Nestled inside a 1980s-style arcade in the Western Suburbs of Sydney, the African Village Market is a meeting place, social enterprise and a site of recognition. The market was established as a means through which African women in Sydney could sell their own products, provide African goods that were otherwise hard to get and foster a sense of community across African groups in Sydney. Drawing on ethnographic research conducted at the African Village Market in late 2013-early 2014, this paper will explore how women at the market understand and give meaning to solidarity. While the market holds a particular resonance for the Kenyan community in Sydney, it also functions as a meeting place for other African communities. It is a particular site where solidarity is practised in the everyday through the act of sharing; the sharing of space, friendship, knowledge and support. By asking why people choose to share with each other, what they choose to share and who they choose to share with, this research will explore the complex ways that solidarity functions across various axes of difference. In the context of a steady decline in funding for ethnic group organisations, it is necessary to understand what role these spaces play as sites of difference that foster a sense of social solidarity within and across communities.

Geographies of Reflexivity: The Spatio-Temporality of Contemporary Youth Subjectivities

This paper approaches the spatio-temporality of contemporary youth subjectivities through a discussion of the spatial dimensions of individualisation. The paper argues for a renewed focus on the reflexive practices of young people in relation to the way that local social conditions are shaped and reshaped as part of broader processes of social change taking place across the western world. Emerging debates about the meaning and significance of reflexivity are situated within geographical theories that emphasise the construction of space as a meeting point of temporalities, as well as the relationship between place, identity, and social practice. In order to provide a located and spatiailised understanding of the consequences of social change for young people's identities, the reflexive practices and biographies of young people in different spatial contexts are situated within this theoretical context. The paper argues that reflexivity is a spatialised phenomenon: young people mobilise reflexive practices in relation to local and structural conditions, themselves embedded within the spatial dynamics of globalisation and individualisation. The paper concludes by calling for a spatialised understanding of the consequences of social change for young people's identities.

Place, Rural Youth Identities, and Social Change

This paper responds to emerging critiques of the metrocenric and placeless focus of contemporary youth studies with a located, emplaced analysis of youth identities in rural and regional Australia. While theories of social change currently influential in youth studies depict a homogeneous and placeless modernity, nevertheless the processes these theories describe have reshaped young lives differently across urban and rural environments. Drawing on a research project ongoing in western Victoria, this paper analyses young people's identities and biographical narratives in relation to arguments about social change, including arguments about globalisation, individualisation, reflexivity and the meaning of place in late modernity. Narratives and biographical imaginings of rural and regional young people articulate identities constructed across geographical scales, as well as providing a located understanding of the genesis of reflexivity and its relationship to identity and local inequalities. Discussing the contemporary significance of place, mobility, and changing geographical inequalities, this paper moves towards a spatialised and comparative analysis of youth identities in a changing world.
Everyday Boundaries and ‘Queer’ Experiences in the Transit Migratory Space of Turkey

Looking at the everyday as a crucial site for being and becoming as well as for (re)shaping belonging(s) of marginalized social groups (Manalansan, 2003), this paper seeks to examine everyday worlds of Iranian queer refugees in Turkey. The paper draws on findings from a doctoral dissertation project, which is based on 11-months of fieldwork consisting of key-informant interviews as well as on ethnographic data and narratives collected through in-depth interviews with 43 Iranian lesbian and gay asylum seekers in Turkey. Iran is a transit locality for non-European refugee communities due to its geographical limitation to the 1951 Geneva Convention. Among other irregular migrants and transit refugees, Turkey hosts many Iranian queer subjects, who are seeking asylum based on sexual orientation and gender identity persecution and waiting for resettlement to a third country in the global North. Time they spend between their\' and \' final\' destination affects and inflects their everyday life struggles and experiences as they shift across multiple boundaries and hierarchical axes of difference within the conditions of cross-border mobility as well as of asylum seeking while living in the transit migratory space of Turkey. In that sense, the main aim of the paper is to go beyond a panoramic snapshot of what the mundane activities of Iranian refugee population in transit in Turkey looks like, toward a sociological analysis of how race/ethnicity, class, gender, and sexuality intersect and create borderlands in the daily life struggles and experiences of migrating Iranian sexual dissidents.

Experiences on Improving Quality in Home Care Services for Seniors in Argentina

In this paper we present research progress on the National Home Care Program in Argentina that has been carried out continuously since 1997 and with greater intensity in the period 2003-2013. The objective of the research is to investigate the impact of public policy aimed at the older population with some degree of dependence with respect to the learning incorporated by public and non-governmental organizations involved in the decentralized structure from which perform these services.

The proposed research is a comparative case study of implementing organizational changes in the National Home Care Program in order to detect changes and learning that occurred in these organizations from the perspective of the actors (members of these organizations and users of its services, including home caregivers service cooperatives, etc.) in the program to build indicators and make proposals for continuous improvement of the quality of this public policy.

Caregiving and Employment in the Canadian Context

According to Statistics Canada, in 2012 more than 8M Canadians had provided care to a family member or friend with a long-term health condition, disability or aging-related needs during the previous year. The largest proportion (44%) were age 45-64—that is, baby boomers in peak earning years. Moreover, the number of boomers caregivers increased by 20% between 2007 and 2012. As in most developed countries, most Canadian caregivers are employed and many report care-related employment consequences. Many also report psychological, emotional and physical health consequences, many of which are serious enough to result in a visit to the doctor. Gender differences are narrowing: a slim majority (54%) of caregivers were women in 2012, but women still spend more time on care tasks, do more high demand tasks (personal and medical care), and experience more health and economic consequences.

Demand for care will continue to grow in Canada, as in most parts of the world. But Canada’s public caregiver support infrastructure is underdeveloped compared to other countries. At the same time growing evidence indicates caregiving can have on labour force attachment, commitment and productivity. Canadian caregivers remain largely uncommitted to supportive workplace practices for caregivers.

In this paper we report results from further analysis of Statistics Canada’s 2012 General Social Survey on Caregiving and Care Receiving examining incidence and predictors of care-related health and employment consequences for caregivers, as well as estimates of monetary costs that accrue to caregivers’ employers as a result. These findings will be interpreted against the backdrop of the Canadian public and private policy context and implications for future policy and practice in the health and continuing care and labour domains discussed.

Children’s Health and Well-Being: Making Sense of the Health Conundrum

Lifestyle related morbidities affecting children have attracted attention from national and international policy makers. One response to these public health concerns is to inform children and their parents of health promoting behaviours so as to establish life long habits for good health. However, epidemiological trends suggest that the prevalence of childhood morbidities is increasing. This suggests that health promotion programs appear to be struggling in effecting change in response to a complex set of factors driving this trend.

This paper attempts to make a small contribution to understanding this problem by presenting some research on children’s understandings of health and well being. The study surveyed a representative sample of Year 6 children (age 11) in two schools. The sample consisted of 192 pupils (90 male, 102 female) with an average age of 11 years. The results of this survey suggest that a considerable number of children have poor understandings of health and well being.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
of health to understand children's perspectives of their illness, less common is research that obtains children's perspectives of what health or well-being means.

Our findings show that when children discuss their health they invoke themes from health promotion campaigns, which share many of the features of 'healthism' (Crawford 1980). However, children also call upon different and more broad-ranging meanings of well-being which problematise these healthism discourses. These include locating health as one dimension of well-being that prioritises agency, security and a positive sense of self; as promoting the body as a functional entity; and of health as generated intersubjectively which reproduce patterns of moral anxiety among carers. The findings suggest that children's understandings of well-being provide important clues as to the limits of health promotion campaigns and a set of considerations policy-makers need to take into account to effectively respond to the health conundrum.

FAWAZ, JULIA* (Universidad del Bio-Bio, Chile, m.fawaz@ubiobio.cl)

New Roles in Rural Contexts. Women, Work and Family in Chile Today

Globalization, modernization and neoliberal policies have significantly contributed to the transformation of traditional rural life in Chile in the last decades. A more heterogenous and modernized rural world has emerged, although still strong gender and social inequalities remain. Within these changes, the visibility of women in public spaces highlights, in particular in the educational sphere and in labor market, even though Chile still has a low rate of female labor participation compared to other Latin American and OECD countries. These new reality implies that the traditional sexual division of labor is being transformed or questioned, since women incorporation to higher educational levels and to labor markets implies for them geographical mobility, new social and economic networks and particularly reciprocity, provides a normative structure that underpins operation of the informal economy for children.

Three main social work performed by young people on the informal economy are identified: enterprise workers, informal employees and associative workers. Each category of work is embedded in different social relations between ‘worker’ and ‘employer’ that represent different relationships of appropriation. These relationships of appropriation reflect latent class structures with young people from poorer backgrounds more likely to undertake work as informal employees and wealthier young people more likely to be involved in enterprise work.

The nature of appropriation also influences intrinsic and extrinsic orientations towards work. Informal employees’ relations, predicated upon strong particularistic ties, do not evidence greater levels of intrinsic attitudes, but are less commodified. Enterprise work, predicated upon weak universal ties, is characterised by higher levels of instrumental attitudes. However young people from poorer neighbourhoods are more likely to show altruistic orientations.

The Influence of the Organizational Performance on Psychosocial Health at Work

At the present time there is a domination of cost-effectiveness criteria in the practices of modern businesses which are more attracted by the economic and management activities that can allow the company to prosper and achieve efficient financial results. Nonetheless, statistics show a steady growth in the number of workers who are victims of diseases such as addiction to alcohol, drugs, mental disorders and insomnia, the difference caused by excessive stress due to adverse methods of work organization and interpersonal relations in the workplace. Downsizing, layoffs, retirement, overtime work and forced leaves without pay have a significant disruptive impact on workers, their physical, social and psychological wellbeing. Thus, there is underestimated the social aspect of a negative impact of the organization's economic activities on psychosocial health at work.

The given research deals with the issue of social pollution, expressed in reducing the level of welfare and deterioration of physical and psychosocial health of workers caused by the economic activities of the company. The theoretical study has allowed us to formulate hypotheses about the toxic management practices and their negative impact on people's psychosocial health. An empirical study conducted by the authors in comparison between Russian and Italian companies has permitted to verify the given hypotheses: to examine in detail the nature of social pollution of the intra-organizational environment and to identify toxic elements of the socio-labour relations in the company. An important feature of the current research is studying the social pollution phenomenon from the point of view of employees, employers and trade unions.

Russian Universities in the Neo-Liberal Reforms

In Russia, for two decades, neo-liberal reforms have been carried out in all spheres of social life: economy, politics, culture, and education. The higher education reforms (universities in particular) dismantle the previous Soviet national education system trying to substitute it by a new pattern based on the Western model “for the purpose of being fully integrated into the global community”.

The process of transplanting Western education patterns on Russian ground resulted in the fact that education no longer performs its most important social functions of integration and differentiation.
The integration function implies the system of education that is supposed to reproduce a set of core values reflecting the spiritual priorities of society and uniting people in a common social, historical and cultural community. It is known far and wide that every society does its best to preserve national identity, socio-cultural and mental characteristics of the population. Therefore, in order not to lose national identity communities try to transmit (and reinforce) their most important values through education systems.

The differentiation function implies preparing people of the younger generation for “embedding” them into cells of the social structure, bringing social and occupational structure of society into the right track; preparing the right number of specialists of different skill levels and different specialties for the country, according to the strategy of its development.

But the paradox of contemporary Russian situation is that neither twenty years ago, when the construction of the neo-liberal capitalism was just at the beginning, nor now – nobody elaborated or formulated the development strategy. There was too much that was obscure: there wasn’t ordered a priority system in the development of certain sectors in the economy, science, and social services. People were unaware of the economic model and the model of society they would create through liberal reforms.

FEINBERG, SETH* (Western Washington University, seth_feinberg@wwu.edu)

Pathways For Prevention: Disentangling Causal Relationships Of Preventable Mortality and Forced Migration In Post-Colonial Africa

If humanity consensually agrees that innocent children should be spared the ravages of violence, political murder is not a reasonable means of debate, and that no person should be led to starvation at gunpoint, then we must also agree that humanity has failed modern Africa. This research summary points to a volume of historical evidence linking a host of independent factors that consistently predict higher rates of preventable mortality from violence, starvation, and disease across sub-Saharan nations. A wide-angle view of dictatorship and resource exploitation in the independent era (1957-1980) set in motion the foundation for modern conflicts that continue to brutalize millions of Africans. Sadly, violence, starvation, disease and other preventable mortality causes are easily predictable, yet continuously occur across many parts of Africa. A second function of this research summary is to highlight causal pathways between extant social, geographical, economic, and agricultural indicators and the increased likelihood of forced migrations and preventable fatalities. If scholars can disentangle the cause and effect relationships that have resulted in millions of lost African lives decade after decade, local and global society will be best prepared to prevent similar catastrophes in the future.

Science of Selection: Developing Social Technology in Educational and Vocational Field 1920–1940, Norway

This paper explores how creating the applied science psychotechnics redefined societies’ views on abilities and disabilities during the early twentieth century. The main empirical sources are textbooks, articles and political documents. It studies the making of applied psychology as two interrelated processes: first, the early experimental laboratory developments of scientific knowledge and the new understanding of the relationship between body and mind, and second, the introduction of new general techniques for measuring intelligence and aptitudes in schools, the military, and employment services – that is, for society in general. I name the first process ‘scientificisation’ and the second ‘politicisation of the new scientific techniques’. The two analytical terms point to how abilities and aptitudes were redefined due to scientific and political interests. This article first gives an overview of the international innovations that I term ‘social technologies’, and thereafter analyses how these technologies transformed the Norwegian system – first the special schools, then the vocational schools, and finally the employment services.
killed men. A total of 26 sessions where observed and systematically registered in field diaries. The study identified aspects related to gender and social classes being mobilized in the discourse of those agents in the legal field to consubstantiate their thesis for both accusation and defense. It is possible to perceive that these aspects are summoned in representations elaborated in the discourse as an strategy undertaken by the agents for a differentiation of the cases submitted to the trial as being either “crimes of passion” or “drug trafficking crimes”. According to the findings of this research, the resort to this strategy makes evident a discursive violence in relation to aspects of gender and social class yielding the idea of defendants (female or male), victims (female or male) or crime committed being “more accepted” and “more tolerated” than others.

Globalization, Market Transition, and Variety of Developmental Models: The Case of the Chinese Car Industry

The Chinese automobile industry has been experiencing some profound changes during the recent market transition and globalization of the Chinese economy. Regarding to the ownership structure and technological upgrading strategies, there have been emerging four major developmental models among the domestic assemblers. Three major theoretical perspectives are then employed including the Schumpeter's hypothesis, the approach of global value chain, and the developmental state argument; however all have major limitations to provide a good explanation.

This paper proposed to apply an institutionalist approach to understand such a variety of developmental models in the Chinese automobile industry. Four representative cases including FAW, SAIC Group, Chery and Geely were sampled for a systematic comparison in the empirical analysis. The major argument is that the divergent paths among these Chinese car makers were historically rooted in the pre-reform era of the planned economy, from where the local political structure, developmental ideas and related agencies took on different looks in the market transition and together contributed to a local social construction over the local automobile sector.

FEFOANOV, KONSTANTIN* (Moscow State Technological University, konstantin.feofanov@gmail.com)
Civilizational Basis of Russian Modernization

Every country participating in the global modern age contest, has its own unique modernization profile, which is based on the country’s civilizational features. Speed and specifics of every country’s traditional societies evolution into the modern ones and further, are still subject to close analysis with a view to discover efficient methods, reasons, mechanisms, recipes and secrets of ‘progressive’ and ‘accelerated’ modernization development.

Russian modernization determinants are of a special interest because they hold back progressive, sustainable and effective growth. For over three centuries they have been recurring repeatedly, with great persistence and iterality, and the modernization processes have been of inorganic, catching-up, tardy, mobilization, relapsing and recurrent nature. Their implementation procedure includes initiation not by society but by government using force. These processes are deeply rooted in Russian civilizational history and culture, as well as character and psychology; they are enormously powerful and no matter how much the government or population want it, they cannot easily "adjust" them.

These features of Russian modernization obstruct the transfer from tradition to modernity, and disable long-term and productive Russian modernization on a new model, which would result in actual democracy, corruption level decrease, rule of law, and therefore, in economic, environmental, cultural and technological achievements. Individual reforms and “modernization leaps” initiated “from the top-down”, can only lead to temporary and relative results. Specific version of traditional society based on recurrent waves and de-modernization elements of the largest modernization projects, keeps prevailing. There is “balancing” between the imminence of “catching-up" copying of certain elements from Western modernity, and “national peculiarity” as inability to implement this assimilation, as well as floating influenced by increase of one factor after another without a resulting vector.

The Multi-Culinary City: Transforming Traditions

Multi-cultural/multi-ethnic/multi-culinary : these dimensions of gastronomic spaces complement even as they counter each other. The proliferation of restauranteurs of all sorts and the consequent profusion of culinary choices endow the city with a cornucopia of gastronomic spaces. Yet, all gastronomic spaces are not equal. Horizontal differentiation conflicts with vertical distinctions: The premium placed on creativity relegates the reproduction of tradition less status than production of the new, the untoward, the heretofore unknown. In the exceptionally competitive dining world of New York City, culinarian identity builds, not on products or people or places, but from the infusion and transformation of a broad range of traditions.

Perception of Discriminatory Practices Among Brits’ Countries: Brazil and South Africa

This paper addresses the question of whether individual perception of discrimination is affected by occupational segregation by race and job status. We use data from Brazilian 2000 Census, Belo Horizonte Area Survey (2005) and Cape Area Survey (2005) conducted by the Federal University of Minas Gerais and Cape Town University. These surveys were designed to have comparable socioeconomic measures of many kinds of both cities. Processes of opening and closing of the labor market due to racial discriminatory practices are well-established topics among social stratification literature. Perceptions of discrimination in South Africa and in Brazil are unique phenomena. In South Africa, up to 1994 discriminatory practices based on race were straightforward and safeguarded by national constitution. African, Coloured and Indian inhabitants were denied the right to vote and forced to reside in peripheral townships. Interracial sex or marriage was formally prohibited. In Brazil, in another hand, there is no clearly distinct cultural boundary that separates blacks from whites. Both groups have the same mother tongue and most identify themselves with the same icons of Brazilian nationality. The commonalities among Brazilian ethnic groups led to the establishment of a myth of racial democracy, that despite being contested with evidences, still seems to prevail in some sectors of society, whereas discriminatory practices linger as a tacit social agreement. We found evidences in both countries that point to a higher perception of social discriminatory practices when the socioeconomic and cultural status of the under-privileged group is higher. We can imply that more access to material and symbolic goods of the dominant group – as information, earnings and culture – could increase, instead of diminish, the perception of the minority groups of their conditions of prejudice and discrimination in the society.

Between Academic Tourism and Student Mobility: Narratives of Students on the Move

More than ever before student mobility is playing an important role to fulfill the idea behind “becoming a global citizen”. Whether private or public, universities all over the world are inculding in their mission statements the commitment of attaining global citizenship by their students. US universities have a long tradition of sending students abroad (Hoffa 2007). In Europe they have developed a similar structure as a result of the Bolongna Process. The vast majority of students involved in mobility are non-degree students who spend a year, semester or a few weeks abroad. Being abroad involves a complex process in which several agendas intersect, the university sending the student, the host university, the student’s family, the host communities with all their cohorts and the student. From each side, several discourses and concerns arise: global citizenship, campus internationalization, cultural awareness, safety and security and the student personal, and often times, not clearly formulated agenda. Having received US students regularly in Merida, Mexico for over a period of twenty years, in this session I explore the narratives of travel and experiences that they have created/constructed in order to cope with their daily experiences while in Mexico when trying to conceal the different agendas. Of particular interest is their effort to avoid stereotypes, create a community on the move and engage with other communities avoiding academic tourism and the tourist gaze.
**Economic and Labour Market Outsideress Among Young People in the EU**

This paper analyses economic and labour market outsideress for young people across different European countries and welfare regime models. We define ‘outsiders’ as those people who are either unemployed, in temporary contracts or have an income below 60% of the median. By using cross-sectional data from the European Union Statistics on Income and Living Conditions (EU-SILC, 2006) we find: (1) a considerable variation in rates of youth outsideress across EU member states. The youth outsideress rates measured over the duration of the spell of outsideress – is higher in Mediterranean countries than in Liberal, Continental and Scandinavian countries; (2) that the depth of youth outsideress is influenced by the different types of skills possessed by young people. However, the strength of the effect varies across different welfare regimes.

Impacts of the Economic Crisis on Gender and Class Inequalities in Europe

The presentation aims to understand to what extent the present crisis increases gender and class inequalities and subjectivity well being in Europe. In periods of rising unemployment and reduced disposable income it is clearly relevant to assess their differential impact on gender and class relations.

Evidence will mainly be collected from the different rounds of the European Social Survey (ESS - 2002; 2004; 2006; 2008; 2010 and 2012). Other sources will also be used such as official information of GDP, Unemployment rates, Gini Indexes per country, Human Development Index (HDI), Gender Development Index (GDI) and Gender Empowerment Measurement (GEM), in order to "quantify" the effects of the crisis, comparing rescued and non-rescued European countries, the last ones being submitted for long to severe austerity policies.

In periods of rising unemployment and reduced disposable income it is clearly relevant to assess their differential impact on gender and class relations.

In periods of rising unemployment and reduced disposable income it is clearly relevant to assess their differential impact on gender and class relations.
The rise of sociology during the Nineteenth century represented not only the strengthening of new ways of understanding the reality of social problems. In this historical process, it is also possible to see the rise of new ways of comprehending the scientific knowledge, specially the problem of objectivity in social science fields in connection with the objectivity foundations of natural sciences. The sociological "discourses" which were observed and understood throughout the classic period as a proto-reflexive critical concern about the logical development of the scientific reasoning, both in natural and human sciences (Geisteswissenschaften). As a result of the classical sociological analysis of the scientific method as a way of constructing the epistemic roots of social sciences reasoning, the sociology developed during the XIX century an important and unique capacity of comprehending "science through the scientific method". Thus, in this paper we aim to develop a historical analysis of the rise of the critic and "reflexive vocation" of classic sociology as an important epistemic condition to the strengthening of the modern sociological conception of science in different fields of sociology like sociology of knowledge, sociology of science and sociology of scientific knowledge. In a first moment, the classics of sociology pointed out the "problem of knowledge" as an internal challenge to the development of a sociology as a scientific way of thinking; in a second moment, the contemporary sociology pointed out the "problem of knowledge" as a general difficulty to the whole scientific conception of reality, promoting a crisis in the logical demarcation of science in face of a real "social demarcation of knowledge".

Russian In Israel: Group Competition and Language Status

A linguistic situation in Israel has been charged with conflicts since the formation of the state. The primacy of Hebrew was the ideological cornerstone of Zionism. This aim was achieved through attitudes and practices that had to compete with the flourishing languages of the Jewish Diaspora: Yiddish, Ladino, Judeo-Arabic and others, as well as with the European languages such as Polish, German, Rumanian and so on. Irrespectively of the size of immigrant waves, all groups either voluntarily or by coercion rejected the language of their homelands. However, the first immigrant group that showed determination to preserve its language and promote its status was Ex-Soviets immigrants of the 1990s. Today, Israel has two state languages, Hebrew and Arabic. De facto English functions as an official language, has high status and is essential for socio-economic upward mobility.

Ex-Soviet immigrants were primarily monolingual Russian speakers brought up in a multiethnic country where Russian dominated. Members of this group had higher education status than average Israelis and rejection of their mother tongue was perceived as the first step in downward mobility. This paper will analyze how a group of Russian-language media, schools, theaters, associations of compatriots and various informal networks went hand in hand with the promotion of the Russian language in the host society. We will look into the role of immigrant politicians, scientists and artists in bringing Russian culture to native Israelis thus preventing ghettoization of the immigrant community. We will also discuss linguistic implications of the rising status of Russian-speaking Israelis for one-and-a-half and second generation immigrants. Material for the paper was drawn from in-depth interviews, conventional and electronic media and participatory observation.

FICHTER, MICHAEL* (Global Labour University, mike.fichter@global-labour-university.org)

Meeting the Challenge of Global Corporate Power: A Strategy for Global Unionism

Today, unions around the world are struggling to fulfill their role as voices of the political and social interests of working people. In a world of increasing precariousness, outsourcing, flexibilization and casualization of work, the loss of union power and the deregulation of labor markets has flourished and opened the way for increasing precariousness and agency work. While continuing to fight to protect their hard-won regulatory instruments within their national domains, trade unions have also begun to look for transnational approaches to combat unforseen international competition that is fed by a race to the bottom over labor costs. The challenge for global unionism is in developing a strategy that will serve as a political and organizational answer to the dilemma it faces – namely, how to bring the power of unions, as locally or nationally organized entities, to bear on the transnational regulatory gap in labor relations. I argue that there is a need to pursue a global union strategy consisting of three basic elements: First, it is based on the global framework agreement (GFA), a contract negotiated and signed between transnational corporations and Global Union Federations to set minimum standards of labour and human rights and enable unions to build and strengthen their organizational base. Second, it is dimensioned to extend labour relations be-
yond single transnational corporations to encompass the broader arena of global production networks. And thirdly, it is designed to link together local, national and global unions in transnational union networks to enhance the collective voice and organizational leverage of labour.

The Role Of Farmer Education In South Australia

There is a significant challenge involved with balancing food security at local and global levels whilst mitigating the environmental and social consequences of the historically productive way of doing things. The worker faces the importance of education in the South Australian agricultural sector as a tool to maximise beneficial outcomes. The results of a blended mixed method research project, which involved farmers and governance stakeholders in South Australia, are presented as empirical evidence highlighting the positive roles education, in particular university education; have in regard to increasing sustainability. Interviews with agricultural governance stakeholders emphasised the important role that education will play in building the adaptive capacity of farmers and having positive outcomes on the future development of the South Australian agricultural industry. It was also found that higher levels of formal education contributed to farmers: having greater confidence in their respective communities; being more likely to prioritise their environmental stewardship roles; being less concerned about the risks posed by large agri-business corporations; feeling there was less need to regulate the agricultural industry or restrict imports; and, looking for more support from government to adapt to a changing climate. Most importantly, however, was the dramatic reduction in farmer concerns with government support programs as education levels went from secondary or less, through to vocational qualifications, and finally university degrees. These results suggest that further education provides farmers with the capacity to compete effectively in a liberalised economy.

A New Tsunami : The South African Anti-Nuclear Movement in the Wake of Fukushima

South Africa's government has made clear its plans to order a fleet of six nuclear reactors, providing an additional output of 9 600 megawatts. It also aims to reactivate other elements of the nuclear fuel chain such as the construction of an enrichment plant, a fuel fabrication plant, and a nuclear waste smelter. President Zuma has taken over from his deputy the chairing of the National Nuclear Energy Executive Co-ordination Committee, the intra-governmental body that is charged with overseeing procurement. The overnight costs of the reactors alone are likely to amount to between US$60 – 100 billion, by far the biggest infrastructural purchase made by democratic South Africa in its 20-year history.

Seemingly the impact of Fukushima has not had repercussions among the responsible decision makers. Instead they have sought and gained approval from the International Atomic Energy Agency for the expanded nuclear programme. However, civil society continues to challenge the plans as a fait accompli. Whilst the international threat in the atomic and nuclear power arena was receding, its environmental NGO sector, new formations and new sectoral opposition is notable. Significant disquiet has been voiced by the trade union movement (in political alliance with government, but not on this issue), faith-based communities, academic energy researchers and civil society energy lobbyists, the consortium of large-scale electricity using companies, communities situated close to the construction of nuclear facilities, and even the government’s National Planning Commission. The paper seeks to understand the dynamics of government indifference to Fukushima, and the stress on Fukushima by opposing social movements, who have adopted TSUNAMI as the name of their coalition (The Southafrican United National AntiNuclear Mobilising Initiative).

Shale Gas in South Africa: Regulating a Resource Grab

A number of transnational oil companies have recently been given the go ahead by the South African government to initiate hydraulic fracturing for the exploration of shale gas in a semi-arid part of the country, the Karoo region, despite a lack of robust regulatory procedures being in place. When she lifted an earlier ban in September 2012, the minister of mineral resources provided no indications of the source from which the substantial quantity of fresh water necessary for fracking would be derived. Existing economic sectors fear the contamination by the oil companies of local groundwater, on which all farming and tourism depends, and a substantial segment of its cultural heritage. In the race to exploit the resource, encouraged by the National Planning Commission, a grab will be made for up to 20 per cent of South Africa's land surface.
The country’s mineral rights are not vested in landowners but in the state, which has allocated them to the oil transnationals. Taken together with scarce water resources, the cost of the industry’s activities will be far higher than the temporary energy dividend. Yet government uses the language of energy security, lower carbon emissions, and local economic development, all of which concepts have been questioned by civil society, pointing to shale gas as typifying the ‘resource curse’.

The presentation looks at potential socio-economic and environmental impacts of shale gas exploration and mining, raises questions about the functioning of the new South African democracy in deciding on controversial new technologies, and proposes legal and regulatory instruments steps that need to be put in place.

Inscribing Dance: From Embodiment to Digital Media

Inscribing dance: from embodiment to digital media

The ephemeral aesthetic of dance, in comparison to other art forms, contains no tangible corpus. It’s matter - body and motion in live performance - are transitory and defy any attempts to record the practice in order to create an accurate transcription and permanency.

Since the beginning of the 21st century the accessibility and proliferation of digital media has influenced the way we document and archive the practice. On one hand, it has contributed to recording unique traditional dance forms that are considered to be in danger of disappearance due, mainly, to socio-political and ecological disturbances. However, though video recording文物保护 intangible cultural heritage through the documentation of the interpretation of dance works, it cannot be taken for the work itself (as is the text of a play in theatre or the score for music). Further, this accessibility of information through technology, this “visibility in excess”, is questioned both by practitioners and scholars who criticize it as a cultural bias, contributing to the contamination by cultural assimilation and globalization of a specific practice – to a certain extent, erasing what makes it unique.

Using specific examples of traditional and contemporary dance practices - the body as the first site of inscription of kinesthetic knowledge, text-based documents, audio and visual recording - this paper will attempt to shed light onto the different methods of inscribing and documenting dance, taking into account the sensory distribution of the different mediums. What is lost? What remains? And how does this sensorial translatability, from cells to pixels, generate alternative representations and NGO’s. It will draw upon research conducted on US, UK, Jordan, Dominican Republic, and the Dominican Republic, Sri Lanka and South African cases.

FILGUEIRA DE ALMEIDA, DULCE (University of Brasilia)

DE QUEIROZ E SILVA, THAIS* (University of Brasilia - Brazil, g.thais@gmail.com)

Is There a Sociology of the Body Itself in Brazil?

The sociology of the body can be understood as a fruitful research field, whose goal is to understand human embodiment (Cscordas, 2008). By defining three research fields, Le Breton (1992) aimed to instigate reflections on how the phenomenon of embodiment is understood in the context of the social sciences and to build some sort of disciplinary matrix by mentioning many authors who are devoted to the study of the topic within the sociological field. Our work aims to answer whether there is a sociology of the body itself in Brazil by performing a bibliographical study of the period between 2000 and 2012. We used the journals A1, A2, and B1, classified by Qualis/Capes, from the fields of sociology and physical education. The keywords were: body technique; Mauss; and body. A total of 728 articles were found in sociology journals, of which two referred to body techniques, 36 to Mauss, and 690 to body. Of the total, 220 articles were selected (30%). With respect to physical education journals, a total of 1,791 articles were found. Of the body technique, 28, 450 Mauss, and 1,700 to body. Of the total, 199 were selected (11%). Considering the range of works for the interpretative analysis, we selected 53 articles that referenced the term ‘body technique’ coined by Marcel Mauss. We aimed to identify: object of study; theoretical framework used; methodological approach; researcher’s academic field; and the field concerned by the journal. We found that there are scientific publications in Brazil, mostly from the social sciences and physical education, using the terms ‘body technique’, ‘Mauss’, and ‘body’. In addition, we found that there is an important theoretical-methodological effort for establishing a sociology of the body itself.

The Dances and Their Meanings in the Kalunga Quilombola Community in Goiás/Brasil

Paraphrasing Almeida and Suassuna (2010, p. 59), the stories and social relations that constitute the group are revived during the dances and, while dancing, people reaffirm their place in society, revealing the identities of their land and mechanic forms of resistance or acceptance regarding new cultural patterns. Based on this understanding, this work intends to comprehend the meaning of dances for young people belonging to the Kalunga community of Teresina de Goiás (located in the State of Goiás, Brazil). We sought to analyze the transitional processes that have been taking place in the daily life of the Kalunga community in relation to the reception of the dances (values and practices) between the generations of older adults and young people. An ethnographic research using interviews and direct observation as techniques was carried out in the community. The interpretation of the information took place on the grounds of who discuss the topic in the field of social science in dialogue with physical education. As a conclusion, we can affirm that the bodies intertwine in the feasts and dances and promote dancing dialogues established between generations. The ritual system, constituted by means of feasts and dances, reveals the senses and meanings of the dances as a cultural resistance strategy, while allowing for the reconstruction of the past and the re-signification of the present of this social group analyzed. This way, we observed the establishment of hybridization processes between traditionalism (older adults’ dance – susu) and modernity (youth’s dance – forró), revealing multiple influences between traditional culture and the cultural industry, resulting in other cultural patterns.

“Movements Wrestling: Union Engagement with Migrant Worker Policy and Organizing in Comparative Perspective

Migrants crossing borders in search of better economic opportunities are often able to utilize their social networks to gain employment but they face the deprivities of the labour market alone unless unions and other non-governmental organizations become involved in supporting voice, not only in the workplace but in the policy as well. An institutionalized labor movement can provide protection, support and the possibility of ongoing representation for migrant workers. Indeed, migrant workers are taking advantage of increased opportunities to partner with unions, but this is happening at a time of great peril for the labour movement. Historically, unions have engaged in vigorous debates regarding labour migration, even when they have adopted “pro-migration” policy positions, approaches to organizing and representation have varied depending upon the individual culture, structure and ideology of specific national and local unions. Of course policies do not act to influence policy or organize migrant workers in a vacuum, rather they do so within specific state contexts. This paper will focus on some of the key debates concerning migrant issues that unions have engaged, as well as the strategies and specific types of organising efforts that have been launched in recent times and the underlying impetus for these efforts including the role played by national union federations, national unions, global union federations and NGOs. It will draw upon research conducted on US, UK, Jordan, Dominican Republic, Sri Lanka and South African cases.

A State/Society Approach to Labor Standards Enforcement

Given the tremendous gap between passing laws and outcomes for workers, how can labor organizations improve enforcement? We contrast two sets of strategies for labor organizations which align with distinct conceptions of the state and enforcement. On the one hand, labor organizations can advocate for laws to be passed and then push the state to enforce them using its own capacities. This strategy accepts a view of enforcement as primarily a technical problem to be solved by regulators. Once there is political will for implementation, it is up to the state to provide the resources and choose the best strategy to ensure compliance. On the other hand, after getting legislation passed, labor organizations can work to create conditions for partnering with agencies in enforcement and can become directly involved in the operational aspects of enforcement. This approach is based on a fundamentally different view of state capacity, which is constituted by a combination of the regulators and organized groups in society that complement the state. Such a view challenges the notion that setting enforcement right is a technical problem that can be solved with the right strategy or correct internal organization of the bureaucracy. By contrast, it treats enforcement as a political problem of constructing institutions that can facilitate collaboration across the state and society divide, thus ensuring greater enforcement capacity. Like cases from historically different political and legal contexts (US and Argentina), we contend that the latter approach has the potential to help...
labor organizations further enforcement and argue that these findings suggest a need to develop more expansive theories of the enforcement process.

*Intergenerational Dependencies: Challenges for Theory, Research and Policy*

This paper examines recent developments in the theory of intergenerational solidarity and dependency, drawing on a review of key sociological studies and policy documents. Despite the rejection of the generational conflict hypothesis in the sociology of ageing, prominent public authors such as Fishman (2010) continue to give popular support to the perspective of demographic determinism and apocalyptic demography. As well as helping to refute such views, attention to the theory of intergenerational dependencies is argued, having the capacity to reinvigorate research on the sociology of ageing and to provide new research perspectives on policy in the epoch of longevity.

*Comparing Two “Banglatowns” – Reflections on the Use and Transformation of the Streets in Rome and London*

The paper aims at comparing how two different “Banglatowns” were built-up in London and Rome. In both cases the “street” played a core role in urban transformation. In London, the Spitalfields’ case will be analysed. Here, a typical inner city has become in the last 40 years one of the biggest Bangladeshi enclaves in Europe. Since the end of the 1990s, its marketing as London’s Banglatown was a product of an alliance between Bangladeshi political and commercial elites that represent the majority in the local Council. A number of area-based initiatives played a core role in this process.

In Rome, the Torpignattara case will be considered. This is an Italian “periphery” that started to receive foreign immigrants, in particular from Bangladesh, since the 1990s. Here the issue is the absence of this place in the policy agenda, and some consequent intensive uses of the streets by the immigrants’ population that led to its labelling as a Banglatown.

Based on an idea of “diversity” that considers multiple axes of differentiation (e.g. national origin, class, gender), the paper will explore how these places’ transformation led to a reconfiguration of the streets’ uses that included new groups, excluding others.

The comparison between the two cases will focus on some core issues:

- With reference to the debate between formal vs. informal, policy vs. practice, citizenship right vs. urbanity right, was the presence/absence of a public policy where the immigrants played a core role a minus or a plus in these places?
- Is the street a privileged space for the cohabitation of differences?
- What kind of diversity is produced in the space of the street?
- With reference to the Bangla-towns image, what kind of “authenticity” was produced? Is authenticity a meaningful issue for the social construction of spaces?

*Race and Class Differences In Urban Environmental Participation: Investigating How School Gardens Connect Students and Families To Communities*

How are race and class related to environmental forms of civic participation? This project disentangles the differences in participation in environmental activities by race and class in one urban setting by studying the ways that students, families, and communities are getting involved in their local school gardens. Building on the fact that there are few studies that specifically focus on non-White civic engagement, and even fewer that hold constant social class, compare across race, and look at environmental activities, this project is designed to fill these gaps by studying race and class differences in environmental engagement. Moreover, this study examines how student participation through a state-supported school garden program is related to environmental engagement, science aptitude, and nutritional knowledge of the students and parents of the children who are enrolled in the program. The project integrates pre-existing data on academic achievement, with survey and interview data collected through the three components of the project to understand the impacts the school gardens are having on students, their families and their communities. We find that there are significant differences in environmental engagement by race and class and we discuss how to understand them in detail.

*Comparative Ethnic Exclusion Of Immigrants In The Western Hemisphere, 1790-2010*

This paper calls into question the widely held view that in the long run democracy and racism cannot coexist. It shows that democracies were the first countries in the Americas to admit immigrants according to racial criteria, and undemocratic states the first to outlaw discrimination. Through analysis of legal records from twenty-two countries between 1790 and 2010, it explains a critical history of the rise and fall of racial selection in the Western Hemisphere.

The United States led the way in using legal means to exclude “inferior” ethnic groups. Starting in 1790, Congress began passing nationality and immigration laws that prevented Africans and Asians from becoming citizens, on the grounds that they were inherently incapable of self-government. Similar policies were soon adopted by the self-governing colonies and dominions of the British Empire, eventually spreading across Latin America as well. Undemocratic regimes in Chile, Uruguay, Paraguay, and Cuba reversed their discriminatory laws in the 1930s and 40s, decades ahead of the United States and Canada. The conventional claim that racism and democracy are antithetical—because democracy depends on ideals of equality and fairness, which are incompatible with the notion of racial inferiority—cannot explain why liberal democracies were leaders in promoting racist policies and laggards in eliminating them. Ultimately, the changed racial geopolitics of World War II and the Cold War was necessary to convince North American countries to reform their immigration and citizenship laws.
Initial Public Offerings. The results of our research indicate that these flows contributed to the increase in concentration and capitalization of the sector in Brazil. The flow of capital – affected by financial logic – has driven transformations in homebuilders' territorial and market strategies, in the building sites, and also in their products. In short, in architecture and urban forms.

At the same time, the ideology of homeownership and of the 'market economy solutions' were mobilized against other alternatives developed in different fights for the right to the city.

The increase of real estate companies' financial scale represents the increased asymmetry in the power to impose their requirements upon the city, as opposed to residents' power to democratically define the spatial organization of their lives.

The study compares the transformations that occurred in Brazil with those that took place in the United States. The concentration and capitalization of capital in the American housing sector – with massive growth in open capital homebuilders – is a recent process, fed by the housing bubble that exploded in the financial crises of 2007-08. This work discusses the similarities and differences of the impact of financial globalization in such different social structures, as are the Brazilian and the American systems.

This paper is based on research on the theme done during our masters and PhD in the fields of Urbanism, Sociology and Economics.

FLAM, HELENA* (University of Leipzig, flam@sozio.uni-leipzig.de)

Emotions and the Self's Past and Future

A Canadian philosopher, Charles Taylor, spoke of emotions, such as love and loyalty, as revealing to oneself and others what one strongly cares about. He argued that they play a role of a moral compass and in this capacity are constitutive of one's identity and morality. Many of his examples make it difficult to distinguish them from particularly strong feelings caused by the perpetuation of dichotomies of dichotomies. Margaret Archer, a British sociologist, Civil war Archer, proposed that in our inner conversations about our future commitments our memory of our past experiences and of the emotions that accompanied them contribute to the very process of decision-making about the future. Also in this case emotions seem to help in the process of teasing out one's preferences and, once these are chosen, of buttressing them. Discussing one form of reflexivity, however, Margaret Archer puts her finger on how the propensity to value strong emotional attachments can standardize personal responses to a great variety of situations, often with disastrous effects to the self. In my talk in contrast I want to show how specific emotions or, better yet, personal emotional geographies, are constitutive of unique individual identities in a sense of fixing or freezing the way an individual relates to her or his self, others and to the past, present and/or future.

Changing Family Models: Emerging New Opportunities for Fathers in Catalonia (Spain)?

In the ongoing debate on changing family models as a result of the decline of the male breadwinner family model, the main focus has generally been placed on a possible social change towards a dual, full-time, adult worker model with a more equal gender balance and where fathers are expected to devote more time to the care of children (Lewis, Campbell and Huerta, 2008; Daly, 2011). On the other hand, in a context of growing family diversity less attention has been paid to the emergence of other work-family arrangements with emerging opportunities for fathers' dedication to their children. This is the case of couples with children in which both partners are unemployed or where the potential breadwinner is a woman.

In the present contribution, in the framework of a research project under way on father involvement in the care of children, we are trying to explore the characteristics and profiles of these families with a special emphasis on the changing role of fathers, in an institutional context where new social policies of fatherhood are being developed in the last decade. Using data from ECVHP, 2011, a regional study in Catalonia which has recently been harmonized with EU-ILC, the paper examines the extent to which soaring male unemployment rates, in connection with other social and economic factors, are shaping new patterns of allocation of time involving a more equitable sharing of childcare and of domestic tasks between partners. What can be the long term consequences of these new developments for gender balance and for the relationships between fathers and children? Are these new arrangements here to stay as emerging new opportunities for fathers or will they fade away as soon as there is an economic recovery?

Explaining Women's Employment Patterns in the Local Context: The Role of Education and Local Care Policies in Terrassa (Spain)

Empirical research into the factors determining female employment has given rise to a lot of interpretations regarding the cultural, institutional and individual effects on women's employment patterns over the family life course in different local contexts and among different groups of women (Steiber and Haas, 2012). In this regard, some studies have thrown doubt on whether institutional and cultural factors have the same effect on women's employment patterns in different contexts (Flam, 2004).

In the context of challenges posed by different work-family arrangements, using a multidimensional approach and as part of the European FLOWs PI research project, this paper examines variations across different groups of women in the way that contextual factors shape their labour supply. In particular, we propose to translate qualitative evidence from different local contexts and among different groups of women into a more nuanced approach to women's education partly explains different patterns with respect to employment, work-family balance and access to family help in the city of Terrassa (Spain). The analysis is based on information drawn from focus groups with different categories of women. Qualitative analysis is supplemented by the results of a survey conducted locally providing empirical evidence of the relationship between employment and use of formal and informal care. The initial hypothesis is that women's employment patterns over the family life course are closely linked to preferences regarding jobs and the family, with education and the local care system playing a key role as both a mediating and differentiating factor in the formation of these preferences and values.

SCHÖGLER, RAFAEL* (University of Graz, rafael.schoegler@uni-graz.at)

Indicators for the Institutionalization of the Social Sciences and Humanities

We will present an interim report of work done in the EU funded INTERCO-SSH project, which deals with the institutionalisation and development of the social sciences and the humanities (SSH) in Europe. We will suggest a concise set of indicators which is being established for a comparative analysis of the development of the SSH in different national contexts. Preliminary data will focus on SSH disciplines in Germany, France and the UK from 1945 to the present. We will ask how these indicators can be used for the history of the SSH and what developments they are able to depict. The sources used are of qualitative and quantitative nature: interviews, statistical and bibliometric data, academic texts and archival records are gathered and combined for this purpose.

The objectives of this work is to identify national patterns of institutionalization which might explain the relative isolation of national traditions in the SSH and to assess the importance of the disciplinary division of labor within the SSH in order to reflect upon the historically changing power relations between branches of study, processes of professionalization of new disciplines, the reshaping of traditional forms of scholarship and the potentialities of new mechanisms of interdisciplinarity.
tual and institutional collaboration and exchange with or without consequences in terms de-disciplinarization of disciplines.

The development of SSH disciplines will be compared in the domains of research, teaching, publication outlets and professional associations. The social and intellectual characteristics of the disciplines’ research staff, students, degrees, the research community’s core topics and study targets, the technicalities and methods applied and their preferential forms of both, scholarly and popular communication in various periods are part of the data processed in this project.

«The research leading to these results has received funding from the European Union Seventh Framework Programme (FP7/2007-2013) under Grant Agreement n°319974 (INTERCO-SSH)»

Why Understanding the Nazi Past Did Not Become the Topic of a Book Written By Everett Ch. Hughes

Chicago sociologist Everett Ch. Hughes (1897-1983) spent a semester in post-war Germany as the first visiting professor in an exchange program between his university and the Goethe University in Frankfurt in 1948. As an ardent field worker he wrote field-notes about his experiences, his conversations with ordinary Germans, his observations about his students and the professors he met which he planned to make into a book after his return. He submitted a book proposal and a sample chapter to the University of Chicago Press but the editor rejected it because he thought that there would no public for such a report. Hughes did not approach another press and published only two short papers on the whole topic, one of them became relatively well known: “Good people and dirty work”, appeared in Social Problems in 1962.

My paper will first give an overview of Hughes’ unpublished book and then point to his “oral publication” of the idea of good people and dirty work, a concept which influenced besides others Hughes’ student Erving Goffman. In addition I will indicate later usage of this concept by Hughes himself.

In concluding I will put Hughes’ failed book project in the larger context of the remarkable lack of sociological publications about Nazism and argue that one should not blame sociologists for their neglect but also point to attitudes on the side of gatekeepers like publishers and the public at large.

Challenging the Routine in Peru's Hydrocarbon Sector – the Potential of Prior Consultations, Indigenous Mobilizations, and Conflicts for Change

Peru's first case of prior consultation in the extractive sector concerns the country's most important oil block located in the Northern Amazon. Even though the formal process has not yet officially begun, local indigenous federations have already formed a potent opposition, trying to dictate the terms for conducting consultations in the first place. This means that in an area without much state structure, indigenous peoples were able to use the consultation's announcement to make their own claims heard.

The goal of this presentation is to analyze the preparatory phase to this first prior consultation using the contentious politics approach (Tilly and Tarrow 2007). How did political opportunity structures as well as the abilities to mobilize and partner outcomes. Implications are drawn for personnel management, development and health promotion. The importance of considering families within employer's prevention strategies is emphasized. Examining the highly mobile group of diplomats and their families is an important aspect in the understanding of the major issues and challenges for spatially mobile societies.

‘cultures of Sick Leave’: Institutional Categorization, Legitimacy, and Moral Order at the Intersection of Research and Politics in Sweden

In line with what has been described as a ‘cultural turn’ in the social sciences over the last decade, ‘cultures of sick leave’ has become an important concept in Swedish social insurance studies as well as in political debates. ‘Culture’ has been used for understanding variations in sickness benefit usage between groups and between different geographical areas in Sweden. Examining how the concept is used and what it does, this study offers an ethnomethodological understanding both on the empirical level and on a meta-level. It is found that ‘culture’ tends to be used (or refuted as explanation), without much theoretical or methodological grounding. Instead, culture is often applied in a common-sense manner, rarely problematizing how it translates into empirical studies. The paper discusses how the concept of culture works to negotiate the institutional category ‘sick absentee’ in the intersection of research and politics, positioning the individual in relation to the welfare state and bringing notions of accountability, legitimacy and morality into play: whose fault is a ‘culture’ anyway, and what can be done about it? As an ethnomethodological approach, the paper suggests ethnomethodology’s way of studying culture as it is being ‘done’. Seeing culture as constituted in discourse, and placing culture in action rather than action in culture, opens up for a bottom-up analysis in which members’ situated practices are in focus. Furthermore, conversation analysis provides a rigorous methodological framework for analyzing institutional categorization processes by closely attending to linguistic detail in interaction. Drawing on a Swedish study of meetings between people on sick leave, their doctor, and the state official administering their sickness benefit, the paper illustrates the use of such an approach, showing just how the legitimate boundaries of the sick leave regime are co-constructed and negotiated: how ‘cultures of sick leave’ are done in the fine details of interaction.

Buddhism and Critical Social Science on the Causes of Suffering: Towards a Dialogue

In order to demonstrate the possibilities of building a philosophically and empirically informed framework for the study and alleviation of suffering, this paper compares the Buddhist tradition and critical social science from the perspective of their understanding of the nature and causes of suffering. Though both traditions are driven by the wish to combat suffering, their understanding of the causes of suffering differs. There may be, however, a productive complementarity in this difference, and yet frictions between the two traditions are real enough. Furthermore, neither tradition exists in a social or ideological vacuum. Thus, establishing a dialogue between these and other traditions calls also for reflexivity, critique and self-critique.

Globalización y Construcción Identitaria. El Caso De Los Jóvenes Universitarios En México

La globalización ha generado diversos procesos que permiten la movilidad de productos, mercancías, personas, información e ideas sin que las fronteras de los países sean un obstáculo, salvo en algunos casos. En el proceso identitario, las costumbres, valores y significados de una determinada región eran los que conformaban la identidad de una persona o colectivo. Con los procesos de movilidad resultado de la globalización, la permanencia física en un lugar no son necesariamente determinantes en la conformación de la identidad, ya que al estar en contacto con los productos, valores e ideas de otros lugares, éstos van formando parte de los significados que se construyen. La globalización crea una nueva manera de construcción identitaria. Lo anterior puede observarse con mayor facilidad en las ciudades, donde existen los recursos que permiten este intercambio de ideas. Dentro de los centros urbanos, los jóvenes por sus características, resultan consumidores ideales de las propuestas surgidas en el entorno global. En este sector, quienes eligen un grado universitario pueden contar con mayores elementos de asimilación y mayor movilidad para integrarse en un sistema global. Por esto, resulta pertinente estudiar cómo es que la identidad de los jóvenes universitarios se construye. La ponencia que se propone es parte de la investigación que se realiza para integrar la tesis de grado dentro del programa del Doctorado en Ciencias Sociales. Se busca explicar cómo se da la construcción identitaria a través de los agentes socializadores presentes en la vida de los jóvenes. Los medios de comunicación y las tecnologías de información resultan de gran importancia en este proceso, ya que es gracias a ellos que se facilita el intercambio de ideas. Para entender cómo una persona ha construido su identidad con base en la interna- lización de los significados externos, se estudia cómo verbaliza su historia.

On the Maturation of Immigration Detention: Theoretical Approaches and Evidence

The detention of irregular migrants and asylum seekers has become a prominent feature of both national and international efforts to “manage” global migration. An important aspect of this phenomenon is the emergence of new institutions devoted to migrant detention, which can be observed for example in the gradual shifting in countries across the globe from using prisons or other “off-the-shelf” facilities to dedicated immigration detention centers. This maturation of immigration detention regimes has important implications, not least of which is the fact that it appears to have occurred at the same time that the number of migrant detainees has increased. Is there a correlation between the institutionalization of detention regimes and the increasing reliance of this method of migration control? Using data on detention regimes from the member states of the Council of Europe, where human rights norms appear to have had an important impact on how detention practices have evolved in recent years, this paper seeks to address this question through differing theoretical approaches to state behavior. For example, has pressure from human rights actors been a key driving force for the institutionalization of detention? If so, what implications might this have for how rights actors view the long-term consequences of certain liberal norms? On the other hand, does a Weberian model of institution-building provide a better explanatory framework for how detention regimes have evolved? Do theories of policy diffusion shed light on the spreading of these practices across the European region and beyond? Or, is growth in detention institutions more the result of increasing private-sector involvement in state functions, including incarceration? Ultimately, the paper seeks to provide some initial guideposts for investigating immigration detention institutions while making clear the broader implications of this phenomenon.

Re-Thinking Cautious Urban Renewal. the Iba (Berlin, 1984/87) As an Early Experiment for a Politicized Strategy for a Sustainable City

Apart from the fact that the strategies for a sustainable city today form the basis of a neo-liberal urban, mainly environmental policy, the main question remains of the social dynamics and initial potential of some of the key concepts. The International Building Exhibition (IBA) in Berlin in 1984/87 with its two areas IBA Alt and IBA Neu, and the two strategies of a critical reconstruction and a cautious urban renewal, seen as a paradigmatic case study in light of the specific situation in Germany in the 1980s, especially the conditions in West Berlin, by linking urban rehabilitation with social and ecological objectives produced alternative, but ultimately normative models of urban regeneration, not only with regard to European urban planning, but of global interest. This paper analyzes, to what extent primarily the IBA Alt - as a paradigmatic concept of development in response to the policy of redevelopment by demolition and reconstruction of the 1960s and the common squatting practice, with its procedures of advocacy, participation, and self-building for the socially engaged and responsible restoration and maintenance of old tenements, new forms of responsibility and ownership, the provision of green spaces and social infrastructure – at first promised a politicization and democratization of urban renewal and everyday life. Since the IBA, funded by federal and state agencies, is called back to mind for its projects and protagonists with various research, exhibition and publication projects to mark its 25th anniversary, I will discuss the function of cautious urban renewal, both its positive achievements and uttered criticisms. In revisiting the IBA, I intend to provide a historically argued contribution to this current debate on sustainability and the city, by not only by highlighting planning processes, but by challenging the dimensions of the ecological and the social.

FOGIEL - BIAJOU, SYLVIE* (The Academic College of Management, sylvieb@colman.ac.il)

The Cosmopolitan Future: A Feminist Approach

Our study questions the approach according to which world society is shaped by “the clash of civilizations”. For that purpose, referring to Beck and Sznaider (2010), we analyze what we call the cosmopolitanization of feminism, i.e. this pro-
ce which enables the gradual recognition of “the other’s others”, the women, through the evolution of the political rights of women at the global level.

In this context, the descriptive representation of women (understood as the increase in the number of women elected in order to reflect the composition of the electorate), as well as their substantive representation (women’s political representation which advances women’s human rights), and their voices within civil society in the North and the South highlight the fact that feminism is undergoing a process of cosmopolitanization, albeit very slowly and in a sporadic way.

In order to present our argument, we adopt a postcolonial feminist reading together with a research method based on the national, regional or transnational NGOs’ data or on data provided by the Inter-parliamentary Union, UNIFEM and U.N.-Women.

Our article is divided into four parts. In Part One, we precise the meaning of the process of cosmopolitanization as applied to feminism. In Part Two, we describe this relatively new analytical approach, starting from the concept of “from above” (top-down cosmopolitanization), referring, among other things, to electoral data from around the world and to International Law which, today, guarantees the political rights of women - more or less successfully. Part Three analyzes the cosmopolitanization of feminism “from below” and refers to feminist theories, cyberfeminism and to the global civil/feminist society. In Part Four, the conclusion, we discuss the common future of feminism and cosmopolitanism.

Logement Et Structures D’accueil Des Usagers De La Psychiatrie : Les Enjeux De La Reconfiguration Socio-Politiques De 6 Pays Européens

L’hôpital psychiatrique assurait jusque là un hébergement à long terme. Avec les grandes réformes de la psychiatrie et le développement des neuroleptiques le suivi médical des patients peut se réaliser en dehors de l’hôpital. L’intégration sociale du patient passe par la reconnaissance de professionals de structure médico-psycho-sociales. Ce nouveau modèle, en rupture avec le modèle “asile” est porté par l’OMS et se développe progressivement en Europe. Le logement apparaît comme un déterminant majeur de santé et d’intégration sociale. Des dispositifs socio-politiques d’accompagnement et de maintien dans le logement des personnes en situation de handicap psychique ont vu le jour. En effet, comme pour les autres citoyens, les patients de la psychiatrie doivent avoir la possibilité de vivre dans un environnement social qui regroupe tous les lieux de vie : la famille, le logement, l’école, le travail, les loisirs. Est-ce une utopie ? Comment renforcer les soins psycho-sociaux, dans la communauté, avec une dés-hospitalisation raisonnée ? Comment éviter l’héritage de l’ancienne relation asymétrique entre la médecine psychiatrique et la société ? Quelles sont les alternatives aux longs séjours en hôpital sur le territoire européen ?

A partir d’une socioanalyse sur le terrain de 6 pays européens, notre communication se propose de montrer comment dépasser la notion de handicap et accroître les possibilités d’accès aux soins psycho-sociaux et de prise en charge dans le milieu ordinaire. Elle précise comment des solutions adéquates sont trouvées en zones urbaines ou rurales quelque soit le pays. Elle dévoile les rapports de pouvoir, les conflits d’intérêt et les enjeux idéologiques, socio-politiques et socio-économiques qui sous tendent cette réconfiguration de la psychiatrie et de la santé mentale.

Notre projet de recherche porte sur les situations française, luxembourgeoise, belge, grecque, suisse et roumaine. Il bénéficie d’un financement Européen.

FONG, ERIC* (University of Toronto, fong@chass.utoronto.ca)

Social Cohesion in Multi-Ethnic Community

From the beginning of the sociological study, social cohesion in community, usually measured by community ties, have been a key topic of discussion. Community ties provide social support, foster social relations, and facilitate social capital among residents in a community. They also facilitate a sense of attachment to community and ties among residents in a community. They also facilitate a sense of attachment to community activities. Two major hypotheses have guided the discussion of community ties in the literature: the race/ethnicity homogeneity hypothesis, and the integration hypothesis. The race/ethnicity homogeneity hypothesis suggests that the larger co-ethnic proportion in a community promotes community ties, while the integration hypothesis suggests that length of residency in the community facilitates community ties. Though there are many publications on these two hypotheses, few of them have considered the significant changes in society. First, we know little about how the hypotheses are relevant to the current population of immigrants who come from diverse social and demographic backgrounds. It has been well documented that the integration of immigrants rapidly in major North American cities. So-called cities become more multi-ethnic, little is known of how the two hypotheses relate to different racial and ethnic groups. In this study, we merged the 2008 General Social Survey with the 2006 Canadian census to explore how co-ethnic composition and duration of residence in a community are related to community ties. The findings suggest that, in a multi-ethnic context, co-ethnic proportion in the community is no longer associated with overall community ties for minority members and immigrants. However, our findings show that the association between residing for a longer time in a community and overall community ties is still applicable today.

FONTAN, JEAN-MARC* (Université du Québec à Montréal, jean-marc.fontan@uqam.ca)

Social Innovation and Societal Change: Role and Impact of Clinical Sociology

For over twenty years, a wide range of research processes and activities have been developed in response to demands brought forth by representatives from local initiatives working toward social innovation specifically by means of social transformation. Among the main organizations that embarked on this undertaking are the Service aux collectivités (SAC) of the Université du Québec à Montréal (UQAM), the Alliance de recherche universités-communautés en économie sociale (ARUC-ÉS), the Centre de recherche sur les innovations sociales (CRISÉS) and the Incubateur universitaire Parole d’excluEs (IUPE). In this context, collaborations were formed with labour representatives (co-entrepreneur plant closures and mass layoffs), with local development initiatives (similar to those involved in the revitalization of the Angus brownfield in Montre-
al), with community organizations (working to provide social housing in the fight against poverty and social exclusion) as well as with the social economy and solidarity-based economy (through Quebec government support for the new social economy).

With this historical backdrop, we present a summary of our reflections on the capacity of such initiatives to impact social change. When evaluating initiatives, we proceed in three steps. To begin, we examine the extent to which an initiative is able to respond to social or economic emergencies, thereby testing its reformist capacity. We then look at its institutional impact on the production of societal frameworks, namely through its ability to contribute to the determination of new path dependencies. In a third step, we identify the conditions that would allow it to increase its reformist or restorative capacity as well as its potential to act as an agent of change within the societal framework.

FONTAR, BARBARA* (Université Rennes 2, CREAD, Marsouin, barbara.fontar@uhb.fr)
LE MENTEC, MICKAEL* (Université Rennes 2, CREAD, ESO, mickaел.levantec@uhb.fr)

Entre Dispositif Institutionnel, Représentations Et Usages : Le Numérique Comme Pouvoir De Renforcement Des inégalités Sociales

Si les inégalités numériques s’intègrent plus largement dans la définition des inégalités, la réalité de la vie sociale des individus et leurs pratiques numériques sont dans un rapport dialectique. Une continuité existe entre les pratiques off et on line (Granjon, 2009 ; Cassili, 2010 ; Fontart, 2011). Ainsi, interroger les inégalités numériques nécessite de questionner les rapports entre institutions, représentations et usages.

Le Mentec (2010 et ANR INEDUC) interrogera l’articulation institutions/usages en montrant en quoi les institutions d’aide à l’inclusion renforcent les phénomènes d’exclusion à travers la mise en place de dispositifs techniques présupposant des savoir-faire chez les usagers. Plus largement, la relation d’aide proposée s’établit sur un rapport dominant-dominé créant une forme d’inégalité qui touche les capacités d’actions des personnes.

Fontar (2010 et ANR INEDUC) interrogera le rapport représentations/usages en montrant que la tyrannie de la majorité (Pasquoy, 2005) crée une norme sociale pouvant générer des difficultés d’appropriation chez les adolescents. La pression sociale à « devoir y être » ne sous-entend pas nécessairement des compétences développées ni des usages variés. Elle s’attaquera à déconstruire le mythe du « Digital Natives » (Prensky, 2001) qui présuppose implicitement une inégalité des pratiques et voile le rôle des apprentissages.

Ainsi, cette proposition de communication contribue à relativiser les visions enchantées du numérique (notamment ces bienfaits émancipatoires) en en montrant son pouvoir de renforcement des inégalités sociales.

Consumption and the Social Organization of the Illusion

CONSUMPTION AND THE SOCIAL ORGANIZATION OF THE ILLUSION

Isleide A. Fontenelle
Associate Professor - Fundação Getulio Vargas - Brazil
idefontenelle@uol.com.br

In order to reflect on the reach and limits of the social organization of the illusion that constitutes the very nature of capitalism, and based on the transformations that are occurring in contemporary capitalism, this article analyses how consumption lies at the very heart of the operation of this illusion. The analysis adopts the Marxist approach with regard to consumption’s place in expanding value within the context of industrial capitalism. It also looks at the history of marketing strategies that aim to produce a new form of subjectivity who is moved by a desire to consume. Resorting to the dialectical method as developed by Marx, i.e. based on the idea of movement and contradiction, the article tries to reveal the contradictions that surround the consumption sphere in the predominant financial and immaterial operating methods assumed by current capitalism, which may result in the possibility of over-consumption, which in turn leads to the non-realization of value. While this points, on the one hand, to the possibility of capitalism coming up against something that is in itself impossible, like the infinite self-expansion of capital, on the other, the solutions sought, also in the field of consumption, point to a hyper-commercialization of the spheres of life and knowledge, which sets in motion new merchandise expansion mechanisms through the privatization of culture, creativity and human life itself, leading to an equivalent of the “enclosure of the commons”.

FONTES, FERNANDO* (University of Coimbra, fernando@ces.uc.pt)

SANTOS, ANA CRISTINA (Centre for Social Studies - University of Coimbra - Portugal)

Disabled Women and Sexual Violence in Portugal

When compared to the general population, disabled people present a higher risk and incidence of violence (UN, 2006; EU, 2011). National reports have highlighted the higher vulnerability of disabled women and people with learning difficulties to either living in institutions or with their families (OPM, 2002; INR, 2010). Despite the great investment by Portuguese public authorities in programs designed to prevent violence there are no intersectional studies of violence in Portugal, emphasizing discrimination factors and highlighting the situation of disabled people in Portuguese society. Therefore the lives of disabled people are still marked by exclusion, poverty and prejudice. In a context that is particularly disabling, masculinized and male-oriented, such as Portugal, disabled women are in a particularly vulnerable position, accumulating the inequalities based on disabilism and sexism.

Based on the Social Model of Disability and drawing on the research project “Disabled Intimacies: sexual and reproductive citizenship of disabled women in Portugal” (funded by the Portuguese Foundation for Science and Technology - reference PPHIG/CG/005/2008) and on my post-doctoral research on disable hate crime in Portugal (funded by FCT – Reference SFHN/BPD/805/9/2011) developed at the Centre for Social Studies, University of Coimbra, this paper considers the issue of sexual violence targeting disabled women in Portugal. In this paper we begin by introducing the Portuguese context in relation to citizenship rights and outlining the phenomenon of sexual violence targeting disabled women in Portugal. The data was gathered from public reports, media coverage, original empirical data collected in biographical interviews and evidences that family and close neighborhood members constitute most of the perpetrators. We continue examining the legal dispositions already in place in Portugal in order to protect disabled women. And we conclude, assessing the effectiveness of the existing laws and exploring the potentialities of the legal recognition of disability hate crime in Portugal.

What’s New about New Social Movement in a Time of Economic Crisis? Reflections about the Portuguese Disabled People’s Movement

Until the 1960s, social movements were comprised mainly of workers’ movements, focused on class and economic issues, highly organised in trade unions and political parties and using strikes and demonstrations as their main action tactic. The 1960s and 1970s witnessed, however, an increased variety of social conflicts beyond the workforce, particularly in Europe and North America, and the subsequent emergence of numerous social movements around new ‘post-material’ issues. The emergence of these new social movements (NSMs) did not only push for a multitude of issues based on identity, but also the investment on civil society as its key location, organised in non-hierarchical structures and networks and embracing direct action and protest.

As with other social groups, the failing of disabled persons by the welfare-state made them especially active since the 1960s. This was especially true of the UK and USA, where disabled people struggled “for equality and participation on an equal footing with other citizens” (Driedger, 1989; 1). This action was made possible by the creation of the Disabled People’s Movement composed of diverse organizations of disabled people. Most current debates on the Disabled People’s Movement included the discussion of whether this is a new or an old social movement.

Drawing on my PhD about social citizenship and the Disabled People’s Movement in Portugal (completed at the University of Leeds – UK), this paper investigates the ways in which this case study may contribute to the theoretical dispute between old and new social movements. I will begin by examining significant characteristics of the Portuguese Disabled People’s Movement. Then, I summarize the theoretical dispute within disability studies on whether the disabled people’s movement is an old or a new social movement. In the last part, I explore the ways in which the Portuguese case study may contribute to this theoretical dispute.

FORBES-MEWETT, HELEN* (Monash University, helen.forbesmewett@monash.edu)
Violence Against Female International Students and the Need for ‘Gender Security’

Violence against women has become a pressing global concern that represents significant social and economic cost. According to the World Health Organization, more than a third of women worldwide are victims of physical or sexual violence. While some progress has been made there remains much to be done to increase the understanding and amelioration of this vast social problem. Within this context, females make up approximately half of the estimated 3.6 million international students undertaking tertiary education in a host country. Previous research has addressed issues of safety and security for international students generally with only passing mention of gender-related concerns. This paper explores the problem of gender-based violence against female international students in their host country and the pressing need for ‘gender security’. Focusing on the United States, the United Kingdom and Australia, the paper draws on empirical research into gender-based violence against female international students. The study uses an intersectional analysis and a claim for human rights to argue for an expansion of preventative and response programs relating to violence against female international students. Findings indicate that female international students are far more likely to be victims of violence than male international students. It is also suggested that low reporting of gender-based violence is exacerbated within the international student cohort. The findings of this paper will be of value to female international students and their families, wider communities including in particular women from diverse backgrounds, practitioners and scholars concerned with the issue of violence against women, the international education sector, and host education institutions and nations.

Personalized Engagement in the Current ‘New’ Wave of Anti-Mafia Grassroots Mobilization

This paper discusses the social mechanisms set in motion by a new anti-Mafia organization called Addiopizzo (Goodbye, Pizzo) which has been able to successfully encourage a growing number of entrepreneurs and shopkeepers to refuse to pay racket fees to local mobs in the city of Palermo, Italy. By using communication technologies that enable personalized public engagement as part of a new interpretative frame which has brought political consumerism into the repertoire of the anti-Mafia movement, Addiopizzo activists – a group of post-grad students formed in 2004 – have succeeded in creating a range of collective and selective incentives that have made it possible for local businesspeople to overcome the problems of collective action and build new social bonds of solidarity. Referring to social movements and diffusion theories, the paper discusses how a relatively small and locally based SMO succeeded in bringing about important changes by organizing itself locally as well as globally, and via internet. Data for the analysis came from several sources of information, such as interviews with the activists themselves, participant observation, media analysis and a unique dataset reporting the answers given to a structured questionnaire with more than 70 closed questions, distributed in 2011 to 277 entrepreneurs who had joined the mobilization campaign entitled “Change your shopping habits to fight the pizzo” at various points in time.

United We Buy: Re-Embedding the Economy into Society for a Sustainable World

It is increasingly argued that the environmental and social problems that afflict industrialized societies cannot be resolved without a change in citizens’ lifestyles and consumption practices. In recent years, the inability (or unwillingness) of institutions to address these problems has stimulated the development of new social movements that, while increasing general awareness on the social effects of consumption practices, have favored the emergence and spread of forms of procurement based on the direct relationship and solidarity between consumers and producers. The paper focuses on some new grassroots initiatives promoting alternative forms of consumption as a way to protect the environment and the right of workers, which have been very successful in Italy in the last decade. Born in 1994 “Solidarity-based Purchase Groups” (or “Gruppi di Acquisto Solidale”) count today more than 900 groups. The survey for selecting potential participants has gathered data from more than 3000 people. This paper explores the social mechanisms set in motion by a new anti-Mafia organization called Addiopizzo (Goodbye, Pizzo) which has been able to successfully encourage a growing number of entrepreneurs and shopkeepers to refuse to pay racket fees to local mobs in the city of Palermo, Italy. By using communication technologies that enable personalized public engagement as part of a new interpretative frame which has brought political consumerism into the repertoire of the anti-Mafia movement, Addiopizzo activists – a group of post-grad students formed in 2004 – have succeeded in creating a range of collective and selective incentives that have made it possible for local businesspeople to overcome the problems of collective action and build new social bonds of solidarity. Referring to social movements and diffusion theories, the paper discusses how a relatively small and locally based SMO succeeded in bringing about important changes by organizing itself locally as well as globally, and via internet. Comparing Inequality of Educational Achievement in Australia, Britain and South Africa

Using Critical Race Theory as a foundation, this paper will analyse inequality of educational achievement of racially marginalised groups in Australia, England and South Africa. The countries have quite different but connected histories. This paper will focus upon indigenous Australians, Xhosa in the Western Cape of South Africa and Afro-Palestinian migrants in England. It will describe the scope of inequality, the mechanisms and decisional processes through which citizens can enter into social movements, and the extent and scope of ‘collective’ action. In each country the educational system is failing these marginalised groups, and the gains of affirmative action programmes are undermined by the re-emergence of overt and covert forms of racism. This paper will argue that critical race theory provides a promising framework for analysing and interpreting these conditions.

GILLAN, MICHAEL* (The University of Western Australia, michael.gillan@uwa.edu.au)

Breaking through or Locked in? Global Unions and Their Institutional Articulation with Trade Unions in Asia

Both leading labour geographers and theorists of transnational activism have noted that there is a weak understanding of the articulation between global institutions and networks, institutions and social formations at other geographic scales. Aitken, et al. (2005) has suggested, what is lacking more generally in discussions of globalisation and civil society is recognition of the specificity of the mechanisms necessary to confront the concrete experiences that mould discontent into specific grievances against specific targets’ and the ability to ‘negotiate boundaries’ between ‘domestic political settings, national governments and international institutions’. This paper takes up these concerns with regard to the articulation between the Global Union Federations (GUFs) and trade unions in Asia. The GUFs have all grown over the last decade in in terms of affiliated unions, members and geographic coverage. However, this formal increase in global representativeness has not always translated into legitimacy and meaningful influence with affiliates or externally. GUFs have coordinated many effective multi-scale union-building organizing and campaign initiatives – something their status as ‘global’ coordination bodies affords unique opportunities to do. However, it is also evident that the scope, form and intensity of GUF interventions are defined by their own institutional capacity and limitations (including resource constraints), leading to an uneven and opportunistic implementation of strategies and goals.

Coalition Patterns in Labour Market Policy – How Activation Policies Restructure the Political Conflict in Western Europe

Activation policies became the means of choice to address typically post-industrial unemployment rates in a context of “permanent austerity” (Pierson 1996). However, comparatively little is known about how these “novel” policy instruments influence the political conflict and the coalition formation mechanisms in this policy domain.

First, in line with the debate on multidimensional modernising reforms (Bonoli and Natale 2012; Häusermann 2010; Clasen and Clegg 2011) this paper investigates the nature of the political conflict in the domain of labour market policy and addresses the question whether the political elite’s preferences concern to more than one dimension.

Second, the analyses address the political elite’s coalition patterns by focusing in particular on the political left testing the hypothesis whether social democratic parties address rather insider or outsiders’ interests (Rueda 2007, Schwander 2012).

The empirical analyses are based on a novel elite survey which captures labour market policy preferences of all actors involved in the political decision-making process, i.e., parties, state bodies, unions, employers’ and social movement organisations in three dualising (France, Germany, Italy) and in two flexicurity-oriented countries (Denmark, Switzerland). The analytical strategy relies on factor and cluster analyses of preference measures weighted by the respective issue salience (cf. Kriesi et al. 2000).

The empirical findings suggest that politics is essentially shaped by policy. In other words, the political elite’s preference and coalition patterns are determined foremost by the regime specific institutional legacies and are structured on a redistributive and on an activation dimension. Interestingly, the most salient and controversial issue related to policies which are constructed around the financialisation of the welfare state.

‘Belonging’ in The Land Down-Under: Insights from Three Methodologies

This paper considers differences in articulations of belonging in Australia generated using three different more or less innovative methodologies among different populations. Results from face to face interviews plus a photovoice exercise among refugee settlers are compared and contrasted with data generated in 20 focus groups with migrants and non-migrants across Australia using a set of images designed to elicit discussion around national, transnational and post-national identities. Membership Categorisation Analysis is used to interrogate the presumptions included in the prompts used to generate the data (interview questions, themes for photographs, and images for focus group discussion). The range of parameters of belonging from the political (civic and ethnic belonging) to the interpersonal (family, friends, place) are noted, as well as the limits to belonging, particularly the category work done discursively to identify insiders and outsiders. The paper concludes that each method is useful in different ways to gain access to different experiences of belonging and un-belonging.

The Discussion to Implement Charging for the Use of Water Resources: Challenges in Participatory Management

The participatory discussion appears among the greatest innovations occurred in Brazilian democracy since the 1980’s, and have as principle the joint action between state and civil society and the sharing of responsibilities in the design and management of public policies. São Paulo State’s Water Resources Policy has the premise that water management should be decentralized, integrated and participatory, through the Watershed Committees. One of the tasks of the Watershed Committees is to establish the charging for the use of water, the economic instrument of water resources policy, which aims to encourage the rational and sustainable use of water. This study aims to analyze the discussion for the implementation of charging for the use of water in the Basin Committee of the Upper Tietê, located at the Metropolitan Region of São Paulo, in the period of 2000, in order to evaluate the political compromises was and how the participation of the state, municipalities and civil society occurred. This article aims to identify the specificity of the participatory process through the analysis of Watershed Committee meeting’s minutes and to compare it with a theoretical reference. The hypothesis is that the state failed to provide equality conditions for the representation of participants in the Watershed Committee of the Upper Tietê in the drafting and implementation of water use charging. Furthermore, the inaction of state institutions may have contributed to the slowness of the process. The evaluation of the discussing process for water charging in the upper Tietê Basin corroborates to the debate about the actual influence of participatory institutions in public policies and the prospects for improving the existing relationship between government and civil society and the conditions for the exercise of democracy in environmental issues.

El Concepto De Comunidad: Teoría Sociológica, Historia Conceptual e Historia Intelectual

Desde hace al menos tres décadas la noción de comunidad se ha vuelto central para una variedad de disciplinas asociadas al campo de las humanidades. El llamado “renacimiento de la comunidad” supuso la tarea de retrasar la historia de esta noción desde sus orígenes griegos hasta el presente. Como es sabido, el surgimiento de la teoría sociológica a mediados del siglo XIX impactó de manera decisiva en la formación y el desarrollo del concepto de comunidad. La indagación acerca de las transformaciones en los usos y significados de dicho concepto a lo largo y a lo ancho de la tradición sociológica parece requerir de una exploración, discusión y evaluación de las potencialidades de diversas herramientas y propuestas teórico-metodológicas provenientes de perspectivas no específicamente sociológicas. En este trabajo nos proponemos, entonces, analizar de forma crítica y y diagramática las posibles confluencias de investigación teórica o metateórica en torno al concepto sociológico de comunidad con dos enfoques de uso generalizado y cada vez más extendido en las ciencias sociales y humanas contemporáneas: la “historia conceptual” y la “historia intelectual”.

Youth in the Age of Austerity

This paper will draw upon international evidence of how ‘youth’ and the ‘youth question’ within social and public policy has been (and is) changing as a result of the global disruption to international capital. It will examine how ‘financial restructuring’ in different countries is impacting on public and social policies aimed at the young and how the concepts such as ‘youth’–‘age’, ‘transition’ ‘diversity’ ‘risk’ and ‘inclusion’ and ‘citizenship’ are being reconstructed and reconfigured in policy discourses. Since the early 80s ‘neoliberalism’ has been seen as the major driver to national and international policy frameworks in western type states. This paper will argue that the recent ‘crisis’ does not create new responses but has accelerated neoliberal strategies that see public and social policies and practices help western states implement a range of new ways of managing young people and the ‘youth question’. The focus of the paper will therefore be on how youth

A Tale of Two Sorrows: Hurricane Katrina, Parenting Trouble, and the Politics of Suffering

This paper examines a set of intellectual and ethical dilemmas that stem from efforts to define and analyze suffering. Drawing from two separate studies, one on the survivors of Hurricane Katrina and the other on middle-class parents whose children have a wide array of problems, we highlight the gap between sociological and self-referential claims to suffering. How do we conceptualize the experiences of people who appear to suffer but are reluctant to identify themselves as suffering? Should studies of suffering include the experiences of privileged people whose hardships seem comparatively trivial? By addressing these questions, we call attention to the politics of suffering and scholars’ participation in the construction of what constitutes “legitimate” distress. We also consider what scholars might gain from comparing the lived experiences of seemingly disparate groups of “sufferers.” We argue that when scholars do not pay attention to how people make sense of their own situations, they risk dehumanizing their participants. Sociologists’ adoption of psychological and psychiatric vocabularies of suffering is particularly problematic in this regard. In the end, we suggest that it is possible to conceive of suffering as part of the human condition and to embrace all forms of human distress, while at the same time making moral assertions about whose situations warrant political action. However, doing so requires scholars to be explicitly reflexive about the political assumptions that underpin their research.

Contested Landscapes: Film Narratives and the Meaning of Land Rights

In rural areas of southeastern USA, African-Americans have fought to maintain land ownership in order to protect independent farmers and maintain economic and political freedom. Struggles over property rights carry a heavy history from enslavement to contemporary racial discrimination. Landownership among African-Americans peaked around 1910, after which there has been a steady decline up to present day. These new ‘geographies of mobility’ strike at the heart of debates surrounding the lived experiences of globalisation: the tension between ‘spaces of place’ and ‘spaces of flows’. These debates have a particular resonance for young people, whose lives are lived at the precarious frontier of the global economy, and the leading-edge of global consumer culture.

This paper will engage with these debates through reflection on emergent findings from an ongoing comparative study of youth leisure, funded by the ESRC, in two geographically and culturally diverse research sites: Scotland and Hong Kong. The study adopts a historical and cross-cultural comparative design, building on landmark research carried out in both study locations by the pioneering sociologist Pearl Jephcott, involving concurrent fieldwork and data-collection in communities in both locales - including ethnographic observations, stakeholder interviews, focus group discussions, oral history interviews, and on-line data-collection. While methodologically rooted in these ‘spaces of place’, the paper will engage with the new configurations of identity and agency thrown up by the emergent ‘spaces of flows’ that compose the lived experience of youthful global modernities.

Multileveled Uncertainty: Meso-micro Linkages between Trust and Confidence

This paper seeks to conceptualise the relationship between trusting institutions and trusting people. While these two types of trust are clearly linked and share important similarities, they are also distinctly different at a phenomenological level. This paper elucidates these similarities and differences and the ways in which the two levels interact. First, it draws on the work of K. E. Loegstrup’s phenomenology of trust as the default attitude within familiar social worlds.

Two fundamentally different ways of dealing with uncertainty are conceptualised. Trust, it is argued, is related only to alterity as long as confidence in systems/institutions in order to bridge the contingency associated with any intersubjective encounter. Trust is possible only when preceded by a trusting orientation. A sense that whatever future is in store will not be a bad one. This orientation is it is an expectation of a more or less wider array of possible futures all within what is familiarly relevant to at specific situation, delineated by confidence. However, trust also provides the foundations for building confidence. Confidence can only be established once the issue of human agency invariable linked to institutions and systems has been settled the in form of trust. Consequently, confidence is learned from trusting. The contribution of this paper is two-fold. First, it brings together otherwise disparate writing on the relationship between trust in institutions and trust in people, helping to clarify this point in trust research. Secondly, it provides conceptual tools to describe and analyse the relationship between trust in intersubjective relations and the ways that familiar institutional and organisational backdrops provide the confidence to trust the other.

Nordic Moral Repertoires: A Contribution To a Comparative Cultural Sociology Of Social Justice

The great values similarity between the Nordic states seems to be a fact beyond dispute (Kildal and Kuhnle 2005; Svalfors 2003; Svalfors 2006). However, since contemporary research primarily focuses on the historical and socio-economic causes of these attitudes, the Nordic inhabitants reasons for having these perceptions are all but unknown. This paper seeks to contribute to an understanding of these reasons.

Identifying macro level drivers is crucial to explaining the development and continued existence of welfare states and institutions. Nonetheless, these are inadequate for understanding why people hold values and perceptions supportive of specific institutional structures: people express egalitarian ideas because this is important and meaningful to them, not because they have a working class upbringing.

The analytical framework applied in this paper is drawn from the Sociology of Valuation and Evaluation (Hall and Lamont 2013; Lamont 2012) emerging in the intersection between political sociology (Boltanski and Thévenot 2006; Wagner 1999) and comparative cultural sociology (DiMaggio 1987; Lamont and Molnar 2002). This approach suggests that perceptions of what is good and just differs between groups and nations because of differences in preferred cultural standards of valuation and evaluation.

This paper seeks addresses these research questions:

• What are the dominant standards of valuation employed in justifying the level of redistribution in the Nordic welfare states?
• Which group identities (nation, class, generation) are most salient to differences in standards of valuation?

The research project is a comparative cultural study of Sweden and Denmark focusing on issues of social justice. 60 semi-structured interviews are carried out in each country with people between 25 and 70 currently employed. The sample
is balanced in terms of age, gender and class. The interviews explore the four subject areas: social justice, redistribution, work, and institutional legitimacy and trust.

Sustainable Credit Guarantee Associations

Purpose of the paper
This research analyses credit guarantee associations and their contribution to financial solutions of local societies. Credit cooperatives aim to guarantee bank loans for micro, and small and medium-sized enterprises.

Research method
Qualitative data were gathered through semi-structured interviews and direct observation with organisations, public authorities, businesses and bank institutions to conduct a case study of Upper Norrlands Credit Guarantee Association (ÖNKGF), in Sweden.

Research Findings
Cooperative enterprises have been democratically owned and controlled by their members and have taken economic and social responsibility for the development of local societies and businesses for the benefits of the members and the society. The research shows that ÖNKGF creates relations with the members by communicating their value base as a cooperative organisation. They develop cooperation with local banks to support commercial business and entrepreneurs who want to start and finance their own businesses. They get advantage to attract new members by emphasising democratic management and members’ sovereignty, educate members, network with authorities and bank officials in charge of handling loans and with local and global organisations using mouth to mouth marketing. For the cooperative credit guarantee association we can see an enlargement of the market and members’ participation and also need for innovations to sustain its business. New entrepreneurial activities face difficulties because of lack of stable financial resources.

Main Contribution
The study contributes to the literature of credit cooperative financial sector, by presenting a model of successful operation of ÖNKGF. We recommend managers to develop networks with members and other stakeholders to promote cooperativecollateral financial activities in the local economy to legitimate and sustain their business in the local society.

Social Memories In South America: Generational Narratives In Times Of Political Youth Activism

Social memories in South America: generational narratives in times of political youth activism

Raimundo Frei (PhD Candidate)
Humboldt Universität zu Berlin

Given the recent, extensive political youth activism in Argentina and Chile, these two post-authoritarian countries provide fertile grounds in order to explore identity boundaries and those born after the dictatorships in the Southern Cone. Against this background, the main research questions are whether and how generational narratives have emerged in the context of political democratisation. Generational narratives link life course sequences with experiences of collective events. This connection must not be regarded in terms of Mannheim’s idea of ‘participation in the same destiny’. Rather, by sharing stories of a common past, people narrate a generational identity. Put briefly, generational narratives are attempts to bestow coherence and connect biography and history.

My analysis draws on sixty narrative interviews with people born in two different age-cohorts (1965-1974 and 1985-1994) in Buenos Aires and Santiago de Chile. It will show that whereas long-standing politics of memory in Argentina have created a discursive homogeneity and continuity between generations, the cycle of youth mobilisation in Chile during 2006-2011 opened up the opportunity to create new narratives through collective remembering.

My analysis will thus illustrate how ordinary members of the respective society create (or not) generational identities by narrating past and present. That is, I will show that Argentina is an extraordinary social space to observe continuity between generations which risks perpetuating historical divisions, while the Chilean youth movement has contributed to shed light on the country’s undemocratic past.

Consumidores Críticos, Pacientes Informados y Pacientes Tradicionales: Visiones y Prácticas De Cuidado De La Salud Entre Usuarios y No Usuarios De Medicinas Alternativas En Buenos Aires

Unos de los rasgos de las sociedades occidentales es el énfasis en la responsabilidad individual en el cuidado integral de la salud. Conservar y mejorar la salud ha convertido en una medida del logro personal en un contexto epide-miológico en el que se han incrementado la mortalidad y morbilidad debido a la transmisión de enfermedades. En este contexto, la alternativa a los medicamentos se confron-tan, o acomodan de manera complementaria, los de las medicinas alternativas que destacan su capacidad curativa, el bienestar psicosfico y espiritual, y el rol activo del individuo en la salud holistica. Basandonos en el análisis cualitativo de 8 grupos focalizados con varones y mujeres de clase media de entre 20 y 50 años de edad realizados en el Area Metropolitana de Buenos Aires en el 2013, analizamos sus concepciones de salud y riesgo, la credibilidad otorgada a los distintos sistemas expertos y saberes populares, y las autoimágenes emergentes en torno a las prácticas de cuidado. Entre estas imágenes identificamos, la del consumidor critico frente a la “moda de la vida saludable” y la creciente comercialización de productos y servicios bajo esta rúbrica, así como respecto del uso de fármacos; la del paciente informado que a partir de la experiencia personal y de terceros, la información disponible en Internet, los medios masivos de comunicación, y la literatura de divulgación, opta por distintas alternativas de cuidado —y conlleva la complementariedad terapéutica— o bien descarta la opción de recurrir a medicinas alternativas; y la del paciente tradicional que se siente bien cuidado por los especialistas de la biomedicina y que participa de redes familiares y sociales en las que no se cuestiona el paradigma biomédico.

Transparent Patients: Addressing Risk in Health Information Exchanges

In the United States (US), Health Information Exchanges (HIEs) are emergent initiatives designed to pool the personal health information of individual patients in order to facilitate care. Proponents also hope that HIEs will support diverse secondary uses of health information (e.g., biomedical research, public health
surveillance, comparative effectiveness research, etc.), thereby improving quality while also lowering care costs. Yet, while HIEs stand to transform systems care in some significant ways, they also generate new risks associated with the ubiquitous flows of personal health information. Using documentary evidence (and informed by debates in content and discourse analysis), this paper considers how HIEs are conceptualizing, addressing, and attempting to manage emergent risks. With particular attention to the ways that patients are rendered transparent—and focusing on how they are made responsible for managing the risks associated with flows of their personal health information—this paper critically examines potential the unintended consequences of HIEs in the US.

FRERE, BRUNO* (Fonds National de la Recherche Scientifique (University of Liege), bfreere@ulg.ac.be) Solidarity (and alternative) Economy and Its Anarchist Grammar

This paper demonstrates the value of French pragmatist sociology, and particularly the methodological device of a ‘grammar’ to articulate the normative macaro-elements that underpin the organizational principles of the solidarity economy movement in France. Our grammatical analysis demonstrates that the loosely coupled movement is held together by a shared libertarian imaginary. We identify as its core four principles about an alternative organization of economic activity: creativity, conviviality, self-management and political activism; and we trace their historical roots in 19th century libertarian socialism and their renaissance in radical social movements in the 1970s. Analyzing the theorization of the libertarian imaginary provided by Proudhon in the 19th and movement protagonists in the 20th century, we argue that the values of the libertarian imaginary have become recombined into a composite construct of complementary, yet potentially conflicting grammatical elements. Presenting a case of a solidarity economy organization, we illustrate how organizational practices are evaluated through a grammar, but how the movement can loosen its critical edge when the grammar is ‘extrapolated’. ‘Extrapolation’ offers an alternative explanation for movement instrumentalization, a frequently observed and deplored phenomenon in social movements, and suggests that it takes place not by co-option of an external and conflicting value logic, but by over-emphasizing a value that is constitutive of the grammar itself.

RC11-207.3

FRERICKS, PATRICIA* (University of Hamburg, patricia.frericks@uni-hamburg.de) Solidarity Regimes and Individualization: Institutional Change In Social Security Schemes

Since the 1990s so-called mature and upcoming welfare states have undergone fundamental reforms. These reforms are related to social, demographic, and cultural changes, and they are at the same time highly influenced by a currently leading political concept: i.e. that of the self-responsible social citizen. Concurrently, it is widely assumed that welfare institutions will align and finally lead to institutional convergence, in our case to institutions based on the concept of self-responsibility.

Concepts, however, find entrance into institutions in very different ways. Actors, for instance, interpret self-responsibility in terms of individualization on the one hand, or subsidiarity how the movement can loosen its critical edge when the grammar is ‘extrapolated’. ‘Extrapolation’ offers an alternative explanation for movement instrumentalization, a frequently observed and deplored phenomenon in social movements, and suggests that it takes place not by co-option of an external and conflicting value logic, but by over-emphasizing a value that is constitutive of the grammar itself.

FRESNOZA-FLOT, ASUNCION* (Catholic University of Louvain, asuncion.fresnoza@uclouvain.be) NAGASAKA, ITARU* (Hiroshima University, nagasaka@hiroshima-u.ac.jp) Understanding Mobile Childhoods: Children of Migrations from the Philippines to Europe

Contemporary parental migrations have resulted in the rise of many transnational families characterized by solidarity despite family separation across geopolitical distance. Children of these families have attracted scientific attention for the last twenty-five years, which reflects the existing social concern about their well-being as they grow up separated from one or both of their parents. When family reunification takes place in the receiving country of the migrant parents, children themselves become migrants. Such mobile childhood is considered atypical in both the children’s society of origin and their destination. How to capture the diversity of childhood experiences of these children migrants? In what way do their experiences present scientific challenges to understanding mobile childhoods? In this presentation, we explore these questions by focusing on the childhood experiences of Filipino migrants’ children who live in the Philippines partly and in Europe, in France and in Italy. Here, we examine their experiences in terms of mobility to unlock their subjectivities and agency. The results of our ethnographic fieldwork among children of Filipino immigrants in France and in Italy demonstrate the different forms of mobility of young migrants through the migration process. Using mobility as an analytical lens, we attempt to move beyond nation-state borders by considering carefully the context and temporalities of mobile children’s childhoods.

FREUDENBERG, MAREN* (Free University Berlin, freudenberg@gsnfs.fu-berlin.de) The Emerging Church Movement in the USA As a Critical Response to the Neoliberalization of Religious Organizations

The unprecedented decline in formal religious adherence and sharp increase of religiously unaffiliated Americans at the turn of the 21st century has led to critical assessments of the ways in which neoliberalized religious organizations responded to the spiritual needs of society. The emerging church movement as a counter-movement to the mega-church model has resulted in the surge of a novel religious movement in the United States in the 21st century. It presents empirical examples of emerging church practices from the American Midwest and the West Coast, which show not only which elements of neoliberalism-inspired religion the followers located in empirical examples of emerging church practices from the American Midwest and the West Coast, which show not only which elements of neoliberalism-inspired religion the followers located in emerging churches reject, but also which religious organizations employed private sector business strategies on the religious market. This model is increasingly rejected by those people seeking more ‘genuine’ ways of practicing their faith in ‘authentic’ faith communities.

The widespread opposition to the neoliberalization of religious organizations has resulted in the surge of a novel religious movement in the United States and elsewhere: the Emerging Church Movement (ECM). In the American context, the ECM was born as a reaction to mega-churches and seeker sensitive approaches in the late 20th century. Its followers question and critique existing religious organizations and the influence of neoliberalism on their practices and theologies. Interestingly, the ECM’s flat hierarchies and localized organization are themselves characteristic of neoliberalism, which raises the question to what extent the theologies and variations of orthopraxy represented in this group are also influenced by the spillover effects of free market ideology into the religious sphere.

This paper discusses the ECM as a manifestation of the rejection of neoliberalized religious organizations in the United States in the 21st century. It presents empirical examples of emerging church practices from the American Midwest and the West Coast, which show not only which elements of neoliberalism-inspired religion the followers located in empirical examples of emerging church practices from the American Midwest and the West Coast, which show not only which elements of neoliberalism-inspired religion the followers located in emerging churches reject, but also which religious organizations employed private sector business strategies on the religious market. At The Leading Edge – Does Gender Still Matter? A Qualitative Study On Successful Coping Strategies and Prevailing Obstacles In Academia. Analysing Female Careers In Austria

Background: During the past 33 years New Zealand has developed hospice services based on the British model for caring for patients with life limiting illnesses. Given the rise in demand from an ageing and increasingly diverse patient population, do palliative care hospice services as shaped by a Western perspective adequately fulfill the needs for persons from non-western cultures? The aim of this research was to identify challenges to hospice service use for Māori Pacific and Asian clients in the use of hospice. Method: The project involved qualitative interviews with 36 Māori, Pacific and Asian cancer patients, whanaungafamilies as well as 15 health professionals (e.g. referring GPs, oncologists, allied health professionals) in one district health board. Findings: Challenges to hospice service utilisation included a lack of awareness in the communities of available services as well as continuing misconceptions concerning the nature of hospice. Language barriers were particularly reported for Asian patients and their families. Issues concerning the cultural safety and ethnic representativeness of the hospice staff were raised. Conclusion: The results offer an important addition to the literature providing the views of both hospice staff and non-European patients and their families regarding challenges to the access of hospice services. This information can be used for future planning to enable hospice to both provide high quality evidence based palliative care services for patients and families and provide consultative services to primary health care providers in the community.

Increasing Low-Paid Employment in Germany, Austria and Switzerland Between 1995 and 2011. Who Are the Losers of Recent Labour Market Flexibilization?

Since the 1980s, Western societies have been experiencing an increasing flexibilization of their labour markets, which led to a massive expansion of non-standard jobs. Interestingly, and this is the starting point for the present paper, there has been relatively little research done on this topic in German-speaking countries such as Austria, Switzerland and Germany over the 15 years. Taking up this research desideratum, we discuss the growth of low-paid employment in these countries.

For the empirical analysis, we use GSOEP, EU-SILC and SHP data from 1995 to 2011. Besides descriptive time series analysis, we present results from logistic regression models and decomposition analysis. Our results confirm a growing trend towards low-paid work in all three countries. Compared to Austria and Switzerland, the German rates of low-paid work are roughly equal (25% of all jobs in the labor market in 2012), indicating a substantial change in the historically dominant form of labour market regulations towards a liberal labour market regime. By contrast, Switzerland and Austria only show a moderate enlargement of the low-paid sector and therefore pursue the traditional path of strong regulation. Against this background we highlight the most significant differences and similarities at a national level and display historical trajectories of regulatory processes leading to the emergence of particular regimes of precarious employment.

Moreover, our analysis shows that risks of low-wage employment are not evenly spread across the workforce. In fact, we can observe strong and increasing inequalities between and within special groups. Especially temporary work, part-time employees and workers with fixed-term contracts belong to the losers of the prevailing dynamics on the labour market in those countries. We conclude that the already disadvantaged workforce has to bear special risks produced by recent labour market changes.

Addressing Inequality through the Mediation of Disputes and Regional Conflicts

Mediation is a non-adversarial, flexibly-structured creative process in which one or more impartial individuals help disputants. Mediation is one of the areas of practice of clinical sociologists. The primary focus of the paper how inequality may be addressed by mediators before, during and after a mediation.
* denotes a presenting author. Abstracts are organized by first presenting author's last name.
neys was at stake, critics argued that the larger number of attorneys would have too much competition and yield many poor attorneys, and in turn debase the quality of legal services provided. Indeed media have repeatedly reported some new attorneys are so poor. I found that the income distribution of attorneys has not changed so much as critics argued even in the latest data available, controlling for the age and gender compositions of attorneys. However, the percentage of lower middle income attorneys are slightly larger in the 2010 survey compared to previous data. Based on these analyses, I will argue that current sentiment shared by many attorneys, like “the more lawyers are, the poorer they are,” is not strongly supported by the fact but it would be a necessary sentiment of the transitional period from the age of the litigation lawyer to that of socially permeated lawyer.

Work Motivation and Social Networking Development in Professional’s Job Change Behavior: A Comparison Between the U.S. and Japan

As professionals’ work-related knowledge is not dependent on the organization to which they are employed, professionals are thought to be able to move between organizations more easily than non-professionals. However a great number of professionals in Japan enjoy a lifetime employment system and never change organizations as many large companies in highly professional fields such as science and technology, etc. adopt internal labor market-type employment systems. Therefore, Japanese professionals tend to hope their growth in the same company, and not to change jobs even if the work is not interesting enough. In the U.S. on the other hand, professionals in Silicon Valley, California found ventures one after another and frequently change jobs. They dislike to continue the same job for three years, because they always are anxious to the opportunity which makes them grow. They have a lot of interesting to the new projects which satisfy their curiosity. For this purpose, they are extending their network not only in the same professional area, but also with other professionals or even non-professionals to meet new idea. They are also looking for colleagues with whom to collaborate to realize such idea.

As a result, professional social networking development in Japan tends to be confined to professional groups such as affiliated companies and academic conferences, etc. Meanwhile, as professionals in Silicon Valley are in a high-risk situation with the fear of bankruptcy and dismissal lurking behind success, a wide variety of social networks consisting of former colleagues, persons in the community, PTA members, and members of the same ethnic group, etc. have developed. These differences in the social environment surrounding professionals have impacted the development of social networks; while employment in Japan divides networks into public organizational networks and private networks, Silicon Valley professionals acquire job opportunities through mixed public and private networks.

Coalition-Building Process Between Socially Heterogeneous Organizations in Japanese Biodiversity Movements

This paper explores how and why social movement organizations build coalitions from the perspective of multi-organizational fields, with a particular focus on coalitions between socially heterogeneous organizations. While researching the interaction between social movements and their opponents, most scholars tend to pay less attention to coalitions/alliances between other movement groups or organizations in different sectors, despite suggesting their importance in social movement dynamics. In this paper, existing analytical approaches toward inter-organizational coalition—alliance—namely “coalition work” (Staggenborg 1986), “mesomobilization” (Gerhards & Rucht 1992), and “resource dependence perspective” (from the sociology of the organization)—are comparatively examined and tested in a case study. This paper attempts to reorder the determinants of coalition building proposed by these analyses.

The case study examines the environmental movements in Japan, particularly organizations involved in advocacy activities for conservation of biodiversity since the 2000s. These biodiversity issues involve many different sub-issues—for example, preservation of wildlife, sustainable development, access to genetic resources, and benefit sharing, and biosafety of living modified organisms—whereby coalitions among many different actors have been critically important. The following specific movements are reported in this paper: (1) movements for alien fish problems in the early 2000s, in which environmental citizen groups, and fisheries associations and academic committees built some coalitions; against sports fishing groups (2) nongovernmental organizations’ (NGOs) alliance for the tenth meeting of the Conference of the Parties to the Convention on Biological Diversity (CBD/ COP 10) in Nagoya city during 2010, in which there was coalition building between environmental NGO’s, grassroots groups, consumer organizations, and others; and (3) coalitions between consumer groups and business companies. In discussing these cases, I focus on the interaction between framings and counter-framings, and on resources distribution among these actors.

Japanese Youth “Inward Tendency”: Analysis of Surveys of Japan Youth Study Group

This presentation aims to discuss “inward tendency” of Japanese youth based on the analysis of social survey of 2012, and a secondary analysis of social surveys of 1992 and 2002, all of which were conducted by Japan Youth Study Group. The term “inward tendency” refers to Japanese youth attitudes that is more “domestic-oriented,” rather than “internationally-oriented” in character. However, up-to-date, its usage is not clear: it refers to both the decrease of youth travelling overseas, and the decrease of students studying overseas. Since the “inward tendency” of Japanese youth started to be considered a social issue in the beginning of 2000s, there is no previous studies, as well as statistical analysis, dealing with it. Therefore, I will review studies on youth in Japan in terms of methodology, examine some government surveys, and discuss which social factors contribute to “inward tendency.” This presentation will attempt to address the following issues in dealing with the study of youth. Though in terms of methodology, it is important to make comparison with other age cohorts in order to understand the characteristics of youth (16-29 years of age), there was no such arrangements in previous surveys. Also in order to gauge changes in youth attitudes, it is necessary to carry out repeated cross-sectional surveys. Though its necessity was pointed out, the age, period and cohort were not distinguished (Fujimura 1995). Furthermore, it is assumed that “inward tendency” correlates with other attitudes, such as intimacy, conservatism, and moral issues. The analysis of data makes it possible to clarify which factors correlate to “inward tendency.” And, consequently, it will be discussed that it is not sufficient to analyze the issue of “inward tendency” just as youth attitude, but it is also necessary to consider other macro factors and policies that have an impact on society.

An Integrative Approach to Understand Resource Investment, Livelihood and Food Security Nexus in Laos

The paper draws attention to an integrative approach of studying the nexus of resource development, livelihood and food security in resource rich but economically poor developing countries. The paper illustrates an example of applying mixed method approach, which incorporates spatial analysis, community and household study to survey the links between resource development, livelihood and food security in Laos, a least developed country in the mainland Southeast Asia. The paper highlights the linkage between the declining resource base and the problem of food insecurity in Laos. It also highlights the inequitable effects of resource investments on people’s access to food and wellbeing, and the ways in which different population groups are adapting to the changing social and natural environment.

FUJIYAMA, HIDEKI* (Dokkyo University, fujiyame@dokkyo.ac.jp)
Network Effects and Activities of University Students in a Seminar

University seminars require students to be involved in intensive activities that require cooperation with each other and also develop their own skills and abilities. In such activities, their friends are also an important factor for their activities—we call these network effects. This is similar to activities pursued within modern organizations such as companies and non-profit organizations. Using Bonacich centrality, a well-known measure of network effects, we can take account of these direct and indirect network effects. The aim of this paper is to empirically examine the determinants of activities in a university seminar. In addition to network effects, we included other factors such as the “Fundamental Competencies for Working Persons” that is promoted by the Ministry of Economic Trade and Industry, “generalized trust” and students’ GPA. Results indicate that Bonacich centrality has a positive and significant effect on students’ activities and its magnitude is as the same as that of GPA. In the Fundamental Competencies for Working Persons the competency of “discipline” is both positive and significant. For generalized trust results are negative and significant and this effect is interpreted by Uslaner’s (2008) generalized trust as a pessimism. These three significant factors are consistent with Putnam’s (1993) definition of social capital.
Bangladesh is described as the "Next 11" or "Frontier 5" and it is expected that it will grow to be a key player in the world economy. Macro-economic dates, such as GDP growth rate which keeps as high as 6% since 2000's, are indicators for the potential of Bangladesh's economy. The Ready-Made Garment (RMG) sector is the country's most dominant industry as well as its leading industry to earn foreign currency. It plays an important role not only in domestic economy, but also international market. The thriving RMG sector accounts for approximately 80% of total exports. As a major apparel products exporter, Bangladesh is ranked in 4thplace behind China, Hong Kong, and Italy in the supply of apparel goods to the world market.

Even though RMG sector in Bangladesh is making remarkable progress, the industry stands on a fragile base. The following aspects should be taken into account when evaluating the real circumstance surrounding RMG sector: (1) RMG sector is highly dependent on imported raw materials specifically from China and India; (2) RMG is divided into two categories, woven and knit, which can only self sustain in knit sector. While knit sector supply meets most demands, woven sector that make higher value add-on products is far behind at about 20%; (3) Bangladesh's competitive advantage is found largely in lower wages among other competing countries such as China, India, Cambodia, Vietnam and so forth. This fact is strongly linked to working condition of RMG workers, which represent current tragedies in RMG factories; (4) Sourcing countries has been changing and it depends on international market trends. The possibility of Bangladesh remaining in its current stage is uncertain due to changing conditions in the external environment.

PR or Social Movement? : Against Climate Change Campaigns in Japan

This presentation examines the national campaign against climate change in Japan through the “frame alignment process” with from the state to the public based on the frame analysis in the social movement research.

State sponsored global environmental campaigns have been blamed for its policies that hide the economic disparity and political-social inequality underlying global environmental problems and trivializing it matters of personal effort. However, specific analysis of these campaign activities had yet to be conducted.

Thus, I investigated one of the national campaigns against climate change, Team Minus 6% (2005-2010) and Challenge 25 (2010-2013), in order to clarify problems that had been focused on and about strategies that had been adopted. The results showed an overall preference for “frame bridging” and “frame amplification” in the frame alignment process in order to hide conflicts among stakeholders. They repeatedly represented and stressed unity in the fight against climate change through “All Japan.”

In particular, 1. They focused on non-eco-friendly lifestyles as the major cause of increasing carbon dioxide emissions while lobbying efforts, against politics delaying the solution of climate change, receded into the background.

2. They presented the value of “individual environmentalism” in which the efforts of every individual adds up to a major force against climate change. As proof, they would quantify carbon dioxide reductions in accordance to numbers mobilized in a campaign or of individual actions.

3. They adopted a “personal interest strategy,” whereas individual interests and climate change issues are connected.

The Changing Gender Relations in Marriage and Fertility in Japan

The trend toward later marriage and growth in the proportion of men and women who never marry is a major cause of the Japan's low fertility rate. Similar to some countries in East Asia, Japan is a country where traditional gender role expectations, i.e. a husband works outside home and a wife stays at home for household tasks and childcare, have been firmly rooted in the society, despite of the high level of women's enrollment to tertiary education. Previous studies often pointed out that the gap between women's increasing demand or potentials of the high level of women's enrollment to tertiary education and marriage and fertility behaviors. For example, studies using the latest and largest panel survey which covers the first decade of the 2000s show that women with more income or higher education are more likely to marry than their less or lower counterparts in the era of 2000s. Other study also shows that married women who have a full-time standard job or who are entitled to childcare leave are as likely as women without a job to have the first and second births. How can we interpret these changes? This study first introduces some of the old and new findings regarding to the relationship between women's socio-economic characteristics and family and fertility transitions. Therefore, the study seeks for the socio-demographic explanations behind the change and discusses the possible implications for the future trends of family and fertility in Japan.

Uses of the Future: The Problem of Theodicy in Nagasaki

How is it possible to construct a meaning for the collective trauma among various social groups? This paper explores how people in Nagasaki respond to the collective suffering of the atomic bomb attack through a different approach to the problem of theodicy. The paper focuses on the religious mode of theodicy which can be seen among the catholic community on one hand, and “tragic mode of theodicy” (Simko 2012) observed at the Nagasaki City Atomic Bomb Memorial Park among other people, to investigate a way to deal with collective suffering in contemporary public arena. Urakami, ground zero of the bombing, was one of the residential areas for catholic communities that historically have suffered discrimination in Nagasaki. Immediately after the bombing, religious theodicy could be seen among the community that attempts teleologically to interpret the collective suffering as a ‘baptized offering’ by providence. Although the catholic community found solace in this theodicy at that point, it was later criticized in public not only because it acquits the responsible of the bombing but it also creates semantic conflicts among a variety of social groups that were affected. In contrast with the theodicy of the catholic community, narratives of suffering of the Nagasaki atomic bomb attack is implied that the secular mode of theodicy oriented toward the future is more prevalent in contemporary Japanese society than the religious mode of theodicy that justifies the past.

FUKUI, HARUNA* (Arizona State University, haruna.fukui@asu.edu)
Social Inequality of Immigrants in Old Age: Exploring Multiple Dimensions of Social Network and Resource Flow during the Great Recession

This is a qualitative research project whose data comes from 10-month ethnographic field work at two senior centers in Phoenix, Arizona that respectively collects data from dominant and non-dominant ethnic minority of Asian or Latin American origin. This paper presents some of the initial findings which illustrate how the ethnic minority seniors are of foreign born. The project examines the access to social support and flow of resources among the older foreign-born population relative to their ties to the community as well as to their family. The primary goal of this study is to understand how the current sociopolitical context in Arizona affects the lives of old immigrants and how can they navigate their everyday lives when faced with economic and physiological obstacles as well as opportunities, and by doing so, it seeks to understand how they not only access and utilize but also contribute to the pool of resources. The secondary goal is to understand the life course impacts of quality and quantity of social and economic resources that are available to immigrants—individually as a part of their ethnic community. The project examines the factors that encourage the expansion of social networks and reciprocity throughout a lifetime course as they impact well-being in old age. It also explores how individual experiences may cumulatively contribute to well-being of the members who share the social networks. With these goals in mind, the project seeks to investigate probable factors that are associated with persistence of social inequality in old age at community level which may be further impacted by the sociopolitical context of Arizona.
Emerging Child Care Services in France and Japan: Public, Private present situation on the basis of national data. Second, I will show some examples of the historical development of the ECEC system in both countries and compare the role of the child care services depending on the working conditions of child care staff. In many countries, various child care services are emerging: municipal day care centers, on-site day care centers, family day care, small day care, and others. The discussion on the support for the development of services in undeveloped countries is also a revived issue in the colonialization age. Of course, the discussions on the polarization of traditional Japanese/Asian and modernized Western laws are outdated. Nevertheless, it seems that we can extract valuable indications from the classic Japanese theories of sociology of law.

From Field To Theory and Back – The Biographical (re-) Construction Of An Unconventional Family Through A Multi-Variant Range Of Data

By use of the case-related reconstructive method, I will show how various types of data can be integrated in the research process. The topic of interest is an unconventional family, whereby unconventional means the absence of the biological parents. Instead of the conventional family structure, the parental role is fulfilled by a homosexual female couple, who realized their wish for children with the help of a sperm donation. The method of data collection is the family-historical interview as a core component of the ethno- graphical access to the family. From that, other methods of data collection were used to ensure that every case is incorporated in the analysis from various angles. This approach is based on the following principle: case reconstructions are not fulfilled in their entirety if only the transcribed interviews of the family history are considered. The set of data also consists of observational data (e.g., the constitution of interactions within the context of welcoming gestures, the seating arrangements, door bell nameplates), but also family indicative documents such as family photographs. Furthermore, data is obtained concerning the family of origin and the life course. This data is collected in a genogram, which is sort of a genealogical tree displaying the succession of generations in a generational context. This approach underlines the investigation of the “biography as a life context of the milieu” (Richard Grafhoff). The aim is to explain biographical constructs, which are limitedly accessible to the own reflection, as an act of negotiation with the family of origin. However, case-reconstructions serve as a basis for theory development. The aim is to overcome the description of individual cases, and discuss in my lecture the interpretation of the results in the context of theory development.

Network Diversity and Educational Inequality: A Case Study Of China

Following the line of James Coleman, this paper focuses on how network diversity influences educational inequality. Social capital is positively related to one’s academic performance. One way to gain more social capital is having a diverse social network as we can access to various kinds of social capital from network within the community for a long time. My focus is on production, circulation and reception of murals in the urban space. In particular, I will look at the emplacement of murals in order to assess the positioning of each image in community. The points that have been revealed in this study are 1) Making use of images from famous pictures, murals on national histories usually express confrontation and tend to be located along main roads in the communities. 2) Remembering the dark side of the history of their communities is considered to be expressed as not covered up in both communities, although some of them are usually seen in residential areas. 3) “Empathy” between the two communities can be seen when they deal with the experience of sufferings under the authorities.

Emerging Child Care Services in France and Japan: Public, Private or Associative?

Early childhood education and care (ECEC) system come to the front in three contexts today. First, quality child care services are indispensable for parents to continue working after their child birth. Second, quality child care services are important for young children to develop their sociability. Third, the quality of the child care services depends on the working conditions of child care staff. In many countries, various child care services are emerging: municipal day care center, on-site day care center, family day care, small day care, parental day care and so on. There are also some facilities such as information centers for families, open space for parents, toy museum for kids and so on. Looking at the child care providers, the private sector and the associational sector are growing instead of the public sector. What are the factors of this change? How shall this change influence the quality of ECEC system? I selected two countries for comparison: France and Japan. First, I will outline the historical development of the ECEC system in both countries and compare the present situation on the basis of national data. Second, I will show some examples of good practices in education and care system provided by the associational sector as well as the private sector from my fieldwork in both countries. At last we will discuss about the conditions for quality child care.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
In this paper we use the concept of the nervous system to analyze the manner through which media conjoints people across the fragmented political topography of the region. In this sense at the core we argue MMP utilizes an independent media and communications infrastructure to collapse isolation between groups throughout the city. The concept of a communications nervous system that serves to build a unified front politics, challenges the long held assumption that media is the arm of an already pre-existing movement, instead showing how through specific media and communication practices (social media, radio, video) new organizational forms and collective identity processes can emerge. In this sense, the paper provides a conceptual framework of how to study and understand the relationship between social movements and media in a contemporary urban setting.

Rhizomatic Resistance: Social Movement Politics from Porto Alegre to Tunis and Frankfurt

The last three decades have seen massive protests and mobilizations. From the Zapatista uprising in Chiapas in the 1990s to mass demonstrations against war and protests at virtually all gatherings of world leaders to struggles in North Africa and most recently Occupy Wall Street and anti-austerity type mobilizations, protests and social movement organizing have taken place across the globe against rising inequality, war, the dispossession of rights and entitlements, democratic deficits and austerity politics.

This paper examines this arch of movement-based politics. Situating it within former social movement organizing and relating it to shifting dynamics of capitalism, I argue that contemporary movement-based politics is relying on and enacting a distinct and novel movement logic. Different from the so-called “Old Left” of mass unions and parties and the more ideatitarian politics of the “New Left”, contemporary movement formations are based on what I suggest to call a “Rhizomatic Logic,” forging linkages and synergies across the fractured landscape of “old” and “new” left. Thriving on multiplicity and thus lacking a dominant core or main axis, the rhizomatic logic emphasizes multi-connectivity and heterogeneity of political struggles, which has no central actor, issue, strategy, or ideology beyond opposition to neoliberalism and thus a subsequent need for thicker community based processes. These processes are characterized as well by tempering of inherent antinomies of diverse movements and groups, and simultaneously limits the degree of congealed and resilient movement building. Most recently this Rhizomatic Resistance model has found varied expressions in pro-democracy as well as occupy-type and anti-austerity protests from Tunis to New York and Athens to Frankfurt.

Return of Religion in the Public Sphere? Comparing the Nordic Countries

This paper analyses the role of religion in the public sphere in the Nordic countries during the past twenty years. While some scholars have claimed that there is a return of public religion in Western countries, this paper asks if this is a reasonable claim for the five Nordic countries. These countries harbor a combination of common and different features that make for an interesting comparative study. The public sphere is here identified as the state, politics, the media and civil society. The study is based on a wide range of quantitative and qualitative data. The data show a trend towards disestablishment, with the exception of Denmark and Iceland. Although religion is not a major issue among the political parties, it is more debated in the parliaments, except in Sweden. The media do not seem to center more on religion than before. Finally, religious communities seem to deal with the growing diversity by engaging with current political issues and dialogue initiatives. This study indicates that religion has had more of a continued role in the public sphere in the Nordic countries, although it is changing, most notably in Sweden, followed by Denmark, and Norway, and the least in Finland and Iceland.

Norms, Hierarchy, and Market Order: A Study of Closed Auction Markets for Antiques and Secondhand Goods

This study explores how market order emerges in Japanese closed auction markets for antiques and secondhand goods. Most auction markets for antiques and secondhand goods are exclusive to dealers in Japan. The Antique Business Act (Kobutsu Egyo Ho) states that participants in auction markets must have a secondhand goods dealer license. Participants also need to obtain a reference from an existing member to enter the markets. Dealers belong to auction markets and associated with other members. Top buyers who have significant influence over pure markets, although the members compete to acquire articles at the auctions. This paper presents the norms and hierarchical relationships in closed auctions that bring order to the markets.

Norms in markets are beliefs about the expected behavior of market participants. The norms alone are not sufficient to engender market order; enforcement mechanisms are necessary. A hierarchy is a typical enforcement mechanism. Authorities observe members and then sanction those who deviate from the norms. Although markets and hierarchies have been regarded as opposing governance mechanisms, hierarchical relations emerge in markets as well as in groups. Market participants in the same marketplace differ in terms of status and power.

The norms in Japanese auction markets require participants to bid based on their own evaluation of items. Buyers who do not have much expertise on auction-related articles may try to follow experts’ bidding. Such bidding is condemned by auction members. Senior members, top buyers who have significant influence over the markets. Their status is earned by their contribution to the markets. They make great efforts to attract dealers and goods to the markets. Participants accept their authority because they know that the markets do not function without their contributions. Although their influence will distort market competition, the hierarchical structure ensures orderly function in markets.

FUSCO, DANNA* (City University of New York, dfusco@nyu.edu)

Youth Justice Programs in New York City

Youth justice programs have been part of the fabric of urban landscapes since Civil Rights. During the 1960s and 70s such programs were explicit in helping young people, particularly young people of color, fight oppression and participate in democratic processes. Today, some argue that the sociopolitical aims of such programs are falling by the wayside due to the focus on “youth development” which emphasizes the growth of individual young people, rather than the growth and health of urban communities (Ginwright & Cammarota, 2002). Not only can we not expect young people to lead healthy, productive lives when growing up under abhorrent conditions, we believe young people can be a part of the solution for transforming their environments. Youth justice programs engage young people as active agents of change in their own lives. While the outcomes of youth justice programs have been examined (e.g., Austria, 2006; Ginwright and Cammarota, 2002; Hill, 2004), there has been a lack of analyses of the processes critical to determining how they work, how they are implemented, or why such processes are effective. The purpose of this research was to examine such processes by examining how youth workers conceptualize the inequities facing urban youth today and how those conceptions translate into practice (e.g., into methods for engaging young people in social justice). We wanted to understand the key inequities staff identify as critical in the lives of urban youth and how young people are engaged in understanding and responding to such inequities (what processes are used). We interviewed key staff from youth justice programs in the Northeast of the United States in order to obtain rich qualitative data for addressing the research questions.

Probability and Timing of Having a Second Child in Japan: Does Gender and Characteristics of the First-Born Matter?

This study examines whether gender and characteristics of the first-born child predict the probability and timing of a second birth among Japanese parents. I examine two explanations. Daughter preference has become common among Japanese couples since the mid-1980s (National Institute of Population and Social Security Research, 2011). In 2010, 69% of couples have daughter links and 77% of males prefer to have one child. Past research reveals that having a child of the unpreferred gender is associated with a higher probability of a subsequent birth and a shorter birth interval if they choose to have an additional child (e.g. Larsen et al., 1998). Therefore, given wide-
spread daughter preference, I investigate whether Japanese parents with a first-born son tend to not only have a second child but also have one sooner. Previous research shows that having a first child with socioemotional and behavioral traits that make parenting easier is associated with a second birth (e.g., Jokela, 2010). It is commonly known that young male children are more difficult to raise than females because they are more prone to illness and injury. Also, boys are considered more physically active and require parental attention. Then, parents with a first-born son may rather hesitate to transition to a second birth or postpone having another child.

Using the Longitudinal Survey of Newborns in the 21st Century, a nationally representative survey of children born in 2001 in Japan, I explore the above explanations. I use Cox regression to model the hazard of progression to a second birth among parents of first-born children surveyed. I especially focus on how gender of the first-born child and measures of parenting difficulty (i.e. occurrence of illnesses and accidents) perceived parenting burdens (anxiety) as well as other characteristics affect parity progression. Interactions between gender and parenting difficulty on parity progression will also be considered.

Child Trafficking in the EU

The paper presents findings from an empirical study of the trafficking of Roma children into the UK, involving the establishment of the first EU wide police joint investigative team (JIT) to investigate the illegal movement of humans in Europe. The paper draws on 12 months of UK-based research and four research visits to Romania and Bulgaria yielding more that 100 hours of interview data collected from interviews with senior actors within policing and justice agencies, Roma advocacy NGOs, and child protection organisations in the UK, Romania and Bulgaria. This dissertation will articulate the problems of policing and protecting marginalised populations across different jurisdictions and how vulnerabilities are exacerbated by the diverse and often conflicting remits of the various agencies involved. The paper discusses how the impact of structural issues such as poverty and exclusion, and the resulting conflation of the criminalisation and victimisation of the Roma, has not only limited the effectiveness of available responses to child trafficking, but also served to aggravate the increasingly adverse conditions faced by 'Europe's favourite scapegoat'. The paper additionally seeks to progress a theoretical space by linking such analysis to sociologies of mobility, marginalisation and the pluralised rendering of criminalised and victimised 'others'. Key here are the myriad ways in which (national and organisational) borders are imagined, governed and responded to by diverse groups of criminals, victims, criminal justice and social services agencies.

Tg04-945.4
Fussey, Pete* (University of Essex, p.fussey@essex.ac.uk)
Security, Surveillance and Space: Contested Topologies of Anticipatory Urban Counter-Terrorist Surveillance

Drawing on data generated from ethnographic research and two years of interviews with counter-terrorism practitioners this paper analyses practices and arrangements of domestic security surveillance operations in two empirical case studies: the London Olympic security programme and, also, urban counter-terrorism surveillance measures in a British city. Particular emphasis is placed on the anticipatory turn in security practice and how collapsing distinctions between internal and external security draw multiple new actors and agencies into the dis- patch of counter-terrorism and attendant surveillance practices. With them come diverse practices, orthodoxies, values, techniques, weightings of risk and ambitions for security and surveillance. The paper argues that topological approaches informed by Foucauldian notions of 'security' (2007) and biopolitics (2008) provide particular utility for understanding of these heterogeneous configurations, techniques and practice of surveillance. Such approaches not only provide conceptual tools to articulate the diversity, plurality, conflict and cohesion within CT practice but, also, capture how power simultaneously operates at different scales and for varying (sometimes competing) purposes. Moreover, the paper argues that such conceptualisations of security represent a move beyond territorial control to the management of circulations, where subjects are left in situ, but their mobilities are monitored, delineated and assessed and, ultimately, reclaim elements of Foucauldian surveillance-focused debate from the shadow of panoptic analyses.

Parental Leave Policies in the French Work Family Regime: Innovative Formulation, Disappopriating Implementation

Theoretically, this proposal hinges its analysis around the concept of Work Family Regime - which at the same time draws from the knowledge acquired from large European comparative studies and from those which come from the feminist critique of these works. It then makes a study of the French Work Family Regime through family policies and, in particular, the formulation and implementation of parental leave.

France has formulated parental leave that is neutral and very innovative in its formulation but which does not fundamentally question, in its implementation, the unequal position of men and women in employment and within the family. Consequently, despite the fact it is very innovative and well founded from the point of view of a better hinge point between Family and Work, the use of the device remains almost exclusively female, puts the employment of women at a disadvantage and reinforces gender inequalities. The world economic crisis, by making available employment and the means of the social investment more scarce, has only reinforced such a dynamic.

In fact, the real sociological question is less to understand how the crisis is putting the brakes on (or even destroying) acquired experience in terms of reconciling working life/family life than to measure the growing discrepancies between social practices and normative frameworks that cause dysfunction and inconsistency phenomena within most contemporary societies. The discrepancy between standards and practices are reinforced against three contradictory phenomena: one that refers to the process of homogenising employment ratios between men and women; a second that refers to the permanence of a sexual allocation of productive and reproductive activities (sexual division of social activities); and a third which expresses the desire of women and men to be able to be reconciled without wearing down their working life and their family life.

Further Development in Study of Dispute Patterns in Central Eastern Europe

As the research on dispute patterns in popular legal culture in Poland is developing the further research results are presented. The 2013 results of field interviews in bi-ethnic area will be presented checking the hypothesized similarity of disputing patterns amongst Polish and Ukrainian population in Poland as well as the initial 2014 data on large urban population in Eastern Ukraine as compared with Polish population in Poland. The reasoning behind is that though different in their identity the two societies had enough similar past that they should display the same basic features of the willingness to dispute, use courts or to settle disputes informally. The methodology of further study concerning the use of courts within such comparison will be presented. Variety of types of disputes is under study ranging from traffic disputes through business disputes to family disputes.

Gender Inequality: Work and Family Conflict in Contemporary Japan

The number of dual-earner households has increased during the last several decades in Japan. Nevertheless, women still perform most of the housework, despite being employed full-time. The issue of work and family conflict—particularly for female workers—has drawn the attention of policy makers, because it has often been associated with the issues of low marriage and fertility rates. Thus, in order to create family-friendly work environment, many Japanese companies have recently begun implementing policies such as overtime work restriction for employees with young children, enhancement of employees’ discretion over the pace and schedule of work, and introduction of various work-life balance measures. On one hand, these policies are expected to facilitate the continuous employment of women. On the other hand, their effects on household management—how spouses divide housework and communication with each other—are uncertain, because these policies are often created taking into account women’s responsibilities at home and aim to reduce women’s work and family conflict. Gender biases may affect the way spouses divide the housework and communicate with each other. This paper examines the impact of friendly-work environment on (1) the division of housework between spouses and (2) the frequency of communication (conversation and having meals together) between spouses. The Japanese Life Course Panel Survey (LPS), a national longitudinal survey of the youth and middle-aged in Japan (i.e., individuals from 20 to 40 years old), was used in this research.
In this paper we look at UK General Practitioners’ (GPs) views of prescribing hypnotics in primary care and compare and contrast these with patient perspectives and experiences, in the context of debates about the (de)pharmaceuticalisation of sleep. Data are qualitative in nature, drawn from focus groups with chronic users of sleeping pills and semi-structured interviews with GPs. We examine the degree to which the views of patients with respect to both aetiologies of their sleep problem and prescription of pharmaceuticals converge or diverge with medical discourses on these matters. We discuss the role of so-called ‘lay expertise’ in the therapeutic management of sleep problems, the perceived value of pharmaceuticals, and the importance of building mutual trust between patients and in the medical encounter.

We argue that in practice, medical views on the value of hypnotics, beliefs about ‘deserving’ and ‘undeserving’ patients and corresponding prescribing practices have permeable borders which regularly break down the partitions between these categories, turning GPs into reluctant prescribers of sleeping pills. In the doctor’s view, the recognition of lay expertise is thought to enrich medical encounters, give patients a voice of their own and increased responsibility for their healthcare practices. From the patients’ perspective, enacting the identity of ‘inform’d patient’ is not straightforward or easily accomplished. In this study the boundary between medical expert and patient was still fairly robust. The patient perspective emphasizes a split between lay and expert views on the value of pharmaceuticals and, the importance of building mutual trust between doctors and patients in the medical encounter.

As religious institutions and practices continue to decline in Japan, a number of young men and women have begun traveling long distances to gather at shrines, temples, and other holy sites. In groups or alone, these pilgrims pay respects at holy altars and purchase votive tablets, protective charms, and other religious paraphernalia that have long marked religious consumption practices in Japan. At first “this seems to be a reversal of the progress of secularization that have intensified around the world under the forces of modernization and late capitalism. However, what draws these individuals is not the charisma of the gods enshrined at these sites, but rather the charisma of fictional characters who inhabit the fantasy worlds of particular manga and anime stories which take these actual holy sites as their settings. These subcultural pilgrims are part of a community of fans who pursue a multi-dimensional connection with two-dimensional, fictional storyworlds. While some scholars view this as the further commercialization and secularization of “traditional” religio-cultural practices, these practices reveal how traditional and “modern” cultural forms—i.e., religion and the popular culture forms of anime/manga—in fact share overlapping cultural idioms of individual effort, charismatic devotion, practical reciprocity, and contingent sociality. In this paper, I analyze the kinds of personal attraction and interpersonal relations formed through participation in subcultural pilgrimages. I suggest that “anime pilgrimage” reveals how religious and secular practices in Japan are neither mutually distinct in a Kantian sense nor dialectically progressive in a Hegelian sense, but rather reciprocally shaped through cultural modes of both ethical and political orientation and self-fashioning. This further calls into question conventional views of distinction between “traditional” and “modern” cultural forms by revealing how new technologies and pop culture media can be reshaped into augmenting and intensifying previous cultural practices of pilgrimage, self-fashioning, and sociality.
her friends to join a tent protest in Tel-Aviv on “14thJuly”, an initiative that spread throughout Israel with even families and elderly people joining demonstrations, marches and gatherings. Some 800,000 protestors -10% of the Israeli population (nearly 8 million) - comparatively the highest number, even internationally, participated in civilian demonstrations (Schechter, 2012). Public support was 91% (July 2011 Peace Index). Israeli mainstream media - printed, online and electronic - supported the protests, opening live studios on main TV channels (participant observation; Schechter, 2012).

Research questions seek the modes and reciprocal relationships between activists, journalists, new and mainstream media audiences; through a combined methodology: offline and online ethnography and netnography; in-depth interviews with activists and journalists; and quantitative and qualitative text analyses.

The Great Recession Washes Across the Desert: A Study of Neighborhood Organizational Resources and Social Disorganization in the Phoenix-Mesa Urbanized Area

The Great Recession (2008-09) impacted urban communities in the U.S. in many different ways. This paper focuses on the role of organizational resources in mitigating the impact of the recession on one metropolitan community, the Phoenix-Mesa metropolitan area. Our research questions are: did areas' organizational resources mediate the effect of the Great Recession on neighborhood outcomes? From Wilson (1987), Small and McDermott (2006), and our own research we know that some neighborhoods in the metropolitan area have considerably more organizational resources than others. Logan (2012) labels this spatial inequality. Our hypothesis is that areas that had more organizational resources prior to the recession were better able to cope with the crisis than areas with fewer resources (Sampson, 2012). These intermediate structures enabled communities to absorb the shock and stay intact. People could turn to neighborhood establishments for infrastructure, services, amenities, health care, religious support, and social support. The counter-argument is that this recession was so severe that it destroyed organizational resources that gave some areas advantages over others. The economic crisis not only undermined the capabilities of the household sector, it also destroyed establishments. It was truly an economic tsunami.

The units of analysis are 943 census tracts in the Phoenix-Mesa urbanized area and we use spatial econometric models. We examine data for 2003, 2007, 2008, and 2009 from the U.S. Census, Dun and Bradstreet, the Urban Institute, and phone directories. These data are collected and geocoded. The dependent variable is a composite measure of social disorganization: crime (homicides), poverty rates, school dropout rates, and underage births. The mediating variables are the number of youth serving organizations, schools, congregations, membership clubs, parks, and health care facilities in the census tracts. The independent variables are housing values, unemployment rates, and population change. Finally, we control for racial/ethnic composition and socioeconomic characteristics.

The Politics of Research on 'popular' Culture in Japan

At the beginning of the new millennium, Japan, then still the second largest economy in the world, was suffering from a decade of recession and watching as geopolitical interests shifted to east Asian neighbors. At the same time, Japanese games, cartoons and comics were circulating around the world, and business and government leaders rushed to support the creative industries. The subsequent strategy to win the hearts and minds of the youth of the world through mega-popular franchises such as Pokemon was dubbed “Cool Japan.” While the success of this strategy has been widely debated, and drawn its share of criticism, in June 2013, Japan's Upper House sent out a statement that they were redoubling their cool Japan efforts, giving the go ahead to the Ministry of Economy, Trade and Industry to earmark ¥50 billion for promoting the cause over the next 20 years. With Tokyo gearing up to host the Olympics in 2020, many expect the charm offensive to gain momentum. However, with increasing interest and investment in branded popular culture, local geek subculture has become an issue of national concern. What is “cool” about Japan, and who decides? How do gamers, comic-book nerds and animation aficionados fit into that image? Is it cool to include such people in projects focused on “Japan”? What sort of research is acceptable, popular and cool within this paradigm? What research is “uncool”? What is the role of the Japan researcher in negotiating all of this during a “crisis” in the field, which is to say declining opportunities for funding and employment? This paper seeks to unpack the politics of popular culture in Japan through the case study of Akihabara, an area in Tokyo that some think is geeky and gross, and others position at the center of Cool Japan.

Missing Bodies? the Visual Landscape of Home and Its Meanings to Solo-Living People

Not only presence of other bodies, but also the absence of bodies of others has a significant effect on the contemporary experience of domesticity and belonging. In her classical study on home as a tyranny, anthropologist Mary Douglas (1991) addresses solo-living only once, mentioning that conflict between persons is just transformed into conflict of wants within one person. In that sense, the normality of home in terms of routines created via the relations of its various members is produced by the single member who has to discipline him- or herself. Goffman-esque “backstage” of home becomes a highly important “onstage” via internalized social norms or aesthetics. In our research we focused on home-centred and home-generated practices performed by the occupants themselves, or between the occupants and the materiality of their dwellings and other non-human players (e.g. things, animals). In this paper, we will present the photo essay based both on 1) visual diaries, where photographs and texts were taken and written by participating dwellers focusing on mundane routines and everyday situations (of “doing nothing”) as well as on the moments of significant ruptures and changes, and 2) on visual material collected by participating researchers during the research events using go-along ethnography in the dwellings. Both are then interpreted in relation to other written or oral narratives produced within different phases of home generating and revisiting the meaning of home, it is constructed by solo-living men and women, which practices they use to create, maintain, experience and imagine their homes in space and time, and how they position themselves within wider social networks, family and society. We are seeking for more fluid, open and empirically grounded concept of home based not on essentialism and normativity, but rather on performativity and it’s becoming-into-being through active bodies, dynamic meanings and mundane aesthetics.

The Perception of Leisure By Grandparents in the Era of Active Ageing: Conflicting or Complementary Roles?

Family, education and work in later life, care for grandchildren as well as the imperative of “active” and “healthy” ageing are framing and structuring the everyday life and decisions of the Czech ageing population. The paper aims to bring new insights into the problem of the role overload, i.e. “the stress generated within in a person who cannot comply or has difficulty complying with the expectations of a role or a set of roles” (Burr 1973 in Lee 1988: 776). Based on triangulation of quantitative (representative survey) and qualitative (open-ended in-depth interviews) data generated within the research project “Role overload: grandparents in the era of active ageing”, the perception of various and dynamic roles performed by the grandparent will be examined, focusing, for the purpose of this paper, mainly on the perception of leisure time and leisure activities in the context of the interpretation and experience of other role expectations and role performances. We perceive leisure as a specific integrating field in which the particular roles may be perceived both as complementary as well as conflicting, depending on the self-positioning, available recourses and the interpretation of the grandparent’s role itself by the grandparents as well as by other relatives and members of relevant social networks. The attention, then, will be paid to the ways how the possible challenging intersection of these different levels are coped with and actively shaped and lived.

GALE, NICOLA* (University of Birmingham, n.gale@bham.ac.uk)

Knowing the Body and Embodying Knowledge - the Practice of Complementary and Alternative Medicine

Bringing together findings from several empirical studies I have conducted over ten years with students, practitioners and teachers of complementary and alternative medicine (CAM), I will define and illustrate the concept of ‘embodied knowledge’. I will argue that the concept has significant implications for practice and scholarship in the field of health care research, and give specific consideration to understandings of spatial/bodily boundaries and timescales in practice.

While health professionals of all types have been traditionally viewed as (more or less) credible brokers of knowledge about the human body in health and illness, the embodiment of the practitioner him/herself is an important counterbalance to the focus on knowledge of the bodies of ‘others’. The philosophies of different CAM approaches are enacted in day-to-day practice within their social context, with an impact not only on the recipients of CAM treatments but also on those delivering them. The bodies on both sides of the CAM therapeutic encounter are often not primarily constructed as medical bodies; they may be ‘energetic’, ‘emotional’, or ‘spiritual’ bodies. The ‘disease’ of biomedical becomes instead framed as ‘dis-ease’, an imbalance or disturbance of energy. In these models, biomedical timescales and spatial/bodily boundaries are not necessarily relevant. Touch can be ‘energetic’ rather than physical, and the focus is on the subjective temporal illness, with the experience that can be crafted during the clinical encounter into body-stories (Gale 2011) that actively integrate personal, lay, medical and CAM concepts of aetiology and healing.

I will present an overview of the embodied pedagogies in practitioner training, the challenges of making the transition from training to professional practice and the embodied experiences and practices of being an established and expert practitioner. I will argue that the concept of ‘embodied knowledge’ is vital to our understanding of the knowledge base of healing practices internationally.

Post-Nationalism or Transformative Transnationalism: Beyond Cosmopolitanism and Narratives of Change Across Borders Among Australian Students and Volunteers in India

This paper is a case study on the possibilities of personal transformation through transnational experiences based on the narratives of Australian students and volunteers working in India. It examines the possibilities of change through transnational experiences with a focus on Australia young people and their experiences of India and challenges to commonly held ideas and understandings of the Other. The research is based on a methodology of participants telling personal stories of experiences across national borders. The paper contrasts the many different narratives exploring what contributes to a transformative experience and the circumstances that contribute to what can be identified as post-nationalist, or an ethic of transnationalism. The paper is part of a project supported by the Australia India Council that focuses on the relationship between Australia and India through Australians involved in aid and development projects in India. The project particularly focuses non-Government aid organizations and Australian students and volunteers who have been visiting and working as volunteers in India over the past 25 years.

National Educational Systems and Academic Profession: Portuguese and Spanish Cases

The transformation by which the universities are faced now is a global phenomenon that is affecting all regions on the globe. This has led some states to unite in regional blocs to seek strategic responses to position themselves favourably in the global context increasingly competitive. In Europe there is an ongoing process of construction of the European Higher Education Space. In this regard, national political agendas are heavily influenced by what Dale’s calls globally structured agenda for education. Despite identifying processes of convergence in national policies at the time of legislating there is a hybridization of the educational agendas in higher education.

Assuming that the impact of political reform are felt and asked differently by social actors in two countries (Portugal and Spain) with consequences in demands on professional competences of professoriate and with the guidance methodological perspective of comparative education, this proposal aims to examine how the European guidelines for the Construction of a European Area of Education, firstly legislated by national governments, produce changes in the what is a professor in the context of economic knowledge societies and thereby assess the importance of the national state in the process of recontextualization of these policies.

The Invisible Spring*: Internet and Political Practices in Colombian and Brazilian Mobilization

When it comes to social movements like the ‘Arab Spring’, Occupy Wall Street and the Indignantos in Spain, there is widespread uncertainty about the extent of their international dimensions. Yet we do know that these movements penetrated borders to gain support from other contexts, where the use of Internet and social networks (especially Facebook) involved the configuration of a particular form of protest and mobilization. What is the relationship between these events and the mobilizations in other contexts?

Two cases concern us: the MANE (Mesa Amplia Nacional Estudiantil) in Colombia, which deployed an unprecedented student movement in the last 40 years of national history, whose founding charter explicitly refers to the events in Tunisia, Egypt, Spain and ACAMPA SAMPA OCUPA SAMPA from the Occupy movement in Sao Paulo, born of the global call to install camps in different cities in October 2011. This paper shows, in a transnational perspective, how the emergence of new forms of communication in the Latin American context involves a reconfiguration of political action and denotes a new politicity process. The « Invisible Spring » is the metaphor of the origin and deployment of the new movements, their actions against invisibility, and the new online collective actions and protest mobilizations. This paper will to expose the invisibility notion concerning three dimensions: the international mass media, the political character of these mobilizations, and the connection between these movements and the three international movements (‘Arab Spring’, Independants, and Occupy). The analysis concerning the Latin American cases presents two foci: the motivations and discourses and the actions and organisational forms.

Overall, the Framework is a PhD research project oriented to analyse the transformations of political practices of the young people in Latin America through the use of Internet (Colombia and Brazil cases).

This paper can be presented in Spanish.
contexto, se hace imprescindible que los investigadores mantengan una postura ética manifiesta, entre otros valores, en la búsqueda incansable por la verdad y el trabajo en colaboración, que les permita generar nuevos conocimientos y aplicarlos a los problemas complejos del mundo actual. Contrariamente al espíritu ético que tendría que guiar este quehacer científico, en los últimos años se ha incrementado el plagio académico, como una práctica no ética de los investigadores. En tanto que esta práctica fraudulenta se ha evidenciado a partir de las publicaciones, el presente trabajo busca analizar este fenómeno en tres niveles. El primero versa sobre la normatividad y políticas institucionales para promover la producción y la evaluación cuantitativas en la promoción de carrera y la obtención de mayores niveles de remuneración. El segundo se centrará en la filosofía de publicar o perecer (publish or perish philosophy) y los valores del sistema de producción académica. El tercero busca concretarlo en estudios de caso. Con estos tres niveles de análisis, se propone hacer un acercamiento a este problema de pérdida de valores en la producción académica, así como sus implicaciones en la formación de investigadores y en la generación del conocimiento necesario para la comprensión y la solución a los problemas de nuestro tiempo.

Human Well-Being in a Media Multitasking Environment

The paper discusses the relationship between media multitasking (MM) and human well-being.

Media multitasking (MM) is changing the way people think, talk, learn, socialize and view the world. MM has both cognitive and behavioral consequences on human beings. On the one hand, it drains the brain altering memory, linguistic ability, and learning process and, also, overwhelming humans with a huge amount of potential information, it can lead them to a feeling of being paralyzed and unable to make decisions. On the other hand, being pervasive in people’s lives, MM shapes their social interactions creating new “social aliens”, and let them experience a weaker capability of being connected with their own self.

Generation gap makes a big difference in the perception of how profoundly MM is affecting human well-being. And in this respect, in an evolutionary framework, does the “digital immigrant” (M. Prensky) original mold risk of disappear- ing to leave the place to the “digital native” new mould, shaped with new cognitive and behavioral characteristics? Are the digital natives going to create a new meaning for human well-being? Or the digital immigrants will be able to drive to a third model?

The paper reviews the literature on the topic, examines the above issues and, based on some empirical results, proposes some perspectives for the future.

The Role of the Communities of Care in Promoting the Social Reintegration of Ex-Offenders: An Account of Restorative Practices in the Philippines

There is a growing literature on prisons and restorative justice; however, creating social groups as a restorative practice remains underresearched in the field of Sociology. This study argues that the key to successful rehabilitation is in creating communities of care (the media, the government, the business groups, the Church and the family) (Gamo, 2007) who will support and reintegrate the ex-offenders in their re-entry to free society. It employs a local-based model of rehabilitation following the concept of restorative justice – the Care System Model (Gamo, 2007). Furthermore, it utilizes a case study approach wherein data was gathered through semi-structured interviews patterned in a storytelling manner. The findings of the study reveal that: a) reintegration should start with the community acceptance of ex-offenders; b) the Communities of Care (Gamo, 2007) functions as one in addressing the needs of ex-offenders; and c) the programs and policies created for ex-offenders should respond to their needs. This implies that community acceptance and involvement is significant in promoting the reintegration of ex-offenders as a restorative practice. The What this research reveals is that there seems to be a weak functioning on the part of the communities of care in terms of carrying out their specific functions. It recommends that further studies on ex-offenders, on recidivists and on the communities of care (Gamo, 2007) should be conducted as an addition to the growing literature existing on Prison Sociology.

Inequality in Intergenerational Closure As a Barrier to Social Capital Formation

Intergenerational closure – a term coined by Coleman (1988) to represent a closed social network of parents and children – is a key marker of social participation, as it serves as a basis for social capital formation. There are no financial barriers to intergenerational closure, so one may have expected to see similar levels across economic and ethnic groups. Yet there may be social barriers, especially in diverse populations where young children’s friendships formed in school do not necessarily cross over to relations among their parents. This paper examines economic and ethnic differences in intergenerational closure during the course of first grade. Data come from a large-scale randomized trial in which SZ schools were randomly assigned to a family engagement program intended to boost social capital among a control group. The schools this research reveals in an U.S. communities with high proportions of Hispanic immigrants. Comparison of treatment and control schools reveals differences between the “natural” development of social capital in the control schools and social capital formation stimulated by design in the treatment schools, with children in the intervention group, and are driven by differences in social capital formation. Key demographic differences linked to social capital formation include whether family members are English-dominant or Spanish-dominant Latinos, whites, or African Americans, and whether students are eligible to receive free or reduced-price lunch, or not. Data are analyzed with multilevel models appropriate for the cluster-randomized design of the study. Results indicate that families that were most disconnected prior to the intervention experienced the smallest gains from attending a school assigned to the intervention, suggesting that family engagement programs may not be an effective tool for breaking down social barriers to intergenerational closure.

GAMORAN, ADAM* (William T. Grant Foundation, agamoran@wgrantfdn.org)

The Rise of Privatization in Tertiary Education, and Its Implications for Teaching and Research in Universities

Increasing privatization in tertiary education is a world-wide phenomenon. In many countries around the world, developed and developing, this takes the form of an expanding private university sector. In the U.S., expanded privatization occurs in the form of sub-baccalaureate for-profit institutions, on-line degree-granting institutions, and the privatization of many functions in public institutions. What do these changes mean for the future of teaching and research in universities? This paper identifies distinctive forms of privatization and discusses the implications of each. An expanded private sector is likely to increase inequality of access to prestigious universities but does not threaten their standing. Moreover, the net effect of privatization on access depends not only on whether families are able to meet tuition demands, but also on whether privatization leads to a general expansion of the tertiary sector, which could increase access overall. Privatization in the form of on-line institutions and for-profit sub-baccalaureate institutions may challenge the ability of universities to maintain their place, but quality distinctions are likely to override the challenges. Privatization within public institutions...
constitutes a more insidious challenge and may shift the balance of resources within universities so as to threaten their ability to provide a well-rounded liberal education.

Elections and Territorial Inequalities in Post-Revolutionary Tunisia

Elections and territorial inequalities in post-revolutionary Tunisia By giving a comfortable advance to the Islamist party of Ennahdha (around 37% of the votes), the first free elections of independent Tunisia on the October 23, 2011 have taken by surprise most observers. In this paper, we identify the social and socio-territorial bases of major Tunisian parties through combining qualitative analyses at different scales and field surveys in specific localities. Although most interpretations have focused on the cultural modernist vs. conservative rivalry, hence obscuring the class cleavage, our analyses highlight very differentiated socio-territorial electoral bases for the main parties and indicate deep social differences in voting behavior between peripheral and core areas, as well as within cities. While allowing for a better interpretation of electoral results, our analyses also provide tools to understand possible evolutions within the Tunisian political space.

Key Words: election, democracy, Tunisia, socioeconomic inequalities

The Reputation Economy: Knowledge Workers and Freelance Networks

A decade after Richard Florida's 'creative class' manifesto we are now confronted to labour markets in the knowledge economy where professionals are increasingly independent and networked. The project-based and freelance nature of contemporary knowledge work enhances the necessity of constructing a solid reputation within a professional network, which appears to be a determinant element to build successful careers. This combines with the use of social media for professional purposes and the increasing importance of digital marketplaces where reputations become visible and, under certain conditions, potentially measurable.

Based on a doctoral research combining mixed methods within an ethnographic approach, this contribution dwells upon the networked dynamics of creative labour across both offline and online environments, to discuss the existence of a Reputation Economy whereby reputation management becomes the determinant element for the professional success of networked knowledge workers. This has implications at the level of subjectivity and hybridization of skills within highly fragmented labour markets.

Placemaking: Inequality By Accident or By Design
Placemaking: Inequality by Accident or by Design

This paper seeks to extend the literature on the neighborhood effect by examining the myriad ways through which surveillance of the past, present and future in the service of urban planning works to reproduce different types of inequality through cumulative disadvantage. We understand the "neighborhood effect" in terms of the association between poverty and disadvantage and spatially located and colloquially named places within cities. The tensions between socio-structural, cultural, and individualistic explanations for the scope and stability of these correlations are described before an analytical approach that combines all three is presented.

A key focus in this analytical strategy is the role being played by geographic information systems (GIS) in the development of plans for the transformation of urban spaces. It begins by reviewing patterns of growth in the spread of GIS technology beyond its traditional borders, in part through the popularization of tourism and professional relocation services that make use of maps, labels and index numbers to facilitate the evaluation of cities and neighborhoods in terms of characteristics commonly understood as amenities, opportunities and risks. The assessment of educational systems at the level of schools, walkability within user-determined boundaries, public safety or “dangerousness” on the basis of levels of exposure to crime, and motor vehicle accidents or pollution are just a few of the indicators to be described.

On the basis of this background review, this paper will shift its focus to the consequences for inequality that are inherent in the uses of spatial analysis as aids to public participation in the planning of neighborhood and community change, especially as they relate to an emphasis on public transportation as a feature of so-called “smart growth” initiatives.

(Mis)Recognition, Ressentiment, and Dualism: Challenges for a New Sittlichkeit

In this presentation I shall argue that the category of 'recognition' (Hegel, Honneth) and its approach to social justice can be enriched if we address two major issues: a) the first problem posed for any theory of recognition is to forge a theory of social institutions embedding social justice. Following Axel Honneth's recent shift towards the work of Durkheim and Parsons, I shall defend this pattern arguing that a new theory of Sittlichkeit is indeed pressing for an adequate approach to social justice through the lens of recognition. Yet, and this is issue (b), Honneth's theory leaves largely unaddressed the issue of ressentiment, a powerful index of social recognition and disrespect. I shall thus attempt to fill this void in Honneth drawing on Max Scheler's configuration of ressentiment. It seems that ressentiment is pertinent to a theory of just social institutions in many ways. For instance, I shall address Parsons' inclusion of 'sour grapes' pathology in his theory of modern society. It is this capacity, I argue, to radiate aversion of systems theorists like Luhmann is important because he locates, perhaps unwittingly, a space in society where ressentiment may be cultivated. This is no other that the inelastic binary code which sets a social system's self-definition in motion. Rigid, and systemically coded, dualisms give rise to feelings of ressentiment between categories ('left'-right', 'progressives' vs 'conservatives', 'public-private', 'pro-globalization-anti-globalization' advocates) and shipwreck important reforms that would mitigate injustice and would improve patterns of intersubjective recognition. Augmenting the category of 'misrecognition' to include the ressentiment problematic can help social theorists to theorize better significant empirical findings (e.g. Wilkinson and Pickett, The Spirit Level) that bear on the issue of contemporary social institutions and their approach to social justice.

Human Rights and Agency: Sociological Opportunities in the Capabilities Approach

In this article I shall argue that Amartya Sen's capability approach offers a promising renewal of sociological approaches to human rights. Sociology has only recently tilted towards the capabilities approach. I shall suggest that, on the one hand, any new normative understanding of action, like the one that Sen and Nussbaum offer, can gain from sociological theory simply because the program's central categories have a precedent among many social theorists. Seeing this affinity as an opportunity for creative theory-building in sociology, and drawing on sociology's accomplishments, I argue that normative components of Sen's ideas have been prefigured primarily by Parsons and to a lesser extent by Giddens. The capability approach mediates, I shall suggest, the formal aspects of Parsons' idea of 'capacity' with Giddens' idea of 'capability' in the context of the latter's theory of structuration. On the other hand, many theories of agency in sociology are normatively wanting. If configured along the tracks of capabilities, sociological categories, like agency, can signal a progressive problem shift in sociology attentive to human rights, a core component of Sen's research program. Compound with capabilities, a new notion of agency can offer the appropriate normative justification to the 'public sociology' paradigm which re-introduces normative considerations in sociological discourses. If this proposed reconstruction is plausible, then it can contribute towards re-generating the capabilities approach sociologically, reconforming its progressive explanatory capacities, the merits of which have already been successfully tested and implemented across diverse sites, movements and organizations that promote human rights.

The Study of Hindu Woman Problems in Morden Society

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The mother India notion of downtrodden women of India, helpless, exploited by men, worn to and early death; and the exotic sensuous women of the orient, who make maharajahs happy with their beauty and talent, are somehow in the picture too.

Indian women of dignity, charm, simple beauty in all classes-form women in the village, middle class women in the cities, government women in New Delhi-who were neither helpless and downtrodden nor absorbed in erotic gratification. Of pampered husbands. Some of these intelligent and still graceful, feminine women were in legislatures, some were running others sector.

Mother India, a mother culture, goddess worship, and in a general cultural veneration of the feminine. The study of the Morden societies the Hindu women problem indenitified. The major source of data for the study is descriptive material from ten Indian informants, women graduate student in university coming from educated, urban and middle and upper-class backgrounds, representing various geographical areas.

Literary sources include translations of original Indian literature. The research paper focus if discussion of the Hindu women problem connected with the single women, older women, widow, divorce, mixed marriages, and friendship live-in-re-relationship and NRI friendships etc. Most of these problems are related to the Morden age and its impact of traditional patterns.

Some of the problems involved in modern Indian womanhood. Except for widowed, they are related to changing times and the impact of the globalisation.

*Info-Communication Culture, Cultural Crisis, Social Media and New Technologies: The Model 'Info-Communication Cultural Management (ICCM)'*

New technologies exert strong pressure on traditional cultural organizations and institutions to digitalize theirs cultural management and administration structures. In economic crisis, some of the most important and widely debated issues in the areas of digitization of cultural policy are administration of cultural organizations and cultural rights of cultural communication Landscape (IICL). In order to cope with the recent crisis and to protect cultural policy and cultural management, all countries should collaborate to create and offer a dynamic regulatory mechanism in info-communication globalization. This paper examines and analyses cultural management, social media, new technologies and info-communication culture. It focuses on cultural management, public interest and regulations of digitized cultural products and services. It proposes a new dynamic model for cultural management *Info-Communication Cultural Management (ICCM)* in cultural and economic crisis.

**GANTZIAS, GEORGE*** (University of the Aegean, ggzantzias@yahoo.gr)

A new digital revolution is coming, this time not only in management of cultural activities but also in the administration systems of cultural organizations and institutions. Digitalization of cultural management and administration will allow cultural managers and administrators to develop and manage real/physical cultural events on demand, wherever and whenever they need them in Info-Communication globalization. This paper examines and analyses the cultural events and activities in recent cultural and economic crisis. It examines cultural management as a very important issue of organising cultural events and activities both locally and globally. It focuses on cloud computing, digitalization of cultural activities, cultural strategies and crisis management. It explores digitalisation of cultural administration structures and proposes a new dynamic model, the *Dynamic Perception of Cultural Activities* (DAP).

*Energy-Related Consumption in France: Policy Influence, Socio-Technical Structure and the Role of Practices*

The issue of the public policies related to sustainable consumption changes has been recently raised in France, emphasized by the “Grenelle of the Environment”. However, since the 70s, France has faced the matter of behavioural changes in energy consumption. That is why we propose to treat the question of the behavioural changes impelled by the energy policies in France. This analysis will be embedded in the history of the public policies (energy and other domains of consumption) and their effects on the behavioural changes. Nowadays, the energy issue returns in top of the agenda, after having known eclipses at the end of the 70s. It is built in a context of the European energy market deregulation. The resulting policies highlight the importance of the individual behavioural change through the “consumer” representation (energy savings, smart grids, market choice of appliances, supplier choice according to the sources of energy production, etc.). The market tools are privileged, but the French State remains the dominating actor. Within this framework, isn’t the notion of the individual behaviour partly rhetoric? Indeed, other upstream factors encourage in a decisive way the levels of households’ energy consumption (e.g. offer construction, infrastructure choices, thermal regulation, at the French and European level). Moreover, the succession between the heterogeneity of the policy devices that have partly opposite objectives may lead to conflicts in norms and contradictions in the energy practices. Our analysis will be developed through examples related to “sustainable lifestyles”, such as: energy label, low consumption bulbs, carbon tax, choice of the means of transport, waste sorting and water consumption.

*Efectos De Los Muertes Por Causas Externas En La Estructura De Población De Venezuela, Años 2001-2011*

Diversos estudios han señalado el aumento de las muertes por causas externas en Venezuela los últimos años, dos de sus principales tipos: accidentes y homicidios, han escalado rápidamente entre las primeras cinco causas de muerte en el país. Este trabajo tiene como objetivo presentar los efectos de las muertes por causas externas en las tasas de crecimiento por edad y en la estructura de la población de Venezuela entre los años 2001 y 2011. Para ello, se utiliza los datos de mortalidad publicados por el Ministerio del poder popular para la Salud de la República Bolivariana de Venezuela en los Anuarios de Mortalidad de los años antes mencionados, y los Censos de población y vivienda de los años 2001 y 2011. Para evaluar la incidencia de las muertes por causas externas se obtienen las tasas de mortalidad por causa de muertes en la estructura etaria de la población introducidos como efectos de la ocurrencia de muertes por causas externas, según tipo de causa. De allí, se muestra las diferencias en la estructura de la población para el año 2011 modelando la ocurrencia de las muertes por causas externas según tipo. Los resultados muestran que entre 2001 y 2011, las cohortes de hombres jóvenes (15 a 34 años de edad) sufrieron el mayor impacto tanto en las tasas de crecimiento como en la estructura, en especial por causas de muertes asociadas al uso de armas de fuego. Mientras que...
para las mujeres son las muertes por accidentes de tránsito en todo el período de estudio, lo que causa el mayor impacto.

Ongoing Disaster: Fukushima, Complex Technological Systems and Uncertainties

Catastrophes such as that which struck Japan early 2011, as a result of the accident in the Fukushima nuclear power plant, the most serious accident ever in the history of nuclear power plants after Chernobyl, demolish claims to extremely small risk probabilities for complex systems and upend the delicate balance between costs and benefits argued by safety experts. The Fukushima disaster demonstrated that in contemporary societies, vulnerabilities and threats are difficult to locate or predict, being both incalculable and impossible to offset. The natural tsunami that ravaged Japan was also a technological tsunami with ecological, social, economic, and political consequences. The Fukushima disaster may be thought of not just as a disaster for Japan, but for the technological order.

Our analysis of the March 11th disaster begins with a simple narrative showing how a natural disaster in a country at the forefront of technological development precipitated an accident in a nuclear power plant that in turn led to a chain of calamities at multiple levels. How did we become constructors of a world with such catastrophic potential? Section two responds by considering how the nuclear threat is played down as a result of the euphoric notion that human vulnerability can gradually be overcome by the increasing ability of science, technology and probability analysis to control and predict events. The final section retrieves the idea of “foresight” as the basis of a political and social approach that can take on not only the uncertainties of the world, but also those generated by technical systems, in order to illuminate our choices and decisions. When faced with calamities and dangers that appear to arise out of the blue but are the outcomes of our technological systems, their interactions, and our dependencies, foresightedness emerges as a response both rational and virtuous, however difficult.

Fighting Social Injustice in Spanish Cities: Social Innovation Practices Against Housing Evictions As a Response to the Current Housing Crisis

This paper analyses the aftermath of the bursting of the housing bubble in Spain, which has left thousands of families without homes and indebted for life. In the first of two parts we look at contextually specific interactions between state regulation and market-oriented projects in Spain. This country is a salient case in which economic recession and a debt crisis follow upon a long period of growth characterized by a housing bubble and a particular urban growth model. In this part we argue that central government has played a key role in framing fiscal incentives for housing ownership, and local and regional administrations have engaged in short-term forms of inter-spatial competition for public and private resources, place marketing and regulatory undercutting in order to attract investment. In the second part, the paper examines the urban social movement “Platform in support of the evicted” (Plataforma Afectados por la Hipoteca – PAH) that, after starting in Barcelona, has spread to many other cities. The movement has created innovative strategies for housing accessibility and public and private governance in the housing market. These strategies include innovations at the local level and at national and European institutional levels. In this part we argue that social movements like the one we study are socially innovative when they aim at responding to social needs not met by the market and the state institutions. At the same time with their activism they transform the debate in the public sphere while prompting institutions to introduce new governance mechanisms and policy outcomes. The paper is the result of a research conducted under the umbrella of the COST Action IS 1102 (European Union RTD Framework Programme) during 2012 and 2013.

The Construction of “US”: The Experience of Love in the Sensible Proximity

According to Norbert Elias, the loving relationship between two people is, at the same time, subjective and objective. It is so because the relationship is related to three different yet overlapped dimensions, namely: the experience of love from the ‘I’ in relation to another person; the experience generated in the ‘US’ which implies observation and bonding of the loving relation; and the ‘THEM’ experience regarding the observation, experience and bonding of ‘others’ with those who are in the loving relationship.

In the first part of the paper, we will develop the “US” dimension of love relationships in heterosexual couples. The aforementioned dimension implies not only a discursive story, but also a story of experiences. Experience here relates to a mutually created process that involves the existence of two or more embodied psycuic systems which “grow old together” (Schutz, 1932) and persistently irrigate each other (Luhmann, 1984).

The observation of a particular “US” story is thus made possible through the examination of the identification condition of the “US” in a continuous present which includes social discourse (power, gender, class), relational moulding or what Goffmann studied as ‘interaction’, and synrhythm between what the mind/bodies create whilst together.

In the second part of the paper, we will observe the “US” dimension through the interaction process (Goffmann, 1983) using a finer level of analytic sensible proximity (Simmel, 1908). Our starting point is that in interaction with others and specifically in the “sensible proximity”, bodies produce Sinn which is mutually inter-terminated (Sabido, 2012). We will develop this through the example of the loving interaction in a heterosexual couple. The presentation will finish with some examples that illustrate this sensible process.

GARCIA CASTRO, JORGE FRANCISCO* (Universidad de Guadalajara, boll@garcia@hotmail.com)

A Different Path for Public Demands and Their Effects on the Processes of Democratization

In clave de la Teoría de Sistemas de Niklas Luhmann, ésta investigación plantea una explicación acerca del proceso mediante el cual la demanda histórica sobre la democratización de medios en México, retomada en mayo de 2012 por el movimiento #YoSoy132, logró instalarse en la agenda legislativa para su posterior discusión y aprobación como Reforma de ley en materia de telecomunicaciones en junio de 2013. Esto es: identificar la articulación y evolución de una demanda pública propagada principalmente por Twitter, su consolidación en el ámbito mediático y la evocación a nuevos actores, la formulación de múltiples variantes y su consecuente aprobación e implementación como política pública.

Así, la relación e irritación intersistémica que se pone en análisis permite explicar y asociar la operabilidad de diversos sistemas (político, jurídico, mediático, científico, y los movimientos de protesta), en su participación sobre dicha demanda y como fuentes de influencia y de tensión social a lo largo del proceso de decisión del Estado.

Para ello se realiza un estudio longitudinal de corte cualitativo que incorpora principalmente recursos audiovisuales de YouTube, documentos oficiales alojados en internet, y notas de periódicos digitales. De esta manera mediante un análisis documental fundamentado en la Teoría de Sistemas, el estudio permite la observación, experiencia y efectos en el aparato estatal al momento de tomar una decisión de vinculación colectiva.

En este sentido, la hipótesis que rige ésta investigación parte del supuesto de que gracias a la viralización y mediatación de las demandas a través de las redes sociales y de los medios multimedia, la participación de actores especializados y a la respuesta de un grueso de la población, se aumentó la presión sobre el Estado lo cual dio paso a un acoplamiento estructural orientado por el cúmulo de irritaciones provenientes de su entorno.

Secularization in Mexico City: a Wrong Paradigm?

The political situation of the world and the complicated relation of the West with Islamic countries have provided evidence that the most significant mistake in the theories of secularization is the conviction that modernization inevitably leads to the loss of the importance of religion. Thus the proposition of Berger (2001) replacing this paradigm with an analysis of the interaction between the forces of the secularization and a counter secularization is pertinent.

In a similar way, it can be said that globalization reminds us that the relationship between religion and politics as established in the Western world, that is to say the passage of the religious to the sphere of the private life, is rather an exception.

Religion in the history of Mexico is a key element in understanding the cultural reality in our country and the future of the existence of the Catholic Church. However, the first years of this century were an undeniable setback for Catholicism. We can talk about changes in the nature of the religious that opened

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
new perspectives for study. In that way studying the study of the process of secularization, its modalities and its particularities, become a pertinent subject.

Likewise, it is suitable to indicate that during the first two decades of this century the paradigm of secularization began to be questioned and the idea of a return of religion or a re-enchantment of the world began to emerge. It is possible to speculate that in large Mexican cities, especially in Mexico City, the process of secularization remains constant only in members of a middle class who can be considered carriers of an international subculture; these are people who have received a Western-style higher education, particularly in the humanities and social sciences.

Academic Language Barriers: Professional Stigma or Recognition and Success?

In the last decades, university language policies have strengthened the use of English for publishing papers, books and articles, even in non-English speaking countries such as Spain and Mexico, for example. This fact has led to a series of academic processes that may place both academic and students at stakes with linguistic and extra-linguistic uses of codes unknown to them and their English academic practices.

Something Is Changing: Italian Young People Between Religious Indifference and New Form of Believing

Several studies on youth and religion stress how only a very small proportion of the youth population has anything to do with organized religion. There has been, on the one hand, a growth of interest in alternative forms of spirituality and, on the other, an increasing estrangement from the various religious aspects (believing, practice, involvement in religious associations). In this framework, the paper will focus on the outcomes of the socialization process, investigating how young people debate, follow, refuse or interact with religion in the Italian scenario. Are we looking at an Italian version of religious modernity which, on one hand, reflects the typical expectations of living in a pluralistic society and, on the other, forms them within the long tradition of culture and religious socialization which are the main reasons of their taking distance from the religion. The collected interviews allow us to define a typology, defining mainly four kinds of youths according to their religious definition and their religious practice, to their opinion on the Catholic church and to their religious socialization.
GARIBAY, DAVID* (Université d’Auvergne (France), david.garibay@udamail.fr)

Mouvements Sociaux Et Sociétés Civiles Dans Les Processus De Démocratisations : Le Cas De Conflits Armés Négociés

Le processus de négociation de paix actuellement en cours en Colombie entre le gouvernement et les FARC pose le problème de la participation des mouvements sociaux et de la société civile dans des négociations dans lesquelles le passage de la guerre à la paix suppose également une évolution vers des régimes plus démocratiques, par une inclusion de forces jusque là en marge de la politique institutionnelle. Or cette participation est face à un paradoxe : d’une part, elle contribue à légitimer le processus au-delà des partis négociateurs, mais de l’autre sa présence peut alérer des négociations marquées par le secret et la confidentialité. Or en Colombie le processus actuel de négociation est face à une importante mobilisation sociale, avec plusieurs expressions, d’une part des mouvements agraires et paysans, autonomes des guerillas, et de l’autre des collectifs de victimes du conflit armé. Les mobilisations s’adressent au gouvernement mais elles ont aussi un effet sur les guerillas qui négocient. Le cas colombien contemporain sera analysé à regard d’expériences similaires par le passé dans le reste de l’Amérique latine, pour le comparer avec des cas où la mobilisation collective a été écartée du processus de négociation (Salvador) et des cas où au contraire elle a été fortement associée (Guatemala). Cette réflexion vise à rehabiliter le rôle des mobilisations sociales dans les processus de démocratisation, rôle trop longtemps négligé par des approchés théoriques centrées sur la négociation.

This paper introduces the concept of ‘double estrangement’ which is based within a somatic Bourdieusian framework and draws from DuBois concept of ‘double consciousness’ and the work of Abdelmalek Sayad. Drawing on a large qualitative dataset I will argue that migrant group boys in Dublins north inner city tend to experience their body image with unease, as somewhat problematic ‘ shameful bodies’, through which they suffer from a break with their embodied selves and a disruption of their internal time as they are pushed between habitual and reflexive action. The dual elements of ‘double estrangement’ will be outlined, firstly, it will be contended that visible difference and dispositions of the body mark migrant boys out as not belonging and this provokes a tendency for them to feel constantly on display and judged through their bodies. Secondly, I will argue that this has the effect of heightening a boy’s self-consciousness of their body as an object of value within peer interactions and this reflection estranges them from their habitual embodied being. This paper will conclude by illustrating how double estrangement acts as a form of symbolic violence within the ‘child world’ of the school, spaces in which the attention of children is on their peers instead of authority figures (Hill 1997). I will argue the development of a ‘reflective habitus’ or habitual disposition to reflect on one’s body, estranges migrant origin boys from the embodied orthodoxy of the child world field and this is used to justify inequalities between boys and disfigure racism within encounters.

GARRETON, MANUEL ANTONIO* (University of Chile, magarret@uchile.cl)

Foundational Dimension of Social Movements in Latin America? : The Case of Chilean Students and Other Mobilizations in Recent Years

The paper discuss five dimensions of recent mobilizations in LA: democratizing, anti-neoliberal, citizenship, identitarian and foundational, according to the predominant dimension in the movements. This is done comparing with other mobilizations in the world. The main thesis is that behind the different mobilizations and social movements in recent years, underlies a foundational dimension aiming to reconstruct the relations between State and society broken after globalization, neoliberal reforms, dictatorships and democratization processes. This hypothesis is examined in the Chilean case considering three main aspects: the type of society emerging after the process of democratization that we define as a post-pochinestha or post authoritarian society linked to the past by the neo liberal model and the Constitution inherited form the dictatorship, the type of mobilizations dimension which has been since 2006 and mainly since 2011 and the window opportunity for new relations between politics and civil society opened by presidential elections in 2013 and possible constitutional processes.

GARRETT, DANIEL* (City University of Hong Kong, dan.garrett@yahoo.com)

Cold War 2.0 Visual Conflicts: American Visual Constructions of the Chinese ‘cyber Threat’

Soft power is a contested and volatile resource. Nations cultivate, expend, and exhaust soft power through hegemonic visual struggles within the international order – especially those at odds with the dominant soft power actor, the United States. Embedded within the notion of soft power and soft power conflict is the power of images for conveying political messages and values, and fostering or contesting the construction, (re)presentation, and diffusion of national brands. In recent years, an escalating dynamic of debates and narratives surrounding soft power are rooted over the putative decline of the U.S. and concomitant rise of the People’s Republic of China. While simultaneously disputing America’s waning, many U.S.-based critics of Chinese soft power moved past traditional China bash- ing exercises over censorship, democracy, and human rights, and now attempt to ‘indicate away China’s post-opening up and reform achievements – key elements of the often identified ‘Chinese model’. Confronting this assault on Confucius Institutes as ‘espionage dens,’ its global media expansion as ‘propaganda offensive,’ and peaceful development model as smokescreen, a louder denigration of Beijing’s economic and technological milestones has emerged from Washington. This information war, intended to shape and malign representations of China’s brand, is best exemplified in the extraordinary claims of former senior U.S. intelligence, law enforcement, and defense officials in late-2011/early-2012 accusing China of wholesale cyber espionage. Extending into 2013, American broadsides escalated to attacking the very premise of red China’s success: ‘socialism with Chinese characteristics’, accusing Chinese malfeasance and thievery were at the heart of the ‘China miracle,’ not any innate superiority of the Chinese system. Though manifested primarily in textual discourses, subver- sive visual imaginaries of China have been increasingly evident in Washington’s efforts to degrade Chinese soft power. This paper examines the production, circu- lation, and reception of these popular culture and political visual confrontations.
What does Europe mean for Europeans, of many parts of Europe or of places outside Europe where are social groups of European origin? The paper looks for to reply to these questions through a research carried out on fourteen samples of ethnic minorities and majorities of Europeans (about 2700 interviews of people), living in the Italian region of Friuli Venezia Giulia (Italians and Slovenes, Friulians), in the Spanish region of Andalucía (Spaniards), in the Ukrainian region of Kharkiv (Russians and Ukrainians, Belorussians, jews), and in the Slovenian region of Ljubljana (Slovenes, Croats). To each sample the attitudes towards Europe and its meanings were requested. The main meanings (through attitudes) of Europe were: an area included between Atlantic Ocean and Urals, a Christian civilization, the European Union (EU), a common family, the West, the overwhelming some peoples, a common culture, a vague idea. The paper considers the intensity and the relations of all these meanings between the macro-regions, between ethnic groups, and between minorities and majorities. The results are among the most important factors for the macro-regions, first of all, and inside each region between minorities and majorities. Besides at the same level of macro-region also the structure of the meaning is very different. For example, the most important factor (Factor Analysis) in the Friuli Venezia Giulia is very simple (West, EU, common culture); on the contrary in the Moscow the first factor is more complex. In the Kharkiv region the structure of the first factor is simpler, but different than the Italian content (that is: Europe is overwhelming some peoples and vague idea); so as the most important factor (first) is simple for the groups of the Tjumen region, but the structure of the meanings of Europe is composed of West and vague idea.

Abstracts are organized by first presenting author's last name.
Emerging Agrarian Crisis and Farmers Suicides; A Study of Telangana Region of Andhra Pradesh in South India

Changing agrarian structure and labor relations, Consequent crisis and farmer suicides is an important area for the study of social scientists in contemporary times all over India. It is a well known fact that India is mostly an Agrarian country and even today 70% its population inhabits in rural India by depending on agriculture and its related occupations despite rapid progress in science and technology. It is a paradoxical situation which prevails only in India where large chunk of population lives even today in rural India with or without land by pursuing agriculture and its related subsidiary occupations resulting rigid social and cultural bond. This complex social structure which constitutes different layers which creates consequent inequality hierarchal structured in terms of caste, class, ethnicity and gender etc.

Further, increasing modernization in agriculture and consequent growing capitalistic mode of production coupled with an unstable returns due to change in climatic conditions resulting the farmers entering into debt traps which leads to help less condition and hopeless life unlike in the past. Lack of timely help from Kith and Kin and indigenous institutional support and constant pressure of ruthless less market financiers resulting in large number of farmers to attempt suicides this phenomenon is increasing day by day particularly in the state of Andhra Pradesh in the era of post globalization.

This study aims to understand the changing agrarian structure and emerging labor relations since post liberalization era and the reasons for increasing farmer suicides and its causes and consequences. For this study Telangana region of Andhra Pradesh in South India has been chosen where large number of farmers are attempting suicides.

Telangana Movement: A Study of Problems and Prospects

Telangana movement for separate statehood is historically well known all over the world. One of the reasons for its popularity is that its peasantry revolt with arms during (1946-48) under the leadership of Communists against the Nizams autocratic rule. However the Telangana region of Hyderabad state was merged in Andhra Pradesh on 1st November 1956. But Telangana people wanted to have their own state in view distinct geographical, socio-economic, political and cultural identity. Telangana people were discriminated in every sphere by the See-mantry as the post independence era shows it.

Against this discrimination and exploitation separate Telangana movement under the leadership of Dr.M.Chenna Reddy was organized in the year 1969. About 400 students and youth were killed during the movement. Due to political betrayal of the parties in the power the moment was subsided. However, in the year 2001 separate Telangana Movement again started under the leadership of K. Chandra Shaker Rao who is a shrewd politician. During the last 12 years of the Movement, about 1000 students and youth sacrificed their lives. In view of the above background this paper mainly aims at to understand the unethical political stands and manipulations of various political parties in the state and at the center in decision making process of the formation of Telangana state. The other objective of the study is to present how people's cause and political aspirations of Telangana region manipulated and marginalized for the selfish ends of Seemandhra.

Political Parties and Community Organising in an Era of MembershipDecline

At a time when formal party memberships are declining across advanced industrial democracies, political parties are experimenting with new ways to re-engage members and reach out to party supporters. Adapted from the experience of American party organisations and campaigns, political parties in the United Kingdom have adopted community organising techniques as a means to address the resource and linkage implications of declining party memberships and to engage supporters (and not just party members) in the community. This paper analyses the character of and motivation for these techniques, how they have been implemented by the Labour Party, the Liberal Democrats and the Conserva-
The research of young intellectuals takes on special significance in the conditions of Russia's transition to the information-oriented society. Attention concentrates on the cultural characteristics of the observable social group because of the “cultural lag” which takes place in the most part of Russian province cities. The main role in cultural reproduction and translation plays the young university tutors as the most active and mobile group. They were considering as either main subjects of the cultural work in the social space of region. It is necessary to find out their cultural needs and general condition of incorporated cultural capital because of their influence on young people's values and aims.

The empirical base of research is presented by the mass poll and the focus group interviews with the young tutors of the institutes of higher education located in the Ural federal district. The investigations were conducting within the bounds of grant project "Professional potential of young tutors in Russian province". The analysis contains information about basic components of young academics incorporated cultural capital: leisure structure and the place of cultural practices within, the art forms and styles which prefers the researched group, the perception of province cities' cultural infrastructure, opinions about necessity of higher art education preservation.

The results of research let us tell about hyperrealitarian in the behavior of young academics, which concentrates on their professional responsibilities and forget about cultural self-development. They constrict their functions to the information translation and don’t feel themselves as the active subjects of social changes. The main respondents doesn’t think of themselves as a “cultural class” and don’t regard their lifestyle as different from life of the majority. Unstable identity of young scientists and tutors, consumer attitude to the cultural space, passivity and lack of self-organization reduce their creative potential.

The Idea of Age-Friendly Cities and Communities As the Answer for Global Trends of Aging Societies

The aging process is great and unheard of in the past, challenge for governments, economies and societies. This means the need to meet the needs of the growing group of people with specific requirements, with full rights and legitimate aspirations for decent quality of life and mobility. Effective management in this area is primarily a matter of the reform of health insurance, tax and retirement system, or other distribution of funds. Of course, these changes are important, but we should take various measures to create friendly environment for the elderly: social solutions conducive to maintaining an active lifestyle and innovative projects allowing for broad independent.

The answer to this can be the concept of Age-friendly Cities and Communities (AFC) which was conceived in 2005 at the XVIII IAGG World Congress of Gerontology and Geriatrics in Rio de Janeiro. It immediately attracted enthusiastic interest, and in 2010 has transformed into The WHO Global Network of Age-friendly Cities and Communities. The WHO has defined an Age-friendly City as a place where people of all ages can be healthy, participate and lead full lives. The underlying principle is that an Age-friendly City is a city where people of all ages can be healthy, participate and lead full lives. The principles of an Age-friendly City are based on the five domains of city life that might influence the health and quality of life of older people: outdoor spaces and buildings; transportation; housing; social participation; and respect and social inclusion; civic participation and employment; communication.

The presentation of examples of implementation of the AFC in selected European ship spans across 20 countries with a total of 115 cities and communities. The WHO is encouraging Member States to develop policies and strategies to promote the implementation of the Age-Friendly Cities and Communities approach across the European Region and beyond.

The will to universalize the French health insurance system at the end of the 90’s created a new marginalized category of patients: illegal migrants. Splitting them from the other insurance holders by the establishment of a special health insurance (Aide Médicale d'État, State Medical Aid), this population was put at the edge of the health system. It led to unequal health practices and increased the difficulties to access health care providers and health insurance. These two levels of barriers have been underlined by the empirical research based on the study of a department in the French public hospital, named PASS (Permanence d'accès aux soins de santé : Departement of health care access). The PASS is specialized in taking care of patients without health care insurance which are mainly illegal migrants. The Aide Médicale d'État from the other insurances made possible for the administration and practitioners to have discriminating practices. The administration uses the processing of the applications (delaying them for example), while some practitioners exclude those patients from their practice. These barriers keep a part of this population out of the regular health care system, compelling these individuals to access health care providers as the PASS. However, the specialization of health practitioners in those patients generated new practices, which showed the relevance and the complementarity of combined social and medical care, networking, and recognition of the social and cultural determinants of health.

This paper aims to tell and analyze the processes and historical background which gave rise to a sub-field (in a Bourdieuian understanding) of medicine of poverty in France from the early 1980’s to the 2010’s.

The PASS is a health care access which was set up by some medical actors and groups of the medical field led to the vote of the anti-exclusion bill in 1998 and the creation of the Permanence d'accès aux soins de santé (Departement of health care access, PASS) in public hospitals. The PASS raised from the meeting of two different social groups – humanitarian (as Doctors of the world) and sub-groups of dominated medical disciplines in the hospitals (as palliative care or infectious diseases) – which have developed this understanding of care since the 1980’s. This was a response of the raising barriers to the health care access and the incapability of hospital practices to answer the new problems of a growing group of patients taking place in a social and cultural context of economical crisis and new poverty. The bill and the PASS were both an institutional acknowledgement of a growing reality of health care practices. It brought a new ethical understanding and practice of health care to modern public hospitals based on an idea of a global patient, multidisciplinary work combining social and medical work, networking, and recognition of the social and cultural determinants of health. However it faces the dominant idea and practices of health care, which rely on evidence-based medicine, technical health care, and profitability.

This paper is based on an ongoing Ph.D empirical study in sociology about the treatment of the social question in and by public hospitals in France through the analysis of the PASS.
The need for assessing women's unpaid work and reproductive activity has long been discussed by economists within the context of estimation of a country’s economic growth rates, as well as by sociologists within the inequality studies. The world statistical practice has acknowledged that working time budget surveys remain to be the most relevant tool to obtain reliable information on unaccounted work because such surveys allow estimating the ratio of time spent by women and men on labour market employment and on unpaid work in households. The proposed paper is devoted to presentation of the results of a special sociological survey on assessment of women's unaccounted work realized in Ukraine. The main issues under investigation include: gender inequalities in time spent on domestic work, distribution of home duties and features of decision-making in households.

A particular emphasis is given to gender assessment of involvement to informal work, which makes a rather important problem in the region of transition economies. The role of prevailing gender stereotypes in reproduction of gender inequality is also analyzed based on data of the national sociological survey, as well as on the results of European Sociological Survey. The latter survey reveals a striking contrast between Ukraine and other countries of Europe in terms of public opinion on social gender roles and norms, in particular those related to women's priorities in harmonizing their work and family obligations.

The paper provides also some analysis of gender policies realized in the country, and subsequent conclusions and recommendations on harmonization of gender disparities in paid/unpaid work balance and general empowerment of women in the country.

**Liquid Organising and Soft Leadership in the Popular Protest Wave**

In activist and academic discourse it is often claimed that contemporary protest movements, including the Arab Spring, the indignados and Occupy Wall Street are ‘leaderless’ or ‘horizontal’ movements (see for example Castells, 2012). However, looking at their internal doings and at their communications it becomes soon evident that far from being leaderless, these movements are characterised by the presence of both personal and collective leadership, in which activist clusters and leadership do not number more than a dozen people come to acquire much influence in the direction of social movements. What we are witnessing to is thus not the end of leadership, but the emergence of a new form of leadership which attempts to harness the communication ecology of contemporary social movements.

Drawing on my ongoing research about the popular protest wave of 2011-13 in Egypt, Spain, the US, Brazil and Turkey, and developing the argument presented in my book Tweets and the Streets (2012) I describe contemporary leadership as ‘soft leadership’. This form of leadership makes use of the interactive capabilities of social media, tapping into the imaginary of participatory culture (Jenkins, 2006). Leadership comes to revolve around community management and facilitation, rather than outright ‘direction’ of collective action.

This paper will look at the specificity of emerging forms of leadership and their connection with the informal and ‘liquid’ practices of organising performed by contemporary movements. Specifically I point to the limits of this format of organising, arguing that while soft leadership is powerful in nurturing contemporary movements, it also runs the risk of exacerbating contemporary movements’ well known tendency towards evanesence. Furthermore, the new forms of leadership emerging in contemporary movements raise serious risks of opacity and unaccountability because of their very liquidity.
tion beyond the activists milieux. Finally, I argue that the squares’ movements are best understood as transitional movements, and moments of foundation and social reconstitution of a new democratic system beyond the neoliberal corporate state. These movements present many opportunities for the development of a progressive democratic politics, but they are also ridden with deep contradictions, in their proceduralism and the lack of substantive demands beyond democratic demands.

GERBIER-AUBLANC, MARJORIE* (Ceped, Paris Descartes University, France, g.marjorie@hotmail.com)

In social sciences, it is now trite to say that HIV/AIDS reveals relations of power. But what could it mean to argue that the epidemic is the incubator of new social interplays in a post-colonial context? The way Sub-Saharan African women living in France have become key players to fight HIV, within communal associations (prevention and support groups), is an illustrative example of such a question. A socio-ethnographic fieldwork led by detailed observations and interviews, from October 2011 to July 2013, invites me to explore this issue through the prism of Intersectionality and Care Theories. Care is understood here as an ethics of Subalterns and a singular political process, following the reflections of J.Tronto (1993).

The subaltern position of those women - as women, migrants, from a post-colonial minority and sometimes HIV-positive - led them to develop an expertise of complexity and a model of intervention drawn on an ethics of Care. Their participation to fight HIV in France represents an unprecedented way to position themselves and reverse the multifaceted relations of power they are the object. Thus, this paper will explore how they socially and politically use the traditional categories assigned by the dominant society to transform their subaltern position in this post-colonial context. A special focus will be given to the way they review their subaltern status toward white French women, within a racialized gendered labour market and an excluding access to citizenship. As an example of grounded theory approach, this field research proposes a theoretical opening that let us thinking about the transition of subaltern identities in light of the intertwining of multifaceted inequalities in a post-colonial epidemic context.

Tensions Between Identities and Roles: When Sub-Saharan African Women Living with HIV Become Health Mediators in France

Between 2000 and 2005, an experimental training program for « new health actors » was lead in France, to improve access to HIV prevention and healthcare for populations in condition of vulnerability. This program trained more than 150 health mediators from the targeted social groups and it included many Sub-Saharan African women living with HIV in France, recruited from communal associations. Through their interventions in the Infectious Disease Wards of the Hospitals, the peer health mediators have turned key players in the relationship between patients and professionals.

This paper proposes to explore the specific interactions between HIV-positive health mediators and institutional healthcare professionals, in particular physicians and social workers. This reflection is based on a socio-ethnographic field research led from October 2011 to July 2013, by conducting 18 months of direct observations in HIV communal associations and 85 interviews with HIV-positive patients, health mediators, physicians and social workers. The roles that health mediators ask to play to improve patients’ quality of care will be examined. It will highlight the tensions that they experiment between the double identity of being an HIV-positive patient and a healthcare professional. A special attention will be given to their specific position within a set of unbalanced relationships with physicians and social workers. Thus, this paper aims at showing that the professional participation of those patient-expert has inexorably improved patients and professionals interactions, by helping reconfigure the hierarchical position of physicians and the states of patienthood. Nevertheless, their intermediary status (between being a patient and an healthcare professional) reveals serious social issues, especially because they are included in an intertwining of unequal power relationships.

Globalisation, Market Value and Cultural Diversity and the Predictability of Football Leagues

Processes of globalisation have changed the nature of professional football in two different ways. Firstly, football clubs revenues from different sources have multiplied over the past decades. Today’s football clubs need to be regarded as commercialized globally operating companies. Secondly, football clubs have been attracting foreign players to sign for their teams, leaving only little room for recruiting exclusively from own national ranks. Hence, teams have become more multinational.

This paper examines the extent to which such processes impact on a team’s success. 1) Due to commercialisation processes, the market value of a football club has become the decisive factor in determining their chances of success. The market value of a club is defined and measured as the sum of the market value of each individual player on the team. The higher a club’s overall market value, the higher its chances of success. 2) The increasing multinational composition of football teams influences their chances of success negatively, because coordination within the team might become more difficult to realise. At the same time, however, multinationality can also have positive effects on their performance because players from different countries know new techniques and qualities that can complement the already existing ones.

We have collected and statistically analysed data from the 12 most successful European football leagues, yielding the following results: 1) A team’s market value has a very strong (positive) influence on their success rate – indeed, ‘money scores goals’. 2) Only to some degree does the multinational composition of a team determine their success. Teams that are composed of some players from different national backgrounds perform better, on average, than nationally more homogeneous teams. However, the direction of association is reversed when there are players from many different nationalities – multinationality, then, influences a team’s chances of success negatively.

Transnational Linguistic Capital. Explaining Multilingualism and English Proficiency in 27 European Countries

Since the second half of the twentieth century, the extent, frequency, and speed of exchange and interconnectedness between different nation states and different world regions have increased enormously, a process described in the literature as globalisation. As the world system consists of multiple nation state containers and as most nation states have different official languages participation in globalisation is among other things dependent on people’s ability to speak the languages of others. Those who only speak their native language are, in contrast, tied to their home country and can only take slight advantage of the perks of a globalised world. Transnational linguistic capital therefore might become a new measure of social inequality in today’s increasingly globalised world.

The question central to our study is to what degree citizens in different countries possess transnational linguistic capital and how to explain the differences in multilingualism both between and within the countries. Using a survey conducted in the 27 member countries of the European Union we analyse the respondents’ proficiencies in foreign languages.

We present a general explanatory model for foreign language proficiency, create hypotheses from this model and test them empirically by using multilevel techniques. We find that the size of a country, the prevalence of a respondent’s native language, the linguistic difference between one’s mother tongue and the foreign language affect foreign language acquisition negatively, whereas a country’s level of education has a positive influence. Using Bourdieu’s theory of social class, we show that besides other factors a respondent’s social class position and the level of education are important micro-level factors that help to increase a person’s transnational linguistic capital.

After the Insurgency: Changing Strategies for Countering Political Inequalities in Bangladesh

To what extent so-called minority populations gain access to decision-making processes in national government structures is one of the crucial questions for understanding the causes and consequences of ethnic conflict. Especially when nation-building processes are determined by the nationalist projects of majority populations, this is a problem of autonomy has emerged, a state of “exit”, replacing “voice”. This paper argues that the strategies for tackling such political inequalities have changed recently, which goes also to the credit of more efficient transnational and global networks. Based on empirical findings from Bangladesh, it argues that “voice” has become a matter of strategic concession, which has not only caused by shifting power-relations and expressions of social, cultural and political interests for the region and globally, but which is also related to social transformations within the conflict region itself: the rise of a new generation with quite diverse individual and
collective aspirations leads to social transformation at various levels. First, better educational assets and new job opportunities lead to an erosion of revolutionary ideals. Second, globalization processes have reinforced diverse mobilities: migration to metropolitan centres and new forms of knowledge giving way to alternative visions of a future society, have become more prevalent than before. These are particularly voiced by activists who are increasingly acquiring a new social status within their immediate social context as well as nationally – a process which is highly dynamic and conflictive. This paper inquires into these dimensions from an empirical perspective and discusses the social transformations in relation to the options for expressing demands within the national framework, as members of the minority population see for themselves. Finally, this leads to an examination of broader visions of society and of the scope for fostering social inclusion and an eradication of political inequality through political participation at different levels of society.

Towards a New Security Culture 2030

This paper presents results from a Real-Time Delphi Study which focuses on the following research questions: What are the important trends with high impact on public security in Germany until year 2030? What will be the most relevant risks within the next 15 years? How do security or risk research and research policies deal with these challenges?

The aim of the survey is to initiate a broader discussion about the future of public security. Therefore we need to discuss the perspectives of five main expert groups: politics, science, economy, media and end-users (e.g. emergency assistants).

Theoretical and conceptual framework
Theoretically we have two perspectives on security and risk that will form the conceptual framework. Firstly, we know from risk research, that risk is often understood as the probability that something occurs combined with comprising negative outcome (e.g. Bechmann 1993, Renn et al. 2007). Even if this is criticized (because risks aren’t objectively determinable), it is relevant for security research due to the fact that arguments for political decisions are justified by these calculations. Therefore the paper secondly discusses the empirical findings in the theoretical framework of “security culture” (Daase 2012), which understands security and risk as social constructions based on norms and beliefs.

Methodology
The survey will be conducted as a Real Time Delphi Study, a foresight method that collects data from experts in iterative rounds (cf. Gordon & Pease 2005). After the first round the aggregated results are communicated to the experts immediately so that they can change their first rating. Within the presented Delphi Study 1200 experts will be invited to take part in the survey which takes place in November 2013.

Results
The results address the above stated questions and will be displayed as statistical numbers and figures.

The "Incest-Beast" of Amstetten

Durkheim has shown that the atonement of crime creates solidarity among those who condemn it. Therefore, crime contributes to sustain the social and moral order, although and because the deed questions them. Nevertheless, there are violent acts that transcend this order in a way that makes it impossible to classify them as acts of "normal violence". Cannibalism, incest and senseless cruelty not only evoke refusal but strong emotions such as disgust and hatred. We want to argue that crime becomes polluting and unclassifiable when it "amalgamates" different kinds of violence – for example imprisonment, incest and cruelty (Jan Philipp Reemtsma termed them “locative”, “raptive” and “autotelic” violence). If there is “only” one transgression the crime is more likely to be integrated into society. In this paper we want to address the case of incest committed in Austria in 2009 by Joseph Fritzl. He held his daughter captive for 24 years in a self-made cellar in the house he lived in with his wife, telling her, the daughter had run off to join a religious sect. He abused and raped his daughter thousands of times fathering seven children. Some lived with their mother in the cellar, the others lived with their “grandparents” as Fritzl told his wife, his daughter had left them at their doorstep. The case of the “incest monster” was of international interest. At the end of the conviction in March 2009 Fritzl was found guilty and was sentenced to life imprisonment. He was thought to be both sane and mentally abnormal. In this paper we want to analyze the case of the “incest-Beast Fritzl” as a deeply polluting act: an act of violence that was scandalized throughout the media. Transcending the notion of “normal violence” by combining various transgressions the crime had to be framed as an extraordinary, monstrous act.

GETZ, SHLOMO* (Academic College of Emek Jezreel, shlomog@yvc.ac.il)
Place of Residence and Higher Education Choice

It is generally assumed that the lower class faces restricted access to higher education and that opportunities of college choice and choice of field of study are restricted for lower class students. Differences of students’ choice by place of residence are usually explained by the socioeconomic status of the place of residence.

Studies conducted in Israel examined the effect of living in four types of locations (city, small town, Jewish village and Arab village) on higher education choices. Those locations may be ranked from high SES in the city through small town, Jewish village and finally the lowest SES in the Arab village. Those studies do not treat place of residence as a monolithic entity. They examine students’ patterns of college and field of studies choices controlling for individual SES and academic achievements. The hypothesis is that place of residence is not only a geographical attribute but also a social place that influences self-identity and plays a role in students’ choice regardless SES or academic abilities.

Findings show that the place of residence has a net effect on students’ choices, and it interacts with SES and with academic abilities. This effect is differential. “Successful” students from cities tend to enroll in more prestigious universities and in prestigious fields of study, like medicine and law. Students from Arab villages tend to enroll in less prestigious universities and choose lower status fields of study, like paramedical studies. Students from towns and Jewish villages are similar in their choices. Less “successful” students are less influenced by their residential place.

It is argued that those differences show an influence of residential place as a way of life, and create a “habitus” based on locality. This “habitus” lead to differential college and fields of study choice, interacting with academic achievement and SES.

Sustainable Agriculture and Regional Development in Western Mexico: Lessons Learned, Challenges Ahead

Globalization is an advanced process in Mexico, profoundly transforming the endogenous properties of the countryside, including its sustainability. As a consequence, many farmers can be identified who have been developing alternative development models, based on agro-ecological farming practices and the revalorization of the local territory, organization and knowledge systems.

In western Mexico, many farmers have been transiting towards agroecological farming practices. Following international trends these transition processes are based upon two main strategies. On the one hand, farmers perceive agroecology as a way for substituting external inputs for locally elaborated ones, while, on the other hand, agroecology is seen as a means for developing an ideologically-based farming style.

This presentation describes the different transition processes towards sustainable agriculture, including motivations of farmers and their perceptions of its possibilities. Furthermore, it describes the regional context of sustainable agriculture. Based on both strategies encountered in our region, recommendations are made for promoting sustainable regional development.

The incorporation principle is the common belief that the food ingesting by humans transforms the body and identity of the eater, and for this reason, the control of food is central in the control of the self (Fischler, 1996). Using this concept, this work show how people think the food like a way to shaping body and the role given to the individual and environmental factors in the control of this process. From 70 semi-structured interviews in Santiago and Mexico City, I identify how people actually think that food is one of the main factors that shape the body, helping achieve an ideal body or not. The interviewees think that moderation in the intake and consumption of healthy foods produce slender silhouettes; on the contrary, they believe that rich food intakes and consumption of junk food make overweight bodies. I identified two opinions on the individual's ability to control their body through food. On the one hand, who believe that the quality of ingested food depends mainly on the individual and their will because it is the individual who decides what to eat and therefore what kind of body have. On the other hand, are those who believe that individuals are limited in their decisions by factors outside the human being, as the available food supply, the resources and the food culture. The first position was more common among Mexican interviewees, while the second position was more usual among Chileans interviewees.

Shaping Body By the Food: Perceptions in Chileans and Mexicans Adults

Due to recent important developments in the energy field in the Eastern Mediterranean over the last few years this region is becoming the focus of a growing geopolitical tectonic shift affecting all neighbouring countries, especially Turkey, Cyprus, Israel and Greece. Important developments are, however, expected not only in the energy field as such which will put the relationship of these countries to the EU on a new track, anyway. Leaving aside merely economic impacts of energy supplies from this region to the EU in the years to come one should state that the region is currently going in a case that could be described as the background of local political and ethical conflicts which will greatly affect the EU-integration and enlargement processes as well as the EU Neighbourhood Policy ahead. Existing and future alliances as well as conflict potentials deriving from the energy strategies of all countries concerned in the Eastern Mediterranean region will thus in an emerging country such as the political problem in the still divided island of Cyprus, on the dispute over the Aegean between Turkey and Greece as well as on the long-lasting conflict between Israelis and Palestinians. The proposed paper seeks to analyse what kind of energy strategies in this fragile world region could produce structural inequalities and thus additional conflict lines between states in the region and under which conditions bilateral cooperation could support regional solutions to political and ethical conflicts thus enhancing economic prosperity in the EU and beyond.

GIANNAKOPOULOS, ANGELOS* (Babceshever University, angelos.giannakopoulos@uni-konstanz.de)

Energy Cooperation and Security In The Eastern Mediterranean and Its Future Impact To Local Political Conflicts and To EU-Integration and Enlargement

The presentation summarizes an ongoing research regarding scientific communities in a rather emerging country, which includes more than 50 in-depth interviews conducted with leading Chilean scientists and one digital survey results, answered by nearly 350 academic and researchers from three disciplines. The presentation also describes several structures and mechanisms that are related to the market, the government and the university which, in principle, explain the emerging "means" to be a scientist in an emerging country such as Chile. The analysis of three communities (astronomers, molecular biologists, and sociologists), attempts to uncover the economic, social and cultural reasons for why these function as they do, especially in terms of their different intellectual and social environments. The results indicate that these structures and mechanisms are very different than before, suggesting that there are new structures and emerging mechanisms - local and global - whose impact is still unknown. The framework of analysis and discussion centers around the idea that there is a utilitarian historical and current relationship between the University and companies, conditioned by the Neoliberal economics revolution, which prevents universities from creating a genuine scientific culture of their own. Finally, the principal sociological vari-

Social Relationships in Later Life: The Role of Childhood Circumstances

There is an established body of research in social epidemiology which links both health and emotional wellbeing to social relationships across the life course and in later life. However, there is surprisingly little evidence on how differences in the nature and quality of these social relationships arise. It is not known, for example, whether existing social gradients in the prevalence of social engagement, social network size or quality mirror gradients in childhood socio-economic status (SES) and/or health.

This paper investigates the long-term impact of childhood conditions on social relationships. We use data from SHARE (the Survey of Health, Aging and Retire-ment in Europe), a collection of nationally representative surveys of the over 50s in 13 European countries. Combining novel objective and subjective measures of current social networks with retrospective life history data on childhood health, cognition, SES and household environment we examine the long-term impact of childhood conditions on social network size, social network satisfaction and emotional closeness in older age.

Using regression techniques, we show that there is a strong but differential association between each aspect of childhood circumstance on social relationships in later life. Therefore we critique the index approach to measuring childhood conditions which gives equal weight to SES, health and social environment over time. We find that emotional closeness mediates the relationship between childhood circumstance and social network satisfaction.

Does Deregulation Help? the Impact of Employment Protection Reforms on Youths’ Non-Employment and Temporary Employment Risks in Europe

Previous comparative research argued that, across Europe, youths face increasing unemployment risks and insecure labour market positions in the course of globalization and related macro-structural changes. Besides macroeconomic conditions, changes in employment protection legislation (EPL) has been blamed as the root of youths’ employment problems in Europe. Against this background, many European labour markets have reacted with the deregulation of employment protection laws, often targeted at the group of youths. However, doubts on the effectiveness on the EPL reforms occurred. Against this background we investi-gate whether EPL reforms succeeded in integrating youths into labour markets or whether they were ineffective and just promoted temporary employment as a crucial new social inequality in Europe.

The empirical analyses are based on a pooled cross-sectional design by using yearly micro-data from the European Labour Force Survey for 14 Western and 8 Eastern European countries for the period from 1992 to 2011. This database provides unique large-scaled, standardised micro data. We apply multilevel models with three levels (individual-, country- and time-level) implemented in a two-step estimation procedure to investigate contextual influences on individual age-relat-ed temporary employment and non-employment risks. At all levels we use cross-national and cross-temporal variation to quantify the impact of EPL reforms under control of other macro-institutional and macro-structural factors. Further, we control for country and time fixed-effects to account for unobserved hetero-

Approaches Using Monte-Carlo Simulations

Social scientists generally rely on three broad modelling strategies to test hypotheses about contextual effects: random intercept and slope (often simply referred to as “multilevel”) models, pooled OLS with cluster-robust standard errors, and two-step approaches. Econometric textbooks tell us that while random intercept and slope models are the most efficient estimator, two-step approaches offer robustness in exchange for inefficiency, and cluster-robust standard errors are situated somewhere in between. But how do these trade-offs play out in actual research settings? To address this question, we go beyond previous Monte-Car-

Talk the Talk and Walk the Walk: Analysing Changing Urban Governance Practices in response to Climate Change

As nation-states are further lowering their climate ambitions in response to the economic crises, a neo-liberal ideology of a small state, and an ecological modernisation rationale, the challenge seems to have been picked up by lower tier governments such as cities. The C40 Cities Climate Leadership group of mega cities addressing climate change is an example of this new reality. They group indicates that the cities combined have about 4700 actions directed at mitigation and adaptation. However, the question remains whether these actions have resulted in different practices within the cities’ institutional setting. This research uses a survey of the C40 cities in order to investigate the lasting impact of participation in a global network aimed at combating climate change. We use practice theory to analyse how well embedded these new practices are in the urban governance regime. We also analyse what dimensions are particularly relevant to these changing practices. The preliminary results seem to indicate cities more at the centre of the C40 network are also impacted the most in their daily governance practice. Yet the changing practices are primarily associated with spatial departments such as transport and spatial development.

GILBERT, CLAUDE** (CNRS, claude.gilbert@msh-alpes.fr)

Consequences of the Ambiguous Relationship Between State and Societal Actors in the Management of Risks and Crises

In France, public policy risk prevention and crisis management still rely on the state. A role is assigned to local authorities and civil society. But only the state appears to have the ability to prevent risks and cope with exceptional situations. More disasters are considered, more state intervention is legitimate. The representatives of the state attach importance to these powers (corresponding to the “state of emergency”).

The predominance of the state in the field of risk and crisis is however being challenged. First for economic reasons: central governments no longer have resources to support alone public policy in this area. A divorce occurred between formal challenge and actual capacity of the state (in particular during disasters).

Second, for political reasons: local authorities (in particular in the major cities) and a part of civil society (in particular firms) want to play a role in defining policies they help to finance. Third for “societal reasons”: disasters can no longer justify the interruption of democracy.

We begin to accept the idea that the state can not be the only or the main actor to manage risks and crises. Reflections on resilience are intended, including by officials, to promote the involvement of other actors in society. But politicians and administratifs want both transfer a part of their responsibilities while keeping control of risk and crisis management. There is an ambiguity that local authorities and other actors of civil society help to maintain: if they want to play a more important role, they do not want to assume state responsibilities.

The question central of this paper is to know what are the effects of this ambiguous situation in the effective management of risks and crises (especially from the example of pandemic influenza threats).

How Much Is a Dead Soldier Worth?

How much is a dead soldier worth? This paper will interrogate the monetary value ascribed to the death of soldiers in the 21st century, and the narratives of sacrifice and heroism that influence military fatalities. Rather than focus on public funerals and burial, I explore the more intimate (yet no less social) acts of valuation and compensation that are navigated by surviving relatives. Questions regarding the price of death are particularly interesting to consider as civilian compensation has become a regularized component of counterinsurgency strategy. Monetary payments have been made in the event of the ‘inadvertent’ death, injury or property damage of civilians in Iraq and Afghanistan, as a way to win the ‘hearts and minds’ of the population, and demonstrate the compassion of the international forces. How are the lives (and deaths) of civilians and soldiers of different countries valued differently, and for how much? What logics of compensation are articulated?

And does compensation in contemporary warfare reconfigure the distinctions between soldier and civilian? These questions will be considered alongside the increasing pressure to reduce deaths, of both soldiers and civilians, as a result of the targeted and remote-controlled strikes of the revolution in military affairs. As tensions regarding death in war increase, how does this impact on how lives are valued, and on our understanding of military service in contemporary warfare?

GILBERT, LEAH* (University of the Witwatersrand, leah.gilbert@wits.ac.za)

The Mercurial Piece of the HIV/AIDS Puzzle: ‘Stigma’ and HIV/AIDS in South Africa As a Social Scientist’s Challenge

‘Stigma’ and its relationship to health and disease is not a new phenomenon. However, it has not been a major feature in the public discourse until the emer-
gence of HIV/AIDS. The range of negative responses associated with the epidemic placed ‘stigma’ on the public agenda and drew attention to its complexity as a phenomenon and concept worthy of further investigation. Despite the consensus that stigma is one of the major contributors to the rapid spread of HIV and the frequent use of the term in the media and among people in the street, the exact meaning is ambiguous. Therefore, its conceptual complexity and its embodiment in the reality of HIV/AIDS in South Africa present a formidable challenge for social scientists who continue to grapple with the questions it raises.

The main aim of this presentation is to briefly re-visit some of the scholarly deliberations and further interrogate their relevance in the HIV/AIDS-related stigma evidenced in South Africa. Although it provides more nuanced understandings of the concept, most of the literature reviewed adds a level of complexity that requires further investigation and renders measuring stigma more problematic. The presentation argues that the fact that there is such an abundance of scholarly articles on the concept and its definitions is testament to the fact that they do not provide adequate explanations for the various manifestations of stigma. In addition, the explosion of studies looking at measuring stigma and reducing its impact is evidence that ‘stigma’ exists out there and continues to be a threat to the successful implementation of public health programmes.

*Social and Economic Inequality As Deviantogenic Factor*

There is no only “reason” of deviance and crime. There are many factors - economic, political, cultural, demographic and others, influencing upon state and dynamics of different forms of deviance. It is important theoretically and practically to define the specific “weight”, “power”, value of each factor in genesis of deviance and its separate types.

K. Marx, R. Merton and many others wrote about a role of an economic inequality as “reasons” of crime and others of negative (deviant) acts.

The ever-growing economic polarization of the population in Russia – is a main source of continuing social conflict. The differentiation between the incomes of the 10% least prosperous and the 10% most prosperous increased from 1:4.5 in 1991 up to 1:15 in 1999 and later up to 11:1.

Empirical researches of multiple-factor model of the reasons of deviance and crime are conducted in Russia by criminologists S. Olfk, I. Skifsky, E. Yuzikhanova. From many factors influencing crimes and suicide - extent of alcoholization, demographic structure of the population, consumption of drugs, an economic inequality, the last factor it appeared the most considerable. The Gini index (i.e., index of economic inequality) in Russia increased from 0.289 in 1992 to 0.422 in 2007. According to S. Olfk, during 1990-1999 the index was at its maximum in 1994 (0.409) and the number of homicides was at a maximum (32,300) and suicide too (61,900); the index was at its lowest in 1990 (0.218) and the number of homicides was also lowest (15,600) and suicide too (39,200).

According to research of I. Skifski (dynamics in 25 years, from 1980 to 2004), the correlation coefficient between homicides and Gini index was the highest 0.9253, between suicide and Gini index 0.8434.

The catastrophe of social and economic inequality serves in Russia as the main factor of deviant manifestations.

*Distinction and Identity in Later Life*

The cultural turn in the social sciences during the 1980s brought new prominence to sources of distinction based on the body, such as disability, gender, race and sexuality. We argue that many of the embodied practices associated with these newly privileged bodily distinctions were further developed, sustained and
extended by consumption and consumerism. Drawing attention to aspects of social identity that had been previously overlooked, the new social movements brought into central focus and ‘liberated’ what might be deemed marginalised identities. The identity politics and associated new social movements of the 1960s and 1970s however were situated in the counter-cultures of youth. In this paper we explore how the ‘ageing’ of those youth cultures has affected the contemporary experiences, narratives and performances of age and in the process brought new ways of thinking differently about ageing and the body. This ‘cultural turn’ is exemplified in contemporary research into ageing, ageing and experience, ageing and fashion, ageing and sex and more generally the performative nature of ageing. Rather than developing a transgressive ‘age liberation’ movement however, much of this embodying performativity seeks to resist the purchase of ‘agedness’ on fashion lifestyles oriented as much to not becoming old as to still being gendered, racialised, able-bodied/disabled, straight or gay throughout one’s adult life.

How Are Social Relations and Locality Connected? New Ambivalences in the Research on Migrant Families

Research on transnationalism is an attempt to avoid methodological nationalism by focusing on families and its members, which do settle at different places or move between these places. In this perspective not only national belonging becomes relativised, blurred and diminished, but local, regional and national attachments of individuals and social groups as well. Here questions of belonging arise anew for, e.g. people who live in the city of Basel (Switzerland) and Klagenfurt (Austria). The complexity of the multilevel approach is applied to different urban and political contexts in Basel, Freiburg (Germany) and Klagenfurt (Austria). The research project on life strategies of migrant families in different local, regional and national urban environments are significant social influences on determining and reifying embodied diversity of their inhabitants. In an international complementary research project on life strategies of migrant families in different local, regional and national urban contexts, the question of heterogeneity and its possibility for comparison arises. The multilevel approach is applied to different urban and political contexts in Basel (Switzerland), Freiburg (Germany) and Klagenfurt (Austria). The success of this research is challenging, because there are not only life strategies of migrant families, which will be researched and internationally compared, but also the relevance of local, regional and national influence on life strategies will be analysed. What is particularly interesting is the question concerning the sort of orientations, migrant families develop towards the location they are living in and how they are influenced by local and national factors.

By identifying and discussing the relevant contexts for multilevel analysis in our international research project, the paper will present methodological challenges of multilevel analysis research. What gives migrants a sense of belonging with others and what relevance can be given to the location where people live? Migrants and their families do often experience social interweaving relations, which are not bounded to one single national territory, but interact in a multi-local situated context. At the same time the existing boundaries of the nation-states do still influence a lot the mobility and opportunities of individuals.

The proposed paper discusses the ambivalence of social belonging and local/regional attachments under modern conditions of social fluidity and multi-local attachment in social relations. First, the paper starts with the elaboration of the theoretical background and the empirical findings of how migrants’ ambivalence of social and cultural affiliations, as well as establishing individual and collective attachments to certain places and regions of (biographical) relevance.

Deliberating Alternatives to Capital: A Critical Cosmopolitanist Approach

Critical analysis of ideological divisions in the broad Global Left, via the historical, ideational and practical roots of these differences is important, for a key reason: it can help us explain the Left’s past and present shortcomings and difficulties in creating viable coherent solutions to the multiple crises of the world capitalist system. Through such a critical historical analysis of the Left, we can explore some of the key practical and intellectual dilemmas that have caused divisions; e.g. grand debates or dilemmas such as reform vs. revolution (strategy); local/national vs. world/global (scale); ecological vs. economic (value-interest); cultural vs. political (identity); individual vs. collective (community and society).

This paper outlines the principles of a new theoretical approach to studying ‘transformative ideological visions’ and ‘regenerative social counter-currents’ that may significantly influence debate and practice around constructing new radical and democratic alternatives to existing systems of domination and hierarchy embedded in capitalist social relations. When dealing with transformative ideas and practices, a critical account of cosmopolitanism can be employed in two ways: (1) as a critical analytical framework, that helps us examine alternative ideologies to the social relations of capital, in terms of their capacity to create historical ‘moments and conditions’ for other alternatives to flourish; and (2) as a normative framework, that can facilitate belonging and identification between rival transformative practices and political agendas. Such a critical account of cosmopolitanism requires a ‘dialectical mode of criticism’ that needs to be self-reflexively applied to our understanding of the cosmopolitan and its history. Nascent elements of such a cosmopolitanism already exist among some synthetic contemporary radical ideologies, such as eco-feminism and radical economic democracy, as well as some forces amongst the global justice movements, including within the World Social Forum, the Occupy movements, and in the recent anti-austerity social movements and popular uprisings.

GILSON, STEPHEN* (University of Maine, stephen.gilson@umit. maine.edu)

Design, Undesign and Redesign: Eliminating Embodied Inequality

Over the past several decades, design and branding efforts for social justice and democracy have exponentially increased. Designers have apprehended and applied market strategies to create products and images to change the world. However, to date, design and branding have not been analyzed to understand and reassign their power in creating, labeling, and affixing differential worth to bodies that are disenfranchised because they are atypical, unruly alters. This vacuum has created a huge gap in intellectual development and guidance necessary to harness design and image to challenge and diminish social inequities that have prevented local through global social acceptance for the full range of bodies. In this presentation, we argue, and illustrate through a targeted analysis of embodied design, its epistemic and axiological foundations and its praxis that design and branding are tacit yet powerful influences on the creation, labeling, and affixing differential worth to our understanding of the Left, via the historical, ideational and practical roots of these differences is important, for a key reason: it can help us explain the Left’s past and present shortcomings and difficulties in creating viable coherent solutions to the multiple crises of the world capitalist system. Through such a critical historical analysis of the Left, we can explore some of the key practical and intellectual dilemmas that have caused divisions; e.g. grand debates or dilemmas such as reform vs. revolution (strategy); local/national vs. world/global (scale); ecological vs. economic (value-interest); cultural vs. political (identity); individual vs. collective (community and society).

This paper outlines the principles of a new theoretical approach to studying ‘transformative ideological visions’ and ‘regenerative social counter-currents’ that may significantly influence debate and practice around constructing new radical and democratic alternatives to existing systems of domination and hierarchy embedded in capitalist social relations. MIGENES DIAS DA FONSECA, LÍVIA* (Universidade de Brasília, liviadgd@gmail.com)

Towards a Democratic and Emancipatory University: Feminist Popular Extension and New Relations Between University and Society in Brazil

Popular Extension is a key element for comprehending the relationship between society and universities in Latin America. By making possible a close col-
laboration between universities and social movements, Popular Extension is a valuable tool for pursuing the construction of a contextualized university capable of opening its walls to the social reality that surrounds it. However, little has been researched regarding the outcomes of this practice building a real alternative to the hegemonic models of university and rationality. Recognizing the centrality of Popular Extension for universities and community development practice in Latin America, the paper looks upon the experience of the Popular Extension Project “Popular Legal Promoters” on coping with gender based violence in the outskirts of Brasilia, Brazil. Established jointly by feminist movements, the University of Brasilia and the Brazilian Public Minister, the project is based on a freirean approach to popular education on human rights focused on the formation of community leaders able to engage themselves on tackling gender based violence within their communities. By resorting to collected data regarding the project implementation and outcomes, we argue that Popular Extension Projects can be an important tool not only for coping with social issues, such as gender violence, but can also be the founding point for the emergence of an emancipatory and democratic University, marked by a production and circulation of knowledge where the surrounding community becomes an active agent of this process and a constitutive element of University itself, which assumes a more contextualized role as an important stakeholder on participatory development practices.

GIORGINO, VINCENZO* (University of Torino, vincenzo.giorgino@unito.it)
The Contemplative Turn in Sociological Imagination

In my presentation I will address some epistemological and theoretical aspects related to the integration between sociological and contemplative methods. The latter are social practices originating from the wisdom traditions of human culture, mainly parapsychic and spiritual backgrounds. Their recent contextualization (going back to the 70s) enables non-experts to achieve specific knowledge. The most successful attempt in this translation is currently found in the so called mindfulness programs, oriented to integrate the biomedical approach and nurturing the subject of the so called integrative or behavioural medicine; it has also recently increased in psychological therapy. Through the 80s and 90s they constituted a growing bulk of research, recently testified by the birth of the scientific journal Mindfulness, not to mention its growing influence in education and management, especially in the literature about learning organizations. My aim is to focus on the conceptual backland in which such kinds of integrative programs can be developed in social sciences, outlining some implications for transformative sociology as well. The core discussion is focused on the re-definition of experience, self and action, taking into account an established tradition of first-person inquiry and narrative research.

From my point of view, the attempt to set up such an integration calls for an enactive approach: via introducing an embodied and interactional perspective, it challenges the dominant representational model of knowledge. In this direction, it could also be of help in broadening and reshaping what we intend by change, contributing to a pragmatic “social transformation from within” and alleviating social suffering.

In my intention, this transdisciplinary effort aims to help at disentangling some crucial sociological concerns and contributes to an experiential, post-constructivist vision of openness, responsibility, and redistribution mechanisms. What means working time capitalization for the every day life?

RCY, FRÉDÉRIC* (CNRS-CNAM, frederic.rey@yahoo.fr)
Comparing Employment Policies in a Globalising World: New Challenges and New Methods

Globalisation is an overwhelming phenomenon that transforms individual identities and social affiliations as well as it destabilizes the three basic policy-making functions traditionally associated with the nation and the nation-state: public problem formulation, public problem solution and the definition of citizenship status. In this context, a form of social inclusion and political participation as well as a key symbolic resource (Giraud, 2005). As such, globalisation undermines the validity of the basic assumptions of the comparative method as we have known it so far.

In the paper, we will elaborate on three complementary methodological solutions to address the formulated dilemmas, and will test and discuss them in the case of self-entrepreneurship as an unemployment policy in two countries: France and Brazil. In the first place, we will consider the comparative method in terms of most different cases (for example: Gerring, 2007, Tarrow, 2010). By confronting the basic characteristics of the object to be compared in very contrasted national contexts, this methodology sheds new light on the functions of the object of comparison as well as it reveals its boundaries and its significance. Second, we will focus on the scalar dimension of the policy under scrutiny, i.e. on the logics of power relations at the various relevant policy levels and on the vertical bounds linking the various policy scales (Scapera 2009, Anderson, Ostrom 2008, Mahen, 2006). Finally, the focus on the transnational character of comparison shows a third dimension of the objects to be compared (Walby 2005, Dobbin, Simmons, Garrett, 2007, Hassenteufel 2005, Kettunen, Petersen, 2011, Gilardi, 2010, 2011). It demonstrates the exchanges and mutual influences between cases as well as the way specific cases integrate supranational or global recommendations, such as the ones formulated by the OECD or the ILO in the case of self-entrepreneurship as an unemployment policy.

IGNOU- Paradigm Shift for Higher Education in India

India’s higher education system is largest in terms of number of institutions and third largest in terms of enrollment next to China and United States. Total approximate number of institutions imparting higher education in India is 26,000 whereas it stands at 6,706 in USA and 4,000 in China.

Despite massive expansion, there is mismatch between the demand and supply of higher educational institution in India. Gross Enrollment Ratio (GER) for higher education in the country is very low at 16.23 per cent as compared to the world average at 27.06 per cent.

Open distance learning is one of such strategy which aims at universalization of higher education, to address the barriers of higher education.

IGNOU- Indira Gandhi National Open

The Indira Gandhi National Open University (IGNOU) established by an Act of Parliament in 1985, has continuously striven to build an inclusive knowledge society through inclusive education. The mandate of the University is:

• Adopting a variety of media and latest technology.
• Provide access to higher education
• Offer high-quality, innovative and need-based programmes
• Reach out to the disadvantaged by offering programmes at affordable costs
• Promote, coordinate and regulate the standards of education

IGNOU, the National Resource Centre for Open and Distance Learning, with international recognition and presence, provide seamless access to sustainable and learner-centric quality education, skill upgradation and training by using innovative technologies and methodologies and ensuring convergence of existing systems for large-scale human resource development.

IGNOU has been conferred with awards of excellence by Commonwealth of Learning (COL), Canada, several times. Recently, it was listed 12th in the webometric ranking of Indian Universities, based on the caliber of its presence on the Internet.

The University is committed to quality in teaching, research and extension activities through ODL system.

An Inter-Cohort Comparison of Intra-Cohort Social Stratification: How Do Cumulative Dis/Advantages Evolve Across Cohorts?

The aim of our paper is to analyze trajectories in hourly wages between the ages of 30 and 50 for five different birth cohorts, using the PSID data. More precisely, we focus on processes of intra-cohort stratification by tracing patterns of income as individuals age. Our analysis is informed by the cumulative dis/advantage hypothesis as process of intra-cohort stratification. Using growth curve models, we seek to describe and explain the patterns of income stratification within and between cohorts. We hypothesize two key patterns: Simple interindividual divergence and path-dependent interindividual divergences. Simple interindividual divergence is indicated when the relation between initial hourly wage and its slope over time is positive (in contrast to convergence, where this relation is negative, and stability, where there is no relation between initial hourly wage and its slope over time). Path-dependent interindividual divergence is indicated when hourly wage differences between men and women, or between whites and non-whites, increase as individuals age. Our analyses will reveal if the patterns of wage divergence over the life course are constant across cohorts, or whether the extent and form of wage divergence is shifting over time.

The Impacts of Brazil and India’s Development Dialog on Poverty Alleviation Policies: Knowledge Sharing and South-South Cooperation

Since the beginning of the 1990ies a South American approach to Conditional Cash Transfers policies for poverty alleviation has been in development. Although widespread throughout the continent two main exceptions can be singled out as most significant for their characteristics, range and influence: the Mexican Oportunidades and the Brazilian Bolsa Familia. Poverty rates have declined in Latin America during the last decade and in the Brazilian case the most intense fall is concurrent with implementation of the national CCT program.

Due to the results of these policies the corresponding research focused on the continent and is currently encouraged and financed by the World Bank to alleviate poverty and brake it's generational cycle. The spread of this model of poverty is currently encouraged and financed by the World Bank to alleviate poverty concurrent with implementation of the national CCT program.

The analysis of field studies illustrates not only that nannies use their labor force to fill the local care deficits, but also helps to gain new insights into the care and work, realities of their employers: from a nanny's perspective.

How Do Cumulative Dis/Advantages Evolve Across Cohorts?

This presentation focuses on migrant nannies working in two European countries: France and Germany. The main interest of this comparative analysis is to evaluate social policies of these two nation states through biographical research with migrant care workers who take care of small children in private households on a regular basis. This is a crucial task as nowadays the industrialized countries are highly interested in finding adequate solutions to their increasing care-deficit. European countries like France and Germany are structurally close and face similar problems such as demographic aging and the pluralization of life and work forms. However, their efforts to guarantee the production of human beings themselves in a globalised and capitalised world differ remarkably. At this juncture, migrant care workers are important key actors, because they represent a significant resource. Therefore it will be interesting to analyze how dimensions of class, but also how national belonging and race are reflected in the relation to local families. The analysis of field studies illustrates not only that nannies use their labor force to fill the local care deficits, but also helps to gain new insights into the care and work, realities of their employers: from a nanny's perspective.

Photography and Society: Lessons from Susan Sontag

In recent years, scholars have often criticized the exclusion of art works in current sociological explorations of the arts. In contrast to classic approaches, foremost of which are those of Georg Simmel, which placed interest on the relationship between a particular art work and society, more recent approaches have primarily focused on art as a social universe, called “art world,” or considered it as a specific social “field” or “system.” Although these perspectives typically involve theoretical concepts applicable to art works, based on exemplary discussions, the main interest is in systematic theoretical questions or institutional aspects of artistic production rather than particular art works and their social significance.

This paper discusses Susan Sontag’s approach to art works and her view on the possibility of gaining knowledge on the social world by analyzing art works. Sontag’s approach is particularly interesting as on the one hand, she was highly skeptical of attempts to diagnose contemporary culture and to discuss the social history of “ideas” through art works. On the other hand, particularly in her preoccupation with photography, she offers sociologically illuminating insights on the way photography is historically related to exemplary discussions, the main interest is in systematic theoretical questions or institutional aspects of artistic production rather than particular art works and their social significance.

The author investigates the extent to which sociological theories of global integration, including political economic, military, and world polity theoretical orientations, help explain different countries’ carbon intensity of well-being. The carbon intensity of well-being approach provides a way to measure a country's progress toward simultaneous environmental and social sustainability by asking how energy (or ecologically) intensely (or efficiently) a nation-state is producing well-being for its citizens. This research utilizes statistically rigorous longitudinal modeling techniques, addresses core sociological issues of inequality, human well-being, and development, and explores questions of sustainability and energy use key to environmental sociology. This is a burgeoning area of research and yet looking at the effects of political economic, military, and world society integration is relatively unexplored in the sociological literature. Results indicate that varying forms of integration have an impact on states’ abilities to provide environmental protections and well-being for citizens, and therefore unequal levels and various types of global integration are important to consider in environmental and development planning.

Migrant Nannies In French and German Households – Insights From A Care Worker’s Point Of View

This article presents the results of a research done in Brazil and India asking what can be learnt from these south-south development dialogues, it exposes the challenges and opportunities as well as the different approaches that each society gives to the same set of policies as well as the discourses about poverty and development.

Questioning Development: Global Integration and the Ecological Efficiency of Well-Being

The author investigates the extent to which sociological theories of global integration, including political economic, military, and world polity theoretical orientations, help explain different countries’ carbon intensity of well-being. The carbon intensity of well-being approach provides a way to measure a country's progress toward simultaneous environmental and social sustainability by asking how energy (or ecologically) intensely (or efficiently) a nation-state is producing well-being for its citizens. This research utilizes statistically rigorous longitudinal modeling techniques, addresses core sociological issues of inequality, human well-being, and development, and explores questions of sustainability and energy use key to environmental sociology. This is a burgeoning area of research and yet looking at the effects of political economic, military, and world society integration is relatively unexplored in the sociological literature. Results indicate that varying forms of integration have an impact on states’ abilities to provide environmental protections and well-being for citizens, and therefore unequal levels and various types of global integration are important to consider in environmental and development planning.
The study on value orientations in Russia has been conducted from the middle of the 1960s. When the theoretical works by a psychologist B. G. Anan’ev, sociologists A. G. Zdravomyslov, V. A. Ladov and others appeared, as well as empirical studies. The biggest one was the sociological and social-psychological study on workers’ value orientations (including young people), carried out by Leningrad scientists under the direction of V. A. Ladov [1] in the beginning of the 1970s. During the Soviet time the study on youth value orientations to a considerable degree was directed toward the revelation of their accordance with the communist ideal, to the socialist lifestyle [2]. At the period of the Perestroika (1985–1991) the problem field was noticeably extended due to the studies on the informal youth associations (actually it was the way to the switch to study on the youth subcultures). Finally, during the last 15 years value orientations of the Russian youth have been investigated by considerable number of individual scholars and scientific groups. The situation of social order change and “re-comprehension of values” on the national scale has encouraged the scientists to interpret the transformation of value orientations of the Russians. The extensive study on dynamics of the value orientations of the Russians that was conducted under the direction of N. I. Lapin [3] is of a great scientific significance. There have been dozens of empirical studies carried out in Russia for the last 15 years, several hundreds theses defended on the problem of the youth value orientation [4]. Although quite often the scopes of such studies, their methodical correctness and opportunities for the data comparison remain to be a subject of criticism.

Can ‘Religion’ Provide a Response to Today’s Climate Challenges?

The very recent report published by the United Nations confirms unsurprisingly that around ninety five per cent of the current climate issues are man-made. This illustrates more than ever the significance of various dimensions of people’s everyday life, such as policy, religion and education that influence their practice of environment.

Environmental concerns are growing in Iran. Some of them are related to increasing dryness of rivers (such as Zayandeh-rood) and lakes (such as Urmieh and Hamoun) and expansion of sandstorms even to the mountainous area of north-west Iran. Having said this, intense air pollution in Tehran and other large cities is probably the most urgent concern. The main reasons for the pollution are: population growth, rural-urban migration, the poor quality fuels used by mostly old cars on the road, and industry – mainly due to the economic sanctions and the geographical location of cities – and, more importantly, a lack of awareness of the environment and of a positive attitude towards it.

Islamic government policies that have been used to deal with at least some of these concerns have not always been systematic. The Islamic government’s disregard for the environment is also reflected in the state education system. Education in general, and in particular religious education, do very little to deal with these concerns.

It is expected that ‘Islam’ informs policy, state-provided education, people’s attitudes and practices towards sustainability in Iran. This paper concludes that this is not the case and aims to provide an explanation for this. Is ‘Islam’ really incapable of tackling climate challenges in the context of Iran? A social constructionist approach of ‘Islam’ will be presented.

The ‘Inter-Vey’. Towards the Conversational Survey

For decades, the dilemma between open-ended and closed-ended response alternatives occupied the methodological debate. Over the years, dominant approaches in survey have reacted to this dilemma by opting for fixed response alternatives and the standardization of interviewer’s behavior. These principles have been recently blended in an innovative technique for collecting survey data, which has been named “inter-vey” (Gobo and Mauceri 2014), making an “interviewee-centered” survey. These principles have been recently blended in an innovative technique for collecting survey data, which has been named “inter-vey” (Gobo and Mauceri 2014), blending in-depth and survey interview (or unstructured & structured interview). “Inter-vey” is based on the idea of the “conversationalizing survey” (Schober and Blending, 2006). These principles make the interview into a conversation, let the interviewee answer desirability effects, the yea-saying and response set phenomena, etc.. If this methodological approaches in survey have reacted to this dilemma by opting for fixed response alternatives and the standardization of interviewer’s behavior. If this methodological approaches in survey have reacted to this dilemma by opting for fixed response alternatives and the standardization of interviewer’s behavior. If this methodological approaches in survey have reacted to this dilemma by opting for fixed response alternatives and the standardization of interviewer’s behavior. If this methodological approaches in survey have reacted to this dilemma by opting for fixed response alternatives and the standardization of interviewer’s behavior. If this methodological approaches in survey have reacted to this dilemma by opting for fixed response alternatives and the standardization of interviewer’s behavior. If this methodological approaches in survey have reacted to this dilemma by opting for fixed response alternatives and the standardization of interviewer’s behavior.

An experimentation (and a procedural example) of this technique will be presented.
items have begun to threaten residential environment there. The increase in housing vacancies, which is closely connected to a lack of security, sustainability, and human bonds among residents in a community, is one example.

This study aims to examine local responses to the increasing number of vacant houses in suburbs. We pay attention to the influence of local regulations on vacant housing; several local governments, including that of Ushiku City, have enacted regulations to promote appropriate maintenance of vacant houses since the late 2000s. Then, we discuss institutional structures that have caused the problem. We also identify the generative process of housing vacancies in the Tokyo suburbs, and we examine the results of field surveys of several old housing estates in Ushiku City, Ibaraki Prefecture. Based on interview surveys of residents, we clarify the mechanism that produces housing vacancies there. We conclude by examining the attitudes of local communities toward vacancy problems.

GOERING, JOHN* (City University of New York, john.goering@baruch.cuny.edu)
Sequestering Public Housing Policy and Research

Sequestering the Poor: Budget reductions and housing policy change in the US and UK

Public housing in the United States has had a long history of both being pressured for financial solvency as well as for redressing the racial and poverty concentration of its residents. In 2013, a fiscal cut-back of substantial size occurred as the budget “sequester” took effect. In New York, for example, the loss of funding amounted to over $200 million for the year (Chaban; Dawsey). Politically analogous budget cuts have also occurred in Britain as the Conservative government has pursued fiscal restraints over the social rental sector.

This paper will examine the intersection of the various formats of the US-UK fiscal crisis and its impacts on housing policy and related national housing research. A series of major housing research experiments have been recently launched in the US to learn how to better manage with less, while the ground rules of fiscal support for most forms of welfare policies are being eroded. My presentation will be upon the choices and tensions as these policy experiments are developed, in the context of on-going reductions in support for the poor.

Intergenerational Reciprocity – the Idealization of the Interchangeability of Phases of Life

Among the prominent concepts used for the sociological description of intergenerational relations is the one of reciprocity. Adopted from predecessors in cultural anthropology, the term was coined by thinkers like Gouldest in the perspective of exchange theory, thereby ignoring other traditions of thought. In the course of time, analyzing intergenerational relationships in terms of exchange theory got confronted with growing problems. It became clear that the “goods” exchanged between generations are not equivalent, that this exchange extends over enormous spans of time, and that donors often are not rewarded by the original recipients. Theorists reacted by introducing additional elements: the double-pole relation was extended to a three-pole relation, time was neutralized in the idea of generalized reciprocity, and models were assembled that allowed the translation of actually incomensurable goods like money, affection, or care. Thus, the initially attractively simple conception became pretty complex and confusing.

Drawing from the phenomenological school of thought, the presentation aims at breaking through to the dimension of reciprocity that lies “behind” its behavioral occurrence. Reciprocity as an action generally rests on the cognitive asumption of reciprocity, as described by Alfred Schutz in the so-called general thesis of the reciprocity of perspectives. Applying this fundamental figure of human understanding to the case of intergenerational relations, the idealization of the interchangeability of phases of life is being introduced. This figure of thought allows for an account of the interaction between Young and Old which avoids the incompatibilities that exchange theory has ravelled into.

GOETTLLICH, ANDREAS* (University of Konstanz, andreas.goettlich@uni-konstanz.de)
Waiting – an Often Neglected Social Phenomenon

Synchronicity or rather asynchronicity are among the most important research topics of the sociology of time, since the successful synchronization of the diverging time spheres of individuals and systems is a precondition for the effective functioning of society. And yet, as we all know at first hand, failed processes of synchronization are a daily occurrence. One of their most prominent results is waiting, one defined by Thomas Luckmann as the correlate of “the incongruence of the various temporal dimensions”. In the same breath he deplored the vast ignorance displayed by scientific research concerning “this significant phenomenon”.

Pretty exactly 40 years after Luckmann’s statement, the scientific literature on the topic has expanded, but nevertheless waiting still presents a challenge for sociological theory. Is it to be described as action or rather as inaction? Are processes of waiting to be conceived exclusively as the outcome of unsuccessful synchronization or are they a constitutive part of the procedure of synchronization itself? Is waiting socially dysfunctional or functional?

Considering the existing literature on the phenomenon the presentation does not intend to give answers to these questions, but rather aims at unfolding the spectrum of aspects that have to be taken into account when answering is attempted. It reflects the fundamental difference between “long” and “short” waiting as well as various framing conditions of waiting. Specific attention is given to the aspect of interculturality, thereby criticizing the conception of the so-called FIPS-rule (first in, first served) which plays a big role in studies on waiting lines.

GOFFI, EMMANUEL* (Paris Institute of Political Studies, emmanuel.goffi@intradef.gouv.fr)
Dying or Living: A Moral Dilemma for Ethical Warriors

Western countries have developed a romantic vision of soldier’s relation to death. In France, the so-called “acceptance of supreme sacrifice” is deeply rooted in both warfare ancient history and the over promotion of physical courage. Dying for France’s higher interest is considered as the core of military identity. This heroism has been reinforced by the professionalization of French forces in 1954 which initiated a professional/client relationship between service members and citizens.

With the development of modern remotely controlled weaponry, relation to lethal risks is changing raising concerns among the military about soldiers’ identities. If supreme sacrifice remains a holy concept hardly disputable, concerns are growing due to the gap between the idealized holistic way of thinking sacrifice within the military and the common reluctance to warfare casualties of individualistic western societies. The French military is experiencing a clash between the promotion of altruistic death and the promotion of egoistic life, both within and outside the forces.

Debates about the future of the French forces always focus on how to adapt the current format of the military to the new expectations and constraints it faces. I would suggest that this is the wrong way to deal with these issues. I would suggest instead that we should re-think the way we consider the military in regard to our current objectives and constraints, and not according to outdated concepts.

The proposed presentation thus aims at re-thinking the French pro patria mori to the light of the current framework in which the French military is used, getting rid of the weight of history and re-assessing our relation to death in warfare. My reflections will be supported by philosophical and sociological considerations about physical courage and the need to get rid of the idea that courage is intrinsically linked to combat.

GOGA, SAFIYYA* (Human Sciences Research Council (HSRC), gogasaf@gmail.com)
Fashioning Religious Selves: Middle Class Muslim Women in Post-Apartheid South Africa

Almost twenty years after the inauguration of a democratic dispensation, South Africa remains caught up in the paradoxical efforts of nation-building. To produce unity out of a racially fractured past, the language of “social cohesion”, “diversity and celebration of cultural heritage” (exemplified in the setting aside of Heritage Day) is large on the Government’s agenda. Yet signs of the failure of the “rainbow nation” (and hence of the multicultural project) seem ubiquitous – growing socioeconomic inequalities, rampant government corruption, social unrest and discontent among the poor, as well as arguably unchanging or hardening of racial mistrust and racial separateness. That forms of cultural and religious authenticity arise and are ever more strongly asserted within this climate makes it crucial to ask what they might mean: more specifically for this paper, what does being middle class and Muslim in post-apartheid South Africa mean?

This paper provides some insights into the questions around nationhood and religious subjectivities through an analysis of the historical situatedness of middle class Indian Muslims in South Africa. Some preliminary thoughts will be provided on the ways in which discourses and practices around clothing and ‘proper’ dress among middle class Indian Muslim women in South Africa construct ways of understanding and placing the self within and/or outside the boundaries of nation and nationhood. Using a combination of literatures – an extensive global literature on Muslim women and dress/fashion, the literature on Muslims and Indians in South Africa – I will explore how the expression of religious group belonging...
through the visibility of the clothed body – relying on connections between the local and the global – ultimately comes to shape the local landscape.

Consideration and Meaningfulness of the Educational Scientific Research: The Explicit or Implicit Concealment of Social Class

The present paper is concerned both with the limits and dynamics of research tools in the specification of theory, in data categorization and in the final representation of the educational incidents or situations schematization and meaningfulness. In particular, the issue of investigation is how meaningfulness is rendered, through the single-side focus on the variable of gender or nationality, to a uniform society which is typically or atypically conceptualized as a homogeneous collectivity, partially differentiated in terms either of gender or nationality.

Social inequality, differentiations in economic, educational and cultural capital elevated through the categorization of individuals in the various social classes was concealed by the argumentation about the in-depth study with focus on one of these variables. There is a thorough analysis of the system which, as the dominant scientific paradigm, was gradually promoted in the capitalist, liberal structures as a model of blunting social inequalities by the projection of new collectivity schemes such as social stratification. The latter actually substituted social class by eliminating the concept of social inequality, different educational opportunities and the individuals’ different present and future based on their social class.

The exemplary implementations depict how non-reference to social class was conducive to an enfeebled theoretical approach, because social consideration, the actual social situation and the social class reproduction model were not elevated, in which the variables of gender and nationality should be co-examined by co-formulating the issue of study within the expanded schema of social class.

Within a mature phase of post consideration, the restoration of social class in the educational research and in education is suggested, being conducive to the promotion of the policy of rights, especially during an economic crisis period.

Social Movements and Protests in Brazil in 2013: What's New?

Social movements and protests in Brazil in 2013: what’s new?

The paper analyzes the new cycle of demonstrations that have taken place in Brazil from June 2013, which took about one and a half million people to the streets and earned international media headlines. The text examines three relevant moments: June 2013-July 2013 and September 2013. It examines three questions: First: who are the actors who make up the demonstrations, which the movements, organizations and social collectives in action; what are your proposals and differences, what is the role of young people and the use of media and social technologies. In the second block: what are the main practices, which like feature rich social of cooperation and of political confrontation; what are the social impacts and innovations produced in society and political institutions. Third block: what the character and sense of the demonstrations, what’s the point of the ongoing democratic process, what are the main ideologies present, which social theories that have been used to explain them, as these are dovetailed with similar demonstrations at the international level.

Different Cultures - One Mandate: Integration of Military and Civilian Personnel within Defence Organizations

Most defence organizations are comprised of both military and civilian personnel working in partnership with each other towards the realization of defence goals. Civilian personnel (i.e., civil servants) in defence organizations often work closely with their military counterparts (e.g., in headquarters, on bases, on missions, in academic settings). Although the issue of civilian-military personnel collaboration within defence organizations has not historically been explicitly considered in the context of collaborative work arrangements, it is indeed an important issue that affects both operational and organizational effectiveness. This paper presents an overview of related international initiatives to examine collaboration between military and civilian personnel across defence organizations, including a Nato Human Factors and Medicine Research Task Group (HFM RTG-226) and a cross-national survey initiative. Further, results from the Canadian Defence Team Survey will be presented. Civilian personnel in the Department of National Defence (ND) and military personnel in the Canadian Armed Forces (CAF), referred to as the Defence Team, work in partnership to meet the mandate of the CAF/DND. Together, personnel in this integrated represent a unique group dynamic allowing the DND/CAF to draw upon the expertise of military personnel who have specialized skills and knowledge that may have been lost and operational functioning, as well as upon civilian personnel trained in a variety of occupations and possessing a range of knowledge and expertise. The Defence Team Survey, presenting the results of 644 Regular Force military members and 1,149 DND personnel, was designed to examine unique issues central to the partnership between civilian and military personnel. Recommendations will be provided for developing strategies and practices for enhancing the quality of collaboration between military and civilian personnel working within defence organizations.

Oh, Didn't Anyone Tell You? the Importance of Intra-Organizational Information Sharing in Defence Organizations

Organizational justice, or the extent to which people perceive organizational procedures as being fair and equitable, is a fundamental organizational value that determines how people behave within organizations. The study of organizational justice has been shown to impact on personnel outcomes, such as job satisfaction and commitment, and ultimately to impact organizational outcomes such as performance and retention. In the study to be reported here, based on survey data from 6,503 Canadian Armed Forces (CAF) personnel, analyses were conducted to determine members’ perceptions of informational justice within the CAF, and the role of informational justice on key outcomes of interest. Results indicated that informational justice was indeed highly related to a range of important factors, including overall perceptions of organizational justice, organizational and unit leadership, career management in the CAF, trust in the CAF, and employee psychological withdrawal. Moreover, mediation analyses indicated that military personnel’s perceptions of informational justice were related to outcomes such as commitment and leave intentions even after controlling for other key variables such as perceptions of overall justice and satisfaction with leadership, further emphasizing the importance of informational justice. Implications for information sharing within military organizations are discussed.

Fertility Stall and Social-Demographic Risks Of Humanitarian Disasters In Tropical Africa, and Means Of Their Prevention

The recent decade has witnessed remarkable success in various aspects of socioeconomic development in Tropical Africa. However, contrary to the “development is the best contraceptive” expectations, fertility in many countries remained stable, frequently at very high levels of 5 and more children per woman. We investigate possible patterns underlying African resistance “pro-natalism” to reveal that some of the best-recognized fertility-inhibiting aspects of development, such as female primary education and female labor participation, are far less efficient for accelerating the fertility transition in Africa than they were in the rest of the developing world. This sharpens the necessity of urgent introduction of effective measures of accelerating the fertility decline, as otherwise the rocketing population numbers will result in burgeoning youth cohorts, tremendous pressure in rural areas, hyper-urbanization, and greater risks of political violence and humanitarian catastrophes. Our analysis shows the most effective ways of accelerating the fertility transition in Tropical Africa to be the introduction of universal primary education and the particular attention to enrollment of women in their 20s and early 30s accompanied by re-introducing family planning campaigns as a development priority.
Why the Arab Revolutions of 2011 Are True Revolutions: Implications and Prognosis

When they began, there was hope that the Arab Revolutions of 2011 would be like the peaceful “velvet” or “color” revolutions in the USSR and Eastern Europe in 1989, as in Ukraine in 2004. Instead, with the possible exception of Tunisia, they have turned out to be more like true, classic revolutions with civil wars, counter-revolutions, high levels of violence, and extended periods of turmoil and sudden shifts in government. There are a number of reasons for this difference, including (1) the greater youth of populations in the Arab revolutions; (2) the role of ideological contenders for power – Islamists alongside the secular liberal revolutionaries; (3) the major interventions of outside powers; and (4) greater internal regional, ethnic and tribal divisions.

Climate Change and Coastal Adaptation: Planting the Seed for Adaptive Governance in Portugal

The most recent IPCC report confirms that climate change is very likely to increase coastal risks. This means that all vulnerable coasts will be required to adopt innovative adaptation strategies. In countries such as Portugal, economic austerity may result in reduced funds for rising coastal defence expenditures. Therefore coastal management will have to confront a geomorphological and social process of creative and progressive adaptive governance if future economies and societies are to remain viable and resilient.

Social scientists will be heavily involved in this challenging prospect. This was the experience of a three-year research - CHANGE - Changing Coasts, Changing Climate, Changing Communities (2010-2013). The project used climate scenarios for the coming decades to promote a meaningful dialogue between a range of interested parties and coastal managers regarding possible planning and financing options in three different coastal locations in Portugal.

The research identified a high awareness across the stakeholder spectrum of coastal risks and climate change. But it also discovered a dominant feeling of hopelessness towards future solutions for coastal protection and funding. Furthermore, all previous attempts by coastal managers to engage stakeholders are widely perceived to be failures.

These critical gaps in processes, action and communication have been analysed in a set of interactive workshops. Representatives from regional government and municipalities, private companies, universities, fishermen, among others, met together to discuss science and communication; social and economic impacts; public participation; financing and adaptation solutions.

The presence of the team, coupled a detailed public opinion survey at each location, demonstrably raised awareness on coastal change and sowed the seeds for creating an inclusive coastal forum, engaging local stakeholders in the mission of spreading the adaptation message. The research paper will sum up the results of the CHANGE process, aiming to offer a contribution towards new models of adaptive coastal governance.

Brain Drain and Academic Mobility

Emigration of high-skilled professionals from less developed countries to developed countries leaves the sending countries economies with a reduced supply of skilled people. The resulting brain drain would limit the use of educational investment in the sending countries, creating conditions for their re-use by the more developed countries. Skilled emigration has been assessed according to two contrasting models: the model of the exodus that stresses the idea that more skilled individuals are forced to the exile, allowing them to get a job and a remuneration corresponding to their training; the model of the Diaspora that stresses the mutual benefits of intercultural exchanges opened by the circulation of cosmopolitan elites.

This research aims to test the comprehensive power of each of these theses referencing to the mobility of highly qualified Portuguese professionals to Europe in the last decade. Portugal is one of the European countries where the drain is most accentuated in the last couple of years, according to the way that leads to insert primary or secondary segments of the employment system of the receiving European countries.

The Entrepreneurial University: Institutional, Political and Social Factors

The mission of the public research university is to advance excellence in research, scholarship and creative activities. Within the increasing cutbacks in government spending on science, the university should acquire a greater degree of flexibility to be more prepared to respond to the needs of a knowledge-based society. It means the greater significance to the ways in which the production of scientific knowledge and the technology transfer are organized. We think that the political sociology of science approach can be adequately applied to study the institutional matrix of the entrepreneurial sector of the public research university. We suggest that intertwining of the institutional, political and social factors gives us an opportunity to build a good explanatory model of the development of the research sector of the university. Political factors cover the state policies, programs and initiatives to engage in and support the technology transfer. Institutional factors cover direct steps undertaken by the university officials to guarantee the conditions that are necessary for innovation. Social factors are divided into two main categories: sociology of innovation and sociology of socialization. The paper presents a diachronic study (from late 19th century to the present) of how changing political contexts influenced the prestige of languages in question and their use in interethnic communication at different periods of time. The focus is on individual sociolinguistic perception that comes from the memories collected. At the same time, the analysis takes into account that personal memories are obviously prompted by later political and social events, and sociolinguistic and political boundaries make a projection on a personal language map. In conclusion, at attempt has been made to link socio-political changes to the degree of language endangerment.

Since at least the 1990s, representatives from several Ecuadorian indigenous communities have sought to obtain redress for an environmental disaster attributed to a consortium of oil concessionaires that operated in the Lago Agrio oil field of the Ecuadorian Amazon between 1964 and 1990. The alleged harm includes an unprecedented environmental degradation, and all sorts of health-related injuries to the inhabitants of those communities. The legal battle comprises a complex web of court, arbitration -both investment and commercial- and administrative proceedings in Ecuador, the US —where more than twenty courts and several administrative agencies are involved. Legal remedies have also been pursued in other countries. The centerpiece of this gargantuan battle, however, is an $18.2 billion judgment issued by an Ecuadorian court in early 2011 against Chevron. This judgment is the largest and most complex award rendered against a multinational oil company in Ecuador, and perhaps in the entire region. The Chevron saga has rekindled an interesting debate on the development of mechanisms for the protection of diffuse rights involving the environment, indigenous peoples, and human rights in general; the role of the courts in supervising compliance with judicial remedies, and their engagement in activities that go beyond their traditional role as simple adjudicators; and the role of privately-formed entities in the administration and supervision of monetary awards. My presentation will address these issues insofar they contribute to help understanding the current landscape of environmental and indigenous rights litigation in Latin America, and the interplay between the social, economic, and political factors in the development of large-scale litigation.

GONOUYA, ROBERT* (RC34 Member, r.gonouya@londonmet.ac.uk)

Double Troubled-Young People Struggling to Cope with the Conjoined Status of Neet-Youth Homelessness in Times of Austerity

Despite the established body of work in sociology illustrating the diversity of youth experiences, there are gaps in understanding the challenges faced by young people whose lives are framed by the duality of NEET-Youth homelessness, particularly in times of economic austerity. As such, the NEET youth homelessness conceptual framework developed in the mixed method study conducted in Essex, Kent and London and reported here, allows for a particular and more nuanced understanding of the nature of this onerous status, including the coping strategies and or tactics of those affected. This encompasses associated aspects such as their attitudes to work, the welfare state, family and training.

One of the central tenets of the NEET-youth homelessness framework presented herein is that irrespective of the importance of micro- level factors and personal preferences in shaping young people’s lives, individual situations can only be fully understood by drawing on perspectives which also recognise the impact of broader social change and its role in structuring opportunities and choices available to young people (Russell, et al., 2011).

Importantly, the NEET-Youth homelessness conceptual framework introduced in this paper, marks a shift from the hitherto, dominant ‘silos approach’ to understanding both NEETism and youth homelessness separately, despite their acknowledged links (Smith, J. and Ravenhill, M. (2006);Quligars et al, 2008; Jones, 2009). This paper posits that those afflicted by the conjoined status are doubly troubled as they not only struggle to cope with the challenges of living in austere times whilst yoked by external influences such as welfare state access conditionality, but also experience debilitating social exclusion linked to their severely compromised personal capacities and turbulent, liminal adulthoods.

RC55-884.2

GONTIHER, FRÉDÉRIC* (Université de Grenoble, frederic.gonthier@iepg.fr)

Public support for welfare state has been shown to be sensitive to economic conjuncture: e.g., to lower with increasing unemployment or inflation rates, and to raise with gross domestic product (Erikson, MacKuen & Stimson, 2002).

Contrasting with the comparative welfare state literature, that usually focuses on social indicators’ annual figures or covers only short time spans, we will adopt a long period perspective and explore how social indicators’ overtime evolutions influence support for state since the 80s. We will use multilevel modeling with pooled data from the ISSP Role of Government, a survey module that has been repeated four times in an increasing number of countries since 1985.

This presentation will deal mainly with global inequalities and public policies indicators. Mixed findings stem from the exploratory analysis. Strong income inequalities are found to fuel support for government, thereby expressing a growing demand for state protection. But more subtle variations appear when we consider the Gini evolution. Support for state appears to be less important in countries where the Gini has increased, suggesting a threshold effect (increasing inequalities usually lower public trust in institutions, and hence dwarf support for state intervention).

The impact of social expenses is only partly as expected. Europeans are all the more in favor of state since they live in countries with low social expenses. However, when social expenses increase, support for state also increases. It indicates that the general public tends to react when political elites answer to social demand, but does not necessarily react according to a “thermostatic” pattern (Wliezen, 1995). Thus, our findings will also raise substantial issues regarding welfare sustainability and democracy responsiveness: e.g., to help understand how public opinion is shaped by previous levels of policy outputs and how government policies answer to prior changes in mass opinion.

Comparing the Evolution of Attitudes Toward Government: Cross-Cutting Substantial and Methodological Issues

While many scholars have used cross-national data to investigate attitudes toward welfare state in a comparative perspective, this topic has seldom been explored with pooled waves of surveys. A long lasting survey module such as the ISSP Role of Government, repeated four times since 1985, permits to gauge whether or not public state attitudes have moved since the 80s. But it is also particularly useful to question aggregate data analysis and its limitations. The goal of this presentation is to address the overtime evolution of support for State from both substantial and methodological perspectives.

First we disentangle the different dimensions of attitudes toward state, so as to compare the global trends across countries and assess the “values convergence” hypothesis (e.g., people are supposed to be less supportive of State due to globalization, individualization and postmaterialism). Hence we raise the issue of aggregate measurements of public opinion and their reliability through time and space.

Then we use multilevel modeling to look at the evolutions among subpublics; especially among middle classes and “transfer classes”, which have been found to be widely in favor of public policies. Complying with the literature showing that statist attitudes are linked to narrow personal interests, we find that demand for welfare is more important among the disadvantaged social groups. Thus we also cope with the problem of harmonized data and comparability of national contexts.

Our results finally provide evidence that support for State tends to move slowly and uniformly among subgroups and countries, thereby confirming the “parallel publics” thesis but strongly contrasting with the idea that welfare retrenchment has a direct impact on values and public opinion. Here we are faced with our last challenge: how global inequalities and public policies indicators can help to understand attitudes toward government?
Comparing the Evolution of Attitudes Toward Government: Cross-Cutting Substantial and Methodological Issues

While many scholars have used cross-national data to investigate attitudes toward welfare state in a comparative perspective, this topic has seldom been explored with pooled waves of surveys. A long lasting survey module such as the ISSP Role of Government, repeated four times since 1985, permits to gauge whether and how consistent attitudes have moved since the 80s. But it is also particularly useful to question aggregate data analysis and its limitations. The goal of this presentation is to address the overtime evolution of support for State from both substantial and methodological perspectives.

First we disentangle the different dimensions of attitudes toward state, so as to compare across countries and assess the “values convergence” hypothesis (e.g., people are supposed to be less supportive of State due to globalization, individualization and postmaterialism). Hence we raise the issue of aggregate measurements of public opinion and their reliability through time and space. Then we model evolution and interaction effects, looking at the evolutions among subpublics; especially among middle classes and “transfer classes”, which have been found to be widely in favor of public policies. Complying with the literature showing that statist attitudes have moved since the 80s. But it is also particularly useful to question aggregate data analysis and its limitations. The goal of this presentation is to address the overtime evolution of support for State from both substantial and methodological perspectives.

Our results finally provide evidence that support for State tends to move slowly and uniformly among subgroups and countries, thereby confirming the “parallel publics” thesis but strongly contrasting with the idea that welfare retrenchment has a direct impact on values and public opinion. Here we are faced with our last challenge: how global inequalities and public policies indicators can help to understand attitudes toward government?

The present study analyses of attitudes toward state have been carried out through multilevel modeling to look at the evolutions among subpublics; especially among middle classes and “transfer classes”, which have been found to be widely in favor of public policies. Complying with the literature showing that statist attitudes are linked to personal interests, we find that demand for welfare is more important among the disadvantaged social groups. Thus we also cope with the problem of harmonized data and comparability of national contexts.

Most results finally provide evidence that support for State tends to move slowly and uniformly among subgroups and countries, thereby confirming the “parallel publics” thesis but strongly contrasting with the idea that welfare retrenchment has a direct impact on values and public opinion. Here we are faced with our last challenge: how global inequalities and public policies indicators can help to understand attitudes toward government?
In several states, such as Chihuahua and Durango, this violence appears to be the main reason for the decline in life expectancy among men aged 15 to 75.

Sociedad, Violencia y Demografía En América Latina

Los cambios sociales y económicos vividos en tiempos recientes por América Latina (democratización política, crecimiento económico, reducción de la pobreza) no han sido excluidos por aquellos confiesos de desigualdades sociales, y que la violencia alcance niveles insospechados décadas atrás. Obviamente, esta situación ha influido en la demografía latinoamericana: si bien el aumento de la esperanza de vida y la disminución de los niveles de fecundidad han propiciado un acelerado proceso de envejecimiento poblacional, lo que ha llevado a que la proporción de personas con 60 años y más se haya incrementado sustancialmente, simultáneamente en la mayoría de los países latinoamericanos hay todavía un numeroso grupo de población en las edades más jóvenes, lo que en la práctica genera una coexistencia de demandas sociales que difícilmente han sido satisfactores en las sociedades del continente razón de una serie de tensiones sociales y de pensiones adecuado –y por ende, la existencia de un amplio número de adultos mayores pobres,– así como la alta mortalidad entre los jóvenes debida a hechos violentos –y su impacto en la esperanza de vida- son prueba de ello. Este trabajo pretende analizar la relación entre cambios sociales y características demográficas en América Latina en las últimas décadas.

Language Diversity at Work: Guidelines to an Interdisciplinary Approach

Communication at work is a complex process in which there is much more at stake than information exchange. How can such an element be analyzed in order to understand both its nature and relevance inside organizational culture (Velázquez Valadéz & González Trejo, 2013)? How can we introduce a sociolinguistic perspective to approach it? The answer might conduct us to consider firstly a renewed concept regarding language diversity. Namely, it could be conceived as a performance landscape or development arena emerging as a result of dynamic forces affecting the linguistic repertoire. Inside companies, language diversity would enable individuals to perform exchange and balance functions (particularly registers and domains) which ultimately represent a place of social significance. The latter would imply, secondly, a new perspective to be introduced into a typical consideration . In this research, I used a combination of the structuration theory (Giddens) and the Coleman’s macro-micro-macro loop in order to explain how this governance structure can emerge as a new model for addressing the monitoring and compliance problem of the human rights norm by the Colombian government.

Human Rights and Political Governance: The Problem of Monitoring and Compliance with the Human Rights NORM in a MULTI-Agent and MULTI-Scalar Perspective

The monitoring and compliance with human rights norm in domestic political contexts can be analyzed as a social risk. I intend to present results from a recent research that suggests that political governance structures could be a major improvement with regard to this problem. Political governance is defined in institutional terms as a negotiation structure between state and non-state agents that works as an interface between the domestic political system and regulation processes of the human rights problematic outside this system, mainly at the international level.

Family and School Effects in the Explanation of Migrant-Native Differentials in Performance and Educational Expectations in Spain

We examine the effects of school context on educational outcomes and outcomes of the children of immigrants, in comparison with natives in Spain, an under-represented case in the international literature and a fast growing immigration destination in Europe. Using two recent datasets, 2011 Chance Survey and the Secondary Schooling Evaluation Survey, which cluster students across schools, we investigate the factors that contribute to the migrant-native differentials in school performance and the formation of long-term educational expectations, and propose an explanation to migrant optimism. We look at three dependent variables: Performance is here studied from both an [1] objective (test scores) and [2] subjective perspective (estimation by children and their parents of whether their performance allows to reach tertiary education) and [3] the adjusted educational expectations (controlled for prior performance). Our results reveal the different way that school context works for immigrant and native origin children. Although immigrant children themselves understand the constraints that such disadvantage imposes on their future educational careers, immigrant parents seem to hold on to a rather unrealistic position. This parental optimism in turn seems to boost the career expectation of immigrant children independent of school effects. Thus while school context determines the performance of immigrant origin students to a greater extent than those of natives, the opposite is true for expectations. The formation of aspirations is more family-oriented among im-
migrants, and thus more positive, than among natives. Whether the long-term educational careers of immigrant children are as successful as they expect is a matter of how they do cognitively in schools, in which there is a greater role for schools to play.

A New Crisologie after 2008? Crises and Cognitive Autonomy

This paper is an attempt to address Morin’s (1968) plea for a sociology of crisis, focusing particularly on two issues of the sociology of time and intellectual change from the vantage point of intellectual responses to a crisis. Most current sociology characterizes our epoch as one of incessant acceleration, which precludes social agents from being able to weave a lasting narration where to situate their life-worlds in the context of an ever-changing society. This insight brings together thinkers as diverse as Rosa, Sennett, Bauman and Castells. Nonetheless, when moments of heightened uncertainty occur and faced with a context of pressing time – the classical definition of crisis as a turning point, from the Greek krino (to cut, to select, to judge) – narrations do frequently appear, for without a minimum of foreseeability, action is impossible and the future unbearably owing insights from the sociology of intellectuals. I first proceed by describing and establishing links between some of the latest contributions stemming from sociology and political science: Tom Medvetz’s Bourdieusian framework and Hartwig Fautz’s neogrammian approach. From there, a discussion ensues on the potentialities and limits of those perspectives to study intellectual change, independence and stability within think tanks. Herein positioning theory, previously used to study public intellectuals (Baert) becomes relevant, as it highlights the relationship between a public intervention, its context and other actors. In the case of think tanks, it highlights how these organisations must “juggle with” diverse forms of knowledge and within and outside, criss-crossed by institutional and economic constraints. Since within think tanks individuals and institutions are enmeshed in various public debates and connect to a range of people and organisations, alliances are crystallised in the public sphere through the think tank’s intellectual reputation (and the form we understand a think tank’s intellectual function: based on technocratic expertise, on being a critical voice, etc.). These resources can in turn be mobilised in the form of allegiances and distances, economic constraints and intellectual resources. This reputation thus becomes a think tank’s greatest asset, its depository of symbolic capital. A public intervention is then the mere exercise of weaving together the intellectual image of a think tank, “talking”, as it were, through its experts in every public intervention and across platforms and publics. This stretches the concept of cognitive autonomy in interesting ways, as organisations themselves generate an image vis-à-vis the image of those who talk on its behalf. In order to exemplify this I expose the case of the British think tank “New Economics Foundation”.

Occupy Wall Street and 15M in Comparative and Theoretical Perspective

This paper compares and contrasts the 15M movement in Spain (los indignados) with the Occupy Wall Street movement in the United States. We examine the class and social background and the grievances and concerns of the protesters in each country. We also examine the external and cross-border influences on each movement, public opinion toward each movement, and the tactical repertoire, achievements, and limitations of each movement. We ask how these movements support or contradict sociological theories about the origins, diffusion, and outcomes of movements.

Researching the Ordinary: The Extraordinary Sociological Research of Pearl Jephcott (1900–1980)

The lives and works of many sociologists have now been well documented and explored yet even when these biographical accounts are combined with boarder authoritative accounts of the discipline this ‘standard history’ is by no means a fully complete nor an uncontested one. There are numerous others who have made, or continue to make, an outstanding contribution to the understanding of social life but who have become lost within the minutia of academic historiographies. As such considerably more needs to be done to examine the history of our discipline and reassess the significant contributions made by ‘other’ researchers so that we may also reappraise what can be learnt from these ordinary sociologists. In this paper we argue that Pearl Jephcott (1900-1980) is one such researcher whose contribution to sociology, and the sociologies of youth and community in particular, is suitable for reassessment. Her books - Girls Growing Up (1942), Rising Twenty (1948) Some Young People (1954) Married Women Working (1962), A Troubled Area: Notes on Notting Hill (1964), Time of One’s Own (1967) and Homes in High Flats (1971) – were both formative for many themes within sociology of the 1940s, 1950s and 1960s, as well as having contemporary relevance despite being largely forgotten. Focusing on two books in particular - Time of One’s Own (1967) and Homes in High Flats (1971) and data collected over a ten-year period from various archives and Universities, we discuss (i) Jephcott’s sociological practice based on ‘reality congruent’ theory developed in order that she may cast a lens on the realities of working class life. She wrote richly detailed studies that offered an unsentimental reflection of ‘lived realities’, of the ordinary, of the mundane, of the quotidian; and(ii) Jephcott’s methodological innovation and pluralism in the use of text, image and non-standard data sources that mark her out as being sociologically ‘ahead of her time’. An ordinary researcher researching the ordinary but her legacy is anything but ordinary.

Obesity and Gender As Status Characteristics

For over 30 years, researchers have examined social influence and persuasion using Status Characteristics Theory (Berger and Conner 1974). While research has investigated beauty and attractiveness as status characteristics (e.g., Webster and Driskell 1983), no research to date has investigated obesity as a status characteristic. The current paper reviews the literature on influence and persuasion, demonstrating how they are related to status characteristics. Next, this paper

This paper examines the contentious politics of salinity in the Mekong Delta, paying particular attention to the competing perspectives towards salinization that exist within both the Vietnamese state and in rural communities in salinity-affected areas. Drawing on interviews with Vietnamese officials and reviews of policy documents, I first look at the competing interests - such as export-oriented development and national food security - which drive tensions over salinization at the policy level. I then turn my attention to differing perspectives and attitudes towards salinity at the local level, drawing on focus group interviews and ethnographic observation to examine the reasons - idealational and material - for which some social groups in the Mekong Delta have embraced salinization and salt-water shrimp farming, while others have sought to persist with rice farming even in the face of mounting salinity pressures.

TIRADO, RICARDO (UNAM)

Social Productivity. Advancing a Concept to Think about Contributions of Social Organizations

The paper deals with social productivity as a useful criteria for assessing the contributions of social organizations to civility, solidarity and quality of life. Commonly social organizations are evaluated with these criteria: a) results, b) the impact of their actions on the world, and c) organizational capabilities. These criteria focuses on examining contributions in a field rather intangible: values and the quality of social relations. The concept points to a poor explored field, although some notable authors wrote about it.

The social productivity concept points to consequences that are not always deliberately sought, since they are often unintended byproducts of organizations behavior. One important aspect is that the image and action of organizations is broadcasted into the civil sphere and it constitutes a role model, that is, it has an effect of social pedagogy. Another important aspect is that organizations' social performance can sometimes be negative, deteriorating social life. Social performance can be seen in these dimensions:

1) From the point of view of the objective or performance materiality and concerns to the contributions of the material and social welfare of the stakeholders. This includes the production of benefits, training of participants in joint decision making, the implementation of the decisions and setting and enforcing rules.
2) From the point of view of the factors affecting the formation of sociality, it focuses on the relationship with the environment in which the organizations operate and interact, and covers the image projected by the organization, its actions and how all this stuff interacts with other institutions and actors. These are issues which impact on social connectivity, civility, the public sphere, and the construction of the meanings which are shaping society.

The Two First Paradigms of Empirical Social Research in Germany

Irmela Gorges

Abstract: The two first paradigms of empirical social research in Germany Empirical social research in Germany evolved from the necessity to get information about the impact of the industrialization on the social conditions in Germany during the 19th century. At the example of the Association for Social Policy, founded in 1872 in Germany, it will be exemplified how the founders of the Association developed a strategy to conduct empirical social research with which they could collect data which they could use to realize their political views of a functioning society. In front of the peak of the industrial revolution, the second generation of members of the Association, among them Max and Alfred Weber, developed a different political view of a future society. As a consequence, they fought for a different strategy to gather empirical data. Because both strategies of empirical social research differed from one another not only with regard to the methods to collect data but also in view of the political goals, i.e. with regard to their epistemology and methodology as well as methods to collect data, it seems to be justified to identify the two approaches to empirical social research as two different paradigms.

GORMAN, TIMOTHY* (Cornell University, tmg56@cornell.edu)

The Social Nature of Salt: Competing Perspectives on Salinity in the Mekong Delta

The Mekong Delta region of southern Vietnam is currently undergoing a massive and rapid environmental transformation. As the seas rise and an increasing volume of fresh water is diverted from the upper reaches of the river, both for hydropower and for irrigation, waterways and soils along the coast have become increasingly saline. Driven by the rising tides, water from the South China Sea now penetrates for dozens of miles inland, up the mouths of the Mekong and its distributaries and into the irrigation canals that crossmatch the delta, posing a mounting threat to rice production and to agricultural livelihoods in the region. This change, however, is not seen by all actors as a negative one; instead, many residents of the region have abandoned rice farming for saltwater aquaculture, turning their rice paddies into saline ponds and cultivating farmed shrimp for international markets.

Uncertainty As an Asset in Education Policy

Education policies around the world are responding to increased perceptions of risk by attempting to reduce uncertainty. They are attempting to gain clear information and identify ‘guaranteed’ solutions by finding out ‘what works’ to develop policy accordingly. They are setting up clear measures of accountability and transparency. In order to understand states of affairs and identify policy issues,
The purpose of this paper is to consider the reality of synergy society criticizing the theory of reflexive modernization and third way. Though positive welfare oriented third way politics has acquired greater importance in creating active civil society and wealth, it is too Western because reflexive modernization implies the project of political subjects concerning the ideal of attaining synergy. Synergy is still collaboration beyond boarders. It lies in seeking the social well-being accompanied with rethinking process of modern values. The rise of communication sector where consultant, advisor, planner and religion play an important role in empowerment is a characteristic of synergy society. Instead of public sphere, we focus on communication media such as the standard of fair trade and eco-label circulate and create the networks of social resonance. This has political, economical and cultural meaning simultaneously. Synergetic modernization is not a progressive project which has political and historical end. It just explores the notion of well-being continually with the choices and actions. The influence of utilitarianism and excessive individualism. Then we reevaluate the Japanese semantics of happiness (shiawase) and research the activities of Japanese Buddhism after 311. Arguing the everyday life with suffering and joy we realize that a contextual succession of accidental meetings build necessarily social relationships which have potential to form the networks of social resonance related to germinating aspects of another modernity beyond the risk society. Synergy society promotes social diversity and well-being against the increasing liquidity. But fragility is unavoidable as resonance contains contingent process. Therefore we conclude that stable social commitment and sustainability are possible when institutional embedding of synergy develops to construct interactive partnerships with synergy networks of well-being.

GOTTFRIED, HEIDI* (Wayne State University, heidi.gottfried@wayne.edu)

Re-Regulating Reproductive Bargains

This paper proposes a framework integrating various capitalism and transnational approaches with feminist theories of gender regimes. A road map of the varieties of capitalism literature charts conceptual building blocks for the comparative study of economic governance models and related labor regulations. Varieties of capitalism theories implicitly refer to work and social regulations designed for standard industrial work and a corresponding form of standard family life. As such, these theories neglect how gender relations are embedded in the way major institutions are organized, creating blind spots in their political-economic models. Without an account of the gender dimensions of employment practices, institutions, and regulations, the varieties of capitalism approach cannot decipher the gendered patterns of nonstandard employment and its variation across countries. National variation in governing of nonstandard employment becomes more intelligible with reference to what I call the varieties of reproductive bargaining. A reproductive bargaining constitutes embedded structures of social relations that contribute to the differential integration of women and men in the labor market. Discussing empirical trends across four advanced capitalist countries, including the United States, the United Kingdom, Germany and Japan, I argue that the type, the density, and the interaction of labor and gender regulations over working time, both directly and indirectly, shape the conditions affecting the supply and demand for particular types of labor and the quality of these arrangements. An examination of the European Union and the International Labor Organization also suggests that supra-national institutions influence the transfer of regulatory norms. Yet, employment outcomes and workplace practices still largely depend on a country's type of welfare state, coordination mechanisms of employment relations, and varieties of reproductive bargaining.

GOTTLEIB, AVI* (Tel Aviv University, gottlieb@post.tau.ac.il)

Climate Change Policy: The Role of the World's Cities

The community of nations has struggled in vain to shape a coherent and effective regime to respond to the global climate challenges (IPCC, 2001). But, beyond the talks, the attempts to tame climate change are becoming more intelligible with reference to what I call the varieties of capitalism. The varieties of capitalism theories implicitly refer to work and social regulations designed to remove the limitation in access to education; whereas the issue of gender is still a hidden variable. Gender inequality is an important aspect of educational inequalities (UNICEF). Most gender gaps is typical mostly of developing countries, where recent gains in education are insufficient to remove the limitation in access to education; whereas the issue of male disadvantage especially in higher (i.e. post-secondary) education, emerges in developed countries of the North, as well as countries in Latin America, East and South-East Asia. It must be emphasised that gender inequalities are an important aspect of “over-education”. For the future of potentially “over-educated” societies, existing gender differences is coherent for education policies.

In our paper we provide an overview of past, current and possible future trends in disparities in education following the traditional patterns of inequality along gender, generation and geography. Magnitude and recent trends in inequality vary across regions and countries. Educational differences by generation indicate the speed of change in human capital formation over time and we identify different patterns of educational transitions that are closely connected to societial, economic and institutional contexts. We focus on pathways from female disadvantage to gender equality and new forms of inequality. The closing of gender gaps is typical mostly of developing countries, where recent gains in education are often more pronounced for women compared to men, but are not always sufficient to remove the limitation in access to education; whereas the issue of male disadvantage especially in higher (i.e. post-secondary) education emerges in developed countries of the North, as well as countries in Latin America, East and South-East Asia. It must be emphasised that gender inequalities are an important aspect of “over-education”. For the future of potentially “over-educated” societies, existing gender differences is coherent for education policies.

We base our analyses on a unique global dataset on educational attainment -- encompassing the reconstruction and projection of educational attainment from 1970 to 2060 for 171 countries by age and sex -- developed at the Wittenstein Centre for Demography and Global Human Capital.

Towards Better Education and Less Inequality? Trends in Geographical, Generational and Gender Inequality in Education

In our paper we provide an overview of past, current and possible future trends in disparities in education following the traditional patterns of inequality along gender, generation and geography. Magnitude and recent trends in inequality vary across regions and countries. Educational differences by generation indicate the speed of change in human capital formation over time and we identify different patterns of educational transitions that are closely connected to societial, economic and institutional contexts. We focus on pathways from female disadvantage to gender equality and new forms of inequality. The closing of gender gaps is typical mostly of developing countries, where recent gains in education are often more pronounced for women compared to men, but are not always sufficient to remove the limitation in access to education; whereas the issue of male disadvantage especially in higher (i.e. post-secondary) education emerges in developed countries of the North, as well as countries in Latin America, East and South-East Asia. It must be emphasised that gender inequalities are an important aspect of “over-education”. For the future of potentially “over-educated” societies, existing gender differences is coherent for education policies.

We base our analyses on a unique global dataset on educational attainment -- encompassing the reconstruction and projection of educational attainment from 1970 to 2060 for 171 countries by age and sex -- developed at the Wittenstein Centre for Demography and Global Human Capital.

GOULD, MARK* (Haverford College, mgould@haverford.edu)

Natural Law, Human Rights and Sociological Theory

Barnett has argued that the requirements of organized social life are the principles of natural law. These laws are “as fixed and unchangeable as the laws which operate in the natural world.” For Barnett, the (normative) force of natural law is found in “if-then” propositions. “If you want to achieve Y, then you ought to do X.” There are three dimensions of sociological theory integral to a natural law argument, which is essential in the formulation of a human rights agenda. Barnett’s characterization of the normative force of natural law requires that sociological...
theory have a functional dimension, specifying propositions that are held to be valid for all social systems. Second, analyses of social relations must focus on patterns of interrelationship and these patterns will differ depending on the nature of the social structure under analysis. Social theory formulates universal-class propositions about more particular types of social structure. Third, if, for example, a functional theory enables us to say we must do X if we are to avoid social disorder, it does not suggest that we ought to do X. If we are to have hope of providing guidance about how we ought to act, we need to introduce a developmental dimension into our argument. A developmental model characterizes immanent possibilities for social and individual development, where later stages are hierarchically-ordered progressions capable of generating earlier ones, but where the reverse is not the case. The last stage in this progression may then serve as the critical standard judging earlier stages.

A characterization of the stages of social development culminates in a stage that constitutes a final direction. These interdependencies can be symbolic and/or material, ranging from expressive support - such as daily contact or giving advice and comfort - to instrumental support, such as helping in household tasks, lending money or giving supplies. These webs of exchanges are likely to vary according to the composition of personal configurations in which individuals are surrounded. Traditionally, friends are known to be confidents and providers of emotional help, whereas relatives are more likely to exchange practical support. Moreover, these exchanges can be reciprocal or overlapping types of support. In this sense, the paper focuses on the macro structure of overlapping exchanges and affiliations within a network of relationships. The pattern of interdependencies are construct within the frame of macro structures and the theory that guides our selections is contestable. This theory articulates a natural law standard for human rights.

RC06-131.6

GOUVEIA, RITA* (University of Lisbon, rita.gouveia@ics.ul.pt) Multiplexity in Personal Networks: Comparing Three Cohorts of Portuguese

Personal networks are paramount for the wellbeing and social integration of individuals, by providing a sense of belonging though the multidimensional inter-dependencies that occur within configurations. These interdependencies can be symbolic and/or material, ranging from expressive support - such as daily contact or giving advice and comfort - to instrumental support, such as helping in household tasks, lending money or giving supplies. These webs of exchanges are likely to vary according to the composition of personal configurations in which individuals are surrounded. Traditionally, friends are known to be confidents and providers of emotional help, whereas relatives are more likely to exchange practical support. Our point of departure is not to consider friendship and kinship relations in a separate manner, but to look at the personal networks as a whole. A configuration can fulfill both types of support, by including persons who provide different or overlapping types of relationships. Moreover, these exchanges can be reciprocal or not, in a long or short term, as well as people can give one type of support and receive in another. In this sense, we hypothesize that the pluralization of personal configurations, - mixing primary kin with distant relatives, ex-kin and non-kin - has an impact on networks’ multiplexity. Multiplexity is understood as the existence of overlapping exchanges and affiliations within a network of relationships. The pattern of interdependencies are construct within the frame of macro structures (gender, social class), but also by the diversification of life course and family status. Do different configurations provide different types of interdependencies? Data is drawn from a Portuguese national survey applied to cross-sectional samples of Portuguese born in three different cohorts (1935-40; 1950-55; and 1970-75) in which respondents provided information about their personal networks and mapped the exchanges of emotional support and material goods between them.

RC34-585.2

GOVENDER, JAYANATH* (Nelson Mandela Metropolitan University, Jay.Govender@nmmu.ac.za) Unemployed Youth: South Africa’s ‘ticking-time bomb’ or ‘democratic dividend’

Young South African’s make up 72% of the unemployed. Organized labor’s reference to the problem as the ‘ticking-time bomb, has become an emblem attached to young people. Political and social comment insists that there is reason for alarm and consternation. Even government planners refer to youth unemployment as ‘the greatest threat to social cohesion’ and the ‘single greatest risk to social stability in South Africa.’

Amidst this dark discourse, government believes that young South Africans may in fact become a ‘democratic dividend’, rather than present any immediate risk or future threat. The paper will analyze both claims for their respective merits. It will locate the analysis within an educational and labour market framework. However, given such a framework, equates social relationships. Here, Barnett’s standard for cultural law is in play, and the theory that guides our selections is contestable. This theory articulates a natural law standard for human rights.

The mother India notion of downtrodden women of India, helpless, exploited by men, worn to and early death; and the exotic sensuous women of the orient, who make maharajas happy with their beauty and talent, are somehow in the picture too.

Indian women of dignity, charm, simple beauty in all classes- form women in the middle class women in the cities, government women in New Delhi- women who were neither helpless and downtrodden nor absorbed in erotic gratification. Of pampered husbands. Some of these intelligent and still graceful, feminine women were in legislatures, some were running others sector.

Mother India a mother culture, goddess worship, and in a general cultural veneration of the feminine. The study of the Morden societies the Hindu women problem indentified. The major source of data for the study is descriptive material from ten Indian informants, women graduate student in university coming from educated, urban and middle and upper-class backgrounds, representing various geographical areas.

Cultural theory have a functional dimension, specifying propositions that are held to be valid for all social systems. Second, analyses of social relations must focus on patterns of interrelationship and these patterns will differ depending on the nature of the social structure under analysis. Social theory formulates universal-class propositions about more particular types of social structure. Third, if, for example, a functional theory enables us to say we must do X if we are to avoid social disorder, it does not suggest that we ought to do X. If we are to have hope of providing guidance about how we ought to act, we need to introduce a developmental dimension into our argument. A developmental model characterizes immanent possibilities for social and individual development, where later stages are hierarchically-ordered progressions capable of generating earlier ones, but where the reverse is not the case. The last stage in this progression may then serve as the critical standard judging earlier stages.

A characterization of the stages of social development culminates in a stage that constitutes a final direction. These interdependencies can be symbolic and/or material, ranging from expressive support - such as daily contact or giving advice and comfort - to instrumental support, such as helping in household tasks, lending money or giving supplies. These webs of exchanges are likely to vary according to the composition of personal configurations in which individuals are surrounded. Traditionally, friends are known to be confidents and providers of emotional help, whereas relatives are more likely to exchange practical support. Moreover, these exchanges can be reciprocal or overlapping types of support. In this sense, we hypothesize that the pluralization of personal configurations, - mixing primary kin with distant relatives, ex-kin and non-kin - has an impact on networks’ multiplexity. Multiplexity is understood as the existence of overlapping exchanges and affiliations within a network of relationships. The pattern of interdependencies are construct within the frame of macro structures (gender, social class), but also by the diversification of life course and family status. Do different configurations provide different types of interdependencies? Data is drawn from a Portuguese national survey applied to cross-sectional samples of Portuguese born in three different cohorts (1935-40; 1950-55; and 1970-75) in which respondents provided information about their personal networks and mapped the exchanges of emotional support and material goods between them.

GOW, MICHAEL* (NYU Shanghai, michaelgow@inbox.com) Professing Hegemony: Consensus Building in the Chinese Higher Education Sector

This paper proposes that the economic, political and social transformation of the People’s Republic of China in the post-reform era is an example of ‘passive revolution’. It is argued that this is the consequence of a regime that in pre-empting a revolution for its own benefit. The paper is grounded in a theoretical framework, elaborated from Gramsci’s theory of hegemony and Bourdieu’s concepts of field, capital and habitus, of social and cultural change in China. The research examines the materialization of national, agential hegemonic projects and the subsequent negotiation of consensus. Focusing on the reform of China’s Higher Education sector, the paper discerns a process by which the ruling party skillfully articulates its own interests with agents operating in and across different fields of activity. Through the strategic deployment of resources, and the resulting competition over those resources the unintended consequence of which is to propel the Chinese HE sector along a trajectory deemed desirable by the CCP and PRC government, a limited form of hegemony characterized as much by the negotiation of consent as by the negotiation of corynth has emerged.

In doing so, this paper views contemporary China as one characterized as much by consensus as coercion; identifies the overarching vision to which consensus is sought, and defines those actors with whom consensus is sought and also the process through which such consensus can be negotiated.

GRABOWSKA, MIROSLAWA* (University of Warsaw, grabomir@is.uw.edu.pl)

Religion and Church in Times of Social Change

In post-communist countries, during the last quarter century two processes have overlapped: the shaping – after communism – of church-state relations and the global trend to strengthen the presence of religion in the public sphere. This is why they are important and difficult to study.

1. The communist system – for ideological and political reasons – repressed churches and believers, who remained in open or covert opposition to the system.

2. However, the countries on which a relatively uniform communist system was imposed differed in many aspects. There were different religions, denominational compositions, relationships between religious and national identities, and the power of the churches (including an assessment of their policies during WW II). That’s why communist authorities had to take into account the "local conditions": the policy towards the church(es) and the faithful had to be different in the relatively secularized Czech part of Czechoslovakia, the religiously divided Hungary and the uniform, religious, Poland.

3. With the collapse of the communist system the situation changed. Churches and believers regained autonomy, able and willing to stand up for their rights, and the democratic government accepted them or even sought their support.

4. So, institutional and legal measures in selected Central and Eastern European countries will be analyzed.

5. These problems should be analyzed in the triangle: state – church – society. For this reason the position of the Church in society will be included in the analysis, as will society’s attitudes – its religiosity, opinions about state-church relations and the sensitive issues in these relations.

6. The analysis will concentrate on Central and Eastern European countries, with comparisons to selected western countries. The main data sources are the WVS and EVS data sets. (These data sets contain many indicators of religiosity, but attitudes on state-church relations and sensitive issues are not represented equally well).

RC33-582.5

GRABOWSKA, MIROSLAWA* (University of Warsaw, grabomir@is.uw.edu.pl)

DURLIK, JANUSZ* (Public Opinion Research Center, j.durlik@cbos.pl)

Social Conditions of Survey Research

The analysis will include two aspects: (1) social conditions of conducting surveys, and (2) social conditions of obtaining meaningful, accurate and reliable answers. These first are very difficult to influence, but researchers have to analyze it to know what the situation is. When it comes to getting reliable answers to sensitive questions, a number of indirect measurement strategies have been developed. In both cases we will present the results of analyses of Public Opinion Research Centre (CBOS) data – treating them as an illustration of the broader processes rather than as a basis for more far-reaching generalizations.

Ad 1. The CBOS (along with the Institute of Sociology of the University of Warsaw) has analyzed participation in survey research and the ‘escape from the field of the questionnaire’ by non-significant answer or refusal to answer. We attempted to determine whether these responses depend on how and why they depend on the questions’ issues (closer and easier, or more distant and more difficult for respondents), the characteristics of the respondent (gender and age distribution and interest in politics, the place of residence), the attitude of the respondent to the interview, and finally, dependence on historical time – the analysis included a quarter century – the period 1985-2011 – including the transformation of the system.

Ad 2. Because asking questions about sensitive issues carries risks, and even a high probability of distortion of answers to comply with social norms (social desirability bias), and in Poland the abortion issue is very sensitive, so the randomized response technique was used to get to the actual experiences of abortion of women. Field work lasted six months (November 2012 – April 2013), and the research procedures included a total of 3576 Polish women. The results of this technique will be presented.

Age and Knowledge As Challenging Factors for the Energy Transition in Germany

The German federal policy for phasing out nuclear power and supporting a shift to renewable energies exerts a strong influence on energy supplying companies. They are forced to readapt their business strategies fundamentally. This is a challenging task as German energy suppliers are traditionally very stable and only step by step being restructured. This restructuration is reinforced by an outstandingly long duration of employment contracts, leading to a high average age. Thus, companies need to rearrange their business by mainly relying on personnel who embodies traditional knowledge and orientations. Furthermore, the recruitment of new, well trained personnel is limited and it is particularly difficult as it is not quite clear what fields of knowledge and which qualifications will be required in the future. The paper explores how energy supplying companies try to find their way into a more sustainable and eco-friendly future of energy supply and use under the given conditions of an aging workforce and predominant conventional orientation and routines. What aspects are treated instead of or in addition to safety and fails?

Eco-Innovation – a New Paradigm for Latin America?

Global phenomena of climate change on the one hand and not predictable technological risks of energy supply on the other hand are challenging not only Germany and the European Union but society, politics, science and industry worldwide. The answers to these challenges are very different. Some countries are screening their existing energy concepts and are searching ways of alternative energy, such as legislation on clean technologies, so-called eco-innovation. It is especially this shift to eco-innovation that catches our attention. It is not reserved for energy technologies, sustainable production, can also be seen in other industries, such as textile. But in the ongoing of the energy turn policy, promoting renewable energies increasingly subsumed the concept (Cooke 2010).

In the last decades energy policy lived a process of securitization. The connotation of energy policy with the field of security automatically led to a change of orientation and qualification. The shift towards innovation theory therefore means not also a reorientation of concepts but also a shift of the "traditional" identity of energy suppliers as conservative realms of primary sector stability and security – be it in terms of employment or in terms of infrastructure.

(Dis-)Connected Youth in Bangladesh. De-Mystifying the Digital Generation

When speaking about the current generation, there is a strong tendency to epitomise them as the "digital generation". While the overall role of communications has already been emphasised in McLuhan’s seminal publication on "Understanding Media" (1962) the more recent technical and technological changes of information technology (IT) have brought these developments to the doorsteps of countries, and their citizens, across the world. At the same time, these technological revolutions went hand in hand with massive internal social divides of those who have the access, and the purchasing capacities, to access and utilise these technologies. This debate, captured as the "digital divide" has given rise to more comprehensive studies about social inclusion and exclusion. The quintessence of these studies is to elaborate on the vast disparities of access to any form of digital media, particularly in (so-called) developing countries.

At the same time, these global developments pose quite a challenge for any government. In terms of national policies, the current Bangladesh government and their "Digital Bangladesh" policy places a strong emphasis on modern Information Technology services. In their Election Manifesto, they point out their past achievements, and argue that these "made it possible for Bangladesh to enter the digital age" (ibid. 2009, 2). In their "Vision 2021" they have epitomised this policy as "Digital Bangladesh". Yet, the Bangladesh Youth Surveys, "Giving Youth A Voice" provides data that strongly question the success of this policy.

Democracy and Inequality in the Philippines and Latin America: Historical Patterns and Political Values

This paper explores the case of the Philippines in light of the Latin American democratization experience. Being a catholic country, with Spanish heritage and a recent authoritarian past, the Philippines may provide a "hoop test" (i.e. a test of necessary conditions) for theories on Latin American politics. Latin America’s fragility is often explained through the reminiscences of an Iberian political culture and through the effects of a statist ideology among elites. These theorized causes are present in the Filipino case as well. Located in Southeast Asia, the Philippines share several cultural and political features with many Latin American countries, such as social and political inequality, patronage and state inefficiency. Despite such problems, the Philippines and most Latin American countries have managed to sustain a democrat- ic routine since the mid-80s. The Philippines and Latin America also face similar challenges, for instance popular dissatisfaction with political elites, high levels of unemployment and also corruption and political violence. The Philippines are thus an interesting case study for theories on Latin American politics, to test the argument of case similarity, first we compare historical patterns of development in the Philippines and Latin America. Then we compare available survey data on Latin America and the Philippines in order to test whether political values are in fact compatible among them. Our main goal is to evaluate if theories on Latin American politics effectively apply to an external case. If the similarity remains tout court, we may say that the Philippines in fact provides a "hoop test" for Latin America. If not, the challenge becomes to incorporate findings in our understanding of Latin America and the Philippines.

The Matthew Effects of the Canada Research Chairs Program: Do Women Enjoy the Same Benefits As Men?

In a classic 1968 paper Merton described the "Matthew Effect" as the tendency among elite scientists to accumulate advantage. Subsequent analyses, Zuckerman and Cole (1975) documented the experiences of women scientists and found women’s productivity was routinely eclipsed by men’s. This, they argued, accounted for the propensity for men to reap disproportionate rewards over their careers. In the years since, the gendered nature of academic work has been the focus of significant attention worldwide. Recently, the Council of the Canadian Academies’ Expert Panel on Women in University Research (2012) found that women continue to face obstacles in their appointment to faculty positions and their progress through the ranks. Structural and individual discrimination continue to have adverse effects on women academicians.

In 2000, the Canada Research Chairs program was established to attract and retain research leaders across all disciplines. Initially, most chairs were awarded to men. More than a decade after the program was established, only 26.2% of CRCs are held by women. In this paper, we are interested in the way in which the Matthew Effect plays out for women and men CRCs. We have previously argued that on many dimensions of professional achievement, status, and rewards, women and men CRCs enjoy similar experiences (Grant and Drakich, 2011). Yet, critical differences do exist and these centre around the gendered nature of academic work and workplaces. In this paper, we focus on measures of research productivity (specifically, recognition, career advancement, and awards and honours). As well, we examine how the dynamics of accumulated advantage vary by discipline. Findings based on 60 qualitative interviews show...
that men are more likely to enjoy greater benefits. We explore the reasons for the enduring pattern of inequitable distribution of rewards amongst women and men.

Investigating Teachers’ Decision-Making about the Use of Digital Technology in Kindergarten

To secure its place in the global economy, the Australian government (2009) recognises that its citizens require highly advanced Information Communication Technology (ICT) skill sets to meet the demands of global ‘knowledge’ economies. Political initiatives to introduce digital technology in educational settings have seen the emergence of digital technology educational outcomes within the national early childhood curriculum, The Early Years Learning Framework for Australia (2009) and in Building Waterfalls (2nd edition, 2011) the curriculum framework used by Queensland Crèche and Kindergarten teachers. Although emerging in early childhood curricula in the prior-to-school sector, digital technology is not yet visible as a policy priority with a plan for funding of digital technologies and infrastructure for support, or for teacher professional development about the integration of digital technology into classroom practice. Against this backdrop of government political imperatives to become a digitally literate nation, new digital technology curriculum accountabilities and an absence of early childhood education digital technology policy the question arises, “How do teachers make decisions about the use of digital technology in Kindergarten classroom practice?”

To address my research interest in teacher decision-making about the use of digital technology in Kindergarten classrooms, this paper draws on interview data gathered from nine teachers working with 3-5 year old children in Crèche and Kindergarten classrooms throughout South East Queensland, Australia. The interviews form a subset of PhD research data collected as part of the larger Australian Research Council Discovery Project “Interacting with knowledge, interacting with people: Web searching in early childhood” (Danby, Thorpe, & Davidson # 1100004180). Institutional ethnography provides a means of scrutinising how teachers use of digital technology is organised and shaped by the discourses embedded in current early childhood curricula and technology policies.

Places and Belongings: “Circular” Conjugality Between Angola and Portugal

In the context of contemporary studies of families and transnational lives, we study the emergence of new forms of conjugality among heterosexual couples living apart (one in Portugal, the other in Angola). Considering the importance of gender stratification when the domestic space is transnational rather than shared, we seek to understand how the construction of masculinity is reformulated in the couple when the man migrates to the other country to find work. The data we seek to understand how the construction of masculinity is reformulated in the couple when the man migrates to the other country to find work. The data gathered in Portugal under my coordination in the ongoing project Places and belongings: “Circular” conjugality between Angola and Portugal (PTD/AFR/119149/2010) capture the repercussions of mobility on conjugality as well as the self-perception and representations of those involved of the domestic space – here understood in its physical, affective, and social dimensions. When a conjugal pair separates as a result of the migration of one person, fluid forms of conjugality arise, demanding realignment of gender roles. The “circular” forms of conjugality that are emerging today can also be studied from the point of view of Post-colonialism Theory – seen in the continuities and ruptures in Portugal’s colonial imagination, the gender-role building, and the migrations between the two countries. This paper contains a first lecture and analysis of the data already collected in the before mentioned project.

Clouds over Spain: Work and Family in the Age of Austerity

Purpose – This paper aims to contribute to the academic literature in two ways. Firstly, the paper will analyse the impact of the financial crisis on the level of flexibility, autonomy and stress of Spanish employees. Secondly, this study aims to identify if the impact of the economic crisis on the work-family balance differs by employed parents are gaining knowledge, acquiring skills or having new perspectives in one role that can have a positive impact on the other role. However, neither the theoretical arguments nor the work-family enrichment scale are shedding light on which specific skills, knowledge, resources, values or perspectives are working parents developing or learning in one role that can be transferred in another role and vice versa. Qualitative research methods seem useful for this aim.

Thus, the purpose of this study are, first, to examine if the rewards and benefits perceived by working fathers in occupying both roles fits in the work-family enrichment construct proposed by Greenhaus and Powell (2006), second, to examine if there are differences between the rewards and benefits developed at home and rewards and benefits developed at the workplace; third, to extend the work-family enrichment theory to new samples in Catalonia.

When People Fight By Themselves. Anarchist Practices and Values In Grassroots Groups

From the early 21st century, protests in Argentina led by the slogan ‘They all must open the door to a new cycle of mobilizations, both in Latin America and other places around the world, which were led by social subjects excluded from the analyses and definitions of collective action traditionally centered on the institutional and structural dimension of protest. Recently, increasing attention to the cultural and subjective dimensions in the study of social movements has raised the academic and political visibility of grassroots groups, characterized by a social and self-managed organization and proposals where social discourses and practices of anarchism can be observed.

In this paper we wish to contribute to the comprehension of these experiences by putting forward an analysis of the anti-authoritative and self-managed practices inspired in the ethical values of anarchism, based on a piece of research work regarding movements such as NOTAV and NOMUOS in Italy, los indignados in Spain and the insurgency in Oaxaca in Mexico. We aim to highlight that the anarchist values and practices do not arise ‘abruptly’ or as the ‘ultimate’ possibility for change after the failure and the cooption carried out by the ‘civil society’ and leftist organizations, but consist of a cultural and practical repertoire of protest that has always been present in grassroots organizations.

Based on the direct experience of more than twenty years in the anarchist movement in different countries, such as Italy, Spain, UK and Mexico, and also on ethnographic work, we will show that this intersection between anarchism and grassroots struggles are not new. As for the anarchist subjects who make themselves present in many of these protests, whether local or national, they have always valued the space of daily practice as a room for struggle and social change.

Domestic Abuse in the British Military Community: Structure, Discourse, and Help-Seeking

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
This paper employs a feminist analysis to explore civilian military wives' experiences of domestic abuse in the British military context. Although military families do not live their lives in complete isolation from the civilian sphere, their lives and communities are shaped to a significant extent by the gendered structures and discourses which construct military culture. Following Stark (2007), I conceptualise domestic abuse not as a crime of assault, but as a gendered pattern of power and control in which a perpetrator attempts to entrap his/her partner in a state of "unfreedom" through the micro-regulation of his/her everyday life. I suggest that the particularities of life in the British military community reshape the tools and opportunities available, as well as the barriers to, both the perpetration of and the resistance to such a pattern of control. This has implications for help-seeking and the provision of support services.

This paper draws on interviews carried out with civilian women who have experienced abuse in marriages to British servicemen, servicemen who have perpetrated domestic abuse, and military and civilian support workers with experience of supporting either/between both of these client groups. I tease out the ways in which a range of factors including the material structures of military life, militarised constrictions of the public and private spheres, wives' disempowered position on the borders of the military community, and discourses around heroism, duty, protection, and precarity produce particular vulnerabilities to abuse and particular help-seeking needs. In concluding, I explore the contributions of this work for the provision of services to this particular group of women as well as its wider implications for understanding the challenges faced by military families in the 21st century.

RC12-230.1

GRAY, KEVIN* (American University of Sharjah, kgray@aus.edu)
Systems Theory and the Constitutionalization of International Law

In this paper, I propose a critique of the Habermasian model of the legitimacy of global institutions, drawing on Luhmann theory to explain how legal systems multiply, recreate and maintain themselves in worldwide social system. Recently, legal theorists have drawn on Habermas’ work to suggest that it is possible to imagine a constitutionalization of international law and legitimation of international institution along broadly Habermasian lines (Von Bogdandy 2012; Von Bogdandy, Dann and Goldmann 2008; Von Bogdandy and Dellavalle 2009; Von Bogdandy and Maskus 2013). The broad trend has been to theorize the development of legitimate international law in terms of processes of will formation outside the state that mirrors the distinction drawn by Habermas and Fraser between strong and weak publics – where strong publics are parliaments and other deliberative institutions, and weak publics are those public spheres which influence parliaments and international organizations such as the EU, international courts, NGOs, etc. Similarly, the tendency is to treat the role of law in terms of the hinge theory of law as outlined in Between Facts and Norms – law is a ‘transformer’ which transforms commands from the public sphere and the lifeworld into a specific language of commands for the economic and bureaucratic fields (Habermas 1994).

I will argue, against the Habermasian, in my paper that the model of international law proposed here is empirically incompatible with legal making in the international arena. Luhmann and Teubner’s model of law formation does a better job of explaining law making in the international arena. Similarly, the continued tendency to treat the role of law in terms of the hinge theory of law as outlined in Between Facts and Norms – law is a ‘transformer’ which transforms commands from the public sphere and the lifeworld into a specific language of commands for the economic and bureaucratic fields (Habermas 1994).

Religiosity, Spirituality and Happiness In Buddhist Thailand

Thailand, a Buddhist country in Southeast Asia, has experienced deep social division and political conflict since 2006. The predominance of Theravada Buddhism is considered an important aspect of the Thai setting since it influences Thai people’s attitudes, thoughts, and ways of life. The purposes of this study are to explore whether the level of happiness is changed over the period and whether religiosity and spirituality has a significant relationship with happiness among Thai people. The pooled data of population age 15 years and over from the Thai Household Income and Expenditure Survey (THIES) in 2006 and 2011 were utilized. They are the national representative sample surveys. The sample consisted of 25,950 population in 2008 and 23,670 population in 2011. Based on binary logistic regressions, the results reveal that Thai people were happier. Religiosity and spirituality were associated with happiness statistically significantly after controlling for study year, demographic factors (age, sex and marital status) and socioeconomic factors (education and occupation). Those who always undertook all five precepts and meditated in Buddhist holy days and other important days were more likely to be happy.

The Self and Identity in Technological Times

Abstract

I intend to explore the impact of technology on the formation of the self and identity. The Italian philosopher Umberto Galimberti, in his book *Psyche and Techne* (1999), maintains that it is no longer accurate to speak of alienation. When Marx advanced his concept of alienation in capitalist society man was still a subject who could imagine new horizons. Today, the domination of technology has reached a point where the relationship between man and technology has been reversed: technology is the subject and man is the predicate. In this new situation, it is not correct to speak of alienation but rather of identification with technology. In a world totally generated by technical equipment, according to Galimberti, man is an official of this apparatus and his identity coincides with his function. Thus, man is himself only if he is functional to the other, technology (1999). In the light of Galimberti’s thesis, can we still speak of a reflexive identity developed in contemporary society, as the sociologist Antony Giddens does? Furthermore, can we still believe, as the existential philosopher Sartre and De Beauvoir did in the seventies, that identity is a project and coincides with subjectivity? Moreover, what becomes of the self? If identity coincides with function, the self is totally withdrawn, and the difference between interior and external life is suppressed. Naturally, this creates a psychological and sociological pathology, because we are denounced when we spoke of the one-dimensional man. Galimberti speaks of the death of the psyche because what is enhanced are the intellectual abilities while emotions are disregarded (1999).

GREBE, EDUARD* (University of Cape Town, eduard.grebe@uct.ac.za)
LOW, MARCUS (Treatment Action Campaign)
New Forms Of Transnational Organisation On Access To Medicines: The Global Activist Response To The Imatinib (Glivec) Case

In the late 1990s and early 2000s, global AIDS treatment activism had been characterised by innovative forms of organisation, including the construction of transnational ‘networks of influence’ (Grebe 2011, 2012) incorporating activist networks and broader coalitions comprising national and intergovernmental bureaucrats, scientists, the media, etc. These networks were built and deployed in order to expand access to patented antiretroviral drugs priced beyond the means of developing country governments, with significant success. Following its successes, however, the movement largely demobilised. The recent patent dispute between Novartis and the governments of India and South Africa is often seen as the recent application for the cancer drug imatinib (sold as Glivec) – the rejection eventually confirmed by the Indian Supreme Court in 2013 – spurred existing activist networks into action for a globally-coordinated campaign in support of the rejection (especially after the United States placed India on a trade ‘watchlist’ in response). The mobilisation described in this paper illustrates the innovative characteristics of activism on access to medicines in the context of globalised corporate power, as well as global trade and intellectual property rights regimes. These forms of organisation include North-South and South-South collaboration and horizontal forms of organisation that span geographic and sectorial boundaries—representing what Ferguson (2004) might have termed ‘horizontal topologies of power’—in order to deploy influence and social power at the global level. The paper further develops the ‘networks of influence’ theorisation of transnational civil society mobilisation previously described.

GREEN, DAVID* (Nagoya University, david.green@law.nagoya-u.ac.jp)
Immigration and Public Opinion in Japan: Keys to Fostering Integration

It is often hoped that efforts at integrating foreign immigrant populations on the part of both local communities and government will bring about a more favorable perception by the public at large. Yet as immigrant populations increase, public opinion becomes a more integral part of the development of any human community, research examining public opinion on immigration in Japan is surprisingly rare. Public opposition to immigration is often unquestioningly taken as a given with little subsequent analysis, either due to language barriers or a lack of interest on the part of Western scholars. Utilizing data from nationally representative public opinion polls, this paper aims to bridge this gap. We propose to dig deeper into public opinion on immigration in Japan, arguing that while the public perception may remain negative overall, there are a number of important mitigating factors that can elicit more positive associations with immigration in the country. If communities and local policymakers hope to foster integration and improve relations with immigrant communities, this research can provide important clues as to what sort of actions can be taken.

GREENBERG, DAVID* (New York University, dp40@nyu.edu)
Criminal Careers: Discrete or Continuous CANCELLED

Numerous empirical studies of criminal careers have made use of finite mixture modeling to analyze sequences of events such as crimes or arrests. This approach represents a set of individual event sequences using a number of discrete trajectories. Individuals are typically matched to the trajectory that is most likely, given the distinctive pattern of that individual’s sequence. We use hierarchical linear modeling and individual time series techniques to test the assumption that arrest trajectories are meaningfully and usefully classified into a small number of mutually exclusive discrete classes, using data for 332 males released from the California Youth Authority in 1981 and 1986, and followed for several decades after release. In this data set we find little evidence of sharply discrete arrest trajectories.

“What Is to be Sustained?: Towards a Critical Theory of Urban Sustainability”

We live in a time when the need for urban sustainability has become a new common sense. We daily witness confirmation of the famous prediction made by Henri Lefebvre that our planet is becoming progressively urbanized, as well as more crisis-prone (Lefebvre, 1970). Urban sustainability appears to many the “hardest form”: unilateral military intervention. From a social constructionist standpoint (in distinction from, say, a theological or metaphysical one), while human rights might be thought to involve obligations toward humanity as a whole, for any given individual in a particular political community, a human right to democracy can imposes obligations only on fellow members of that community. The idea of a universal human right to democracy makes no sense, and outside intervention toward encouraging local democracy would not be warranted on human rights grounds. Still, the local vernacularization of human rights could possibly be sustained. It is often hoped that efforts at integrating foreign immigrant populations on the part of both local communities and government will bring about a more favorable perception by the public at large. Yet as immigrant populations increase, public opinion becomes a more integral part of the development of any human community, research examining public opinion on immigration in Japan is surprisingly rare. Public opposition to immigration is often unquestioningly taken as a given with little subsequent analysis, either due to language barriers or a lack of interest on the part of Western scholars. Utilizing data from nationally representative public opinion polls, this paper aims to bridge this gap. We propose to dig deeper into public opinion on immigration in Japan, arguing that while the public perception may remain negative overall, there are a number of important mitigating factors that can elicit more positive associations with immigration in the country. If communities and local policymakers hope to foster integration and improve relations with immigrant communities, this research can provide important clues as to what sort of actions can be taken.

Changing Disadvantage: Creating Space for Chicago’s Third Ghetto?

Chicago has long served as a national policy lab, particularly in regards to urban housing policy. The city’s public housing policy over the past 20 years has been particularly intertwined with arguments for national program reforms and devolution. As public housing policy in the United States continues to devolve amidst fiscal austerity and market-driven public private partnerships, the spaces of housing need and assistance have also shifted. Parallel to national linkages with public housing policy, Chicago has long served as an important driver of scholarly work regarding the geography and structure of metropolitan opportunity. As the Chicago Housing Authority’s “Plan for Transformation” approaches 14 years of implementation, what impact have its policies of transformation had on shifting structural dimensions of disadvantage in Chicago neighborhoods?

This paper links existing theories of metropolitan opportunity structure with an analysis of the historical shift in spaces of advantage and disadvantage for public housing residents. Using the Chicago Housing Authority’s Plan for Transformation as an important inflection point in local housing policy, this paper examines shifts in spaces of advantage and disadvantage for public housing residents in relation to broader shifts in these spaces for unassisted households. This paper contends that while the Plan for Transformation espoused values of racial and economic integration, and the revalorization and stabilization of historical sites of housing assistance via income mixing, that its end effect has largely been one of further disintegration, displacement, and a retrenchment of structural disadvantage for broader swaths of Chicago neighborhoods. By examining the impacts of public housing transformation on the spatial dimensions of structural disadvantage, this paper contributes to a broader understanding of the intersection of policies of housing assistance and the structure of metropolitan opportunity.

GREGG, BENJAMIN* (University of Texas at Austin, bgregg@ austin.utexas.edu)
The Local Construction Of A Human Right To Democracy

Is the idea of a human right to democracy coherent? Socioculturally oriented human rights studies can usefully identify civil society processes that show why and how particular societies have come to embrace, to some extent, various kinds of human rights standards. These are empirical studies in vernacularization, i.e., the translation of human rights norms into local practice. Did any part of the Arab Spring, which took place in non-democratic communities, vernacularize democracy in any sense? Did any part make the idea of a human right to democracy plausible? A right is plausible only given some connection to specific duty-holders and their obligation to ensure the practice and defense of that right. If, as it appears, in the Arab Spring there were no domestic institutions or powers obliged to ensure a human right to democracy, could any conceivable foreign institutions or forces be so obliged – and obliged, perhaps, to intervene? Intervention ranges from “soft” forms, such as scholarships for dissidents, to “harder” forms, such as financial support of domestic opposition groups, to conditions on aid packages, to the “hardest form”: unilateral military intervention. From a social constructionist standpoint (in distinction from, say, a theological or metaphysical one), while human rights might be thought to involve obligations toward humanity as a whole, for any given individual in a particular political community, a human right to democracy can imposes obligations only on fellow members of that community. The idea of a universal human right to democracy makes no sense, and outside intervention toward encouraging local democracy would not be warranted on human rights grounds. Still, the local vernacularization of human rights could possibly be sustainable.

What Cognitive Sociology Can Contribute To Human Rights Diffusion

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Because many a social construction appears parochial from standpoints outside and beyond the community of origin, one wonders: On what basis might one parochialism ever justifiably trump another? Specifically, how might particular human rights be made widely plausible from within communities in which they currently appear implausible for local cultural reasons? The words “from within” already suggest a central aspect of my thesis: a parochial idea is legitimate for the community that embraces it. Human rights can be legitimate for any community that comes to embrace them. But how can particular human rights become persuasive within cultural communities tomorrow that today regard them as alien or misguided? The answer should have critical implications: conceptual for the sociology of culture; practically for the human rights project. My approach aspires to redeem both possibilities. As theory, it combines cognitive sociology with normative philosophy. With practical intent, it would facilitate human rights diffusion through a new conceptual insight. It construes human rights as a cultural phenomenon and argues for a parochial reading of the normative culture as better suited for advancing human rights viewed sociologically: as a culturally parochial social construction. I develop my approach in several steps: (1) I reject essentializing approaches toward culture and instead (2) distinguish cognitive aspects of culture from normative ones. (3) I show how a cognitive approach allows for human rights as rights internal to any given community’s culture. I then propose human rights as a learning process in two senses: (4) as a “cognitive community” and (5) as a social system. (6) These steps render human rights, understood in the theoretically least taxing way as merely parochial social constructions, nonetheless less spreadable across cultural and political boundaries - through a technique of “cognitive reframing.”

GREGORY, MICHELE* (City University of New York, mrgcpw@earthlink.net)

Body, Sports and Work

Organizations, from financial institutions, government bodies to hospitals are important spaces for understanding the relationship between sports, bodies and production. This relationship is particularly vital when employers use competitive sports to construct hegemonic masculinities, which sometimes affect workplace opportunities for the disabled, immigrants, working classes and ethnic, racial, gender and sexual minorities. In a recent lawsuit filed by former female employees of Goldman Sachs, one alleged that ‘golf’, ‘push-up contests’ and ‘other physical pursuits’ represented the culture of the trading floor (Lattman 2010, p. B1). Other litigation involving the now-defunct investment bank Stanley has resulted in gender discrimination lawsuits ($46 million) and the use of male sports was notable (Anderson 2007, p. C18). These lawsuits illustrate that competitive male sports are used by employers as a form of cultural capital, excluding women and possibly ‘others’ who have no interest in sports and who do not fit the athletic male model of fitness.

Using empirical case studies, I will apply the concept that I call ‘sportswork’ to describe and analyse how white collar professionals in non-sports organizations use sport in the workplace to engage in a number of practices, such as symbolic practices, actual practices and exclusionary practices. Sports is not devoid of power and social relations – class, disabled, gender, immigrant status, racial and sexual diversity. Therefore, the paper will also illustrate how sportswork is used by employees to manage their bodies and how it shapes employees’ perceptions of their and others’ bodies.

On Religion and Hospitality Cultures in Economic Relations

Recently prominent scholars (as Beckford 2003, Casanova 2004, Habermas 2008) have offered an argument for integrating the sociology of religion into the corpus of sociology and to rethink religion sociologically. This has given rise to questioning the fact that after the European Enlightenment the connection between modern and secular became not only empirical but normatively embedded in social reality, and their configuration can make certain cities more hospitable than others, is the leading idea.

‘the Veiler and the Rapist’: Muslim Masculinity and the ‘Feminist’ French Republic

In the early 2000s in France an intense and highly emotive public debate took place around a phenomenon called ‘les tournantes’ – a slang term for gang rapes that were allegedly widespread in banlieues (poor housing estates) around Paris. What started as a well-publicised march by women of the banlieues under the banner of Ni Putes Ni Soumises (Neither Sluts nor Submissives) protesting sexism and violence soon became entwined with debates about Islam, immigration and the future of the French Republic. This was further aided by another round of ‘hijab’ laws (first introduced in the late 1980s) in 2004 banning girls from wearing Muslim headscarves in French schools and various proposals to ban the wearing of the banlieues. The image of the young Muslim man as a deviant Veiler and rapist became ubiquitous in the French popular imaginary.

France is not the only country to have experienced this problematisation and pathologisation of Muslim masculinities but its particular brand of Republican political rhetoric has affected the ways in which this discourse has been constructed. This paper examines a range of texts (media, cinematic, autobiographical/testimonial literature), which sought to represent and reflect on les tournantes. In doing this, this paper seeks to contextualise the popular debate in France against the backdrop of discourses of French Republican values and the colonial legacies, which continue to haunt France’s relationship with its Muslim population.

Facing Secularization and Diversification: The Role of the Catholic Church in Public Institutions in Spain

Spain, together with Portugal and Italy, is part of a ‘family of nations’ (Castles, 1993) where the Catholic Church has historically had a monopolistic role in the religious field. However, rapid transformations have displaced the Church from its old hegemony and have drawn a new scenario in Southern European countries. In Spain, the constitutional disestablishment, the detachment of a great part of the population from the traditional Catholic structures and the significant increase in religious diversity have compelled the Church to reconsider its own position, role and strategy within the Spanish society. Two lines of contention delimit this readjustment: the secular/religious divide and the religious mono/polychreolic diversity division. In this paper we analyse the effects of the changing religious landscape for the Catholic Church’s symbolic and practical role in public institutions. The paper draws upon the fieldwork (interviews and observations) carried out by the Catholic Church in the national and regional Catholic authorities.
out in public institutions (hospitals and prisons), where religion meets the secular and the old religious monopoly meets religious diversification. The research has been conducted in the framework of the project The accommodation of religious diversity in hospitals and prisons in Spain funded by the National Research Programme of the Spanish Ministry of Economy and Competitiveness.

Educational Accountability, Safety, and Youth

Abstract:
Young people who feel unsafe and disconnected from their neighbourhoods are most likely to engage in violent or unsafe actions, themselves (McMurtry & Curling, 2008). Students designated as ‘unsafe’ through Ontario’s Safe Schools legislation are pushed out of their neighbourhood schools through suspension, expulsion, and proactive relocation processes. In this way, Safe Schools and other institutional processes that are designed to mediate the unsafe behaviour of particular young people also serve to exclude these youth from their neighbourhoods and neighbourhood institutions, increasing the risk that the young person will engage in further violence. During our presentation, we will describe a project that seeks to understand how young people’s transitions between programs and between systems (e.g., education and youth criminal justice) influence their own experiences of safety and unsafety and their connections to their neighbourhoods, to community-based organizations, and to mainstream institutions.

Receiving funding from the Social Sciences and Humanities Research Council of Canada, this is an ongoing research project being conducted in collaboration with a community hub organization – Promoting Education and Community Health (PEACH). PEACH is located in a designated priority neighbourhood in Toronto. It houses a Safe and Caring Schools program for the Toronto and the Toronto Catholic District School Boards. The research – an institutional ethnography – documents and analyzes inter-institutional processes and institutional processes (e.g., educational programming) which young people’s experiences of safety and unsafety in the neighbourhood. Focusing on young people’s transitions within and between institutional systems, we aim to generate findings that will be useful to researchers, practitioners, institutional leaders, and policy decision-makers interested in the integration of service delivery for marginalized or “at risk” youth.

Finding a Language for Mental Distress: Narrative Accounts of ECT

Electroconvulsive therapy (ECT) remains one of the most controversial treatments in mental health today. It can cause permanent loss of some personal memories. ECT if often given to people with severe depression who have not responded to other treatments or for people who have responded to ECT treatment previously but for whom a relapse is envisaged. Depression rates vary from 40-70%. The decision to have ECT is viewed seriously by clinicians and ECT remains one of the most intrusive clinical practices in modern psychiatry. The issue of “capacity” to make a decision is viewed as being the medical establishment in the UK as the ability to (a) understand the issues and (b) to weigh them in making a decision. However under the Mental Capacity Act, a doctor can declare that it is in their best interests. Alternatively, they may be detained under a section of the Mental Health Act. If, on the other hand, they are capacitous, then their wish not to have ECT must be respected: they cannot receive ECT, even if they are detained under the Mental Health Act.

However comparatively little qualitative research has been conducted into the decision-making process, experience of ECT or a fuller narrative investigation of the effects of ECT. This paper presents this decision as located in the wider context of someone’s feelings about their mental health, their social care and support networks and their experience of mental health treatment – including their experiences of compulsory care. Through the analysis of the narratives of 30 people who have been offered ECT, and 13 carers, (collected by the Health Experiences Research Group at the University of Oxford) the broad social context of this decision is described and analysed with some surprising results.

Educational Inequalities in the Access to Higher Education at the Intersection of Gender and Migrant Background: Results from Switzerland, Germany and France

Gender inequalities as well as migrant-related inequalities in education have been profoundly analysed in sociology during the last decades. While gender inequalities were shown to have been reversed during the last decades (Buchmann et al. 2008), youths with a migrant background appeared to generally perform lower in most European educational systems (Heath et al. 2008). However if it is controlled for social origin and school performance – and in line with migrants’ higher educational aspirations – many studies reveal increased transitions of migrant youths to the more demanding educational tracks available to them (Jackson et al. 2012).

In spite of these studies, the question of a possible interaction between gender and migrant background has been rarely investigated so far (e.g. Fleischmann and Kristen 2011). Given this lack of research, the paper focuses on such educational inequalities at the intersection of gender and migrant background at the transition to higher education.

In order to formulate the theoretical expectations, we refer to decision theory. According to the analysis of the data the comparison of Switzerland, Germany, and the Republic of France (Panel of élites of the second degree 1995). Multivariate regression models were run in order to investigate the research questions.

Preliminary results indicate increased transition rates to Higher Education for second generation males from socially disadvantaged migrant groups for Switzerland and Germany, if controlled for social origin. A deeper analysis for Switzerland thereby also reveals that such advantages are largely driven by the high occupational aspirations these males pursue.

However, the assumption that second-generation females originating from countries characterized by a rather patriarchal culture would encounter disadvantages at the transition to higher education was not backed by the data for none of the countries under consideration.

Sociologist of Religion: Insider As a Professional Outsider. on Professional Competence and Potential Engagement

This type of research is about understanding concealed internal meanings of a religious belief and religious action from the viewpoint of Max Weber’s interpretative understanding of social action. This method helps to reveal subjective presumptions, incentives and personal foundations for religious belonging and religious service. This research requires specific conditions and specific methods: “ethnographic”, “anthropological” and phenomenological methods. Typical sociologists of religion face numerous problems when they study unknown communities as outsiders. The difficulties are about penetrating into the studied group, duration and continuity of staying in a group, the difficulty of understanding the internal worlds of believers, etc.

Contemporary religious communities involve people of every social class, educational level and intellectual abilities. Sociological education per se does not always result in high quality research. It can be argued that an ‘original insider’ cannot avoid religious engagement or that they cannot be completely objective, an important rule to observe in any research. The author explains that every society member has a greater or less degree of religious engagement caused by their initial attitude to any religion (Max Weber, ‘Intellectual Honesty as a Principle of Religious Cognition’). Speaking generally, each of us is ‘engaged’ by our temperament, nature, experience, beliefs, prejudices, etc. Being objective might be a theoretical objective for any researcher with a bit of self-discipline and an honest attempt to distract from their personality. A ‘professional outsider’ is not especially different from an ‘original insider’ in this respect.

The problems might be mitigated if original insiders could become professional outsiders. They could be members of a studied community by birth, education and conversion, essentially, they would have the necessary level of intellectual, culture and training. The paper discusses some methods of finding, attracting and training such researchers.

GRIMMER, SASCHA* (University of Basel, sascha.grimmer@unibas.ch)

Sociology of Corruption

Corruption under the perspective of its effect on the stability of macro-social democratic societies shall be discussed. It appears as deviation from normed functionalities in spheres of society with the aim of taking advantage for all parties involved in the corruption relationship. In the theory of differentiation this is an effect of dedifferentiation, a throwback of modernity, because their superior, to functional differentiation and specialization based operation has been abandoned. Corruption appears to herein as functional equivalent of subsystem-specific function logics. It appears from the normative point of view of democratic theory and a corresponding democratic political culture as a system in jeopardy context. The reference to the political culture may be enough to highlight that corruption in everyday life and its many small, non-significant standard violations begins with each individual. The studies of Morlok and Tänzer refer to so-called microstructuralizations, which promote structural level corruption. In the sociology of domination and social theory, where corruption with respect to the functioning of organizations or subsystems have no relevant role. They operate as criminalized forms of deviant behavior and not as a functional equivalent to...
In the early 90s of XX century Russia adopted the law on freedom of conscience and Russian people were enabled to express their religious views. Religion became an opportunity to gain inner stability in the midst of a social chaos. All that in a very short time contributed to a higher percentage of formal Orthodox Christian believers but a lower proportion of practicing believers. In this paper we analyze the social phenomenon of university students’ mixed religiosity in post-Soviet Russia. Results for our research are based on interviews conducted with 323 Russian university students, between 18 and 25 years old. Nearly 68% of the respondents stated that they believe in God, however religious faith comes second to last out of 14 most important life values. 11% of those respondents can be attributed to a ‘practicing Orthodox believers’ group. In the course of our research, we have identified three religiosity types of the university students: formally religious, actively practicing and spiritual. We argue that a significant gap between formally religious and actively practicing Orthodox students has occurred mainly because of a prevalent mixed religiosity among the students and might be explained in terms of uninstitutionalized forms of religion. Mixed religiosity is defined as a combination of different elements of traditional religious concepts and spiritual ideas and practices. The processes of secularization at macro- and meso-levels are analyzed in the article and viewed as preconditions for a mixed religiosity at the micro-level.

To sum it up, we argue that a broken religious socialization between generations is an important factor for emerging mixed religiosity among Russian university students. The attitude toward religion in the Soviet society, that affected the behavior of our respondents’ parents, continues to indirectly influence the religiosity of students in the 2010s.
Following the Constitution of an Organizational “Way of Seeing”: Intertwining Talk, Body and Materiality in Context

Many practices within organizations are centered on the visual capacities of the agents. For example, in the field of architecture (Ewenstein & White, 2007; Styhre, 2011), construction (Nicolini, 2007), medicine (Monda, 2003; Alaei, 2008), scientific work (Daston, 2008; Vittert, 2012; Vertesi, 2012), researchers have shown how the members share a “professional vision” (Goodwin, 1994). These studies investigated visual practices in professional communities and demonstrated their role in the production, creation of knowledge, expertise and so on. Following the work initiated by these studies, my objective is to analyze and understand how an organizational “way of seeing” is interationally constituted and shared as a means to sustain the production of expertise. To do so, I conducted an organizational ethnography (Ybema et al., 2009) in 2012 in a firm of land surveyors. The video recording of the daily activities was privileged (Heath et al., 2010) in order to grasp the spatial dimension of the interactions (Monda, 2008). I studied the survey work as a situated activity and an interactional activity based on a variety of multimodal resources such as speech, gestures and manipulation of objects or technologies. In this study, I analyzed how organizational members progressively and jointly build expertise about a property, and, in particular, how specific “practices of seeing” (Styhre, 2010) are constituted through the daily work activities. My goal is to reveal how materiality, corporeality and language play a key role in the constitution of a collective “way of seeing” in organization. In this presentation, I would like to contribute to the discussion of the role of “socio-technical arrangements/agencements” (Callon, 2004, Latour, 2005) in processes of constituting an organizational “way of seeing”.

Representations of Desirability and Accessibility of Jobs in the Transition to Vocational Training in Switzerland

Transition to vocational training in Switzerland is still characterized by social inequalities, in particular in terms of gender, social origin and nationality. In this paper I wish to explore how the theory of social representations can help us understand the way in which young people placed in obligatory school imagine their future job, how they represent their professional aspirations and choices. In particular I wish to explore how two different characteristics of an imagined job, its desirability and its accessibility, can be differently emphasized among different social groups. I will explore the factors that contribute to this different emphasis, in particular the consequences of belief/disbelief in the possibility of social mobility, of degree of self-confidence, of school results and of the representation of how difficult the studies to access a particular profession are, on evaluations of accessibility and the consequences of representations as to social prestige of jobs, as to school and acquiring new competences, as to parent expectations and as to gender roles, on evaluations of desirability. This research is based on a dataset that was gathered from over 3000 13-15 year-olds in five Swiss cantons in 2011.

GROSS, TOOMAS* (University of Helsinki, toomas.gross@helsinki.fi)

Marathon Running, “Bodies for Others,” and Social Class in Post-Communist Estonia

Like many other countries, Estonia has in recent years experienced a veritable boom of recreational long-distance running. Since the turn of the millennium, the number of people running at least one marathon a year has grown nearly twentyfold, and year-on-year growth rate of marathon runners in Estonia has been constantly over twenty percent. This paper, based on an ethnographic study, seeks to understand the corollaries of this process and links the marathon boom to wider socio-economic and value changes in the post-communist setting. The paper pays special attention to the phenomenology of the body in the context of novel ideals of health, welfare, and success in post-communist Estonia. Bourdieu’s notion of “bodies for others” is particularly helpful when trying to make sense of the run-ners’ perception of their bodies in the new social and economic environment. As will be argued, long-distance running as a bodily experience is related to class identity. For Bourdieu, a sport is more often adopted by a social class if it does not contradict that class’s relation to the body at its deepest and most unconscious level. The paper demonstrates that subjecting one’s body to regular physical strain when training for and running marathons corresponds to various class-specific ideals of self-discipline, motivation, success, and perseverance. Also, runners now increasingly subject their bodies to constant self-monitoring and measurement by means of modern technology. Such technologically enhanced and informed “optimization of the self” constitutes a new form of bio-politics that fits with the neoliberal values of efficiency and productivity.

GROSSI PORTO, MARIA STELA* (Brasilia University, mgsgrossi@unb.br)

Police Organization; Professional Identity and Social Representations in Brazil

In contemporary Brazilian society police violence and his involvement in vio-lent forces of conflict resolution are topics relevant to those who are interested in understanding the public security dilemmas. In this sense, this paper aims to analyze how are police forces organized, which relationships are there between this organization, the professional identity and police violence: how police organi-zation and practices are represented by police officers and the effects of these representations are for the way the police officer are responsible to assure the law and order. We believe that these representations have developments not only in maintaining law and order but also in ensuring all human rights. We still believe that such practices result from the symbolic universe through which police offi-cers conceive themselves in terms of marks, belongs and identity records.

The paper is based on a survey that was structured using the Theory of Social Representations- TSR. The empirical goal was to obtain, and to compare, the so-cial representations that military and civil Brazilian polices make about their organi-zations, practices, professional performance and relationships with society. We also compare social representations that police officers create about themselves and the ones they believe society creates about them.

The design of the survey was a sample structured by spatial divisions, hierarchies, roles and sex, comparing both polices: the sample is compounded by 399 questionnaires for the civil police and more 1,181 answered by military police officers, 2077, for the way they understand their role as responsible to assure the law and order.

The analysis focuses on motivations for the choice of the profession; the pride of the profession; representations of fear, stress, uncertainty and risk arising from police work; and how all these symbols affects police organization and daily performance.

Exploring Residential Mobility As a Spatial Practice Via Qualitative Interviews, Quantitative Survey and Agent Based Modeling

The paper reports on a collaboration of sociologists and landscape ecologists in understanding future residential patterns in a medium sized shrinking city in Germany. Shrinking cities are an especially interesting case here, because numbers of inner city relocations are in general higher than in other cities (Sturm et al. 2013 for Germany). This is due to housing over-supply with more and cheaper offers being available. Like this, patterns of socio-spatial segregation can alter faster.

In a step-wise design, we included inductive and deductive steps, qualitative and quantitative approaches and finally the construction of an agent-based model to simulate future households residential mobility patterns. Firstly, we explored mobility practices by means of in-depth interviews from which we derived context-appropriate information on the orientations and decision criteria of resi-dents. Here, space is included as the life worlds of interviewees.

Secondly, from these results, we constructed a classic questionnaire survey to achieve representative data on the decision criteria among different social and demographic groups. In this step, administrative spatial boundaries were introduced in order to standardize questionnaire responses. From the survey results, thirdly, we develop rules of behavior of households and simulate their decisions in an agent-based model (ABM) as a method to understand patterns emerging from individual behavior. Thus, ABMs use abstract spatial categories and typologies of spatial practices of agents (households in our case). In ABMs, space can be both an independent variable (thus influencing behaviour) and a de-pendent variable (if the space is influenced by human actions) In our case, space is an independent variable in that location choice depends on the socio-spatial structures and the images attached to certain places and neighbourhoods, on distances to work-places, social networks, infrastructure access etc. Space is a dependent variable when analyzing collective household migration pat-terns and the changed patterns of socio-spatial segregation.

Socio-Spatial Inequalities and Socio-Spatial Policies in Shrinking Cities

Socio-spatial segregation – the question of the uneven distribution of social groups in urban space – is a classic of urban research literature. The extensive body of literature was elaborated set against the background of growing cities all pointing to the growing spatial separation of social groups in todays cities. Less is known about the dynamics and patterns of socio-spatial segregation in shrinking cities that is cities which loose population over a longer period of time due to a bundle of causes, ranging worldwide from de-industrialization or other econom-ic restructuring, urban sprawl, counterurbanization, political change or conflict, natural hazards or demographic change. In our paper, in a first step we analyze how urban shrinkage impacts on the process and patterns of socio-spatial segregation. These are based on empirical work in three of the case studies of the EU 7th Framework research project “Shrink Smart”: Leipzig/ Germany, Ostrava/ Czech Republic, Genoa/ Italy. The loss of inhabitants due to far reaching de-industrialization experiences, job migration, urban sprawl and steep drops in fertility rates impacted on urban structures in a variety of policy fields, socio-spatial seg-regation being one of them. With the support of selected data, we shed some light on how urban shrinkage influences the social make up of cities. We will show that in all case studies, population decline acts as a catalyst to socio-spatial segrega-tion leading to pockets of rapid change and decline. Set against this background, in a second step, we examine which policies are promoted to solve problems such as ethnic segregation, ageing, and socio-spatial inequalities. The results show that even though current policies are not able to accommodate the rapid changes for social cohesion, the attempts of policies to tackle them still appear to be secondary priorities, sectoral rather than comprehensive, and involve a certain delay.

The Risk of Becoming NEET in Poland

The emerging phenomenon of young NEETs in recent decades has been linked to transformation processes of societies like the global processes of individualiza-tion and de-institutionalisation of a life course and individualization of social risks (i.e. Beck, 1996). The effect of de-institutionalisation seems to be much stronger in Central and East-European EU member states, also in Poland, where the collapse of the strictly regulated old system has considerably increased flexibility and vul-nerability of youth transitions if compared to the old EU members. The economic recession starting from the late 2000s has further worsened the process of young people’s transitions towards independent living. Becoming NEET is the risk for a young people and for society.

The main question of the paper is on the scale and dynamic of the Polish NEET population and its heterogeneity in perspective of ways and barriers of transition to independent living of the young. I also discuss the consequences of being NEET for young people and for societies. The analysis are based on quantitative data of Polish Central Statistical Office and the Eurostat the disclosure of the scale, for young people and for societies. The analysis are based on quantitative data of Polish Central Statistical Office and the Eurostat the disclosure of the scale, for young people and for societies. Who Are Kosovars? Multifaceted Positioning of Internally Displaced Persons (IDPs) from Kosovo in Serbia

In my paper I discuss the politics of belonging and multifaceted positioning of the internally displaced persons (IDPs) from Kosovo in Serbia and the racialized images of a “Kosovar”, as a part of the IDP from Kosovo group, in the Serbian society. Internal displacement in Serbia is not only a political category but as well a multifaceted position. In the paper I focus on the analysis of ethnic, gender, class and housing arrange-ments. I am drawing on the biographical interviews collected in Serbia in 2012, and a further data analysis of my ongoing doctoral research on the intersectionality of national, gender and religious identities in the contemporary Serbia.

My argument is that the notion of a “Kosovar” carries a negative imaging and ambivalent notions of belonging to the national imaginary of the Serbians and the Serbian community as the “other kind of Serb”. In addition, the political com-munity of belonging for the Kosovo Serbs is the Serbian community, but in the politics of belonging of the Kosovo Serbs living as IDPs in Serbia are visible sig-nificant referential and differential points as localities of belonging – in terms of language, region and ethnicity. Although, in the studies on social exclusion and boundary-making this could be described as a “classical” examples of the tensions between the “newcomers” and “locals”, or, “established” and “outsiders” leading to different aspects of othering and marginalization, in the case of the Kosovo Serbs (IDPs ethnic majority) it is paradoxical. Namely, Kosovo-Serbia displace-ment/emplacement politics of belonging shows a significant gap in relation to the dominant (right wing) nationalist discourses on Serbians and Serbianhood – describing Kosovo as the most important topic of the Serbian national history, and Kosovo Serbs portrayed in as a “Serbian martyr” while Kosovo is a Serbian Jerusalem.

Measuring Employment Standards Violations, Evasion and Evasion Using a Telephone Survey

This paper reports on efforts to develop a telephone survey that measures the overall prevalence of employment standards (ES) violations as well as their
analyses to investigate these problems. Of concern to the problems of higher education in modern Russia. The research methodology combines qualitative and quantitative methods. Different universities (state and private) give diplomas of different quality. It leads to the transformation of higher education in contemporary Russia and its place in the international arena and it involves in these processes Russian higher education. The national institutional contexts, such as the educational and health systems, the immigration policies, in both the parents' countries of origin (Senegal) and the parents' countries of destination (United States, Italy), shape the organisation of transnational families (Bryceson, Vuorela, 2002, Mazzucato, Schans, 2008, Razy, Baby-Collin, 2011). Migrant parents examine the advantages and drawbacks of origin and destination countries, when deciding where their children should be raised. However, these children are also frequently affected by internal mobility (Vandermeersch, 2002) within Senegal in response, amongst other reasons, to parents' work constraints, health issues, family solidarity, and educational choices. I then discuss the differences between various care-giving arrangements (internal and transnational fostering) within the extended families which have been studied.

Access to and Perceived Quality of Childcare (and elder care) in Europe

The reconciliation of work, family and private life has become one of the main challenges for younger and older families in Europe today. Access to affordable and good quality childcare is essential in removing barriers to parents' (especially women's) labour market participation, as is 'ensuring effective access to affordable, quality early childhood education and care for all families that also fits to the increasingly diverse working patterns' (European Commission, 2013). The same applies to elder care, which is an important service in connection with generally longer life spans, population ageing and the increasing labour market activity of women.

Our paper's research was funded and done for the European Foundation of Living and Working Conditions in Dublin (Eurofound) and is based on Eurofound's EQLS3 data set, a European quality of life survey which was run in 2011/12. It investigates perceived access to and perceived quality of childcare and eldercare (also known as long-term) care services in Europe as a whole and in different EU member states and how the availability of such services is related to (female) labour market participation. In order to investigate the determinants of perceived quality of childcare and elder care services, we use multi-level analysis with grand mean baseline measures and standardized reporting tools.

Higher Education Reforms in Post-Soviet Russia: Problems, Contradictions

The current stage of social development, which is characterized by objective global trends, marked by significant changes in the economic, political, social spheres of contemporary society. Almost everywhere, also in highly-developed countries the situation shows that together with growing complication of state, social, technical, informative and global problems we observe the decline of competence of elite, specialists. Due to this and other reasons everywhere intensive reforms in the system of higher education are being held. Russia is an important actor in the international arena and it involves in these processes Russian higher education. The frame of Bologna Declaration, subjects to reform, transformation, in order to integrate into the European educational space. The field of higher education institutions becomes increasingly hierarchical in post-soviet Russia. Different universities (state and private) give diplomas of different quality. It leads to the problems faced in educational and labor markets. The research focuses on the problems of transformation of higher education in contemporary Russia and its implications for labor and educational markets. The research objectives are to explore students' attitudes to higher education, to explore the demands of students, to investigate the demands of labor and educational markets in contemporary Russia. The research methodology combines qualitative and quantitative methods. Depth interviews with experts are applied on purpose to identify central issues of concern to the problems of higher education in modern Russia. Representative sample consists of 1000 students. Students are trained in various specialties. The research methodology combines qualitative and quantitative methods. Adaptation To Climate and Biodiversity Change: The Case Of Large Canadian Cities

Adaptation is generally thought of as a successful response to a changing situation. For the social sciences, adaptation is the outcome of a long series of deliberations, decisions and negotiations. One cannot take for granted that adaptation will normally follow changing conditions. Adaptation must be seen as a social process whose outcome is not known before hand by the actors and institutions. The paper starts with a critical examination of what adaptation is for sociology. A multidimensional model is proposed wherein adaptation is conceptualized as a process which is both controversial and cooperative and is the result of interacting actors and institutions which come to a common understanding of a problematic situation and of its solutions. To understand this process a combination of different theoretical approaches are necessary. The overlapping elements are the following: 1) governance process where ecological uncertainty is pervasive, and where structural and social diversity has deep implications for decision-making; 2) controversy analysis, which focuses on debate on common understanding and on the choice of courses of action; 3) cultural theory to explain how people perceive and organize the changing world (natural as well as social) they live in; 4) since some, if not all, adaptation measures are likely to be innovative solutions, an understanding of how innovations are produced, diffused and adopted, even co-produced, is important; 5) finally, one may ask to what extent models and instruments of environmental governance are sensitive to social and ecological justice. This approach will be applied to problem-definition and policy-making in instruments of environmental governance are sensitive to social and ecological justice. The approach will be applied to problem-definition and policy-making in adaptation to climate and biodiversity change in a selection of large Canadian cities.

On the Concept of 'human' and the Aporia of Social Sciences

It is to be ascertained by way of a simple juxtaposition that the set of concepts “human / human being / humanity / humanness”, which forms the very core of modern scientific production in its entirety, belongs to a category that qualitatively differs from all those morphologically, lexically, pragmatically comparable concepts. The concept of “human” does not assign any manageable features, or assessable parameters, to those phenomena subsumed by it. It belongs to a class of concepts that I provisionally call “hoax”. A concept of this category pretends to indicate a set or subset of conspecific phenomena in that one or more shared accidents are applied as differential features of the construction. The concept “human” is the best and truest of this kind. It is the epitome of “hoax”. Withal, it doubles its uniqueness by appointing itself to both the source and the guarantor of its own legitimacy and virtuousness. To top it all, one of the most significant features of “humanness” and human existence consists in the circumstance that the humanness of the concrete units of human society is determined heteronomously. The simple, but nonetheless devastating, consequence of this briefly described construction and operating principle of the concept “human” is that the whole edifice of modern social science, no matter the path taken, no matter how sublime the respective motive and objective may be, is damned to always end up in a cul-de-sac of some type of biology.

Postcolonial Sociology: An Oxymoron or a Border Crossing?

Since its inception, the division established in the course of securing the disciplinary borders of the sociology field between the populations to be studied by sociologists and those who fell in the “other” group to be studied by anthropologists was taken for granted and remained unchallenged. It was only in the political conditions of possibility of the institutional recognition of their profession that included the labor division between sociology and anthropology. Now that the
Member issues?

The last three parliaments in Bulgaria, Slovakia and the Czech Republic. The main comparison will be focused on:

- Like sympathizers or citizen’s involvement are blurred because the members don’t
  - Anaire between statutes of formal party membership and other forms of activism

I’m studying the social conditions of the daily lunch – when the residents
tend to get to a sociological understanding of mealtimes uses in the French nursing
homes. I’m tempted negotiations with the nurses, continuous criticism or refusal to eat will be
analyzed with gender and social categories references.

The comparison will encompass parliamentary parties represented into the

- Practices of attracting party members in Bulgaria, Slovakia and the Czech Republic

The political parties in ECE countries are assessed to be unstable, weakly
- Encrusted into the civil society, very much attached to the state (Hafner: 2001) and
  with low levels of members (Brezen and all). Political parties in ECE countries are
even described as “party with no members” (Cabaña: 2013). This is problematic for the
- Levels of representativeness and the levels of representation and the expression of different civic groups and interests. In general, parties in ECE countries are not implementing formal rules for equal representation of young people, woman and minorities. According to some researches the boundaries between statutes of formal party membership and other forms of activism like sympathy are not clear anymore because the members don’t matter. Parties in ECE countries are also pointed as based on clientelistic networks and patronage. The paper proposed aims to analyze party members and party policies and practices to sustain and extend the membership in comparative perspective in the case of Bulgaria, Slovakia and the Czech Republic. The comparison will be focused on:
  1. Forms of involvement: in the political parties in Bulgaria, Slovakia and the Czech Republic (formal membership, peripheral organizations of youth, woman; and other)
  2. Practices of attracting party members in Bulgaria, Slovakia and the Czech Republic: statutes; rules; new innovative techniques
  3. The social-economic, age and gender profile of party members of the three countries

The comparison will encompass parliamentary parties represented into the

- Practices of attracting party members in Bulgaria, Slovakia and the Czech Republic

The main research question is how do political parties in studied countries deal with low membership issues?

This presentation falls within the framework of my PhD research, which aim to get to a sociological understanding of mealtimes uses in the French nursing homes. I’m studying the social conditions of the daily lunch – when the residents
have to eat together – in spite of physical and cognitive disabilities, eating and
moving challenges, and frequent deaths. I question this social practice considering
that residents often declare they do not want to live in institution, and do not
want to share mealtimes with others. Eating together is a daily rule in all types of
nursing homes – public, commercial, or associative. Eating alone is always an
exclusive propriety in the medically hospitalised, all grouped.

From the institutional point-of-view, the shared meal practice is built around
the values of the French conviviality, and the institutional appropriation of the
French public health discourse on the undernutrition of elderly people.

In the context of control of the embodied dimension of the selves during meal-
times, I intend to describe how the social practice of eating together produces
forms of social control of the body according to different health restrictions. Depending on the health condition of the elderly people, they face various body management (ex: table placing, type of food service), and various forms of food incorporations (ex: “all pureed”, all pureed). I aim to show how the daily practice of eating together often produces typologies of eater’s, far away from gender, social and generational conditions of the residents.

In the context of control of the embodied dimension of the selves during meal-
times, I propose to focus attention on forms of deviant behavior of residents as forms of self expression in different social conditions. By way of example, attempted negotiations with the nurses, continuous criticism or refusal to eat will be analyzed with gender and social categories references.

The interest for sustainability issues and the redefinition of social priorities in an ecological discourse (Schumacher’s concept of “small and simple living” 1980) have covered, for better or for worse, their own way in today’s societies, and the urgency of change is gaining more and more advocates. Despite this, the holistic view of sustainability – promoting human welfare and protection of the natural environment – is becoming a programmatic and cross dominant ideology that has shaped the generally environmental policies, but its effective implementation has basically been done in an evasive (Adger and Jordan, 2009), superficial (Redclift, 2005), and inconsequentia (Léelé, 1991 (2005); Carter, 2001) manner.

In those rough economic times that we are experiencing in Europe – and de-
picted in the end of the 70s under the “age of irresponsibility” the other de-finite re-
resources (Jackson, 2009) – those features tend to worsening and, nevertheless, do not release an engaged, empowered and collective movement able to request and support just, equitable and pro-sustaining measures. Hence, based on the testimony of representatives of Portuguese civil society organizations (focus groups, on-line survey, and document analysis) we will try to define i) motivations, ii) interests, and ii) profiles of civil society organizations, taking into account that, despite the rhetoric of holistic sustainability, environmental groups tend to ignore social problems and overestimate ecological ones, while the remaining groups tend to take a reverse position.

Governance for sustainability has gained greater public awareness and so-
cial significance since the late 1980’s (Adger and Jordan, 2009), and it shares
basic purposes and characteristics with sustainable adaptation. Consequent-
ly, both governance for sustainability and adaptation to climate change often
overlap in policy design and implementation (Kemp, Paro and Gibson, 2005). In
the case of the Portuguese case, despite the persistent lack of a concerted national frame-
work and/or reliable funding policies, incontrovertible advance has taken place in
recent years. However, these dynamics are still irregular, in reality some misconceptions and unsustainable practices are persistent (Schmidt & Guerra, 2011). Bearing this in mind and in the context of climate change, the overall objective of this project is to produce knowledge to support decision making on adapta-
tion strategies and pathways, as well as related action programmes across Europe. Based on results from an online survey applied to a representative sample of Portuguese municipalities by the BASE Portuguese team, and framing our analysis within a multi-arena governance framework (Jorgensen, 2012), this paper will discuss the conditions and features of local sustainability initiatives
promoted by Portuguese municipalities. We will attempt to diagnose the sit-
uation, analysing the features and context of initiatives and projects currently
being implemented or promoted by municipalities, under the framework of
European and national policies for climate change mitigation and adaptation.
Moreover, we will try to highlight some relevant features of local communities

(A)Different Kind of Tension: Portuguese Musical Creation and Identity Narratives

In this paper, we analyze the identity features present in the Portuguese music editions of the years 2011 and 2012. It is important to understand the established relations between music and society: how far music expresses themes, subjects, emotions? How far those themes, subjects and emotions, as well as the social reality, reflect themselves in music? Reckoning music as a social phenomenon, sociology must accept the sound world autonomy, with its own symbols and norms without neglecting the importance of external factors that come in line with it. In this sense, the paper intends to make a plural balance of the sociological reflection on the sounds around the following question: the subcultural concept is still heuristic regarding the understanding and explanation of the youth resistance ritual practices or, in the other hand, we are standing before a context of explaining opportunity of the post-subcultural theories as we emerge in a context of change, transition, neo-traditionalism, bands and scenes? In times of growing economical and social easing, we discuss here the complex processes of youth identity construction around the punk, that global mediascape. This multifaceted landscape of the musical youth cultures, made of multiple expressions and references, finds meaning in an also plural ontological landscape.

(Almost) Four Decades of Punk in Portugal: A Culture Still Young?

It’s been nearly four decades since the emergence of the first punk movement - in the UK and USA - and, since then, the 'movement' has deeply changed at different levels. One key aspect of this transformation of the punk has to do with how it has been globalized and differently appropriated by urban youths from different parts of the world. What were, at the beginning, the key milestones and who were the original Portuguese punk players? How the punk movement allowed us to read and understand the evolution and transformation of Portuguese society over the past four decades, in their aspirations, expectations and weaknesses? Why punk still is, until nowadays, a relevant reference point for some Portuguese youths, persisting as a relevant and dynamic urban culture? And, on the other hand, how is it possible to get older in the 'scene' and still claim to be punk? Here, we will be deeply analyzed a wide range of interviews conducted with dozens of participants in the Portuguese punk scene, from different generations. This approach focuses on a social theory argument – one that has been delayed, although is a rather relevant cornerstone. According to the subcultural concept, it is still heuristic regarding the understanding and explanation of the youth resistance ritual practices or, in the other hand, we are standing before a context of explaining opportunity of the post-subcultural theories as we emerge in a context of change, transition, neo-traditionalism, bands and scenes? In times of growing economical and social easing, we discuss here the complex processes of youth identity construction around the punk, that global mediascape. This multifaceted landscape of the musical youth cultures, made of multiple expressions and references, finds meaning in an also plural ontological landscape.

The Effect of the 2008 War on Estonian Public Confidence in International Institutions: A Mixed Methods Study

When the so-called 5 Day War between Russia and Georgia occurred in the summer of 2008, the Estonian public reaction was especially passionate. Two major explanations stem from the strong identification of Estonians with the situation of Georgia (post-Soviet state, small country, Russian citizens speakers on Georgian territory) and the question of existential insecurity (will the EU and NATO guarantee our security in case of necessity?). Using a mixed methods research design, in this study we investigate how the 2008 war between Russia and Georgia affected public confidence in international organisations in Estonia. Data for this study derives from three different sources. Firstly, the European Values Studies (EVS) conducted in 2008 offers a unique value for this research because fieldwork for the survey in Estonia coincided with the military confrontation between the Russia and Georgia on 8-14 August. EVS, among other domestic and international institutions, inquired about the level of confidence in the United Nations (UN), the European Union (EU), and the North Atlantic Treaty Organization (NATO), which serve as the dependent variables of the current study. Using propensity-score matching technique, respondents who were interviewed in a time interval before the war are designated as the control group, whereas those respondents who were interviewed after the war started, can be designated as the treatment group. Secondly, the information from this dataset is further supplemented by observations and in-depth interviews conducted in Estonia both in the period around the Russo-Georgian conflict, and after it. This will enable us to go deeper into the embedded meanings of trust that Estonians exhibit towards international organisations, or the West more generally. Thirdly, we will offer a brief review of how the 2008 conflict was framed in Estonian media at the time, and how this may have shaped the perception of the Estonian public.

*Trade Unions As “Contested” Legal Intermediaries ? Reflection on British Unions’ Legal Mobilisation for Equal Pay Since 1970*

Since 1970, British trade unions have been involved in the obtaining of a national equal pay legislation, in the pursuing of significant claims and in the implementation of the law through collective bargaining and job evaluation schemes. This legal mobilization did not develop in a consistent manner over time and across unions though. In the 2000’s, unions have been heavily criticized for having consistently colluded with the employers to minimize the effects of equal pay legislation, while being forced to support massive litigation on behalf of their low-paid female members. To understand this contrasted story, I will use a conceptual framework that defines trade unions as “contested organisations” which highlights the disputes both between and within unions as to what constitutes the central trade unions’ “project”. To understand why union legal mobilization for equal pay has been very controversial within the trade union movement and challenged by lawyers, I will argue that trade unions can be characterized as “contested legal intermediaries”. Drawing on a multi-methods approach combining 34 interviews with trade unionists, legal practitioners and experts, union archives analysis and legal case study data, I will argue that union legal mobilization needs to be understood in the context of the contentious (and gendered) relations existing between members with different interests, the competing relations between union officials and their base, and the often adverse relations between trade unions and employers. I will also claim that litigation strategies need to be apprehended in their complex and sometimes constrained relationships with other types of legal strategies such as collective bargaining. Finally, I will reflect on the effects and limits of massive litigation on union agenda and practices, pointing out the potential risk of marginalization and de-politicization of pay inequalities issues.

*Fishing in River, Confrontations at Risks and Ambiguous Situations*

The contributions dealing with industrial risks bring to light the organizational and sociological causes which provoked accidents (Perrow, 1984; Vaughan, 1996) or those who prevent them (Laporte, on 1996). They also reveal the controversies which denounce the presence of the works modifying the living environment of the local residents (Lolive, 1997), or externalities are denounced as being risks (Chataureynaud and Torny, 1999; Borraz, 2008). But what about cases where the local residents do not denounced the industrial risks and confront themselves with the risks? And what can be their incidence on the risk management?

Not feeding controversies towards the industrial works and their risks, the local residents can even develop practices of leisure near the industrial works, minimize the incurred risks and go against rules. If the theory of the perception of risks (Slovic, 1992) and opportunities (Star, 1969) are first useful theories, sometimes the ambiguous role of rules and the political positioning of actors around them, allow to understand better the confrontation of the local residents to the risks.

To develop these points, we shall approach the confrontation of fishers at the risks generated by the hydroelectric exploitation of rivers. Beginning with a description of rivers (I), the contribution will analyze the reasons bringing fishermen’s specific segment to confront with their risks (II). If their limited recognition, their rhetoric of underestimate and their perceptions bring them to trivialize the risks (III), safe practices are facilitated by multiple rules which create ambiguous situations (Lot, 2008). They clarify the situations by establishing “cognitive compromises” (Amalberti, on 1996) or by mobilizing “techniques of neutralization” (Sykes and Matza, on 1957) to justify their practices (IV). The ambiguous situations are maintained by the associations of fishermen in order to develop their practice.

*Bullying As Social Control: Prejudice and Discrimination Among Children*

This study examines bullying as a form of control, surveillance and punishment of socially deviant behavior among children. This violent practice mobilizes regulation-powered rules that outline the limits and possibilities of what it means to be a boy or a girl. It is based on data from an exploratory ethnographic research in primary and secondary education schools in Brazil. It is argued that bullying is centered on complex power (gender, social class, race and sex) relations embedded in the broader sociocultural context, and particularly in children’s cultures. The bully, along with a group of followers, enforces a prescriptive ideal. His or her performance classifies and naturalizes normality through symbolic aspects that act to produce and socially legitimize the socially established, ideal types. The ‘popular’ and ‘successful’ infuse desired attributes, and guide the actions of those who must live in constant fear of isolation and rejection. Noteworthy is the continuous effort by boys and girls towards the visually ‘perfect’, which is intensified by a celebrity-driven culture and their own exposure on social networks. The processes of identity formation and competition are marked by a differentiation from the abject. The Other is the self’s regulating and identity referential. It directly affects subjectivities drifting from guilt to resignation, failure or hope of a future metamorphosis.

As an example, there is the figure of the ‘whore’, who manages sexual regulation, and prompts a demand for prescriptive performances of femininity by the ‘good girls’. Thus, the bullying-engendered game of violence segregates children territorially, and affirms and protects dominant identities, affiliations, representations and social roles.

*Children’s Participation in the Promotion of Their Right to Health: The Specialists’ View*

More than 20 years after the Convention on the Rights of the Child, the right to participation is yet to become common practice. This article has analyzed the concept that scholars and NGOs specialized in child health have about the role of the children’s scholars in promoting their right to health. The General Comment on Article 24 by the Committee on the Rights of the Child was organized through a requested contribution from experts, who submitted 36 comments. Among these, 19 addressed the issue of child participation with a view to have their right to health realized. Results indicate: a) a consultative participation, limited to the institutional and political reorientation of health services; b) the access to information as a prerequisite to participation in the promotion of the right to health; c) the inclusion of health education as an instrument of information dissemination; and d) the domains of social interaction and intergenerational relationships in the family, school and community are not appreciated as health promotion areas. In summary, experts believe that the right to information is the sine qua non to the right to participation. Because valid opinions are conscious, participation is manifested when they are formulated. This perception does not include ‘learning by doing’, which is centered on the development of personal and social tools. One text alone mentions the importance of the children’s awareness and knowledge about their own rights, as well as that of exercising their citizenship.

*Household Carers and Gender Inequalities: A Comparative Perspective on Care*

Domestic services are now on the global policy agenda. In Europe, there has also been a development of varied forms of domestic work that recall periods such as the eighteenth and nineteenth centuries where domestic help spread beyond the nobility to merchants and farmers’ households. In fact, then as now, the recruitment of domestic labor is an important expression of social relations, including social class and status, as well as a means of reproducing them. Housework as a cultural practice has been understood as a solution to the “Great Transformation” of recent decades that involves ageing of the population, changes in family structure and gender roles, with the masculinisation of women’s employment patterns, in a context of shortage of public care services, in-migration and de-industrialisation which in turn calls for the development of the services sector. This paper examines policies that are implemented (through fiscal policies mainly) the hiring of domestic workers thus has a political economy aspect since labor market regulations and welfare state policy legacies will influence responses to socio-demographic changes. It focuses on gender inequality: Domestic workers relieve women from doing this work themselves and avoid gender conflicts over the division of domestic work but can reinforce inequalities amongst women and reproduce gender roles. Finally, domestic work is often performed by migrants or minority women from previous migration waves although some activation policies have emphasized the retraining of women native workers. Notwithstanding what is the contribution of household sector and its role on the question of ‘global inequality’? This paper focuses on political debates relating to domestic work during the last quarter of century and the policy measures adopted, their stated goals and their actual consequences in France, Belgium and at the EU level.

Understanding the Social, Cultural and Economic Factors That Shape the Acceptance, Use and Resistance to GM Crops: A Comparative Approach

Although the growth of GM crops has been dramatic, its uptake has not been the smooth transition predicted by its advocates. Unless we examine why GM crops have not been universally accepted as a public good, we will fail to understand the conditions under which "GM crops can help to feed the world." To answer this question we develop a research programme of fieldwork within and across India, Mexico and Brazil. Our research looks to contribute: (1) to enrich the debate at the level of culture and ontology; (2) to attend to the meanings of GM crops and foods and how they are embedded in practice; and (3) to develop deliberative methodologies to engender a broader set of options for GM policy and agenda setting. The main objective is to highlight the distinctive political, anthropological and cultural dynamics to the debate on GM crops across the 3 countries. Through this research, founded by The John Templeton Foundation, we identified some gaps in the literature: (1) little in-depth research examining the impacts of GM crops on farmers' communities and their culturally-specific farming and related practices; how GM crops have been embedded into everyday life contexts, how benefits and risks have been assessed from diverse cultural perspectives, how they have affected if at all farmers' social situations, practical knowledge, and their engagements with the land and food. (2) little in-depth examination of public perceptions of GM foods, and (3) little attempt to engage farmers (particularly female), citizens, regulators and scientists in deliberation, to assess how and under what conditions GM crops can be developed fully cognizant of social, cultural and spiritual values. In the research we developed: a) stakeholder structured interviews; b) stakeholder qualitative questionnaires; c) Ethnographic fieldwork with farmers and researchers and 4) focus groups with urban consumers.

Handling the End-of-Life Between Institutions and the Individual

Many factors are involved in defining the changes within the field of death and dying: innovations in medical knowledge and practice; changes in health institutions, family structures and everyday life practices; the pluralism of beliefs and religious affiliations.

A new dimension is represented by the emergence of the legitimacy accorded to the individual's decisions in choosing how to handle his end of life. This is no small thing, and, in fact, it has led to the opening of a rather heated debate in the public space.

The paper examines some recent cases in order to identify the knotty problems around which the change develops, oppositions are articulated, and instable compromises are reached.

Intergenerational Transfers and Solidarity in the Wake of a House-Price Boom: The Case of Norway

Housing is an important source of households' wealth. Tenure is becoming an important marker of social difference and point of distinction between good and poor housing. In Norway most households has become home owners early rather early in life. However, the house-price boom in the last two decades has changed the conditions and opportunities different cohorts has met to access homeownership and climb the housing ladder. While young households meet a housing market where access to homeownership is steady more trouble because of the increased housing prices amount to substantial housing wealth for older households and a capacity to support their own children's acquisition of a home.

An important question in the paper is how middle aged and elderly Norwegian dispose their growing housing wealth. Do they spend their wealth, do they continue to save or do they help younger family members? Another question is whether new generations of elderly behave in other ways than generations before them. Our main question is whether an explanation based on different attitudes in different generations or an explanation based on life course changes fit our data on how middle aged and elderly people plan to dispose their housing wealth.

The enormous increase of housing wealth is a newer phenomenon than the Scandinavian Welfare State where good housing originally was one of the pillars but not the vehicle of capital collection as we see today. We will ask how this development in the housing sector and in the system of family wealth affects other aspect of the Scandinavian Model as for instance pensions and policies towards income and wealth distribution. We will also make a short comparison with Sweden, another representative of The Scandinavian Model, with a system of housing tenure where the rate of individual home ownership is much lower than in Norway.

The Territorial Separated Marriage As a New Reality

Aim of this research is a one new form of marriage – the territorial separated marriage. Now some part of migrants have two (or more) families: the first is in the motherland and the alternative – on the migration territory. What are the reasons of this situation? How many kinds and species it has? What are the profit and problems men and women have? What about children?

Background of this research is the theory of demographic transition, theory of social stratification and social mobility, analysis of the international labor market and labor migration and the model of balance outlays/income of the generation offered by author, published in the paper of RC33 Eighth International Conference on Social Science Methodology in Sydney, July 2012 (N. P. Guliaeva. Socio-demographic problem of modern society: age structure, migration and labour force. The research method is the analysis of the open (official statistic data, media data (including internet source) and the results of investigating activity published by another authors and researching centers.

Results: the territorial separated marriage is a new form of marriage generated by long-time migration. Appearance a new marriage on recipient territory often does not destroyed a first marriage on the motherland. Frequently it is because marriage has not possibility or necessity removing the first family to the job land. At the same time the job of the working migrant is the main source of income to both families.

It is concluded that the territorial separated marriage is reality. As international migration is growing it is opportunity of the dissemination of this form of the marriage

The Role of the Court-Reforms in Transforming Azerbaijan Society

Both in the judicial system and in the minds of the population, there are still problems with the past communist regime in modern Azerbaijan. The conducted survey of the character and the essence of this problem can allow us to identify the ways of improving the judicial system in the country in line with the requirements of a democratic society.

The majority of the surveyed believe that democratic transformation of society cannot be successful and private enterprises cannot develop without a legal base and perfect judicial system that are capable of effective protection of private property rights, control after execution of the agreed responsibilities, protection of the rights of economical subjects, foster creation of market relations.

One of the reasons for the judicial power not to be able fully satisfies demand for the services is the fact that this demand is artificially lowered because of the distrust of the population to the judicial system. The other reason that lowers demand for the judicial services is lack of economical growth, which doesn't foster growth of the need in resolution of economical arguments.

It is evident that the observed tendency for activation of the commercial activity and successful implementation of the economical reforms will foster increase of demand for the services of the judicial system.

Some of the opinions of enterprise managers, representatives of the general population, judges and employees of the court machinery, analysis of their judgments and proposals allowed to reveal the most relevant problems related to the work of courts and render of the judicial services, to determine the paths for extension of population's and business sector's access to the judicial services, which will help to further improve the judicial system and will become a cause of the more effective implementation of the goals of the judicial reform in Azerbaijan.
ties for women and men on a labor market, expansion of opportunities for career growth women, appointments them on senior positions. The state supports strengthening of social protection and protection of mother and children, baby sitting simplification for working parents according to the ratified in the Workers with Family Responsibilities Convention of the International Labour Organization increase in number of kindergartens, and also development of services on to family planning.

For the purpose of realization of noted directions the parliament of Azerbaijan accepted a number of the target documents. The parliament accepted such important documents, as “Strategy of the Azerbaijani families”, the National plan of action on gender equality, Children’s code and National children’s strategy. Along with it, in the country are created institute “Family psychologist”, the help and shelter centers for the women who have undergone the household to violence, and also system of monitoring of violence against women, evasion of women from education and early marriages.

Negotiating Narratives in the Discourse of Legitimized Use of Military Force: The Triforom Linkage of Action, Institution and Structure

How can we deal with issues concerning the use of force in international conflicts, for instance debates about Humanitarian Interventions, RtoP, Human Security etc. beyond idealistic and normative prejudgment? Based on our discourse analytical study this paper illustrates the analysis of international conflicts, which incorporates structure as well as agency by focusing on conflicting narratives within discourse (e.g. sovereignty vs. human rights, humanitarian interventions vs. RtoP). Grounded on the pivotal epistemological hypothesis that the relation between discourse and practice is inextricable and mutual, we argue that this linkage is triformal: Discourse consists (1) basically of long-term constitutive beliefs that are (2) due to social trends constantly reinterpreted and modified in (3) the face of interactional events and crises of action, when conflicting norms are negotiated. In this sense ‘discourse’ is seen as an entirety of correlated speech acts, which are analyzed for institutionalized stabilized patterns of structure and rules of action. By combining discourse analysis and grounded theory, we examine speech acts (e.g. minutes of plenary proceedings, UN resolutions, the ICISS-Report) perceived as a form of action and hence as an important part of political practice. We show how strategic narratives, reconstructed from interactional events, get systematized and condensed into strategic culture, thereby part of the discourse. We portray the process of change of hegemonic narratives on the basis of the international discourse in the cases of former Yugoslavia, Democratic Republic of Congo, Sudan and Afghanistan: what grounds of justification concerning the use of force emerge? In what way UNO, NATO and EU differ from each other? Which role plays state-building in the concrete action of international agents compared to other goals?

Leisure and Indian Joint Family System - a Some Case Studies of Hyderabad Karnataka Region

The study of Indian joint family system and Leisure is assuming importance especially developing countries of the world in general - India is in particular. The study of Indian family system deserves specially attention, not only because they are born in Indian families but also here the family system differs in material respects from the western family system. The family in India does not consist only of husband and wife but also of uncles, aunts, their children and grandchildren. This system called as joint family or extended family system , is a peculiar characteristic of the Indian social life. A son after marriages does not usually separate himself from the parents but continuous to stay with them under the same roof, messing together and holding property in common, the family has joint property and every one lives in it since the birth, the time he is born. The earings of all the members are put in a common fund out of which family expenses are met. Non-earning members has much share as the earning members, the joint family system is in rural India thus like a socialistic community in which everyone earns according to their capabilities and receives according to his needs.

The joint family system provides more leisure, since the work is shared by all members on the bases of age, sex and experience, they get more leisure time and more hands at home can finish off their work with minimum time and provide enough leisure to the members to relax. In this study an attempt had made to analyze the narratives within discourse (e.g. sovereignty vs. humanitariansim) structure in the cases with personal interview of the members of the joint family system in Hyderab - karnataka region of India.

GUN CUNINGHAME, PATRICK* (Universidad Autónoma Metropolitana, pgcuninghame@yahoo.co.uk)

Resistance to Precarity in Knowledge Production, the Case of a Mexican State University

The precarity of Autonomos Metropolitan University manual, administrative and academic workers was one of the main causes of the SITUAM trade union’s strike between February and April 2008, the longest since the university’s foundation in Mexico City in 1974. However, the conflict has remained unsolved and it seems that this process will continue to provoke unrest and tension among workers until it is solved, probably after another form of strike or industrial dispute in the near future, especially given the recent 2012 Labour and Education neoliberal structural reforms which have already provoked considerable resistance among state school teachers and university students.

But what exactly is university precarity? What are its main forms? Could it be more effectively combated through the stalemate trench warfare of the prolonged strike? In an attempt to answer these questions this paper starts from the proposition suggested by the international online discussion list and blog “Edu-factory” that the university has become an increasingly privatized and globalized “factory” for the production and dissemination of knowledge in the most intense and competitive form possible, increasingly linked to the demands of private enterprise and the “free market”, rather than those of society. These developments occur within and are crucial to the ongoing transition from industrial to cognitive capitalism. As the higher education sector is key to the creation of surplus value in cognitive capitalism in which the production and strategic dissemination of knowledge is central, a series of struggles are now being fought both against the privatization and transnationalization of the sector as well as the precariousization, flexibilisation and casualization of its workforce. Finally, the organization of the production and distribution of knowledge as “commons” instead of fetishized market commodity appears to be the key to thwarting the neoliberalization of the public university.

GUNDEMEDA, NAGARAJU* (University of Hyderabad, nagarajuhcu@gmail.com)

University Student’s Attitudes Towards Affirmative Action Policy: Reflections from India

The structure of the Indian society is based on the practice of caste hierarchy legitimises the unequal social status and institutionalized policy of domination and deprivation from the material and ideological resources of the state, society and economy. Since the colonial times the demand for affirmative action policy (popularly known as reservation policy) in education based on caste is a source of ideological conflict between the upper caste and lower castes. The higher educational institutions in general and universities in India in particular have become the centres of battle ground for the advocates and opponents of reservation policy. The objective of the paper is to evaluate the university students on the policy of reservation based on gender, caste, class, tribe, religion, region and physical disability. The sample of the study consists of 500
students from diverse academic programmes and disciplines of the University of Hyderabad in India. The survey method, selected individual and focused group interviews have been conducted in order to map out the rationale behind supporting and opposing reservation based on ascribed and achieved identities. The opponents of reservations felt that reservation is nothing but the exclusion of the meritorious talented students from the higher education, employment. On the other, the reservation policy gets support as a compensatory justice mechanism for the historical exclusion and multiple forms of deprivations and discriminations against the marginal groups of the Indian Society. The study also brings the personal narratives which demonstrate how reservations enables the social mobility for the marginal caste/groups and works as disabling mechanism in the case of students from upper castes, male and normal students. Therefore, the paper brings debates and (dis) contents associated with preservation and suspension of reservation policy within the framework of public policy and development discourse.

Since the late 1970s, Kawashima’s approaches to Japanese law that attribute significant explanatory value to culture have been in Retreat. Recent sociolegal scholarship share a skepticism about efforts to explore Japaneselawthrough the lens of culture, which they see as conceptually weak, undefined. With cultural translation theory, this paper argues that vagueness of Kawashima’s theory has consequence for the salience and scope of legal problem, by focusing on the link between legal professional, media literacy and local culture. A case study of Communicational Impact in Kawashima’s Legal consciousness theory is analyzed in two part: the first, to compare the form of Kawashima’s academic work and this discourse on public, with a paperback book called Nihonjin no ho ishiki (The Legal consciousness of the Japanese), shows that legal profession and layman culture has different types of legal information. The second is to confirm the possibility of comparative understanding of legal theory, by following Kawashima’s Legal consciousness debate in Japanese, American, Chinese legal review from 1967 to present.

Understanding Swedishness and Conceptualizing the Self: The Perspective of Young Women of Middle Eastern Backgrounds Living in Sweden

 Searching for a sense of belonging and defining one’s sense of self has become a complex task in this globalized world. The way we define ourselves, for instance along ethnic lines, has consequences for our understandings of others in our everyday lives. This presentation will depart from a project that uses semi-structured qualitative interviews – with 24 young women of Middle Eastern backgrounds aged 15-22 – to explore the ways in which identity can be constructed. The reason why these women’s identity is in focus is that they have been the subject of heated debates on honor related violence in the Swedish news media in recent years. Against this backdrop, questions about the implications of being regarded as ethnic ‘Others’ can be explored. In this presentation, the focus will be on social identity processes and the interplay between self- and public image, with specific regards to ethnic identity. The presentation will draw attention to the way in which understandings of Swedishness play a role in these women’s conceptualization of self. These understandings include, among others, assumptions regarding Swedish women’s liberal approach to norms on sexuality and the informants’ relation to the Swedish society as a home, yet, not a ‘homeland’. As such, the presentation problematizes how sense of belonging and definitions of the self are constructed when identity is contested andnegotiated in everyday life settings.

An Emerging Social Movement in China: Frames and Activists in Dog-Rescue Actions

A series of dog-rescue actions intending to save dogs from being slaughtered and destined for restaurants have been occurring quite regularly in China since 2005. Localised seen activities taking action on highways to demand dogs to be released from the trucks, interrupting traditional festival in Yulin, Guangxi Province celebrating eating dog meat, and exposing illegal slaughterhouses for dogs. In China where dog meat has been a common source of meat and where dogs have been socially and culturally regarded as lowly creatures, these activities should deserve closer examination. For one thing, do these activities indicate an emerging movement advocating animal welfare rights? Or do they reflect some broader changes in the values and practices of a new generation of Chinese growing up in post-reform affluence and modernity? And how has such a movement been able to expand, especially in a social milieu that is generally conservative and authoritarian? Adopting the lens of frame theory, this research endeavors to answer these questions by inquiring into the participants and organizers of these activities and the frames they share and develop in spearheading their organization and movement. In turn, a critical analysis of the broader social, cultural and economic changes in post-reform China will be carried out.

A case study of an Animal Rescue Organization, which has organized two dog-rescue campaigns has been conducted in Kunming, while 20 depth-interviews with activists in Kunming, Beijing and Chongqing have been delivered as well.

Brotherhood, Masculinity, and Social Capital: Fraternities At The University Of The Philippines Diliman

The paper is based on the study of college fraternities rooted in traditions of bond and loyalty at the University of the Philippines Diliman (UPD), the country’s premier state university campus. Tracing their roots in the early 1900s, UPD fraternities have built a vast network of brotherhood ties connecting various generations of men, from college students to professionals who now occupy leadership positions and status in government, private and corporate sectors in the Philippines. The study looks into the identity formation of young men, including the quest to be part of a trust-based social network to affirm masculinity, survive the competitive challenges or enjoy the adventures presented by college life, and assure paths to social capital and professional status.

The paper discusses how young men gravitate to fraternities for constructive aims such as academic excellence and socio-civic service, on the one hand, and become embossed in antisocial violent behaviors within their group or in conflict with rival fraternities on the other. Such violence in gang fights and hazing rites has claimed the lives of at least eleven, and injured hundreds of young college men in the history of the university. The concepts social capital, identity and masculinity are utilized to understand the meaning of “brotherhood”, the origin and shifts in orientation and behavior of the group and individual members over generations. The study analyzed documents supplied by fraternities, and examined the narratives of fraternity “brods” or members from various generations or cohorts since the 1950s to the present.

Ethnic Conflict and Internal Colonialism: Theoretical Reflections for the Indigenous Mobilizations of the 21st Century

This paper discusses why ethnic conflict in Latin America is not related to secession or ethno nationalism, rather it is characterized as a renewed political activism of indigenous peoples denouncing violence and threat in a context of defending territories and natural resources. The concept also implies the revision of “internal colonialism” as a theoretical guideline that inspires intellectual and political projects of ethnic mobilizations. Finally, the paper argues what are the main characteristics of ethnic conflict in Latin America: a) low tendency to rebel against the state, b) low use of violence form indigenous peoples, c) very high use of violence and threat against indigenous peoples and d) widespread social exclusion and racial discrimination.

Immigration Key for Immigrants in Spain 2013

According to our recent research study/survey, it shows that the immigrants in Spain 2013 (Romanians 19%, Moroccans 18.8%, Ecuadorean 9.4%, sub-Saharan Afri cans 6.3%, Colombians 6.1%, Bulgarians 9.4% and those with dual nationality 16.9%) 77.6% of them live in rental housing, 27.3% work in private labour market with temporal contracts and 21.1% with fixed or permanent contracts, while 26% are unemployed although they have worked before. 57% of them have the intention to stay definitively and in general terms, they are highly satisfied with the services. They are also highly satisfied with their interpersonal relationships (88%), with their family life (80%) and at work/studies (63%). Nevertheless, only 44% of them are satisfied with the economic situation. 83.5% consider their cultural contribution as positive and 75.3% consider their economic contribution as positive. 69.8% consider their demographic contribution as positive. 50% of immigrants surveyed think that they should keep their civil traditions, specially if they can. However, 68% agree that the languages which are majority should be included in the academic curriculum and 37% agree with the headscarf ban in classrooms.

Integration for 78% of the surveyed is a society issue, and those with more difficulties are the Magreb population 36.9%, the sub-Saharan African countries 13.8% and the Chinese 13%. We conclude with the affirmation that, according to the immigrants, 50% of them agree that the economic aids should exist for Spaniards and immigrants regardless of their legal or illegal administrative status and for 97% of them, they should have the right to live with their families, 95% think they should collect their unemployment benefits after paying their social security taxes, 80% think they should be able to vote in local/municipal elections and 85% think they should be able to obtain the Spanish nationality.

The third wave of feminism declares that the most important mission in becoming a gender equal social ideal is to encourage men to take a greater part in the family life, and especially, take greater responsibility toward their children’s upbringing and education. Some scholars suggest that this revolution has yet to take place because women still guard their traditional roles and refuse to share them with their spouses.

Our study indicates that although women ideologically declare their wishes for a more supportive and active partner and for a more egalitarian division of household labor and child rearing, when these ideas were turned into practice and examined, we found that men define these practices as far less feminine than women. This tendency appears both for secular men and women and for religious men and women.

Thus, while ideologically, women are more liberal and feminist than men, in practice, they tend to hold a traditional view regarding child rearing daily practices, as they view these practices as feminine.
Park protest we can see mostly all political, ideological views developed in Turkey. From communists to nationalist, from Muslims to Atheists, from LGBT to football fans of these 3 biggest clubs. Of course politicization of these fan groups can be described as political awakening of youth after 1980 military coup and turning it into a struggle within their passionate interest.

This paper aims to understand these fans, their change and their demands from authority.

Muslim Informal Organizations of Tatar Youth in the Republic of Tatarstan (Russia)
The report deals with the revival of Islamic identity in the Republic of Tatarstan which is an ethnic republic within Russia and the Muslim informal organizations of Tatar youth. Sociological research shows that religion is more important for Tatars than for other ethnic groups who traditionally do not profess Islam. There are more believers among Tatars who observe religious customs and ceremonies: there are less non-observers and non-believers. As far as religion is concerned, sociologists used to argue that women were more religious than men, older people more than youth, the uneducated more than people with higher education and people from rural areas were more religious than citizens from urban areas. However due to processes of post-modernity the situation has changed and another tendency has become apparent, which is sometimes the reverse. One of these trends is Tatar youth. The research data reveals that desecularization has increasingly affected young people, and their degree of religiosity does not depend on the level of education or place of residence (there is even more rapid Islamization among the educated youth of big cities). A group of strictly observing young Muslims has been pointed out. They are about 5% of all Tatar youth. They are very religious and they confirm it by their behavior. The report focuses on some initiative groups and informal organizations of Muslim young people in Tatarstan closer to the present of a life in Tatarstan.

GUZI, MARTIN* (Masaryk University, martin.guzi@ecoon.muni.cz)

Effects of Interview Mode on Self-Reported Well-Being
This study explores the differential effects of face-to-face interviewing and web-survey self-interviewing on subjective well-being questions. The analysis employs individual data from traditional surveys (e.g. the World Values Survey, the European Social Survey, and other representative national surveys) and data obtained from a web survey posted at WageIndicator websites in more than 30 countries and sent to 200 interviewers. Stimulated by an increased use of web surveys, we test the hypothesis that online surveys decrease measurement error in sensitive questions created by the presence of an interviewer (e.g. the underreporting of socially undesirable behavior). We show that mostly in advanced economies respondents tend to report higher subjective well-being levels in the presence of an interviewer, while in developing and former communist countries the presence of an interviewer generates a downward bias in the reported well-being levels. The paper also contributes to the ongoing debate on web survey data quality, reliability, and validity for scientific use. It demonstrates how social sciences can benefit from the use of web survey data in order to overcome the limits of traditional information sources.

Changing Identity: Istanbul Clubs during Gezi Protests
Galatasaray, Fenerbahçe and Beşiktaş are the biggest sport clubs in Turkey. Even they are sport clubs their main focus located in football and football has an obsession level love and hate relation within Turkish public. But even %90 percent of Turkey’s population see themselves as fan of these 3 big clubs which are also the oldest clubs, these Istanbul clubs have zero class affiliation throughout history. Very crudely Galatasaray represent aristocracy, Fenerbahçe bourgeoisie and Beşiktaş worker class but like we said these assumptions are very crude and can not apply to fans and general public.

GÖYONG, JOHN EMMANUEL* (Sociological Association of Nigeria, gyongemma@yahoo.com)
The Socio-Economic Implications of Kidnapping in Port Harcourt, Nigeria
Kidnapping seems to be growing as an industry involving every level of the society. However, studies on it have been relatively a recent phenomenon, with much of the literature coming from Asian, American and European continents. There is very little empirical research carried out on kidnapping in Nigeria and yet there are series of media reports of daily incidence of kidnapping in the country. In port Harcourt, the commercial and oil Hub of Nigeria’s Niger Delta, kidnapping was/is generally said to be a fearful and threatening crime. While in other places, the problem is more or less an occasional thing, that of Port Harcourt is generally observed to be habitual, sporadic and spontaneous that happens almost every day. It is against this backdrop, this study examines the nature of kidnapping and the socio-economic implications of kidnapping in Port Harcourt, Nigeria. Using the multistage cluster sampling method, a sample survey of 350 households was administered questionnaire. In addition, official crime statistics on kidnapping from the police was collected and 15 in-depth interviews (IDI) including victims, police officers, traditional rulers among others were conducted. The findings show that one, kidnapping takes a violent dimension and it has been established, operated and executed in form of business empire; two, there is the development of independent negotiator between the victims and perpetrator of kidnapping; three, there exist paucity of official reported cases; fourth, there is general behavioural modification of residents on socio-economic activities and relationships. In conclusion, the study confirms that kidnapping has negatively influenced people’s behaviors and that cases are grossly underreported to the police as government does little or nothing to stamp out the menace.

GÜRTNER, CHRISTEL* (University of Muenster, ggaertner@uni-muenster.de)
Voluntary Commitment in Church-Based Environments As a Chance of Generating Meaning for Adolescents
In analyzing the religiousness of youth, positions vary between the hypothesis that religiousness has decreased and the hypothesis that there is a specific youth religion. In my paper I will assume that the development of religious identities and convictions depends on social contexts and family environments. My paper elucidates that adolescents generate different religious interpretative patterns in order to position themselves in relation to concepts of life and meaning in societies that are marked by the pluralization of values, the secularization of social relations and the individualization of life styles.

In western Germany, church-related status passages are still part of the norm. We unpack how knowing the ‘new’ and ‘old’ is being translated and reinterpreted among the two generations. Drawing on ethnographic fieldwork I am going to...
show specifically how the implicit dimensions of knowing how to use ‘new’ and ‘old’ media becomes visible and obtains agency in each of the context of the other generation.

The paper is divided in three steps. First, I will discuss the moments when members remember how to use either ‘new’ or ‘old’ media and discuss the implications for our memory view on media studies. Second, I will show what happens when the implicit knowledge of using these objects is being translated to the other generation. I will follow how the rhythms of bodies in interaction with their environment change, and how the use is being remembered and reinterpreted. Third, I will discuss the implications of such an intergenerational view on the enactment of social time in each of the generations’ body rhythm.

GÖBEL, HANNA* (University of Hamburg, hanna.goebel@uni-hamburg.de)

Unpacking Sensual Ruptures and Rhythms in the City: Methodological Devices for a Sociology of Sensual Translations

Studying urban sensual experiences through film and photo cameras is one of the most intense settings through which an argument about the performativity of methods and their epistemological and ontological consequences can be developed. Drawing on the recent developments in the realms of a ‘sociology of translation’ and the methodological devices offered by the ontologies of ‘urban assemblages’, this paper wishes to unpack the specific case of visual, acoustic, haptic, taste and smell related ruptures and reconfigurations of body rhythms in the city.

The case will be unfolded in three steps. First, I will focus on specific moments when sensual ruptures occur and reorder the body rhythm of movements through the city. I will draw on ethnographic field work in the cities of Hamburg and London introducing different moving crowds in political settings of protest, shopping related activities and transport practices in which the five sensual activities are challenged in various ways, overlap, interact and compete. The rhythmanalysis as offered by Henri Lefebvre is going to be applied in a fresh way showing how sensual translations become social makings and unmakings. In the second step, I will stress the epistemological consequences when extending the agency of observation through film and photo cameras and show how to follow the new ontologies that occur through these lenses. In the third step, I am going to argue for a sociology of sensual translations offered when taking into account the methodological agencies of film and photography in settings of urban experiences.

In the Name of the Rule of Law and Democracy: Institutional Restructuring of the State and Women’s Rights in Iraq

The nature of international involvement in improving the status of women in Iraq has been ironic, inconsistent and controversial. Since the initial years of the war, women’s oppression has been rhetorically used by Anglo-American coalition forces as an excuse for the military operation. Ironically, the US has been accused of trading women’s rights for cooperation from the Islamists and reports by foreign governments, the UN and human rights organizations have until recently ignored the deterioration in the status of women and the rise in gender-based violence in Iraq. The tendency within the international community is still to consider culture, underdevelopment or religion as the root cause of women’s subordination and to push for “modern” changes in society and law in compliance with a western liberal model of law and gender egalitarianism. This article investigates the nature of negotiations among international actors, governmental authorities and local politics for institutional restructuring and the implications of this international endeavor for women’s rights and solidarity in Iraq. The article argues that the implementation of specific social and legal models/refers based on the norms and systems in western liberal states, targeting disadvantaged groups such as women, in a socially and politically precarious context like Iraq might raise serious problems and contribute to social inequalities and violence if the complexities of local politics of gender are not analytically taken into consideration. The article aims to contribute to activist efforts to enhance women’s status in war-effected societies, promote women’s solidarity against ethnic polarization and empower women to be active agents in advancing peace and justice in the face of radical transformations taking place in society, economy and politics that are dominated by men at all levels including local, regional, national and international.

GÖKALP, DENIZ* (American University in Dubai, dgokalp@aud.edu)
KAYA, ZEYNEP (London School of Economics)

Interrogating the Role of International Actors in State-(Re)Building in Iraq: Implications for Ethnic Politics, Youth Discontent and Social Justice

A significant consequence of the military intervention in Iraq has been the active involvement of international actors and agencies (e.g. foreign governments led by the US, the UN, EU and INGOs) in the institutional restructuring of the country. Substantial changes inspired by western neoliberal (political, economic and legal) models have been introduced to the institutional system of the country, ultimately to establish democratic institutions, encourage political participation of youth, reconstruct the economy, achieve ethnic reconciliation and implement the rule of law (e.g. Legislative Strengthening Program sponsored by USAID and UNAMI -United Nations Assistance Mission for Iraq). This international endeavor entails a rather controversial role for humanitarian actors like the UN, as their role has been to mitigate the discrepancies between the priorities of foreign agents (e.g. fiscal and security reforms, modernization, economic growth and so on) and daily injustices suffered by Iraqis. By analyzing the three significant lines of action by the international community, i.e. “ethnic reconciliation”, “youth empowerment” and “social justice” in which the UN and foreign governments are actively involved, the paper investigates the scope of international interference in Iraq, more specifically the nature of negotiations among international actors, governmental authorities and local politics in the course of state-(re)building since 2003. It argues that the discrepancy between the priorities of international state-building efforts (based on international norms, humanitarian causes and self-interest) and the complexities of national and local politics in a highly militarized multi-ethnic context like Iraq has contributed to the institutionalization of social injustices, marginalization and frustration of youth and consolidation of ethnic fragmentation between Arabs and Kurds. The paper aims to provide insights about the international involvement in domestic politics in the Middle East and contributes to the theoretical discussions on the complex repercussions of state-building and institutional design through military and humanitarian interventions.

Power Shifts and Transnationalization. a Comparative Study of Long-Term Changes in the Swedish Power Elite, 1990 - 2013

Based on three surveys with a few thousand decision-makers each in top positions in all areas of Swedish society (in 1990, 2001 and 2013), we analyze changes over a period of more than 20 years in the composition and internal power relations of the power elite. It is to our knowledge the first time that a historically oriented study has been made, where three points in time are studied using the identical research design. Also, it is possible to analyze the entire elite stratum (not just a sample) as it is small enough, while at the same time it is big enough to allow statistical analyses.

Comparisons are made both over time and in social space, that is, between different parts of the field of power, characterized and ruled by different logics and relations. The previous studies have shown systematic differences between fields and also between the genders in various respects. Our paper has three parts: the first part gives an overall perspective of the long-term development and changes, and the second part discusses some important results. The third part discusses methodological problems, emerging especially in connection with the growing transnationalization of fields and of elite groups. With the increase of international ties, migration and the merging of big business as well as of cultural arenas, INGOs, and economic and political cooperation, important power seems to be moving from Sweden as a European periphery to the big financial and industrial centers and cultural arenas. What is a national elite group these days? Also, several sites of power are gender-balanced (or de-gendered) in Sweden. How will the scope, force and hierarchy of the gender-order be affected in the meeting with other gender-orders as part of a transnationalization process?
Competition over Expert Authority in the New Field of Human IVF

HA, JUNG-OK* (Seoul National University, jungok@snu.ac.kr)

Abstract

Is human IVF (in vitro fertilization) the extended version of animal IVF or is it human fertility? Such a question may seem odd today. Nevertheless, the question ignited controversy in the 1980s when the term “human IVF” first appeared, creating competition between experts.

This paper focuses on the competition over expert authority between obstetricians and gynecology clinicians (OG clinicians) and embryology (E) scientists in the 1980s when human IVF began to take root as a new field in Korea. Here I refer to human IVF not as a discipline but as a field because IVF is “an amalgam of thoughts, a mixture of habits, an assemblage of techniques” (Mol & Berg 1998), not a coherent, prime face. The process of mixing and assembling that which is originally different is neither simple nor peaceful. The new establishment of a field inevitably requires a process of determining the “dominant professional” (Oudshoorn 1994) through competing with rivals and making the field appealing to outsiders. The human IVF field in Korea was settled down by OG clinicians who had the capabilities to motivate a wide range of resources; E scientists entered the field with the help of these first players.

This paper aims to provide insight into the human IVF field of the 1980s in light of its developmental history through analyses of academic journals, in-depth interviews with experts, and analyses of discourses over the issue, all of which reveal how the experts regarded this new field as an extended version of their own expertise.

Expert authority is not self-evident but results from social politics. This insight is gained when we consider human IVF as a social reality and when we pay attention to the construction of that reality, not regarding it as a natural object. To that end, a sociological analysis is required.

Urban Shrinkage As a Travelling Concept

HAASE, ANNEGRET* (Helmholtz Cntr Environmental Research, annegret.haase@ufz.de)

RINK, DIETER (Helmholtz Cntr Environmental Research)
KABISCH, SIGRUN (Helmholtz Centre for Environmental Research - UFZ)
WOLFF, MANUEL (Helmholtz Centre for Environmental Research - UFZ)

Abstract

Urban shrinkage as a phenomenon has globalized during the last years: worldwide, including also the global South, cities have faced population decline and its manifold consequences for urban space, fabric and society. In terms of urban theory, shrinkage as a phenomenon or way of urbanization was disregarded for a long time, or shrinkage was looked at through the lens of urban growth as the basic trend of urbanization: as deviance from the norm, a bad or false development or a temporary appearance to be overcome.

Shrinkage as a concept was used first in the German discourse and got onto the national scientific and public agenda with the extreme population losses of East German cities during the 1990s and early 2000s. Shrinkage got accepted as an international term with the growing number of comparative studies and projects from the mid-2000s onwards.

The concept of shrinkage today faces a twofold challenge: On the one hand, it still struggles for recognition as describing a common pathway of global urbanization. On the other hand, research shows an overwhelming diversity of contexts which challenges the essence of what shrinkage was hitherto be defined as. The recent crises in the US and Europe, however, represent a context where expertise is gained when we consider human IVF as a social reality and when we pay attention to the construction of that reality, not regarding it as a natural object. To that end, a sociological analysis is required.

The pertinent role of technology in societal development expands the demands on future engineers to “soft” skills such as intercultural communication and consideration for economic, social and environmental aspects. Therefore, the engineering profession is in a process of re-examining and re-legitimising their knowledge-base.

In spite of a general agreement on the need for future engineers to be broad thinking and hybrid, the engineering education system has been reluctant to part with traditional knowledge regimes focusing primarily on “hard core” scientific and technical competencies.

An empirical investigation of a year group of engineering students in Denmark finds that a great deal of the professional status and legitimacy of the engineer is based on the symbolic value attributed to the engineering knowledge base. The experience of hardship and endurance in relation to the demanding workload of the science and technology disciplines and a high degree of difficulty of these subjects are seen as “tests of manhood”, ritualising the professional initiation.

This anachronistic way of legitimising the profession may bolster the self-confidence of the engineering students making it through to graduation, but it is also likely to be an obstacle to the stated objectives of engineering education systems of attracting more women to the engineering profession and of providing engineering professionals able to address challenges of a dynamic, global society.

Attitudes Towards Patriotic Education and Armed Forces among Slovenian Youth

Contemporary democratic societies are encounter many demanding challenges such as decreasing political participation in the democratic societal sphere. In most European countries one can detect an almost annual drop in citizens’ political participation. Due to the dramatic changes in political, security and societal conditions in Europe in the last decade, today’s youth is being brought up in a fundamentally different spirit. New perspectives are emerging. In preparing citizens for the future, there is debate in Slovenia regarding civic and patriotic education, as well as active citizenship among the youth. Differing opinions may be found on how to realise this education, and what forms and methods should be involved. In general, two different concepts are at odds: a discipline of patriotic education, introduced in rather limited way into the Slovenian elementary schools in 2009; b) second concept attempts to cultivate a sense of taking responsible and of the acceptance of democratic culture while simultaneously maintaining a critical stance on the very political system; this concept is traditionally not synched with military tradition, but was introduced into school curricula in 1990s. The proposed paper will analyse attitudes of youth towards patriotic education, and try to ascertain, whether the concept of patriotic education is has been able to deliver its goals. When analysing trust of youth towards different institutions of democratic state in the last decade, one finding is relatively high trust of youth in the armed forces and school as an institution on the one side and relatively firm distrust into various political institutions of democratic state. Research question will ask how patriotic education has been accepted by the pupils and teachers and how patriotic education is affecting pupils trust in the armed forces and school as an institution on the one side and distrust various political institutions on the other.

A War without Images?

A war without images? : Secrecy, information and communication during the war in Mali

As the international operation is still under way in Mali since January 11th 2013, the French armed forces played a huge role in the defeat of the jihad's fighters. From the first days of the French commitment (i.e Operation Serval) to the Mali presidential polls (August 11th 2013), this paper will deal first with the information and communication policy conducted by the French forces during this new “war on terror” both on the political and organizational sides (political discourses and structures), is the war in Mali a “war without images and without facts” as French and foreign reporters described it? How the French authorities dealt with this traditional dilemma: the (French) people’s right to be informed and the need of secrecy, especially on the front line? Based on the analysis of the political an institutional discourses and on interviews, this paper will explore all these questions.

School Alienation, Patriarchal Gender-Role Patterns and The Lower Educational Success Of Boys In Secondary Education. A Mixed-Method Study

This paper attempts to be an empirically backed contribution to the current debate on gender differences in educational success in favour of girls. As explanatory factors, school alienation and gender-role patterns – together with other crucial factors – are analysed (controlling for social origin). School alienation is characterised by a low attachment to school, low school commitment, a low identification with school and learning and an emotional detachment from academic goals and values (Finn, 1989). Catalysts that illustrate, the disparities in masculinity and femininity – are orientations that are assumed to structure attitudes, aims, motivations and, finally, behaviour, and are therefore also relevant for educational success. Analyses are based on a Swiss mixed-method study (standardised survey among 872 eighth-graders, group discussions, class room observations). Results indicate that the gender gap in educational success is caused partly by boys being more alienated from school and preferring patriarchal gender roles. The impacts of these factors on educational success are mediated by school deviance. Further important issues emerging from this analysis are peer attitudes towards school and teaching style; both of them environmental factors which influence school alienation. In particular an authoritative teaching style can largely reduce school alienation.

Women in Minority Communities in West Texas: Negotiating Work and Family

This paper is based on the collection of oral histories and qualitative research that has been conducted in the Permian Basin, Texas, among the members of the African-American Community. The individuals interviewed provided a magnifi-
cent and vast collection which raised the issue of how social and cultural points of view are reflected in the distribution of economic and political resources in the area. The analysis of these narratives enables us to clearly see the rich, dynamic and diverse historical trends of community development and empowerment these individuals have experienced. The focus of this presentation will be in examining how women negotiated work and family, and the many lessons, historical, social and political we can draw from their experiences.

Coherence; Art Content & Society

Some claim considering the content of art is a task for art critics & historians. However, this may be relevant also for sociologists, to reveal information on so-
ciety. Contemporary art is dominated by conceptual art with a broad range of art expressions, diverging from traditional art. Many consider this tendency to express democracy and art diversity; others regard it as a breakdown of rules claiming it creates art anomaly. Durkheim describes how anomaly appears in times of crisis. However, he also describes how anomaly may appear in times of sudden wealth, which is the case in Norway, which has grown tremendously rich during the last decades. Simultaneously there has been a breakdown of norms in the society, which obviously has created some features of anomaly. Additionally the art interest has increased, as well as governmental support to artists, on principals of democracy and freedom of speech. Today Norwegian artists have great free-
dom to create whatever they like, including controversial political art, such as a Norwegian artist who creates art performances in North Korea with North Korean artists. Although he is criticized by many, as his performances probably requires some connection with North Korean authorities, others defend his performanc-
es. According to Benjamin, art criticism is crucial for art development. Although Norwegian media often provide art articles, art criticism is rather weak and art is seldom criticized in a critical way. Norwegians today seems liberal to controver-
sial art, perhaps more than people outside Norway. My PhD-thesis on corporate art and architecture (2011), also reveal that Norwegian art collectors seem more
liberal to controversial art than collectors abroad. This makes me wonder; is it a
coherence between art liberalism and features of anomie in a society caused by
sudden wealth? May this be reflected in the content of art in the current society?

*When Art Becomes an Emotional Burden*

Art infuses our emotions, usually positively. However, art may also appear as
offending and become a burden. Here I discuss so-called “offending art”, defined as:
at art with improper sexual, violent or blasphemous content. I use empirical
examples from my PhD-thesis (2011) and new observations. My thesis reveals
different practices for corporations collecting art in four countries, including the
USA and Norway. Although related cultures, the policy for collecting art diverges
regarding offending art. While most of the American corporations express that
they avoid art that can be experienced offending by employees and visitors, the
Norwegian corporations are more liberal. Although most art in the Norwegian
collections are not offending, they also contain offending artworks that creates
emotional reactions among employees, who experience this art as a burden. Due
to the emotional impact on employees and visitors corporations have had to re-
move artworks from public areas, for example a painting regarded blasphemous.
An artwork still hanging contains a digital text about sexual abuse and is de-
scribed by employees as depressing. The employees have got used to it and sup-
press their emotional reactions. Corporate collectors can easily avoid offending
art, as the art in their possession are not offending art. However, the con-
templates that they like to show their art interest and support art. They also like to appear
as democratic organizations and will probably not risk being accused for censoring
art. Sometimes art seems prioritized on the cost of people. This applies also to
commissioned art. Some new paintings in a governmental building in Oslo show falling
paper and skeletons between flying buildings. Employees experience the
artworks as an emotional burden, because they give associations to the terrorist
attack on the government buildings in 2011. Seemingly there is a gap between
fear of art censorship and consideration to employee emotions worth examining.

KRISTIANSEN, TRULS TUNBY* (UIT The Arctic University of Norway, truls.tunby.kristsianesen@uit.no)

*Institutional Change through Rational Collective Action*

The paper seeks to establish an analytical framework for the study of institutional
change. Its main components are drawn from sociological systems theory, rational
choice analysis and the literature on collective action. The distinctive theoretical
assumption is assuming that modern, functionally differentiated societies can be analyzed as communities, more or
less capable of collective action.

The analytical core of the framework is a concept of collective action characterized
by the conflict between collective and individual rational lines of action. This subjec-
tively experienced conflict is also a social dilemma because the outcome of an action is
codetermined by the choices of other actors. Mutual interdependence creates a particu-
lar social dynamic that can be applied to the study of institutional change.

We take modern society to consist of several self-referential social systems that op-
erate through unique social media and binary codes. However, we also conceive of
the administrative means to put political decisions into effect. However, to become
aspects of its function systems. To an extent these belong to the political system and
whether the conflict between collective and individual rational lines of action.

**RC35-616.2**

HAGEN, ROAR* (UIT The Arctic University of Norway, roar.hagen@uit.no)

*The Whole of Society and Society as a Whole*

Sociological theories of modern society conceive of some form of horizontal
differentiation among spheres, fields, systems, discourses or sectors. The con-
cepts vary a lot, but the same as the concept of collective action, art
sports etc. The theories take, however different approaches to the question of
how these entities are related to each other. There are three main perspectives.

The tradition emerging from Weber conceives of a modern society consisting
only of parts. This view is epitomized in Niklas Luhmann’s theory of a modern
society characterized by functional differentiation. In the tradition emerging from
Durkheim, mutual interdependencies among the subsystems create a social bond
of organic solidarity particular to modern society. Society is a community or even
a collective, because of legitimate institutions, shared social norms and a common
culture. In the Marxian tradition the other subsystems are regulated by capital
and power, with the market and the bourgeoisie state as the real centers of soci-
ety. All three perspectives have their merits and can claim empirical confirmation
either in a uniform society of global financial markets, art and science, or nation
states as embodiments of solidarity and power.

However, all three perspectives share a common weakness: They are unable to
explain how mutual interdependencies among subsystems lead to problems of
performance or function that are also problems of collective action, and thus con-
stitute society as a collective regarding its own cohesion or societal integration.
The reason for this shortcoming is an ontology of the social based in spatial met-
aphors which reifies collective phenomena. When this epistemic obstacle is iden-
tified, we might create an alternative ontology that enables a new understanding
of modern societies as communities or social wholes with varying capacity for
collective action on local, regional and global levels.
of Mexican migrant workers in Canada’s largest cherry orchard conducted by Elise Hahn on behalf of the Lake Country Heritage and Cultural Society. In conjunction with our paper, ten original photographs of migrant workers in the Okanagan Valley, products of the aforementioned case study, will be presented. Together, these experiences have challenged our pre-conceived notions of who migrant workers are, the lives they lead, and their cognizance of the racialized processes to which they are subject in Canada.

“Planning the Unplanned” - Trajectories of Managing the Informal in the Urban North

This paper will present research on how informal activities and practices in Berlin’s public spaces are tackled. The global trend of proliferating informalization in urban centers as a result of ongoing neoliberalization is not solely a contemporary reality in cities of the Global South but encroaches as well on North-Western cities. Especially in multicultural societies of receding welfare states, many people’s possibilities have become confined to informal economic opportunities as they have been denied access to more formal spheres. As such, the street vendors and bottle collectors that are working in many of Berlin’s parks are faced with various regularization strategies in a city that otherwise is known for its “anything goes” attitude. While on the one hand tightening the possibilities for diverse informal practices to develop and proliferate, the city government on the other hand also promotes its “urban pioneers” that have informally appropriated various spaces in the city. Right after the fall of the Wall, the abundance of vacant lots and buildings perceived as weakness in the new urban development processes, however, today they are endorsed and proclaimed as strengths and idiosyncratic features of the urban landscape. Hence in current governmental strategies “planned informalization” is an important pillar to develop urban space that is otherwise lacking financial investment.

Overcoming the informal/formal duality and stimulated by this debate which emanates from the Global South, the paper will show how informality and formality are intricately intertwined in the researched cases in Berlin. Furthermore, it will talk about the ambiguous role of the city government that on the one hand, emboldened in the neoliberal agenda, is promoting certain kinds of activities, while on the other hand, evoked by the image of the modern and orderly city, is regularizing undesirable informal practices.

Circular Labor Mobility in the Central European Region: Job Finding and Labor Market Outcomes of Cross-Border Commuters from Hungary, Slovakia and Czech Republic in Austria

Circular labor mobility within the EU has been strongly promoted through several institutional programs since the 1990s. However, so far the given circumstances for participants in these emerging transnational labor markets have not been investigated in depth. This is especially the case for European cross-border commuters. Our paper aims to close this gap by taking the Central European region (CENTROPE) as an exemplary instance.

Therefore we investigate job-search strategies and related labor market outcomes of cross-border commuters in the regions of the Czech Republic, Slovakia and Hungary, the latter linked to Austria. Theoretically, we build upon a model developed by Aguilera and Massey on the nexus of social networks, job search methods and related labor market outcomes. Methodologically, we use a brand new longitudinal survey on employment careers of cross-border commuters conducted in 2013 (N=2,550). Empirically, the focus of our paper lies on three research questions concerning methodology, job searching methods, commute strategies. The third is the wide spread Brazilian ethnic business. These two points have related to low level of Japanese language proficiency of Brazilians in Japan. The third is the passage of time. More than 20 years of Brazilian immigration history in Japan made bilingual second generation grown-up. In these days the role of bridge or pipe line between local end ethnic communities constructed by bilingual Brazilians of first generation is being maintained, succeeded and renewed by second generation little by little.

Do Egalitarian Couples Have More Sex?

The German Family Panel (pairfam) is a multidisciplinary survey focusing on partnership and family dynamics. The survey implements a complex study design. In addition to the panel approach, it follows a multi-cohort and multi-actor approach. This means that so-called anchor persons from birth cohorts 1991–93, 1971–73, and 1951–53 are surveyed annually. Furthermore, the anchor’s partners, parents and children are also included in the survey. By next year the panel will comprise of five waves. Because pairfam collects yearly information from both partners it is perfectly suited to address partnership topics.

Studies show that partnership characteristics are influenced by distribution of household work, e.g. if the man’s share of the household increases, the woman’s partnership satisfaction rises and the risk of divorce diminishes. However, relatively few studies have addressed how housework distribution influences the frequency of sex in domestic partnerships. Kornrich et al. (2012) is a recent exception. They suggest that traditional gender behavior fuels sexual scripts and therefore results in higher sexual frequency. However, the data for their study, collected in the United States, is 20 years old and only focuses on married couples. Further, other studies assume that women exchange sex for housework, resulting in a negative association between women’s share of housework and sexual frequency.

So far there is no known study from Germany that deals with this topic. Using pairfam data I can demonstrate that couples with an egalitarian housework distribution have the highest sexual frequency. This correlation exists for traditionally female, as well as for traditionally male housework. Neither sexual scripts, nor exchange seem suitable to explain this correlation. Moreover, I am going to use fixed effects panel regression methods to examine if this correlation also holds true in a longitudinal analysis and to explore the underlying causes of this correlation.

Gender, Ordination and Socially Engaged Buddhism in Australia

While women have played a prominent role in Buddhism in Australia, at least since the 1880s, they have received relatively little scholarly or public attention. These women include prominent nuns, teachers, community leaders, scholars...
and activists engaged in environmental and human rights issues, such as Marie Byles, Natasha Jackson, Venerable Robina Courtin and Judith Snodgrass. Courtin, has frequently featured in the Australian press and been referred to as ‘unconventional’, given her forthrightness and dynamism. On October 22, 2009, four women received Theravada Bhikkhuni Ordination in Perth, in the Thai-Forest Tradition, which has generated a considerable amount of controversy. Members of the Australian Sangha Association, including prominent nuns and monks such as Rev. Chi Kwang Sunim, Ajahn Braham and Bhante Sujato have, and continue to be, at the forefront of promoting gender equity in Buddhism in Australia. This paper explores the contribution of Buddhist women and men, and also Buddhist organisations, in addressing gender disparities in Australia. It argues that stereotyping Buddhists, and Buddhism more generally, as passive and pensive, negates Buddhists’ commitment to the Bodhisattva ideal, social justice and social engagement, evident in both traditional and contemporary Buddhism.

Mortgage Households As Carry Traders: The Social Life Of The Swiss Franc In Poland

The recent innovation of mortgage credit in Poland has been rearranging property relations, stimulating construction and enabling new middle class aspirations. There are more than 1.5 million active contracts; there exists no significant population who paid off. Half of those contracts are adjustable rate mortgages denominated in Swiss francs. They draw households into the currency market, making foreign currency factoring attractive how LIBOR on the franc and a favorable exchange rate between the Polish zloty and the franc. “Franc people,” as they have come to be known, enjoy the benefits of this speculation, but are also subjected to unprecedented risks. As the recent crisis attracted investors worldwide to the “safe haven” of the Swiss franc causing its strong appreciation, the mortgage portfolio living with a sharp plunge of equity on their houses and an increase in monthly payments. Based on ethnographic fieldwork this paper traces the dual productivity of the Swiss franc in Poland through the lens of the groupmaking effect of currency: “Franc people,” or “currency spread generation.” Economically, the franc is capable of producing independent effects that contradict the conventional wisdom that money is “just a veil” to economy. Symbolically, as a discursive site, or locus communis, the franc and its people become a vehicle of debates about poststructuralist transformation, capitalist generation, instabilities of contemporary capitalism, and the legitimacy of speculation. What are the practices of domestic living with multiple currencies engaged through a complex and long-term contract? How do charts, exchange rates, and the LIBOR index become objects of attachment both in intimate household economies and in the public discourse at large? While based on the Polish case, this paper also uses data on the social life of the Swiss franc in Croatia, Hungary, and Spain for a more comparative and theoretical perspective.

HALD, LENE* (KEA Research and Innovation Centre, lhald@kadk.dk)

Design Experiments As Intervention: How May This be Rendered Visible?

Building on empirically based visual experiments in the form of design interventions and co-designerly processes this paper seeks expand the field of visual sociology. This is done through an exemplification and discussion of how we might visualize interactive, multisensory and process based aspects within fashion and identity studies. Furthermore, the paper address how visual, expressive and design ways of constructing and representing sociological insights affect our understanding.

Visual sociology is based on the notion that valid scientific understandings of our world can be attained by observing, representing, analysing and theorizing its visual representations of people and material entities of culture. (Pauwels 2010). Equally, fashion, like the arts, is often considered a visual phenomenon and the creation of aesthetically appealing artefacts is frequently described as one of fashion design’s main goals. Design disciplines (including fashion design) have, throughout their histories, actively engaged visual methods in the form of photography, moodboards, sketching etc. (Boradkar 2010). Furthermore, fashion design and the study of fashion & identity have been moving towards a broader definition than mere object making by being concerned with activism, critical and social design (von Busch 2008) - elements that historically have been the core of sociology. This points out some of the dissimilarities between visual sociology and the study of fashion, which make it prima facie plausible that visual sociology has a potential for social and cultural fashion studies.

Through visual design experiments conducted within a specific case-study concerned with troubled youths, fashion and identity, this paper seeks to investigate whether it is possible to grasp meanings of fashion beneath the visual surface and re-frame these meanings in a visual and designerly manner.

HALL, ALAN* (Memorial University, alan@mun.ca)

Vulnerable Workers: The Significance of Trust and Uncertainty in Coping with Workplace Hazards

Based on a qualitative study of 120 Canadian born and immigrant workers in unorganized and non-unionized workplaces this paper explores the different ways in which workers manage and cope with workplace safety hazards in contexts of varying forms of employment vulnerability and insecurity (Vosko, 2006). I examine the rationalizations, beliefs and identities that workers employ to dismiss or make sense of their risk-taking, while also considering the ways in which they seek to counteract levels of control over hazards and security in their employment, in part through the building of knowledge and trust with other workers and supervisors. I also consider the contradictory nature of workers’ actions which are frequently in tension with each other, including taking safety risks to build employment security, as well as taking employment risks to establish limits to their acceptance of safety risks. In this latter part of the analysis, I explore the contradictions and actions which limit worker compliance to certain levels and kinds of hazardous conditions, arguing that some workers are relatively successful in working either individually or with other workers to build what they see as a balanced level of safety and security.

HALL, DEREK* (Wilfrid Laurier University, dehall@wlu.ca)

Where Is Japan in the Global Land Grab Debate?

Some of the main explanations of the ‘global land grab’ implicitly suggest that Japan should be close to the center of the phenomenon. Japan, after all, has the world’s third-largest national economy, is extremely dependent on imported food and fuel, is a massive capital exporter, and has multinational corporations with vast international experience. In fact, however, the main land grab inventories show few cases originating in Japan. In Japan’s case, the national government’s role is scanty, and the land grab literature has little to say about the country. This paper seeks to explain both why direct Japanese investment in overseas land might be limited and why whatever land grab-related activity Japanese actors are engaged in might go relatively unnoticed. I argue that 1) the international experience of Japanese multinationals has predisposed them to avoid large-scale overseas land acquisitions; 2) the Japanese government is prioritizing and supporting forms of international agricultural investment other than direct land acquisition by Japanese actors; 3) the avoidance of sub-Saharan Africa by private and public Japanese actors (with the major exception of the ProSAVANA project in Mozambique) lowers the visibility of Japan’s actions; and 4) more generally, that little attention is paid to Japan in broader discussions of world politics. I also suggest that Japan’s experience shows that there is much more to “land grabbing” than land, and that the literature needs to pay more attention to areas like investments in agriculture-related infrastructure, control over shipping, and technology transfer where the Japanese role has been quite prominent.

Throwing Together Experiences of Belonging within Public Space

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
This paper examines place-based belonging as a construction of thrown-together experiences within the public spaces of two gentrifying neighbourhoods. It draws on Massey’s (2005) concept of throwntogtherness and Amin’s related work on situated multiplicity and collective culture (2008), to examine the manner in which such belonging can be generated through our everyday negotiations of the multiple trajectories of people, objects and symbols, that make up the contemporary city. Massey argues that because of the multiplicity of these trajectories, places should be thought of as unfixed, their meaning instead constructed within these moments of encounter. In this paper I apply this perspective to place-based sociality, to consider how the experience of belonging may be constructed within these negotiations. In doing so the paper also seeks to shift the focus from dichotomies of public and private, or inclusion and exclusion, that often characterise discussion of public space in gentrifying areas, to instead consider ways different practices of coming together are encouraged by these intersections.

In this paper I particularly focus on quasi-public spaces - cafés, bars, and shopping centres - where publicness is always ambiguous, and where much potential for both inclusive and exclusionary experiences resides. Drawing on qualitative research conducted within two gentrifying Australian suburbs, this paper describes the throwing together of interactions, representations, and interpretations to construct personal and collective identifications. These can work to enable belonging and create opportunities for diversifying exposure; both of which have the potential to communicate the presence of the community across time and space. In doing so this work seeks to demonstrate that the geographic and temporal boundaries of public space are blurred, breached and yet also reinforced, as we throw together place-based experiences of belonging.

HALL, TOM* (Cardiff University, halta@cf.ac.uk)

City Streets, Dirty People and the Politics of Cleaning

This paper reports from empirical research on the work of urban patrol, in particular the physical work of street cleaning and the social (although similarly physical, messy and material) work of ‘outrouch’ and street care. We consider a team of council employees in the city of Cardiff in the UK whose job it is to make repeated tours through the centre of the city, day and night, looking to establish contact with and minister to ‘vulnerable’ adults who may otherwise struggle on their own to access mainstream (social and healthcare) services; the street homeless make up a significant proportion of this target group, but take their place alongside as-sorted others, including sex workers, all of whom outreach workers aim to assist and enrol as clients. We also consider the daily patrols of teams of street cleaners, again employed by the local council to patrol the city streets – picking up litter, emptying the bins and sweeping surfaces clean.

The paper develops two lines of analysis. The first examines the ways in which street cleaners and outreach workers – the latter ‘moral’ street sweepers, of a sort – employ and engage the senses in pursuit of their tasks and are drawn, alike, to the same dirty, grimy, cluttered, smelly and unsightly places as they do. The paper’s second contribution, building on the first, considers the ways in which the expected outcomes required of street cleaners and street carers (outrreach workers) are often equated with the appearance and look, and ‘feel’, of the places and people in, on and with whom they work. This linking of care and upkeep to appearance – as the desired outcome of work that tends to and mens place and people – signals a politics of repair, enacted with ‘deviant’ groups in frequently dirtied city places.

HALLENDE, KARIN* (Stockholm University, karin.halden@sofi.su.se)

Gender Differences in Academic Careers in Sweden

Gender differences to women’s disadvantage are evident in most branches of the labour market, so also within academia (Danell & Hjerm, 2012, 2013). Research on Swedish data shows that women have difficulties reaching the highest academic positions. Among other things, women’s likelihood of becoming professors—comparing men to women (men PhD obtained in the same year)—are lower. Women’s greater family responsibilities are often assumed to account for much of the observed labour market gender inequality. Nevertheless, to our knowledge no Swedish study has analyzed the impact of parental leave on academic careers in a systematic way. Hence, the current study uses Swedish register data for all teachers and researchers at Swedish universities and university colleges and matched information on individual and family related characteristics for the time period 1995 to 2011. Event history analysis is employed to analyze the effects of parental leave and temporary parental leave on gender differences in academic careers. The regression results show that men’s likelihood of becoming professors - which is in line with previous research. However, the gender gap in academic careers gets smaller over time since obtained PhD. Parental leave and temporary parental leave have negative effects on academic careers for both men and women. When studying separately individuals with small children in the household we find that the gender gap in academic careers is significantly larger for this group compared to the gender gap in academic careers for others academicians.

HALLER, MAX* (University of Graz, max.haller@uni-graz.at)

Ethnic Stratification and Income Inequality Around the World

The paper starts from the assumption that inequality within countries is a very important topic for research also in the area of globalization. Data show that there exist huge differences between countries and world regions (continents) in this regard, with Latin America and Sub-Saharan Africa exhibiting extremely high, most European countries and Japan rather low income inequalities. Neither sociological nor economic research have theorized and investigated this issue systematically. The general hypothesis of the paper is: Economic inequality can only be explained if we see the close interaction between class stratification and ethnic differentiation. For a test of these hypotheses, a new aggregate data file has been produced, including characteristics about the ethnic structure and history, the socio-demographic and economic structure (population, level of development etc.), and the political system (democracy, federalism, welfare spending) of 130 countries around the globe. A regression analysis shows that both ethnic diversity and a history of slavery are significant determinants of income inequality; the same is true for land distribution, democracy and welfare spending. Some implications of these findings for policy and further research are discussed.

HALLER, MAX* (University of Graz, max.haller@uni-graz.at)

Sport and Inequality, a Comparative, International Analysis

Social inequality in sport is an important topic in Sociology. Ever since modern sports were established there have been differences in the type and frequency of sports practiced by different socio-economic classes. Do these socio-economic differences in sport participation still exist today? Or are other horizontal dimensions more important in determining who is participating in which sport and how often? In this presentation these questions will be examined using the 2007 International Social Survey Programme (ISSP) on “sport and leisure time”. The relevance of three dimensions of vertical stratification (education, occupational position, and income) is investigated as well as of two horizontal dimensions (gender and age) for 34 countries around the world by using descriptive and causal (regression) methods of analysis. The results are surprising and even spectacular.

Contrary to the widespread thesis that the vertical dimensions of stratification are losing in importance in favor of new, horizontal dimensions, we find that if anything it is the horizontal dimensions that have lost in importance. Participation in sports is much higher in rich countries than in poorer countries, also, the more affluent the country the lower the relevance of the horizontal dimensions. Indeed, in the most affluent countries the effects of horizontal dimension are even reversed.

Searching for European Values

Since 1981, the European Values Study group is searching for the values of the Europeans by means of surveys in an expanding number of countries. The latest wave took place in 2008 and included all 45 countries (with more than 100,000 inhabitants) on the European continent. We aim at a repeat survey in 2017.

It was attempted to identify value systems, but in general values appeared not to cluster coherent patterns, but the patterns found and values that could be identified were domain specific. It means that values could be identified with regard to various life domains and it is hard if not impossible to find overarching values.

What also was revealed in and repeatedly found since the first wave in 1981 is that Europe is far from homogeneous when it comes to basic values. Despite its common Christian history, the values of the people in the European countries appear rather diverse and the European unification has not (yet) resulted in a converging of the values of the Europeans. Ideas of mono or varieties of modernities (e.g., Eisenstadt; Schmidt) and path dependency (e,g., Inglehart) seem to be confirmed by such results.

In this paper I focus on European values in 2008 and elaborate on our efforts to find patterns in values distinguished in various value domains (religion and morality; politics and society; primary relations; work and leisure time). The data allow to identify one or two more fundamental orientations which appear to be underlying the orientations in the distinctive value domains. Perhaps such results are disappointing but they illustrate the wide variety in values that exist in contemporary Europe despite its ongoing process of unification.

"Why Independent Elderly Prefer to Continue Living in Their Home Even When They Become Frail?"

Frail old people have three options for care (informal, formal, mixed): move in with one of their family members (usually one of their children); live in a nursing home or in assisted living setting; continue to live in their home and receive private care or care services (based on the Long-Term Care [LTC] Insurance Law).

As a multicultural society, Israel serves as a natural laboratory for identifying similarities and differences between various groups. The present research compared independent Jews and Arabs aged 55+ who live in the community, on various aspects of their preferences for care.

The study included two stages, a quantitative one, in which closed-ended questions were administered to 200 old Jews and Arabs, followed by a qualitative one, in-depth interviewing 20 respondents. The study found that Jews mostly prefer informal care, whereas Arabs prefer mostly to remain in their homes. However, approximately 40% of both populations preferred "mixed care," staying in their home with a live-in worker or with one of their children.

Three main aspects were identified: a macro-level aspect of social and cultural cohesion (collectivism vs. individualism); a mezzo-level aspect of family patterns and norms (reciprocity and exchange in intergenerational relations); and a micro-level aspect of personal attributes and values (psychological meaning of family/home; dignity vs. honor). Although main aspects were in general similar between Jewish and Arab respondents, the initial meanings of these aspects were different, reflecting social contexts, past experiences, family norms and the importance of home in late life.

Results revealed the need for developing culturally sensitive and tailored programs and services that take into account these aspects. Providing such services would allow old people to continue living in their homes, even when they become frail and need care and support.

BOZONNET, JEAN-PAUL (Institut d’Etudes Politiques)

The Disconnexion Between Attitudes to Transport and Policy Choices

This proposed article explores the following paradox: whilst research on attitudes to transport and travel behaviour in European States often suggests that the negative externalities of the transport system are a significant everyday concern, decision-makers at various levels of government are reluctant to support "anti-travel" measures that are associated with the negative externalities of transport policies and policy tools such as speed limits, urban tolls or other carbon taxes.

This article seeks to further explore this paradox by revisiting the public policy assumption. Political attitudes research, especially that which seeks to identify influences on voting intention, shows that transport is often relegated to a much lower level of priority.

Based on reflective waves of Eurobarometer surveys, our analysis suggests that attitudes to transport and travel are increasingly shaped by the politics of choice and combination of policy tools. Following the claim made by the so-called policy feedback model, we expect transport policies to shape citizen attitudes towards institutions, including policies, measured in terms of trust, causal narratives, the punishment of free-ride.

HALSA, ASTRID* (Lillehammer University College, astrid.halsa@hil.no)

At Home and Elsewhere: How to Handle Daily Life Growing up with a "Mad Mother" or "Drunk Father?"

There is a large body of research on children living in families with parental mental illness/substance abuse focusing on parental failure, adverse outcomes and risks imposed on the child. The risk and harm perspective is however less suitable to study children as participating agents. There is a gap of knowledge about how these children deal with the different realities of home and away, and at what costs and benefits they adapt to these different contexts. They often have to negotiate between the often secret and shame-laden family context and arenas and situations outside the family. This paper focuses on children and young people's first persons accounts on growing up with parental mental illness or substance abuse by analysing children's own experience. The paper concludes with the suggestion that to grasp these children and young peoples lived-experiences the research has to look outside the families front door and include children's activities in school, leisure and community, and focus on the active and challenging identity work these young people go through in trying to keep their homes together while developing a sense of selves.

HAMADA, KUNISUKE* (Tokyo Jogakkan College, hamada@kcn.ne.jp)

Causal Relationship Between the Feeling of Alienation and Anti-Foreignism in Contemporary Japan

In the last decade, anti-foreignism has emerged gradually in Japan. Grassroots right-wing organizations such as “Zaitokukai” have held anti-Korean demonstrations repeatedly. Furthermore, we can easily find many postings and articles on the internet which have hostile attitudes toward foreign nationals and left-wings. They claim that there are people who have a liberal view on migration and advocate for immigrants to be “traitor” to Japan and have intended to damage Japanese national interest. Although only a few people participate in these movements, quite a number of people may share the feeling of intolerance toward vulnerable and minority groups. For example, a national diet member Satsuki Katayama waged a campaign to investigate the recipient of welfare public assistance and expressed...
the opinion via twitter that welfare public assistance for foreign residents should be cut off. Why has this trend emerged during recent years in Japan? Who support these speeches of anti-foreignism?

Yasuda (2011) pointed out that the people who support “Zaitokukai” have a feeling of alienation from societies and participate in activities to gain the esteem from others. On the other hand, Higuchi (2012) claimed that “Zaitokukai” have recruited “ordinary” people who have a patriotic feeling through the internet, because there are only a few organizations which fulfill the demand of conservative people. However, these discussions are based only on the qualitative research of “Zaitokukai” members and it is difficult to generalize about characteristics beyond this particular group.

The aim of this presentation is to clarify the relationship between a feeling of alienation and anti-foreignism in Japanese ordinary people. For this purpose, I analyze the data from nationwide surveys conducted in 2009 and 2013 using the method of causal analysis and structural equation modeling.

Late-Alain Touraine’s Theory of Modernity, New Subjects and Cultural Movements: Toward Theorizing Social Transformations in Contemporary Asia

The purpose of this presentation is to theorize social transformations in contemporary Asia from the perspective of late-Touraine’s theory. The “compressed modernity” theory (Chang) is often used, which is based on the theory of “radicalization of modernity” (Giddens, Beck) that focuses on the institutional level of modernity. However, the latter is partly criticized by the theories of “multiple modernities” (Amann) and Touraine, because the cultural orientations characteristic of modernity are embodied in institutions, but not reducible to them. Its founding gesture is a break with the widespread assumptions that there is one main pattern of modernization and modernity.

This presentation explores the insights that emerge from the exploration of Touraine’s major works after 1990s that are highly appreciated by the theorists of multiple modernities. Touraine does not justify modernity institutionally and does not anchor it in the market economy, the government administration, or democratic organs. Instead it brings other regions of the world into the debate over modernity. Touraine maintains that modernity was characterized from the beginning by the two poles of reason and the resisting subject. In a world best defined by multiple processes of change, there exist no other means of combining economic strategies and identities than through the individual. It is not the individual as consumer or member of various organizations, and even less as citizen, but the individual as subject, in the desire for individuation, which constitutes the only principle able to mediate between the instrumental world and the world of identity; the collective situations that protect the uniqueness and individuality of individuals called cultural movements.

These conceptualizations can be applied to Asian societies, however to that end it should be developed into institutional analysis based on a new theoretical model from the theories of welfare regime, new social risks, social/cultural movements, and social governance.

HAMANO, TAKESHI* (The University of Kitakyushu, hamano@kitakyu-u.ac.jp)

Contested Rights of the Cross-National Family: Recent Cases of International Parental Child Abduction Between Japan and the United States

This paper aims to explore conflicting rights claims of cross-national family members. Based on multinational case studies of recent international parental child abductions involving Japan and the US, it discusses the ways in which the realization of the basic human rights of each party of a cross-national family (father, migrant mother and child) involves fundamental challenges to the achievement of social justice in the absence of a universal legal system.

In May 2013, the Japanese Diet passed a bill approving Japan’s accession to the Hague Convention on the Civil Aspects of International Child Abduction. Signatories to the Convention such as the US had for many years criticized Japan for showing little interest in the increasing number of cases of international parental child abduction by Japanese nationals. Frequently the cases involve Japanese women who are international marriage migrants abducting their children to Japan after the breakdown of a marriage. In the US context, not only do these migrant mothers offend the right of joint custody of the American partner, but they also breach the child’s right of access to both parents and violate the Convention rule against unilateral removal of the child from their habitual residence. Japan’s accession to the Hague Convention is likely a progressive step indicating that Japan has begun to see the issue as a matter of basic human rights, rather than a purely private and individual matter.

However, in this paper I argue that in order to improve global social justice in relation to family disputes, accounting for the particular situation of migrant woman in both public and intimate spheres is crucial. Taking this new rights talk into account, I attempt to sketch a more nuanced concept of social justice in relation to the cross-national family, pointing out possibilities for further international legal refinements.
The concept “Middle Class” conventionally invoked to refer to a social class that are drivers of social change both in economic and in Political terms in the west and in developing world. Ghana, like many African countries has had its share bit of political instabilities particularly in the aftermath of independence, in the 1960s, 1970s and 1980s. But since the return to democratic rule in 1992, it has steadily established itself as the beacon of democracy with multi party elections every four years and serves as an example for other African countries to emulate.

This paper will explore if the current political stability in Ghana since the return to constitutional rule in 1992 had been a result of its middle class. It traces the Ghanaian middle class from independence, post-independence era of military rule to date and the role the middle class played especially in the 1990s and 2000s to ensure the political stability prevails. Drawing on a field work carried out in Ghana in 2012 with a varied sample from different social backgrounds to gauge out who these middle class are? What classify them as middle class? To borrow Bourdieu’s social classification typology: is it their economic, political, education and cultural capitals that make them middle class? And what economic or political role do they play within the Ghanaian political sphere?

Transforming Legal Professions in Scandinavia

In Scandinavia, the legal profession has been regarded as the midwives of the modern state; the legal profession was totally dominant in the most important position in society. However, with the development of the welfare state and with neo-liberal management methods in various branches of the public and private sector the legal profession has been replaced from the most prominent positions. With globalization new markets have opened for Scandinavian lawyers, the question is however, if the profession at large gains from the new opportunities or if the profession is stratified. This paper examines how different parts of the profession react to new challenges for the legal profession.

La Socialización En La Emergencia Del Científico De Bioquímica y Ciencias Sociales. Consideraciones Para El Futuro

Los procesos formativos de los doctorandos son heterogéneos, la socialización se deriva de las comunitades a las que pertenecen. La variación en los mecanismos y modalidades se relacionan con los procesos de formación, cognición y roles de identidad en distintos momentos para insertarse en la comunidad científica. La trayectoria del investigador es un cierto shock con la realidad, dificultad que se va superando según se logra un proceso de encumbramiento, mediante el cual se adquieren habilidades tácitas de competencia científica a través de ensayo y error hasta lograr la independencia para la publicación (Delamont y Atkinson:2001). El propósito es abordar conocimiento sobre el vínculo de las actividades propias de la comunidad científica; se analiza la reconstrucción de sus experiencias en la formación doctoral y las posiciones que ocupan en los ámbitos de inserción laboral que reflejan su formación como científicos; finalmente, se reflexiona sobre el futuro de la socialización para la emergencia del científico.

Risk Perception and Risk Governance in East Asia

The aim of this paper is to examine salient characteristics of the public perception of risks in Beijing, Seoul, and Tokyo as capital cities of three major countries of East Asia and to explore multiple pathways to reflexive risk governance in East Asia as an important condition for second modern transformation. Based on the 2012 survey data from Beijing, Seoul, and Tokyo over the issues of risk society, risk governance, the future of East Asia, and second modernity, the authors will show 1) the overall consensus among East Asian citizens about the consequences of modernization and the future development; 2) the commonalities and differences in the public perception of risks in three capital cities; 3) the major factors which may shape a concrete paradigm of risk governance in each country. Reflexive risk governance at issue is second-modern in that state alone can no longer be able to adequately perceive and manage complex risks citizens face today, requiring a partnership though its forms are various. The authors will thus examine the interactive patterns among government, experts, NGOs, and citizens in forming risk governance, drawing in particular attention to the evolving procedures in which the bottom-up inputs from citizens and the extent of institutional responsiveness are linked together to produce efficient policy outcomes. The authors will argue that it is necessary for East Asia to delineate and combine two types of risk governance, that is, local and cosmopolitan, depending on the types of risks to be regulated. In so doing, the authors want to demonstrate the overall commonalities of risk governance in East Asia, on the one hand, and specific characteristics involved in each country, on the other.

Transitional Justice and East Asian Community: Two Patterns of Civil Engagement

This paper deals with two salient patterns of civil engagement in South Korea and China as a collective response, first, to the lack of transitional justice on the part of the Japanese concerning war crimes committed by its imperial army and its colonial rule and to the difficulties in forming East Asian community in its genuine sense as we can see in European Union. Confronted with, and challenged by, this unfortunate legacy of the past which is still wielding enormous influence on the domestic politics and international relations in East Asia, the authors want to delineate contrasting patterns of civil approaches to this problem via discursive analysis: one is driven by a nationalist ideology and emotional mode of confrontation in various forms of popular movement, another is characterized by civil discourses and NGO activities aiming at mutual understanding and solidarity among citizens of East Asian countries rejecting a state-centered and politically motivated nationalistic drives. The authors argue that the advance in transitional justice in Japan is an important condition for East Asian community. At the same time, the authors also argue that retributive justice is not enough for creating a new future but a genuine care by Chinese and Korean citizens over the pains of the Japanese victims. The authors also argue that transitional justice is not merely a strategy of redressing the unfortunate legacy of the past which is still wielding enormous influence on the domestic politics and international relations in East Asia, but a genuine care by Chinese and Korean citizens over the pains of the Japanese victims.

Incorporation of Urban Differences in the Tokyo Metropolitan Complex

Differences mark an essential element of urbanity. In the case of Tókyó, differences seem to appear beyond significant income disparity, migrant or ethnic minorities. On the local scale differences create a finely grained, heterogeneous urban condition. This contribution asks, what are the modes and practise leading to an incorporation of these particular social and cultural elements, which give a locality certain irreplaceable urban qualities, into the dominant logics of space production.

I will investigate the process of incorporation by looking at two case studies: Shimokitaazawa and Kitamoto. In Shimokitaazawa accumulated efforts of citizens...
have produced a neighborhood with socio-spatial qualities contrasting those of the dominant centralities near by. An incorporation of these differences has been initiated by local magazines, tourism agencies, and ministries: differences produced in a incremental and bottom-up process have been turned into an attraction for people beyond Shimokitazawa and a mainstream compatible youth culture, where by the space is being deprived of its experienced dimension. Kimutama in the north of the city is struggling with an aging population, economic issues as well as questions of identity, similarly to other peripheral areas. Due to this change, its dependency on the central area of Tôkyô is transforming and demanding a new consciousness for place. This is leading to the emergence of an active production of differentiating elements in the city, driven by the local authorities and inhabitants: an intended commodification of local assets, such as the natural environment, seasonal changes or local goods is aiming at creating local, socio-cultural value and identity.

By looking at the production of differences as part of a dialectical process of production of differences this paper aims at capturing the complexity of everyday life as a backbone of urban society. To achieve this, my research encompasses an open methodological approach and methods from different disciplines.

HANCOCK, ROSEMARY* (University of Sydney, rosem.hancock@sydney.edu.au)

Islamic Environmental Activism in the United States and United Kingdom

Social Movement theorists have, until recently, accepted after Marx that religion is the ‘opiate of the masses’ and inherent opposed to social or political change. The small but growing involvement Muslims in the environmental movement in the US and UK is a challenge to this belief. The emergence of specifically ‘Islamic’ environmental organizations (IEOs) in both the UK and US shows the engagement of certain Muslims in the Diaspora with grassroots activism, and with the contentious politics associated with environmentalism. This paper is based on the study of four IEOs and their participants, two from the United States and two from the United Kingdom. The IEOs participate in actions and projects that are remarkably similar to their secular counterparts, and show a similar critique of the effects of capitalist economics and industry upon both the environment and a concern for social justice. However, their underlying ideology is grounded in a unique interpretation of Islamic scriptures emphasizing the role of humankind as God’s representative on earth; the environment as a ‘sign’ from God in perfect, divinely ordained balance, and the necessity of following Islamic teachings in everyday life. The secular environmental movement and its organizations have heavily influenced IEOs, both in the framing of environmental crises, and in terms of their organizational structures and forms of action. Utilizing Social Movement Theory and comparative analysis, this paper argues that Muslim environmentalists bring an Islamic voice into the environmental movement, calling for significant social and political change based upon Islamic principles, while sharing with secular environmental organizations methods of mobilization, organizational structure, and aspects of ideological framing.

Growing up in a One-Parent Family: Families and Child Wellbeing

Background A large body of international literature has documented that children who grow up living with both biological parents fare better on a range of outcomes when compared to children not living with both biological parents. Researchers continue to disagree as to whether the association represents a true causal effect. The main finding is that the socio-economic disadvantages inherent in childbearing outside of marriage account for a non-trivial portion of the effects of family type.

Conclusions The selective argument assessed in this paper maintains that childbearing outside of marriage does not necessarily cause negative consequences for child development. The majority of Irish mothers who give birth outside a traditional married setting come from impoverished backgrounds so that much of the adverse consequences on child development are an artefact of pre-existing socio-economic disadvantages resultant in different lifestyles, including factors such as rates of smoking during pregnancy and lower rates of breastfeeding.

Comparing the Governance of Novel Products and Processes of Biotechnology

The emergence of novel products and processes of biotechnology in medicine, industry and agriculture has been accompanied by promises of healthier, safer and more productive lives and societies. However, biotechnology has also served as cause and catalyst of social controversy about the physical safety and social desirability of novel technologies. Such controversies have put the principles, institutions and instruments of governance, which has conventionally guided the interactions between science and society, under pressure. While researchers and policy-makers have focused their attention on the role of the media, the role of the mass media can explain trends in punitive attitudes over time.

This is done in a twofold way. Firstly, we look at patterns of media consumption and imprisonment in the United States and other Western societies (e.g. Garland, Wacquant). The present contribution aims at examining the factors that drive individual punitive- ness. Studies have shown that the mass media play a significant role in shaping public attitudes towards crime and punishment. Therefore our interest focuses on the role of the media. The paper assesses to what extent the media can explain trends in punitive attitudes over time.

In criminology there has been an active discussion about rising punitiveness in the United States and other Western societies (e.g. Garland, Wacquant). The present contribution aims at examining the factors that drive individual punitive-ness. Studies have shown that the mass media play a significant role in shaping public attitudes towards crime and punishment. Therefore our interest focuses on the role of the media. The paper assesses to what extent the media can explain trends in punitive attitudes over time.

Studies have shown that the mass media play a significant role in shaping public attitudes towards crime and punishment. Therefore our interest focuses on the role of the media. The paper assesses to what extent the media can explain trends in punitive attitudes over time.

The economic reforms of the late seventies led to a massive urban expansion in China as villages were swallowed by the urban sprawl. The most striking example is Shenzhen, an area with 300,000 inhabitants grew into a metropolis of 14 million people over a couple of decades. Today only 3 million are formal residents of the city, and the rest of the people without local residency are excluded from subsidized amenities like education, health care and social housing. Most of the people that move into the city find accommodation in one of the 320 villages that have become embedded in the urban fabric. These urban villages provide rough-
ly half of the total residential floor area in Shenzhen, although they only cover 13% of the total built-up land. Over time, these multifaceted spaces of informality have shaped a landscape that is clearly different from the formal city; however, their transformation follows a logical trajectory which continuously contests social and market-driven demands. As the city further develops and infrastructure improves, the expected economic rents of urban village land will keep on rising. For those villages, market-led redevelopments are almost inevitable. Large-scale land acquisition and redevelopment are beginning to transform urban villages into upscale private apartments, luxury hotels and malls—citadels of the rich. This process diminishes a great deal of affordable housing stock in the central city, further marginalizing the low-income groups. Moreover, this works as a domino effect where the redevelopment of one urban village drives the process for other urban villages in the proximity to fall on the same redevelopment path.

Similarly, the practice of producing scientific knowledge is no longer solely in the hands of experts, and the boundary work (Geyrn, 1983) between experts and non-experts has been recently challenged. This tendency is more visible in “scientific” knowledge that is contentious, such as climate change, alternative medicine, hybrid cars, child vaccinations, and alternative and renewable energy sources. There is no “correct” knowledge, but rather what exists is contentious knowledge through its co-production among experts and laypeople. With these situations in mind, this paper examines how contentious knowledge is constructed in a social media environment, namely Wikipedia. More specifically, this study empirically investigates online discussions of nuclear power plants on Wikipedia. We apply the Fukushima Nuclear Power Plant Disaster that occurred in March 2011 in Japan as well as child vaccinations (i.e., MMR and Thimerosal), Wikipedia is an online encyclopedia with over 280 different language versions and over 4 million articles just in English. In addition to the articles that are more visible to the general public, Wikipedia provides an online discussion space for each article. This offers a rich space for examining how scientific knowledge is negotiated in an open online environment. This study aims to examine who is included and who is excluded in the co-production of knowledge in a social media environment and to discuss the mechanisms in which co-production of knowledge occurs. The implications of the findings are relevant to studies of scientific knowledge as well as consumers of scientific knowledge.

HAO, PU* (Hong Kong Baptist University, ppuyaho@hkbu.edu.hk)

**Unequal Housing Choices and the Residential Segregation in Urban China**

The growth and transformation of cities in China continue to absorb migrants from both ends of the economic spectrum, giving rise to socially mixed cities. Concurrent is the elevated level of residential segregation owing to new forms of enclave urbanism such as gated communities and urban villages. Factors including historical legacy, land institution and property-led development have contributed to a divided residential pattern at the neighbourhood level, but the divisions are not necessarily as significant in larger spatial units. This paper, by analysing the distribution of both urban population and housing provision in Shenzhen, explicitly unravels the spatial logic of the divided pattern of the population. As expected, migrants and local **hukou** holders are largely segregated by different housing choices; however, due to the relatively even distribution of a vast amount of migrant enclaves, at the sub-district level a rather low degree of segregation is manifest. This residential pattern is salutary as it maintains a spatially equitable setting which enables deprived groups to reside within short catchment areas of jobs and amenities. Nevertheless, urban renewal programmes that target urban villages and old neighbourhoods are likely to jeopardise the somewhat reasonable composition and distribution of housing choices, aggravating segregation on a large spatial scale.

HAO, ZHIDONG* (University of Macau, zhao@umac.mo)

**Left and Right, and Organic and Critical: Understanding the Politics of China’s Intellectuals**

In today’s China, intellectuals continue to play important roles in social, economic, and political development. Much has been done on the roles of the public intellectuals in China in the reform era (Cheek 2006; Goldman 1994, 1999; Edward Gu and Merle Goldman 2004; Zhidong Hao 2003; Kelly 2006), but the intellectual scene is developing so fast with increasingly clearer demarcations between the left and right that it remains an interesting and daunting challenge to describe more accurately what those roles are and why they matter. This article is one of those efforts towards a better understanding of China’s intellectuals and their political roles.

In this article, I will first define the term “intellectuals” and their political positions and roles to play, or their subjectivities, in terms of organic, critical, and professional. Then I will define the left and right intellectuals. Thirdly, I will examine contemporary Chinese intellectuals’ political positions. We will find that the left intellectuals are more likely to be organic to the government, and the right intellectuals are more likely to be critical of it. Fourthly, I will emphasize the complexity, subjectivity, and dynamics of intellectual politics in terms of the changeability of their political roles, the organic intellectuals’ living for or off politics, and the communality between the left and right intellectuals. Finally I will speculate on the possible future development of intellectual politics and their implications for China’s democratization.

The method of analysis in the paper is typological, i.e., I am categorizing intellectuals into left and right, and organic and critical. The representative texts I am analyzing to substantiate the typologies are mainly from the Internet and the traditional media because this is where the battle between the left (organic) and the right (critical) over the politics of the government is mainly waged.

HARA, TOSHIHIKO* (Sapporo City University, t_hara@scu.ac.jp)

**Japan As a Shrinking Society: What Is the Condition for Recovering the Replacement Level of Fertility?**

This paper focuses on the phenomenon of shrinking society emerging in Japan and its sociological meanings, such as the possible historical consequence of demographic transition from high birth and death rates to low ones. First, we used the Historical Statistics of Japan (Statistics Bureau and the Director General for Policy Planning of Japan, 2006) and Population Projections for Japan (National Institute of Population and Social Security Research, January 2012) to show the past and future development of the dependency ratio from 1891 to 2100. Second, utilizing the life table population and Net Reproduction Rate (NRR), we observed separately the effects of the increasing life expectancy and declining fertility on the dependency ratio. Finally, we analyzed the historical relations among women’s survival rates at reproductive age, the theoretical fertility rate for maintaining the reproductive level (NRR = 1), and the recorded Total Fertility Rate (TFR). Important findings are as follows. (1) The effects of the rising longevity on the dependency ratios were stable until the average life expectancy reached around 70 years. When the average survival rate at reproductive age reached an upper limit of 0.99, the dependency ratio began to grow swiftly according to the extension of life expectancy. (2) Historical observation showed TFR as adapting to the theoretical level of fertility (NRR = 1) at a certain time lag and corresponding
with women's survival rates at reproductive age. (3) For women, their expanding lifespan and survival rates at reproductive age could have influenced reproductive decision making to minimize the risk of childbearing; even if the theoretical fertility rate meets the reproductive level, women's views may remain unchanged. In Japan, fertility is lower than the replacement level because women's cost-benefit imbalance for childbearing is too high.

**Social Capital of Seven Countries/Areas in East Asia: From the Questionnaire Approach**

The Center for Social Capital Studies of Senshu University, Japan, chaired by Professor Hiroo Harada, have made the questionnaire research about 'social capital' both in rural and urban areas of seven countries/areas; Vietnam, Cambodia, Laos, South Korea, China, Taiwan, and Thailand, and at Shinjuku Ward and Kawasaki City in Japan, from 2010 to 2013. In this report we will focus on the research of seven countries/areas.

The hypothesis is that 'social capital' might differ from the degree of economic development and urbanization. We define 'social capital' as the index of four components; social trust, maintaining and improving livelihood, risk and social safety-net, and social rituals, consisting of 56 questions and 18 items of face sheet. We are quantitatively examining the outputs so that we have not reached the final result and conclusion, but 'social capital' differs in urban and rural areas, families, communities, and so on. This may also suggest that 'social capital' differs with the economic development, market capitalism and globalization in prevailing at the present age. We also focus the examinations on the history of the families, communities and countries/areas. These would be the qualitative analysis. We have to carefully treat the outcome of the questionnaire, because the degree of 'social capital' does not imply the superiority or inferiority, nor the positive or negative effect of 'social capital', but the social relations and evaluation in the society of community conditioned by the history and geography. Therefore the policy implications would be differently induced.

**Civil Movements in Low-Recognized Disaster Affected Areas**

We discuss how civil movements have developed to protect children from radiation pollution in local communities after the March 2011 Great East Japan Earthquake and Fukushima nuclear disaster. We focus on those areas that have not been classified as "Affected Areas" by the government, although local residents have sought to gain institutional recognition of the damage due to nuclear accidents. In this article, these areas are defined as Low-Recognized Disaster Affected Areas (LRDAA).

It is important to pay attention to LRDAA in mega disasters. Existing research suggests that local communities with low-level impacts were peripheralized and neglected by both the government and society in the face of tremendous negative impacts as a result of the earthquake and nuclear accidents. In seeking institutional recognition, residents in LRDAA have difficulty showing the causal relationship between the level of pollution and its impact on health. This makes it difficult for residents to justify damage claims. The level of success of social construction around radiation pollution in low-level impacted areas determines how far and to what extent the Fukushima nuclear disaster impacted communities.

As a case study, we examine a civil movement in Ibaraki, a city near Fukushima. A series of petitions were filed by dozens of newly established citizen groups against local governments and legislatures, and the government of Japan. We analyze how Ibaraki local citizen groups have established their network, to which extent they have achieved their claims to gain legitimacy in social and political process, and the roles the professional experts played in those processes. We point out that the establishment of the Law to Support Child Survivors of Nuclear Accidents of June 2011 in the National Diet changed the character of the local political situation by transforming the local government's attitude toward citizen groups from oppositional to cooperative.

**Conspiracists' Longings for a Pure Science**

Conspiracists' longings for a pure science, conspiracy theories have in recent decades become a popular and widespread cultural phenomenon in the Western world. Although conspiracy theories come in all shapes and sizes, a communality can be found in the challenge they pose to the epistemic authority of science. The social sciences have, however, simply conceived of conspiracy theories as bad science, making a parody out of the respectable scientific tradition, but in their moral condemnations these scholars leave unexplained how we can actually understand these critiques. In this article I draw on the ethnographic research conducted in the Dutch "conspiracy milieu" to explore what conspiracy theorists claim about science, scientists and the knowledge they produce. On the most abstract level is modern science criticized for its dogmatism that excludes deviant forms of knowledge and leaves many terrains of inquiry unexplored. A second line of critique is directed to the knowledge scientists produce which in practice is not living up to its a-societal ideal of objectivity and disinterestedness. The last strand of critiques then centers around the powerful social position scientific experts have established in relation to outsiders that subordinate laymen and protect their in-group. In sum, what these critiques articulate is a (particular) public understanding of science. Despite a strong critique of science, conspiracy theorists are not against science, but hold a rather ambivalent position: science is at once sacralized for its intentions but profaned for its effects. I conclude by showing how these critiques resonate with both pre- and post-modern scientific understandings of science, and argue how the frailty of modern scientific ideals of the universality and disinterestedness of science paradoxically instigates those critical longings for a pure science that characterize contemporary Western conspiracy theories.

**Strategy and Identity in the “Conspiracy Milieu”**

Strategy and Identity in the “Conspiracy Milieu”

Conspiracy theories have in recent decades become a popular cultural phenomenon, and its discourse is now an increasingly normalized idiom for many people to account for the occurrence of (seemingly ungraspable) phenomena in contemporary societies. The social sciences have nevertheless conceived of “conspiracy theorists” in rather ambivalent ways: they have paradoxed a sense of an outdated worldview and endanger the body politic. Although the moralism in these studies is already problematic for the sociological understanding of who these people are, what I challenge in this paper is the uniform identity these scholars construct of conspiracy theorists. I draw here on ethnographic research in the Dutch “conspiracy milieu” to explore what differences in beliefs and practices can be found and how they are related to dynamics of identity formation. While a communality can be found in the societal change all conspiracy theorists want to bring about, I dissect three different strategies with which people think these
changes should be accomplished: withdrawal, activism and mediation. Strongly influenced by New Age beliefs, adherents of the first strategy assume change is to come from within: by changing oneself, the world will change accordingly. The activist strategy is informed by the notion that a different world can only be established by overthrowing the old order, practices therefore take place on the barricades. The mediators at last argue that societal change can only be achieved in cooperation, adherents therefore want to bring people together by making visible societal and political problems. I conclude by showing how the identity of conspiracy theorists is much more complex and dynamic than social scientists generally assume: it is multiple and formed in relation to the general public and other conspiracy theorists alike.

HARDERING, FRIEDERICKE* (Goethe-University, f.hardering@soz.uni-frankfurt.de)

Alienation and Meaningful Work – Subjective Strategies of Ascribing Meaning to Work

This paper speaks to current debates about new expectations of meaningfulness at work and new forms of alienation pathologies (Rosa 2012). Current scholarship generally agrees that defining work as meaningful is an important strategy against the feeling of alienation. But still little is known about the mechanisms and processes that individuals themselves use to create meaningful relations to work. (Rosso, Dekas & Wrzesniewski 2010). This paper investigates the mechanisms and processes of how employees ascribe meaning to their work. The sample consists of 21 employees who had changed occupations. I conducted in-depth narrative interviews about their work biography and their work orientations.

The reference to basic identification with work, 2) reference to meaningful aspects of work, 3) reference to the purpose of work for a greater good, 4) reference to values beyond work. The results show that current understandings of work or job orientations need to be extended and elaborated. Furthermore, the empirical findings invite more detailed questions on alienation, for example, in how far alienation can be interpreted as a gradual phenomenon.

Mindful Living, Mindful Working? New Understandings of the Role of Work in Post-Growth Society

In discourses about post-industrial, post-growth societies (Paech 2012), emerging questions of the “good life” and appropriate, sustainable consumption have invited a general inquiry about new lifestyles. Two archetypes of the new lifestyles include “Lifestyles of Health and Sustainability” (LOHAS) and “Lifestyles of Voluntary Simplicity” (LOVOS). The research about these lifestyles focuses particularly on the consumption behaviors of these lifestyle groups, but questions of how these lifestyles and philosophies affect the understanding of work remain understudied. Because work and consumption are closely linked, we expect that those involved with these new lifestyle models may also have a notably different orientation to work.

We investigated the understanding of work held and articulated by members of these new lifestyle groups. We reconstruct the understanding of work using the responses from four narrative interviews, two from representatives of the LOHAS lifestyle and two from the LOVOS, collected in Germany in 2012 and 2013. These four cases are a selection from a larger sample of 21 job-changers who described as their new employment biographies. The central analytical questions of the research are health, sustainability, work-life balance, and simplicity. Our results show that the understanding of work as expressed by these new lifestyle representatives deviate strongly from common understandings of “normal work” or “occupational careers.” The respondents report that it’s very important that their work mirrors their broader values on the dimensions of self-sufficiency, deciding for themselves rather than being driven by outside forces and demands, health-consciousness, and meaningfulness.

HARDY, JANE* (University of Hertfordshire, j.a.hardy@herts.ac.uk)

China in the Global Division of Labour: Contradictions and Class Relations

By examining the contradictions in China’s model of growth and the shifting dynamics of its place in the global division of labour, the aim of this paper is to understand the tensions in the class relations that underpin the Chinese ‘success story’. It will provide the contextual underpinnings necessary for understanding the environment in which increasingly restive Chinese labour is located. The paper will argue that China’s integration with global capitalism and global circuits of capital has, particularly from the early 1990s up to and including the early 2000s, has been a major source of its meteoric growth, but has also sharply increased its economic vulnerability as manifested in its exposure during the 2008 crisis. High rates of growth, driven by unprecedented accumulation that outstrips private consumption, has increased China’s reliance on exports, particularly to the core capitalist economies of the United States and the European Union. Reflecting fears that this scale of accumulation is not sustainable, the government’s 12th Five Year Plan (2011 to 2015) called for slower growth and rebalancing from investment to consumption, in part at least through higher wages. Such an approach, however, presents a threat to China’s comparative advantage based on low wages and super-exploitation. Some regions and sectors are already under strain and production has moved within China or to other cheaper economies. In addition, the combined and uneven nature of China’s development, sectorally and regionally, underpins the fractured interests of the ruling class. Finally, the presentation will point to the massive infusion of financial used to ‘soften’ the effects of the global crisis that has produced property bubbles, which are further fuelling inequality and discontent.

HARGREAVES, STUART* (The Chinese University of Hong Kong, stuart.hargreaves@cuhk.edu.hk)

Geo-Immersive Technologies & the Male Gaze

Geo-immersive technologies are a set of nascent services that digitally record public spaces and then make the imagery accessible to anyone with an internet connection. The best known is perhaps Google’s StreetView service. This paper argues that by transmitting images of public spaces to anonymous groups of billions, far removed both spatially and temporally from the site of the initial public behaviour, these technologies form a new kind of public street surveillance.

This paper shows that certain images captured by such technologies are increasingly harvested by anonymous users, who seek out photographs they find notable and re-share them. Such ‘notable’ images frequently include images of topless women, or women sunbathing, or women merely dressed in a fashion the anonymous crowd feels is worthy of comment. This paper argues that geo-immersive surveillance thereby replicates the male gaze in a manner that has adverse impacts for the claims of a range of equity-seeking groups, particularly but not exclusively women.

In most jurisdictions, such photography is nonetheless largely unregulated. Individuals are typically treated as having no reasonable expectation of privacy while in public and thus are granted no legal recourse to prevent such “street photography” or seek ex post facto remedy. At the same time, Google and other service providers make no efforts to enforce copyright over the imagery they publish, and thus certain photographs tend to rapidly go ‘viral’, increasing their potential to create harm.

This paper suggests that this situation demands regulatory change. The balance between privacy claims in public and legitimate claims for freedom of expression through ‘street photography’ must be better struck in a way that acknowledges the differing ways in which surveillance is experienced by different groups, who may be more susceptible to surveillance-related harms.

AKERBLOM, ANNIKA (Malmö University)

Academic Discourse Meets Praxis Discourse in Group Tutoring

The aim of this study is to explore the meeting of academic and praxis discourses in group tutoring of undergraduate’s thesis. The point of departure is that the quality of the theses of undergraduate and master level, at the teacher education programs has been questioned by The Swedish National Agency for Higher Education (2006). The main critic concerns lack of academic qualities, such as failing theoretical awareness, weak analysis, normativity and lack of critical writing and thinking. The teacher education programs is, however, primarily defined as a professional training program meaning that students to a large extent are focusing on the practical aspects of the profession. Two differing discourses can thus be identified, and this contradiction is explored by investigating the difference between students’ and the supervisor’s perceptions of the purpose of the thesis writing. The results from the analysis, of the transcribed extracts of
verbal interaction, show that the "academic code" is used mainly by the tutor and the "praxis code" by the students. The study focuses on the meeting between these codes/discourses in relation to supervision and is inspired by the code theory of Basil Bernstein, where "codes" are used to describe regulative principles, realized through different possibilities of selection and combination (Atkinson, 1985). Language is used as a means to understand social relationships, structures and processes. It is noticeable that, within these codes, the same expressions were used to great extent, but with different meanings and in different contexts.

HARJU, ANNE* (Malmö University, anne.harju@mah.se)
Children's Reproduction of Power Relations in the City

This study investigates power relations in a small city in southern Sweden. It is a city where there have been radical social changes in the population structure due to a major inflow of immigrants.

The social situation can best be described as filled with tension between different groups. In relation to the tension there is a strong and dominant narrative about "us" and "them", relating to the categories "Swedes" and "immigrants". The study has two aims in relation to this narrative. One is to explore how it is used to reproduce power relations in the city. The second aim is to investigate how children actively use and reformulate the narrative and the power relations within it.

The point of departure is the assumption that human beings are embedded in figurations (families, social class, ethnic groups, nations etc) containing different power ratios that are transferred from one generation to another (Elias 2009). Socialization is thus central in the transmission of power ratios, as children acquire adult standards of behavior and social norms. However, children are from childhood's point of view, also active agents involved in creating and influencing their own and others' lives, which implies that socialization is not equal to adaptation and internalization, but also to children's negotiation, sharing and creation of culture (Allison, Jenkins and Prout 1998, Corsaro 2005). In the study the children's contribution to reproduction and reformulation, in relation to the narrative of "us" and "them", is in line with William Corsaro's (2005) concept of interpretative reproduction. The term interpretative captures children's participation in their own unique peer cultures by creatively taking information from the adult world to address their own peer concerns, while the term reproduction captures the idea that children not only internalize society and culture, but actively contribute to cultural production and change.

Educational Institutions As Mating Markets

Educational institutions are important settings in which future partners meet and where inequalities in the current and next generation are formed. Yet there is little research on educational institutions as mating markets, partly due to limitations with existing data. In this study, we use population register data to follow the educational histories of an entire birth cohort of Swedes, born in 1970. We are able to identify the educational institutions the members of this cohort attended, and analyse whether their educational careers overlapped in these institutions. We focus on high schools (Gymnasium) and universities. As the outcome, we focus on first births and analyze assortative mating through the characteristics of the parents. We estimate which share of our cohort members overlapped with ("met") their partner in high school or university and use contextual level information on the structure and social compositions of the high schools and universities attended to analyze the probability of meeting one's partner in these institutions, and on the probability of assortative mating according to age, ethnicity, and class background. Our preliminary results suggest that up to 40% of tertiary educationally homogenous couples have met in university, and that the social and demographic compositions of both high schools and universities shape meeting chances and mating along demographic and social lines.

Newspaper Messages about Public and Private Health-Care Services in Australia: The Entrenchment of Unequal Choice

Media representations of health care can perpetuate stereotypes about public and private systems that unequally shape consumers' perceptions and enactment of health-care choice. For instance, recent research about Australians' (dis) trust of public and private health care suggests that participants' concerns about long public hospital waiting lists echo prominent media messages, which might in turn contribute to the fact that one in two Australians supplement Medicare (the universal public health insurance scheme) with private insurance. Asa larger study about health-care choice(2,7),(997,990), we seek to understand ways in which the media represent both public and private health services, and their role in structuring different 'choice' pathways through Australia's health-care maze.

This paper presents results from an analysis of newspaper reporting of public and private health care. The sample consists of newspaper articles and letters dealing with public and private health services, private insurance and Medicare from 'broadsheet' and 'tabloid' newspapers in three Australian states (2011-13). These texts were coded for positive, negative and neutral messages about public and private care and examined for representations of choice, trust and responsibility. In line with the theoretical framework for our study, we also focused on articles that presented different aspects of 'health-care capital' – economic, social, symbolic or geographic – as influencing consumers' capacity for health-care choice. The analysis reveals variation by state, newspaper, and over time.

We found that articles in the populist tabloid papers are dominated by negative, frightening messages about the "crisis" in public health systems and, to a lesser extent, the threat of rising costs of private health insurance. The 'quality' broadsheets present more balanced accounts, with articles typically combining positive, negative and neutral messages. Media representations thus contribute to the differential structuring of health-care choice, potentially compromising quality of care and exacerbating inequality.

Doing and Displaying Families through the Preparation of Children's Lunchboxes

This paper analyses family life and social change from the perspective of parents and their daily routines of preparing lunchboxes for their children. In this study lunchboxes are understood as an artefact linking together discourses and practices of doing and displaying families, marketplace and government discourses of feeding children and broader issues of care and surveillance in private and public settings. At a time when the roles of men and women are experiencing considerable change, this paper explores family life and gender roles by considering who is responsible for preparing children's lunchboxes, how they feel about it and what this daily practice connects with workplace considerations. Drawing on photoelicitation interviews and focus groups with British parents with children aged between nine and eleven years old, we explore majority and minority experiences in order to contribute a greater understanding of how traditional and non-traditional families negotiate family display through children's lunchboxes.

Researching Racism: Reflections on Different Methodological Approaches to Recording People's Experiences of Racism

This paper combines two contrasting and complementing methodologies to explore young people's experiences of racism in everyday life. The paper will reflect on how the use of qualitative and quantitative methods can lead us to different understandings of experienced racism. The first method uses ethnography and non-structured interviews which do not directly ask respondents to talk about their experiences of racism. The second method examines data from the
Understanding Society (UK) survey, which records people’s responses to specific questions about their own and others’ experiences of racism.

What emerged is that in the qualitative project, participants found it difficult to name racism and denied that quite explicit forms of racism they had experienced was ‘really’ racism. In the survey, respondents recorded widespread racism which they and/or people they knew had experienced. This paper considers some of the implications of these apparently divergent findings. The use of ready-structured questions is helpful in alerting us to the persisting prevalence of racism. This is facilitated when survey respondents are not actively encouraged to reflect on the personal and social meanings of their experiences. The other hand highlights how confronting racism can be difficult. The paper argues the process of interview can in itself help reveal a great deal about the nature of different forms of racism. The paper also indicates that this has worrying implications for the ways in which racism can be resisted in everyday life when it can be so difficult to talk about.

HARRIKARI, TIMO* (University of Helsinki, timo.harrikari@helsinki.fi)

Securitizing Childhood – Childhood and Youth in Finnish Crime Prevention Programmes

Several international analyses of criminal justice and social policy have revealed an increased focus on children and young people during the past decades. One of the key characteristics of the recent interest has been a new concern with child violence, even with signs of moral panic. This type of public interest originates from the turn in criminal policy in the US and UK in the 1970s and 1980s, leading to a punitive turn in youth crime policy, to the rise of the risk agenda and, in general, to the intensification of formal social control towards children, young people and families with children.

The described transformation has expanded into a wide-scale international phenomenon, an almost complete movement from one country to another. The developments have also touched the Nordic welfare states. Consequently, the presentation addresses the issue of how children and young people are constructed and governed in Finland’s crime prevention and securitizing programmes and projects. The analysed data consists of abstracts and appraisals of 88 local securitizing programs.

The results of the analysis suggest that, in many ways, the programmes reflect a post-recession situation in Finnish society. Children and young people are dominantly positioned as ‘risks’ or as ‘exposed to risks’ and the goals and means of the programmes are connected with intensifying their control. The results suggest that the status of security speech and crime prevention technologies within the entity of governing childhood and youth require critical consideration.

The presentation is based on the article published in Youth Justice in April 2013.

Governing Global Capital: Professions and Regional Competition In Offshore Finance

How do professions affect the configuration of political economies worldwide? This study addresses the question through interviews with members of a new trans-national profession—wealth management—whose innovations are reshaping the balance of power in global finance. Wealth managers specialize in helping elites avoid taxes and other forms of regulation. This study documents how they achieve this objective—shifting billions in private assets of global elites avoiding taxes and other forms of regulation. The relationship is then articulated in distinctive local restaurants as well as shops and markets.

The agri-food system in Monterrey, Mexico is structured by three segments. One segment consists of the “traditional” Mexican diet of corn, beans, rice, chicken and pork. For residents of Monterrey, these foodstuffs are usually purchased at local mercaditos from local vendors who have acquired the foods from long supply chains. The second segment consists of the rapidly growing middle class and upper class. They purchase their foods at national and transnational supermarkets, and they tend to consume a more international middle class diet. The third segment is an emerging alternative food network that emphasizes locally produced foods, distinctive traditional foods, heirloom varieties of vegetables, organic farming, and artisanal food production. This segment attracts both middle class and upper class shoppers, who find these foods in health food stores, niche shops, and periodic alternative food markets. The third segment is framed both as an attempt to re-invigorate local culinary traditions and as an effort to separate one’s consumption from the transnational agro-food system. This emphasis is then articulated in distinctive local restaurants as well as shops and markets.

Family Structure Models and Nonmarital Childbearing in the Transition to Adulthood

Nonmarital childbearing is now a common fertility event during the transition to adulthood in the United States. Current estimates indicate more than forty percent of births occur to unmarried women in the U.S., however, the image of a single, unmarried mother raising a child on her own is no longer accurate. This paper uses national data from Add Health to document the relationship between nonmarital childbearing and socioeconomic confounding factors, we find robust and significant effects of family structure models in the multiple social contexts during adolescence on the prevalence of two-parent families and contemporary prevalence of single-parent families. Family structure models in these multiple social contexts during adolescence on the prevalence of two-parent families and contemporary prevalence of single-parent families. Before and Beyond Neoliberalism: The Development Of Precarity And The Emerging Alternative

In this paper we contend that, to understand what might exist beyond neoliberalism, we need to rethink processes of capitalist development before neoliberalism. We make two arguments.

First, for poorer countries, processes of commodification which are highlighted as evidence of neoliberalism often predate the neoliberal era. Third World development policies tended to make social and economic life more precarious as a corollary to capital accumulation, before neoliberalism as an ideology took hold. Second, intense theoretical focus on neoliberalism obscures a recent shift in the global South towards a tendential and tangible de-commodification of social
life. In fact, during the height of what is widely accepted as the period of neoliberal triumph in many countries across the global South, the relationship between work, land, and welfare has begun to transform in ways that look quite different from what the dominant paradigm leads us to expect.

The most salient examples today are state-led social protection programs which have been implemented across the former Third World. For those who lament that the post-2008 crisis has produced no Polishian double movement, we argue that these state-driven social assistance policies are precisely such a mechanism. These emerged not out of technocratic fixes from above but often out of political and social struggles from below. The rise and spread of these programs are not only in stark contrast to popular conceptions of a neoliberal reinforcement, but are specifically targeted at social strata whose precarity has been largely generated by developmental policies which predated the neoliberal era.

Our paper presents a macro-level quantitative survey of the rise and spread of social protection programs over the past two decades in the global South, and qualitative comparisons of these programs in the BICS – Brazil, India, China and South Africa – as evidence of our argument.

Two, Three, Many Middle Classes: Theorizing Middle Class Power From a Global Perspective

Analyses of the post-2008 global wave of social protest have generally celebrated the rise of educated middle classes as a driver of historical change as eagerly as analysts did the destruction of the Western bourgeoisie. In the global South, middle classes are analyzed as both object and subject: the goal of economic growth is a middle-class society and the middle class is assumed to be the most suitable base for political development. Yet public discussion about the middle class occurs with a set of implicit assumptions which underpin this sort of teleological talk, many of which derive from the application of late 19th-early 20th century sociological theory to the 21st century world economy. As an intervention in contemporary debates over class and protest, in this paper I reconstruct the concept of the middle class for the purpose of analyzing the current political economy of middle-income countries. To do so, I historicize middle class formation. The book focuses on regions over the past two decades in the global South, and qualitative comparisons of these programs in the BICS – Brazil, India, China and South Africa – as evidence of our argument.

The Widening Disparity of Cities and Shrinking Districts in Japan: An Environmental Justice Perspective

In this paper, I describe the widening disparity and class stratification among cities in Japan. Specific focus is placed on impoverished and shrinking districts such as Kamagasaki in Osaka and Sanyo in Tokyo, where numerous poor day laborers and homeless people live and work. Niklas Luhmann pointed out that impoverished districts were spatially isolated and excluded on multiple levels from more prosperous areas. In addition, residents in these areas are often burdened with higher levels of environmental and mental risks than are residents in prosperous areas. Environmental justice or equity (the fair distribution of environmental benefits and burdens) initiatives therefore focus on these problems.

In this presentation, the historical background leading to the creation of these areas is explored. In addition, potential linkages between numerous factors, such as population decline, residents’ average life expectancies, tuberculosis risks, income levels, crime rates, and land prices in these areas, are evaluated. To highlight linkages, multiple data sets that have been issued by the Japanese government as well as real-estate agents are cross-compared. In terms of the land price factor, a hedonic approach is followed, which incorporates local environmental factors by using a geographic information system (GIS). This approach allows for the incorporation of road traffic noise as a variable indicating the quality of the local environment.

HASEGAWA, KOICHI* (Tohoku University, k-hase@sal.tohoku.ac.jp)

Thinking on the Recovering Process from the 3.11 Tsunami Disaster

This paper discusses problems in the recovering process in the tsunami devasated area, based on a case study in a fisherman’s village, Minami Sanriku Town. This is one of the most severe areas of the most devastating part of the Tohoku 3.11, 2011. The huge three tsunami waves of 15.5 meters high left 824 people dead or missing, 4.6% of the whole population. Almost all of all buildings, shops and houses were swept away and turned into rubble and wreckage. Suddenly the central area of this town vanished. The usual very beautiful, peaceful and quiet bay suddenly turned into the awful tsunami waves and destroyed the town.

The speed and pace of the recovering process is very slow due to the loss of effective political leadership and the very bureaucratic, rigid reactions and sectionalism of the national bureaucrats. After clearing up rubble and wreckage, there is nothing except vacant ground. A large amount of money
is only bringing public works of long lines of a huge coastal levee like the Great Wall. Despite being a fisherman’s village, new life will start away from the ocean and with no ocean view.

Among residents, there are a lot of clashes of interests. Within a household, we can find a generational gap between the retired elderly with a pension and the younger generation who seeks a job and is raising children. While the former wants to stay within the village, the latter hopes to move out of the village, to an inland area more convenient for getting higher income, shopping, transportation and education. The town forecasts the population aging rate of over 15 years old will increase to 38% in the year of 2033, from 28% before the tsunami attack. The population will decrease to less than 13,000 from 17,000. How can we support the recovering process?

HASHIMOTO, MIYUKI* (Rikkyo University, miju@bf6.so-net.ne.jp)

The Non-Nationalized Narrative of Two Korean School Graduates

In April 2010, the Japanese government began a tuition-waiver program for high school education. In February 2013, after many twists and turns, Korean school (chosengakko) were excluded because of their connection to North Korea. In the media and through popular hearsay, Korean schools have often been identified with North Korea, and Korean school students are exposed to the outside prejudice that they are “brainwashed, anti-Japanese children.”

In this paper, based on an interview about whether it was appropriate to exclude Korean schools from the waiver program, I present the complicated realities of an insider’s life story. The interviewees are a couple living in a local Japanese city with their 6-month-old baby. Each member of the couple is a third-generation zainichi Korean, born in the 1970s, and attended Korean school for approximately ten years. While the interviewer is a Japanese who is an outsider to the Korean school system, I have known one of the interviewees for a long period of time. Thus, when this interviewee characterized our interview as “the occasion to put my life in order,” I could hear these insider’s life stories about Korean school without the interference of a mindset gap between insider and outsider.

Though the two interviewees’ reasons and experiences are different from each other, the opinions they arrive at in this interview are similar:

1) Because of their own difficult experiences, neither interviewee wishes to have their son attend Korean school.
2) Neither interviewee entirely denies the value of Korean school itself.
3) Both are against the exclusion of Korean schools from the tuition-waiver program.

Do these opinions run in contradiction to one another? Although it may seem so to outsiders, it is possible to understand these opinions as consistent if they are not viewed as part of a national (i.e. North Korean) framework.

Multi-Sensory Experiences at Aso Farmland, Kumamoto, Japan

Aso Farmland is a multi-sensorial experience for tourists. The farm stay resort allows tourists to consume local food produced in the region at 11 restaurants, exercise in an activity zone, and enjoy a variety of onsen baths including mud baths, as well as 13 heated saunas (earth power spas) lined with different herbs and minerals as well as a cold dome. Visitors can place their feet in a pool of fish for foot care and they can visit a petting zoo. There is an agricultural production facility on site as well as a farmers' market. Tourists experience a range of aromas from sulphur baths, to perfumed and herb baths to the aroma of a variety of cuisines and the busy market place and deli. An arts and crafts centre allows tourists to make a variety of crafts including music boxes, paper crafts, candles and snow globes. Accommodation is in dome shaped rooms infused with an antioxidant (anti-aging) solution. The paper will look at attempts by the attraction to provide a stimulating environment taking visitors beyond their reliance on just sight to engage in a more holistic experience.

HAAS, JON* (University of California, jon@caltech.edu)

Utilization, Implementation, Process of Execution, Standards for Scoring, Logic, and Ways of its Implementation

In this paper, I will analyse the testing wars in American schools as well as in Japan. In Japan, the Ministry of Education, Culture, Sports, Science and Technology (MEXT) had executed examinations for the sake of encouraging prudent students of the Samurai. However, they got the new “shape” or “form” from Western school examination information. Judging from the remaining foreign books of those ages, it is likely to say they came mainly from America. After Western information, Japanese examination got many rule books as well as guide books.

For American testing, William Reese’s Testing Wars in the Public Schools: A Forgotten History, (2013), tells us many about how testing in 19th century American public schools had flourished under the influence of Europe. The years, from 1868 to about 1879, when the information about the testing of this country came to Japan and utilized much, were such era that standardized testing was almost conquering all States, regardless of the good will to improve teaching by using statistics and testing; days of testing’s side effects.

My comparison would be made on both examinations’ (testings’) procedure of implementation, process of execution, standards for scoring, logic and ways of its utilization and some others.

By finding out the difference of Japanese examination and American testing, we may be able to see the difference of how it could work as a social organ, and then get to the reason of how people’s understanding of assessment and evaluation of both culture differ.

The Discursive Construction and Performance of Gendered Identity on Social Media

This article looks at the construction and performance of gendered identity through the medium of social media. Data was collected from a sub-section of Facebook webpages belonging to the Slut Walk movement. Our analysis suggests that gender is constructed through the subjects’ participation in the ‘post-feminist masquerade’ - through which their gendered identity is defined in relation to a hegemonic masculine-ideal. This situates the network of sites within a post-feminist context, characterised by the ambivalent and appropriative treatment of feminism. Acts of resistance are framed as individual, momentary ruptures of Judith Butler’s heterosexual matrix of ‘cultural intelligibility.’ The online context of these ruptures is found to vest a creative potential, by removing the constraints of time and location, indicating that the impact of these ruptures may extend beyond its immediate environment.

CVV, MIERU* (University of Pittsburgh, cvvv@student.pitt.edu)

As an Introduction to the Concept of Gendered Identity

The concept of gender has developed through anthropological studies and is now further developed through social psychology and sociology. Gender has been a category that has been used to study the interactions between a public and a private sphere. However, this article focuses on the interactions within the public sphere and how the interactions within the public sphere can be understood through a gendered lens.

What Explains the Rise of Ethnic Minority Tensions in China?

In the past few years there has been a rise of flash ethnic violence in the relatively developed areas of China such as Beijing and Shanghai, to the far-reaching Western provinces of Xinjiang and Tibet. While the state’s response to ethnic unrest oscillates between ‘soft’ (e.g. funding ethno-cultural activities) and ‘hard’ (e.g. increasing security mechanisms) policies, this paper suggests that this strategy will do little to address the underlying causes behind minority tensions in the long-term. Instead, it will argue that the most culpable factor behind current ethnic tensions are socio-economically rooted: Minorities are increasingly experiencing ‘ethnic penalties’ in the labour market, whereby their comparable educational attainment and training, akin to the majority ethnic group, Hans, do not match similar labour market outcomes. While intuitively, overt discrimination insofar as one’s physical appearance or linguistic abilities, and first generation migrant status, are often cited as prevailing reasons to explain this ‘penalty’, the findings presented in this paper will suggest that explanatory factors such as an individual’s social network, a firm’s working culture, and social trust in a community are equally important considerations. Moreover, the interactive role of non-cognitive skills in minority labour acquisition will be discussed. Finally, the
Over-fishing and eutrophication caused by agricultural nutrient run-off comprise two of the most severe environmental threats to the ecological integrity of the Baltic Sea, located in Northern Europe. This article takes its theoretical point of departure in Elinor Ostrom’s work on design principles, arguing that a selection of these principles fruitfully can be scaled to serve as analytical tools at the international level. The principles of conflict resolution mechanisms, nested enterprises and monitoring are adapted to a multi-level governance situation where international conventions, EU directives, national strategies and stakeholder involvement all contribute to setting the stage for collaborative initiatives. Because of the tensions between environmental protection and natural resource use in fishery and agricultural sectors mutually acceptable agreements are especially difficult to reach and thus constitute hard cases in relation to the broader spectrum of marine environmental disturbances. Moreover, collective action problems often emerge among the Baltic Sea States where free-riding is an ever present threat. It is shown that although formal conflict resolutions largely are missing at the regional level, forums for deliberation where broad spectra of stakeholders are invited are slowly emerging as mechanisms to facilitate conflict resolution among countries as well as sector interests and other stakeholders. Furthermore, it is shown that even though different layers of institutions for regulating fisheries and agricultural runoff typically exist at local, national, regional and global scales, nesteness is often incomplete, that is, the intuitional fit between the layers are frequently not fully adequate. Finally, while monitoring is part and parcel of modern environmental management, broader models of integrated monitoring of biophysical as well as social parameters and processes in collaboration with relevant stakeholders are still in their infancy.

The Co-Construction of Identity As ‘Japanese Women Living Abroad’ in Interview Narratives

This paper aims to illustrate how Japanese women living in London as permanent residents co-construct and represent their identities. As a recent trend of the social science of language, narrative has been analysed as talk-in-interaction. Following this perspective, narrative should not be analysed as a mere representation of past events, but should be understood as a process of co-construction influenced by the social norms of their new/previous communities. In this presentation, the presenter will focus on aspects of co-construction in the narratives of Japanese women who were indirectly affected by the Great East Japan Earthquake in 2011. The interview narrative data collected in London in 2012 have been analysed from the perspective of positioning theory (Bambarg 1997, De Fina 2003, De Fina, Shiffrin and Bamberg 2006 and others), analytical methods of small stories (Bambarg 2004, Georgakopoulou 2007) and multimodality (Goodwin 1981, 1986, McNeill 1992, 2005, Kataoka 2011).

Analysis of the data shows how co-construction is manifested in linguistic and other semiotic resources - final particles, supportive giving/receiving verbs, nodding, laughter, dysfluency, overlapping, gesture, eye gaze, and so on - appearing in interview narratives. This presentation will reveal that 1) how the narrative message can be conveyed by not only language, but also other semiotic resources, 2) the participants of the conversation put much value on collaboratively constructing their mutual identities in the ‘here and now’ situation, rather than the contents of their storytelling, 3) they inevitably encounter aspects of internal conflict derived from their unique experiences, 4) they represent their feelings in view of the social norms of their original and current community and the pragmatic constraints on expression in their mother tongue.

Reading Comics with Ears

Comics is an art form of visual storytelling, which means a page of comics cannot be reduced to texts in speech balloons and narration boxes. Facial expressions of characters, onomatopoeia, emanaata, and even gutters convey meanings non-verbally. Reading comics is mostly an experience of looking at and interpreting visual images drawn on a page.

Based on this understanding of comics, this paper investigates comics for people with visual impairment. Recently some volunteer groups in Japan have made translating speech of comics catering for visually challenged people. Although translating images to voice information has been already practiced on speech translation of films, in comics-to-speech translation it is necessary to bring not only characters’ behaviours and their situations but also signs used in panels, as mentioned above, to speech. Also, because comics literacy of the readers (listeners) differs, what they want in reading experience is not the same; some know comics as an art form from their former reading experiences and thus want to read comics as comics, whereas others have never seen comics and want comics as entertainment-oriented stories, in other words they are not so interested in their visual aspects such as the layout in a page. Translators try to grant these requests as far as they can, and at the same time, give sufficient consideration to authors too, not to spoil what authors place importance in their art works.

Attempts of “telling the whole story”, including grievances outside the scope of results-based management, also marks a significant transformation in the pattern of exclusion: a shift from mere exclusion to an ‘inclusive’ one, at least in Turkey. In the past, exclusion was mainly in the form of almost complete denial of the existence of home-based work and these workers, now their acceptance as full workers do not make a sense in the decision making processes of social policy or in the context of social movements. Almost every concrete instances, they are forgotten to be invited to involve in. This negligence can also have several forms: to forget they are workers, union is not a charity association, they are not experts working for it... In some instances, when they make corrections, they are often treated as ‘hysterical’, or over-emotional women expressing anger improperly.

This paper describes these new patterns and takes the “omission”, as the most common form of exclusion in the case of home-based workers’ organizing in Turkey. By exploring the perspective of the representatives of social movements/organizations who omit systematically, and then, by discussion of these data with union members, aims to contribute the exploration of grounds of solidarity and action.

**HAUG, CHRISTOPH*** (University of Gothenburg, haug@gu.se)  
“We Want to Report about Everything!” How the Technologies of Results-Based Management Protect the Comfort Zone of Donors in International Development Cooperation

Donor agencies legitimize their existence by producing activity reports which show that they are making a difference. Evidence needs to be produced that links the donor to the results achieved by its partner organizations. Such evidence usually comes in the form of reports which the partners are obliged to deliver before they receive the next slice of funding.

The present paper examines this practice of exchanging funds for reports, asking how it affects the relationship between the development partners. The focus of the analysis is on how reporting requirements of Results-Based Management (RBM) structure the communication between donors and recipients and thereby organize global social relationships in asymmetrical ways, allowing donors to appropriate the credits for the work done by the recipients of their funds.

Based on a case study from donor funded HIV/AIDS work in South Africa, the analysis finds two conflicting languages: the language of results and the language of grievance. The paper shows that a significant source of donor power lies in their ability to structure the communication between the partners in a results-oriented way and thereby frustrate attempts of grievances-related storytelling. However, the study also documents the urge of some community based organizations to “report about everything”, meaning: not only what the donor wants to hear. Appropriation of “telling the whole story”, including grievances outside the scope of the donor’s program, is interpreted as expressions of dissent aimed towards the construction of a dialogic relationship between donors and recipients. It is discussed whether this is possible within or alongside with RBM, or whether dialogue based on local experiences implies a rejection of the RBM framework.
HAUG, CHRISTOPHE* (University of Gothenburg, haug@gu.se)

Consensus Decision-Making in Meetings As an Interactive Accomplishment: Silence without Silencing?

This paper starts from the observation that most of the literature on decision-making is focused on methodological individualism: at least in the western world, it seems that a decision can only be understood as the outcome of an individual act or an aggregate thereof (voting). Nevertheless, genuinely collective practices of decision-making (consensus) are widespread across institutional and cultural settings, but the collective dimension of these is inadequately understood, leading to a confusion between unanimity (everyone agrees) and consensus (no one disagrees). Both researchers and practitioners of decision-making have largely avoided this issue, so that empirical studies often remain unclear about how exactly a decision was made, and decision-making groups sometimes find themselves in the paradoxical situation of disagreeing whether they have reached consensus or not.

Based on participant observation of numerous meetings among global justice activists using the consensus principle, this study seeks to untangle some of the conceptual confusion through a detailed interactional analysis of meetings as communicative events. Focusing on the final stage of the decision-making process, the paper identifies four types of consensus: imposed, acclaimed, hasty, and considerate. Drawing on previous findings from conversation analysis, it is argued that although they all observe the absence of voiced disagreement, they differ significantly in how this absence is constructed interactionally. Therefore, what appears to be the same mode of decision-making – consensus – should be treated as different modes, both by researchers and practitioners.

The paper concludes by discussing the consequences of this analysis for radical democracy and anti-hegemonic practice, wondering whether it is possible to produce silence without silencing.

HAUGE KATAN, LINA* (University of Copenhagen, lhk@soc.ku.dk) BAARTS, CHARLOTTE* (University of Copenhagen, cbp@soc.ku.dk)

Towards a Post-Hermeneutic Phenomenology

The kinds of attention that have less to do with intellectual analysis than with our senses, emotions and bodily responses to our immediate experiences are generally recognized as important among field-researchers. Still when it comes to reporting there is an urge to turn the indistinctness of sensory and emotive experiences into identified and accountable registrations. Bodily and affective reactions to the surroundings are most often perceived as something to be taken for granted, to be understood as part of the environment and thus as something that is already known, instead of being an object of research.

We propose an approach to both the making and communication of knowledge, which could be called post-hermeneutic – a phenomenology not aiming at fixation of identified significance, but at a focus on the outcomes of elections or on citizens’ motivations to vote in the first place – typically by building models of the voter on assumptions made about the voter’s choice. We tend to forget the symbolic significance of the voter’s choice and the meaning and impact it has on the participants. In this paper we seek to restore a focus on this symbolic dimension, exploring some of the differences between the ritualisation of democracy through an analysis of voting rituals in France and Britain.

As we explore what citizens do when they vote and the extent to which these actions reflect and contribute to construct particular visions of the polity and the place of citizens within it. In particular we pay attention to how the voter’s choice is constructed as either something that can be performed and hence displayed publicly or as irredeemably secret and private. We consider how such typically taken-for-granted practices help us to understand how polities have been constituted and reproduced on the basis of divergent assumptions about the boundaries of the public and the private.

Company Brand Vs. Professionalism: The Marginalization of Women in TV Newsrooms in Japan

This paper analyzes Japanese media elites from a gender perspective in order to identify why male domination stubbornly persists even in a working environment where institutional arrangements all seem to support women, such as paid maternity leave and an equal payment agreement. We argue that the pervasive domination of corporate culture, rather than journalistic professionalism, is the source of the persistent marginalization of women in the media sector.

A growing number of women have entered the world of corporate journalism in Japan since the late 80s after the implementation of the Equal Employment Opportunity Law in 1986, but the ratio of women in senior management positions still remains at the lowest level among advanced industrial countries, according to a survey by the International Women’s Media Foundation in 2010.

Having conducted in-depth interviews on the social/educational background, professional career and life course of 21 senior news editors ranging from their late 40s to late 50s at leading TV stations in Japan, we identified clear differences between the genders in their understandings of the role of professionalism and the brands of the companies to which they belong. Female journalists tend to rely more on meritocratic professionalism based upon individual skills and achievements in moving up the corporate ladder, whereas their male counterparts feel their success largely owes to informal networks and prestigious corporate brands to which they belong.

Although gender studies has emphasized the masculine nature of the conceptualization of professionalism, and the sociology of work has revealed the self-centered ideology underlying professionalism in many occupations, we contend that playing down the role of professionals and professionalism imposes a substantial brake on change in terms of gender equality within an occupation.

Across the globe, societies face pressing challenges to address the needs of their rapidly ageing populations against a background of austerity. This is particularly true of Japan, Britain and Sweden, all ageing and established welfare states, where each government has attempted to expand and diversify public care services. This paper draws on face-to-face interviews with leading civil society organisations in these countries, a participatory observation, will examine and compare successful and innovative models of civil society organisations that have developed ‘gap-filling’ services for older people in Japan, Britain and Sweden. Key findings concerning each model will be contextualised within their national context, highlighting specific features. Analysis of models at a national level will then be placed in a transnational and comparative perspective, underscoring best practice benchmarks together with the challenges encountered by organisations. For instance, while the standardised and universalist Japanese model mobilises traditional quasi-governmental community resources, the British model emphasises partnership working and recognises innovation and professionalism, and Sweden’s model is characterised by localism and sensitivity towards the employment of ‘conventional’ labour, with volunteers being discouraged. In conclusion, this paper will discuss suggestions for future care policy making and possible refinement of the care market, potentially transcending national boundaries. It will also consider how experiences and best practice from the models examined here could be utilised in other countries to pursue evidence-based sustainable care policies and promote civil society.

HAYES, JAN* (Australian National University, jan.hayes@anu.edu.au) Integrity Management and Fantasy Planning: The San Bruno Pipeline Rupture

On 9th September, 2010, a high pressure natural gas transmission pipeline ruptured under the suburb of San Bruno, near San Francisco, California. The result was a fire that lasted for two days. Eight people died, and thirty eight homes were destroyed because a weld in the buried pipeline failed. The weld had been poorly made in 1956 when the pipeline was first constructed.

Using document analysis (investigation reports, transcripts of evidence and other primary source materials), in this paper we focus on the experts in this organisation who were responsible for pipeline integrity management. Clarke’s work regarding fantasy planning in the face of uncertainty explains both how and why the integrity management system had taken on a symbolic, rather than functional, role in this organization. ‘Knowing’ about the system was grounded in elaborate algorithms and graphs purported to show risk was declining, and functional, role in this organization. ‘Knowing’ about the system was grounded in elaborate algorithms and graphs purported to show risk was declining, and this analytical work was linked to the actual level of danger. In an environment of cost cutting, expensive inspection work was tailored simply to meet available budgets. Small failures were repaired and then dismissed from the collective memory so that valuable opportunities for learning in this uncertain environment were ignored.

This professional disposition on the part of the expert engineers was embedded in a broader organisational context. The paper further argues that senior management decisions about cost cutting were divorced from the real world impact as a result of the historical restructuring of the domestic gas industry overall and the low status of relevant industry expertise at senior management levels. We conclude that this ‘organisational accident’ provides important lessons for all organisations relying on technical expertise to prevent low frequency, but high consequence events.

HAYES, CASSIE* (Gettysburg College, chays@gettysburg.edu) Violent Natures: From Coercive Conservation to Climate Change in Africa

Since the colonial era, African natures—both external landscapes and internal human dispositions—have been constructed as violent via the parallel ideologies of wildlife conservation and climate change. Both address the human impact on, responsibility for, and stewardship of the environment through the lens of violent natures. During the colonial era in East Africa, ‘natives’ were relegated to specific areas, their lands usurped for white settlement and the conservation of dangerous wildlife. Today, conservationists continue to violently evict residents of East and South Africa from apparently precarious landscapes. In colonial and contemporary conservation, both ‘native’ and nature appear unruly and potentially violent. Under the ideology of climate change, as well, poor, non-white populations usually bear the brunt of catastrophic natural (or unnatural) disasters; at the same time that they are blamed for contributing to the underlying environmental causes of such events. African environments and peoples are therefore constructed as inherently violent and in need of external intervention via the rhetoric of both conservation and climate change.

Each system of thought employs science and technology to cast the ‘purity-stricken, racialized ‘other’ in the role of the enlightened noble conservationist; evil instigator of anti-conservationist or climate change-inducing practices; or vic- tim of the violent environments engendered by conservation and climate change. The result is a deeply problematic in both the theoretical and practical realms. As a result, the concept of ‘nature,’ nature, or both ‘native’ and nature, as violent. “Violent Natures” thus explores the racialization of nature by connecting the parallel stories of conservation and climate change in Africa.

HEAP, JOSEPHINE* (Stockholm University, josephine.heap@ki.se)

Multiple Disadvantage in Midlife and Old Age - Exploring the Associations

To explore multiple disadvantage – the simultaneous occurrence of disadvantage such as health problems, lack of economic resources or social isolation – implies reduced possibilities for people to manage daily life. The prevalence of multiple disadvantage has been found to be much higher among older adults (especially those older than 80) than among younger age groups. In this study, we investigate whether multiple disadvantage in old age was preceded by multiple disadvantage in midlife, or if the accumulation of disadvantages may have happened later in life.

Previous research has established that individuals' health and resources in old age are strongly correlated with their health and resources in midlife, making midlife a crucial starting point for the study of old age. However, old age is often associated with a decline in resources such as health and social resources, making it plausible that this is a period of life when disadvantages accumulate.

In this study, we test the association between multiple disadvantage in midlife and multiple disadvantage in old age by drawing on longitudinal, nationally representative data from Sweden from 1974 (when respondents were aged 40-59) and 2011 (age 77-96). Preliminary results go in two directions. On the one hand, results indicate that people with multiple disadvantage in midlife were likely to experience multiple disadvantage also in old age. On the other hand, around one-third of those who experienced multiple disadvantage in old age reported no disadvantages in midlife. Thus, for a considerable proportion of those reporting multiple disadvantage in old age it may be a relatively recent experience, suggesting that there are different pathways into deprivation in old age. Further analyses will aim at describing the plausible pathways and target the issue whether certain pathways are associated with certain kinds of disadvantages.

HEARN, JEFF* (Örebro University, jeff.hearn@oru.se)

Autoethnography, Theorizing and Transnational Movements and Moments

This paper is in three parts: a brief overview of the relevance of autoethnography for transnational sociological theorizing; critical interrogation of my previous work on autoethnography; re-evaluation of their implications for transnational sociological theorizing.

The second part investigates four different interpretations of my own personal, work/employment, political, and theoretical change over time. In this, I build on previous autoethnographic work to examine how theorizing develops and changes with transnational movements and moments. The first is based on different relations to nation and nations: England, Ireland, Finland (Autobiography, nation, postcolonialism and gender’, Irish Journal of Sociology, 2005). The second focuses on changing relations to children, family and household (‘The personal is work is political: theoretical: continuities and discontinuities in (pro)feminism, Women’s Studies, men and myself’, NORA, 2008). The third concerns changing relations to transnationalisations, transdisciplinary and transinstitutional developments (‘Opening up material-discursive (trans-)forms of life … politically, theoretically, institutionally, personally’, in M. Wojtaszek and E. Just (eds.) Quilting Stories: Essays in Honor of Elzbieta H. Oleksy, 2012). And the fourth highlights the relations of men, intersectionality, organizations and prospection in research and fieldwork in the diversity and equalities field, with a focus on gender and intersectional dynamics and research processes (Equality, Diversity and Inclusion, 2014).

In the third part I discuss more general implications of these four perspectives for the analysis of intersectionality and intellectual biographies, in terms of: the politics of location; reflexivity and its limits; critical positionality of members of superordinate groups; the problematisation of the male ‘I’ (‘Contradictory masculine men’s “I”: the unwriting of men, and the concept of gex’, Revista Canaria de Estudios Ingleses, 2013); and the relation of body and writing (Writing as intimate friends … how does writing/profeminist research become methodologically challenging?, in M. Livholts (ed.) Emerging Writing Methodologies in Feminist Studies, Routledge, 2011).
and New Synergies*, organised within GEXcel Collegium for Advanced Transdisciplinary Graduate Studies (Orebro-Karlstad-Linköping Universities), with specific focus on violence seen as inequalities (Hearn, Sociological Review, 2012; Current Sociology, 2013). The larger project examines intersectionality in gender studies, in relation and dialogue with the diverse, sometimes conflictual, theoretical and political positions in feminist debates (Wabey, Armstrong, Strid, 2012; Strid et al. Social Politics, forthcoming). The project is designed against this background of rich, diverse feminist traditions for theorizing of intersectionality, and informed by tensions between these traditions. This paper takes up this challenge in terms of violence, especially violence against women, and state policy thereon, addressing the place of violence in contemporary state regulation and intersectional gender relations. The paper examines the complex, situated and spatial relationship between theorizing on violence against women and state policy on such violence (Hearn and Mckie, Policy & Politics, 2008; Violence Against Women, 2010). This focus continues discussions on multiple linkages between multiple frameworks, policy and theory, in local, national and transnational contexts. More specifically, drawing on extensive comparative European data at local, national and transnational, it explores the concepts of gendered intersectionalities and intersectional gender by examining how multiple inequalities, long been prominent in feminist activism and intervention on violence, are made (in)visible and conceptualized in state gender-based violence policy and debates. Attention is paid especially to tendencies to degendering strategies in violence research and state policy. A key aim of the paper is to investigate how analysis can be a starting point for assessing if, how and why multiple inequalities come to question the quality of policy, for both reducing and stopping violence, and assisting those subject to violence.

HEATH, MELANIE* (McMaster University, mheath@mcmaster.ca)

Gender Equality or Religious Freedom? Testing Competing Rights in the Canadian Polygamry Trial

Constitutional provisions protecting fundamental human rights are central features of liberal democracies. However, tensions exist between the construction of rights as universal principles and their application in a fragmented political world. For example, the right to be free from discrimination based on creed or gender may be at odds with each other or with other rights, laws, and practices. The Canadian Charter of Rights and Freedoms of 1982 guarantees freedom of conscience and religion and the right to equal protection and benefit of the law without discrimination based on race, national or ethnic origin, color, religion, sex, age or mental or physical disability. The practice of polygamy by fundamentalist Mormons and Muslims presents the potential for competing rights where arguments concerning autonomy, cultural integrity, and religious freedom are pitted against the right for gender equality. In 2010, the Canadian Supreme Court of British Columbia of the 2010-2011 case of the same name overturned the Canadian’s prohibition against polygamy is consistent with the freedoms guaranteed by the Canadian Charter of Rights and Freedoms. A central concern is whether polygamy perpetuates inherent harm to women, children, and society. In contrast, arguments were made that some women freely choose to enter into polygamous relationships, and that criminalizing this family form offends their right to religious freedom. In 2011, Justice Bauman ruled that, although the law violates the religious freedom of fundamentalist Mormons, the potential harm caused by polygamy outweighs this concern. Thus, in the name of protecting women from harm, women who practice polygamy are part of their religious commitment and are made criminal under the law. This paper examines the treatment of competing rights and societal values in the BC Supreme Court case that pits an individual’s conscience and religion and the right to equal protection and benefit of the law against the right to act on “sincerely held beliefs” against the equality rights guarantee in Canada’s Charter.

JS-9.2

HEATH, MELANIE* (McMaster University, mheath@mcmaster.ca)

Migrants are commonly considered as a vulnerable group due to the fact that they are not citizens of the countries in which they live. Moreover, when a migrant enters another country illegally, or enters legally and subsequently loses legal immigration status, her or his susceptibility to exploitation increases. The instability of migrant status is further complicated when immigrants participate in undesirable or illegal practices in the host country. France has a particularly complicated history of migration that involves immigrants predominantly from Gambia, Mali, Mauritania, and Senegal. During the period following World War II, immigration to France significantly increased due to the shortage of male workers. Under the family reunification immigration policy that took effect in 1974, France permitted the immigration of polygamous families. In 1993, it passed the Loi Pons, which altered the immigration law so that only one spouse per immigrant would be issued a visa. The law has had negative consequences for polygamous families, as it requires multiple spouses to divorce and “décohabitez” (physically separate their households) or face deportation. Women living in polygamy in France are particularly vulnerable. They may choose to bear numerous children to increase their monthly family allowances and to avoid deportation as guaranteed under the post-1993 legal framework. Yet, many are forced to live in undesirable situations without the ability to move to more stable areas. It could not function: they may be socially marginal, but they are technopolitically central to the production of nuclear power (and all other industries).

In nuclear and other systems, subcontracting has consequences for occupational health, as well as for transnational knowledge production (about the effects of low-level radiation exposure in the nuclear case). Contemplating these consequences, in turn, takes us to another apparently peripheral part of the global nuclear industry: uranium production. After a quick comparative consideration of knowledge production about the dangers of radon exposure in mines, the paper discusses uranium mining in Gabon. It examines labor and occupational hazards there, including the efforts of Gabonese miners to make themselves and their illnesses visible on the global technoscientific stage.

Social Order and the Genesis of Rebellion: Mutiny in the Royal Navy, 1740-1820

The possibility of rebellion is a check – sometimes the only check – on authoritarian rule. Although mutinies in which crews seized control of their vessels are rare events, they occurred throughout the age of sail. To explain the occurrence of this form of high-risk collective action, this paper provides a theory which holds that shipboard grievances – related to material deprivation, poor governance, and the inadequate provision of health and welfare -- are the principal causes of mutiny. Yet such grievances can only lead to rebellion when obstacles to collective action can be overcome. Whereas seamen usually could count on an ample supply of informal organization, their ability to engage in collective action was increased by factors that facilitated coordination and provided a critical mass of ringleaders. Using a unique database drawn from extensive archival information about Royal Navy voyages from 1740 to 1820, this study employs the case-control method and random-forest classification to show why shipboard social order shifts, sometimes tipping crew members toward the high risks of mutiny. The findings have implications for the role of grievances in generating rebellion and the role of social order in maintaining or compromising that order.

International Networks of Banks and Industry Revisted: The Financial Crisis

What impact did the financial and economic crisis that swept the Western world have on the international network of the corporate elite? Has corporate
The Global Corporate Elite Uncovered

The transnational orientation and organization of corporate elites has for long attracted the attention of those who expect that ongoing globalization goes hand in hand with transnational elite cohesion. The laborious nature of compiling reliable network datasets has hitherto forced scholars to focus on those arena’s where we expect transnational corporate elites to emerge, notably the largest (often stock listed) firms in the western industrialized world. This systemic bias disregards the role of non-western elites in the global regime and neglects a possible multi polar architecture of the global corporate elite. Aside from the art tools and techniques, we are able to overcome this burden by analyzing the entire network of interlocking directorates between a set of 100,000 corporations across the globe in 2012. This allows us to uncover the extent to which western and non-western corporate elites occupy similar social circles; which firms, countries, sectors and cities serve as linchpins within the global corporate elite, and as such reveal the sites and spaces where transnational corporate elites organize themselves, both in the west and beyond.

Processes of Success Among Students in Gender Segregated VET - Qualification and Social Inclusion

The aim of this project is to explore educationally successful processes in gender segregated VET based on qualitative life story interviews. Informants will be recruited from a school based longitudinal dataset (LUNO) of young people in Oslo, and I will focus on the importance of gender segregation for changes in aspirations during VET.

High rates of drop out in vocational upper secondary education is a problem in every European country. On the one hand, about one third of students drop out of or fail to complete upper secondary school in Norway – and the drop-out rate is highest among students in VET programs. On the other hand, the Norwegian VET system, which in general provides two years in school and two years in apprenticeship, ‘leaks’ a substantial number of high achieving VET students after the second year to general education supplementary studies which qualify them for higher education. The aim of this work will be to explore the question of ‘success’ according to the individual and national higher education attainment goals, may be seen as ‘failure’ according to policy aims regarding high quality vocational skill formation at the upper secondary level.

Theoretically, gender has been shown to be of importance for the development of identity as a learner, for failure and success in school, particularly for boys but also for girls. The key objective of this project will be to understand processes related to educational processes and changes in aspirations among students in gender-segregated VET study programmes and give a deeper understanding of the characteristics of gendered school contexts which supports or hinders the completion of VET and transition to apprenticeships. The study will be based on educational life story interviews with selected LUNO-respondents, and strategic short-term fieldwork in gender-segregated study programmes.

Dimensions, Practices and Dynamics in Cultural Adaptation Work: An Example from Norway

My paper concerns the movement of an idea and a legal system. The idea is that a product’s quality can be determined by where it comes from. The legal system is known as Geographical Indications and enables protection under law of product designations for foodstuffs with a special geographical origin, tradition or characteristics. In 2002 a system for GIs (Protected designations) was set up in Norway modelled on corresponding systems in the EU. I develop a grounded conceptual framework to understand the implementation, administration and the use of protected designations in Norway. I emphasize that the movement of ideas and legal systems is dependent on actor’s adaptation practices. More specifically I describe this as Cultural Adaptation Work (CAW). My analysis shows that the actors’ work with adaptations of meaning, social organization and materiality, during implementation, administration and use of the Norwegian scheme is important. They occur because opinions, forms of cooperation and production of Norwegian food culture do not always coincide with the food-cultural conditions which the EU scheme was founded.

To identify, describe, and understand how the implementation, administration and the use of Protected designations is worked out I elaborate on the concepts of translation, reorganization and transformation, giving them a special meaning. In this regard translation refers to adaptations of meaning, reorganization refers to adaptations of social relations and transformation refers to material adaptations. These adaptation practices may furthermore be understood as elements of CAW. I conclude that CAW takes place in the interplay between people’s translations of meaning, reorganization of social relationships and transformation of things. The interplay takes place in the tension between the global and the local, the old and the new.

The Social Construction Of Prices – The Impact Of Culture, Networks and Institutional Rules On Stock Quotations

Prices in market economies are based on supply and demand processes. I challenge this common economic sense by comparing stock price movements and their causes in the US and Germany, arguing that stock valuations also depend on the embeddedness of trading in culturally constrained frames of meaning, corporate networks and institutionalized rules. Economic sociology is well aware of such social forces. Still, sociological investigation of price formation lacks both theoretical integration and empirical evidence for how different types of market conditions interact and influence prices.

Theoretical and empirical works have already shown, that the financial crisis represented a ‘test case for the cohesion of the transnational capitalist class (TNC).’ If business networks and reorganization of networks do not respond to the financial crisis and the subsequent changes in each systems’ stability, the transnational business community however may indicate a fragmented elite that cannot uphold its cohesion when the financial sector is in trouble.

In this regard this paper furthermore demonstrates that the transnational orientation and organization of corporate elites has for long attracted the attention of those who expect that ongoing globalization goes hand in hand with transnational elite cohesion. The laborious nature of compiling reliable network datasets has hitherto forced scholars to focus on those arena’s where we expect transnational corporate elites to emerge, notably the largest (often stock listed) firms in the western industrialized world. This systemic bias disregards the role of non-western elites in the global regime and neglects a possible multi polar architecture of the global corporate elite. Aside from the art tools and techniques, we are able to overcome this burden by analyzing the entire network of interlocking directorates between a set of 100,000 corporations across the globe in 2012. This allows us to uncover the extent to which western and non-western corporate elites occupy similar social circles; which firms, countries, sectors and cities serve as linchpins within the global corporate elite, and as such reveal the sites and spaces where transnational corporate elites organize themselves, both in the west and beyond.

Vulnerable Children's Right to Voice: An Exploration of Implementation and Success of Repurchase Plans in Sweden

The aim of this project is to explore educationally successful processes in gender segregated VET based on qualitative life story interviews. Informants will be recruited from a school based longitudinal dataset (LUNO) of young people in Oslo, and I will focus on the importance of gender segregation for changes in aspirations during VET.

High rates of drop out in vocational upper secondary education is a problem in every European country. On the one hand, about one third of students drop out of or fail to complete upper secondary school in Norway – and the drop-out rate is highest among students in VET programs. On the other hand, the Norwegian VET system, which in general provides two years in school and two years in apprenticeship, ‘leaks’ a substantial number of high achieving VET students after the second year to general education supplementary studies which qualify them for higher education. The aim of this work will be to explore the question of ‘success’ according to the individual and national higher education attainment goals, may be seen as ‘failure’ according to policy aims regarding high quality vocational skill formation at the upper secondary level.

Theoretically, gender has been shown to be of importance for the development of identity as a learner, for failure and success in school, particularly for boys but also for girls. The key objective of this project will be to understand processes related to educational processes and changes in aspirations among students in gender-segregated VET study programmes and give a deeper understanding of the characteristics of gendered school contexts which supports or hinders the completion of VET and transition to apprenticeships. The study will be based on educational life story interviews with selected LUNO-respondents, and strategic short-term fieldwork in gender-segregated study programmes.

Rethinking Child Welfare Policy

Studies on children’s welfare have been pursued in a separate strand from the welfare state literature in general. Welfare state theory has been blind to cross-national variations of, and characteristics. In 2002 a system for GIs (Protected designations) was set up in Norway modelled on corresponding systems in the EU. I develop a grounded conceptual framework to understand the implementation, administration and the use of protected designations in Norway. I emphasize that the movement of ideas and legal systems is dependent on actor’s adaptation practices. More specifically I describe this as Cultural Adaptation Work (CAW). My analysis shows that the actors’ work with adaptations of meaning, social organization and materiality, during implementation, administration and use of the Norwegian scheme is important. They occur because opinions, forms of cooperation and production of Norwegian food culture do not always coincide with the food-cultural conditions which the EU scheme was founded.

To identify, describe, and understand how the implementation, administration and the use of Protected designations is worked out I elaborate on the concepts of translation, reorganization and transformation, giving them a special meaning. In this regard translation refers to adaptations of meaning, reorganization refers to adaptations of social relations and transformation refers to material adaptations. These adaptation practices may furthermore be understood as elements of CAW. I conclude that CAW takes place in the interplay between people’s translations of meaning, reorganization of social relationships and transformation of things. The interplay takes place in the tension between the global and the local, the old and the new.
surprisingly weak in Swedish legislation, with negative implication for the welfare of vulnerable children. Signing of the UN Convention has in this respect not left any clear imprint on Swedish legislation. The findings show the need to formulate new policy strategies: We may resolve the tension between children as ‘beings’ and ‘becomings’ by recognizing that it may be necessary to invest in children’s education and child care but that this is not sufficient as long as we do not consider children’s rights to voice.

HEIMTUN, BENTE* (UiT - The Arctic University of Norway, bente.heimtun@uit.no)

Hunting the Northern Lights

This work in process explores gendered landscapes imbuing the increased use of ‘hunt’, ‘hunters’ and ‘hunting’ in the language of northern lights tourism in Northern Norway, aimed at English speaking markets. The development of this tourism product, as winter tourism as such, started in earnest with Finsmark Reiseliv’s (county DMO) winter project in 2002. The evolvement of the last decade’s hunting metaphors has become very important in the marketing of northern lights tourism in the region and is has been adapted by tourists in their blogs (trip advisor). Hunting the northern lights tours, at least in their commercialised forms are highly planned by tour operators and aimed at soft adventure tourists (Beedle and Hudson, 2003). These hunters thus do not need any skills, experiences and knowledge to take part in the hunt. Therefore the link to hunting as a symbol of masculinity (Bye, 2003) and masculine social values such as hierarchy, physical toughness, rationality, emotional distance and risk taking (Haenfer, 2004) is lacking. This paper thus discusses how commoditisation of hunting metaphors in relationship to northern lights tours contributes to demasculinisation of hunting and hard adventure tourism discourses. It also explores partly overlapping discourses between big game hunt and the hunt for the northern lights. Whereas the former exists today mainly as a masculine pursuit which requires preparation and good physical strengths the latter is available to masses of tourists regardless of gender, skills and knowledge (Houston, 2008, References)

Winter People: Constraining and Motivating Factors for Attracting Winter Tourists to Northern Norway

Based on 116 qualitative interviews with domestic and international tourists visiting Oslo, Norway in the summer of 2013, this paper explores constraints and motivators regarding winter holidays in Northern Norway. Preliminary findings suggest that not all tourists are winter people. Perceptions of coldness and darkness, however, are positive and negative. Some tourists are excited about experiencing an arctic winter climate; in particular those interested in winter activities such as skiing and northern lights hunts. These tourists emphasise the pureness and freshness of the winter climate as well as a fascination for winter lights during the day and night. Other tourists dislike being cold on holiday and would only travel to warmer climates. Some of these tourists live in winter destinations and know how to deal with a cold climate. Others do not. In particular disinterest in winter activities, lack of appropriate clothing and old age are constraining factors. This suggests that winter tourism is for special interest tourists.

The Role of Victim Witness Testimonies for Collective Memory Formation, Recovery from Trauma and Future Reconciliation

Title: The role of victim witness testimonies for collective memory formation, recovery from trauma and future reconciliation.

In this paper the author argues that witness testimonies in war crimes and genocide trials play a crucial role even though they may not be related to the indictment of the prosecution or help to establish justice. In her book Eichmann in Jerusalem Hannah Arendt mentioned that the survivor accounts were not helpful in collecting legal evidence against Eichmann. This author thinks however that witness accounts are crucial not for legal purposes but for purposes of collective memory formation and victim trauma recovery by using the example of the witness account of the Auschwitz survivor Alfred Oppenheimer who gave a testimony at the Eichmann trial.

The paper refers to other reconciliation attempts such as the truth commission in South Africa or the Comfort Women issue in Korea and Japan and seeks to identify conditions that make future reconciliation possible.

The example of the comfort women in Japan shows that witness testimonies alone cannot lead to positive change and reconciliation as long as there is no recognition of wrongdoing and guilty behavior in the first place. In other words witness accounts can only be effective and fulfill their purpose if there is an opposition not only between individual or a political body who acknowledges his wrongdoing. In the case of the Eichmann trial and the South African truth commission the perpetrators were physically present whereas in the case of the comfort women nobody has assumed responsibility.

From Traditional Religiosity to Religious Diversity - Youth and Religion in Post-Soviet Latvia

Traditionally Latvia has been described as a Lutheran country with a Catholic Latgale region in the South Eastern part of the country. During the Soviet period between 1940 and 1990 religion was in a marginal, and only after the collapse of the Soviet Union the revival of the religious life became possible. Now, twenty years after the new independence, there are three main denominations (Lutheran, Catholic and Orthodox) and several minority religions making the religious field rather pluralistic. According to youth researchers, young people in the Western and Eastern Europe today are increasingly similar. Important difference among the youth in the West and the East is economic resources which is causing obligatory cohabitation in the family of origin which is influencing more widely attitudes of young people. The qualitative and quantitative data that has been collected among the university students in 1999 and 2010/2011 in the city of Riga will answer to the question what is the role of religion for emerging adults in a post-soviet society. The paper examines youth and different dimensions of religion (e.g. belief, practice, affiliation) and what are the differences among the attitudes of young people with ethnically different backgrounds in the country where approximate 70% of inhabitants belong to the so called “Russian speaking minority”. How do young people, born in the end of 1970s and 1980s, themselves see the world must be delineated. It must be done so convincingly as to ensure that such reframing aligns as many people as possible to the task of language revitalization. This paper discusses this process on the case of the Ryukyuan languages which are spoken in the extreme southwest of the Japanese Archipelago. These severely endangered languages are characterized by witness based apocalyptic revitalization. As an effect, the task of ideological clarification is being pursued. This is urgently needed, because the Ryukyuan languages have huge lexical gaps, lack styles for public effect, the task of ideological clarification is being pursued. This is urgently needed, lack of appropriate clothing and old age are constraining factors. This suggests that winter tourism is for special interest tourists.

Shimakutuba - Adapting the Ryukyuan Languages for the 21st Century

Language endangerment is often the result of repressing language use but of repressing language adaptation. The way endangered languages are characterized is not neutral but include ideologies constructing these languages as static, marginal and obsolete. Due to such repression, endangered languages indeed lack really. Language ideological clarification about the role and function of the endangered language in the present-day world must be delineated. It must be done so convincingly as to ensure that such reframing aligns as many people as possible to the task of language revitalization. This paper discusses this process on the case of the Ryukyuan languages which are spoken in the extreme southwest of the Japanese Archipelago. These severely endangered languages are characterized by witness based apocalyptic revitalization. As an effect, the task of ideological clarification is being pursued. This is urgently needed, because the Ryukyuan languages have huge lexical gaps, lack styles for public debate or for writing specific genres. They also maintain social varieties characterising its past use in a feudal society. Its large number of regional dialects, 700 in total, also reflect boundaries of community which no longer exist today. Dialect levelling is rampant. Mixing of formal and informal styles, and of high and common social varieties is also frequent in the language use of those seeking to revitalize Ryukyuan languages. In the view of criticism on their language use, they seek to adopt ideologies and use of Ryukyuan to present-day uses. This presentation draws on observations in the field and on interviews with language activists, researchers and prefeclural authorities.

HEINZ, MANUELA* (National University of Ireland Galway, manuela.heinz@nuigalway.ie)
Initial Teacher Education – Who Gets in and What Are the Implications for Students, Schools and Society?

Teachers Matter (OECD, 2005). Through their influence on the young (academic, personal, emotional, social) they contribute to diminishing educational disadvantage as well as broader inequities of society (Gay, 1993; Sleeter, 1996; Villegas & Lucas, 2001; Zeichner, 1993). Attracting and selecting individuals to the teaching profession who have the potential to ‘teach for social justice’, equipping them with the necessary skills during their training, and retaining them in school are important tasks for policymakers and teacher educators. This paper offers a critical analysis and discussion of currently administered selection criteria and procedures for initial teacher education (ITE) programmes in Ireland and internationally. It presents first findings from the Diversity Profiling Initial Teacher Education (DITE) study which explores (i) the impact of selection criteria and procedures on the composition of student teacher cohorts as regards their socio-demographic, motivational and educational profiles and (ii) ITE applicants’ perceptions of teaching, learning and second-level education in Ireland. Researching teacher candidates’ diversity profiles is important and timely since contemporary school contexts have ignited concerns about the mismatch between the ethnic, cultural and language backgrounds of pupil and teacher populations. Furthermore, a small number of studies (King, 1993, Su, 1997) found that minority ITE candidates have clear and strong visions for social justice and for their own roles as change agents in the school and society (which differ from the motivations and conceptualisations held by mainstream students). Issues related to equity in and equity through teacher education adoption (Child et al., 2011), access and widening participation policies will be explored with the aim of generating important debates about what types of teachers are needed in today’s schools and how policy makers and teacher educators can assure that the most committed and suitable individuals are attracted to and can enter ITE programmes.

HEINZE, EIKE* (Université de Strasbourg, ei.he@uni-bremen.de) Distinction Practices and Socialization Of “Native” and “Foreign” Elites In Mexico

The paper summarizes the results of an empirical research project on “native” and “foreign” elites in Mexico in a comparative perspective. The focus is set on the elites’ different attitudes, socialization and distinction practices (in particular “completeness” versus “synecdochism”). Furthermore, the relations and interactions between “native” Mexican elites and “foreign” expatriate elites in Mexico are taken into account. Similar to other ‘emerging market’ countries, Mexico has gone through profound changes in the last 30 years. Some Mexican enterprises have become large multinational enterprises operating on several continents and some Mexican business men are now among the wealthiest in the world with Carlos Slim Helu being the richest business man in the world. Simultaneously, during the economic liberalization process which culminated in the North American Free Trade Agreement in 1994, many foreign multinational enterprises have set up major operations in Mexico, resulting in ca. half of the 500 largest enterprises active in Mexico being foreign – bringing to Mexico their own foreign top managers (expatriates), cultures and distinction practices. The question how the different attitudes and distinction practices of foreign and native elites in Mexico co-exist, interact and whether they mix, will be addressed. It will be argued that it depends to a significant degree on the home culture, socialization and nationalities of the foreign expatriate elites whether they blend into the Mexican elite milieu. Concerning the distinction practices, it will be argued that the Mexican upper class leans heavily towards synecdochism.

HEISE, MARCUS* (Martin-Luther University, marcus.heise@soziologie.uni-halle.de) RADEMACHER, CHRISTIAN* (Martin-Luther University, christian.rademacher@soziologie.uni-halle.de) The Effect of Non-Monetary Incentives on Unit and Item Non-Response in Surveys on Intimate Topics

The Effect of Non-Monetary Incentives on Unit and Item Non-Response in Surveys on Intimate Topics

The use of noncontingent incentives constitutes a well-established technique in order to reduce both item- and unit-nonresponse in self-administered surveys. While the use of monetary incentives included in the initial mailing should be the method of choice, the use of nonmonetary incentives might be more appropriate in at least two situations: Depending on the study area, various regulations on data protection or budget restrictions might prohibit researchers from sending multiple follow-up reminders as suggested in Dillmanns’ Total Design Method (TDM). Current research indicates that low-value nonmonetary incentives can serve as a substitute for the absence of follow-up mailings to a certain degree. Secondly, the use of monetary incentives might be disadvantageous in interaction with certain survey-topics (e.g. topics that correspond to reciprocity, morality or other social desirable norms as well as intimate questions) and might even turn out to provoke reactance on the respondent’s side. The contribution renders the adequacy of nonmonetary incentives under these two conditions and presents the results of an experimental designed study. We used a target sample of 400 respondents, who received a survey on “Morality and Conscience in modern life”, the initial mailing of a ball pen showed significant effects on the following criteria:
- Response rate (unit and item non-response) and response speed
- Sample composition
- Data Quality (Elaborateness of answers to open-ended questions and Reduction of Acquiescence Response Patterns)

The findings suggest that the use of low-value nonmonetary incentives is a cost efficient strategy to improve data quality, especially in the context of intimate or personal topics. Because of their more subtle character, small gifts may even be more appropriate than cash or money-related incentives in certain contexts.

HELMAN, SARA* (Ben Gurion University of the Negev, sarith@bgu.ac.il) MARON, ASA* (Department of Sociology and Anthropology, asamaron@gmail.com) Intra-State Conflicts in Activation Reforms: Authority Delegation and Bureaucratic Centralization In The "Privatized" Implementation Of Welfare-To-Work In Israel

Based on the Israeli case, this article highlights the role of intra-state conflicts between bureaucratic actors in the politics that surround the reform of the government of public employment services and the ways in which these conflicts have shaped not only the reform process, but also the institutional makeup of the reform itself. We analyze the politics that surrounded proposals to change the government of long-term unemployment in Israel (1997-2004) and shaped the institutional makeup of the reform (2004-2010). We highlight how intractable conflicts between state agencies—the Ministry of Finance (MoF) and the Israeli Employment Service (IES)—brought about the delegation of administrative authority to private agents in no way represented a rolling back of the power of state agents, or a transition to a “regulatory” or “steering” state. On the contrary, we argue that this delegation of authority actually enabled state agents to strengthen their intervention in the routine management of the program, bringing about a process of bureaucratic re-centralization. We conclude that the initiation of “partnerships” with private agents does not necessarily signal a transition to a steering state or towards a collaborative mode of governance, but may also function as a strategy through which certain state agents seek to impose their projects, thereby marginalizing alternative or competing conceptions of the role of the state in society.

HELORICH, ROBERT* (Inst Vocational Education & Training, helmrich@ibbb.de) TIEMANN, MICHAEL (Inst Vocational Education and Training) The Renewable Energy Expansion and Its Effects on Vocational Education and Training and the Labour Market in Germany

In Germany, the sector of renewable energies (RE) is currently experiencing enormous growth. Besides first estimations about the type of the expansion, energy mix, resulting demand for workers and new requirements for firms, the effect of the RE sector’s growth on the job structure and on skill requirements has not been sufficiently examined. Our proposal exemplifies results from an ongoing research project. Theoretically and empirically the study is based on a combination of three frameworks. We use to examine requirements on the level of the working place: Firms will have to structure their working places according to new requirements. Being able to describe occupational content and its links to new qualification demands will put us in a position to examine a) what the new requirements for firms and employees are and b) what the effect of the occupational structure is. The first reference framework draws on work by Prediger and others (c.f. Prediger/Swaney 2004) who developed dimensions – namely „people vs. things” and „data vs. ideas“ - which are used to describe certain aspects of occupational contents and for graphing occupations. The second is the requirements on knowledge work by Volkothen and Kochling (2001), where the working population is partitioned according to the type of knowledge work of their employment,
ranging from qualified workers to task flexible and innovative workers. The third reference framework is the task-approach by Autor and others (2003) about the share of routinisation of occupations, which is an enhancement of the "Skill-Biased Technological Change" approach.

Questions we address empirically (analyzing primary data of surveys of employees and firms) include:
- What is the extent of RE on the labour market?
- What characterizes jobs in RE?
- Are there unequal chances for working in RE as opposed to other occupations?

Uncertain Transitions: Changing Attitudes, Values and Lifestyles of Young Finns

This paper is based on empirical comparative and longitudinal studies of young people in times of economic crises and uncertainty in the Finnish context (Helve 2013; 2002 and 1993). It will present results of the research project “The changing lifestyles and values of temporary employed young people in the different labour markets of Finland” analyzing data from 2009 to 2011 including in-depth narrative interviews (N=20) and ethnographic observations among young people working temporarily, and the survey data gathered on-line from Finnish students in higher education (N=689). The attitude scales measured attitudes towards education, working life and society, and the future orientation and meaning of life. The paper places its focus on the research question: How uncertain employment affects attitudes, values and lifestyles of young adults? The study shows that young people working with short-term employment contracts, or who are temporarily unemployed are not doing much long-term future planning. The short-term and temporary employment is changing work attitudes and values of young people. Drawing on theories and the biocultural model of human development through life-course (Bronfenbrenner, 1995) the paper discusses about the impact of uncertain transitions on coping with shifts between dependency and independency as a result of prolonged transitions (c.f. Du Bois & Stauber 2005, "yoyo transition").

Leaders’ Enhancement of Leader–Member Exchange (LMX) Relationships: An Examination of Leaders’ Cognitive Support and Knowledge Resources in Research Group

The quality of leader-follower relationships has repeatedly been associated with positive individual and organizational outcomes. But how can leaders improve on the quality of the relationships they have with their followers? We examined the effects of the Cognitive Support and Knowledge Resources that leaders provide their followers in a sample of 166 academic and commercial researchers in Sweden. Our goal was to investigate whether these two task-related variables were antecedents of followers' perceptions of leader-member exchange (LMX) in research settings. Specifically, we investigate the effect of leader-provided Cognitive Support and Knowledge Resources in relation to the four sub-dimensions of LMX (LMX-MDM): Affect, Loyalty, Contribution, and Professional Respect. As we hypothesized, we found that both Cognitive Support and Knowledge Resources, with one exception, related to the four sub-dimensions. The exception was the failed association between Cognitive Support and Loyalty. We conclude that in creative knowledge environments, Cognitive Support and Knowledge Resources are possible means for leaders to influence the quality of their leader-member relationships.

WERNLI, BORIS* (FORS, boris.wernli@fors.unil.ch)

Leaving the Parental Home and the Material Conditions of Entering Adult Life

Youth sociologists usually note different stages of transition to adulthood, which are often understood as access to autonomy and financial independence (Galland, 2009; Harnett, 2000). However, synchronization and irreversibility of these stages in the course of contemporary life have been questioned and some scholars insisted on distinguishing autonomy from financial independence (Hamel 1999; Singly, 2000). We focus on a particular stage of the passage to adulthood – leaving parental home, which is often described as a way to gain autonomy – and we examine the impact of this emancipation process on living conditions of youths.

We use the waves 1 to 13 from the Swiss Household Panel, a representative longitudinal annual survey of the general Swiss population, to study the economic impact of leaving the parental home for several hundred young people aged 18 to 29. Several objective and subjective indicators of financial situation, as well as debt and material conditions, are used as dependent variables. Analyzes are performed controlling for a series of socio-demographic (age, sex, nationality, region) and economic characteristics (job income, occupation, education level), as well as life-events (end of training, first job, entering into a couple) of both the interviewee and his/her parents.

Much more than a portrait at a given point in time, the use of the SHP longitudinal data with appropriate analytical methods can significantly enrich the analytical perspective on young people leaving their parental home, especially by taking into consideration other cohort differences, life-events, and information about their family background. Our preliminary analysis suggests that for a number of young people access to autonomy through leaving their parents’ household is correla
d with a decrease in material well-being. In other words, for some young people in Switzerland, access to autonomy is paid for by precarious living conditions and a loss of economic independence.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Indeed, the disturbing fact is that the gap between macro-economic and survey based estimates of informal activities seems to be bigger in former communist regimes in Central Europe or repressive right wing governments. This paper tests the prediction that the social desirability bias in self-reported survey measures of informal economic activities depends on this institutional history. Based on the second round of the ESS, this thesis is tested with the help of comparison with other forms of (economic) deviance, the impact of generations to the social desirability bias and direct measures of negative attitudes toward informal activities.

Creativity As Anti-Alienation: Towards a Sociology of Artistic Labor

Based on qualitative research in the fields of the visual arts and design we aim to show that the actors in those realms experience the non-alienating qualities of their work even under current conditions of an intensified economisation of the “aesthetic” sphere. The idea and the activity of “creative labour” thus may still serve as an ideal for a Critical Theory of alienation. We propose that this view is legitimised by the self-reflexive stance of this type of activity on the one hand and the self-proclaimed distance to economic logics in the mode of production on the other. For example, some artists we interviewed who were quite aware of the commercial dimension of their own activities proclaimed anti-economic zones and un-commercial times in their creative process. The autonomy attributed to the idea of creativity and the practice of creative work thus seems to allow for a relative and at least temporal distance to economic calculations and its potentially alienating effects.

This is a surprising result because it runs against two major trends in contemporary European sociology. First, against the impetus to interpret the discourse on creativity mainly in its complicity with neoliberalism (for example following the sociology of critique of Boltanski/Chiappello or proponents of Governmentality Studies such as Thomas Osborne or Ulrich Broeckling), and secondly, against the perceived need to focus on issues of marketization resp. financialization and economic speculations in the analysis of all areas of social life (according to Michael Sandel and others). While both trends can hardly be ignored, the ‘liberating’ effect and the ‘personal’ dimension of creative work for the actors themselves however seems to be relatively stable. This is an argument in favour of the classical “artistic” critique of capitalism that is sometimes under a meta-critical attack in recent sociological research.

Reification, Money, and Wage Labour: A Defense of the Classical Theory

Reification Money, and Wage Labour: A Defense of the Classical Theory

Reification is not a new topic, neither in Sociology nor in Social Philosophy: Authors such as Georg Bächler/Luckmann, Hannah Arendt and Helmut Heines of the Frankfurt School, and in his new version of the theory. This lead, or so I will argue, to a re-idealisation of the concept which had more in common with Hegel than it had with the classical Critical theory that used this term in a Marxist understanding.

Against this moralization and de-economisation of the term, this paper argues for a re-economised theory of reification. The starting point for an alternative reconstruction, however, is not History and Class Consciousness, but the political economy of Karl Marx himself, who already used the term in an interesting way (e.g. in XI. of Capital). The paper will first develop and defend a sociological interpretation of Marx’s Parize manuscripts (1844) and Capital (1867), where Marx identifies the machineries of a monetarized economy and a production based on wage labour as the main drivers of a capitalistic ‘reification’ of social relations. In a second step I will apply this reformulated classical theory of reification to today’s globalized and flexiblexized economy. I would like to suggest that conceptually the ‘classic’ tradition of Critical theory still has a lot to offer for an analysis of contempororary capitalism.

HENRICKS, KASEY* (Loyola University Chicago, khenricks@abfn.org)

No Taxation without Discrimination: The Racial Interconnectedness of the Third-Fifths Clause, Taxation, and Alienation

“No taxation without representation!” These iconic words of tax rebels like the “Sons of Liberty” marked the birth of a new nation. Yet when they became formally codified under law, neither can be fully understood without reference to race. In terms of congressional representation, Northern representatives wanted to regard slaves as much less than three-fifths a person to ensure their own political control, but when it came to taxation, these same delegates argued that slaves should be counted as more than 60 percent for a tax system based on population size. Of course Southern delegates objected to higher tax burdens and lower representation, and they assumed positions in direct opposition to their Northern brethren. On both sides of the debate, racial oppression was rationalized by elite white men to promote their own interests through discourses of alienation and estrangement—discourses ranging on a continuum from entitlement and disenfranchisement on one end to victimhood and disenfranchisement on the other. The debates spanned nearly 10 years, until finally, a compromise was achieved. Yet this compromise is not merely an artifact of the American past. It culminated into the prohibition of direct taxes by federal government, a legal clause that still stands as a major Constitutional roadblock to federal taxation on most forms of wealth in the United States. For these reasons, among others, I argue for a re-articulation of those revolutionary words as not “no taxation without representaion” but “no taxation without discrimination.”

Youth Protests in Baghdad: Acting in intertwined realities

Youth protests in Baghdad: Acting in intertwined realities

Analysis of youth protests can contribute to a better understanding of topics such as Arab Spring have mostly overlooked recent developments in Iraq. Yet - inspired through other countries in the region - Youth in Baghdad do engage and position themselves in urban spaces as well as in digital social networks and challenge sectarianism, political developments and frictions within Iraqi society. The paper argues that these symbolic and physical spaces are not to be regarded as dichotomous but rather as two aspects of relational space. The evolving digital platforms (e.g. Facebook, Twitter, Blogs) have created new spaces and ways of acting and networking that would have hardly been possible otherwise due to the on-going violence and worsening security situation. Drawing on interviews and chats with involved actors the paper explores which new possibilities arise from technological opportunities of networking and organizing and how the self-representation and performances of actors are digital and urban spaces are linked from a theoretical view as well as from the actors’ own perspective. Furthermore it aims to discuss how these processes of positioning shape public spaces and can be seen as new instruments of power.

From Promise to Reality: Equal Opportunities and Real Capabilities of Women in the Era of Globalization, an Approach Based on the Study of Female Seasonal Agricultural Workers in Chile

From Promise to Reality: Equal Opportunities and Real Capabilities of Women in the Era of Globalization. An Approach Based on the Study of Female Seasonal Agricultural Workers in Chile

After years of numerous worldwide strategies and policies, implemented by different public, private, national, and transnational actors, who want to install a gender and equal opportunities approach for women, what is the final assessment of these practices? What true empowerment and what real capabilities have been achieved by these different actions? Are there any significant transformations that we can identify in these attempts?

Some interesting answers to these questions can be found in the case of female seasonal agricultural workers. After going through a process of proletarianization and insertion into, by definition, precarious and unstable work, numerous changes have affected their social, economic, cultural and domestic environment. These include access to a consumer society, participation in new networking and the sharing of responsibilities in the family area. But in a context of great inequality and precariousness, how can we talk about empowerment and capability?

In this ethnographic study carried out in Limarí Province in Chile, provides some answers to those questions. It analyzes how the situation has changed for women, tracks progress in gender equality, and explains to what extent the current situation both comes close to and moves away from the desired development project.

Dissatisfied But Not Enough – Israeli Protest Of Summer 2011

In the Summer of 2011, between the first major eruption of protests in Tahrir Square and the emergence of the American Occupy Wall Street movement, Israel experienced a massive protest wave. However, unlike Egypt and the US, at that time Israel did not experience a socio-political or economic difficulties. In fact, by most objective parameters, this was a relatively calm period. Yet the protest gained unprecedented attention and participation.

Based on social movements political process theories and public opinion data collected in the framework of the monthly Peace Index and the annual Israeli Democracy Index run by the author, the paper will examine the reasons for the unexpected momentum of this protest campaign; and analyze the public assessment of the 2011 protest ex post facto.

The main argument here is that the 2011 protest popularity on the one hand and its negligible results on the other are two sides of the same coin. Dissatisfied with the government performance and motivated by their perceived political inefficacy and simultaneously fascinated by the political and social transformative ideas, rhetoric and activities of the Arab and Western protest campaigns of the time, the Israeli masses filled the streets of Tel Aviv from July to September 2011. However, the data suggests that the protestors were not “hungry” for substantial social, economic and political changes. In fact, they had national (Jewish) and (middle) class vested interests in the maintenance of the socio-political status-quo, as was manifested later in the 2013 parliamentary elections. Because of this duality, significant social dissatisfaction together with a strong motivation to maintain the socio-political superstructure, despite certain similarities, unlike the Tahrir and Occupy struggles, the Israeli 2011 protest did not and could not have produced a clear transformative agenda or action plan.

HERMANOWICZ, JOSEPH* (The University of Georgia, jch1@uga.edu)

Colleagues and Quests For Immortality

Achievement in the professions is situated relationally. Work comes to constitute contribution only by the judgments of colleagues. This is paradigmatically the case in science and scholarship, a realm understood to be imbued by charismatic authority, where colleagues not only sanction behavior but also serve as a conduit by which others are immortalized for their contributions.

The present work, however, examines empirically how incumbents value colleagues in actuality. Taking academia as a site for analysis, the present work investigates one aspect of the social significance of colleagues by asking how scientists might desire being remembered by them. The study is thus centered on two social-psychological questions: the importance, if any, that incumbents assign to colleagues and the specific attribution to colleagues of how incumbents would like to be remembered by them. The paper is fully written and complete. The presentation will discuss its major points.

Internationalization of Knowledge Work in Argentina: The Case of ‘Global Professors’

Globalization has changed the world in many aspects relevant for professionals and ‘knowledge workers’, such as professors and teachers. One of these aspects is linked with higher education and its internationalization process. The configuration of the educational sector and the increasing necessity of ‘symbolic analysts’ and other ‘knowledge workers’, who can manipulate and manage the proper codes required for production today, are part of a development that calls for permanent and higher education to foster production and social reproduction. These global processes significantly increase the need for ‘knowledge workers’ and for cross-border higher education, and subsequently, this may cause conflicting interests between local education institutions and transnational providers. In addition, lifelong training is increasingly required, such as postgraduate and professional courses in a wide range of areas. Taken together, these are major reasons for a new emergent type of a ‘global professors’ in 21st century. A growing number of professors are working in different countries but without moving: moreover, as virtual tutors or professors they are teleworkers in the information society. This paper will discuss this new reality in Latin America, specifically focusing Argentina.
Globalizing the Classroom: Innovative Approach to National and International Learning

This essay examines an innovative approach to teaching globalization and assesses a course on Globalization, Social Justice and Human Rights co-taught collaboratively by faculty from different campuses and countries since 2009. This course was created to address unmet needs in the traditional higher educational systems; the lack of cross-cultural and interdisciplinary collaboration among students, faculty, and institutions to examine recent forms of globalization. Whereas economies, politics, environments, and human societies are experiencing great connections across the globe, the educational system continues to be modeled on Nineteenth century assumptions and structures. Faculty teach at their respective universities but use an on-line platform to allow for cross-campus communication. In addition to the classroom rooted in a physical place, a major component of student learning occurs on-line, including undertaking collaborative group work across borders. A shared core syllabus can be modified by institution to satisfy local needs. We examine the following: the logistics of this course; the obstacles and possibilities in its implementation, including the use of technology; the role of language and communication, and; mechanisms for adapting faculty participants’ needs to local curricular guidelines. We also address the benefits of the course for students, such as exposure to a greater diversity of worldviews and pedagogical approaches; the development of teamwork skills, including developing a flexible mind frame; accepting and accommodating diverse educational needs/approaches; and; promoting interdisciplinary communication and collaboration. We also assess the challenges for faculty in designing and managing a course on different time zones and academic calendars, facilitating transnational group service learning projects, and the great time demands required to coordinate and monitor students’ online interactions. Our objective is to contribute to improving and innovating approaches to teaching globalization.

Aesthetic Proximity and Performance Among “Hatsune Miku” Cosplayers in Japan

“Cosplay” is an activity popular among Japanese youth where somebody dresses-up, in the most of the cases, as a fictional character. I focus on those cosplayers based in the character named “Hatsune Miku”, a voice synthesizer presented as a female fictional character developed by Crypton Future Media, under the concept of a “virtual idol”. This synthesizer uses the “vocaloid” technology developed by Yamaha Corporation and is used to “sing” the songs produced by her users. However, unlike many other popular characters, Hatsune Miku is characterized by her offer of a narrative. Nevertheless, instead of losing “reality” because of this “lack”, it is precisely thanks to this characteristic that she has the versatility of appear in many media (mainly User Generated Media) and be used freely in many different ways, becoming a perfect icon of the “Participatory Culture”, as imagined by H. Jenkins (2006). The particular kind of reality that supports her success as a “virtual idol” is described following “character-actor” theory proposed by G. Ito (2005). In my study I analyze the role of this kind of reality among Miku fans in Japan, departing from Ito’s theory of “Kyaro”. However, while Ito’s theory is centered on iconic futures of Japanese comic books (manga), I will adapt his theory into a wider use of the “Kyaro”, and particularly its performative use in the cosplay. For this aim, I will move from the textual iconicity focused by Ito, towards the idea of “aesthetic proximity” as proposed by Sandvos (2005a, 2005b) in the study of fan affectivity, and therefore, focusing not on the “visual” but on the “aesthetic” dimension of popular culture. As a result, my aim is to present an example of how “reality” is a characteristic of social practice in the particular case of contemporary Japanese cosplay culture.
in the eastern and western corridors of the U.S.-Mexico border? Who are the migration entrepreneurs that facilitate and develop the infrastructures of migrant mobility? How do segments of the migration industry of migrant mobility go from being a bastard institution to become a legitimate institution? What differences and similarities exist between the industry and infrastructures of migrant mobility of the Monterrey-Texas and Tijuana-California migratory corridors and what accounts for them? We answer these research questions using data from a multi-year ethnographic and qualitative study of transportation networks on both sides of the U.S.-Mexico border.

Thinking through Worker Responses to Globalisation – What's Geography Got to Do with It?

Everywhere we go, it seems, we hear about globalisation. And, if we are associated with a labour movement in any way, we often hear a corollary to this globalisation talk – ‘workers must organise globally; ‘unions must internationalise’, and many similar such statements. Certainly, I don’t want to suggest here that these are not important elements in a vibrant labour politics that seeks to confront the untrammeled power of global capital. There are growing numbers of labour unions who are merging across international borders as a way to gain leverage in the global economy. But what do I want to suggest is that responses to the activities of global capital are more complicated than a simple ‘we need to globalise’ response. And part of what complicates this is questions of geography. In this paper, I will revisit some of the geographical approaches that a group of self-styled ‘Labour geographers’ have developed to think through issues of worker power to show how the way in which the geography of capitalism is made is both reflective of capital-labour conflicts but also constitutive thereof. In particular, I will focus upon two claims which, when viewed through a geographical lens, are problematic than at first perceived; these being: 1) the claim that workers must organise at the same geographical scale as capital if they are to have any purchase upon the world economy (i.e., globally); and 2) that transnational organising by workers is necessarily progressive. Such geographical perspectives provide a means to think about world order and political praxis in a more nuanced manner. Researching how different places are geographically connected, then, is a central starting point to developing effective and progressive strategy in an increasingly networked global economy.

Is There a Field of Art in Russia?

A popular opinion among the international and Russian art communities is that Russian art collectors—often thought of as nouveaux riches—have no taste. Contemporary Russian art is also poorly received by both, and frequently dismissed as derivative of western art. And Russian art world insiders often complain that because of a lack of education, the general Russian public does not understand or appreciate contemporary art. Yet Russia has long had a rich cultural history with emphasis on appreciating the arts and is home to world-famous museums. Further, since the transition from socialism to capitalism would suggest there is ample inspiration for creating original art instead of aping the West. Further, Russia’s tumultuous transition from socialism to capitalism would suggest there is ample inspiration for creating original art instead of aping the West.

By introducing a typology of actors that traces their careers (Becker, 1956) previous their entry to the Secretariat, this case study underlines the criteria employed for the appointments at the levels of Secretary, under-secretary and director. From this typology, an initial assumption can be made: the logics of bureaucratic appointments in the Secretariat depend not only on the appointees’ affiliation to Correa’s party, Alianza Pais, but also on the implementation in the social movement organizations mobilized for the migrants’ cause.

Relying on this tableau of actors, a detailed analysis will be presented shedding light on how the appointees dispose of a specific set of capitals (Bourdieu, 1972, 2004), practices and representations of the migration issue that allow them to shape the design of the nascent institution and the implementation of the Ecuadorian migration policy. It is finally through the lens of bureaucratic appointments that we will have a powerful entry point to further understand the interactions between the political and social movements spheres and their effects on the restructuring of the bureaucratic field during the Correa administration.

This paper is empirically based on a six-month field research at the Secretariat carried out from June to November 2011 and a series of 30 interviews with high officials of this institution.

HERRERA, WILLIAM* (University of Paris 1 Panthéon-Sorbonne, herrera.william@gmail.com)

The Logics of Bureaucratic Appointments and the Construction of the New Ecuadorian Migration Policy

This paper explores the logics of bureaucratic appointments during the first five years of the Ecuadorian president Rafael Correa’s administration (2007-2011) through the case study of recruitments in different levels of bureaucracy in one of the government’s new emblematic institutions – the National Secretariat for Migrants. With this case study, we aim to better understand the relations between bureaucratic appointments within the Secretariat and the process of designing and implementing the new Ecuadorian migration policy.
Cosmopolitanism in a Changing Political Landscape: Making Sense of Cultural Difference and Belonging in an Australian School

With the recent change in federal government, Australia is currently experiencing a conservative nationalist turn. Xenophobic, anti-immigration debates abound about how cultural diversity and difference will lead to the demise of ‘Australian’ national identity, values, social cohesion and security. Whilst this political discourse has marginalised post-national sentiments in dominant media, does this align with how culturally diverse communities orient toward cultural difference and belonging in the everyday? The City of Greater Dandenong in the outer suburbs of Melbourne is one of the fastest growing, most culturally diverse regions in Australia. Dandenong government schools, micropolitics of the wider community, are key sites where issues of race, cultural diversity and belonging are being negotiated. Newcomer cosmopolitanism offers an alternative discourse and a competing resource for the imagination through targeted educational and cultural interventions in school communities. Whilst cosmopolitanism has currency as a valuable ethico-political ideal for contemporary transnational and global ways of life, it has faced criticism as unrealistic, elitist, consumerist and western-centric. Based on fieldwork in a Dandenong high school, this paper considers how students and teachers interpret and interact with nationalist, cosmopolitan and other post-nationalist discourses in making sense of how they live, belong and get along in a complex, culturally diverse school community and their wider worlds.

In light of debates over whether grassroots, vernacular forms of cosmopolitanism manifest in commonplace encounters with difference and diversity, this paper provides insight into whether students and teachers in this school create an everyday cosmopolitanism on their own terms – independent of the ever-shifting ‘flavour of the month’ political and institutional discourses.

Politicization of the Youth in Germany – Two Case-Studies about Protest Movements

In this paper I want to explore the criminalization and politicization of young left-radicals (anti-germans) through the use of biographical methods. I found a connection in both cases that became graffiti-artists and gang-members in the 1990s in Frankfurt am Main, because of their experience of racism and disregard in the German host society. After the German reunification a new form of politicization took place as well as on the political left side of society as on the side of migrants. The attacks on the home for people seeking asylum in Rostock, Mölln and Hoyerswerda led to other aspects of politicization that will be discussed. Both groups felt affected by this situation. In the session I would like to present two cases. The first one is about the approach of an anti-german activist. The second one deals with a former gang-member from the 90s. Both cases are based on narrative interviews and participant observation for example the ways of acting in demonstrations.

Shaping National Borders and Imagining National Belonging through the Professional Practices of Asylum

This paper is part of an ongoing ethnographic study of the Dutch asylum process. I explore how competing professional practices of the asylum procedure shape a specific kind of (national) border-performance and works to produce images of national belonging. Non-Western migrants pose a dilemma for ‘nation states’ leading to a manifold of control measures and monitoring strategies. In part this dilemma is dealt with in and through an asylum procedure that incorporates both the compassionate promise to protect ‘authentic refugees’ and repress a complexity of differently classified non-Western migrants. In this spatio-temporal asylum process the asylum applicant resides in a liminal manifold of interaction, in which professional negotiations and visualizations of ‘deservingness’ unfold between legal represen- tatives of asylum applicants and well-trained IND officers representing the state. Such asylum practices can be understood as particular ways of performing the border (cf. Green, 2010). While, often, national borders are taken for granted as stable, fixed and as an ever-present reality, a national border is dynamically made and unmade, present or non-present. The presence and making of the border is a process that which is integral to its very structure and not an add-on to it. The well-developed border regime, such borders radically disappear when flows of capital are of concern (cf. Appadurai & Holston).

Through the ‘problem’ of asylum and non-Western migration the national border is made into a (liminal) space of separation; in various detention or ‘application’ buildings ‘asylum seekers’ are classified (separated) as either ‘good’ or ‘bogus’ and, accordingly, labeled as (un)deserving to enter the ‘sovereign’ domain of the ‘national community’. As such, the border-performances of the asylum procedure shape specific and diverging relationships between the ‘national self’ and the ‘other’. These professionalized border practices, consequently, produce and visualize images of national belonging.

Immigration and Naturalisation Service (Immigratie en Naturalisatie Dienst)

Civil Marriage in Africa: Rights of Women, or Rights over Women?

Although matrimonial procedures in sub-Saharan Africa are highly complex, civil marriage is often a minority practice in this region. It is being increasingly promoted, however, notably in policies to advance women’s rights, since legal marriage enables each partner to assert his or her rights, if necessary through the courts. But why are women opposed to this practice in different populations? Is it always a brake to marital rupture, quantitative results confirm that divorce is rare in case of legal marriage, while it is a commonplace act of rupture among women’s first marriage) otherwise. The paper will show that legal marriage can increase gender inequalities by making it more difficult for women to dissolve a union, while failing to provide them with rights that are suited to local realities.

The “Art” of Occupying the City : Contestations and Resistance through Creative Activism in an French Suburb

The “Art” of occupying the city: contestations and resistance through creative activism in an French suburb. Recent urban renewal policies in France have led to a reactivation of “urban activism” rooted in the “urban struggle” of the early 1970s (Castells, 1973) and the rise of “new social movements” (Touraine, 1978), while knowing deep changes in the light of new concerns (Ion, 1997). Through the analysis of a local organization of inhabitants promoting the use of the public space in a suburban town affected by urban regeneration, we can question these renewed registers and the modalities of action chosen by inhabitants who challenge and intend to participate actively in the transformations of their material surrounding, in a context of changing decision-making process in French urban planning. We will see how, through use of art in urban activism, between performance and informality, it is the City “given back” to its inhabitants which is staged and defined as a counter model to the contemporary “planned and imposed” town. Through the collective production of a new urban aesthetic, a new relationship with the city is suggested, based on renewed values and sensitive approaches, as well as an “alternative” urban design and landscape. We will also show how the creative act, as a collective process, appears more important than the art piece itself, as it allows social relationships defined like a new kind of urban “togetherness”. However, far from being inclusive, this “artivism” (Lemoine et Ouardi, 2010) can also work like an “en- trance” and, thus, in a more exclusive way, involve a spatial and social “distinction” process (in the bourdieusian sense). This communication will, thus, insist on the ambivalence characterizing collective action and belonging through use of art in urban mobilizations.
Le paternalisme comme système total régnant la relation entre employeur et salarié a un impact subtil à l'aube de l'industrialisation et du travail salarié en Europe. À travers ses différentes caractéristiques et ses différents usages, (encadrement de la population marginale, outil de fidélisation et de discipline, univers clos, outil de contrôle politique et social permettant de faire écran à l'État et aux luttes sociales), ce système demeure au travers des relations plus complexes et d'acteurs nouveaux.

Nous observons ce système de domination au Pérou, où certaines entreprises minières ont un contrôle non seulement sur leurs salariés, mais sur l'ensemble de la population avoisinant le projet minier. Nous voulions étudier la relation entre l'entreprise minière Suisse Xtrata, et la communauté paysanne de Fuerabamba au Pérou. Installée depuis 2005 sur le territoire communal, l'entreprise développe des stratégies d'adhésion à son modèle, notamment à travers le système de Responsabilité Sociale.

Le paternalisme n'est pas, ici, uniquement la prise en charge des employés par l'entreprise. En système inclusif, les habitants de la communauté (fidélisation, dépendance, distraction, suivi « social », sponsoring, etc.) pour le bon déroulement de son projet.
Ainsi, l'entreprise remplace l'État, crée son propre marché du travail, emploie les habitants de Fuerabamba, offre des bourses aux jeunes, propose des formations et des ateliers, (ré)invente des traditions et des concours de danses traditionnelles, promeut le développement dans la communauté et s'impose comme de son projet.

We approach this coexistence as a “nexus of exclusionary beliefs” with its blurred "racism", "feminism", and "liberals" (left-wingers) in Scandinavian popular reasoning about difference, and if successful we can supply some input to the debate. This paper focuses on the societal level mainly in terms of institutions of internal refugees who were born in the host localities. Present Absentees: Internal Refugeeism As Location and Identity in the Second and Third Generations of Palestinian Women Citizens of Israel

I explore the emergence and significance of the identity of “internal refugees,” the identity of Palestinian citizens of Israel who were expelled from their localities in 1948 and, though remaining within the state of Israel's borders, were denied the right to return there, and were forced to reside in other places. The analysis is based on 15 biographical narratives of women who are second and third generations of internal refugees who were born in the host localities.

The theoretical and empirical claim is that refugeeism as location and as identity is a liminal arena that both enables an examination of women’s experience and offers an alternative viewpoint for understanding Jewish and Palestinian societies as well as women’s experiences. My argument is twofold: first, women’s multi-faceted marginal location within both Jewish society and their own society enables them to challenge both societies.

Second, internal refugee status for the second and third generations of Palestinian society in Israel, has become a category of identity alongside national, ethnic, religious and gendered categories. It is an identity category through which existential experiences are interpreted, and a collective, familial and personal history is constituted. Like national, ethnic, and gendered identity, this category is also subject to constant negotiations and contestation over its boundaries and meaning, but is unique in its location. From the woman refugee’s position somewhere/nowhere, women are able to develop a strong political critique towards their own society (Palestinian within Israel, in the Occupied Territories, in the Diaspora) and toward Jewish society.

Re-Membering the Past: Biblical Archaeology Between Secularization and Religionization

Secularization and religionization are concepts that continue to arouse much debate. This paper focuses on the societal level mainly in terms of institutions and norms. Our theoretical presumption is that both “religion” and “secular” are not universal nor essentialist entities, but rather contingent dimensions of social life that are embedded in time, place, and changing historical circumstances. Moreover, they are based on continuing social processes of separation and hybridity between these social categories. This mandates examination of religious and secular institutions (such as state, science, nationality) as relative dispositions and strategies for action in historical perspective. Our case study is the changing attitudes toward the Old Testament that reveal the pendulum between secularization and religionization and, at the same time, unveil the hybrid nature of the categories of religion, secularity and nationalism.

Traditional religious appreciation of the Old Testament by the three monotheistic religions was disrupted by the secular school of biblical criticism that flourished in Germany from the mid-19th century and challenged the historicity of the biblical narrative. A counter movement of biblical archaeology rose at American Divinity Schools in the early 1920s aimed at refuting the secular biblical criticism claims by excavating sites mentioned in the Old Testament and thereby testifying to the historicity of the biblical events. This approach was enthusiastically adopted by secular Israeli archaeologists in the newly established State of Israel. The collective memory of the religious biblical stories strengthened national cohesion.

Since the 1990s, the pendulum has swung toward a critical view of the archaeological data. Secular scientific archaeology rejected the shackles of religion and national concerns.

Exile from Exile: The Political Theory of Judith N. Shklar

Judith N. Shklar was one of the most influential American political theorists whose parents served in Iraq and/or currently serving in Afghanistan, family disruption or destruction (Getz, 1986). By means of this paper, we will eventually provide theoretical lenses for looking at the Dutch Wadden area and other vulnerable coastal areas. Coastal areas are extremely interesting regions to examine, since a large share of the world population lives in these areas, despite threats caused by climate change and sea level rise and their consequent state of vulnerability. This research area, which is a trend in the early 1990s. Towards the end of her life Shklar suggested that the entire understanding and managing complex issues like tourism in vulnerable coastal areas in order to overcome the traditional separation between ecological and social sciences (Liu et al., 2007), to examine tourism in a more systematic way (Ruiz-Balles-tros, 2011) and to find ways to develop and protect at the same time.

Family disruptions are never an easy transition for any child. For those children whose parents served in Iraq and/or currently serving in Afghanistan, family disruption or destruction (Getz, 1986) can be a tool for regional development, but at the same time an agent of disruption or destruction (Getz, 1986). By means of this paper, we will eventually provide theoretical lenses for looking at the Dutch Wadden area and other vulnerable coastal areas in the world.

Tourism in Vulnerable Coastal Areas: Towards a More Resilient Wadden Area

Tourism in the Dutch Wadden area and other vulnerable coastal areas can be found. Second, we will look into why, and in what ways, a complex adaptive systems approach - like a social-ecological systems approach - can be useful in analyzing tourism in vulnerable coastal areas. Coastal areas are extremely interesting regions to examine, since a large share of the world population lives in these areas, despite threats caused by climate change and sea level rise and their consequent state of vulnerability. This research area, which is a trend in the early 1990s. Towards the end of her life Shklar suggested that the entire understanding and managing complex issues like tourism in vulnerable coastal areas in order to overcome the traditional separation between ecological and social sciences (Liu et al., 2007), to examine tourism in a more systematic way (Ruiz-Balles-tros, 2011) and to find ways to develop and protect at the same time.

Third, the paper will describe governance perspectives that contribute to understanding and managing complex issues like tourism in vulnerable coastal areas through different scales. Planning is important and has to be done carefully, since tourism on national level for regional development, but at the same time an agent of disruption or destruction (Getz, 1986). By means of this paper, we will eventually provide theoretical lenses for looking at the Dutch Wadden area and other vulnerable coastal areas in the world.

Participatory Democracy and Socialism: How to Extend Participatory Democracy from the Political to the Economic Sphere

The economic and political shortcomings of representative democracy have led many to search for alternative, more direct and participatory forms of democ- racy. This has led, in particular, to local-level experimentation with popular con- trol over political decision-making, via institutions such as participatory budget- ing, a practice giving citizens control over local budget decisions that has spread to more than a thousand cities worldwide. This paper explores the possibility of extending participatory control from the political to the economic sphere. I argue that a radical left party with four characteristics can facilitate the construction of what I term emergent socialist hegemony. These characteristics are: internal democracy; links to popular movements; a prefigurative commitment to dem- ocratic socialism; and links to/autonomy from the national state. This argument is illustrated by examining participatory control over political and economic de- cision-making in Torres, which has been called "Venezuela's first socialist city".

Reclaiming Democracy: Popular Participation of the Left and Right in Venezuela and Bolivia

Participatory budgeting (PB), a practice that gives urban residents control over local budget decisions, has spread to hundreds of cities in Latin America and around the world since the 1990s. PB was originally closely tied to a Left political agenda; the most radical proponents of PB envisioned it as a tool that could be used to form a socialist revolution. But World Bank and Western lenders have championed PB. And while PB has most often been initiated by Left parties, there are a number of cases in cities controlled by centrist and right-wing parties. For the most part, scholars have failed to grapple with the question of "rightwing participation", and many scholars argue that participatory reforms, such as PB, can only suc- ceed when a Left party is in power at the local level. Through a nested, cross- sub-national comparison, based on 19 months of ethnographic research, my dis- sertation interrogates this assumption by looking at participatory budgeting in cities run by the Left and Right in Venezuela and Bolivia. I expected to find more success in my two Left cases than in either of the two Right cases. Surprisingly, I found robust participation in my Left and Right Venezuelan cases but limited participation in my Left and Right Bolivian cases. I was also surprised to find greater success in my Venezuelan cases given the greater strength and autonomy of social movements in Bolivia compared to Venezuela and the different trajectories through which Hugo Chávez and Evo Morales rose to prominence (Chávez through a failed military coup and Morales through social movements). I argue that these unexpected findings can only be explained by examining the relationship between local and national politics in Venezuela and Bolivia.
social rights of citizens, the latter highlights the protective role. Even though the war ended in 2009, public discourse continues to be dominated by security issues. Persisting ethnic tensions in the country feed into the dominant discourse, delegating social policy issues to the background.

HETTIGE, SIRI* (University of Colombo, Sri Lanka, hettigesiri@gmail.com)

Issues in School to Work Transition in Sri Lanka

The transition from school to work has become more complex in recent years due to both the changes in the education system as well as the dynamics within the labor market. This paper, first provides an overview of the above changes based on secondary data drawn from various institutions and then examines how young people in Sri Lanka fit into both the education system and the labor market in the light of data drawn from the national youth survey of Sri Lanka conducted in 2009 under the direction of the author. As is evident from the survey data, the desire on the part of the youth in general for securing educational credentials remains strong, though the opting out of education at secondary level is also increasing, particularly among male children. This tendency appears to be related to labor market dynamics as well as poor prospects for employment among youth with higher levels of education. Domestic labor shortages and increasing overseas employment opportunities for people with low levels of educational attainment persuade young people to leave school early. The paper discusses the implications of the above for skill formation in a country that strives to achieve a higher level of economic development in the years to come.

HEVENSTONE, DEBRA* (University of Bern, hevenstone@soz.unibe.ch)

Statistical Methods and Network Simulation: The Role of Limited Information in Edge Formation

Snijders et al. (2009, 2013) have contributed to an approach integrating agent based models and empirical network data in which instead of empirical data “validating” the simulation, the simulation estimates the empirical parameters. One assumption is that agents have information about the other actors in the network, i.e. that any two agents could potentially form a tie. This assumption means that the model is limited to modeling relatively small empirical networks. Another potential solution is to consider how information about potential matches might be limited. In a loosely related area, Bearmann et al. (2004) looked at the potential generating mechanisms of a specific type of social network: sexual histories. They found that limiting potential matches (excluding those close to one’s network) generated social networks that closely matched empirical data.

We use agent based simulations to consider the effects of assuming full versus limited information in evolving social networks. First, we limit information in a network's evolution based on the existing network, partitioning the list of potential new friends between those within one's local network (e.g. 3-step acquaintances) and a small sample of strangers. We test whether limiting information about potential matches generates more realistic graphs in terms of the average path length, clustering, edge distribution, and connectivity, as community-size increases. The question of limited information is then extended to sexual history networks, again, partitioning potential matches into those in one's local network and a small sample of the general population. The evolution of social networks is based on an exponential graph models while the sexual histories implement a Gale Shapely Matching Algorithm, as seen in the literature on the stable matching problem.

Global Academic Participation: Opportunities and Threats

A recent Japan initiative, “Global 30 Project for Establishing Core Universities for Internationalization,” aims to recruit 300,000 additional students from outside Japan by 2020 to study in English, and to send more Japanese students overseas, mainly to English-speaking areas. These and other developments are a response to decreasing numbers of Japanese students studying abroad, and demographic shifts domestically. Gradot (2007), presenting a comprehensive survey of global trends involving English Language education (ELI), outlines a strong economic correlation with language learning. This economic imperative has influenced some Japanese companies to consider English proficiency in a number of their workforce. This indicates a change in attitudes to the professional use of English in the workplace, but may not be matched by institutions of higher education in Japan. Yamagami & Tollefson (2011) report that globalization forces offer opportunities and threats for global non-native speakers of English.

A higher educational approach promoting awareness and skills necessary to be global, are keys to gaining access to predominantly English academic discourse. Such access can lead to the sharing of common life goals and more specific participatory mechanisms across national boundaries and cultures. The promotion of both global awareness and skills, based on Steiner's three-tiered model of social life development, involves discipline-specific information exchanges and knowledge-sharing, specific genres, highly specialized terminology, and a high level of expertise (Swales, 1990).

Content and language integrated communication learning or CLICL, prioritizing academic literacies and discipline-specific content, provides learners with knowledge, skills, and life values enabling them to be mobile in local and global workplaces, including academia. Our paper provides an account of CLICL, which balances academic literacies and discipline-specific knowledge, skills, and values. We outline the practicalities that nurture CLICL, or lead to its rejection.

The Changing Significance of Social Class in Later Life

During the 1980s the concept of class constituted a fundamental touchstone of social gerontology. This was especially true within the political economy approach to ageing, however with the development of new societies of a ‘late’ phase of modernity this concern was overshadowed by an engagement with other stratification orders. This has had the consequence of leaving class analysis “surprisingly underdeveloped”, although the field does at times focus on the class background of older people, the arbitrary implementation of Marxist or Weberian standpoints informs us only of the extent that older persons conform to middle-aged norms rather than shedding light on the same character of class relations in later life. Moreover, tracing the class position of older people back to the breadwinners’ final occupation does not really account to the reality of older people’s connection to this. This modernist strategy contains crucial analytically and empirical lacunae. For instance, whilst it may have been valid in the past when most individuals died either before or soon after statutory retirement age, nowadays retirement generally signals the start of a ‘third age’ phase of life. Moreover, instead of an ‘add and stir’ approach to class where age is ‘added on’ to conventional models, there is a need to recognize different people may work as ‘older’ men and ‘older’ women when they are addressing the linkages between ageing and class. This presentation will introduce the key themes of power identity and lifestyle as they connect to class in later life and assess the extent to which social class is a useful category in studying old age.

How Can the Public Service Improve the Uncertain Transition of Youth into Adulthood? a Case Study of Educational Support Centers in Japan

In Japan, the uncertain transition into adulthood for some young people is recognized as the problem of futoko: a term that refers to youths who have been absent from their school for over 30 days in a single year. A person with experience of futoko tends to have difficulty in advancing to a higher education or obtaining a job, and may become isolated from society. Futoko shares similarity with hikikomori, as both refer to a youth’s withdrawal from the public sphere. In contrast to hikikomori, however, futoko youths are formally registered in school, and the educational administration agency therefore attempts to become involved with them.

This paper examines the governmental service for futoko adolescents, with the aim to clarify the factors constraining the transition of this age group to school or work. We focus on the Educational Support Centers (ESC) program, which is the most extensive and longest-running policy of Japanese Ministry of Education for futoko juveniles. Futoko has been a topic of interest for many Japanese sociologists, however ESCs have received little attention to date. Using interview data from instructors of ESCs in four cities, we examine how the staffs approach futoko youths.

The major findings are summarized below. First, although instructors find young people lack basic social skills, such as taking a bus or train, they have difficulty stepping into these youths’ private lives because of limited authority. Second, the background of lacking social skills, young people are often plagued by familial problems or economic difficulties that make it harder for instructors to improve their situations.

This study demonstrates that governmental support makes the phenomenon of correntinisa, i.e. the transition to adulthood more visible, but it confronts the dilemma of how (and to what extent) the public service can intervene in the private problems that underlie futoko.

CIVIL-MILITARY GAP in Japan: Comparing the 2004 and 2013 Surveys -- CANCELLED

This paper compares two surveys conducted by the authors in 2004 and 2013 which looks at the possible “civil-military gap” in Japan. These surveys, modeled after the TISS survey, were the first academic attempt to examine the attitudes of Japan Self Defense Force (SDF) officers as well as civilian elites in Japan. In the 2004 survey, we found that (1) SDF officers were more conservative than the civilian elite, (2) on US-Japan alliance issues, there were no evident gap between the officers and civilian elite, while there were signs of gap with the general public; (3) SDF officers long for a greater role in the policy making process. Events that took place between 2004 and 2013, including the SDF dispatch to Iraq, the end of the conservative party rule in Japan, and the 2011 earthquake and the disaster relief efforts by the SDF, suggest that there may be a change of attitudes among both the SDF officers and the civilian elite. A second survey is to be conducted in October 2013, and this paper will compare the 2004 and 2013 survey results to examine whether and why there may be changes in the “civil-military gap.”

Contested Spaces. Informality, Dwelling and Spatial Governance in Berlin

This paper examines the intersections between informality and the governance of space in Berlin, Germany. In particular, it examines practices of dwelling, in which permanent residency does not fit neatly into the logics of formal planning processes in order to discuss the possibilities and delimitations that people experience when living beyond the law.

In Berlin, research on urban development has frequently been framed through debates on neoliberalism and a series of interdependent developments such as gentrification, urban entrepreneurialism or increasing socio-spatial inequality (Mayer 2009; Holm 2010; Bernt 2012). While these debates focus mainly on the enclosure of space, a series of postcolonial approaches have developed an analytical toolbox that helps to consider the ways in which cities are shaped through the everyday lives of their inhabitants. Here, the urban is seen as “a site that is not just inhabited but produced through that inhabiting” (McFarlane 2011: 651), a site that is neither ossified nor stable, but open to political transformation. Drawing particularly on Bayat’s (1997, 2000) notion of ‘quiet encroachment’, which describes the quotidian and longsomed advancement of the poor, these frameworks will be used to compare processes of regulatory enforcement in three urban typologies, in which people informally inhabit space: ‘Schrebergärten’ (best translated as allotment gardens), camp sites and ‘Wagenburgen’ (best translated as trailer encampments). Even though the retreat of their inhabitants into sheds, vans or camps could simply be interpreted as an indication of socio-spatial marginalization, I set out to explore, if the infiltration of planning law through their informal dwelling practices could similarly be understood as a sign of encroachment. In sum, I highlight both enabling and destabilizing aspects of these processes: While residents find opportunities to claim urban spaces and sovereignly influence their experience when living beyond the law.

Language and the Geo-Politics of (dis)Location: A Study of Zimbabwean Shona and Ndebele Speakers in Johannesburg

This paper explores the language repertoires and survival strategies of Zimbabwean migrants in Johannesburg. In the aftermath of the May 2008 attacks – now widely termed ‘xenophobic attacks’ – the status of African immigrants in South Africa has been the subject of much critical discussion. By virtue of a multifaceted crisis in their country, Zimbabwean Shona and Ndebele speakers have a particularly marked presence in South Africa. In this paper we explore the geo-politics of “otherness” within the metropolitans boundaries of the “City of Johannesburg.” We begin with a GIS-based study of speakers designated “other” in the 2011 census; focusing particular attention on the distribution of foreign others at neighbour-hood (sub-place) level. This section provides the backdrop to a more focused study of Zimbabwean migrants, drawing on ethnographic research conducted in five neighbourhoods. Using Bourdieu’s “ecosystem of social practice” as an analytical framework, we show how each neighbourhood is a site of struggle, contestation and negotiation over the “field of power”, a complex social-ecological order that belies the post-1994 Constitutional enshrinement of eleven official languages.
A Tale of Three Villages: Boom and Bust Experienced at the Local Level in Rural England

The paper compares and contrasts three English, rural villages, each with different low-order rural resources that have informed their social histories: one geographic proximity to Southern UK cities (for commuting purposes); another offering a heritage site (several buildings and ruins of historical note); and, finally, one with geographic characteristics that brought a large-scale industry temporarily to the village, but only to depart with similar rapidity. Through a comparative and contrast analysis, the paper considers the impact of these individual circumstances for each village before and after (in the modern-day context). It draws upon a portfolio of evidence including macro contextualizing background information and also ethnographic research datasets. This seeks to capture an insider perspective, whilst recognizing villages contain different social class groups and are not immune to global influences. It then questions the sustainability of each of these periods of boom and bust. What implications does each model hold for their respective village? Who benefits from each of these three differing circumstances – local, regional or national (or even global) interest groups? What lessons can be learned from local adaptability and resilience? The paper finally seeks to comment on the theoretical model best suited to capturing the complexity of rural villages. Are you defined by where you live, as some sociologists have recently argued? Or do there remain something sociologically significant about the social situation as grounded by the local level? This attempts to place economic trends and changing circumstances as experienced and also informed by local, community-level social actors.

What Facilitates Moving from Urban Cities to Rural Depopulated Villages?: “I-Turn” Phenomenon in Ayabe City, Kyoto Prefecture, Japan

The Japanese countryside is suffering from severe aging. Due to the lack of job opportunities, many young people migrate from their home villages, leaving the elderly in difficult living conditions. Moreover, according to government reports, 423 villages will be deserted within the next 30 years without the young population. However, at the same time, in Japan, some people living in urban cities are willing to move their residence to those depopulated villages. This movement is so-called “I-turn” phenomenon. In this report, I use data from my fieldwork, which includes a case study and social surveys of Shigasato town, Ayabe city, and Kyoto prefecture in Japan. Shigasato (1,444 people live in here) town has warmly invited about 40 families in the last 10 years. Almost 10% of their population is “I-turn” residents from other urban cities in this town. What kind of social factor fascinates these rural-orientated people in Japan? Answering from my studies, 2 factors are accountable. First, Shigasato Town has plenty of bridging social capital (Putnam 2000). Shigasato’s local neighborhood association called KODAKARA-Net hold various events of cultural exchange with other cities, and they introduce their vacant houses for “rural-oriented” people. Second, Ayabe city is located in Kyoto city’s neighborhood. It enables residents of Shigasato town to run various side jobs besides keeping farm. As is often the case with “I-turned” people abandon their rural lives due to the lack of job opportunities, this case avoid the problem. These social and geographical factors have strong influence for people who intend to “I-turn” in urban cities, and those points makes different Shigasato’s case.

Labor Market Exit of Older Low-Skilled Workers: German Firms’ Practices

Recent pension reforms in EU countries display two main trends: 1) early retirement pathways are closed and standard retirement age is increased; 2) the contribution-benefit link is strengthened, mainly by calculating pensions on the basis of lifetime earnings. Both developments endanger the adequacy of old-age pensions of low-skilled workers in particular because they regularly attain low lifetime earnings, leave the labor market (much) earlier than (highly) qualified workers, and often have to claim pension benefits before reaching standard retirement age. In the paper, Germany is taken as an example of a country that, for long, practiced premature exit of older workers and had developed an “early retirement culture”. The first part describes and analyzes the pension reform trends as well as current employment situation of elderly low-skilled workers. The second part explores in more detail how firms part company with these workers, at what age, and whether firms’ strategies and workers’ preferences have (already) adapted to shifting institutional frameworks. This is based on semi-structured (qualitative) interviews with human resource managers of firms (manufacturing/service sector) employing at least 50 workers of whom a disproportionate share are low-skilled. It is found that there are significant differences between the industries (mainly across the manufacturing-service axis) with regard to “normal” exit age, adopting measures that promote employability of low-skilled workers and the interest in retaining workers until standard retirement age (or even beyond). Furthermore, we suggest that firms are indeed modifying their behavior towards older low-skilled workers and have become more responsive to their needs, i.e. the quest to stay on in the job longer in order to prevent pension cuts. Those workers who actually made it until standard retirement age are often eager to return to their former employer to increase their public pension by working temporarily or part-time.
How Does Participation in Resistance Interact with the Construction of Family Relations? West Bank Palestinians Between the First Intifada and the ‘Post-Oslo’ Period

A large share of the Palestinian population in Gaza and the West Bank was involved in the First Intifada (1987-1993). As a mass movement against the Israeli occupation it was both, shaped by and shaping the construction of family relations and gender roles. In academic literature on Palestine, it has been widely discussed whether the involvement in civil and militant political activities against the Israeli occupation has reduced the patriarchal influence of senior males in favor of a growing influence of juveniles and women within the (extended) family resp. clan (Hamullah). In large parts research focused on the effects of female integration into ‘committee work’ and the increased familial authority of young Palestinian males (Peteet 1994). The period after the so-called Oslo peace process (roughly after 1995) and the various transformations it entailed for Palestinian society, however, have caught much less attention in research on the Palestinian family. Based on biographical case reconstructions and participant observation we want to discuss if the societal conditions in ‘post-Oslo’ Palestine have altered the interplay between participation in resistance against the Israeli occupation and the construction of manhood and family relations. Therefore we show the effects that the interplay of involvement in ‘resistance activities’ and family relations yields for the biographical trajectories (Schütze 2006) of young Palestinian males. Looking at the relations of family members from a biographical perspective allows us to reconstruct the changing relevance of family relations in the course of a lifetime as well as the intertwining of family relations with other biographical spheres of action. Our paper is based on fieldwork in the West Bank which is part of our PhD-projects as well as a larger Israeli-Palestinian-German research project funded by the German Research Foundation (DFG) and supervised by Prof. Gabriela Rosenthal, University of Göttingen.

Women's Experience of Maternal Morbidity - a Global Meta Ethnography

While the conditions and healthcare women experience during pregnancy and childbirth vary greatly, this meta-ethnography will explore whether there are shared biographical categories, regardless of inequalities in economies, healthcare resources and the social capital of women in different settings.

Maternal mortality rates vary greatly around the world, 99% of all maternal deaths occurring in developing countries. Improving maternal health by reducing maternal deaths is at the heart of global health policy.

Studies of near miss maternal morbidity, where a woman needs urgent life saving treatment during childbirth to save her life, have been undertaken in various settings. They are used to understand factors that lead to maternal death and improve care and outcomes for women.

Methods:
Qualitative interview studies of near-miss maternal morbidity from around the globe (including the UK, Australia, Brazil and Burkina Faso) will be reviewed and synthesized using the meta-ethnographic method.

Findings:
There are considerable organizational differences in the delivery of care and social context in which women experience these emergencies; women in Australia and the United Kingdom are giving birth in more individualistic and isolated communities than their counterparts in Burkina Faso and Brazil. Does experiencing an acute health crisis in a first world country where mortality rates are very low vary greatly from experiencing it in a developing country where maternal death is still a common occurrence? How does the ‘social capital’ of women in different contexts impact on the long-term emotional and physical impact of these experiences?

Conclusion:
This presentation will explore what we can learn from shared experiences and whether a synthesis of qualitative research can contribute to improving maternal health outcomes in diverse settings.

ESA The Position Of The Female Gender In The Political Space. An Analytical Biography Access To The Study Of East German Female Politicians Career Choices

This abstract aimed to determine the career opportunities of East German female politicians in the time of the collapse of the GDR and consider the processes of their social and mind-making. The empirical basis are 24 biographical interviews with female MPs’ from East Germany. In this regard my research confirmed that “the revolution in the former GDR” has got a crucial influence on the East German politicians careers, especially, when it is cooperation with other categories of difference such as “gendered” role. That is why influence of the collapse of the GDR and the following transformation processes had crucial influence on career opportunities of East German female politicians. To that extent, the research aiming to show how “gender” and “gender differences” in politics are constructed. These consequences for their political careers and the political culture will be demonstrated, too. It will also demonstrate, how “gender identity” is constructed in the field of politics. The abilities which are essential for successful career are considered if women in politics are discussed. Another focus is on the specific advantages and disadvantages female politicians have got because of their “gendered” role. Besides, it will be shown if and in which way female politicians will be accepted by the male competitors and by the society. Last but not least the consequences of these projects for the political culture at the present time are also discussed.

Movement for Justice in Labour and Environment - Post Fukushima Labour with Exposure to Radiation

This paper focuses on labour with exposure to radiation in post-accident Fukushima. Radiation related labour includes all the work in and outside of the troubled Fukushima Dai-ichi nuclear power plant as well as vast amount of decontamination work around the region. Network calling for justice in working conditions and health of workers in radioactive labour has been set up and is undertaking various activities such as: helping workers in radioactive labour find and join unions and fight for better working conditions, gathering and disseminating information on radioactive labour, and exchanging information with staff members of Ministry of Health, Labour and Welfare, Ministry of Economic Trade and Industry, asking for reform in various policies, and lobbying diet members and their staffs on this issue. This movement takes place at the crosspoint of labour movement and environmental movement and thus is has many implications for these two movements and their collaboration and theoretical studies of them. This paper will address the main issues regarding radioactive labour in post-accident Fukushima and try to introduce theoretical perspectives.

Restructuring Vegetable Oil Supply and Demand in Asia: The Impact of Trade Liberalization Facilitating Increase of Fat Supply Among Asian Nations While Jeopardizing Their Domestic Production

This research examines strategy shift in vegetable oil sector among global transnational corporations, focusing on Asian TNCs like Japanese sogo-shosha and food industry, together with related trade liberalization and deregulation policies of Asian countries in the Corporate Food Regime (McMichael, 2005). These shifts are assumed to be increasing Asian countries’ dependency on global vegetable oil, which can jeopardize their food security as the global oil supply increasingly depend on only two crops, oil palm and soybean, produced in the limited number of countries. The shifts also can jeopardize public health of the Asian population...
by increasing availability of oils and fats in the nations’ diet as a forerunner of nutrition transition.

Asian countries have rapidly increased vegetable oil supply in last few decades. China and India transformed from mostly self-sufficient countries of vegetable oils into the global leading importers by rapidly increasing imports of palm oil, and of soybean in case of China, since the mid-1990s. Thailand and South Korea have increased their vegetable oil supply, mainly with palm oil and soybean oil, after the financial crash in 1997. Japan liberated its vegetable oil supply decades ago and reduced its self-sufficiency rate as low as 2%. More significantly, recent neoliberal trade liberalization, especially direct foreign investment and corporatization, are suspected to be facilitating (re)structuring of the supply chains of vegetable oils with development of food industry based on imported vegetable oil and oil crops, like building large-scale oilseed crushing facilities or developing instant noodle industry in China. The increased availability of oils and fats, and the concurrent change in diet toward higher-fat, lower-carbohydrate, more processed food, can jeopardize the public health among Asian nations. This research investigates the structural changes in vegetable oil supply and demand in Asia, in order to secure food and health of the population.

Legitimacy or Legitimation?

After years of Great East Japan Earthquake, day and day, disparities in restoration among similar regions are seen as social problem. In this study, we explore the limitation of this schematic way of making problem, through the process-oriented research of local governments’ decision-making concerning their restorations. Certainly, restoration disparities among regions are verified statistically, for instance, numerical difference of population recovery rate. Furthermore, the popularly supported national policies have been made to target restoration disparities among regions. However, each of region or its local government has been permitted to decide distinctive plan or style of restoration. After the Second World War, Japanese local government is not just bound by national law but also become to be allowed to pursued its autonomy. Additionally, this degree of allowance of local autonomy has increased with successive fiscal crisis of national government. In fact, through our follow-up survey of the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive determination of local government. In this research we pay attention to the different ways of restoration financing between condition similar local governments. The results show differentiation of financing: from dependence just on local tax revenue and national subsidy to but also on donation from residents, corporations and foundations, and financial assistance of international NGOs and so on. In accordance with pluralization of sources of fund for restoration, local governments have been required the plural logics of persuasion or conviction of several stakeholders with varying interests. Based on this research, we could call the restoration difference among regions not as disparities subject to given singleness, legitimacy but divergence arisen from “legitimations” of distinctive local governments.

Theoretical Considerations of Recent Studies of Japanese Immigration to Brazil

The paper considers that the migrant, even prior to becoming an emigrant, was transforming within his own country and within his own community/society of origin, due to his dreams, desires, and utopias, into an atopus, that is, an atopoic, without place. Among the various ethnic groups that migrated, including Japanese, those who belonged to so-called “complex genetic stock,” due to their cultural singularities that differentiated them from the supposed community/society standard accepted as nationally prevalent, faced prejudice, acts of intolerance and “racism”, in which “myths” and “historic facts” were mobilized to justify the violent actions of people, of social group, and of the receiving State itself. However, how does one remain Japanese after living outside Japan for many years? When, with the passage of time, is a new place (topus) constructed in Brazil with a complex web of family relations and professional activity? When are the children socialized and educated through schools, according to the Brazilian standards of thinking, feeling, and acting. In this context the concept of national identity appears as an unquestionable value for Brazilian Japanese descent, is an essential instrument for social and economic ascension, and is the place where the rules of civility and Brazilian active citizenship are acquired.

Does the Great East Japan Earthquake Influence the Migration Patterns of Filipino Nurses to Japan?

The disaster caused by the Great East Japan Earthquake influence foreign residents in Japan. A mass exodus of foreigners was observed especially in the first few months after the earthquake for fear of being exposed to long lasting radiation. Nevertheless, there were Filipino nurses, who entered Japan to work at hospitals across the country, only two months after the earthquake.

This study aim to find the predictors of the mental health status of the 3rd batch Filipino nurses coming to Japan, under the Japan-Philippines Economic Partnership Agreement. A four-page questionnaire, including GHQ (General Health Questionnaire), socio-demographic status, motivation to go to Japan, degree of knowledge about Japanese language, skill satisfaction for pre-departure training and impact of The Great East Japan Earthquake, was developed and distributed to all candidates who attended the pre-departure orientation organized by Philippine Overseas Employment Administration in May, 2011. The multi-linear-regression model (R²=.535, p<0.001) indicated that the strongest factor to indicate GHQ score was satisfaction for pre-departure training (beta=.370, p<0.01), followed by motivation to go to Japan (beta=-.351, p<0.01), but impact of the earthquake did not show a significant correlation to GHQ score.

One can assume that Filipino nurses’ migration was derived by their motivation based on their economic needs. On the other hand, the degree of impact of the earthquake did not influence their migration patterns.

Migration of Foreign Nurses to Japan Under the Economic Partnership Agreement: Trends and Challenges through Sociological Perspective

Over 400 Indonesian nurses and 300 Filipino nurses entered Japan under the Japan-Indonesia Economic Partnership Agreement, in 1994. This is the first case for Japanese government to officially receive foreign nurses to Japanese hospitals. Under these agreements, Indonesian and Filipino nurses can work as a registered nurse in Japan, after they pass the national examination for registered nurses in Japanese language, within three years after their entry to Japan. However, the recent phenomenon indicates that many implementations on this program should be made. The number of applicants as nurses and as hospitals for this program has been shallowed, and many criticisms on the programs have been discussed in both sending and receiving countries. One of the criticisms is based on the absence of the governance of the nurses, including Indonesian and foreign nurses, of the programs. In this presentation, the JIEPA and JP-EPA programs are analyzed through quantitative and qualitative analysis which author and her co-researchers have been working for since 2007. Throughout the study, some suggestions will be made to contribute the cross national movement of health professionals in Asian countries.

Construction of the Environmental Problems: Biblio-Metric Analyses of the “Tragedy of the Commons”

“The Tragedy of the Commons” is frequently cited as a model to explain how resources with open access are destined to deplete as a result of rational individual’s actions. The original neo-Marthusian message of the metaphor however, has been largely forgotten. This paper explores how the frame of “environmental issues” has changed over the years by tracing the citation trends of the original paper written by Hardin in 1968. The data used in the analyses are the 4,330 bibliographic records that cited Hardin’s article identified in the Web of Knowledge. The results show an exponential increase in the number of citations especially after the 1990s. The scope of disciplines related to environmental studies also expanded after the year 2000. The proliferation and popularization of the metaphor indicate the decoupling of population problems through the changes in the frame of environmental discourse that synchronized with the trends in global environmental politics.

Housing Policy and Gentrification: Conflicts and Contradictions in the Inner City of São Paulo

During the last decades, Neil Smith is developing a conceptual framework linking neoliberal urbanism and gentrification. In his works, the increasing role of the state as an agent of the market is underlined. Also, according to Smith, in a context of globalization and financial capital, the gentrification is thoroughly generalized as an urban strategy (Smith, 2002). This paper aims to discuss the concept and the elements of gentrification in cities of emerging economies, using as an empirical case the inner city of São Paulo, Brazil. Since the nineties, the central area of São Paulo is being subject of several urban interventions, varying from the promotion of new cultural facilities to the redevolopment of several blocks as a key to increase population in the historical neighborhoods. The most recent intervention presented is using the housing policy as an instrument to promote gentrification, by removing several buildings, today occupied by poor families that were once attracted by low rent prices, in order to make room to new developments to address the housing needs of the emerging medium class. The conflicts and contradictions that are arising from these projects are meaningful and give us strong elements to deepen the political terms of the Smith's concept of gentrification, coloring it with the characteristics of the Brazilian uneven urban development.

HIRATA, YUKIE* (Dokkyo University, kiraro0616@hotmail.com)

For a Happy Encounter Between a Researcher and a Participant Living in the Different Contexts of Social Organization of Gender

In this paper I discuss how to interpret and represent individual gender biographies in transcultural research settings when a researcher meets with informants who belong to different social and historical contexts. In my experiences regarding gender biographies in transcultural research almost all informants talked about 'their' social norms of gender before telling their life histories, although it is very important to understand the conflicts between their biographies and social contexts. Here it is also implied that the nation-state has still a powerful meaning for informants and a researcher, even if a researcher argues ‘transnationality’ or ‘transculturality’ of the field to be examined. In this paper I explore whether a methodological effort can help make an adequate co-production for both a researcher and an informant in case that they have different cultural and national backgrounds.

HIRAYAMA, YOSUKE (Kobe University)

Housing and Social Re-Stratification

This article looks at transformations in the role of housing in social stratification. During the 'golden age' with high-speed economic growth and generous government subsidies, social inequalities were mitigated by the expansion of middle class home ownership and redistributive schemes of providing social rented dwellings to lower classes. However, with the ascendance of neoliberal prescriptions in the 'global age', new housing systems oriented towards accentuating the role of market economies in providing and financing housing have increasingly exacerbated, rather than alleviated, social disparities. There have been widening gaps between the market-included and the market-excluded in terms of housing conditions. Moreover, within market spheres, various variables such as the timing of housing purchase, the appreciation or depreciation of housing assets, the nature of housing investment, the condition of mortgage borrowing, family support in acquiring housing, intergenerational transfers of residential properties, architectural profile and location of dwellings and the number of houses owned have been becoming more definitive in creating social cleavages. In varied fields of social science, position pertaining to labor markets has been regarded as very important in explaining the formation of social classes. However, housing and property ownership have increasingly become more significant, and will be, more definitive in reshaping social inequalities. This paper will identify housing related key drivers for social re-stratification and explores housing situations in some exemplary countries such as Britain, USA and Japan in arguing the importance of housing in creating new contours of social inequalities.

For a Happy Encounter Between a Researcher and a Participant Living in the Different Contexts of Social Organization of Gender

In this paper I discuss how to interpret and represent individual gender biographies in transcultural research settings when a researcher meets with informants who belong to different social and historical contexts. In my experiences regarding gender biographies in transcultural research almost all informants talked about ‘their’ social norms of gender before telling their life histories, although it is very important to understand the conflicts between their biographies and social contexts. Here it is also implied that the nation-state has still a powerful meaning for informants and a researcher, even if a researcher argues ‘transnationality’ or ‘transculturality’ of the field to be examined. In this paper I explore whether a methodological effort can help make an adequate co-production for both a researcher and an informant in case that they have different cultural and national backgrounds.

Employment of Care in the Private Sector in Brazil: The Case of Recyclable Materials Collectors

In the last decades, real estate production turned into a main capitalist way of reproducing the global financial dynamics. For urban space this means impoverishment of a city notion. For social mobilization that seeks for the reduction of social inequalities it leads to a perception of insignificance of small victories, even with a high level form of organization. In this way, the urban vision over society by philosopher Henri Lefebvre, not just makes clear the role of the urban for capitalistism, but also gives us elements of reflection for social mobilization practices by an observation of urban social practices. That is what is shown by an urban vision on the case of resistance of recyclable materials collectors in downtown São Paulo.

Reshaping the Housing System in the Context of Japan’s Post-Growth Society

Many mature economies are now entering the ‘post-growth’ era characterized by low growth in GDP, ageing of the population and increasing social stratification. Japan stands at the forefront of such transformations towards ‘post-growth societies’, where the government is increasingly being prompted to reorganize the housing system within the context of the shrinking and super-aged population, lowering marriage rates and lowest-low fertility, extremely prolonged recession, increased social inequalities, house-price volatility and housing asset deflation, and growing pressure to cut back on social spending and public subsidies. Housing studies have been debated during the postwar ‘golden age’ of social and economic development accompanied by increasing population, high-speed economic growth, expanding housing construction, and increasing rates of home ownership. Such housing debates were linked to the development of wider social theories on social stratification, the welfare state and urban transformations. With entering the ‘global age’, however, the ‘post-growth’ social context now requires a re-examination of housing debates and related theories. This presentation looks at Japan as a vivid exemplar in terms of exploring how housing is implicated in shaping ‘post-growth societies’.

Teachers Concerns and Proposals in Educational and Ethical Practices to Face Uncertainty

In Mexico, teachers that instruct in primary and secondary levels of education are increasingly being evaluated by international and national policies and organizations and are being harshly judged by different social agents, such as mass communication media, public opinion, parents and entrepreneurs. In international tests, our country has been evaluated and compared with many other countries, and is being located with low levels of educational achievement. To attend this problem the government has proposed continual educational reforms that include diverse types of evaluation of schools, students, teachers and the institutions that are in charge for the preparation of the future teachers. Processes of actualization have not been developed simultaneously and furthermore there have been changes in the labor conditions that have created uncertainty. In our research project: Professional Ethics for Professors and especially from the open question: which are the five necessary actions to prepare teachers about professional values? we found that teachers are interested in a better cognitive knowledge and actualization, an approach to norms, rules and codes in reference to values and ethical themes, the consequences of their professional decisions, the importance of team work and personal relations and communication. Two key aspects are the reference to be a behavioral model to their students and to teach and research not only as a professional but as a life project. These last two answers are more articulated to subjective and individual concerns that search for diverse ways to face uncertainty.

Politics of Food (In)Security in East Asia: Insatiable Appetite for World Food and Agricultural Resources

This paper will be focused on backgrounds of and perspectives for the food (in)security politics in Japan and East Asia, and could therefore be an introduction to the session. With its rapid economic growth, East Asia is widely recognised as one of the most important regions in the world economy. Despite its significance in the globalised agrifood system, very little has been discussed in international academic communities about the realities and transformations of the agricultural sector, food systems, and rural societies in the region. Because of its consumer affluence and limited agricultural resources, the extent of the region’s heavy dependence on food imports has become too significant to be disregarded. According to FAOSTAT, the region accounts for 28.9% and 64.5% of the total volume of world maize and soybeans imports, and 15.6% of the total value of world agricultural imports in 2010. This situation is unsustainable not only for regional economies but also for the world food economy in the era of “the end of cheap food”. A heightened sense of “food crisis”, especially since the 2007/2008 world food price crisis, can be observed at every corner of political, economic and civil society in the region. Unfortunately, in the mainstream discourse, our “food security concerns” are appropriated and manipulated to justify the business-as-usual agricultural and food policy for further agricultural trade liberalisation (e.g. KORUS and TPP) and large-scale overseas farmland investment (i.e. land grabbing) in order to make food accessible in the globalised market at the expense of food sovereignty within and beyond the region.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.

In this paper, the development of policies and discourses on food (in)security will be critically analysed as a underlying basis for further empirical studies with a perspective for social mobilisation of food sovereignty in the region.

Policing and Autonomy of Community: Comparative Study of Japan and Indonesia

The objective of this presentation is to clarify the character of community policing in Japan and Indonesia from the viewpoint of the autonomy of community and my filed research. This presentation will be divided into three parts.

First I will examine some discussions and theories regarding the community policing, where we will see that the autonomy of community is needed to manage the way of policing practiced in community in the case of the US. Then, I will clarify the crisis of the autonomy of community with special attention to a discrimination among communities. It has been produced by the development of suburban area and individualized auto-mobility in the US.

Secondly, we will turn to the case of Japan, and I will cover weakening roll of Japanese neighborhood organizations and activation of policing by the central government. The government tries to apply “broken window theory” and discard tradition of mutual cooperation. Through the cases, I will identify the difference and similarity with the social condition of the US and clarify difficulty of the autonomy of community in Japan.

In the third part, we will look at the community policing of Indonesia in the development era and evaluate a mixture between local security and tourism for community development in Bali. The police has tired to apply the community policing in order to reestablish new structure of the police and grasp vigilante groups since the collapse of centralized policy. However, in the case of Sanur area in Bali, finally, we will see a success of the community policing with new image of tourism.

As a conclusion, finally, I will clarify the advantage of the community development through the mixture of policing and local creative activities.

Burmese Refugees and Ethnic Business in Japan

While Japan is said to be the country which has one of the strictest control for refugees and asylum seekers, Japanese government accept some refugees, especially from Burma. After receiving the asylum, some of Burmese run a small business in their community. How do Burmese become a refugee entrepreneur? How do they run a small business? This presentation aims to explain the factors which foster the refugee entrepreneur from the view point of the opportunity structure theory. This presentation is based on the field work data carried out in Tokyo, Japan from 2004 to present. The data consists of interviews with Burmese refugees, refugee advocacy NGOs, Government agency, and other related personnel. Based on the opportunity structure theory, there are some types of Burmese small businesses. One type is a small business serving an ethnic community’s needs. With the help of their colleagues, they mobilized various ethnic resources: capital, labour and skills. Other type is small business serving an open market. They try to attract non-Burmese customers to their shops. However, their businesses are not stable because of the small size of their ethnic market and the intense competition of the service industry. Following the presentation, I will discuss the economic integration of refugees in the future.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.

This paper addresses Chinese women's self conceptions through developing the concept of erotic justice to focus on access to life chances and opportunities for sexual expression, erotic exploration and realisation.

The erotic is conceptualized as more ambiguous, fluid and diffused than sex-oriented sexuality in that as a process it does not focus on one part of the body or one object. It is about connection between current inside and the world spinning outside, but not limited to the interpersonal (Ho & Tsang, 2013). Eroticism evokes expectations and anticipations, however, eros renegotiates the "politicization of economy of life chances" which are not equal. Indeed, people in their movements, emotions, and desires are themselves made in terms of the discourses and unequal differences, of the past, present and future political economy (Foucault 1980; Bourdieu 2001). In short, erotic explorations in everyday life occur within the frameworks of power where they play a game with others who strategize with equal self-interest, but often with more legitimacy (Bourdieu 2001).

In-depth case studies of online narratives of Chinese women have suggested ways in which these women create new identities for themselves through a politics of iconocassys using new social media (Ho, 2006, 2011, 2013). We examined how they articulate the kinds of injustices they face in love, marriages, family and society due to their gender, age, social class, ethnicity, sexual preferences and other social variables. We also identified the strategies that they used to rectify these injustices including becoming everyday icons through their practices of self online and offline.

In creating these new identities, they envisage and locate themselves within new futures in which gender and sexual justice become possible. Their self narration includes a reflexive construction of self where the past is reshaped to fit the present and the imagined future.

The Determinants of Intrinsic and Extrinsic Work Motivation Among US and Norwegian High School Students

This paper investigates the work motivations of American and Norwegian high school students. It centers on types of motivation that are widely defined as either intrinsic or extrinsic to the work itself. The distinction, which has a long history in the empirical study of work values, aims to separate the motivational force of self-development through work from that of obtaining external rewards as a result of work. The paper draws on prior studies of young Americans’ work motivations, and attempts to build bridges to cross-national research, which has primarily been preoccupied with the work values of adults. The paper thus aims to pave the way for more comprehensive cross-national research on young people's work motivations. While scholars have disagreed as to whether intrinsic and extrinsic values should be treated separately or as opposite poles on a common continuum, the paper underlines the benefits of not committing exclusively to one understanding, and giving both their due in empirical examination. A key benefit of this approach is that it tackles acquiescence bias, a surmountable challenge when conducting cross-national comparison of rating-based survey data. Regression analyses reveal that national context, gender and ethnicity greatly impact intrinsic and extrinsic work motivations. In the Norwegian context, intermediate variables (grades, part-time work, and particularly high school program) are also strongly linked with work motivations. Conversely, no significant effects of parental education are found in either context, signaling a break with earlier studies.

A Globalizing University Centered in Asia: State and Society Interactions in University Restructuring

A Globalizing University Centered in Asia: State and Society Interactions in University Restructuring

K.C. Ho (Sociology, NUS)

East Asia countries are late comers in international education, league tables and world class university formation. This entry was marked by a fundamental restructuring of the university system, particularly top national universities whose traditional role has been the training of the nation’s elite.

My paper discusses Singapore's restructuring experience and its consequenc- es in terms of its search for international talent for professors and students, its focus on basic research rather than applied or policy research, and its increasingly ambiguous relationship with society and community. Drawing from a people impact survey of the country's two largest comprehensive universities, the paper dis- cusses impact of the internationalization drive and its connections to Singapore's global city-state status, its implications of being unhinged from its traditional so- cietal roots from a variety of disciplines: science and engineering, medicine, and business and management, and the reactions of different societal and community groups to this shift.

The Place of Community Practices in City Heritage Projects

The fast transforming city is faced with a systematic tension, the necessity of preserving and promoting cultural heritage and the need for economic opportunities. This nexus is more often thought of in terms of individual advancement and personal fulfillment.

My paper examines two heritage projects, Pomahakan in Bangkok, Thailand and Kampong Glam in Singapore. Both sites represent contrasting ways in which local communities have been alienated from wider city-based efforts branding heritage. Set in a planned Rattanakosin historical park of old Bangkok, Pomahakan represents a case of how local heritage and ways of life are fighting for recognition and preservation alongside the royalist and religious heritage being represented in the Rattanakosin Project. Kampong Glam project, in contrast, has retained the local community icon, the Sultan Mosque as the jewel of the ethnic Arab-Muslim quarter, but is stripped of its residential and community elements.

The result is a vernacular physical form, redressed to play a larger role as tourist attraction and entertainment district.

Ultimately, successful projects require an understanding of how activities get sedimented, layered and connected, how places develop identity and meaning, and how policies should combine with market and community to create the attractive diverse spaces, transforming the city into what Lofland calls “a garden of earthly delights”, comprising of the kind of places we love and want to go back to.

Women Negotiating Work and Family Responsibilities in Hong Kong and Britain: Rethinking Modernity, Individualization and Intimacy

Women Negotiating Work and Family Responsibilities in Hong Kong and Britain: Rethinking Modernity, Individualization and Intimacy

Drawing on comparative qualitative research conducted in Hong Kong and Britain, this paper contests western theorists’ ideas on the consequences of modernity for women's orientations to work and family. Our data derive from life history interviews and focus groups with young women and their mothers in both locations and reveal both similarities and differences in the effects of social change on the two generations. The differences cannot be attributed to the pace or duration of modernization, nor are they wholly consistent with the changes that might be predicted by Giddens' (1992) ‘transformation of intimacy thesis’ or Beck and Beck Gernsheim's (2002) individualization thesis. While the Hong Kong women are more committed to family than their British counterparts (cf Chang and Song 2010; Jackson and Ho 2013), in particular in terms of obligations to close kin, they are also far more career oriented. Conversely, the British women seem much more individualistic, sometimes hedonistic, in their personal lifestyle choices, but they are far more willing to sacrifice career to motherhood than those in Hong Kong. Hong Kong women are much more strategic in pursuing economic opportunities, evident especially in pressure on daughters to succeed, in terms of advancing the family as a whole. This is in keeping with the idea of Asian instrumental/utilitarian familialism (Lau 1978; Chang 2003; Chang and Song 2010). Young British women are encouraged by their families to succeed, but this is not to the extent of in terms of individualization and personal fulfillment. These differences are not only cultural, we argue, but also a result of material conditions of life in each location and the ways in which gender intersects with other inequalities in local contexts, creating differential opportunities and barriers to reconciling family and work under late modern conditions.

Nationality of Food: Food Safety As National Crisis and Nationalistic Ideology in South Korea

Nationality of Food: Food Safety As National Crisis and Nationalistic Ideology in South Korea

This paper examines food safety issues as national crisis and nationalistic ideology in South Korea. Food safety issues are one of the major issues at stake in South Korea recently. The import of US beef and potential threat from mad cow diseases had caused one of the biggest protests in Korean modern history in 2008. The risk of agricultural products imported from China is almost the daily topic in Korea. The uncertainty of possible radiated fish from Japan after 311 Fukushima incidents arouse panic around family tables. Food safety is a topic that touches people’s nerves in everyday life.

In this paper, I will analyze the discourses and regulations regarding original places of food productions. My argument is that although food safety is a reason- able issue to worry about, yet in South Korea it is rather a political/nationalistic issue. An agricultural movement called shintobuli in late 1980s had successfully
built up an ideology that only domestic food is reliable and good for Korean people's body and health, no matter how those foods are produced. Regulations to enforce labeling the origins of food production enhance Korean national identity and sentiment towards their domestic products as well as nation. Fear penetrates when evolving foreign food products. Crisis of food safety thus is not only an issue about health and well beings but rather an issue in political arena. It shows the anxiety and senses of threats when South Koreans have to face other powerful countries around them such as US, China and Japan. Safety only exists inside the door. Nationality is thus not only essential for people, but also for food.

Queer Reproduction in Global Context: How Taiwan Lesbian Building an Alternatiive Sociotechnical Network of Assisted Reproductive Technologies

While Taiwan is the most LGBT friendly country in East Asia, it is still one of the twenty regions only "married" (heterosexual) couples can legally use assisted reproductive technologies (ARTs). Globally, East Asian countries are the second restrict region (next to Muslim countries) where assisted reproductive technologies eligiblity criteria are severely based on marital status. At the same time, the first lesbian parenting social group in East Asia emerges Taiwan, the interesting contradiction between legal restriction and vigorous lesbian parenting desire and association bespeak a theoretically abundant case. In this paper, through more than six years field work, participation and observation in Taiwan LGBT parenting group, the author explores 15 lesbians in Taiwan how did they negotiate to get access to ARTs in spite of the legal restriction. First, the author find self-infantion is not well diffused and used in Taiwan like the United States and some other western countries, and it's due to different feminism movement context and the predominant feminist antinatalism discourse in Taiwan. Second, lesbians in Taiwan disguise as single (with heterosexual assumption) to fulfill physician's moral concern, while some physician's consider single women are more legitimate than lesbians to have children despite of both groups are illegal users. Besides, some lesbians have pseudo-marriage with gay people to get legal access to ARTs. Finally, reproductive exile also happen in Taiwan—some lesbians go to Canada and Thailand to pursue ARTs treatments. In this paper, the authors found four different strategies the Taiwanese lesbians use to navigate their way to ARTs. They are: (1) they negotiate with their procreative desire in existing medical system, their reproduction practices challenge the traditional ARTs intend. Furthermore, queer actors, knowledge, and ARTs travel beyond borders, not only weaken the state-bound health regulation, but also embody a new transnational biomedical mobilities.

HOCHMAN, OSHRAT* (Ruppin Academic Centre, osrath@ruppin.ac.il)

Infiltration Into The Country, Infiltration Into The Mind? Framing Of Asylum Seekers In Israel and Its Consequences For Attitudes Towards Them

In January 2012, the Israeli parliament passed an amendment to the infiltration prevention law, originally passed in 1952 as part of Israel's defense policy against security threats. The new amendment expanded the infiltration prevention law to treat any person who did not enter the country through border terminals as an 'infiltrator' entering Israel illegally. The context for the amended law was the large incoming flow of asylum seekers entering Israel between 2006 and 2012. This wave of new legal means to systematically deprive them of their basic rights for asylum. While the official 'infiltrator' terminology is relatively new, the term 'Infiltrators' has been used by policy makers to describe asylum seekers already before 2008. Thus, the association of African asylum seekers with national threats is, by now, embedded in the Israeli public discourse. This study investigates whether framing asylum seekers as infiltrators is motioned not only exclusionary policy measures, but also public support of such measures. This study is the first to investigate the consequences of Israel's policy towards asylum seekers more expensively the study asks enter. It results in a spatial mismatch between the demands of young households for inner-city living and the supply of relatively affordable and accessible dwellings located more peripherally. This paper looks at the spatial production and reproduction of inequalities, which have been transferred between generations. Increasingly, we see that supporters of the Israeli state move to the most expensive neighbourhoods, whereas disadvantaged residents increasingly concentrate within peripheral parts of the city.

Starting from Unequal Positions: Patterns of Young Households Starting on the Amsterdam Housing Market

This paper takes a broad perspective regarding the success with which young people can leave their parental home and become an independent household in Amsterdam. High demand pressures on the local housing market and the financial crisis are seen to place constraints on the accessibility for young households. Nevertheless, paradoxically, especially the influx of young households currently contributes to Amsterdam's population growth. However – and most importantly to this paper – previous research suggest that inequalities between different starter groups have grown. These inequalities are often transferred from one generation to the next. Using longitudinal individual register data this paper looks at patterns of inequality between young households with different backgrounds as they make their first steps as independent households. Especially their parental background is of importance to this analysis. This data suggests that the number of starter households with wealthy parents and following university education entering the Amsterdam housing market is growing, whereas disadvantaged starter groups are increasingly excluded. We will analyze how socioeconomic and parental backgrounds influence young households' chances to start living in the Amsterdam housing market. Included elements are the age of nest-leaving, tenure type they move into, the type of household they form, and the chance of moving back to their parental home after a brief period of independent living (boomerang kids).

Processes of gentrification have made most of Amsterdam's inner-ring neighborhoods more expensive. The study asks enter. It results in a spatial mismatch between the demands of young households for inner-city living and the supply of relatively affordable and accessible dwellings located more peripherally. This paper looks at the spatial production and reproduction of inequalities, which have been transferred between generations. Increasingly, we see that young people move to the most expensive neighbourhoods, whereas disadvantaged residents increasingly concentrate within peripheral parts of the city.

Managing the Difference Engine: A Cybernetic Analysis of Discrimination

This paper will propose, as a model, a cybernetic device, deeply embedded in human language and social processes, which produces both separation – of groups and meanings – and unity and convergence. Drawing on evidence from linguistics and sociology it will argue that both movements, of separation and convergence, must be managed by the same device. This has important implications for efforts to manage discrimination of all kinds (e.g. racism, sexism, class divisions), if these opposite outcomes are produced by altering the settings on a single system, rather than by the clash between opposing systems, one of which might exist without the other.

From cybernetics, Bateson’s models for schismogenesis and for schizogenesis will provide a starting point. From linguistics especially relevant will be the work of Chomsky, Labov and the Comparative Philology tradition stemming from Sir William Jones and Saussure, and empirical studies of language change and multi-culturalism will provide concepts and materials. Theories and studies of evolution and development, as in the work of Edelman. From theories of chaos and complexity, the basic framework will come from Prigogine’s account of catalytic and auto-catalytic loops in biological and social life. Mandelbrot’s theory of fractals will be drawn on, as will theories of artificial life.

Social Networks and Strengthening the Participation in Brazil: “Projeto Vidas Paralelas” Experience

“Projeto Vidas Paralelas” – PVP aims to reveal and give visibility to daily life, culture and work from different social groups, from the perspective of the subjects involved, by means of training processes in digital culture and articulation of social networks to strengthen social participation in the construction of public policies, health promotion and culture. It is a proposal for strengthening the social movement and struggle processes through audiovisual training and use of new media as tools of expression, critical thinking and social organization. The project arises from a demand of workers for expanding the visibility of conditions and work processes experienced in the contemporary context and strengthening social movements. This is the result of initiatives taken by Brazilian unions and delegates of the Third Brazilian Conference on Occupational Health held in 2005. Thus, “Projeto Vidas Paralelas” – PVP is articulated and built with all the Brazilian Union Centers and social movements related to occupational health. Between 2008 and 2010 the project was implemented in twenty-one (21) Brazilian states, in a partnership between “Rede Escola Continental em Saúde do Trabalhador”, Universidade de Brasilia, Brazilian Ministry of Culture and Ministry of Health. In 2010 indigenous students demanded the formation of “Projeto Vidas Paralelas Indígena” – PVPí, and in 2012, the process for the construction of “Projeto Vidas Paralelas Campo”. Currently, “Projeto Vidas Paralelas” – PVP is a social network that articulates the major social movements in Brazil, related to urban and rural workers, indigenous and “quilombola” communities. This study aims to share the experience on their theoretical and methodological proposal, as well as socialize the progress and challenges regarding the implementation of the strengthening of social participation through social networks.

Do RRT and the Crosswise Model Produce Valid Measurements of Sensitive Items? An Online Validation Study

Social desirability and the fear of negative consequences often deter a considerable share of survey respondents from truthfully responding to sensitive items such as own norm violations (e.g., non-voting, tax evasion, cheating). As a consequence, the prevalence of norm violations is underestimated and results are inaccurate. Indirect techniques for surveying sensitive questions such as the Randomized Response Technique (RRT, Warner 1965) or the Crosswise Model (Tian et al. 2007), a new variation of the RRT, are intended to mitigate this problem by providing complete concealment of respondents' answers. However, it is far from clear whether these indirect techniques generally produce more valid measurements than standard direct questioning (DQ). Furthermore, most systematic evaluations so far compare a particular method's resulting prevalence estimates of sensitive behavior with DQ estimates under the "more-is-better"-assumption and lack a known true value for validation. Under the "more-is-better"-assumption higher prevalence estimates are interpreted as more valid estimates. So, it cannot be ruled out that higher prevalence estimates are a methodological artifact and not the result of a technique's superior validity. Whether or not a particular sensitive question technique truly produces more valid measurements can only be answered for certain with validation studies. But the possibilities to carry out validation studies are rare and the topics' range very limited.

Therefore, we designed an online experiment which allows for the in-depth validation of any sensitive question technique. Inspired by Fischbacher and Heusi's (2008) widely used cheating dice game we developed two dice games where respondents had an incentive to violate a norm, i.e., they could illegitimately claim a bonus payment. After the game, respondents were surveyed about their personal norm adherence, i.e., whether they cheated or not. We used different sensitive question techniques to survey this sensitive item. Resulting prevalence estimates were then validated with the true observed behavior.

Institutional Ethnography for Oppressed People

The specifically oppressed people in modern society are the people with communicative, mental or social disabilities stemming from brain injuries, developmental disorders and mental illness such as schizophrenia. These people are in many ways marginalized in modern society where social and communicative skills are highly valued and sometimes requisite for achieving a position on the labor market as well as getting into social networks of modern urban subcultures. Being in such a position often makes them ultimately dependent on welfare institutions where they have difficulties in expressing their needs and demands for social relations, daily activities and means for personal development.

Since 1997 the author has been involved in several investigations into the institutional landscape for these people following the ambitions of an applied institutional ethnography. That means that our point of departure was the life-world of these people and their efforts to get a coherent everyday life and a basis for personal development. With this reference we judged the total structure of insti-
Experiencing It like a “Gogo”: Intergenerational Relationships in South Africa

“Gogo” is the Zulu word (from “ugogo”) for grandmother and this paper will focus on the pivotal role of older women in the context of entrenched inequality and Japanese poverty. An estimated 1.2 million so-called HIV/AIDS orphaned children, of whom around sixty percent reside in grandparent-headed households, exacerbate this and obviously place on the research and policy agenda the continuous asymmetrical dependency and needs of younger generations on older generations. Although these grandmothers' contributions are increasingly recognised, current explanations of the dynamics within these multi-generational networks lack a nuanced understanding of their complexity and ambiguous nature. Drawing on 58 narratives from different generations (a generational sequential approach) in 20 multi-generational networks, this contribution qualitatively explores grandmotherhood in Mpumalanga, South Africa towards a deeper understanding of such inter-generational relationships. The main findings relate to the intrinsic and extrinsic vulnerability of the sacrificing older carer in resource-constrained and uncertain contexts. This has implications for them at the nexus of their individual rights and their future care outcomes.

Promoting Intangible Cultural Heritage Protection Through Research: An Analysis Of The Impact Of Academic Discourse On Local Protection and Tourism Practices In China

This study traces the impact of the Chinese academic discourse on intangible cultural heritage protection and tourism practices in the PRC at the subnational level. Since the concept of intangible cultural heritage (ICH) entered the Chinese academic discourse in 2003, the academic elite has actively promoted the development and protection of intangible cultural heritage nationally through the publication and circulation of research. While their influence on the drafting process of the “Intangible Cultural Heritage Law” has been acknowledged, hitherto little research has been conducted on their impact on local governmental policies, protection strategies and tourist promotion activities. This paper therefore aims at filling this research gap by conducting a comparative historical text analysis of Chinese academic journals from 2003 to 2013 in order to assess how academic discourse affects local government strategies for the branding of intangible cultural heritage. Comparing various selected cases, the paper will examine how scholars support local governments by reinventing and framing local traditions according to ICH discourse, promoting them for ICH nomination and attributing tourist values. Furthermore, it will explore how successful local government practices and management models of ICH protection are disseminated within epistemic communities of scholars, ICH experts and local administrators. The findings show that the impact of Chinese academic discourse on specific local practices of ICH protection but also point to common protection strategies ready for adoption in other localities.

High Aims, Low Outcome: Implementing Gender Equality in Japan

Japan has ratified the Convention for the Elimination of All Forms of Discrimination Against Women (CEDAW) in 1985. Next to other measures, the Convention led to enacting the Basic Law for a Gender-equal Society in Japan (1999). This law is the most outstanding and far-reaching policy regarding gender-related issues in Japan to date. However, when it comes to gender equality in international comparison, Japan still lags far behind other countries, ranking 101 among 135 countries in the Global Gender Gap Report 2012. This paper asks for the reasons of the discrepancy between the far-reaching aims of policies for gender equality and the low outcome. By taking the Basic Law for a Gender-equal Society as a case study, this presentation reassesses, how and to what extent the ideas of CEDAW have been implemented throughout Japan and what barriers prevent successful outcome. This question is being taken into account from different perspectives. Next to deciphering the mechanisms and strategies of implementing gender equality on the regional level of the 47 Japanese prefectures, an outlook of policy change during the DPI government (2009-2012) and the new LDP government that took over in December 2012 will be given.

The paper draws back on results of the authors Ph.D. thesis on the implementation of gender equality in Japan as well as on a paper on the impact of the DPI government in the field of gender equality policies (both published 2013).
Alcohol, the Body and Gender in Later Life

Alcohol consumption in later life has emerged as a public health concern in many advanced economies in recent years associated with an observed increase in alcohol consumption among the elderly. The dominant public health message has centred on the need to moderate drinking in later life due to the direct and indirect impact that alcohol has on frailty in later life. This paper challenges the assumption that increased alcohol is associated with functional as well as social decline but in doing so recognises how assumptions about the inter-relationship between alcohol consumption are both gendered and class-specific. Drawing on both quantitative and qualitative data on alcohol consumption in later life we explore how drinking is a cultural practice that both resists and conforms to expectations about ageing and frailty. In particular we consider how drinking patterns are both gendered and classed and how drinking is a practice through which idealized norms of femininity and masculinity are performed in old age, but also how these can be resisted. The paper is based on quantitative analysis of the English Longitudinal Study of Ageing and qualitative analysis of focus groups with older people on drinking in later life.

JS-76.1

Youth Leisure As Job Training and the Pursuit of Distinctiveness

In 2009 a group of students at the University of California, Santa Cruz who self-styled themselves as the ‘Research and Destroy Collective’ issued a Communiqué from an absent future denouncing how demands on young to perform and be active rather than liberating, were stifling their futures, and that ‘even leisure is a form of job training’. This paper responds to this rally cry to map out how young people are increasingly engaging in leisure pursuits in advanced economies in order to enhance their CVs. I will consider how leisure activities, which may include travel, sport, hobbies, volunteering and membership of organisations, are increasingly seen as ways of standing out from the crowd and demarcating oneself as distinctive. While these quest for uniqueness is not a particularly new quality, I will explore how contemporary leisure activities are re-framed as means of job training. I will consider what leisure activities young people pursue in order to enhance their CVs, what the dynamics of these activities are for young people, and the implications this has for young people’s futures in a world of work.

JS-55.6

Supply-Side Economics and Demand-Side Planning: U.S. Southwest Water Challenges, the Case of Oklahoma

In 2013 the U.S. government categorized all 77 counties in Oklahoma a disaster area due to persistent drought conditions. While 597 counties nationally were identified within theoutrage, Oklahoma, Kansas, and western Texas were hardest hit. Years before this, scientists’ projections of anthropogenic climate change showed “widespread agreement” that in the Southwest “the levels of aridity seen in the 1950s multiyear drought, or the 1930s Dust Bowl, become the new climatology by mid-century: a perpetual drought.” However, such information is not the basis of ecological and economic planning in the South. I examine the development of the Comprehensive Water Plan recently adopted by the state of Oklahoma to demonstrate how planning in the region continues to operate on an undemocratic and “demand-side” basis. With disastrous consequences, the OCWP offers no real plan for long-term change subject to science or the democratic process. Rather, the politicians demonstrate their approval of historical modes of development in the region while downplaying the costs and publicly encouraging skepticism of scientific projections. Drawing on Michal Kalecki’s distinction between “monopoly-capitalist” and democratic planning and exploring the historical actuality identified by Forster Nduhuri towards “demand-side” (in ecological terms) planning, I offer a theoretical approach to understanding the limitations of the dominant mode of planning for addressing such long-term anthropogenic ecological crises. I argue that the official designation of drought-stricken counties as facing “disaster,” has short-term implications and is therefore misleading. This region must be recognized as facing an historical transition, in need of genuinely democratic, and ecological or real “supply-side,” economic planning to avoid some of the worst ecological and social outcomes. To end, I offer suggestions based on current, localized attempts at planning outside of the dominant framework, for alternative approaches that, if forced by movements to the state level, or beyond, could help reverse current trends.

RC50-811.2

Tourism Studies and Conceptual Unsettlement: The Decolonisation Of The Bleached Field

Each discipline / domain should regularly examine its effectivities regarding the representation and making of the socio-historical world. In inspecting the so-called global provocations of tourism, this presentation advances the view that the increasing dominion of tourism / Tourism Studies over matters of culture, heritage, and nature has not only been carried out according to eurcentric canons, but has been bolstered by theoretically feudal forms of knowing. It thereby calls for a concerted decolonisation of Tourism Studies --- that is, for a conceptual cleansing of the field to clearly identify and confront the hegemonic agency and...
authority of the industry over colonised places / spaces and over histories / contemporaneities.

The presentation therefore will principally question:

1. Which priority areas of concern in international tourism should be decolonised, if any?

2. What would/should/could the decolonisation of Tourism Studies principally entail, or mainly consist of?

3. Who should be involved in the so-called decolonised ‘cleansing’ of Tourism Studies?

4. How would the decolonisation of tourism be substantiated educationally (in the schooling of practitioners and researchers who currently drive international tourism)?

The main supposition underlying this paper is that the decolonisation of the so-called ‘bleached realm of tourism’ (after Pfaelzer’s term “bleached” field / “bleached” discourse) would involve considerable conceptual unsettlement for many of those who work in Tourism Studies / Tourism Management. Much of the required re-oriented understanding would indeed be corrective (as the industry’s internal and collaborative sinews of oppression are identified). Hence a more fluid acumen is demanded vis-a-vis the field’s “improved conversation with the world” (after Bauman), where the productive / composite genius latent within it can be positively used much more strategically and frequently for distant / removed / colonised populations in their own found interests.

HOLM, GUNILLA* (University of Helsinki, gunilla.holm@helsinki.fi)

Photography As a Research Method in Exploring Bilingual Teenagers’ Language Minority Group Identifications

Using participatory photography as a research method is underutilized in sociological youth studies. Young people today are comfortable using photographs for communication. Visual research methods are increasing in overall importance, but especially the analysis and interpretation of visual data have not changed much in the last decades. Hence, the focus in this paper is on analysis and interpretation of photographs taken by 15-year-old students in the comprehensive school in Finland. The importance of the researcher’s language minority habitus in interpretation is explored in relation to the habits of the language minority students.

The teenagers all belong to the Swedish speaking minority group in Finland. The purpose of this study is to explore how the Swedish language minority students position themselves with regard to belonging to the Finland-Swedish group by using photography as well as interviews as the data collection methods. In particular we were interested in exploring how photographs and interviews complement each other. Of particular interest are the teenagers’ identifications with and their views of the Finland-Swedish language minority group.

The study is part of a larger multi-sited ethnography and in this paper we focus on the photographs taken by students in four schools and 62 interviews and 22 photo elicitation interviews.

We found that the photographs and the interviews complemented each other by bringing up different issues. The interviews focused mostly on the language it- self and the daily life in school whereas the photographs were metaphorical and brought up aspects more difficult to verbalize. The photographs expressed the habitual of being a Finland-Swede. There were photographs expressing the loneliness of being a minority member, the harassment, the sense of belonging as well as the comfort in the minority networks, traditions and culture.
are eligible for early retirement and disability benefits, the diagnosis in many cases does not present financial disaster. However, receiving disability benefits led to stigmatization through the bureaucratic mechanism in place. Subsequently, women discussed feelings of shame and worthlessness induced by bureaucratic mechanisms.

The present study will be one of the first studies in which international comparisons on qualitative interview materials that have been collected in different languages and by different interviewers are analyzed within the same research framework. Thus the paper presents important findings on production of inequalities in high-income countries, and provides a new methodology for cross-cultural secondary analysis.

HOLMES, PABLO* (University of Brasilia, pabloholmes@gmail.com)

Social Inequalities in Latin American Social Thought: Beyond Culturalism and Class Theory

Since its origins in the nineteenth century, Latin American social theory has been primarily concerned with the unequal position of the region in the world society. The “Latin American condition” has been largely explained with reference to its “cultural singularity”-a vis-a-vis “developed societies”. In the last two decades, following a broader critique of developmental theories, there has been strong criticism of cultural explanations for global, regional and national inequalities in the region. In Brazil, some theoretical attempts have attracted attention. The first one, formulated in the beginning of the nineties, argued that structural forms of extreme social exclusion from modern social systems like law, politics, economy and education would have striking consequences for the institutional reproduction of these systems in the region. Accordingly, there would emerge a small sector of a socially over-integrated population, which would be in the position of using legal and political institutions for its advantage. Simultaneously, a broader sector of under-integrated population would have only an insignificant meaning for institutional operations, remaining thus excluded and being used to reproduce unequal social structures. Another well-known approach has drawn on many elements of this formulation, insisting, however, on classical categories of class theory to explain the social reproduction of inequality.

In the present paper, I would like to look critically at these different interpretations. I will, thus, argue that, although one can consider the existence of social classes as an outcome of important social dynamics, any theoretical explanation of social inequalities in the Latin American context must take into account the role of legal and political institutions. The paper also argues for the necessity of taking not only institutions into account, but also for the importance of bringing back the role of transnational institutional dynamics in the debate, although without stepping back into old culturalist traps.

HOLMES, PABLO* (University of Brasilia, pabloholmes@gmail.com)

The Social Constitutionalization of Trade? the WTO-Trips and the Chances of a Reembedment of the Global Regime of Intellectual Property

Since the financial crisis, the consciousness has grown that increasing social inequalities can have impairing implications for the functioning of institutions and for economic efficiency. Nevertheless, the tools that were known until now to tackle inequalities still seem to be ineffective on the transnational level. Mechanisms of tax & transfer, as well as the promotion of social rights, cannot be used in the same way as they had been in national contexts. For many scholars, the only way to face these problems would be a shift towards the transnationalization of social rights. Although much talk has been seen on the necessity of “constitutionalizing” the WTO, the fact remains true that the global regime of trade remains highly fragmented. Moreover, the rules of the many regimes existing in the WTO do not seem to be interpreted under the light of the so-called “global regimes of human rights”. Rather, it seems that they reproduce extremely specialized vocabularies, each of them taking for granted specific conceptions of how to balance property and social rights. As some authors argue, if it is true that the highly specialized global regimes of governance operate in close relation to economic knowledge, maybe they could develop some sort of “responsivity” to their non economic social environment on which they depend. In the present paper, by carefully analyzing 34 decisions of WTO dispute settlements regarding the Agreement on Trade-Related Aspects of Intellectual Property Rights, I try to assess the extent to which it is possible to identify in this regime internal elements of the constitutional semantics of social rights or possible functional equivalents of it. Hence, I will assert whether it makes sense to have any hope on transnational constitutionalization processes of trade carried out exclusively by the legal and functional mechanisms of economic global governance.

HOLWOOD, JOHN* (University of Nottingham, john.holwood@nottingham.ac.uk)

The Neo-Liberal Knowledge Regime and the Displacement of Critique

This paper will address neo-liberalism not as a theory of public policy, but as a theory of knowledge. It will argue that neo-liberalism favours the market as a mechanism for the generation of knowledge. In favouring knowledge under contract, neo-liberalism is explicitly hostile to those forms of social science that provide expertise precisely because that expertise might sanction political intervention. In this context, the forms of social science that are favoured are those that can be commercialised in the form of re-packaging ‘big data’ and ‘behavioural’ interventions. Sociology’s traditional concern with social structures is displaced by anti-social (structural).

HOLTHUS, BARBARA* (German Institute for Japanese Studies, barbarahlol.thus@gmail.com)

Parents Against Radiation: Strategies Towards Advocacy

To what extent do organizations within the larger anti-nuclear power movement monitor, interact with, and possibly influence (local) authorities in the policy making process? Thus in which ways, if any, do these organizations provide advocacy to their members? And how do these compare cross-culturally?

After the triple catastrophe of March 11, 2011 in Japan, as part of the upsurge of the larger anti-nuclear power movement, more than 300 citizen groups were formed throughout the country that joined forces within the “National Network of Parents to Protect Children from Radiation”. Groups within this network use different strategies: Whereas some participate in highly visible protest activities such as mass demonstrations, others belong to the “invisible” part of civil society using less aggressive tactics to influence protective measures against nuclear power, contaminated food and playgrounds.

Our study has a multi-method approach: we combine field research through participant observation with semi-structured interviews and the analysis of our survey questionnaire, conducted among members of all 23 local chapters of the “Tokyo Union to Protect Children from Radiation”, a post-3/11 network of parents social movement organizations. Using this network as case study, we analyze strategies and tactics of political participation which post-3/11 parental organizations use. In a second step, we compare these to the strategies and tactics employed by social movement organizations founded in response to the Three Mile Island nuclear incident in the US more than 30 years earlier.

For the Japanese case, our preliminary findings suggest that whereas strong social capital emerges out of the activities within the group, the impact of advocacy understood as influencing policy outcomes is much weaker. Whereas this result stands in line with existing research, we argue however that the parental groups shape their style of activities to build up sustainable relations with local authorities in the long run.
The Function and Uses of Society

Who needs society anyway? Since Weber, many sociologists have shunned the notion of society as a reified collective concept; and in the wake of the globalization debate, the critique of ‘container theories’ of society has further decreased the number of those who regard society as an essential sociological concept. But ‘society without society’ not only runs the danger of discarding an important element of social theory without a proper alternative but also fails to account for the everyday presence of the term outside academic discourse. This paper addresses the sociological and everyday usages of the concept of society from a functional perspective. Although the function of society, as the most encompassing social system, must be conceived quite broadly, it nonetheless remains distinctive if compared with other social systems such as organizations and face-to-face interactions. Only loosely related to this functional reconstruction of the concept, ‘society’ also continues to play a role in everyday discourse. Yet what kind of society is thereby discursively constructed? The usages of the term ‘society’ in mass media and other discourses are difficult to pin down; yet a common denominator lies in the fact that society usually refers to an anonymously constituted and therefore not directly addressable social horizon.

HOMANEN, RIKKIA* (University of Tampere, rikka.homanen@uta.fi)
Reflecting on Work Practices: Possibilities for Dialogue and Collaborative Knowledge Production in Institutional Ethnography

The presentation explores ontological and epistemological issues of institutional ethnography (IE) in relation to bringing together different knowledges and epistemic commitments. More specifically, the presentation addresses the possibilities for dialogue and collaborative knowledge production between research participants, practice-oriented, experience-based ideas about their work and researchers’ academically informed concepts. The issues are explored through analysis of how participants in an IE project, namely researchers and maternity nurses, engage in reflection collaboratively on the care activities. The material analyzed are fieldnotes produced at workshops arranged for joint reflection on the nurses’ own work practices as documented on video.

The analysis shows that the possibilities for, and the difficulties of, achieving dialogue emerge from three sources. First, conflicting knowledge interests between researchers and research participants may lead to complementary projects in situations where all parties align themselves with the other’s interests. In such situations, experience-based knowledge may be co-produced through storytelling motives. Second, doing IE is about the researcher moving from one setting to another and taking up different positions accordingly. These fluid positions create constraints and possibilities for dialogue. An outsider expert/administrator position and circumstances that reinforce it are not conducive to the articulation of multiple voices. However, it is possible to shift the overall positioning so that the participants may co-produce knowledge. In my case this was done through working with videos and researchers’ provocative commentary that bore on the nurses’ own work practices. Third, presenting theory-based interpretation that addressed an organizing element of care provoked accounts that addressed the organizing element from a different angle and specified how such organization is actually realized. Reframing the ongoing analysis through such dialogically produced experience-based knowledge means that the theoretical concepts are used not to make generalizing statements on commonalities in the material but to put them to test.

After the Dream of Medicine As a Versatile Solution, What Comes Next?

Since ancient times, Japan has had an unusual self-care culture. Following Japan’s nineteenth-century modernization, Western medicine has prevailed in the country, and the high health awareness of lay people forms the basis for promoting medicalization. Modern Western medicine is currently the national standard in Japan, and even for universal health insurance coverage. Unlike self-care movements closely connected with individual rights, such as in the United States, Japanese lay people’s high level of interest in health does not exert an influence at the institutional level. Thus, medical discourse still has prime influential power.

The future of Asia will be highly influenced by the current opinions of its youth and bilateral relations between China and Japan. The current perceptions of the Chinese youth have not been fully developed, and there is a gap in perceived and actual perceptions on issues which are acting as roadblocks in bilateral relations. Previous research suggests that there are highly emotional responses to numerous controversial issues from both sides (Yong, 1997; Choi, 2010; Fan 2012), but little fieldwork has been done to identify the feelings involved in these emotional responses and how individuals perceive their peers’ opinions.

Recent surveys conducted by Genron-NPO in 2012 have been able to capture the opinions on a number of topics and the reason for negative opinion, but failed to ask to identify respondents’ feelings as well as how they believed themselves to be perceived by the other nation.

Therefore, to improve the relations between the two countries in the future it is imperative to identify the feelings and the perceptions of the Chinese youth concerning Japan and opinions on the controversial issues. Preliminary analysis of data collected from 261 college students indicates that, on average, Chinese students rate themselves and their peers to be more knowledgeable than the average Japanese student on China-Japan relations; what is more, they perceive the Japanese to have more amiable feelings towards China than their Chinese counterparts feel toward Japan. There is evidence to suspect the false-consensus bias is present and the possibility of naive realism which has conflict resolution implications. Though numerous social scientists have focused on the past and the historic issues between Japan and China, my goal is to focus on the current perceptions and their implications for building a better future.
Who Feels Powerless?: An Examination on Self-Attitudes of Japanese Youth

Youth labor market in Japan has changed drastically since the beginnings of 1990s. It is often pointed out that both precarity and severity of work, the risk of poverty and social isolation have increased remarkably among Japanese youth. In order to forecast the future of Japanese society and to search for clues to break its deadlock, we need to grasp the precise trajectories and attitudes of young people.

Youth Cohort Study of Japan (YCS), a five-year longitudinal quantitative survey of young people in Japan, provides us abundant information which is beneficial to the purpose mentioned above. Using the YCS data, this analysis focuses on factors which affect self-attitudes, especially the sense of powerlessness and self-esteem of Japanese youth. The reason is that these attitudes are deeply related to agency and resiliency of young people, who is expected to rebuild the staledmate social structure.

Among numbers of axes which divide young people, most influential ones are gender, family SES, trajectories of transition from school to work, educational experience, regional mobility, workplace environment and social network. Through multivariate analysis, it is found out that there are remarkable differences both of levels and of factors concerning self-attitudes between men and women. The results imply that Japanese young men, including regular workers who have been thought to be advantageous compared to non-regular workers, feels more depressed than young women. The deterioration of labor condition since the early 1990s had much graver negative impact on Japanese men than women as the change of male-breadwinner norm has been far slower than that of the actualities.

Immigrant Homeland Re-Creation and Healing in Urban Community Gardens of Los Angeles

This presentation will extend the definition of the domestic sphere to include urban community gardens, which I argue serve as critical spaces that allow undocumented Latino immigrants to sustain themselves and to re-create homeland in urban Los Angeles. I focus on undocumented immigrants, some of them indigenous and some mestizo in southern Mexico, and in Guatemala. Illegality and legal violence, racism, and marginality characterize urban life in these neighborhoods. Home-making and healing practices occur in these urban community gardens, which become shared domestic space. Mexican and Central American immigrants and their families gather at these gardens to grow familiar foods that nourish them. In the process, they connect their children, some of whom are U.S.-born, with ancestral traditions, attaching them to homeland culture, and to an experience with la tierra (the earth). They are not simply feeding their families, as they are spatially re-appropriating urban Los Angeles and re-coding it with material plant life such as sugar cane, mango trees and corn stalks.

The urban community gardens are also healing spaces. The gardeners cultivate and share a range of medicinal herbs, creating informal homeland pharmaceutics that remedy tooth aches, nervous anxiety and indigestion. The gardens also provide palliative remedies for intimately experienced social problems, including loneliness, social isolation, and the depression and anxiety that accompanies poverty and illegality.

The domestic sphere has always been a loaded place, a site of comfort, sustenance, and belonging, but also, as feminist scholarship reminds us, a site of patriarchy and conflict. So it is with the urban community gardens. While the change of male-breadwinner norm has been far slower than that of the actualities.

A Special Way of Modernization ("Sonderweg") or Methodological Cosmopolitanism?

Since the IMF crisis of 1997, Beck and Beck-Gernsheim’s “individualization thesis” has attracted much academic attention in Korea, for it was seen to explain the processes of social change and the transformation of family forms. Unlike the original German presentation, which focused on the transformation of family forms, Korean academic analyses, when employing the same model, are limited to institutional processes of strong Confucian family as unique characteristics of the Asian path to modernization. Among numbers of axes which divide young people, most influential ones are gender, family SES, trajectories of transition from school to work, educational experience, regional mobility, workplace environment and social network. Through multivariate analysis, it is found out that there are remarkable differences both of levels and of factors concerning self-attitudes between men and women.

The results imply that Japanese young men, including regular workers who have been thought to be advantageous compared to non-regular workers, feels more depressed than young women. The deterioration of labor condition since the early 1990s had much graver negative impact on Japanese men than women as the change of male-breadwinner norm has been far slower than that of the actualities.

Social Emotional Stability Facing Disaster Warning

Social emotions are a complex system, with a dissipative structure. When the carriers of social emotion percept threat from a disaster warning, the initiative dissipative structure of social emotional system will be broken down. This study applies the dissipative structure theory to explain the social emotional response to a disaster warning from the aspect of a complex system. Firstly, we analyzed the dissipative structure features of social emotion and used Social Emotional Entropy (SEE) to measure the changes of social emotional stability, which was explained by the dissipative structure theory of complex system (DST). Secondly, we considered that the social emotional stability is not simply the totaling of individuals’ emotions, but results from both the combination of individual-level affective factors as well as from the group or contextual level. In that way, we used the Cellular Automaton modeling method integrated with the Social Network Theory, in order to present a dynamic dissipative process of SEE from both aspects: “bottom-up” and “top-down”. Finally, we used a case study to verify the effectiveness of the integrated method. Our results indicated that the social network properties and population characteristics are key determining variables of social emotional stability.

Golden Age - Ageing, Well-Being and Tourism

Population ageing is likely to affect the tourism movements especially in Western countries. The importance of seniors for the tourism economy is growing. Nowadays seniors are expected to be more active in domestic tourism and travelling more often abroad than previous generations. However, there are several reasons why ageing people are not travelling as health problems and lack of resources.

The paper clarifies how active travelers ageing people are and it identifies reasons why in Korea discussions on individualization are exclusively concentrated in areas of gender and family.
The older age cohort was traveling less than the younger one as expected. The socio-economic differences are wide in domestic tourism and especially traveling abroad. People traveling often were also more active in other leisure activities. Respondents’ self-estimation of their health predicted the propensity of traveling. Health problems were one main reason why ageing people are not traveling (anymore) but also other factors like lack of money.

Child Investment in Youth Care Services: Dilemma’s and Consequences

Welfare states have (re-)invented family policy as a response to the notion that children are the social, cultural and economic capital of societies. Consequently, the healthy development of children is an important aim in policies regarding child care, and the role of parents in safeguarding their children’s development is stressed.

For professionals working in the field of youth care this change in policy aims has had its effects on the way their profession is organized and carried out:
1. more attention is directed towards preventive and early interventions—in order to ensure the best possible developmental trajectory—as opposed to curative interventions.
2. There is a stronger emphasis on effectiveness and evidence based practices and its concurrent emphasis on protocols and guidelines. At the same time however, professionals are expected to adjust their work to the demands of parents, and to serve parental expectations and wishes.
3. In line with this, professionals find themselves balancing “distance” and “control”: working with parents presupposes that professionals can’t be directive and should refrain from being too authoritative. Yet, professionals are also expected to intervene when children are at risk, and policy measures emphasize risk-assessments and inter-organizational information exchange.

The international research project “Governing New Social Risks” centers on this turn to parenting. In our paper we will discuss how these changes and dilemmas have affected the way in which professionals organize themselves in government’s organizing the own profession, and their relation with parents and families. Based on interviews with (academic) parenting experts, relevant policy makers and professionals themselves, we will present our findings on how professionals give form to these policy changes.

Although the turn to parenting takes place throughout welfare states, we will focus on the Netherlands as a case example. However, data from the other European countries included in this international research project, will be taken into account.

HORI, MAKIKO* (Wichita State University, maki.hori@wichita.edu)

Gender Differences in Happiness: The Effect of Marriage, Employment, and Parenthood in 33 Countries

Happiness remains an important measure of psychological well-being. Given the current challenges of struggling global economies and political conflict and unrest, psychological well-being has never been more important. While previous studies have focused on how women, the young, the unmarried, and people with lower socioeconomic status are more likely to suffer from lower psychological well-being, they fail to fully capture societal-level conditions’ impact on individual happiness. Although previous studies have focused on how societal conditions affect individuals in a given society and shape perceptions of their personal conditions, in this study I focus on gender. Utilizing hierarchical linear modeling on data from the 2002 International Social Survey Programme, I examined gender differences in happiness and how country-level gender stratification affects the relationship between happiness and family-related predictors in 33 countries.

The results show that there are clear and significant gender differences not only in the choice of happiness between men and women but also in the factors affecting their happiness. While, on average, women evidenced lower happiness than men, results indicated that there were gender differences in the effects of being married, not working, and the number of children individuals had on happiness. However, despite expectations, country-level gender equality and egalitarian norms would improve women’s happiness, the measures of gender equality and gender ideology at the country-level showed mixed results in the cross-level interaction and therefore suggestion are made for future directions in this important area of research.
This paper examines the social construction of the categories of ‘religion’ and ‘the secular’ in Japan. This is a preliminary analysis of how the term ‘religion’ was constructed and the ways in which the two categories focusing on the social process in which particular meanings of the terms of ‘religion’ and ‘the secular’ have been constructed and the ways in which the two categories are demarcated from each other.

Horowitz, Adam* (Stanford University, ahorowitz@stanford.edu)

The Myth of Multireligiousness: Assessing the (Im-)Possibility of Identification with Multiple Religions

The rate at which people of different family-origin backgrounds (race, ethnicity, religion, etc.) form romantic relationships and have children continuously increases in the United States. Scholarship has provided compelling accounts of the experiences of the children of inter-racial couples and their construction of “multiracial” identities. This study explores whether a similar form of identity construction with multiple religions is possible for children of inter-religious couples. To do this, I examined the mechanisms most salient in religious identity formation and their effects on the possibility of identifying as “multireligious.” I explain the relationship between parents’ choices in the religious upbringing of their children (or lack thereof), their influence on cultural/religious exposure, and how these factors affect one’s ability to feel a sense of religious identity and belonging. By addressing the role of heredity and heritage in making claims to religious belonging, this paper sheds light on the complex intersection of race and religion as categories of identity in American society.
ology, state, modernity, family and kinship, civilizations, and human inequalities. A tentative re-interpretation of Parsons' AGIL-scheme in light of Thernborn's life-long preoccupation with the same themes ends the paper. This brings us to the present state of the discipline, its relationship to the outer world and prospects for its future.

Miracles, Giants, Dragons and Small Tigers: Beyond the Unique, Hybrid, World and Model – Asian Welfare States on the Move?

For two decades, comparative welfare state research on developments in Asia was largely confined to five or six cases: Japan, South Korea, Taiwan, Hong Kong, Singapore, and occasionally China. These welfare states have continued to be in the forefront of recent social research. However, with rise of PRC over the last decade this picture has entirely been changed. On the one hand the focus of global social policy research has shifted towards the monumental transformations going on in China also regarding welfare policy. Chinese social researchers have come to the fore in this area to an extent never seen before. In particular western researchers have flocked to this lump of sugar and interacted with the growing stock of domestic comparative scholars in this field. So far, this stream of research is only in its infancy, the outcome is uncertain but there is a dire need to bring such studies into the larger picture of comparative, cross-national welfare state research.

Climate Change in Portuguese Media: Global Politics and the Vanishing National Reality

Portugal is highly exposed to risks and vulnerabilities related to climate change, such as a continuing increase of average summer temperature, more frequent and intense heat waves and a reduction of rainfall, and, as a consequence, floods, droughts, fire hazards, air pollution, erosion and changes in water quality and availability (Santos and Miranda 2006). Climate change is therefore seen as a challenge for the country's future, and media debates are likely to play an important role regarding the choices that have to be made. In fact, the framing of climate change in the media guides public perceptions of reality and offers hints for thinking and acting (Entman 2004) and to the policy-making level. In line with the COMPON research protocol, newspaper articles were selected by searching for the keywords "alterações climáticas" (climate change) in all items published during the period of 2007-2010. The sample consisted of 25% of all newspaper articles indexed in the database. The selection was stratified by year. Results show that the Portuguese press tends to reproduce the global political agenda on climate change, mainly focusing on international events associated with global political decision-making processes, while typically reducing the debate to climate change mitigation. Adaptation’s low visibility may be explained by a dependency of Portuguese newspapers on the international political agenda and by the news sources used. The lack of mobilization of national leaders for adaptation may also play a part. This type of coverage tends to obscure local and national realities and responsibilities, though they are key to addressing climate change.

Changes in ICT Usage in Times of Scarcity

The information and communication technologies (ICT) market has been showing a remarkable expansion. Considering the severe ICT-related and economic crisis, some countries are currently facing, and the restrictions in several forms of consumption due to scarcity, what changes may be affecting ICT usage in everyday life? This presentation tries to address how are individuals adapting to new challenges related to inequity of (material) access to ICT and a growing digital divide in ICT usage, which may emerge or be intensified in particular relevant in the context of scarcity such as the one Portugal is now experiencing.

The research adopts an approach based in recent theoretical developments in sociology of communication, which consists in analyzing media as practice. This perspective enables media research to move beyond a narrow focus on audience practices in order to understand the complexity of contemporary media-saturated cultures (Coully, 2004). Studying the whole range of practices focused directly or indirectly on ICT allows understanding how ICT are embedded in everyday life and are constitutive of routines (Coully, 2004; Pink and Mackley, 2013). By focusing on social practices, attention is shifted from the individuals’ agency and choice to the pro/construcively structural elements such as things, technologies, physical entities, competences (skills, know-how, techniques), and meanings (symbolic, ideas, aspirations) are connected and enacted in the form of patterns of practices, thus allowing to explain the dynamics of reproduction and transformation of social practices (Shove, Pantzar, Watson, 2012).

The analysis draws upon data from in-depth interviews conducted with people from diverse social groups in terms of age, education and socio-economic status. Results show the complexity of the relations established between individuals’ practices, motivations, knowledge and material conditions related to ICT use.
This research focuses upon the institutional systems which have been constructed by the regional head-quarter managers of Japanese multinational corporations (MNCs) in Asia-Pacific. Theoretical frameworks for dealing with these systems or conditions are notably conceptions of institutional entrepreneurship.

The activities of Japanese multinational corporations in the Asian region are not new. They have been initiated by head quarters in Japan, however they require appropriate and realistic organizational procedures. In general, Japanese expatriates who are delegated from the head office in Japan have played vital roles in such system-construction as institutional entrepreneurs. They utilize their positions and authority derived from the head office, and at the same time they have made efforts to advance their local networks and use resources and relationships in the host community so as to develop a new institutional scheme which is responsive to the perceptions of members who are involved in these networks.

For some reasons, their efforts have not always led to successful outcomes. In this research, the entrepreneurial characteristics that have been shown in the construction of appropriate relations between their networks and the fields are presented in order to identify the factors which determine success and failure.

Grass-Roots Healthcare Reforms: Collaboration Between Patient Support Groups and Medical Professionals

Healthcare reform that responds to unmet needs is a most urgent challenge. While many individuals and agencies, including governments, associations of healthcare professionals and lawyers have worked to solve these problems, the collective action of people with illnesses and disabilities and their families is just as important. The aim of this study is to examine how patients' support groups change and help to create healthcare services that satisfy what they want and suit their needs, by examining the activities of two organizations: one for people with sarcoma (a sort of cancer), and the other for ME/CFs (myalgic encephalomyelitis / chronic fatigue syndrome) focusing on their advocacy activities. The advocacy activities of these groups can be called Health Social Movements.

According to my previous survey, patients expected that the groups' activities would change governmental healthcare policy, provide adequate medical and social services and eliminate discriminatory perceptions against their disabilities. But there are so many obstacles they must face until their expectations are realized. However, these case studies showed that the advocacy activities of patients groups have actually achieved their goals to change the healthcare settings. The sarcoma support group persuaded medical professionals to establish a sarcoma center at hospitals to provide appropriate medical access for the patients. The ME/CFs support group has convinced medical professionals to conduct scientific research on the disease and government workers to set reasonable social services.

This study suggests that the advocacy activities of the groups are becoming increasingly important for both the patients themselves and healthcare providers. A sign of social transformation of the healthcare structure, from a bureau-crat-driven one to a civilian-driven one, can be seen in this study. This process of people's involvement should be a key factor in the design of a more effective and sustainable healthcare system in the future.

HOSOGAYA, NOBUKO* (Sophia University, n-hosoga@sophia.ac.jp)

Institutional Entrepreneurs in Multi-National Corporations: Embedding the Managers' Networks into Organizational Fields
Mending the Master Programmes: An Effort to Improve Progression and Completion Rates in Graduate Education

Generally, studies of dropout and completion in higher education have been concerned with undergraduate education and little attention has been paid to graduate level.

The Bologna process has led to a introduction of reforms in higher education in several European countries. In Norway a comprehensive reform in higher education – the Quality Reform – was implemented in 2003. Two of the aims with this reform was to improve the students’ progression and completion in higher education. To achieve this, a number of changes regarding the structure and pedagogy in Norwegian higher education system were introduced.

This article addresses completion and dropout in Norwegian university graduate higher education before and after the reform, using register data consisting of the 2005-cohort and one after the (1999-cohort). The aim of the article is to two-fold: to investigate if there are changes over time in completion rates and dropout rates in graduate university education, and if the changes can be interpreted as an effect of the comprehensive reform in Norwegian higher education implemented in 2003. To what extent can national translations of international reforms make changes in national completion rates?

Preliminary analyses, including important independent variables such as SES and gender, indicate that there has been an improvement in completion rates after the reform, but that the dropout rate might not have changed significantly over time. There was an improvement in the proportion of students completing an estimated time (2 years). Moreover, the process of completing a graduate university degree in general is more rapid after the reform than before.

Social Innovation: Driving Force Of Social Change

The importance of social innovation in successfully addressing social, economic, political and environmental challenges of the 21st century as e.g. poverty and inequality is recognised not only within the Europe 2020 strategy but also on a global scale. However, despite this growing awareness of the significance of social innovation, there is still no sustained and systematic analysis of social innovation, its theories, characteristics and impacts.

Since Schumpeter, the concept of innovation has focused predominantly on economic and technical developments, whereas social sciences were particularly interested in the corresponding social processes and effects. This may explain why social sciences, to this day, have been conducting empirical work on social innovations quite comprehensively, but without labeling them as such and, with few exceptions, without a concept of social innovation informed by social theory.

In light of the increasing importance of social innovation the paper looks at the theoretical concepts, areas of empirical research and observable trends in the field of social innovation on a global scale. It gives an overview of the current situation and the perspectives of socio-scientific innovation research that have greatly contributed to the development and spread of an enlightened socio-scientific understanding of innovation.

It will present the objectives and the concept of the global research project SI DRIVE (7. Framework programme of the European Commission) which intends to extend knowledge about social innovation (SI), facilitating empowerment within innovation processes driving social change and shall be a main result of social innovations. Thus, social innovations need to mobilise citizens to take an active part in innovation processes and thereby enhance society's generic innovative capacity. This requires new models of governance in favour of self-organisation and political participation, allowing sometimes unexpected results through the involvement of stakeholders.

Food Markets of Oaxaca (southern Mexico); Culinary Heritage, Gender and the Slow Food Movement

In 2010 traditional Mexican cuisine - ancestral, ongoing community culture - was inscribed on the Representative List of the Intangible Cultural Heritage of Humanity of UNESCO. Significant element of the indigenous culinary heritage of Mexico is the pre-Hispanic institution of a food market (tianguis).

The southern state of Oaxaca - characterized by its ethnic and cultural heterogeneity and rich biodiversity - is famous for its regional cuisine considered to be the most sophisticated in Mexico and well established network of traditional markets. Nowadays, those lively, highly gendered spaces are not merely tourist attraction but still form a crucial part of local economy and communal life.

is recent, western trend of ‘slow food’ markets, shops and cafes established in
gentrified urban spaces as well as middle class suburbs of the state capital.
Based on the results of fieldwork carried out in 2011 and 2014 in the central
part of the state of Oaxaca (Volles Centrales) this paper analyzes the ambiguous
relation between two seemingly similar, but heavily diversified along gender, class
and ethnic/national lines patterns and ideologies of consumption that can be ob-
served in contemporary marketplaces of Oaxaca City: traditional, indigenous/mestizo,
peasant usage of food versus those promoted by the local branch of slow
food movement connected with new, transnational urban lifestyle. Moreover, it
points out the implications and dubious outcomes of the ongoing changes in
Oaxacan urban foodways for indigenous communities and especially those who
traditionally produce, cook and sell food at local markets – Indian women.

From Environmental History to Sustainable Future? On the Taiwan Experience and Beyond

In this presentation, I will draw from the lessons of Taiwan’s local environmen-
tal history in 10 counties and cities over the past 60 years to assess the possible
future for sustainable development.

First, I will sketch the overall and particular historical trajectories of how local
environment has been affected and become deteriorated by human actions and
government policy factors such as ill planned industrialization and over urbaniza-
tion in many localities.

Second, I will look into the rise, development, and effect of green local civil
society forces in the forms of anti-pollution, nature conservation, and anti-nuclear
mobilization in many localities.

Third, I will then assess if the slow yet steady paradigm shift facilitated by the
green movements has been effective enough to change the government-business
collective mindsets and begin lead Taiwan to a sustainable and just development
future.

The Unspoken Shame – the Politics of Memory during Cold War in Taiwan

How do political victims recall and deal with their pasts after prolonged griev-
ous state violence? This is a research aims to account for the way in which the
politically victimised ones in Taiwan look back on their pasts during the Cold War
from the present point. Whilst conducting interviews with the victimised individu-
als, as former state enemy, informants are prone to conceal their pasts as to their
traeson crimes, and even tend to deny the pasts in public. The attitude highlights
the impasse of transitional justice work in Taiwan, while the society has not pro-
vided the former state enemies enough rooms to voice their deeds that had once
seemed to be committed crimes. In addition, informants of the research express
an emotion of shame that they even have never voiced to the loved ones. Yet,
after the fieldwork for years, the informants disclose their unspeakable shame to
researcher such as I during interviews. It is salient to denote that the emotion of
shame that informants have interacted with their memories is not remnants of the state
violence or political stigma. In stark contrast, a shame was derived by the depression
of not revolting the regime successfully. As the society see these individuals as
victims, they tend to see themselves as revolutionaries instead.

The research aims to elicit the hidden context of the collective state of mind of
the former state enemy in Taiwan. With in-depth interviews and collected data,
the paper manages to analyse the subjectivities of these individuals through their
memories. By unraveling the way in which the victimised individuals remember
their life stories, the research aims to deliver another perspective of the politics
of memory in Taiwan.

HSIAO, MIN-YUE* (The University of Tokyo, miesiao@gmail.com)

“My Girlfriend Said She Won’t Live with My Mom in the Future”: Online Discussion about Relationship in Taiwan

The contemporary self-help culture raises scholars’ interest, through it to
investigate whether the discourse and imagination of intimate relationship or
biographical pattern and life decisions. However, although people still rely on
advice and counsels from self-help books and manuals written by experts and
professionals when they are troubled by problems about relationship and life,
more and more people login to online forums to ask for advices from other or-
dinary people. Not only in new media but in non-western context is the self-help
culture significant and prosperous, though in different ways from western societ-
ies on which most studies concentrate. Therefore, this study aims to inquire the
advising interaction about intimate relationship on online forum (Boy-Girls) of
Taiwan’s largest virtual community (PTT).

Through a yearlong fieldwork and discourse analysis in this community, I ex-
amine the discourses about intimacy in Taiwan and compare with what have been
suggested in the previous studies based on the Western self-help literature in
print or media. The online advising discussion shows different concerns and dis-
courses about intimate relationship, and has a different relationship between
advisers and advisees. First, family issues, gender difference, and ethics of relation-
ship are main themes in the discussion. Secondly, comparing to what have been
indicated in the past, the discussion in virtual forum concerns less self-centered
than ethics-centered, less value of self than equality between genders. These
discourses may promote a perspective of intimacy based on rather mutually de-
pendent partnership than ego-centered atomic individuals. Finally, the pattern of
the production of discourse in online forums is different from the way structured
in mass media which allows only one author/expert/advisor preaches their ideas/
experience/strategies to the mass audience. In this sense, the different relation-
ship between advisers and advisees in new media, I argue, is the reason resulting
in different discourses about intimate relationship and self.

Big Data: The Concept in the Next Society

In our society, each social phenomenon leans on every new concept to clarify.
Concept of “Big Data” reveals the novel route to further illustrate our society.
Combining endless possibility in the society nowadays, connection produces
innumerable different situation since they are highly correlated. These variable
contexts currently become a huge complexity than within the modern society in the
sense of Niklas Luhmann. Therefore, the aim of next society is finding a way to
construct the order of the system (in the sense of Dirk Baecker), not reducing the
complexity instead. Facebook demonstrated a solution, which has been developed by the society. By
algorithmic programming in Facebook, each loose coupling (uncertainties) click of the
user is now referring to different distinction and building up the boundary of
meaning. Every time user clicks “like” on status that it means he understands
something. Following understanding and meaning, the uncertain state will soon
transform into certainty, namely stable state or the order. Thus, using the endless
uncertainty is possible to construct the order or coexist with other systems.
The novelty of “Big Data” isn’t itself but clarify the targeted question. The paper
illustrated how Facebook reveals the solution to the problem of the next society,
computer society, as Dirk Baecker said.
Living Arrangement, Intergenerational Support, and Life Satisfaction in Japan, Mainland China and Taiwan

The unique style of coresidence in East Asia is a three-generation household. This is not only strongly endorsed by cultural values with emphasis on respect for parents, but this also forms a basis for promoting intergenerational changes between older parents and adult children. There are three main questions to be answered in this study. First, how does living arrangement influence material and instrumental support between generations? Second, does this influence vary by countries in East Asia? Finally, what are the relations between living arrangement, intergenerational support and individual life satisfaction?

In this study, we used data from 2006 of the East Asia Social Survey. Results show that coresident children in these three countries tended to provide more support to older parents and also receive more support from older parents. Older parents who lived with children tended to give more support to children; however, coresident parents in Taiwan received less support from children than parents who didn't live with children.

Results from logistic regression models suggest that while living with own parents does not appear to affect adult children's life satisfaction in these three countries, greater giving support to own parents was associated with a higher level of life satisfaction for female adults in Mainland China and male adults in Taiwan. Japanese males who didn't live with father-in-law and who contributed more support to in-laws tended to be more satisfied with life. Taiwanese females who didn't live in the same neighborhood with mother-in-law were likely to be more satisfied with life. Furthermore, males in Mainland China who lived in the same neighborhood with their adult children tended to be more satisfied with life. While living arrangement was not associated with life satisfaction of older parents in Taiwan, receiving more support from their adult children would facilitate life satisfaction of older parents.

Sociology As Social Memory: Narrative Identity and Knowledge Construction in the Study of "Chinese Modernization" in Cold War Taiwan

Man is a story-telling animal and sociologists are not an exception. Sociological works are often more informed by historical narratives that function as particular forms of collective memory than sociologists would have admitted. My article aims to show how sociology may be a major agent of collective memory and identity formation by analyzing the sociological study of "Chinese modernization," especially the case of Kwan-hai Lung (1906-1983) as one of the major founders of sociology, in Cold War Taiwan. The study of Chinese modernization in social sciences in general and in sociology in particular were promoted mainly by scholars of Chinese Mainlander background who exiled to Taiwan, where the Japanese colonial rule just ended, after 1949 owing to the Chinese Communist Party's victory in China's civil war. These scholars dominated Taiwan's social sciences in the Cold War era up to the 1980s. The Mainlander sociologists in exile were haunted with the bitter memory not only of their displacement, but of modern China's cultural trauma caused by foreign oppression. Embracing Chinese nationalism and the modernization theory imported mainly from the U.S., they hoped that China could become a rich and powerful nation by modernizing itself. By integrating the metanarrative of global and Chinese modernization and the metanarrative of Cold War into their sociological works, they became a major story-teller who endeavored to narrate post-colonial Taiwan back into relationship with the Chinese nation. As an important source of public narratives, the sociological study of Chinese modernization helped in the construction of collective memory and national identity in Cold War Taiwan. Situated in the context of the political and cultural inequality between the Mainlanders and the local Taiwanese, however, their historical narrative and their study of Chinese modernization per se were ready to be co-opted into the ruling ideology of the Chinese Nationalist Party.

The Effects of Sibling Structure on Fertility Decision in Taiwan

Drawing from theories of son preference and family resources, this paper attempts to construct a sequential fertility model, and then uses it to estimate the probability of parents' fertility decisions of their first few children by the sibling structure and to elaborate the effects of various socio-demographic factors in Taiwan. The data used in the analysis come from the PSFD (Panel Study of Family Dynamics) in which respondents were born between 1934 and 1986 in Taiwan. The main findings are as follows. Firstly, the sibling structure has a significant effect on fertility decision. Secondly, the gender-balance hypothesis is rejected, whereas the son-preference hypothesis is supported. Parents with daughters in their first or second three children have a greater likelihood to have a next child. Thirdly, son preference and son investment have an opposite effect on fertility decision. The number of sons tends to reduce the likelihood of parents to have a child.

Fourthly, the hypothesis of social stratification is rejected. Parents of different status groups make similar fertility decisions. Fifthly, the data didn't support the cohort hypothesis, because the patterns of fertility decisions by different cohorts appear the same. Finally, the significant effect of sibling structure indicates that fertility decisions are made in a sequential decision-making process in Taiwan.

HSIEH, MICHELLE F.* (Academia Sinica, mhsieh17@gate.sinica.edu.tw)

Colonial Legacy and Development in East Asia: South Korea and Taiwan Reconsidered

Conventional wisdom attributes the post-war ascent of Taiwan and South Korea to the role of the "developmental state". Specifically, the formation of the developmental state in both countries has been attributed to similar causes: post-war geopolitics; land reform; or even, by some, to distinct forms of Japanese colonial rule. A focus on external factors assumes the impetus of post-war East Asian development stems from the external big bang that shook up the existing social orders and melded two different societies into being alike.

Yet, advocates of this position have been unable to explain the different patterns of industrialization and economic organization in Taiwan and Korea despite similar external challenges. On the other hand, the literature that focuses on endogenous factors in explaining the origins and development of the developmental state tends to overlook the conjunctural forces and becomes ahistorical. This paper joins the debate through a reinterpretation of the origins of the post-war political economies of Taiwan and South Korea. While acknowledging the importance of conjunctural forces in shaping the direction of development, I argue that the existing social structure matters: its interaction with the state shapes and constrains state choices and thus can account for the variations in strategies.

I make three claims to explain the divergence between Taiwan and South Korea: First, I illustrate how different configuration of state-society relationships (the state-business relationship) responded differently to similar historical conjunctures. Second, I highlight the different responses from society and the dynamics of the state-society relationship in shaping industrial structures and industrialization patterns. The existing social structure played an important role in shaping and constraining state choices at the transition to industrialization. Thirdly, I illustrate how these historical events have helped to reinforce the established patterns of state-society relationship, (Korean state and large capitalists nexus versus Taiwanese state and numerous SMEs alliance), rather than flattening them out.

Constructing a Quality Regime: The Origins of Taiwan's Export-Led Capitalism

Two key features of East Asian capitalism are the predominant involvement of the state in the economy and success via "export building". This paper revisits one of the original successful tigers, Taiwan, by examining the mechanisms of state involvement and the processes of integration into the world market at the firm level. The conventional explanation of East Asian development focuses on the state capacities in shifting to export-led industrialization (in contrast to the lack of such state capabilities in Latin America and India) and the emphasis on industrial policies to induce entrepreneurship. A direct implication of this interpretation is that when the state intervenes, it tends to produce large firms and encourage industrial concentration. Yet, the Taiwanese SMEs as key exporters has run against the evidence elsewhere. If export-led development is an important element in understanding East Asian capitalism, and if the state-centric thesis is to have any explanatory power, we need to show how the East Asian states consort firms in the world market. Specifically, how has Taiwan, as an example, coordinated a system of SMEs in its quest for integration into the global economy?

Through in-depth case studies of the 1970s key export industries, this paper illustrates the patterns and ways in which the Taiwanese state coordinated and interacted with the decentralized SMEs. The linkages between the state and SMEs were through varieties of technology and export promotion programs carried out by various kinds of semi-governmental organizations with an emphasis on technical standardization (at the firm level) and ensuring quality control. These measures were crucial in overcoming the institutional voids and establishing institutions of trust, and they had an impact on the formation and patterns of firms' subsequent technological learning.

This reinterpretation of Taiwan's post-war experience is relevant to debates on models of Asian capitalism(s).
On Appropriation and Japanese Sociology: The Case of Postmodern Social Theory

What does it mean to appropriate a social theoretical approach—initially developed elsewhere—into a different social context? The aim of this paper is to interrogate this very question through the prism of contemporary Japanese sociology. While some scholars have suggested that the practice of appropriation indicates a lack of creativity, others have suggested that something more intricate and innovative has been at work in Japan (Elliott, Katagiri and Sawai 2013: 11-12). In this paper, I substantiate the latter interpretation of Japanese sociology by exploring how postmodern social theories have been used to generate insights about contemporary Japanese society in new and unconventional ways.

Although postmodern social theory is now regarded as a largely defunct—if not also unproductive—area of study in the Western world (e.g., Ryan 2007), Atsushi Sawai (2013) describes how the field continues to remain relevant in the Japanese context. My argument here is that Japanese scholarship on the postmodern has not remained overly fixated on the issue of epistemology, as a sizeable portion of postmodern social theory in Japan has sought to analyze various social transformations and events. It is also crucial to note that the scholarly debate on postmodernity and postmodernism in Japan has not unfolded in the same way as it has in the West. What is unique about Japanese postmodern social theory is that it has simply held a ‘diachronic’ view of postmodern culture (Koto 2006). Some scholars have noted that it is possible to detect postmodern features in pre-modern periods of Japanese history, and that postmodern culture may be more ‘indigenous’ to Japanese society than otherwise thought (Katarni 1985).

Post-Developmental State with the “Therapeutic” Turn: The Case of Taiwan

The East Asian developmental states fell for decades due to global economic restructuring and their respective contradictions and dilemmas. Political exploration of post-developmental scenarios remains ongoing. In Taiwan, this exploration could be termed as “therapeutic turn” in three respects. First, the Taiwanese “welfare state” that has implemented the National Health Insurance, wherein population health became a new ideology of legitimation. Second, health industry in its inclusive sense has been targeted as a promising techno-economic paradigm, along with the ascending information and communication industry, for a new mode of growth. Third, there is a ‘managerialist-developmental’ creation of national system of innovation for promotion of the targeted industries. However, policy paradigm characteristic of marketization of healthcare system, productization of health promotion on the one hand, and intensifying workfare regime on the other, contribution to a disjuncture among current mode of growth, regulatory regime and accumulation strategy, which turning to a more far-reaching organic crisis. Writing from regulation approach, this paper argues that why the ‘welfare turn’ is in fact a political project and illustrate how the therapeutic turn of Taiwanese post-developmental state runs into crisis.

Is There a Motherhood Penalty in Taiwan? The Effect of Childcare on the Wages of Women

Does motherhood affect the wages of an employed woman? Because women generally take the major responsibility of childcare, researchers have noted the effect of childcare on the wages of women. At least three theories have been developed in the United States of America and Europe to explain the relationships between motherhood and lower wages. These theories include mainly human capital, neoclassical theory of compensating differentials, and statistical discrimination. First, scholars employing human capital theory have assumed that many women spend time at home caring for children, interrupting their job experience. This interruption is likely to reduce the accumulation of human capital such as work experience, seniority, and formal skills. Therefore, the loss of the human capital may have an influence on later wages. Second, the neoclassical theory of compensating differentials suggests that mothers may trade off higher wages for “mother-friendly” jobs that are easier to accommodate their responsibility of childcare and employment. Finally, the main argument of statistical discrimination is that employers may discriminate against women because of their motherhood status. Compared to the rich evidence of childcare wage penalty in the United States, the relationships between motherhood and the wages of women have not been well investigated in Taiwan. Therefore, this paper aims to examine the wage penalty for motherhood by using data from Panel Study of Family Dynamics with fixed-effects models. The research analyses whether the effects vary by different marital statuses.

The Knowledge Inequity in Hidden Curriculum of Taiwanese Higher Education Under the Trend of Globalization: The Comparison Between Private General University and Technology University

The knowledge condition in higher education under the trend of globalization has been moving toward post modern universities, which is consistent with the argument of Lyotard (1984) – the rise of performativity. Under the dominance of performativity, the curriculum with practice, efficiency, performance or productivity has undoubtedly become the important strategy for universities. Moreover, the vocationalization of curriculum in higher education and the hidden curriculum of performativity especially in nursing faculties.

It is worth studying whether there remains knowledge classification in terms of management and skills among students between the hidden curriculum of performativity in private general universities and those in private technology universities. The inequity as well the corresponding consequence in the workplace is the main issue of this research.

This paper aims to explore the relevant arguments about vocationalization and hidden curriculum of the higher education under in the trend of globalization. Samples for case study include two private universities, one general university and one technology university, from which the knowledge classification and the inequity in the hidden curriculum of performativity will be explored.

This a qualitative research and the method includes text analysis and interviews. It is expected that the vocationalization of curriculum and the inequality in the hidden curriculum of performativity can be unveiled for the reflection of the undergraduate curriculum related policies in higher education faculties.

Key words : the vocationalization of curriculum in higher education, globalization , performativity, hidden curriculum, sociology knowledge

Social Capital, Civic Engagement, and Political Efficacy in East Asia

This study attempts to explore plausible mechanisms among social capital, trust, civic engagement, and political efficacy in four East Asian societies. The data are from the 2012 East Asia Social Survey on Social Capital, including data from Taiwan, China, Japan, and Korea. This study differentiates social capital into individual social capital, organizational social capital, and trust. Individual social capital is measured by the diversity of accessed position-generated networks, and organizational social capital is measured by the diversity of voluntary associations people participated in. Trust is classified into three types of trust as well: trust to personal contacts, trust to public agents, and general trust. This study attempts to examine the effects of individual and organizational social capitals on three types of trust, and then furthermore examine the function of all types of social capitals in terms of civic engagement and perception to political efficacy. One dominant and macro level mechanism of thought is that there is a positive effect of position-generated social capital on all types of trust in all East Asian societies except that in China. In China, diversified social capital is vulnerable to trust which quite supports some finding on the vulnerability of weak ties in socialist society. The effects of organizational social capitals on trust to government agents and personal contacts are stronger in Korea and Japan, but the position-generated individual social capital has strong effects on trust to personal contacts and general trust in Taiwan. Both individual and organizational social capital affect civic engagement in four societies, but the effects of these two social capitals on perception to political efficacy even are stronger except for those in Korea. Trust to government agents and trust to personal contacts have direct effects on the perception of political efficacy in four societies, and trust variables also become intervening variables in Taiwan.

Green Home for Whom? Estimating Green Housing Opportunities of Various Socio-Economic Groups in Nanjing China

Although sustainability is considered an integration of society, economy, and environment, it is criticized that the concept of sustainable city is not necessarily accessible or affordable to the majority. The improvement of the quality of life after sustainable plans leads to a significant market premium which can only be afforded by the minority rich. Take Nanjing China as an example. In the transition from an industrial to a post-industrial city, Nanjing government attempts to build a sustainable city by constructing green apartments, improving metro networks, etc. However, the current green apartment buildings are mainly built in places with good accessibility and neighbourhood quality. The high prices make green apartments as a symbol of luxury for the upper-middle class. To involve different socio-economic groups in developing a sustainable
city, it is essential to understand the role of housing affordability playing in it. This article estimates green housing opportunities of various socio-economic groups in Nanjing China according to their affordability and housing preferences. It analyses the effects of sustainable plans on housing opportunities by comparing three urban development circumstances: the current circumstance, after improvement of the metro system, and after relocation of heavy industry. Results indicate that in the current circumstance, the lower-middle class has a slight chance to own a green home across the city. The improvement of metro network can increase the green housing chances for the lower-middle class in the central areas only if they sacrifice their housing size. The relocation of heavy industry can dramatically increase the green housing opportunities of the upper-middle class in the central urban areas, but will push the lower-middle and middle class moving to the suburbs due to high prices. To ensure social equity in developing a sustainable city, policy makers need to consider affordability and sustainability simultaneously.

Parental Migration and Adolescents' Transitioning to High School in Rural China

The transition from middle school to academic or vocational high school or work is a crucial period for adolescents in China. It has profound implications for both the individuals' lifetime status and the society's educational stratification and social inequality. Educational reforms beginning in the 1980s have raised direct costs of education for individual families and widened regional disparities in education opportunities. Returns to schooling have increased in both rural and urban China. Growing opportunities of migrant work in urban China provide alternatives to economic mobility. Facing unequal opportunities and constraints of pursuing education, how do rural adolescents choose to follow different trajectories of transitioning to high school?

This paper investigates how parental labor migration influences rural adolescents' transitioning to high school of different levels or migrant work after or even before graduation from middle school. Millions of rural children are left behind in rural China for years as their migrant parents work in the city. Parental migration may lead to increased financial resources, decreased parental supervision, more demand on children's time and labor on housework or farming, access to parents' information and networks on migrant work opportunities, and changes in parents' values and attitudes about children's education. These mechanisms will in turn affect children's aspirations, motivations, academic performance and educational outcomes differently.

The data used is collected from my fieldwork following groups of students and dropouts from 3 middle schools located in a typical migrant-sending county of Central China. I used mixed methods to obtain detailed information from student participants, caregivers, teachers and the schools. Data from multiple time points and sources allow me to contextualize life circumstances for rural adolescents, and to examine who continues to high school and why. Both qualitative and quantitative analysis will be conducted.

Profesiones Sin Fronteras? Las Trayectorias Profesionales De Los Ingenieros Mexicanos Que Migran a Estados Unidos

With the processes of globalization, the migration calibrated has increased in the last decades. We advise an interest notable of people characterized by a professional of the chosen society of the information and the society of the knowledge. Although in Mexico we observe a rise in the importance of this type of migration, there are few studies on the impact.

In this paper we examine the relationship between the migration to the United States and the selection of professional careers for Mexican engineers. We analyze data from the Mexican National Longitudinal Survey of Higher Education (ENHO) and the Mexican National Survey of the Labour Force (ENOE). The data is from a sample of 1,000 Mexican engineers who were employed in the United States.

The results show that migration to the United States has a significant impact on the professional careers of Mexican engineers. Engineers who migrate to the United States are more likely to choose careers that require higher levels of education and training. This is consistent with previous research that has found that migration is a form of human capital accumulation.

Teacher Quality Vs. Social Justice: Issue and Status Quo in Taiwan

Teacher quality is taken as the strategy to social justice in the theory of standard-based teacher education. In the accountability of the interpretation of social justice is about student learning opportunity that let every student can learn depends on teacher quality. Especially, all students in every school can receive teaching from qualified, knowledgeable, and capability teachers that means school success. The assumption of the relationship of teacher quality and student learning is worth to investigate. Why the relationship is about social justice, which kind of social justice in the assumption, and how about the context in Taiwan. Is its meaning in Taiwan the same in the concept of standard-based teacher education with globalization? Therefore, this paper would like to find the relationship of teacher quality and social justice. Second, this paper would like to understand the meaning or perception of social justice in the case. Third, this paper would like to

The Taste of Home: Food, Identity, and Community Among Chinese Marriage Migrants in Taiwan

This study aims to explore the complexities of boundary-negotiation, identity, and the sense of belonging through examining foodways in cross-border marriages between Taiwanese men and Chinese women. Analyses are based upon data collected from ethnographic research conducted in Taiwan. Food is not only a necessity in defining their national origin, further classified as the lack of modern concepts and the textuality of history through a case study on the changing forms of governmentality of the Communist Party of China (CPC) before and after the foundation of the People's Republic of China (PRC).

The paper focuses on two social movements initiated by CPC: Land Reform before the foundation of PRC and Patriotic Hygiene Campaign afterwards. The former movement intended to classify ‘class backgrounds’ of people in rural China in order to distribute private properties to create an egalitarian society. While the latter aimed to arouse awareness of public health so as to win an alleged germ warfare and raise people's standard of living.

The first part of the paper uses two literature texts to analyze the change of governmentality. One is Ding Ling's award-winning novel which portraits the Land Reform which was initially derived from the short consultation period, procedural unfairness, and inadequacy of information disclosure, and then further reinforced by officials' untrustworthiness towards government. The risk was framed as a social issue associated with the lack of confidence in authorities' supervision and regulatory capacity which was justified by past scandals regarding shady public projects, food safety as well as the widespread pollution problems in China. The untrustworthiness towards government was initially derived from the short consultation period, procedural unfairness, and inadequacy of information disclosure, and then further reinforced by officials' untrustworthiness towards government.

The second part of the paper further discusses the practice of the new form of governmentality in later years of the Patriotic Hygiene Campaign. Using news reports and official archives, the paper uncovers the changing meanings of the idiom ‘class enemy’. From American imperialism to wrong methods of economic development, and later, dissidents within the Party, the change of the designatation of the same word unveils the fact that history is more of a narrative open to various interpretations than a solid causality between events.

Framing Risk and Untrustworthiness: A Study of Anti-Nuclear Activism in Guangdong, China

This study examines frames and framing processes in the opposition to a proposed nuclear material processing plant in Guangdong, Jiangmen city, which led to the suspension of the plan. Systematic analysis of microblog posts belonging to the hashtag of “Jiangmen nuclear crisis” on Sina Weibo revealed two important organizational frames: risk of radioactive contamination and its hazardous effects on human health, and untrustworthiness towards the local government and the attendant low level of acceptance of the sitting plan. The framing process was facilitated by the Internet and shaped by contextual factors as well as interactions between government and opponents. The sense of risk has been heightened after the Fukushima Daiichi nuclear accident and frequently referred to in the framing process. Yet, unlike the previous literature emphasizing the importance of “technological fix”, the risk was framed as a social issue associated with the lack of confidence in authorities' supervision and regulatory capacity which was justified by past scandals regarding shady public projects, food safety as well as the widespread pollution problems in China. The untrustworthiness towards government was initially derived from the short consultation period, procedural unfairness, and inadequacy of information disclosure, and then further reinforced by officials' untrustworthiness towards government.

The Relationships Among Ethical Ideology, Work Stress, and School Life Adjustment of Elementary School Teachers

The purpose of this study was to explore the relationships among idealism, relativism (two kinds of ethical ideology), work stress, and school life adjustment of elementary school teachers. The data were collected through questionnaires from a sample of 565 elementary school teachers in Kaohsiung city. The major instruments for this study included Teachers Idealism Scale, Teachers Relativism Scale, Teachers Work Stress Scale, and Teachers School Life Adjustment Scale. Structural equation modeling (SEM) was applied to make parameter estimations. Path analysis revealed the following findings: First, idealism could negatively predict work stress, whereas relativism could positively predict work stress. Second,
in the common estimation, idealism could positively predict school life adjustment, but relativism could not significantly predict school life adjustment. Third, work stress could negatively predict school life adjustment. Fourth, work stress was not the mediator among idealism, relativism and school life adjustment. The implications of this study to elementary school teachers’ human resource management in Kaohsiung and future studies were discussed.

Inclusionary Housing in China: Achievements and Challenges

Faced with a large national quota for low-income housing coupled with severe budgetary constraints, local governments in China have recently embraced inclusionary housing as a new strategy to achieve housing affordability and social and spatial inclusion. Yet, inclusionary housing in China is complicated by the strong role of the central government in housing policy, the state ownership of urban areas, the land and local governments’ right to lease land, and a private sector that historically had little role in the provision of low income housing. This paper evaluates inclusionary housing in the Chinese context, asking: 1) Has inclusionary housing achieved social and spatial inclusion? 2) What are its social, economic and political costs and benefits? 3) What kind of mechanisms need to be in place to make it successful and sustainable? Field work in Beijing shows while inclusionary housing in China is producing a large number of new units due to the strong government mandate, it does not result in increased social and spatial inclusion. As a result, the policy further deepens patterns of spatial marginalization of low-income residents to the urban fringe, increases transportation costs and decreases access to employment opportunities. The government is the main beneficiary of inclusionary housing, while developers and residents have few benefits but face challenges in property management and daily life. We argue that that the inclusionary housing policy in China has to be reformed to be sustainable, with a better incentive system to encourage the active participation of private developers and a better policy design and implementation to facilitate social and spatial inclusion.

Where Is Home? Hukou, Non-Local Young People and New Inequalities in Relation to Housing in Contemporary Shanghai, China

In the past decade, housing prices have been skyrocketing and renting prices also have been on a rise in Shanghai. The measures taken by the governments to restrain rising housing price, together with their pursuit of gentrification of the city, when intersecting with such institutional hurdle as hukou (household registration) system, ironically, have produced new inequalities between local residents with a Shanghai hukou and those without. This paper aims to unpack the complexity and examine the production of new inequalities suffered by young non-locals, who, according to the 2010 census, account for almost 60 per cent of the nine millions non-local migrants in Shanghai. It employs two cases. First, it examines a phenomenon called “group renting” (qun zu) in which existing medium- and even high-end apartments are divided into small cells and let to people. The great majority of the inhabitants are young non-local migrants who cannot afford more than a cell in the gentrified city centre where job opportunities lie. The local government has taken measures to stop ‘group renting’ which leaves many young non-locals nowhere to find a home. The second case is about a recent regulation issued by Shanghai government in which non-local unmarried people are denied the right to buy a home in Shanghai. The effects of this regulation are gendered, as protests have focused on how consumers and result in women are mobilized to purchase ethical products as an expression of citizenship or social agency, we examine the motivations of social movement actors and their tactics for engaging others. Using the case of food, we examine how movement actors seek to engage consumers through food products, while encouraging movement towards citizenship responsibilities and political change. Data are derived from a qualitative case study of 45 leaders from civil society, the state, and the market in two Canadian cities. Findings are used to scrutinize the concept of the citizen-consumer hybrid as this entity relates to environmental social movements. While advocates of shopping for change suggest that ethical consumption creates opportunities and discursive spaces that encourage individuals to develop collective identities, the actors interviewed were not brought into the arena of social change via consumption activities. Interestingly, these individuals continue to advocate for greater consumer education and opportunities for ethical consumption as tactics to enlist greater citizen engagement, tensions for the professional ethos of occupational physicians or safety engineers. While professions define the critical values of acceptable, tolerable and unacceptable harms and consult companies on their OHS management, their role regarding the (non)spread of risk-based regulation is still underexplored.

Torn Between Equality Norms and Risk-Based Governance Stimuli? Comparing the Role of Professionals in Occupational Health and Safety Regulation in Germany and the United Kingdom

Risk-based governance provides, inter alia, the means to target regulatory interventions by the probability of the occurrence of ‘bads’ and their impact. For example, in 2005, the influential British Hampton Review suggested to target workplace inspections in occupational health and safety (OHS) policies in a novel manner: not the threat of injury should allocate resources, but high probability and/or spectacular injuries. However, the unequal treatment of workers in risk-based regulation raises tensions for the professional ethos of occupational physicians or safety engineers. While professions define the critical values of acceptable, tolerable and unacceptable harms and consult companies on their OHS management, their role regarding the (non)spread of risk-based regulation is still underexplored. Based on findings from the international research project HowSAFE this paper identifies key tensions between professional dedications to treating the health and safety of all workers equally and risk-based approaches which would focus on particularly frequent and/or costly health damages as defining element of OHS regulation. To do so, we compare the progressive and OHS governance across institutional settings, focusing on occupational physicians and safety engineers as two influential professional groups in the domain. We compare and explain their role in German and British OHS governance. We argue that variation in treatment of occupational illness across countries depends – apart from historical and legal conditions – on the organisational structure of professions (e.g. regulatory agencies vs. professional associations) within the OHS domain and nuances in professional identity. We thus explain, for example, why the ranking of diseases and risks seems relatively acceptable in the UK, while the medical profession in Germany treats each case as particular and costly health damage. The article addresses the question of how professional organisations shape their role regarding the (non)spread of risk-based regulation in institutional settings. The research demonstrates how – apart from national and legal influences – professional organisations’ characteristics shape their role regarding the (non)spread of risk-based regulation.

Asthma Management in British South Asian Children: An Application of the Candidacy Framework to an Understanding of Barriers to Effective and Accessible Asthma Care

Asthma is one of the commonest chronic conditions of childhood, placing a significant burden of care on families, communities and health services. British South Asian (Indian, Pakistani, Bangladeshi origin) children diagnosed with asthma are less likely to receive reliever and preventer medication prescriptions compared to their White British counterparts; are more likely to suffer uncontrolled symptoms; and are more likely to be admitted to hospital with acute asthma exacerbations. This paper explores the socio-cultural context of asthma management in British South Asian families, drawing on major qualitative study of management and interventions for asthma management funded by the UK National Institute for Health Research, Health Services Research (NIHR-HSR) Programme.

We present findings from data exploring parents'/carers'/children's and health professionals' understandings of asthma and their perceptions of the barriers and facilitators to good asthma management. The paper draws upon an interpretative analysis derived from the candidacy framework for explaining inequalities in access to health services for vulnerable groups, developed by Dixon-Woods and colleagues in the UK (Dixon-Woods et al. 2006). The candidacy framework emphasises the dual, multi-dimensional and contingent character of health-care access and provides an insightful interpretation of our findings in light of the social patterning of perceptions of asthma and health services. Our analyses utilise this conceptual framework demonstrate how a lack of alignment between the priorities and competencies of British South Asian families and the organization of health services conspire to create vulnerabilities and difficulties in effectively managing childhood asthma.

Funding acknowledgement and Disclaimer: This project was funded by the NIHR-HSR programme (Ref 09/0001/19). The views and opinions expressed therein are those of the authors and do not necessarily reflect those of the NIHR HSR programme or the Department of Health. The paper is presented by the authors on behalf of the wider MA project team.

Bio-Sociality and the Negotiation of Diagnosis in Cross-Border Infertility Treatment

The expansion and globalisation of medical technologies for the ‘treatment’ of infertility has taken place at a rapid rate. Solutions to an increasing range of fertility-related concerns (chromosomally abnormal gametes and embryos, immunological disorders, reduced ovarian function) have been marketed to an affluent, engaged, mobile and technologically literate patient group. The apparent increase in what has been referred to in the popular media as ‘reproductive tourism’ is one product of the ever-expanding field of medical possibilities offered by ARTs (assisted reproductive technologies).

Recently expressed concerns about patients who travel overseas for fertility treatment have helped to embed the notion of the ‘fertility tourist’ in the public imagination. The categorization of this group has seen them variously constructed as sources of evidence for social/historical analysis. However, this approach to assessing the worth of particular sources of evidence against, what we might loosely call, ‘standards of truth’ is itself problematic in key respects. While such criteria have their place, they ultimately lead towards a series of questions which are particularly at odds with processual/relational thinking. Again using Elias’s work as a case in point, I explore as an alternative an approach to diachronic cultural analysis in which both discursive form(s) and content(s) become simultaneously ‘objects’ and ‘subjects’ of investigation. In this way we might re-consider the value of cultural/documentary artefacts not simply as sources of ‘content’, but in terms of what such sources might be used to tell us about the unfolding relationships, human interdependencies – the broader social conditions under which such materials ‘came to be’.

A Matter of Record

Principal among such issues is the question of whether medieval manners texts, literature and art works; and, by extension, television and film can be treated as reliable informants on the social universe. I suggest that, using conventional methodological standards, notably those expounded in John Scott's seminal A Matter of Record, the value of such sources should be checked against such criteria as authenticity, credibility, representativeness and meaning. As such, serious questions are raised concerning the extent to which documentary and literary artefacts are treated as part and parcel of human ‘figurations’.

I propose that Elias’s approach to social analysis raises a series of methodological questions concerning the status of documentary/cultural artefacts as sources of evidence. Principal among such issues is the question of whether mediated forms of communication are a ‘biosocial collectivity’ (Rose & No

Alienation and the Crisis of White Racial Identity

The lion’s share of contemporary research on alienation remains couched in Marxist and neo-Frankfurt school foci on the separation between the subject and the product of the work of others, largely in the private sphere. The subject is able to grow and develop. Moreover, this paradigm’s application to gender, sexuality, and race, have left us with understandings of these social categories as distractions from the ‘true’ basis of social reality—the inherent conflict between owner and worker. In breaking step with this tradition, a modicum of recent scholarship...
effectively demonstrates both (1) how dominant white racial groups alienate non-white racial and ethnic groups and (2) how dominant white racial groups employ a discourse of alienation—through claiming an unfairly victimized status—as a political strategy to lay claim to resources and reproduce their dominant status. Still, few have employed the concept of alienation to understand how white racial identity is continually reconstructed as a site of ontological crisis that facilitates simultaneous (a) claims to superiority, (b) claims to victimhood, and (c) practices of discrimination. Through an in-depth exploration of supposedly antagonistic white racial projects positioned at different class and labor positions, we can better understand how the social expectations of white racial identity are not distractions from material inequalities, but are a central mechanism in the reproduction of inequality and domination.

Exploring the Role of Labour NGOs, Rights Lawyers and Intellectuals in Workers’ Collective Actions

In the wake of the economic crisis in 1970s, the western capital needed a new site for investment (Silver 2003). China has taken advantages of this trend to turn the country into a global manufacturing hub; foreign-owned factories have thus mushroomed in South China. Because of meager wages and poor working conditions, increasingly more migrant workers from these factories have taken collective actions to advance their rights (Lee 2007; C. Chan 2010; A. Chan 2011; Chen and Tang 2013). Various actors involving in migrant workers’ collective resistance have been well-examined. For instance, Chen (2010) highlighted the role of the government, trade unions, employers and workers in the strike. He and Su (2010) pointed out that judges were requested to go to the protest spots to mediate industrial conflict. Pan and Smith (2007) considered workers’ dormitories an important site for cultivating labour resistance. However, one gap concerning workers’ collective actions is yet to be filled: what role does civil society actors, such as NGOs, right-lawyers, and intellectuals, play in workers’ collective resistance? According to the authors’ fieldwork, increasing civil society actors have intervened into workers’ collective actions in the Guangdong province. This paper argues that the fact of workers’ collective actions can be explained by the dual dual control of the enterprises and the party-state (Chen, 2003) has created room for other social actors to intervene into labour resistance. Their involvement has taken the forms ranging from invisible to visible: provision of advice, knowledge-transfer, legal representation, open endorsement, advocacy campaign and so forth. This paper also discusses the potential and challenges of civil society actors’ engagement into workers’ collective actions.

The data of this paper is collected through triangulated sources, including interviews with workers, NGOs staff, rights-lawyers and intellectuals, participant observations in workers’ collective actions, as well as documentary research.

in harmony with Nature, a stage full of competition among people, a stage when everyone is full of many kinds of desires. Unfortunately, today, traditional values of leisure have in this multivariate social transformation been mutilated more and more; and the essence of these values has been more and more tainted with materialism; leisure value is either distorted or understood in too narrow, too shallow, and too vulgar a way. Most people simply identify leisure with beer and skittles, with entertainment and shopping, or with what is fashionable that the rich like to boast about.

This article attempts sort out Chinese traditional leisure culture and style from Confucianism, Buddhism and Taoism... as well as reflection on contemporary Chinese face to the confusion and difficulty, the loss of leisure value and cultural traditions.

Point of No Return? Neoliberalism and Changing Public Opinion in New Zealand and the United Kingdom

Neoliberalism represents a significant and enduring shift in the politics shaping social policy. Although it is frequently ascribed a hegemonic, all-powerful status that focuses our attention on the coherence found in neoliberal policies, this paper is influenced by scholars highlighting variation in the neoliberal project across different policy areas, national settings and across time. Specifically, it employs Peck & Tickell's (2002) view that neoliberalism has gone through multiple phases in response to both external and internal crises as an entry point for studying neoliberalism's impact on public support for the welfare state. Drawing upon a New Zealand case study with select comparisons with the United Kingdom, the paper argues that public reactions to the early period of retrenchment ('roll-back' neoliberalism) differ from those found in the following 'roll-out' or embedding phase of neoliberalism implemented by Third Way Labour governments in both countries. Continuing public support in many policy areas arguably contributed to the internal crisis that provoked an adaptation of the neoliberal project. Moreover, the paper explores what has happened to public support for the welfare state following the external crisis provoked by the financial meltdown of 2008-2009: do New Zealand and British public attitudes show signs of resistance against austerity measures or do they indicate a third, 'roll-over' period of neoliberalism whereby the public accepts not only a neoliberal economic agenda but also the need for further retrenchment of the welfare state? Conclusions about the politics of social policy at the level of public opinion are drawn from a qualitative analysis of both survey data over three decades and interview/focus group conducted in New Zealand, offering both good and bad news for welfare state advocates.

Lack of Universal School Education: A Potent Agent for Preservation and Propagation of Inequalities in Developing Nations

Education is said to be a social institution that eliminates inequalities through its individual (formation of social personality, social placement, social mobility etc.) and societal (social stability, division of labour, social change etc.) functions. Multitier educational systems in developing capitalist economies like India pose challenges to its functions and marginalise masses. States run schools with school teachers in the possession of unprofessional values catalising this phenomenon. This paper is based on a preliminary study to investigate the prevalence of unprofessional practices among school teachers. Six undesirable values investigated in the study were absenteeism, dereliction of duty, lack of responsibility, discrimination, authoritarianism and commercial venality. A comparative appraisal of undesirable values was also made between male and female teachers.

Generational Orders in Azerbaijan and Kyrgyzstan - Young Adults Between Independence and Interdependence

Our paper is based on field research, qualitative interviews and group discussions with young people of different social origin in Azerbaijan and Kyrgyzstan concerning their biographical plans for professional and private life. In both countries the ethnographic and interview material points to strong obligations of young people towards their families of origin, e.g. obligations to submit to parents’ will, to support parents financially, to support them with care or work just with affection and attention. Such obligations are legitimated by what is meant to be tradition, by religion and as well by a generational and gendered order as they may be especially strong towards daughters. These strong expectations young adults are confronted with however conflict with educational and occupational aspirations which young adults hold for themselves or which are held by their parents for them. Educational migration is of major importance in this context. Various solutions are worked out in such conflictive constellations, some being more, some being less realistic planning, and most of them maintaining the validity of an age hierarchic order. By comparing the two countries and specific groups in these countries, the paper will present a theoretical approach identifying constellations that are supportive or obstructive in regard to favorable solutions.

HUNT, STEPHEN* (University of the West of England, Stephen3.Hunt@uwe.ac.uk)

Sexual Rights In The UK: The Christian Right and The

In recent years the United Kingdom, much like other western democracies, has seen the proliferation of sexual minority rights largely through equality legislation (especially Equality Acts 2006, 2010). As a consequence many faith communities are now challenged by such legislative enactments that advance the equality, citizenship and social inclusion of sexual minorities (and heterosexuality) and prohibit discrimination in various economic and social spheres. This paper will explore attitudes and views of conservative Christian churches that have come out strongly against such developments on moral grounds and advance freedom of speech to express their vehement views. Christian Right campaigning groups are however more strident in their attitudes which have tended to have become increasingly polarized. This paper considers the key issues in the context of, firstly, the result of increasing marginalization of conservative Christians in a post-Chris- tian environment and, secondly and relatedly, the narrative of rights and the philosophico-ideological underpinnings that they adopt in the opposition to sexual rights. The paper will also consider how such narratives also engage with religious rights that are simultaneously advanced by the Equality Acts 2006, 2010 and which generate contradictions and conflict/potential conflict between sexual and religious rights.

Sidewalk Cafes: Formal and Informal Negotiation of Public and Private Space

The School: A Nurturing PLACE for Inefficient Work Force

The health of various social institutions is based on their value system. Some values (truth, justice, equality, humanism, tolerance, peace, etc.) are necessary for the survival of the social institutions and other are desirable (excellence, commitment, studiousness, honesty, empathy, industriousness etc.). According to Emile Durkheim, the value system is passed across generation in the school and the agent of the society for this job is the school teacher. For that he/she should be in the possession of various values. Numerous reports and studies have highlighted the prevalence of undesirable values among the school teachers. Transmission of undesirable values to the generations could lead to inefficient work force. This paper is based on a preliminary study conducted to investigate the prevalence of undesirable values among the school teachers of Roopnagar district of the state of Punjab in India. Six undesirable values investigated in the study were absenteeism, dereliction of duty, lack of responsibility, discrimination, authoritarianism and commercial venality. A comparative appraisal of undesirable values was also made between male and female teachers.

of norms defining this space among patrons, proprietors and passers-by, the research also explores more formal mechanisms that define it by city regulations, and zoning ordinances that are themselves seen to be another level of negotiation among public and private interests. We also trace the mutual impact of the two levels of informal and formal negotiations, with the emphasis for this reason placed on negotiations of public and private space across local communities and neighborhoods with respect to differences in ethnicity, and inequalities of social class and power. The research is based on data from participant observation at the informal level as a “consumer” and at the formal level as a city plan commissioner.

A Reflection on Social Class Differences in Australian Mothers’ Experiences of Full-Time Employment and Family Life

In Australia, as in many other countries, a growing proportion of mothers, whether they are wealthy or poor are participating in full-time employment (AIFS, 2008). This paper will examine social class differences in mothers’ experiences of full-time employment and family life. Drawing on qualitative interviews with mothers who live in NSW, I will examine how differently classed mothers in full-time employment negotiate workplace obligations, unpaid labour in the home, parent-child relationships and romantic relationships. This paper will argue that, while mothers in white collar occupations are rich in economic and cultural capital, the increasing demands of middle-class employment create a 'time deficit', which may deplete women's capacities to genuinely attain 'the good life', associated with their class positions. At the same time, full-time employment is rarely compatible with the ideals of 'good motherhood', regardless of a woman's social class location.

Older Canadian Men’s Perceptions and Experiences of Ageism in Everyday Life

In this paper, we consider the complex and often conflicting perceptions and experiences of ageism among older Canadian men. We draw on data from in-depth interviews with 29 men, aged 65-89 (average age of 74), who were diverse in terms of their incomes and levels of education while also being largely homogeneous with respect to their marital statuses and sexual orientation (the majority were married and heterosexual).

Our analysis of the data revealed three key findings: a) perceptions that ageism was irrelevant; b) identification of ageism as something that affected others; and c) internalization of ageism. Many of the men asserted that ageism was not a factor that constrained or explained their everyday lives. For some, the irrelevance of ageism was because they perceived that the prevalence of age-based discrimination had declined over time. Others reported that they had simply never experienced ageism in their everyday interactions including encounters with strangers, health care providers, peers, or family members. However, the majority of the men also suggested that ageism was something experienced by others, primarily older women (who were perceived to be under intense pressure to look young) and institutionalized elders (who were perceived to be the most likely target of maltreatment, including neglect and abuse). At the same time, most of the men expressed internalized ageism either through the distancing of themselves from those they considered old (both a moral and chronological age category), the expression of barriers for young appearances or youthful personas, or the acceptance of negative stereotypes regarding later life (such as older adults as poor drivers, grumpy individuals in poor health, ‘dirty old men’, or persons unable to easily adapt to new technologies).

We discuss our findings in relation to the extant theorizing and research pertaining to ageism, masculinity, and age relations.

Advancing Gender Equality in Nordic Academia: Political Will and Persistent Paradoxes

The Nordic countries – Denmark, Finland, Iceland, Norway, and Sweden – can be characterized as global leaders when it comes to overall gender equality of society (World Economic Forum, 2012). Political will to advance gender equality in academia is evidenced by the gender equality promotion that has been actively on the national policy agendas since the late 1970s-early 1980s, through various national level interventions, especially so in Finland, Norway and Sweden. Gender equality is addressed in the university legislation in Norway and Sweden, and universities are legally obliged to engage in equality planning. These three countries show the highest proportion of women on scientific boards in the European Union, approaching gender parity, and the highest proportion of women among university Vice-Chancellors in the EU (EC, 2013). Even if many key gatekeeping power positions shaping the academic and scientific landscape show greater gender inequality, unequal gendered structures in academic careers prevail. If the proportion of women among full professors is used as an indicator of gender equality in academia and science, Norway and Sweden do not excel in a European comparison, having only reached the same level as the European (EU-27) countries on average, while Denmark has among the lowest, whereas Finland among the highest proportions of women among full professors within the EU. This paper interrogates the Nordic paradox of high overall gender equality in the society, political will and active policy regulation to advance gender equality in academia and science, on the one hand, and the persistent unequal gendered structures in academic careers and inequalities in resource allocation, especially in research funding, on the other. Accordingly, differences and similarities between the Nordic countries will be highlighted and discussed, along with historical developments, policy landscapes and continuing resistances to greater gender equality.

Artistic Valuation and Growth in the Creative Economy

Highly elaborate valuation practices enable judgments of value on unique, constantly new artistic creations. They combine collaborative and contentious processes of agreement on aesthetic qualities with market exchanges of original works, measured in monetary units. This particular hybrid structure is an institutionally grown, historical accomplishment that fosters future growth in the consumption of aesthetic experiences.
Section 1 of the paper develops the theoretical argument, based on Luc Boltanski’s “sociology of critique”, Luc Karpik’s “economy of singularities” and my own work on “familiar surprises”. Section 2 demonstrates, in four historical vignettes, the slow historical development of judgment practices in the Visual Arts. Section 3 contrasts contemporary practices in the global art scene and its high-end market with recent online aggregations of common opinion in the creative industries, particularly OCRs (Online Consumer Reviews). Section 4 argues that both developments make it possible that total value generated by products of the global aesthetic experience economy will continue to grow.

New General Unions: Trade Union Mergers and Labour Movement Renewal in Canada

The crisis of organized labour has given rise to an extensive literature and various policy ideas for trade union renewal. One proposal has been to call for union mergers to create new types of labour organizations better equipped to conduct campaigns to increase union density and influence. Are such mergers an indication of union weakness or, if undertaken strategically, do they hold promise for a reinvigorated labour movement?

After reviewing past union mergers in selected industrial relations systems, the paper focuses on a recent new union formed out of the merger of two large private sector unions – the Canadian Auto Workers and the Communications, Energy and Paper Workers Union of Canada. The paper provides the background to the merger and offers an assessment of the possibilities for labour movement revitalization.

Objectives for the new union include the organization of non-union workers, especially in private service sectors characterized by a concentration of young workers who are difficult to organize and preclude organization by traditional craft approach. New organizational approaches include building union associations and community chapters. These tactics require innovative union philosophies, organization structures to support the new general unions, and political campaigns to challenge legislation. Having critically considered these and other ideas on reshaping unions, the paper makes more far-reaching proposals for recasting unions to change legislation. Having critically considered these and other ideas on reshaping unions, the paper makes more far-reaching proposals for recasting unions to change legislation.

The paper contributes to theory and policy by arguing that an increase in the size and complexity of working-class organizations need not necessarily compromise democratic worker campaigns.

The research draws from a literature review, interviews and recent conference debates on union strategy. The paper has benefited from the author’s involvement in research and education programs for one of the two unions involved in the formation of the new labour organization.

Thirty Years of Lean Production: The Making of a New Managerial Ideology

Employers have been implementing lean production (LP) outside of Japan for more than 30 years. This production system has been researched, debated and contested throughout this period, while the concept has been applied well beyond the automobile industry to other work environments.

The paper critically surveys the literature with an emphasis on empirical investigations of how workers, and where they have existed, unions, have responded to LP. The author was a co-investigator for one of the first longitudinal research studies of a transplant joint-venture LP automobile factory in North America.

30 years of LP allow for a comparison with three managerial ideologies discussed by Bendix (1956, 1974): scientific management, human relations, and the communist party and trade-union sponsored “worker-activist movement” in post-Second World War East German industry. Bendix views each of these movements as both organizational and ideological. Those in authority advanced each technique as a way to improve efficiency, while simultaneously presenting the policies as having redeeming social value. Each ideology also identified a role and mission for managers.

Based on research in Canada, the United States and Mexico, the paper applies Bendix’s framework to consider LP as a new managerial ideology. First, managers assert the superiority of LP, as measured by efficiency and quality of output. Second, proponents point to the success in transposing LP techniques from the Japan prototype to work organizations around the globe. Furthermore, managers of non-union and unionized enterprises alike have been able to introduce LP into their workplaces. Third, LP supporters have claimed that their system provides for skill development, increased employee participation and an enhanced quality of work life.

The paper assesses each of the three sets of claims. Finally, the paper gives consideration to how worker resistance has sometimes brought about change in the operation of LP.

Social Class, Age, and Identity in Later Life

This paper will present a comparative analysis of social class identity and age identity in later life alongside key theoretical approaches to identity and social change. Second, the paper will consider the methodological and data issues associated with cross-national research and review evidence, at national and cross-national levels, for a relationship between class identity and age identity. Third, the paper will present an analysis of (i) global comparative data from The International Social Survey Programme (ISSP) and (ii) changes in identity over time using the UK Citizenship Survey. Findings show relatively wide cross national differences in the salience of class and age for identity in later life. Moreover age and class identities operate independently of each other suggesting that other factors, identity and identification, need to be examined. However, overall, neither appears to be a particularly important aspect of identity. There is some evidence (in Europe at least) of a relationship between GDP and class identity lending some support to Inglehart’s post materialist thesis but there is no evidence of a generational effect. Analysis of UK data suggests higher levels of class and age identity among this sample of retirees raising both methodological questions and the possibility of greater variation within samples. The paper will conclude by discussing the salience of class and age identities at national and international scales.

Socio-Economic Differences in Health Trajectories Around Retirement in the USA

There is increasing concern about possible widening inequalities in health amongst the older population. There is a growing body of work on the relationships between patterns of labour market participation in later life and health. However the results are equivocal and little has been done to explore socio-economic variations in the impact of retirement on health. To redress this data from 10 waves of the Health and Retirement study in the USA were used to analyse trajectories of poor health and retirement for different socio-economic groups. Repeated-measures logistic regression with generalised estimating equations were used to analyse data up to 7 years before and 7 years after retirement from 1992 to 2010. The results show that for the sample as a whole the prevalence of sub-optimal health increases sharply in the years before retirement, from around 16% four years before retirement to 23% at retirement. Following retirement the prevalence of poor health remains high but the rate of increase slows down. Educational differences are evident throughout the period. Those with a lower level of education have higher rates of poor health for all years and show a more rapid increase in poor health up to retirement compared to those with higher levels of education. Four years before retirement 25% (95% CI 20.0-30.0) of those with a lower education reported poor health compared to 12% (95% CI 9.8-14.1) of those with a higher education. At retirement this had risen to 36% (95% CI 31.2-41.2) and 19% (95% CI 16.7-21.3) respectively. The analyses suggest that poor health is a main driver of retirement in the USA. Also those with lower levels of education continue to be at greater risk of poor health following retirement which might contribute to growing health inequalities in later life.

Environmental Gains and Social Losses? Critical Reflections on the Sustainability Potential of Telework

Anthropogenic climate change and its environmental and social consequences are of increasing concern worldwide. Approaches that advocate a ‘greening’ of our technological and social systems through technological innovation and development tend to dominate policy responses, especially in resource-intensive sectors such as transport. This position is labeled as shallow Ecological Modernization (EM) thinking whereby technology is perceived in (over)optimistic terms, with limited evidence of challenges to contemporary growth-centric models of development, production, and consumption that cause climate change.

Work takes up a considerable portion of people’s lives whilst travelling to and from work has become a key feature of everyday mobility in many developed and developing countries. A significant contributor to Greenhouse Gas (GHG) emissions, transport in its current form is deemed to be unsustainable. In a European context, 416
ropean context, telework - an arrangement that enables employees to work from home - has been suggested as a virtual mobility option with the potential to reduce the ‘consumption of distance’ associated with regular commuting. Given its emphasis on the application of technology to solve environmental problems, the uncritical promotion of telework constitutes a prime example of shallow EM thinking.

Despite the prominence of EM thinking in climate policy and practice, theoretically informed empirical explorations of its implementation and impacts remain incomplete. Drawing on a multi-method investigation of telework in the Republic of Ireland, this paper finds current EM thinking amongst decision-makers to be shallow and largely reflective of neo-liberal environmentalism, contributing little to curbing the consumerist impulses of contemporary economic models and lifestyles. The environmental benefits of telework are also questioned, as is the rationale for existing teleworking schemes. This paper further asserts that actual and potential environmental gains can conflict with potentially negative implications for fairness, equity and well-being, with teleworkers shouldering a substantial social burden arising from technology-aided changes in work practices.

**HÄLTTERLEIN, JENS** (Technical University Berlin, haelterlein@ztg.tu-berlin.de)

**Smart CCTV in Contemporary Crime Control: Policies and Practices of Surveillance**

I would like to address risk governance in crime control by illustrating the development and implementation of so called “smart” CCTV systems in Germany. These video surveillance systems are expected to automatically detect deviant behavior by using software algorithms. Since this technology is not based on the psychological or criminological analysis of deviant individuals, but on the analysis of situation and space classified as dangerous, it comes with an expansion of risk perception: everyone who is monitored by these systems is a potential risk. Hence smart CCTV can be seen as a signature of a new rational of crime control, described by scholars as situational crime prevention, new penology or neo-liberal governmentality. In this new rational, smart CCTV is seen as an efficient and effective tool for security measures. In accordance with this view both, advocates and critics of this technique draw a picture of new powers of control, that stretch from terrorism and incivilities to mass events. This vision of technology based security yet faces technological problems (how can indexical behavior be translated into software algorithms?) and the often divergent interests of prospective users (police, public transport, private enterprises). Drawing from empirical research conducted for the German FMER-funded MuViT project and the EU-funded Vid-eosense project I want to show, that the development of smart CCTV is on the one hand part of a new rational of risk governance in crime control since it comes with a re-coding of risk and security. On the other hand its practical implications correlate with a multitude of social factors.

**RC20-347.3**

**HÄNZI, DENIS** (TU Darmstadt, haenzi@fs.tu-darmstadt.de)

A century ago, Max Weber convincingly brought Switzerland’s character as a “Wissensstaat” into sharp focus. Yet, his oft-quoted notion of the Swiss as a modern nation forged out of will, in a nutshell: Only on grounds of a shared belief in the unique nature of their habits and morals, the identity of the Swiss could emerge and consolidate. Based on a mythology of rural-alpine nativeness and isolation, this “belief in commonality” entails both the construction of boundaries vis-à-vis the threatening outside world and corresponding semantics of resistance. Given the recent discussions on foreign “attacks” on the Swiss banking secrecy and the increased charismatisation of the Swiss mountain guide (an idealization of the laudable Swiss) at the present time, it becomes apparent that this architecture of “Swissness” still provides important symbolic resources. Yet, what about those Swiss who do not live on the very “Helvetic island” but are dispersed all over the globe? First, the paper aims at discerning how the “Swiss abroad” (“Auslandschweizer”) is integrated into the overall imaginary of Swissness. It will be stated that the Swiss expatriate is being drawn as a distinct category since the mid-1970s, the results show that in both countries, social-liberal value orientations tend to advocate the recognition model. This multi-dimensionality of care provision has remained weak. The paper argues that the politics of reform must be analyzed with a coalitional approach in a multi-dimensional policy space. Indeed, the adaptation of the male breadwinner model to new needs and values can be analyzed with different paths, namely via a recognition of care work (recognition model), b) increased female labor market participation (working mother model) or c) an overall rebalancing of work and care for both men and women (social transformation model). Both the working mother model and the social transformation model contain elements of the social investment agenda. Each of these reform directions gives rise to different conflict lines that foster specific actor alliances.

Based on an empirical analysis of actor positions in all family policy reform processes since the 1970s, the results show that in both countries, social-liberal values have been the main drivers behind cross-class alliances between employers and the left have become important drivers of the working mother model, whereas social-conservative alliances tend to advocate the recognition model. This multi-dimensionality of care policy modernization has led to sequential waves of care policy reforms in Germany and to reform stalemate in Switzerland until the end of the 1990s. Recently, social-liberal and cross-class alliances have become successful drivers of family policy, mostly in the direction of a working mother model. * denotes a presenting author. Filling up Discontinuities in the Urban Landscape: Alternatives and Strategies

The end of the so-called housing bubble with the current economic crisis is having dramatic effects in the urban landscape as construction companies have declared bankruptcy and have left many unfinished buildings and empty lots in the urban space where garbage is being accumulated, and no one seems to be responsible and neighbours suffer the consequences. Thus, it is urgent to develop initiatives and alternatives that provide an answer to the deterioration not only of the urban landscape but, more importantly, to the everyday lives of the citizens who suffer the consequences of years of speculation with the urban space.

In this paper I will show the preliminary results of the research project FUTURE (Filling Up Territorial Discontinuities in the Urban Landscape) that has been carried out in the Spanish city of Burgos with the goal of promoting citizens' participation in the elaboration of proposals and alternatives that activate sustainable forms of participatory engagement for a better living in urban areas.

This research is based on ethnographic fieldwork research with neighbours, independent artists and local authorities (participant observation, interviews, life stories, discussion groups) as well as archival research (year of construction/demolition, name of the constructor, original project). More specifically, in this paper I will discuss the following issues: (i) how neighbours perceive these empty spaces and abandoned buildings in terms of risks (garbage, physical injuries, gang activity, depreciation) and what alternative projects and uses they proposed; (ii) what are the intended projects developed by the local authorities in order to fill up these discontinuities; (iii) examples of successful projects developed from below. The presentation will also include a dynamic chart where I have mapped out both these territorial discontinuities or ‘spaces-in-between’ and the alternatives suggested by neighbours and other actors of the civil society (independent artists).
Graduate programs in medicine assume the social commitment with their performance according to scientific and technical norms of discipline in the field, but it will also demand to carry out this work within the framework of certain ethical, professional, and social values. It is clear that we are faced with emergent field knowledge in higher education institutions. The inclusion of these topics in the university curriculum -either as knowledge discipline or transversal axis- is recent and even more so when it refers to specific aspects of this discipline. The research analyses the perceptions about the professional ethics the teachers and students in medical graduate programs and pretends to know about deeds for training in skills and values in public and private universities to make comparisons. In this paper we present the results of the revision, adaptation and implementation in a Mexican public university to discuss how to promote these skills and values. By a joint methodology that includes application of: the instrument validated by Hirsch (2005) from National Autonomous University of Mexico (UNAM), about professional values; the questionnaire for the assessment of the competencies of teachers by the team coordinated by Pérez Pérez (2012), from Valencia University, Spain and conducting interviews. The above-mentioned instruments includes teachers and students that show the condition that prevails about the beneficence principle which, according with Alcoberro, originates in the Hippocratic oath, but goes beyond philanthropy which recognizes the patient as a subject of law; it talks about the expectations of benefits to justify any risk of damage or discomfort to the participants, who sometimes use there transgression to save life at the expense of an unequal relationship between the physician and the patient.

**Urban Conflicts As Spaces of Politicization of Collective Action Around the City: Notes to Think the Continuities and Discontinuities of Urban Social Movements in the City of Santiago (Chile)**

Over the last 40 years the city of Santiago has experienced deep transformations, which have been linked to the implementation of neoliberal policies. Also, the city has been not only the stage, but rather the protagonist of a variety of conflicts around urban issues, such as urban growth, use and appropriation of urban spaces, environmental, demand for housing. This has been the scenario in which old and new forms of collective actions have emerged to propose new forms of appropriation and use of urban spaces, transforming the urban space into an object of political action.

In this context, this paper aims to study the processes of politicization and depoliticization current in urban conflicts in the city of Santiago suggest that not all collective actions around urban issues develop the same levels and types of politicization. Therefore, in this paper I will try to address the following question: what are the factors that can explain the trajectories of the process of politicization or depoliticization of collective action around urban issues? To answer this question I will study the collective actions that have developed around the problems of access to housing, inquiring into its politicization paths from the mechanisms and strategies that develop as part of their urban struggles (configuration of their social networks, identity, organizational structure and action strategies). Finally, I will try to establish the relationship between the processes of politicization and the construction of imaginaries and collective discourses around the city and urban issues.

**Culturalism: Its Circulation In East Asia, Development and 'Clash' With Nationalism**

The paper examines the migration and development of culturalism, ‘a natural conviction of cultural superiority that sought no legitimation or defense outside of the culture itself’ (Duara 1996) in East Asia and its supposed ‘clash’ with nationalism as the face of modernity. Culturalism can be seen as one of models of political community. It was a reaction to the dominance of the modern nation-state. The idea has been developed further as a useful tool in challenging the claim that emphasizes the novelty of nationalism as a form of consciousness as proof of radical discontinuity between pre-modernity and modernity suggested by leading theorists of nationalism such as Benedict Anderson (1991) and Ernest Gellner (1983). If the novelty of nationalism as a form of consciousness lies in the co-extensiveness of political and cultural communities, nationalism was not totally novel in China where culturalism providing a similar kind of totalising view of community had long existed. Culturalism, originated from China, naturally migrated to its spheres of influence including Japan, where under Tokugawa shogunate, it stimulated various intellectual responses such Kokugaku, a ‘nativist’ school of learning focusing on the study of Japanese old text which produced a vision of community that bears close resemblance to Chinese culturalism. The conventional view is that culturalism both in China and Japan then experienced a clash with nationalism, a modern idea of political communities originated from the West, and was replaced by it. The paper first outlines the idea of culturalism as developed in Japan and investigates the way in which it migrated to Japan and facilitated a range of new ideas under Tokugawa rule. It then questions the assumption of the nationalism’s takeover of culturalism in nineteenth- and twentieth-century Japan and China and explores possible transformation of nationalism.

**The ‘Overcoming Modernity’ Symposium: Modernity, Japan and East Asia**

The paper aims to address the theme of the session by using the ‘Overcoming Modernity’ symposium that took place in Japan in 1942. The symposium has conventionally been dismissed as ‘infirmous’ or even ‘notorious’, not deserving serious attention, and was predominantly viewed that it was an attempt by the intellectuals of the day to legitimise the war and fascism. While the symposium’s political and wartime purpose has been well-established, its contribution to Japanese political and cultural thought has been sporadically re-examined starting with Takeuchi Yoshimi’s essay published in 1959. Takeuchi (1959=1979) dismissed the symposium as intellectually empty but argued that the event represented a historical moment when various contradicting forces in Japan, such as restoration vs innovation, the East vs the West and so on, came into a violent collision as an attempt at ‘overcoming modernity’. He appreciated the intellectuals’ concern with ‘overcoming modernity’ as a worthy endeavour as an exercise to look for solutions to the perceived social, economic and political ills but concluded the symposium failed to contribute to the development of political and cultural thoughts in Japan because of the intellectuals’ failure to recognise the double-sided nature of the Pacific War (as an anti-imperialism war against the hegemonic West and as an imperialism and colonialist war towards Asian countries) in their attempts to understand the world. The paper examines the visions of modernity that the symposium participants sought to overcome and explores the ideas suggested as alternatives to the Western-centric vision of modernity during the symposium. These alternatives were then placed in the background of competing visions of Asia and the world including pan-Asianism, the Asia East Cooperative Community and oriental religiosity.

**Another Way of Modernization and Sociology: A Critical Assessment of the “Japanistic Sociology” in the 1920s and the ‘30s**

During the late 1920s and the early ’30s there was a movement among the Japanese sociologists to establish the “Japanistic sociology” that should differ from the western sociology.

Concerning the social & international context in which this movement emerged, three points should be mentioned at least. First, in the 1920s social inequality and social conflict were more clearly recognized than before in Japan. In 1919 the Japanese Ministry of the Interior established the “social” section for social policies. There also arose a “social science” movement among the university students in the early 1920s. This was strongly affected by the Marx-Leninism, and therefore oppressed soon. Many Japanese sociologists tried to separate sociology from this kind of “social science”.

Secondly, the political orthodoxy in Japan shifted its orientation gradually from the westernization to the asianism. The Japanese proposal for the racial equality was rejected at the Paris Peace Conference (1919). And the new Immigration Law (1919), the Japanese Governor General of Korea changed its colonial policy “overcoming modernity” as a worthy endeavour as an exercise to look for solutions to the perceived social, economic and political ills but concluded the symposium failed to contribute to the development of political and cultural thoughts in Japan because of the intellectuals’ failure to recognise the double-sided nature of the Pacific War (as an anti-imperialism war against the hegemonic West and as an imperialism and colonialist war towards Asian countries) in their attempts to understand the world. The paper examines the visions of modernity that the symposium participants sought to overcome and explores the ideas suggested as alternatives to the Western-centric vision of modernity during the symposium. These alternatives were then placed in the background of competing visions of Asia and the world including pan-Asianism, the Asia East Cooperative Community and oriental religiosity.

Ageism and Social Integration of Older Adults in Their Neighborhoods in Israel

Purpose: The paper aims to examine the extent to which ageism is connected with the social integration of older adults in their neighborhoods and to identify factors that explain social integration.

Design and Methods: A convenience sample that included 300 older adults aged 65 and above and 300 younger people under the age of 65 were interviewed in three neighborhoods in Tel-Aviv, with varied socio-economic status. The levels of ageism were measured using the Attitudes toward Old People Scale (APOS). The study also examined the influence of personal and contextual factors on social integration.

Background: Many older adults who are hospitalized are functionally dependent and employ paid carers who perform a variety of tasks during hospitalization. This has been widely examined.

Methods: The study included a combination of qualitative and quantitative research methods.

Results: There were no formal policies and guidelines regarding the tasks that paid carers should be allowed to perform. The majority of nurses perceived that paid carers should be allowed to perform a variety of tasks except for professional nursing tasks. Type of hospital and ward and nurses’ education were significant in explaining nurses’ attitudes towards involvement of paid carers in providing care to their older care recipients.

Conclusions: Attitudes towards nurses towards paid carers are determined mainly by local organizational characteristics and nurses’ education. There is need for explicit policies and practice guidelines and their enforcement with regard to paid carers.

Positioning and Counter-Positioning in an Institutional Setting. the Role of Children’s Active Participation in Managing Conflicts

This paper presents some video-recorded episodes of conflicts involving children and adults at school. These cases describe the multidimensionality of school community work and point to: 1) the distinction of the interactional construction of the conflicts in schools; 2) the ways institutionalized organizational narratives become cultural resources for framing, scripting, and revising problems as plots; and 3) the interdependence of micro- and macro processes. The approach construes conflicts as a dynamic part of classroom social life in which personal expressions are affected by and affect teachers’ and students’ classroom norms of conduct. Conflicts are observed in discursive practices that interactively construct social positions and diverging/shared narratives. Drawing from work on organizational narratives, positioning theory, and conflict analysis, this presentation focuses in particular on the role of children’s active participation in managing conflicts in an institutional setting.
within the Kanto region, and its farmers suffered from a sharp decrease in sales following heated media coverage. Under these circumstances, I convened the Round-table Meeting for "Kashiiwan Products for the Kashiiwan People" towards Security and Safety, and called for various local stakeholders—including farmers, supermarket owners, restaurant chefs and housewives within their childbearing years—to be engaged in that meeting. We deliberately and scientifically discussed some unique radioactivity determination method on local farm products and soil, and arrived at an agreement over our own acceptable standard of radioactivity level in farm products. By measuring radioactivity and transmitting the result, we achieved the recovery of the reliability of local farm products...

Our primal motivation to convene the meeting was to overcome the 'gap within the local community', namely, the pointless conflict between consumers and farmers after the Fukushima accident, which was mainly derived from the asymmetric nature of 'choice' and 'mobility' between them. Redefining local consumers and farmers as Kashiiwan citizens sharing the same locality and issues, we strategically aimed to connect the local consumers, who have an attachment to the locality and wish to peacefully eat local products, with the local farmers, who intend to build personal relationships with the consumers. However, our community-oriented risk-communication strategy had a critical limitation: apart from the assumed local customers, it was impossible to reach a wider range of consumers via our marketing strategy. On the basis of this practical experience in Kashiiwa, this presentation will discuss social 'coordinating' and trust-building between people with opposite interests under the risk of uncertainty.

**Decision Makers and Those Affected in the Japanese Expert Community—the Fukushima Nuclear Disaster**

An aim of this presentation is to describe the great distance in risk evaluation regarding the Fukushima people with dementia (PWD) in Japan and to analyze its structure and background by applying the insight on a distinction between decision makers and those affected in risk sociology of Niklas Luhmann(1993). After 3.11 in 2011 the most Japanese experts appearing in mass media followed the government report which was underestimating a seriousness of Fukushima and a possibility of spreading of radio-activities. In contrast some experts such as Hiroaki Koide and Tetsuji Imanaka from Kyoto University pointed at a high possibility of core meltdown in the nuclear plants and warned citizens of the great dangers of the serious nuclear disaster through local or community media from the early on. A distinction between experts and citizens which is very common in the previous risk analysis might be useless to explain this distance, because it appears within the expert communities. Therefore the author focuses on the other distinction and takes into account the diagnosis of Luhmann that the serious conflicts over the perception and evaluation of future loss between decision makers and those affected who are excluded from decision making process cross into the every functional area in the society. It implies the splitting of the scientific experts into such two unintegratable positions. To analyze this tendency in the case of Fukushima the author will focus on the different types of positionality for warning risks and dangers and will analyzes the different degrees of trust in each other's controllability in the new situations. These elements might influence their discrecures at the more basic level than their differences in scientific-theoretical assumptions on a safety of nuclear plants and a nature of radio activities.

**How New Is the Image of Those with Dementia in 21st Century in Japan? an Analysis of TV Documentary Programs in the Nhk Data Archives**

**Introduction:** From the late 1990s to the early years of this century, a new image of dementia (PWD) has been promoted in Japan in order to mitigate the stigma of dementia. The willingness of PWD to speak publically about their thinking and de- sires around 2004 is considered a significant event. Afterward, their statements became a central issue in dementia care. The mass media and especially the NHK (Japan Broadcasting Cooperation), which produced television documentary programs on this subject, have promoted this trend. The event of 2004 has been definitely important in changing the image of PWD. However, the views and wishes of PWD have been uncovered and con- structed in diverse way in each field of dementia care, and the NHK has reported some outstanding care practices. The empirical exploration of this im- age of dementia in Japan is crucial to the understanding and interpretation of socio-political realities of such new events by online consumers.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Since the fallout of the triple disaster in March 2011, coupled with the government’s pursuit of the reactivation of nuclear plants, Japan has once again become a seedbed for grassroots political activity. Various anti-nuclear rallies and demonstrations are held across Japan, and the largest of them all, the Friday Protest rally in front of the Prime Minister’s Official Residence has been staged more than fifty times. Such contentious activism, especially among Japanese youth, has been quite inconceivable in the country for many years. How should we understand this development in relation to the three decades of relative silence after the end of student movements in the 1970s, which is said to have left a negative legacy by its violent disintegration? Building on the sociological studies of the protest cycle, this paper explores the concept of “abeyance” and demonstrates the working of “mediators” as key actors for social movement continuity in a post-union democracy.

Climate Change Policy-Making Process and Reasons of Its Stagnation: Activities and Preferences of Stakeholders in Japan

Institutional processes of making political decisions determine the range of their outcomes. The international comparative research project, the COMPON project (Disaster Planning: Climate Change Policy Networks), explores characteristics of the decision making processes in each society, based on common methods. The purpose of this presentation is to show results of the Japanese face-to-face questionnaire survey to national stakeholders and to discuss its interesting findings, especially on activities and preferences of major stakeholders.

The COMPON-Japan conducted this survey based on the Japanese translated version of the common COMPON questionnaire sheets to 125 organizations in 2012 and 2013 which can exert political leverage in the field of climate change policies. 72 organizations responded and the collection rate is 57.6%.

As results of our survey, we find that almost all stakeholders share the view that the climate change really occurs and is caused by human activities, though a few stakeholders conduct natural or social science research by themselves. They can, therefore, concentrate their political resources to bring their opinions to governmental officials by attending at committees and making press releases. On preferences of domestic climate change policies, there is a cleavage over policy orientations, especially between industries and NGOs. Industries prefer a bottom-up voluntary goal setting, while NGOs prefer more institutionalized and legally goal-binding measures.

Our respondents replied the progress of climate change policies are seriously impeded by the lack of political leadership. This result can be interpreted in two ways. For one thing, they expect the government’s coordinating of the crush of interests between stakeholders. And for another, they expect stronger political leadership and media campaigns to introduce more effective climate change policies. Climate change policy-making processes in Japan are stagnated, then we need stronger international stimuli and pressures to change the situation.

Community-Based Disaster Management in Super Aging Society: How Age and Gender Interacted to Shape Disaster Response in 2011 Tohoku Disaster

This paper seeks to examine how different attitudes toward gender across generations affected disaster response and recovery in 2011 Tohoku Earthquake and Tsunami.

Substantial population aging had occurred in the coastal areas of Tohoku that were devastated by the 2011 Earthquake and Tsunami. About two thirds of those killed in the 2011 disaster were older than 60 years of age. While elderly persons as a group are one of the most vulnerable population groups, they are key to community-based disaster management in Japan.

Community organizations for disaster management (jishubousaikai) are conventionally established under each residents’ association (jichikai) or neighbourhood association (chounai). Men in their 60’s and 70’s, retired but active, are the main members of jishubousaikai. Women of the same generation also participate in activities of jishubousaikai, but they are seldom engaged in decision-making because of perceived distribution of labour that characterize this generation. Younger generations with more egalitarian gender attitudes are generally not very interested in disaster management activities.

After the disaster, jishubousaikai managed shelters and distributed relief goods in many affected areas. The national government for the first time issued requests to each area to consider diverse needs of affected women and care-giving families in shelters; however, the requests were not recognized as important in many affected areas.

This paper investigates how age and gender interacted and shaped response processes in 2011 Tohoku Disaster though the analysis of data collected in two studies: 1) interviews with people engaged in disaster response and recovery during the 2011 Tohoku Disaster, most of who were also affected by the disaster themselves and 2) an action research project with three jishubousaikai, aimed at incorporating gender and diversity sensitivity in their activities in Shizuoka Prefecture, where another gigantic Tokai Earthquake is predicted to occur.

Gender-Based Violence Following the Great East Japan Disasters

Research on gender-based violence following disasters remains limited in Japan. A team of researchers and advocates, who are members of the Women’s Network for East Japan Disaster, conducted a case-finding study and compiled 82 unduplicated incidents of gender-based violence perpetrated in the aftermath of the Great East Japan Disasters. This presentation discusses the study’s results and analyzes various manifestations of gender-based violence following the disaster.

While the majority of the reported cases (n=45) pertained to intimate partner violence/domestic violence, the remaining 37 cases involved violence and harassment by individuals other than intimate partners. These incidents were diverse in their manifestations and situational contexts and included sexual assault, unwanted sexual contact, voyeurism, sexual harassment, ad stalking. The majority of the perpetrators were individuals whom the victims knew, as opposed to total strangers. Some of the reported cases involved sexual assault and exploitation committed by individuals who were in the position to provide assistance and protection, i.e. the leaders of evacuation centers. Exploitation and even fear and helplessness was a tactic frequently employed by perpetrators. For example, ex-partners perpetrated violence after approaching women and offering help, and disaster response personnel/volunteers exploited disaster-affected individuals. Women of all ages and in all situations are at risk of this type of exploitative violence; however, women who are single, divorced, separated, or widowed and those who have lost a place to live, job or other sources of livelihood appear particularly vulnerable to this type of violence.

This study elucidated multiple layers of vulnerabilities of women in the wake of the disaster, which stem from the pre-existing social structures that disadvantage and discriminate women, and sociocultural norms that reinforce male domination and female subordination.

IKEDA, KEN’ICHI* (Doshisha University, keikeda@mail.doshisha.ac.jp)
Does East Asian Social Capital Bring about Beneficial Effects over Its Indigenous Cultural Constraints?

East Asian social networks, as compared with North Americans’, are often colored with their emphasis on hierarchy. In tandem with network structures, East Asian cultural context also stresses that hierarchy is essential in society, which is often modeled after traditional kinship networks. As was revealed in a book by Ikeda & Richey (2011) in Japanese cultural contexts, this hierarchical nature does affect Japanese political trust, knowledge, and participation. However, we are not certain that the case is true for other East Asian cultural contexts, i.e. the generalizability of the findings. This paper will focus on this point. Using EASS 2012 dataset (East Asia Social Survey among Japan, Korea, Taiwan, and Mainland China), we will show comparative analyses of social network and its effects on social trust, social support, and political/ social participation, especially focusing on the hierarchical nature of “Asian” social networks.

IKEDA, SHINGOU* (Ins Labour Policy and Training, ikeda@jil.go.jp)
The Factors of Japanese Female Workers’ Job Quitting for Childbirth/Childrearing

This presentation will show the factors why Japanese female workers quit their jobs for childbirth and childrearing. Despite the enforcement of Equal Employment Opportunity Act and Parental Leave Act 20 years ago, the female labor force participation rate by age in Japan still forms M-shape curve, because many women quit their jobs at the time of their pregnancy.

C. Haskins stresses on “preferences” between work and home to explain behaviors of female workers with family responsibilities; “work-centered”, “home-centered”, and “adaptive”. She presents the data that many of women are “adaptive” in Europe. She also points out the influences of relaxing labor market regulations
on increasing part-time work and on intermittent careers which are typical of adaptive women.

I suppose it is also important in Japan to focus on the structure of labor market as an influential factor to explain the mass of women's behaviors. Japanese society has experienced long-term depressions during the past two decades, and firms have increased non-regular employees such as regular employees as well as temporary workers instead of regular employees. This severe employment situation has negative influences on many female workers' job continuity, while some firms maintain female regular employees as long-term labor force. Moreover small organizations are not so positive on parental leave while large organizations promote the leave. As a result, the job continuity rate after the first childbirth is increasing only for the regular employees in large organizations.

The results of our data analysis imply that it is effective for employees in small organizations to gain knowledge of work-life balance support systems to negotiate with their superiors and avoid job quitting. And also, it is important to support female workers searching for regular employment with work-life balance systems so as not to choose nonregular jobs in order to balance work with family lives.

The Influence of Gabriel Tarde on the Development of Japanese Sociology in the Early Twentieth Century

The purpose of this paper is to examine Gabriel Tarde's influence on the development of Japanese sociology in the early twentieth century. During this period, Tarde was an opinion leader of French sociology with his famous opponent, Émile Durkheim. After his death in 1904, Tarde's presence in the French academic community declined gradually, while Durkheim earned a reputation with his collaborators known as "Durkheim school." Unlike Durkheim, a professor at the Sorbonne, Tarde did not have his own students at the Collège de France, where lectures were open for everyone. It may be one of the main reasons for Tarde's decline, as some historians of sociology think.

However, there were many foreign sociologists in the audience of his course of modern philosophy at the Collège de France. One of Japanese sociologists who attended Tarde's course, Shôtaro Yoneda (1873-1943), became the first professor of sociology at the Kyoto Imperial University. Yoneda established his sociological theory based on Tarde's "Inter-psychology." In 1913, Yoneda co-founded the Japanese Institute of Social Science with his colleague at the Tokyo Imperial University, Tôgô Takebe (1871-1945), who also attended Tarde's course. Yoneda's earliest disciple, Yasuma Takata (1883-1972), a preeminent sociologist and economist in Japan, not only borrowed Tarde's idea for his "Power theory of economics," but also discussed Tarde's imitation theory for his system of formal sociology. Therefore, in this paper we propose to demonstrate that the impact of Tarde's sociology was more important in Japan than in his home country.

What Is Happening in the Northern Mozambique Under the ProSavana Programme and Agricultural Growth Corridor: An Implication to the Large Scale Land Acquisition in the Southeast Asia

This paper intends to reveal what is happening in the Northern Mozambique under the ProSavana Programme and agricultural Growth Corridor, and draw implications from a field survey for peasant society in Southeast Asia. Large scale land acquisition, so-called "land grabbing," is extending in Southeast Asia as well as in Africa. Laos and Cambodia are relatively new countries in the sphere of land grabbing. Such countries are expected to promote agricultural growth corridors. Obviously, there is close relations between land grabbing and corridor projects. What impacts will such relations give on the concerned rural communities and peasant farmers?

In Mozambique some agricultural growth corridor projects have been conducted since the mid of the 2000s. Nacala corridor project in the Northern Mozambique, which connects Nacala Port to Malawi and Zambia, is one of them. In the same area, ProSavana programme started in the same area in 2011 under the triangle cooperation among Mozambique, Brazil and Japan. The target area of ProSavana covers the Nampula, Zambezia and Niassa provinces.

The UNAC (União Nacional de Camponeses) and international NGOs are claiming to stop ProSavana because of many problems caused from ProSavana and its related activities of the local and the central governments, and agribusinesses. This paper highlights the process of land deals, real beneficiaries, and severe impacts on peasant farmers and examines how large scale land acquisition by foreign investment infringes food sovereignty of the society.
material state of his/her own family, social activity, satisfaction with ecological situation in the area of residence, interaction with bodies of local authorities, migration moods, life ambitions, etc., draws stable psychosocial climate of a rural area.

Mutual support is a phenomenon in modern society where personal values and disunity dominate. This phenomenon is characteristic of very few rural areas of Russia and it was found in rural areas of Tartastan. The explanation of this fact lays, in the opinion of the author, in socialistic values of rural population especially typical for the area where the proportion of old people is quite big. Social networks reflecting rural population cooperation in Pestrechinsky area are concentrated basically on mesolevel and in Kukmorsky area on microlevel. Projective trajectories of rural population towards development of all spheres of life in a rural area are connected with intergenerational continuity due to family agricultural business.

1. Specifics of a demographic portrait of population in Pestrechinsky area reflected on making facilities inside the house. At the same time home improvement in Kukmorsky area is connected with household needs outside the house. 2. Rural residents working on a family farm show high level of satisfaction of fulfillment of his/her reproductive capabilities. 3. Such form of rural residents' cooperation as condemnation of co-residents for not taking part in life of a rural community. 4. Life of rural people living in Pestrechinsky area is concentrated on the development of a social wellbeing while in Kukmorsky area - on personal wellbeing. None of these strategies cannot be viewed acknowledged as the best for the development of a rural society because personal welfare also constitutes social capital of the whole area.

**Table of Contents**

This paper will examine the visual effects of gentrification in the historic neighborhood of Galata in downtown Istanbul, Turkey. Revisiting the research I have done in 2004 and conducting a new fieldwork in the neighborhood, I intend to examine the evolution of visual contrasts between physical proximity and social distance, revealing the differences and similarities concerning residential segregation and neighborhood change. Galata is a historical district which was inhabited by non-Muslim minorities until the first half of the twentieth century when they had to leave the country for various reasons, including the creation of the State of Israel, the events of 6-7 September 1955, the "wealth tax" in 1964 and the cancellation of the residence permit for more than eight thousand Greeks. These years also represent a significant wave of migration from underdeveloped regions of southeastern Turkey towards Istanbul. These migrants have settled in the neglected and abandoned apartments mainly in Galata. In the '70s, small factories moved into the area, usually in the ground pavements, destroying the walls in order to install machines and thus worsening the condition of the buildings. Since the 2000's the dilapidated buildings are restored and the migrant population is gradually displaced and replaced firstly by the middle and then upper classes. Using the concept of territoriality, enrolling in both frames of time and space, this study aims to elaborate the interpenetration of these two structures and to identify the vernacular ways, developed by different social groups living in the district, of appropriating the same urban space.

This paper will examine the interactions between the actors of the Gezi Park urban uprising and the Turkish state in the framework of shifting violent and non-violent strategies. The movement of peaceful, unarmed, non-violent people against the demolition of the Park was faced with violent tactics from the police force, varying from excessive use of tear gas and water cannons to plastic bullets, while streets turned into battlefields. This led to an emotional urban commuting process of different political groups with different perspectives or agendas, and even "ordinary" people without any activist experience or intent, which represents a unique characteristic. The approach of the government, fostered by accusing the protesters of being "looters", has resulted in defensive, as well as new, creative strategies. The movement of peaceful, unarmed, non-violent people urban uprising and the Turkish state in the framework of shifting violent and non-violent strategies. The approach of the government, fostered by accusing the protesters of being "looters", has resulted in defensive, as well as new, creative strategies.

**British Muslim Response to the Post-9/11 Uncertainties**

The 9/11 and 7/7 attacks in the US and UK, as well as the subsequent War on Terror and its effects have had a tremendous sociopolitical impact on the British Muslim polity. On the one hand the events have fostered Islamophobia and the securitization of Muslims. But on the other hand, it is the focus of this paper, the aforementioned events have fostered an atmosphere where sociopolitical and religious reflexivity is taking place among British Muslims.

The paper is based on interviews and virtual ethnography and it identified three main ways in which the Muslim community is changing. Firstly, some Muslims are adopting a literalist reading of Islam, which is performance orientated and pietistic. Secondly, a small number of Muslims are reading Islam in a liberal reformist way within a modern sociopolitical milieu. The group is composed of born and convert Muslims and ethnically diverse. The reformists tend to focus on human rights, women rights and the rights of the Muslim LGBT community. Finally, an increasingly large number of young Muslims are becoming politically assertive, confident, and organized. These Muslims in the main are concerned with human rights, especially of fellow Muslims. Like the literalist group, this group is composed born and convert Muslims and is also ethnically diverse. This group adheres to a mixture of reformist and literalist reading of Islam and often receives criticism from the literalists.

**New Technologies, Therapeutic Zones and Islamist Groups**

ILYAS, MOHAMMED* (Goldsmiths College University of London, modini11@hotmail.com)

**New Technologies, Therapeutic Zones and Islamist Groups**

Communication and entertainment technologies over the last decade have transformed sociopolitical activism. Ayman Al Zawahiri, in his book Knights Under the Prophet's Banner states: "We must ... get our message across to the masses and break the media siege imposed on the jihad movement ... This can be achieved through the use of the internet." In most cases the new technologies were first developed for military purposes and later modified for civilian use –In the Internet, mobile phones, and military games. However over the last two decades Islamist groups have started to use the technologies in ways that they were first intended for –build secret communication networks, attract and train new recruits, or to use the media to spread their political message, especially Internet has been well documented in academic literature, and think tank and government reports. However, there is little written about how the aforementioned technologies are used to create psychosocial environments that at act as precursors to one joining and acting on behalf of Islamist groups.
In this paper, I will detail how social networks, videos, and video games can foster and be used by Islamists to create what I call ‘therapeutic zones’, which make acquiring and acting upon extreme ideas more amenable. I consider these zones as an essential part in cultivating the desire among some individuals to acquire extreme ideas and in some cases act upon them, either with or without the involvement of Islamists.

These zones are important because they are spaces where what I call militarized emotions can be cultivated and secondary trauma imparted. The emotions act as ‘disclaimers’ to circumvent ethical and legal references and make Islamist explanations and solutions acceptable.

Significance of Agent-Based Simulation in Social System Theory

Since the late decade of the 20th century, agent-based simulation method has been developed and becoming a powerful tool for social science. This approach has attracted attention as a new trend, which clarifies the social dynamics and complex human relations. Especially, the following is an important advantage of this approach. This simulation is performed in bottom-up and process-traceable ways, therefore we can clarify how the macroscopic form and social order are generated from the interactions of individual agents. The agents only receive a small number of constraints, each interacting autonomously in the computer space. Then we can reproduce by simulation the manner of forming the ordered small number of constraints, each interacting autonomously in the computer space.

The advantage of agent-based simulation lies in that we can explore the micro-macro link between individual and society by a bottom-up procedure. There has been a deep division between the methodological individualism and collectivism. To bridge this division has been the most difficult work so far. Because of the emergent property of a macro level, it has been regarded as almost impossible to derive the characteristics of macro (society) from the micro (individual). In fact, while efforts to the problem of micro-macro link have been regarded as almost impossible, the result is being recognized.

The outcomes of this study should offer more insights and alternative views to the problem of micro-macro link between individual and society by a bottom-up procedure. There has been a deep division between the methodological individualism and collectivism. To bridge this division has been the most difficult work so far. Because of the emergent property of a macro level, it has been regarded as almost impossible to derive the characteristics of macro (society) from the micro (individual). Political Participation Patterns in Lithuania: Alienated or Active Citizens?

Citizen participation in the process of political governance is an essential condition for the functioning of democracy and ensuring the stability of society. Political participation essentially is expressed through a number of mechanisms inherent in the process of democratic government that help citizens to voice their interests, preferences and needs, and to pressure state officials to take into account their opinions. Active participation in the process of democratic government provides ordinary citizens with a possibility to have influence on the appointment and monitoring of politicians and civil servants.

The focus of this paper is to investigate the impact of structural and individual factors on political participation patterns in Lithuania. What groups of citizens in Lithuania may be distinguished in accordance with their level of interest in political participation? What are the factors that determine the differences between types of citizens? What are the causes and explanations of different patterns of political participation between types of citizens?

Based on the survey conducted in Lithuania in 2010 and 60 semi-structured interviews, the paper draws conclusions that three types of citizenship (active, voters, passive) may be identified according to interest in politics, political efficacy and participation in political acts. From theoretical perspectives of active, traditional and monitory citizenship, the characteristics of identified groups are mixed, because of socioeconomic and cultural conditions in Lithuania.

Support for Democracy and Citizens Participation in Lithuania: From Alienation Toward Active Citizenship

Democracy is rather fragile, when it is based on formal democratic institutions. Support for governmental institutions and citizen participation in the process of political governance is an essential condition for the functioning of democracy and ensuring the stability of society. Citizens are free to choose a number of ways to influence the political process. However, not all modes of political participation are politically efficacious and contribute to the consolidation of newly established democratic system. High levels of support for democracy and participation in conventional political acts constitute a precondition for a stable democratic system. On the other hand, other authors argue that low levels of institutional trust and participation in illegal protest acts may be considered as acts of self-expression and it is not necessary for stability of democracy.

The focus of this paper is to identify and to investigate types of citizen in Lithuania. What groups of citizens in Lithuania may be distinguished in accordance with their level of evaluations of democracy, support for governmental institutions and citizen participation in political acts? What are the factors that determine the differences between types of citizens? What are the causes and explanations of different patterns of satisfaction of democracy, political trust and participation between types of citizens?

Based on the survey conducted in Lithuania in 2010 and 60 semi-structured interviews, the paper draws conclusions that four types of citizens (trustful reserved, non-trustful reserved, non-trustful active, non-trustful passive) may be identified according to evaluations of democracy, institutional trust and par-
Bodies-in-Design: Impairment and Embodiment in Universal Design

Bodies-in-design: impairment and embodiment in Universal Design Designed objects and environments are often inattentive to impairment or bodies that do not conform to particular, yet normalised, conceptions of the body form and performance. This has resulted in a heightened awareness for a socially just design that is sensitive to the complexities of bodily actions and encounters, leading to the emergence of movements such as Universal Design. Drawing on a study on the relationships between impairment, embodiment, and design, this paper considers the diverse ways in which major exponents of universally designed products and services construct the impaired body, or the bodies for which they purport to design. Discussing data from interviews with designers in companies at the forefront of making universally designed products, we consider the implications of the impaired body in the design process. We discuss how designers sometimes fall back on reductive conceptions of the impaired body that mask the diversity of capabilities and experiences among users of designed objects and environments. We then discuss some of the reasons for such exclusions as well as outline potential ways of sensitising organisations and practitioners to the complexities of bodies-in-design.

Does Trust Promote Generosity?

Both of trust and generosity have been considered as important factors to promote cooperation (Yamagishi 1998, Nesse 2001). Some researchers argue that trust plays a significant role in assessing quality and trustworthiness of unknown others. On the other hand, generosity is defined as a tendency to forgive defects or failures of partners (Exline & Baumeister 2000, McCullough 2008). However, these two cooperation-promoting traits appear to be incompatible. Trust helps us to assess partner's trustworthiness, which may lead to a withdrawal from inappropriate relationships. On the other hand, generosity helps us to forgive partner's mistakes, implying that we make a commitment in spite of partner's failures. Therefore, the question is: Are these two traits really compatible? And if so, how do we have developed these two seemingly contradicting traits?

Here, we aim to clarify the puzzling relationship between trust and generosity by using an agent-based modeling. We adopt trust game as a basic building block and then incorporate two further elements into our model. One is related to heterogeneous agents in terms of abilities to fulfill donor's expectation. The other element is related to partner choice, commitment (repeated trust game with the same partner) and an exit. Trust is thus formulated as selective strategies in the context of partner choice, whereas generosity is defined as forgiveness of partner's failures in the context of commitment relationship. We carry out the set of computer simulation experiments to assess the viability of several strategies.

Our first result is: without reasonable trustful strategies, more generous strategies cannot be viable. Furthermore, we find that as group size increases, trust level also goes up, leading to the prevention of degenerating generosity. These two results clearly indicate that trust can promote generosity. Put it differently, there exists a coevolution mechanism of trust and generosity in our social world.

Facing the Selves in the Field Research of Immigrants: From the Research Question Based on Visibility to Led through Daily Relationships

This paper aims to describe the process of constructing and transforming research questions through encounters with immigrants in the field of everyday life under the globalized environment, and to indicate two approaches to the fieldwork, based on my research around Kobe city, Japan. The first is research based on researchers' perceptions that categorized immigrants as the “aliens” visibly in the social structure, while the researchers' positions and power to make them other are not critically subjected. Here, encounter is not a research subject but rather a chance to inspect our presupposed research question. On the contrary, the alternative approach that constructs research question from daily relationships with immigrants focuses on the encounter itself as the process of facing the selves that occurs us another belonging and identity in the dimension of existential movement, such as Ghassan Hage proposed (Hage 2005). Based on my research, I experienced these approaches as transition from the former to the latter, that criticized the direct linkage between the notion of “aliens” and their visibility by walking away from the ethnic festivals to the daily relationships among return migrants from Peru, and by getting involved an trouble of a family. By getting involved an trouble of a family their visibilities by walking away from the ethnic festival to the daily relationships.

“Battle Hymn of the Tiger Mom” As Social Capital Building

“Battle Hymn of the Tiger Mom” as Social Capital Building

In this presentation, I explore Amy Chua's “Battle Hymn of the Tiger Mom” as a strategy of second-generation Chinese American. I examine Chua's account in relation to Asian immigrant experiences, social and cultural ties, and communities in U.S. race and ethnic relations. The questions asked include: How did Chua raise her children to obtain social capital and educational opportunities in U.S. society? What were the limitations and (unintended) consequences of her strategy? How can we bridge the difference of the account in the history of Asian American social, cultural, political, and educational experiences? Does her account overcome stereotypes against Asian Americans, or those against other racial minorities?

I situate Chua's account of child rearing in the context of existing quantitative and qualitative educational research on educational achievement of Asian Americans to point out the almost missing perspective of building social capital from cross cultural contexts. Second, I analyze Chua's account. Chua comes from an intellectually elite family, and she herself is also a well-connected intellectually elite. She has very distinct idea on “success,” and her children are successful so far, but Chua also suggests that the Chinese way of raising children will have some pitfalls because it does not nurture some important American values such as creativity, leadership, and independence. I argue that Chua's account, while being somewhat extreme, shares some common characteristics of the dominant discourse of Asian Americans as a model minority. I also suggest that analyzing the accounts of second-generation mothers is advantageous, as they know the ways social capital and networks work based on their foreign-born parents' experiences and they are very conscious not to allow their children to lose them while becoming “American.”

Reading “Battle Hymn of Tiger Mom” As an Educational Biography

Reading “Battle Hymn of the Tiger Mom” as an Educational (and Socio-Political) Biography

In this presentation, I explore Amy Chua's “Battle Hymn of the Tiger Mom” as a biographical account of child rearing by a second generation Chinese American. I examine Chua's account in relation to Asian immigrant experiences in the United States. Questions asked include: How does Chua tell about the ways in which she raised her children to attain high educational achievement in U.S. society? What were the limitation and (unintended) consequences of her strategy? How can/should we situate Chua's biographical account in the history of Asian American social, cultural, political, and educational experiences?

First, I situate Chua's account of child rearing in the context of existing quantitative and qualitative educational research on educational achievement of Asian Americans. I review the literature on educational attainment of Asian Americans to point out the missing area is Asian Americans' self account of education at home, i.e., how they raise their children.

Second, I analyze Chua's account. Chua comes from an intellectually elite family, and she herself is also an intellectually elite. She has very distinct idea on “success,” and her children are successful so far, but Chua's account also implies that the Chinese way of raising children will have some pitfalls because it does not nurture some important American values such as creativity, leadership, and independence. I argue that Chua's account, while being somewhat extreme, shares some common characteristics of the dominant discourse of Asian Americans as a model minority. I also suggest that analyzing the biographical account of second-generation mothers is advantageous, as they know the ways their foreign-born parents raised their children and they are very conscious of how they raise their children.

INOUÉ, HIROKO* (University of California-Riverside, hiro.inoue@email.ucr.edu)

The comparative world-systems approach analyzes systems of societies rather than a single society. Interaction networks in world-systems comprise systems of human societies which are bounded in space and engage in regularized interpersonal and economic exchanges. The evolutionary growth of the connections and intensified linkages through cycles and oscillations has formed increasingly larger and integrated world-systems over time. Structural globalization is thus conceptualized as an elementary trend that prevailed in the last two centuries. While the world-systems approach explains evolutionary growth of interaction networks over time, it is conscious of historical contingencies as well as spatially and temporally specific conditions for local polities. This aspect is compatible with recently developing agent-based social science. Applying spatial agent-based simulation, the current study engages in examination of historical cases. In particular, this study faced
Vocational Education and Gendered School-to-Work Transitions in Switzerland and Japan

The labour markets of Japan and Switzerland are significantly gender segregated. In Switzerland the seed for labour market gender segregation begins with the gender role orientations of young schoolchildren. Via the Vocational education and training (VET) system and the occupational linkage of education and employment, early career aspirations are transformed into gendered employment opportunities. VET is indeed very prominent in Switzerland, where seven out of ten upper secondary graduates come from vocational programs. But the case of Japan challenges the assumption that gender segregation is mainly due to gender segregated VET. Japan’s upper secondary graduation rates figures are more than reversed from those of Switzerland with three out of four graduates having enrolled in general programmes and only one out of four in VET. Within VET, however, Japan (JP) and Switzerland (CH) show a similar distribution of gender segregation by field of education and gender. Still, the contribution of the highly competitive academic education system to gender segregation in Japan remains unclear. Therefor the paper asks how education systems in Switzerland and Japan promote gender-typed trajectories into the labour market differently.

We use comparable youth panel data for both countries to analyse our research question (JP: Youth cohort study of Japan; CH: Transitions from Education to Employment TREE). Our dependant variable is job gender concentration as measured on industry level. We apply stepwise linear regressions to analyse country specific effects of (1) junior high school variables (CH: track, marks, literacy skills; JP: position of class), (2) senior high school variables (field of VET, academic level), (3) higher education variables (field of study, short vs. long studies), (4) family background variables, and finally (5) gender on job gender concentration. The findings allow for a critical assessment of VETs contribution to job gender segregation in different educational systems.

The Street As Urban Borderland: Micro-Geographies of Inequality and Co-Existence in Manchester and Shanghai

The paper examines the micro-geographies of spatially divided but adjacentely located and coexisting social groups (defined by place of origin, ethnicity, socio-economic status or various other criteria) in two very different cities. It is rooted in six years of fieldwork in Shanghai, China, and several months of research-based teaching (Architecture) in Manchester, UK. The study builds on ethnographic work (namely long-term observation, visual methods and in-depth interviews) in two divided neighbourhoods, where the street acts both as a border, separating difference, and as a space of conviviality, bringing together and merging. In this way, the studyly streets are established as spaces were the various barriers between the different are often patiently and persistently undone by those who live them in their everyday, just as symbolically as they are sometimes erected
Intergenerational transfers of money, time and space are important features of parent-child relationships. Previous research reveals substantial differences in intergenerational solidarity, raising the question of causes and reasons for European divergences. Apart from inequality on the micro level, meso level structures (family) as well as macro level factors are important in order to understand differences in support levels of giving and taking money, time and space within and also between countries. While single types of solidarity have been predominantly analysed separately, a joint analysis is still missing.

Based on the Survey of Health, Ageing and Retirement in Europe (SHARE), 14 European countries are analysed to measure the impact of inequality structures on functional solidarity between parents and their adult children. Multilevel analyses including micro, meso and macro levels indicate that need and opportunity structures as well as variations in family composition and cultural-contextual differences between welfare state regimes matter for intergenerational relations. Children in need get more support than better situated offspring. Simultaneously, parents with better opportunity structures help more. Furthermore, we can observe that parents in low-level service states and high poverty and income inequality countries such as Poland, Italy and Spain predominantly support their adult children by providing living space, whereas in less familialistic and more generous welfare states such as the Netherlands, Denmark or Sweden parents rather provide time and monetary support. Our results moreover reveal that the provision of living space substitutes for time and financial transfers. The latter, however, do complement each other: children who receive time support from their parents often receive monetary help as well.

Money Vs. Space? Intergenerational Transfers in a Comparative Perspective

The provision of living space as well as direct financial transfers are important elements of functional solidarity between parents and adult children. However, previous research reveals substantial discrepancies in monetary transfers and intergenerational co-residence not only within but also between countries. Against this background, the investigation addresses causes and reasons for intergenerational support in terms of money and space. We investigate (1) which parents do provide these kinds of support for their adult children, (2) whether money and space are substitutes or complements, and (3) how one can explain national differences.

Using the Survey of Health, Ageing and Retirement in Europe (SHARE), influences of individual, familial and societal factors are analyzed for 14 countries. The empirical results, based on logistic multilevel models, indicate that especially needs of the adult child as well as opportunities of the parents are important determinants of intergenerational solidarity. In contrast, competing family members reduce support probabilities for each individual. Parents in familialistic and low-level service countries such as Poland, Italy and Spain predominantly support their adult children by providing living space, whereas in less familialistic and more generous welfare states such as the Netherlands, Denmark and Sweden parents rather offer monetary support. Furthermore, the provision of living space seems to substitute direct financial transfers.

The Sex Lives Of Sex Researchers

The Sex Lives of Sex Researchers

As sexuality studies develops as a field, recent biographies feature some prominent figures. In addition to several texts on Alfred Kinsey, these biographies include those of Michel Foucault, Richard von Krafft-Ebing, Jeannette Foster Howard, the first librarian at the Kinsey Institute, and William Masters and Virginia Johnson. Some of this work is superb scholarship. Some might be considered "pathography," Joyce Carol Oates term for "the technique of emphasizing the sad, sentimental underside of its subject's life."

Pathographies of sexuality researchers spin for perversion. For example, James Miller's biography of Michel Foucault links Foucault's work with a range of unconventional sexual proclivities like SM. And biographer Thomas Maier begins his book with Virginia Johnson losing her virginity, portraying her as a sexually conniving conventional sexual proclivities like SM. And biographer Thomas Maier begins his book with Virginia Johnson losing her virginity, portraying her as a sexually conniving conventional sexual proclivities like SM.

far right has ultimately won hegemony. I will show the process of ‘double instrumentation’: participation without systematic attempt to establish ideological influence and use of the grassroots protests for the publicity of particular political groups. If these two typical failure strategies are allowed to proceed, they lead to increasing distrust, the collapse of coalitions and isolation of the new left groups.

An Analysis of Imagined Boundary of the “Japanese”: Results from an Internet Survey in Japan

This paper aims to analyze tendencies and differences of imagined boundary and definitions of the “Japanese” among Japanese people. There is a legal definition of the Japanese, that is, the Japanese are the people having Japanese nationality. However, a personal definition to distinguish people between Japanese (or ‘real Japanese’) and non-Japanese may vary from person to person according to their experiences and social status. Especially, judging in terms of grey zone cases, for example naturalized immigrants or Japanese diaspora, is controversial and delicate issue in Japan.

For capturing people’s imagined boundary and definition of the “Japanese” in detail, I conducted an internet survey with 2,000 respondents in 2013. In this survey, I employed 16 types of vignette questionnaires which describes typical Japanese people, and demonstrated explicit link between indices and the notion of the Gini’s algebraic equation. In the paper, results from the survey will be demonstrated in detail. Besides, the relevance between types of imagined boundary and definitions and demographic and socio-economic status will be discussed in the paper.

Income Inequality and Relative Deprivation: A Formal Theoretic View

In a time of increase of inequality, does people’s frustration or feelings of deprivation rise? If it is yes, many theories of relative deprivation explain these kinds of relevance between objective economic situation in a society and subjective feeling of individuals? This paper aims to present a formal theoretic view of the relationship between income inequality and relative deprivation by applying and developing Shlomo Yitzhak’s (1979) defined indices of individual and societal degree of relative deprivation emerged by income comparison among reference group, and demonstrated explicit link between indices and the notion of the Gin’s inequality coefficient.

In this paper, I try to describe and explain two paradoxes relevant to relative deprivation occurring in the time of modernization from a formal theoretic view. First paradox regards the tendency that a disappearance of class barrier as reference groups in terms of income comparison rather results in increase of people’s relative deprivation. Second paradox is related to economic growth which tells that increase of amount of income in a society rather increases individual and societal relative deprivation under certain conditions.

A formal theoretic model will be introduced so as to solve these paradoxes. Furthermore, some implications from the model for understanding contemporary situations in advanced countries will be discussed.

Social Network and Job Change in Japanese Youth Labor Market: Embeddedness, Safety Net, and Social Closure

The purpose of this study is to examine whether and how social network affects job change behavior and the result of job change in Japanese young workers. They are faced with high risks of job turnover because of the expansion of fixed-term or part time employment, which is followed by service industrialization and long term recession since 1990’s. It is becoming an important process of career mobility that Japanese young workers find their job in the external labor market today. Social network approach is a convincing sociological framework to investigate the job search process.

There are several explanations based on social network approach. Embeddedness, safety net, and social closure arguments are examined empirically in this study. A panel survey data targeting at Japanese youth is utilized and it is tested whether and how social network affects job change and change in income after changing a job. Beckman’s two-stage sample selection model is applied.

Empirical analyses support the embeddedness argument. We have two main findings. First, social network is not related with job change behavior, but employment status is the definitive factor. Secondly, however, male job changers with ‘weak ties’ get higher income if they experience mobility between different industrial sectors. Social network works especially in cross-border mobility, where workers may lose their human capital and be put under uncertainty about their career. Social network can offset these disadvantages and give them advantages in job searching. And the cross-border mobility is a process of de-embeddedness.

In previous researches in East Asia, social network’s aspects of safety net and social closure are focused. From the results of this study, however, embeddedness argument is still important to be considered.

Baseball Labor Migration: Transformation of Border Crossings of Athletes in Global Diffusion of Baseball

As the result of globalization of a sport, the border crossings of athlete are increasing explosively today.

This study proves that the border crossings of athletes have accomplished the qualitative change from the example of global diffusion of baseball, which has been considered with capital and rational relations.

The global diffusion of baseball can be positioned on the context of forming a global marketing and scouting network of professional baseball whose summit is the Major League Baseball as North American top league.

This network has assumed Central America-Caribbean region by 1950s and East Asia after 1990’s, and has been expanding to the ‘Baseball Barren’, Europe, Middle East, Africa and South American Continent, after 2000s. As a result, new competition terrains, where playing level had been dropped, have emerged in some of the ‘Baseball Barren’, and new types of border crossings of athletes can be seen there.

In the past sport labor migration studies, it has been thought that economic reasons, like salary or bonus, are main factor for the athletes who cross borders, however, not a few athletes are going abroad for non-economic and mental reasons, such as self-actualization these days. These can be seen as a new phenomenon as a conclusion of globalization of sports. In this situation, border crossings of athletes can be regarded as not parts of ‘labor’, but parts of ‘consume’.

From this analysis, the word of ‘Sport Labor Migration’ is becoming no longer appropriate to represent the border crossings of athletes.

Reconstructing Relationships in a Transgender Family: The Story of Parents of Japanese Transgender Children

Raising and nurturing children is one of the most important functions of a modern family, and the emotional parallel child bond is typically strong. However, in the case of transgender children, to what extent do their gender issues impact their relationships with their parents? When discovering that their child is transgender, parents either accept them or change or reconstruct their relationship. This study discusses the process of creating new relationships and parents’ viewpoints by analyzing the narratives of parents of Japanese transgender children.

Ten in-depth interviews of parents with transgender children were conducted. The interviewees included eight mothers and three fathers. Data were collected from November 2012 to October 2013 in Kobe, Tokyo, and Fukuoka.

First, in these families, children’s problems were mainly handled by mothers because fathers had a comparatively tenuous relationship with their children and tended to avoid the topic of sexual minorities. Two types of reactions were seen on discovering that their child was transgender. The first was an “as suspected” response, while the second was extreme shock. The interviewees then began gathering more knowledge about gender issues and LGBT by reading or visiting LGBT communities to understand and generally acknowledge their child’s unique or queer gender identity. And in their life stories, parents tried to reconform or reconstruct images of their children and reforify their emotional ties with them.

How Do Support Providers Deploy Care Workers Effectively in Japan?

This presentation aims to develop a more effective method of deploying care workers for in-home care of aged persons. Although in Japan the government provides long-term care for aged persons who require it in accordance with the Long-Term Care Insurance Law (Kaigo Hoken Ho), aged persons do not always find compatible care workers. This is not only because of the shortage of care
workers but also because in-home long-term care support providers may lack motivation; as they do not receive subsidies for placing compatible care workers with aged persons. Yet, good chemistry between aged persons and their care workers is important because aged persons have diverse needs, which may require specific characteristics in their care workers.

To design a policy that will motivate care providers to deploy their care workers more effectively, the presenter interviewed several care workers and other support provider staff members, investigating how care support providers deploy care workers and the difficulties they face. The qualitative interview data revealed that some support providers have aged persons appoint their own care workers at their own expense. This method usually results in successful postings as it enables aged persons to choose compatible care workers and to make particular demands regarding their needs. However, because these appointments are made outside of the Long-Term Care Insurance Law, a designation fee is applicable, which some aged persons cannot afford. These findings suggest that the government should give subsidies to support providers who appoint large numbers of care workers so that these providers can keep their designation fee low, and aged persons can continue to choose their own care workers. Such an initiative may also restrict social welfare costs in the long run because increased rates of in-home care are associated with decreased medical spending.

*The Education of Young Brazilians in Japan*

Currently (2011), the Brazilian population in Japan totals 210,032. Of that total 46,855 (22%) are under 20 years old, and 24,061 (11%) under 10 years old. From these data, we can conclude that many of these children attend, or have attended, school in Japan. Compared to the Japanese-Brazilian adults living in Japan, their children learn the Japanese language much more easily and quickly. Many of these children start their education in Japanese kindergartens, and then most of them continue studying in Japanese schools. Some advance to the university level. However, even if they speak the Japanese language, most of them have problems keeping up with the regular disciplines. The main reason is that they don’t have the background the other Japanese children have. Additionally, they don’t have their parents’ help with their studies at home since most of the Brazilian parents are not fluent in the Japanese language. Another issue to be considered is that in Japan, education is mandatory for children under 15 years old who are citizens, but optional for foreigners. One problem here is how Japanese society views foreigners. For the Japanese, the Japanese-Brazilians are temporary foreign workers who will leave Japan after a finite period of time. The result is that the Japanese-Brazilians are dealt with as visitors, and this feeling extends to the children. This treatment negatively affects any policy regarding the education of foreign children in Japan. The prospect for Japanese-Brazilian children in the future depends on where they settle. Lacking a higher education a large number of Brazilian children experience difficulties with stability and ascension in both Japanese and Brazilian societies. In this paper, I will focus on cases of young Brazilians raised in Japan who were successful in obtaining a higher education in Japanese universities, although they are currently the minority.

*Volunteerism among Mexican Youth in the US: The Role of Family Capital*

This study investigates patterns of volunteerism within a rapidly growing segment of the population, Mexican immigrant and Mexican origin youth, using data from the Education Longitudinal Study of 2002 (ELS). These data show that volunteerism varies by immigrant generational status. Contradicting classical assimilation, the study shows instead that through environmental certification regimes, ecology or nature itself is largely shaped, transformed and restructured to fit into, and thus serve, neoliberal governance and accumulation in a normalized manner. Certification regimes offer some avenues for a sustainable aquaculture; however, the internal dynamics of neoliberal capitalism remains largely unchanged. Since economic logic still reigns over ecological and social logics, the article argues that the example of the certification regimes should therefore be characterized not by ‘ecological modernization’ but by ‘modernization of ecology’. It is because through certification regimes, capitalism is not modernized in ecological lines, but ecology itself is modernized in the line of neoliberal capitalism.

*Violence and Education in Judo Practices: A Comparison of France and Japan*

In this presentation, I examine the relationship between education and violence through judo practices of children in Japan and France. Judo originated in Japan but it is not anymore popular there. While the population of judo players is less than 200 thousands in Japan, it is almost 600 thousands in France where the national population is two times less than that of Japan. In order to compare the judo practices in these two countries, first of all, I examine the recent debates in Japan on the violence related to judo and on the ideas of judo as education (Mosk 2010; Matsubara 2013). Then, I introduce examples with the data collected from my interviews to French judo coaches especially at a Britanny region and my fieldworks at a Judo club in a Paris suburb, infamous for a poor and dangerous area. From my ethnographic research at this area, I found the social boundary in the area and that it was closely related to the order of violence (Ishikawa, ISO 2013). Then, I introduce the judo practices of the club team as “moral” that are not common in the area but are more extensively in France in practicing judo. The judo practice in the club is common to others in France. Contrary to France where the judo practices are oriented to avoid any violence and they are often considered as education, judo and judo players are often considered as violent in Japan but the Japanese educational policy has believed the educational
values of judo. Such policy has caused mortal accidents at public schools every year in Japan. I examine why the judo practices are so different in these two countries in regard to education and violence.

Habermas' Discourse Theory and the Concept of Public Sphere

The aim of this paper is to clarify the concept of Jurgen Habermas’ public sphere in his book, Between Facts and Norms, especially focusing on his perspective and method. In this book, discourse theory is formulated with “D: Just those action norms are valid to which all possibly affected persons could agree as participants in rational discourses.” However, especially in American context, there is a lot of criticism that the discourse theory is not so effective for the analysis of an actual problem because it is too formalistic. Responding to this criticism, Habermas elaborates a process model of rational political will-formation about realistic problem. Habermas has taken up the public sphere as a concept to support such political will-formation. According to Habermas, the public sphere “is a warning system with sensors that, though unspecified, are sensitive throughout society” and “can best be described as a network for communicating information and points of view.”

Some existing discussion found that Habermas succeeds to use a theoretical technique, called conversion of perspective and shift the level of a reference in The Theory of Communicative Action. However this paper points out that Habermas already uses similar techniques in Between Facts and Norms. Habermas moves to more concrete level of discussion based on his theoretical understanding of a modern democratic constitutional state. Dealing with experimental problems, such as politics and law, one of focusing point is a public sphere. Finally, we think on the feasibility of the concept of Habermas’ public sphere as an analytical tool of actual problems.

ISTVAN, ALESHA* (Texas A&M University, aistvan@tamu.edu)

Using an illustration of the relationship between the U.S. environmental movement and the U.S. wind energy industry, I develop a theory for understanding the relationship between social movements and their economic outcomes. Synthesizing the social movement theory of political process with the economic theory of social structure of accumulation, I argue that social movements become more and less important to industry creation based on the intersection of the phases in the cycle of contention with the industry’s position within the cycle of accumulation. Furthermore, at any given point in time, these cycles are both impacted by the larger political, economic and ideological structure of the society. I develop four distinct propositions to further clarify this theory. First, during times when economic consolidation intersects with movement diffusion, contentious actions have little, if any, relationship with industry development and technological explanations prevail. Second, during times when economic decay intersects with movement exhaustion, technological and social movement outcome explanations become even less important and the macro-political-economic environment provides a more robust explanation for industry changes. Third, during times when economic exploration intersects with movement radicalization/institutionalization, movement actions have an important effect on its industry counterpart. Fourth, during times when economic consolidation intersects with movement exhaustion, the economic counterpart may develop in direct contradiction to movement goals.

Re-Thinking of Community Based Pre-Disaster Activities; The Problem of Social Divisions in the Case of Japan

As the lessons learned about local initiative of disaster preparedness, this paper will be re-thinking the role of local community mainly focusing on the case of Japan recent two decades and especially based on the original research findings about neighborhood association “chonai-kai” and making “secure-and-safe community activity” after the Great Kobe Earthquake of 1995. The questions are 1) why and how previous disasters and terrorism have changed local communities’ disaster preparedness and risk perception nationwide, 2) how the local office promoted risk mitigation at the level of local community and 3) whether they worked out or not during the tsunami disaster efficiently.

The findings are as follows: 1) the local communities are one of the best social capitals which are worked as emergent aiding and caring system each other and so 2) the construction of “chonai-kai” based disaster preparedness have become main important program of the disaster planning nationwide. For the “chonai-kai”, the problem of risk became more and more main subject of their activities. 3) This trend was connected to nationwide anxiety and “making secure-and-safe community activity” after terrorism using chemical substance by cult in 1995 Japan. But 4) the initiative of the activities is not belong to “chonai-kai” or local community itself and 5) the social division within local community itself is the problem such as the isolation of disabled people or other minor roles in the town after disaster revealed in 2011. This is connected with the case of unequal gender/ethnic relationships in communities and reflected in the local pre-disaster preparedness.

The discussion is 1) how the disaster studies take up the problem of social division in the theme of local community at global level and 2) how the relationships of the nations and local citizens in the disaster planning should be.

The Role of Japanese Public Health Nurses’ Activities As Post-Disaster Assistance

This paper will examine about the construction of disaster resilient local community based on multiple social networks through the cases of public health nurse activity in the tsunami devastated area.

The questions of this paper are 1) why and how the professional ability of public health nurse are efficient at the post-disaster time and 2) how it is different from volunteer activities such as non-specialized NPOs or neighborhood disaster prevent associations at the community base.

This paper is based mainly on the findings of my own interview with public health nurses of Chiba University who worked in south of Iwate prefecture and a detailed survey on the public health reports about the disaster assistance. The findings are that 1) their activities are focusing on informal care and long-term support for community re-construction as well as official nursing services in the shelter right after the disaster, 2) their professional skills were especially effective in case they conducted their research about the health status for all surviving citizens in the area by using nationwide public health nurse human-resource network. And 3) they can support efficiently the destroyed local public office because they have been long working there and knowing in detail about clients and their community. It is important significantly different from other non-professionalized volunteers that 4) they have professional skills and a long year experiences of local community based caring and they have a variety of wide networks all over Japan.

I will discuss about collaboration of public health services with other local institutions, NPOs, volunteers and organizations for disaster vulnerable people such as elderly women. Japanese public health nurse activities is one of the best examples of post-disaster assistance system which has been uniquely rooted in local communities culturally and historically.

What the Ubiquitous Network Society Brings in Japan: Influences of the Mobile Internet Devices on Teenagers

Advanced technologies sometimes corrode social institutions. “Act on Development of an Environment that Provides Safe and Secure Internet Use for Young People” is a Japanese law which binds every parent to set up mobile web filter on the mobile phone of her/his child to block “harmful” information in cyberspace. However, recent prevalence of smart phones and hotspots in Japan is spoiling this protection.

In this paper we want to describe current trends of the Internet use among Japanese schoolchildren based on several surveys we exercised in 2010 – 2013 in Gunma prefecture. The results show that many teenagers use their mobile Internet devices in a quite unquestioned manner. For example, 20% of high school girls answered our questionnaire that they had met someone they had come to know through the Internet.

We are convinced that, basically, teenagers are exposed to three types of different risks. The first risk is caused by the fact that they are connected directly with the outer world, where evil adults (or non-adults) are waiting for their victims. This risk contains cyber-crimes such as enticement, deception or false billing. Another risk comes from the situation in which the teenagers are connected online with themselves. Cyber-bullying, or cyber-troubles are getting serious because they happen where neither teachers nor their parents can observe. The last risk comes from the recent convenient condition of the ubiquitous internet. Schoolchildren are exposed to the risk of addiction to the Internet activities, such as online games, blogs, SNS, live-chatting or online shopping.

We want to illustrate what Japanese teenagers or parents suffer from and what we should do in order to protect schoolchildren. We don’t think we can prevent teenagers from connecting with the web, therefore, at last we have to teach them how to adapt themselves to the coming digital age.

ITO, MIDORI* (Otsuma Women’s University, midorito.ito@nifty.ne.jp)

**Transformation of Relationship in the Second Modernity in Japan in Comparison with the Theory of Reflexive Modernization**

The aim of this report is to examine how far the theory of reflexive modernization can be applied to the Japanese society today. Examining titles of books and headlines in Asahi-newspaper, we see abrupt increase of the word of ‘relationships’ (Tsunagari) and ‘ties’ (Kizuna) in and after 2011, when the big earthquake occurred. Precise examination leads us to other finding that since 2007 the number of these words began to increase and that the word of ‘prostitution’ mostly relates to family or community. Moreover, in 2007 a new word ‘activity to get married (Konkatsu)’ was coined and since then the word has got popularity. These suggest surge of interest in how to create or keep relationship in family or neighborhood. These phenomena to seek relationship actively seem to correspond with the theory of ‘pure relationship’ by A.Giddens or of individualization by U.Beck at a glance.

However, there are data which are contrary to their theories. If we focus on family relationship, since about 2000 we see tendencies that people regard family relationship as more important than before. First, people try to stop postponing formation of the family, which is not successful though. Second, they try to keep the family relationship; they support the idea that one should keep the family relationship, even if one becomes to dislike his or her partner, which are contrary to Giddens’s theory. Third, more people tend to support the normal family: registered marriage and the family consisting of a husband, a wife and their children. While Western societies are experiencing the diversifying of family in the private sphere, Japanese society is experiencing the re-institutionalization of family on people’s consciousness.

In conclusion, although the theory of reflexive modernization is a useful tool to research Japanese society, we should re-theorize it from our differences.

ITO, MIHO* (The University of Tokyo, mihoito.pig@gmail.com)

**Expansion of Secondary Education in a Transition Economy: The Case of Vietnam**

This paper examines an abrupt expansion and stagnation of higher secondary education in Vietnam during the two decades since the beginning of 1990s. In 1986, Vietnam introduced the Doi Moi policy to shift from a centralized socialist economy to a market-based one. Influenced by this drastic transition of economy, people’s aspirations for upward mobilization through achievement of a higher academic level increased significantly. The school enrollment rate of high school increased from 15% in 1990 to 55% in 2010. However, the trend of the upward mobility movement has not continued for such a long time as in other recently industrialization countries in East Asia. By analyzing educational statistics by regions, the author found that the number of enrollments in high school now is still increasing, and is even decreasing in some poor rural areas. This paper focuses on two causes that restricted the rapid expansion of higher secondary education and caused a reduction in its speed. Firstly, a privatization policy of secondary education introduced a number of private high schools with weak management bases. They provided temporary bases for people’s aspiration to go to high schools, but could not be continued due to lack of strong management strategies. Secondly, the development of the labor market could not keep up with the rapid increase of the newly produced labor force, high school graduates. People began to realize that only having a higher secondary education diploma was not enough to have a stable job in the metropolises, but was also too much education to work as part of the manual labor force in factories. In conclusion, this paper forecasts the future of post rapid expansion of secondary education in the first two decade of the transition economy.

**Experiences of Difficulties Faced By Hikikomori People within Everyday-Life: From the Perspective of View of Intimacy**

This paper aims to describe the experiences of difficulties faced by the withdrawal of youth from society known as hikikomori in Japan. This paper is based on fieldwork data and narratives of hikikomori people in self-support group in Kobe. This self-support group organizes peer supporters with their experiences, and provides support to hikikomori people as the person concerned (Tojisha). This paper analyzes their narratives from the approach of life-history analysis. In Japan, hikikomori phenomenon has been problematized since the 1990s. According to research conducted by the Cabinet Office in 2010, the population of hikikomori (age range 15-39), is estimated 696 thousand (comprising 1.79% of the total population of Japan). In this survey, hikikomori is defined as “people who predominantly stay at home for more than six months, other than for household work, child-care, schizophrenia or physical illness.” Therefore, hikikomori has been referred to as problems of psychology and requires psychiatric treatment. Moreover, hikikomori has been also identified as problems related to Japanese education and employment systems. However, experiences of difficulties faced by hikikomori people are more complex. In fact, on their narratives, they address the various issues which they face in their daily lives. When talking experiences of hikikomori, they talk about various categories of human relations. In particular, their narratives on difficulties are often associated with intimate relationships, gender, sexuality and the other. For example, a hikikomori parson said “I am troubled about how to interact with other people familiarly.” Thus, this paper focuses on the intimacy of human relationships within their everyday-life experiences. Through this analysis, I argue that the experiences of difficulties faced by hikikomori people not only reflect instability of employment of youth but also related to the anxiety and uncertainty concerning their intimate relationships.

**Embodiment Experiences of Women with Disabilities in Yogyakarta, Indonesia**

**Embodiment Experiences of Women with Disabilities in Yogyakarta, Indonesia**

**Abstract**

This paper explores the changing embodiment experiences of new disabled women after the 2006 earthquake disaster in Bantul district, Yogyakarta province, Indonesia. As a consequence of the disaster, thousands of people lose their parts of their bodies and become disabled. Not only they faced psychological suffering and trauma caused by the earthquake but also they should deal with many challenges in order to survive in their subsequent lives. Their properties were vanished and the situation was exacerbated by their work inability as a result of their impairment. They have been adapting to improper environment situation such as inappropriate facilities that hinder their mobilities. This situation even worse for new women with disabilities because they have not only to struggle for daily needs, they also have to challenge multiple oppression because they are disabled, because they are women and because they are poor and do not have ability to work. They also have been experiencing changing embodiment. After the disaster they lose their dignity and have to adapt to their new embodiment experiences. They have to follow procedures of medicalization to their physical disabilities in order to close with normality and should involve in some programs such as work skills from government and NGOs. This paper deal with ethnographic approach of the personal experiences of 5 new disabled women in comparing embodiment experiences before and after become disabled. This paper also discloses the embodiment process after 5 years of disaster and how those women with disabilities exercise their bodies to mainstream disabilities in their families and neighbourhoods.

The Next Transformation: From Glam-Capitalism to Alter-Capitalism

Globalization has resulted not in the ‘world society’ but rather in networked enclaves of globalization: New York, Tokyo, Hong Kong, Moscow, London etc. People that rush together explore the world through extensive flows of consumer goods, technologies, migrations, money, media-generated images (Appadurai). There capitalism has been transformed into glam-capitalism. Preconditions for glam-capitalism were created by virtualization of social structures. Hyper-reality of simulations producing copies without original (Baudrillard) is a adequate model for networked enclaves and networks as well as for politics of images and media. By the 2000s intensive commoditization of images has led to overbranding and triviality of the virtualization strategy that provokes shift of competitive advantages to hyper-virtuality of glamour. Being specific life style or aesthetic form, glamour becomes now newest rationality of capitalism. Glam-capitalism raises when producers at the hyper-competitive market place must glamour consumers and when goods must be aggressively beautiful to attract targeted groups. Value creation process now is related more to trends, than to brands, not only in fashion industry and show business but also in high-tech and financial industries.

Alternative movements like ‘copy left’, ‘open source’, ‘creative commons’, and ‘pirates’ violating ‘intellectual’ property rights challenge regime of glam-capitalism and represent the authenticity revolt against hyper-virtuality of glamour not only in economy but also in politics and culture.

Alter-social movements reinforce functionality and competition against image- producers at the hyper-competitive market place must glamour consumers and represent the authenticity revolt against hyper-virtuality of glamour not only in economy but also in politics and culture.

The pressure on universities to increase external sources of funding research became the global trend. This trend is consistent with the basic principle of a modern market economy - the demand of increasing the efficiency of all actors and to reduce government deficits.

In the last 20 years Russian higher education took several reforms. After 1992 many technical institutes have expanded the number of faculties and have become state universities. They were allowed to introduce tuition fees. In 2003 the special foundations, financing the first stage of innovations, were founded, including national and regional venture capital funds. The innovation activity of the universities was stimulated. In 2009 the government introduced status “research university” and began to support research universities with special mega-grants. To receive this status universities prepare reports for their research development.

The amount of funds received by the university from external sources is among the indicators that are taken into account during the competition.

A detailed analysis of the problems that arise after the reforms, show the positive and negative effects of each reform on the research activities of universities. The positive results of the reform are: the expansion of research in the universities, the emergence of new laboratories and scientific equipment update, inviting well-known scientists to carry out joint research projects. But still the main source of funding for research in universities is the state budget. There are significant restrictions on the receipt of funds for research from other sources. Limited income of the population in Russia does not allow to raise tuition fees. The economic crisis and the reluctance of the innovative entrepreneurs restrict the flow of funds from the business sector. There is also a contradiction between the development of innovation activity and basic research.

Anxiety and Social Change

The purpose of the study: a comparative study of the correlation between the level of social anxiety, and some of the economic characteristics of the countries. Indicators: the level of anxiety (Q38-Q34 – EVS), the level of happiness (Q3 – EVS), the level of social activity (Q5A–N – EVS), human development index and human development rates.

High growth rates of human development level positively correlate with increased level of anxiety (0, 76) and negatively correlate with the level of happiness (-0, 51) and the level of social activity (0, 57).
Low growth human development index are accompanied by reduced anxiety (-0.88), high level of social activity (0.81) and feeling of happiness (0.71).

Negative emotions can be an important regulator of social activity. It is necessary to distinguish between the qualities of negative emotions. For example, the decrease in activity occurs in depression. Anxiety is accompanied by disappearing of emotions, interest loss, and energy reduction.

Anxiety stimulates social activity, makes people more susceptible towards, first, to social innovation, and secondly, to social dysfunction. High innovative activity leads to a more rapid pace of economic and social development of the country.

IVORY, TRISTAN* (Stanford University, tivory@stanford.edu)

Immigration Policy, Gender, Identity and Their Implications For Sub-Saharan Africans Living In Japan

Japan is a relatively new immigrant destination among advanced post-industrial nations. Despite increased immigration since the 1980s, Japanese immigration policy provides relatively few avenues to citizenship or permanent residence and even fewer accommodations for family reunification. Furthermore, Japan has experienced a prolonged internal debate concerning the effects of immigration on national identity and belonging. For the majority of migrants within Japan, the only way to regularize their status and legally remain in the host society is to marry a native-born Japanese citizen. Sub-Saharan Africans represent a novel migrant group to study in Japan because they are racially, ethnically, and culturally distinct from the majority-group (a “visible minority”) and their status as Africans is often denigrated within Japanese society. I use in-depth interviews and participant observations from a 12-month period in the Greater Tokyo metropolitan area to interrogate how Sub-Saharan male migrants negotiate their status within Japanese society. The issues of greatest interest arising from the research are: the gendered nature of citizenship in Japan, strategies for asserting masculinity in receiving settings, prioritization of marriage selection, and negotiating cultural and gender differences in maintaining the family structure. I argue that marriage to a Japanese national is not only the primary mode for regularizing a migrant’s legal status, but the most essential avenue for providing invaluable access to social capital and social networks.

IVORY, TRISTAN* (Stanford University, tivory@stanford.edu)

Marriage As a Social Resource: Distinctions Among Immigrants In Japan

Classic studies on immigration to traditional receiving destinations describe intermarriage with native-born populations as one of the final steps towards group assimilation (Gordon 1964; Bogardus 1968; Barth 1969). Although aspects of this argument have been complicated (Alba and Golden 1986; Song 2009) or revised (Kalimji 1993; Rosenfeld, 2001), the basic premise has remained intact (Qian and Lichter 2001; Chiren 2004; Walters and Jiménez 2005). Research on new receiving destinations, however, has been much more conclusive about the nature and sequence of native-born/immigrant intermarriage within the process of group assimilation (Kalimji 1998). Using interview and observational data gathered from the Sub-Saharan African population residing in the Greater Tokyo Metropolitan Region between July 2011 and August 2012, I show that marriage is substantially different across two distinct classes of migrants. For migrants incorporated as low-skilled or non-credentialed laborers, marriage to native-born individuals is the first step towards assimilation because it is the fastest, most readily available avenue for obtaining legal long-term residence in Japan. For migrants incorporated as high-skilled or professional laborers, stability of legal status and comparatively broad access to human capital and social networks results in a less instrumental mate-selection process and increases the likelihood of marriage to non-native-born individuals. The segmented nature of immigrant/native-born intermarriage in Japan highlights the importance context- and country-specific factors play in understanding intermarriage and the process of group assimilation.

The Impacts of Wartime Mobilization on Postwar Social Stratification in Japan: A New Direction of Quantitative Historical Research

During the World War II, a large number of Japanese men were drafted in military service or forced to work for military factories. After WWII, they returned home from military or moved from military factories to other workplaces. This study investigates the wartime mobilization and the stratification system. Japanese Social Stratification and Mobility surveys, which have conducted at an interval of 10 years since 1955, have collected work history data of respondents born from 1886 to 1985. This work history data included the information on wartime experiences such as military service. So far, this information has not been utilized in Social Stratification and Mobility research. Using the data, we could reconstruct the information on at what age the respondents started military service, at what age they returned from military or in what kind of job they engaged after WWII. Life histories of respondents born from 1901 to 1925 are thought to be strongly influenced by WWII since they experienced the wartime at their adult active ages. Using 1955 and 1965 Social Stratification and Mobility surveys, this paper, first, attempts to reconstruct life history data of respondents that enable us to analyze the relations between wartime experiences and careers. The analyses of this life history data, then, reveal that there are clear age differences in wartime experiences among birth cohorts. Third, multivariate analyses of postwar occupational attainment indicate that although educational levels strongly influence patterns of occupational transitions from wartime to postwar period among people who experienced wartime mobilization in their twenties, thirties, and fifties, it becomes more important in the transition period than before. Based on these results, this paper discusses the future possibilities of quantitative historical research.

Who Tolerates the Use of Physical Punishment?

In the end of December 2012, a male senior high school student killed himself after he suffered from frequent use of physical punishment by an adviser teacher of his basketball team. Since then, a large number of serious cases caused by massive wartime controlling have been reported in Japan. Before that incident, although the Fundamental Law of School Education prohibits physical punishment, public opinion generally tended to tolerate the use of physical punishment by parents in Japan. Many people think that hitting a child as a way of parenting is unavoidable in some cases. According to JGSS-2008 data, more than 60% of respondents approve the use of physical punishment by parents. Physical punishment by teachers was also more or less permitted in JGSS-2000/2001. It is now necessary for us to understand social and cultural backgrounds of tolerating physical punishment in Japanese society. This paper explores the factors of approving the use of physical punishment among Japanese people.

Balinese Reactions to UNWTO's Global Code of Ethics for Tourism: A Case Study of Balinese NGO's Initiative

This paper examines an emerging tourism-related movement in Bali, initiated by the local NGO to reform long established mass-tourism. While Bali is well-known as Indonesia’s most prestigious tourism destination today, Bali’s economic development has been associated with rapid changes caused by modernization. In other words, tourists’ fluid attitudes on culture and the environment seriously concern tourism practitioners. Consequently, although there is no unified idea and approach, introducing sustainable tourism has come to attract considerable attention especially among Balinese intellectuals, policy makers and NGOs.

A local NGO, Wisnu foundation, has launched a village tourism project called ‘Bali DWE’ in 2010. The project has two purposes: to promote alternative forms of tourism and to preserve the Balinese cultural heritage. In order to publicize the necessity of reforming Balinese tourism, Wisnu foundation came up with ethical standards based on the UNWTO’s Global Code of Ethics for Tourism (GECT) supported by urban intellectuals.

This paper firstly illustrates how Wisnu foundation and its collaborators identified the issues of tourism in Bali and promoted its ethical dimension by ‘rearranging’ the concept of tourism. The outcome of the field research reveals that although there is an apparent divergence between active villagers and urban intellectuals, the NGOs in terms of their perspectives on tourism, preserving culture and means of livelihood, the usage of GECT is playing a certain role in uniting the participants of the project.

Balinese Reactions to UNWTO’s Global Code of Ethics for Tourism: A Case Study of Balinese NGO’s Initiative

This paper examines an emerging tourism-related movement in Bali, initiated by the local NGO to reform long established mass-tourism. While Bali is well-known as Indonesia’s most prestigious tourism destination today, Bali’s economic prosperity has been seen as resulting from the development of the tourism industry since the 1970s. However, especially after the 2002 terrorist attack, various socio-cultural, economic and environmental changes caused by modernization have come to be recognized as serious threats not only for the social stability but also for the tourism development among the Balinese. This is partly but significantly because Bali has been relying on international tourism. In other words, tourists’...
The Apple Does NOT Fall FAR from the Tree: Offspring of Interracial Marriages in Brazil

Starting from colonial times, Brazil has a long history of racial miscegenation. How do families structure themselves with respect to a concept of racial hierarchy? Several censuses and surveys from the Brazilian Central Statistical Office (IBGE) incorporates some ethnic enumeration with information on race/skin color of the respondent, though mostly self-reported. Alternatives are: “White”, “Black”, “Asian”, “Mixed race” and “Native Brazilian”. Though it is possible that some subjectivity is introduced to the process, temporal consistency is observable, within a 5% error margin. Analyzing census data, one can perceive a trend towards “whitening” of the population until 1991, with a slight reversal in 2000, resuming the “whitening” trend up to 2010 (the latest census). But how do offspring of interracial marriages self-report themselves? Among possible alternatives, is the race/skin color the most connected to the determinant factor? Is this choice affected by geographical region or social status? Is there a noticeable time trend in choices made? The study analysis data from five Brazilian censuses, between 1960 and 2010, in order to identify patterns and trends among offspring of interracial marriages.

Among exogamous couples where one of the partners is “White”, this is the dominant race/color skin alternative for the offspring. When the mother is “White” the difference with respect to other alternatives is even wider, less so, when the father is “Asian”. The reported proportion of “White” children increases with socio-economic status to the process, temporal consistency is observable, within a 5% error margin. Analyzing census data, one can perceive a trend towards “whitening” of the population until 1991, with a slight reversal in 2000, resuming the “whitening” trend up to 2010 (the latest census). Reconsidering the Traditional Postpartum Practices of Laos from Women's Experience

The traditional postpartum practice that keeps mothers body warm for a certain period after childbirth is still practiced throughout the Southeast Asia and has been performed in Laos usually as well. As the biomedicine penetrated into Laos, such traditional practice has been often considered as a “bad custom” which injures women’s health. However, it must be said that this is partial and insufficient recognition which comes from overlooking the experiences of women who have actually practiced it. This presentation attempts to describe the postpartum practice called “yu fai” in Laos through the viewpoints of Lao women. These perspectives were suggested from interview survey which was conducted to 25 Lao women who have given birth, and it shows the following points. Yu fai is a process of caring a postpartum vulnerable body to make it recover to be able to do daily activities through performing a set of practices such as: lying by the fire, following food restriction, taking hot bades and drinking hot drinks. Interestingly enough, while their practices are generally oriented by a customary framework as a whole, the remarkable differences appeared in each individual way and the time period of yu fai. Through the experiences of monitoring and caring their bodies cautiously during a period of yu fai, women acquire individual knowledge about their own body's characteristics, and they can reconstitute their body perceptions and ways and period of yu fai based on their realization. Such differences are reproduced through the women's knowledge based on experiences of practicing yu fai by themselves. From examining above findings, this presentation tries to approach the aspect of yu fai as dynamic practice to care postpartum body based on women's individual experiences and knowledge.
Japanese Single Fathers’ Role Performance and Resources in Family and Work

In this study, interviews with single fathers were conducted in a semi-structured way, and the balancing of their roles as fathers and workers was investigated. The sampling number was ten and all the samples were single fathers living in urban areas with a child or children aged under 18. The sampling was carried out by network-sampling through two NPO supporting single fathers. All the collected data were divided into two groups depending on whether or not the samples lived with parents. The ability to share the burden of child-rearing and the data were analyzed with the constant comparative method. The results showed that housework and child-rearing skills are required as necessary resources at home, and all the fathers who lived independently of their parents have acquired these skills. The need for these two skills decreases slightly in the case of those living together with their parents, although these fathers have concerns about declining support from their father and/or mother. In terms of career roles, fathers living apart from their parents focus on advanced scheduling in order to receive maximum support from their parents as well as from the public, and therefore a work environment that facilitates making advanced schedules is an important resource for them. On the other hand, fathers who share the burden of child-rearing with their parents pay attention to the politics of the work environment so as to gain an understanding of their coworkers in order to fulfill their parental roles. Finally, for both groups, the sense of a single father and management skills to create suitable conditions for child-rearing are essential in order to accomplish their roles as both a worker and a parent. In addition, it was found that a single father has a unique identity structured by family role, work role, and masculinities.

Social Structure, Race, and Racial Relations in Japan

Literature on racialization processes has predominantly examined the Western societal contexts and societies where high levels of racial/ethnic diversity and conflicts existed, such as the U.S., Europe, Brazil and South Africa. These studies have identified that social institutions, ideologies, and social interactions together shape, legitimize and thus perpetuate systemic racial inequality by classifying individuals as ‘whites’ and ‘non-whites.’ Yet, theoretically grounded studies on racialization in other societies have been limited; we know little about if and how structural forces affect racial hierarchy and meanings in other social contexts. This study highlights the intricate relationship between social structure and historical development of the concept of race and subsequent racialization processes in Japan, using semi-structured interviews of foreign residents in Japan and Japanese individuals. It shows how the state, its structural positioning, cultural representations, and dominant discourses of different foreigner groups together condition Japanese individuals’ understanding of race, racial hierarchy, and their position within the hierarchy. The concept of race in Japan denotes a combination of phenotype, nationality, and cultural desirability internalized among Japanese individuals. Following this conceptualization, Japanese is understood to be a distinct racial group while foreign migrants become marginalized differently based on their perceived racial statuses. This study also highlights the salience of structural forces in creating and maintaining the significance of race, racial meanings and hierarchy, similar to the racialization processes documented in previous studies; since the ideology of homogeneous Japan and importance of maintaining social boundaries have been heavily embedded in the structure, there is a limited opportunity for social integration, which perpetuates the rigid racial boundaries. Thus, it provides deeper understanding of the effects of racially biased structure in perpetuating and even fostering racist acts and attitudes, which is imperative in bringing about positive changes to alleviate the increasing racial tension and conflicts in Japan.

Indigenous Populations Achieving Human Rights in the Global South

The adoption of the UN Declaration on the Rights of Indigenous Peoples has resulted in enthusiasm for the potential it provides and skepticism surrounding the limitations of the Declaration (Anaya 2009, Schulte-Tenckhoff 2012, Watson and Venne 2012, Xanthaki 2010). While there remains much to be skeptical about, including continued human rights violations, little or no legal standing to demand human rights, and a state-centric model of protection and provision of human rights, unexpected victories are emerging.
**Catholic Faith-Based Filipino Organizations in Japan**

This study looks into the Catholic faith-based groups of Filipino mothers in Japan. This paper argues that organizing or mobilizing such groups enabled the Filipino to cope with their situation as immigrant housewives. It explores how Filipino Catholic communities in Japan organize themselves collectively and how their activities are associated with identity affirmations both in religious and ethnic standpoints at their intercultural homes and the community in which they belong. Discussion of this paper is partly based on an author's three year stay in Japan as a doctoral student and one of the founding members of a Catholic Church-based Filipino community known as the Kaagapay Oita Filipino Associations or KOFA. A reflexive account, this paper narrates the experiences of the organization as it tries to cultivate a "space" in a Japanese Catholic Church. The views of the author cannot be ignored in this writing as he was involved in the process of founding such a group.

**Who Refuses to Answer the Question about the Income and How Can We Reduce the Item Non-Response Bias By Using the Propensity Score Adjustment?**

The main goal of this presentation is to find out whether the refusals to question of income are random or not as well as how can we eliminate the effect of item non-response in point estimation.

Firstly, using the Hungarian and Polish data set of ESS 2008, it will be demonstrated that the likelihood to refuse is not random, but rather proportional to the declared level of income. In this part of presentation I will introduce the basic principles of propensity score adjustment (PSA) as a weighting scheme (see Matsu et al. 2011). This procedure is normally based on the logistic regression, but I will demonstrate the usefulness of a credit-scoring model for such purposes. In fact it is also based on logistic regression, but it helps to choose the relevant set of predictors as well as to illustrate and understand the nature of income refusals.

Secondly, based on the data from the “Polish General Social Survey”, an assessment will provide of whether PSW or PSA leads to gather total survey error (TSE). By removing the known values of income I will consider three patterns of missingness: (a) the random one, (b) the systematic one without 10% of the lowest income values and (c) the systematic one without 10% of the highest values.

Findings are four-fold: (1) PSA is much more effective when missingness mechanism is systematic, however PSW is slightly more effective when non-response is random; (2) PSA increases variance a little bit more than PSW, but (3) PSA decreases bias much more efficiently than PSW. Taking (2) and (3) together, it turns out that (4) PSA estimator seems to be better on the ground that it implies much smaller TSE.

**Classical Sociologists on Music and Society**

Music is a social phenomenon and a product of social life. There is no culture in which there would be no music. Throughout history, people have created and reproduced music, at the same time making it an important aspect of artistic, aesthetic and social life. Sociological reflection on music and society is as old as sociology as a science, and has much to offer contemporary sociologists. More or less systematic assumptions about the musical life can be found in the reflection of such great classics of sociology, as Herbert Spencer, Georg Simmel, Max Weber, Alfred Schutz, Pitirim Sorokin, Norbert Elias, etc.

Despite the rich theoretical base and a long tradition of social thought on musical life, the sociology of music (as a part of the sociology of arts) is probably one of the most theoretically and methodologically neglected social science sub-discipline. The problem of its theoretical backwardness was stressed out by Alphon Silbermann (1962) many years ago. Its interdisciplinary character causes many theoretical problems, such as incoherence and lack of consistent conceptual grid. There is also poor debate on the role and significance of classical sociology reflection on music and society in the contemporary sociology.

The main goal of the paper is to consider the theoretical tradition of social thought on music and society in the classical sociology, especially in such aspects as: musical practices of societies, rationalization of music (Weber), musical identity of groups (Simmel), musical roles (Elias) or musical interactions (Schutz). The

Multiple Discrimination, Intersectionality and Vulnerability

In its 2012 report, Amnesty International underscores the consequences of discrimination against Muslims in Europe. “Multiple discrimination” is a special focus of the Special Rapporteur on the situation of human rights in the European Union Agency for Fundamental Rights. Discussion of the need for a “Horizontal Directive” (EU-MIDIS, 2010: 5(5)) and the “Gender Race” project of the 7th Framework Programme both highlight multiple discrimination and the “intersectionality” (Gendercare, 2010: 272) of axes of discrimination. The Genderrace report (2010: 32) uses the term intersectionality “to define a situation . . . in which several grounds of discrimination interact concurrently.” This report follows the European Commission’s 2007 study, in which the problem of multiple discrimination and the significance of intersectionality on the impact of discrimination are investigated. Using the European Social Survey (2002, 2008, 2010) for fourteen European states along with scores on the Banting/Kymlicka (2012) Multicultural Policy Index and its eight dimensions (available for 1980, 2000, 2010), we examine over time both the reported discrimination faced by Muslims on the basis of their religion, race, nationality, ethnicity and gender and the impact of specific areas of state policy on the trajectory of discrimination. We give particular attention to consideration of the discrimination-reducing impact of state policy in eight areas: (1) affirmation of multiculturalism by the constitution, legislature or parliament; (2) school curriculum; (3) media—sensitivity and representation; (4) dress-code exemptions; (5) dual citizenship allowed; (6) funding of cultural activities of ethnic group organizations; (7) bilingual education; (8) affirmative action (Banting and Kymlicka, 2012: 11). On the basis of the results, we assess the policy changes warranted by the data to enable European Muslims to fully utilize their talents and abilities to the benefit of Europe and its member-states.

Sport, Symbolic Capital and Monopoly Rents: The Cultural Politics of the New Zealand All Blacks

In their bid to globalise, transnational corporations (TNC’s) utilize a diverse range of strategies and synergies in order to insert into, and locate within, local/national cultures. Amongst their strategies TNC’s invest in a range of powerful and innovative, marketing and promotional campaigns, marquees, and sponsorships that pressure to attract consumer attention and to distinguish brands has lead to a compulsive search for new images and themes where culture has become a giant mine (Goldman and Papson, 1996) resulting in a range of political, economic and ethical questions This paper traces the promotional culture of the New Zealand All Blacks since the sport went professional in 1995. The focus is on David Harvey’s concept of monopoly rent which emerges “because social actors can realize an enhanced income stream over an extended time by virtue of their exclusive control over some directly or indirectly tradable item which is in some crucial respects non-replicable.” (1997: 34). The paper focuses on several specific sponsors (Adidas and AIG), and their advertising campaigns, to illustrate the cultural, political, legal and ethical/moral issues associated with the logic of monopoly rents.

Towards a Practice Theoretic Approach to Understanding Sexuality

In our book ‘Theorising Sexuality’ (2010) we re-worked the Interactionist sociological account of everyday sexual behavior drawing on the work of G H Mead (1937) and utilising the notion of sexual scripts (Gagnon and Simon 1973). We do however, accept some of the criticisms of interactionism as overly cognitive and have attempted to overcome this by developing a more embodied understanding of sexuality - using the example of orgasm (Jackson and Scott 2007 and 2010), and developing the ideas of Luyckx and de Nola in order to enable an undersanding of the ways in which sexual interactions are composed. While we have utilized the term sexual practice, and engaged to some extent with the work of Bourdieu we have not, until recently, begun to develop fully a practice theoretic approach to the sociology of sexual conduct. In this paper we will engage with the work of van Dijk, Schatzki, Redclift, Warde and Shove in order to set out the ways in which sexual conduct constitutes a practice, and to indicate to what extent this approach, if brought together with interactionist ideas, can support the development of a general sociological theory of sexuality.

Environmental Governance and Risks in Brazil

Environmental governance has advanced in Brazil since the Rio Conference. Different stakeholders have had a relevant role in the processes that have permeated in a growing scale the process of decision making and formulation of new public policies. The process of environmental governance has brought into scene stakeholders representing the public and private sector and the social movements, mainly the environmental movement.

The incorporation of new social actors with differentiated demands on the management of natural resources has become more frequent as to issues on water, solid waste, biodiversity and climate. The engagement of these different actors has brought to the environmental arena, a logic of dispute and negotiation on aspects linked to natural resources, sustainability in cities, impact of degradation of water sources, loss of biodiversity, conflicts with indigenous population on land, impact of hydropower projects and more recently on the impacts of climate variability and its multidimensional aspects.

The paper will approach how national policies are taking place adequately or insufficiently taking into consideration the complexity of the process of environmental governance, and what this implies in terms of enlargement of the role and engagement of stakeholders in the process of decision making. The analysis will focus on the strengthening of deliberative spaces, multiplicity of networks that promote awareness and mobilization to face uncertainties and potential risks in cities and biodiverse spaces and the pressure to reduce socio-environmental and knowledge based asymmetries.

Several civil society organizations have had in the last years important role facing environmental governance and risks in Brazil, and these initiatives promoted advancements towards democratizing access to information, besides pressuring for more transparent and participative decision making processes on environmental policies and the need to take into consideration diversities, complexities of transformations taking place in a context of global climatic uncertainties.

Developing Care-Technologies While Balancing Utopian/Dystopian Worldviews: Dimensions of Attention

Collaborating since 2005 in different interdisciplinary pre-competitive care technology research projects in Flanders (Belgium), we learned about crucial dimensions to balance the tendency of supporting utopian/dystopian views on the impact on wellbeing and quality of care due to new care technologies. The goal of these subsidized projects is to innovate in a way added value is created for its future users and valorization potentials in the collaborative companies. In general the team is rather utopian on the capabilities of the information and communication technology.

Involving potential users from ideation phase towards valuation of prototypes is a primary way to bring balance in looking at both positive and negative consequences of the future care technology. Due to the involvement of social scientists, over the years we moved from a pathology-centered problem definition, over an age-focused approach towards a care dependent approach. Concurrently, we emphasized the need of a multi-stakeholder approach, grounded in the insights of a Social Construction of Technology perspective (cf Bijker, Rip). These premises of human-centered design and not enough to balance the tensions and paradoxes encountered when studying the potential consequences of envisioned care solutions and their impact on care-giving.

Recurrent dimensions of empowerment and disempowerment, that are potential pitfalls, are described in this paper. Essential themes will be: self-determination of care dependent and his/her caregivers, impact of technology on the caring relationship and quality of service by care organizations, role of present and future infrastructure and learning curve of present and future users, ... We also discuss the ways in which we try to balance tensions and paradoxes in this field, using in all phases of innovation binder approach (scenarios and persona’s, tech cards, ...), and supporting the development of CareLivingLabs. We illustrate these with examples from past and current projects.

Media Metacommentary and the Performance of Expertise

This paper considers the extent to which media metacommentary—or, the critical comparative reflection about media formats—constitutes a new form of expertise. We begin by tracing out the history of critical discourse that seeks to explore the possibilities and limitations of different cultural formats, arguing that this is linked to institutional development of critics and the larger aesthetic discourse about modernity. Next, we consider how mediatization has altered the conditions under which media metacommentary can be mobilized as a performance of expertise, or the display of an expert identity. Ultimately, we argue that the proliferation of new media technologies and the growth of transmedia culture have fundamentally transformed the social organization of expert discourse.

Orphans Other Dead ends in the History of Sociology: Symbolic Interactionism and the Mid-20th Century American Compromise

To conceptualize dead ends in the history of sociology, we examine how intellectual lineages, networks and institutional histories have been narrated in U.S. sociology. Introductory sociology textbooks are strategic research sites because they are a space where sub-disciplines, academic institutions, curriculum, individual intellectuals, and market dynamics intersect. Examining textbook narratives of the discipline, we ask: What has been narrated as central? What has been omitted?

The concept of decent work (ILO) has recently appeared in corporate social responsibility. The social relations of the company are based on the type of contract. The concept of decent work and gender equity are themes emerging in business landscapes. Despite international instruments for the promotion of human rights within the framework of corporate social responsibility (CSR), such as the Ruggie Report (UN), national discussions and effective practices are not homogeneous. The CSR academic debate revolves around the perspectives on what is understood about the role of social organizations. In a skeptical approach, CSR integrates a new form of authoritarian paternalism whose motor function is masking the “real intentions” of corporations in their quest for higher profits (Thornton, 1966; Wells, 2002). On the other hand, there are currents that emphasize the relationship between the company and society, and the prospects that CSR takes

Long-Term Visitors’ Adaptation to the Tourism Context of Costa Blanca, Spain

Tourism and analogous phenomena have assumedly become structural elements of Costa Blanca societies, on the Mediterranean coast of Spain. The large international flows of multitudes of people have also assumedly led to blurred precincts here between tourists, holidaymakers, sojourners, drifters, migrants, and residents. Particularly the most economically independent lifestyle and retirement ‘migrants,’ residential tourists’ and lifestyle and health-oriented sojourners are still under-researched. On the basis of questionnaire surveys, the paper will explore self-reported adaptation features among Nordic long-term visitors, including language skills, media use and assessments of facets of ‘local’ and expatriate life.

Decent Work and Corporate Social Responsibility: Contemporary Debates about Human Rights and Paternalism in Organizations in Brazil and Portugal

The concept of decent work (ILO) has recently appeared in corporate social responsibility. The social relations of the company are based on the type of contract. The concept of decent work and gender equity are themes emerging in business landscapes. Despite international instruments for the promotion of human rights within the framework of corporate social responsibility (CSR), such as the Ruggie Report (UN), national discussions and effective practices are not homogeneous. The CSR academic debate revolves around the perspectives on what is understood about the role of social organizations. In a skeptical approach, CSR integrates a new form of authoritarian paternalism whose motor function is masking the “real intentions” of corporations in their quest for higher profits (Thornton, 1966; Wells, 2002). On the other hand, there are currents that emphasize the relationship between the company and society, and the prospects that CSR takes
to build the legitimacy of organizations in contemporary capitalism (Freeman, 1984).

The aim of this work is to investigate the influence of the guidelines of decent work in CSR in the national contexts between Brazil and Portugal, on a comparative basis. We investigated the existing regulatory guidelines for CSR through documentary research and comparative studies of the relevant legislation. The results demonstrate that while human rights and decent work appear as topics of CSR agendas in both countries, in Brazil, the corporate actions are voluntary, whereas in Portugal, there are laws that reinforce the communication of business practices within the CSR and decent work.

L’évolution De La COMPétence En Organisation Des Collections De Documents Numériques: Le Cas De L’entrée Dans L’enseignement Supérieur

La fracture numérique de second degré (Hargittai, 2002) pose le problème des écarts de compétences médiatiques entre les utilisateurs. Dans un contexte où de plus en plus d’informations sont disponibles (Gantz & Reinsel, 2011), où l’accès à ces informations est toujours plus fragmenté entre des contextes différents (Jones & Teevan, 2007), et où la dimension sociale des objets médiatiques se complexifie, la compétence à organiser ces informations devient fondamentale. Cette compétence d’organisation correspond à la capacité à imaginer des structures pertinentes et à les implémenter à l’aide d’outils matériels ou logiciels. Dans les usages, cette compétence à organiser s’actualise aussi bien dans des activités de recherche, que de gestion des flux d’informations, ou de stockage (Jones, 2008).

Une série d’interviews d’étudiants réalisées avant et après leur entrée à l’université fait apparaître que les plus compétents sont ceux les mieux capables de percevoir, d’adopter et de modifier les affinances (Norman, 1990) offertes par leur environnement. Trois catégories d’affinances peuvent être dégagées: sociales, techniques et informationnelles. En situation, la compétence d’organisation consiste donc pour l’utilisateur à prendre parti des affinances et contraintes des outils adoptés afin d’aménager l’environnement technologique pour le faire correspondre à la structure de l’activité de l’utilisateur, de sorte qu’il soutienne au mieux celle-ci (Kirsh 1995).

Trois hypothèses alternatives sont avancées quant aux facteurs de développement de cette compétence: l’intensité des usages des médias (Schradie, 2011), la variété des contextes sociaux dans lequel les usages se développent (Ito et al., 2009), et finalement, le rôle de stimulus des relations sociales de l’utilisateur. Nos premières observations semblent indiquer que, plus encore que l’intensité ou la variété des usages, l’entourage des usagers joue un rôle primordial dans le développement de la compétence d’organisation, en ce qu’il crée des opportunités d’échange et de confrontation de pratiques médiatiques.

JAGODZIŃSKI, ROMUALD* (European Trade Union Institute, rjagodzinski@etui.org)

The paper aims at drawing attention to proper transposition of EU directives as a challenge for ensuring effective workers’ rights to information and consultation (I&C). To this end it looks at the example of implementation of the European Works Councils (EWC) directives 94/45/EC and 2009/38/EC with a special focus on enforcement provisions. The choice of implementation of EWCs legislation as a ‘lab case’ is relevant in several ways: a) being an EU originating institution requiring implementation into national industrial relations (IR) and legal systems they represent a perfect example of tension between coherence of centrally introduced rights and their national ‘conjugation’; b) the original directive 94/45/EC, substantially modified by recast directive 2009/38/EC and recently transposed provides for an apt up-to-date test-case; c) it addresses loopholes in existing research and has both a political and practical relevance for over 1000 active EWCs and over 17 mil. workers they represent.

The paper will provide comparative overview of national transpositions of specific key provisions of directive 2009/38/EC and an analysis of their coherence with the source regulation. Focusing on transposition of enforcement provisions on access to justice and sanctions it will argue that a formalistic ‘copy-paste implementation’ without consideration of the ultimate principle of effectiveness acts as impediment to coherent application of the fundamental right to I&C. To this end it will present jurisprudence of the European Court of Justice and research on the meaning of ‘effective, proportionate and dissuasive sanctions’.

The paper will also argue against the lenient approach supporting the view that differences between national IR justify cases of substantial/excessive, divergences in implementation. By means of reference to EU institutional developments and interventionism in the field of financial market and environmental regulation it will also challenge the view that the European Commission has no competence with regard to setting sanctions.

Do Equality Values Differ in Asian and Western Cultures? Results from the Social Inequality Module of the ISSP 2009

Whether certain values are unique or specific to a group, a nation, or a culture, has been a topic of lengthy debates. During the last decades the interest has shifted from smaller to larger collectives and from smaller to larger regions. The European Values Surveys was an early attempt to identify cultural values, first in West European societies, and later in Europe as a whole. Whether the goal of the enterprise has been reached remains an open question. What most European
societies really distinguish from other societies is the millennia-long Christian tradition. But has this tradition also brought forth unique values? And if so, are they still influential in modern societies?

In the nineteenth a similar debate started in Asia. Asian values were initially seen as a stronghold against Western value imperialism and against Western democratisation. The unification of the Euro-American two-culture model and the empirical research results in Europe on value pluralism. Dalton and Nhu-Ngoc (2005) could not identify specific and homogeneous value patterns in the Confucian societies. Rather, family orientations and respect of authorities largely varied in Asian countries.

This will not be the end of the debate on Asian values. There are so many visible differences between Asian and Western cultures that the search for specific underlying Asian or Confucian values will continue. Education and work values, as well as economic and social inequalities might be domains in which specific Asian values have emerged. The paper focuses on values which are related to social and economic inequalities to find out how much of multi-level analyses of the ISSP Social Inequality Module 2009 whether and to what extent these values are affected by different cultural backgrounds and whether Asian societies in particular differ from societies with a Christian tradition.

Formal and Informal Female Migration: Challenges of Governance in Bangladesh

In the last three decades, Bangladesh has grown to be an important source of labor migration. Female labor migration, however, has lagged far behind the male migration. Starting with a small number, in recent years the number of Bangladeshi women has grown. Official figures put the proportion of Bangladeshi female labor migrants as 1% of the total number of migrant workers in 2003. In recent years proportion of women as total migrants is estimated at around 14%. Bangladesh female migrant workers go to the Gulf countries, Lebanon, and Singapore to work as domestic workers. Many Bangladeshi women also went to work in the textile industries in Malaysia, Mauritius and Korea. In addition to formal labor migration, an undetermined number of female workers go to neighboring India to work as domestic workers as well as in entertainment industries. The issue of Bangladeshi female migrants in India has created controversies in Bangladesh, especially, in view of the harsh treatment they face as undocumented workers. They also take great risk, including the risk of life in crossing the Bangladesh - India borders. The present paper examines how the government of Bangladesh has dealt with the issue of female labor migration and what are the public policies in place to promote safe female migration to the Gulf countries and Lebanon and how concerned authorities of Bangladesh government deal with the informal female migration to India. Using interview methods and analysis of secondary data, this paper will draw attention to the Bangladeshi female migrants in the Gulf Cooperation Council (GCC) countries and Lebanon. Policy issues, especially innovation in migration policies will be examined in this paper.

JAIME-CASTILLO, ANTONIO M. (Universidad de Málaga, amjaime@uma.es)

Inequality of Opportunities and Preferences for Social Policies

The positive relationship between democracy and equalization of income predicted by the well-known Meltzer-Richard has been highly criticized on both theoretical and empirical grounds. In this paper, I analyze whether inequality of opportunities (rather than outcomes) is connected with preferences for social policies at the individual level. I focus specifically on the sources of current inequalities by decomposing individual outcomes into a fair share, which can be attributed to personal merit and effort, and surplus outcomes, which are the results of structural barriers in the labor markets or depend on inherited factors such as social background. To do that I rely on the methodological approach used by the growing economic literature on reference groups, in which individual income is the product of two components: the average income of the group and an idiosyncratic factor, which is the result of individual attributes. I use data from five waves of the European Social Survey in order to test these hypotheses. Empirical findings prove that occupational status and individual differences with respect to reference groups (especially those caused by inherited disadvantages) have a strong and significant impact on preferences for redistribution. In addition, educational inequality has a negative a significant effect over preferences for redistribution at the aggregate level.

New Religious Capital, Conversion, and Drug Rehabilitation: Evangelical Social Projects in Baja California, Mexico

The aim of this paper is to analyze certain changes in evangelical identities and their religious capital in the religious field at Baja California, following the impact of charismatic movements and the crisis of denominational models during the 1980s, and their relation to the expansion of the so-called “Christ-therapy” in Rehabilitation Centers for drug addicts. From a general perspective, religious capital suffered a series of rearrangements within their referents mainly anchored in doctrines, practices and preconceptions relatively unchanged until last decades of the twentieth century.

Therefore, this work raises the question of whether the expansion of a new evangelistic model of openness to society in Pentecostals and Charismatic churches, especially in Northern Mexico, may explain the growth of Evangelical Christians, with new forms to mobilize symbolic capital and social participation.

In this sense, many of these churches have found that an increasing demand for rehabilitation of drug users, and the withdrawal of the Mexican State from the health sector, has opened new opportunities for their social change projects based on individual conversion. To study the above, this paper analyzes some cases of Rehabilitation Centers in Tijuana, and Ensenada, Baja California.

Making People Illegal: What Globalization Means for Law and Migration

In any given week in 2007, newspapers around the world carried reports of “illegal” migration. This did not start in 2007. It is not poised to end at any time soon. While many of the accounts are about the United States or the European Union, unauthorized migration is newsworthy in all corners of the globe. Russia has a large and growing extraregional population. China stopped more than 2,500 illegal border crossers in 2009. Thailand and Malaysia have launched a cooperative approach to their shared illegal populations. The Gulf of Aden is a key human smuggling route. South Africa is attempting to grapple with its unauthorized occupants. Illegal migrants come to droves in India, and in lesser tempering this view of citizenship. Considering the limits of law in this regard, it is crucial to unearth the place of law in accounts of globalization, and to understand both how and why globalization forces are making people illegal.

It is worth examining as to why people and tribes of people are being termed illegal, what is it that does not give them support in the country they seek shelter and why do they leave their native land to find shelter in a foreign land. Here under the paper proposes to study and understand the concept of illegal people, how illegal migration is being aided by the process of globalization and how does it harm the native society and also the ill effects of migration on the migrants.

JAIN, RASHMI* (University of Rajasthan, rashmi.jn1@gmail.com)

Technology and Family Leisure: Is It the Way Forward?

Families are one of the fundamental units of society and are the building blocks of social structures and organizations in every culture. A theoretical framework that has been used to describe and understand how families function and interact is the Family Systems Theory (Steinglass 1987, Whiturich & Constance 1993). According to the Family Systems Theory, the family is a complex system of individuals interacting with another. The concepts of family cohesion, family adaptability and family communication are the key to continuation of family systems. Over the last seventy years, researchers have consistently reported positive relationships between family leisure and positive family outcomes when examining recreation and leisure patterns among families (Hawks 1991; Holman & Epperson 1984; Ortner & Mancini 1991).

Enjoying family leisure time can be a way through which cohesion, adaptability and communication is increased within families. The perils of the modern world with its fast paced life, both parents working, emergence of nuclear families, pressures of weekend socializing, demands of curriculum on the children have all made a serious dent in family leisure time.

The present paper proposes to examine the role of technology especially communication technology in promoting family leisure time amongst urban educated families.

FEITOSA, FLÁVIA DA FONSECA (National Institute of Spatial Researches (INPE))

Multi-Scale Analysis of the Effects of Socio-Spatial Segregation

The variable “space” is increasingly being used by scholars in the social sciences. In this sense, the methods that use spatial analysis are becoming more known
by social scientists. One of the most important applications of the use of spatial analysis in sociology, demography and population studies is the socio-spatial segregation. Some countries are studying the spatial concentration of the population with respect to race/color, but in others, such as Brazil, the miscegenation of the population is high, and so it makes no sense to study segregation by this variable. In this case, the income of the person can be the key variable in this process. Spatial analysis techniques, such as isolation indexes, are then used to analyze the spatial segregation according to income, translated by poverty or wealth. However, in each geographical unit (scale) used, the result of the analysis may be different. Then, the main goal of this paper is to create a multi-scale analysis of the effects of segregation in terms of isolation of poverty and wealth indicators. Our assumption is that when we increase the scale of the segregation analysis, the inequalities also increase. And this is what we attempt to show with this paper, using data from census tracts of 2010 for the city of São Paulo, the most populated in Brazil.

The Changes in the Form of Japanese Integration in Brazil

The beginning of the 20th century is considered a starting point for more significant flows of international migration in the Brazilian Amazon, with the arriving of different people, especially from European countries as well as Japan, due, among other reasons, to the political instability of the period of war that the world had faced. The arrival of these migrants changed the Brazilian society in several aspects, with regard to the insertion of new cultures, traditions etc. Thus, the objective of this work is to analyze the socio-demographic profile of the Japanese migrants in Brazil by regions, including the Amazon, in terms of their date of arrival in the country, their occupation in rural or urban areas, and also of migrants who left the country tradition in an attempt to understand possible changes in the aspirations of the younger Japanese generations with respect mainly to occupation, which traditionally has been widely recognized for their contributions in the Brazilian agricultural production. In order to do that, data from the Brazilian Demographic Census of 2010 will be used to create maps of spatial concentrations and to compare the Japanese migrants with more-long-standing in Brazil with those who arrived more recently to find out until what extent the younger generations are preferring other occupations and other housing locations instead the traditional ones and with this leaving aside their traditions and modifying their forms of integration in society.

Autochthonity, Whiteness and Loss in Outer East London: Tracing the Collective Memories of Diaspora Space

This paper explores autochthonous through the memory practices of in Newham, East London. It addresses how remembering East London as the home of whiteness and traditional forms of community entails powerful forms of forgetting that feed into contemporary ideas of racialised territorial belonging. Newham's formation through migration its 'great time' has ensured that myths of indigeneity and whiteness have never stood still. Through engaging with young people's and youth workers' memory practices, the paper explores how phantasms of whiteness and class loss are traced at the same time as the migrant, a figure of racial decline, is constructed. It addresses how this tracing reveals ambivalence, porosity, and the continued allure of race. Overall, it explores how whiteness and loss develop into autochthonous forms appropriated across ethnic boundaries, and how they are mobilized to produce new forms of racial hierarchy in a 'super-diverse' place.

Bugs and Future Usage – Design As Twofold Problem

My ethnographic field is a design laboratory in which young German designers develop wearable textile-electronic interfaces. It can be observed here that the characteristics of the design-work are quite different compared to the work of scientists, as for example Karin Knorr Cetina or Harry Collins have put it. In short, two types of practices can be found in the field of design: Designers talk about the use and the benefits of their conceptualized design objects systematically in meetings and informally on various other occasions. They ask themselves, what their design object is it good for and who will use it and when. In a less abstract level of their work, the designers are very concerned to create a functioning proto-

Urban Scenes and Place Identity: The Case of Seoul

The scene perspective can help us understand cities in terms of cultural amenities. Its abstract characteristics can join Asia with the US and Europe so that social scientists, policymakers, and average citizens can coherently interpret common features of world city systems. Scenes can be defined as the specific lifestyle of a place; thus, a scene is more than a neighborhood or its physical structures. It includes collections of people labeled by race, class, gender, etc. It also includes specific combinations of these groups and activities that join them together. With these characteristics, scenes show the specific cultural tastes of the residents, shop owners, and visitors. They show their own internal logic and dramas that, for instance, are gloriously rather than fade into anonymity, project warmth and intimacy rather than distance and aloofness, maintain an authentic and real life rather than a phony existence.

Place identity can be formed through interactions between the physical characteristics of specific places and the people using the physical facilities. In this sense, urban scenes are closely related with place identity. Both urban scenes and place identity are considered as contributing to the creative regeneration of a city. In this paper, we present how urban scenes can contribute to developing place identity in Seoul. To do so, we will compare a Seoul scene map with a map of the ethnic population of Seoul. This will lead us to incorporate characteristics of people into the facility data of the scene map in the specific place of Seoul. With this analysis, we expect to capture the dynamics of place identity and the influence of scenes on party identity.

JANKOWSKI, BARBARA* (IRSEM France, barbarajankova@yahoo.fr)

Sharing Information at the Operational Level

The information is vital in the conduct of war and the whole field of information warfare focuses on how one can achieve superiority over the enemy. Thus we need to know more about how we protect vital information, or how they are obtained than on how information is shared within a specific force. Human and interactional dimensions of war have less been studied whereas "friction" and "fog" act as much between the belligerents as within the armed forces.

My presentation will focus on information sharing, on cooperation around information. Officers are trained in staffs where hey learn to plan and conduct operations. How do they train on information sharing? If the control of information is considered a factor of operational superiority, how do they learn to get it? How are they prepared to work in a multinational environment? This is even more important because in the future the national armed forces will have to cooperate in various environments: NATO, EU, ad hoc, multi and bilateral, military or not.

The paper will focus on the decision-making process: assessment of the situation, decision, order transmission, reporting. This presentation will be based on a field work that will take place in the first half of 2014, inside French joint staffs training officers.

JANSSON, ANDRÉ* (Karlstad University, andre.jansson@kau.se)

Hospitality and Recognition in the Transmedia Age: Mediatization As Social Critique

Recent (trans)media innovations, such as the smartphone and social networking sites, have drastically altered the conditions of everyday life in affluent societies. Such developments have on the one hand contributed to potentially expanding lifeworlds and extended social affordances in terms of mobility and social connectivity. On the other hand, research from various disciplines has pointed to social disorders, or ‘pathologies’, related to the everyday dependency on such technologies, as well as to the socially segregating nature of these developments. Against this backdrop, the suggested paper engages with the ongoing academic debate around mediatization, generally understood as a meta-process of complex socio-cultural change, and focuses particularly on the critical potential of this concept. The argument is developed in three steps. Firstly, a general approach to social critique is presented, based primarily on the works of Axel Honneth and media theorist Roger Silverstone. Here, the concepts of hospitality (Silverstone) and recognition (Honneth) are singled out as key (mutually dependent) facets of a socially sustainable and egalitarian (global) society. Secondly, the paper introduces a model of mediatization as a socio-spatial meta-process, based on Lefebvre's triadic notion of social space. The combined social forces of technologies, as well as to the socially segregating nature of these developments. This paper explores more deeply the part played by happiness in the recent attempt to unify justice, status, and power theories. Specifically, the paper does three things: First, it strengthens the foundation from Plato and Aristotle for the theory's premise that different people seek happiness in different ways and by different means. Second, it connects those different ways and different means to the attributes and possessions that people care about, as well as to the basic outcome -- justice, status, or power -- that is activated. Third, the paper analyzes a new set of situations in justice theory, in which individuals may compare themselves to everyone who outranks them (on the salient attribute or possessions), everyone whom they outrank, or everyone in general. These situations lead to different outcomes both for individuals and for societies. Further, the paper shows vividly the implied effects of inequality in the distributions of attributes and possessions on average happiness and inequality in happiness.

RC14-254.3

JAUREGUIBERRY, FRANCIS* (Université de Pau, francis.jaureguiberry@univ-pau.fr)

Technologies De Communication Et inégalités D'Usage

Il est devenu quasi-impossible de se déconnecter des technologies de l’information et de la communication. Parce qu’elles sont des acteurs facilitateurs du quotidien, synonymes d’immédiate, de sécurité, d’ouverture et d’évasion. Se tenir informé, gérer son emploi du temps, faire ses réservations et achats, se sentir en sécurité et près des êtres chers malgré l’éloignement physique, autant de raisons nous portant vers une connexion permanente. Mais cette connexion est aussi source d’exces, d’apparitions non désirées, d’apports d’informations non désirées, de surcharge de travail, de confusion entre urgence et importance, de nouvelles dépendances et de contrôles non autorisés.

Face à cela, des tactiques de réajustement visant à reprendre la main dans la gestion de son temps et de ses occupations apparaissent. Il s’agit de conduites de refus, non pas des technologies de l’information et de la communication elles-mêmes, mais de certaines de leurs utilisations, en particulier celles qui conduisent à des excès, au branchement continu et même à des formes de dépendance ou de contrôle. Or, il s’avère que ce capital de maîtrise des flux informationnels est très inégalitaire. Dans les organisations, il y a ceux qui ont le pouvoir de se déconnecter et ceux qui ont le devoir de rester connecté, dans la vie privée ceux qui and employment status) on individual time-use patterns. This approach focuses on differences in the sequence structure and time allocation (e.g. unpaid work, socializing) analysed in a cross-sectional perspective. Since most of the existing reports on structural differences in behaviours come from developed Western countries, this study uses time-use data from the countries rarely included in cross-country research carried out in the field. These countries are Poland and Armenia. The past-time-use patterns of Poles and Armenians are compared in terms of how much they differ across social categories, as well as what are other lines of such differentiation in these societies. The additional benefit of the study is that it compares daily practices in the countries of Central Eastern Europe and the South Caucasus region.

JAROSZ, EWA* (Polish Academy of Sciences, ewajarosz@yahoo.com)

Stuck in the Moment? Time Perspective and Time Allocation Across Social Classes in Poland

Individual's time perspective and everyday time-use patterns have major impact on all realms of human life. They influence the chances for upwards mobility and affect individual life trajectories. As put by Jeremy Rifkin, “those who are most present oriented are swept into the future that others have laid out for them” (Rifkin, 1987). However, time perspective is a multidimensional phenomenon and need systemic studies in relation to the actual use of time patterns -- in which it is supposed to be reflected. Only combining attitudinal and behavioural data can give deeper insights into socially differentiating role of temporal arrangements. This study analyses daily time allocation patterns in conjunction with temporal preferences and the possible drivers behind them -- such as individual time perspective and time constraints. It focuses on the relationship between the perception of time or daily allocation of time and individual position in the social structure. Using quantitative data for Polish population aged 24-65 (n=780), it shows how temporal orientations and perception of time are related to individual social position and how they differ depending on the respondent’s genders, age, educational attainment or occupational category (ISCO-based). The study casts light on the much overlooked dimension of social inequality, including the effect of temporal perspective on status attainment, social determinants of the ability to plan long-term and delay gratification, as well as the life course-related choices and their consequences.

Examining multiculturalism, and combining a postcolonial feminist perspective with intergenerational communication, transnational migrant families are examined with a view to understanding the realities and negotiations between generations as well as how cultural values are transmitted across generations. In particular the communication: varied aspects such as verbal and nonverbal, that grandparents use in relation to their grandchildren will be examined. A nuanced analysis of gender intersecting with race, class, ethnicity and cultural diversity will be used in this study. The goal is to empirically uncover and shed light on the following questions: How do grandmothers transmit cultural values to their grandchildren in the Canadian context?

More specifically, what negotiations do grandmothers make to effectively communicate with their grandchildren about the cultures of their countries of origin?

Interviews, at least to ten to twelve, using a semi structured interview protocol as well as focus groups if needed will be conducted in Ottawa among grandmothers and a group of respondents from varied cultures as possible representing varied nationalities and cultures will be selected to participate in the study.

**The Cons/Truction of Gender in the Canadian Construction Industry**

We examine the Canadian construction industry by looking at how gender interacts with various markers of identity within the construction industry: such as age, ethnicity, class, race, education etc. in Canada and how these interactions affect women’s participation in the industry. We base our categorization of gender and class in a broad sense to include its intersection with other aspects such as ethnicity, race etc. (Denis, 2006; Mohanty, 2003; Spivak, 1999; Tastoglu, 2006). In the Canadian context, the espoused policies of multiculturalism and immigration provide a context for immigration related research (see http://canada.metropolis.net/index_e.htm). However, there are challenges of labour force participation of immigrants and of women in almost every sector (Cohen, 1994; Watts & MacPhail, 2004).

In addition, research on the construction industry in Canada has shown that it is highly gendered in terms of the experiences of women (Watts, 2007) manifest in such behaviours as sexual harassment of women as well as a hierarchical and male dominated culture (Watts, 2007). At the same time, immigrants into Canada who are very diverse in terms of the various facets of identity outlined above have also tried in some instances to make inroads into the construction industry (Walton-Roberts & Hiebert, 1997).

By performing secondary data analysis (Rubin, Rubin, & Peele, 2005) through a survey of the literature as well as through an examination of construction industry periodicals, we want to examine how gender in its broadest conception as intersecting with race, ethnicity, and age, and other dimensions plays a role in the construction industry in Canada and, if there are differences in various segments of Canadian society.

We will do this by a comparison between mainstream women’s participation and the barriers faced by them, in the construction industry, and ethnic immigrant women.

**Emotion at Work: Between Alienation and Resistance**

This presentation endeavors to utilize the concept of emotion in an heuristic and sociological manner in order to investigate the subjective link we have with work. More specifically, we will use it as a means to grasp not only the suffering and alienation that are associated with work, but also the pleasure that can intervene to ameliorate work-related pathologies. Furthermore, if we view emotions as a link to the self as well as to others and to the world, it becomes possible for an investigation of emotions associated with work to reveal how relationships to work can point to forms of resistance. It is also necessary in this regard to take into account the fact that the concept of emotion enables us to rethink the classical oppositions between rationality and affect, nature and culture, and masculinity and femininity. In addition, what Rimé (2006) has written about the social elements of emotion from a psychological point of view can be developed from a sociological and critical perspective. Finally, the concept of emotion is subversive in a manner that is analogous to the way in which care theory is subversive, which Caroll Gilligan (2013) has demonstrated. This is particularly the case at the work place, which is characterized by control and self-control. The discussion will thus seek to reveal how the concept of emotion not only is heuristic in character, but also possesses a subversive and critical force.

privatizing previously public or common goods and grounds, the shift is towards conceptualizing care as a public good and as part of the collective societal responsibility. This move implies a paradigmatic shift in the way social sciences have conceived social practices and understood social inequalities – between regions of the world, between income strata, between age groups and ethnic lines, between men and women and among women themselves. Therefore, an integrated consideration of the institutions (states, markets, families) and the belief systems that regulate gender regimes, global migratory regimes, age patterns, ethnic and racial categorizations, can provide the clues that could guide public action leading to redress some of these central global injustices.

At the intellectual and scholarly level, this paradigmatic shift calls for revising and renewing conceptions of the links between micro and macro levels, of the private/public divide, of needs and emotions.

Celebrity Leadership in Open Collaboration Movement

As Coleman observes (2001), open collaboration communities can rely on two diametrically different leadership philosophies: with a charismatic, celebrity leader (WikiLeaks, Wikipedia, to some extent Linux) or with no clear leader at all, or leadership passed from person to person (the Anonymous, Debian).

I would like to present the results of a long-term, participative, ethnographic study of Wikipedia community, and the role of Jimmy Wales in organizational culture development. I want to show how “benevolent dictatorship” (Raymond, 1998; 1999/2004) model on one hand contradicts the a-, or anti-hierarchical ethos of Wikipedia. Through a case study of development of Jimmy Wales role in Wikimedia community, I am going to show that in principle, “F/LOS communities only tolerate an individual’s exercise of authority over her areas of expertise” (Monteiro & Steinmüller, 2008), with a prefix – excepting, of course, also organizing skills (Vos & Agyei, 2004; Carte, Chidambaram & Becker, 2000). I am also going to show that leaders in open collaboration movements have to carefully and sparingly accumulate merit and charisma (Besigie, 2010), and that they can lose it overnight, after one careless blunder. I am going to seek conclusions for the pros and cons of celebrity leadership, and describe the current role of Jimmy Wales, who gained real momentum and increased his influence only after he resigned from performing most of active duties on Wikipedia.

Incorporating the Social Investment Element into East-Asian Productivist Welfare System: Path Dependence or Path Breaking?

The critical difference between East Asian productivist welfare state and European social investment welfare state is the focus being placed more on the life cycle perspective (Atkinson & Schoon 2004) than on the family state (Semyonov 1999). The social investment welfare state is different.

The European social investment welfare state was designed according to the principle of ‘economic developmentalism’ to achieve economic catch-up. However, European social investment welfare state is emerging as a new policy paradigm to adapt new knowledge-based economy and deal with new social risks. The European social investment welfare state is a more prominent on European social investment welfare state and not in East Asian productivist welfare state. Third, one of the critical features of the social investment welfare state is the focus being placed more on the life course and on the future than on equality of outcomes in the present. Last but not least, the concept of citizenship in East Asian productivist welfare state and European social investment welfare state is different.

Given the differences of the East Asian productivist welfare regime with the social investment strategy in Europe, some ‘active’ components and modes of welfare delivery have changed recently in East-Asian countries, particularly Japan, Korea and Taiwan. This article aims to highlight the contrast between the two social welfare states and rationalize for this change. The political position of different actors (political parties, unions and employer organizations) toward this change will be examined. Moreover, a new social/political cleavage and possible building of effective coalition for pushing this social investment in East Asian context will be examined.
For parents of intersex children, from the moment of birth, if not before, the announcement of sex is replaced with an announcement of a different kind: that of a medical and social emergency. A body that is not clearly male or female as a result of its chromosomal makeup, hormonal balance or external genitalia, is given the diagnosis of ‘indeterminate sex’ (ICD-9-CM code 752.7). But this diagnosis is a later diagnosis (by definition, a diagnosis of cancer), course classification of the medical problem is necessary for deciding on management and prognosis. In the case of intersex, medical professionals assess additional data to determine the intersex individuals’ ‘true sex,’ in effect explicitly diagnosing intersex while implicitly diagnosing sex en route to treatment recommendations. In this paper, we examine the diagnosis of intersex as a site that renders visible the process of social diagnosis (Brown, Lyson, Jenkins 2011). As argued in the framework, diagnosis is social because of both the variety of social actors involved in diagnosis and because it diagnoses social structures that contribute to health and illness. In this vein, we (1) show how multiple social actors (e.g. parents, doctors, technol- ogy, legal and cultural institutions) contribute to diagnosing the individual’s ‘true sex,’ which, once determined, can be ‘restored’ medically. We then (2) set out to diagnose the social structures that make intersex a medical and social problem. In line with other scholars (e.g. Fausto-Sterling), we view sex in a multi-dimensional space, with male and female representing only two points. It follows that a system that diagnoses intersex, in effect, also diagnoses sex. We argue that since most cases of intersex do not involve physical dysfunction, it is this social compulsion to categorize sex that make intersex individuals ‘sick’ – not their chromosomes or organs.

JENKINS, TANIA* (Brown University, tania.jenkins@brown.edu)
The Myth of Meritocracy in the American Medical Profession

The United States currently graduates approximately 40% fewer physicians than are needed to fill postgraduate residency positions. The remaining positions are filled by American graduates of foreign universities, foreign medical graduates and osteopaths. The result is that US medical graduates (USMGs) are the most competitive candidates for residency, getting priority access to the most desirable positions. Last year, for example, over 90% of spots in plastic and orthopedic surgery were filled by USMGs. In contrast, non-USMGs fill lower-prestige residency positions in less desirable geographical locations and specialties (like internal medicine). In some cases, this has resulted in very polarized training environments, with so-called ‘friendly’ programs staffing only non-USMGs, and highly prestigious ‘traditional’ programs training only USMGs. Because of major differences in resources and medical service offerings, these programs have vastly different approaches to teaching which can affect residents’ opportunity structure post-residency, especially in subspecialty training.

This study aims to (1) show how this arrangement persists, in spite of its implications for inequality. What are the social forces and beliefs that sustain this system of stratification among internal medicine residents? Drawing on two years of ethnographic observation and interviewing at one such ‘friendly’ hospital, this paper presents evidence for a ‘myth of meritocracy’ among residents. Doctors feel they are individually responsible for their own success, and conversely, that they are to be individually blamed for not reaching certain goals, such as getting into competitive residency and fellowship programs. They also deploy examples of non-USMGs successfully achieving these goals as evidence for this belief, rather than as evidence of successful strategies (such as cancer), further constraining opportunities for non-USMGs. By elaborating local understandings of social mobility and advantage among medical residents, the paper reveals the power of this myth of meritocracy in obscuring, sustaining, and perpetuating the role of significant social and institutional constraint.

Horizontal Knowledge Dynamics and the Initiation of Students in Expert Cultures: Investigations into Profession-Oriented Programs in Higher Education

The aim of this paper is to discuss relevant approaches for studying how students in higher education programs become initiated in their expert culture in a period in which such cultures undergo changes in several ways. Much is written about how modes of knowledge production and distribution are in transformation in today’s society (e.g. blurred relationships between knowledge production and application; new relationships between knowledge, education, and labor; and the social expansion of such processes). Less is known, however, about how such developments influence educational programs and student learning.

We present a conceptual framework for investigating these relations, highlighting the concepts of epistemic machineries, epistemic practices and ‘epistemential-
The main purpose of this study is to examine the relationship between the levels of Fairness-awareness and Forms of Employment using data from the 2009 Korea General Social Survey (KGSS) survey. In the field of Sociology, only few works has been dealing with fairness-awareness itself as a unit of analysis, despite numerous attempts to consider inequality in connection with social status, class, resource allocation and distribution process etc. even that earlier researchers have limitations that many studies cannot explain which variable affect fairness-awareness of organization or they only concentrate positive influence of fairness-awareness affect to organization. Grounded on this, I analyze the data concentrating upon the Main Hypothesis which is “there are existing Fairness-awareness difference depending on Form of Employment (Permanent/Temporary)” and demographic variables as a Moderator. And the results are as in the following: (a) Temporary position have an positive effect on Fairness-awareness level of distribution. This direction is reinforced by younger age and (c) low level of education. There is no effect between Fairness-awareness level of procedural and Form of Employment.

The Rise of China and Post-Neoliberalism Among Southern Economies

Over the last 20 years, European States have seen a drastic change in their approach to immigrant integration. From a rights based vision founded on the (legal) empowerment of the individual immigrant, with close-to equal rights as the best practice regarding integration; Europe has moved to a situation where integration is seen as a string of formal acts immigrants have to perform in order to obtain rights. Equal rights or naturalization is regarded as the final step of integration rather than its beginning. From an essential tool for integration, rights have developed to a reward for achieving formal integration requirements. This is problematic because legalistic, and formal integration requirements, such as passing a language or knowledge of host society exam, say nothing about real, i.e. social, integration of newcomers. Also, such formalistic approach to integration disregards that the host society also has a role in the integration of migrants. Nevertheless, the formalized approach to integration is regarded as best practice in many EU member states, including new destinations of or immigrants, such as Spain, Greece, or Italy.

This paper will (1) map the paradigm change from a rights based approach to integration to a reward driven formalistic approach to integration in Europe over the last 20 years; (2) display the detrimental effects of these changes on the process of inclusion of migrants into host society; (3) whether it is time to move back to a more rights based approach to integration for the sake of more chances to inclusion for immigrants.

Social Formation of Geographic Proximity Effects: Understanding Unequal Access to Higher Education in China

Recent literature has demonstrated that college proximity (such as the number of colleges within commuting distance) enhances college attendance in the United States. But not all differences in proximity affect college attendance. We argue that the causal role of proximity is crucially shaped by the educational institution and family logic of schooling the child generation. We thus focus on the question of what proximity matters and why. The question of what requires a distinction of different types of schools and measures of proximity. The question of why looks at signs of the underlying mechanism of a true proximity effect.

We have created a new database by combining (1) school address data from official censuses, (2) provincial educational and labor market statistics from official published sources, and (3) individual-level data from the 2012 Chinese Labor Dynamic Survey (CLDS), which is the first wave of a nationally representative panel survey with over 16,000 respondents. CLDS provides detailed address on the place of residence for respondents when they were last enrolled in the regular school. This database allows us to directly address the research questions. Organizational censuses provide school addresses and founding dates that allow us to estimate the national spatial distribution of secondary schools and colleges over time. Provincial data facilitate the control for confounding variables.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Preliminary results provide striking evidence for the critical role of proximity to secondary schools (the number of schools within commuting distance), viz., the gateway to college. Gateway proximity, not college proximity, enhances college attendance. This finding contrasts starkly with the focus on college proximity by the recent U.S. literature on the geography of access to higher education. To further identify the possible mechanisms underlying the gateway proximity effect, we will also conduct a detailed examination of alternative measures of proximity.

**Temporal and Spatial Patterns of Secondary Education Expansion in China, 1980-2010**

China has experienced unprecedented educational expansion in secondary education since 1980s while there are substantial spatial disparities across provincial level divisions. This study does not only document the evolution of secondary education enrollment over the last three decades and across 31 provincial level divisions, but also examines how well the key factors of modernization theory—industrialization and economic development—are associated with the temporal and spatial patterns of the expansion in lower secondary education and upper secondary education.

Based on pooled cross-sectional and time-series data for 31 provincial level divisions over a 30-year period, results show that the overall secondary education enrollment rate increased dramatically, while the spatial disparities are substantial. Additional analyses find that the expansion of secondary education corresponds closely to the economic development and industrialization. Within its provincial divisions, more than 60% temporal variation of lower secondary education is explained by the changes of economic development and industrialization. Across provincial divisions, around 70% variation in upper secondary education is explained by the changes of economic development and industrialization factors.

This study provides greater precision in evidence for modernization theory by explicitly measuring industrialization, economic education, and educational expansion of secondary education. In addition, it differentiates spatial and temporal variations between expansion of lower secondary education and upper secondary education to determine whether and how industrialization and economic development correlates in these two patterns.

**Sustaining Global Skills Inequality? Skills Transfer and Skills Protectionism in the Nigerian Multinational Corporate Sector**

While the vital role of skills in the socio-economic transformation of nations is well espoused in the literature, little scholarly attention has been paid to the international dichotomies in skills and the dynamics that underpin them. In many countries in the global South, there is a plethora of liberal policies that seek to attract industrial investments by corporations in the global North, the hope often being that the transfer of vital skills – and eventual national socio-economic development - will result from such investments. Yet, studies have shown that in many developing countries, years of active multinational involvement by multinational corporations in the local economy have not had the desired effects: anticipated socio-economic benefits of socio-economic transformation in the developing countries have not occurred. It is against this backdrop that this paper examines the skills development programmes and strategies in Nigeria’s multinational corporate sector vis-à-vis the dominant national discourses on skills development in Nigeria. The paper focuses on the extent to which multinational corporations operating in Nigeria have facilitated the acquisition, by Nigerians, of vital skills. From interviews conducted in key Nigerian national manpower policy agencies and two multinational companies, each with over half a century of active industrial operations in Nigeria, the paper argues that despite the long period of involvement, multinational companies operating in Nigeria still source vital skills from their home countries. Besides, the levels of investment in skills development in the local economy suggest a possibility of skills protectionism – an active or unwitting process of hoarding vital skills rather than transfer them to local employees. The paper thus highlights the challenges and contradictions of aligning the economic calculations and objectives of corporations to national human capital development imperatives, and one of the subtle ways in which global skills inequality is sustained.

**Are Science, Technology and Innovation Fulfilling the Needs of Society?**

For decades science was considered the major force for the advancement of humankind. Ironically, S&T has notoriously progressed either for the preparation on the realisation of war. Likewise, the gigantic technological steps made by humanity during the race to the moon are also paralleled. Science was regarded as the answer to the problems of humanity. However, many times science, rather the use that man makes of science is counterproductive to the human ideals. Based on scientific discoveries man has made, and used, weaponry for massive destruction. The potential for annihilation of the human race of chemical, biological and nuclear weapons currently stored – and recently used - by a number of countries is beyond limits. However, scientists as a whole don’t pay enough attention to the development of science for the benefit of humanity.

Based on this inattention to social problems, UNESCO in an effort to catch the attention of scientists organized the remarkable “Science for the 21st Century”, in 1999. The objective was the formulation of a new relationship between science and society, that is, a new social contract with science based on the assumption that science is to be subjected to public scrutiny. The debate on the need for a democratic discussion of scientific priorities, the size of its budget, its institutional structure, and the use that is given to the results of scientific labor, was recuperated. It was asserted that such decisions cannot be left simply in the hands of scientists and government officials. However, fifteen years later, the results of this global effort seems to be null. This paper gives some insights and examples of the way modern society is responding to this debate, and how it could be more involved on the decision making of the scientific labor.

JIMENEZ HUERTA, EDITH R.* (Universidad de Guadalajara, ejimenez@cucea.udg.mx)

**Renting and Sharing: Housing Options for the Poor**

The government of Mexico encouraged the construction industry and the financial sector through massive new housing projects, particularly from 2000 to 2012. Developers built houses and acquired land reserves where the price of the land was cheap: on the far away outskirts of the cities. An important impact of this policy is that cheap land where irregular settlements would in the past have developed, has now become scarcer and more expensive. Over half of the population do not qualify for the new houses, anyway. Thus the financialization of housing on the periphery of Mexican cities is likely to have pushed the poor back into existing low-income settlements, or forced them to remain there, thus encouraging the already ongoing process of consolidation of irregular settlements. Old low-income settlements, founded more than 20 or even 50 years ago, have earned themselves a privileged location in the cities by now, as they can offer their inhabitants proximity to employment and infrastructure. In these areas, renting or sharing accommodation has become an important option for those with low incomes, either because, as is often the case, it is the only choice they have, or else because it suits their family or economic situation to rent instead of buying. Also, shared arrangements play a fundamental role in the lives of the most vulnerable groups: single mothers, the sick, the handicapped, and people of an advanced age. However, we know very little about current conditions in these settlements, and the problems faced by owners, tenants and sharers. To shed light on these parts of the city, I use information obtained from questionnaires and in-depth interviews conducted in Mexico, as part of a major research project into 11 cities in 9 countries of Latin America (the Latin American Housing Network).

**Invisibility As Strategy? Understanding the Perceptions Toward Organising Amongst Foreign Farm Workers in Musina, South Africa**

In this paper I explore issues of self representation and mobilisation amongst foreign farm workers in Musina, Limpopo. Based on original empirical research on the commercial privately owned farms in Musina, this paper reveals a number of human rights violations against this group, and points to a lack of capacity and insufficient policy by civil society organisations and also of government departments to effectively address these problems. Drawing on this context, I make two interconnected arguments: first that the political economy of Musina has created and sustained an informal-formal system through which these conditions can be perpetuated; and second that farm workers adopt tactics of invisibilisation to operate within this system. By this I refer to the range of sustained strategies that workers- and second that farm workers adopt tactics of ‘invisibleness’ to operate within this system. For decades science was considered the major force for the advancement of humankind. Ironically, S&T has notoriously progressed either for the preparation on the realisation of war. Likewise, the gigantic technological steps made by humanity during the race to the moon are also paralleled. Science was regarded as the answer to the problems of humanity. However, many times science, rather the use that man makes of science is counterproductive to the human ideals. Based on scientific discoveries man has made, and used, weaponry for massive destruction. This paper examines affiliation divestiture process of Korean business groups, chaebol, in 1989-2010. One of the characteristics of chaebol is that its head and his/her family members rule the structure, the whole group network, despite their little shares. It is possible because they are major shareholders of the group network's holding company. Therefore, the corporate network, composed of individual legal corporations, is the group owner family's privately owned social structure and succession of ruling right is regarded as if a private property. Consequently, some Korean conglomerates have divided itself for succession from group owner to his family members. This affiliation divestiture process differs from a firm's typical spin-off because it results separation and survival of the business group network. This research, hence, analyzes the process based on three points: how each structure is cohered; how major human agents locate within each structure; and what happens in the structure's network across time. The result is as follows. First, group network's cohesiveness is an important factor of making affiliate divestiture. Next, separation experience works as a path-dependency by becoming 'a logic of succession.' Third, business groups which have not concluded their way of transfer select joint succession as a temporary expedient. Last, group network forms plural cores before commencing gradual affiliate divestiture. By those processes, Korean chaebols get on different ways in succession due to how inner network of each structure is organized. In other words, cohesiveness of structure and composition of network show how a network of business group is divided, is transferred from previous owner to his descendants, and maintains its survival. This result provides a key to understand formulation and survival of derivative chaebol, which will continuously come into the world.

The Employment Relations in the Changing Circumstances of Korean Labor Market

This study aims to explain the employment relations in the changing circumstances of Korean labor market, focusing on the automobile industry. As globalization has developed, the segmentiation between the regular workers and the non-regular workers in the labor market has deepened. The wage level of the non-regular workers is about 60-70% of the regular workers, while they engage in the same kind of job within a work organization. The labor movement of the non-regular workers to improve their working conditions has intensified, reflecting the serious situation in the labor market. This study analyzes the dynamics of labor movement of the non-regular workers, based on the segmented labor market in the Korea automobile industry. After then, we will try to present an alternative option to the present situation of the segmented labor market.

Transforming Violence on School through Family Minority Males

European schools are witnessing a growing range of violent behaviors, including bullying or gender violence. And especially strong violence is addressed towards ethnic and cultural groups. Research noted various factors that push to particular types of violence. In this paper we will focus on hegemonic masculinity that plays an important role on it. Thus, schools need preventive strategies like community involvement. Nevertheless very little research has pointed out women participation in their local schools. In this sense, the start point of the paper is to show how participation of minority males in schools contributes to promote diverse models of masculinity and in consequence reduce violence behaviors. The results presented on the paper, draw on data obtained on project INCLUD-ED (6th FP European Commission, 2006-2011). Researchers identify three specific types of masculinities (Flecha, Puigvert & Rios, 2013): Dominant Traditional Masculinity, Oppressed Traditional Masculinity and New Alternative Masculinity. As they point out, children and adolescents who do not follow the model of hegemonic masculinity are more often the victims. The New Alternative Masculinity, could become a reference for the adolescents to fight violence behaviors. It is through the involvement of role models in classrooms and in other learning spaces such as the playground, and also participating in decision-making that they help to create a safer atmosphere where violent behaviors are neither accepted nor tolerated.

“We Are All Sri Lankans”: Sri Lankan Muslim Organization’s Reaction Towards Islamophobia

The civil war in Sri Lanka between the Tamil Tigers and the Sri Lankan government ended in 2009. In this ethnic conflict there was a third group whose ‘own’ identity was strengthened by the war, this was the minority Muslim population. The conflict was the result of nationalism and the frequent camouflage of radiation doses, the labor organization of the nuclear industry in Japan and other countries (Taiwan, France...). have made invisible the major part of occupational hazards. This invisibility of local and chronic hazards has also alimented and biased a global production of scientific knowledge and ignorance, which is only one but fascinating part of the long controversy on “low-doses”. I will examine to what extent has 3.11 created a new context that could lead to the further modification of current standards of radiation protection. Here I will present how Japanese labor and environmental activists build their criticism of existing safety standards by borrowing from classic Marxism. I will further address the criticism on minor mode that has rose within the nuclear establishment (the “nuclear village”) in Japan and among the international “community” of epidemiologists and radiation specialists. The conflicts of interpretation (i.e. hermeneutics) between Japanese government experts and activists thus reflect a larger debate, at a global level, within the community of epidemiologists and radiation specialists. This description will lead me to discuss the limits of the classical opposition between the positivist paradigm and the social constructivist paradigm.

This research follows up on a study I started in 2002 on Japanese nuclear contract workers. Further observation and interviews have been conducted since 3.11 in Japan and in Europe, among cleanup workers, government experts, activists and epidemiologists.

JOHANSSON, ROINE* (Mid Sweden University, roine.johansson@miun.se)

Disaster, Organization and Temporariness

One intersection between studies of organization and of disaster, that is seldom theoretically explored, is temporal delimitation. The well-known before-during-after trichotomisation of disaster studies is an indication of the inherent temporariness of disasters. Organization, on the other hand, is usually associated with stability and continuity. However, temporary aspects of organization have during recent decades attracted increased attention from researchers. In this paper, disaster management is regarded as a form of temporary organization. The aim of the paper is to provide a categorisation of different forms of temporary organization which differ aspects of disaster management can be placed. In connection with a recent discussion in organizational sociology, “organization” is here regarded as a form of social order (comparable with other social orders, like institution and network) rather than as a formal social structure; a phenomenon
can be organized to different degrees, and some phenomena are only partially organized. The least common denominator of organization is that it is a decided order. Without a decision, no organization, not even a partial one. Here, a distinction is made between full organization and different forms of partial organization, the latter consisting of mixes of organization and other social orders; a phenomenon may be a mix of organization and institution (if, e.g., norms heavily rest on rules, norms and beliefs) or a mix of organization and network (if it lacks a clear formal hierarchy). Organization is a widespread form of social order. Many such phenomena are temporally delimited. Here a distinction is made, regarding the nature of their horizons, between known and unknown time-fixes. The latter (when it is not known when a phenomenon will take place) is characterized by a higher degree of uncertainty. Disaster management belong to this category. Different aspects of disaster management are analyzed with this theoretical framework.

Change in Daily Eating Habits – Organization and Arrangement of Nutrition Patterns in the Context of Family and Public Compared Between Germany and Japan

Instead of looking at unknown social arrangements far away, comparative sociological research should investigate the alien within the known following suit the ethnographic research of modern industrial society. While comparing the development of Western industrial states, sociology can get insights in the meaning of social problems, its circumstances and consequences. This perspective will be presented by an on-going project comparing eating habits of everyday life between Japan and Germany. The stark contrast between European and Asian nutrition habits illustrated by the German-Japanese comparison is examined to discuss the correlation of malnutrition, change of family structures, gendered responsibilities, and daily eating habits in regard to cultural differences as well as to numerous similar characteristics of the current social change. Thereby, the focus is to be laid on specific and comparative analyses as to how the diagnose of “malnutrition” is made, which shape it assumes and which causes are being named. Ultimately, it has to be questioned what kind of regional country-specific solutions of the stated problem take root and which family-supporting components of the different national strategies can be taken by extra-familial agents of socialization in order to teach nutrition skills. Afterwards, different national approaches to a solution of the respective problems of how to arrange daily nutrition in the area of tension between private and public nutrition supply as well as their transnational learning potentials can be discussed. To compare developed countries with each other in regard to particular problems will not only result in new knowledge about the research objectives but will also help to evaluate and develop the theory of World Society, whether the world is differentiating into a multiplicity of societies or unifies in a way which takes a segmental, regional differentiation into account.

Pedagogies and Practices in the Modern and Postmodern

There is a paradigmatic shift in how pedagogy is conceived and practiced in contemporary discourses. In this paper, I focus on the discourses that arise out of the fragmentation of the project of modernity. I attempt to make a distinction between modernist and postmodernist educational theory, their languages and vocabulary and their tools of measurement. Furthermore I show that issues related to change, crisis, difference, diversity and fragmentation of identity, and of knowledge and power are important aspects of the emerging conceptualization within pedagogy. I try to describe some pedagogies such as the notion of “border pedagogy” etc. have emerged from critical pedagogues who locate themselves within the postmodern. Pedagogies that give students an opportunity to engage in multiple reference points that constitute different cultural codes. Finally I raise the problems that the radical critique of postmodernism pose for education that is central to post-Enlightenment, emancipatory, liberal humanist project of modernism.

Intersections Between Western and Indian Childhood Discourses

This paper presents one of the chapters in my Ph.D. dissertation on Conceptualising Childhood, Indian children as a social category are neither homogeneous nor monolithic. “Childhood” in Indian discourses represent “shifting set of ideas” developed over a period of time, and across different sub-cultures. In this paper, I make the argument that intersections between childhood discourses in India and the West in order to show that childhood discourses (located in the West) documented in this study are getting percolated into Indian discourses due to globalization of childhood discourses, even as there are protests about childhood discourses being Eurocentric. In both the West and in India plurality of childhoods have been acknowledged in discourses on Childhood. Indian sociological studies document multiplicity of childhoods which in turn depends on varying factors such as region, religion, caste, social class, gender, family structure, etc. What emerges from the study of texts on the subject, is that both India and the West have been marginalization in sociological discourses on children until now. There is a perceived emergent decrease in patriarchal control of children by adults, with adult-child relations becoming more democratic and participatory, manifested in greater negotiation of control by children. The “Century of the Child” notable for the United Nations Convention on the Rights of the Child (1989) and the new Sociology of Childhood has brought children into the arena of international politics and academic debates in both the North and the South.

Organising the 'Invisible' Sector: A Case Study on Household Workers in Lima

This paper examines the organisation of household workers in Lima. Household services is one of the biggest employers of female workers in Peru, and roughly a half of all household workers live in the capital Lima. Among other informal workers, household workers are regarded as one of the most precarious and marginalised group of workers in the labour markets. The lack of recognition, and the fact that the work is done in private households, makes the household sector 'invisible' and thus the workers' rights, including working hours, wages and access to social security, are poorly controlled. Lima provides an interesting case for studying household workers' movement. In recent years, household workers have increasingly mobilized on local, national as well as international level and formed new networks to promote their rights as citizens but most importantly, as workers. In 2011, the international labour conference accepted a convention for domestic workers, setting labour standards for persons working in household services. Peru has not yet ratified the convention, but especially the local household workers' organisations have been actively campaigning for the ratification. This paper investigates the various forms of organising household workers in Lima. Special focus is given on household workers' organisations and their networks, and the ways these promote decent work and job quality for workers in household services. Since informality in the sector is high and less than 1% of household workers in Peru are unionised, non-governmental organisations play a significant role in advancing the position of household workers in the labour markets and in the society.

Women Human Rights Defenders: Promoting Women's (Human) Rights in Honduras

This paper explores the recent developments in women's human rights activism in Honduras. In the past years, political and economic instability, culminating in the coup d'état in 2009, has led to extensive protests and mobilization among a variety of civil society actors, particularly among women's groups. While promoting gender equality and organizing against militarism, neo-liberal practices and human rights violations, Honduran activists have increasingly embedded the notion of human rights in their claims. Moreover, a wide variety of women's groups including feminists, teachers, community leaders, labour union members and LGBT activists, among others, have met challenges collectively as 'women human rights defenders'. I suggest that as a consequence, the discourse on women's human rights has moved from academic spaces and a 'feminist project' to the everyday understandings of a large number of women's groups and most importantly, a new framing of women's agency. In doing so, activists have, moreover, enhanced their alliances with supportive women's groups beyond national borders and entered new regional and international arenas of advocacy. Drawing mainly on social movement theories, this paper seeks to explore 1) the factors that have contributed to the shift in women's rights framing among women activists in Honduras and 2) the possibilities and challenges arising from the strategic usage of human rights frames for the activists' work and the women's movement in Honduras generally.

Disaster Warnings on Remote Islands: From the Traditional to the Contemporary

Natural disasters such as tropical cyclones are commonplace in South Pacific island nations, including on remote islands within these remote countries. During a project on climate change adaptation planning in a changing climatic environment, warning signs and responses to them in remote island communities in Fiji and Tonga were investigated. On remote islands, people are well connected with their land and environment, and local ecological warning signs have existed and been relied upon traditionally. Knowledge about such traditional warning signs is still alive today, but diminishing as technology takes hold. Traditional warning signs are being overtaken by a reliance on warnings from the meteorological service on the radio. Many of the older people who hold most of the traditional knowledge perceive a lack of interest from young people in learning about those signs, because of the radio. However the ways in which young people are using the radio in changing, which may make this form of warning message distribution less effective in the future. There are moves toward the use of mobile phone technology, especially in Tonga, for distribution of disaster warnings. In remote areas where mobile phone reception is less about being in the right general area than standing under the right tree, methods of locally spreading the news of any warning will remain vital. This presentation outlines knowledge of different types of warnings, their perceived reliability, how these are changing, and the responses to the warnings, on two remote island communities where sufficient warning is considered more important than the severity of an extreme weather event.
JONAS, MICHAEL* (Institute for Advanced Studies, jonas@ihs.ac.at) LITTIG, BEATE (Institute for Advanced Studies Vienna) Sustainable Practices and Behaviour

Practice theories are at the cutting edge of research on sustainable consumption and material managerial policies. They claim an alternative route to conceptualize the dynamics of social change by addressing both, the persistence and the innovativeness of human behaviour. The focus of this research are daily unsustainable routines, i.e. the everyday doings of people, carried out by bodies with the assistance of things, be it instruments or the surrounding infrastructure. Practice theories draw attention to core issues which remain quite often unaddressed by behavioural approaches such as large scale infrastructures or material agents as participants of everyday life. If it comes to behavioural changes towards a more sustainable way of living practice theories pose the critical question whether at all and how it is possible to steer or to govern social practices. Our contribution gives an overview of the “practical turn” in social science and its reception within the discourse and research on sustainable development. Social practices are especially linked to studies of consumption routines as well as lifestyles and the conditions for changing them towards sustainability.

What Kind of Power Is ‘Love Power’? II - Continuing the Elaboration of a Theoretical Concept

Love, more specifically “love power,” is central in my mode of theorizing contemporary western societies. In the article, “What Kind of Power is ‘Love Power’?” (2011), I outline briefly, three ways in which I have approached this key question. I have done this, firstly, by comparing “love power” with “labor power,” concluding that the two human powers are both similar and basically different, and that both can be seen as specifically human “world creative capacities” (in the sense explicated by Marx); secondly, by distinguishing care and erotic/erotics, as the defining elements of the internal dialectic in sexual love; and, thirdly, by asking, what kind of power love power is, looking (in vain) for answers among the so-called “power terms” as presented in dictionaries and applied in most prevailing social and political theories. I conclude that love power would have a new dimension and enrich the whole complexity of power terms. In this paper I will continue to elaborate the concept of “love power” roughly along these three lines. The aim is to explore, develop further, and reflect over the strength and delimitation of my love theory. I will expand the comparative view (labor vs love in Marx) by bringing in and assessing some other, apparently similar or overlapping theories and key concepts where creative and transformative powers are also at the center: some feminist historical-materialist work—labor-related concepts, and also concepts, generated within other research traditions, in particular “desire” and “erotic power” as variously framed by, or through critical debate with, psychoanalytic theory. Then, drawing on the explorations in the first part of the paper, I seek to explicate further my understanding of love as polivalent practice and power, and what point I am trying to make by theorizing sexual love and love power in a specific historically located context.

How Brown-Coal Mining Affects the Lives of Older Long-Time Inhabitants of the German Lusatia Region

Not only the profound shock of events such as war that can shake societal structures and with that throw people of every age off their accustomed paths. Also events like natural catastrophes (floods, fires, storms) can threaten people’s physical and spiritual health.

Another different form of serious influence on human lives is represented by events that emerge neither as a result of war nor through the forces of nature, but solely through the decision-making power of hierarchies. As when the Olympic Games required new sports venues to be built, and whole city quarters had to be flattened, or superhighway construction causes many houses or even whole localities to disappear, a severe, all-encompassing violent form of violent intervention acts on and against the existence of the people living in these areas. It is the same for people who live in mineral-rich regions.

In my contribution I examine the influence of renewed coal strip-mining and the resettlements necessitated by it on the lives of older people in the Lusatia region. Many of them will soon have to experience being uprooted from their homes for the third time in their lives – after the first time in the Second World War, then in consequence of strip-mining in GDR times, and now through renewed plans to mine extensively on what they thought was an area secure from future extraction.

How do older people react to the loss of their familiar environment? How does the necessity of resettlement affect their health, spiritual well-being, as well as their sense of security in old age? What strategies do they develop to face the impending physical and mental effects of the threatened eviction? The variety of responses to these questions – based on my research interviews carried out from 2010 in the region – is formulated in my presentation.

2011 and 1968: Transnational Crisis - Transnational Social Movements?

2011 and 1968: Transnational Crisis - Transnational Social Movements?

The Arab Spring revolts, the Indignados and international Occupy! protests were immediately cast as harbingers of an international, even transnational, movement capable of displacing political elites’ neo-liberal agendas and politically and economically repressive regimes which. Clues for the feasibility of this transformative potential can be derived from comparisons with the protest movements closest in scale and character: those of the late 1960s. The two upsurges are similar in their lateral, non-hierarchical mobilisation and organisation, rejection of conventional ‘system’ politics, direct, deliberative democracy practices, and equality of participation through personal commitment, initiative and action. Yet sixties’ protests failed to transform or even modify capitalist economic relationships, which assumed even more elemental market forms. Sixties’ campaigners’ radical alternatives to today’s transnational economic crisis. What lessons do the failure of sixties radicalism in these respects offer for today’s campaigners?

Examining international diffusion of radical ideas and campaigns via their organisational, discursive vehicles and communication media, suggests three possible commodifications for achieving ‘transnationalised’ social movements:

similar causative grievances;

• adoption of another society’s social movement model;

• and/or convergence of regional/national movements into transnational programmes and goals.

Analysis of these potential commodifications indicates that sixty movements achieved limited convergence in shared or similar perspectives and programmes only through a transnational, but ultimately unworkable ideological paradigms. Yet comparison, with the newer vehicles of global and social media and practices such as Occupy! Suggests these need, but lack, the meaningful and coherent discourse(s) to achieve the transnational force for political change.

Measuring Corporate Social Responsibility for Consumers: Lessons Learned from Seven Years in the Field

Which company is more sustainable: Coca Cola or Pepsi? Apple or Microsoft? GE or LG? Or none of the above? While data clearly indicate that we must significantly reduce our overall quantity of consumption, sustainable consumers face a wide range of obstacles when attempting to enhance the quality (responsibility) of their consumption. Reliable data is not readily available, and the practice of “greenwashing” – or deceptive marketing that makes corporations of their consumption. Reliable data is not readily available, and the practice of “greenwashing”, on the other. How can citizens consumers effectively navigate the muddy waters of corporate social responsibility?

Drawing from a seven-year public sociology research project that uses independent, third party data to evaluate corporate practices, this presentation examines how and the art and science of measuring corporate social responsibility. More specifically, it explores five tensions inherent in the development of a comprehensive and accessible system of measurement.

1. The Data Integrity Problem: Including all reliable data, on the one hand, while excluding overly-biased data (or data that is the product of gre-enwashing), on the other.

2. The Data Quantity Problem: Uncovering too little data on some companies and too much (potentially overlapping) data on others.

3. The Past/Present Problem: Weighing companies’ legacy of positive or negative conduct against more recent indications of change.

4. The Multidimensional Problem: Determining the comparative value of different dimensions of social responsibility (e.g., human rights, the environment, political lobbying).

5. The Simplicity/Complexity Problem: Creating a system that is simple enough for consumers to use while being complex enough to accurately capture the many facets of corporate conduct.
The author offers working solutions to these tensions and explores the strengths and weaknesses of his methodology. More broadly, this inquiry underscores how, in order to be effective, more sustainable consumption requires increased corporate transparency and better public sources of data on corporate social responsibility.

JONES, ELLIS* (College of the Holy Cross, ejones@holycross.edu)

Reclaiming Corporate Social Responsibility for Activists and Academics: An Analysis of International CSR Ranking Systems

Is it possible for activists and ethical consumers to reclaim corporate social responsibility (CSR) from its current, largely greenwashed, state that seems to merely strengthen much of the same neoliberal agenda it was meant to address? While CSR research in general is expanding rapidly, there is relatively little research being done on CSR measurement, and almost all of this sub-category of study focuses on corporate self-reporting rather than 3rd party tracking of corporate behavior. The solution may be found in nonprofit and academic efforts to develop valid measures of CSR for a public audience. This research project examines four CSR measurement systems created specifically for consumers in the US, UK and Australia in order to understand the current level of consensus/diversity in: 1) definitions, 2) methodologies, and 3) outcomes. Utilizing a combination of text analysis and standard statistical tools, these questions are answered with surprising results. The rankings of 106 global corporations are compared across all four systems to reveal where consensus can be determined despite significant differences in different methodologies. CSR rankings results are reassessed in light of some of the most recent publications from Transnational Institute (“State of Power 2013”) and Asia Monitor Resource Center (The Reality of Corporate Social Responsibility) to determine where blind spots may be in each of the systems. Fnal recommendations include a call for increased research in the area of empirically measuring overall CSR behavior (with an emphasis on indicator validity) rather than generating additional research on CSR reporting, reputation indices, correlations with corporate profitability, or hyper-specific, non-comparable corporate efforts along particular lines of social or environmental responsibility. The argument presented includes a call for resistance movements to help transform capitalism rather than reduce the economic roots to neoliberal ideologues while focusing on social change efforts in other arenas.

JONES, HELEN* (University of Huddersfield, h.m.f.jones@hud.ac.uk)

Youth Work in England: An Uncertain Future?

It is easy to paint a pessimistic picture of how young people are affected by the current economic situation. In Britain, almost 20% of 16-24 year olds are ‘NEET’, the acronym for young people who are not in education, training or employment. The Education Maintenance Allowance, paid to 16-18 year olds to encourage them to stay in education by paying them a small weekly grant to help with fares and other overheads, was removed in 2011. Perhaps it is not surprising that UNICEF (2007) found the UK’s children and young people to be the unhappiest out of those living in 21 developed countries. Aspirations for the future included a sense of purpose, having opportunities to develop talents, a sense of belonging and a desire for a responsible and fulfilling life. The OECD (2013) has found that young people are most likely to suffer from governmental austerity packages; they suffer most from cuts. Youth workers have always tended to look back to a golden age. Currently, the period when government funding was channelled into work with young people via local authorities and third sector voluntary organizations provides the touchstone. In April 2013, the UK’s magazine Children and Young People Now published an article entitled, ‘Youth sector on a “knife-edge” as third of organizations at risk’. It presented a depressing overview of reductions in expenditure and a pessimistic prediction of the future. Youth services have been subject to swingeing cuts accompanied by amalgamation with targeted and acute services. This paper identifies the aspects of young people’s lives which have been affected by different cuts and other policy changes. Where possible, examples of innovative practice will be discussed. These present exciting ideas which have potential to be replicated if funds are found: although the future is uncertain, we owe the country’s young people a more optimistic future.

JONES, IAN REES* (Cardiff University, jonesir4@cardiff.ac.uk)

Class and Health Inequalities in Later Life

For over sixty years significant research activity has addressed the extent to which the effects of social class over the life-course have determined or contributed to an individual’s economic and social fate in old age. This has led to the elaboration and discussion of a whole host of conceptual and measurement issues among a growing body of epidemiological and social researchers. To these we must add, in light of the social changes and accompanying theoretical developments over the same period, questions about the viability of class as a means of understanding social relations and social inequality in contemporary society. This paper will interrogate these issues as they relate to the role of class in later life, using the prism of health inequalities. The paper argues that the wider implications of the emergence of a relatively lengthy post-working life have not been fully incorporated into studies of class and health in old age. This is a major lacuna given that the generations entering retirement today in affluent countries are precisely those who have experienced the social changes that have seen both increased prosperity and the questioning of the salience of class in wider society. We therefore need to address two questions. Firstly, how best to describe and explain patterns of social class inequalities in health over the life course? Secondly, what does class mean in later life and how can it be conceptualised in relation to a population that may have been out of the workforce for many decades?

JONES, IAN REES* (Cardiff University, jonesir4@cardiff.ac.uk)

Communities, Connectivities and Later Life

The rapid diffusion of forms of Information and Communication Technologies (ICT), mobile technologies and social media have transformed many aspects of social relationships and enabled new forms of social connectivity. However, the impact of virtual connectivity on community and communication for those in later life is not well understood. Research suggests that for older people internet use and its impacts are multifactorial and differ according to the nature of social relations. Research in this area has produced ambiguous results. Researchers have found that, where older people were previously socially isolated, by becoming internet users they were able to keep in touch with friends and family often across geographical distances. Others have found cyber communities to have a negative impact in terms of withdrawal from the outside world leading to a contraction in the use of social and physical space. It is certainly the case that the expansion of social networks beyond the local neighbourhood that domestic ICT allows can lead to profound changes in the nature of community in later life. Research on the internet has tended to focus on a digital divide, on the impact on community and social capital and on political and cultural participation. While the most common uses of computers by older people appear to be related to communication and social support, leisure and entertainment, health information, educational information and productivity; this is not that different to younger groups. The presentation will address; theoretical approaches to new technologies and social relations in later life, trends in internet use among older people, research addressing the digital divide, patterns of motivation and use, the impact on social relations and social networks and the consequences of technological change for older people in temporal and spatial terms.

JONKMAN, AREND* (University of Amsterdam, a.r.jonkman@uva.nl)

JANSEN-JANSEN, LEONIE (University of Amsterdam)

Socio-Spatial Justice and Housing

While the relationship between justice and geography and spatiality is acknowledged and put central in research by several scholars, there is no consensus on the type of relationship. Space is often used as a contextual way and social justice writings are in many cases focused on power and struggles within society. Edward Soja has argued for putting spatiality more central in social justice research. Space may have a great explaining potential, but may also contain a causal power. This paper will further explore the spatiality of justice through an analysis of the Amsterdam housing market. Institutional changes related to housing that especially change the role, position and field of work of the social housing corporations in the Netherlands change the provision of housing. Space, landscape or territory might shape the effects of institutional changes and are therefore both a means and an end of production and moreover distribution of housing. Amsterdam, by some regarded an example of a just city, is characterized by a high degree of social housing. This paper argues that the wider implications of the emergence of a relatively lengthy post-working life have not been fully incorporated into studies of class and health in old age. This is a major lacuna given that the generations entering retirement today in affluent countries are precisely those who have experienced the social changes that have seen both increased prosperity and the questioning of the salience of class in wider society. We therefore need to address two questions. Firstly, how best to describe and explain patterns of social class inequalities in health over the life course? LINDGREN, GERD (Karlstad University)
The Vulnerable Man-Machine: Human Actors As Productive Parts in Work-Networks

As parts of heterogeneous work-networks, human actors need to manage their vulnerability by finding ways of fitting neatly into the network and become reliable man-machines. This may also have to learn how to manipulate the network so that they retain a position in it. From a posthuman- and ANT-based perspective, this presentation explores human vulnerability in a male dominated, internationally successful company. Vulnerability is understood as a consequence of various material-semiotic processes, where individuals are or are perceived as unable to execute certain tasks, relearn, commit and so on. Being or being seen as able can result in vulnerability as well, as this may propel the actor in unknown or even unwanted directions.

Working at “Techno,” human actors help form a work-network put together for increasing productivity and, in the end, profit. They are protected by laws, policies and helmets, but in this network they necessarily remain some of the softest parts with different (dis)abilities and utilities. The analysis of ethnographic data from “Techno” suggests that technology and vulnerability is closely linked. The white-collar-domain of the network results in one set of human vulnerabilities and the blue collar in, to some extent, another, but the real difference lies in the actor’s possibility to manipulate the network. Depending on your formal position, who you know, how you are categorized (in terms of age, education etc.), and how well you fit into the network, you will be able to tinker with work schedules and the ordering of new machinery or software to different degrees. Being able to manipulate the network partially or completely to some extent is highly important for actors and their manipulation-strategies differ depending on what resources they possess and how closely they are monitored by management and co-workers.

JOO, YU MIN* (National University of Singapore, sppyjm@nus.edu.sg)
Finding New Opportunities in Shrinking Cities: Local Citizens, Artists, and the State in Urban Revitalization Projects

South Korea is one of many countries now facing the problem of inter-urban inequality. While Seoul and the capital region have nearly 50% of the national population, many other cities, which developed as the country rapidly industrialized during the latter half of the 20th century, are quickly losing their industries to newly emerging economies, such as China and Southeast Asian countries. In short, a number of Korean cities, once noted for their speedy urban transformation and growth, now face reversed difficult challenges of shrinkage. A good example is Busan, which had been the center of the southeastern industrial core, but is now struggling, with a shrinking economy and population. This paper examines two urban revitalization projects that took place in Busan’s dilapidated old downtown and explores how these projects, typified by the presence of both nonprofit organizations and public authorities, allowed emergent civic actors to take much greater roles in the development projects, leading to unexpectedly successful outcomes. Additionally, the paper points out how the visible decline provided an opportunity to change the mindset of the society, which had been rather firmly embedded in development-oriented ideologies, and to seek alternative possibilities amid the shrinkage. Perhaps, with the arrival of more socially aware and inclusive development approaches and goals, shrinking cities may find new opportunities to build more resilient and livable cities.

Beyond Agamben’s Noncitizen: Protestng Refugees on Their March through Europe

Migrant protest on the move has emerged recently in different national and local geographies. Following the Refugee Protest March 2012 to Berlin, similar forms of political protest have been realized in different European spaces. Organized mainly by refugees themselves and supported by non-refugee solidarity activists, the recent phenomenon of ‘mobile refugee activism’ has created public discussion and thus influenced mainstream debate on the precarious situation for refugees in Europe. Analytically, while the politics, laws, and regulations concerning the life of the refugee within the EU are layered according to three main spaces of institutionalized power: regional, national, international; also grassroots activism as organized resistance is developing accordingly. Based on my ethnographic study of Asylstafetten, the Asylum Relay Walk in Sweden during the summer of 2013, plus research on the Refugee Protest March through Germany and the marches organized by Refugee Struggle for Freedom in Bavaria, also the responsive practices of policing are elaborated in this paper. While repression via police harassment was a central experience of the protest marches through Bavaria, the Asylum Relay Walk through Sweden rarely met the state. Further including the Congress of Protestng Refugees in Europe, held in Munich in early March 2013, the historical and geographical context becomes palpable: ‘European’ refugee protest must be analyzed not only as local and national, but also as increasingly transnational. The self-proclaimed ‘Non-Citizens’ of Europe, in reference to Agamben expressing their overall aim to “overcome the duality of Citizen and Non-Citizen,” have met the responses of power in different ways in different places. The ‘Human Right’ to non-violently articulate democratic dissent has in these cases been infringed by different strategies of state repression. Meanwhile, grassroots refugee activism has to a certain extent already managed to adjust domestically and organize internationally according to these structures of inequality, discrimination and exclusion.

Identities, Culture and Transnational Learning: Being Malaysian Women Medical Researchers

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
In spite of being half of the population of the world, having increased access to education and increased labour force participation, women continue to dominate traditional fields in education, health and welfare, social sciences, business and law, and humanities and arts (OECD 2011; UN, 2010) and are still severely underrepresented in science, engineering, technology and emergent industries, accounting for only slightly more than a quarter of all scientific researchers (Hawkins & Ronchi, 2008; OECD, 2011). There is loss of productivity and human capital, and monetary loss when women’s potential is fully harnessed. This paper is based on a pilot study looking on the intersectionality of culture, global networks and innovation, investigates the identity practices of a group of Malaysian women medical researchers. It examines the ways in which ethnicity, social relations and power dynamics within the medical research sector shapes this group of highly skilled Malaysian women’s identities working in this research sector and their access to resources and opportunities. The findings will contribute to an initial framework of how cultural identities and transnational learning in knowledge-intensive industries. The discussion also considers an initial framework for understanding socio-cultural and scientific dimensions of new industries, and higher level skills vital for women’s successful participation in the global economy.

Studying Selected Youth Transition Studies Between the Global North and South: A Conceptual & Methodological Analysis

This paper examines selected youth transition statistics and studies between the Global North and South, and focuses at understanding how conceptually and methodologically these studies may be related and contextualized to researching “transition crisis” in the Philippines. It focuses at assessing unemployment and education performance indexes from selected countries, and identifies how these statistical variations reflect similarities and differences along work-education nexus across cultures. Methodologically, the paper evaluates empirical designs of selected studies to recognize what good measure of youth transition estimate may be applicable to Global South countries like the Philippines. In the end, the paper draws insights from youth statistics and content analysis of studies to inform the design and texture of conducting local youth transition research in the Philippines.

Theoretical Consistence Between Goffman and Luhmann

At first glance, it could cause doubts when one tries to put Erving Goffman and Niklas Luhmann together. Their thoughts will probably be treated as two different, even opposing approaches. This article attempts to offer another perspective by pointing out the theoretical consistence between Goffman and Luhmann. Furthermore, it hopes to make Goffman and Luhmann more understandable by cross-referencing their works to each other.

In a short journal article “Die Form Person” (The form person), Luhmann defined person as a form with two sides which through regulating the actions offers a solution to the problem of double contingency (Luhmann 1995: 152). After some explanation, Luhmann wrote: if you want to learn more, you have to read Goffman (Luhmann edb.: 151). For a closer investigation of the theoretical consistence between these two sociologists, this article will develop its arguments according to the following guidelines:

1. Foreword
2. George Herbert Mead as a point of reflection: Both Goffman and Luhmann are unsatisfied with Mead’s explanation as to the process of self-formation.
3. Double contingency as a chance: Unlike Parsons, both Goffman and Luhmann do not treat double contingency as an communicative obstacle needed to be overcome through common culture normality, but as a chance or a pressure to set dynamic practices in motion.
4. Person/Non-Person: Both of them pay attention to the possible qualifications and attributes of self-identity which are temporarily excluded from the side of non-person, but could potentially be ascribed as the self-identity. This may explain why one would behave so cautiously in the social interactions to maintain the civilian self.
5. Conclusion: Inspired by the above discussion about the theoretical consistence between Goffman and Luhmann, I would like to suggest, as the conclusion of this article, a practical perspective of a “self” that refuses the ontological existence of a pre-social self.

Overcoming Alienation: A Luhmannian Perspective

The concept of alienation can be found in micro- as well as macro-level socio-logical processes. The present discussion seeks an understanding of alienation, and possible ways to overcome it, in relation to Niklas Luhmann’s theoretical perspective, which, given its non-hierarchical structure, may provide a possibility of conceptualizing alienation from “both sides”. In Luhmann’s theory of social systems, individuals (i.e. psychic systems) are seen as residing in the environment of other social systems and thus not constituting a part of it. It is argued, on the one hand, that this results in an essential, and alienating, differentiation of psychic systems from social systems. On the other hand, the differentiation of systems from their environment (and other systems in it) provides systems with a particular “freedom” in terms of acting according to their own, non-alienating, system logic (i.e. functionally). Nevertheless, psychic systems want to participate in the communication of social systems and this is possible only through access to system-specific media of communication, which are defined by social systems. In relation to this, psychic systems appear to be condemned to act according to the logic of social systems, which consequently would emphasise the alienating process of social participation and reduce the “freedom” of psychic systems. However, media of communication may be defined in one way in social systems while, from the perspective of psychic systems, alternative ways to access system media through various creative and unexpected processes may be possible. The equal “freedom” of psychic systems in relation to social systems would seem to emphasize such a possibility. It is thus argued that Luhmann’s theoretical perspective provides a possibility for psychic systems of social participation according to their own logic, and that this possibility may provide a key for understanding how the alienation of social participation can be overcome.

Addictive Gaming: Self-Addictions of Analysis and the Biographical Context. Life Story Interviews with Video Game Addicts

Since the 1990ies computer and video games are discussed as being addictive. In media and research the phenomenon has gained great attention and with the appearance of internet gaming disorders research diagnosis in the appendix of the recently published fifth edition of the Diagnostic and Statistical Manual of Mental Disorders (DSM V) addictive gaming made a further step towards official recognition. Looked at addictive gaming from a social science perspective one could say that it is considered a social problem. But how do affected gamers perceive and interpret their gaming behaviour themselves?

This presentation tries to give an answer presenting biographical narrative interviews with german male and female gamers who are or were at some point classified as video game addicts according to a psychological screening instrument (CAS II) (Rehbein et al. 2010) and/or self-analysis. The main objective is to take the subjective perspectives of the video gamers seriously and to reconstruct their self-accounts within their complex interrelationships between everyday life and the biography and the virtual world. By presenting exemplary cases it will be shown, without idealising or pathologising from the outset, which everyday and lifestyle problems can be solved using the virtual practices and which dysfunctions and follow-up problems this is potentially linked to.

The project follows Grounded Theory and in the analysis also uses the method of Objective Hermeneutics.

From Protest Event to Protest Wave: A Theoretical Appraisal on the World-Historical Perspective

For a long time social movement studies are strongly influenced by the geographical and historical points of reference. Empirically, most social movement theories have been generated from case studies of short-term mobilization activity in the global North. Methodologically, the study of social movements is overwhelmingly characterized by case-oriented studies. However, one of the most fundamental characteristics about social movement is the ‘connectedness’, both temporally and spatially, of collective actions with each other. This leads us to draw on a theoretical approach that attempts to identify similar processes and dynamics that operate in diverse cases of contention. “Protest waves” as understood in this manner offer us the possibility of constructing a systemic analysis that could identify and then particularly explain contention processes in the
global South as a whole. The strength and diversity of participating groups in a protest wave are apparently shaped by a country's specific characteristics and its location in the world-economy structure. These kinds of linkages allow us to pinpoint shared political-economic attributes and structures that are conducive to the outbreak of popular contention by large numbers of people in the global South. Examining contentious protests within the world-historical perspective offers a path to understanding the continuation of struggles and how periods of contention may be just the one wave in a larger sea of long-term resistance. What is particularly crucial to determine is how diverse social movements affect each other and interact with the structures that they are decomposing and transforming. This heuristic characteristic of collective action has an elevated affinity with the concept of protest wave, which points out the connectedness of each protest cross over time and space in the global South.

Information Management, Collective Intelligence Within The Context Of Crisis Resolution - Going Global

Information Management, Collective Intelligence and Knowledge Management within the context of Crisis Resolution - going global. Crisis Resolution from an international perspective is to be embedded into the problem of escalation and de-escalation of irregular war. Experts during many decades of Cold War had been focusing in research on interstate wars. But Civil war today is the most common form of armed conflict and „hearts and minds“ are concurrently going global. Therefore it is more than normal to implement those procedures of collective intelligence and knowledge processing into the broader domain of security management and crisis resolution. The international community and the international alliances are affected by their enforced austerity programs, this gave birth to the idea of “religion” as a new paradigm to overcome the political and cultural cacophenies. It is useful to look at the cultural and psycho-sociological foundations of collective intelligence and knowledge management for to find incentives but also barriers for pooling and sharing in the military-civil security domain. Collective intelligence and knowledge Management is based on accepted values:

- sharing
- responsibility
- respect

So Pooling and sharing of logistic resources may be successful in this respect, but what about the vast field of pooling and sharing of information, scientific ideas? The processing agencies very often are competitors in this field.

Saving the Environment? Environmental Policies of Japanese Firms and Their Effectiveness

In the past decade, a new framework has gained popularity that firms, which aim to make profits, should also address broader social issues, such as environmental protection, human rights, and labor standards. It is no coincidence that this framework of corporate social responsibility (CSR) has become popular under the anti-regulation logic of neoliberalism. Instead of bringing the state back in, the CSR framework grants corporations a way to pre-empt state regulations, by claiming that market mechanisms through corporate voluntarism is more effective in resolving social issues than state mechanisms through bureaucratic supervision. Thanks in part to the promotion by international organizations (e.g., the United Nations), various CSR policies have been widely adopted across advanced industrial societies. Their effectiveness, however, has been largely unknown, raising serious concerns that adoption of such policies amounts to mere symbolism. In this paper, we examine environmental policies of major Japanese firms and their impact on these firms' environmental performance, using data on Japanese firms between 2006 and 2013. During the period, under the increased global institutional pressures for CSR, Japanese firms have adopted a broad range of environmental initiatives, such as environmental auditing and labeling. But there is little research on whether and under what conditions such initiatives lead to substantive changes. Our findings suggest that without other complementary mechanisms such as government regulations or other third party monitoring, corporate voluntarism alone is unlikely to achieve corporate environmental responsibility and may instead result in corporate carte-blanche.

Transnationalism and Religion; A Study on Biographies of Immigrant Women in Germany

This study research into the biographies of South Korean nurses who left Korea in early adulthood and have remained in Germany until now. Between 1963 and 1978, around 11,000 Korean nurses left for Germany as working migrants. Korean nurses were hired under a restricted three-year time period for migration. After the expiration of the contract, many returned to South Korea or chose to immigrate to another country such as Canada and the U.S. But other nurses did not return to Korea but instead chose to remain in Germany. They have formed Korean Communities and organized various Korean immigrant associations in Germany. After deciding to remain in Germany, they established their life over more than normal to implement those procedures of collective intelligence and knowledge processing into the broader domain of security management and crisis resolution. The international community and the international alliances are affected by their enforced austerity programs, this gave birth to the idea of “religion” as a new paradigm to overcome the political and cultural cacophenies. It is useful to look at the cultural and psycho-sociological foundations of collective intelligence and knowledge management for to find incentives but also barriers for pooling and sharing in the military-civil security domain. Civil Awareness: A Comparison of the 2011 Occupy Wall Street Movement in the United States and the 2008 Mad Cow Disease Protests in Korea

The Occupy Wall Street protest that swept the United States in 2011 and the mad cow disease protests that emboldened Seoul in 2008 seemingly occurred in different political and cultural contexts concerning different issues. In fact, although the details of these two protests differ, the protests are similar in that the initial protest took on a larger symbolic significance that captured the imagination of other groups and encapsulated some essential truth about society. Both the Occupy Wall Street movement in the United States and mad cow disease protests in Korea demonstrated how spontaneous protests can strike a chord with the larger population and create a powerful dialect between the protesters and the public wherein the protesters articulate a theme resonant for the larger population and have immense impact on groups at a distance from the original protest. The very successful performance of protests as intense fusion between protest frames, the public display similarities in a broader sense symbolically, and these similarities emerge in the motives of individual actors and shared inner meanings of the respective protests. It is worthwhile examining the motivations of these two different protests, the ways the discourses were made up among protesters, and interpreted in the mass media, and how the general public responded. The comparison of the two cases offers insights into the process by which a small group can create movement that transfers to other groups that do not share the same interests, discussing how the themes were articulated and how meanings are created beyond a national level.
We will argue that the focus on high reliable screening organizations is too narrow – instead we need a different way to think about trust.
chain from food producers to retail and consumers have access to this transformative food chain management. In our paper, we discuss the transformative food chains in climatic conditions of Finland. Our paper is based on a case study, which was conducted in Finland in 2012. The primary data were collected through thematic interviews with 16 different food chain stakeholders, from three regions in Finland: Central Finland, Pirkanmaa and Southern Savo. The interviewed stakeholders comprised mainly of food entrepreneurs, with additional representatives consisting of farmers, trade unions and retail chains. Qualitative content analysis was used for data analysis. Our preliminary results indicate that there is a need for a more decentralized food system. Local food chains may act effectively as adaptive strategy. Food enterprises are simultaneously facing other increased challenges, such as increased bureaucracy and market competition which limits their efforts in climate change adaptation.

JÖNHILL, JAN INGE* (Örebro University, jan.jonhill@oru.se)
The Paradox of Managing Diversity, Observations of a Personnel Management Strategy in Mass Media Organizations from a Systems Theoretical Perspective

On the background of “anti-racism” legislation, of ideas of cultural diversity and incentives of the marked economy, the management strategy of diversity management was developed in the early 1990s. It has since then made success globally as a “new paradigm for management”. - The aim of this paper is to present some results from a research project on diversity management in mass media organizations in Sweden.

The project applies Luhmann’s systems theory as main approach for several reasons. In this case (1) as it allows analyses from different observer perspectives, (2) as the functional and structural conditions of society and its organizations and (3) as well the complexity of the issue must be taken into account, and (4) as the distinction between acting and performing becomes apparent in this communication-based theory.

Social changes in direction of (more) equal opportunity and inclusion chances will to cultural diversity have occurred in the studied media organizations. In a previous study one of my findings was that it is reasonable to assume that diversity management is more adequate than other modes of managing issues of cultural background of journalists, such as quota and also have high confidence as to legal regulations.

Among my findings are that diversity management makes a difference due to a recent professionalization of personnel managing in the media companies. Competence-based assessment as a principle generates a prerequisite for journalists with migrant background to achieve equality in opportunity, when e.g. applying for a position or by team building. The study, thus, shows that focusing on the matter of competence and not focusing on person’s cultural background (but being aware of the social matter of disfavour), paradoxically, is likely to be a functioning or even successful path of managing this issue.

JÖNSSON, INGRID* (Lund University, ingrid.jonsson@soc.lu.se)
Ingrid Jönsson and Yuegen Xiong: Changing Intergenerational Relationships in Contemporary China and Sweden: Consequences for Eldercare

Changing intergenerational relationships in contemporary China and Sweden: consequences for eldercare.

Although China and Sweden represent different stages of economic, social and demographic development, currently eldercare is an important social policy issue in both countries due to changing social and generational contracts. The paper aims at analyzing recent developments of eldercare with regard to marketisation and de-/refamiliarisation departing from the frame of analysis suggested by Daly & Lewis (2000:287). Empirically it means that the division of responsibilities between the state, market, family or community at the macro level will be analysed while at the micro level this will be identified by who performs the caring, who receives benefits and available services, how does the relationship between caregiver and receiver look like, under what economic, social and normative conditions care is carried out and the rate of female labour market participation. This frame of analysis enables us to identify recent changes and point to similarities and differences of how social care for ageing populations is handled in different economic, social and demographic contexts. China and Sweden are chosen for the comparison as they traditionally represent a strong generational and a strong social contract respectively. The paper starts with historical reviews of the organisation of eldercare followed by a presentation of recent changes related to economic, social, cultural and demographic circumstances (e.g. migration, changing filial piety, family structure, size etc.) with consequences for generational and social contracts. Eldercare in everyday life will be discussed in relation to Daly & Lewis’s frame of analysis as well as in relation to the concept ‘care packages’ (used by Knijn, Jönsson, Klammer, 2005) compare income packaging used by Rainwater, Rein and Schwartz, 1986), i.e. which resources are used when caring for elder-

ly and its impact on the relationship between caregivers and receivers (dependence/interdependence) and women.

RC11-207.16
JÖNSSON, INGRID* (Lund University, ingrid.jonsson@soc.lu.se)
Ingrid Jönsson: Childcare and Eldercare - Different Paths of Development

Traditionally welfare in Sweden is publicly paid, publicly organised and access is based on needs rather than means. Economic retrenchment, changes of governance and legal frameworks in the 1990s have an impact on the organisation of social welfare with implications for universalism, marketisation and refamiliarisation. The paper will discuss the different paths of developments for eldercare and childcare and whether ideas of social investment currently being advocated by international organisations have contributed to the different paths of development. Although ideas of social investment in Sweden dates back to the late 1930s (Morel et al. 2012) recent emphasis on early childhood and care in the context of limited economic resources and changes of governance and legal frameworks have implications for eldercare. Discussing eldercare as social investment in a European context means counteracting future costs related to ageing populations while it for children means capacitating them for changing labour market and family structures with the aim of improving employability and increased economic competition. Historical reviews of childcare and eldercare including changes of governance, legal frameworks, etc. constitute the background for the analysis of recent diverging paths within the two sectors in relation to universalism, marketisation and refamiliarisation. The recent development is socially as well as gender differentiated.

Gender Inequality and Occupational Segregation: A Study of Women Labourers in Areca Nut Processing Units in Karnataka, India

Despite remarkable progresses in many spheres, the Gender inequality still persists in India. Waged work is Segregated and Marginalized on the basis of Gender. Employed women in work place are horizontally and vertically segregated and there is a clear distinction between men's work and women's work. Women's work is characterized by lower wages, low status and lower rung on the skill ladder, involved in less interest, more repetitive, monotonous and low status activities. Such pattern of Gender Segregation is exhibited in Areca nut processing units.

Areca nut is a cash crop which has contributed more than Rs.250 corers towards the National income in India. It is largely cultivated in Malenadu region of Karnataka State. The process of cutting, de-husking and drying of nuts is entirely dependent on hand labour. Women are employed in this process. The present paper discusses the Gender Inequality, Segregation and marginalization of women labourers working in an unorganized sector. The main objectives of the paper are (1) to examine the vertical Occupational Segregation of Women laborers in Areca nut processing units. (2) To study the factors influencing Gender inequality, and (3) to overview the implications of Inequality and Marginalization of women in areca nut processing units. The study is based on the primary data collected through interview technique. The study highlights that, there is Gender inequality and Marginalization in functioning and the payment of wages. There is job insecurity and violation of labour legislations. The study helps to identify the nature and structure of Gender inequalities, Segregation and Marginalization. Further, the paper tries to justify the need for empowering women to bring Gender equality and enhancing their status.

Urban Green Space Provisioning in Berlin, Germany. Environmental Justice in Sustainable Urban Green Space Planning

The city of Berlin, Germany, tries to integrate the ecological, social and economic dimensions of sustainability in all fields of policy action since some years. The main aim is to increase quality of life for all residents in an equal way. However, Berlin is facing further immigration which will lead to nearly 250,000 additional residents in the next 20 years. This population growth combined with urban planning policies of (re)densification will certainly drive the conversion of urban green spaces into residential land. This development might result in an unsustainable city development which would raise concerns of environmental justice too.

Set against this background, we present an analysis of urban green space provisioning in Berlin in order to identify distributional inequalities between urban green spaces and population. The relation is discussed in light of variations in user preferences associated with age and immigrant status. Publicly available land use and socio-demographic data at sub-district level are applied in a GIS, dissimilarity index and cluster analysis approach. Our results show that although most areas are supplied with more UGS compared to the per capita target value of 6m², there is considerable dissimilarity by immigrant status and age. Environmental justice is further discussed on a site-specific case in Berlin – the park and former city airport Berlin-Tempelhof. Visitor profiles and preferences are analysed. Results from questionnaire surveys indicate that the identified dissimilarities on sub-district level are not the same as environmental injustice in Tempelhof, but point to a mismatch of urban green space and user preferences.

We conclude that, if a city claims to follow the sustainability paradigm, successful urban green space planning should consider the match between quality of a park and specific cultural and age-dependent user needs while providing equal access to high quality green spaces for all residents.

Global Social Governance As Inter- and Inner-Organisational Relations Between Actors

This paper is concerned with the conceptualisation of global social governance as a matter of inter- and inner-organisational relations between global policy actors. Global social governance is commonly characterised as a complex and multi-aceded process, driven by more or less powerful and legitimate actors. There are significant overlaps in their agencies, as well as they are bound in various (sometimes) overlapping networks and alliances that cross-cut organisational borders. While global social policy actors differ in terms of types and functions, they do not unfold their respective power in isolation from each other. They relate to each other, part of what they do is driven by what others’ do.

The global social policy literature has discussed a number of examples how different global social policy actors, often international organisations, are involved in fighting over ideas; a process that happens both between and within organisations. This paper engages in a rather theoretical discussion about different ways of how the inter- and inner-organisational relationships can be conceptualised and how related interactions can be understood by drawing on a number of disciplines. The paper will reflect on some insight that can be drawn from sociological, organisational and psychological theory to better understand such relationships.

From Bottom-up – a Micro-Methodological Examination of the Military

The aim of this paper is to deepen the discussion of micro-methodological examination of the military, Research on the military focuses largely on a macro perspective, examining mechanisms, structure and policies. In this paper I wish to emphasize the importance and contribution of micro research, which focuses on the individuals rather than the institution; examining their experiences, understanding and interpretations.

Based on a qualitative research study, utilizing a semiotic-interpretive approach which is well-suited to examining the subjective point of view, I argue that the interpretations and experiences of the soldiers are a central means for understanding the structure, the mechanisms and processes in the military.

By focusing on interviews with 60 combat soldiers who served in two infantry brigades in the IDF (Israel Defense Force), I wish to illustrate the role of individuals in creating and perpetuating the structure, culture and mechanisms of the military as well as in challenging them. Focus on the role of the individuals, rather than the institution, enables us to examine not only how structure and culture are maintained and reproduced through formal policy, but also how they are created and formed by the soldiers, through their practices, without the external supervision of the army.

The contribution of a micro perspective is, first, to stress that mechanisms operate not just top-down but also bottom-up. Furthermore, the study illustrates how social categories, such as ethnicity and gender, are preserved and perpetuated not only by institutional mechanisms, policy and structure, but also by individuals through the ways they perform. Finally, by emphasizing a micro perspective I do not ignore the important role of the organization, but rather emphasize an additional point of view in military methodology.
Children’s Leisure Pursuits: A Test of the “Homology” Versus “Omnivore-Univore” Hypotheses Debate – CANCELLED

Recently in the UK academic milieu, there has been a debate as to whether the link between socio-economic status (SES) and adults’ participation in cultural activities conforms to a “structural homology” rule (Bourdieu, 1984), or present a pattern best characterised as an “omnivore-univore” distinction (Peterson, 1992). The dispute surrounded the issue of whether in contemporary British society, cultural participation (and consumption) still signifies social-class, and in what ways. However, researchers have tried to analyse class-based patterns of cultural participation and leisure pursuits in children.

The present paper addresses this gap in knowledge by exploring the associations between SES (measured by parental education and occupation levels and by familial incomes) and children’s participation in three leisure domains: social-group activities, commercial-public activities, and home-centred activities. Within each of these domains, activities from across the “highbrow-lowbrow” cultural capital spectrum are examined.

The results are used to discuss the debate on the “homology” vs. “omnivore-univore” hypotheses in the context of cultural socialisation and cultural capital acquisition in the middle childhood years. The paper relies on quantitative analyses of data drawn from the British “Millennium Cohort Study” (MCS), a survey of around 19,000 babies, all born between 2000-2002. The current analyses focus on data taken from the third and fourth sweeps of the MCS when the children were aged around 5 and 7 (respectively).

The findings indicate that children’s leisure pursuits are stratified by SES: children in high-SES groups are more likely than peers in low-SES groups to participate in a range of leisure activities across the highbrow-lowbrow spectrum. This pattern of leisure participation is consistent with the “omnivore-univore” hypothesis. Yet, the results also show that the association between SES and children’s leisure pursuits are stronger for highbrow and midbrow activities than for lowbrow activities, a finding that lends support to the “homology” argument.

The Provision and Expansion of High School Education in Post-War Japan

This study aims to clarify the mechanisms of high school educational expansion and regional variations in postwar Japan regarding the kinds of opportunities that were provided. We focus on education providers and the programs offered by high schools. High school education expanded rapidly in the 1960s when the first baby boomers became high school students. To understand how this extraordinary expansion was made possible and how the opportunities for high school education were provided, we must consider the relationships between public and private institutions and the roles of the private ones. The proportion of students attending private high schools is now about 30%. This proportion became higher during the 1960s. This means it was impossible for high schools to expand if only public schools supplied education. Also, as Ichikawa (1991) points out, a distinctive feature of the Japanese educational system is a preference for general education under a single-track system. The same holds true for high schools. Although Japanese high schools offer both academic (general) and vocational/specialized programs, the ratio of students enrolled in academic programs continues to rise, accounting for more than 70% in 2010. These features characterize high school education in Japan. At the same time, there have been regional variations in provision of high school education regarding above mentioned points. How and why was each prefecture different in providing high school education? To answer these questions, we first classify prefectures into groups using cluster analysis then clarify determinants of regional variations. In conclusion, we discuss how these variations may affect provision of high school education in the near future, in depopulating society.

The Classed Parental Attitudes Towards the School Choice and Lay Judge System and Social Bias

Should Court respect the judgment of lay judges when the lay judges had not enough knowledge concerning to a specific psychological conditions or a disorder caused by mental disabilities?

This paper aims to clarify the necessity to overcome prejudices of lay judges and to suggest the importance of supports of lay judges in order to avoid a social-based decision.
findings of school choice, attitudes towards comprehensive school system and social class (based on family survey, conducted in 5 Finnish cities, n=2617). Our interpretation is that the lower classes are relatively excluded from the Finnish version of school choice, which grounds on aptitude tests, and urge for more open enrolment in general. Whereas middle classes on one hand, more commonly exercise parental choice in practice, and, on the other hand, are more aware of the segregative effects of free parental choice. Nevertheless, new cleavages, based on occupational status within the middle class have emerged with different emphases on freedom to choose and universal education system.

In this ordeal with a limited number of working positions and the reorganization to age and years of studies. The prolonged education is conducive to the reinforcement of gender equality and should contribute to innovation. Individuals represent a significant source of innovation in their policies. This implies a recognition that the vast majority can operate tasks. Experience shows that broad involvement of local shop stewards and staff in innovation processes has positive economic effects, but also provides benefits in terms of improved job satisfaction, further education and reduced absenteeism.

In this way this development has been promoted by the Norwegian Confederation of Trade Unions. A paper will address Norwegian EDI challenges and experiences based on the Nordic work life model.

From the Educational Policy about Gender Equality to Its Testing in the Labor Market during the Greek Economic Crisis

In the present paper the effects of the Greek economic crisis to the Greek society are comparatively scrutinized with concentration on both male and female access to the labor market. In particular, the issues under investigation throughout 2008-2013 are: a) the unemployment percentage both of men and women, b) men and women part-time employment and c) the correlation between studies and labor. Besides, the variable of gender is studied in combination and in relation to age, years of studies.

Through quantitative researches an evaluation is pursued whether education about gender equality, being the aim of the educational policy, was productive; in other words, whether a differentiation based on gender was statistically significant. Additionally, the years of studies are correlated with unemployment or part-time of men and women so that the question whether the prolonged education is conducive to the reinforcement of gender equality is investigated, resulting in the same access possibilities to labor market both by equally qualified male and female subjects.

The economic crisis period is regarded by the present paper as a testing phase for the educational policy implemented towards gender equality. It is estimated that in this ordeal with a limited number of working positions and the reorganization of the labor market the evidence will be apparent. In this respect the outcome of a policy about gender equality will be evaluated and the educational structures will be within a policy of reinforcing gender equality aligning with a broader policy about equality conducive to the unification of vindication schemata for both genders.

Employee Driven Innovation - an Organisational Challenge

The Nordic countries are about to open there eyes for that employees in all sort of workplaces is an important an untapped potential of resources for innovation. But many politicians, bureaucrats and top managers lacks the understanding of what it is and how to do it.

During the last decades the technological paradox has influenced industry and innovation policies. Succeeding innovation strategies seems to base the rather one sided notion that essential ideas occur in laboratories and research departments. However a paradigm shift is in the process of getting approval. Major social challenges, rather than more dispersed product priorities, have become evident, also in EU and OECD policies. The value of holistic approaches to innovation is emphasized, rather than a purely scientific and technological focus. And the importance of innovation in services, production and work processes is lifted up. This happens at the same time as the general level of education are rising, and businesses are hiring more people with skills to see and understand the wider contexts and to participate in resolving complex issues.

As part of the Nordic countries adopted the concept of “employee-driven innovation” in their policies. This implies a recognition that the vast majority can and should contribute to innovation. Individuals represent a significant source of insight and problem solving, whether they work in a development device or have operating tasks. Experience shows that broad involvement of local shop stewards and staff in innovation processes has positive economic effects, but also provides benefits in terms of improved job satisfaction, further education and reduced absenteeism.

In this way this development has been promoted by the Norwegian Confederation of Trade Unions. A paper will address Norwegian EDI challenges and experiences based on the Nordic work life model.

Churches and Religious-Secular Interaction in Welfare in Croatia and Finland

The welfare state reforms have changed the position of actors and put co-operation between public and private stakeholders in Europe on the agenda. In this situation, the Churches are also taken more seriously as partners of welfare services and they have an opportunity to expand their activities on the secular sphere. At the same time, the question regarding the position of the religious in the interaction must be taken account. Growing religious-secular interaction seeks to a different position than the religious institutions had during the modernization process. Thus, the situation differs also theoretically from the classical views of secularization: both differentiation and dedifferentiation are equally relevant viewpoints for the analysis. In the context of predominantly Lutheran and Catholic countries, which are analyzed in this paper, the interaction may also support the impact of the religious on the secular domain.

The paper focuses on the role of Churches in the welfare sector in Croatia and Finland. It presents results regarding the local-level interaction between secular and religious organizations in the field of the welfare sector. The data includes the interviews of secular public sector and the social work of the Churches gathered in 2013 in three regions in Finland and Croatia. On the basis of the empirical work and background analysis the paper demonstrates the multifaceted reality of interactions between religious and secular institutions and discusses theoretical consequences of changing ways of interaction in different social and religious contexts.

Disentangling Greek Xenophobia during Recession

In the recent recession, the most severe one since the Great Depression, Greece has been considered the Achilles heel of Eurozone’s economies. Since 2008 the country has experienced an economic turmoil as well as an unprecedented social and political collapse. Due to the devastating economic conditions, the social fabric has grown more frayed generating a mixture of frustration, insecurity and anger among Greeks which has been directed against immigrants fuelling the upsurge of anti-immigration backlash. The acute augmentation of xenophobic stances has been expressed by the rise of the neo-fascist Golden Dawn which has grown from a fringe group into a nationwide political party propagating that immigrants are responsible for the socio-economic woes of the country. The study attempts to disentangle the complexities of Greek xenophobia during the recession using an amalgam of theoretical frameworks (i.e. realistic group conflict, social identity and scapegoating theory) as well as multiple secondary data sources, i.e. European Social Survey (ESS), European Value Survey (EVS) and Eurobarometer. The analyses unveil the ideologies of Greek xenophobic stances traced in the intense inter-group competition due to the scarcity in jobs and economic recourses but most importantly in the formation of a far right-wing populist identity that tends to displace the blame for personal hardships and misfortunes onto the relatively powerless immigrant group members. The study unearths one of the social facets of the Greek economic crisis in breeding hostility against migrants and highlights that such hostility has recently taken more violent forms of racist attacks and racial clashes. It is underlined that the call to transform xenophobic climate into a xenophile one in Greece becomes more urgent than ever; hence immediate policy responses are needed to curtail xenophobia and safeguard the fragile social cohesion and order of the country.

Kalogeraki, Stefania* (University of Crete, s.kalogeraki@gmail.com)

Unveiling Correlates of “Don’t Know” Responses in the Left-Right Scale

Europe’s current economic crisis has spread to the political sphere and escalated populist tendencies and nationalistic politics. Specifically in indebted member-states the political crisis is echoed in citizens’ skepticism about an uncorrupted political system and widespread perceptions that political parties are neither trustworthy nor capable of handling the country. The analysis unveil the ideologies of Greek xenophobic stances traced in the intense inter-group competition due to the scarcity in jobs and economic recourses but most importantly in the formation of a far right-wing populist identity that tends to displace the blame for personal hardships and misfortunes onto the relatively powerless immigrant group members. The study unearths one of the social facets of the Greek economic crisis in breeding hostility against migrants and highlights that such hostility has recently taken more violent forms of racist attacks and racial clashes. It is underlined that the call to transform xenophobic climate into a xenophile one in Greece becomes more urgent than ever; hence immediate policy responses are needed to curtail xenophobia and safeguard the fragile social cohesion and order of the country.
left-right scale become the core of investigation. During an era of economic and political crisis, DK responses may reflect individuals’ perceptions of weakening of democratic institutions, their distrust in political parties to revitalize the economic growth, their condemnation of the political system and their focus on alternative forms of governing to confront the socio-economic woes. Using data from the European Social Survey (ESS) in 18 European countries, the paper analyses the changes in DK responses in the left-right scale before and during the economic crisis. The analyses unearth specific patterns of DK responses whereas the greatest changes are detected in two countries severely affected by the recession, i.e. Greece and Spain. Multivariate logistic regression analyses unveil the differential impacts of political and civic participation, trust in democratic institutions and political parties in elucidating DK responses in respondents’ left-right orientation during a period of economic downturn and political turmoil.

Medical Marijuana Laws and Substance Induced Deaths: Evidence from the U.S

This paper explores the relationship between medical marijuana laws and substance induced deaths. The relationship between marijuana and alcohol empirically remains unclear; one strand of the literature shows the substitute relationship whereas another reveals the complementary relationship. In a similar vein, gateway drug hypothesis (i.e., marijuana consumption results in more harmful drug use) has been subject to empirical analyses, and yet proponents and opponents of the hypothesis have been often unclear about what policies it entails. That is, it is argued that a policy aims to reduce the risk of exposure to marijuana in order to prevent the use of other illicit drugs. On the other hand, one would claim that the problem lies in the nature of the illicit drug market where marijuana and other illicit drugs are simultaneously provided and supplied. Using state level data from 50 U.S. states, the paper considers the effects of medical marijuana laws on alcohol-induced deaths and cocaine-induced deaths. Empirical results show that medical marijuana laws result in an increase in alcohol-induced deaths, suggesting that there is a complementary relationship between marijuana and alcohol. In contrast, medical marijuana laws lead to a reduction in cocaine-induced deaths. The results shed light on understanding the complicated relationship between marijuana and substances in the sense that availability of substances plays a critical role in the gateway drug hypothesis. Alcohol is provided in a formal/ legal market whereas cocaine can be only supplied in an informal/ illicit market. It is therefore suggested that if such drug related policies change the way drug markets function and results in drug market separation, illicit drug induced deaths can be reduced.

Attitudes Toward Non-Normative Sexualities Among University Students in Japan: Quantitative Analysis (Part 2)

Following the presentation by Kazama, et al., we will present the results of a preliminary analysis of attitudes toward homosexuality, transgenderism and other non-normative sexualities among university students in Japan, focusing on the mechanisms through which gender, other attributes and personal experiences might shape their attitudes. A definite and sizable body of literature on attitudes toward LGBT issues has been accumulated in the Euro-American context. Such studies are limited, however, in Asian countries. This paper informative ethnographic studies on the themes of knowledge and awareness of, as well as attitudes toward sexual minorities (discomfort, judgment, perception of what is “normal”) and also experiences of contact, including personal, media, educational, of such people/issues.

A preliminary analysis of the data of more than 700 cases shows that in many of the attitudinal questions students show more liberal attitudes compared to their male counterparts. Personally knowing someone who is homosexual and/ or transsexual also tends to make one more accepting of variant sexualities compared to students who do not have such connections. In the presentation, we will provide a comprehensive picture based on further analysis of the data, including how such attitudes relate to attitudes toward other issues, such as gender, family and nationalism. We hope to draw implications on how heteronormativity, homophobia, sexism and binary thinking of men and women constitute the experiences of young generation in the Japanese context.

Changes in Family Forms in Japan: Analysis of Subjective Definitions

In order to understand the changes in family pattern, it is crucial to look at how individuals understand and define the family subjectively. In this paper, I will examine the changes in the subjective boundary of the family among Japanese, namely, who among kin are normatively considered as members of the “family”.

The preliminary analyses of the 1st (1993) to the 4th (2008) National Family Survey in Japan conducted among married women by the National Institute of Population and Social Security Research show that there is an expanding trend of the normative boundaries. In other words, more and more types of kin are considered to be one’s “family member”. For example, the proportion responding that a “married daughter” is generally considered as one’s family member regardless of whether or not they live together increased from 35% in 1993 to 66.2% in 2008. The analyses also show that the defined boundaries vary by age, education, employment status, household size and its composition, and geographic region.

In the paper, I will further examine how the subjective family boundaries relate to their attitudes toward various family forms and ways of living, such as attitudes toward taking care of aged parents, aged couples living with their children, marrying or not having children, and raising or not raising children who stay home. Finally, I will compare these results based on individual level data with the macro-level data on family structure to explore possible mutual relationships behind the changes in family pattern.

Effects of the Great East Japan Earthquake on Subjective Well-Being

We study changes in Japanese people’s subjective well-being (happiness) and feelings of altruism before and after the Great East Japan Earthquake of March 2011. We use a panel data set compiled by a group of researchers mainly from Keio University. Although the questionnaire is large, we focus on a question about people’s altruism. We are interested in altruism because, according to a Japanese Statistics Bureau report on expenditure by Japanese households, charitable donations increased by over 850 percent in March 2011 compared to one year earlier. Using this large panel survey consisting of responses from over 4000 households all over Japan, we found that many Japanese people reported more feelings of altruism following the earthquake, even in the most affected areas; this is consistent with the rise in charitable giving. We also found that a large number of people reported an increase in happiness after the earthquake, in fact, as the number who reported a drop in happiness. An interpretation of this finding is suggested by a recent experiment by Dunn et al., who find that spending money on others promotes happiness; according to this story, many Japanese people became more altruistic after the earthquake, inducing them to make charitable donations, which in turn made them happier.

We are interested in seeing how changes in altruism affect changes in happiness. However, both variables are subjective, so their measurement errors are likely to be correlated. Therefore, we use a two-step procedure, first identifying the effect of altruism on an objective variable, charitable giving, and then measuring the effect of charitable giving on happiness. In each step of the analysis, we run a two-stage logit regression, which controls for reverse causality. This analysis, which deals effectively with the aforementioned problem of correlated measurement errors, yields results that are consistent with our story.

Social Contribution through Student’s Participation in Village Festival

Kanazawa University embarked on the new project on social contribution in 2010 through promoting students to participate in traditional festivals held in severely depopulated rural villages. This project aims to provide opportunities for
students to lean the everyday lives of rural Japan, and also to take a leadership role of university in revitalizing the rural communities. This paper explores the reason why Kanazawa University set up this project, and show to what extent this project goal has achieved its initial goal.

In 2004, central government enacted the low to reform the national universities to quality and autonomous bodies. Thereafter, many national universities including Kanazawa University set up the charters. In Kanazawa University Charter, social contribution is declared as one of the principal missions of the university. Kanazawa University has established Center for Regional Collaboration in 2002. “Matsuri Project” started in 2010 as one of the University’s social contribution activities. Over one hundred of overseas and Japanese students joined the project every year. During the summer, almost every village in Noto region held traditional summer festival, called “Kirkko festival”. Within the last decade, due to aging and depopulation, many villages are now faced with manpower shortage to maintain the village hall and summer festivals. Young students are pleased to join the festival and walk around with shoulderering heavy Kirkko with village people. Before the festival began, gorgoeus dinner are sometimes served to students.

For the students, joining Kirkko tour is a good chance to go inside the village and to talk with local people. Planned and arranged by university staff, overseas students can experience the actual lives of rural villagers. So far “Matsuri Project” has weak relationship with student education and academic research by faculty members, local people well acknowledges the leadership of the university for revitalizing the rural communities.

Rethinking the Body through its Disability

A person with physical disability has uncontrollable body. The body’s passiveness and physical inability go beyond its activeness and capability. Disability studies associated with sociology of the body examine disability as a social, cultural, and political phenomenon in contrast to medical perspectives, focusing on how disability is defined and represented in society. Both of them have been positioned against medical science; they approach to the body from the society and context while medical science from biology and institutional accounts. International perspectives of the (sociological) new institutional theory while criticizing the explanaion using game theory may not require society or sociology so much as we presume.

Stabilization of the World Due to the Expansion of a Western State System: Explanation Using Game Theory

Stabilization of the world due to the expansion of a Western state system: Explanation using game theory

Dr. David Strang explained the stabilization of modern global society from the perspective of the (sociological) new institutional theory while criticizing the explanations given by realists in highly original research (“Anomaly and Commonplace in European Security Realism: Realists from the Inside,” International Organization, vol.45, 1991). He states that global society has been stabilized as a result of the expansion and the “institutionalization” of a Western state system that respects the sovereignty of each country, rather than as a result of the balance of power of countries that reasonably maximize their utility.

However, his explanation is still insufficient when we ask questions such as: why and how such an expansion took place; and why such an expansion stabilizes global society.

The answer can be derived from the fact of historical conflicts between dependencies and sovereignties. The form of the dynamic game between resisting/non-resisting dependencies and oppressing/non-oppressing sovereignties is analogous to that of the well-known chainstore game. This dynamic game has two Nash equilibriums. Based on the replicator dynamics of this game, we can interpret the historical changes in global society.

Capacity for Urban Recovery in Southern Germany after the 2013 European Floods

This proposed contribution deals with the impact of natural disaster on the recovery of urban settlements. In the 2013 European floods, settlement space in the South and East of Germany was severely impacted, including the Bavarian city of Deggendorf situated along the Danube river. Reports point out that early damage appraisals in combination with environmental degradation may show the 2013 flood impact, above all for individual communities. This contribution presents an integrated approach based on socio-spatial perspectives in disaster research and urban studies serves to analyze these aspects in relation to vulnerabilities as well as institutional planning and programs for recovery. This permits a multidimensional discussion on ongoing processes of adaptation to disaster and its impact in urbanized regions, while enabling disciplines to spatial production access to this issue of urban flooding. This study matter.

A case study is the city of Deggendorf in the Fischerdorf area of Deggendorf in late 2013. Methods include qualitative interviews with key individuals in state and local institutions as well as impacted residents in addition to document research, participant observation, site visit. The goal of this contribution is to identify problems within the urban recovery after the 2013 Eluv European floods. This study effort. This indicates an inter-related, socio-spatial, and cultural character of planning, settlement space, disaster, and recovery. Which aspects play a role in the recovery of urbanized regions after disaster, and how can their irreleration be conceptualized? This paper explores this aspect in relation to disaster response and urban studies serves to analyze these aspects in relation to vulnerabilities as well as institutional planning and programs for recovery. This permits a multidimensional discussion on ongoing processes of adaptation to disaster and its impact in urbanized regions, while enabling disciplines to spatial production access to this issue of urban flooding. This study matter.

Examining the Structure of Happiness and Life Satisfaction in Japan Utilizing a Large Scale National Survey

Using data from “The Study on the Quality of Life” collected by the Cabinet Office in March 2012, we examined the structures and factors affecting the happiness and general life satisfaction among Japanese.

Both measures are calculated with single questions, and the mean score for happiness (6.64 of the scale of 0-10) is higher than life satisfaction (5.98).

Of all satisfactions with various aspects of our life (e.g. housing, childcare, healthcare, etc.), the satisfaction with family is most strongly related to happiness and life satisfaction except for the satisfaction with work to life satisfaction among males.

Multiple regression analyses indicate that the respondent’s age shows a U-shaped effect on the happiness (lowest at age 44 through 45). The happiness is positively affected by the respondent's education and being married, both of which seem to indicate more psychological, internal state of our life.

We also took an exploratory approach and regressed both variables on various psychological, attitudinal variables. We found that our happiness was more strongly related to the happiness of family members than any other including own life satisfaction. Other factors related to happiness but not life satisfaction include tolerance, peace of mind, tenderness, and feeling accomplishment often, which all indicate autonomous and psychological fulfillment, somewhat similar to the concept of Eudaimonism in Greek philosophy.

On the other hand, factors related to satisfaction but not happiness include doing as well people around myself, feeling appreciated by others, feeling confident that I am as successful as others, and often thinking of myself first, all which indicate utilitarian and competitive drives.

The present study is based on one of the first and most comprehensive data sets on subjective well-being in Japan with a national sample. As such, it offers a contemporary and comprehensive overview of subjective well-being in Japan.
Although they cooperated to lobby for public supports for animation and achieve to construct a museum for Japanese animation and chamber of commerce played an event that affects the recent situation. It is shown that a civil group that aims to try to reconstruct Nerima’s image as Anime Town. It is based on a partnership of Nerima Animation Association, the trade association of anime companies trying to reconstruct Nerima Ward, Tokyo. Because many animation companies concentrate in Japanese cities around the end of the 1990s and culture became to be recognized began to gradually lose the industrial base because new international division of labor have disrupted the industrial cities suffered from economic decline. In contrast, Japanese cities had man capital, became popular in Western cities from 1980s. At that time, former Japanese cities had a demand for them.

Japan or in Brazil. Although the ethnic schools face many obstacles, there is still a poor quality of education, hindering the chances for upward mobility either in those ethnic schools are supported neither by the Brazilian government nor corporate mindset that disrupts the schooling and high tuition fees. Third, most of the research experience in Japan is set aside – the content of the imported textbooks does not fit of the curriculum focus solely on the study of Brazil, the daily life and the migratory experience in Japan is set aside – the content of the imported textbooks does not fit of the domestic division of labour and co-residence living arrangement with elderly parents.

**What Kind of Trust Do We Measure Using the Generalized Trust Question?: An Approach Based on Latent Class Model**

Despite the importance in social capital research, empirical studies on generalized trust show inconsistent results. For example, trust studies have not shown clear results with respect to the relationship between group participation and respondents’ level of generalized trust (Nannestad 2008). This study shows that a part of inconsistency is due to the measurement of generalized trust. Generalized trust is measured by such questions as “Generally speaking, would you say that most people can be trusted, or that you can’t be too careful in dealing with people?” This kind of question is employed in major social surveys such as World Value Survey (WVS). This study hypothesizes that respondents think some different kinds of trust when they answer the generalize trust question. This study extracts heterogeneity of trust respondents think by latent class analysis (McCutcheon 1987), using Japanese dataset (Social Survey of Residents’ Networks and Health). As a result, this study extracts four types of trustors; (a) active trustors (27.6%), who show higher levels of generalized trust and participate all kinds of social groups, (b) inactive trustors (31.3%), who show higher levels of generalized trust but do not participate any kinds of social groups, (c) parochial trustors (19.6%), who show lower levels of generalized trust but participate local groups only, (d) distruster (21.4%), who show lower levels of generalized trust and do not participate any kind of social group. This result shows that respondents think four different kinds of trust when they answer the generalize trust question. Inconsistent results in previous studies may be caused by the difference of group participation between high trustors.

KANAZAWA, RYOTA* (Tokyo Metropolitan University, ryota_kanazawa@yahoo.co.jp)

**Urban Cultural Strategy and Japanese Animation in Nerima**

This paper analyses data of the Chinese Women’s Status Survey 2000, a national survey in China, to examine the association between housework participation and marital satisfaction in urban and rural families. Married women’s housework time is 2.8 times of that of married men. Yet their level of marital satisfaction is on a par with men’s. We hypothesize that this is partly due to gender difference in the preference about domestic roles versus work roles. We first test if housework time forms a migration as a transition state, whose final objective is the return for men. (i.e. Do women dislike housework less than men?) We also test if work time has a stronger negative relationship with women’s level of satisfaction than men’s. (i.e. Do women dislike paid work more than men?) Furthermore, we test whether elderly parents’ help in housework mainly alleviate women’s domestic burden rather than men’s. We find supportive findings for these hypotheses in our preliminary analyses. We will employ Structural Equation Modelling to investigate the patterns of associations among different forms of marital satisfaction (including satisfaction with the domestic division of labour, satisfaction with marital life, and satisfaction with the economy) with respect to these patterns, the domestic division of labour and co-residence living arrangement with elderly parents.

KANASIRO, ALVARO KATSUKAI* (University of Tsukuba, kanasiro.alvaro@gmail.com)

**Transnationalism and Schooling: The Case Study of a Brazilian Ethnic School in Japan**

This paper aims at analyzing the relation between migration and education through the case study of a Brazilian ethnic school in Japan. The hypothesis which underlies this work is that the conception of Brazilian schools is related to the logic which drives the migratory flow to Japan: many Brazilian migrants living in Japan experience China as a transitional state, whose final objective is the return to their country. The experience as a temporary high school teacher in a Brazilian school has shown that the ethnic school tends to reproduce this reasoning; the curriculum is the same as that studied in Brazil; the textbooks are imported from educational companies, whose educational view are strictly utilitarian; classes are taught in Portuguese and the pedagogical objective is to prepare the students to their return, allowing them to continue their studies in Brazil later on. The fieldwork highlighted three points to be analyzed: first, given that the curriculum focuses solely on the study of Brazil, the daily life and the migratory experience in Japan is set aside – the content of the imported textbooks does not fit to the social reality lived by those children. Second, Brazilian schools are target of severe criticism and receive a suspicious look by the Brazilian community itself. Common criticisms denounce poor infrastructure, lack of skilled professionals, corporate mindset that disrupts the schooling and high tuition fees. Third, most of those ethnic schools are supported neither by the Brazilian government nor by the Japanese government. Arguably, all these factors together contribute to a poor quality of education, hindering the chances for upward mobility either in Japan or in Brazil. Although the ethnic schools face many obstacles, there is still a demand for them.

**Gender Difference in the Influence of Non-Regular Employment on Mental Health: The Case of Japan**

1. Aim

Studies on the relationship between non-regular employment (NRE; such as temporary or precarious employment) and health have been increasing since the 2000s. Most of the studies reported that NRE has a negative effect on various health outcomes (including mental health).

The purpose of this study is to investigate the gender difference in the relationship between NRE and mental health in Japan. The number of NRE workers in Japan has been increasing since the 1970s, when most of them were married women who worked to financially assist their household under the male-breadwinner model. However, male NRE workers has been rising since the latter half of the 1990s. In the case of men, socioeconomic disadvantages of NRE cause a strong conflict between the male-breadwinner model and their socioeconomic status. Therefore, we can expect that the impact of NRE on mental health is more serious for men than for women.

2. Data

The “Japanese Study of Stratification, Health, Income, and Neighborhood” (J-SHINE) survey data is used. This is a computer-assisted personal interview survey that was administered in Tokyo and four suburban cities in 2010 (N=4381, age range of 25 to 50 years).

3. Findings and Discussion

In this study, I use three mental health outcomes as dependent variables: depression (K6), mental component summary score (SF8) and suicidal ideation. The results of preliminary analyses are summarized as follows. First, NRE has significant negative effects on three outcomes in the case of men. In contrast, NRE has no effects in the case of women. Second, after controlling for covariates, the effects of NRE are disappeared: marital status (married) and subjective SES have consistent positive effects on outcomes. These results suggest that lower SES of male NRE workers decrease the possibility of getting marriage and it influences on mental health.

KANAZAWA, RYOTA* (Tokyo Metropolitan University, ryota_kanazawa@yahoo.co.jp)

**Urban Cultural Strategy and Japanese Animation in Nerima**

Culture is now implemented for urban economic development in many advanced countries. Urban cultural strategy, trying to attract investment and human capital, became popular in Western cities from 1980s. At that time, former industrial cities suffered from economic decline. In contrast, Japanese cities had enjoyed economic prosperity because of industrial growth, especially the R&D and hi-tech industry. But from mid 1990s most Japanese cities include Tokyo began to gradually lose the industrial base because new international division of labor had deepened. So new plans for economic development were needed in Japanese cities around the end of the 1990s and culture became to be recognized as a resource for urban competitiveness. In this presentation, I will show detailed case of Hama-ward, Tokyo. Because many animation companies in Nerima ward, the local government is encouraging animation industries and trying to reconstruct Nerima’s image as Anime Town. It is based on a partnership with Nerima Animation Association, the trade association of anime companies in Nerima ward. To explain how and why this partnership is formed and policy measures are implemented. Therefore, it is needed to focus on the flow of event that affects the recent situation. It is shown that a civil group that aims to construct a museum for Japanese animation and chamber of commerce played major role to prepare institutional base for recent policies from the mid-1990s. Although they cooperated to lobby for public supports for animation and achieve significant results, they dissolved their partnership. I point there is a tension between culture and commerce. It affects policy formation and inter-organizational relationship in Nerima.

the insured living everywhere in Japan. The other hand, Japanese physicians can practice medicine at their favorite place within Japan. This system has continued traditionally from the 19th century. Therefore, the government has not been able to adopt any policy to directly regulate the practice place of physicians. This presentation examines how the geographical distribution of physicians has changed in Japan underneath these circumstances. Concretely, it analyses how the policies after the 1960s, namely the increase of medical schools in the 1970s, the regulation of hospital beds since the 1990s, the new clinical training system in the 2000s, have influenced the geographical distribution of physicians, and shows that the physician's geographical uneven distribution has decreased.

The Transition to Parenthood As Experienced By New Fathers
The Transition to Parenthood As Experienced By New Fathers
Abstract
While many studies have explored the transition to motherhood, literature on the transition to fatherhood remains scarce. This qualitative study sought to broaden the knowledge on the transition to fatherhood by analyzing the experiences of fathers to first children aged one and under and looking at how they cope with the challenges presented by their transition to fatherhood. Data was collected during an unstructured group interview held in a focus group of 9 married men in Israel. The study findings reveal that, contrary to common gender stereotypes, men were mostly concerned about emotional issues, and not numerical facts, emphasizing the need for emotional support. Four main themes were raised during the men's discussion, with which they were required to cope in their transition to fatherhood: new insights about the meaning of love in their relationships with their spouses and the changes it undergoes; the way they feel as men; the need to adapt to new circumstances and changes in their relationship with their spouses; a sense of delay in their emotional bonding with the child in comparison to their wives, and with the new paternal identity they must adopt; and finally their emotional need to have access a “safe place”, outside their relationship with their spouse and role of parenthood, where they can share their experiences with other men and emerge stronger. The study findings shed light on three areas where new fathers grapple with mixed feelings of discomfort, difficulty and vulnerability: the personal, the spousal and the parental. These findings indicate the importance of developing a unique intervention program for new fathers in which all three areas will be addressed.

International Organizations in a Global Social Inequality
Economic globalization caused the fast growth of market economy throughout the world. But it also caused the worsening of social differentiation and growth of social tension. The principle of free movement of capital maintained during the last three decades provoked a mass permutation of social-economic space. National governments are in a permanent search for new models of economic growth, understanding that previous strategy of growth has lead to market’s destabilization. International and regional organizations in this situation need to elaborate common rules, norms and values that can possibly lead the world or region out the the dangerous way of perpetual crisis. Many global actors, both national and international, agree that rules of the game must be changed, but this strategy faces a serious conservative opposition. Current analysis is directed towards the reasons and consequences of the global social breakdown through the lens of three regions: European Union, Middle and Near East and Latin America. European Union, being the the most powerful international organization in the world, is not only the example of wrong fiscal policies. Founders of the EU considered that the creation of the free trade zone and common currency would bring an end to monetary imbalance. But, on the contrary, it resulted in social imbalance and growing split between the states. The social and political disruption on the Middle and Near East is also caused primarily by national and supranational financial and economic imbalance between the rich Gulf countries and the rest. It, in turn, influences and strengthens the ethnic, religious and geopolitical contradictions. Latin America is rightfully considered by many today as one of the grand social laboratories. Successfully cooperating through regional organizations, national governments have managed to propose innovative social-liberal policies throughout the continent, renewing but not repeating the continental European economic policies of the 1960-70-ies.

From Theory of Social System to the Theory of Social Harbor
In the new post-industrial era, especially in the sense of ecological civilization, the concept of “society” in the end should be re-understand and re-define. The work is an urgent job. People in the past regarded “society” as a “complex system” and the intercourses, the understanding and studying work is based on the previous methodology of science. In this paper, the concept of “Society harbor” or “Harbor society” is proposed to reveal the society to help people build a new comprehension or sense to security mechanism. “Harbor” is an abstract concept from the physical world; it can be studied to study the problem that how humans can better cope with unpredictable or unavailable changes and bring a new sense of co-existence of social cooperation. Correspondingly, the concept such as “matrix”, “general climate” are important cornerstones. The “matrix” is the base of society harbor. Study the sociocultural framework of the world is an urgent job. People in the past regarded “society” as a “complex system” and the intercourses, the understanding and studying work is based on the previous methodology of science. While under the guidance of logic, theoretical framework for the sociology. In this paper, the concept of “Social harbor” or “Harbor society” is proposed to reveal the society to help people build a new comprehension or sense to security mechanism.

Understanding Science Revolution By a Trinity Model
Paradigm change is an ex post summary of Scientific Revolution. How to make out a specific Scientific Revolution is still an unsolved mystery. Philosophy, mathematics and science are trinity, logic is the core real. Logic is mined from mathematics using the methodology of philosophy thinking. In other words, logic is refined from philosophy based on the mathematical framework. When philosophy and mathematics integrated, logic generated. While under the guidance of logic, new sciences are formulated. In order to achieve truth, transforming from engineering, art and design language to the philosophical language system based on practice’s completely significant. Why people all think that a solution is no doubt can be found for a problem? If the language system used when searching for the answer is the same with the language system used when formulating the problem, at no time the solution can be found. The only way to elminate the problem is to completely switch the way of practice’s thinking, which means to change the language system. Here, we stress the in-turn transfer of engineering language, philosophy language and

Do Social Networks and SNS Function As Social Capital for Social Engagement?

This paper examines what types of social networks are facilitated by online networking activities and function as social capital for social engagement in South Korea. East Asian Social Survey (EASS) Module in 2012 Korean General Social Survey (KGSS) provides measures for social networks and social engagement whereas KGSS has a unique module for Internet/SNS activities. Analysis focuses on social eating/drinking and neighbors’ social support as local networks, local participation, voluntary activities, and political interests as social engagement, and the presence of Internet and/or SNS activities as online networking. Analyses of 2012 KGSS and EASS Module observe that online networking activities facilitate social eating/drinking, but not neighbors’ social support. Correcting for possible bias by counterfactural analysis, it is SNS activities, not Internet activities per se, that facilitate social eating/drinking. It is also observed that both social eating/ drinking and neighbors’ support function as social capital for both types of social engagements: local participation and voluntary activities. SNS activities do not directly affect those social engagements but promote political interests, whose effect is robust after counterfactual analysis. Concerning personality traits, more conscientious and open people engage in social matters more actively while less conscientious but more open people are more likely to use SNSs. In summary, this paper finds that (1) both neighborhood-based strong ties and socially outreaching weak ties encourage social engagements for local and public interests; (2) SNS activities mainly help social outreachs and promote political interests, but not actions yet; and (3) SNS activities have affinity with specific types of personality and exercise distinctive impacts on social networks and engagements beyond those of Internet activities.

Building a resilient community to disasters has become one of the main goals of disaster management to absorb and mitigate negative disaster impacts. More disaster resilient community often experiences less disaster impact and reduces long recovery periods after a disaster. In this paper, we present the methodology that we constructed a set of indicators to measure community’s disaster resilience (CDRI) in terms of human, social, economic, environmental, and physical factors. Moreover, this study develops a methodology to aggregate constructed disaster resilience index of local communities in Korea. 229 local municipalities are examined to measure the degree of community’s resilience to natural disasters.

Violence, Cumulative Discrimination and Gendered Struggles for Justice

The unabated violence against women, sexual minorities, Dalits, minorities and indigenous communities in India, its resurgence even, resurrects older debates on subjugation, repression and resistance struggles. There are layers of new meanings and forms and articulations of suffering and harm that grow over these older debates on inequality and discrimination that signal shifts in economic realities and legal (im)possibilities -- spreading the sense of imminent crisis. The (mis)appropriations of ideas of justice, by the state, by non-state actors and “the people”, drive new vectors of change at the intersection of law, governance and public debate. The emergence of a new common sense on the (co)habitations of gender based discrimination and the interrogation of the very construction of crisis itself – “is this the worst that has happened?” – are at the centre of the renewed imagination of justice.

This paper will use the events and debates around the Report of the Committee on Amendments in Criminal Law headed by Justice Verma that recommended wide ranging changes in the law on sexual assault to open out the possibilities that a Bill of Rights for Women holds for a different imagination of justice – looking at the specific situation of women, but also at the ways in which larger questions of modernity, impunity, targeted assault, the existing recognition of “atrocity” in the law and state practice inform and are shaped by these debates.

What are the multiple locations and articulations of the law (or is it justice in the era of modernity?) -- within which the shifts in the debate need to be mapped? What are the aggravations in targeted assault that are consequent on rapid and escalating shifts in economic policy? And therefore how does state formation take place around the edifice of patriarchy?

This Is a Man’s World? Changes in Disposable Income Predict Sex Ratio at Birth

The human sex ratio at birth (SRB) is long known to be relatively constant at around 105 boys per 100 girls. In recent studies evidence has been found that SRB might vary according to exposure to chemicals and socioeconomic conditions. SRB has also been declining after World War II in several industrial countries—a phenomenon that remains unexplained. Here we show that changes in disposable income are associated with birth sex ratios in OECD countries. Positive changes in disposable income are associated with higher proportion of male infants. We apply panel regressions to OECD data that spans the years 1971 to 2011 for 35 countries and UN fertility data in an unbalanced panel. Findings not only partly explain the rises and declines in the sex ratio in OECD countries, but also first time provides evidence of the influence of economic and social forces on SRB that can even be seen in macro level analysis. This opens up radically new research directions in social sciences, where the emphasis on the biological factors has traditionally been on how biological determinants shape social life and in the interaction of the two, not on how social and economic determinants might affect biological facts such as the sex of an infant. This furthermore contributes to debates of gender equality. Our findings suggest that the equality of opportunity differs for genders as the sex ratio depends on the underlying economic conditions: men seem to be born into better economic conditions.

Experiences of Fatherhood in Lithuania: Persistence and Changes

Men’s studies is an emerging research area in many post-communist societies. There is a little evidence on the impact of the rapidly changing political and socio-economic conditions on the normative masculinity model and identity. The paper is directed towards a study of how men become fathers (their perception of a family and man’s familial roles, motivations to have children, family planning practices) and what are the experiences of “being a father” (paternal involvement in childcare; communication and emotional ties with children; bread-winning and combining the professional and family roles). These issues are explored basing on the qualitative and quantitative Lithuanian data - the results of the questionnaire survey carried out at the end of 2011- beginning of 2012 (a sample - 2000 respondents, representing national population born respectively in 1950-1955, 1960-1965, 1970-1975 and 1980-1985) and the in-depth interviews with 23 fathers (representing of the same birth cohorts), conducted in summer of 2012 in the six regions of Lithuania. The investigations were accomplished in a frame of the four years research project „Trajectories of family models and social networks: intergenerational dimension“, financed by the European Social Fund (ESF). One of research objectives is to follow the changes in men’s family and paternal roles by comparing the experiences and attitudes of generations socialized in two different historic periods – the Soviet time and in the years of societal transformations after the collapse of communist regime.

Anti-Nuclear Movement in Taiwan: Fukushima Disaster Prompts the Case for Citizen Participation in Democratization of Energy Policy

The anti-nuclear power movement in Taiwan has a history of more than two decades, where the conflict has never been just a question of science, but because of uncertainty and complicated interactions of socio-technical systems, has been about interconnected economic, environmental and social concerns. In the aftermath of the neighboring 2011 Fukushima nuclear disaster, intensive media coverage and synergy among Taiwanese civil society groups and Japanese environmental activists in several national and local rallies resulted in greater public awareness of possible catastrophe from nuclear power disasters among both Taiwanese and Japanese citizens. Despite the strong civic questioning of current energy policy, the Taiwanese government, however, does not only retain its strong support of nuclear energy in guaranteeing the safety of the three current nuclear power plants, but also maintained that diminishing the fourth nuclear power plant would result in costly economic decline for Taiwan. Against that background, this paper aims to investigate how has the anti-nuclear movements in Taiwan been transformed during the past three years and to inquire reasons why it could draw varied constituencies to participate in this collectivism with unprecedented scale.

In addition, this paper also analyzes how civil society through varied collective activities has challenged current energy policy and moved towards democratization of energy policy. Employing a qualitative approach along with discourse analysis and interviewing actors from the various social movement groups, the author attempts to answer questions above in five arguments—a feeling of close cultural and geographical proximity to the Japanese, increasing distrust in safety of the controversial fourth nuclear power plant, cyber communities as mobilization networks, advocacy of elite and celebrity, activism alliances across varied social movement organizations. Finally, deriving from these empirical findings, the author discusses how democratization of energy policy could take place in also recognizing key barriers.

Democratizing Expertise and Enhancing Public Participation in Deliberative Risk Governance: EMF Case in Taiwan

This paper contributes to ongoing discussions on democratizing expertise and building public capacities for deliberative/participatory risk governance of science and technology through an investigation of public participations in risk governance concerning the controversies of electromagnetic fields (EMF) in Taiwan. The author utilizes a qualitative approach, drawing from documentary data and data from two focus groups, as well as in-depth interviews with key actors in this controversy to critically investigate this Taiwan case. This paper reflects on the politics of expert authority permeating practices of public participation, employing insights from the sociology of scientific knowledge and STS, the author discovers that extensive tensions taking the form of contestation have arisen from discussing a common problem, such as accuracy of scientific literature translation, to what extent EMF exposure is acceptable, versus containing conflicts around how to define the problem under scientific uncertainty and complexity. In addition, the failure of expert authority reflection on their social value positions has played a key role to understand their less-than-successful defence in the citizen perspective. From this perspective, the author discusses some challenges for democratizing expertise in this Taiwan case and then provide suggestions for better public participation in EMF risk governance.

Do Social Networks Help You to ‘Get Help’? Usage of Mental Health Services Amongst Women of Different Ethnic Groups in England, UK

The way in which people seek help and access mental health services is a complicated and varied process. Contact with, and usage of, services may occur through individual efforts, GP referrals, or informal contacts. Typically, in the UK, mental health service use has been researched within a largely individualistic paradigm, with Dixon-Woods’ candidacy model gaining increasing popularity. There has been little consideration of the social processes involved in help-seeking. More specifically, the way in which the resources available in social networks affect usage of services (as theorised by Pescosolido in the Network Episode Model) has not been explored in the UK context.

Pakistani women in England have lower rates of usage of outpatient mental health services compared with women from White ethnic groups. Although there has been an indication that social networks may have a role to play in the usage of services, there is little robust evidence. Previous qualitative studies show that Pakistani women’s social networks can be lacking in social support, leaving women feeling socially isolated. Further, it is evident that Pakistani women’s social networks may not contain network members that facilitate or encourage access to mental health services.

This paper addresses previously unanswered questions of how the content and function of networks are each associated with the access and usage of mental health services, and how these associations may vary among women of different ethnic groups. Using quantitative data from an English community survey (Ethnic Minority Psychiatric Illness Rates in the Community, 2000) this paper presents statistical models of the effects of social networks on access and usage of services, and discusses how these vary between Pakistani women and women from other ethnic groups. The findings are discussed in relation to the lack of current UK mental health policies to address ethnic inequalities in service use.

Deliberative Risk Governance: EMF Case in Taiwan

This paper contributes to ongoing discussions on democratizing expertise and building public capacities for deliberative/participatory risk governance of science and technology through an investigation of public participations in risk governance concerning the controversies of electromagnetic fields (EMF) in Taiwan. The author utilizes a qualitative approach, drawing from documentary data and data from two focus groups, as well as in-depth interviews with key actors in this controversy to critically investigate this Taiwan case. This paper reflects on the politics of expert authority permeating practices of public participation, employing insights from the sociology of scientific knowledge and STS, the author discovers that extensive tensions taking the form of contestation have arisen from discussing a common problem, such as accuracy of scientific literature translation, to what extent EMF exposure is acceptable, versus containing conflicts around how to define the problem under scientific uncertainty and complexity. In addition, the failure of expert authority reflection on their social value positions has played a key role to understand their less-than-successful defence in the citizen perspective. From this perspective, the author discusses some challenges for democratizing expertise in this Taiwan case and then provide suggestions for better public participation in EMF risk governance.
New Age, New Economy, New Middle Class: The Case of Jewish New Age in Israel

Albeit the extreme individualization of late modernity, social class still is important in all aspects of our life. Yet, class as a social category, remains largely ignored in contemporary religious studies. Based on ethnographic data, this paper sets out to explore the central yet under-researched ways in which class sustains social, cultural, and religious distinctions. In particular, by focusing on New Religious Movements and on New Age spirituality, it aims to explicate how class is determining religious affiliations and practices.

Sociologists of religion have recently pointed to that New Age has become part of the cultural repertoire of the new middle class. However, only rarely have they explored New Age as a leisure practice manifesting class-based tastes. Our paper examines the emergence of a New Ageoption in the Jewish cultural-religious field in Israel, asking why has New Age Judaism become so appealing particularly to the burgeoning cosmopolitan post-materialist, secular new middle class.

Drawing on post-Bourdieusian cultural sociology, we start by describing the theoretical and experiential hybrid nature of Jewish New Age, and show how these elements were enthusiastically embraced by new middle class adherents. We argue that by partaking in Jewish New Age communities, middle class new agers express and further accumulate high levels of omnivorous cultural capital. In line with recent work on cultural cosmopolitanization and class privilege, we conclude by claiming that in the Israeli context, high cultural capital is manifested, inter alia and rather surprisingly, in the ability to re-appropriate local religious forms, and to cosmopolitanize them via New Age culture.

KARABCHUK, TATIANA* (National Research University, karabchuk@hse.ru)

Career VS Children: The Effects of Institutional Background on Females' Subjective Well-Being Across Europe

The paper deals with life satisfaction and happiness among women in European countries. The research question is to disclose in which countries (with more liberal or strict labour market legislation) females are more happy to have jobs, kids or to combine children with employment. The author claims that women living in the countries with more liberal labour laws and open labour markets are happier to combine their work with childbearing than those in countries with more rigid labour legislation. The hypothesis is tested with the help of the European Value Study dataset for 2008 year, including 28 countries. The results of multilevel regression analysis proved that the expected assumption and showed that females are happier in those countries with family oriented labour legislations and at the same time where it is easy to find a new job, means lebral labour markets. In the countries with high rates of employment protection legislation female are more happy with jobs than with combining motherhood and employment. Conditional effects of multilevel regression are the results in a more detailed way. The paper could have important implications for social policy in European countries.

KARASIKOU, VICKY* (Cyprus Open University, v.karasikou@ouc.ac.cy)

From Real to Ideal: Visual Narrations of Collective Traumas and Identities

The paper will focus on the commemorative sculpture in the Republic of Cyprus and comment the role attributed to individual actors in the process of narrating and preserving collective memory. The busts, statues and architectural complexes erected since 1960, when the country gained its independence, are consecrated to the dead and missing during the political inter-communal and inter-ethnic conflicts. In Cyprus the construction of national identity and the enhancement of memory mechanisms are achieved through the promotion of the individual exemplary distinction within the social body and the personification of heroic models.

Comparatively, the paper will examine an example which is placed at the opposite: the anonymity of membership in creating the nation and heroic concepts in China. Both countries are newborn states despite their long history and rich cultural background. However, their radically diverse cultural backgrounds determine a dramatically different way the position and the role of the ‘self’ within the social group.

Greek-Orthodox tradition, under the hue of western Romanticism, mobilized personality cults in Cyprus. On the other hand, in China Socialist Realism summed up deeply rooted traditional behaviors and current political stands and revealed a different version of idealized interpretation of reality. Visual narration in China promotes the joy of the victorious results, the dynamics of the collective national struggles and the solid ground of today’s society heading to the future. Furthermore, in Chinese memorials male and female bodies are mundane vibrant actors vindicating the achievement of a shared goal. In contrast, Cyprus promotes martyrdom and orchestrates powerful connotations with a view to keep alive the collective traumas of the past. Commemoration focuses on the transcendental dimension of the individual heroes, on passivity and loss, and links them with familiar religious connotations.
This paper discusses the global income inequality and stratification of the world economy from 1820 to 2012 with a focus on the transformations that take place during periods of financialization and hegemonic transitions. We argue that in periods of financial expansion and hegemonic intensification, intensification of economic crises, inter-state competition and emergence of new developmental strategies transform existing structures of world-income hierarchy. Hence, historical development of world income hierarchy and between-income inequalities cannot be explained merely by the orthodox interpretations of the modernization, dependency and world-systems theories. Through a combination of quantitative and historical-comparative analysis, we discuss the continuities and ruptures observed in patterns of global income inequality in reference to existing theoretical frameworks provided by modernization, dependency and world-systems theories. Our analysis suggests that (1) global income inequality moved from a bimodal to trimodal distribution during the British-led financial expansion period and (2) this transition has been going through another transformation in the contemporary era of financialization. By analyzing the transformation of the global income inequality from 1820 to 2012, changes in the position of individual states/regions within global income hierarchy across time, and conducting a historical-comparative analysis of both periods of financialization, we discuss the prospects and limits of the existing theoretical-conceptual frameworks. Our analysis (1) highlights the transformative role of systemic crises, inter-state rivalries and emergence of alternative “developmental” patterns during periods of financialization and hegemonomic crisis, and (2) calls for a new conceptual theoretical framework for explaining dynamics of global income inequality which pays equal attention to continuities and ruptures.

KUMRAL, SEFIKA* (Johns Hopkins University, skumral1@jhu.edu)

Gezi Uprising in a Macro-Comparative Perspective

This paper examines the class structure of the 2013 Gezi uprising in Turkey in comparison with the 2011 wave of global social unrest. Although the Occupy-type movements that took place primarily in North America and Europe were important segments of the movements which created the 2011 wave of social unrest, they were excluded from the analysis due to the fact that the core of the movement, the “Arab Spring”, or worker struggles in new zones of global production in South, Southeast and East Asia were also parts of the 2011 wave of unrest. Many studies which discuss the class composition of the 2011 revolutions, however, often rely on single-source data, which is mostly constructed upon a materialist flow of North American and European protests. Arguing that single analytical models will fail to address the complexity of the contemporary wave of social unrest, in this paper we discuss the class composition and social base of the 2013 Gezi uprising in Turkey in comparison with different segments of the 2011 wave of global social protest. In the first half of our paper, based on a database of newspaper reports on social protests from 1990 to 2012, we provide a global survey of the class structures of movements which constituted the 2011 wave of social unrest. In the second part of the paper, we discuss the class structure of 2013 Gezi uprising in respect to discussion of diverse class compositions of social protests across the world. Based on our analysis, the class composition of the Gezi protests is mostly constructed upon a materialist flow of North American and European cases, while the middle class grievances were articulated in a different way in the case of the Gezi protests. In this way (1) how these middle class grievances were articulated and, (2) how a larger coalition of class interests were created.

KARAOLOVA, MARIA* (The University of Manchester, mariakarlova@postgrad.mbs.ac.uk)

Conceptualising Re-Migration: The Case of Post-Soviet Nanoscience Émigrés

This paper examines patterns of the outward migration of nanoscientists from the countries of the former Soviet Union during the period 1989-1994 yrs. This period of scientific migration is characterised by its mass character, very limited return rates, and peculiar patterns of diaspora distribution. The paper will focus on the latter.

It is argued that the numbers of emigrating scientists reached as much as 10 000 people leaving in 1993. (Gokhberg and Nekipelova, 2002) And whereas the primary destinations for emigration included Germany, Israel, the USA and Greece (top-4 in 1992-93), the final destinations featured the USA, Germany, France and the UK (ibid.). I argue that the conventional approaches to studying scientific migration do not capture the pivotal features of the process through which the emigrating scientist decided to move from an “institutional power base”, “tactics” are typically encountered among the subaltern who do not control such spaces of power and nonetheless manage to temporarily and discursively slip through the “webs of power” that surround and constrain them.

KARNER, TRACY XAVIA* (University of Houston, txkarner@uh.edu)

Poetics, Politics, and Possibilities: Visualizing Our Humanity

At the turn of the 21st century, sociologist Robert Putnam warned that bedrock of community–our social connections to each other were disintegrating and leaving our lives and communities impoverished. He found that we were losing touch with our humanity, our sense of belonging, and our ability to care about, and be cared for, by others. Since this alarm was sounded there has been an explosion of research into the neurological basis of social connections. In this quest, scientists have focused on the roles of emotions, especially empathy, in moral thought and action. This research into the workings of oxytocin, mirror neurons, and social cognition may also offer a means to understand the enduring power of photography to evoke an emotional response. Moreover, it offers interesting interpretations as to why viewers respond strongly to some images and not to others. As visual scholars, these findings can also point to possibilities for more self aware image making in our visual methods. Photography can be a transformative act for the image maker, the viewer and the community. As a medium of communication and connection, images rely upon emotive impulses to go beyond social differences and engender understanding. Empathy may be in the eye of the beholder but it can also be at the heart of the photographic act. The camera, like Janus, looks both ways offering a glimpse of the maker as well as the subject. In this way, every image can be seen as a self portrait, reflecting the values and vanities of the photographer. If the neurological research is sound, empathic photographers will create images more likely to resonate strongly with others, thus re-engaging those lost social connections -- one compelling image at a time.

The Facebook Gaze: Disciplining Action in Online Interpersonal Space

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Facebook as the most widely used social media site in the world has lead the way in using interface technologies to shape user behavior by turning online interaction into algorithms that engineer specific kinds of performances and render others invisible. Like Foucault’s Panoptican, the Facebook Gaze is deployed through the architecture of the site itself. Facebook has created an online space that allows users to enter their information into generic templates which make managing and mining large amounts of data easier but constrains the users participation to those things allowed by the template. Creating a uniform normativity through the technical structuring of a way of being, users must adjust their behavior accordingly in order to participate. Edgelfank, Facebook’s algorithm for structuring the flow and visibility of information and communication, further disciplines user behavior by through the threat of invisibility (Bucher 2012). Photography plays a key role in social media identity staging and interaction as images are a prime means of increasing your Edgelfank score. Similar to the hermeneutic circle which allows users to enter their information into generic templates which make managing and mining large amounts of data easier but constrains the users participation to those things allowed by the template, creating a uniform normativity through the technical structuring of a way of being, users must adjust their behavior accordingly in order to participate.
The government initiatives to enhance the situation of the rural mass, especially rural women, have paved the way to Integrated Rural Development Programmes (IRDP) in India. As part of the IRDP, the Government initiated the formation of groups in the villages of rural India with the name as DWCRA or Self Help Groups (SHG’s). With the help of the Government as well as donor agencies, the programme became successful in some parts of rural India and here are the cases where these groups became the symbol of success to neighbouring areas in the rural areas of Andhra Pradesh.

The present cases are situated in three backward areas of the Rayalaseema region of Andhra Pradesh, India. These three cases are different from each other but the ultimate goal of the three cases is the same as enhancement of lives and livelihoods of rural masses. The present paper tries to explain how the members of these groups have emerged as leaders in their respective areas and enhanced the lives and livelihoods of the people in general and women in particular in Andhra Pradesh. Three cases are Rythu Sangam (Farmers Club, Chittoor), Swastha Arogya Unnati (Health and life, Warangal), and Village Organisation (Anantapur) which have studied and regarded as the backbone of rural masses in the two districts of Andhra Pradesh.

The Three initiatives have shown that people, rural women, have improved their awareness and enhanced their lifestyle. Further, it also explains how they have transformed the groups by acting as active and future groups in their location which is benefited them to a large extent. To conclude, the paper has shown the importance of emerging leaders, rural women, in the rural areas of Andhra Pradesh.

In Greece the structure of rural society has changed profoundly since the 1960s. Rural exodus and consequent demographic ageing, restructuring towards more intensive seasonal farming and social rejection of wage labour in agriculture and living in rural areas created labour deficits.

The arrival of international migrants following the collapse of the neighbouring socialist regimes in Albania, Bulgaria and Romania meant new opportunities for the struggling Greek agriculture. The mass availability of flexible, cheap wage labour gave agriculture and rural areas an impetus of development and demographic regeneration.

The employment of these migrants was rather complementary than antagonistic to family labour often freeing family members to undertake other jobs outside agriculture and rural areas. The segmentation of labour markets between the informal and formal implied their smooth operation for the ‘benefit’ of both populations.

However, the economic crisis variously affected the situation and the convergence of the labour markets. The crisis was now expected to bring closer the informal and the formal labour markets leading to a stronger competition for the same jobs the two populations.

Drawing from research material collected in a rural area where the intensive cultivation of strawberries was concentrated, the paper analyses labour relations and living conditions developed between older and younger migrant workers in the region of Elia in western Peloponnese.

The cultivation of strawberries is a typical example of an export driven industrial product while the employment of international migrant labour reflects the externalisation of reproduction costs and the demand led character of the labour market. It becomes evident therefore that control over labour costs and labour relations is a critical issue for the competitiveness of the product. Thus, ethnicity, exploitation, racism production relations, irregularity of residence status and arduous and living conditions are examined in the paper as part of this production model.

Sea level rise is one of the most critical climate change impacts that could exacerbate shoreline erosion, storm surge and flooding. As it represents complex, uncertain and significant environmental, financial, social and legal risks to coastal populations, it demands a rethink of institutional arrangements for risk governance in the whole system of Australian coastline (Abel et al., 2011; Ryan et al., 2011; Leitch and Robinson, 2012). However there are challenges like conflicting expectations and normative judgements of values, contradictory perspectives of evidences and knowledge to deal with (Leitch and Robinson, 2012). Accordingly, the government will need to balance the aspiration, expectations and values of coastal socio-economic activities by taking into account the socio economic contexts which hold a vital role in the ability of local authorities to shift to new governance and practices (Leitch and Robinson, 2012; Taylor et. al., 2012; Susskind, 2013). Failure to realize this may jeopardize the objectives of building trust, legitimacy and cooperation in risk management and impair the ideas of deliberation and inclusion of citizens. This trajectory towards improved risk management is paramount. The translation of practical strategies is of paramount. This study aims to explore sociologically-informed approaches to risk governance through deep investigation and understanding of how social learning underpins risk perception, communication and decision making through negotiation and compromises and that it holds potentials to improve risk governance. Theories orientations for the research derived from Luhman’s System Theory and Social Amplification of Risk Framework (SARF). This study embarks on interpretive case study involving local governments in Australia with local government officers and local communities as unit of analysis. The findings that revealed the implications and explicit attention of social learning in risk decision making will be the basis of practical intervention for future risk policy making as well as extending the current sociological theories of risk.

In general a great many elderly women have plural diseases in various levels. For example some old women need to be cared in nursing home or hospital, and the others don’t need but often go to hospitals from their own houses. We call the former type “dependent elders” such as dementia or bedridden people because of receiving professional care and cure, conversely the latter one “independent elders” because of ability of social contribution as the volunteers in many kinds of fields.

But even if which type they are categorized, it would be desirable to wear their favorite clothing. The reason is that it would be helpful for them to maintain their Quality of Life (QOL) as a result of thinking positive and continuing to engage their enjoyable activities. To investigate this issue, this research would emphasize the subjective recognition and experiences of their own clothing, and not the objective beauty of appearance and fashion trends.

Intensive data were collected as life stories of 7 elderly women including both types, “dependent elderly women” in nursing home and “independent” who had engaged the volunteer at medical agency. The interviewer asked all the interviewees to arrange some favorite pictures during their lives. These pictures helped to remember their clothing including some episodes and memories in their youth. As a result of content analysis, it is clear that “the meanings of clothing” and “the role of clothing,” for dependent and independent elderly women, are “Self-expression” and “the switch of identity”. It appears that the satisfied and favorite clothing as social body assist their lives when they confront some hardships.

According to T.W. Adorno, this society is full of contradictions, so the concepts of sociology cannot but be flawed and fractured. But he evaluates such a crackle in sociology affirmatively because it enables sociology to grasp the essence of “non-identifiable” thing. If the concepts of sociology become too static and too systematic, sociology views society as the “identical” object and can’t face social contradictions. So Adorno intends to make a new style of sociology for the critical “non-identity” thinking. And his narrative style is formed after art works, especially after avant-garde art. The purpose of this presentation is to consider Adorno’s unique style of critical thinking. Adorno emphasizes the hybrid character in sociology. He says that sociology has both philosophical and scientific characteristics. From Adorno’s view, sociology is a mixture of the Enlightenment and the American empirical science. This view is probably derived from his experience of exile. In other respects, Adorno’s sociology has hybrid characteristics between opposing things. For example, the study of The Authoritarian Personality used both quantitative researches and qualitative researches. By having multiple elements in it, sociology can comprehend a complex structure of social phenomenon. For Adorno, sociology is a jumble of various academic disciplines or methods of study.
the lecture, Adorno says that sociology needs Chimerosim and Quixotic attempts. Culture critique is as important work as social critical theory in Adorno’s thought, and these two aspsects in his works are related. Adorno makes methods of modern art or modern music references for creating his style of thought, for instance, collage, dodecaphony, etc. And art works are regarded ideal model for social relation because these have multiple elements with reconciliation. In this presentation, I consider relationship between modernity and critique by analyzing Adorno’s singular style of critical social thought.

KATKAMI, HEIJIRO* (Rikkyo University, hglo2hgl0@ybb.ne.jp)
Between “Munesuke Mita” and “Yusuke Maki” -on the Possibilities of Fictional Construction By Sociology-

“Yusuke Maki” is the pseudonym of the Japanese sociologist Munesuke Mita. Mita uses the name “Maki” for creating a new style of sociology. Mita says that the name of “Mita” is used for works within the modern society and the name of “Maki” is used for works beyond the modern rationality. It is remarkable that one person has two names as sociologist, and he uses them for different purposes. Mita uses the fictional sociologist “Maki” for alternative images of sociology. The purpose of this presentation is to consider the possibilities of fictional construction by sociology from Mita’s project “Maki.” Maki often uses the word “clarity” affirmatively, and there are two aspects of this word in his works. The first connotation is the clearness and the thoroughness of a theoretical structure. Generally speaking, the social figure of sociological theory is different from that in real society, as in the example of Max Weber’s “ideal types.” But such a fictional character in sociological theory enables us to have a theoretical “clarity.” The second connotation of “clarity” is unmediated interaction between people in society. Maki’s definition of “Gemeinschaft” uses this aspect of “clarity.” The fictional sociologist “Maki” creates the image of a not yet existent utopia by combining these two aspects of “clarity.” Here is a fictional possibility of sociology. Maki’s social theory intends to create a sociology beyond the modern rationality. But it doesn’t ignore or deny the potential of modernity. He seeks to change the direction of the modern rationality. The early works of Mita and Maki largely depend on modern Western social theories, and in the later works Maki creates his original perspective of “comparative sociology” which relativizes the western modernity. A consideration of Maki’s social theory probably links to a consideration of social theories in a non-western world.

Strong Family Ties and Demographic Behavior in Japan

This study investigates the effects of intergenerational family ties on demographic behavior such as marriage, divorce, marital fertility, and women’s labor force participation during the child rearing period, using retrospective life history data from a nationally representative survey in Japan.

Although Japan is still one of the strongest family countries, intergenerational ties have gradually weakened relative to the past in terms of living arrangements: the shift from intergenerational co-residence upon marriage to delayed co-residence and cohabitation. The proportion of couples co-residing with the husband’s parent(s) or with the wife’s parent(s) at the time of marriage decreases from about 35% for those born in the 1930s to 20% for those born in the 1960s. However, the latter cohort starts living with their parent(s) soon after marriage, and then over 30% of them co-reside 10-15 years after marriage, showing a delayed co-residence tendency. In addition, for the 1960s cohort, the proportion of couples living nearby (within a walkable distance) the husband’s parent(s) or the wife’s parent(s) is over 20%, higher than other cohorts, from the time of marriage onward.

A series of event history analyses show interesting results: Intergenerational co-residency and/or proximity have strong positive effects on marital stability, marital fertility, and the labor force participation of married women. It suggests that weakening intergenerational ties can be a key cause of current demographic problems such as later and less marriage, rising divorce rate, very low fertility, and women’s labor force exit upon family formation.

In the past decade, much has been written and discussed about the relationship between strong family and low fertility. However, little literature has presented women’s labor force exit upon family formation.

KATO, KUMI* (Wakayama University, kumikato@center.wakayama-u.ac.jp)
Wolf, Extinction and Fukushima

Iitate, Fukushima is a village designated as ‘whole village evacuation’ since April, 2011 despite being located over 30km from the Fukushima Daiichi Plant. The village had maintained its traditional rural landscape as one of the “The most beautiful villages in Japan”, and was renowned for its high quality beef and dairy products. The farming community’s spiritual wellbeing is deeply ingrained in their land, both of which are under threat of being lost in the serious contamination and the prolonged evacuation.

In Iitate, there is a shrine devoted to the local community of Sasu called Yasumatsumiji. The shrine’s guardian or holy messenger is a wolf considered to protect farming villages from pest animals such as deer, boar and monkeys. The wolf’s mighty power is also considered to deter disasters, illness, fire and theft, and there is a record that at the end of Edo in Ansei period, wolf worship flourished as a series of disasters and unsettling events overwhelmed Japan. Yasumatsumiji, known for its 237 ceiling paintings depicting the wolf as its holy messenger, kept its door open to the evacuated community in much the same way as the wolf worship supported the community in Edo. Tragically however the shrine burnt down in April this year.

This paper reports on an ongoing project that attempts to record the significance of local beliefs interwoven in the natural environment and restore the legacy of one significant belief of the village people, namely the wolf paintings. It is argued that attending to the spiritual wellbeing of the community deeply ingrained in the ‘spirit of the place’ is critical in the ‘reconstruction’ process, even if the community may not return to the village fully in near future. Clearly the project has an anti-nuclear message though it does not take an overt ‘anti-nuclear’ action.

Intergenerational Relationships Between Adolescents and Their Grandparents in Japan

Intergenerational bonds among family members may be more important today than in earlier decades, because the individuals today live longer and share more years and experiences with members of other generations (Bengston, 2003). However, due to the increase in mobility and the fast pace of life, the increase in divorce rate, and the long generation span between grandparents and grandchildren, the meaning of family and the role of grandparents have changed in Japan. The increase in divorce rate and the long generation span have caused a change in the role of grandparents. The grandparents may no longer be the central figures in the family.

The adolescents are likely to have greater satisfaction of the perception of relationships with their grandparents. In addition, having overly burden of the relationships with their grandparents is associated with little conversation between the adolescents and their fathers. Their higher commitment to their grandparents is related to their increasing the communication with older persons by e-mail and face-to-face communication.

Based on my findings, I suggest that Japanese society needs to consider the ways to facilitate communication between adolescents and their grandparents in order to build intergenerational relationships. It is also important to promote the intergenerational relationships between adolescents and their grandparents on influence processes within the grandparent-parent-grandchild triad in Japan.

Abuse Among Older People: An Invisible Discrimination

The forces of globalisation, modernisation and technological change, and the rapid transmission of knowledge have resulted in lifestyle changes and corresponding adjustments in cultural values. Improved healthcare, lifestyle changes and the subsequent increase in life expectancy have challenged traditional images of old age. Today, one-eighth of the world’s elderly population live in India. The increased life expectancy in India is also leading to four-generation families. Kerala finds itself facing a huge human development challenge in the form of its elderly population that is burgeoning faster than other Indian states. Despite glowing accounts praising the Kerala economy’s improved performances in recent years, marginalised groups like the elderly have remained discriminated and neglected.

In many countries, older people are being treated unfairly by stereotyping and discriminating against them. Deprived of work, dependent on charity or old-age pension, they suffer from all types of physical ailments, and are regular victims of robbery, assault and other crimes. Elder abuse constitutes different forms of abuse like neglect, disrespect, verbal abuse, physical abuse, financial abuse, psychological and emotional abuse or even sexual abuse. The discrimination that...
older people face is also complex; often based on two or more factors, such as age and gender, ethnic origin, where they live, disability, poverty, sexuality, HIV status or literacy levels. Older people without any source of income are particularly vulnerable to discrimination based on both age and dependence. This article focuses on the sociological conditions responsible for elderly vulnerability in Kerala. It also seeks to identify primary abusers within families besides the elders’ perception of abuse. This paper focuses on the extent to which the elders depend on family members for care, as well as the type and level of care they need. An empirical study comprising 300 elderly people were made in the state of Kerala.

**Effectiveness of Social Welfare Schemes for the Elderly in RURAL Kerala, India**

By 2050, India will be home to one out of every six elderly persons in the world. While life expectancy has improved, the changed socio-economic conditions have drastically altered the living conditions of the elderly in India. In this changed social set-up, old people face increasing incidence of age-related discrimination, ageism, elder abuse, and mistreatment, which militates against the norms of a civilized society. The least noticed of the destitute in India are the elderly. Most elderly struggle with low incomes and poor health. As income inequalities increase, it is noticed that senior citizens are getting poorer and poorer. Social security thus becomes necessary. Further, inadequate public healthcare facilities and expensive private healthcare heighten the relevance of social security. In recent years, the social and economic policies of developed and developing countries are attempting to address social security needs. The need for social security during old age quite early. The Indian Constitution guarantees social security in old age under its Article 41. But ideals have rarely translated into reality at the grassroots level.

Kerala has the most comprehensive safety net among Indian states for vulnerable sections in society. The Kerala Government’s social security schemes primarily target poor families. The elderly in Kerala suffer either by not receiving sufficient economic and/or physical support. The rising cost of living, minimal or no reliable employment opportunities and nuclear families are the culprits. Age-based priorities of care and assistance are now firmly recognised. Thered are more than 35 social security and assistance schemes that have been implemented in India. Therefore impact and effectiveness of social welfare programmes on senior citizens is assessed to sensitize the government and the policy planners for their mid-term corrections. This data was collected from 320 elderly persons in Trivandrum district in Kerala.

**Informal Caregivers’ Expectations and Experiences of Hospital Admission of a Relative with Dementia**

This paper describes findings from a two-phase study undertaken in the UK by a multi-disciplinary research team. 111 pairs of people with dementia (PWD) and their family caregivers were recruited from patients referred to a specialist psychiatric liaison service in two English general hospitals. Data was obtained about their quality of life (QoL-AD and EQS-DL), severity of dementia (MMSE), carer stress (GHQ), activities of daily living (I-ADL) physical illness and depressive symptoms (GDS), and economic data on care services and resources (Sheehan et al 2012). These measures were repeated at six months and at twelve months where feasible. In the second phase caregivers whose relative was planned to be discharged to a long term facility were interviewed several times, the final interview took place about four months after the admission of the PWD to the facility (Katz et al 2013). This paper focuses on a) caregivers’ observations whilst the PWD was in hospital and b) the process of choosing a facility.

Concurrently and retrospectively family caregivers gave detailed accounts of their relative’s care in hospital. They varied considerably in their assessment of the quality of care received, but many focused on the patient’s physical and mental deterioration during the hospital admission. Caregivers noted how their roles vis-à-vis their relative changed, and described their emotional and practical reactions to what they observed. Most recounted a difficult process of being an ‘outsider’ to the care of their relative and feeling guilty and remorseful.

Caregivers described their experiences of having to choose a long term facility (often at short notice) with relatively little guidance from hospital or social services. This paper focuses on their perceptions of the conflicts caregivers face in endeavouring to provide protection for their relative whilst simultaneously carrying out their (filial) responsibilities.

**If I Had Cancer I Would Get Loads of Sympathy, ‘Cos It’s HIV, I Can’t Even Tell Anyone': Young People’s Understanding of the Stigma of HIV**

There is little research which has documented how the stigma of HIV is understood by young people who have grown up with the virus. This paper presents the experiences of twenty-eight participants living with perinatally acquired HIV in the UK. At the same time as being formally told their diagnosis participants recalled being alerted to the stigma of HIV. They are advised to keep their status secret to avoid discrimination or rejection. The fear and experience of stigma was reported as central to their experiences of growing up with HIV. Participants observed that HIV is viewed differently to other illnesses, and believed that, unlike other health conditions, HIV did not evoke a sympathetic or supportive response. The young people identified the negative and derogatory talk around HIV in wider society as affecting their self image. Through their observations of the negative media representation of HIV coupled with the lack of positive role models, they learn that it could be counterproductive to be open about their status.

This paper presents the strategies participants devised to avoid stigmatisation. This paper presents an alternative biography to explain hospitalisations and illnesses, conceal medication in the home, hide the taking of medication at school and with peers, deny knowledge and awareness of HIV and learn ‘the code of silence’ and to ‘keep their heads down’. The external negative representation of HIV HIV-re-inforces the stigmatised nature of their condition and young people in turn feel that they must alter their self-identity. Young people’s explanations of the stigma of HIV identify the link with sex, promiscuity, racial stigmatisation, fear of infection and association with homosexuality and intra-venous drug use. Participants themselves construct a hierarchy of blame: those perinatally infected are ‘innocent’ whilst those infected through sexual contact or intra-venous drug use are seen as responsible for their own infection.

**KAVALIAUSKAITE, JURATE** (VILNIUS UNIVERSITY, jurate.kavaliauskaite@tspmi.vu.lt)

**This Ain’t Mere Eco-Nationalism: Undervalued Cultural Roots of the Lithuanian Green Movement**

A nation state embodies the political order of the modernity in contrast to contemporary Green movements foreshadowing its end (Hurrel, 1994; Lash et al, 1996). Consequently, nationalism and environmentalism are considered to be hardly compatible companions (Hamilton, 2002). Therefore a puzzle of the Greens, found at the vanguard of independence movements of Central and Eastern Europe in late 1980s, is often resolved with a simplistic disavowal of their “green” identity. In words of American scholar Jane I. Dawson, here Green movements were no more than a manifestation of eco-nationalism, a mere surrogate for a hidden nationalist strife (Dawson, 1996, 2000). The paper aims to challenge this nationalist thesis, a reductive and homogenizing reading of eco-mobilization of 1980s in the region, bringing to the fore a deeper empirical look into complex and diverse cultural origins of pioneer organisations of the Green Movement (Lietuvos Zailej) in Lithuania. Archival analysis and in-depth interviews with surviving fathers and active members of the Movement reveal tangible distinctions in the collective identities (Melucci, 1995) of three earliest voluntary environmental associations, Zemyna, Aukuras and Atgaja, in Lithuania. The identity work and differences among the early Greens are poorly explained by eco-nationalist argument, however, their mutual tensions are well reflected by the classical distinction between anthropocentric and ecocentric worldviews (Nass, 1973; Eckersley, 1992), embedded in peculiar local cultural meanings of ‘nature’ and conflicting logics of Soviet environmental modernization, (neo)traditionalist apotheosis of indigenous ‘ethnoscape’ (Smith, 1999) and lively postmodernist celebration of the ecology of countercultural lifeworlds. These findings urge for a more rigorous and subtle approach to the play of cultural fields and cultural notions of ‘nature’ in environmental/ ecology movements not only in Europe but also worldwide, including Asia (Thomas, 2002).

**KAWABATA, KENJI*** (The University of Tokyo, kawaki@gmail.com)

**How to Conceptualize Social Inequality after Risk Concept?**

How to conceptualize social inequality after risk concept?

Risk concept has been in sociology with the publication of Ulrich Beck’s Risk Society (Beck 1986). One of the most important thesis of Risk Society is the “paradigm” shift of social inequality. Beck claimed the “change from the
logic of wealth distribution in a society of scarcity to the logic of risk distribution in late modernity”. Thus he pointed out the appearance of risk society “in contrast to class society”.

However, Beck's thesis has been criticized in several researches by showing the continuity of class relevance. Such as Hans-Peter Müller (Müller 1992) or Rainer Geißler (Geißler 1996), J.H. Goldthorpe, (Goldthorpe 2002) etc. Then, how can we understand social inequality covering the relevance of risk and class. The issue is to integrate the relevance of risk and class to understand contemporary social inequality. And we need a concept which integrates class elements and risk elements.

This presentation attempts to figure out the issue to integrate class and risk concept focusing on 1980’s individualization dispute in Germany.

Acceptance of Foreign Nurses Based on the EPA in Japan and Future Challenges

Objectives: The acceptance of foreign nurses started in Japan from 2008 under the Economic Partnership Agreements. Over 400 nurses have come to Japan from Indonesia and the Philippines thus far. If they do not pass the exam within 3 years, they basically have to return to their countries. They can work in Japan as nurses if they pass the Japanese national board exam for nurses within 3 years after coming to Japan and they will be paid the same or more as Japanese nurses. Passing the national board exam for nurses is the main issue for the foreign nurse candidates. So far, the rates of foreign nurse candidates passing the national board exam were 0% in 2009, 1.2% in 2010, 4.0% in 2011, 11.3% in 2012 and 9.6% in 2013. Though the pass rate is gradually increasing, realistically, passing the exam is very challenging for them considering the fact that the overall pass rate for Japanese applicants is approximately 90%.

Methods: We conducted a study on the practice national board exam targeting Filipino nurse candidates in Japan and Indonesian nursing students in Indonesia. We requested them to take the Japanese national board exam translated into English and Indonesian and analyzed the exam results.

Results: The percentage of correct answers was low even though the practice national board exam was written in English or Indonesian.

Conclusions: Because the percentage of correct answers was low in the study on the practice national board exam for nurses, we believe that there is a difference in the nursing training curriculums and nursing itself in each country. It is necessary to compare and study the differences in nursing training curriculums in each country as soon as possible.

Environmental and Ethical Implications of Food Consumption Affecting Distant Countries: How Aware Canberra and Tokyo Community Gardeners of These Issues

Global food system has developed with the increased power of agri-food corporations. Under the current structure, wealthy people tend to over-consume food, while poorer people are experiencing social inequality and degradation of their environment. Recent studies around ‘alternative’ food systems have highlighted grass roots movements, especially in industrialized countries, for democratic and environmentally sustainable food systems, which often focus on local food production. However, it is still necessary to discuss environmental and ethical soundness of global food production and consumption, because it is unrealistic to expect that local food systems can immediately become the dominant system. To begin to transform the current dominant system, it is important to explore whether people who are engaged in ‘alternative’ food systems understand and care about the ethical and environmental issues around global food systems, from consumer point of view. Consumption attitude of imported food is a key, as citizens in wealthy countries are the major actors of global food consumption, who have influence to choose what to buy, and create demand, even though this power is restricted. This study may then point to the possibility of these people engaging in ‘alternative’ food system becoming agents for global change.

This study examined whether community gardeners in industrialized countries have an understanding of, and interest in, the ethical and environmental implications of the current global food supply chain. This study compares Canberra (Australia) and Tokyo (Japan) as case studies. Initial analysis of interview data suggests that participants from Australia expressed a stronger understanding and awareness of ethical and environmental issues occurring outside the country than Japanese participants. The cultural, political and economic differences, including different position in the global food system (Australia as a net-exporter and Japan as a net-importer), underlying these results will be considered.

On Hannah Arendt’s Understanding of the Society or the Social: Resisting Unprecedented Crises

Hannah Arendt stated in The Human Condition her intention to understand society or the social as well as provide criticism on society and salvage the political to promote appreciation of and resistance against unprecedented crises. In her pursuing an understanding of society, she has adapted a unique method tracing back to the distinction between the public and the private in ancient Greece as the origin of society, and then referring to the history of theories on society presented by John Locke, Adam Smith, Karl Marx, and sociologists Auguste Comte and Herbert Spencer.

In this paper, I will interpret her understanding of society based on the above method and argue that society is fundamentally ruled by the biological life process. Therefore, human life and activities in society are regulated based on whether each person contributes to the sustenance of the life process and multiplication of lives. This interpretation can link Arendt’s understanding of society in The Human Condition with her descriptions on unprecedented crises in her other writings, especially The Origins of Totalitarianism. Arendt has stated that when people are extremely forced to contribute to a function of the life process, an ideology forms out of ideas of race, body, and other biological things contributable to such a function. By rise of such an ideology, People not contributable to the function have been removed to a condition of complete rightlessness in imperialism and concentration camps in totalitarianism. Moreover, to accelerate the function of the life process, humans apply nuclear fission to harness nuclear power at the risk of irreversible danger, “to act into nature”.

In addition, this paper outlines my attempt to search for a normative theory in her arguments on resisting unprecedented crises by focusing on her concepts of forgiveness and promise.

“I Don’t Want to be a Burden”: Japanese Immigrant Acculturation and Their Attitudes Toward Non-Family-Based Elder Care

Elder care remains in the family sphere in Japan while elderly Japanese immigrants in the U.S. are actively planning to utilize formal care services. Although social structural conditions may explain these differences, they do not fully explain “how” Japanese immigrants have developed norms of independent living and utilization of formal care services. This paper will focus on how Japanese immigrant women’s value acculturation leads to their cultural preference for non-family-based care. They seem to accept the U.S. norms of the independent parent-child relationship and see their children as “other” individuals rather than “inseparable” family members who are obligated to fulfill their filial duty. This value acculturation may manifest in their preference for independent living, friend-based support, and utilization of formal care services. This ensures their middle aged children’s freedom from filial care duty by showing no expectation of it at all.

The Reception of “Art for art’s sake” in Japan: Case Study of a Classical Music Festival Audience

The purpose of this paper is to examine how the idea of “Art for art’s sake” is received in contemporary Japan from the perspective of music and the human body. The concepts art and artist are typically described as relatively new conceptualizations that originated in modern European societies. In pre-modern societies, musicians were usually not regarded as artists, but rather as artisans who produced their work based on orders received from patrons. Therefore, their work was not regarded as art but as extensions of rituals or worship practices. However, during the modern period, a movement started that viewed these activities as art. It appears that the ideal of Art for art’s sake provided impetus to this movement. In this study, we therefore attempted to determine the reception of Art for art’s sake in contemporary Japan. Research data were collected using a survey of the Saito Kinen Festival Matsumoto, which is one of the most famous music festivals in Japan.

The analysis focused on factors that oriented people toward the ideal of Art for art’s sake, and the results demonstrated the following major findings. First, people who attended the festival because of their relationships rather music interest tended to demonstrate an orientation toward Art for art’s sake. Second, participants who were closely involved with classical music indicated a strong orientation toward Art for art’s sake. Third, people who were introduced to classical
music by listening to it with media, such as televisions or radios also indicated a strong orientation toward Art for art’s sake. The results indicate that as people consume music through media rather than their bodies (e.g. playing musical instruments or attending music concerts), their musical consumption become individualized and their perspective on the ideals of art more purified.

From Clinton’s Anti-“New Terrorism” Policy to Bush’s “War on Terror”: Presidential Transition in the Anti-Terrorism Policy of the United States

This paper aims to tackle the question of why the United States came to launch the war against Afghanistan and Iraq under the name of “Global War on Terror.” To clarify this problem, I examine the historical usage of the concept of “terrorism” by the two U.S. administrations surrounding the 9/11 attacks in 2001. It is notable that some terrorism scholars were able to “predict” the emerging threat of the religiously motivated terrorism as “New Terrorism” shortly before the 9/11th attack on the World Trade Center. Scholars such as Daniel Benjamin and Steve Simon argued in the paper published in *Survival* that more lethal and dangerous threat of the religious terrorism was increasing. This poses a serious puzzle; because even those scholars themselves admitted that there were no dramatic statistics or persuasive evidence before the 9/11 attacks. To answer this question, I focus on the concept of the “religious motivation” in those scholar’s arguments, and perform a conceptual analysis. By doing so, I argue that the advocates of the “new terrorism” did not insist the newness of the “new terrorism” based on the empirical facts of the lethality of terrorist attacks at the time, but in fact they re-defined the conceptual dichotomy of “religious/secular” based on the standard of negotiability, by which the “new terrorists” were characterized as non-negotiable and irrational jihadists. This new concept of “religious motivated terrorists” made possible the policy prescription of “war on terror” of the Bush Doctrine, which justifies the preemptive attack to those new terrorists and the “rogue states” which were supposed to harbor those terrorists.

Power Transition in the Legitimation Mechanism of Fashion Designers

Prior to the advent of the Internet and social media, fashion designers’ reputations were legitimated by industry professionals who attended biannual fashion show events that took place in the major fashion cities, such as Paris, New York and Milan. It was their prerogative and privilege to be part of the by-invitation-only insider circle. Consumers and the general public eagerly awaited for the press coverage in newspapers and magazines to see what is going to be in trend the next season. It was an exclusive status to be a member of the industry because they were the “gatekeepers” of fashion who consecrated the designers. This mechanism of hierarchy has been completely overthrown by the invention of the internet and social media. Their fans wear their favorite labels, take pictures with their smartphones and instantaneously post them on blogs, twitter, and Instagrams. This communication occurs on a minute-by-minute basis. The fans are making an invaluable contribution to the publicity and the promotion. Amateur bloggers with insatiable appetite for fashion are just as powerful and influential as professional magazine editors. Luxury brands that were reluctant to rely on the social media since they reach too wide an audience are finally following suit as well. My paper attempts to explore how the mechanism of the mainstream fashion system has transformed in the past decade and investigates how the legitimation process of designers and the power structure of the industry have changed.

Buddhism, Collective Memories, and Political Process in Myanmar (Burma)

Buddhism as a majority religion in Myanmar (Burma) has been a powerful symbol for the Burmese population and long affected the socio-political dynamics in a traditional country. Despite the romantic reading of Buddhism prevalent in the West and among neo-liberal commentators, Buddhism has manifested the potential to become a contentious public symbol when appropriated to oppress the ‘enemy’, while simultaneously justifying its position and winning public support.

The sangha historically maintained a close relationship with the Buddhist kingship and a symbiotic relationship between them underpinned the stability of the country until the last king was dethroned in 1885. The desacralization of Buddhism by Europeans and the violation of its symbols remain deep in the collective memories of the people. I discuss the political activism of Buddhist monks that started during the British colonial rule and highlight the patterns in which monks respond to different crisis points in modern history, deriving from a deep sense of anxiety that their Buddhist tradition is threatened.

Myanmar (Burma) witnessed intense communal violence during the democratisation period after independence in 1948. Prime Minister U Nu was hampered by monks making incessant demands to give preferential treatment to Buddhism and eventually succumbed to make Buddhism the state religion. Buddhist monks today comprise almost half a million of the population and profess themselves to be the custodians of the szabona (the Buddha’s dispensation). They are increasingly asserting their authority to protect the szabona in the age of moral decline, which they see as coming from Islam. This paper attempts to unravel the collective trauma that prompts monks to manifest a similar pattern of both self-defense and aggression, and understand the cultural and religious underground that continues to influence people’s aspirations and worldview.

Family Support and Mental Health Care for the Japan Self-Defense Force Personnel

Since 1992, Japan Self-Defense Forces (JSDF) has engaged in various types of new missions overseas, stretching globally from Haiti to Golan Heights, Iraq, Sudan and Gulf of Aden. The 3.11 East Japan Great Earthquake in 2011, subsequent tsunami, and nuclear power plant disaster in Fukushima, resulted in the largest-ever domestic disaster relief operation in the JSDF history, mobilizing more than 190,000 personnel. Given the increased operational tempo, JSDF have tried to improve institutional family support and mental health care programs. This paper describes how the social-psychological support programs have developed, focusing on the Japan Ground Self-Defense Force (GSDF). In particular, I examine the institutional programs of the Family Support Center, Mental Support Center, and a “Mobile Counseling” outreach program, to provide mental health care to JSDF personnel and their families in the Hokkaido area. Also, the effectiveness of the institutional programs from the soldiers and their families’ perspective will be examined, based on both quantitative and qualitative data, including interviews of military families. In conclusion, relevance of “community capacity” model will be discussed in terms of enhancement of social support networks for the JSDF families.

New Middle Class in Singapore As a Global Creative City

I would like to present a new middle class and cultural development in Singapore as a global creative city, particularly focused in the following two points. One is taken in Singapore case and I would deal with the detail content developped during these 20 years. It is very interesting case, because Singapore government has successfully accomplished the cultural institutions. As a result, there have occurred some intensions or class discrepancy among Singaporean people themselves, additionally a famous conflict between foreign workers and Singaporean workers. I introduce the concrete cases and analyze them. During last 20 years Singapore government considerably planned and systematically managed some artistic areas including artistic participation, art education, and artistic outreach activities. And it will be included a famous ethnic public policy in Singapore. I would trace the historical transformation and analyze the sociological meanings. Singapore would compare with Hong Kong and other Asian cases. Particularly I would take both Shanghai and Tokyo. Both cities are also global creative cities just the same as Singapore. Of course each city has had its original history and has making its unique type by itself. But there exists Asian Share-ness among the three cases. Mainly I would point out the relationship between national/city government and private industry. I would discuss the future of the new class conflict in Singapore and the sociological meanings compared with the two cities.(227 words)

Social Friction in the Community Hosting Evacuees of Nuclear-Disaster in Fukushima: A Case Study of Iwaki City

The Fukushima Nuclear disaster has brought various and complex social divide, not only to those communities forced to evacuate but also to the communities hosing evacuees. Iwaki-City, Fukushima Pref., is currently hosting about 24,000 evacuees from several municipalities, which is the largest evacuee-hosting

XVIII ISA World Congress of Sociology
municipality in Japan. One of the issues in the aftermath of disaster in Iwaki-City is the frustration of its residents to host evacuees and the social friction between evacuees and residents.

The aim of this research is to examine the structural problem of the social friction, based on the data taken by the interviews to the evacuees and the hosting residents and supporters in Iwaki City. The cause of friction can be categorized as (1) the drastic social change and inconvenience of daily life due to the rapid population growth, (2) the relative deprivation constructed by the compensation for mental damage and the sense of risk to radiation and (3) the structural issues of disaster relief assistance for evacuees and to create an environment for the evacuees and residents to interact.

Especially regarding the third issue, as evacuees are widely dispersed, the formal assistance for disaster relief, which differ according to municipalities, have not necessarily fulfilled the needs of their current daily life, and informal self-help groups of evacuees have emerged to reconstruct their existing social network in order to obtain an access to social resources. However, in this situation, the sense and need of belonging to each municipality is emphasized and these differences eventually seem to function as ethnic differences and deepen the gap between them. This issue illustrates the social and economic gap constructed in the process of disaster, the difficulties to organize a disaster relief assistance for evacuees in this nuclear disaster and the need of coordination assistance between evacuees and residents.

Negotiating the Risk of Being Murdered in Turkey: Femicide in Everyday Life

Existing literature on femicide frequently focuses on certain patterns of femicide, characteristics of perpetrators and/or victims as well as some other institutional aspects such as policy orientations to reduce incidence and social changes (like globalization, migration and transformation of family structures and gender order) that would possibly have an influence. However, very little study sheds light on how femicide is perceived in the everyday life. This study brings forward women’s perceptions, and their negotiations with rising phenomenon of femicide in Turkey. For this purpose, this study reveals different aspects of femicide in Turkey at two levels. At a macro level, we aim to figure out violence against women, and femicide as an extreme practice of violence through interrelationality with social and economic changes in Turkey. On the other hand, at a micro level, based on interviews with women of risk groups defined through some demographic factors like marital status, belonging to migrant communities and class positioning, this study analyses women’s emotional attachments to femicide and their strategies to challenge risk of being murdered. Accordingly, we aim to reveal how public visibility of femicide shape women’s practices in everyday life and re-constitute social and cultural demarcations between appropriate and inappropriate gender performativities. Moreover, this study would give us an opportunity to understand potentials and/or limitations of women’s agency across increasing phenomenon of femicide and how it is differentiated in terms of class, cultural and regional differences.

Turkish Sociology’s Footprint in the History of Sociology

A simple glance at the classical or contemporary sociological theory books is enough to recognize the general tendency of limiting the history of sociology to the West in general without even mentioning the existence of other sociological traditions. The said situation has also a strong relation with the tendency of considering Western history as the main and only source of sociology.

The purpose is to show that history of sociology cannot be limited to Western traditions only. In that term emergence of sociology in Turkey and its establishment as an academic discipline at higher education institutions is a good example.

As the need for knowledge and practice of sociology in Turkey was different from the conditions the West was facing, development of sociology had its own unique way in Turkey. Sociology as an academic discipline was first taught in Darüf-funun (House of Sciences) which was a higher education institution in the Ottoman Empire period. After the collapse of the Ottoman Empire and with the emergence of the new Turkish Republic, new reforms took place in higher education. In 1923, the Darüf- funun was transformed into Istanbul University which then up until now lots of sociology departments have been established at various Turkish universities.

One of the assertions of this paper is that while sociology is considered as a mere Western heritage, the history of sociology’s emergence and involvement in higher education in Turkey also show that particular social and historical contexts of Turkey have created different needs for and relations with it as a science result-

Detecting ‘Ripple Effects’ Of The Canterbury Earthquakes in a National Longitudinal Study Of Aging

The timing of the 2010 and 2012 surveys conducted by the New Zealand Longitudinal Study of Aging provides a clear “before and after” dimension to the exploration of the impacts of the Canterbury earthquakes, on the study population of older people. Our data shows some effects (after controlling for baseline differences) on physical self-report health, according to location, and degrees of recorded direct and indirect exposure to the Canterbury earthquakes. In particular, the aspects of control and self-realisation within the quality of life measure show different trends based on location and exposure to earthquake effects. Other psychosocial measures of loneliness and depression also show regional differences. These differences are not unidirectional or consistently negative, to the extent that some exposure suggests positive outcomes on some measures. The relevance and value of these findings in terms of policy will be further enhanced by our future ability to continue to track such effects over the longer-term, in light of the scale and duration of the Canterbury recovery process, and of other emerging phases of this country's exposure to a potentially hazardous seismic environment.

Ibn Khaldun – Assessing His Influence in the Foundation of Modern European Sociologies

In the course of recent debates around decentering, decolonizing and pluralizing the history of our discipline, Ibn Khaldun has been (re-)claimed not as a precursor, but as one of the “founding fathers” of sociology. Suspicion has been voiced that the concept of ‘moral panic’ espoused by his Muqaddima is indeed qualitative, as opposed to the ‘sociological perspective’ per se that it is often said to represent. A preliminary analysis hints to three potential “entry points” into modern sociology: Spanish history of ideas that refers to Ibn Khaldun’s heritage; debates between politicians and sociologists at the Institut International de Sociologie; as well as Vienna as a place of debate around Ibn Khaldun, possibly through the influence of Ottoman social thinkers. The paper then provides more detailed textual analysis of the reception of the Muqaddima by two important early sociologists, K. Gumperz and F. Oppenheimer, with regard to their “sociological theory of the state”. The way in which they mobilise Ibn Khaldun as a reference is particularly interesting with regard to the question in how far sociological theory is context-bound as opposed to generally true.

Stressors and Resiliency Resources: Explaining the Significance of Subjective Social Status and Objective Social Status for Depressive Symptoms Among African American and Afro-Caribbean Women Residing in the U.S.

Studies in the U.S. often find that black women report more subclinical depression and psychological distress than whites or black males. Scholars argue that these disparities arise from the intersection of race, gender, and social class that converge in unique ways to place Black women at higher risk of poverty and its associated stressors that challenge their emotional well-being. Stress research indicates that the strong inverse relationship observed between objective measures of social standing (e.g., education and income) and mental health arises from greater exposure to stressors and/or the lack of coping resources among the economically disadvantaged. Recent research suggests that subjective rank relative to others may be even more influential. This study used data from the National Survey of American Life to investigate the association between objective and subjective social status and depressive symptoms among black women residing in the U.S. Using regression analyses, we investigated the extent to which two chronic stressors—perceived discrimination and financial strain—and four resiliency resources—religion/spirituality, emotional support from family, and racial/ethnic group evaluation—mediated or moderated the association between status and symptoms. Findings revealed a strong negative relationship between subjective status and symptoms for both groups of women and a less robust relationship between education and symptoms for
African American women. Family support and economic strain mediated this relationship for Afro-Caribbean women, while discrimination, economic strain, friends, family, and group evaluation did so for African American women. Our findings speak to the paradox of inclusion. Although the experience of subjective social status is similar for both African American and Afro-Caribbean women, the different effects of education, perceived discrimination and group evaluation suggest the need to avoid homogenization of the life experiences of women of color when examining disparities in mental health.

KEIZER, RENSKE* (Erasmus University Rotterdam, keizer@fsw.eur.nl)

Father-Child Relationship Quality in Living Arrangements after Divorce

Based on multi-data from the Divorce In Flanders survey conducted in 2010, this study examines to what extent the quality of father-child relationships is higher for children in families with joint physical custody arrangements compared to children who live solely or mainly with their mother. We focus on two mechanisms that may explain the association between living arrangements and the quality of the father-child relationship: (1) the level of father involvement and (2) the quality of the co-parental relationship. In addition, we examine whether gender differences in the child and conflicts between the ex-spouses moderate the association between living arrangements and the quality of the father-child relationship.

Our results reveal that children who live in families with joint physical custody have indeed higher quality relationships with their fathers, compared to children who live solely with their mothers, but not compared to children who live mainly with their mother. In addition, our findings reveal that children in joint physical custody report higher quality relationships with their father compared to children who live solely with their mother because in the former families fathers are more actively involved with their children and the ex-spouses have better co-parental relationships. No significant moderating effects from child's gender or conflicts between the ex-spouses were found. Contrary to what is often thought, our results suggest that it is the fact whether or not children live with their father, and not so much the amount of time they live with them that is important for the quality of the father-child relationship.

The Impact of Gender Role Ideology on Direct and Indirect Paternal Involvement: A Focus on Men Who Make the Transition to Parenthood

Using data from the first two waves of the Netherlands Kinship Panel Study, I examine to what extent men's gender role attitudes explain men's paternal involvement after the transition into parenthood. I extend previous work in two ways. First, I incorporate multiple dimensions of paternal involvement. Although father's role of providing is highly important, there is scant research that directly addresses providing as a form of paternal involvement. Second, I aim to unravel issues of mediation by focusing on men's gender role attitudes as predictor of paternal involvement before these men enter parenthood. In most studies, scholars use the simultaneous measurement of father's views on parental roles and paternal involvement. As such, father's experiences with paternal involvement may well have shaped their attitudes concerning parental roles rather than the other way around.

My results show that men with more modern gender role attitudes indeed spend more time on childcare tasks, also when controlled for relevant background characteristics such as educational attainment, work hours, religiosity, age, partner status, age, and gender of the child. In contrast, gender role attitudes have no impact on changes in men's work hours across the transition to parenthood nor on their level of income. This latter finding shows that men's work schedule and their provision are unrelated to men's gender role attitudes, suggesting that being a good provider is of importance to all men who become fathers, irrespectively of gender role attitudes.

Does Greater Equality in Governance Contribute to Greater Health Equity? Lessons from Closing the Gap for Aboriginal Australians

There is growing evidence that providing increased voice to vulnerable or disenfranchised populations is important to improving health equity. In this paper we will examine the engagement of Aboriginal people and organisations in local government reforms associated with the Indigenous Health National Partnership Agreements (IHNPA) in Australia and its impact on the uptake of health assessments.

The sample included qualitative and quantitative responses from 188 people involved in regional government in Aboriginal health. The study included data on the uptake of Aboriginal health assessments from July 2008-December 2012. The ex-s黄埔区 was 83190 in 2009/10, 88506 in 2010/11 and 90903 in 2011/12. Logistic regression was used to examine the relationships between organisations within forums and the regional uptake of Aboriginal health assessments. The independent variables included before and after the IHNPA, state, remoteness, level of representation from Aboriginal organisations and links between Aboriginal and non-Aboriginal organisations.

The introduction of the IHNPA was associated with a shift in power from central government to regional forums. This shift has enabled Aboriginal people a much greater voice in governance. The results of the analyses show that improvements in the uptake of health assessments were associated with stronger links between Aboriginal organisations working with other Aboriginal organisations and between non-Aboriginal organisations working with Aboriginal organisations. Higher levels of community representation were also associated with improved uptake of health assessments in the IHNPA. The findings suggest that from the perspective of Aboriginal organisations, the IHNPA and the IHNPA membership has contributed to greater health equity.

Re-Invention of the Kurdishness through the Transnational Kurdish Media

Re-Invention of the Kurdishness through the transnational Kurdish media

Dr Janroj Keles, Business School of Middlesex University

Abstract

The rapid development of transport and communications technologies have contributed to the exchange of information and resources along with multiple participation in socio-cultural and political activities across the borders of national states. Transnational ethnic media has played a key part in this by enabling a re-connection of diasporic/transnational populatons with a mediated homeland. In this sense, this paper will explore the linkages between nationalism, media and Kurdish migration and the role of the Kurdish transnational media in articulating and mobilizing different political and identity positions for Kurdish migrants. It will focus on the development of Kurdish media in Turkey/Kurdistan and in Europe and the way in which they have connected, constructed a determinized imagined Kurdish political community. This paper will be based on 30 in-depth interviews with Kurdish journalists and migrants of diverse age, gender, political affiliation, occupation and length of migration in London, Berlin and Stockholm.

Getting Better All the Time? Selective Mortality, Attrition, and Compositional Changes in Longitudinal Studies on Ageing

By default, life-course studies on ageing include selection processes. Selective mortality changes the composition of samples as people age. In addition, in longitudinal studies, this selection process may be compounded by selective attrition. Consequently, the distribution of important social attributes, such as education and social class, is likely to change over time in any given study cohort.

The aim of this study is to explore changes in the distribution of baseline sample characteristics due to i) selective mortality and ii) attrition in an ageing panel sample (born 1914-1934) throughout different follow-up waves (1968, 1974, 1981, 1991, 1992, 2000/2002, 2011). The study is based on nationally representa- tive longitudinal survey data from Sweden (Swedish level of living survey – LNU and The Swedish panel study of living conditions of the oldest old – SWEOLD). After 43 years of follow-up, 67% of the total sample (N=2335) had died, and an additional 16% had been excluded because of non-response in at least one follow-up wave. The proportion women in the sample increased from 50% to 60% because of selective mortality. The mean level of education increased among both men and women. Similarly, changes in class structure were observed for both sexes. In particular, the proportion of manual workers decreased and the proportion of non-manual workers in the sample increased over time. In both women and men, the changes in class structure were compounded by attrition. In men but not women, selective attrition also compounded changes in education.
Finally, the proportion of the sample that experienced poor childhood conditions, financial hardship, or had received social benefits at baseline was successively reduced during follow-up.

The impact of selection processes throughout the life course is commonly discussed in ageing research. However, few studies have explored how these processes change the social composition of longitudinal samples over time.

Eat the Rich, Ignore the Poor: The Welfare State and Income Inequality in 46 Societies

The emergence of the welfare state provided a countervailing force against the socialills of industrial production and capital markets, namely economic inequality. However, issues of legitimate pay and income inequality regularly spark bitter polarizations, debates and protests. In this paper, we investigate the possibility that these attitudinal phenomena are shaped by the welfare state. We test hypotheses that push beyond material self-interest or country-level development in explaining individual attitudes. Namely we use the breadth of welfare state institutions (welfarism) as a way to cross-nationally identify what leads individuals to endorse redistribution and legitimate earnings for low and high status occupations. Despite ideological and institutional theoretical perspectives, we find that individual attitudes are attributed to the material returns of the welfare state and envy of those who have high incomes. Using ISSP data, this finding is true in the broadest range of countries investigated to date in either of the legitimate pay and welfare state research traditions (46 countries; 112 country-time points; 120 individuals). We conclude that resource acquisition as opposed to equality or social cohesion drives the impact of welfare state institutions on individual attitudes.

Between State Bio-Power and Social Bio-Politics Documented and Undocumented Migrant Care-Workers in Israel

The paper deals with tensions emerging between high demand for migrant care-workers in affluent economies and their simultaneous construction as a demographic threat to the nation’s political body. Drawing on the empirical analysis of the Israeli case, an ethnically defined nation state and a major ’insourcer’ of labor migration, the article examines how these tensions are put in display in the topical realm of migrants’ family formation and unity within host countries. It argues that while contradictions between the reproductive labor of migrant care-workers and their reproducing bodies are closely connected to gendered state policies around labor migration, they manifest differently along the legal/illegal continuum of migration status. Thus whereas documented care-workers are subjected to the regulation of their employment conditions and protected by labor laws, they are also directly exposed to state and employers’ control on family formation. Periodically, undocumented domestic migrants who are for-saken to unfettered dynamics of informality and risk of deportation, gain space for greater maneuver over the creation and maintenance of family life in host countries. Moreover, difference in the management of the reproductive-reproductive dyad around care workers according to their legal status, shape the repertoires of contention available to civil society organizations and networks as they try to assert migrants’ rights to family life in the context of global feminization of migration and stringent control policies.

Socioeconomic Influences on Inequalities of Wellbeing in Later Life: A Study of Australian Baby Boomers

Promoting health and wellbeing in individuals across the life course has become a priority for many governments and policy makers around the world. There is increasing recognition of the value of subjective measures of wellbeing as a complement to the more traditional, objective measures of health and wealth. In Australia there is a widespread view that the early post WWII birth cohort has been advantaged relative to later cohorts but there has been little attention to the origins of inequalities arising from earlier life experiences within the cohort. This paper begins this gap by examining the influence of earlier life course exposures on subjective wellbeing among a sample of Australian baby boomers aged 60 to 64 years from the 2011-12 Life Histories and Health (LHH) survey (a sub-study of the NSW 45 and Up Study). Inequalities in childhood social position – notably parental social class and education – were found to have small but significant effects on later life wellbeing. The childhood influences operated mainly through their relationships to adult attainment of socioeconomic position such as highest education, occupational class and household income. Differences in childhood health also impacted on later life wellbeing through associations with adult physical and health capacities. Overall, there was evidence that advantages or disadvantages experienced in both childhood and adulthood had a cumulative effect on wellbeing on entry to later life. These findings underscore the value of early intervention, not only proximal, but also earlier, distal life course determinants of wellbeing and the importance of reducing inequalities in health and wellbeing across all stages of life. Comparisons to English Longitudinal Survey on Ageing will indicate the influence of societal differences in socioeconomic development and public policies on wellbeing outcome.

Insights from the Past: Disaster Research and the Second Environmental Crisis

We are living in a time of accumulating hazards that form a universal risk milieu: a concentration of potential dangers across natural, technical, and social systems. Intensifying urbanization, climate change, aging infrastructure, and global economic difficulties combine to create a complex of perplexing hazards for which scientific discovery and policy guidance are both needed and elusive. Yet another environmental crisis occurred in the United States in the 1960s: a realization of threats to the natural environment that were publicized in iconic works such as Silent Spring and that inaugurated a movement of activists, musicians, actors, public officials, and legislators to enact widening laws and regulations to lessen environmental pollution. In less than a decade, the Clean Air Act, the Clean Water Act, and the Endangered Species Act became the touchstones upon which environmental policy is based. The enduring effects of these acts are still clear in our current environmental crisis.”

Consumption Behavior and Disaster Recovery: Insights From Eight Years In A Living Laboratory

On August 29, 2005, Hurricane Katrina came ashore along the United States Gulf Coast resulting in unprecedented damage and presenting long-term struggles for residents. Since that date, the region has been impacted by other natural disasters, most notably Hurricanes Rita and Isaac, resulting in a rich laboratory for investigating the impact of these large-scale, shared life events on various behaviors. Utilizing data collected over 8 years by several research teams and drawing from extant research in marketing, sociology and psychology, this body of work investigates the short- and long-term effects of these natural disasters on consumers’ consumption behaviors and how these behaviors aid in the individual and community recovery process. Several themes are explored in this research. In addition to discussing methodological challenges and best practices when collecting timely information pre- and post-natural disaster, the role of consumer behavior as it relates to the various stages in the disaster recovery model is examined. Using data collected from 318 individuals, the role of consumption as a tool to regulate emotions is explored as a means to cope with an impending threat. Further, depth interviews and online surveying (n=448) conducted in the weeks and months after impact shed light on the collective stress and resulting positive and negative consumption behaviors and attitudes (i.e., impulsive and compulsive buying and evoking views of possession). Follow-up surveying (n=176) four years later a natural disaster illuminates the role of consumption behaviors in restoration, reconstruction and recovery. The ethical and social responsibility implications for public policy makers are discussed along with future opportunities for social science researchers.

This paper presents findings from research in six branches of a Wal-Mart owned food chain in Johannesburg, South Africa. Wal-Mart entered South Africa in a newmaking majority share owner buy-out of South African listed Massmart, Holdings in 2012. This paper explores the results of research with shop floor workers. It details labour conditions and worker frustration with company and unions, alike. It examines worker politics in these stores as they struggle to combat the erosion of existing conditions, and as they struggle to be heard by their union. It discusses union efforts to support this workforce and to build an All-Africa Alliance of Wal-Mart workers. It grapples with the gap between worker experiences of precariousness in their jobs and union battles to confront this multinational on its home turf.

Precarity and the Law: Regulating Casual and Contract Labour in the South Africa Retail Sector

This paper explores the history of legislation around forms of casual, part-time and contract labour in South Africa since the 1930s. Building on my previous work on casual and part-time labour regulation in the retail sector (Kenny 2009), this paper expands the discussion to explore the legal lineages which helped to define the construction of these forms of labour within the retail and distribution sector. It seeks to examine the relationship between the law as disciplinary apparatus, transnational importation of law and norm, and socio-political contexts and worker and union politics in explaining changing legal provisions over time. In so doing, I hope also to examine the boundary between these forms of employment law and the influences of Masters and Servants legislation as limit for black workers in South Africa in relation to the sector.

Shifting Power Relationships in the World Economy: A Long Term Perspective

It is argued by many that position in the world economy is, for the most part, highly stable and resistant to change, at least across the macro-level “zones” that form a key element of world-systems theory. I suggest that this apparent static actually marks a considerable amount of change and discontinuity within the global economy. This paper takes a different perspective, focusing on power rather than position, to explore the extent to which shifting relationships between military and economic power, both within and across countries, reflects a changing dynamic with significant implications for the global economy. Following Kentor (2013), the balance of economic and military power within countries is charted at 10 year intervals from 1850 to the present. I then explore the impact of this changing balance of power on movement in the world economy.

KENTOR, JEFFREY* (Eastern Michigan University, jkentor@emich.edu)

The Structure of the Global Economy 1850-2000

This research develops a new typology of the structure of the world economy, based upon Charles Tilly’s (1994) theorization of the emergence of the modern nation-state system.

Following Tilly, this research conceptualizes the world economy as a four dimensional space of economic and military power. These dimensions include 1) size of the economy 2) capital intensiveness of the economy 3) size of the military and 4) capital intensiveness of the military. A typology is constructed that locates countries within this multidimensional space from 1850 to the present, utilizing fuzzy set methodology.

This typology allows us to better understand the shifting relationships among countries at any given point in time as well as changes over time, and provides new insights into the dynamics of the world economy such as economic development, inequality, and hegemony.

Insert Coin for the Next Level! Digital Games and the Idea of Regional Development for Less Developed Regions: The Case of Ankara Gaming Cluster

Digital Gaming sector is one of the fastest growing sectors in the world. It is estimated that the growth of the gaming market will reach to 85 billion USD which doubles the cinema and music. In Turkey, Gaming sector has boosted in Turkey with the beginning of new millennium. It looks very new and baby born sector. But, its development pace has been incredible.

The idea of regional development is now crucial concept for the developing countries in highly globalized world in which the competition has increased day by day. Obviously, the developing countries cannot catch the big ones in every field of development. Somehow, they have to develop their production capacities, productivity and knowledge level in specific fields.

Even if economic development processes are highly localised not all ‘locations’ are equally able to succeed in the global competitive environment. In fact, regardless the sector, the success of innovative activities requires a convenient environment which comprise of local social, political and institutional actors.

In the case of digital gaming sector, the only cluster is founded in ODTU Teknokent which is the biggest science park of Turkey. More than 15 enterprises are located in the same region. Besides almost all the stakeholders are located in the same region such as two big universities having M.S: Programme on Gaming and also public institutions funding gaming projects.

In this paper, the digital games sector will be discussed specifically. One of the main questions is that: Can digital games can be a proper factor which contributes to both regional and national development in developing countries like Turkey? Or in what sense such a growing sector can increase the socio-economic level of the country? The gaming cluster of Ankara is used as a case.

Globalization, Uneven Economic Development, Inequality, and Poverty: The Interactive Affects between Position in the Modern World System and Domestic Stratification Systems

Various data sources indicate that in the last decade(s) world poverty has decreased and global inequality between nations has diminished. However, within more developed countries and even among some of the more developed countries, primarily in the USA, inequality has increased dramatically while poverty has not gone down, or at times increased. From the 1970s, research focused on less developed nations, following the modern world system perspective, has shown that globalization has mostly led to increasing inequality and less long term economic development for most nations, and in some cases even higher poverty. There is increasing evidence that a large part of the increasing inequality in the USA, in contrast to many EU countries, is related to economic globalization.

Recent evidence has suggested that the impact of economic globalization has complex effects through various channels. Other data also show that less developed countries in Asia, in contrast to African and Latin America, are more likely to have more economic development, less poverty, and less growth in inequality from increasing ties to the global economy.

The paper summarizes some differences between the USA and EU nations that have led to the different outcomes of globalization. It focuses on data and several fields of work in four Buddhist countries in Southeast Asia (Thailand, Vietnam, Laos, Cambodia) to identify some of the causes of the impact of ties to the global economy which vary even within Asian countries, showing some Southeast Asian countries (such as Cambodia) share more characteristics with African or Latin American countries that are related to very uneven economic development, rapidly increasing inequality, and no poverty reduction.

This paper suggests how differences in domestic stratification systems are the key to understanding the varied impacts of economic globalization in both rich and less developed nations around the world.

Literacy Leadership and Accountability Practices: Holding onto Ethics in Ways That Count

Despite the rhetoric of schools serving the needs of specific communities, it is evident that the work of teachers and principals is shaped by government imperatives to demonstrate success according to a set of standard ‘benchmarks’. In this paper, we draw from our current study of new forms of educational leadership that are emerging in some South Australian public primary schools to explore the ways in which mandated accountability requirements are being mediated by principals in schools that serve high poverty communities.

Taking an institutional ethnography approach, we focus on the intersection of trans-local policy and the everyday work of one principal to show the nature of the impact that standards-based reforms are having on practices of literacy leadership, and how principals’ work is increasingly constituted by attempts to classify and measure their professional responsibilities. Institutional ethnography explores the complexity of such coordination in its emphasis on actions of people as they engage with the ordinary, usually textually organised, routines of their local work organisation. School reviews in the form of ‘validation days’, and ‘liter-
acy chats’ between a literacy leader and classroom teacher, are examples of such
texturally organised actions. We elaborate on these inescapable textual framings and
tasks faced by the principal and literacy leader, and those that they create and
modify in order to ‘hold on to ethics’.

We argue that while leaders’ and teachers’ everyday work is regulated by ‘ruling
relations’ (Smith, 1999), it is also organic and responsive to the local context.
We conclude with a reflection on the important situated work that school leaders do
in mediating trans-local policies that might otherwise close down possibilities for
engaging ethically with students and their learning in a particular school.

Rule Relations at Work: The Active and Occurring Text in the
Everyday Life of a Local School

In Australia, as in many western education systems over the last two decades,
discourses of accountability, transparency and performative have reshaped edu-
cation policy that in turn has reorganized the work of school leaders and teachers.
Increasing attention to the production, analysis and display of student achieve-
ment data has been one of the effects of this reorganization.

This paper presents some of the work undertaken by school leaders and teach-
ers in a school whose results suggest that it is succeeding ‘against the odds’. In the spirit of institutional ethnography we are interested in
the ways in which the educators’ everyday practices in this school are textually
mediated and shaped by a number of different texts and discourses, including the
discourses of accountability and transparency associated with the national school
reform agenda, and the discourses of professional learning, Vinitea and care that are
promoted locally.

The paper examines how intersecting layers of national, state and sector poli-
cies connect with and coordinate school leaders’ and teachers’ everyday prac-
tices. We trace the ways in which translocal rules are continuously reinterpreted
of a globalized education system reach into and regulate the activities of people
in local everyday settings. Our analysis uses the concept of the ‘active text’, the
as activating and occurring in a specific place and time at the same time coordinat-
ing and ruling from a distance. We examine in detail a sequence of the
creation and reading of assessment data by educators in one school and con-
sider how this codifies students and their learning experiences and articulates
with and coordinates teachers’ actual practices. In this process we begin to learn
from those involved how their everyday work brings into being institutional
processes that produce a particular institution’s standard sequences, its decisions,
policies and outcomes.

Opening and Closure in the Reproduction of Social Movements
and Organizations

This study examines the social mechanisms behind the reproduction of so-
cial movements and organizations based on Max Weber’s distinction of open
and closed relationships.

Max Weber’s concept of social closure played an important role in the
academic discourse about Marxist class theory in the 1970s and 1980s (Parkin 1972,
1979). Accordingly, the formation of classes is closely related to processes of so-
cial closure where a group of privileged actors monopolizes their access to cer-
tain resources (Murphy 1986, 1988). In this sense, the concept refers to a central
mechanism behind the formation of social collectivities. In the context of the dis-
cussion about the production of social capital, the distinction between opening
and closure was further developed and refined in the field of social network anal-
ysis. Burt (2000, 2005) demonstrated in several studies how processes of opening
(brokerage) and closure affect the innovative capacities of social networks.

This presentation aims at transferring the findings of past research on social
classes and networks to formal organizations and social movements. In the first
part, I will discuss the social mechanisms that produce closure: While the closure
of formal organizations typically depends on a continual process of decision-mak-
ing (Luhmann 1998), social movements reproduce the boundary between ‘us’ and
‘them’ through ongoing mobilization. In the second part, I will draw on net-
work analytical concepts in order to operationalize the opening and closure of
social structures. In the third part, I will show on the case of the energy market
in Germany how the mobilization of the environmental movement affected the
balance of opening and closure between electric power companies.

Back Home: The Reintegration of Return Albanian Migrants in a
‘Foreign’ Environment

In this paper we explore the Albanian return migration from Greece. Albanian
return migration is a neglected field of study and there is little empirical evidence
related to it.

In the beginning of the 90s, after the fall of communism in Albania and else-
where, Albania was the biggest exporter of migrants in the Eastern Block, judging
by its proportion to the general population. Over one fourth of the country has
lived or is living in a foreign country. Their main destination was Italy and Greece,
because of their geographic proximity.

Recently, there is a growing number of migrants that have returned home. Our
research is focused on the reasons of their return, the Greek debt crisis being one
of them. We mainly explore the difficulties of their re-integration in Albania, and
how they perceive themselves in the Albanian society. We call it a ‘re-integration’
because Albania is not the country that they left behind when they first migrated.
It is changed, pretty much the same way as other closed societies have done after
they opened their borders.

We also explore what was the reaction of their family in Albania and their
children with regard to their decision to return. What role did their family, their
friends, and in general the Albanian government, play during the process of their
reintegration? We include the role of the Albanian government because it has
been advertising itself as a facilitator and supporter for their smooth ad-
aptation.

KERR, ANNE* (University of Leeds, e.a.kerr@leeds.ac.uk)
All Change: The Social Life of Change Management in the UK
National Health Service

The UK NHS is going through what is typically referred to as an unprecedented
period of change, marked by key priorities of patient choice, innovation, quality,
innovation and the minimisation of bureaucracy. These processes are associated
with a plethora of paradigms, initiatives and tools designed to support the man-
agement of change, including strategies for developing the learning organisation
and the role of change agents, predictive change tools, models and processes of
personal change, and the rejection of ‘old-style paternalistic’ theories of organisa-
tion and culture.

This paper will explore the rise of the change management agenda in the NHS,
and the organisational and psychosocial theories and values which underpin it,
before moving on to consider how and why we might trace its articulation in
the practices of NHS managers, drawing on preliminary data from exploratory
discussions and observations with NHS managers working in a large soon to be
Foundation Trust Hospital in the North of England. We consider how and why we
might go about understanding the social life of change management in organisa-
tions by focusing upon manager’s practices and accounts of their experiences of
and rationale for change, especially the productive character of change mantras
and devices. We end with some critical reflections on the importance and the dif-
culties of tracking, understanding and articulating the activities and the actants
of change in organisations-in-flux and in managing the ways in which we ourselves
as researchers are enrolled in the processes of change we seek to study.

Graffiti with Chinese Characteristics: A Longitudinal Study
of Campus Graffiti in Northwest China

The current paper, utilizing an original data source of approximately 400 graffi-
ti markings from a single location in Northwest China taken in 2012 and 2013, is
a longitudinal content analysis study. The markings were collected from a co high
school/university campus in a predominantly Muslim region of China. The paper
engages in a descriptive summation of dominant themes found in the markings
and changes in these themes between the collection of original marking in 2012,
and the markings that were appearing in 2013. Analysis indicates that themes are
consistent with emotional issues experienced by youth embedded in transitional
and temporary social networks. Beyond a pure descriptive summation, the paper
further explores differences in themes appearing in its data compared to that
appearing in documented studies in other parts of China and in other parts of the
world.
Policing of Minorities and Police Accountability

In the European Union organizational structures, traditions and citizens’ trust in police differ substantially among the member states. The numbers of police per 100,000 population fluctuate between less than 150 to nearly 500, trust in police indicates an opposed relationship: the lower the numbers and the less money spend on police/ security the higher is trust in police (Kääriäinen 2013). Despite of all the variety there is a common challenge to police in Europe which is the relationship between police and minorities. Whether working migrants and their descendants (e.g. Turks in Germany), traditional resident minorities (e.g. Roma in Hungary) or asylum seekers/ refugees from civil war regions (e.g. Sub-Saharan Africans in Austria), survey results indicate that minority men and women are more frequently subjected to police controls than majority citizens. More often than majority citizens, persons from a minority background feel treated unfairly by officers during encounters with police. At the same time, the victimization rates of minorities are significantly higher while their levels of reporting to police is lower, and this includes instances when they become victims of hate crimes (Goodey 2013).

The European Union has commissioned research aimed at an assessment and an improvement of police-minority relations in the EU member states. The presentation will report findings of such a project (www.corepol.eu). This research project investigates police minority problems and best practice conflict resolution in a wider perspective of restorative justice approaches in Germany, Austria and Hungary.

KETTE, SVEN* (Bielefeld University, sven.kette@uniLu.ch)

From Topic to Problem. Organizational Mechanisms of Constructing Demographic Change

By referring to organizational theorists like Karl E. Weick and Niklas Luhmann, the proposed contribution starts from the assumption that for organizations demographic change is not a clear and unambiguous given problem, but rather a topic which might be regarded (i.e. constructed) as a problem-or not. Consequently, demographic change is understood as a non-instructive problem, which can be framed in different ways (e.g. risk, catastrophe, or standard problem). Based on the analysis of qualitative expert interviews that has been conducted in organizations of various types (e.g. business firms, health insurer, local government, social welfare organizations), I want to present preliminary results on the question: Which structural elements and which mechanisms are crucial for the organizational construction of demographic change as a problem?

More specifically, the proposed contribution wants to shed light on two aspects: first, it is asked as what kind of problem the demographic change is constructed by organizations. This refers to the organizational construct of demographic change itself and aims at identifying different types of constructs. Second, it is asked how the demographic change is constructed as a relevant problem. This refers to the process of constructing demographic change as a certain type of problem and aims at identifying crucial structural elements certain types of constructs depend on.

Obviously, this approach does not refer to a shifted objective and real social structural reality and its related challenges for organizations. Instead, it asks for the organizational role, which way actors pay attention to the phenomenon like an aging and/or declining population. To address this question promises a central contribution to understand why and how organizations by themselves do or do not refer to a shift in the social structure of populations at all.

Leisure and Life Satisfaction and Adjustment in Elderly People

LEISURE AND LIFE SATISFACTION AND ADJUSTMENT IN ELDERLY PEOPLE

Today, everyone is busy in his business. Every PEOPLE needs leisure to maintain his quality of life and satisfaction. Leisure helps the person to maintain his health. After retirement people have leisure. In old age the people feel relaxed and inferior as his physical and mental abilities deteriorate. The purpose of this study is to find out the relationship among leisure and life satisfaction, leisure and adjustment of elderly people in the context with socioeconomic status and psychological factors. In old age people have leisure but they may not have satisfaction because of poor economic conditions, lack of social support. In family people has social and emotional support but in old age home the get material support not emotional support. So it affects the person's life satisfaction. Life satisfaction is very important for adjustment.

120 elderly people selected from old age home and family who are busy and 120 elderly people selected from the same population but have leisure. They have been administered life satisfaction scale and adjustment inventory.
The present paper would like to focus on 1) to assess life satisfaction within low, middle and high socio-economic status. 2) to compare life satisfaction of elderly people living in old age home and in family 3) to assess adjustment of elderly people within low, middle and high socio-economic status. 4) to compare the adjustment of elderly people living in old age home and in family. 5) to compare leisure and life satisfaction of elderly people living in old age home and in family. 6) to compare leisure and adjustment of elderly people living in old age home and in family.

Key words: Leisure, life satisfaction, adjustment, support system

Use of Facebook As a Source of Political Participation Among University Students of Pakistan

Use of Facebook as a Source of Political Participation among University Students of Pakistan. The Internet has brought about remarkable changes in contemporary societies by increasing access to the information and allowing users to freely express their views to others. Various scholars consider the Internet as a new source of political socialization and a way to bring young people closer to the political process. The Internet facilitates this process in various forms. The use of Social Networking Sites (SNSs) is viewed significant in this regard. SNSs have stimulated the political debate among less democratized societies particularly after the event of Arab Spring. However, there is dearth of scientific evidence that how SNSs are linked with democratic and political participation among the users of developing countries. The following study intends to see that how Facebook, most accessed social networking site in the world, is being utilized by its users in Pakistan for political purposes and influenced its young users to participate in political process. For this purpose, an online survey has been conducted with students of various universities in Pakistan to find out the relationship, if any, between Facebook use and their civic and political participation. The preliminary analysis shows that there is an association between Facebook use and online and offline political participation. The preliminary analysis shows that there is an association between Facebook use and online and offline political participation. However, further inquiry is in process to see the effect of intervening variables to validate this relationship. The study will provide deep insights regarding the political use of Facebook and its influence on civic and political participation.

Islam and the Arab Muslim Refugees in United States

The studies of Arab Muslim refugees in the United States are just in the beginning; research is needed on wellbeing of families. Refugees have more challenges than many other immigrants because of what they have experienced before and after they arrive to United States. Politics, religion, and culture overlap to shape these refugees’ lives. Islam is one of the main factors that influence refugees’ resettlement and adaptation in their new home. New opportunities challenge traditional ways of living. The paper will draw on some of the findings of an ongoing research study exploring refugees’ religion continuity and change: fate, rituals, and practices, the role of religion in refugees’ resettlement, adaptation, and emotional support, types of challenges facing for being Muslim, and the role of Muslim communities in refugees’ resettlement. A qualitative approach was used to conduct interviews with female Arab refugees. Semi-structured interviews were conducted with refugees in the Middle Atlant ic area. Grounded theory was used to build useful theory about Arab Muslim refugees’ religion continuity. Findings emphasize the importance of taking a holistic approach in understanding Arab Muslim refugees’ needs which can lead to successful integration into the American society. Islam is more than religion; it represents a strong emotional support that ties the family together and helps them to assimilate to the new culture, and passing their religious values to their children is one of their priorities. In addition, it appears important for the well-being of refugees that they maintain their religious rituals while encouraged to integrate to the new culture. Social ties play an important role on family’s well-being and emotional support represent on other refugee friends, relatives, and American friends.

Participatory Water Governance through Gender Sensitive in the Indian Context

Equity in water, through gender-sensitization of developmental projects in the sector, is now recognised as an international agenda, owing to the commitments made in the Johannesburg Plan of Implementation, and declaration of ‘Water for Health’ as a human right. However, governments in developing countries have been found to be limited by social fabric existing at the community level, strongly held together by long-standing traditions and social structures. The study discusses issues and concerns with respect to effective participation of women in governance of water projects, and provides case studies/examples to illustrate the practical implications of success(ess) and failure(ess) to engage women for decision-making.

The study concludes that efforts that penetrate into the existing social structure to built opportunities for a reallocation of power amongst different groups of people are required. Participatory appraisal of projects, inclusive of women, is a key for identification of appropriate entry points for achieving the above objective in water sector. Several intra-gender differences however, impede success of programmes that consider women as a homogenous group.

Inclusion in Continuing Education and Its Unequal Accessibility: An Empirical Analysis for Able to Work Young People in Siberian Region

The data of two surveys conducted by us in Novosibirsk Oblast (in 2012 the economically active inhabitants of semi-urban settlements from 16 to 45 years old were represented) and N=35; in 2009-2008 it concerned young workers of urban, semi-urban and rural settlements, N=778 demonstrate that in whole a mass demand for further education among the adults has been observed. There is a special need in higher and second higher education, as well as in the courses/programs of supplementary professional education (SPE). The largest need in additional education, professional training and retraining were revealed among those employees whose work is connected with information use or innovative activities (as well as interest in them).

Anyway among all young workers educational activity of different kinds (real or projected) is realized as the most productive means for achievement of fuller self-realization in work. So, for this purpose they prefer increasing of their educational and qualification level in the major profession (41% of answered), also increasing of the general educational level and mental outlook (28,7%), than change of a place of work (8,8%), change of profession or kind of activity (9,8%) or even widening of an area of independent decision-making (15,6%).

However the discovered educational needs essentially surpass real involvement of the adult population in the continuing education. It was revealed the unequal accessibility to SPE services. Thus there is a noticeable part of employees (42,2%) and the unemployed (69%) who never passed before through professional training or retraining. The employees who are available to use a branch system (42,2%) and the unemployed (69%) who never passed before through professional training or retraining are used for a solution.

The survey data show that right-wing ideology becomes more popular in Ukraine. Far-right party Svoboda, promoting racist, xenophobic views, on the parliamentary elections in Ukraine received 10.44%, and was elected in the Parliament for the first time (in the previous elections of 2007, it received only 0.76% of the votes). One of the most unexpected findings of the Ukrainian national exit-poll 2012 is that individuals with higher education have greater propensity to vote for right-wing party. Has far-right ideology such strong support in Ukraine or are there other reasons for this success? The analysis is based on the electoral statistics and nationally representative data about the well-being, educational status, ethno-linguistic affiliation, electoral history, basic social and political attitudes, and protest intentions of supporters of the right party Svoboda in Ukraine.

KHAZAIE, RAZIEH* (Shiraz University, gkhazaie@gmail.com)

A Challenging View on Religion-State Relationship: Iranian Case

It's obviously documented and historically recorded that religion has always been a strong factor in Iranian society, and is embedded in social/everyday life of Iranian Muslims. Most of researches also explore that Iranian Muslims strongly believe in spirituality as well as rituals although the states might have followed secular policies in public spheres in past decades. Since the victory of Islamic Revolution in 1979, the state was formally charged to diffuse religious believes over the society and to control people to follow religious rituals and Islamic duties in public sphere as well as the private space. These new policies made the state to intervene in legislating process regarding the Islamic believes to make people to follow Islamic rules in public sphere and do rituals like prayers, fasting, Hijab etc.

But what's the true reality? A survey on the basis of data collected in 2010-2012 in a few of important vital cities in Iran tries to find answers to this question. Due to the findings of this research it's suggested that although the state is to make people do rituals in public sphere and all possible efforts are done by the state, media, police etc to convince people to follow the state Islamic rules (i.e. not eating/drinking in fasting days in public spheres) -otherwise they will be punished- it has not lead to increase in doing religious rituals in their private everyday lives.

This research explores that state's pressures on people to do rituals have been less successful although it suggest that Iranians are strongly religious and strongly believe in spirituality yet but in a personalized way.

Keywords: sociology of religion, religious legislation, religious status, public sphere, Iranian Studies.

Artistic Communities: Strategies and Tactics of Creative Products Promotion in Petersburg Market of Contemporary Art

This paper considers the strategies and tactics that young Petersburg artists use to promote their artworks and provide communicative resonance among them. It presents the results of a research project conducted in accordance with the strategy of multiple case-studies: four artistic communities of different scale, structure, integration grounds, ideological orientation, professional background, forms of spatial embeddedness and artistic style were selected for analysis. In the course of data collection, a wide range of field research techniques such as
in-depth interviews, participant observation and qualitative analysis of texts was applied.

The empirical data show that under the conditions of deficient sponsorship and information support, artistic success in Petersburg largely depends on the artists’ constant self-promotion efforts (participation in competitions and collective projects, applications submission, dissemination in Internet). By accumulating material, informational and reputational resources of their members, art-communities make convenient platforms for artistic self-presentation and development both in and beyond the local market. Responding to the specific noneconomic logic of the market, where symbolic recognition and before commercial success, communities produce unique strategies of defining target audiences, embedding creative process in urban contexts, choosing legitimate exhibition sites, opposing themselves to other artists and art-groups. Community membership helps artists cope with the risks of disintegration, isolation and insufficient information exchange impermissible for the small and highly competitive market of contemporary art in St. Petersburg and balance between the margins of creative products unoriginality and recognizability. Thus, artistic communities can increase symbolic capitals of individual artists serving as a peculiar kind of social lift and constituting one of the major forces of the social construction of artistic reputations.

Social Effects of Neoliberal Policy in a Post-Soviet City: Urban Space Contestation Revisited

With the transition from Soviet state-planned economy to post-Soviet market economy, neoliberal city policy has become central for urban planning and (re) development in Russia. Subject to this policy, contemporary St. Petersburg experiences impetuous commodification and aestheticization of urban space and, consequently, its rapid gentrification. Alternative views on how urban space should be organized make citizens consolidate and buck against the decisions of elites. This paper considers the processes of urban space contestation by strong and weak advocacy groups in a neoliberal post-Soviet city. It focuses on six research cases embracing struggles of local communities against aggressive urban (re)development in St. Petersburg (spot construction, demolition, renovation of historical areas). To analyze the decisions on urban futures taken by city administrations and developers, we use the theories of urban political regimes (Stone, Molotch, Logan). To describe the resistance of citizens to imposed urban transformations, we apply theoretical frames developed by Levebvre, Scott and de Certeau.

However, our empirical data show that the abovementioned theoretical backgrounds have to be adapted to the local context of St. Petersburg where struggles over urban space unfold under the conditions of total uncertainty: coexistence of multiple property regimes, constant adjustment of legislative frameworks, insufficiencies in the decision-making process performed by city authorities and investors. For instance, pursuant to growth machines theory, coalitions of authorities and developer companies are fashioned in Petersburg, but it is only true for big businesses whereas smaller enterprises often suffer damage from inconsistent authoritative decisions. Meanwhile, local communities always suspect developers’ exchange in the urban area. Spot construction, demolition, renovation of historical areas. To analyze the decisions on urban futures taken by city administrations and developers, we use the theories of urban political regimes (Stone, Molotch, Logan). To describe the resistance of citizens to imposed urban transformations, we apply theoretical frames developed by Levebvre, Scott and de Certeau.

Protecting The Health Consumer – Health Capabilities and Collective Voice Versus Patient Choice

‘Patients’ are increasingly seen through the lens of the ‘health consumer’. Non-communicable diseases and injuries are increasingly predominant, while a rejuvenated interest in the ‘social determinants of health’ and health inequalities re-locates individual biology and agency within a larger context of physical exposure and social conditions, highlighting longer chains of biomedical and social causal factors (Venkatapuram, 2011, 33, CDSH 2008). This contrasts against discussions which view patients as individual health consumers, leveraging self-efficiency to achieve societal health outcomes. The health capability paradigm offers an alternative perspective on individual health agency, scientific and professional judgement, and collectivist health norms (eg Ruger 2010, 141–142). This paper advances a capability perspective on systemic health protection and argues for capability-oriented health system reforms (eg Thai Health 2013) which support and vindicate the principle of health protection. The discussion is illustrated with respect to well-known occupational and environmental health hazards such as asbestos that are beyond the health agency of individual ‘patients’ (Kho’ and Kulsumboon, in progress). The goals are twofold – to prevent and decrease risk of exposure and to increase provision for those who have, or may in the future, become ill or disabled through exposure. The discussion points to the importance of protection as a systemic attribute in health governance. It focuses particularly on collectivist and solidaristic consumer action and its role in participatory deliberation through organized civil society channels.

The theoretical discussion integrates reflexive health governance and the capabilities approach, linking normative, substantive and procedural claims for health justice and rights with theories of health governance. A ‘joint scientific and deliberative approach’ can provide a means to guide decisions and bring together normative substance, scientific evidence and procedural decision-making to achieve broader health system development and reform towards more legitimate and just forms of shared health governance (Ruger 2010, 183).

Challenges of Poverty and Inequality in the Arab World

Challenges of Poverty and Inequality in the Arab World

Despite spectacular economic rise of some of the Arab Gulf countries, poverty remains a persistent challenge in the Arab World. Social inequalities persist as new inequalities overlay old structured ones in a number of Arab countries. Department of Statistics, Ministry of Planning and Development, Arab League, 2008. The social safety net, social inequality is often deepened by the rapid social transformations. Historically formed structured inequality often combines with new poverty to produce social turmoil. Social inequality and poverty played a critical role in the waves of social uprisings popularly known as the ‘Arab Springs’. There are intra and inter-regional variations in poverty in the region which help shape not only internal political outcomes, but also impacts external relationships. Some of the poor countries in the region depend on their rich neighbors to meet ends meet, while others look beyond the region for facing the challenges of entitlements. Such external relations play an important role in shaping the geo-political alignments in the region. Intra-Arab regional migration too plays an important role. Remittance earnings play a critical role in meeting the challenges of poverty in some of the countries. However, social upheavals tend to disrupt patterns of migration with far reaching consequences in the intra-Arab world relationships. The paper will provide a critical survey of the state of the play of poverty and inequality in the Arab world and try to chart various social and political implications of structured inequality and poverty in the region.

Gender Research in Japanese Sociology: Complicit or Critical?

Gender Research in Japanese Sociology: Complicit or Critical?

The impact of feminism in sociology has been examined quite thoroughly in the US and Britain but comparable analysis has not been undertaken in Japanese sociology. The present paper endeavors to fill this gap, but less to assess the impact of Japanese feminism on sociological research and society than to examine the type of gender research published in a mainstream sociology journal, to obtain a picture of the nature of gender knowledge that is produced in sociology, and specifically, whether gender research in sociology raises questions about the way sociology is practiced. I analyzed all four issues per year from Volume 40 (1989-1990) to Volume 61 (2010) of the official general sociological journal published by the Japan Sociological Society, Japanese Sociological Review (Shakai-gaku ku Hyoron), with a total of 558 theoretical and empirical articles. All articles were coded for topic/subarea, geographic focus, if relevant, methodology, and also gender, affiliation, and professional status of the author(s). In addition, the text of the gender-related articles were read and coded for major claims or findings and reference sources. Preliminarily, the analysis shows that most gender-related articles are on the topic of family and marriage, body and norms, intimacy and sexuality, and social stratification. The next popular topics are labor, employment and organization, and social network. Only two such topics are central to sociology represented by this journal and indicated by the number of publications. While 59 articles out of 558 articles may represent a fair number from any subfield in a highly diversified discipline, a closer look reveals a different picture, one that could suggest a marginal status. Results of further analysis will be presented at this ISA.

Effects of Women Employment on Family Integrity (Case study: Comparative Teachers with Housewife in North of Iran)

Identifying the effects of women's employment has contributed to the strength and health of the family, and the research in the effects of women's employment has high scientific and social importance and necessity. The purpose of this study is to identify the effect of women's employment in Integrity of the families. The research method in this study is survey. Population includes of 400 people of employees (teachers) from 25 to 49 years as a test group, as compared with the same number of housewives as control group. Sample size which were determined by using Cochran formula is 200 that includes 100 of the employed women and 100 of similar housewives women. Samples selection is down, using random sampling. Method is according to systematic way in employed group and stratified method appropriate to unemployed groups. The tools of data collection was questionnaire and its validity was using a content validity of face validity, using and reliability using Cronbach's alpha coefficient (0/84) has been approved. For data processing spss software and for data analyzing statistical analysis appropriate in level of variables measurement such as Pearson, Spearman, the mean comparison (t.test) and analysis of variance (ANOVA) was used. The results of the research showed that the Integrity of family among housewives women is higher than the employment groups. More results show that whereas the income has positive relationships with Integrity of Family, the education have negative effect on Family Integrity. Discuss show that the result of this study have been protect with the result of Alaeddini (1993), and André Michael (2003).
in the capitalist world-system. No wonder, many people distrust authorities and rarely participate in civil actions. Thus, there is a huge gap between awareness of unbearable situation and passive approach. Yet, people should know that there is an alternative: an emancipatory social science, which calls on active participation for implementation of desired change. In the real utopias approach of E.O. Wright that offers real alternatives should be desirable, viable, and achievable. And civil activists who plan changes actually need and lack knowledge about possible models of empowered democracy and techniques of implementation, which proved to be efficient in real utopia cases around the world. And this study is aimed to provide such knowledge. As far as democratic initiatives implemented by authorities have a profound influence on society as a whole, it is reasonable to give priority to civil activism in political realm through symbiotic transformations using the state. Therefore, the research question is the following: what would be a comprehensive real utopia model of desirable, viable, and achievable participatory democracy? The theoretical studies, and qualitative expert interviews provided grounds for an integral real utopia model of efficient participatory democracy, relevant for communities and even larger societies. So far, the perspective change in democratic governance should include local community initiatives, participatory budgeting, referenda, free and fair elections, citizen assemblies, electronic democracy, and efficient control of work of authorities. For implementation civil activists should be guided by their emancipatory values and objectives, take into account theoretical implications, consider experience of the existing real utopias, mechanisms of implementation, effects of contexts, collateral institutions, unintended consequences, positive and negative feedback processes, and intermediaries of implementation.

The findings are applicable to semi-peripheral, peripheral, and even core societies.

World-Systems Approach to Global Inequalities in Effects of Individual Activism on Subjective Well-Being

The world is experiencing global crisis, yet proactive individuals can promote social change. Still, opportunities for activism and its impact are unequal in the modern stratified world-system. Therefore the following research question arises: what are the differences in degrees of causal influences among proactive orientation, individual activism, personal achievement, and subjective well-being between countries of core, semi-periphery, and periphery? The preceding theoretical implications and empirical findings by M. Kohn, S.K. Parker and C.G. Collins, M. Sekigama, N. Argyre, C. Welzel and R. Inglehart, L. Beer and T. Boswell, T. Kitschou were considered. The posed hypothesis is the following: degrees of causal influences among proactive orientation, individual activism, personal achievement and subjective well-being are higher in core societies than in semi-peripheral societies, and in semi-peripheral societies are higher than in peripheral societies. The data set of World Values Survey 5th wave (2005-2008) with the sample of 49 countries with up to 69,381 respondents were used. Structural equation modeling and multiple group analysis in MPlus has been performed. In fact, the hypothesis was confirmed partially. It was proven that positive influence of person's individual activism on subjective well-being is the strongest in the core, is weaker in the semi-periphery, and is even negative in the periphery. However, it was found that there are relatively small differences between degrees of influence of individual activism on personal achievement. This finding signifies that overall human actions do lead to accomplishments, regardless of structural conditions. Moreover, it was revealed that the degrees of influence of all other constructs are surprising; reversely: they are stronger either in the semi-periphery or the periphery and are the weakest in the core. The highest degree of influence of proactive orientation on individual activism and personal achievement in the semi-periphery testifies that people with proactive orientation do can bring change there.

The Variant Activity of Young People in Precarious Transitions in Late Modern Japan—Based on the Interviews with 51 Young People

In recent Japan, young people have experienced prolonged and complex transitions from school to work, have been forced to work in precarious jobs, or faced the risk of unemployment, poverty, and social exclusion. The Youth Cohort Study Japan (YCSJ) conducted by The Japanese Educational Research Association is a five-year panel survey that contains 1687 samples aged 20 (first wave in 2007) and 891 aged 24 (fifth wave in 2011). Our analyses of YCSJ data have indicated the characteristics of the transition from school to work in recent years, especially its precarious processes and the factors (familial and educational background, social capitals, gender bias, etc.) which have influence on the differentiation of transitional trajectories. Then we have tried to describe the activity of youth in precarity based on qualitative analyses of interviews with those young people who have participated in our five all waves and assent to be our interviewees (we interviewed with fifty one cases). Through these analyses, we aim to show some variant types of precarious transitions. And we also suggest how young people overcome or negotiate their difficulties.

Racial Identity and Psychological Well-Being Among African Americans and Whites

Research over the past few decades finds that African Americans have persistently poorer psychological well-being than whites. African Americans score lower than whites on happiness, life satisfaction, and trust in people. In contrast, African Americans' mental health (e.g. as measured by depressive symptoms) is comparable to or better than whites', despite African Americans' lower socioeconomic status and greater exposure to stressors. Scholars have speculated that a strong, positive racial identity may help explain African Americans' good mental health, based on findings that the two are associated. If so, it means that racial identity and psychosocial well-being are stronger for African Americans than whites. We addressed these questions using data on African Americans and whites from the 1996-2012 General Social Surveys. We investigated how racial identity is related to psychological well-being (happiness, life satisfaction, and trust in people). Based on social identity theory, we examined two distinct dimensions—identification with (closeness to) one's racial group and ingroup biases (negative evaluations of ingroup versus outgroup members). On average, African Americans identified with their group more than whites did, but whites evaluated their group as relatively more intelligent and hardworking than African Americans did. Stronger racial identification was associated with greater happiness, life satisfaction, and trust in people, equally for African Americans and whites. Contrary to prediction by social identity theory, favorable ingroup evaluations at an outgroup's expense were sometimes associated with poorer psychological well-being. These effects of ingroup bias did not differ by race. We discuss what the findings imply for social identity theory and for how racial inequality influences psychological well-being.

The Role Of Risk In Child Mobility Decisions -- Empirical Evidence From Benin

Child mobility is still common throughout the West African region. This has been academically approached under the headings of child fostering, child migration, child labor and trafficking. Poverty is considered a main driver, alongside social networking and skills matching. Recent empirical work looks at the role of shocks to child mobility. Yet, it has been hypothesized that vulnerable families do not necessarily wait for a shock to occur, but might relocate children as an ex-ante strategy. The proposed paper looks at the role of risk in the child mobility decision with data from a fertility based survey of 3000 rural households in Benin, a country known for high child mobility rates. The survey allows for comparing children living away from parents, their schooling status and purpose of leaving. The 2012-survey covers three important areas: poverty, exposure to the massive floods of 2010 (shock), and the household head's level of worry about not being able to provide for his family the next 12 months (risk).

The regression show controlling for social and demographic factors, that perceived risk correlates substantially and systematically with child mobility. Poverty and shock, on the other hand, do not correlate at a statistically significant level. This interestingly contrasts with the correlates of the schooling decision. While poverty, as previously established, correlates negatively with schooling, risk and shock do not. Focusing only on children who have left and are not in school, both risk and poverty correlate with the mobility outcome.

The results support the notion that child mobility forms part of an ex-ante risk management strategy for families at risk. At the policy level this supports cash-transfer type social policy interventions, supporting findings from South-Africa where even small - but predictable incomes - like pensions and child benefits - have produced positive effects on child outcomes.

Normalizing Precarity? Youth Unemployment and Employment Instability in Poland

In the last decades, there has been a heated debate concerning the consequences of employment flexibility in many European countries. Concerns have been raised that young people do not have stable jobs, are underemployed, and are exposed to precarious working conditions. Substandard employment is concentrated among young school leavers. In this context, Poland is an interesting case: although the Polish economy has done quite well throughout the current economic crisis, the rates of youth unemployment and temporary employment remain disturbingly high. Precarity for young workers appears to have become the norm, with more than 25% of economically active 15-24-year-olds in unemployment, and 66% of employees working fixed-term (EUROSTAT, 2012). This paper presents the results of an analysis of the distribution of various aspects of labour market precarity for the Polish youth: not only is there a temporary employment, but also unstable employment histories signifying a weak attachment to the job market. The quantitative analyses are conducted on subsamples of the youngest cohorts of respondents (aged 21-25) from two most recent waves of the Polish Panel Survey (POLPAN), 2008 and 2013. POLPAN data include detailed information on the respondents’ employment history, enabling a dynamic analysis of young peoples’ early labour market trajectories. The quantitative results are supplemented by a qualitative analysis of in-depth interviews, reconstructing the ways in which the young define their own experiences of unemployment and precarity. Paradoxically, it appears that even those young respondents who are employed do not regard their situation as satisfactory, psychological coping mechanisms lead them to legitimize existing labour-market inequalities.

What Does the Word of “Joshi-Ryoku” Mean in Terms of Gender in Japan?

Recently the word “Joshi-ryoku” has become very popular on the mass media and daily life in Japan. It seems a counterpart of the word “girls’ power” in the English speaking world, which means girls’ empowerment, ambition, or strength. But Joshi-ryoku implies a more restrictive sense. The meaning of this word “Joshi-ryoku” is so complicated, and therefore, examining the usage of the word helps us to find the complexity of the modern Japanese culture and society, especially from the viewpoint of gender.

In the 1970’s, the Japanese society has experienced the changes in many points: The economy went into recession and improved; a regime change occurred; social unrest never ceased. The movements by the sexual minority people are rising, while women’s movements are stagnant and cannot achieve a change of generations.

The word “Joshi-ryoku” came into use in this social situation. It means the ability that women must learn in any age. The specific meaning changes in context, it change of generations.

In this paper, the picture of the word “Joshi-ryoku” will be considered as its argumentative expression.

Family Caregiving and Stress Processes: Son and Daughter Caregivers in Japan

In Japan, caregiving of elderly parents has been traditionally the responsibility of the family; the wives of eldest sons, or daughters-in-law of the elderly, typically provided care for elderly parents. However, the profile of family caregivers has been changing in the past few decades. One of the major changes is the increase of male caregivers. Presently, about 30% of primary caregivers are sons or husbands of the impaired elderly. A growing concern is that these male caregivers may have different types of difficulties or stress from caregiving, compared with their female counterparts. For instance, a recent national survey on elderly abuse reported that more than a half of the abusers are male caregivers. Evidence suggests the possibility of gender differences in stress processes. However, most previous studies are on female caregivers, and research on gender differences in stress processes is very limited in Japan. Are there gender differences in the stress processes of family caregiving? This study seeks to address this question by drawing on stress process theory (Pearlin et al. 1990). I analyzed data from a survey conducted in 2011 on son and daughter caregivers aged 40 to 64 years old, who take care of their elderly parents at home as primary caregivers. The analysis results show that the stress proliferation processes of son and daughter caregivers share many similarities in terms of pattern, whereas certain differences appear to reflect the gendered nature of Japanese society.

Dimensions of Safety in the Process of Mental Health and Illness. Empirical Results and Theoretical Framework

Feeling safe in the world is regarded as a basic human need which Maslow placed at the second level of his human need hierarchy directly after basic physical survival. Consequently, lack or loss of safety in the most general sense is considered as a major risk factor for the impairment of human well being and the development of mental disorders. Dimensions of safety which have been identified as relevant for mental health are personal relationships, economic living conditions and environmental circumstances. Despite the fact that the relevance of these dimensions of safety for mental health has been confirmed in an increasing number of studies, there is still lacking a common theoretical framework that allows a comprehensive understanding of the interrelationships between individual and environmental aspects of safety in the etiology of mental disorders.

In this presentation the recent results of empirical studies on the impact of the lack or loss of safety on mental health will be discussed with regard to their contribution for the understanding of the interaction between personal characteristics and environmental hazards in the development of mental health and illness.

The Sociology of Work and Factory Sociologists in Communist Poland

In Communist Poland the sociology of work was one of the most prosperous social science branches. It was perceived as particularly important due to the Marxist emphasis on the category of work, as well as its supposed significance for national economy. It might have been even perceived as a dream come true by those who imagined social science as a scientific guidance for the practice. Besides academic field, in which the branch was hindered by imprecise definition of the very subject of its studies, normative bias, censorship and, mostly, self-censorship, the sociology of work spread to big socialist enterprises which employed professional sociologists in 1960s and 1970s. Their role was significant also due to the role of the workplace as the backbone of Socialist civil society. As a result, new occupation and potentially interesting field of intellectual activity opened for young sociologists.

The paper will base on period literature dealing with factory sociologists - limited yet existing - as well as on archive resources and interviews with ex-factory sociologists. Due to fragmentary data it will not probably be possible to describe typical social profile or career paths of factory sociologists, so the paper will concentrate on those cases in which some more detailed biographical data is available. The study will aim at describing their professional role which was by no means clearly defined, position in the factory structure/hierarchy - somewhere in between the management, Party secretariat and labor unions - as well as their expectations and future career plans. It will also refer to their professional aspirations and career paths. A special concern of the paper will be intellectual ambitions of factory sociologists and their relations with the academic field from which they were rather isolated, what in turn caused their constant dissatisfaction.

Medicalization in Turkey in the Context of the “Health Transformation Programme”

There has been a growing interest on the effects of health care systems on medicalization in particular national contexts. This paper contributes to this literature by focusing on the case of Turkey, where medicalization in the form of increasing consumption of medications, use of health care services and diagnosis of a number of diseases goes in parallel with the health reform process that started a decade ago aiming to radically transform the provision and financing of healthcare services. Special emphasis is given on how policy measures such as separating purchasers from providers, encouraging competition among public providers, implementing performance-based payments, and combining public and private health care services affect medicalization by creating financial and policy-based incentives for physicians to alter their diagnostic and treatment behaviors. Additionally, the arguably positive and negative impacts of medicalization are discussed with reference to recent statistical data including population health indicators, patient satisfaction, outpatient/infant per patient ratio, consumption of pharmaceuticals, the number of screening tests performed and the number of doctor visits with a particular focus on indications of overdiagnosis/overtreatment.

Social Capital, Social Integration, and Suicidal Thoughts Among Korean Youths

Social Capital, Social Integration and Suicidal Thoughts among Korean Youths

Abstract

The focus of this research is to examine some of the key factors that influence suicidal tendencies among youths in Korea. The teenage suicide rate in Korea has been one of the highest among all OECD nations, attracting the attention of scholars and policy makers alike. In this study, we examine in particular how and to what extent measures of social capital are associated with having suicidal thoughts, ceteris paribus. In a Durkheimian tradition, medical sociologists and social epidemiologists have increasingly relied on the concept of social capital in explaining individual and cross-national health inequality. Much of the extant scholarship focuses on adult populations in the context of Western developed economies. Based on the analysis of the Korean Youth Panel Study, a government-funded multi-year research project, we shift the analytical angle toward a vulnerable population that has not received much academic attention. A number of social capital indicators are conceptualized and measured in analyzing the roots of suicidal tendencies among Korean youths, specifically participation in voluntary organizations, friendships, network size, frequency of interaction with close friends, quality of network members (number of “delinquent” friends), degree of intimacy with parents, and neighborhood trust/fear. Hierarchical linear modeling is used to examine the psychological health effects of social capital simultaneously at individual and contextual (neighborhood) levels. While controlling for a host of socioeconomic and demographic variables, we find that voluntary organizational membership, intimacy with parents (in terms of time spent together), frequency of interaction with close friends, and neighborhood fear are significantly related to having suicidal thoughts. We offer broad theoretical discussions and implications for the social capital literature based on our findings.

Biopolitics of Depression in Korea

Abstract

Biopolitics of Depression in Korea

As Korea has experienced rapid modernization, patients of depression have dramatically increased for the last 50 years. This has led, tragically, to a rapid increase in the rate of suicides. This study attempts to understand the reasons...
why Korea as one of the most successful countries in modernization has shown such high rates of depression and suicide. It also attempts to analyze the process of medicalization of depression in Korea and how the doctors and patients accept anti-depressants as a cure for depression.

Neoliberal Individualization and the Modified Familism of Korea: The Case of Unmarrieds in Their 30s

As one of countries with the record low fertility rate Korea has the sharp concern in the unmarried among youth. The explanations on the issue has been given to the causes such as economic condition or individualism among them, which seem to be insufficient. This article aims to analyze the marriage attitude among the unmarried people in their late thirties focusing on the complexity of their family value. That purpose is to explain the characteristics of the individualization in intimacy in the times of the late modernity relating with the strong familism and the kinship system of the patrilineality privileging the first son. The analysis on the life course is also the main theme in this research. The economic crisis of Korea under the IMF-led bailout programs started to be intensified from the year of 1998 when the cohort group of birth in 1975 started to graduate from the universities. So this article selected 19 unmarried men and women from the target group, who were thirty eight years old.

The result shows the great gender differences in the narratives of family value. Men interviewees tend to tell the sons’ responsibility of the care for the parents and the role of the male provider, while the women as well as to the consumers by the self and making the lives of own. But the sexual lives of both seemed very limited, and their emotional ties were commonly connected with their parents, especially with mothers. Their living arrangements were never separated from their parents’. So we can call the recent changes among them as ‘the family-oriented individualization’

Korean Wave As a Hybrid Subculture

The Korean wave (Hallyu) refers to the significantly increased popularity of Korean drama and music around the world. Hallyu swept through Japan, China, Taiwan, Vietnam, Philippines, Thailand and other Southeast Asian countries, and then to all over the world. Now, Hallyu has expanded to include the popularity of any 'Korean subculture' including cuisine, clothes, cosmetics and language, etc. ‘Gangnam style’ by Korean singer ‘PSY’ has recently acquired more than 1.7 billion views on Y-Tube in the world within a year. This paper is dealing with the rise of the Korean wave (Hallyu), reasons of success and the current situation of the Korean wave both in the positive and negative aspects, and then it concludes with some sociological implications for a hybridization of East Asian culture. This study claims that Hallyu is the fruit of hybridization through digesting the influx of culture from Western and Asian sources in Korea. Hallyu in turn builds a hybrid subculture that appeals in Asia based on a long tradition of cultural interactions among other countries.

Organizing Independent Contractors in South Korea: A Case of Insurance Agents Unionizing

The purpose of this study is to understand limitations and possibilities of organizing independent contractors by focusing on insurance agents in South Korea. Among various types of precarious employment, insurance agents are an exemplar case of independent contractor jobs. Since the 1997 crisis, the private insurance industry has shifted market risk on to workers by employment externalization in the form of independent contracting as well as the introduction of variable insurance scheme. The labor standard law does not treat insurance agents as workers and most of insurance agents are not affiliated with labor unions. As a result, insurance agents are outside labor protections. Under this context, insurance agents attempted to organize their own union, Korean Insurance Agents Union (KIAU), in early 2000s, and form a branch of Korean Finance and Service Workers’ Union (KFSWU) in 2004. However, the KIAU lost rapidly its membership since the mid-2000s and have failed to revitalize itself until now. This failure might be attributed to some external and internal factors. External factors include the denial of worker status by the courts, the absence of labor market regulation by the government, and crackdown on union activities by major insurance companies like Samsung. Internal factors include the absence of strategic approach on the side of the industrial union (KFSWU), individualized job characteristics of insurance agents, heterogeneity of the working conditions between regular workers of insurance companies and insurance agents. In recent attempts to re-organize insurance agents, the role of industrial union is crucial factor. Some programs turning non-regular workers into regular jobs are implemented by the KFSWU through collective agreements; however, the union focused on directly employed non-regular workers, like fixed-term workers. Moreover, the KFSWU’s strategic and long-term support was not given to insurance agents, because of its internal constraints and the lack of preparation.

Selecting Between Chosenjin and Zainichi: Analysis on the Zainichization Processes of Koreans in Japan

The Zainichi Koreans were brought to Japan during the colonial period and so this foreign group has the longest history of foreign residence in Japan. But success of ethnic identity formation is not easy in a country that determines nationality by jus sanguinis and so many third- or fourth-generation of ZainichiKoreans have some trouble living as a ‘Korean’. Even though there are lots of studies that address their ethnic identity troubles, many of these focus on the discourse of intergenerational diversification.

Based on Constructivism of Cornell & Hartmann(2007), this paper focuses on the media environment as a field of constructing ethnic identity. Analyzing the influences of exposure to the ‘Korean Wave’ and ‘abductions by North Korea’, the representative problem in Japanese mass media, this paper look into the interpretations and responses of Zainichi Koreans through their selection processes of group appellation in everyday life.

In this paper, looking into the survey and in-depth interview data, which I have conducted after 2008, I will also attempt to analyze the relation between the using and selecting group appellation of Zainichi Koreans and the changing of ethnic identity of them.

These approaches would bring light to new aspects not only on the current Zainichi Koreans’ identity but also on how factors, like as Zainichization, affect changing ethnic identity in host society.

South Korea’s Developmentalist Worldview and Debates about Its Modernity

South Koreans make a Eurocentric hierarchy between countries according to the criteria of their developmental discourse, the discourse of seongnjung (advanced country). In this discursive framework, the identity of South Korea tends to be constructed as a country near seongnjung or “the threshold of seongnjung” (“seongnjung munteok”), which provides both senses of superiority over hujinguk (backward country) and of inferiority over seongnjung. With this intermediate identity, Korea is still under the project of modernization, actively pursuing the status of seongnjung as its historical national mission. This paper aims to provide a critical review of the debates about Korea’s modernity in the light of its dominant developmentalist worldview, the discourse of seongnjung.

International Policy-Translation Among Precarious Women Workers Organizations: Japan and Korea in Comparison

It was Japan that established the women-only labor union, which was influenced on learning and adopting the main idea of organizing precarious, non-standard women workers from the model of SEWA (Self-Employed Women’s Association) in India, on the one hand, and from the cases of community labor movement in Japan, on the other hand. Korean Women Workers Association (KWWA) learned the experiences of Women’s Union Tokyo (WUT) in Japan, and established a women-only labor union, which is Korean Women’s Trade Union (KWTU) later. On the contrary, Women’s Union Tokyo learned the way of organizing and its role of KWWA, and applied to establishing the Action Center for Working Women (ACW2).

By introducing the concept of policy translation, this study searches for understanding the different strategies and results in organizing and reflecting interests of precarious women workers in Japan and Korea. The term of policy translation will be adopted for describing the process of moving policies, programme, ideas or institutions from one time and space to another. Policy ideas may travel via individual and organizations. It helps to capture the travel of ideas and their modification at the organizational level and helps to analyze the history of women’s organization, the labor movement discourse, and the drivers in the process of policy influence.

The effective performance of KWTU and KWWA attributes to the organizational strategy of the movement leaders, the solidarity condition within the civil society, and the rise of the new cultural context emphasizing the women rights in the society. These experiences of the two countries show that policy-translation can occur
and matter within labor movement, and that its effectiveness can vary according to the strategy, environment and context.

Implications of Work-Family Policies and Anti-Discrimination Policies on Gender Occupational Inequality: A Cross-National Study

Whereas the impact of the welfare state on the quantity and quality of women's employment is widely studied, little research has further investigated the ways other (non-welfare) types of policies affect women's occupational opportunities. In this paper, I attempt to explain the level of gender occupational inequality in 2004 in 33 countries through cross-national variations in particular state policies in 1984. I create an original indicator of two types of policies: laws designed to help women combine employment and childrearing responsibilities (measured by a paid maternity leave policy) and laws that promote non-discrimination (measured by a policy that guarantees equal access to all occupations and a policy that guarantees equal remuneration). My data thus include three policies altogether: maternity-leave policies and two distinct forms of anti-discrimination policies. I find that state policies are the strongest determinants, compared to global and female human capital factors, of the gender occupational inequality but different types of policies have different impacts. Specifically, maternity leave is associated with a greater level of occupational gender inequality while anti-discrimination legislation is associated with less occupational inequality within countries. Although a panel analysis for a relatively small number of countries should not be overgeneralized, the results do introduce new information about policy-specific consequences for gender occupational inequality and provide a solid foundation for future research.

New Media and The Social Reconstruction Of Reality

Social constitutive power of media has been increasing continuously as we enter the era of new media driven by digital technology. As a result, media is no longer a simple means of living but a life itself. Building on Peter Berger and Thomas Luckmann's phenomenological proposition: 'Reality is socially constructed', this study first applies said proposition to our current social reality and discusses the changing life-world of the digital age under the theme of 'social reconstruction of reality.' Next, referring to the results from 2011's survey of 1027 netizens on happiness, the constituting mechanisms of online and offline life-worlds are compared. Finally, based on aforementioned theoretical and empirical discussions, qualitative differences in online and offline life-worlds are further explored.

Upon analyzing survey results, the rise of online life-world, as opposed to offline life-world, is witnessed. Online life-world can now be considered a very effective functional alternative to offline life-world. While citizens, the members of offline life-world tend to follow reality principle, netizens of online life-world appear to favor fantasy principle. If causal logic is inherently emphasized in explaining the behaviors of citizens, narrative logic seems more salient for understanding netizen's behaviors. Compared to our conventional offline everyday-life which has been existing from the outset of agricultural age, online everyday-life, used to be generally looked down as 'mock reality' devoid of substance. However, empowered online virtual reality is now elevated to an alternative life-world capable of competing against offline actual reality. Moreover, owing to its hyper-real characteristics, online virtual reality appears to reinforce itself up to a point where the possibility of colonizing offline everyday-life cannot be ignored.

South Korean Values: Understanding Who Koreans Are

Attempts at understanding what people think and feel has been one of the major themes in the realm of academia. From motivations to strategies, various studies seek to venture into the unknown. Because human mind belongs to the inner workings of human psyche, it transforms itself depending on the situation, and can be concealed at the face of social taboos. Koreans, by the look from outside seems to be multifaceted, and it is not easy for us to get a grasp on the overall mind map. However, behaviors are governed by motivations and motivations are the reflection of what people value. Identity, when applied to inner-workings of people in general, acts as the starting point. Identity, motivation, and core values are expected to guide us in comprehending who Koreans are.

This study seeks to develop an understanding of who South Koreans are. Following the logic of "magic of numbers" and fully utilizing the power of empirical generalization, overall mind map of South Koreans is drawn. Data gathered from 47 separate assessments by psychoanalysts is used. It could be argued that South Korean mind map consists of following three main branches: 1) Relationalism, 2) Inner-Worldliness, and 3) Returnism. These tendencies are all intertwined and form secular trinity in the sense of supreme bliss." As aforementioned tendencies went through significant transformations, the sense of supreme bliss' sought after differs from that of traditional Korean society.

The kind of bliss so many Koreans yearn for nowadays is more of a fortune than happiness. Disenchanted Koreans today seek the sense of supreme bliss by means of meaningful and beneficial personal connections. What we are witnessing is the reflection of distrust toward ruling ideology and social leadership, resistance to the opportunity structure where fairness is ignored, and remorse over competitive life where winner takes all.

Inequalities in Life Expectancy and Healthy Life Expectancy in Korea: Gender and Educational Disparity

Health inequality is considered as a sensitive barometer of social inequality. Over the last decade, social inequality in Korea has become intensified in multiple dimensions on distribution of population health. Based on life expectancy (LE) and healthy life expectancy (HLE), we examined the health inequality cross social groups by gender and education over time. LE is the expected number of years of life remaining at a given age, derived from the current age-specific mortality rates. HLE is a composite measure of LE and morbidity, to imply remaining years that a person of a certain age is expected to live without disability or in good health status. Through data linkage (death registration, population census, and nationwide sample survey for morbidity status), we calculated LE and HLE by abridged life table method and Sullivan method, respectively.

From 2000 to 2010, LE at birth of men and women increased from 67.9 to 74.3 years and from 77.4 to 82.2 years, respectively. As of 2010, women live 7.9 years more than men. However, gender gap in LE was negligible; HLE at birth was 62.8 years for women and 62.7 years for men, respectively. Also, education disparity was apparent in 2010; for men with less than high school education, LE at 30 years old was 37 years, while that was 49 years for college graduated men. Similar pattern was observed among women; 49 years vs. 55 years. Such gap did not become narrower over the last decade in both genders.

These results imply differential experiences of morbidity and mortality across gender and socioeconomic groups. Social determinants beyond individual biological traits, and biological process of social influence within individuals should be explored.

Developmental Multiculturalism In The East and Liberal Multiculturalism In The West?

While multiculturalism is losing its popularity among Western European countries, multiculturalism has gained popularity and continued to play an important role in East Asian countries. This paper examines the extent to which multiculturalism in the East (mainly South Korea and Taiwan) conform to and deviate from Western liberal multiculturalism. In this paper, I define and limit the discussion of multiculturalism as immigrant multiculturalism or a mode of immigrant incorporation.

I argue that at the level of practices and policy instruments, Western multiculturalism and Eastern multiculturalism are similar; both segment and stratify immigrants on the basis of their willingness and ability to assimilate to a host country. But, at the level of discourse, Western and Eastern multiculturalism diverge. Western "liberal" multiculturalism treats tolerance a property of liberal West and construes the immigrant others "illiberal, object of tolerance". On the contrary, Eastern multiculturalism presents multicultural tolerance as a necessity for their countries to become advanced liberal democracy. For this reason, I call multiculturalism in the East "developmental multiculturalism". The key difference in the Western liberal multiculturalism and Eastern developmental multiculturalism centers on who has the responsibility to learn the value of tolerance. In the West, it is the immigrant minorities; while in the East, it is the non-immigrant majorities.

The difference in Western liberal multiculturalism and Eastern developmental multiculturalism may suggest one possible reason why the popularity of multiculturalism has declined in the West while it is still in vogue in the East. In the West, multiculturalism is constructed in a way that its failure is blamed on immigrant minorities. In Eastern developmental multiculturalism, multicultural tolerance is constructed as a virtue of advanced, more developed [Western] countries and achieves multicultural tolerance is the role of non-immigrant majorities for their country to become more like the developed countries.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.

The notion of race and ethnicity is central to contemporary immigration scholarship. Researchers routinely compare groups of different origins to assess their immigration trajectories and respective degrees of socio-economic integration. Less attention, however, has been paid to the historical origins of the classification and categorization in immigration. This paper argues that Dillingham Commission Report (1911) marks the pivotal moment, at least in the United States. Responding to the surge of nationalism and increase in the number of immigrants and from southern and eastern Europe at the end of 19th century, the leading politicians and intellectuals of the time engaged in the task of classifying and categorizing immigrants: vast amount of statistical data on social and economic characteristics of immigrants within the U.S. were collected to promote a scientifically informed measure of immigration control.

Focusing on the data from the report concerning crime, welfare, and education of immigrants, this paper will display how racial and ethnic categories emerge out of raw data. The initial statistics conveys an extremely complex portrayal of immigrant society, often divided by exotic categories (such as “black Russians”) that are remote from our contemporary understanding of race and ethnicity. As report progresses to the synthesis and recommendation, however, the notions of “desirable” and “undesirable” immigrants emerge as an overarching principle of categorization, and the ensuing recommendation of promoting positive immigration leads to reaffirmation of the pervasive understandings of racial hierarchy. Endless stream of numbers and crosstables align behind this hierarchy to provide substances to racial categorization, and immigration policy follows this blueprint to shape national identity of the U.S. by implementing the national quota restrictions of 1920s.

Drawing from original archival evidences, I show how race, ethnicity, and national identity emerge out of statistical data, both through scientific reasoning and political struggle.

Attitudinal Correlates of Cohabitation in Japan

What are the attitudinal correlates of cohabitation in Japan? Cohabitation has been growing more prevalent among young cohorts in Japan, and yet little is known about its relationship with liberal attitudes on family and gender. Exploring this issue is important for testing the Second Demographic Transition theory that predicts ideational secularization as driving force for non-traditional unions like cohabitation. In this article I examine attitudes on family and gender norms that are correlated with current or past cohabitation experience. For this analysis I use the 2009 National Survey on Family and Economic Conditions (NS-FEC), a national, two-stage stratified probability sample of 3,112 Japanese men and women ages 20-49. Individuals with more liberal attitudes toward pre-marital sex and out-of-wedlock birth were more likely to have cohabited relative to those with conservative values. Also, those who disapproved with forgoing divorce for the sake of children were also more likely to have cohabited. On the other hand, differences in attitudes on other gender issues did not significantly change the likelihoods of cohabitation. The results show that liberalism in only narrow range of family issues are associated with cohabitation in Japan, showing only partial support for the Second Demographic Transition. Also, the results suggest that cohabiters in Japan would be expected to have higher rates of divorce once they enter marriage compared to non-cohabiters.

Care, Welfare State and Multidimensional Social Citizenship: The Case of South Korea from a Comparative Perspective

This study aims to investigate the peculiarities and changes of the childcare in South Korea by applying a theoretical framework of multidimensional social citizenship. To embrace the affuent theoretical arguments on gender, family and welfare states, this study suggests the concept of ‘multidimensional social citizenship’ consisting of decommodification (state intervention), defamilialization (family role), and degenderization (gender equality) in analyzing care. Using OECD data and Time-Use data, the childcare of South Korea in 2000s were analyzed according to the three-dimensional social citizenship. The main findings are as follows. First, the social citizenship has developed dramatically in the dimensions of de-commodification and defamilialization, but not much in that of degenderization in childcare of South Korea. Second, in terms of outcome, the development of childcare policy has hardly contributed to improve women’s labor market participation in South Korea. Finally, the classification of childcare across the welfare states according to three dimensions suggests the existence of East Asian care regime.

Culture-Driven Gentrification from below: A Case Study of Tokyo, Japan

This paper analyses the ongoing process of Tokyo’s gentrification from the case study of former working class neighborhood in east Tokyo. Since gentrification has generalized as a global urban phenomenon, it has become an avowed policy goal of the cities competing for economic supremacy and globalization services. In Tokyo, recent redevelopment of the central Tokyo which actively promoted by state authorities had been considered. The eastern part of Tokyo has been developed as an industrial district in the rapid economic growth period of modern Japan. Like many run-down areas in other cities, it has suffered from the decline of local manufacturing due to de-industrialization and had remained as a place that stimulates nostalgia for “good old days” rather than attractive tourist destination until 1980s. However, when art exhibitions in derelict factories and community-engaged art projects as local experiment for community rebuilding had begun in late 1990s, changes occurred gradually. Galleries and studios started to set up in the area, while tenement houses replaced with small independent restaurants and cafes. Local art festivals and tourism campaigns coupled with commercial and residential redevelopment of surrounding area started to lure tourists and relocating businesses. The initial intentions of art as a cultural resistance slowly fade out, while the focus has been moved to economic revitalization and celebrating authenticity.

This may be a common scene in many ‘creative cities’ around the world, but what makes difference is that instead of ‘revanchist city’, there is coexistence of expectations for gentrification from the local community itself and deep-rooted nostalgia to the past based on the myth of ethnic homogeneity. Both the main features of first-wave gentrification in 1970s and current state-led gentrification can be seen in this case, intertwining various elements of gentrification history that has been formed from multiple time and space.
The notion of race and ethnicity is central to contemporary immigration schol- arship. Researchers routinely compare groups of different origins to assess their immigration trajectories and respective degrees of socio-economic integration. Less attention, however, has been paid to the historical origins of the classification and categorization in immigration. This paper argues that Dillingham Com- mission Board (1907) marks the pivotal moment, at least in the United States. Responding to the surge of nativism and increase in the number of immigrants and from southern and eastern Europe at the end of 19th century, the leading politicians and intellectuals of the time engaged in the task of classifying and cate-gorizing immigrants: vast amount of statistical data on social and economic char-acteristics of immigrants within the U.S. were collected to promote a scientifically informed measure of immigration control.

Focusing on the data from the report concerning crime, welfare, and education of immigrants, this paper will display how racial and ethnic categories emerge out of historical context. The initial statistics consists of an extremely complex portrayal of immigrants, often divided by esoteric categories (such as "black Russians") that are remote from our contemporary understanding of race and ethnicity. As re-port progresses to the synthesis and recommendation, however, the notions of "desirable" and "undesirable" immigrants emerge as an overarching principle of categorization, and the ensuing recognition of positive immigration leads to reaffirmation of the pervasive understandings of racial hierarchy. Endless stream of numbers and crosstabular align behind this hierarchy to provide substance to racial categorization, and immigration policy follows this blueprint to shape national identity of the U.S. by implementing the national quota restric-tions of 1924.

Drawing from original archival evidences, I show how race, ethnicity, and na-tional identity emerge out of statistical data, both through scientific reasoning and political struggle.

Memory, Community, Identity: Narrating “Chosen” By Zainichi Korean Women in Japan

Memory, Community, Identity: Narrating “Chosen” By Zainichi Korean Women in Japan

Zainichi Korean women invoke lives and experiences that reflect class, gen-der, hierarchy and patriarchy. The notion of “Zainichi” and “women” has undergone a vivid transformation provoking the question, “What constitutes Zainichi womanhood in a transnational context?” Undoubtedly their identities are constantly evolving, an ongoing process of construction and reconstruction in the mind of multi-cultural, hybrid and hyphenated identities, and situational ethnicities. Many situate themselves in more than one nation-state, displaying intricacies of multiple selves. Thus we ask: What are the dynamics of multiplicity, diversity, malleability, and/ or resistance that Korean women employ in position- ing and defining themselves within their own community and society? What are the commonalities and differences of Korean women’s experiences in their cul-tural settings? What are the discursive frameworks of adjustment and settlement, flux and change, unyielding and stable structures and strategies articulated in relation to work, family, children, and social ties? How do they juxtapose their homeland’s “traditional” value system with new cultural and social encounters? In what way does acceptance, negation, negotiation, and agency affect their identity and the emotional embodiment of nostalgia, longing, belonging, displacement, and alienation? This paper attempts to present a transgenerational articulation of selves and emerging identities of women, their stories, and meaning within a transnational context. It elucidates narratives that permit to Zainichi women’s cultural expression of who they are and how they see themselves within the Jap-anese as well as their own ethnic community.

Responding to Knowledge Gaps in Food Safety Issues: Citizen Science after 3.11 in Japan

The 3.11 nuclear accident resulted in concerns about food contamination. The government released little data and citizen groups took the issue into their own hands to fulfill knowledge gaps on food safety issues, establishing organizations to test their own food. Based on qualitative interviews and a survey of these “citi-zen labs,” the paper examines how the lay people’s testing efforts were structured in response to food safety threats. Who led the initiatives, what were their moti-vations, and how did they test food in a different/same manner as the “official” experts in the government? Furthermore, to what extent, was their “science-doing” linked to a larger political mobilization, or did it simply remain as a personal strategy to ensure well-being of their own and their families? Drawing on theories of citizen science, the paper examines politics of knowledge gap in the aftermath of nuclear accident and citizen responses and their potential for politicization.

Charm As the Capital in Japanese Youth Culture

The purpose of this presentation is to examine the type of capital an individual possesses to attract others using quantitative data from the 2012 survey conduct-ed by the Japan Youth Study Group. Z. Bauman (2000, Liquid Modernity) has point-ed out that with professions and families becoming more and more fluid, one’s own body has become one of the means of confirming one’s identity (Details of the book is omitted in this abstract). Then, what does this ‘body’ refer to? Attractive looks can be one of them. But this is not enough. C. Hakim (2011, Honey mony: the Power of Erotic Capital) has offered an interesting insight on this point. That is, in addition to economic capital, cultural capital and social capital identified by P. Bourdieu (1986, “Forms of Capital”), she has proposed the fourth capital, “erotic capital”. She also suggests that the erotic capital is made up of looks and interpersonal charm, which is huge and increasingly important. Nonetheless, conventional sociological studies have not paid enough attention to people’s attractiveness. In particular, in the study of feminism, femininity, which is one of the attractive characteristics of a female, has been denied. Therefore, the presentation tries to examine the different aspects of the social men and those without, and benefits that are gained in this regard. The presentation first exam-ines constitutive elements of erotic capital in Japanese youth culture. Secondly, it examines the ways in which erotic capital differs from ‘social capital’, a concept which is increasingly receiving attention.

Language Rights and Disability Studies

Language rights discourses have rapidly evolved in Japan during the last decade. From an almost unknown term, it has advanced to a frequently used concept to address linguistic inequality. By foregrounding fairness in language matters, this discourse has expanded the scope of moral arguments on language diversity in Japan.

With the initially being heavily influenced by international academic and political discourses, the Japanese discussion on language rights has gradually undergone some specific evolutions. For example, it is probably unique to Japan that the struggle for the recognition of the sign language has been one of the leading forc-es advancing language rights. Related to this is the most striking characteristic: the entwinement of language rights with the discourse of disability studies. The so-called social model in disability studies, which seeks the cause of disability not in the body of the individual but in the society, has ostensible affinity to the idea of language rights which also focuses on injustices rooted in sociolinguistic condi-tions. The approach to add options rather than just change the dominant regime, or the emphasis on improving the legal framework are also features common to both discourses.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The concept of communication rights which came out of this synthesis seems to have the potential to overcome the limits of the internationally contested concept of language rights which typically seeks to provide a certain status to a certain defined language.

After a short overview of the language rights discourse in Japan, the paper compares this discourse with recent international discussions on the matter in order to assess whether and how the Japanese way of conceptualizing language rights can contribute to put forward the international discussion on inequality related to language.

However recently, the island started to arouse attention as a symbolic site of industrial modernization of Japan. Nagasaki City is now attempting to re-evaluate this abandoned island as an “industrial heritage” and utilizing it as a tourism resource for regenerating the declining industrial areas. There has even been a movement to make the island a world heritage site, while tours around Gunkan-ji ma are also becoming more and more popular.

Using data based on fieldwork conducted in Nagasaki City and semi-structured interviews with several actors related to Gunkan-jima, I found that the branding and the commodification of the ex-industrial island have been drastically promoted by the municipal merger and the “locality” as the basis of the legitimacy to represent the island has been totally changed. These findings can be utilized in the future studies that examine the mechanism of urban regeneration projects.
Genre As Social Force: Hollywood Cop Action from the Perspective of Filmmakers

Recent analysis of genre as social construction shows that critics and scholars tend to categorize works of art differently than producers do. The biggest marketers in Hollywood cannot copyright genres and so avoid treating their own product as genre. They sell their films instead as unique combinations of diverse elements, in order to appeal to many audiences and differentiate product. Interviews with contributors to the Hollywood cop action movies discuss the conditions under which they come to work on the projects, the extent to which they see themselves as genre-makers, and how they can differentiate their own work. This research shows that filmmakers answer to their own demands and priorities, distinct from those of critics, audiences, scholars, and distributors. By showing how such diverse categorizations of film converge and diverge, it demonstrate how a genre of human expression is contingent on social affairs, porous in boundary, prone to change, often subject to reasonable disagreement, and yet still a compelling force within an industry that remains ambivalent about producing generic work.

Sensing the Right Person. Finnish Recruitment Consultants and Outline of the Ideal Working Body in the Recruitment Interviews

The body's aesthetic and emotional capital in the post-industrial working life has eagerly been examined in recent years (e.g. Hassard et al. 2000; Mckie & Watson 2000). However, the discussion has not yet put the importance of the human working communication skills and the ability to brand oneself in the current labour market where the CV advantage has been displaced by the tyranny of the right person. Feminist scholars (e.g. Acker 1990; Bordo 1993; McDowell 2009) have already shown how different corporeal characteristics in terms of sex/gender become categorized as suitable or unsuitable to conduct different kinds of work tasks. However, we still know too little about how the ideal working body, i.e. representing the wanted personality, is concretely performed in recruitment processes.

The paper is based on the interviews of Finnish recruitment consultants. It illuminates their role in assessing and defining the ideal employee when their client companies have mandated them to choose and interview the proper candidates. The paper shows how the candidates should first convince the recruitment consultants in the interviews by stylized bodily performances and communication skills in order to get the job. Recruitment consultants use their own embodied knowledge to determine which candidates would “fit in” with different working teams and environments. In order to fill in their clients’ expectations, the consultants not only attempt to read the bodily performances of the employee candidates and environments. In particular, we point out some notable implications.

This paper introduces some cases that were known by members of civic movements on this topic. Among the players, we point out some notable implications.

KIRA, YOSUKE* (Tohoku University, ykira@littlestar.biz)

The Conditions for Sustaining Efficient and Inefficient Norms

Although most rational choice theorists have assumed that social norms are created to prevent negative externalities, some norms spoil the welfare of people. These inefficient norms have been discussed as “unpopular norms,” which typically include “the shirker’s new clothes,” self-destructive adolescent behaviors, infatuation, and honor killing. However, it is also true that efficient norms, which prevent uncooperative behavior, are observed in social dilemma situations. In this paper, we hypothesize that long-term relations stabilize both efficient and inefficient norms, but communications destabilize inefficient norms. We analyze a Sub-game Perfect Nash Equilibrium (SPNE) and a Strong Perfect Equilibrium (SEP) in an N-person repeated prisoners’ dilemma with the costly punishment option. A social norm is defined as an equilibrium in which every player is expected to do something (or refrain from doing something) and is punished by some or all others. We explore the relationship between efficiency and equilibrium strategies. This equilibrium concept assumes a situation such that players cannot communicate with each other, e.g., tacit price collusion in oligopoly markets. As the Folk theorem indicates, there exist inefficient SPNEs, in which the Pareto-deficient payoff is sustained by costly punishment. In contrast, an SPE assumes a situation such that self-interested players can engage in cheap talk and collude. If feasible coalition deviation exists, all members of the coalition can earn more by changing their strategies simultaneously. Every SPE is an SPNE, but the opposite is not true. The sufficient condition for existing SPEs is proved using the multi-objective dynamic programming method. In conclusion, we successfully formalize the hypothesized relationship between efficiency of norms, long-term relations, and communications among players. Additionally, we point out some notable implications.

Future Visions and Social Theory

Social science in general and sociology in particular are facing a challenge of conceptualizing the relation between environment and society in ways that assist the dialogue and multiple attempts for creating visions of a sustainable society. Thinking about the future always involves thinking about the future of society. However, in future studies little attention has been paid to how underlying social theories affect our future visions. Since backcasting is a special approach in future studies which starts with a normative vision of the future and elaborates a strategy to reach this normative vision, this issue is even more pressing. Our paper
aims to reveal and reflect upon the role of these underlying social theories in the construction of future visions in backcasting practices.

In the first part of the paper we will present four different ways to think about society and social change. These are structural functionalism, conflict theory, symbolic interactionism and actor-network-theory. We argue that these are not only present in academic papers but also can be thought about as general ways of thinking about society. Furthermore, these underlying models of society also affect the various ways future is presented in public discourses.

The second part of the paper especially focuses on the various methodological approaches to involve social theories in the elaboration of future visions in backcasting practices. Methodologies such as functional analysis of institutions, stakeholder mapping, living labs, narrative approaches and system mapping will be discussed both in relation to the above-mentioned social theories and the future vision which can be created by utilizing such methodological approaches. We argue that by focusing upon both the theoretical and methodological issues in thinking about the future can enhance the quality of the normative future visions created in backcasting practices.

Emotions As Reason, Rationale and Result of Urban Artist Areas

For the last two decades urban arts and cultural districts, arts neighborhoods, and artist housing and studios have become the focus of social scientists studying the internal life of urban and arts sociology. I will analyze the emotional forms and functions of this type of urban cohabitation. Certain smaller areas have been, from the bottom up, transformed by artists NOT for external political or economic purposes BUT for self-utilitarian – and often emotional – purposes internal to the participating artists and their community. The latter purposes are objectives directly and emotionally pursued by the participating artists. These artist areas are “reserves” that serve as catalyst for the internal socio-spatial emotional enjoyment of artists, performing and propagating a “liberty of delectableness” not offered outside these specific areas. As a theoretical starting point I interpret texts such as Zukin’s “Loft Living” (1982), Bourdieu’s “Rules of Art” (1992) and Ehrenreich’s “The Meanings of Work” (2006), plus the literature on the notion of “cultural sustainability” that alludes to emotional values (e.g., Kirchberg & Kagan, Brocchi, Duxbury, Throsby). There is a variety of emotional benefits that can be paraphrased and typologized as “artistic community identity”, “alternative patriotism”, “lifestyle experimentation” and “bohemian sociality” – to name just a few. Furthermore, these emotional benefits will be analyzed applying the extensive literature on the “affectual turn” (Clough 2007, Gregg & Seighworth 2010). Empirical illustrations will be provided by my own research in urban artist areas in Baltimore, Maryland, and Hamburg, Germany, plus further collated evidence from Phoenix, Arizona, Minneapolis, Minnesota, and other cities.

KIRCHNER, CORINNE* (Columbia University, ck12@columbia.edu)
Agism and Language in Old-Age Inequality

Nikolas Coupland (2007) has focused on “style” as a productive dimension of linguistic material. He highlights that sociolinguists have not adequately appreciated variation in style as a tool for conveying meaning in social interaction. Coup- land shows that the common sociolinguistic reduction of style to age-formation often through linguistic practices, has been recognized (Miniciello et al, 2011) minimally examined, with little serious attempt at proposing feasible correction. This theoretically Social Constructivist paper is motivated by the under-appreciated success of a similar, salient situation regarding “ablest” language and the stigmatized identity of disability. The Disability Rights Movement offers a model, led by disabled activists, eventually involving rehabilitation and other “helping professionals” and governmental policymakers. Long-term resistance by Aging and Disability field leaders to making that connection is now weakening. For data, I analyze style in online recruitment language from key disability activist versus aging service organizations showing agentic linguistic style changes that can undermine negative effects of agism.

KIRILENKO, OLESYA* (Russian Academy of Sciences, kirilinko@bk.ru)
Methodological Institutionalism Vs. Methodological Individualism As a Core Principle in Alternative Social Theories of Second Modernity

Modern dominant Western social theories are based largely upon method- ological individualism principle. Attempts to overcome its confines are undertak- ing constantly in different analytical programs and approaches (A. Giddens, M. Archer, P. Sztompka, P. Bourdieu, J. Alexander, J. Ritzer, V. Yadv) etc. But in fact all these approaches assume an explanation of the social and economic phenomena in terms of individual behavior and follow methodological individualism principle (S. Lukes, J. Holberg). In the paper the capabilities and limitations of methodolog- ical individualism as a core principle of mainstream sociology and economics are explored. The recent debate dealing with methodological individualism in Rus- sian and foreign sociology and economics is considered. Institutional individu- alism principle (A. Agassi, F. Toboso) is tested. As a challenging view, premises for methodological institutionalism (P. Keizer, S. Kirdina) are offered and consid- ered as an alternative and complimentary precondition of the different vision for alternative social theory of second modernity. It is shown that methodological individualism and methodological institutionalism express two epistemological preconditions of institutional precondition such as holism ("the whole is more than sum of its parts") and a reductionism ("the whole is understood as a set of primary elements forming it") respectively. Institutional matrix theory (S. Kirdina) based on meth- odological institutionalism principle will be presented to explain the success and failures of historical trajectories of modernization for non-Western countries as well for Western ones.

Fitness Culture As the Factor in Globalization of Recreational Sports

In the context of globalization, integration in the sphere of competitive and professional sports that receives maximum support from political and economic institutions, International Olympic Committee, and international sports federations expands to a great extent. Increasing need of the modern society for health-rec- reational technologies unprecedentedly reinforces the role of health culture and health industry known as “wellness”. Fitness is an element of wellness culture, and it presents a universal basis for popularization of health forms of physical and sport activity along with optimization of nutrition and body weight control. It makes health fitness as the direction of recreational sports an effective tool for strengthening population’s health and preventing non-communicable diseases.

Globalization of health fitness culture is primarily determined by the develop- ment of global fitness industry. Another factor in fitness development is the activity of mass media and advertising, as well as marketing and educational campaigns in the form of fitness conventions. The third factor in globalization of fitness culture is the activities of international organization in the sphere of sports for all and fitness, which include Sport for All Commission of International Olympic Committee, the Association for International Sport for All, International Fitness Association, Federation of International Sports, Aerobics and Fitness, and others. Issues in social factors of promoting health fitness on a global scale as well as its scientific, informational, educational, economic, legal and institutional support represent actual direction in integrative sociological research of sports, physical activity and health. Uneven development of fitness culture and inequality in ac- cess to fitness services caused by of various social factors are of particular interest to sociologists.

Problems of Access to Modern Wellness Culture

Society’s growing interest to the quality of life has predetermined the develop- ment of modern culture and industry of health called “wellness.” During last decades, wellness has acquired features of new institutional complex, which in- tegrates functions of numerous spheres related to health preservation and im- provement, e.g. medicine, pharmacology, sports, leisure, tourism, manufacturing of cosmetics and goods for personal care. The process of popularization of wellness culture is supported by scientific and educational institutions, mass media and advertising.

From a sociological point of view the inclusion of individual into wellness cul- ture is determined not only by the conditions of upbringing and quality of edu- cation but also by a human motivation that forms healthy lifestyle and consumption. The key role in this process is determined by individual’s socio-economic status, which includes income level, nature of person’s professional activity, availability of mon-

The Process Of Urban Change In Osaka City After The Collapse Of The Economic Bubble: The Case Of Horie, Nishi Ward

For the last 30 years, cities everywhere have followed the neoliberal path, including a shift to a service economy, consumerism as a way of life, homogenization of urban spaces, socio-spatial polarization, and urban entrepreneurialism. Japan, with a liberal political economic history but also its own regulatory mechanisms, based on the development of neoliberal urbanism, after the asset price bubble collapse in the early 1990s. Since then, the emphasis on Tokyo as Japan’s sole global city to the neglect of other large cities in Japan has accelerated the further adoption of the neoliberal urban policies. Having lost its previous status due to uneven development, Osaka has nevertheless recently been forced to engage neoliberal urbanism by its mayor, Tōru Hashimoto, who sees it as the way out of post-bubble economic and demographic stagnation. The contrast of the processes of identity negotiation. We also examine the narratives that the individuals tell of themselves in relation to the local people.

Discourses of Internal Migration and Belonging: The Case of Some Communities in Ghana

Ghana, whose geographical position is along the west coast of Africa, has a population of approximately 20 million people. It is estimated that 45-60 local languages and dialects are spoken in Ghana (Dzamshie 1998). English is the official language in Ghana, and it is used as a medium of instruction in educational institutions, commerce and government. A large population of Ghanaians are multilingual but use English as a common language for communication with speakers of other languages and the society and the state in general. Each of the nine regions in Ghana has a dominant language that is also taught as a subject to school going children. Of all the languages spoken in Ghana, the Akan language is the most dominant of all. About 44% of Ghanaians understand and speak the Akan language (Osam 2003), though not all of them can speak it fluently.

This paper examines how highly proficient adults from Southern Ghana construct and negotiate social belonging and exclusion in Northern Ghana. The data comes from interviews of individuals who migrated to Northern Ghana as adults and spent a significant portion of their lives in Northern Ghana. How do such individuals negotiate for belonging within the Northern identity region and successfully learn the dominant language? How do participants position themselves as successful learners of a Northern language? After successful negotiation, how do they see themselves in relation to the local people?

We argue that the study of identity and language use must consider socio-historical contexts. Success in acquiring the Northern language is based on interaction. We examine the aspects of a good language learner namely: learning process, learner characteristics, and language features from the perspective of identity negotiation. We also examine the narratives that the individuals tell of the processes of identity negotiation.

Personality and English Learning: The Case Of Some Students In Ghana

This paper focuses on understanding the role personality plays in English learning among some students in the Eastern Region of Ghana. Personality as defined by Ortega (2009), are qualities in a person or predispositions that have been learned through social experience. The personality aspects examined are learner beliefs, motivation and self-esteem because they are linked to learner ability to learn and the achievement of their goals. The assessment of personality support English learning? Is a question we hope to answer. Cook (1991) argues that learners have fully formed personalities and mind when they start learning a second language, and these have profound effects on their ways of learning and on how successful they become. Their capacity to perform as skilled language users, which requires mental and physical effort, is influenced in one way or another by their fully formed personalities, which in turn is influenced by the environment in which they find themselves. This implies that students who come to class will bring along attitudes from the society they live in, which in turn affects their motivation and subsequently their performance. These attitudes developed over years, could be either positive or somewhat negative. Data was collected from a sample size of 1444 Senior High School students in the Eastern Region.

Frequency of Incarceration, Criminal Thinking, and Sense of Coherence Among Male Japanese Criminals in Offender Rehabilitation Facilities

For former convicts, reintegration into society is complicated by psychological factors, such as mental strains and personality traits, and socioeconomic factors, such as unstable employment. The aim of this study was to investigate the relationship between the frequency of incarceration (at children's self-reliance support facilities, juvenile reformatories, juvenile penitentiaries, and prisons) and the personality factors of criminal thinking and sense of coherence (SOC).

This study was conducted at two metropolitan area offender rehabilitation facilities and participants were 116 Japanese men who had been placed under parole/probationary supervision or had been recently released from prison. The participants completed a questionnaire survey that contained the Japanese
version of the 13-item SOC scale, the Japanese criminogenic thinking inventory (JCTI), and self-reported demographic items. The SOC scale consists of the three subscales of comprehensibility, manageability, and meaningfulness. The JCTI contains four subscales including discontinuity, “cut off” thinking, self-deception, and problem avoidance. Spearman’s rank correlation coefficients were calculated to assess the relationship between the frequency of incarceration and each personality factor. In addition, the Man-Whitney U test and Kruskal-Wallis test were performed to analyze the relationship between frequency of incarceration and demographic variables including age, dwelling environment, education, marital status, job history, and the latest charged offense.

The results revealed negative correlations between the frequency of incarceration and the total SOC score and the scores on the comprehensibility and manageability subscales. A positive correlation was observed between the frequency of incarceration and the JCTI subscale of “cut off” thinking. The frequency of imprisonment (at prison only) and the demographic variables of marital status and the latest charged offense were found to be significantly correlated.

Improving offenders’ SOC and criminal thinking might mitigate the risk of recidivism and facilitate their reentry into society. Our findings will be discussed further in our presentation.

Young People’s Practical Agency: Transitions From FE College To Work In London

This paper presents findings from the Changing Youth Labour Markets and School to Work Transitions in Modern Britain project. The project examined young people’s experiences and perceptions about study, work and the future while going through transitions. Our findings demonstrate a complex picture of potentialities, vulnerabilities and resilience of young people in transition. The target group was young people aged between 18 and 24, who were on vocational courses at Further Education (FE) colleges in London. This group is an under-researched ‘missing middle’ (Roberts 2011) group, who are neither NEET nor following ‘tidy’ pathways. Drawing on the individualisation theory and agency theories, we explore how diverse and complex transition experiences of the missing middle can be categorised. We apply the conceptual framework of temporal orientations of agency, originally proposed by Emirbayer and Mische (1998). The missing middle group shows a number of potentialities, but they are vulnerable under current circumstances of youth labour markets. The young people do exercise agency in making decisions based on practical and realistic options available to them at the present, and thus they develop resilience. We suggest that agency is situated and discussed the interplay between young people’s agency and the contexts in which they live, particularly in relation to youth labour market conditions.

Deterrioralising Teaching and Research Through Information Technology and Capitalism

Allegedly there is a gap measured in astronomical units between the ways in which the contemporary youths and universities work with knowledge. And thus the universities at least in Finland should gird their organisational loins and adapt accordingly. In this paper I investigate one such attempt to deterrioralise teaching, learning and research to better suit the future the involved parties have envisioned or wish to create. I do this by concentrating on the use of the concept of Knowledge Practices in expressing and explaining this vision. Deterrioralisation is used here in two senses: Firstly as travelling to new places and secondly as the parameter defining the state of the boundaries and relative internal heterogeneity of an assemblage. With these concepts I try to map out the envisioned future relationship between universities and society by tracing the relationships of different components of a particular assemblage called Minerva Plaza expressed in material form or through language.

This is a work in progress but Knowledge Practices seems to be effective in making various boundaries less fixed and solid by being somewhat amorphous and scalable. It spans recurring everyday activities (practices) from individual to societal level line linking liminal sciences, psychology and cultural-historical activity theory. Furthermore information technology is deemed to have the general capacity of enhancing the joint knowledge creation of humans in conjunction with it. Is the future role of universities to provide such easily adaptable concepts which facilitate bringing in corporate partners by avoiding excessive clarity? Would this contribute to the techno-political utopia of virtual online communities developing the roles of the state and combating transnational corporations as Taul Harper suggests in “Smash the Stratag?”

No Wires Attached? Displacement of Power through Information Technology

What we have learned so far is that there is nothing without the Wireless Network. This chapter discusses the extent and consequences of the previous sentence in terms of translating two scientific models into material form. It was uttered as a summary of using Minerva Plaza, a set of facilities built within the University of Helsinki in order to utilise the supposed digital nativity of the students. The stated goal of Minerva Plaza is to weave together collective knowledge construction, emerging communication technologies and inclusion into the scientific community in order to prepare especially future teachers for the challenges they are predicted to meet during their careers. These goals have been somewhat incongruent with The University’s ICT policies and the capacities of the selected soft- and hardware.

The collection of assembled and interconnected components of Minerva Plaza can be aptly described as volatile. They can facilitate very fast transitions from one state or point of interest to another but also being difficult to hold permanently. Some of this explicitly intended in the design. On the other hand the Wireless Local Area Network has managed to hold its position as an unintended obligatory passage point for the sets of translations of using the Plaza as planned. This paper presents an analysis on how dependency on ICT and project funding has displaced the power to decide who participates and how away from the users. This seems to resonate with David R. Johnson’s depiction of technological change as a cause of diminishing professional control within the professoriate. Unlike Johnson I argue this is caused by the volatile nature of the whole assemblage also in cases where the technology use is initiated and endorsed by the teaching professionals.

Old and New Inequalities of Educational Opportunity by Gender and Family Background in Finland

What comes to equality of educational opportunity, in the sociology of education enduring themes have been, for instance, the Bourdieuan thesis of strong reproduction and the persistency of inequality à la Shavit and Blossfeld as comes to relations between parents’ socioeconomic position and their offspring’s educational achievements. Empirical studies from various countries have started to report decline in educational inequality. Our own previous studies based on Finnish longitudinal data have shown that the equality of educational opportunities, at least as measured by differences in participation in university studies by gender and family background (parents’ education academic vs. non-academic) has clearly improved and differences narrowed up till the end of 20th century. Gender relations belong to the core interests of sociology of education, too. For long there has been discussion on the persistent gender segregation in higher education, which according to Carlo Barone (2011) is a key in understanding inequality in the labour market.

In this paper we explore equality of educational opportunity and labour market effects related to educational expansion in Finland. Our updated longitudinal register data covers five age groups of higher education students and graduates from baby boomers to recent small age groups, including for the first time also students of the universities of applied sciences. We ask to what extent expanding education improves the odds of participation in university studies when analyzed by gender and family background. We also study how the female/male relation, situationed by differences in participation in university studies by gender and family background (parents’ education academic vs. non-academic) has clearly improved and differences narrowed up till the end of 20th century. Gender relations belong to the core interests of sociology of education, too. For long there has been discussion on the persistent gender segregation in higher education, which according to Carlo Barone (2011) is a key in understanding inequality in the labour market.

by the currently popular “evolutionary psychology” (Tooby andCosmides, Pinker) regarding the human nature; (2) the “Homo economicus criticisms” of evolutionary economists in the spirit of A Cooperative Species: Human Reciprocity and Its Evolution (Bowles andGintis); (3) Geoffrey Hodgson’s version of “Generalized Darwinism”; and (4) “niche-construction” approach to human “gene–culture coevolution” (Deacon, Dennett, Laland, Odling-Smee), with its evolution-historical studies on social learning and language evolution.

While evolutionary psychology offers insights into humanity in a long enough timeframe, it unfortunately involves a leap from the face-to-face groups of Pleistocene era straight to modern societies, over all sociologically interesting institutional developments. Bowles and Gintis discuss the evolution of altruism against the idea of selfish individual, providing solutions to “the problem of social order” – timely in economics but familiar to sociologists already since Talcott Parsons. Hodgson’s model in turn utilizes pragmatist conceptual tools well, but its level-ontology and generalized principles of evolution remain less convincing. This paper seeks to pick out the best lessons of these three approaches and synthesize them with the fourth, niche-construction approach. The resulting organism-environment transaction model opens the brain–consciousness–language–society continuum “outside–in” rather than “inside–out” and allows understanding in terms of localized organism–environment transactions by means of which evolution can in fact only be understood.

Did Japanese Women Writing on Cultural Issues in Post War Japan Create Solidarity Among Themselves? a Case Study of the “Kusanomi Kai” (Kusanomi association)

In post-war Japan, many Japanese women have been writing about their everyday lives, their opinions on social problems, or politics in major newspapers. These readers’ columns helped in founding the “Kusanomi Kai” (Kusanomi association), an association of writers and readers, in 1955.

In my presentation, I will examine how and why a community of writers was created between 1955 and 1958. First, I will explain why they founded the communication association and made it their primary media. Back in the 1950s, women often found it difficult to get their opinion published in major newspapers, since some editors/owners had a view that women were inferior to men and consequently criticized women’s opinions that appeared in the readers’ columns. To avoid being criticized, some women made “Kusanomi Kai” their primary media to communicate amongst themselves.

Second, I will discuss the practice of writing followed by the “Kusanomi Kai” members and the use of media studies. Those days, most women had little experience of making a speech in front of an audience. However, as they were good at writing, they used the skill for expressing their opinions about gender or social problems and read them out as they appeared in print. To do this, they would go to a meeting of “Kusanomi Kai” and talk about their writing in the media.

In a meeting of “Kusanomi Kai” and the categories of members in the association. The association was made up of not just housewives but also a few working women. They wrote about their opinion on issues that mattered and discussed them with each other in the group meetings in which they developed a sense of intimacy and built their collective identity, not as “housewives” but as “women.”

KJELLMAN, ARNE* (Stockholm University, kjellman@dsv.su.se)

The Foundation of a Theory of Everything

This paper discusses the basis of a recently developed “Theory of Everything” that builds on a “Subject-Oriented Approach to Knowing.” Its persistent claim is that physics and modern science by their reference to the “given”, most often explained by the concept of “matter”, have led human thinking astray. This work shows that in the very moment a thinker/knower introduces “matter”, or the like, as something subject alien, he already in the outset introduces a crippling matter/mind distinction from which knowing never will recover. This contamination spreads to other themes and their languages and conceptual frameworks, hence many of the perplexities and paradoxes found in modern science. On this view truth and falsity, right or wrong disappear, as well as the traditional role of science as a pursuit of truth. Along also goes the clef between the social and natural sciences. This means that all knowledge endeavours can, pace Ernst Mach, be grouped under the same umbrella. The idea of a common reality gives place to the idea of a private universe – a private reality belonging to each and every man, and laboriously constructed on the basis of purely private experience. By his own will man builds this fund of cumulative experience in isolation or in a mood of communication and social consensus. In the latter case, the tools of communication are also critically influenced by his choice of conceptual seed. On this view the first hominid man was forced to construct a private language to connect to his children simply to break free from the isolation of his thoughts. Thus Adam was forced to build an emerging science strictly in a bootstrap manner. There is no other way to explain science and human knowledge - a recognition that has hitherto been hidden by a misunderstanding of the sign function.

We Are the People! Street Demonstrations As a Means Of Communication

We are the people! Street demonstrations as means of communication

Over the last decades we have witnessed a dramatic rise in the occurrence of street demonstrations. Increasingly, citizens chose street demonstrations as a means of communication. “We are the people!” or more recently “We are the 99%!” are appeals to politicians to listen to the people and to take their claims seriously. Movement politics have become the natural counterpart of party politics.

Employing a unique dataset of over 80 demonstrations that occurred between 2009 and 2013 in 9 different European countries, we give voice to the citizens who populated these protest events. Some of these demonstrations were people protesting the austerity measures they were suffering from. For instance, students protesting a raise of tuition fees or public health workers fighting budget cuts. Other were people demonstrating against the way democracy was practiced in their country. Democracy, as we know it for decades, no longer satisfies many a citizen. Not only in post-communist and authoritarian regimes but also in mature democracies people challenges democracy as it is done. Occupy-London or Amsterdam, or the 15" of May in Spain are examples. We will compare the participants in these two types of demonstrations. What were their grievances? How did they evaluate democracy in their country? Did they trust state institutions? What did they expect from their participation? Did they participate in party politics next to movement politics? Had they given up party politics? How were they embedded in the multi-organizational field?

We maintain that movement politics is a necessary complement of party politics. The democracism of a country is defined by the quality of both movement and party politics.

Scenes of Street Art in Montevideo: City and Creative Processes

La presente ponencia es punto de partida de la actual investigación que desarrolló en el marco del Doctorado en Gestión de la Cultura y el Patrimonio (Universidad de Barcelona). El objetivo de esta presentación es visualizar algunas líneas claves sobre el papel que atesora el Street art en su diálogo con Montevideo, más precisamente, con respecto a la ciudad, su espacio público y los procesos creativos que nacen de las interacciones generadas entre los propios artistas urbanos (ya sea en su carácter individual o colectivo – crew).

Montevideo es una pequeña ciudad, capital del país más pequeño de América del Sur. Sus características propias de cercanías permite interacciones entre artistas urbanos, artistitas, etc., generando un crisol heterogéneo de formas creativas en un territorio sumamente acotado.

Asimismo, estos agentes traen lógicas horizontales en las tareas que realizan, eligen democráticamente y generan fuerzas lazos de solidaridad en las tomas de posesiones al momento de “marcar” el territorio de la ciudad. La elección por el espacio público es tratar de impactar e involucrar al habitante de la ciudad con el graffiti u otras formas de arte urbano, “rompiendo” con su espacio cotidiano, con su familiaridad con la ciudad.

La ciudad se interpreta poniéndola en cuestión a través de sus formas, sus construcciones, su arquitectura, etc., demarcando los espacios sociales donde se presentan las producciones artísticas, ejerciendo su derecho a la ciudad, buscando reconocimiento en la distancia invisible.

Los procesos creativos son múltiples, y las formas de trabajo creativo también. Las estrategias de generación de arte en ese gran lienzo blanco llamado ciudad permiten construcciones compartidas entre los artistas como puntos de tensión y normas internas de respeto y convivencia.

En definitiva, Montevideo es un pequeño lienzo con multiplicidad de artistas e interacciones creativas que se visualizan y complezjan en territorios locales acotados.
Considering the Theoretical “Status” of Critique

The hereby proposed presentation shall focus on a very specific aspect of the relation or discussion concerning modernity and critique. The aim is to, considering the multiplicities of viewpoints addressing the centrality or relevance of modernity as a centerpiece of sociological interpretation, understand to which extent a predominant and (partially) normative concept of modernity can be taken as a point of departure to define the origins of (dialectical) critique while, at the same time, dislocating the hegemony of modernization theory.

Therefore sociological theory as critical theory should be able to establish a profound and rigorous dialogue with distinct theoretical cornerstones, and here is where the interest lies in bringing to the debate standpoint from peripheral origins, focusing specially on the contribution of the Brazilian (although from a European and migrant background) critical theorist Roberto Schwarz. One has to take into account that a significant amount of his interpretations was written from the 1960s until the 1970s, and therefore precedes the more or less recent wave of post- as well as decolonial critique.

It is certainly the predominance of European colonization in so called South America was tantamount to the pertinence of recovering modernity - carried foremost under the attributes of civilization and enlightenment - as a fundament for economic, political and social conceptions. Hence, as a centerpiece of the discussion should stand Schwarz’s effort to work out the specific and distinct traits of the so called modernization or state-formation process in Brazil and how this enables us to consider the particularities and generalities of a critical perspective based upon various academic disciplines. This dialogue of critique(s) is appraised as a possibility for putting present sociological theory under ‘cross-examination’.

Segregation Patterns in Dual Vocational Training in Germany: Increasing Advantages for Young Women?

In Germany, gender segregation in the system of vocational training and education (VET/CVET) is a social reality. This system consists of three sectors: dual vocational training, the largest sector, the much smaller part of school-based training, and vocational preparation measures, bridging schemes for school leavers who cannot find regular training positions. Existing research mainly concentrated on most visible segregation line in this system: Traditionally, dual training focused on male dominated training occupations in industry, craft and construction. In contrast, women were (and still are) heavily concentrated in school-based training, where many health and clerical assistant occupations are being taught.

Less is known, however, about segregation patterns within these subsectors, particularly in the dual training system, their change over time, and their effects on employment prospects of female and male apprentices.

In recent decades, the labor market has undergone major structural changes. Skill-biased technological change and sectoral change have resulted in more challenging requirements for future workers and changing demands for occupations and qualifications, which have been reflected in shifts in the occupational composition of the dual system. Today, the majority of training contracts are found in service occupations. However, we do not know how these long-term structural changes affected segregation patterns in dual training and transitions from training to work in female and male training occupations.

Against this background, this paper’s aims to answer two questions: First, in what respect have segregation patterns within the dual system of vocational training changed over time? Second, could young women profit from structural labor market changes in terms of smoother transitions from training to work? These questions are answered by using large-scale registry data of the Federal Employment Agency on dual training and subsequent employment biographies in Germany in between 1977 and 2010.

Exploiting Untouched Nature? The Social Production of Nature As a Resource at Nakai-Nam Theun Npa (NNT), Lao PDR

The presentation argues that nature conservation is an external imposition on current socio-economic realities in Laos, and as such internal to the country’s social structures and dynamics; the state and its subjects have to make do with biodiversity conservation as a fact established internationally. Therefore, resource protection feeds into extraction with some systemic necessity. Nature reserves are an effect of power differentials, so the extraction it invites or necessitates one way or the other is ridden by inequities, as well.

But inequality defined merely by access to and use of the resources within a certain protected area (PA) is a very limited, and in fact ideological, notion of social inequality. The yardstick should rather be the distribution of the general social resources of the country and beyond. Otherwise, there is the risk of naturalizing “stakeholders” as stewards and custodians of biological diversity. Such essentialism, present in the everyday practice of sustainable development, largely misses locally lived realities and aspirations, and with these the systemic and productive relation between nature conservation and exploitation, in Laos at least. Instead, a view where nature reserves are not passive reservoirs but rather “factories” that produce biological and cultural patterns as a result of a process of socially structured practice, is more appropriate. This practice transcends, undermines, ignores or complies with the laws of a PA according to social differentiation. In this tangled and ambiguous way a PA and its productivity is realized.

These issues are discussed with regard mainly to NNT in Lao PDR. The presentation is based on the extensive research carried out by a variety of experts and scholars due to the involvement of the World Bank in the Nam Theun 2 dam project, as well as on my first-hand research in villages of the PA.

Sociology of the Frontier, Frontiers of Sociology? Ecotourism in Laos and the Social Practice of Resource Production

This presentation departs from the overall concern with the nature of power and the power of nature in current global capitalist society. It focuses on one specific aspect of this society, ecotourism in countries like Laos: frontier economies that, by definition, challenge the well-arranged epistemologies of institutionalized disciplines. I argue that attempts at understanding frontier dynamics must be decidedly sociological, i.e. aware of the dimensions and peculiarities of social practice as the very place where transformations and continuities take form. On the other hand – since theory itself is bound by and thus must reflect the complexities and limitations of time and place – sociology of frontiers must also transcend itself: first, by transcending the inherent bias that “everything is social”, albeit acknowledging that everything “is social”; second, just like socio-economic processes “run wild” at the frontier, frontier sociology has to transcend academic boundaries, within and outside the discipline.

Nature reserves are “thick” social facts constituted and maintained by socially organized and differentiated practices, and ecotourism is central in this regard. I analyze ecotourism in Lao nature reserves as a socially organized practice that crosses scales (local-global), dimensions (ecology-religion), and nature relations (subsistence-capitalist) as well as binaries such as “tradition vs. modernity” and “conservation vs. development”, which continue to pre-occupy large parts of environmental thinking and practice. Seeing nature conservation as effective resource production, I suggest a theory of frontiers as social spaces of productive conversion. I will show how a careful, reflexive materialism and an elaborated notion of social practice as the place of symbolic-material crisis regulation provide fruitful methodological grounds for a critical social theory of eco-capitalism. The presentation highlights the challenges and chances for a theory of social nature relations in late capitalism fit to deal with the diverse pitfalls of its frontiers.

Truth and (self) Censorship in Military Memoirs

Sometimes it can be fairly difficult for outsiders to gain access to the military field. However, there is a rich source on the military that is readily available for every researcher: military memoirs. This source does provide some methodological challenges, nevertheless. One might wonder about the reliability (truth) of these autobiographies and whether their content is affected by the fact that these books are prone to official censorship by the military in order to preserve operational security.

This study shows that truth and (self) censorship are not only a concern for researchers, but also for military writers themselves and it gives insight into the way soldier-authors deal with these issues. This study provides concrete quantitative data based on all military memoirs published between 2001-2010 dealing with Afghan experiences from five different countries (UK, US, Canada, Germany and the Netherlands).

The majority of soldier-authors make some kind of truth claim (either in the form of a subjective or objective truth) in their books that they also substantiate. Books published by traditional publishers do so significantly more often than self-published books. At the same time, military authors also frequently admit to some form of self-censoring, especially anonymising names is an often mentioned method. So truth claims and self censorship do go hand in hand.

Against this background, this paper asks about the at least one aspect of censorship being actively censored by the military, but most don’t even mention it, making censorship a common military feature, that is almost normal for military writers.

Making truth claims, mentioning being censored, or self-censoring do not influence the kind of plots these authors write either in a negative, or positive way.

Developing Home? Transnational and Translocal Return Migration To Ghana

Since the late 1990s a number of Ghanaian migrants living in Western countries have returned to Ghana for shorter or longer periods of time. Return migrants are widely regarded as having potential – and responsibility – for contributing to development in Ghana and are courted as development agents by the Ghanaian government and other policy makers. This perception is shared by some returnees who see themselves as having obtained knowledge and resources through their experiences abroad. However there are different types of returnees and they perceive themselves and are received in different ways.

This paper presents a case study of return migrants from Europe to Ghana, examining three different types of returnees: recent returnees who have returned because of economic turmoil in Europe since 2008; voluntary returnees who have been in Ghana for more than ten years; and involuntary returnees such as deportees. Its aim is to analyze what the modes of return mean for how returnees articulate their return; how they are received locally; how they engage themselves socially, politically and economically; and finally, the responsibilities and challenges they face when returned.

It shows that in many ways the position and engagement of ‘successful’ transnational returnees resemble that of the local elites who have made it in the capital or other big towns: migrants who are (are perceived to be) successful are expected to contribute to their families and hometown communities no matter whether they have migrated to Europe, other places in Africa, or inside Ghana. The reception of migrants who have received because of deportation or economic problems, however, is more ambivalent and depend on to a large degree on what return migrants have managed to remit back during their migration or when returning.

Polyamory and Political Economy: A Note on Socio-Economic Inequalities

Academic research and popular writing on nonmonogamy and polyamory have so far paid insufficient attention to class divisions and questions of political economy. This is striking since research indicates the concentration of significant amounts of income and other substantial polyamorous community. This paper highlights the economic conditionality of polyamorous relationships and families. Theorising polyamory from a materialist point of view allows for a more adequate understanding of the contradictions which riddle poly communities in advanced industrialised societies and confines its reach to this particular identity to premon- inantly white middle class circles. The insertion of poly cultures into an economic and cultural nexus shaped by neoliberal capitalism helps to circumscribe the material and discursive spaces from within which poly relationships and kinship formations are enacted. In this paper, the author is particularly interested in how the construction of a polyamorous style of enhancing polyamorous intimacy which is more attuned to class and socio-economic inequalities.

Employment Preferences or Family Values - Where Are the Pitfalls for Women's Labour Participation?

A better reconciliation of work and the family life is one important issue on the political agenda in many areas of the world. In West-Germany, the male-breadwinner family model is still well established. Only recently, the development of child-care for children less than three years of age offers mothers the possibility to re-enter the labour market early. Apart from such important structural restrictions, family values and gender attitudes play an important part for explaining labour force participation of mothers. With regard to family values, the family-home plays a decisive role. In West-Germany there is a widespread believe that children should grow up in sub-urban or rural as a bushwark, so that moving to a child-friendly home can be seen as a proxy for a strong value orientation towards family life. Such moves normally add space between the family home and the work-place, which results in the necessity of long-distance commuting. Hence, an early re-entrance in the labour market might become un-attractive for women, although they had a strong labour market orientation before the move. The goal of this contribution is to estimate the influence of family-oriented relocations on the re-entrance in the labour market of mothers, controlling for employment preferences and gender attitudes.

The data comes from the German Socio-Economic-Panel Study (GSOEP). The sample consists of 900 women who had a partner and a first birth between 2001 and 2010, and event-history models are applied. Preliminary results show that a child-oriented move indeed impacts mostly negatively on the re-entrance of mothers in the labour market, whereas employment preferences have positive influences. Other important influences like marital status, that are partly interacted with the family values and employment preferences, support the view that both concepts are useful for enhancing our understanding of the underlying processes.

The Challenge of Female Commuting for Partnership Stability

In modern societies, demands for spatial flexibility are omnipresent. In Germany, as in other European countries, commuting between home and the workplace is widespread. Women often neglect mobility demands when they have a partner and/or children because commuting adds an extra burden to those who are mainly responsible for the household. But of course there are women who are within commuting and face situations that commuting is as harmful as often feared. Recent findings about the impact of job related mobility on partnership stability show that long distance commuting of women increases the risk of separation for couples in Germany. The goal of this contribution is to get a deeper empirical insight in this coincidence and to explain the mechanisms behind this harmful effect.

This is possible by using the German family panel study (pairfam) which provides rich information on couples' dynamics and spatial mobility. Our contribution makes use of the first three waves of the panel. The sample consists of 2,500 women with partner aged 25 to 28 years and 35 to 38 years in the first wave. Using event-history models harmful effects of female long-distance commuting on partnership stability are replicated. In the next step, the data of the pairfam study concerning gender attitudes, employment and family preferences, and other psychological and relationship aspects are used to explain this effect. It is shown that commuting, employed to reconcile the new roles of women and men in family and working life, destabilizes couples' relationships under certain circumstances. The societal consequences and possible policy recommendations are discussed.

Political Arrangements of “Minha Casa Minha Vida” Program - the Role of State, Civil Construction Sector and Civil Society

Historically there is a functional relationship between the development of the civil construction productive sector and the Brazilian State, with a deep impact in housing policies’ decision-making processes. ‘Minha Casa Minha Vida’ program was an anticyclic measure to face the international economic crisis, supporting that sector and implementing Keynesian investments with macroeconomic effects, having few concerns with housing needs.

The Federal Government concentrates program’ normative and financing functions, redistributing from the cities/housing ministry to the economic planning ministry and the government’s strategic political decisions agency. Implementation decision power was granted to a public bank which acts guided by productivity goals, regardless housing needs. The constructive sector was already strongly present in the program formulation and influencing the rules to a better reproduction of the sector’s capital, being also a fundamental actor in the implementation, given that it became its main promoter.

In the case of municipalities – who had almost no influence on MCMV conception – it was assigned a role of appointing the beneficiaries of the first range (low-income families), assuring them, without financial/institutional efforts, the maintenance of electoral mandates through clientelistic relations. Social movements’ participation was limited to a category with only 3% of the budget (but that enables them to deliver actual results to their bases). They also informally participate in the appointing process, amplifying their political gains but with results that drift away significantly of their struggle against spatial segregation.

These decision arrangements discourage particularized solutions dialoging with local needs and represent the State/corporations’ historic imbrication, ori-
ated by the development of construction sector and by its macroeconomic, political and electoral roles. This logic shapes the actual housing policy model and explains housing investments’ decision-making process, apparently deepening territorial inequalities. Then, a pending question is: does this model contribute to or counter inequality in brazilian cities?

Attitudes About Success: Is It Rational To Be Dishonest During Economic Transition?

Success or becoming successful is quite often identified as a goal by many cultures in the world. As former Soviet states gained their independence and opened to the rest of the world the notion of success, especially economic success, became very popular even for children. It is important to note that as economic achievement becomes imperative it is unclear whether the transitional economies are able to provide their citizens with the legitimate means of achieving this coveted success. Here we propose to compare attitudes of Ukrainian students to success and the means of its achievement to those of American students by conducting a pilot survey in American colleges and Ukrainian schools. The survey questions include the definitions of one's success, necessary elements of success and the possibility of breaking the law, being dishonest and corrupt to achieve the success. One can hypothesize that the established economy with well-developed democratic institutions (like those of the US) will produce citizens who are less inclined to choose the illegal or dishonest path to achievement. Ukraine, on the other hand, with its relatively high level of corruption (according to Ti index) and unstable economy might be more likely to influence the population to acquire quite different values and attitudes, more suitable to ‘cut-throat’ conditions of the market. Is the Ukrainian population's willingness to ignore the law and basic notions of honesty an indicator of a rational adaptation?

Good without God: Atheists Facing Moral Questions and the Question of Morality

Religious books and stories are a compendium of rules and parables that cause people to consider ethics and behavior, even when many of the rules are questioned in a modern and diverse society. These guidelines remain the major source of morality for many believers; while some consider only their own religion legitimate, others accept all varieties of religion. But to reject a higher power altogether is perceived to be without an ethical basis, and thus immoral. Based on a research project incorporating over 70 qualitative interviews with both believers and atheists in the U.S, this lecture will examine the concepts behind this accusation, how atheists react to it, what kind of morality they bring into play and what they think about religious morality. In what ways do questions of ethics and equality matter to atheists, and what kind of topics do atheists choose for their social and political charity and activism? How is this related to both their status as a social minority and to non-religion itself?

Social inequality is a key focus of many of these moral debates. While many believers associate atheism, directly or implicitly, with communism, there are in fact a variety of approaches atheists take in facing the issue of inequality. What these approaches share is a common pattern for non-religious ways of dealing with social change. These different points will be laid out and illustrated with interview material in order to create a theoretical framework regarding atheist and nonreligious morality and ethics.

Intelligentsia in Modern Russia: Social Status Change

Humanitarian intelligentsia is a specific social group. Throughout its history it is not only developed non-material culture of society, but also played the leading role as civil asset of the nation, its “conscience”. During two past decades transformation in social life put the group in necessity of social adaptation, and so far the social position of the group and its role in the new social relations became unclear.

The paper is aimed to determine the current status of humanitarian intelligentsia in socio-economic, socio-political and professional fields and seek ways to improve its civil and professional positions. The analysis is based on the theoretical and methodological approaches that take into consideration the stratification of Russian society, differences in territorial conditions and professional fields. The study was divided in two phases. Initially, a wave of semi-structured interviews (n = 100) were conducted. After that, quantitative data were collected from questionnaires (n = 1150).

Results identify the strategies of socio-professional behavior, the current socio-political position of the group and its social adaptation level. The factors of status change present different levels: macro - level (socio-economic, political, socio-cultural change in the country), meso - level (the development of the region and current professional sphere), micro - level ( individual knowledge, attitude and behavioral strategies).

The Reality of Nineteen Eighty-Four. How Fiction Becomes Social

A literary text, according to the literary theorist Wolfgang Iser, operates by oscillating between the limits of the fictional and social worlds and thereby expresses the plasticity of the human being and its continued evolution of self. Notwithstanding, the question of how these fictional ideas spread into the social domain is rarely tackled. At the heart of this presentation is the task to forward develop an understanding of how the fiction found in literature participates in the shaping of social reality.

The reception of George Orwell's popular novel Nineteen Eighty-Four (1949) in the German public sphere in the years 1983/1984 will be taken to exemplify the irruption of the fictional into the social. Symbolizing the concept of totalitarianism in its purest and most extreme form, the element of imagery provided by the fictional text moves beyond signification and pretends an ontology. This socio-fictional aggregate referred to either by the novel's title or the term Big Brother has come to shape the idea of totalitarianism for a whole era. I will introduce the social philosophy of Cornelius Castoriadis to the debate, as I believe it can help us understand the functioning of the fictional within the social as displayed in this phenomenon. Castoriadis attributes primary importance to the imagination for the creation of social knowledge as well as the interaction between the social imaginary significations and the (individual) radical imagination. His framework of the interrelation between the individual and the social may well be perceived as a gateway for the irruption of the fictional as found in the arts into the social. For Castoriadis, sociological understanding of literature, I therefore propose to take the element of ontological pretension provided by fiction into consideration. Fiction can thus lay the foundation for abstract social terms and hence becomes part of social reality.

Dealing with Difference: Exclusion As a Problem of the Subject or the Discourse?

This paper integrates the sociology of knowledge approach to discourse (Reinhard Keller) into the debate on exclusion on grounds of sex, ethnicity or age. The main thesis is that exclusion is not a problem of closed or open structures, of powerless or powerful subjects or of intersectional categories. In contrast, the paper argues that exclusion is mainly a result of the interplay between discourses as structures of power and knowledge and subjects related to an institutional context. Considering empirical results, which stress the relevance and irrelevance of intersectional categories alike, the paper discusses how to deal with difference in institutions, that is how to explain mechanisms of exclusion. We propose a concept, which applies the intersectional perspective to the level of communicative interaction in institutions. Focusing on intersectional categories, the concept regards them as discursive constructions, which are more or less relevant in situations of interaction.

First, the paper discusses the main strands of related theories, which deal with the problem of structure and agency in the field of exclusion from three different perspectives: structures constitute subjects, subjects form structures, and subjects disappear behind the (intersectional) structures. Second, the paper concludes that all three mentioned perspectives miss the decisive point. Neither the focus on powerful subjects nor the dominance of structures of powers nor behind structures veiled subjects can cope with the problem of difference proceeding exclusion. What the paper aims to explain this phenomena a broader perspective is needed, which integrates the interplay of discourses and subjects in the context of institutions. The paper argues that intersectional categories are constructed by discourses. Discourses as structures of knowledge and power, are (re-)produced and transformed in communicative interactions. The main hypothesis is: How institutions deal with difference (and exclusion), based on certain intersectional structures, depends on the institutional context in which communicative interactions takes place.

Consent to Data Linkage: A Focus on the Interviewer Respondent Interaction

Linkage of survey and administrative records is increasingly popular. The survey respondent's informed consent is required to perform linkages and a number of studies have documented interviewer effects in the decision to consent. Whilst studies found that 28-34% of the variance in consent outcomes is attributable to interviewer characteristics, many of the characteristics were unobserved. We use experimental data on consent to data linkage collected in wave 4 of the Innovation Panel (IP4) to examine the role of the interviewer-respondent interaction in the decision to consent to data linkage. IP4 included a number of experiments around the way in which consent is asked and respondents were asked for consent to return their interview tapes, see Sala Knöbl and Burton (2013). We report results from multilevel models on selectivity in consent using information gathered from coding the interviewer-respondent interaction around the data linkage request.

The code frame considered whether the interviewer read out the question as scripted, with minor or major deviations. Deviations from the script considered whether the change in wording may be viewed as biased toward a particular decision. We coded the interviewer-respondent behaviour for all available interviews which allows us not only to examine the prevalence and effect of non-standard interviewer behaviour and how it affects the consent outcome, but also whether these vary across experimental treatment groups in a nationally representative study. Results will contribute to elaborate on Groves and Couper (1998's model of survey response into building a theoretical model that explains better the complex processes that lead respondents to consent.

RC05-115.4

KNOTH, ALEXANDER* (University of Potsdam, alexander.knoth@uni-potsdam.de)

The birth of modern society follows structural pluralism and many forms of social differentiation. Processes of state formation are dealing with the population and their new personnel. But who or what is the population? How does the state address individuals? What are patterns of membership and belonging when individuals become persons i.e. citizens?

Using a historical perspective through the lens of classification and social knowledge the contribution will discuss the "making up people" (Hacking 2002) within the formation of nation state's political system. It will be shown that legal classification and categorization are state practices in order to address people and to distribute resources. These persons are reflecting structural changes and they can be used as a key to open modern society's self-discriptions.

In the first step (1) beginning at 1945 the historical sequences will be sketched to reconstruct the legal paths of the cases Hungary, the Czechoslovak Republic, Ireland and Netherlands. In the second step (2) some common and some historic-specific institutionalization of inclusion by the principle of functional differentiation would be posited as a result of the system demands, however there aren't empirically saturated studies explaining this principle.

The contribution aims to explore institutional manifestations of inclusion by focusing on person's classification, because classification processes are essential for the formation of functional subsystems.

Using a historical perspective through the lens of classification and social knowledge I will discuss the production of citizens within the formation of nation state's political system. It will be shown that legal categorizations are state practices in order to address people and to distribute resources. These persons are reflecting structural changes and they can be used as a methodological key to open modern society's self-discriptions and their way of modernization.

In the first step (1) historical sequences from 1945 to 2011 will be sketched to reconstruct the legal paths of Hungary, The Czechoslovak Republic, Ireland and
The first part of the paper focuses on the period when influential German historians tried to emancipate themselves from Hegel's philosophy of history in order to create a truly empirical science – and failed! The problem was that they couldn't solve the problem of relativism which comes up in any historical account that distances itself from Hegel's teleological perspective. Thus, historians such as Ranke and Droysen from multi-nominal logic and would have emerged with arguments that in the end were not too dissimilar to the Hegelian ones.

But getting rid of Hegel's teleological philosophy of history was not only a problem of historiography. It was at the centre of the emerging social sciences in general and the writings of the most important Neo-Kantians, who influenced Max Weber. Weber clearly saw the problem and deliberately tried to cut off all links leading to a philosophy of history. This was accompanied by some costs and Weber's particular conceptual move – the coining of highly robust processual terms which seemingly could not be doubted (and thus could not be relativized!) with respect to their analytical usefulness – was not a necessary one as contemporary developments in other philosophical traditions show. But it was Weber's theoretical apparatus which became most influential so that sociology followed his lines of arguments and continued to base its narratives of social change on the assumption that social reality is to be understood as a cosmos driven by robust processes like "bureaucratization", "rationalization", "secularization", etc. This move, so it is argued, might have been convincing in Weber's days, but it is not any longer.

**Differences in Job and Work Mobility of Labor Market Insiders and Outsiders in Taiwan**

One emerging issue of research on work and labor market is to study the segmentation trend in job and work mobility in labor markets, and mechanisms behind segmentation processes. Recently, some researchers argued further that the division between standard and nonstandard workers has acted as an additional segmentation of labor market. This approach also paves the way to understanding of the link between precarious work and social inequalities. Considering the significant impacts and labor market policy implication of this possible segmentation, developed by C. I. research difference on patterns of job and work mobility between standard and nonstandard workers, and also study if these differences have caused segmentation in labor markets of Taiwan.

Existent literatures provide two strands of arguments regarding consequences of nonstandard work arrangement: the stepping-stone hypothesis and the entrapment hypothesis. The stepping-stone hypothesis claims that nonstandard work provides a stepping stone to a standard job and is regarded as a means to flexibilize the rigid labor market. On the other hand, the entrapment hypothesis, which is derived from labor market segmentation theory, assumes that nonstandard work has long-lasting negative consequences on job mobility because it makes nonstandard workers "trapped" in the secondary labor market segment, or leads to unemployment. To investigate which hypothesis is correct in Taiwanese labor markets, I use "Manpower Utilization Quasi-Longitudinal Survey" (2008-2011) to examine job and work mobility between standard and nonstandard workers. As a result, the data from multi-nominal logistic regression models support the entrapment hypothesis. Segmentation of labor market is reflected in difference of mobility pattern between standard and nonstandard workers.

**Determinants of Social Activities Among Older People in China: An Analysis of Family Factors and Community Factors**

**Objectives:** The study investigates the extent of family factors and community factors affecting engagement in social activities (non-market productive activities and leisure activities) by older people in China.

**Conceptual framework:** Given filial piety and Chinese "quanzhi" value the importance of family in Chinese culture, family factors, including older people's household size, composition and number of financial supporters are tested. In line with opportunity structure arguments, the impacts of community factors (public facilities, community offices and urban/rural communities) on the likelihood of social activities are examined. Research hypotheses are summarized here:

- **H1:** Older people living with more family members are less likely to engage in social activities than are older people living with few or no family members.
- **H2:** Older people living alone are less likely to engage in social activities than are older people living with partners.
- **H3:** Older people with more financial supporters from within their family are less likely to engage in social activities than are older people with few or no financial supporters from within their family.
- **H4:** A community with more public facilities increases individuals' propensity to participate in social activities.

**Methods and data:** The first wave of the China Health and Retirement Longitudinal Study (CHARLS) is used. The analytic sample is composed of respondents above 50 years old (n=7,813). Multilevel models for dichotomous data are employed (first level: individual characteristics and family factors; second level: community factors).

**Transnational Families and Newcomer Children in Japan**

In the 1980s, because of the economic boom in Japan, many workers came to Japan from other Asian countries. In the 1990s, the Japanese government revised the Immigration Law, resulting in workers coming from Latin America. Since then, the number of foreign laborers has continued to increase.

The number of foreign workers’ children has also grown. They face difficulties keeping up with academics in school because of insufficient Japanese language and poor school support. Teachers also face challenges in instructing diverse students whose native languages are Chinese, Tagalog, Portuguese, Spanish, and others.

In Kanagawa prefecture neighboring Tokyo, the number of newcomer children is relatively large. Four public high schools began providing special services for foreign students in 2007, and the number of such schools increased to 16 in 2013. Those schools provide a variety of services including native language classes, Japanese-as-a-second-language classes, and special instruction classes for academic subjects.

The authors identified the challenges and needs of newcomer students. The data derived from interviews with 85 children at a high school in Kanagawa preface from 2007 to 2013. The findings and interpretations indicate that (1) some newcomer children have poor academic achievement and face difficulty going on to college because of scarce resources and support even though they desire more education; (2) many families experience separation due to migration for jobs or women marrying Japanese men and leaving their children in their own country. These are the “multinuclear households” often seen in countries with long accepted immigrants; (3) those families that live apart for many years have difficulty reestablishing their ties. We argue that special educational and social attention should be given to these families and their children.

**KOBAYASHI, JUN** (Seikei University, jun.kobayashi@fh.seikei.ac.jp)

**Mobile Social Dilemmas in an Experiment: Mobility Accelerates the Cycle, but Does Not Change Cooperation**

**1. Problem**

This paper sheds light on the role of mobility on cyclic processes in mobile social dilemmas. Olson argues that rational actors will free-ride in large groups. Erhart and Keser's experiment revealed that people formed cyclical cycles of group size and cooperation when they can change groups. But they did not compare various levels of mobility. Thus, our research question is how mobility affects the cycle and the cooperative behaviors.

**2. Methods**

We conducted a laboratory experiment (with 168 participants in 40 groups in 10 sessions). Three conditions (treatments) were introduced (immobile, high mobility costs, and low mobility costs conditions).

**3. Results**

We show the following findings. (i) Mobility did not change effects of size on cooperation (N=339 group-rounds). (ii) Still, mobility accelerated effects of cooperation on size (N=360 group-rounds). As people moved more easily, cooperative groups were more likely to expand. (iii) As a result, intergroup mobility accelerated cooperation (N=40 groups). Groups rotated faster when people moved more easily. (iv) However, mobility did not raise nor decline cooperation levels (N=40 groups).

**4. Conclusion**

We observed negative effects of size on cooperation. This was consistent with the literature, both on mobile and immobile social dilemmas. We observed cyclic dynamics. This reconfirmed Erhart and Keser. We observed identical cooperation at various mobility levels. This was inconsistent with Tiebout's prospect. The literature overlooked that free-riders can invade cooperative groups. To foster cooperation among rational actors, first increase mobility to free-riders. Then, restrict mobility to exclude free-riders.
Zainichi Korean athletes have been represented in an ambivalent professional wrestler—Rikidozan—to the naturalised Japanese football player—to the fore in public consciousness and popular discourse. From the legendary ship and identity by speaking Japanese and adopting Japanese names in order to generations of Japan.

Korean athletes with respect to how the postcolonial politics within a wider context of East Asia. Overall, this paper serves as a preliminary analysis of zainichi Korean athletes with respect to how they might be studied both theoretically and methodologically.

Although Japan’s economic presence has declined over the past two decades, the legacy of Japanese cultural-economic contributions to the global process has not been adequately addressed. This paper identifies the pioneering role of Japan in developing, and globally disseminating, two key commercial processes of ‘globalisation’ (Robertson, 1995) and ‘self-orientalisation’ (Dirlik, 1996). By delineating the links between the two interrelated processes, it is argued that Japan’s contributions to the making of the global cultural economy have dramatically altered the mode of domination by transnational corporations—from economic rationalisation to cultural differentiation. This was triggered, as I contend, by the formation of strategic alliance of Japanese corporations with Western marketers and advertising agencies when they globalised their products and business operations in the 1970s and 1980s. Drawing on case studies of global sport brands, this paper demonstrates the ways in which Japanese workers and consumers have mediatized the structural forces of the global/West through their practices of globalisation and self-orientalisation. Overall, this re-thinking of Japan’s cultural-economic contributions counters the view of seemingly unilinear development of neoliberal capitalism that has been prevalent in theorising of global consciousness and connectivity.

Inarticulate understanding of someone’s needs and feelings accurately, and communicating with people smoothly is represented as “reading the atmosphere”, and it has been treasured in Japanese tradition. Recent young Japanese adults prefer being accommodating, and setting themselves apart from their peers can lead to worsening of their mental health. The present study was a questionnaire containing items about the self-rated abilities to read the atmosphere for 703 students at two universities in 2011. Among them, 3.2% were self-rated as “cannot read the atmosphere at all (Group 1)”, 9.4% “cannot read the atmosphere very much (Group 2)”, 46.8% “can read the atmosphere a little (Group 3)”, 25.4% “can read the atmosphere very much (Group 4)”, and 5.3% “read the atmosphere too much (Group 5)”. Also, logistic regression analysis showed that the self-rated abilities of reading the atmosphere were not related to age, sex, and the presence or absence of siblings, and collectivism scale. However, they were significantly related to the self-monitoring scale. The results indicated that self-monitoring is a crucial factor for the proper functioning of abilities to read the atmosphere. Also, people read the atmosphere not because they put the priority of group goals over individual goals.

Turkey has been praised as a remarkable success story among the developing economies as many countries in the Southern Mediterranean, the Middle East and North Africa suffered the impacts of global financial crisis during the first decade of the 21st Century. The economy grew by 5% per year on average from 2002 to 2012 and per capita income increased up to 10,500 USD in 2011, from the modest 3,500 thousand dollars in 2002. As of 2012, Turkey was listed as the 17th largest economy in the world with a GDP of about 800 billion dollars.

This paper explores the nature of progress towards poverty and hunger alleviation in the country during the same period. It shows that behind the neoliberal miracle of growth, there is escalation tendency for depeasantization, increase in urban poverty, decline in collective bargaining rights of labour unions, widening income gaps, incidence of food insecurity and political instability. Despite these socially unfavourable social factors officials figure celebrate success in terms of food security and fight against hungriness. This paper will provide insights as to the causes and consequences of such “success” in food security while critically assessing the analytical and methodological utility of the concept.

This paper examines how zainichi (residing-in-Japan) Korean athletes have been represented in the media and mobilised in relation to the cultural politics of Japan. Zainichi Koreans have been the largest ethnic minority in Japan largely due to forced migration during the era of Japanese colonialism. Second and later generations of zainichi Koreans have often strategically hid their Korean citizenship and identity by speaking Japanese and adopting Japanese names in order to avoid conflict with, and discrimination from, Japanese society. Sport is one of the sites where the politico-historical issues of zainichi Koreans are brought to the fore in public consciousness and popular discourse. From the legendary professional wrestler—Rikidozan—to the naturalised Japanese football player—Tadanari Lee, zainichi Korean athletes have been represented in an ambivalent manner—both as ‘Japanese’ and ‘the Other’. This ambivalence of representation is linked to how they self-identify, the role of the media and the context of cultural politics at the time. By examining how representation and perception of zainichi Korean athletes have been maintained or changed over time, the paper highlights the key events and sport stars that have contributed to the re-positioning of zainichi Koreans in Japanese society. Research on zainichi Koreans has been rarely conducted yet deserves attention because it challenges the homogeneous construction of ethnic essentialism and sport nationalism in Japan and reveals the postcolonial politics within a wider context of East Asia. Overall, this paper serves as a preliminary analysis of zainichi Korean athletes with respect to how they might be studied both theoretically and methodologically.

Inarticulate understanding of someone’s needs and feelings accurately, and communicating with people smoothly is represented as “reading the atmosphere”, and it has been treasured in Japanese tradition. Recent young Japanese adults prefer being accommodating, and setting themselves apart from their peers can lead to worsening of their mental health. The present study was a questionnaire containing items about the self-rated abilities to read the atmosphere for 703 students at two universities in 2011. Among them, 3.2% were self-rated as “cannot read the atmosphere at all (Group 1)”, 9.4% “cannot read the atmosphere very much (Group 2)”, 46.8% “can read the atmosphere a little (Group 3)”, 25.4% “can read the atmosphere very much (Group 4)”, and 5.3% “read the atmosphere too much (Group 5)”. Also, logistic regression analysis showed that the self-rated abilities of reading the atmosphere were not related to age, sex, and the presence or absence of siblings, and collectivism scale. However, they were significantly related to the self-monitoring scale. The results indicated that self-monitoring is a crucial factor for the proper functioning of abilities to read the atmosphere. Also, people read the atmosphere not because they put the priority of group goals over individual goals.

Turkey has been praised as a remarkable success story among the developing economies as many countries in the Southern Mediterranean, the Middle East and North Africa suffered the impacts of global financial crisis during the first decade of the 21st Century. The economy grew by 5% per year on average from 2002 to 2012 and per capita income increased up to 10,500 USD in 2011, from the modest 3,500 thousand dollars in 2002. As of 2012, Turkey was listed as the 17th largest economy in the world with a GDP of about 800 billion dollars.

This paper explores the nature of progress towards poverty and hunger alleviation in the country during the same period. It shows that behind the neoliberal miracle of growth, there is escalation tendency for depeasantization, increase in urban poverty, decline in collective bargaining rights of labour unions, widening income gaps, incidence of food insecurity and political instability. Despite these socially unfavourable social factors officials figure celebrate success in terms of food security and fight against hungriness. This paper will provide insights as to the causes and consequences of such “success” in food security while critically assessing the analytical and methodological utility of the concept.

Although Japan’s economic presence has declined over the past two decades, the legacy of Japanese cultural-economic contributions to the global process has not been adequately addressed. This paper identifies the pioneering role of Japan in developing, and globally disseminating, two key commercial processes of ‘globalisation’ (Robertson, 1995) and ‘self-orientalisation’ (Dirlik, 1996; Iwabuchi, 1994). By delineating the links between the two interrelated processes, it is argued that Japan’s contributions to the making of the global cultural economy have dramatically altered the mode of domination by transnational corporations—from economic rationalisation to cultural differentiation. This was triggered, as I contend, by the formation of strategic alliance of Japanese corporations with Western marketers and advertising agencies when they globalised their products and business operations in the 1970s and 1980s. Drawing on case studies of global sport brands, this paper demonstrates the ways in which Japanese workers and consumers have mediatized the structural forces of the global/West through their practices of globalisation and self-orientalisation. Overall, this re-thinking of Japan’s cultural-economic contributions counters the view of seemingly unilinear development of neoliberal capitalism that has been prevalent in theorising of global consciousness and connectivity.

Inarticulate understanding of someone’s needs and feelings accurately, and communicating with people smoothly is represented as “reading the atmosphere”, and it has been treasured in Japanese tradition. Recent young Japanese adults prefer being accommodating, and setting themselves apart from their peers can lead to worsening of their mental health. The present study was a questionnaire containing items about the self-rated abilities to read the atmosphere for 703 students at two universities in 2011. Among them, 3.2% were self-rated as “cannot read the atmosphere at all (Group 1)”, 9.4% “cannot read the atmosphere very much (Group 2)”, 46.8% “can read the atmosphere a little (Group 3)”, 25.4% “can read the atmosphere very much (Group 4)”, and 5.3% “read the atmosphere too much (Group 5)”. Also, logistic regression analysis showed that the self-rated abilities of reading the atmosphere were not related to age, sex, and the presence or absence of siblings, and collectivism scale. However, they were significantly related to the self-monitoring scale. The results indicated that self-monitoring is a crucial factor for the proper functioning of abilities to read the atmosphere. Also, people read the atmosphere not because they put the priority of group goals over individual goals.

Women's Health and Gender Discrimination In India

Abstract

The greatest revolution in any country is the one that affects positively the lives of women, and there is no doubt that, if women are encouraged to realise their potential, that it's not only their life which would be affected but the life and situation of the whole household which is the basic unit of our national economy. Women's health in India can be examined in terms of multiple indicators, which vary by geography, socio-economic standing and culture.

Women's condition and health in India is often leads to increased drug use. A heavy nod numbs heroin users from the cold part of an overall strategy for negotiating Denver's regimes of spatial confinement continuing to seek alternative and often illegal places for shelter and attending to this, it is unsurprising that homeless people resist this degree of control by con-

Finding Shelter in Denver: Multiple Regimes of Spatial Order and Multiple Coping Strategies

From a homeless person's perspective, the neoliberal city seems like a virtual minimum-security prison. In order to work, eat and rest, they must negotiate multiple and layered ordinances regulating their activity and movement. For the homeless, simply occupying public space is already problematic. Certain municipalities allow begging, others do not. Scraping metal often violates land use codes. In seeking services, the homeless must conform to the requirements of state and charitable service providers. Obviously, neoliberal spatial control of homelessness does not germinate from a single control center. Peck (2010) argues that the mongrel phenomenon of the neoliberal state is relationally consti-

Does Inclusion Mean Everyone Every Time?! – Critical Reflection on a Popular Concept

It seems that inclusion is being discussed everywhere you turn; organisations, institutions, government services all claim to be places of inclusion. What does this really mean? Does it mean that every location will be designed so that anyone can access and act in it? Is it enough to declare your intention to work together to be inclusive? Will this concept be able to remove the subtile (and not so subtile) forms of exclusion that have developed over the years in our society? Is it really intended that each person in it's unique way of being should be acknowledged and accepted as an active participant? How can such processes of change be carried out and supported? My presentation will focus on the inclusion of children with handicaps in public schools; I will reflect on the questions above and conse-

Parents' Home Ownership and Support for Adult Children Across Europe

The degree to which economic well-being depends on the support provided by the family of origin varies considerably across welfare regimes. Thus, while Scandinavian countries are characterised by an high level of defamilialization, Continental Europe follows a model of supported familialism. The Mediterranean countries are best described as adopting a model of familialism by default. In our previous research, we have shown that what changes from one model to the other is not only the relevance and strength of the family ties, but also the strategies adopted by parents to support their adult children's own family projects.

emotive tool in institutional propaganda. My case study is Instagram photographs which were uploaded to the official Instagram site of Israeli Defense Force between 2012-2013. I also examined random Instagram photographs which were tagged IDF and Zahal (IDF in Hebrew).

I will suggest that the site administrators attempt to form a conceptual frame embedded in ideological, aesthetic, and emotional norms that are common to all the users, who were raised on myths about the army and the value of service as young men and women in the armed forces (Friedländer, 1984). And last, seeing Instagram as a platform for individuals to perform and share their artistic creativity (Gye, 2007), goes along with another Israeli myth, which praises soldiers as sensitive individuals who fulfill their national duty, while being young “fighters and dreamers”, who express their feelings in various forms of art.

KOIKKALAINEN, SAARA* (University of Lapland, skoikkal@ulapland.fi)

Free Movement and Serial Migration: Exploring the Lives and Motivations of Highly Skilled Finns Living Abroad

The European Union (EU) is a globally unique area, where it is possible for the majority of European citizens to study, work or retire in any of the 28 EU member states, as well as Switzerland, Iceland, Norway, and Liechtenstein (Koikkalainen 2011). European citizens have more legal, transnational mobility rights than any other migrant group in the world and the ease of mobility across intra-European borders has created a common labour market for those willing to be mobile. The presentation discusses the intra-European mobility regime from the perspective of highly skilled migrants: how young, educated Europeans experiment with living abroad, move between European capitals and take up job offers in various countries without the need to worry about visas, work permits, or integration requirements. For these privileged migrants, Eurostars (Favell 2008), onward migration may be as easy as buying a low-fare airline ticket or hopping on a fast train. The paper draws on the Working in Europe Study (2008-2011) which collected the experiences of 364 Finns working in 12 European countries. Special attention is paid to the work of scientists, hospital administrators and private users to activate a unified code of symbols, which blends individuality and nationality, the beauty of nature, the aesthetic standards of the application and the admiration of armed forces (Friedländer, 1984).

In sum, there are some variables which having opposing effects in different societies. They seem to reflect the differences in the population composition of Muslim migrants as well as the composition of economically active population in each society.

Mobile Workers, Mobile Lives: Tourism Workers in London and Lapland

This conference paper focuses on two European tourism destinations that thrive on seasonal tourism, often performed by circular migrants: London, UK and Lapland, Finland. London is an important urban tourism destination in Europe attracting more than 30 million tourists each year. Lapland is a major tourism destination at a smaller scale: the land of ice and snow, the arctic borealis and reindeer safaris attracts just below one million tourists each year. While the profiles of these two places are very different, they do share important similarities in terms of labour demand. In London the pubs, hotels, shops, and amusement parks rely on seasonal labour, often performed by young people originating from other European countries. In Lapland the hotels, ski resorts, wilderness safaris and other tourism-related services also require flexible, seasonal workers who return to their countries of origin or to Southern Finland for the off-season. A look at this unlikely pair of case studies can increase our understanding of the migration – tourism nexus, and provide an insight into the differences between the tourist experience and the mobile worker experience.

Drawing from the tourism research and migration research literatures the presentation explores how the experiences of tourists and migrant workers differ from each other. Is working at a tourism destination in fact a form of lifestyle migration? How do migrant workers form workplace communities, develop place attachment, and bond with the local community, if they know that their own stay at the tourism destination is only temporary?

Halal Food Consumption Among Muslim Immigrants in Tokyo, Seoul and Taipei: A Comparative Analysis of Correlates

This study aims at clarifying the similarities and differences in immigrant integration from the perspective of religiously regulated food consumption in new immigration countries in Asia. It analyzes correlates of halal food (which Muslims are allowed to eat) consumption behaviors among male Muslim immigrants in Japan, South Korea and Taiwan. Applying logit models to the micro-data from the Survey of Foreign Muslims in Japan (2005-2006), the Survey of Muslims in South Korea (2011) and Explorative Study on the Taiwanese Muslims (2012-2013). It broadly draws on the analytical framework proposed by Bonne et al. (2007). The dependent variables include the frequency of visits to halal shops and that of visits to halal restaurants. The frequency of visits to halal shops and restaurants tends to be low in Japan and high in South Korea. The logit analysis for Tokyo shows that white-collar employment, strengthened religiosity and concerns for local customs have positive effects while visit to halal shops and that other origins and high-school or less education have negative effects. The logit analysis for Seoul shows that the entry in 2005-2006 or 2009-2011, South Asian origin, very strict observance of Islamic rules have positive effects on the visit to halal shops and that other origins and high-school or less education have negative effects. The logit analysis for Taipei shows that living in owned housing and very strict observance of Islamic rules have positive effects on the visit to halal shops and that other origins, white-collar employment, non-strict observance of Islamic rules and adaptation have negative effects. The results show more differences than commonalities among the three societies, possibly because of the differences in the composition of Muslim immigrants and in the availability of these facilities.
"Alternative Unions" and Their Involvement in the Post-3.11 Disaster Politics

Labor unions call alternative unions are increasingly becoming a noteworthy presence in the contemporary Japanese social movements scene. These are individual membership-based unions, such as general unions and community unions. I call them alternative because they are from the standpoint of nonstandard workers, they serve as an alternative to enterprise unions from which non-standard workers are usually excluded.

This paper examines the ways in which these alternative unions, who have made themselves into prominent figures engaged in nonstandard employment issues, became involved in the post-3.11 disaster politics. This study uses ethnographic and archival data gathered during fieldwork in Japan from April 2008 to September 2009 in addition to follow up research conducted in 2010 through 2013. I demonstrate that alternative unions live enmeshed in a complex web of individual and organizational ties, and that they thrive by building new ties as they respond to emerging crises. From the standpoint of individuals who are involved in labor disputes through these unions, they come to be enmeshed in a dense network through union affiliation. They develop new bonds and ties with individuals they meet anew. As a consequence of this organizational social capital being transferred to the individual, some come to participate in social movement activities on their own, separate from union affiliation. The network transfer sometimes leads in the long run to nurturing new activists who respond and engage in emergency crises. I argue that alternative unions serve a double role in the field of social movements in Japan. First, they actively engage in emerging crises by working with other unions and civil societies. Secondly, these unions serve to connect individuals through these activities, which sometimes lead individuals to participate in movements on the newly emerging crisis.

Depression, Work and Identity in a Neoliberal World: Perspectives from Australia and the UK

Since the 1980s, job markets in economies such as the United Kingdom (UK) and Australia have been shaped by neoliberal policies directed at increasing competitiveness and productivity. While different national policies and institutions are at work, workers in these countries have been affected by some common trends, including decreased union membership, restructuring, outsourcing, off-shoring, increased workload pressures, short-term contracts, and redundancies, contributing to greater job insecurity and workplace stress. During the same period, the prevalence of depression diagnoses has increased worldwide, with the World Health Organisation estimating that over 100 million people are currently living with depression. Recently, sociologists have theorised about the possible connections between these two trends, suggesting that the increasing demand for workers to be flexible and enterprising has contributed to them feeling stressed, with implications for depression (Rose 2007; Ehrenberg 2010). Yet relatively few qualitative studies have empirically explored the relationship between work, depression and identity. This paper elucidates the connections between work and personal narratives of depression using 77 in-depth interviews with people living with depression in Australia and the UK. Interviews were conducted between 2003 and 2010. In this paper, we provide a secondary analysis of interview transcripts (with original researchers involved), using thematic analysis to explore how people talk about their experiences of work in the context of their illness narratives. We will uncover how people living with depression experience work, including how work and workplace policies (e.g. antidiscrimination, sick leave) can both contribute to emotional distress and protect against it. We locate our empirical findings in the context of theoretical debates about the impacts of neoliberalism on contemporary individuals, and draw explicit comparisons between people’s experiences in Australia and the UK to illustrate our points.

Preschool Teachers in a Changing Institutional Context: Reforms and Prospect of Professional Group

Results of this research are the initial stage of the "Processes of the Actual Russian Market of Preschool Education" project and allow to allocate the following main points of a situation of preschool teachers in the period of institute reforming. Difficult situation of preschool teachers is caused by increase of demand for this service, on the one hand, and an obvious suspense of an array of problems of the sector, defining statuses of group, on the other hand.

The cultural resource of occupation is very poorly popularized that making uncertain the symbolic capital of group in the opinion of clients (parents and educational government officials). In this situation private sector is essentially interested in advance of the cultural capital of occupation as the power of authority and expertise of a profession as a basis to increase the status indicators of the group.

At institutional level monopolization by the state of administrative functions administration. The professional organizations in estimate of experts received different treatment. Informants of the "pro-state" sector associated them only with labor unions, taking into account absence at them serious opportunities of change of professional group position. Experts of "pro-market" organizations showed interest in professional associations and the organizations of public control. The preference of a type of expert associations focused on advance of the cultural capital of group and classical "not bureaucratic" ideas of professional independence, testifies higher interest in development of power resource and group ascending mobility.

The current changes in an institutional context can potentially modify structure of professional group, promote legalization and expansion of its private sector and increase of its status indicators.

The Causal Effect of Another Sibling on Own Fertility – an Estimation of Intergenerational Fertility Correlations By Looking at Siblings of Twins

Researches have documented persistent differences in fertility between different socioeconomic groups. These differences could over several generations have important population level implications on the social transmission of socioeconomic status as the size of socioeconomic groups naturally is dependent on differential fertility. The reasons for intergenerational fertility correlations are however poorly understood. The current study attempts to differentiate between the causal role of another unexpected child in the parent generation, from the effect of other characteristics that are shared between parent and children, for explaining intergenerational fertility correlations. Thus it is possible to examine if intergenerational transmission of fertility is due to transmission of socioeconomic status, which on average is shared between individual. This is examined through an instrumental variable approach, using a twin birth as a source of exogenous variation in the size in the parent generation. Data is drawn from the complete Swedish population using administrative register data on more than 2,000,000 parent-child links. Findings show that little or none of observed fertility correlations can be attributed to the causal affect of growing up with another sibling as such, instead shared characteristics between parents and children such as fertility preferences, ethnicity, religion or socioeconomic background appears to explain observed fertility correlations.

Development and the Transformation of Women's Capabilities. – Sociological Study of Household Footwear Cluster in India

Indian leather industry has grown in household sector and part of it is in the process of mechanization today. Footwear is major product produced both in household and factory sectors to meet the export and domestic demand. The Indian leather industry is supporting livelihood to millions of artisans who follows the division of labour system of footwear production activity at the household level. Men and women have specialization in each operation in the footwear production activity. The household sector contributes almost 70 percent of the total footwear production activity. Footwear is major product produced both in household and factory sectors. A few units particularly in clusters are surviving with limited market support of traditional buyers. Women play major role in sustaining the footwear activity in these clusters. The institutional intervention focusing on women workers has empowered them with new production skills and technical training.

Central Leather Research Institute (CLRI) has taken up the task for mechanization of the household sector. A few units particularly in clusters are surviving with limited market support of traditional buyers. Women play major role in sustaining the footwear activity in these clusters. The institutional intervention focusing on women workers has empowered them with new production skills and technical training.

The current changes in an institutional context can potentially modify structure of professional group, promote legalization and expansion of its private sector and increase of its status indicators.

Key words: Leather industry, household footwear sector, women workers, institutional support, division of labour

Indian leather industry has grown in household sector and part of it is in the process of mechanization today. Footwear is major product produced both in household and factory sectors to meet the export and domestic demand. The Indian leather industry is supporting livelihood to millions of artisans who follows the division of labour system of footwear production activity at the household level. Men and women have specialization in each operation in the footwear production activity. The household sector contributes almost 70 percent of the total footwear needs of the country. The post liberalization era brought huge quantity of cheap and non leather footwear to Indian market that affected mostly the household sector. Outdated technology and low scale of production system and primitive designs of the footwear are the major reasons for the household footwear sector, that unable to hold their market share. Faced with the emerging competition and challenges, many of the household units closed down their production system. A few units particularly in clusters are surviving with limited market support of traditional buyers. Women play major role in sustaining the footwear activity in these clusters. The institutional intervention focusing on women workers has empowered them with new production skills and technical training. Central Leather Research Institute (CLRI) has taken up the task of footwear cluster development programme with women specific empowering goal has made significant impact on women artisans in household footwear sector. The study has brought out interesting facts and findings on the women empowerment with decision making through institutional support.

In the field of environmental education, several previous studies mentioned experiences in nature as the factor to prompt pro-environmental behaviors and in the field of environmental sociology, they say environmental awareness and knowledge about environmental issues are the factors to do environmentally appropriate behaviors. The purpose of this study is to examine the effects of those three factors as the determinants of prompting pro-environmental behaviors. In November 2010, we conducted a survey in Minamata, Japan. Respondents are all the 3rd grade junior high school students and their parents in that city. Results are as follows: 1) Both students and parents who try to share knowledge about environmental issues with their family members tend to do pro-environmental behaviors, 2) Experiences in nature are in correlation with only students’ pro-environmental behaviors, not with parents’ behaviors, 3) as for students and fathers, awareness of personal responsibilities for and effectiveness of doing environmentally appropriate behaviors have correlation with their pro-environmental behaviors, and doing environmentally appropriate behaviors have correlation with their pro-environmental behaviors.

The “Classical” Concept of Alienation in the Light of Post-Structural Social Theory: Trans-Alienation and Hypo-Subjectivity of Working Man

In general, the studies of alienation can be divided into two strata: 1) processes of alienation in the “developed countries” due to formation of mass consumer society, 2) dynamics of alienation in “developing countries” that takes place in classic terms of alienation, and in new social contexts for the emerging market economies. We can see sharply distinguished types of alienation? Probably today we should talk about rhizome (Deleuze, 1980) of different dimensions of alienation. Using the concepts of diverse trans-phenomenon (trans-politics, trans-economics etc.) of French post-structuralist Jean Baudrillard (2006) I’m representing the concept of «trans-alienation» which is a hybrid of “new” Western and “old” Soviet forms of alienation which are products of the different types of social spectacle (Guy Debord, 2004). The “democratic” Western countries are more inclined to the methods of state regulation of the economy, whereas in developing countries there is still a tendency to anomic and imposing values of the market and the consumer society. Thus, the modern individual is represented as totally alienated, in other words, as a “dead subject”: a vicious circle: alienated labor → alienated consumption. Is there still hope today to reanimate the subject that is not more crushed by the discourses of power, labor, consumption and capital? If the early works of postmodernists abounded statements and attitudes regarding the death of the subject, some of their more recent works show revision of the terms “subject” and “subjectivity” and indicate the possibility of resuscitation active social agent as a full-fledged subject of power, of his will, intentions and desires. This possibility is possible by the development of new ideas about the properties of the social environment (consumers): a flexible, non-linear, post-bureaucratic, rhizomatic (Deleuze, Guattari).

The Socio-Political Foundations of the Zionist Banking System in British Mandatory Palestine and Its Institutional Change in the Political Economy of Israel

In 1948, when Israel was established, there were more than twenty banks and a hundred of credit cooperatives. This was the legacy of the pre-state period in which this fragmented Jewish banking system was formed by the British liberal government. A framework of social and business networks among German origin Jewish bankers, power struggles between bankers and state bureaucrats, created, which are still a part of the present situation in the banking sector in Israel.

Thirty years later, in the end of the 1970s, the landscape of the Israeli banking was completely different: it was dominated by only three powerful banking groups which have become the exclusive actors in the financial and commercial markets. The government has decided to create a ‘state-led’ financial system (similar to France) and brought about an extreme consolidation in the banking sector, in order to control the monetary system and optimize the channeling of capital for achieving industrialization. Through ordinances and informal means, embedded in institutional arrangements, politicians and state bureaucrats adopted and simultaneously applied a triangular policy: giving institutional preference to three specific banks; imposing discrimination against the rest; and prompting mergers in the field. The regulatory authorities also allowed the three largest banks to become ‘universal’ (similar to Germany), what made the implementation of the
Emergent Platform Stage of Japanese Civil Society after the Fukushima Accident: The End of “Winter of Social Movements” in Japan?

After the severe accident in Fukushima Daiichi nuclear power plant, major campaign issues in anti-nuclearpower have become variable. Before the accident, these issues were related to the anti-nuclear power plant construction in particular regions and anti-atomic weapon for the risk of causing radioactive contamination. However, this crisis broadened the range of these issues and changed the risk. Not only living environments in Fukushima were destroyed by the tsunami, but also the environments in other regions were influenced by the risk of the unseen health problem which may be caused by radioactive contamination. How did Japanese civil society organizations respond to the arising issues? What are the differences and commonalities of the organizations working through each issue?

To investigate the questions mentioned above, we conducted interviews with leaders of civil organizations on related issues in Tokyo, Osaka, and Fukushima, and a questionnaire survey on hundreds of the organizations which appeared in newspapers after the March 11.

From these researches we find out that the wide range of issues in nuclear power which was caused by the crisis gave way to the emergence of, not only the anti-nuclear power organizations which passed through the “winter of the social movements” before the Fukushima accident, but also new comer organizations which keep sometimes ambiguous or neutral stance on nuclear power. But, for example, a new comer movement proposed a law request for the victims, which was finally got through, to the local government. In other words, a newcomer organizations can have the means of accessing Japanese society. So, these organizations can provide the alternative means to fight against the government for Japanese civil society organizations of the issues in nuclear power. These research findings must make important resources to predict the future of the civil society after the great earthquake.
are a desiring subject with ‘sexual, material, and affective self-interest’. They have a wide range of aspirations, needs and longings for love, sex and relationship. Some are proud of paying for rather impersonal sex with as many women as they wish (McDonaldization of sex, or McSex) while others passionately seek intense emotional intimacy with female sex workers and refer themselves as a member of a ‘sucker’s boat’ or Titanic, the local parlance for male clients who fall in love with sex workers. It is through these different engagements with female sex workers that we can understand the emerging Chinese masculinities in Hong Kong.

Through a sociological analysis of men’s commercial sexual experiences in Hong Kong, this research joins the current international debate to rethink masculinity in relation to the changing gender order between the sexes under the new urban sexual culture of post-industrial capitalism.

**KONIECZNY, PIOTR** (Hanyang University, piokon@post.pl)

This paper contributes to the discussion on Internet mobilization and on international social movements’ ability to influence national policy, by analyzing the motivations and the participation levels of Wikipedia volunteer editors (Wikipedians). The day after the first Internet strike on 18th January 2012 against the SOPA legislation proposed in the US, Wikipedians from all around the world took part in the vote concerning whether Wikipedia should undertake a protest action aimed at influencing American policymakers. Wikipedia editors are shown to share value change, which allows examining complex life course patterns, through experienced Wikipedians were also likely to be concerned about whether taking part in a protest action is not violating the site’s principle of encyclopedic neutrality. Wikipedia’s participation in this protest action allowed internationally-based netizens to have a visible impact on the US national legislation. As such, Wikipedia can be seen as an international social movement organization, whose participation in 24 hour site’s blackout was a major factor that led to a creation of an international political opportunity structure worldwide awareness of and protests against a proposed American legislation enabling a national political opportunity structure (American citizens who otherwise would not be aware of the issue became so and became politically active)

*Social Stratification of Changing Family Life Courses – Results from Sequence Analyses for Seven European Countries*

A major shift of life course patterns occurred in Europe throughout the second half of the 20th century. The post-war period of economic growth and mass prosperity fostered highly standardized life courses, characterized by continuous employment patterns (among men), nuclear family patterns with early and stable marriages, accompanied by medium levels of fertility. Research has proven, that living arrangements have pluralized and become more heterogeneous since the 1970s, while life courses destandardized. Value change, individualization and increasing economic insecurity are assumed to have stimulated these changes. We add to the discussion of the causes of destandardization by investigating which social strata are driving the process. We examine differences in destandardization of family formation between higher and lower educated strata in seven European countries with distinct socio-political systems and economic development. We use representative data from the Generations and Gender Surveys (GGS) for Norway, France, Italy, Russia, Estonia, Hungary and from the National Educational Panel Survey (NEPS) for Germany (n = 70228 respondents). We compare cohort-specific patterns of family formation between the respondents’ 15th and 35th birthday using sequence analysis, which allows examining complex life course patterns.

The empirical results show for all countries that a) traditional’ sequences of family formation are diminishing and b) life courses of the lower educated have become more destandardized than those of the higher educated strata. This is due to the fact that a new standard of family formation emerges among the higher educated, while the lower educated follow a variety of different paths. Specific life course pattern contribute to the social stratification of changing family life courses. Overall, our results suggest that destandardization is a to a lesser extent extended by value changes, but much more by social deprivation and failure to establish stable and socially accepted family trajectories among lower social strata.

*Toward a Sociology of “Sexuate” Beings*

Although biological factors underlie human sexual behavior and interaction, sexuality is a distinctly sociological phenomenon, as it is part of the social world that is endowed with and constituted through meaning. In this regard, sexuality does not differ from other aspects of social experience. However, its close connection to the biological body presents an especially interesting challenge for sociological theorizing. The meaning of sexuality has been explored widely in the social sciences and humanities. One notable theoretical strand in these inquiries is gender theory. Gender theorists share a sociological perspective in that they view sexuality as part of the meaning structure that we constantly create. Another important approach to the theory of sexualities is feminism. Feminist theories are supposed to be rationalized, these theorists have identified multiple ways in which everyday interactions occurring within them are sexualized. Yet, the body itself is curiously absent from these and other theoretical approaches. Although the only way to know our bodies is through some meaning structure, this does not mean that the body cannot exist unless meanings are attached to it. The body exerts a powerful influence on social interaction, and sociological theory must account for it.

As social theorist Drucilla Cornell has argued, we are “sexuate” beings with multiple engagements and multifaceted phenomena. ‘Sexuate’ status creates the materials with which we construct our social world, which is shaped through this process. A more adequate theory of sexuality must be based on an understanding of how the real and fictitious possibilities of attraction and repulsion among human organisms are acknowledged, used, and acted upon, on the one hand, or minimized, and rejected on the other, in various social contexts. Building on Cornell’s concept, this study aimed to develop a conceptual framework for a more complete sociological understanding of human sexuality.

*Diversity in Leisure and Leisure Research for Social Justice in Japan: Seeking International Conversations*

Although Japanese leisure research literature has grown over the past four decades, it has not been well recognized at the global level largely because of language barriers. Given that Japan and Japanese leisure literature are closely intertwined with each other particularly in non-Western contexts (Fox & Klaiber, 2006; Iwasaki, Nishino, Onda, & Bowling, 2007), the acknowledgement of the existing Japanese leisure literature appears necessary to initiate constructive conversations on leisure and leisure research in Japan among international researchers. Therefore, a critical review of literature on leisure and social justice is desired. Building on Cornell’s concept, this study aimed to develop a conceptual framework for a more complete sociological understanding of human sexuality.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
For cosmopolitan identities, this paper argues for scholarly analysis cognizant of Japanese history, culture, and contemporary social issues, particularly family issues. I argue that a culturally-adapted communitarian model of diversity perspective on contemporary Japanese family settings will open space for a just research of diverse family issues, including the rapid rise of one-two-person households and the so-called “invisible family” that do not necessarily fit the conventional idea of Japanese nuclear family. This study examines specifically gender and age issues in the contexts of such postmodern family configurations. Given the effects of globalizations on all nations, further international conversations are necessary to advance our knowledge on the subject.

In post-reform China, the value of education is heightened in the country's development of a market economy. Driven by a neoliberal ideology of human capital theory, China has moved from educational expansion as a means of economic growth and has implemented a series of education reforms. In parallel to the adoption of an export-oriented growth model, the role of vocational education is emphasized in the past two decades – to train secondary school graduates with skills to match the needs of the developing industrial sectors. This paper describes how the expansion of vocational education in China responds to the neoliberal idea of human capital development. It also investigates its impact on the life chances of students with rural background, who previously had limited chance for post-compulsory education. Based on the fieldwork data collected in three vocational schools in Chongqing, we find the students have an urge to craft marketable selves through the acquisition of educational credentials. Earning degrees in vocational schools is motivated by their aspiration for upward mobility. However, many students show their pessimism after working side-by-side with other factory workers on the production lines during their internship. This paper argues that under the developmental mode in a globalized market, China relies heavily on labour intensive manufacturing-based economy. The state-capital alliance has already shaped and structured the types of jobs that available in the labour market. The expansion of vocational schooling operates in the guise of training and skill development; but, in reality, these educated youth only becomes members of the new generation of migrant workers for the use of the export-led industrialization. The human capital argument for national development has failed to deliver on its promise.
Immigrant Occupational Attainment in Japan and Its Determinants; Is it a "Structured Settlement"?

Japan as a "post-transitional society" has recently shifted into a "new" country of immigration as southern European countries. However there are few studies on the integration of immigrants in the Japanese labor market. The present study aims to reveal immigrant occupational attainment in Japan and its determinants by comparing their occupational distributions to those of the Japanese counterparts with the Japanese census micro-data conducted in 2010. As a result, the following findings are revealed: to the first question, we answered that socioeconomic compositional differences cannot explain the differences in the occupational distribution between immigrants and the Japanese, meaning that a migrant might have a different probability of occupational attainment from the Japanese who has an equivalent feature. On the second question, it is revealed that a return to immigrant educational attainments is higher than that of the Japanese, when a migrant is a highly-skilled or a long-term resident such as Vietnamese Refugees and Japanese migrants. In addition, there is a general pattern in a return of educational attainment, which tends to be smaller for females than for males. To the third question, we can argue that the extension of residency in Japan mostly has a positive effect for migrants except highly-skilled ones. To the fourth question, the outcome of occupational attainments shows mosaic situation, implying that the same characteristic plays a different role in their occupational attainment depending on their mode of incorporation. Taken together, it is clarified that selection on human capital, duration of residency and gender difference are important for immigrant occupational attainment. Actually, the relations between those determinants are similar to findings in previous studies in western developed countries. However, it is also revealed that Japan has experienced multiple modes of immigration simultaneously, or a "structured settlement" as a feature of "new" country of immigration.

Refugee Returns - Experiences of Inclusion Here and There

My doctoral dissertation focuses on the personal experiences of research participants, legally defined as refugees, in relation to their reentry to the region of their origin, from Finland. Reentry, a fluid concept, adopted from intercultural communication research, illuminates several types of return that appear along a spectrum from normative notions of 'permanence' to relatively transnational outcomes. Specific examples in my interview data include forced return, voluntary reentry, and onward migration, patterned visits, following return in Chile, Iraq, or Vietnam. Applying Rosenthal's biographic-narrative interview as the interview method of study, the participants narrate their life story, which is then analyzed, in terms of phenomena linked to return, especially concerning the biographers' social networks. My aim in this presentation is to illuminate how the participants narrate their reentry and exclusion in different settings in Finland and as a returnee, in the region of their origin. In addition, the interviews illuminate other key settings, events, relationships and issues that play a critical role in their lives. Experiences of being different are frequent in the participants' narratives – both here and there – and they frequently reflect on this, often showing remarkable social acuity and awareness of social and cultural dynamics, in terms of aspiration, achievement, abandonment – or being contextually-abandoned, with the result of either achieving the aspired position or experiences of abandonment. In addition, normative framing and unquestioned assumptions are frequently encountered, presenting an ongoing and central challenge, for both myself and those I have invited to participate in this research.

Returning Refugees' Life Stories

My doctoral study looks at refugee returns applying Rosenthal's biographic-narrative interview as the interview method of reentry, a concept coined from the field of intercultural communication denoting the immediate experiences of people returning, the applicability of the method is being elaborated on in reference to different types of interview participants, returning from Finland to the region of origin, e.g. the case of three voluntary returns to Iraqi Kurdistan (PKU) and the three interview participants held a legal status of a refugee in Finland, stayed there for at least 2 years, and returned under the auspices of an IOM programme of assisted voluntary returns in the beginning of 2013. In order to examine the return processes as a whole, with special emphasis on social relations and networks, and the impact of the time spent in Finland in the participants' lives, the biographic-narrative interview was chosen as the most applicable method to elucidate the genesis of return, key turning points characterizing the participants' lives, the various salient social and cultural dynamics concerning the return decision, and what the future looks like from the participants' present perspective. In matter of looking at "the experiences preceding the return phenomenon in question" (Rosenthal, 2004: 53). For the analysis, the procedure of biographical case reconstructions is followed step-by-step: biographical data, text and thematic field analysis, reconstruction of the life history, microanalysis of certain segments, comparison of life history and life story, and the development of an account of comparison of cases. Challenges are apparent regarding other types of biographical data. That said, both the levels of narrated and experienced life history fall within the scope of my study.

The Turkish Dilemma: How Should Islam Relate To Republican Era Collective Memory?

This paper scrutinizes how the Syrian refugee crisis affect Turkey's decades long geographical restriction policy on admitting asylum seekers. It presents how former Soviet policies provide a context for pragmatism in making immigration policies. It also debates how the reaction of societal actors to immigration affects the making of Turkish foreign policy vis-à-vis the Middle East. Thereby, looking at the Syrian refugees crisis, it presents a case of public philosophy clashing with policy. Turkey is one of the last four countries in the world that remain to impose geographical restriction policy on admitting asylum seekers. It presents how policy makers appealed to Turkey's geographical region as a discourse for rejecting asylum applications of those that came outside Europe. While under the Cold War conditions this may have made some sense, in its aftermath this policy remains unintelligible. Given the recent hike in illegal entries to or residence of foreigners in Turkey, the policy serves little to keep the excessive informal employment in Turkey. Yet, since the 1980s geographical restriction is pragmatically used when it comes to settling people of "Turkic" descent – serving the interests of Turkish foreign policy insomuch as its goals did not clash with the public opinion. The most recent Syrian refugee crisis, however, is the first instance whereby there is a clash between the two. AKP government seeks policy pragmatism with geographical restriction once again and provide refuge for Syrians whilst the public philosophy remains opposed to receiving any foreigners, including the Syrian refugees to Turkey. Overall, this paper debates the Syrian refugee crisis as a case study to assess how far Turkey's immigration policy can appeal to pragmatic policy solutions rather than drastic changes in policy and public philosophy dealing with foreigners.
this ethos, the supporters of political Islam in response vied to emphasize Islam and its Turkish martyrs as a predominant character of collective memory. In other words, Turk’s gallerity, statecraft superior to its neighbors, and finally tolerance to the weak became the underlying theme of such collective memory. It is puzzling to see that while both ideologies underline superiority, history, and continuation in Turkish historiography, but they diverge on how to fit in Islam in this composition. In the end, we face a very pious and conservative nation who call themselves defensively as the “real” Muslims vis-à-vis each other, but not certain about how to fit in the heritage of Islam in the making of their collective memory as a nation. This paper investigates the roots and effects of this dilemma on the relation between politics and religion in Turkey.

Patterns of Substance Use in Entertainment Venues in Latvia: A number of surveys in Europe, including Latvia, show that the level of drug use among young people in entertainment venues is significantly higher than among youth in general (according to EMCDDA). Monitoring surveys carried-out in Latvia in 2000, 2008 and 2012 support this conclusion. Over the last 12 years, changes in the models of alcohol and illicit drug use were identified: young people try these substances at very young age, the drugs distribution market is very saturated and offers wide variety of substances, including legal highs. At the moment the poly-use model is dominating, i.e., using several substances simultaneously (alcohol, legal and illegal drugs). Our analysis of the spread of drug use and affecting factors is based on quantitative data (n=400 in 2000, n=600 in 2008 and n=800 in 2012) and semi-structured interviews with field experts and owners of entertainment venues.

The results show that young people admit the fact that drugs became an integral part of modern youth entertainment and club subculture. Drug use is made to suit particular entertainment purposes and driven by desires of achieving known effect. In order to minimise risks young people avoid injecting drugs and prefer not to use substances with distinct and strong smell (for instance, marihuana); at the same time drugs in pills or plasters are in favour. We can speak as about the prevalence of substances with stimulant effect that offer effect appreciated by some users: catching unexperienced energy, feelings of parallel and prefer not to use substances with distinct and strong smell (for instance, marijuana part of modern youth entertainment and club subculture. Drug choices are societal groups, respectively.

Patterns of Transition from Youth to Adulthood in Latvia: Comparison of Four Generations

Authors analyse the transition of young people to adulthood between the second half of 20th century and the first decade of 21st in Latvia putting in focus the transition from education to work. Employing the generations approach as theoretical frame allows identifying the ties between historical events and living conditions, and individual biographical solutions. We distinguish four generations of youth: the time of national millennium generation. Previous research demonstrates that rapid changes in political system in Latvia echoed in the transition to adulthood. We approach these changes by cross-generational comparison of young people’s transition from education to employment, their occupational choices and effects of education on further life-paths. The analysis is based on data from national youth surveys carried out between 1967 and 2012.

Up until late 1980s the transition to adulthood was a rather standardised process, the system offered stability and security at the beginning of independent life, e.g., guaranteed jobs, but some were not satisfied with that. The status of an individual was mainly defined by their position in economic, regional and political structure and was less dependent on personal qualities. The transition to market economy marked the turn towards new models; individual qualities and ability to take risks became more important than qualification and professional training. Finally, global processes marked the transition of millennium generation, when individualisation trends and increasingly complex social life encouraged looking for individual solutions by mixing various strategies and activities. For a long time the society believed that each next generation would achieve a better life. However, looking at the generation that enters the adulthood in present days brings up not so optimistic forecasts. Meanwhile youth research in Latvia suggests that modern youngsters accept the situation and recognise the increase in opportunities.

Lobbyist Activities of Religious Interest Groups – Germany and the USA Compared

The question of political lobbying by religious (collective) actors is not an issue for interest group research only. Their public and political presence also raises questions concerning the relationship between religion and the state within modern, secularized societies. All modern democratic states know (traditional) regimes of religious governance that influence the scope of action of religious organizations and may open up or limit their opportunities to increase their political participation. In recent years the (scientific) concern regarding national regimes of religious governance has even increased since there have been processes of secularization, privatization of religious practices and religious diversification that have challenged historically rooted arrangements regarding the relations between religion and state.

This research project focuses on the political presence and participation of religious organizations in two countries with different traditions regarding both the role of organized interests in general and of religious interest groups in particular: Germany and the USA. The question is how religious organizations try to influence political processes in the two countries, thus to frame the political agenda, to be present in public and to establish relations to and networks with relevant (political) actors.

The strategies and means religious communities apply are analyzed via a qualitative analysis of documents published by religious organizations like press releases, position papers and their websites. Via a media analysis not only positions of religious organizations concerning certain political issues are investigated but also the results of their efforts to be present in the media and place their concerns publicly. The political participation of religious organizations is investigated via parliamentary lobby lists, the numbers of their members being elected to parliament and their presence in parliamentary committees and governmental advisory boards which they are invited to as experts on specific issues and as relevant societal groups, respectively.

A Challenge for an Expert: The Management of Acute Psychosocial Support

According to Finland’s Health Care Act, municipalities are responsible for organizing the acute psychosocial support in crisis and special situations. Typical of these situations is the need for immediate and simultaneous help, where obtaining the necessary resources is challenging. Acute psychosocial support includes psychological, social and mental help to the victims, their families and communities. All these parties should be considered in managing the acute psychosocial support. Strategic management is required when psychosocial support is organized for different groups, so that the general view is not forgotten and no one is left without the offered help.

The purpose of this study was to find out what helps the expert to quickly become a crisis and special situation manager and what helps the employee to change back to the expert role. In addition, the study sought answers to crisis and special situation manager’s decision making and what kind of abilities crisis managers require. Both quantitative and qualitative methods were used including data for data analysis. The data consisted of initial mapping and a theme interview made at Vantaa City social and crisis emergency department.

This study showed that the feel of being in control of a situation as well as being in control of oneself are factors supporting the management of acute psychosocial support. Both the employee and the team should have special skills to control the situation, as well as the feel of being in control personally. Crisis and special situation management consists of management support, structures, capacities and the support of various parties. These factors can be influenced by education and training. Education and training should be planned carefully, for example, by skill mapping to find weaknesses in skills so that training would be targeted correctly.

A World-Systems Methodology for the Study of Inequality

Drawing on historical data on inequality within and between regions of the world-economy, we indicate that inequality within regions in both the core and the semiperiphery of the world-economy tended to rise over a long period extending from the sixteenth to sometime in the nineteenth century. During this same period, inequality between regions of the world-economy remained considerably less pronounced and stable. Beginning during the nineteenth century, however, the trends shifted in significant ways: inequality within many core areas began to decline (as opposed to many peripheral and semiperipheral areas where inequality remained very high), and inequality between these areas underwent a rapid increase. We link these transformations to social forces that acted to expand various rights (e.g., those of citizens and of workers as wage laborers) under the aegis of the modern nation-state, with uneven and linked effects in core, semi peripheral and peripheral areas of the world-economy.

Our data allow us to provide a stylized depiction of within- and between-country income distributions to show a multiple and overlapping matrix of distributions across regions. The global income distribution that is both systemic and historical--that has shaped the geography of winners and losers both over the long term and in more recent decades. This depiction suggests that (i) Schumpeterian cycles of innovation and creative destruction in the global production of goods and services have been key to shifting patterns of within- and between-country inequality, as the innovations have included (ii) the deployment of shifting and unevenly successful institutional strategies aiming to facilitate mobility and change for specific regions and/or nations within the world-economy. This exercise allows us to raise questions and further research to the processes of internalising and institutionalising strong incentives (e.g., drastically lower wages in poor countries) for both the migration of workers to higher-wage markets and the “outsourcing” of skilled labor.

Moreover, we have indicated that the growth of between-country inequality through most of the last two centuries became a driving force for the migration of labor and capital: growing income disparities between nations over time generated strong incentives (e.g., drastically lower wages in poor countries) for both the migration of workers to higher-wage markets and the “outsourcing” of skilled and unskilled labor to peripheral countries. Both trends exercised a “market by-pass” that over the last two decades has been overcoming the twentieth century institutional constraints on labor flows that characterized the development of the world-economy. In the proposed paper, we further specify and expand our arguments by developing a new model that identifies the main forces driving migration across the world-economy. We test this model by drawing on an original cross-national dataset on population flows: this exercise allows us to more precisely identify country- and region-specific patterns of outgoing and incoming migration, and to assess the relative weight of specific variables (e.g., wage differentials, income inequality, civil war, famine, geopolitical location and migration policy regimes) in explaining these patterns. Finally, we consider the social and political tensions that have accompanied recent changes in these migration patterns, discuss how these tensions are shaping the politics of citizenship across the world, and draw some theoretical implications for rethinking about how Karl Polanyi's theory of political tensions that have accompanied recent changes in the processes of restructuring of the education system (i.e., households, school principals, education policy makers, etc.) and set it against the formal institutional design of the reform. We show that these reforms (extension types of schools, the provision of school choice, the legalization of paid services, and rejection of affirmative action) have provided exclusive opportunities for elite groups and extremely limited opportunities for the more deprived groups in the population.

Parallel to that we also discuss how the results of pioneering sociological studies in Russia and particularly their dissemination among the expert public have pushed the issue of inequality in access to quality education to become a major point in the national policy agenda in Russia.

KOSIARA-PEDERSEN, KARINA* (University of Copenhagen, kp@fs.ku.dk)

Multifaceted Party Membership

Party membership is in general in decline; however, both the trends and the membership figures vary among parties, and the meaning of party membership varies among members. Both the degree, type and quality of party member participation vary among party members. Hence, in order to understand how the concept of party membership is filled out by party members, it is necessary to take into account what formal members are actually (not) doing within or for their parties. On the basis of a party member survey in nine Danish parties across the political spectrum, first, party members are grouped into types of party members. Second, the characteristics of these party member types are shown. Third, the distribution of party member types across parties is explained on the basis of party-level variables, such as level of intra-party democracy, party culture and campaigning strategy. Finally, the party member types are discussed and compared to other, newer forms of party ‘supportership’, and the democratic implications of party membership figures are put into perspective.

KOSKELA, KAISU* (University of Helsinki, kaisu.koskela@helsinki.fi)

Experiences from within the Migrant Hierarchy: Imposed Categorizations As Definers of Social Identity for Highly-Skilled Migrants in Finland

Studies of ethnic hierarchies in Finland show varying levels of prejudice toward immigrants based on their national and ethnicity. Levels of acceptance are also tied to the role of the immigrants in the economy and labor market (i.e., class standards). In the intersection of these value judgements an overall ‘migrant hierarchy’ is formed. At the bottom of this hierarchy are ‘unwanted’ humanitarian migrants from less familiar cultures, while at the top end are the ‘migrant elite’: ‘wanted’, highly-skilled, and preferably Western, migrants.

I study this hierarchy as a form of categorization that creates a social structure. This structure has an effect on the construction of migrants’ self-defined social group identities; although these categorisations stem from the Finnish society and its views on immigrants, I believe that they are recognised and to certain extent internationalised also by the migrants. Drawing from ethnographic and interview data emphasising lived experience and everyday life of skilled migrants in Finland, I will discuss how the imposed categories become strategies that can be used also by the migrants themselves in identity negotiations and to represent value judgements. As such they also point to possible problems with integration: in (re) drawing their group boundaries within this new social structure, skilled migrants in Finland are defining their identities not only as who they are, but also as who they are not: not ‘unwanted’ humanitarian migrants, but also not Finns.

KOSKINEN, RAJIA* (University of Helsinki, rajia.koskinen@helsinki.fi)

Can Actor Relational Approach be Combined with Institutional Ethnography – What Could be the Benefits When Studying Information and Communication Technology Use in Child Welfare?

The need to make use of an interdisciplinary approach is vital when studying the development and use of new technologies in welfare services. There is research that indicates that information and communication technology (ICT) affect...
work practices in welfare services in many ways. So far the effects have only in a limited way been in the focus for critical and constructive interdisciplinary research. In welfare services there is a need to communicate the essence of work especially among professionals planning, purchasing and using ICT.

This presentation is based on an empirical research plan. The research concentrates in studying the development and use of ICT in child welfare units in Finland. The aim of the research is to find out how functional the client data systems are that are used in Finnish municipalities. The question of functionality focuses on how appropriate these systems are in relation to the basic task in child welfare. The research plan has its origin in a small case study in the city of Helsinki. The results of this action research indicate that the use of client data systems may have negative effects on the basic task in child welfare in case there are not enough human resources using the systems.

The theoretical frame of the research comes from the actor-network-theory (ANT) and its critic. In order to communicate the findings within disciplines, the researcher plans to make use of Actor Relational Approach (ARA). In this sense the presentation investigates further whether Actor Relational Approach can be combined with Institutional Ethnography in a fruitful way in this research.

KOSMINSKY, ETHEL* (Queens College/CUNY, ethelkos@hotmail.com)

Mayume's Life History: Between Japan and Brazil

Although Mayume is from mixing ancestry, her mother is non-Japanese Brazilian and her father is Japanese. Her Japanese is similar to a girl from a small town in Japan. At the time of the interview she was eighteen years old. When she was at four years of age, and her brother one year, her mother decided to join her father who was already working in Japan. She attended kindergarten, although she didn't understand what they were talking. However, she adjusted very well at the Japanese school and life style. But, six years ago her mother decided to return to Bastos, Brazil, to see her parents. That's when Mayume faced a difficult adjustment: “I wanted to come here to see the town. I didn’t want to remain. I wanted to go back, I wanted until today... because there is enjoyable at least for myself.” She compares the Japanese town where she lived to Bastos: “Ja-pan is a diffused society, it looks like Sao Paulo, and I thought that here it would be the same. When I arrived here, I said: that’s too much land!” Mayume faced a lot of problems at the Brazilian school. She compares the organization and the cleanliness of the Japanese public school, the respect from her classmates toward their teacher, and among themselves to the Brazilian public school and its poor-building, lack of respect toward the teacher, lack of discipline. Mayume’s dream is to return to Japan and attend college there.

Mayume and other children face ruptures in their socialization process due to their parents’ labor migration. However, children as social agents can struggle to change their lives and make the decisions that sound better to them.

KOSNY, MAREK* (Wroclaw University of Economics, marek.kosny@ue.wroc.pl)

Pension System Based on Sharecropping and Economic Security of Families

Decisions about giving birth and upbringing of children imply consent to finance the public good. These decisions are generally individually adverse from the point of view of both short- and long-term economic security of families. The way to change this appraisal is to modify the structure of the pension system. The idea of the new solution is based on the sharecropping – one of scheme of incentive systems under uncertainty and information asymmetry. The concept underlying this approach assumes that parents and the state, involved in upbringing the children, share both costs and benefits, what results in sharing the risk. The main advantage of the proposed solution is a convergence of interest of the parents and the state.

The practical implementation of such a system would be based on division of pension insurance contributions, paid by a working individual, between the two pillars of the new system, in proportion to the expenditure incurred on his (her) upbringing by the state and the parents in the past. The first part would be spent on financing the development and use of ICT in child welfare units. The concept underlying this approach assumes that parents and the state, involved in upbringing the children, share both costs and benefits, what results in sharing the risk. The main advantage of the proposed solution is a convergence of interest of the parents and the state.

The empirical part of the analysis will be done for the pension system in Poland, in the context of its planned restructuration.

Towards Usages of Europe By Patient Representatives at National Level?

Following a series of landmark rulings of the European Court of Justice (ECJ) on cross-border healthcare, the access to healthcare has been facilitated for European patients. After ten years of negotiations these rulings have been codified in the EU’s Directive on the application of patients’ rights. Europe thus now offers national actors various resources to pursue their interests beyond the opportunities of their national healthcare system including challenges and resources for patient representatives at member state level. Do these actors use those European resources inside their national healthcare system? Based on semi-directive interviews, this paper thus investigates if and how patient ombudsmen in the Austrian healthcare system include usages of Europe into their institutionalised routines and which are the national institutional limits to those usages. The paper argues that while Europe has rendered the national institutional boundaries of healthcare systems porous, control over patient flows is kept intact and that there is only limited room for manoeuvre for patient ombudsmen to use Europe at national level.

Transition from School to Work, and Labour Market of Younger Generations in Japan

The aim of this panel session is to share with the audience the outline of changing Japanese employment practice. Japanese employment system has been classified as one of the “organization-oriented,” and it implies that it ensures long-term employment within the same firm. Japanese industrial relations system, the main feature of which is the enterprise union, appears to have reinforced the employment security. Japanese practice of transition from school to work has been regarded as enabling even graduates to immediately begin their occupational lives as regular employees.

As with the employment systems of other countries, Japanese employment practice is confronted with the pressure from globalization, and it is becoming difficult for it to maintain as high a level and as wide a range of job security as it used to be. In this presentation, I will focus on prevailing insecure job market especially in younger generations in Japan.

Ideas in Conflict: The Campus Protest Culture in the 20th Century Japan

In the late 1960s, from North America to Europe and from Latin America to Asia, many countries witnessed a wave of student protests. Since those movements showed distinct features from place to place and shared similar backgrounds such as the Cold War politics and common issues such as antiwar and academic freedom, they provide a good field to examine the critical question haunting recent social movement studies: whether and how culture matters in the emergence and process of social movements (See Johnston et al., 2009; Poles, 2008).

Against this background, this presentation examines a campus protest at the University of Tokyo, Japan, from 1968 to 1969, using data from in-depth interviews with the participants to show how the students’ ideas shaped their perception and interpretation of the situations in the course of the struggle and influenced the choice of strategy and tactics.

This presentation focuses on a group of students called “NON SEKUTO RAJIKA- RU” (non-sec radicals). The protests were not monolithic but divided into three groups in conflict: Democratic Youth League of Japan (DYLJ) under the guidance of the Japanese Communist Party (JCP), the New Left sectors which were seeking a new form of Marxism politics as a alternative to JCP, and the non-sec radicals without any affiliation to DYLJ or the New Left. On one hand, the non-sec radicals and the DYLJ and New Left students were equally marked by Japan’s campus culture dating back to the 1910s; the strong tradition of Marxism as a guiding ideology of social movements and self-cultivation. On the other hand, the non-sec radicals developed principles against the basic lines of DYLJ and the New Left organizations, including centralized and hierarchical organizations and strict Marxism orthodoxy. Thus, they created decentralized and horizontal organizations and based their choice on their firsthand observations instead of ideology.

Risking It? Upper Social Class and School Choice in Finland

The uncertainties and risks families are facing concerning educational choice have both, local and global influences. The neo-liberal market mechanisms promoting educational choice in educational systems move the responsibility of successful choice increasingly on individuals. The individualized responsibility is partly replacing the ‘collective assurance against risk’, and as it increases individual risk, it might lead to social closure and enabling the strengthening of the ‘lines of social divisiveness’. In the context of educational choice this touches upon the discourse around choice and distinction between social classes. Despite the privileged educational trajectories can still be obtained by context-relevant use of economic, social and cultural capital, the changes in the educational provision and basis of selection to prestigious institutions produce new arenas for competition. This challenges the privileged position of upper-class children in the competition of the best education available, and makes examining their educational choices relevant.

The aim was to examine the educational discourse of the upper-class parents of children entering lower-secondary school, and investigate how their hopes and fears regarding their children's education intertwine both with the considered risks and their trust in the Finnish education system. The data consist of semi-structured interviews conducted in Finland and France (Vantaa, Espoo, Paris) with parents (n=19) who have experience on educational policies and practices in Finland and abroad, and by contrasting data, interviews with parents with no such international experience (n=78). The interviews were analysed by using qualitative content analyses. Preliminary results show that parents trust and value Finnish education and especially the value-base behind it. Still, their conceptions regarding competition, uncertainties, risk and the definitive nature of educational choices seem to have absorbed some ‘international fears’. This contributes to the construction of the social reality and subtle social distinctions in the Finnish school choice space.

Why Is It That I Think I Am Better Than You? Antecedents and Consequences of Hospital Employees’ Assessment of Their Own Skills Relative to Those of Their Colleagues

Work in health care organizations requires employees to permanently improve their skills, and taking part in continuing education is a prerequisite for keeping a position or for being promoted. Comparing the resulting skills and abilities with those of colleagues and co-workers is a mechanism of status evaluation and, in turn, may produce perceptions of superiority. In a survey of 1050 employees (physicians, nurses, social workers, etc.) from 49 hospitals we asked respondents whether they were worse, equally, or better skilled than the colleagues with whom they work together on a day-to-day-basis. 46% reported to be better skilled (equally: 50%, worse: 4%). This finding is not due to a higher representation of better skilled respondents in the sample and is found in both formally high (e.g. physicians) and low (e.g. nursing assistants) skilled employees, so apparently working in high-skilled occupations can help one to better estimate their skills or relative status. The results of a comparative study in a hospital to its quality of care we attempt to gain insight into the consequences of this phenomenon: Do hospitals do better or worse with higher proportions of employees that rate their skills better than those of their colleagues? We finally discuss whether the high opinion employees have of their own skills may be a result of the permanent self- and third-party evaluation at the workplace and in contemporary societies as a whole.

Functional Differentiation and the Public Sphere: An Attempt in Theoretical Formalization for Historical and Comparative Research

This study elaborates on the concept of functional differentiation as a structural feature of modern society. Methodological criteria to judge whether society is differentiated functionally remain elusive, although these must be presupposed when the concept of functional differentiation is applied to comparison of societies. Certainly, a society is not functionally differentiated if judicial decision, for example, is always dependent on external conditions, whether power or wealth of parties, and hence, the legal system cannot operate according to its own logic. However, the autonomy and independence of a functional system never imply the functional differentiation of society as a whole because the case where other functional logics can be violated directly by political or monetary power is not completely excluded. The existence of some functional institutions, for example, the parliament, bureaucracy, courthouse, market, and educational system, does not guarantee a functionally differentiated structure. To exploit

Research on Aged Prisoners in Japan

1 Situation of the research

In accordance with aged society in Japan, the population of people whose age is more than 65 years has been increasing twofold during in the last two decades. In this context, the number of arrested people aged over 65 years has been increasing by 3.8 times and the population of aged prisoners is also increasing rapidly.

2 Purpose and sample size of the research

The purpose of this research is to clarify the actual situation of aged prisoners. Almost 450 male and 150 female aged prisoners are investigated focusing on their life style in society, motivation and situation of the current crime, specific feature of criminal life curve, philosophy of life, future plan after release, etc.

3 Outline of the research

The details will be presented at the session.

Most dominant type of crime is larceny, and then stimulant drug control law violation, and fraud. Half of them were unemployed. 65% married but 1/5 divorced then 60% did not have any persons who support prisoners when they committed a crime. 53% have disease. 45% do not have any place where they can live after they release form prison. Most of them do not have any job after release. Total of 53% have disease and receive many kinds of medicine.

Newly Started Activities of 80-Year-Old Japanese Seniors

Eighty-year-old Japanese seniors were asked if they had started new activities after their age of 70. All seniors aged 80 years living in Suginami City, Metropolitan Tokyo, were invited to participate to a research program organized by the city as her 80-year anniversary. Among the seniors listed, 2,476 persons responded to a mailed questionnaire (response rate was 66.0%). Over 70% of the respondents (72.1% of men and 72.5% of women) reported their health condition was excellent or fair. A total of 53% reported that they have started new activities; 37.4% in men and 53.3% in women.

Thirty-nine percent of the respondents (38.7% of men and 39.3% of women) answered that they had started some new activities after age 70. Various activities were reported. The most frequently mentioned new activity was hobby (46.8% of seniors who had started new activities; 37.4% in men and 53.3% in women), followed by athletic activities (35.0%; 33.3% in men and 36.1% in women) and personal computer and/or mobile phone (21.0%; 25.6% in men and 17.7% in women). Not only sedentary activities such as reading and playing games, but also kinetic activities, including walking, swimming, and gymnastics, were indicated. Seniors who were healthy at age 80 were more likely to have such activities than those who were not healthy.

In Japan, where population aging has been rapidly progressing and life expectancy at birth has been rapidly increasing, seniors have become younger and younger than their age-peers in older cohorts, physically as well as socio-psychologically. The results of this first-wave survey of 80-year-old seniors living in a relatively affluent urban area seem to show spyness and “youthfulness” of today’s Japanese seniors.

Civilizational Distinction: Figurative Changes of Contemporary Societies

A common civilizational core binds all contemporary societies. It provides interaction, action and solidarity. It is a civilizational unity is a basis for the emergence and existence of multiple modernities with their endless social and cultural diversity (S. Eisenstadt, J. Aronson, P. Wagner). The development of the western and eastern societies in the civilization relation should be comparative study based on the comparative figurative Sociology of Norbert Elias. Figuration is an entwinement of relationships people, intended and unintended social and cultural processes. In the center of the figurative process is fluctuating voltage equilibrium, a balance of power, which belong to the structural characteristics of configurational currents.

Civilizational distinction show a full range of colorful entwinement intentional and unintentional links, networks, activities, structures, states. Sociogenesis symbols of culture and civilization shows how they precede unplanned actions and relationships between individual and group. However, they require an understanding and designing models or strategies of economy, government and culture, both at the individual and collective levels. In every contemporary society develops a flexible balance of power between individuals and groups, a specific configuration of social inequality, resources, and efforts. Civilizational order as well at global and local levels is a set of flexible forms of social mobilization, effective institutions, technology management, cultural controls and patterns. Figurative modifications, meaning moving modernities of contemporary societies, speak about degree of their civilizational variability while maintaining a fundamental properties in common. Figuration as interdependence of people is primarily mediated by factors like social communication. The main mechanism of interaction within and between national societies (states, communities) are historically formed socio-cultural practices and a variety of social communication (transit, exchange, and use of experience, knowledge and information). Civilizational configuration is a variety of modernities, coexisting and interacting actively in the changing political and socio-cultural space.

KOZLOREK, OLIVER* (Universidad Michoacana de San Nicolás, okozlarek@yahoo.com)

Experiences of Modernity and the Modernity of Experience

It has often been argued that a certain loss of experience, even of the ability to have experiences is apparent under the modern condition (Adorno, Benjamin). Yet, at the same time it seems to be true that modernity is quite obsessed with experience (see: Jay 2005). Certainly, there are different understandings of what experience actually means, and it is probably true what Michael Oakeshott has to say about this topic: “Experience, of all the words in the philosophic vocabulary, is the most difficult to manage, and it must be the ambition of any writer reckless enough to use the word to escape the ambiguities it contains” (quoted in: Jay 2005: 9). Although this paper sees itself in the tradition of this ‘recklessness’, it does not aim to escape the ambiguities of ‘experiences’. On the contrary, ambiguous is not only the word, but also what it stands for. But it is precisely this ambiguity of experience, and the acknowledgemente of it, that contributes to an often claimed characteristic of modernity: its contingency (Rorty) or its ambivalence (Bauman).

In this paper I will argue that the ambiguity of modern experiences has to do with a new kind of world-consciousness that emerges in modernity. I will draw on authors like the recently deceased Marshall Berman, the already mentioned Walter Benjamin, and Theodor W. Adorno, but also more recent authors like Boaventura de Sousa Santos and Peter Wagner. And I will include in my discussion voices from Latin America like Octavio Paz and the philosopher Bolívar Echeverría. They all shall help to outline a theory of modernity for which the experiences that real human beings are making when confronted with the challenges of modernity.

active labor force and in particular is reduced. Employment in the industry falls especially in the small cities and provincial locality. The main issue for the farmers is an access of its products to local market and a large labor costs. Therefore it is developing the traditional type of economy, which is dominated by monocultural economy of the farm (horticulture, animal husbandry, small-scale construction, transport services, temporary employment) and commercial businesses. Modernization potential of the rural "backs" in particular in South region of Russia is diverse. The rural population is aging and decreasing. However, there is a surplus of labor force against the backdrop of falling employment. This dissonance is typical for the Black Earth region. Lack of investment, jobs, degradation of industrial and agricultural spheres pushes people to the development of the service industry and trade, to labor migration to the big cities, and social mobility. It is sufficient to note the high level of social and economic infrastructure: electricity, gas, roads, fiber optic lines, public transport, landscaping. There is a stable mobile communication, satellite TV, Internet access. However, rural inhabitants are experiencing social fatigue. They complain constantly about the lack of funds, the futility of life in rural areas. Many inhabitants are focused on internal migration, employment, education, and career in the middle and big cities. Key resources are upgrading a new economic policy of the local authorities, effective budget and private investments, solidarity of local communities, and of course, the willingness of local people to the medium-and long-term investment in yourself and in the development of their area.

Creating an image of «Victim» As a Way of Creating Controlled Conflict Situation

For creating controlled conflict situation and for finding (appointing) an "enemy" often an image of "victim" is being created, meeting goals and tasks of its creators.

An image of "victim" may be classified on the following types: "victim-hero", "victim-loss", "victim as belonging", "victim-tragedy", "victim-country", "victim-nation", "multiplying victim" and other.

Constructed "victim" has to meet such characteristics of real victim as innocence and defenselessness. Therefore innocent children, old people, and women are appointed to the role of "victim". Violence towards them provokes the tension of passions and promotes desired public opinion.

Process of construction an image of "victim" includes the following steps: actualization, privatization, heroization, humanization, institutionalization, historicization (mythologisation), objectivization, legitimation, sacralization, realization of "victim's" image in the social and political practices.

Generated image of "victim" presupposes execution following functions in the real and potential conflicts:
- identification of people on the base of their attitude to the "victim";
- creation of enemy image who is guilty attacking "victim";
- consolidation of people to fight identified "enemy";
- upbringing of "new heroes";
- determination of people behavior in critical situation;
- image of "victim" is becoming the elements of culture.

Deliberately thrusting of "victim" problem generates disadvantageous situation for alleged "enemy". Direct of potential oppressor's image constructed, with necessity to oppose or annihilate it. The most important "enemy" characteristic is its mortal threat for person, group and society. Next distinguisher of "enemy" is dehumanization.

Special role in the process of both "victim" and "enemy" image construction belongs to mass media and first of all a television.

Generated image of "victim" may be used as motive for intervention of "third party", for deliver a "retribution blow" on a real or an appointed enemy.

Towards Emancipatory Ecological Cosmopolitan Commonism Via Positive Ecology in Tasmania, Australia

Adopting earth stewardship appears to be the fate of the human species; it is how we adapt to this challenge that will determine our survival and level of thriving. This paper will outline four areas of an approach to the challenge of earth stewardship. The first is to identify the emergence of a capacity for intentional cultural evolution, for which there exists a variety of indicators across the globe. The second is to sketch a theory of negative ecology, based on the process of dominance that has evolved over history, resulting in the failure of successive systems to equitably meet basic human and environmental needs. This has led to ever increasing social and environmental costs, and indicates the need for radical degrowth. The third is to outline a theory of positive ecology to guide progress towards what is tentatively called "emancipatory ecological cosmopolitan commonism (EECC)", aimed at ending repressive domination. The equitable meeting of needs is given priority, based on "synergistic satisfiers", with global cooperation the ultimate goal. The fourth area discusses community-based exchange initiatives (CBEs) as bottom-up initiatives towards advancing positive ecology in the here and now. Analysis of the potential of some CBEs currently underway in Tasmania, Australia to progress towards positive ecology and EECC will comprise the final part of this paper.

Women's Overqualification: Why It Is Necessary to Account for Additional Individual Characteristics

Women's labor market participation has been rising in the last years, the portion of female university graduates increases constantly and ever more women are in executive positions. However, there is also evidence that women are more likely to be overqualified than men.

If a person is overqualified, in the sense that an employee's level of training exceeds the job requirements, parts of the human capital lie idle. This could not only have negative consequences on the individual level, but also be costly on the social level. Current research on overeducation focuses mainly on its magnitude and structure; often the discussions on explanatory factors are limited to only one dimension, such as gender or migration status. But in light of economical, political and cultural globalization that increases societal heterogeneity, it is obvious that the emergence and reproduction of social inequalities cannot be reduced to only one dimension. In the study of social inequalities it is important to consider that people are always part of several social groups at the same time. Therefore, it can be supposed that for instance female immigrants face different risks of being overqualified than male immigrants.

In the presentation I will focus on this research gap. Based on the concept of intersectionality I will discuss the mechanisms of interaction of gender, migration status and social background in the context of overqualification theoretically. Using data from the German Socio Economic Panel, a nationally representative household panel study, I show the effect of gender on the risk of being overqualified as itself and in interaction with the other individual characteristics. I will respond to the question how gender inequality on overqualification varies with other social categories.

Construction of Knowledge Around Risk and Regulatory Practices Among Pipeline Industries in Australia

This research assesses the gas pipeline industry in Australia in relation to risk, regulatory practices and its comparatively strong safety record. It may be held as an exemplar to examine: how is knowledge of industrial risk in the Australian pipeline industry constructed and performed by regulators? In tackling the question, this research takes discourse analysis combined with a semiotics of materiality Actor-Network Theory approach; giving new emphasis to non-human entities (e.g. gas, risks, techno-measuring devices and regulatory apparatus) interacting with actors (e.g. regulators, company safety officers, workers and communities) in generating knowledge-power and actions around the regulatory process of governing industrial risks from hazardous industries. The entry point is technical-informed regulators, assumed to have good risk-management knowledge. The research explores three relationships among these entities. First, relationships between regulators and non-human entities: e.g. how regulators develop their knowledge-power and take their actions influenced by a legal concept (as low as practically achievable – ALARP); and how regulators interpret their responsibility in the process of hazard identification and assessment? Second, relationships among regulators, companies and non-human entities (e.g. a concept of responsibility) are considered: how do regulators exercise their discretion either to support or command the companies? Third, relationships among regulators, companies, workers, the public and non-human entities are assessed: e.g. how do regulators perceive the roles and participatory actions of workers and the public in breaking regulatory capture, balancing power, and managing industrial risks? The findings may reveal inconsistencies hidden in processes, leading to a better understanding of how to manage, govern and mitigate risks and improve regulatory practices and effectiveness.

Organization, Identity, and Transnational Citizenship: Mexican Indigenous Migrants in the United States

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Transnational migration challenges the congruency of identity, citizenship, and state territory, because transmigrants identify with their communities in countries of destination as well as origin, and practice citizenship across national borders. The question of transnational identity and citizenship is all the more important when migration involves members of indigenous groups who are ethnically discriminated against politically and economically marginalized in countries of origin and in their adopted countries. How do indigenous migrants negotiate transnational citizenship? Based on the data collected from my ethnographic research in Los Angeles, I argue that indigenous migrants from Mexico's Southern state of Oaxaca negotiate citizenship through a diverse network of migrant organizations which open wide transnational social spaces to reconstruct the boundaries of ethnic and local membership and belonging. In contrast to Mexican mestizo migrants, they established issue-based migrant organizations in Los Angeles – such as business, religious, or educational organizations – above the level of hometown associations and state-based federations to claim precise rights for indigenous people as workers, believers, or students. In doing so, they collaborate with various political institutions, businesses, churches, and other organizations on different levels – local, state as well as national – in the United States and in Mexico. In other words, pan-indigenous identity and transnational citizenship emerge not only in political response to ethnic discrimination and social hostility, but also cooperation and support in transnational spaces.

Challenges for Teachers and Pupils on a Vocational Program

This paper aims to analyze teachers’ views on how a good mechanic should be, and how the teachers are mobilizing students to become mechanics through instruction and practice. In another social landscape – before marketization, post-industrial transformation and neo-liberal forms of governance has become a part of the public educational system – a common practice were that students established a kind of counter-culture in schools; Why should I study while I am going to be an auto mechanic? Today teachers in the vehicle and transport program partly facing a new school logic where they have to deal with pupils that have another approach to education. - Why should I study, I’ll still do not want to be an auto mechanic? Previously the students were to a high extent culturally self-motivated, but nowadays the mechanics to become a car mechanic seem to have changed. My PhD project is linked to a larger research project that deals with issues of multicultural incorporation and school achievement. My contribution to the project concerns an ethnographic study in a vocational high school on a vehicle program, where there are mainly boys with immigrant backgrounds from heavily segregated areas, present in the classroom.

The paper contains an analysis of the symbolic boundaries that structure the auto mechanic profession and how these boundaries are expressed by teachers and industry representatives. It also describes how teachers in the vehicle and transport program mobilize students to the mechanic profession both by their teaching/pedagogy and use of social networks within the car industry.

Social Transformation and the Memory in a Postwar Society: the Case of Kosovo

This paper is based on two qualitative research projects conducted ten years after Kosovo exodus, and the dramatic changes related to the war, social organization, environment, daily life, and value system. The first one is “Memory vs. Forgetting” (2009), and the second one is “Socio-cultural Changes in Postwar Kosovo” (2010). Both conducted by the Department of Sociology in the University of Pristina. The data show very interesting aspects of collective memory and human experiences during the dramatic events and the general social transformations. The way how people remember the past, how do they perceive the present, and what they are expecting from the future is important not only for Kosovo society, but for the entire humanity.

The focus of our research is the period after 1999. This period is important in two senses. First, in terms of social change, this period is important because three international missions were deployed in Kosovo and the country has declared its independence since. Second, from the aspect of social organization, it is the period of transition of the self-administered institutions, and the development of the overall transition. The structural changes affected the culture, and the system of values in Kosovo society to a great extent. This period is of a particular importance, because it signifies great changes in lifestyle, the transformation of values and memory patterns and practices. Research in the field of collective memory and social transformations requires very precise methodological approach. Each of the research projects has included 50 in depth-interviews, and visual elements collected in the field, such as pictures and video materials. The data show that people’s relationship are very strong not only to the family and the homeland, but also to physical objects, tools, pictures, books, souvenirs, symbolic values, plants, animals and the environment.

Explaining Differences in Fertility and Marriage Expectations of Adolescents of Native and Immigrant Origin in Spain. The Role of Socioeconomic Status and Ethnicity

This paper aims to examine aspirations and expectations of adolescents in Spain with regard to family formation patterns, using survey data collected in secondary schools in Madrid. We are interested in the variability of these preferences across generations and between children of immigrants and their native peers. We look at fertility and marriage expectations to account for varying cultural backgrounds and for acculturation and/or integration processes. Furthermore, differentiated expectations of fertility and marriage tempo and quantum among children of immigrants and natives might be an indicator for segmented assimilation with regard to their or their parents’ socio-economic status.

For the empirical analysis of this paper we use survey data of some 2,600 adolescent pupils and 1,150 parents. About half of the students and parents are of immigrant origin. Besides aspirations and expectations linked to family formation processes, the survey provides information about parents’ labor situation and their educational levels, variables that are used as a proxy for their socio-economic status. To complement the survey, contextual data will be included, adding information on origin countries’ actual fertility and marriage behaviors and the ethnic composition of the neighborhoods in Madrid where the youths live. Multilevel models are computed in order to account for variations within schools and between schools and to disentangle the complex causal process that determines adolescents’ aspirations and expectations. First descriptive results indicate that adolescents’ expectations reflect actual cross-country differences in age at first marriage and first birth.

Most theoretical approaches and empirical studies in this field concentrate on the U.S. Focusing on Spain as a relatively new immigration country can give important new insights into another migratory setting, which may be valid also for other (European) immigrant-receiving countries.

KRAUSCH, MEGHAN* (University of Minnesota, kraus310@umn.edu)

Producing the Collective Subject: Anarchist Practices at the People’s High School in Buenos Aires

This paper analyzes the experience of a “people’s high school” in Buenos Aires, Argentina, and the ways that it engages with anarchist-inspired practices and ideas. In 2001, Argentina experienced a political and economic crisis that gave rise to hundreds of social movements opposing the neoliberal status quo, including “movements of unemployed workers” (MTDs) and factory takeovers. These 2001 movements encompassed much experimentation with the idea of social movement itself, as they abandoned the old political party structures and incorporated social relationships into their political agendas. While many such movements have since dropped their autonomist orientations in favor of aligning themselves with Kirchnerism and the presidential administrations since 2003, other movements remain staunchly independent and committed to alternative models of social change (referring to themselves as part of the “indépendent”). One such organization, the people’s high school (bachillerato popular) of the MTD Barracas, uses a non-hierarchical structure and consensus-based decision-making as one of the primary vehicles for organizing grassroots social change within the movement and the neighborhood. Based on a year of participant observation, I examine how the movement enacts these anarchist organizational forms. I argue that the successful outcome of such organizational practices is the creation of a collective subject, which is only produced at the school when these structures are combined with meaningful emotional interactions among activists. Thus this paper provides light on how and why some uses of consensus seem to fail flat or collapse into frustrating bureaucratic formulae, while other movements succeed in using such anarchist principles to meaningfully integrate participants into decision-making processes. Within a context of marginalization and oppression in Argentina’s shantytown, the people’s high school is using anarchist practices to create alternatives to neoliberal capitalism.

Human Rights and Humanitarian Relief: The Organizational Mediation Of Ideas In The Global Arena

In talk of the “international community”, many commentators assume that human rights work and humanitarian relief are pulling in the same direction. Others see human rights work and humanitarian relief as two fundamentally different modes of engagement. What both of these approaches share is a focus on the content of ideas. This paper examines the relationship between human rights and humanitarian relief in the international arena from the perspective of the sociology of practice and the sociology of organizational fields. Since the 1970s two separate traditions of practice have emerged – one centred around human rights and one centred around human rights. Based on interview research and document analysis, I examine how professionals in humanitarian relief organizations use the concept of human rights. In the past 15 years, they have used the language of human rights more and more, but the impact this language has had in humanitarian work has been mediated by the practical constraints and incentives of the humanitarian field.

Rethinking the Theory of Social Becoming: For a Humanistic Turn

According to P. Sztompka (Society in Action: A Theory of Social Becoming. Cambridge, 1991), the modern world is in a state of becoming that occurs in the context of unfinished structural and functional development. As a result social and cultural processes differ from each other in the context of unfinished structural and functional development. Human agency, the main aim of which is to preserve the human capital, works out a new type of sociological imagination the essence of which is reflexive thinking about social becoming.

Since that time the socium has become even hypercomplex: there appeared “normal accidents” (Ch. Perrow), change climate as well as new risks, vulnerabilities and social turbulences produced by human agency (J. Ury, L. Beck). Taking into consideration these realities of new catastrophism I argue for ‘a humanistic turn’ in sociology, whereby societies should be examined through the patterns and character of their complexity-dependency and human agency-consequences. This implies still a newer type of sociological imagination based on the synthesis of social, hard and humane sciences. The methodological instruments of this type of sociological imagination include both non-linear and humanistic aspects. Thus, I propose a non-linear and humanistic sociological imagination that deals with the acceleration of socio-cultural dynamics and globalization (R. Robert-son), synergetically takes into consideration paradoxes, risks, and dispersions of socium, searching for new forms of humanism, based on men’s existential needs.

WG01-895.1

KRAVCHENKO, SERGEY* (Moscow State University of International Relations, social7@yandex.ru)

Vulnerabilities to the Network Human Capital

The content and, therefore, the conceptual interpretation of the human capital is multifaceted and many-sided, depends on the historical time, cultural space, nowadays mainly - on the conditions of becoming complex socium, its “normal accidents” (Ch. Perrow), social and climate turbulences produced by human agency. Taking into consideration these realities we have proposed a network model of the human capital that is adequate to the urgent need of a humanistic component in the human capital.

There appeared new vulnerabilities to the network human capital. Until recent-ly in the history of mankind in the implementation of modernization the ques-tion about the humanistic ways and means to achieve the goals was not even discussed. Any pragmatic and rational intentions by themselves do not lead to prosperity, harmony, peace, if they do not provide the production of humanism, its penetration into social institutions. The network human capital should be managed on the basis of social and fundamental requirements: management should be in the form of a civilized and humane way of the interactions people; it should take into account the non-linearity of the human capital formation, dynamically complex causal relationships, the factor of social and climate turbulences; we should mind the latency of the formation of the human capital, that is - unforeseen and unimplemented unexpected turmoil’ of human agency. It is necessary to consider the layered hazard as derived from the scientific research and innovation: the effect of “normal accidents” should be extended not only on scientific and technological innovations but also on economic and political spheres, as well as on the processes of medicalization, urban design, new information technologies, tourism, fashion, diet etc.

KREISSIG, VOLKMAR* (Taita Taveta University, vkreissig@gmx.net)

Participation, New Forms of Corporate Governance and Social Responsibility –, History, Discussions and Realities – Industrialised Countries, Central and Eastern Europe and Developing Countries

Discussions to “participation” started in Germany within labour movement & works councils in 19th/20th century. Main questions were how workers & representatives can participate in the production process, in works force organisation, decision making etc. The promoters were socialist parties & left wing circles, trade unions & works councils.

In France in the 80-s the “participation” was that base-democratic right which should stand for the “socialism in the colours of France”. Participation was declared as the democratic alternative concept to the French state centralism and to the Soviet model of the state socialism.

The debate in the 90-s went around Japanese participation offers in production processes. Predominantly was “Japanisation”. The following “Flexurity debate”, had the idea to exchange “flexibility of working regime” into the preservation of employment.

Discussions on corporate governance & corporate social responsibility started in the 70ies in US, later on in Germany & Europe. Promoters were stakeholders & shareholders. Bearers of debate were less in trade unions or left political circles. Targets were common responsibilities of stake- and shareholders for environ-ment, life on the earth, quality of productions, employment law, work-conditions like child work, dangerous work, over-exploitation of the natural resources etc. in production & sourcing modification of high technology productions.

Trade unions and supervisory boards and works committees have to be able to challenge this course; however, they were not any more the sole or key players of debate.

The discource wins in social and changes away only from conditions of em-ployment to the responsibilities and the consequences of the application of prod-ucts. ISO 26000 is asked from the supervisory boards, the shareholders’ meetings linked with the influence of works committees.

These ideas were more developed in industrialised countries of Europe and Northern America than in developing countries as well as Eastern European coun-tries.

KRELL, KRISTINA* (Leibniz Institute for Social Sciences, kristina.krell@gesis.org)

Reference Income and Pay Satisfaction: How Do People Choose Their Reference Group?

When exploring individual well-being, not only satisfaction with life as a whole is suitable basis for analyses – also information on satisfaction with certain domains can provide valuable insight into how people are affected by the circum-stances of their lives. Satisfaction with the personal income reflects not only whether people assess their pay as high enough to deal with every day's expenses but also people's perception of how their effort and performance is valued by oth-ers (the employer), which can be a considerable aspect of mental well-being.

As is known, reference groups for income comparisons can be people of same profession, with same education or colleagues, etc. This paper provides further insight into the field of study of whether different groups of people apply different reference groups when evaluating their income and – if applicable – which aspects motivate the choice of reference group (e.g. information disparities).

Data base is the German Socio-economic Panel Study (SOEP) of 2010. Several types of reference groups are defined and the impact of their income on the per-sonal income satisfaction of different population groups is analyzed, applying an ordered logit model.

Towards the Construction of a Composite Indicator of Objective Individual Living Conditions for Europe

This paper provides an approach for constructing an index of objective individual living conditions which is based on micro data and comparable between countries and over time. It summarizes on the individual level how people’s lives are from diverse perspectives, which together form their “objective living condi-tions”. As the name already indicates, the index particularly focuses on objective indicators, not taking into account subjective (cognitive or affective) perceptions of one’s own life, such as life satisfaction or happiness. The life domains that are included in the index are:

- income / standard of living
- housing area
- health
- social relations
- work

Each domain incorporates a number of single indicators that describe this aspect as thoroughly as possible.

Constructing an index based on micro data has the advantage that the computation of the index for subgroups (e.g. by gender, age groups, etc.) is possible. In the lack of a micro data base for Europe that covers information on all the domains mentioned, the index combines three data sources: the EU-SILC, the ESS and the EU-LFS. At present it can be computed for a limited number of European countries for the years 2006, 2008 and 2010 (severely limited also for 2004).

First results of the index indicate that there is a high correlation between macro indicators of the economic strength of a country (e.g. GDP/capita) and the index as a whole whereas certain domains of the index seem to be uncorrelated with those macro indicators. Particularly, this concerns the domains housing area and health. Hence, the indicator can give differentiated insight into the “performance” of countries concerning their population’s objective living conditions.

**Bargaining the „Human Rights“ of „Human Resources“ – Unions and NGO-Networks Advocating Precarious Migrant Workers’ Interests in Japan**

Tackling the debate concerning recent immigration policy changes, focusing on the so-called Technical Intern Training Program (TITP), as case study, this paper challenges common assumptions about the current status of the civil society and the labor movement in Japan. While civil society in Japan has often been portrayed as apolitical and service oriented, being strong in producing local “social capital” but weak in generating “advocacy” on the national level, the labor movement has been described as politically domesticated and oriented towards balancing interests of big companies and their core staff, organized in enterprise unions. As these generalizations are grounded for a great part of the scene, they still ask for qualification, because they obscure a relatively small but growing and significant portion of organization of and bargaining for workers interests in Japan. Irregular employment and migrant labor is especially prominent in Japan’s many small and medium sized enterprises (SME). The unionization of employees in SME through individual membership unions, that has been fostered in the 1970 by the former national union center Sôhyô, has since the 1990s formed the basis for migrant and irregular workers organization in unions in Japan, and as further become the core of new constellations and alliances in civil society, which played an active role in discussions leading to immigration policy reforms. Thus it was not the Japanese civil code or the so-called NPO-law, but the Labor Standards Act (LSA) and the Labor Union Act (LUA), which formed the legal framework for a vibrant civil society in Japan, providing rights of organization and collective bargaining for precarious migrant workers, and thus enabled political advocacy.

**Not No Place: Fragments of Johannesburg**

Not No Place is a collage of visual and written fragments on Johannesburg- historical, archival, found and self-generated. The book is the result of document- ing and collecting material on the city of Johannesburg over the course of five years. It interweaves selected quotations with personal memories and reflective accounts, we were fiction in an attempt to explore the city as both lived place and an imagined no-place (the direct translation of Sôhyô). A montage combin- ing photographs, drawings, archival material and texts, it alternates between the mode of collector, witness, observer and author, taking into account the numer- ous representations of the city in historical writing, urban theory, film, media and fiction. Not No Place presents a collection of moments in the city’s complex history, its contemporary spatial realities as well as its future projections.

Bettina Malcomess and Dorothee Kreutzfeldt speak to their visual processes and practices informing their book-length investigation into Johannesburg, Not no Place: Johannesburg: Fragments of Spaces and Times. This intriguing and beautiful book is by no means an official biography of the city – it reads more like a richly illustrated scrapbook of ideas and reflections part made up of quotes from a multitude of sources and part made up of the authors’ personal narratives and ruminations on topics; the subheading Fragments of Spaces and Times captures it well. It is a peripatetic amble through the history and physicality of Johannesburg, stumbling into recurring characters such as the Carlton Hotel and Nongoloza.

**Study of Language Use and Language Planning in Education in the South Asian Multilingual Context from the Point of View of Educational Linguistics**

Language Problems of multilingual countries, especially those in South Asia differ only in quantity rather than quality (Ferguson et al., 1969). Due to the heavy impact of colonization and political power imperialism of the colonial powers – the role of languages in these nations starting from the 15-16th centuries showed drastic changes especially in the areas of education and that too in the use of languages as media of instruction.

Although there were a number of problem due to language use in general, the problems in the domain of education were considered as more crucial and needed to be tackled in order to achieve literacy standard, formal schooling and still later higher and technical education.

Most of the nations in this region are multilingual on the hand and termed as dual languages on the other. Languages like English due to the power and dominance started playing a major role at the national / international though they were bilingual or multilingual in actual practice, there existed only a monolingual supremacy in education.

In many of these nations local / nature languages were not given any import- ance at the national international. They were treated under the banner ‘vernacular languages’, and never used as first languages or medium of instruction even at the international level of school education. This kind of dominance controlled the uses of native languages in education and thus the natural choice was only the colo- nial languages of power and supremacy. Even after the independence of these nations, the situation prevailed then favored the colonial languages like English.

**Confronting Vs. Transforming Consumerism on the Path Towards Sustainable Development**

The high level of consumerist tendencies particularly in emerging markets pose a question whether environmentally conscious consumerism is an oxy- moron. The presentation is based on a series of surveys fielded in 2012-2013 to general populations in 22 countries. The survey results enabled the mapping of consumerism in the two-dimensional space defined by “Environmentalist” and “Materialist” attitudes. A large proportion of customers in each of the surveyed markets exhibits a combination of high level of environmental concerns with the passion to consume. In other words, this group is trying to reconcile their desire to shop with a sense of care for the environment and society.

This segment is identified as Aspirationals. It may serve as a factor bridging the gap between societal and environmental needs and the business interests of the corporate world. Unlike Eco-Enthusiasts with their ascetic environmentalism and reduced consumption, Aspirationals may gain gratification from sustainable purchasing and sustainable consumption. Aspirationals represent hundreds of millions of consumers globally. They are most prominent in countries with a tradi- tion of face consumption such as China, India and Brazil. Due to not sharing the Post-Materialist values, this segment is unlikely to become Eco-Enthusiasts in the Western sense of the word. However, sustainable purchasing might be in- troduced to Aspirationals as something stylish and fashionable which would add to their social status and further differentiate them from the majority.

This presentation comments on segments distribution across global regions and markets as well as on the members’ demo- and psychographics. The seg- ments’ attitudes will be causally linked to a broad range of socially and environ- mentally responsible behaviours, and communication patterns.

**Multilingualism and Community-Building Among Brussels Based Civil Servants and Lobbyists: Perceptions, Practices and Power Positions**

This presentation explores the multilingual and multicultural aspects of com- munity-building, networking and communication in the EU's political and admin- istrative system with special attention to the effects of a multilingual and mul- ticultural working environment on the actors' identities. In order to track these aspects we investigated the networking and communicative preferences of EU civil servants and lobbyists based on broad-scale survey data (277 surveys com-
pleted) and thematic interviews (17 hours of recorded materials). We argue that the power dimension of the linguistic choices among EU bureaucrats is especially important, since as Mamadouh (2002) observes: Language(s) regulate access to political, economic, and cultural resources. Language matters to access the supranational political arena (for example, to acquire a position in an EU institution or a policy network), as well as to control political representatives and civil servants at the EU level.

The findings indicate that although multilingualism appears on various levels in the different social contexts investigated, all of these contexts are heavily dominated by English. It also appears that in their professional practices our respondents are highly aware of the relationship of language(s) to power and they prefer the usage of more power-neutral language policies even if this comes with the cost of mutual intelligibility. It also seems that the current availability of some of the alternative languages used in the Brussels context might be somewhat more viable when dealing with political status/historical reasons than with practical considerations. Yet, the findings imply that multilingualism plays a less significant role in the social and working lives of Brussels based civil servants and lobbyists than previously assumed. Furthermore, the respondents’ social identifications are rather influenced by new signifiers related to economic globalization and competition and their institutional positions than their linguistic backgrounds or the multilingual practices they take part in.

"I Hope to Muddle through until the Retirement" - the Aging Workforce in Demanding and Dangerous Jobs

The paper discusses the increase of physical and mental challenges for older workers in various exceedingly demanding and dangerous occupations, typically in police and military force, fire brigades and prisons (wardress) but also in aviation (pilots and flight attendants in general, bus drivers, machine-makers, traffic controllers, railway operators) as well as in heavy industry (mining) and - though it may seems strange - in performing arts (ballerinas). Slovenia, an ex-socialist country that has joined European Union in 2004 is taken as the case.

Firstly, the challenges are identified through combination of interviews, group discussions and structured questionnaires with relevant workforce representatives. Secondly, the obtained testimonies are compared among professions and between generations who underwent socialist and transitional (mainly market driven) period respectively, to identify similarities and differences in challenges. Thirdly, the problem is approached from social policy point of view to demonstrate the inefficiency of the latest changes in the Slovenian pension system regarding demanding and dangerous jobs. Finally, the state of affairs is addressed in the framework of changes the society underwent in the last twenty-five years, including liberalization of economic and political system, privatisation, Europeanisation and globalization. The influence of global economic crisis and austerity measures, that altogether lead to redefinition of workforce position in general, to chaotic and eclectic transfer of responsibilities regarding retirement security from society, state and companies to individuals. The individualisation of risks has serious consequences for quality of work and working conditions of workers who see their responsibilities for decent retirement and satisfactory pensions are severely reduced.

*Testimonies and evidence were collected as a part of a research project, commissioned by consortium of Slovenian Unions Associations (Alternativa and Free Trade Unionos), Ministry of Labour, Family, Social Affairs and Equal Opportunities, Chamber of Commerce and Norway Grants found.

**Korean Environmental Sociology: History and Characteristic**

This article aims to analyze the history and characteristics of Korean environmental sociology since the 1990s. Korean environmental sociology has been developed since the 1990s when environmental movements and environmental awareness started to proliferate nationwide. The Korean Association for Environmental Sociology was founded in 2001. Seojee Lee summarized that Korean environmental sociology is participation, problem solving, and field research oriented. Sun-jin Yun analyzed that sustainable development, ecological democracy, oil-silff disaster, nuclear waste dump site, environmental justice, and so on are key issues in Korean environmental Sociology.

Korean environmental sociology has the following theoretical and empirical achievements. Firstly, it introduced ecological paradigm and tackled the limitations of anthropocentric sociology. Secondly, environmental sociologists raised environmental justice and inequality issues and accumulated research on environmental and ecological movements. Thirdly, they tried to develop theory and policies of ecological democracy beyond anthropocentric democracy. Fourthly, they tackled the limitation of nation state and economic growth model and tried to develop alternative state, local community, global governance and development theories. Korean environmental sociologists have focused on not only analyzing environmental problems, awareness, movements, and policies status quo but also suggesting new theoretical framework and alternative society model.

**An Inter-Cohort Comparison of Intra-Cohort Social Stratification: How Do Cumulative Dis/Advantages Evolve Across Cohorts?**

The aim of our paper is to analyze trajectories in hourly wages between the ages of 30 and 50 for five different birth cohorts, using the PSID data. More precisely, we focus on processes of intra-cohort stratification by tracing patterns of income as individuals age. Our analysis is informed by the cumulative dis/advantage hypothesis as a process of intra-cohort stratification. Using growth curve models, we seek to describe and explain the patterns of income stratification within and between cohorts. We hypothesize two key patterns: Simple inter-individual and path-dependent post-inidividual divergences. Simple inter-individual divergence is indicated when the relation between initial hourly wage and its slope over time is positive (in contrast to convergence, where this relation is negative, and stability, where there is no relation between initial hourly wage and its slope over time). Path-dependent inter-individual divergence is indicated when hourly wage differences between men and women, or between whites and non-whites, increase as individuals age. Our analyses will reveal if the patterns of

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
wage divergence over the life course are constant across cohorts, or whether the extent and form of wage divergence is shifting over time.

The Joint Impact of Paternal and Maternal Parenting Styles on Children’s High-School Academic Achievement in Taiwan

The present research used data gathered by Taiwan Education Panel Survey (TEPS) in 2001 and 2003 to explore how fathers’ and mothers’ parenting styles jointly influenced their children’s academic achievement in junior high. Using latent class analysis (LCA), the research uncovered the same four parenting styles for both Taiwanese fathers and mothers. These four parenting styles are consistent with parenting typology often discussed in the literature and can be labeled as authoritarian, authoritative, permissive, and neglectful. Since the majority of Taiwanese children lived with both biological parents and not much research has been done to understand how both father’s and mother’s parenting styles jointly influenced their children’s development, the research further used LCA to construct 16 joint parenting styles to investigate how these styles were related to children’s academic achievement. The research found that children with both parents adopting the permissive style would have the best academic performance in junior high. Past studies have indicated that authoritative parenting would be conducive to good academic achievement. The present research showed that when one of the parents was authoritative, for their children to perform well in junior high, the other parent should be more permissive. In other words, in the traditional Chinese view of parenting, there should be a combination of being “yan” (strict) and being “tsi” (kind). The research further found that if paternal parenting was authoritative and maternal parenting was neglectful, this type of joint parenting style would have the most negative impact on their children’s academic achievement. In short, the findings of present research clearly demonstrate the importance of understanding the joint impact of paternal and maternal parenting on their adolescent children’s development in Taiwan.

Renaissance of Ethnicity? Self-Identifications of the Second and Third Generation of Algerian Immigrants in France

The paper presents the results of an empirical research on the self-identifications of people belonging to the second and third generation of Algerian immigrants in France. The aim of the research was to investigate in which situations the Frenchmen of Algerian origin (FAO) feel included and in which excluded from the various collectives, e.g., collective of the Frenchmen, of the Algerians or of the people belonging to the other important social (not only ethnic or national) categories. The choice of FAO stemmed from the fact of their strong, connected with numerous contradictions, attachment both to the country they live in and its culture (France) and to the country and culture of their origin (Algeria), also from their ambiguous attitude towards the suburbs of the French cities which they are very often identified with in the context of riots erupting there every few years. The project answers to the questions concerning the variables that differentiate the identifications of FAO with various social categories and give the classification of situations which occurrence is conducive to the appearance of self-identification of a particular kind. The results are based on a content analysis of 25 autobiographical novels written by FAO authors and published in France between 2000 and 2012 and the biographical method by F. Znaniecki and his principle of “humanistic coefficient” was used in the project. Indicating the situations in which FAO still feel different than other citizens of their own country can show the areas of social life that require reconsideration in the terms of the state’s integrating policy.

Takao Tanase and Talcott Parsons: The Possibility Of Functional Analysis

Takao Tanase makes a unique contribution to sociology of law because he uniquely applied the sociological framework of Talcott Parsons who elaborated general theory.

When Tanase studied abroad in 1970’s, he majored in sociology and was mentored by Parsons. So Tanase was clearly influenced by Parsons in his early works and tried to develop or modify Parsons’s theory. But after that he rarely mentioned Parsons and repeatedly referred to normative theories such as critical legal studies. So lately Tanase has been considered a postmodern theorist in Japan.

But if we read1 intensively his works, we can notice that he was influenced by Parsons all the time although he never clearly mentioned Parsons.

Tanase frequently used Parsons’ functional analysis uniquely to study law and society in Japan. He decomposed research objects (fort law in Japan, for example) into ideal elements (logic of liberalism, for example) and observed the functions of those modern ideal elements in real social conditions. Then based on the observations and new normative theories such as postmodernism transcending the limits of modern ideas, he proposed what is necessary for modern law imported from the West to function more properly in society. In this way Tanase applied Parsons’ general theory standing on the convergence between idealism (normative theories) and positivism (observations), and his application gives a hint when someone applies Parsons’ general theory to researching the functions of law in other countries.

Though Parsons was attacked severely and his influence declined once, he has been reevaluated since 1980s. But this is not true for sociology of law. So Tanase’s application becomes a nice model of using Parsons’ general theory in sociology of law and it suggests the possibility of researching and comparing the functions of law globally.

Tokyo as No. 4: A perspective from World City Ranking

Since the 1960s, a shortage of lodging in city centers has led to high prices and the development of suburban housing estates. The problems of aging suburban populations are attracting considerable attention in Japan, a society of great longevity. The decline in mobility among elderly homeowners is a main problem in aging suburbs because an aging population and the accompanying social problems have been threatened by issues related to the suburban environment. An increase in housing vacancies, which is closely connected to a lack of security, sustainability, and human bonds among residents in a community, is one example. This study aims to examine local responses to the increasing number of vacant houses in suburbs. We pay attention to the influence of local regulations on vacant housing; several local governments, including that of Ushiku City, have enacted regulations to promote appropriate maintenance of vacant houses since the late 2000s. Then, we discuss institutional structures that have caused the problem. We also identify the generative process of housing vacancies in the Tokyo suburban area and examine the results of field surveys of several old housing estates in Ushiku City, Ibaraki Prefecture. Based on interview surveys of residents, we clarify the mechanism that produces housing vacancies there. We conclude by examining the attitudes of local communities toward vacancy problems.

Questioning the Promise of English: Language Choice of Japanese Transnational Workers in Asia

English has increasingly been positioned as a global lingua franca in public and academic discourses especially in non-English-dominant countries like Japan. To give a perspective of how a new ideological landscape and the use of English skills with individual and national economic advancement, ideas about English in globalized world have formed a particular language ideology, influencing education policies and raising demands for English teaching and testing. While the prevalence of English is indeed observed in globalized marketplaces and transnational communities, language choice and use should be conceptualized as a local practice (Pennycook, 2010) that reflects, reinforces, or disrupts social, historical, material, and ideological conditions at a certain locality.

This paper reports a qualitative study that investigated the language choice as well as views and experiences of transcultural communication among 20 current and former Japanese transnational workers of five Japanese manufacturing companies who were assigned to work in China, Korea, or Thailand. Semi-structured interviews revealed that for workplace communication, Japanese was predominantly used in China and exclusively in Korea, whereas English was exclusivity used in Thailand. Almost all interviewees developed a truncated repertoire of the local language in order to fulfill daily survival needs (Blimmaert, 2010), whereas a couple of workers developed a professional level of Mandarin and used it extensively for work.
These findings demonstrate historical and linguistic relations of power that intersect with practical considerations. Specifically, the language choice seems to be implicated in a colonial legacy reflected in the linguistic hierarchy (e.g., Japanese vs. Korean or Chinese) and the commodity value attached to Japanese as well as pragmatic factors related to linguistic and orthographical proximity. Moreover, the fact that the interviewees were selected by each company reveals a particular entrepreneurial habitus or lingua-cultural dispositions expected for transnational workers. The study problematizes the neoliberal ideology of the promise of English and provides educational implications.

Conflict Management in Prostitution (性活=“Seikatsu”) — the Structure and Meaning of Pluralistic Justice

"Conflict management in prostitution" have some meanings especially from the perspective of law. They are also concerned with their own viewing. In Kencya, there are also different ideas depending on the situations. The meaning for female who are working as a prostitute (I call them normally as "性活者"= "Seikatsu-syaa", sex-practical use person) is protection or any system which will help them. This presentation will try to make clear the "real" situation of conflict management in prostitution (I call it normally as "性活= "Seikatsu", sex-practical use) . For it, I had researched for 101 prostitutes by interview directly in 2010 to 2013 in Nairobi, Mombasa, Malindi, Nakuru, Kisumu and Meru. The average time of interviews is 1 hour 30 min. And I did the research more than 500 for non-regular women and men as customer by questionnaire. The research for prostitute have more than 100 questions divided into 5 sections, Experiences, Ideas, Ways, STI, and Personal Matters. I will describe here how prostitutes think about and get on with "law" even "living law" in prostitution. And more, I will try to find what is the way and meaning of conflict management for them through my research in Kenya. We can find the idea of original conflict management in prostitution through confrontation against "law" finally. Actually, justice, even law is pluralistic in the field of prostitution. When we think the structure of prostitution from the perspective of conflict management, we feel something poor or strange to the normal-idea in prostitution field like that is legal or illegal. Because the "law" must be different for each in multiter prostitution structure. We need to understand the situation without any bias in first and discuss to pure structure of prostitution later. The idea of strategy of conflict management in prostitution will help it.

Sexuality and Refugee Status: Narrative Construction of Sexual Minority Asylum Seekers in the United States

Since the 1990s, sexual minority status has been recognized as a basis for refugee/asylum claims in certain countries. In the United States, as seen from the recent governmental guidelines for those specific cases, the so-called LGBT asylum is now drawing attention. This study attempts to analyze the issues of gays, lesbians, and transgenders who are seeking asylum in the U.S. from the perspective of narrative construction regarding to the dominant notion of sexuality in the host society appearing in legal procedures. Previous studies have shown that since the credibility and objectivity of those claims are legitimized within a US-centered notion of homosexuality, it marginalizes those individuals who fall outside of this paradigm. However, studies based mainly on legal documents have yet to develop an understanding of sexual minority asylum seekers’ experiences and of the degree to which they follow the dominant picture of sexuality.

To further understand this phenomenon, interview research was conducted in New York City and the San Francisco Bay Area. In order to define asylum seeking process as a system which connects the concept of sexuality to past events in the narrative construction, this study explores the experiences and perspectives of the asylum seekers themselves. Although, in most cases applying for asylum is taken as an option they find as a choice to legalize their status, a comparison of two different areas tells us that the strategies and discourse of their advocates and case-workers, between these and ethnic communities, and practices of border crossing have impacts on how they form the narratives. For example, the asylum seekers in New York City tend to use human rights discourse while those in the San Francisco Bay Area do not. Instead, a common practice of multiple border crossing characterizes the latter as an actor within the asylum-migration nexus.

Gendered Innovations In Hospital Workforce Management: A Scoping Study

An increasing scarcity of health human resources in Europe calls for innovations in hospital management and workforce governance, yet policy interventions and measurements are mainly concerned with costs. In this paper we introduce an approach of ‘gendered innovations’ that brings both the gendered nature of the professional groups and their importance as the backbone of healthcare system into perspective. The aim is to explore gender-sensitive forms of managing the clinical workforce, especially medicine, and how this may contribute to both gender equality and sustainable health human resources. In terms of method, we draw on a scoping review of the literature and findings from a pilot study in a large German hospital. Here, the focus is on hospital doctors with particular interest in the situation during specialisation. The case study applied comprises data analysis of hospital statistics, expert interviews and four focus groups with (male and female) doctors working in different specialties and departments. We develop a conceptual approach that systematically links three strands, namely privatisation and organisational restructuring of hospitals, health human resources management, and gendered professional careers. There is increasing evidence that improving gender-sensitive work and career conditions and linking organisational and professional governance issues may help improving competition of hospitals for qualified doctors. At the same time, the opportunities of gendered innovations are affected effectively by hospital management, decision on increasingly competitive hospital sector. Drawing on these findings and organisational settings, we suggest ways of translating gendered innovations into the day-to-day practice of hospital workforce management, thus furthering more efficient and sustainable workforce management and sustainability.

Mapping The Governance Of Care and Professional Development: A European Comparative Study

This article investigates the care sector through the lens of the sociology of professions. We introduce a dynamic approach that systematically links changes in the nursing professions and society at large with new modes of governance in healthcare. The aim is to explore institutional conditions that contribute to the development of an integrated professionalism and efficient health human resource management in the care sector. A novel contribution is the cross-sector and profession-straddled approach that connects professional developments in nursing in hospital, primary and long-term care with governance arrangements. A comparative case study design is applied that focuses on western European countries using England, Finland, and Germany for an in-depth analysis. In terms of methods, we draw on public statistics, document analysis and other secondary sources. Three emergent patterns can be identified: (1) ‘constrained professional development’ was observed in the German corporatist and federalist/fragmented system.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
with overall high density and quality of healthcare services and concentration in the middle-range professions with a lack of upward institutional pathways; (2) ‘elitist professional development’ was found in the more centralised governance in England and characterised by a growing expansion in the high-status segments, but overall weak development in the middle-level and lower segments; and (3) ‘integrated professional development’ emerges in the context of decentralist and universal governance arrangements in Finland, that foster expansions in both high-status segments and low and unqualified segments of nursing. In summary, the findings highlight connections between professional development and governance. This study (which lacks democratic and (meso/micro) level of professions, in order to achieve transformative potential, must be connected and back-up by (macro-level) health and social policy interventions.

Before we can even discuss democratic consolidation, at least three minimal conditions must be fulfilled, according to Linz and Stepan (1996). Beside those consolidated democracies should also fulfill several other conditions that have in scientific analyses not attracted such high attention than three minimal conditions. Among other conditions Linz and Stepan specifically stress the importance of economic consolidation. The proposed paper is going to analyze the challenges of democratic consolidation in the Central and Eastern Europe from the beginning of 1990s, when democratic transition began to take place, to most recent period, when consequences of global economic crisis hit the region. It is clearly evident from the findings that the democratic consolidation measurements that most former socialist countries have reached level of consolidated democracies; authors are testing the thesis that one of the reasons for that was also successful economic consolidation, which in is recent period suffering under heavy pressure of global economic crisis. The consequences of that can already be seen in various democratic consolidation measurements, like Nations in Transit or Human Development Index (HDI), where most CEE countries are regressing in last few years.

Is The Middle Class a Harbinger Of Democracy? Evidence From Southeast Asia

A vast body of literature claims that the middle class is a critical force for democratic transitions, democratic consolidation, and political stability. Yet, recent events in Thailand and in other Southeast Asian newly-industrializing countries (NICs), indicate that the middle class often challenges democratic regimes or supports authoritarian juntas. How should we reconcile these divergent views of the middle class? This article argues that an explanation for the behavior of the middle class in relation to regime-type must begin by looking at the state’s role in addressing the interests of the middle class. Where a state addresses the key concerns of the middle class – rule of law, economic development, and political stability – this class is unlikely to rebel against the state. Institutionalized states are most likely to satisfy middle-class interests, while patrimonial or clientelistic states are particularly vulnerable to middle-class rebellion precisely because they are unable to satisfy any middle-class interests and values. A comparison of four Southeast Asian NICs will thus show that middle-class support for democracy is highly contingent on the structural conditions in which they find themselves embedded.

Judging Bodies in Europe: Examining the Variety of Repertoires for Evaluating the Beauty of Male and Female Bodies in Six European Countries Using Visual Q-Methodology

Being perceived as beautiful is associated with many social and economic benefits, including advantages in dating and labour markets. In post-industrial European societies, “physical capital” is increasingly becoming a valuable asset, for men as well as for women. Yet little systematic and inductive cross-national comparative research has been done on what is perceived as physical capital by people of different social backgrounds, genders and age groups. As a result, most existing studies on beauty ideals emphasize universal criteria of beauty evaluation inherent in human evolutionary psychology, or the homogenizing effects of beauty standards propagated by transnational media imagery and a transnational beauty industry.

In our study, using a structured sampling method, a total of 180 respondents in six European countries are asked to sort picture sets of a wide variety of both male and female bodies according to their own tastes. This is done in the context of semi-structured interviews in which respondents are asked about their ideas on beauty and the role it plays in their lives and social interactions. Through factor analysis, separate “taste groups” are identified on the basis of their sorting patterns, and their particular criteria for evaluating beauty interpreted with the help of their own comments.

The effects of gender, education, age and nationality on ideals of bodily beauty, are ascertained through regression analyses with factor scores, and systematic coding of the interview material. Furthermore, we investigate to what extent bodily beauty ideals are informed by moral or symbolic, rather than purely aesthetic, considerations. We predict, on the basis of the theories of Elias and Bourdieu, that social norms relating to specific gender roles, self-control, race and other status and identity markers play a marked role in the repertoires Europeans use for assessing the bodies of both men and women.

Processes of Economic Consolidation in Central and Eastern Europe

Demographic Giants: Does Indonesia Offer a Path for Egypt to Achieve below-Replacement-Level Fertility to the Benefit or Detriment of Women?

Indonesia is the world’s most populous Muslim-majority nation and Egypt has its largest Arab population. Both countries have similar overall and any modern-method contraceptive prevalence rates (61% and 58%) and levels of unmet need (12-13%). Fertility decline has recently stalled in both countries, but at a lower level in Indonesia than in Egypt (2.6 and 3.0 births/woman, respectively). In the mid-1960s, both countries established clinic-oriented national family planning programs with strong bureaucratic and financial support. However, state policies led to skewed method choice with each country relying heavily on a single reversable intervention that accounts for 90% of contraceptive use, reducing choices for women. Also, each program each has recently hit trouble. Indonesian politicians have shifted their attention and resources away from family planning. Injections are increasingly offered by local midwives with strong incentives and by more private providers. Indonesia now has the world’s highest injectable use rate (32%), but reliance on long-acting conception is weak. The Egyptian program has poorer informed choice, higher discontinuation rates, and heavier reliance on public sector sources now undermined by ongoing political turmoil. The IUD remains the most widely used method (36%), but 7% of women now use injectables, more than in other Arab states and possibly soon usurping pills as the second most popular method.
most common method. We use survey data, documentary evidence, and key informant interviews to examine these developments further. With certain caveats, the Indonesian experience offers lessons for instituting more solidly founded contraceptive and population policies and for accelerating the path toward replacement-level fertility in Egypt, notwithstanding its major societal turmoil. Increasing injectable use can help meet demands on the fragile state health system, make use of Egypt’s underdeveloped community-based channels, and may serve as a catalyst for other Arab states to help them reach more sustainable population and development trajectories.

**Depression, Suicidal Ideation and High-Risk Behaviors Among Underserved Youths in Central Mexico**

**Background:** The staggering cost of depressive disorders and suicide on the quality of life of patients and families, the increased mortality risk, and the high economic burden demand our attention. There is evidence suggesting that engagement in risky behaviors, development of negative habits such as using alcohol, tobacco, and drugs, and depressive disorders all begin during adolescence. Further, substance use, in particular smoking and drinking, has been linked to depression and suicide risk. The study aim was to evaluate the prevalence of depression and suicidal ideation and identify predictors that could inform a prevention program.

**Method:** Using a cross-sectional study design with a probability sample, 702 adolescents residing in five low-income, rural high school students in the central Mexican state of Guanajuato were surveyed.

**Results:** Almost half (49.2%) of participants showed some level of depression (CES-D > 16), with 23.6% identified as suffering severe depression (CES-D > 25). Logistic regression analyses indicated that controlling for financial status, symptoms of depression were predicted by female sex, low self-esteem, risky behaviors, conflictive parent-teen relationships, and binge alcohol drinking. The same variables with the exception of binge drinking predicted severe depression. In turn, suicidal ideation was associated with depression, low self-esteem, high-risk behaviors, and conflictive relationships with parents. A similar pattern of clustered behaviors among teenagers has been reported.

**Conclusions:** Predicting and ultimately preventing depression is of enormous public health significance. The findings can inform the design of interventions to prevent this early pattern of depressive disorders and associated risk factors among low-income, rural youth in Mexico and possibly in other contexts.

**Urban American Indian Youth Religion, Native Spirituality, and Well-Being: A Latent Class Analysis**

Most American Indians (AI) in the United States now live in urban rather than tribal areas yet little is known about their interconnected spiritual, religious and cultural worlds. This presentation documents ways that urban AI middle school students were involved with religious institutions and Native spiritual and cultural practices, and assessed how these differences related to cultural identities and risk and protective factors. Data come from AI youth (n=205, mean age 12) in five urban middle schools in a southwestern USA metropolis. Latent class analysis identified distinctive groups of youth according to religious affiliations, attendance at religious services, adherence to Christian and traditional spiritual beliefs, sense of Native spirituality, and involvement with spiritually significant Native cultural practices. Five classes emerged. There were two Christian groups, one attending Christian churches and following Christian beliefs, but uninvolved with Native beliefs, spirituality, or cultural practices, and a nominal Christian group affiliated with but not attending church, and relatively unattuned to belief systems. Two groups followed Native beliefs and spiritual practices, one affiliated with the Native American Church (NAC) and another unaffiliated with any church. The fifth, non-religious group, was unaffiliated, followed neither Christian nor traditional beliefs, and was uninvolved in Native spirituality and cultural practices. ANOVA indicated that the two Christian groups were higher in SES, had lived longer in the urban area, had better educational behaviors and better deviant behavior, and also the most substance users if any. The two groups embracing AI spirituality (NAC, and non-NAC) had better school grades, more enculturation in tribal language and strong AI ethnic identity, and the strongest bicultural orientations. The non-religious group had the lowest scores on parental monitoring, closeness, and support outside school. Findings indicate the differences in ways that four groups are socialized and develop.

**Marginalized or Empowered? Conflict Induced Internally Displaced Kurdish Women’s Experiences in Turkey**

This study is focusing on the conflict-induced internally displaced Kurdish women’s experiences. There has been an ongoing internal armed conflict in Turkey since 1984 and one of the consequences of this conflict is the internal displacement that occurred in 1990s. In the displacement process, women and other family members were victimized. They did not only lose their homelands, but also their economic burden demand our attention. There is evidence suggesting that economic burden demand our attention. There is evidence suggesting that economic burden demand our attention. Women becoming the heads of households these women may break the life-long cultural conditioning and become empowered in the city centers. But marginalization and empowerment are not fixed categories and there is always a possibility for these women to transform their marginalized position into empowerment. By political engagement, working outside home and/or being head of the household these women may break the cycle of their marginalization and becomes empowered in the city centers.

Nations and Expectations of Democracy Among the Participants of the OccupyGezi Movement in Turkey

The aim of this paper is to explore the notions of democracy and the expectations aroused by the OccupyGezi movement started in Turkey in May 2013. The protests, which began on 28 May over the plans to demolish one of Istanbul's rare central parks, developed into nationwide rallies against the government. Although the protests have been acknowledged to be a civil unrest participated by people from different political backgrounds, the demographic features of the protestors and their demands remained under-researched and this caused speculations from both the government and the opposition sides about the reasons and impacts of the protests.

A group of voluntary independent researchers have conducted a survey with 1060 protestors, during the actual demonstrations on the streets in Ankara. Data were collected in three days (8th, 9th, 10th June) in two different centers of the protests in Ankara. Participants were people attending the protests at the time of the interviews, in varying forms and degrees (example: just standing to actually fighting with the police). Participatory observation and results of other surveys conducted in Turkey were also used as secondary data. The questionnaire consisted of questions concerning the demands, political backgrounds, reasons and types of participation to demonstrations and expectations of the protestors, along with their demographic characteristics.

This paper is based on the analysis of the participants’ notions, expectations and demands around democratization in Turkey. Results suggested that the demands of democratization have varied according to a series of factors, including the political background of the participant, gender, the place of demonstration attended and the different understandings about the government’s policies restricting individual freedoms. The results have also documented the intense police violence experienced by the participants, which is expressed as one of the major reasons for the growing unrest.

Population Change, Demographic Dividend and Health Care in Aging Population of ASEAN

The purpose of this study was to investigate the change of population from 1967 – 2060 and to study the demographic dividend among ASEAN countries and to health care among aging using qualitative methods from secondary level of population data. It was determined that the population of ASEAN is approximately 600.8 million people or 8.6% of the world population and this amount has tended to continuously increase for 40 years. Nowadays, the population structure consists of 48.3% of laborers, 39.8% with child dependency, and 8.5% of aging dependency while the death rate is very low and birth rate is declining. The total fertility rate of the ASEAN population is 2.4. The demographic dividend could be categorized into three groups including 1) countries that already have passed opportunity, i.e., Singapore, Thailand and Vietnam, 2) countries that have had the chance to handle this prime event, i.e., Indonesia, Malaysia, Brunei Darussalam and Myanmar, and 3) countries that will meet this situation in the future, i.e., the Philippines, Cambodia and Lao PDR.

The ASEAN community consists of ten countries as its members which all have different population structures, hence dividend occurs more than once and each country could give a hand to others to help solve problems and clear effects. It may be necessary for countries which have not faced the prime period to learn from those who have passed the period. For labor issues, population segmentation could be reallocated to countries that lack human development results resulting in the new trends in health care systems for aging people in the future.

KUMAGAI, FUMIE* (Kyorin University, fumike@com.home.ne.jp)

History of Courtship and Dating in Japan

The marriage pattern in Japan developed from the group/horde marriage in the Primitive Times to the tsumadoi-kan (the groom commuted to the bride residence), to the muko-in (the groom lived with the bride family) during the aristocracy, and to the yome-in (women marrying into men’s families) under the Bushi ruling. It was only after the Meiji era that Japanese marriage changed to the Yorai pattern based on the mutual consent of the marriage partners.

Then, two types of mate selection pattern emerged: the arranged (miao), and the romantic marriage (ren-ai). In the arranged marriage the go-between (nakoudo) arranges formal interviews providing the young with opportunities for meeting suitable marriage partners. During the early stage of Japanese modernization, miao was the predominant pattern, however the complete reversal has emerged today, and ren-ai has become the dominant pattern instead.

Recently, young Japanese have difficulties in finding ideal marriage partners. Consequently, great many Japanese men and women remain single lifetime (1920: about 2% for both men and women; 2010: 20% for men and 11% for women). Extremely high rates for life-time singleness of Japanese men and women today are one of the major reasons for the fertility decline.

Attempting to provide young people with mate selection opportunities various “kon-katsu” services (marriage mate seeking activities) have been established by local municipal offices, commercial matchmaking agencies, and Mochi-Kon (Township Companion where both young men couples and women couples meet in group). Furthermore, the current government will extend monetary support to marriage services organized by municipal offices effective 2014 fiscal year.

Marriage, however, is an individual and private matter. And, therefore, if one decides to lead a lifetime singleness, it matters only to himself/herself. Nevertheless, it is hoped that these new styles of courtship and dating will encourage Japanese youth to go forward for marriage.

Car Festivals (Religious Yatras) in India: A Dimension of Leisure Tourism (A Case Of 'Nanda Devi Raj-Jat Yatra' In Uttarakhand, India)

This paper is about the car festivals (Religious Yatras) organized in different parts of India and their impact on the quality of life of its participants. This paper is analyzing how these car festivals provide leisure to its participants which further improve quality of their life through mental well-being, Jagannath Puri Rath Yatra (Orissa, India), Mysore Rath Mahotsav Yatra, Mysore (Karnataka, India), and Nanda Devi Raj-Jat Yatra (Uttarakhand, India) etc. are some of the famous religious car festivals in India. Thousands of people participate in these religious festivals to get relaxed from day to day stress. Nanda Devi Raj-Jat Yatra is one of the most celebrated car festivals of Uttarakhand in India, taking place once in every 12 years during August-September for 19 days. A trek of 280 km remains jam-packed with the experience of nature, flora and fauna, fabulous culture and let one have a glimpse of the Uttarakhand Himalayas. Last car festival was taken place in the year 2000 and more than 50,000 people had been found taking this car festival.

Well established indicators of quality of life are used to explain the results in this study. Simple statistical and participatory tools are used to analyze the information and data gathered from different primary and secondary sources. Case studies are also used to explain the experiences of the participants of the car festivals.
Findings of the study reveal that leisure tourism enhances quality of life by increasing feelings of competency and relaxation, distracting from difficulties, as well as enhancing social inclusiveness and support. Leisure tourism also results in improved mental wellbeing through associated meaningful engagement, self-expression and creativity. Participation in it is considered as a life time experience. This experience not only provides leisure during the event but also provide happiness in memories.

The protests against the politics of crisis in both the US and Germany are structured along similar patterns: The Tea Party Movement in the US and the right-wing Euro-criticism in Germany stand in opposition to the Occupy Movement on both sides of the Atlantic. These polarized spectra not only deploy parallels in their political messaging, but also in their socio-demographic composition. Beyond this opposition, all four poles seem to be united by a deep mistrust towards their national governments with a focus on domestic socio-economic issues.

The paper uses the concept of the socio-spatially determined Habitus, bridging the gap between agency and structure: resonating with the messaging of the respective protest-mobilizations, but in turn also structuring and shaping the development of these very movements. Participant observations in meetings and protests, group discussions and interviews conducted with participants in all four movements are analyzed relying mainly on the hermeneutics of the sociology of knowledge to reconstruct the Habitus as a sedimented body of practical knowledge shared by the participants.

The paper seeks to contribute to the understanding of the development of the movements and the different inner and outer limits they encountered. Why did the Occupy Movement in different parts of the US and other countries follow such different trajectories after 2011? Why did the German counterpart to the Tea Party never gain comparable traction - despite numerous attempts and significant resonance in the media?

The analysis shows that the polarization of the national protests can be understood as resulting from the different ways in which social classes interpret the social contradictions sharpening in the recent years. While this dispositional schism is mirrored on both sides of the Atlantic, the diverging paths the movements took express the different ways in which the crisis affected the national economies.

The analysis shows that the polarization of the national protests can be understood as resulting from the different ways in which social classes interpret the social contradictions sharpening in the recent years. While this dispositional schism is mirrored on both sides of the Atlantic, the diverging paths the movements took express the different ways in which the crisis affected the national economies.

KUMAZAWA, TAKUYA* (Japan Society of Sport Sociology, sdt131012@g.hit-u.ac.jp)

The Diffusion of American Football in Japan from 1930's to 1950's

This research examines the diffusion of American football in Japan from 1930's to 1950's from the sociological perspective. The research question is why and how it diffused in Japan during the time. In general, Japanese-American relations during the time was tense because of Immigration Act of 1924, Manchurian Incident in 1931, Second Sino-Japanese War in 1937-1945, Pacific War in 1941-1945 during the time was tense because of Immigration Act of 1924, Manchurian Incident in 1931, Second Sino-Japanese War in 1937-1945, Pacific War in 1941-1945 and the occupation of Japan by GHQ in 1945-1952. American football diffused in Japan in these situations although it is one of the most conspicuous American cultures. Why and how did this happen? In my opinion, there are four main reasons. Firstly, at the beginning of 1930's, Nisei students from Hawaii and the west coast of America began to come and study in Japanese universities, and they started to play American football. Secondly, some Japanese politicians, diplomats, business people and the American Embassy staff in Japan supported Nisei students to play American football because they thought that it was useful for promoting friendly relations between Japan and America, or at least, for preventing Japanese-American relations from getting worse any more. Thirdly, the media like newspapers, publishing companies also supported Nisei students to play American football because they thought that it had a potential to become popular content like baseball and help to sell their newspapers or magazines more. Lastly, because many Japanese people saw American football through American movies from the beginning of 1930's, American football had a grounding to be diffused. For example, about 20,000 people came and watch the first official game in Japan on November 29, 1934. In conclusion, American football diffused in Japan from 1930's to 1950's because four different actors shared their different interests through American football.
Sociocultural Shocks In Cross-Border Marriages: A Comparison Between Chinese and Southeast Asian Wives In Taiwan

Along with the expansion of international trade between Taiwan and Southeast Asia, inter-ethnic marriages between Taiwanese men and Southeast Asian women have started from the late 1970s. Cross-border marriages between Taiwanese men and Chinese women have dramatically increased starting from the late 1980s after the Taiwanese government has changed the national policy. These new events make cross-border marriages a significant phenomenon in Taiwan.

Based on the in-depth interviews with marriage immigrants from China and Southeast Asia, the author delineates their daily lives in Taiwanese families after they married. It is clearly that all these marriage immigrants experience sociocultural shocks when they have started their lives in Taiwan.

The author notices that both Chinese and Southeast Asian wives wish to work on the job market and be economically independent but are restrained by the government policy. Both of them feel strange about the common arrangement in Taiwan to live with in-laws. They also experience the unreasonable underestimation of their natal family's SES by their in-laws.

Only Chinese wives complain that their husbands never helped with household chores, and their mothers-in-law seldom helped either, and so they have to work like a household servant. Moreover, they are often in conflict with their mothers-in-law or husbands on the issue of child rearing. They are also fussy about Taiwan’s limited living space.

Most Southeast Asian wives, on the other hand, emphasize personal privacy and sanitation of living environment, but the real situations often contradict with what they expect. They also frown at the special diet their mothers-in-law prepared for them after they have delivered babies. They are especially angry about their natal mothers being looked down upon by their in-laws.

All the above mentioned sociocultural shocks in turn affect whether or not these foreign wives identify with their families in Taiwan.

The Movement of People's Politics in Democratisation Process in Thailand

This paper aims to explore the concept of people's politics and its application to the Thai democratic movement. Although Thailand became a democratic country more than 60 years ago (1932), the problems of inactive participation, political conflicts and political unconsciousness are still clearly seen today. The attempts to bring top down into bottom up democracy became a new approach in the new Thai Constitution (2007). Both the political development council and local organization council Acts have been established to support people's active involvement. People’s participation has also been launched throughout the country. Both the most pressing issues and the drawbacks of people's politics in the political movements towards democracy will be examined in the paper. The grassroots’ movement for human security, equity and opportunity will be studied as an example of the strengthening of people’s politics in terms of deliberative democracy, civic education and democracy. The role of people’s politics is also examined through the works of Center for People’s Political Development Center supported by King Prajadhipok’s Institute in 48 centers/provinces during the last decade will be reviewed and investigated for the success of people’s politics development in the future.

Constructing the Assessment Framework for Local Disaster Management Capability

Due to the increased magnitude and frequency of extreme climate events, increased population density and land-use intensity, disaster impact that humans need to face in the future can be foreseen as more severe and complicated. Disaster risk is typically conceptualized as a composite function influenced by numerous natural and socio-economic factors. Coping capability is a key factor that influences not only the society's acceptance to disaster risk but also its potential to take related measures. It is important for a society (especially those vulnerable communities at local levels) to prepare itself so it is capable of responding to these natural, technological, and emergent threats more effectively. While there have been numerous studies and practices on assessing social vulnerability, few studies are emphasized on assessing a system's ability to manage disastrous incidents. Hence, one worthwhile inquiry is to explore the characterization and measurement of disaster management capability at local levels.

The ultimate goal of this study is to develop an assessment framework that is both comprehensive and feasible in the area of disaster management. The paper first reviews and analyzes the capability assessment systems carried out in the United States, New Zealand, and Japan. We then modify the US national preparedness system (e.g., core preparedness capability) and develop a framework based on Taiwan’s experiences in disaster management. The resultant assessment framework is constructed with a matrix of 19 disaster tasks (e.g., risk assessment, evacuation, and housing) and 11 capability elements (e.g., planning, science and technology, and social capital). It assesses whether a local society has the required institutional mechanisms and resources to execute these tasks in three disaster management missions (i.e., prevention and mitigation, response, and recovery). The result of this capability assessment framework is expected to be applied further in disaster risk assessment and capacity building program.

Public Environmental Concern in Taiwan

One of the 21st century highlighted environmental issues for the 21st century identified by the UNEP foresight report is 'Social Tipping Points: Catalyzing Rapid Transformation for the Planet.’ As Taiwan’s foreign population consists of both Western and Asian immigrants (4.5% and 8.3%), it can be thus inferred that humans need to change original destructive actions and need to learn to adapt to changing climate and environment (with combined influences of both natural and human forces). Moreover, these actions need to be taken more rapidly. Hence, the factors that trigger people’s behavioral changes are often differentiated due to countries’ different socio-economic contexts. Therefore, it is important to understand how individuals in different cultures think of, know of, and plan to respond to these environmental challenges and to investigate the interrelationship between people's environmental attitude and environmental behaviors. This paper aims to answer these two research questions.

The study reports the data (n=2209) derived from 2010 Taiwan Social Change Survey (TSCS)—a longitudinal face-to-face national survey project conducted each year since 1985. The results find that the Taiwanese public is concerned about environmental issues and they demonstrate a positive environmental value system in terms of protecting the environment, coexisting with the nature and other species, and respecting the earth. However, they show a level of inconsistency in the frequency of taking pro-environmental behaviors. While they often recycle for renewable resources, they rarely consume organic foods and drive less personal vehicles. The preliminary analysis suggests that there are deficits between pro-environmental attitude and actual environmental actions. To overcome this behavior deficit, it is perhaps necessary to provide net-benefit incentives to Taiwanese people.

KUPREYCHENKO, ALLA* (Institute of psychology of Russian Academy of Sciences, akupreychenko@hse.ru)
SHLYAKHOVAYA, ELENA (Institute of psychology of Russian Academy of Sciences)

Structure and Specificity TRUST of E-Zines

Nowadays the Internet has globally changed mass communication. As a result ‘civil journalism’ has emerged. The urgent problem of trust in networking has become more actual. Media-trust defines relations in mass media communication with the using of material objects including electronic media and devices. Media-trust is a multilateral phenomenon. Its components: trust of the audience to mass media, trust of the mass media (team of journalists or one journalist) to his audience, or to a concrete reader (a viewer, a listener, a user). The user's status (regular, random, prospective and etc.) is an important factor of Media-trust. Media-trust is a function of the characteristics of mass media audience, characteristics of the audience and the characteristics of the communication process. The peculiarities social media is the social context (“the ideology of the time”), the form and type of information. In particular, the Media-trust importance as a whole and its components depends of the usefulness or uselessness of the information, of connection information to one or another area of subject's life and etc. Users' trust in e-zines is one of particular cases of media-trust, which is a result of three basic components integration: trust to information, trust to journalist. The integration of the referred components is constant and absolute, as trust in social information is impossible without trust in its source. The triad of these types of the interrelated trust has three aspects: information, perceptive and interactive. The validity of the conceptual model and the relationship of many media-trust characteristics have been confirmed in empirical study of Russian youth. The relationship trust to e-zines and intellectual, emotional and communicative respondent's characteristics has identified.

KUPREYCHENKO, ALLA* (National Research University “Higher School of Economics”, akupreychenko@hse.ru)
RYBAKOVA, VICTORIA (National Research University “Higher School of Economics”)

Trust, Loyalty, and Culture in Organizations

The trend in business is based on the idea that an employee is the primary resource of any organization, that sincerity, benevolence, trust and loyalty of employees is a major competitive advantage. The purpose of the study was to examine relationship between different psychological organizational phenomena, such as trust, loyalty, and organizational culture in organizations with different spheres of activity. Hypotheses were tested using survey data different organizations: publishing, nanotechnology, banking, PR, marketing. The results of comparative and descriptive data of culture, loyalty and the components of organizational culture have given evidence of all hypotheses. The results suggested that separate components of trust, loyalty and culture are related between each other. Organizational culture is related to organizational trust and employees' loyalty, i.e. different types of culture require particular combination of trust and loyalty indicators. Organizational trust is related to employees' loyalty, i.e. each component of organizational culture will be determined by the specific rate of each type of loyalty (organizational, professional, labor). Moreover differences of preferred and actual culture indexes are inversely related to overall level of trust and loyalty. The study carried out in a unique context of poor explored Russian market could provide further practical and theoretical insights and contributed to the understanding of the nature, development, and maintenance of trust, loyalty and culture in organizations. Yet, this understanding has not been fully translated to the business community in a way that encouraged the actions necessary to reduce the growing trust deficit. A-domain of the research efforts to build better practices for communication and employee involvement, along with strategies for reducing employee vulnerability and dependence. These efforts should be integrated into the cultural norms of the organization, where trust is a part of every interaction between employees.

The Sportification of Tai Chi and the Hegemony of Vision

The purpose of this paper is to enable a deeper understanding of modern sport through an examination of the sportification of tai chi (taijiquan) – its transformation from a folk tradition specific to local communities into a modern sport with global competition. While there is considerable literature on the sportification of tai chi (Li, 2008; Ryan, 2008; Zhang, 2010), this paper proposes to understand sportification as hegemony of vision (Levin, 1993) – the prioritization of the visible as the most important source of socially relevant meaning over what is perceived by other bodily senses. This was first made possible by the creation of the Simplified 24 Form in 1956 under the initiative of the New Chinese Government. Whereas traditional tai chi was, and still is, a martial art combined with internal ‘chi’ cultivation techniques impregnated with Daoist philosophy, the Simplified 24 Form is sterilized of the martial, internal and philosophical aspects; it was rendered a standardised, easy-to-learn health exercise for the masses, demanding only the correctness of visible movements. This prioritization of vision enabled objective rules for competition, which systematically allocated social meaning to the visible body. While competition has contributed to the global popularity of tai chi, it has indirectly led to the relative neglect of aspects that were not subject to visual appreciation, such as the internal cultivation of ‘chi’ and its philosophical implications. By drawing on data gathered by fieldwork in a tai chi class in Xinxing City, China, light will be shed on the rich sensory experience that traditional tai chi affords. This relativizes not only sportified tai chi, but also modern sport itself, as an activity obsessed with the externally visible out of the whole of human sensory experience.

The Relations Between National and Global in Ukrainian University Rankings

In my presentation I want to analyze how national and global components are presented in the leading Ukrainian university rankings TOP 200 and COMPASS and, in manifest or latent ways, influence the contemporary vision of university mission. By being initially national educational institutions (with a certain specific internalization of ‘national’ during times of Russian Empire and Soviet time), after 1991 Ukrainian universities faced a kind of “double pressure” from the ideology of nationalism and influences of globalisation. How intersection between “national” and “international” is presented in the main criteria and indicators of these university rankings? Do rankings help to create new academic hierarchy in Ukrainian university education? How effective are university rankings as a tool for internationalization of our system of education? These are the main questions for my future presentation.

Emotional Infrastructure of Reconciliation

Analysis of several institutionalized reconciliatory actions in relation between Central and Eastern European nations - German, Polish, Ukrainian, Jewish, Lithuanian, Czech and Russian - is made aiming at excavating the basic emotional components underlying the success of reconciliation. This involves the discourse of emotions like guilt, hatred, forgiveness, penitence and love. The tolerance is usually assumed as minimal precondition for reconciliation but the ideal reconciliation is linked with the proactive approach, that involves the love of the neighbor. The failed attempts at reconciliation provide the cues for the answer as what is the role and dynamic of the "hated complex". This is then linked to the analysis of the rituals of reconciliation where the emotions are publicly communicated and displayed in the public spectacles. The basic contradiction is pointed as the ritualized reconciliation demands display of love emotion, the working infrastructure of tolerance is not emotional neither ritualized.

Contextualizing “Individuality”: Searching for More Flexible Definition

This presentation focuses on a concept of Kanjin (the contextual) coined by a Japanese sociologist Eshun Hamaguchi. Hamaguchi introduced this concept of Kanjin to overcome a commonly accepted view that Japanese are collectivists lacking in individuality. In such view, Japanese are described as self-sacrificing and group-oriented agents unable to act autonomously. According to Hamaguchi, however, such view of Japanese is helplessly biased because it sees Japanese society within the framework based on a narrowly defined concept of the individual. Hamaguchi insisted that the concept of the individual is so westernized that it cannot be applied to the different cultural contexts like in Japan. Therefore, he argued, Kanjin as a more flexible model of agent is needed. Now, what is Kanjin? Hamaguchi translates it into “the contextual” and defines it as a “relatum”. However, today, the contextualism and relationalism can be seen in various forms in the sociological discipline. Then, is the concept of Kanjin different from them? If so, how is it different? Through elaborating these points, this presentation would contribute to the attempt to challenge the classical perspectives on “individuality”.

KURODA, YOSHIHIKO* (Nagoya University, krd@nagoya-u.jp)
Globalization in East Asia and Contemporary Situation in Northeast Asian Societies
The East Asia and Pacific region continues to be an engine of global growth, contributing around 40 percent of global growth in 2012. Driven by strong domestic demand, the region grew at 7.5 percent in 2012 – higher than any other region in the world. Economic interdependence in the countries of Northeast Asia is getting stronger. Needless to say, the center of economic development is China. For Japan, economic importance of China has increased every year. China is the largest trading partner for Japan now. Japanese population who live in Shanghai is estimated to 100,000, which is greater than New York. Chinese has become the biggest bloc of foreign residents in Japan in 2007, overtaking Koreans, which has been the biggest bloc in Japan in the postwar period. In rural and remote areas, Chinese workers called Foreign Trainees and Technical Intern are an essential labor force to support the local economy since the 1990s. Although North Western countries share common economic interests, political tensions both between Japan and China, and between Japan and Korea frequently occur in the 2000s. Japan and China are strongly opposed to each other over the territorial problem. Japan and Korea are opposed to each other over the territorial problem and the understanding of history. In the near-to-mid term, it seems that there is no hope for building the East Asian Community.

Financial Support for Families with Children and Its Trade-Offs: Balancing Redistribution and Parental Work Incentives to Increase Well-Being of Families
Financial support for families with children implies inherent trade-offs some of which are less obvious than others. In the end these trade-offs determine the effectivness of policy with respect to the material situation of families and employment of parents - two crucial elements for the well-being of families. We analyse several kinds of trade-offs involved using a careful selection of potential changes to the system of financial support for families with children. We focus on: 1) the trade-off between redistribution of income to poorer households and improving work incentives, 2) the trade-off between improving work incentives for better off and poorer households, 3) the trade-off between improving work incentives for first and for second earners in couples. The exercise is conducted on data from Poland, a country characterized by high levels of child poverty, low female employment and one of the lowest fertility rates in Europe. We demonstrate the complexity of potential consequences of family support policy and stress the need for well-defined policy goals and careful analysis ahead of any reform.
Role of Local Governments in Immigrant Integration: Cases from Thailand and Japan

There are much discussion on immigration at the national state level, focusing on their immigration and citizenship status. However, it is at the same time recognized that there are many migrants who do not go through the official procedure of immigration and come to live in the country on a day-to-day basis. Local governments need to face these migrants on a day-to-day basis, since these migrants live there as residents. We focus on this vacuum of migration policy at the local level, where are the local governments coping with migrants and how are they balancing their accountability to local residents and their accountability to national state regarding migration policies? We will take cases from Thailand (Tak and Samut Prakan) and Japan (Yokohama city) to explore the struggles of local governments and communities.

Vulnerabilities to Cyclonic Disasters in Bangladesh

This paper aims at exploring the vulnerability factors affecting cyclone impacts in the southern coastal regions of Bangladesh based on empirical investigations. The primary data for the present analysis has been collected from over hundred respondents, who sustained repeated cyclonic disasters, based on semi-structured interviews conducted during last several years in the study areas. The findings suggest that the prevailing socio-cultural conditions significantly underpin the populations' evacuation behavior and rapid response during crises and emergencies. Moreover, a comparative analysis of 1991, 2007 and 2009 cyclones, marked as the most severe in recent history, reveals a significant decline in life casualties of 0.5 million, 0.14 million and 4 thousand respectively. The paper identifies three major reasons behind this damage reduction. First, disaster preparedness measures have gradually become effective and the information dissemination technology and early warning systems got improved over the years. The widespread of cell phone technologies in rural areas of Bangladesh played key role in effective early warning dissemination and reducing life casualties between 1991 and 2007 cyclones. The second reason is the unequal population density of the landfall areas of these three cyclones. The 1991 cyclone made landfall near Chittagong city, the second largest city in Bangladesh, causing maximum damage to lives and livelihoods. The third reason suggests that the 1991 cyclone had attacked during high tide, causing high storm surge accompanied with severe inundation and enormous destructions. The paper, however, makes substantial analysis for informed decision-making and policy considerations for cyclonic disaster reduction in southern Bangladesh.

KUSAYANAGI, CHIHAYA* (Waseda University, kusayanagi@waseda.jp)

“Individuality” As a Moral Expression in Japan

Sociology has long been interested in individualization or individuality as social phenomena. Classical sociologists found individualization among social changes in modernization. It is said that there has been this process in Japanese society, too.

This paper examines how “individualization” and “individualism” has been talked about, not among sociologists, but among lay people in Japan and explores how people conceive of “individualization” and “individualism” and how they make use of those concepts to understand their everyday life. Those words are not only theoretical terms but also everyday words. This way of approach is based on the idea Ibarra & Kitsuse (1993) proposed as an ethnography of moral discourse; a constructionist approach to social problems that focuses on social processes in which a social problem is defined and discussed.

The words “Individualization” and “Individualism” in Japan are vocabularies often used to problematize social phenomena, people, or events. For example, a movement to change the civil law to allow women to keep their name after their marriage used to be criticized as excessive “individualism.” Eating a meal alone, especially in the case of children or young members of a family, drew attention in early 2000’s as “ko-shoku (individual or solitary on their own),” and is thought to be a problem of individualization that has weakened family bonds. These vocabularies convey moral meaning and they are “vernacular constituents of moral discourse” (Ibarra & Kitsuse 1993).

By examining how those words are used in moral discourse, I would like to argue how they work for people to approve or disapprove of social conditions, behaviors, and social changes. Talking about “individualization” or “individualism” is a speech act that participates in constructing social realities.

KUSEIN, ISAYEY* (Kyrgyz-Turkish University Manas, kuseinisaev@yahoo.com)

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The categories of identity, identification, state, civil, national, and ethnic identity are being widely used in sociology and other disciplines. These concepts are rather new to Kyrgyzstan's public domain and scientific rhetoric where the interpretation of a nation as citizens of the state started entering political and academic discourse. According to Habermas, post-traditional, post-national identity is “a more sober political identity” that separates itself from the background of the past centred around ethnic history. Modern civil nation is not made spontaneously and at one step. It evolves as a result of efforts aimed at consolidation of civil society and its institutes in their interaction with the state.

Modernization of post-Soviet Kyrgyzstan in the context of local-global relations of post-traditional world will be successful only when traditionalism is overcome based on the use of contemporary democratic, modernist and economic values. Kyrgyz society is developing with all the aspects of civilization, as it is characteristic of contemporary society, where all social relations are based on modern laws and constitution. Kyrgyzness is being shaped in the process of modernization and interaction with global processes, and there is no option of being a separate nation-state.

KUSENBACH, MARGARETHE* (University of South Florida, mkusenba@usf.edu)

Between Lifestyle and Necessity: Senior Mobile Home Living in Florida

This paper focuses on a community-type that has long been attractive to older people in the Gulf states of the US: the mobile home park. While living in a mobile home is generally more affordable than living in a site-built home, many seniors actively seek, and even move across the country, to participate in the "mobile home lifestyle" in the US southern regions which promises a pleasurable climate, homeownership, leisure activities, community, and friendship to White middle and working class seniors. My paper examines to which extent these expectations by seniors are fulfilled in which kinds of communities, and how social differences, economic struggles, as well as health and personal issues can compromise them over time.

Community activists tell about our lives. They emphasize the (precarious) achievement of homeownership, the neighborly and homogeneous communities which can, however, turn out to be less stable, and the growth of waged occupations created in temporary jobs and casual positions. South Africa is currently dealing with the rising use by companies of temporary employment agencies, also known as labor brokers, who apparently facilitate this labor market flexibility. Labor brokerage has stirred up a lot of controversy in South Africa through the media, unions, and many movements to the point where labor brokerage has been labelled as a new form of slavery that further fuels worker exploitation. Certain abuses have been associated with the practice of labor brokerage in relation to ensuring decent jobs in South Africa's globalizing capitalism. This research has been conducted regarding the business case for labor brokerage and subjecting it to an assessment alongside the notion of decent work as advocated by the International Labour Organisation (ILO). The research solicits the opinions of the labor broker so they can directly address, justify, and/or clarify the accusations against them as being against the four pillars of decent work. This research provides a platform for the labor brokers to be able to defend the role they play in what has been labelled as an inhumane, insensitive, detached system and strategy.
