their objective wellbeing, because of low returns of agricultural and low wage works in rural. But the limited seeking material wealth through migration on the one hand also enhances or fulfils their subjective well-being. This study also found that the rich seems to be experienced higher happiness after returning to the village, while the poor do not experience subjective wellbeing in the same manner.

Key words: wellbeing, migration, the Northeast of Thailand, Development

**PRUISKEN, HENRIK** (Bielefeld University, henrik.pruiskenniuni-bielefeld.de)

**Locus of Control and Cumulative (Dis-)Advantage in the Labor Market**

The relationship between Locus of Control (LoC) and occupational outcomes has already been shown in several cross-sectional studies. The belief to have control over the achievement of own goals, as do people with internal LoC, seems to be an important property for the career opportunities. Thus, people with an internal LoC get more pay, and take higher vocational positions in the average. This paper, however, has a longitudinal perspective and investigates the mutual influence between labor market experience and the development of LoC. More specifically, it is assumed that there is an accumulation of (dis-)advantages for people with an external locus of control. In this case the external locus of control leads to a decrease in employment opportunities and the worse employment opportunities lead then to a strengthening of the external LoC over time. On the other hand, an accumulation of advantages could be assumed for people with a stronger internal LoC.

The analysis is based on household panel data from the German Socio-Economic Panel (SOEP) for the years 1999-2010. The SOEP includes a multi-item scale which measures the LoC in the years 1999, 2005 and 2010. In addition, the SOEP contains much information about the employment history, so that the employment situation can be modeled in detail.

On the basis of "Fixed-Effects-Models" I estimate the effects of labor market outcomes, like unemployment or the decrease of income, on a possible change in the locus of control over time. First results show that a deterioration in the individual labor market situation leads to an increase of an external LoC. The assumption of the accumulation of (dis-)advantages can so be confirmed on the basis of the previous analysis.

**PRUISKEN, HENRIK** (Bielefeld University, henrik.pruiskenniuni-bielefeld.de)

**The Effect of Inequalities within Families on Work-Values of Adolescents**

The occupational aspirations and work-values of adolescents strongly influence their career choice and therefore are formative for their status attainment. The importance of the family for adolescents' development of work-values has been mostly studied in terms of direct intergenerational transmission of work-values from parents to their children. In contrast with this approach the paper investigates to what extent the sibling constellations and inequalities within the family affect the formation of work-values. It is assumed that differences in supportive parenting between siblings reduce the social work-values of the child that is less supported. Based on the assumptions of the theories and research on social par- risons it is further assumed that these effects are stronger for more similar sibling pairs, because the individual social comparison orientation is stronger and a "de-identification" is harder within these pairs.

The analysis is based on household panel data from the German Socio-Economic Panel (SOEP) for the years 2000-2011. In the SOEP adolescents are interviewed at the age of 17, including questions on their vocational goals or their perceived parenting behavior. The great advantage of the data is that the siblings are also surveyed at the age of 17.

On the basis of "Sibling-Fixed-Effects-Models" I estimate the effect of the differences in the perceived parenting behavior. First results show that a supportive parenting style increases the social work values, but that higher support of the other sibling leads to a lower formation of social work-values. The results also reveal a stronger effect for same-sex siblings in comparison to opposite-sex siblings, because the individual social comparison orientation is stronger and a "de-identification" is harder within these pairs.

The empirical data for this study were collected by means of a standardised electronic questionnaire from 3 organizations in Finland (n=719) in 2011, and so far 4 organizations in Lithuania where a survey is still carried on since 2012 (current n=536, survey to be completed December 2013). Based on preliminary findings of regressional analysis, the emotional component of organizational trust has a much more significant effect on organizational innovativeness than cognitive one. Its affect on the dimensions of behavioral, process and strategic innovativeness exceeds its impact on market and product innovativeness. These findings imply that creativity may be mispracticed in organizational setting and more self-purposeful rather than result-oriented.

The research findings will have theoretical implications concerning the role of emotion to organizational innovativeness, discussing the need for golden mean in practicing organizational trust. From a managerial perspective, potential risks arising from high organizational trust and certain dimensions of organizational innovativeness will be discussed considering the innovation context.

**Successful Educational Actions in Southern Europe: From Marginalization to Educational Inclusion**

The recreation of the successful social and educational actions is achieving the transition of social contexts with strong indicators of exclusion. These actions have been identified through the INCLUD-ED project, the only integrated project about schooling from the Framework Programmes of research until its ending in December 2011. There have been 15 universities from 14 countries participating in the project and case studies have been conducted in Spain, Italy, Malta or Cyprus, among other countries, where the successful educational actions (SEAs), universal and transferable, have been identified. The case that we are pre-
senting here is the one in the La Milagrosa neighbourhood, at the outskirts of the city of Albacete (Spain). The educational centre in the neighbourhood presented low academic performance, high levels of absenteeism, serious problems of co-existence among students and high levels of conflict between teachers and families. Through the implementation of the SEAs advocated by the international scientific community, a transformation started which was extended far beyond. The academic results experimented a rapid improvement and the diverse social agents (university, administration, professionals-officers and neighbours) carried out a Dialogic Inclusion Contract to re-creates the SEAs and to carry out the transformation process. This process has become a model at a European level to exit the ghetto. The key resides in the design of policies based on scientific evidence; and on the inclusion of the voices in all the decision-making processes.

New Alternative Masculinities Against Gender Violence

This paper presents a South's contribution to overcoming gender violence. Recent scientific evidence about the perpetuation of the traditional heterosexual model of masculinity upon gender violence shows that 1) there are in the history many examples of men that have fight together with feminist women for the eradication of gender violence; and 2) often and according to an existing socialization to be egalitarian do not promotes a desirable image (in terms of sexual attraction). It stands out the differentiation between three types of masculinities: Dominant Traditional Masculinities (DTM), Oppressed Traditional Masculinities (OTM), and New Alternative Masculinities (NAM). DTM and OTM contribute to perpetuate violence against women, while NAM allows preventing it and, thus, overcoming it (Flecha, Puigvert, Rios, 2013).

This theoretical contribution was presented for the first time in Barcelona (Spain) in a conference organized by Homes en Diálogo (Men in Dialogue), a men’s organization, based under the context of Dialogic Feminism and which main objective is to promote and strengthen other models of masculinity based on equality and dialogue, as an alternative to the hegemonic masculinity. From the theoretical perspective of Dialogic Feminism, defined by Puigvert (Beck-Gersheim, Butler & Puigvert, 2011), and the new conceptualization of DTM, OTM and NAM, it is possible to contribute to the eradication of gender violence in different countries. Thus, this paper proposes how this conceptualization could be transferred to all cultures and contexts and fight gender violence in a global way.

From Reform Socialism To Transnational Capitalism: The Political Economy Of Foreign Direct Investment In Postsocialist Central and Eastern Europe

The existing literature on postsocialist transformations in the former communist ruled states of Central and Eastern Europe (CEE) argue that paths of market reform in the region were largely determined by policies implemented at the moment of transition. This paper, by contrast, argues that reform paths were heavily constrained by each state’s inherited industrial structure and ties to the world economy prior to 1989. Examining flows of foreign direct investment (FDI) in the region during the initial liberalization period, the paper shows that the density of East-West inter-firm ties in the 1970s, and rates of international state indebtedness during the same decade, are better predictors of how rapidly postsocialist states amassed FDI stocks in the early 1990s, than their economic, institutional or policy characteristics during the transition period. However, the paper also finds that while the size and inherited ties to the world economy form a powerful structural basis attracting FDI, post-Communist political coalitions were key in enabling or hindering the advancement of foreign investment. The combination of industrial structure and political coalitions at the time of liberalization explain divergent pathways in transitions from state socialism in CEE.

Social Implication of Inequity in Higher Education; A Comparative Study of Formal and Non-Formal Mode of Education in Andhra Pradesh of South India

A B S T R A C T

SOCIAL IMPLICATION OF INEQUITY IN HIGHER EDUCATION

A comparative study of formal and non-formal Mode of Educatio in Andhra Pradesh of South India

*Dr. P. Koteshwar

Social implications of different modes higher education has been gaining lot of importance in contemporary times. This is because of growing important for higher education and its consequent skill and talent required for management of complex issues and problems emerging in the era of post liberalization.

As such Higher Education has been considered as necessary tool for social transformation by using increasing knowledge in science and technology. As a result increasing post globalization era developed and developing countries initiated establishment of institutions of higher learning across the world. In this consequent the Government of various Nations have been liberalizing the higher education and imparting education through formal and non formal means, India is one of such countries which has been liberalizing higher education and expanding its institutional activities through formal university education and non formal system of open university education and distance mode of higher education to reach all the sections of the society.

However, there is a lot of disparity in the content, quality, curriculum and mode of teaching etc. Further the socio-economic profile of the students are also varies. Hence there are number of consequences on the students due to various systems of education for the same degree.

This study aims at to understand comparatively the system of formal and non formal higher education and its implications and the students of various backgrounds. For this study Kakatiya University and its formal and non formal system of education has been chosen to understand the implications of the system inequity in higher education.

A New Age of World Factory: Monopoly Capital and the Struggle of the New Generation of Chinese Workers

A startling 18 young workers attempted suicide at Foxconn production facilities in China in the year of 2010, attracting worldwide attention. This article looks at the historical development of Foxconn Technology Group as a case to demonstrate the advent of rapid capital expansion in China and its impacts on the lives of Chinese workers. It also provides an account of the role of the state that facilitates to Foxconn's production expansion as a form of monopoly capital. Foxconn is important and typical of this phenomenon due to its speed and scale of capital accumulation in all regions of China which is incomparable to extant enterprises. We argue that this new form of capital generates a global factory regime and a distinctive managerial mode that further leads to workers' suffering from work pressure, anxieties and desperation at an unprecedented level.

Communism Revisited: A Third World Perspective

As an idea or philosophy, Communism died in the West when the mature form of capitalism didn't succumb to a communist revolution. As the result of the transfer of capital, with the support of militarism and class conflicts in the Third World, socialist revolutions arrived there in the 20th century. This is the history of communism, the first wave, if you would like to name it.

Since the movements of the 1960s, the state or party-politics has usually been represented as the enemy to be attacked. But from a Third World perspective, as Lenin highlighted, the highest stage of communism was imperialism. The first half of the 20th century focused on national liberation that required a state machine. This proved to be the foundation of communist struggle in the context of the Third World. After the revolution, the state didn't vanish but this didn't put an end to the struggle – as many in the West thought – since we see communism as praxis rather than an idea of History.

There are three reasons for the continuing existence of the socialist state: The failure of Western communist movements to liberate their own working class and their counterparts in the third world. The Cold War required the strengthening of socialist states and develop the socio-economic conditions for socialism. The lack of grass roots democracy and the lack of substantial class forces which could counter-balance the bureaucratization of the party-state.

Although it failed, the Chinese Cultural Revolution was an attempt to address these historical predicaments. Capitalism has conquered most Third World countries and enveloped their life-worlds, thereby creating the social conditions for the final capitalist crisis and the second wave of the communist revolution. A new sociology of communism needs to revisit the politics of class, collective and human emancipation.
into the great wide open? a comparative study of cultural legitimacy and the arts in british and finnish newspapers, 1960-2010

Classifications and social valuations of culture and the arts vary cross-nationally and historically. Recent studies have questioned the role of classical highbrow culture and a status marker in Western countries and suggested that the self-evident bourgeois "good" or legitimate taste is becoming less hierarchical and more open. The famous idea of cultural omnivorosity, that the taste of the high status groups is no longer exclusive but inclusive, is one way of conceptualizing this trend. Omnivore scholarship, however, has concentrated mostly on the consumption rather than the production side of culture. Changes in the social value and composition of the legitimate taste as expressed in people's dispositions and preferences should nevertheless receive support, or even be preceded, by transformations in cultural institutions which confromate legitimate art. Since art journalists and intellectuals play a crucial role as cultural intermediaries, the changes in dominant taste patterns should be reasonably recognizable in their evaluations and writings, i.e. in how cultural classifications and aesthetic standards are represented in the media. Sociological studies of such cultural institutions that would include both the national and international level are still rare. This paper presents the first results of a reseach project examining cultural pages of the main newspapers in five European countries, Britain, Finland, France, Spain and Sweden, from 1960 until 2010. Since we are interested in changes in the legitimate taste and the processes that have created space for omnivorous tastes, we pay special attention to the appearance of new (and the disappearance of old) cultural genres and art forms as well as the weight of popular culture in these pages and the boundaries between entertainment and "serious" art. By using both quantitative and qualitative content analyses, we focus here particularly on two countries and the respective newspapers, Britain (The Guardian) and Finland (Helsingin Sanomat).

bewixt and between: web spaces and southern theories

Traditionally, the dominant forms of sociology have been based on the assumption that theories were generated in the north while the global south contributed mostly confirmatory-cases. Many scholars have challenged this assumption though, given the political economy of knowledge systems, their perspectives have not, as yet, shaken up some of the core orthodoxies in the metropole. At the same time, sociologists who are in tune with theory-making and well-developed knowledge systems in different parts of the world are aware of co-existing frameworks that describe diverse social realities. Some of these co-existing frameworks have been identified and described as Southern theories, indigenous theories etc. I have been paying special attention to the appearance of new (and the disappearance of old) cultural genres and art forms as well as the weight of popular culture in these pages and the boundaries between entertainment and "serious" art. By using both quantitative and qualitative content analyses, we focus here particularly on two countries and the respective newspapers, Britain (The Guardian) and Finland (Helsingin Sanomat).

Bewixt and Between: Web Spaces and Southern Theories

The present contribution stands as a deeper and wider sociological reflection of some empirical evidence resulting from a national research project entitled “Federalism, Local Autonomy and Quality of Democracy”. In an attempt of understanding the reasons for the substantial halt of the federal reform process in Italy, the content analysis of the interviews addressed to privileged witnesses of the administrative and local political system emphasized two central aspects: the increasing role played by technical knowledge and the persistence of a ruling-class political culture geared toward a parochial/individual dimension of interest, more than according to general and collective aims. On the one hand the increasing complexity and technical nature of the regulatory framework “imposed” by a higher level of government (European Union), on the other a network of relationships between politics, society and economy - both at national and local level - that is oriented to the defense of the achieved benefits through what we can describe as familialistic (or neo-feudalist) mechanisms of interaction. This picture that emerges may help to explain the phenomena of globalization in terms of growth, competitiveness, development and democratization of decision-making processes of their political systems (by implementing, for example, inclusive decision-making practices supported by the use of new technologies of information and communication).

The aim of the contribution is therefore a general reflection on the political culture of the Italian political elites and its "weight" in shifting the impact of globalisation from a potential added value for both national and local development to the actual practical loss of competitiveness of the whole system.

Discourse on Affirmative Action: Perspectives of a Privileged Minority

The legislated system of racial privileging institutionalised under apartheid in South Africa was dismantled with the transition to an inclusive democracy. With the normality of a racialised order questioned measures were instituted to address the legacy of the apartheid workplace regime. In this paper the discourse of middle-class whites to challenges to entitlements they have enjoyed historically, is considered. This discourse reveals how privilege and disadvantage is concealed, and shifted, with a loss of power to dictate terms of engagement with others. Narratives on colour-blind merit, efficiency and equity are marshalled to protect a privilege position and challenge potential threats.

“Dilemmas” of Migration Governance: A Case Study of Nepal

The labor market is complex in every society. Along with one’s movement from one place to another, his/her life becomes vulnerable. Though migrants are to be treated not as workers but as human beings with human rights, reports state that labour migrants have been facing a lot of problems not only in receiving countries but also in their own soil. Generally, labour-sending countries in Asia are confronted with the dilemma between “promotion” and “protection”. In the face of bleak employment prospects at home and the economic gains from foreign exchange remittances, countries would like to see expansion in overseas migration of national workers. At the same time, they cannot turn a blind eye to the rampant abuses of basic human rights suffered by their nationals abroad. Nepal, being one of the newly emerged countries in sending its labour force to the international market, especially in Asia, has been one of a witness of such dilemma. On the one hand, it exports its labor in order to take some pressure off local unemployment. On the other hand, it has to deal with exploitation and even death situation of its citizens as the recent case of Qatar shows.

Within this background, this paper explores the reasons behind Nepal’s reluctance not only to put the labor migration in its policy priority but also to sign/rectify the UN Convention. In other words, examining the link between political ideology of major political parties in Nepal, and its reflections in introducing gov.-of-the-people policies including the labour mixing its labour force to the international market, especially in Asia, has been one of a witness of such dilemma. On the one hand, it exports its labor in order to take some pressure off local unemployment. On the other hand, it has to deal with exploitation and even death situation of its citizens as the recent case of Qatar shows.

On The In/Compatibility Of Giving and Exchange

The paper argues for the importance of making a distinction between gift-giving and ceremonial gift exchange. Ever since Marcel Mauss and his pioneering
essay *The Gift*, sociologists and anthropologists have considered the gift largely on the basis of exchange. However, there are also forms of giving that are not reducible to the reciprocity of exchange. While in ceremonial gift exchange (e.g. Christmas and birthday presents, reciprocal dinner invitations, etc.) gifts are perhaps best conceptualised in terms of reciprocal recognition (Héraff, 2010), the practices of giving presented by self-sacrifice and humanitarian aid, for instance, escape or at least suspend the strict economy of exchange. What is more, the paper suggests that modelling the gift solely according to exchange significantly undermines the giving (up) involved in the gift. Whenever what is given is given only ‘in exchange’, so to speak, the giving with abandon is annulled already by definition. Nevertheless, it is not that giving would be completely separate from reciprocity. The paper argues that gratuitousness and reciprocity comprise two dimensions of the gift that at once presuppose and exclude each other. The gift

The paper reports on a theoretical and historical research project comparing two contrasting social movements that shaped China’s immediate and long-term futures, the post-World War I May Fourth Movement and the Cultural Revolution of 1966-76. The May Fourth Movement grew out of the betrayal of China by western powers at the Versailles Conference, and was the culmination of a renegotiation of Chinese indigenous traditions. It led to political reform and intellectual strengthening. The Cultural Revolution can similarly be situated in China’s international isolation during the Vietnam War but rather than a popular expression of future-orientated optimism it was a party-led mobilization of inexperienced young people directed to internal factionalism. It led to chaos, lost opportunities and isolationist cultural closure. The paper explores the characters of these very different movements and also considers some similarities which they share. One common element that will be developed in the analysis in addition to international context and qualified rejection of indigenous traditions is the possibility of characterizing each movement in terms of representative collective commitments. By focusing on the macro-level commitments internal to each movement the paper will relate the movement-level engagements of participants and their psychic investment in socio-cultural and political development in these two quite different but crucial phases of Chinese history.

**A case study of Wuhan City about research on improvement strategies of the state-owned mining shantytowns under the guidance of ecological civilization construction**

With the rapid development of China’s urbanization, industrialization, expansion of urban population, housing becomes a growing problem, especially the growing problem of settlements decline. At present, our old settlements regeneration are mainly used in large-scale reconstruction of the tear down, and it has brought up housing prices, the differentiation of urban living space, the loss of urban form and urban culture and other issues. Under the impact of the living environment development of the 21st century, the harmony of “Man and Nature” became the theme of urban development, which requires the city old settlements to provide a sustainable development of rehabilitation programs, the sustainable development concept of “Reconstruction – renewable urban settlements came into being. It is designed to improve the living environment, optimize the layout, and enhance the quality of the living, and inject new vitality to the healthy development of the city, while also promoting China’s housing market in the context of rapid healthy urbanization and stable development, to build “eco-society”. Through the study of the planning of Wuhan City and the state-owned mining shantytowns settlements regeneration from the planning and material transformation level, proposed to construct an ecological society proposed to try new ideas to improve the living space for vulnerable groups such as the shantytowns, and other cities.

**New Religious and Nonreligious Organisations: Competition, Contest & Communalities**

What are the communalities and differences between religious and nonreligious organisations? With ‘nonreligion’ I am referring to groups that are generally considered to be not religious but are nevertheless related to ‘religion’ in important ways. Obvious examples are atheist, rationalist, and secular humanist organisations. Despite their roots in the 19th century, their apparent growth in many parts of the world and their realignment in the contemporary world make them in many ways new forms of (nonreligious) organisations. My engagement with such groups will primarily draw on a long-term study of rationalist and atheist organisations in India (Quack 2012) as well as data from atheist groups in the Philippines and humanist associations in Sweden and Germany. These organisations try to spread an explicitly secular worldview, provide secular alternatives to religious life-cycle rituals, and stand in direct and indirect competition and contest with religious organisations in various ways. To analyse these relationships, I will critically engage with the ‘theory of religious and secular competition’ devel-
oped by the sociologist Jörg Stolz (2009) to complement the ‘religious economies’ approach within secularization theory. Based on a relational approach to study ‘nonreligious’ groups and organisations (Quack 2014), I will further engage with the organisations’ struggles for various kinds of capital within institutional and field-related ‘logics’. On this basis, I discuss the ways in which nonreligious organisations may be situated within the ‘surroundings’ of a religious field, thereby complementing Bourdieusian studies of specific religious fields.

**Reconfiguring Personal Communities in A ‘Divorce Biography’**

Scholarly discussion on divorce has largely focused on the detrimental consequences of divorce. This scholarship inadvertently constructs divorce as a tragic life event that destroys individuals and a social problem that threatens the very fabric of society, reinforcing and reflecting common attitudes towards divorce. However, there has been an emerging field of research challenging such academic and policy discourses about divorce. My study is situated within this new sociology of divorce. It departs from the perspective that divorce signifies moral decadence and focuses instead on the way individuals organise their family life and practices. My research argues that divorce creates spaces, however fraught, for individuals to construct what I call ‘a divorce biography’. These spaces include the ways in which divorce copes with the crisis, organises one’s personal relationships and makes plans for the future. In this paper, I focus on how Singaporean divorcees, as part of constructing their divorce biography, negotiate their post-divorce relationships with family, friends and other significant others. My paper explores how they exercise choice by navigating around cultural norms and take into account practical considerations as they reconfigure their personal communities for survival, intimacy and belonging. This study shows how divorced individuals might continue to build and enjoy strong and close relationships even after the rupture of their marriage and disruption of their nuclear family unit.

**Estimating Societal Trends from Heterogeneous Cross-Sectional Time Series Surveys – Some Challenges Demonstrated on the Example of Church Attendance Trends in Europe**

Sample-based social science surveys have initially been a tool to collect data for analyses with a limited time horizon. With the advent of long-standing survey programmes such as Eurobarometer, EVS/WVS, ESS, or ISSP, the option of deriving society level trend information from cross-sectional data collected over different time points has come into the world. It has often been demonstrated that larger trends can be observed from repeated cross-sectional surveys within the same survey program, when some methodological homogeneity can often be taken for granted. It is however much less clear whether data from different survey programs, with different methodological details, are sufficiently homogeneous to be cumulated into a common source database for building even longer, denser, and more complete trends.

The present study uses a database of responses to church attendance questions in European surveys, compiled from the survey programmes named above. This database is analysed with respect to possible problems arising from the requirements of harmonisation across time and countries, given the variety of languages, questionnaire and data formats, and other design properties of the individual surveys. The database presently comprises more than 70000 respondents from 70 European countries or regions and covers almost 30 years from 1966 to 2010. Analyses aim to establish the presence or absence of country samples from 32 European countries or regions and covers almost all languages, question and questionnaire formats, and other design properties of the requirements of harmonisation across time and countries, given a variety of incentives and opportunities for such behaviors found in their home society. For comparative studies this means that we have to expect cross-national variation in the measurement properties of scales for political participation, even for substantive reasons alone.

This study investigates how such substantively driven heterogeneity in the measurement of protest behaviour can be dealt with, in particular in relation to methodologically driven heterogeneity of the participation measures, which may be also present and which we routinely attempt to exclude. A latent-class item response theory model for a participation scale from the European Values Study 2008 will be estimated and the outcomes analysed in terms of substantive and method-induced variation across countries.

**Genre Et Vieillissement : L'expérience De Femmes aînées ImmigrantEs**

Cette communication présente certains résultats d'une recherche qualitative menée auprès de 90 femmes aînées ayant immigré à Montréal au Canada, dont on ne sait peu de choses. En effet, les données sur les aînées immigrantes sont rares et presque toujours basées sur le rôle de grand-mère (échanges de services, liens avec les petits-enfants, impact de l'éloignement géographique) (Attas-Donfut, 2008; Phillisop, 2002; Teras et Shampa Mazumdar, 2004; Aldous, 1995). Notre recherche visait à comprendre l'expérience – au sens à la fois des perceptions et des émotions ressenties et des actions déployées par les femmes pour organiser leur quotidien (Dubet 1994). Le vieillissement quant à lui doit être compris dans ses dimensions à la fois personnelles (rapport au corps, à la santé, etc.), familiales (place de la grand-maternité, rôles comédien comme détenues dans les relations et la transmission intergénérationnelles) et sociales (rapport à la société québécoise en soi et des biographies de vie d'individus ou de groupes) (quandt, 2009, 2010).
