Ideas in Conflict: The Campus Protest Culture in the 20th Century Japan

In the late 1960s, from North America to Europe and from Latin America to Asia, many countries witnessed a wave of student protests. Since those movements showed distinct features from place to place and shared similar back-grounds such as the Cold War politics and common issues such as antiwar and academic freedom, they provide a good field to examine the critical question haunting recent social movement studies: whether and how culture matters in the emergence and process of social movements (See Johnston et al., 2009; Pol-
er, 2008).

Against this background, this presentation examines a campus protest at the University of Tokyo, Japan, from 1968 to 1969, using data from in-depth interviews with the participants to show how the students’ ideas shaped their perception and interpretation of the situations in the course of the struggle and influenced their choice of strategy and tactics.

This presentation focuses on a group of students called “NON SEKUTO RAJKI- RU” (non-sector radicals). The protestors were non-monolithic but divided into three groups in conflict: Democratic Youth League of Japan (DYL), under the guidance of the Japanese Communist Party (JCP), the New Left sects which were seeking a new form of Marxism, new behaviorism, and alternative to JCP, and the non-sector radicals without any affiliation to DYL or the New Left. On one hand, the non-sect radicals and the DYL and New Left students were equally marked by Japan’s campus culture dating back to the 1910s; the strong tradition of Marxism as a guiding ideology of social movements and self-cultivation. On the other hand, the non-sect radicals developed principles against the basic lines of DYL and the New Left factions, including centralized and hierarchical organizations and strict Marxism orthodoxy. Thus, they created decentralized and horizontal organizations and based their choice on their firsthand observations instead of ideology.
works such as biographies etc. – which are consciously value-centered, where the paradigm recognizes forms of writing research – amongst which also literary of autoethnographic method lies in the possibility, it offers, of having an access to disaster, were described by the artists and what was the purpose of casting light of the events, which took place in the aftermath of the Earthquake and Tsunami. In this sense art becomes also a memory . In this sense it is art that collects individual experiences of the disaster in a diary of collective society, where speaking about one's inner thoughts and emotions is not culturally rate the tragedy caused by the Great Kantō Earthquake and the Tsunami, which took place in 1923. To commemorate this disaster, the 75th anniversary of the tragedy, the Japanese Government, in collaboration with the United Nations Educational, Scientific and Cultural Organization (UNESCO), and in cooperation with the World Federation of Scientists, established the University of Tokyo, and the Tokyo Metropolitan Government, to launch a project to create a comprehensive documentation of the disaster. The project, known as the Tokyo Earthquake and Tsunami Archive Project (TEAP), aims to collect and preserve information about the disaster, including written accounts, photographs, and other materials. The project's goals are to document the disaster and its aftermath, to study the disaster and its impact on society, and to promote understanding and cooperation between nations. The project is being carried out in collaboration with the United Nations Educational, Scientific and Cultural Organization (UNESCO), and in cooperation with the World Federation of Scientists, to promote understanding and cooperation between nations. The project is being carried out in collaboration with the United Nations Educational, Scientific and Cultural Organization (UNESCO), and in cooperation with the World Federation of Scientists, to promote understanding and cooperation between nations.

Research on Aged Prisoners in Japan

1 Situation of the research

In accordance with aged society in Japan, the population of people whose age is more than 65 years has been increasing twofold during in the last two decades. In this context, the number of arrested people aged over 65 years has been increasing by 3.8 times and the population of aged prisoners is also increasing rapidly.

2 Purpose and sample size of the research

The purpose of this research is to clarify the actual situation of aged prisoners. Almost 450 male and 150 female aged prisoners are investigated focusing on their life style in society, motivation and situation of the current crime, specific feature of criminal life curve, philosophy of life, future plan after release, etc.

3 Outline of the research

The details will be presented at the session.

Most dominant type of crime is larceny, and then stimulant drug control law violation, and fraud. Half of them were unemployed. 65 % married but cohabited. 60 % did not have any persons who support prisoners when they committed a crime. 53 % have disease. 45 % do not have any place where they can live after they release form prison. Most of them do not have any job after release. Total of 53 % have disease and receive many kinds of medicine.

Newly Started Activities of 80-Year-Old Japanese Seniors

Eighty-year-old Japanese seniors were asked if they had started new activities after their age of 70. All seniors aged 80 years living in Suginami City, Metropolitan Tokyo, were invited to participate to a research program organized by the city as her 80-year anniversary. Among the seniors listed, 2,476 persons responded to a mailed questionnaire (response rate was 66.0%). Over 70% of the respondents (72.1% of men and 72.5% of women) reported their health condition was excellent or fair.

Thirty-nine percent of the respondents (38.7% of men and 39.3% of women) answered that they had started some new activities after age 70. Various activities were reported. The most frequently mentioned new activity was hobby (46.8% of seniors who had started new activities; 37.4% in men and 53.3% in women), followed by athletic activities (35.0%; 33.3% in men and 36.1% in women) and personal computer and/or mobile phone (21.0%; 25.6% in men and 17.7% in women). Not only sedentary activities such as reading and playing games, but also kinetic activities, including walking, swimming, and gymnastics, were indicated. Seniors who were healthy at age 90 were more likely to have such activities than those who were not healthy.

In Japan, where population aging has been rapidly progressing and life expectancy at birth has been rapidly increasing, seniors have become younger and younger than their age-peers in older cohorts, physically as well as socio-psychologically. The first-wave survey of 80-year-old seniors living in a relatively affluent urban area seem to show spryness and “youthfulness” of today’s Japanese seniors.

KOZLAREK, OLIVER* (Universidad Michoacana de San Nicolás, okozlarek@yahoo.com)

Experiences of Modernity and the Modernity of Experience

It has often been argued that a certain loss of experience, even of the ability to have experiences is apparent under the modern condition (Adorno, Benjamin). Yet, at the same time it seems to be true that modernity is quite obsessed with experience (see: Jay 2005). Certainly, there are different understandings of what experience actually means, and it is probably true what Michael Oakeshott has to say about this topic: “Experience, of all the words in the philosophic vocabulary, is the most difficult to manage, and it must be the ambition of any writer reckless enough to use the word to escape the ambiguities it contains” (quoted in: Jay 2005: 9). Although this paper sees itself in the tradition of this ‘recklessness’, it does not aim to escape the ambiguities of ‘experiences’. On the contrary, ambiguous is not only the word, but also what it stands for. But it is precisely this ambiguity of experience, and the acknowledgement of it, that contributes to an often claimed characteristic of modernity: its contingency (Rorty) or its ambivalence (Bauman).

In this paper I will argue that the ambiguity of modern experiences has to do with a new kind of world-consciousness that emerges in modernity. I will draw on authors like the recently deceased Marshall Berman, the recently mentioned Walter Benjamin, and Theodor W. Adorno, but also more recent authors like Boaventura de Sousa Santos and Peter Wagner. And I will include in my discussion voices from Latin America like Octavio Paz and the philosopher Bolívar Echeverría. They all shall help to outline a theory of modernity for which the experiences that real human beings are making when confronted with the challenges of modernity.

Socio-Cultural Resources Development of Russian Province (“backs”) in Context of Globalization

The situation of contemporary rural province (“backs”) in most Russian regions shows a doldrum of social, economic, and cultural life. The demographic situation has stabilized, yet the population in general and of an economically...
active labor force and in particular is reduced. Employment in the industry falls especially in the small cities and provincial locality. The main issue for the farmers is an access of its products to local market and a large labor costs. Therefore it is developing the traditional type of economy, which is dominated by monocultural economy of the farm (horticulture, animal husbandry, small-scale construction, transport services, temporary employment) and commercial businesses. Modernization potential of the rural “backs” in particular in South region of Russia is diverse. The rural population is aging and decreasing. However, there is a surplus of labor force against the backdrop of falling employment. This dissonance is typical for the Black Earth region. Lack of investment, jobs, degradation of industrial and agricultural spheres pushes people to the development of the service industry and trade, to labor migration to the big cities, and social mobility. It is sufficient to note the high level of social and economic infrastructure: electricity, gas, roads, fiber optic lines, public transport, landscaping. There is a stable mobile communication, satellite TV, Internet access. However, rural inhabitants are experiencing social fatigue. They complain constantly about the lack of funds, the futility of life in rural areas. Many inhabitants are focused on internal migration, employment, education, and career in the middle and big cities. Key resources are upgrading a new economic policy of the local authorities, effective budget and private investments, solidarity of local communities, and of course, the willingness of local people to the medium-and long-term investment in yourself and in the development of their area.

Creating an image of “Victim” As a Way of Creating Controlled Conflict Situation

For creating controlled conflict situation and for finding (appointing) an “enemy” often an image of “victim” is being created, meeting goals and tasks of its creators.

An image of “victim” may be classified on the following types: “victim-hero”, “victim-villain”, “victim as belonging”, “victim-tragedy”, “victim-country”, “victim-nation”, “multi-functioning victim” and other.

Constructed “victim” has to meet such characteristics of real victim as inno- vence and defenselessness. Therefore innocent children, old people, and women are appointed to the role of “victim”. Violence towards them provokes the tension of passions and promotes desired public opinion.

Process of construction an image of “victim” includes the following steps: ac- tualization, “privatization”, heroization, humanization, institutionalization, historiciza- tion (mythologisation), objectivization, legitimation, sacralization, realization of “victim’s” image in the social and political practices.

Generated image of “victim” presuppose execution following functions in the real and potential conflicts:
- identification of people on the base of their attitude to the “victim”;
- creation of enemy image who is guilty attacking “victim”;
- consolidation of people to fight identified “enemy”;
- upbringer of “new heroes”;
- determination of people behavior in critical situation;
- “victim” is becoming the elements of culture.

Deliberately thrusting of “victim” problem generates disadvantageous situation for alleged “enemy”. Direct of potential oppressor’s image constructed, with neces- sity to oppose or annihilate it. The most important “enemy” characteristic is its mortal threat for person, group and society. Next distinguisher of “enemy” is dehumanization.

Special role in the process of both “victim” and “enemy” image construction belongs to mass media and first of all a television.

Generated image of “victim” may be used as motive for intervention of “third party”, for deliver a “retribution blow” on a real or an appointed enemy.

Towards Emancipatory Ecological Cosmopolitan Commonism Via Positive Ecology in Tasmania, Australia

Adopting earth stewardship appears to be the fate of the human species; it is how we adapt to this challenge that will determine our survival and level of thriving. This paper will outline four areas of an approach to the challenge of earth stewardship. The first is to identify the emergence of a capacity for intentional cultural evolution, for which there exists a variety of indicators across the globe. The second is to sketch a theory of negative ecology, based on the process of dominance that has evolved over history, resulting in the failure of successive systems to equitably meet basic human and environmental needs. This has led to ever increasing social and environmental costs, and indicates the need for radical changes. The third is to give a “synergistic satisfiers”, with global cooperation the ultimate goal. The fourth area discusses community-based exchange initiatives (CBEI’s) as bottom-up initiatives towards advancing positive ecology in the here and now. Analysis of the potential of some CBEI’s currently underway in Tasmania, Australia to progress towards positive ecology and EECG will comprise the final part of this paper.

Women’s Overqualification: Why It Is Necessary to Account for Additional Individual Characteristics

Women’s labor market participation has been rising in the last years, the pro- portion of female university graduates increases constantly and ever more wom- en are in executive positions. However, there is also evidence that women are more likely to be overqualified than men.

If a person is overqualified, in the sense that an employee’s level of training exceeds the job requirements, parts of the human capital lie idle. This could not only have negative consequences on the individual level, but also be costly on the social level. Current research on overeducation focuses mainly on its magnitude and structure; often the discussions on explanatory factors are limited to only one determinant - such as gender or migration status. But in light of economical, political and cultural globalization that increases societal heterogeneity, it is obvious that the emergence and reproduction of social inequalities cannot be reduced to only one dimension. In the study of social inequalities it is important to consider that people are always part of several social groups at the same time. Therefore, it can be supposed that for instance female immigrants face different risks of being overqualified than male immigrants.

In the presentation I will focus on this research gap. Based on the concept of intersectionality I will discuss the mechanisms of interaction of gender, migra- tion status and social background in the context of overqualification theoretically. Using data from the German Socio Economic Panel, a nationally representative household panel study, I show the effect of gender on the risk of being over- qualified as itself and in interaction with the other individual characteristics. I will respond to the question how gender inequality on overqualification varies with other social categories.

Construction of Knowledge Around Risk and Regulatory Practices Among Pipeline Industries in Australia

This research assesses the gas pipeline industry in Australia in relation to risk, regulatory practices and its comparatively strong safety record. It may be held as an exemplar to examine: how is knowledge of industrial risk in the Australian pipeline industry constructed and performed by regulators? In tackling the ques- tion, this research takes discourse analysis combined with a semiotics of materi- ality Actor-Network Theory approach; giving new emphasis to non-human entities (e.g. gas, risks, techno-measuring devices and regulatory apparatus) interacting with actors (e.g. regulators, company safety officers, workers and communities) in generating knowledge-power and actions around the regulatory process of governing industrial risks from hazardous industries. The entry point is technical- ly-informed regulators, assumed to have good risk-management knowledge. The research explores three relationships among these entities. First, relationships between regulators and non-human entities: e.g. how regulators develop their knowledge-power and take their actions influenced by a legal concept (as low as reasonableness practicable – ALARP); and how regulators interpret their responsibili- ty in the process of hazard identification and assessment? Second, relationships among regulators, companies and non-human entities (e.g. a concept of respons- ivity regulation) are considered: how do regulators exercise their discretion either to support or command the companies? Third, relationships among regulators, companies, workers, the public and non-human entities are assessed: e.g. how do regulators perceive the roles and participatory actions of workers and the public in breaking regulatory capture, balancing power, and managing industrial risks? The findings may reveal inconsistencies hidden in processes, leading to a better understanding of how to manage, govern and mitigate risks and improve regula- tory practices and effectiveness.

Organization, Identity, and Transnational Citizenship: Mexican Indigenous Migrants in the United States

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Transnational migration challenges the congruency of identity, citizenship, and state territory, because transmigrants identify with their communities in countries of destination as well as origin, and practice citizenship across national borders. The question of transnational identity and citizenship is all the more important when migration involves members of indigenous groups who are ethnically discriminated against politically and economically marginalized in countries of origin and in their adopted countries. How do indigenous migrants negotiate transnational citizenship? Based on the data collected from my ethnographic research in Los Angeles, I argue that indigenous migrants from Mexico’s Southern state of Oaxaca negotiate citizenship through a diverse network of migrant organizations which open wide transnational social spaces to reconstruct the boundaries of ethnic and local membership and belonging. In contrast to Mexican mestizo migrants, they established issue-based migrant organizations in Los Angeles – such as business, religious, or educational organizations – above the level of hometownassociations and state-based federations to claim precise rights for indigenous people as workers, believers, or students. In doing so, they collaborate with various political institutions, businesses, churches, and other organizations on different levels – local, state as well as national – in the United States and in Mexico. In other words, pan-indigenous identity and transnational citizenship emerge not only in political response to ethnic discrimination and social hostility, but also cooperation and support in transnational spaces.

**Challenges for Teachers and Pupils on a Vocational Program**

This paper aims to analyze teachers’ views on how a good mechanic should be, and how the teachers are mobilizing students to become mechanics through instruction and practice.

In another social landscape - before marketization, post-industrial transformation and neo-liberal forms of governance has become a part of the public educational system – a common practice were that students established a kind of counter-culture in schools; Why should I study while I am going to be an auto mechanic? Today teachers in the vehicle and transport program partly face a new school logic where they have to deal with pupils that have another approach to education. - Why should I study, I’ll still do not want to be an auto mechanic? Previously the students were to a high extent culturally self-motivated, but nowadays the mechanism to become a car mechanic seem to have changed. My PhD project is linked to a larger research project that deals with issues of multicultural incorporation and school achievement. My contribution to the project concerns an ethnographic study in a vocational high school on a vehicle program, where there are mainly boys with immigrant backgrounds from heavily segregated areas, present in the classroom.

The paper contains an analysis of the symbolic boundaries that structure the auto mechanic profession and how these boundaries are expressed by teachers and industry representatives. It also describes how teachers in the vehicle and transport program mobilize students to the mechanic profession both by their teaching/pedagogy and use of social networks within the car industry.

**Social Transformation and the Memory in a Postwar Society: the Case of Kosovo**

This paper is based on two qualitative research projects conducted ten years after Kosovo exodus, and the dramatic changes related to the war, social organization, environment, death, and value system. The first one is “Memory vs. Forgetting” (2009), and the second one is “Socio-cultural Changes in Postwar Kosovo” (2010). Conducted by the Department of Sociology in the University of Pristina. The data show very interesting aspects of collective memory and human experiences during the dramatic events and the general social transformations. The way how people remember the past, how do they perceive the present, and what they are expecting from the future is important not only for Kosovo society, but for the entire humanity.

The focus of our research is the period after 1999. This period is important in two senses. First, in terms of social change, this period is important because three international missions were deployed in Kosovo and the country has declared its independence since. Second, from the aspect of social organization, it is the period of transformation of the self-administered institutions, and the development of the overall transition. The structural changes affected the culture, and the system of values in Kosovo society to a great extent. This period is of a particular importance, because it signifies great changes in lifestyle, the transformation of values and mentality, and social patterns and practices.

Research in the field of collective memory and social transformations requires very precise methodological approach. Each of the research projects has included 50 in depth-interviews, and visual elements collected in the field, such as pictures and video materials. The data show that people’s relationship are very strong not only to the family and the homeland, but also to physical objects, tools, pictures, books, souvenirs, symbolic values, plants, animals and the environment.

**Explaining Differences in Fertility and Marriage Expectations of Adolescents of Native and Immigrant Origin in Spain. The Role of Socioeconomic Status and Ethnicity**

This paper aims to examine aspirations and expectations of adolescents in Spain with regard to family formation patterns, using survey data collected in secondary schools in Madrid. We are interested in the variability of these preferences across generations and between children of immigrants and their native peers. We look at fertility and marriage expectations to account for varying cultural backgrounds and for acculturation and/or integration processes. Furthermore, differentiated expectations of fertility and marriage tempo and quantum among children of immigrants and natives might be an indicator for segmented assimilation with regard to their or their parents’ socio-economic status.

For the empirical analysis of this paper we use survey data of some 2,600 adolescent pupils and 1,150 parents. About half of the students and parents are of immigrant origin. Besides aspirations and expectations linked to family formation processes, the survey provides information about parents’ labor situation and their educational levels, variables that are used as a proxy for their socio-economic status. To complement the survey, contextual data will be included, adding information on origin countries’ actual fertility and marriage behaviors and the ethnic composition of the neighborhoods in Madrid where the youths live.

Most theoretical approaches and empirical studies in this field concentrate on the U.S. Focusing on Spain as a relatively new immigration country can give important new insights into another migratory setting, which may be valid also for other (European) immigrant-receiving countries.

**KRAUSCH, MEGHAN*** (University of Minnesota, kraus310@umn.edu)

**Producing the Collective Subject: Anarchist Practices at the People’s High School in Buenos Aires**

This paper analyzes the experience of a “people’s high school” in Buenos Aires, Argentina, and the ways that it engages with anarchist-inspired practices and ideas. In 2001, Argentina experienced a political and economic crisis that gave rise to hundreds of social movements opposing the neoliberal status quo, including “movements of unemployed workers” (MTDs) and factory takeovers. These 2001 movements encompassed much experimentation with the idea of social movement itself, as they abandoned the old political party structures and incorporated social relationships into their political agendas. While many such movements have since dropped their autonomist orientations in favor of aligning themselves with Kirchnerism and the presidential administrations since 2003, other movements remain staunchly independent and committed to alternative models of social change (referring to themselves as part of the “independent left”). One such organization, the people’s high school (bachillerato popular) of the MTD Barracas, uses a non-hierarchical structure and consensus-based decision-making as one of the primary vehicles for organizing grassroots social change within the movement and the neighborhood. Based on a year of participant observation, I examine how the movement enacts these anarchist organizational forms. I argue that the successful outcome of such organizational practices is the creation of a collective subject, which is only produced at the school when these structures are combined with meaningful emotional interactions among activists. Thus this paper sheds new light on how and why some uses of consensus seem to fail flat or collapse into frustrating bureaucratic formulae, while other movements succeed in using such anarchist principles to meaningfully integrate participants into decision-making processes. Within a context of marginalization and oppression in an Argentine shantytown, the people’s high school is using anarchist practices to create alternatives to neoliberal capitalism.
Human Rights and Humanitarian Relief: The Organizational Mediation Of Ideas In The Global Arena

In talk of the “international community”, many commentators assume that human rights work and humanitarian relief are pulling in the same direction. Others see human rights and humanitarian relief as two fundamentally different modes of engagement. What both of these approaches share is a focus on the content of ideas. This paper examines the relationship between human rights and humanitarian relief in the international arena from the perspective of the sociology of practice and the sociology of organizational fields. Since the 1970s two separate traditions of practice have emerged - one centred around human rights and one centred around human rights. Based on interview research and document analysis, I examine how professionals in humanitarian relief organizations use the concept of human rights. In the past 15 years, they have used the language of human rights more and more, but the impact this language has had in humanitarian work has been mediated by the practical constraints and incentives of the humanitarian field.

KRAVCHENKO, SERGEY* (Moscow State University of International Relations, social7@gandex.ru)
Rethinking the Theory of Social Becoming: For a Humanistic Turn

According to P. Sztompka (Society in Action: A Theory of Social Becoming. Cambridge, 1991), the modern world is in a state of becoming that occurs in the context of unfinished structural and functional development. As a result social and cultural aspects of different ambivalence within a culture. He worked out a new type of sociological imagination the essence of which is reflexive thinking about social becoming.

Since that time the socium has become even hypercomplex: there appeared “normal accidents” (Ch. Perrow), climate change as well as new risks, vulnerabilities and social turbulences produced by human agency (J. Urry, U. Beck).

Taking into consideration these realities of new catastrophism I argue for a “humanistic turn” in sociology, whereby societies should be examined through the lens of complexity and human agency-consequences. This implies still a newer type of sociological imagination based on the synthesis of social, hard and humane sciences. The methodological instruments of this type of sociological imagination include both non-linear and humanistic aspects. Thus, I propose a non-linear and humanistic sociological imagination that deals with the acceleration of socio-cultural dynamics and glocalization (R. Robertson).

Synergetically takes into consideration paradoxes, risks, and dispersions of social change, searching for new forms of humanism, based on men's existential needs.

The notion ‘praxis’ should be rediscovered: it should mean humane praxis - humanistic creative agency, the main aim of which is to preserve the human capital of all the generations and to maintain the balance between scientific, technological and humanistic creative agency, the main aim of which is to preserve the human capital.

Vulnerabilities to the Network Human Capital

The content and, therefore, the conceptual interpretation of the human capital is multifaceted and many-sided, depends on the historical time, cultural space, nowadays mainly - on the conditions of becoming complex socium, its “normal accidents” (Ch. Perrow), social and climate turbulences produced by human agency. Taking into consideration these realities we have proposed a network model of the human capital that is adequate to the urgent need of a humanistic component in the human capital.

There appeared new vulnerabilities to the network human capital. Until recently in the history of mankind in the implementation of modernization the question about the humanistic ways and means to achieve the goals was not even discussed. Any pragmatic and rational intentions by themselves do not lead to prosperity, harmony, peace, if they do not provide the production of humanism, its penetration into social institutions. The network human capital should be managed on the basis of social and fundamental requirements: management should lead to the form of a civilized and humane way of the interactions people; it should take into account the non-linearity of the human capital formation, dynamically complex causal relationships, the factor of social and climate turbulences; we should mind the latency of the formation of the human capital, that is - unforeseen and unintentional traumas lead to different forms of human agency: it is necessary to consider the latent hazard as derived from the scientific research and innovation: the effect of “normal accidents” should be extended not only on scientific and technological innovations but also on economic and political spheres, as well as on the processes of medicalization, urban design, new information technologies, tourism, fashion, diet etc.
Bargaining the „Human Rights” of „Human Resources” – Unions and NGO-Networks Advocating Precarious Migrant Workers’ Interests in Japan

Taking the debate concerning recent immigration policy changes, focusing on the so-called Technical Intern Training Program (TITP), as case study, this paper challenges generalizations about the city and the labor movement in Japan. While civil society in Japan has often been portrayed as apolitical and service oriented, being strong in producing local “social capital” but weak in generating “advocacy” on the national level, the labor movement has been described as politically dominated and oriented towards balancing interests of big companies and their core staff, organized in enterprise unions. As these generalizations are grounded for a great part of the scene, they still ask for qualification, because they obscure a relatively small but growing and significant portion of organization of and bargaining for workers interests in Japan. Irregular employment and migrant labor is especially prominent in Japan’s many small and medium sized enterprises (SME). The unionization of employees in SME through individual membership unions, that has been fostered in the 1970 by the former national union center Sôkyû, has since the 1990s formed the basis for migrant and irregular workers organization in unions in Japan, and as further become the core of new constellations and alliances in civil society, which played an active role in discussions leading to immigration policy reforms. Thus it was not the Japanese civil code or the so-called NGO-law, but the Labor Standards Act (LSA) and the Labor Union Act (LUA), which formed the legal framework for a vibrant civil society in Japan, by providing rights of organization and collective bargaining for precarious migrant workers, and thus enabled political advocacy.

Not No Place: Fragments of Johannesburg

Not No Place is a collage of visual and written fragments on Johannesburg’s historical, archival, found and self-generated. The book is the result of documenting and collecting material on the city of Johannesburg over the course of five years. It interweaves selected quotations with personal memories and reflective accounts, weaves fiction in an attempt to explore the city as both lived place and an imagined no-place (the direct translation of U-topia). A montage combining photographs, drawings, archival material and texts, it alternates between the mode of collector, witness, observer and author, taking into account the numerous representations of the city in historical writing, urban theory, film, media and fiction. Not No Place presents a collection of moments in the city’s complex history, its contemporary spatial realities as well as its future projections.

Bettina Malcomess and Dorothée Kreutzfeldt speak to their visual processes and practices informing their book-length investigation into Johannesburg. Not no Place: Johannesburg, Fragments of Spacesc and Times. This intriguing and beautiful book is by no means an official biography of the city - it reads more like a richly illustrated scrapbook of ideas and reflections part made up of quotes from a multitude of sources and part made up of the authors’ personal narratives and ruminations on topics; the subheading Fragments of Spaces and Times captures it well. It is a peripatetic amble through the history and physicality of Johannesburg, stumbling into recurring characters such as the Carlton Hotel and Nongoloza.

Multilingualism and Community-Building Among Brussels Based Civil Servants and Lobbyists: Perceptions, Practices and Power Positions

This presentation explores the multilingual and multicultural aspects of community-building, networking and communication in the EU’s political and administrative system with special attention to the effects of a multilingual and multicultural working environment on the actors’ identities. In order to track these aspects we investigated the networking and communicative preferences of EU civil servants and lobbyists based on broad-scale survey data (277 surveys com-
plicated) and thematic interviews (17 hours of recorded materials). We argue that the power dimension of the linguistic choices among EU bureaucrats is especially important, since as Mamadouh (2002) observes: Language(s) regulate access to political, economic, and cultural resources. Language matters to access the supranational political arena (for example, to acquire a position in an EU institution or a policy network), as well as to control political representatives and civil servants at the EU level.

The findings indicate that although multilingualism appears on various levels in the different social contexts investigated, all of these contexts are heavily dominated by English. It also appears that in their professional practices, our respondents are highly aware of the relationship of language(s) to power and they prefer the usage of more power-neutral language policies even if this comes with the cost of mutual intelligibility. It also seems that the current availability of some of the alternative languages used in the Brussels context might be somewhat more difficult to obtain with political status/historical reasons than with practical considerations. Yet, the findings imply that multilingualism plays a less significant role in the social and working lives of Brussels based civil servants and lobbyists than previously assumed. Furthermore, the respondents’ social identities are rather influenced by new signifiers related to economic globalization and competition and their institutional positions than their linguistic backgrounds or the multilingual practices they take part in.

KANJUO - MRČELA, ALEKSANDRA (University of Ljubljana)
“'I Hope to Muddle through until the Retirement’ - the Aging Workforce in Demanding and Dangerous Jobs”

The paper discusses the increase of physical and mental challenges for older workers in various exceedingly demanding and dangerous occupations, typically in police and military force, fire brigades and prisons (wardress) but also in aviation industry (air crew, pilots, flight attendants, air traffic controllers, railway operators) as well as in heavy industry (mining) and - though it may seems strange - in performing arts (ballerinas). Slovenia, an ex-socialist country that has joined European Union in 2004 is taken as the case.

Firstly, the challenges are identified through combination of interviews, group discussions and multi-respondent questionnaires with relevant workforce representatives. Secondly, the obtained testimonies are compared among professions and between generations who underwent socialist and transitional (mainly market driven) period respectively, to identify similarities and differences in challenges.

Thirdly, the problem is approached from social policy point of view to demonstrate the inefficiency of the latest changes in the Slovenian pension system regarding demanding and dangerous jobs. Finally, the state of affairs is addressed in the framework of changes the society underwent in the last twenty-five years, including liberalization of economic and political system, privatization, Europeanization and globalization, and its influence of global economic crisis and austerity measures, that altogether lead to redefinition of workforce position in general, to chaotic and eclectic transfer of responsibilities regarding retirement security from society, state and companies to individuals. The individualisation of risks has serious consequences for quality of work and working conditions of workers who feel responsible for their obligations and financial insecurities for decent retirement and satisfactory pensions are severely reduced.

*Testimonies and evidence were collected as a part of a research project, commissioned by consortium of Slovenian Unions Associations (Alternative and Free Trade Unions), Ministry of Labour, Family, Social Affairs and Equal Opportunities, Chamber of Commerce and Norway Grants fund.

Europeanizing Social Science - the Case of the European Social Survey

This paper sketch out and analyze the historical development of the European Social Survey (ESS). In the 1996 a group of European social scientist under the auspices of the European Science Foundation initiated what became one of them largest scientific projects, a project that now is seen as the golden standard in transnationalization research. The first wave was launched in 2001 and has since been conducted biannually in an increasing number of European countries. From the first wave and onwards the ESS has been heavily funded through the European Union Frame Work Programs and National Research Councils. Simultaneously the ESS has been leading in developing and disseminating transnational surveys research techniques from items design through field works to data management and dissemination. Using documents and interviews, the paper analyses the case of the ESS shedding light two interrelate processes both very central to the analysis of social sciences in society. First, it can tell us about the current changes and developments of surveys research. Surveys research has been one of the most influential social scientific techniques, but the classical techniques of surveys research has in different ways been attached to the nation state. Thus, the paper asks which kinds of changes does transnationalization of surveys research bring? Secondly, the paper analyses the relations between the social sciences and the EU. The social sciences has since their first institutionalization been closely entangled to the nation state, how is this entanglement changes in the Europeanization process and what with consequences for the social scientific knowledge?

Resistance to Mining in the Current and Past World-Historical Conjunctures: A Comparison of Mobilization Against Globalizing Capitalism Across Place and Time

This is an incorporated comparison of resistance to destructive resource extraction by mining in the current and past world-historical conjunctures. The analysis is based on long-term participant observation and field research in the most important mining investment areas in Brazil, India and Finland. The empirical quality of the analysis of the current conjuncture allows to test world-system theories often based not so much upon large-N comparative ethnography. The findings are related to historical ruptures and continuities in resistance, seeking causal explanations and reasons to why mobilization against globalizing capitalism has occurred in some places and times and not others. The mining industry is global and regional trajectories will be historized and tied into the current events by historical institutional analysis.

Korean Environmental Sociology: History and Characteristics

This article aims to analyze the history and characteristics of Korean environmental sociology since the 1990s. Korean environmental sociology has been developed since the 1990s and environmental awareness started to proliferate nationwide. The Korean Association for Environmental Sociology which was founded in 2000 has organized theoretical and empirical research and has published Academic Journal ECO since 2001. Sejeec Lee summarized that Korean environmental sociology is participation, problem solving, and field research oriented. Sun-jin Yun analyzed that sustainable development, ecological democracy, oil-spill disaster, nuclear waste dump site, environmental justice, and so on are key issues in Korean environmental Sociology.

Korean environmental sociology has the following theoretical and empirical achievements. Firstly, it introduced ecological paradigm and tackled the limitations of anthropocentric sociocentric. Secondly, environmental sociologists raised environmental justice and inequality issues and accumulated research of environmental and ecological movements. Thirdly, they tried to develop policy and policies of ecological democracy beyond anthropocentric democracy. Fourthly, they tackled the limitation of nation state and economic growth model and tried to develop alternative state, local community, global governance and development and sustainable development. Korean environmental sociologists have focused on not only analyzing environmental problems, awareness, movements, and policies status quo but also suggesting new theoretical framework and alternative society model.

An Inter-Cohort Comparison of Intra-Cohort Social Stratification: How Do Cumulative Dis/Advantages Evolve Across Cohorts?

The aim of our paper is to analyze trajectories in hourly wages between the ages of 30 and 50 for five different birth cohorts, using the PSID data. More precisely, we focus on processes of intra-cohort stratification by tracing patterns of income as individuals age. Our analysis is informed by the cumulative dis/advantage hypothesis as a process of intra-cohort stratification. Using growth curve models, we seek to describe and explain the patterns of income stratification within and between cohorts. We hypothesize two key patterns: Simple inter-individual divergences and path-dependent post individual divergences. Simple inter-individual divergence is indicated when the relation between initial hourly wage and its slope over time is positive (in contrast to convergence, where this relation is negative, and stability, where there is no relation between initial hourly wage and its slope over time). Post individual divergence is indicated when hourly wage differences between men and women, or between whites and non-whites, increase as individuals age. Our analyses will reveal if the patterns of

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
wage divergence over the life course are constant across cohorts, or whether the extent and form of wage divergence is shifting over time.

The Joint Impact of Paternal and Maternal Parenting Styles on Children's High-School Academic Achievement in Taiwan

The present research used data gathered by Taiwan Education Panel Survey (TEPS) in 2001 and 2003 to explore how fathers' and mothers' parenting styles jointly influenced their children's academic achievement in junior high. Using latent class analysis (LCA), the research uncovered the same four parenting styles for both Taiwanese fathers and mothers. These four parenting styles are consistent with parenting typology often discussed in the literature and can be labeled as authoritarian, authoritative, permissive, and neglectful. Since the majority of Taiwanese children lived with both biological parents and not much research has been done to understand how both father's and mother's parenting styles jointly influenced their children's development, the research further used LCA to construct 16 joint parenting styles to investigate how these styles were related to children's academic achievement. The research found that children with both parents adopting the permissive style would have the best academic performance in junior high. Past studies have indicated that authoritative parenting would be conducive to good academic achievement. The present research showed that when one of the parents was authoritative, for their children to perform well in junior high, the other parent should be more permissive. In other words, in the traditional Chinese view of parenting, there should be a combination of being "yan" (strict) and being "tsi" (kind). The research further found that if paternal parenting was authoritative and maternal parenting was neglectful, this type of joint parenting style would have the most negative impact on their children's academic achievement. In short, the findings of present research clearly demonstrate the importance of understanding the joint impact of paternal and maternal parenting on their adolescent children's development in Taiwan.

Renissance of Ethnicity? Self-Identifications of the Second and Third Generation of Algerian Immigrants in France

The paper presents the results of an empirical research on the self-identifications of people belonging to the second and third generation of Algerian immigrants in France. The aim of the research was to investigate in which situations the Frenchmen of Algerian origin (FAO) feel included and in which excluded from the various collectivities, e.g., collectivity of the Frenchmen, of the Algerians or of the people belonging to the other important social (not only ethnic or national) categories. The choice of FAO stemmed from the fact of their strong, connected with nostalgia towards the suburbs of the French cities which they are very often identified with in the context of riots erupting there every few years. The project answers to the questions concerning the variables that differentiate the identifications of FAO with various social categories and give the classification of situations which occurrence is conducive to the appearance of self-identification of a particular kind. The results are based on a content analysis of 25 autobiographical novels written by FAO authors and published in France between 2000 and 2012 and the biographical method by F. Znaniecki and his principle of “humanistic coefficient” was used in the project. Indicating the situations in which FAO still feel different than other citizens of their own country can show the areas of social life that require reconsideration in the terms of the state's integrating policy.

Takao Tanase and Talcott Parsons: The Possibility Of Functional Analysis

Takao Tanase makes a unique contribution to sociology of law because he uniquely applied the sociological framework of Talcott Parsons who elaborated on the law of functionalism. When Tanase studied abroad in 1970's, he majored in sociology and was mentored by Parsons. So Tanase was clearly influenced by Parsons in his early works and tried to develop or modify Parsons's theory. But that after that he rarely mentioned Parsons and repeatedly referred to normative theories such as critical legal studies. So lately Tanase has been considered a postmodernist theorist in Japan.

But if we read intensively his works, we can notice that he was influenced by Parsons all the time although he never clearly mentioned Parsons.

Tanase frequently used Parsons' functional analysis uniquely to study law and society in Japan. He decomposed research objects (fort law in Japan, for example) into ideal elements (logic of liberalism, for example) and observed the functions of those modern ideal elements in real social conditions. Then based on the observations and new normative theories such as postmodernism transcending the limits of modern ideas, he proposed what is necessary for modern law imported from the West to function more properly in society. In this way Tanase applied Parsons' general theory standing on the convergence between idealism (normative theories) and positivism (observations), and his application gives a hint when someone applies Parsons' general theory to researching the functions of law in other countries.

Though Parsons was attacked severely and his influence declined once, he has been reevaluated since 1980s. But this is not true for sociology of law. So Tanase's application becomes a nice model of using Parsons' general theory in sociology of law and it suggests the possibility of researching and comparing the functions of law globally.
These findings demonstrate historical and linguistic relations of power that intersect with practical considerations. Specifically, the language choice seems to be implicated in a colonial legacy reflected in the linguistic hierarchy (e.g., Japanese vs. Korean or Chinese) and the commodity value attached to Japanese as well as pragmatic factors related to linguistic and orthographical proximity. Moreover, the fact that the interviewees were selected by each company reveals a particular entrepreneurial habitus or lingua-cultural dispositions expected for transnational workers. The study problematizes the neoliberal ideology of the promise of English and provides educational implications.

Conflict Management in Prostitution ("性活"="Seikatsu") — the Structure and Meaning of Pluralistic Justice

“Conflict management in prostitution” have some meanings especially from the perspective of law. They are also concerned with their own viewing. In Kenya, there are also different ideas depending on the situations. The meaning for female who are working as a prostitute (I call them normally as “性活者”="Seikatsu-sya", sex-practical use person) is protection or any system which will help them. This presentation will try to make clear the “real” situation of conflict management in prostitution (I call it normally as “性活”="Seikatsu", sex-practical use) . For it, I had researched for 101 prostitutes by interview directly in 2010 to 2013 in Nairobi, Mombasa, Malindi, Nakuru, Kisumu and Meru. The average time of interviews is 1 hour 30 min. And I did the research more than 500 for non-regular women and men as customer by questionnaire. The research for prostitute have more than 100 questions divided into 5 sections, Experiences, Ideas, Ways, STI, and Personal Matters. I will describe here how prostitutes think about and get on with “law” even “living law” in prostitution. And more, I will try to find what is the way and meaning of conflict management for them through my research in Kenya. We can find the idea of original conflict management in prostitution through confrontation against “law” finally. Actually, justice, even law is pluralistic in the field of prostitution. When we think the structure of prostitution from the perspective of conflict management, we feel something poor or strange to the normal-idea in prostitution field like that is illegal or illegal. Because the “law” must be different for each in multiter prostitution structure. We need to understand the situation without any bias in first and discuss to pure structure of prostitution later. The idea of strategy of conflict management in prostitution will help it.

Sexuality and Refugee Status: Narrative Construction of Sexual Minority Asylum Seekers in the United States

Since the 1990s, sexual minority status has been recognized as a basis for refugee/asylum claims in certain countries. In the United States, as seen from the recent governmental guidelines for those specific cases, the so-called LGBT asylum is now drawing attention. This study attempts to analyze the issues of gays, lesbians, and transgenders who are seeking asylum in the U.S. from the perspective of narrative construction regarding to the dominant notion of sexuality in the host society appearing in legal procedures. Previous studies have shown that since the credibility and objectivity of those claims are legitimized within a US-centered notion of homosexuality, it marginalizes those individuals who fall outside of this paradigm. However, studies based mainly on legal documents have yet to develop an understanding of sexual minority asylum seekers’ experiences and of the degree to which they follow the dominant picture of sexuality.

To further understand this phenomenon, interview research was conducted in New York City and the San Francisco Bay Area. In order to define asylum seeking process as a system which connects the concept of sexuality to past events in the narrative construction, this study explores the experience and perspectives of the asylum seekers themselves. Although, in most cases applying for asylum is taken as an option they find as a choice to legalize their status, a comparison of two different areas tells us that the strategies and discourse of their advocates and case-workers, depending on sex and ethnic communities, and practices of border crossing have impacts on how they form the narratives. For example, the asylum seekers in New York City tend to use human rights discourse while those in the San Francisco Bay Area do not. Instead, a common practice of multiple border crossing characterizes the latter as an actor within the asylum-migration nexus.

Structural Engineering in the Care Sector: A Cross-Sectoral Approach

The care sector is one of the fastest-growing sectors in Europe. Despite its importance, it still faces many challenges, such as changing demographics, increased demand, and underfunding. In this presentation, I will introduce a cross-sectoral approach to improve the management in the care sector. This approach involves collaboration between different sectors, such as the hospital, pharmaceutical, and social services sectors. By doing so, we can create a more efficient and effective system that benefits all stakeholders.

The Sociology of Death: The Case of the Armed Forces

This presentation will try to make clear the “real” situation of conflict management in prostitution through confrontation against “law” finally. Actually, justice, even law is pluralistic in the field of prostitution. When we think the structure of prostitution from the perspective of conflict management, we feel something poor or strange to the normal-idea in prostitution field like that is illegal or illegal. Because the “law” must be different for each in multiter prostitution structure. We need to understand the situation without any bias in first and discuss to pure structure of prostitution later. The idea of strategy of conflict management in prostitution will help it.

Mapping The Governance Of Care And Professional Development: A European Comparative Study

This article investigates the care sector through the lens of the sociology of professions. We introduce a dynamic approach that systematically links changes in the nursing professions and society at large with new modes of governance in healthcare. The aim is to explore institutional conditions that contribute to the development of an integrated professionalism and efficient health human resource management in the care sector. A novel contribution is the cross-sector and profession-centered approach that connects professional developments in nursing in hospital, primary and long-term care with governance arrangements. A comparative case study design is applied that focuses on western European countries using England, Finland, and Germany for an in-depth analysis. In terms of methods, we draw on public statistics, document analysis and other secondary sources. Three emergent patterns can be identified: (1) ‘constrained professional development’ was observed in the German corporatist and federalist/fragmented system.
with overall high density and quality of healthcare services and concentration in the middle-range professions with a lack of upward institutional pathways; (2) ‘elitist professional development’ was found in the more centralised governance in England and characterised by a growing expansion in the high-status segments, but overall weak development in the middle-level and lower segments; and (3) ‘integrated professional development’ emerges in the context of decentralist and universal governance arrangements in Finland, that foster expansions in both high-status segments and low and unqualified segments of nursing. In summary, the findings highlight connections between professional development and governance. This study, which focuses on social capital (macro) level of professions, in order to achieve transformative potential, must be connected and backed up by (macro-level) health and social policy interventions.

Before we can even discuss democratic consolidation, at least three minimal conditions must be fulfilled, according to Linz and Stepan (1996). Beside those consolidated democracies should also fulfill several other conditions that have in scientific analyses not attracted such high attention than three minimal conditions. Among other conditions Linz and Stepan specifically stress the importance of economic consolidation. The proposed paper is going to analyze the challenges of democratic consolidation in the Central and Eastern Europe from the beginning of 1990s, when democratic transition began to take place, to most recent period, when consequences of global economic crisis hit the region. It is clearly evident from the findings of the paper that most former socialist countries have reached level of consolidated democracies; authors are testing the thesis that one of the reasons for that was also successful economic consolidation, which is in recent period suffering under heavy pressure of global economic crisis. The consequences of that can already be seen in various democratic consolidation measurements, like Nations in Transit or Human Development Index (HDI), where most CEE countries are regressing in last few years.

KUHONTA, ERIK* (McGill University, erik.kuhonta@mcgill.ca)
Is The Middle Class a Harbinger Of Democracy? Evidence From Southeast Asia

A vast body of literature claims that the middle class is a critical force for democratic transitions, democratic consolidation, and political stability. Yet, recent events in Thailand and in other Southeast Asian newly-industrializing countries (NICs), indicate that the middle class often challenges democratic regimes or supports authoritarian juntas. How should we reconcile these divergent views of the middle class? This article argues that an explanation for the behavior of the middle class in relation to regime-type must begin by looking at the state’s role in addressing the interests of the middle class. Where a state addresses the key concerns of the middle class – rule of law, economic development, and political stability – this class is unlikely to rebel against the state. Institutionalized states are most likely to satisfy middle-class interests, while patronal or clientelistic states are particularly vulnerable to middle-class rebellion precisely because they are unable to address middle-class interests and values. A comparison of four Southeast Asian NICs will thus show that middle-class support for democracy is highly contingent on the structural conditions in which they find themselves embedded.

Judging Bodies in Europe: Examining the Variety of Repertoires for Evaluating the Beauty of Male and Female Bodies in Six European Countries Using Visual Q-Methoirdology

Being perceived as beautiful is associated with many social and economic benefits, including advantages in dating and labour markets. In post-industrial European societies, “physical capital” is increasingly becoming a valuable asset, for men as well as women. Yet little systematic and inductive cross-national comparative research has been done on what is perceived as physical capital by people of different social backgrounds, genders and age groups. As a result, most existing studies on beauty ideals emphasize universal criteria of beauty evaluation inherent in human evolutionary psychology, or the homogenizing effects of beauty standards propagated by transnational media imagery and a transnational beauty industry.

In our study, using a structured sampling method, a total of 180 respondents in six European countries are asked to sort picture sets of a wide variety of both male and female bodies according to their own tastes. This is done in the context of semi-structured interviews in which respondents are asked about their ideas on beauty and the role it plays in their lives and social interactions. Through factor analysis, separate “taste groups” are identified on the basis of their sorting patterns, and their particular criteria for evaluating beauty interpreted with the help of their own comments.

The effects of gender, education, age and nationality on ideals of bodily beauty, are ascertained through regression analyses with factor scores, and systematic coding of the interview material. Furthermore, we investigate to what extent bodily beauty ideals are informed by moral or symbolic, rather than purely aesthetic, considerations. We predict, on the basis of the theories of Elias and Bourdieu that an attitude of “al beauty ideals are informed by moral or symbolic, rather than purely aesthetic, considerations. We predict, on the basis of the theories of Elias and Bourdieu.

Depression, Suicidal Ideation and High-Risk Behaviors Among
Underserved Youths in Central Mexico

Background: The staggering cost of depressive disorders and suicide on the
quality of life of patients and families, the increased mortality risk, and the high
economic burden demand our attention. There is evidence suggesting that eng-
gagement in risky behaviors, development of negative habits such as using alco-
hol, tobacco, and drugs, and depressive disorders all begin during adolescence.
Further, substance use, in particular smoking and drinking, has been linked to
depression and suicide risk. The study aim was to evaluate the prevalence of de-
pression and suicidal ideation and identify predictors that could inform a prevent-
ion program.

Method: Using a cross-sectional study design with a probability sample, 702
adolescent school students were surveyed in low-income, rural high school students in the cen-
tral Mexican state of Guanajuato were surveyed.

Results: Almost half (49.2%) of participants showed some level of depression
(CES-D > 16), with 23.6% identified as suffering severe depression (CES-D > 25). Lo-
gistic regression analyses indicated that controlling for financial status, symptoms of
depression were predicted by female sex, low self-esteem, risky behaviors, con-
fictive parent-teen relationships, and binge alcohol drinking. The same variables
with the exception of binge drinking predicted severe depression. In turn, suicidal
ideation was associated with depression, low self-esteem, high-risk behaviors,
and conflictive relationships with parents. A similar pattern of clustered behaviors
among teenagers has been reported.

Conclusions: Predicting and ultimately preventing depression is of enormous
public health significance. The findings can inform the design of interventions
to prevent this early pattern of depressive disorders and associated risk factors
among low-income, rural youth in Mexico and possibly in other contexts.

Urban American Indian Youth Religion, Native Spirituality, and
Well-Being: A Latent Class Analysis

Most American Indians (AI) in the United States now live in urban rather than
tribal areas yet little is known about their interconnected spiritual, religious and
cultural worlds. This presentation describes ways that urban AI middle school
students were involved with religious institutions and Native spiritual and cultural
practices. Data come from AI youth (n=205, mean age 12) in five urban middle schools in a southwestern USA metropolis. Latent class analy-
is identified distinctive groups of youth according to religious affiliations, atten-
dance at religious services, adherence to Christian and traditional spiritual beliefs,
sense of Native spirituality, and involvement with spiritually significant Native
cultural practices. Five classes emerged. There were two Christian groups, one
attending Christian churches and following Christian beliefs, but uninvolved with
Native beliefs, spirituality, or cultural practices, and a nominal Christian group af-
filiated with but not attending church, and relatively unattached to belief systems.
Two groups followed Native beliefs and spiritual practices, one affiliated with the
Native American Church (NAC) and another unaffiliated with any church. The fifth,
non-religious group, was unaffiliated, followed neither Christian nor traditional
beliefs, and was uninvolved in Native spirituality and cultural practices. ANOVA
indicated that the two Christian groups were higher in SES, had lived longer in the
urban area, were more conforming behaviors and better decision-making but also the
most substance using friends. The two groups embracing AI spirituality
(NAC, and non-NAC) had better school grades, more enunciation in tribal
language and strong AI ethnic ID, and the strongest bicultural orientations. The
non-religious group had the lowest scores on parental monitoring, closeness, and
supportiveness. Findings indicate that there are different ways among AIs to
access spirituality and religious beliefs and practices, and their consequences for
well-being.

Gender and Medical Specialization: Segregation By Culture or Choice?

Women taking to gainful employment and professional practice are on the rise in
India and medicine is one such profession which by its nature, prestige and
rewards comes to be sought after most by women. It is precisely owing to these
traits, the medical profession has been strongly aspirated by their male counter-
parts as well, which might bring into play the forces of gender bias and gender
discrimination as has been the case with the phenomenon of gainful employment
in general. The paper seeks to ascertain empirically the considerations, motiva-
tional beliefs and influences involved in the decision of the path of medicine by women
in medical profession. The findings are based on in-depth interviews with 237
women physicians in the City of Bangalore in India. The findings reveal that wom-
en doctors are inclined and constrained to avoid such branches that tend to be
male dominated. It is further noticed that women doctors tend to opt for the soft
specializations in medical practice less sought after function male counterparts and hence
are less expensive in terms of course fees and capitulation, and also are relatively
less paid on the one hand and provide less intrinsic satisfaction and recognition
in medical circles and society on the other. The experiences and dispositions of
women doctors appear to indicate that their decisions on specialization tend to be
more culturally conditioned and arise out of their tendency to avoid areas of
deference over which their male counterparts are assumed exercise a cultural and
professional prerogative and unjustified monopoly.

KULKARNI, JAYASHREE V* (JSW Steel Ltd., jaya1581@rediffmail.com)
Technology Induced Inequalities at Workplace – an Indian
Experience

Inter-industry variations in compensation packages has since long been a
normal phenomenon in industrial circles as it comes to be determined by the
functional importance of respective industry and the levels of skills and expertise
required. The paper deals with recent trends toward increasing inequalities in
earnings in Indian work organizations. It is assumed that growing complexity of
knowledge and skills required, length and cost of training requisite for operations,
increase in capital expenditure requirements and growing sophistication and
specializations in industrial sphere are the forces that necessitate innovations and
their dispersion through forces of globalisation and these developments have
implications for compensation packages across the industries resulting in
increasing inequalities in wages within and across industries. The analysis of data
pertaining to variations in pay and allowances in 16 large intensive and 14 tech-
ology intensive manufacturing establishments in India over a period of 20 years
indicate that differential emphasis on technology and innovations in different
industries has brought about unprecedented inequities in the levels of income
between the industries and even within the industries across the cadres. Such
inequalities are further accentuated by elimination of moderately skilled workers
on grounds of obsolescence and redundancy. The findings further indicate that
the technology induced variations in income in Indian Industries vary significantly
with sector of industrial operations and its functional importance for economy on
the one hand and its potential for creation of wealth on the other.

Marginalized or Empowered? Conflict Induced Internally Displaced
Turkish Women's Experiences in Turkey

This study is focusing on the conflict-induced internally displaced Kurdish
women's experiences. There has been an ongoing internal armed conflict in Tur-
key since 1984 and one of the consequences of this conflict is the internal dis-
placement that occurred in 1990s. In the displacement process, women and other
family members were victimized. They did not only lose their homelands, but
they also had to struggle in the city centers with poverty and discrimination.

After they started to live in the city centers, women may become both mar-
ginalized and empowered. The aim of the study is to understand the situations
that lead Kurdish women to be marginalized and/or empowered in the cities to
which they have been forced to migrate. After the displacement process, which
is one of the major victimization processes for these women, some of them
may be trapped in ethnic and gender-based discrimination and may become more
marginalized in the city centers. But marginalization and empowerment are not
fixed categories and there is always a possibility for these women to transform
their marginalized position into empowerment. By political engagement, working
outside home and/or being head of the household these women may break the
cycle of their marginalization and becomes empowered in the city centers.

**Nations and Expectations of Democracy Among the Participants of the OccupyGezi Movement in Turkey**

The aim of this paper is to explore the notions of democracy and the expectations among the followers of OccupyGezi movement started in Turkey in May 2013. The protests, which began on 28 May over the plans to demolish one of Istanbul’s rare central parks, developed to nationwide rallies against the government. Although the protests have been acknowledged to be a civil unrest participated by people from different political backgrounds, the demographic features of the protesters and their demands remained under-researched and this caused speculations from both the government and the opposition sides about the reasons and impacts of the protests.

A group of voluntary independent researchers have conducted a survey with 1060 protesters, during the actual demonstrations on the streets in Ankara. Data were collected in three days (8th, 9th, 10th June) in two different centers of the protests in Ankara. Participants were people attending the protests at the time of the interviews, in varying forms and degrees (example: just standing to actually fighting with the police). Participatory observation and results of other surveys conducted in Turkey were used as secondary data. The questionnaire consisted of questions concerning the demands, political backgrounds, reasons and types of participation to demonstrations and expectations of the protesters, along with their demographic characteristics.

This paper is based on the analysis of the participants’ notions, expectations and demands around democratization in Turkey. Results suggested that the demands of democratization have varied according to a series of factors, including the political background of the participant, gender, the place of demonstration attended and the different understandings about the government’s policies restricting individual freedoms. The results have also documented the intense police violence experienced by the participants, which is expressed as one of the major reasons for the growing unrest.

**Population Change, Demographic Dividend and Health Care in Aging Population of ASEAN**

The purpose of this study was to investigate the change of population from 1967 – 2060 and to study the demographic dividend among ASEAN countries and to study health care among aging using qualitative methods from secondary level of population data. It was determined that the population of ASEAN is approximately 600.8 million people or 8.6% of the world population and this amount has tended to continuously increase for 40 years. Nowadays, the population structure consists of 48.3% of laborers, 39.8% with child dependency, and 8.5% of aging dependency. The total fertility rate of the ASEAN population is 2.4. The demographic dividend could be categorized into three groups including 1) countries that already have passed opportunity, i.e., Singapore, Thailand and Vietnam, 2) countries that have had the chance to handle this prime event, i.e., Indonesia, Malaysia, Brunei Darussalam and Myanmar, and 3) countries that will meet this situation in the future, i.e., the Philippines, Cambodia and Lao PDR.

The ASEAN community consists of ten countries as its members which all have different population structures, hence dividend occurs more than once and each country could give a hand to others to help solve problems and clear effects. It may be necessary for countries which have not faced the prime period to learn experiences from those who have passed the period. For labor issues, population segments could be reallocated to countries that lack human development resources resulting in the new trends in health care systems for aging people in the future.

KUMAGAI, FUMIE* (Kyorin University, fkumagai@com.home.ne.jp)

**History of Courtship and Dating in Japan**

The marriage pattern in Japan developed from the group/horde marriage in the Primitive Times to the tsunamado-koan (the groom commuted to the bride residence), to the muku-in (the groom lived with the bride family) during the aristocracy, and to the yome-in (women marrying into men’s families) under the Bushi ruling. It was only after the Meiji era that Japanese marriage changed to the Yorai pattern based on the mutual consent of the marriage partners.

Then, two types of mate selection pattern emerged: the arranged (miai), and the romantic marriage (ren’ai). In the arranged marriage the go-between (nakoudo) arranges formal interviews providing the young with opportunities for meeting possible marriage partners. During the early stage of Japanese modernization, miai was the predominant pattern, however the complete reversal has emerged today, and ren’ai has become the dominant pattern instead.

Recently, young Japanese have difficulties in finding ideal marriage partners. Consequently, great many Japanese men and women remain single lifetime (1920: about 2% for both men and women; 2010: 20% for men and 11% for women). Extremely high rates for life-time singleness of Japanese men and women today are one of the major reasons for the fertility decline.

Attempting to provide young people with mate selection opportunities various “kon-katsu” services (marriage mate seeking activities) have been established by local municipal offices, commercial matchmaking agencies, and Mochi-Kon (Township Companion where both young men couples and women couples meet in group). Furthermore, the current government will extend monetary support to marriage services organized by municipal offices effective 2014 fiscal year.

Marriage, however, is an individual and private matter. And, therefore, if one decides to lead a lifetime singleness, it matters only to him/herself. Nevertheless, it is hoped that these new styles of courtship and dating will encourage Japanese youth to go forward for marriage.

**Car Festivals (Religious Yatras) in India : A Dimension of Leisure Tourism (A Case Of ‘Nanda Devi Raj- Jat Yatra’ In Uttarakhand, India)**

This paper is about the car festivals (Religious Yatras) organized in different parts of India and their impact on the quality of life of its participants. This paper is analyzing how these car festivals provide leisure to its participants which further improve quality of their life through mental well-being, yagannath Puri Rath Yatra (Orissa, India), Mysor Rath Mahatras Yatra, Mysor (Karnataka, India), and Nanda Devi Raj-Jat Yatra (Uttarakhand, India) etc. are some of the famous religious car festivals held in India. Thousands of people participate in these religious car festivals to get relaxed from day to day stress. Nanda Devi Raj-Jat Yatra is one of the most celebrated car festivals of Uttarakhand in India, taking place once in every 12 years during August-September for 19 days. A trek of 280 km remains jam-packed with the experience of nature, flora and fauna, fabulous culture and let one have a glimpse of the Uttarakhand Himalayas. Last car festival was taken place in the year 2000 and more than 50,000 people had been found taking this car festival.

Well established indicators of quality of life are used to explain the results in this study. Simple statistical and participatory tools are used to analyze the information and data gathered from different primary and secondary sources. Case studies are also used to explain the experiences of the participants of the car festivals.
Findings of the study reveal that leisure tourism enhances quality of life by increasing feelings of competency and relaxation, distracting from difficulties, as well as enhancing social inclusiveness and support. Leisure tourism also results in improved mental wellbeing through associated meaningful engagement, self-expression and creativity. Participation in it is considered as a life time experience. This experience not only provides leisure during the event but also provide happiness in memories.

Sowing the Seeds of Change: Shifting from Traditional Cropping to Cash Cropping-Some Illustrations from Western Himalayas

Around 10,000 years ago human being had started domestication of plants and animals, even before this period, people had been altering parts and animal for their own benefit by using other means such as fire-stick farming. With the changes in almost every sphere of life, agriculture has also undergone change particularly in developed and developing world, and has been characterized by enhanced productivity, the replacement of human labour to mechanization and the introduction of synthetic fertilizers and pesticides, selective breeding has changed the fate of agriculture round the globe and Himalayan states are not exception.

Present paper is based on primary study conducted in Chamba and Kangra districts of Himachal Pradesh. In the state agriculture contributes nearly 45% to the net state domestic product and about 93% of the state population depends directly or indirectly upon agriculture, moreover it is main source of income as well as employment.

The paper is an attempt to analyse the shift from traditional crops to cash crops which is based on primary data based research collected from two study districts from the state of Himachal Pradesh in India dividing two districts in four sub-districts and further in 30 panchayats (lowest administrative unit) and 73 villages and at least select three respondents from each village, 200 respondents have been interviewed to arrive at desirable results. People have shifted from traditional crops to vegetables, semi-culture and horticulture and earning very good income and experienced change in the amenities available in the household as well as those provide better living conditions. Study concluded with observation that at present, the seeds of change has sown and now the change is visible and people of the hilly region are changing traditional crops and shifting to cash crops.

KUMAZAWA, TAKUYA* (Japan Society of Sport Sociology, sd131012@g.hit-u.ac.jp)

The Diffusion of American Football in Japan from 1930's to 1950's

This research examines the diffusion of American football in Japan from 1930's to 1950's from the sociological perspective. The research question is why and how it diffused in Japan during the time. In general, Japanese-American relations during the time was tense because of Immigration Act of 1924, Manchurian Incident in 1931, Second Sino-Japanese War in 1937-1945, Pacific War in 1941-1945 and the occupation of Japan by GHQ in 1945-1952. American football diffused in Japan in these situations although it is one of the most conspicuous American cultures. Why and how did this happen? In my opinion, there are four main reasons. Firstly, at the beginning of 1930's, Nisei students from Hawaii and the west coast of America began to come and study in Japanese universities, and they started to play American football. Secondly, some Japanese politicians, diplomats, business people and the American Embassy staff in Japan supported Nisei students to play American football because they thought that it was useful for promoting friendly relations between Japan and America, or at least, for preventing Japanese-American relations from getting worse any more. Thirdly, the media like newspapers, publishing companies also supported Nisei students to play American football because they thought that it had a potential to become popular content like baseball and help to sell their newspapers or magazines more. Lastly, because many Japanese people saw American football through American movies from the beginning of 1930's. American football had a grounding to be diffused. For example, about 20,000 people came and watch the first official game in Japan on November 29, 1934. In conclusion, American football diffused in Japan from 1930's to 1950's because four different actors shared their different interests through American football.

Conflict in Ethiopia

Colonialism is a practice of domination, which involves the subjugation of one people to another. The etymology of the term from Latin word colonus, meaning farmer. This root reminds us that the practice of colonialism usually involves the transfer of population to new territory, where the arrivals served as permanent settlers while maintaining political allegiance to the country of origin. Colonialism is a characteristic of all known civilizations. Books on African history teaches us that Ethiopia and Liberia are the only countries, which were not colonized by West European states, but the paper argues that Ethiopia was created by Abyssinian state colonizing its neighbouring nations during the scramble for Africa. Using comparative colonial history of Africa, the paper tries to show that Abyssinian colonialism is the worst of all colonial rule of all territories in Africa, according to the number of people killed during the conquest war, brutal colonial rule, political oppression, poverty, lack of education, diseases, and contemporary land grabbing only in the colonial territories. In its arguments, the paper discusses why the Oromo were defeated at the end of 19th century whereas we do have full historical documents starting from 13th century in which the Oromo defended their own territory against Abyssinian expansion. Finally the paper will elucidate the development of Oromo national struggle for regaining their lost independence.

The Roots of Horn of African Conflicts

The Roots of Horn of African Conflicts

Majority of societies passed through various conflicts in their history. Horn of African societies entered new types of violent conflicts starting at the end of 19th century, which is continuing until today under different forms. Exceptionality of Horn of Africa is that Abyssinia (Ethiopia) was the only African Empire state, which participated in the colonization of Africa with Western European states at the end of 19th century. Compared to all participants of colonial powers of this part of Africa, Abyssinian conquest war was the longest and the bloodiest violent conflict according to historical empirical data. The territories of many nations were divided and became part of different colonial territories and different nations were forced to be part of the same colonial territory. The paper will discuss conflicts at different levels in the Horn of Africa: the conflict between state and ethno-national identity in the Sudan and Ethiopia. The Ethiopian empire colonial character from the view of non-Abyssinia peoples, the problem of interference of the state in religion affairs of some groups in Ethiopia (e.g., Islam and Waqefana (Oromo indigenous religion), geopolitical interests of foreign powers in the region will be the main points of the discussion. The role of Ethiopian state interest in Somali conflict will be one of the points of discussion of the paper.

Sociocultural Shocks In Cross-Border Marriages: A Comparison Between Chinese and Southeast Asian Wives In Taiwan

Along with the expansion of international trade between Taiwan and Southeast Asia, inter-ethnic marriages between Taiwanese men and Southeast Asian women have started from the late 1970s. Cross-border marriages between Taiwanese men and Chinese women have dramatically increased starting from the late 1980s after the Taiwanese government has changed the national policy. These new events make cross-border marriages a significant phenomenon in Taiwan.

Based on the in-depth interviews with marriage immigrants from China and Southeast Asia, the author delineates their daily lives in Taiwanese families after they married. It is clearly that all these marriage immigrants experience sociocultural shocks when they have started their lives in Taiwan.

The author notices that both Chinese and Southeast Asian wives wish to work on the job market and be economically independent but are restrained by the government policy. Both of them feel strange about the common arrangement in Taiwan to live with in-laws. They also experience the unreasonable underestimation of their natal family's SES by their in-laws.

Only Chinese wives complain that their husbands never helped with household chores, and their mothers-in-law seldom helped either, and so they have to work like a household servant. Moreover, they are often in conflict with their mothers-in-law or husbands on the issue of child rearing. They are also fussy about Taiwan's limited living space. Most Southeast Asian wives, on the other hand, emphasize personal privacy and sanitation of living environment, but the real situations often contradict with what they expect. They also frown at the special diet their mothers-in-law prepared for them after they have delivered babies. They are especially angry about their natal mothers being looked down upon by their in-laws.

All the above sociocultural shocks in turn affect whether or not these foreign wives identify with their families in Taiwan. The movements of people's politics in terms of deliberative democracy, civic education for human security, equity and opportunity will be studied as an example of the best practices and the drawbacks of people's politics in the political movement.

People's participation has also been launched throughout the country. Both the Thai democratic movement. Although Thailand became a democratic country more than 80 years ago (1932), the problems of inactive participation, political conflicts and political unconsciousness are still clearly seen today. The attempts to bring top down to bottom up democracy became a new approach in the new Thai Constitution (2007). Both the political development council and local organization council Acts have been established to support people's active involvement. People's participation has also been launched throughout the country. Both the best practices and the drawbacks of people's politics in the political movement towards democracy will be examined in the paper. The grassroots' movement for human security, equity and opportunity will be studied as an example of the strengthening of people's politics in terms of deliberative democracy, civic education and democracy. The roles of the people's movement through the works of Center for People's Political Development supported by King KUNPHOOMMARL, MONTRI* (Naresuan University, montrinu@hotmail.com)

The Movement of People's Politics in Democratisation Process in Thailand

This paper aims to explore the concept of people's politics and its application to the Thai democratic movement. Although Thailand became a democratic country more than 80 years ago (1932), the problems of inactive participation, political conflicts and political unconsciousness are still clearly seen today. The attempts to bring top down to bottom up democracy became a new approach in the new Thai Constitution (2007). Both the political development council and local organization council Acts have been established to support people's active involvement. People's participation has also been launched throughout the country. Both the best practices and the drawbacks of people's politics in the political movement towards democracy will be examined in the paper. Public Environmental Concern in Taiwan

One of the 21st century identified by the UNEP foresight report is ‘Social Tipping Points? Catalyzing Rapid Economic Transformation for the Environment’ (UNEP, 2009). It can be thus inferred that humans need to change original destructive actions and need to learn to adapt to changing climate and environment (with combined influences of both natural and human forces). Moreover, these actions need to be more rapid. However, the factors that trigger people's behavioral changes are often differentiated due to countries' different socio-economic contexts. Therefore, it is important to understand how individuals in different cultures think of, know of, and plan to respond to these environmental challenges and to investigate the interrelationship between people's environmental attitude and environmental behaviors. This paper aims to answer these two research questions.

The study reports the data (n=2209) derived from 2010 Taiwan Social Change Survey (TSCS)—a longitudinal face-to-face national survey project conducted each year since 1985. The results find that the Taiwanese public is concerned about environmental issues and they demonstrate a positive environmental value system in terms of protecting the environment, coexisting with the nature and other species, and respecting the earth. However, they show a level of inconsistency in the frequency of taking pro-environmental behaviors. While they often recycle for renewable resources, they rarely consume organic foods and drive less personal vehicles. The preliminary analysis suggests that there are deficits between pro-environmental attitude and actual environmental actions. To overcome this behavior deficit, it is perhaps necessary to provide net-benefit incentives to Taiwanese people.

The Intellectual Advantages and Dangers of Borrowing, the Complex Relation Between Literature and Sociology

Literature and sociology are two types of intellectual games. Literature is driven by the rules of art. The latter foreground such aesthetic techniques as estrangement (anti-essentialism), meaning gaps (let the reader guess) and the captive mind (manipulated emotions). Sociology is a scientific discipline and is hence bound by the rules of typological construction (essentialism), methodological reflection (transparent language) and distanced role-taking (critical empathy). This does not exclude intellectual borrowing of the insights, imagination and language produced by writers. A good starting-point to reflect on these issues is the methodology of Ervin Goffman. He uses literary sources mainly for their accurate ethnographic observations in particular from the French existentialist writers Jean-Paul Sartre and Simone de Beauvoir in order to investigate issues of identity and identity work and more generally the micro norms of interaction between ego and alter.

What Goffman tends to ignore though is that in particular Sartre in all his novels and dramas describes alter as ‘stranger’. There are never any close emotional bonds between ego and alter. In order to fully explore the imaginative possibilities of literature, other French writers such as Proust and Celine should be looked into as the latter suggest that social relations between strangers can change into intimacy but also return to the civility between strangers in public.

Nor should sociologists ignore how literary theorists analyze the works of fiction writers. Reading such work helps us better to understand both what is specific for the literary text but also how the techniques, imagination and language of fiction writers illuminate important aspects of issues that sociologists have tended to leave out in their interpretative work such as the importance of events, time, place, artifacts, representations, bodies, problem-solving etc.
Structure and Specificity TRUST of E-Zines

Nowadays the Internet has globally changed mass communication. As a result, 'civility journalism' has emerged. The urgent problems of trust in networking have become more actual. Media-trust relates in mass media communication with the usage of material objects including electronic media and devices. Media-trust is a multilateral phenomenon. Its components: trust of the audience to mass media, trust of the mass media (team of journalists or one journalist) to his audience, or to a concrete reader (a viewer, a listener, a user). The users' trust is one of particular cases of media-trust, which is a result of three basic components integrated: trust to information, trust to journal and trust to journalist. The integration of the referred components is constant and absolute, as trust in social information is impossible without trust in its source. The triad of these types of the interrelated trust has three aspects: information, perceptive and interactive. The validity of the conceptual model and the relationship of many media-trust characteristics have been confirmed in empirical studies of Russian youth. The relationship trust to e-zines and intellectual, emotional and communicative respondent's characteristics has identified.

**Ready or Not? California’s Early Assessment Program and the Transition to College**

Nearly one in three first-time freshmen in the U.S. are enrolled in some remedial/developmental course in English or math at their college or university (U.S. Department of Education, 2003). Rates of remedial course enrollment vary substantially across U.S. colleges and universities, with some institutions not offering any and others enrolling upwards of 80 percent of their incoming students in remedial classes. Part of the explanation for the large share of remedial students in American colleges and universities may be limited information. Students are often ill informed about what they need to do to succeed in college and subject to (the arguably mistaken perception that) everyone must at least attend, if not complete, college in order to succeed in the labor market. A majority of high school students, regardless of their academic performance, report that they will attend college (Rosenbaum, 2001). In fact, academic performance accounts for little of the variance in students’ expected levels of educational attainment. Despite the pressing need to ensure that more students obtain a postsecondary degree, we know surprisingly little about what leads to college readiness and degree completion.

This study focuses on California’s efforts to improve college readiness through the Early Assessment Program (EAP). The EAP is an intervention designed to increase the quality of information about academic preparedness available to high school students. We aim to understand how an increase in information about college readiness may influence students’ needs for remediation once enrolled, and whether the effect of this information varies for different types of students (by gender, race/ethnicity, and academic background). Although several studies have demonstrated that many students are relatively uninformed about what it takes to succeed in college, the question of how we might effectively enrich the information on which students base their postsecondary decisions remains largely unexplored.

**White Trash, Working Class or Just Your Average Guy? the Changing Face of a British Far Right Supporter**

In the wake of a lively academic debate of the past decade and against the background of yet another decline in fortunes of the British Far Right, the paper investigates the sources of its political power. It was long considered to lie in the working class neighborhoods, to the point of current BNP leader comparing his party to the early 20th century Labour. However to what extent is the support base of the Far Right proletarian, or rather post-proletarian, given the overall postindustrial trend, remains debatable. And there's more to that – how does the experience of living in area with actual minority population influence the support for the Far Right and what are their preferences in cross-party perspective. The exercise is conducted on data from Korea.

This paper aims to understand how an increase in information about college readiness may influence students’ needs for remediation once enrolled, and whether the effect of this information varies for different types of students (by gender, race/ethnicity, and academic background). Although several studies have demonstrated that many students are relatively uninformed about what it takes to succeed in college, the question of how we might effectively enrich the information on which students base their postsecondary decisions remains largely unexplored.

**The Disparity in Rate of Deductible of Social Health Insurance with Respect to Age and Gender and Its Resolution in Post-War Japan: Whether It Has Influenced Healthcare Utilization and Longevity?**

In post-war Japan, healthcare system has been constructed so that every Japanese could utilize health service of modern medicine free of charge or at low cost. When this system started in 1961, the employed and their dependents were obligated to enroll in so-called “social health insurance” plans. The medical expenses of the employed and their dependents were covered by the insurance while the self-employed including farmers, retirees, and their dependents were left to fend for themselves. The medical expenses of the employed and their dependents were capped. In this paper, change in (a)disparity in rate of deductible was based on occupational status, which was closely related to age and gender. This disparity has been reduced bit by bit until the year of 2003 when irrespective of occupational status, the deductible rate for those 70 years and over of age was 10%, whereas that for those under 70 years of age was 30%; in either case, monthly total out-of-pocket expense was capped. In this paper, change in (a)disparity in out-of-pocket expense of healthcare service utilization, (b)health care utilization rate and rate of deaths in medical institutions broken down by gender and age, and (c)life expectancy at birth, 20 years of age, and 65 years of age broken down by gender, in post-war Japan will be examined, and by comparing between the patterns of chronological change of (a) and (b), and between those of (b) and (c), it will be analyzed how the change in (a) has influenced (b), and how the change in (b) has influenced (c).

**JAPA-15.1**

**KURODA, YOSHIHIKO** (Nagoya University, krd@nagoya-u.jp)

**Globalization in East Asia and Contemporary Situation in Northeast Asian Societies**

The East Asia and Pacific region continues to be an engine of global growth, contributing around 40 percent of global growth in 2012. Driven by strong domestic demand, the region grew at 7.5 percent in 2012—higher than any other region in the world. Economic interdependence in the countries of Northeast Asia is growing stronger. Needless to say, the center of economic development is China. For Japan, economic importance of China has increased every year. China is the largest trading partner for Japan now. Japanese population who live in Shanghai is estimated to 100,000, which is greater than New York. Chinese has become the biggest bloc of foreign residents in Japan in 2007, overtaking Koreans, which has been the biggest bloc in Japan in the postwar period. In rural and remote areas, Chinese workers called Foreign Trainees and Technical Intern are an essential labor force to support the local economy since the 1990s.

Although North Western countries share common economic interests, political tension both between Japan and China, and between Japan and Korea frequently occur in the 2000s. Japan and China are strongly opposed to each other over the territorial problem. Japan and Korea are opposed to each other over the territorial problem and the understanding of history. In the near-to-mid term, it seems that there is no hope for building the East Asian Community.

Japan and China’s relationship is often described as comprising “Cold politics and hot economics.” It can be said the same for Japan - Korea’s relationship. The problem is that violation of human rights may be prone to happen upon foreign residents from North Eastern countries under the situation of “Cold politics and hot economics”, as is recently observed in hate speech against foreigners from Korean.
ing the gender employment gap in the group of parents of young children. Also the institutional context (work-family policy) plays an important role. However, there are also financial incentives that lie in the rules of family benefits and child tax credits systems, often neglected in comparative research, but influencing material decisions whether to work. In my research I compare these rules in the CEE countries looking for incentives that support or hinder maternal employment. I focus particularly on such pairs of countries that share similar socio-economic and cultural contexts for maternal employment, but differ in financial incentives that lie in the tax-benefit systems and in employment outcomes for mothers of young children. One of such examples is a pair of two, small Baltic States: Estonia and Lithuania. I show that while socio-cultural and structural contexts are more favorable for maternal employment in Estonia than in Lithuania, more generous maternity/parental leave-benefit provisions in Estonia form a strong negative economic disincentive for mothers to work when their youngest child is still in its nursery age. The income burden of mothers of very young children (nursery age) is much lower in Estonia than in Lithuania, whereas employment of mothers of older children follows the opposite pattern.

**Does School Context Reinforce the Educational Inequality of Children of Immigrants in Europe? A Multilevel Analysis of Individual and School Effects**

Various national and international studies on school achievements confirmed that immigrant descendants suffer educational disadvantage over native students (cf. OECD 2006). Social background of students has proved to be a crucial factor explaining unequal opportunities in education. However, in some national contexts disadvantaged students seem to overcome the socioeconomic barriers and perform better at school, a fact that raised the question about the role of context in school achievements. This article focuses on the institutional factors of school in explaining the discrepancies in educational outcomes between native-born and second generation in six European countries. The aim is to examine the effect of school policy, climate, and sociocultural composition of students on reading and mathematics performance of 15 years old students. I use hierarchical linear modelling as a multilevel analysis technique with the international data of PISA 2009 from Austria, Belgium, Denmark, Germany, the Netherlands, and Switzerland in order to estimate both, school-level and cross-level effects on the individual students’ test performance. The expected finding is that in all six countries compared the school context does affect the performance of students. The more selective the education system either regarding age, performance and/or sociocultural background of students, the more disadvantaged is the second generation compared to their native-born peers. On the other hand, the schools that responded to the increasing multiculturalism of society and adapted their programme to students’ specific needs are expected to have a positive impact on students’ performance.

**Mobility As Strategy to Cope with Resettlement: History of Mobility and Social Reproduction of Ethnic Groups in Northern Laos**

Moving villages has been part of their life for many of the indigenous groups in Northern Laos. However, in the last few decades, such mobility patterns have changed since villages in the Northern Laos were targeted for resettlement to places near the road. Increasing economic concessions from cross-border investment has lead to rapid expansion of rubber plantation, restricting land and forest access of the ethnic people. With resettlement and changing livelihoods, which also lead to scattered social networks, indigenous women and men have to devise new ways of organizing their social reproduction. Women in these communities are burdened with the responsibilities to weather the changes associated with resettlement and keep family going for day-to-day survival, but their support networks for childcare and other reproductive work might not be available as before with more women becoming busier and more mobile in order to gain cash income. Unlike childcare among urban workers and in industrialized countries, analysis on childcare in rural remote areas has been neglected. However, we noted that the life of mobility, mobility patterns pose new challenges for childcare arrangement in these remote villages. Based on Cresswell's (2010) notion of political dimension of mobility and following Kronsid (2008) in taking mobility as capability, this paper analyzes the link between gendered livelihoods and mobility patterns and how these affect social reproduction especially childcare.

**Role of Local Governments in Immigrant Integration: Cases from Thailand and Japan**

There are much discussion on immigration at the national state level, focusing on their immigration and citizenship status. However, it is at the same time recognized that there are many migrants who do not go through the official procedure of immigration and come to live in the country illegally. Local governments need to face these migrants on a day-to-day basis, since these migrants live there as residents. We focus on this vacuum of migration policy at the local level. How are the local governments coping with migrants and how are they balancing their accountability to local residents and their accountability to national state regarding migration policies? We will take cases from Thailand (Tak and Samut Prakan) and Japan (Yokohama city) to explore the struggles of local governments and communities.

**Vulnerabilities to Cyclonic Disasters in Bangladesh**

This paper aims at exploring the vulnerability factors affecting cyclone impacts in the southern coastal regions of Bangladesh based on empirical investigations. The primary data for the present analysis has been collected from over hundred respondents, who sustained repeated cyclonic disasters, based on semi-structured interviews conducted during last several years in the study areas. The findings suggest that the prevailing socio-cultural conditions significantly underpin the victims’ evacuation behavior and rapid response during crises and emergencies. Moreover, a comparative analysis of 1991, 2007 and 2009 cyclones, marked as the most severe in recent history, reveals a significant decline in life casualties of 0.5 million, 0.14 million and 4 thousand respectively. The paper identifies three major reasons behind this damage reduction. First, disaster preparedness measures have gradually become effective and the information dissemination technology and early warning systems got improved over the years. The widespread of cell phone technologies in rural areas of Bangladesh played key role in effective early warning dissemination and reducing life casualties between 1991 and 2007 cyclones. The second reason is the unequal population density of the landfall areas of these three cyclones. The 1991 cyclone made landfall near Chittagong city, the second largest city in Bangladesh, causing maximum damage to lives and livelihoods. The third reason suggests that the 1991 cyclone had attacked during high tide, causing high storm surge accompanied with severe inland flooding and enormous destructions. The paper, however, makes substantial analysis for informed decision-making and policy considerations for cyclonic disaster reduction in southern Bangladesh.

**“Individuality” As a Moral Expression in Japan**

Sociology has long been interested in individualization or individuality as social phenomena. Classical sociologists found individualization among social changes in modernization. It is said that there has been this process in Japanese society, too.

This paper examines how “individualization” and “individualism” has been talked about, not among sociologists, but among lay people in Japan and explores how people conceive of “individualization” and “individualism” and how they make use of those concepts to understand their everyday life. Those words are not only theoretical terms but also everyday words. This way of approach is based on the idea Ibarra & Kitsuse (1993) proposed as an ethnography of moral discourse; a constructionist approach to social problems that focuses on social processes in which a social problem is defined and discussed.

The words “individualization” and “individualism” in Japan are vocabularies often used to problematize social phenomena, people, or events. For example, a movement to change the civil law to allow women to keep their name after their marriage used to be criticized as excessive “individualism.” Eating a meal alone, especially in the case of children or young members of a family, drew attention in early 2000’s as ‘ko-shoku (individual or soliy on their own),’ and is thought to be a problem of individualization that has weakened family bonds. These vocabularies convey moral meaning and they are “vernacular constituents of moral discourse” (Ibarra & Kitsuse 1993).

By examining how those words are used in moral discourse, I would like to argue how they work for people to approve or disapprove of social conditions, behaviors, and social changes. Talking about “individualization” or “individualism” is a speech act that participates in constructing social realities.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The categories of identity, identification, state, civil, national, and ethnic identity are being widely used in sociology and other disciplines. These concepts are rather new to Kyrgyzstan's public domain and scientific rhetoric where the interpretation of a nation as citizens of the state started entering political and academic discourse. According to Habermas, post-traditional, post-national identity is 'a more sober political identity' that separates itself from the background of the past centered around ethnic history. Modern civil nation is not made spontaneously and at one step. It evolves as a result of efforts aimed at consolidation of civil society and its institutes in their interaction with the state.

Modernization of post-Soviet Kyrgyzstan in the context of local-global relations of post-traditional world will be successful only when traditionalism is overcome based on the choice of culture. Dominant and traditional cultural and religious identities is a feature of traditional societies in which ideology, ethnicity, and religious traditions are main social values. In post-traditional world the values of civil nations are asserted that integrate multi-ethnic communities and ascertain cultural pluralism as a main vector of collective identifications. A 'civil nation' is not developed by chance, but emerges as a result of the efforts to strengthen civil society and its institutes and their interaction with the state.

The overall problem of the Kyrgyzstan's identity is a mismatch between its basic elements such as national, ethnic, religious, cultural and political ones. There is a trend for new interpretation of these elements' composition. While the Soviet identity was mobile home lifestyle which promises a pleasing climate, mobile home is generally more affordable than living in a site-built home, many people in the Sunbelt states of the US: the mobile home park. While living in a mobile home generally more affordable than living in a site-built home, many seniors actively seek, and even move across the country, to participate in the "mobile home lifestyle" in the US southern regions which promises a pleasant climate, homeownership, leisure activities, community, and friendship to White middle and working class seniors. My paper examines to which extent these expectations by seniors are fulfilled in which kinds of communities, and how social differences, economic struggles, as well as health and personal issues can compromise them over time.

The paper is based on an analysis of 150 qualitative interviews conducted with residents of the Gulf Coast of Florida between 2005 and 2009, where more mobile home parks are more numerous than anywhere else in the US. Just over half of the interview participants were 55 years or older; roughly one fourth resided in so-called senior parks which restrict residency to persons over the age of 55, while the other half lived in communities that also accommodate middle aged residents and children.

Even though it is not an entirely urban phenomenon, the senior mobile home lifestyle is influenced by urban experiences and cultural imagery, such as fear of crime or racial/ethnic conflict, often creating a longing for simpler, more neighborly and homogeneous communities which can, however, turn out to be less affordable, affordable, and personally fulfilling for older people than originally anticipated.
multicultural world. Of course, there are challenges that they have to deal with in order to achieve the social transformation.

**Russian Youth: Mobilities, Inequalities and Life Chances**

Due to the influence of the global social transformations of XXI century there have appeared new forms of inequality (access to mobilities, networks, education, spare time and information, guarantees of security) as well as the “old” inequalities concerning income, wealth, prestige are being changed in the direction of increasing. Russian youth has been particularly affected by the rapid social, political, economic and cultural changes and discrepancies. Furthermore, the breakdown of the USSR has led to the drastic social conversion. These multiple structural factors not only determine but shape the life of youth in Russia. Faced with these uncertainties and turbulences the young people have to make their own decisions and to pattern their behavior on the current “liquid modernity” (Z. Bauman) which possess a lot of seeming life chances and choices.

Our paper addresses the growing phenomenon of social mobility which has become a core motif of the modern society and numerous “new” and “old” inequalities forming the social structure of the Russian society. The theoretical grounds of the research are the classical and the modern social theories concerning social inequality and mobility. We elaborate the “integral” approach to the social inequality which appeals simultaneously the objective characteristics and to the person’s perception of his social position and the inequality phenomenon.

The paper is based on the desk study of the Russian youth, its problems, choices, social identification, ways of life and on the data of the author’s sociological on-line survey of 400 young people at the age of 18-35 years old. I’ll present the results of the research showing the influence of the becoming of non-linear inequality on the social mobility and life chances of youth in Russia.

**Life Expectancy and Retirement Age: Policy Options and Practice**

The trend to early retirement that has been observed in many industrialized countries (e.g., Kohli et al. 1991) seems to have come to an end. The steady increase in life expectancy has led to changes in retirement age regulations, what in turn accelerates the aging of the workforce. For example, the Czech Republic and Poland increase their retirement age by the amount of the projected increase in life expectancy, what statistically keeps the mean duration of the retirement phase in the life course constant, while the mean working phase in the life course extends. Others countries like Germany rise the retirement age in a way that both the retirement and the working phase increase. Regardless of the amount, these changes affect inequality and redistribution by the social security systems as life expectancy is distributed unequally in these societies: For example, better education and higher income result in higher life expectancy. The paper discusses opportunities to change the current three-parted (and dominantly male-oriented) life course regime in a way that both increased mean productivity of the aging workforce and increased inequalities can be reached at the same time by reorganizing the life course, namely by redistributing education, work, and retirement phases in the life course. By improving productivity, the problems of ageing societies can be tackled at the societal level (e.g., increasing contributions for social security) as well as both the level of employers (e.g., improved skills of the aging workforce) and employees (e.g., Improved health). Discussing such opportunities, other than simply rising retirement age, widens the scope for designing growth friendly social security that help to reduce existing social inequalities.

**The Politics of Social Policy in Kenya**

Since the introduction of the multi-party system in 1992, Kenyan political parties generally had a low programmatic profile and were clearly personalized. Voting was rather based on ethnic and religious affiliation than on policies. The inglorious climax was the violence after the presidential elections in 2007 when more than 1000 people were killed and over 300,000 displaced. It was thus remarkable when the newly aligned major political camps released programmatic manifestos for the 2013 elections. They included some claims in the field of education, health care, job creation, social security) as well as both the level of employers (e.g., improved skills of the aging workforce) and employees (e.g., Improved health). Discussing such opportunities, other than simply rising retirement age, widens the scope for designing growth friendly social security that help to reduce existing social inequalities.

However, barely three months after the election, President Kenyatta declared free public maternity services, a first step towards free primary healthcare as desired by the Jubilee coalition manifesto. Considering the human and financial resources, there is still ample ground for scepticism concerning the long-term viability of this policy. Nevertheless, this is a significant development in a rather sclerotic social welfare system.

What are the determinants of this social policy change? Functionalist, institutionalist, economic determinist, modernisation or power theories have limitations in explaining power. Preliminary evidence from interviews with stakeholders in Kenya and other sources point towards the importance of politics. The recent post-election violence questioned both domestic and international legitimacy. Including free maternity care in the manifesto and implementing it quickly is on one side an attempt to restore international legitimacy, as maternal health is an important issue on the international agenda (MDGS). Given the neck-and-neck electoral race of the two big coalitions, it on the other hand also attempted winning the support of smaller electoral groups and thus domestic legitimacy. Hence, catalyst by a serious electoral crisis, politics finally resulted in policies.

**KÖNIG, ALEXANDRA*** (University of Wuppertal, okoenig@uni-wuppertal.de)

**Faces of Uncertain Transitions to Adulthood – in Different Fields of Education**

The faces of uncertain transitions to adulthood vary between different countries. But they also differ within countries. Germany and its manifold fields of education are ideal cases for studying the phenomena in question. Using data from a quantitative and qualitative longitudinal study on orientations, strategies and decisions of adolescents upon leaving school, we will carve out different patterns of uncertain transitions to adulthood.

In our presentation we will

(a) show how the transition to adulthood is structured in different fields of education (e.g., in a paternalistic apprenticeship based on an old master-pupil model; in an art academy which offers independence but uncertain job chances);

(b) differentiate between different forms of uncertainty (e.g., to secure the livelihoods in the long term, to find the scope for self-realisation, to live alone);

(c) discuss how the adolescents cope with uncertainty, how they design their future and their self.

The sample of our study contains trainees in vocational training (hairdressers, painters) and university students (art, teaching/engineering). The sample composition allows a comparison of adolescents in different fields of education in Germany.

There are different theoretical options and viewpoints to get a perspective on transitions to adulthood. In forms of our research project, we link theories of intergeneration (e.g., Meads processual concept of “self”: Strauss’ concept of “status passage”) with Bourdieu’s theory of social inequality (and his concept of “field”) to understand the strategies and orientations of adolescents at the threshold to adulthood.

**RC04-80.9**

**KÖNIG, ALEXANDRA*** (University of Wuppertal, okoenig@uni-wuppertal.de)

**Orientation and Strategies of Less Privileged Students**

In Germany, like in many other countries, the proportion of adolescents with university entrance exam increases and the absolute number of students is higher than ever before. Using data from a quantitative and qualitative longitudinal study on orientations, strategies and decisions of adolescents upon leaving school, we will shed light into the way less privileged adolescents make their choices and shape their self-project. We use the term “self-project” (in reference to Mead and Strauss) to indicate that the decision for a university program is (a) part of a more encompassing “self-project”, that allows identification and this means ascription to a unique self; (b) it is a decision-process (with evaluations, modifications, revisions), and it is (c) embedded in an interactive process with generalized and significant others. The sample of our study contains three subsamples: students of art, of teaching, and of engineering. We want to discuss the following points:

a) The structuredness of choices: Choices are structured because requirements and expectations differ depending on the social position. For instance, the less privileged adolescents choose more often university programs offering good job chances (like teaching or engineering).

b) The access to different fields of education: While the criteria for access to university are universal and transparent (school grades), access to an academy of arts is unpredictable. A committee of the academy identifies a specific “artistic”, incorporated capital. Mass participation to education at an academy does not exist. c) The relevance of significant others: The quantitative interviews show that students from lower classes more often feel parental misgivings concerning their personal ability. The qualitative interviews allow to deepen the analysis about the role of significant others.

**KÖNIG, RONNY*** (University of Zurich, koenig@soziologie.uzh.ch)
**Educational Inequality and Welfare State Patterns**

Previous research on social stratification reveals that social inequalities in educational and thus occupational opportunities are still very relevant features of modern societies. Against this background the study focuses on the intergenerational reproduction of educational inequalities and how this reproduction is affected by specific welfare state patterns in 13 European countries (Australia, Belgium, Denmark, France, Germany, Greece, Ireland, Italy, the Netherlands, Portugal, Spain, Sweden and Switzerland). For the analyses micro-data from the Survey of Health, Ageing and Retirement in Europe (SHARE) and macro-data from several sources (e.g. Eurostat, OECD and UNESCO) are used. With this approach it is possible to combine a multi-level perspective in a two-level model. A broad comparative perspective allows the identification of different institutional influences, namely direct or indirect governmental investments in education, national specific shifts in the labour market as well as demographic changes. In general, multi-level estimates on 33,346 individuals – born between 1950 and 1984 – show the perpetual importance of the family of origin and the reproduction of educational inequalities over generations. Furthermore, the overall hypothesis that both welfare state arrangements and labour market indicators have an influence on the educational attainment is confirmed. In addition, contextual characteristics can partly counter the influence of social origin and therefore reduce the intergenerational transmission of educational opportunities.

**KÖPPE, STEPHAN** (University of Dundee, s.koeppe@dundee.ac.uk)

*The influence of generational support on housing pathways: Evidence from the British Household Panel Study (BHPS)*

The family home is the single most valuable asset for most individuals and households. In addition, people have strong emotional attachments to their family home, when it is passed on through generations. In recent years this idealised housing pathway has become more and more complex. Young people are increasingly depending on their parents, both financially (deposit) and in-kind (guarantor, living rent free at parental home), to acquire their first home. Qualitative evidence shows that middle aged children support their less well-off parents to purchase their own flats via the right-to-buy scheme. This paper contributes to this debate by investigating the influence of bequests and in-kind generational transfers on homeownership. Based on the British Household Panel Study (BHPS) we investigate how housing pathways are influenced by receiving an inheritance and in-kind support by offering rent free accommodation. Estimates suggest that inheritance seems irrelevant compared to other socio-demographic control variables. Based on the results the timing of such windfalls seems to be crucial. Most individuals receive an inheritance at the end of their work-life and often share the amount of the windfall with their siblings. Hence, at this stage in life few people move into their family home as owners or use the windfall to purchase their own home. However, rent free accommodation seems to have an effect on housing pathways. Young people who are living with their parents are benefiting from this in-kind support and are able to purchase their first home earlier than independent mortgagees who are saving up for a deposit while renting. These results are discussed in the wider context of housing policy, welfare and generational support.

**RC32-542.5**

**LABUCAY, IREMAE** (Social Weather Stations, maie.labucay@gmail.com)

**Gender, Work and Family: The Situation in the Philippines**

Using three waves of data from the International Social Survey Programme (ISSP) survey modules on Work Orientations, and on Family, Work and Gender Roles, the paper will explore the current situation and the changing trends on how the work-family nexus is structured by gender in the Philippines. At the macro-level, Filipino women have gained greater equality with Filipinos as well as with the rest of its Southeast Asian neighbors. The Philippines was one of the first countries in Asia to have recognized the important role of women as an essential component in nation-building. There are laws enacted laws and policies instituted to ensure the empowerment of women. The Philippines has had two women Presidents, a woman Chief Justice of the Supreme Court, and women in high-level elected positions. Women have much access as men to establish their own businesses.

But what happens when men and women go home from work? Despite the increasing the role of women in the public sphere, the Philippines remains a conservative, largely Catholic society that puts importance on the family. The paper will first examine the gender differences in the domestic division of labor, traditionally the women’s domain as “homemakers”. Then the paper will examine the possible impacts of gendered domestic division of labor on the work sphere, as measured by potential work-family conflict, and attitudes/behavior on female employment over the life-cycle. Finally, the paper will examine the possible linkages of domestic division of labor and well-being of couples, including satisfaction with family life, happiness and satisfaction with life.

Using the data from ISSP surveys conducted in 1994, 2002 and 2012 will allow the paper to examine the trends in gender, work and family in the Philippines within the context of the changes in the Philippine economic conditions across three decades and the accompanying socio-cultural changes it brought.

**Ambivalent Transnationalism. Understanding the Long Distance Engagements of Hometown Organisations**

Collective remittances undertaken by hometown organisations for the benefit of their origin area is a well-known illustration of migrant transnationalism. This paper unravels the rationale for these homeowners to engage (or dis-engage) into long distance development practices. The latest evolutions of transnational theory focuses on the spatial extensions of transnationalism embedded into neo-liberal globalization but fails to address the micro level drivers of transnational engagement. It is contended that a revised conception of structure and
agency approach to transnational phenomena is likely to shed a new light on actors’ transnational engagements and on the role of transnational social institutions such as hometown organisations. This S/A approach presented in this paper draws on ambivalence theory as well as Habermas communicative action theory. The paper also argues that such an approach would open the possibility to open a cross fertilizing dialogue between transnational theory, migration theory and general social theory.

The different steps of the demonstration will be illustrated by personal research on hometown organisations in France and the UK. Arguably, integration adds layers migrants’ identity. Their identification with the place of settlement and their new associated obligations undermine their “raison d’être” as a villager. The life experience and socialisation of migrants in alternative social fields enriches their lifeworld with new references and fosters ambivalent perceptions of the world. But, in term, this multi-polarisation questions people sense of belonging, in their new context it needs to be constantly reassessed. The strong social practice of engagement into long distance development initiatives observed among hometown organisations is the result of this necessity to reassert “villageness”.

**RC31-537.1**

**LACROIX, THOMAS*** (CNRS, Migrinter, University of Poitiers, thomas.lacroix@univ-poitiers.fr)

*Transnational Volunteering and Immigrant Incorporation: The Case of Moroccans in France*

This paper analyses the recent evolution of Moroccan organizations in France. The analysis of the Journal official, a registry of all associations created in France, shows a rise in the number of hostland oriented organizations such as civic or socio-cultural associations and whose aim is traditionally dedicated to insertion of immigrant communities in France. In parallel, the number of creation of homeland oriented organizations is on the rise and surpassed hostland oriented organizations in 2002. These transnational associations are mostly NGO’s engaged into development in the villages of origin.

What are the relationships between this reorientation of Moroccan volunteer- ing and integration? What is the growing importance of the transnational referent synonymous with a weakening of the integration dynamics in the host society? The analysis of the INED survey “Trajectoires et Origines” including a sample of 10 000 people and focusing on both immigrant integration and transnational practices shows that it is far from being the case. This reorientation parallels the emergence of a Moroccan middle class in France. This data survey analysis is complemented by a field study that informs the dual embedding “here and there” of immigrant transnational organizations.

*L’action Et Les Politiques Syndicales à L’épreuve De L’aide Et Des Services à Domicile En Europe. Le Cas De La France*

En France, comme pour d'autres pays européens, l'aide et les services à domicile sont le lieu, depuis plusieurs décennies d'expérimentations discrètes en matière d'émergence de nouvelles formes d'emploi et de précarisation du travail. Dans le même temps, des avancées certaines mais fragiles ont aussi eu lieu et ce, depuis plusieurs décennies.

Depuis le milieu des années 2000, on assiste toutefois à des mutations importantes. Les nouvelles régulations engagées par les Pouvoirs publics impactent très fortement les conditions de travail et d'emploi ainsi que les politiques et pratiques des employeurs en matière de management et d'encadrement du person nel. L'behance raisonne sur le secteur marchand ou non marchand. Du côté des organisations syndicales, le secteur apparaît comme un nouvel enjeu. De nouvelles pratiques et politiques émergent, tandis que les militants du terrain continuent d'être engagés dans un travail militant au quotidien, dans un univers où les taux de syndicalisation sont faibles.

Cette communication propose de s'intéresser aux formes des politiques et de l'action syndicales dans l'aide et les services à domicile en France, en articulant les différentes échelles de l'action syndicale et en revenant sur les contradictions à l'œuvre. L'analyse documentaire, d'entretiens réalisés auprès d'acteurs syndicaux et institutionnels ainsi que des observations de permanences syndicales permettront de discuter des stratégies à l'œuvre et de la façon dont elles peuvent peser pour changer le travail, qu'il s'agisse d'actions au quotidien ou de formes d'intervention dans des instances internationales. Les données sont extraites d'une recherche européenne (Belgique, Italie, Espagne, France) coordonnée par le BIT (Fonds européen) menée au moment de l'application de la Convention internationale 189. Une mise en perspective avec les autres pays étudiés sera proposée.

**LADJAL, TAREK*** (Lecturer, tarekladjal@gmail.com)

*The Egypt-Sufism Movements in the Aftermath of 2011 Revolution. Critical Study*

Abstract:

Experts on Sufi movements often assume a potentially significant position for Sufism in forming the political map for change in Arab countries following the Arab Spring. This is particularly true for one of the most vibrant Sufi capitals of the Muslim world; Egypt, holding a record of more than ten million Sufi members. In spite of this, one year after the Egyptian Revolution, political developments began to exhibit the failure of Sufism to gain political ground in the post-Mubarak political scene. This paper discusses the problematic issues of Sufism with respect to politics in Egypt, with particular focus on the political experience of the Sufis in...
Egypt. It seeks to examine the Sufi experience in the process of political struggle, in addition to their contributions in the election held in November 2011 in an attempt to understand the factors which culminated in their gaining remarkably insignificant political support in spite of their massive membership base; and officially favored state support, both internally and externally. This study concludes that the nature of the Sufi practice itself has played a key role in restraining their political presence, in addition to their lack of political awareness as well as poor organization and populism; all of which have had a significant impact on the failure of the political experience of Sufi orders in Egypt.

While it does not create a theory of cosmopolitanism it does deal with common participation, particularly online participation. Crawford, writing in the context of the twenty-first century. Drawing upon complexity theory, actor-network theory and field theory, this paper considers 3D printing as a newly emergent technology and examine its translation into one specific culture field—museum field. Museum field, the guardian of authentic material cultures, instead of worrying the widespread of hyper-real reproduction culture caused by 3D printing, showing enthusiastic embracement of this new technology that brings back materiality to the society. This paper thus discusses how 3D printing associates into the museum assembly and creates the new heterogeneity and novel competition transforming the museum field. It not only emphasizes on the museum's aftermath of digitalization and its new hybrid material turns by 3D printing whirls, but also examines new dynamics engaging into the competition in the global museum field.

Based on 3D printing's current engagements and appropriation in the museum field shown in news and exhibitions as well as scenario analysis of future studies, this paper examines their performances in terms of forms of museum capital: Firstly, it analyzes current museums' acquisition of 3D printing collection and their creative projects with artists and designers as well as its application in collection's restoration; secondly, it analyzes the future presentation techniques in exhibitions with newly emergent materiality and spatial design; thirdly, it deals with how 3D printing 'engaged in museums' interactive education programs and their future development; thirdly, it discusses bringing 3D printing back home for on-line visitors and souvenirs-making in the age of (im)mobility. Some scenarios analysis of the 3D printing's general future impacts and the consequence of unequal development of global museum field will also be laid out as the conclusion.

Exploring the Role of Listening in Participation. -- CANCELLED

This paper will review the work on listening as a democratic skill in participation, particularly online participation. Crawford, writing in the context of the applying listening in the context of online activity, draws on the work of Jonathan Cray who observes there is in our times an ongoing crisis of attentiveness.' Crawford proposes that emphasizing listening as an approach offers a counterpoint to this. So too listening theorist Beard has written that there may well be "an ethical listening subject." He argues this subject will make "the choice to listen selectively." This does not mean Beard explains to only those points at which we feel "safe" but rather to think about why and how we listen and to seek out listening points rather than being passive receivers of endless information. Having explored elements of listening theory drawing on Kennedy and Beard, this is then applied in the context of environmental issues. The recent work of Holifield will also be reviewed; this work argues that listening and ecology have a relationship. Drawing on quite different theoretical foundations nevertheless Beard and Holifield argue this listening then in turn creates the 'self'. The listening approach to online participation therefore has value in contributing to cosmopolitan ideas. While it does not create a theory of cosmopolitanism it does deal with common themes from cosmopolitan thinkers who grapple with the universal, the voices of all, and the self. Listening writers therefore offer an important perspective to the project of enhancing democracy.

Social Disorganization and Terrorist Attacks in the United States before and after 9/11

Despite much rhetoric regarding terrorism in recent years, little empirical research has examined patterns and predictors of terrorist attacks in the United States. We use newly available data on terrorist attacks in U.S. countries from 1990 to 2010 to test a set of hypotheses informed by a social disorganization framework. Given the historic impact of the coordinated attacks of September 11, 2001, we also examine whether the determinants of terrorism changed after this iconic event. In particular, we hypothesize that the unprecedented increase in anti-terrorism policing following 9/11 not only reduced terrorist attacks but also produced the greatest reductions in terrorism in communities where policing is traditionally most successful—those with low population heterogeneity. Across the two decades spanned by the data, results show that terrorist attacks were more common in counties characterized by greater language diversity, a higher proportion of foreign born residents and greater residential instability. Moreover, while total attacks declined significantly after the 9/11 attacks, results show that the decline was less dramatic in areas characterized by high levels of population heterogeneity. We discuss the implications of the results for theory, future research and policy.

Educational Inequality in China -- Preliminary Findings from Recent High School Graduates in Urban Nanjing

China has undergone an expansion of higher education in the 1990s. The crude university enrollment rate jumped from 1.6% in 1978 to 24.2% in 2009. The university enrollment rate among high school graduates increased from 27.3% in 1990 to 83.6% in 2010. At the same time, Chinese universities are stratified into key universities and non-key universities, which differ significantly in resource input and prestige. Researchers argue that in the era of mass education, the focus of educational inequality should move from quantitative to qualitative differences. Class inequality in the US is found to be maintained through family practices in competition for prestigious universities rather than mere educational attainment. Moreover, when it comes to labor market stratification, both university prestige and extracurricular activities are screening devices adopted by employers.

Educational inequality in China has attracted much research attention in the past decade. However, little is understood about educational inequality in China in the qualitative terms. The present study thus explores the relationship between family origin and inequality in university education in terms of institutional prestige and participation in extracurricular activities. Data come from a panel survey of 759 recent high school graduates in urban Nanjing. A vast majority of these students (98.4%) were enrolled in post-secondary education in 2012, among whom 96.6% attended universities or colleges in China. The analyses are restricted to the in-school subsample.

Preliminary findings reveal that 21.5% of the respondents go to key universities. Students with university-educated fathers, students coming from prestigious high schools, and students with better self-reported academic performance are more likely than their counterparts to enter key universities. Father's education and prestige and key university are significant correlates of social participation and occupancy of leadership position. Implications of the findings will be discussed.
RUAN, DANCHING (Hong Kong Baptist University)

Educational Transition and Social Networks – Preliminary Findings from Recent High School Graduates in Urban Nanjing

The formation of social networks is not a random process. It is a result of the combined forces of macrostructural conditions, which provide differential opportunities to meet members of different social groups, and the tendency of people forming social relations with similar others. The macrostructural conditions are often presented in the form of social organizations. School is a major social organization in contemporary societies; there many individuals spend an extended period of time on acquiring knowledge and skills. During the course of schooling, individuals often move from one educational institution to another. A change of educational institutions would then lead to a change of macrostructural settings for social network formation. Existing studies have mainly focused the correlates of social network formation at one time point or social network changes across different time points. Little is understood about the network impact of macrostructural changes associated with life course transitions. The present paper investigates the relationship between educational transition and social networks in China. Data come from a two-wave panel study of 759 recent high school graduates in urban Nanjing, a vast majority of whom (98.4%) were enrolled in post-secondary education in 2012. Two research issues are addressed. First, what is the network impact of transition to higher education? Chinese students feared that they would lose friends and contacts with their peers, which defer significantly in resource input and prestige. Differences in network changes between these two types of universities are compared. Second, how may participation in extracurricular activities and part-time employment be related to an expanded social network and increase in network diversity? Preliminary findings show that transition to key universities, extracurricular activities, and part-time employment are related to an expanded social network and increase in network diversity. Implications of the findings will be discussed.

Creating Agora Chronotopes on Young People's Political Participation in Transnational Meetings

This paper deals with young people's political participation in transnational meetings. Methodologically the study aims to shed light on multi-staged global ethnography. Young people are viewed here as a social age group sensitive to critical, alternative and even radical political participation. The diversity of the young actors and their actions is captured by using several different methods. The research sites are the EU Presidency Youth Event (2006 Hyytinä, Finland), the Global Young Social Forum (2007 Nairobi, Kenya). The data consists of participant observation, documents and media articles of the meetings, interviews, photos, video, and internet data. In this paper the diverse field of youth political participation is studied by using a cross-table of cosmopolitan resources (or the lack of them) and everyday-makers – expert citizen dichotomy. First, the young participants of the EU Presidency youth event are studied as an example of expert citizens with cosmopolitan resources (these resources include, for example, language skills, higher education and international social network). Second, the paper analyses those everyday-makers who use performative politics to demonstrate their political missions here and now. In order to make the social movement global they need cosmopolitan resources to be able to use the social media tools and work globally. Third, the paper reflects upon the difficulties of reaching those actors who lack cosmopolitan resources, either everyday-makers or expert citizens. The going-along method and the use of the interpretors are shown as ways to reach these young people's political missions. Fourth, the paper underlines the importance of ‘contact zones’ for deeper democracy and for boost- edged dialogue between different kinds of participants.

Spaces of Dialogue? the Case of the Wsf Tunes 2013 from the Perspective of Local Youth and Volunteers

The paper focuses on the World Social Forum (the WSF) held in Tunis 26-30 March 2013 from the local youth perspective. The WSF Tunis brought together 60,000 participants from formal and informal social movements and networks all over the world for five days. The authors distinguish the young WSF volunteers from other Tunisian youth who participated in the forum. The data drives from participatory ethnography and action research. Around 15 WSF volunteers and 20 young Tunisian civil society actors involved in the WSF Tunis were interviewed during and right after the forum.

The research questions focus empirically on the dialogue/non-dialogue from the young Tunisian participants points-of-view: 1) what kind of local (Tunisian) dialogue took place; and 2) what kind of global dialogue (esp. together with non-Tunisian participants) took place – inside and outside workshops and sessions. These questions intertwine with the questions of why the WSF came to Tunisia and what affect it had to the local civil-society from the young informant's perspective. The paper also studies the roles and effects of the local youth in the WSF as well as the success and shortcomings of the WSF Tunis from the perspectives of the young volunteers and young Tunisian civil society actors.

The Tunisian author of the paper (Jabberi) was the volunteer coordinator in the WSF Tunis for around 1,200 volunteers (applying action-research and auto-ethnography), the Finnish author (Laine) was carrying out her post-doctoral research in the forum (and conducting interviews as part of her ethnography). Therefore, the academic dialogue between the global South and North takes also place in the setting of co-authors, carefully reflected in the paper.

Producing Knowledge about Post-Separation Stalking from Children's Point of View - Children As Social Actors?

In this presentation, the post-separation stalking is understood as gendered violence from the children's point of view. The post-separation stalking - as a sensitive, morally laden issue - creates a psychosocial and physical threat for children's and their mothers' wellbeing. Stalking is defined as severe, continuous, multidimensional, and a systematic process of violence. Even though the mother is the main target of the stalking, the children are often used as a means to carry out stalking, as targets of revenge and as abused informants. The sensitive nature of the phenomenon emphasizes the ethical demands in the knowledge production. The presentation is based on the ongoing research project “The Invisible Children – Supporting the Survival of Children and Adolescents in the Everyday Life Shadowed by Post-Separation Stalking” funded by Alli Paasikivi Foundation. The aim of the project is to analyse the stalking in the everyday life of Finnish children. The principle has been to enable safety spaces for children's voices. The children's knowledge is approached from different angles in order to reach their everyday experiences. The knowledge is produced together with the mothers and professionals (the Federation of Mother and Child Homes and Shelters) who work with the victims.

The basis of the data collection has been to encourage and strengthen the possibilities for children's narration. The data is collected by children's groups based on action and interviews conducted with children as individuals and together with their siblings. The knowledge produced in different forms and relations has supported children as social actors and knowledge producers. The tentative analysis shows that children are able to break the beliefs and taboos concerning the understanding about the family, parenthood, violence, and the best interest of the child. Therefore the question is do we take into account children as agencies who can redefine these issues?

The Realpolitik of Sexual Assault: Cartographies of Gender, Consent, Standpoint and University “Hookup Cultures”

There is significant media attention, especially in North America and the UK, to a so-called “hookup culture” among adolescents, particularly those enrolled in university. Characterization of young people as indiscriminately promiscuous may be reductionist hyperbole and/or cliché, but in any case the value-laden, gendered, classed and raced threads within such discourse obscure a regime of institutional rationales requiring interrogations. The current technological phenomena of social media, texting, and camera phones bring with them a culture of immediacy, self-disclosure, and voyeurism that add complexity to these issues and their lived experiences. In this era of rapidly developing technologies, the quality of sexual and platonic relationships is also undergoing accelerated changes. Research is challenged to keep pace with new realities associated with experiences and definitions of abstinence, sex, and dating. Moreover, consent and coercion are under-theorised in the literature, interfering with deployment of effective strategies to prevent or respond to instances of gendered sexual violence and non-consensual or coerced sexual encounters. Political, ethical and moral sensibilities mitigate efforts to nuance, trouble, and frame discourse on this subject, rigifying a project of patriarchal social reproduction.

This paper offers a theoretical framework for engaging issues of sexual coercion and consent, reconciling laws, policies and practices with RealPolitiks of

Can Sri Lankan Teachers Afford to Spare the Rod?: Teacher Attitudes Towards Corporal Punishment in School

The main objective of the study is to understand the attitudes held by teachers in the Government schools in Sri Lanka regarding the administration of Corporal Punishment (CP) in school and to examine the justifications they have for resorting to CP. The study is a response to a concern raised by the authors in 2012 about the need for more in-depth exploration on the topic.

The purposive sample of teachers who participated in the study was from four Government schools in Colombo. One school was a boys’ school while the remaining three were coeducational schools. 28 teachers were chosen for study based on their gender and years of experience in the teaching profession. Data was gathered through in-depth interviews with the teachers.

It was found that a majority of teachers in the sample have resorted to some form of CP at some point in their career as teachers. Given the teaching-learning culture teachers have been exposed to as children and the authority traditionally attributed to teachers in Sri Lanka, they were of the opinion that CP can have positive impacts on children and their future success. Teachers did not seem hostile to the idea of CP per se but the “form” and “severity” of CP administered on students.

Many were of the opinion that CP was “a fine means of disciplining students” as long as it is administered with the ‘correct’ intent of guiding students. They also thought that CP becomes an “issue” only when teachers use it in brutal/inhuman manner with vindictive intents and as a means of stress release.

High levels of work related stress and weaknesses in the mechanism of appointing individuals to the teaching profession were highlighted as resulting in situations of “brutal/ inhuman beating” in schools. These views expressed by teachers raise important policy implications.

The Conflict over Mining in the Heart of the Universe

Mining is progressing over indigenous people’s land in Mexico. One of the holiest sites of Wixárika people, Wirikuta, has been cedoned to mining companies seeking to revive mining in the region. This has caused a conflict. Wixárika people have been exposed to different groups of actors by construction, ownership and control of that territory.

This paper presents an ethnographic study of the conflict based on actor-network perspective. Information was obtained during fieldwork conducted during August to December 2012. The main purpose of this work is to analyze the conflict from a relational perspective, I also seek to highlight the importance of non-human actants which participate in conflict. Nonhuman actors have been invisible or objectified in sociological analysis of conflicts over the spread of extractive mining, however at least in the case we are studying, nonhuman actants are central to explaining and understanding the dynamic of the conflict by the construction, ownership and control of the territory in the Natural Protected Area Wirikuta.

Conditional Cash Transfers, Job Markets and Capabilities in Latin-America: A Missing Link

The paper is part of an on-going joint project between the National University of Colombia and the University of Buenos Aires that is re-examining the achievements of conditional cash transfer programmes (CCTs) in the region. Within the acknowledgment of their diversity in terms of targeting, modalities and composition, CCTs have been mostly praised by international co-operation agencies, Latin-American governments and the academia. Nonetheless, there seems to be a missing link. Social policy presents a strong relationship with how societies deal with dilemmas concerning social inclusion and justice within an increasingly complex world of new and local and global dynamics. Beyond technical debates related to CCTs financing and implementation there lays a key interrogative: do CCTs increase people’s capabilities and reduce key individual and household-related vulnerabilities? Do they provide access to a key asset such as greater job and income security? In 2012 the research project started to analyse six national CCTs programmes in the region (Argentina, Brazil, Chile, Colombia, Honduras, Mexico and Nicaragua) and two regional job markets (Argentina and Colombia).

The paper present two interesting insights: a) so far the great majority of CCTs evaluations have been unable to present any solid result about medium or long-term improvements in the security of people’s livelihood and capabilities, b) in the face of substantially unaltered rates of unemployment and informality, CCTs do not seem to have improved the participation of beneficiaries in the job market. These results are based both on the analysis of national and capital cities-based household’s surveys, and on programmes assessments and internally available data. Through the presentation of quantitative and qualitative the paper aims to contribute to the challenging of mainstream wisdoms on CCTs and to an already renewing debate in the region.

CHINTHAKA, KRISHAN (Freelance Researcher)
Response Latencies and IRT Person Estimates Using CASI

Computer assisted self-interviewing (CASI) has been used around the world for a long time in order to achieve survey data collection with a reduced cost. CASI can also be useful when the intention is to reach groups of the population who are geographically dispersed, or who cannot be available to be interviewed during normal work hours. However, it has often been argued that CASI may potentially yield low-quality data if the respondents are not motivated to respond honestly and reliably, using their full potential and concentration.

This study proposes a new Item Response Theory (IRT) algorithm for the estimation of the person estimates when an attitude scale or an ability test is administered through a CASI. The algorithm weights less the responses that are given too soon after the stimuli are presented, so they may not be considered as legitimate and honest efforts for a truthful response. The new method is based on the work of Wise and Kong (2005) and Mislevy and Bock (1982) and used a modified biweight IRT estimation method.

The application of the algorithm on empirical data (N=920) in the context of the mathematics National Curriculum in England gave indications of increased validity and usefulness of test results.

The possible practical consequences of the use of this algorithm for survey research are discussed.

Deferential Surrogates and Professional Others: Recruitment and Training Of Migrant Care Workers In Taiwan and Japan

When outsourcing care to foreign workers, a society must engage in discursive reconstruction and institutional reorganization of intimate labor. Should care be seen as a family duty or professional work? Should care be characterized as a culturally embedded practice or a market form of labor that can be easily outsourced to foreigners? This paper examines the operation of transnational care regimes in Asia by comparing the recruitment and training of migrant care workers in Taiwan and Japan. Although both countries seek migrant workers as a solution to the similar problems in aging population and care deficit, Japan and Taiwan have adopted different strategies which demonstrate varying ways in intersecting migration regime and care regime: Migrant care workers in Taiwan are positioned as “deferential surrogates” while their counterparts in Japan are seen as “professional others.” It is often assumed that East Asian societies share substantial cultural affinity due to their intersecting histories and common tradition of Confucianism. This comparative study not only shows varied institutional parameters of care that organize the family, market and state in distinct patterns, but it also demonstrates that cultural values and social practices such as feminism and gendered division of care are subject to transformation under the influence of state intervention and global market.

Tiger Parents in a Globalized World: Class, Immigration and Transnationalism

The reductive image of “tiger mom” has overshadowed the changing practices of and class differences within Chinese parenting. Based on in-depth interviews with parents in Taiwan and Chinese immigrants in the US, my paper examines how globalization has differential impacts upon the styles of childrearing across class divides. By comparing middle-class and working-class Han parents in two societies (Taiwan and US), I explore how the cultural practice of childrearing is mediated by class inequality and reconstituted by the experiences of immigration and transnationalism.

LAND, KENNETH C.* (Duke University, kland@soc.duke.edu)

Fifty Years after the Social Indicators Movement: Has the Promise Been Fulfilled? an Assessment and an Agenda for the Future

In recent decades and a half the struggles of South American popular movements and organizations against the military governments, free trade agreements and neoliberal economic adjustment policies crystallized in the election of many left or “progressive” governments. In these struggles and the constitutional processes that occurred in some countries, there are two central threads of struggles: first, the popular demand for the “return of the state” and social policies aimed toward social inclusion, access to education, health, food, social security ... and a reduction of the profound inequalities that have historically characterized the continent. The other axis refers to the relationship of humans with their natural surroundings, the struggles of indigenous peoples and peasants for their land, rights and rights of Mother Earth. This implies a profound critique of the very idea of development and the search for options to a civilization in crisis that has to confront the fact it have reached the physical limits of the planet. This also relates to a critique of the monocultural character of liberal-colonial South American states in profoundly pluricultural societies. The attempt to achieve these two sets of goals simultaneously has generated deep contradictions. In response to widespread social demands of the most excluded sectors of society and looking to reassert their political and electoral legitimacy, all these governments have prioritized economic growth based on extractive neo-developmentism (economic model based on an increased dependency on the export of non-processed primary goods) in a context of a significant hike in the demand and price of commodities in the world market. The purpose of this presentation is the analysis of some of the socio-environmental impacts of these governmental options and the main social and political conflicts that these have generated.

Work-Life Conflict In The Economic Recession

The aim of this paper is to explore from a gender and class perspective the effects of the on-going economic recession on work-life conflict and well-being of Swedish employees. For many employees, the global economic downturn has exacerbated work-life conflict making it more difficult to find an acceptable work/life balance. Some employees have lost their jobs, others have been forced to change jobs, accept reduced working hours, lower pay and/or accept work with increased degrees of precariousness with direct implications for work/life balance. Current knowledge indicates that the recession has not affected all employees equally. Due to gender segregation and the gender wage gap women and men are hypothesized as affected differently. Furthermore, social class is likely to play an important role in outcomes for both men and women. Consequently, although...
the global economic downturn has affected well-being of all employees, the ramifications for individual employees’ remain unclear.

The data used to study these issues were collected in the European Social Survey (ESS), Family, Work and Well-Being (FWW), modules for 2004 and 2010. The study is limited to a sub-sample of Swedish employees. To capture gender differences in perceptions of work-life conflict the research problem is approached from both dimensions; work-to-family and family-to-work conflict as previous research has shown that men and women experience these facets differently. In order to capture class position the study adopts Wright’s class scheme based on ownership, hierarchy and autonomy as developed and elaborated by Leifurfrud, Bison and Jensberg. The study is expected to show that some intersections of class and gender will exacerbate work-life conflict and have a more detrimental effect on work/life balance than others.

What It Needs for a Social Ego: A Survey-Based Comparison of Social Network Measures

In this paper we compare different methods of measuring social capital in conjunction with alter’s resources. Our analysis is based on a survey of two succeeding, complete cohorts of sociology students from one university. This survey includes detailed information on network ties between students. In addition, we use a resource generator and a position generator to assess ego’s social network beyond his/her fellow students. For all social network instruments, we differentiate between relationship strength, the basis for social capital, and the level of resources that are accessible via these social ties. We implement the same distinction with respect to measures of family background.

This unique design allows us to construct methodologically interesting counterfactuals. We can assess how the measured distribution of ego’s network resources differs if the accessibility of resources is not taken into account; how well we approximate ego’s resource distribution when based exclusively on indicators of relationship strength; and under which conditions – regarding ego’s network structure – we can measure social capital and related resources by using solely name generator based instruments. Furthermore, we compare these counterfactuals between different sampling designs. We analyze which path length is necessary to approximate the full cluster solution using a respondent-driven cluster sampling design.

Our study is constructed as a generic methodological study. Based on our results, we can specify which conditions regarding sampling designs and measurement instruments are necessary to adequately represent the social embeddedness of egos. These results are of general importance to researchers conducting large-scale surveys, e.g. international survey projects which rely on cluster sampling and/or name generator based instruments. Furthermore, we compare these counterfactuals between different sampling designs. We analyze which path length is necessary to approximate the full cluster solution using a respondent-driven cluster sampling design.

The New Middle Classes - Drivers of Both Unsustainable and Sustainable Consumption in Developing Countries

During the last decade, in public debates and particularly in the media, unsustainable patterns of consumption spreading also in the Global South developed into a major concern. The focus is mainly on the ‘new middle classes’. They are impeded to lack any sense of responsibility both in civic and environmental respect and, by their sheer number, to undermine any progress made so far in protecting the climate.

Nevertheless, albeit a pilot group in promoting western lifestyles, above-average levels of education and qualification, according levels of professional responsibility, and above-levels of political influence (locally, regionally...) make parts of the new middle classes important players in fostering more sustainable consumption.

Negotiating a Space to Rest: Denver’s Camping Ban and Camping in Denver

On May 14, 2012, camping became illegal in Denver, Colorado. Over the past 25 years, the development of downtown Denver followed identifiable patterns of neoliberal governance. Single room occupancy hotels were upgraded into “loft-living” condos, rundown streetscapes were intensely policed thenrendezvoused, a major downtown street was pedestrianized. Urban policies focusing on commercialization and real estate development contributed to Denver’s revitalization while exacerbating the city’s problem with homelessness. As experienced in other cities, concurrently rising property values and increasing numbers of homeless people have led to various municipal ordinances intended to render homeless people invisible to the consuming public. In Denver, a sit-lie ordinance was enacted and park curfews were more strictly enforced to keep homelessness from the public’s field of view. Consequently, for residents without a permanent address, finding a place to rest became increasingly difficult. Then in 2011, playing off of popular distaste toward the Occupy Denver Movement, conservative politicians and the Downtown Denver Partnership, a business improvement district, sought and succeeded in introducing legislation outlawing camping—sleeping in public with any sort of “protection against the elements”.

Arguing that the camping ban did not eliminate homelessness and interested in how Denver’s homeless residents were coping with the ban, we focused on a particularly vulnerable homeless community, injection drug users (IDU). Conducting participant and unobtrusive observation as well as in-depth interviews with 24 IDU, we learned that their continuing survival depends on a mixture of three interrelated processes: a complex moral economy of mutual aid and mutual predation within and between homeless communities, acts of often unexpected kindness by agents of the state officially charged with enforcing the camping ban, and the articulation of public and hidden transcripts playing off various tropes of homelessness, helplessness, and self-help.

“Because You’re a Migrant, They Treat You Really Tough.” Findings of a Qualitative Study on Young Migrant’s Perception of the Armed Forces in Germany

In 2011 compulsory military service was suspended in Germany. In view of profound demographic changes and ethnic pluralisation of the German society, migrants now pose an important target group for recruitment. The question whether recruitment of personnel with migration background is successful not least depends upon migrants’ perceptions of the armed forces, which have a long institutional history of ethnic homogeneity and exclusion of “others”. In order to identify psychosocial factors and dynamics that influence these perceptions we conducted an exploratory qualitative study, using four semi-structured group discussions with young people with different migrations backgrounds in three different German cities. The composition of the group of interviewees allowed for evaluating effects of gender, migration background and military status in addressing recruitment issues to migrants. Our analysis calls attention to three findings: 1. The participants resisted fixed national and ethnic identity ascriptions. Multiple accounts of situational identifications demonstrated their ability to strategically play with identity constructions in different social contexts. 2. The perception of the German armed forces was essentially framed by personal or family experiences with the military or police in the country of origin. Problematic experiences with armed forces in authoritarian countries e.g. negatively influenced the image of the German armed forces as well. 3. The interviewers played a subtle role in producing an environment of interest/disinterest for the armed forces in the group discussions. In unintentionally activating his role as a migrant military member, one of the interviewers was repeatedly addressed as a peer expert for a military career. Hence, with regard to recruitment strategies the study hints at the importance of 1. developing an institutional sensitivity for post-national identities of a younger generation of migrants, 2. considering different migration contexts in addressing military issues, and 3. integrating migrant servicemen as positive role models for their respective communities.

LANGER, PHIL* (Goethe-University Frankfurt, langer@soz.uni-frankfurt.de)

Intimacy in the Research Process – Methodological and Ethical Implications of Examining the Psychosocial Dynamics of Sexual Risk Behavior in Biographical Peer Research

Sexuality is regarded as a highly sensitive topic for empirical research, especially if tabooed and stigmatized issues are at stake and sexuality is conceptualized as a part of one’s biography. In general, peer research that is aimed at exploring life worlds as an “insider” is seen as a privileged way for researching sensitive issues because it can facilitate field access, enhance trust and openness, and play an empowering and de-stigmatizing role in the field. However, peer research on sexuality poses considerable methodological and ethical challenges that must be taken into account if the potential of peer research is to be utilised.

The paper draws on a peer research project on sexual risk behaviour of gay and bisexual men in Germany. Based on a biographically oriented approach 58...
narrative in-depth interviews were conducted by an HIV-positive gay researcher. In the peer interviews subtle dynamics of a sexualisation of the researcher occurred that focussed on the researcher’s sexuality and his sexual biography. The paper addresses methodological ways of dealing with phenomena of sexualisation and effects of intimacy in the research encounter, the interpretation of such data and its implications for writing-up and publishing the respective findings. Referring to psychoanalytic concepts of inter-subjectivity and counter-transference it argues for reflexively bringing in into the research process one’s own sexuality as a researcher for a deeper understanding of the production of sexual life stories in the interview situation. The double-bind of being researcher and perceived peer that may lead to exploitations of the interviewee’s fantasies of sameness call for the integration of ethical considerations about reflexivity, power relations and responsibility as an integral element of the methodology of biographical peer research.

Mobilizing for Dignity: Recognition and Social Movements

How do we understand the world wide spread of social movement of our age, from various fundamentalisms to the progressive thrusts of Arab Spring to Occupy? How have such movements fared? We will argue that the roots of these movements can be found in the consequences of neo liberalism that has not only fostered greater inequality and hardship for most, but its crises have migrated to the realms of subjectivity, emotion and motivation. Our analysis is rooted in the recognition of a Marxist critique of alienation, Lukacs critique of reification, Habermas on legitimation crisis, New Social Movement Theory and recent development in sociology of emotion. We will argue that these movements not simply for better economic conditions, but to overcome the adversities of a lack of recognition of a meaningful identity that in turn has fostered anger, indignation and even hope. But these assaults to one’s identity also foster hope that leads people to social mobilizations.

Tokyo: Rebuilding the Global City in a Context of Urban Maturity

Since the turn of the 2000s, Tokyo has been facing issues which deal with urban maturity, a notion characterized by two elements: stagnation of the economic growth, and population peak, associated with an ageing population. Those issues, which threaten the sustainability of Tokyo as a major and attractive global city, necessitate new approaches for urban management, urban finance, and urban rebuilding projects. Nevertheless, in spite of the mature urban profile of Tokyo, the city changed sharply during the 2000s. While demographic and economic indicators of Tokyo are not very favorable compared with those of the other Asian global cities, how could the urban profile of Tokyo change as fast and as dramatically as it did? How was the city able to reorganize its structure, to verticalize its skyline, to vegetalize its public and private spaces? After the «Japanese miracle» which occurred from the 1960s to the 1980s during a time of prosperity, the 2000s also knew another miracle: an urban miracle in time of crisis, as a result of urban maturity.

Two new phenomena are necessary to understand this urban miracle in Tokyo. The first one is real estate securitization, which allows the financing of the city based on its mature state. The second one is a new approach to urban management, with the edition of the Urban Renaissance Special Law in 2002. Both of these elements help to rebuild a world class city in a context of urban maturity. This new urban model is a cutting-edge one which can inspire the management of the 2000s. From the high growth, and population peak, associated with an ageing population. Those issues, which threaten the sustainability of Tokyo as a major and attractive global city, necessitate new approaches for urban management, urban finance, and urban rebuilding projects. Nevertheless, in spite of the mature urban profile of Tokyo, the city changed sharply during the 2000s. While demographic and economic indicators of Tokyo are not very favorable compared with those of the other Asian global cities, how could the urban profile of Tokyo change as fast and as dramatically as it did? How was the city able to reorganize its structure, to verticalize its skyline, to vegetalize its public and private spaces? After the «Japanese miracle» which occurred from the 1960s to the 1980s during a time of prosperity, the 2000s also knew another miracle: an urban miracle in time of crisis, as a result of urban maturity.

Two new phenomena are necessary to understand this urban miracle in Tokyo. The first one is real estate securitization, which allows the financing of the city based on its mature state. The second one is a new approach to urban management, with the edition of the Urban Renaissance Special Law in 2002. Both of these elements help to rebuild a world class city in a context of urban maturity. This new urban model is a cutting-edge one which can inspire the management of European and American cities facing the same issues than Tokyo. This paper will present the urban transformations induced by urban maturity, and will allow to discuss the notion of urban maturity, taken as a notion in opposition with the model of shrinking city.

LAPEGNA, PABLO* (University of Georgia, plapegna@uga.edu)

Analyses of Latin America’s “pink tide” (the rise of Left-wing administrations during the last decade) explain the demise of governments that followed the IMF and World Bank’s recommendations as a result of the deleterious consequences of neoliberal policies. I argue that to understand the rise of Left-wing governments we need to pay more attention to the connections between neoliberal policies and neoliberal politics (i.e. the political parties supporting neoliberal policies), and analyze the massive revolts preceding the rise of anti-neoliberal governments. Drawing on archival research and in-depth interviews, I develop this argument by examining a two-day massive riot targeting political institutions during February 2003 in La Paz, Bolivia. I analyze these events and their contentious performances to suggest that these protests targeted the political system rather than the institutions of neoliberal governance, thus opening political opportunities for the rise of Evo Morales and the Movement Towards Socialism. The Bolivian case illustrates that collective actions performed during massive revolts are underpinned by moral understandings and the drawing of symbolic boundaries, and that they can create turning points in historical trajectories. I examine the methodological challenges of studying leaderless and spontaneous protests, suggesting that the analysis of symbolically charged performances can be a point of entry for studying such events.

Teamwork Diversity

The study of teamwork is facing two opposite traditions – sociotechnical approach, which is more developed in Scandinavian countries, and production, which first appeared in Japan’s industry. Within the first tradition, the implementation of teamwork is associated with the quality of working life and industrial demystification. On the other hand, the production model strives to improve organizational performance with the help of teamwork, increasing peer pressure and work intensity. Strengthening democracy or renewing forms of control at work – what is the real meaning of teamwork in today’s workplaces?

Does teamwork represent a breakthrough from taylorism or a strengthening of taylorism? Does it rather represent both depending on the type of teamwork? Far from constituting a single homogeneous entity, teamwork takes diverse forms and can be distinguished depending on the autonomy workers have and the duties they are responsible for. On the basis of a survey conducted in the Quebec manufacturing sector (Canada), two types of teamwork – lean teams and semi-autonomous teams – are examined in this paper. These will be compared with a focus on autonomy, work intensity, task complexity, problem-solving activities and task rotation.

Two logics of teamwork adoption are also contrasted. Lean team adoption refers to the logic of standardization, labour cost reduction and incentive pay, without employment security guarantees, representation and partnership. On the other hand, semi-autonomous team adoption is based on employment security guarantees, representation and partnership. Finally, semi-autonomous teams represent an improvement of working conditions compared with both taylorism and lean teams. They also constitute an improvement of democracy at work. However, they require an appropriate institutional context, difficult to implement or to develop in this era of finance-led capitalism. Consequently, it is easy to understand why they are much less diffused than lean teams.
The contexts marked by the reception of migrants, with a high degree of multilingualism, represent a scenario that clearly reveals the symbolic capital associated with the existence of such organizations. In the case of young people, in the process of building their self-identifications and feelings of belonging, family influence and their own life experiences outside of this area may influence the construction of self-identifications in which the symbolic capital of the languages spoken in the residence territories are unequal and highly relevant (Bourdieu, 1985, 1991; Heller, 2000, 2008).

Increasingly, the aim of this paper is to analyze the predictive power of parental and non-parental variables related to languages in contact on self-identification with Catalonia.

From a quantitative approach, the main results show the importance of variables that refer to the symbolic realm of language – young people's language attitudes toward Catalan and Spanish and their self-identification with Spain, as well as the language attitudes and self-identification of their parents – carrying greater weight than other variables of socio-structural character, as the socio-professional or socio-cultural levels, and even the level of Catalan competence.

This work is a part of a research project funded by the Spanish Ministry of Science and Innovation (EDU2009-08659EDUC). Ianos, Paelegung and Popa have a Pre-PhD Grant funded by Catalan Government (2011 FIB 00490 / 2012 FIB 00379 / 2013 FIB 00347 respectively).

Undeserved Unhappiness: A Comparison of Philippines and Japan

The social relevance of happiness surveys is that they also tell us about unhappiness. To the extent that such unhappiness is due to different forms of economic deprivation, such as hunger or poverty, is socially undeserved. Tracking undeserved unhappiness contributes to the advocacy for alleviating poverty, as well as to the understanding of conditions for happiness.

Social Weather Stations (SWS) has a total of 19 national happiness survey, one in 1991 and 18 in 2000-2011. These surveys found that extreme unhappiness was most felt among households suffering severe hunger, and among household considering themselves as poor. The excess unhappiness associated with hunger and poverty is the undeserved unhappiness.

SWS' participation in the 2010 and 2012 rounds of the International Social Survey Programme (ISSP) provided data comparing Filipino happiness with that of 47 other member countries, including Japan.

This paper will compare happiness in Philippines and Japan, and the extent of undeserved unhappiness connected with various indicators of well-being and economic deprivation, such as subjective social class, self-assessed health, access to health care, family roles, and social policies related to work.

Due to processes of globalization, digitalization and cultural democratization, publicly funded organizations in the culture sector are in need of legitimizing their own existence towards three publics. The publics provide different forms of support, that the organizations are dependent on: The producers/artists provide quality and artistic credibility, the government/public authorities provides funding, and the general public provides legitimacy. In satisfying the three publics the actors engaged in presenting the relevance and importance of the publicly funded organizations are conducting legitimacy work. Legitimation work is a social process being in motion for as long as there are actors engaged in securing the future existence of such organizations.

In this paper I present a theory of legitimation work. The theory is developed from several empirical studies of various publicly funded organizations in Norway and Sweden. I have studied the legitimation work done in the Norwegian public service broadcaster NRK and the Swedish public service broadcaster SVT, the Norwegian National Opera and Ballet and the Oslo Philharmonic Orchestra. These are all organizations that are in need of legitimizing themselves towards the three before-mentioned publics when conducting legitimation work. In the paper I discuss what characterizes a publicly funded organization's communication with the various publics and what role they play in the legitimation work.
Economic Growth and Institutions: Gender Equality, Beyond Markets in Brazil, China, and Russia

This paper aims at comparing female trajectories in three BRICS – Brazil, China and Russia – since 2000, when a new path of economic growth opened up new opportunities for both sexes in these new mass-consuming market societies. These countries have some features in common, including their being large economies with a strong manufacturing sector, low fertility rates (under 2.0), an urbanization rate over 50%, and convergent female participation rates in the labor market (between 56% and 65%), but one major dissimilarity in terms of educational attainment: only Russia displays high shares of tertiary education (more than 50%) among the adult population[1], as compared to China (less than 5%) and Brazil (around 10%) (OECD Factbook 2013; World Bank GHD 2013: Capital for the Future).

For this reason, however, these three countries differ profoundly in the way they have developed different patterns in terms of institutions and norms with regard to social protection schemes, labor regulations, and gender policies. This paper will systematize major traits of female trajectories and gender gaps in Brazil, China and Russia in the 2000s, gathering statistics from the ILO, OECD, World Bank and other relevant databases. In parallel, it will map how the welfare state has evolved as of late in these countries and how existing norms and institutions either push for or constrain gender equality. After systematizing data and the major characteristics of national social protection schemes with regard to the promotion of gender equality and wellbeing, a logistic regression model will be computed in order to determine the factors that most contribute to explain gender asymmetries in each country.

Multilevel Analysis of Standard Governance: Voluntary Carbon Certification and the Peruvian Cookstove Sector

Carbon markets are often seen as one of the best success in environmental markets yet they are also subject to many criticism. On the margin of the regulatory market, the voluntary market has developed under which certain standards set claimed ambitious criteria for sustainable development. Such standards govern a commodity of a new kind: carbon credits. The standards have ambiguous relations with the state and put at stake the notion of government. As such, they question the ability to govern sustainability from the private sector.

In my PhD, I analyze the case of a carbon certification programme for improved cookstoves implemented since 2008 in Peru. The standard used is the Gold Standard carbon and sustainable development certification framework. The approach is pluri-disciplinary and accounts for the impact of projects on indigenous communities, the making of and architecture of the chain of actors under the voluntary carbon market and the political economy of carbon offsets.

For this presentation I will look at how this carbon offset resulting from this value chain are sold to the final consumer. In particular, I will be interested in how Peruvian stove users are pictured in the process. The underlying question is whether the adequate representation of an environmental issue is key in mobilizing offsetters. Building on the analysis of various offsetters, I will show that the understanding of the Peruvian context is very different for them a is their commitment to reduce emission before offsetting. The presentation will provide insight on the current use of carbon offsetting as a corporate social responsibility practice.
d'activation, caractérisées par un projet institutionnel d'incitation à l'adaptabilité aux normes d'emploi (Cassiers et al, 2005). Ce mode de gestion spécifique de relation avec les chômeurs comporte en effet des caractéristiques communes avec le paternalisme : personnalisé, il combine coercition, autonomie et vision du bien commun marquée par une logique de contrepartie (Boismenu et al, 2003). En revanche, une différence importante subsiste à travers le poids de la rationalisation gestionnaire, qui s'incarne notamment dans le profilage des chômeurs.

Ces nouvelles formes de paternalisme, qui prennent également pour appui la légitimation de l'asymétrie des rapports entre employeurs et chômeurs au nom d'une rationalisation sus-jacente des entreprises, se situent donc à la croisée de deux visées, la subjectivation et la rationalisation. À partir de 200 observations de rendez-vous entre conseillers et chômeurs, notre communication entend analyser les effets de ces deux visées potentiellement contradictoires pour examiner comment émergent de nouvelles éthiques dans les pratiques et justifications professionnelles.

New Ethics of French Employment Advisers and Their Clients Coping with the Unemployment Trap

This research work focuses on the transformation of the French Public Employment Service through a sociological pragmatic study of discourse and practices of professional employment counselors. We consider the reconfiguration of this profession as an indicator of changes in the welfare state to an active welfare state, which is expressed in particular by an institutional incentive project to the adaptability to employment standards and market principles. Based on a long ethnographic investigation in seven agencies with 87 counselors, and 200 observations of appointments between advisers and unemployed, the paper analyzes the effects of these two potentially conflicting targets: the subjectivation (individualized assistance in job search by the Monitoring Monthly Custom, introduced in 2006) on the one hand, and the management streamlining (profiling, strengthening sanctions) on the other.

By changing the standards, organization, this industrial rationalization of a new type reconstitutes the structural professional divisions between socio-clinical and socio-technical standards. It brings out a new professional model, marked by an actuarial management of risks, but also supported by a moral dimension based on the individualization of treatment. However, earlier divisions persist and give rise to ethical dilemmas and polarizations (between ethic of work placement and ethic of empowerment counseling), and strategies of avoidance or neutralization of the most coercive professional acts.

The paper examines also the notion of subjectivity in social policies and the prescriptive strength of standards and tools that accompany the activation. The streamlining and tightening of supervision of unemployed on the ground give rise to the use of social technologies of adaptability, but the observations of professional practices also reveals some areas of negotiation. They are characterized by a use of the processual dimension in assessing the unemployed recruitability, by the establishment of trusted devices or else by the taking account of a “situated use of the processual dimension in assessing the unemployed recruitability, by the observations of professional practices. We consider the reconfiguration of this profession as an indicator of changes in the welfare state to an active welfare state, which is expressed in particular by an institutional incentive project to the adaptability to employment standards and market principles. Epistemologies of Professional Leisure Sociology: The Canadian Context of Western European Domination

The category of ‘Leisure’ as an object of academic pursuit has historically been derivative of Western European epistemologies dominating the literature, providing the reason and intellectual spaces that scholars must somehow shoehorn their ideas into and making a feedback loop into policy circles that make concrete differences to how we live. This paper explores the domain of thinking about leisure and work, a call and argument about extension of epistemological breadth to handle the range of cultural truths constituent of professionalism in sociological pursuits and showing an unequal balance of voices from ways of living. The literature extant from Canadian scholarship provides a viable launch point for the main thesis about epistemological diversity and inequality given the nation’s literature extant from Canadian scholarship provides a viable launch point for the main thesis about epistemological diversity and inequality given the nation’s cultural truths, encompassing Aboriginal, Asian and Caucasian cultures under its umbrella.

LAW, ALAN* (Trent University, alaw@trentu.ca)

Leisure, Justice and Economic Collapse

This paper explores the roles of leisure to both ameliorate and deepen the catastrophic effects of unemployment. The main issue at stake is the extent to which the distributive justice of time and social legitimacy comes to bear in a way that reproduces social relations that, on one hand lead to social inclusion and on the other, radically marginalize victims of economic collapse. The role of the state is critical in setting the terms of social legitimacy, but the state has become agglomerated in clusters of social and economic practices that mutually regulate legitimacies of diverse peoples. State agglomerations are only one plane of action in a complex of social dimensions that find their roots at the intersections of continuously emergent cultural histories including millennia of globalizations. The paper draws on histories of global economic collapse beginning in the 19th century.

Insights for Healthcare Professionals on Patient Experience of Research Participation

There is limited evidence about why patients might be motivated to share their personal stories about their illness experiences through research initiatives and the impact of participation. Ethics committees and healthcare professionals are sometimes reluctant to support research that involves in-depth qualitative interviews given concerns about vulnerability and/or potential harms. Two studies were undertaken, in Germany and in Canada, to explore participant experiences of participating in qualitative research. The research teams are involved in the DIPEx International collaboration – using common methods to collect and share narratives of an increasing number of people living with diabetes, who had been interviewed about either diabetes or chronic pain, were interviewed again about the reasons why they chose to disclose their illness experiences. In Canada, 30 people, who had been interviewed about their family caregiving experiences, completed a survey asking about their experiences of the interview. In both studies, participants were asked about their research participation, perceived benefits, what was difficult and what about the research process could have been better. These studies were conducted independently, using different methods and within different cultural contexts, yet there were strikingly similar narratives of experiences and outcomes. Participants opened up and helped others with similar conditions cope with their situation and to help healthcare professionals as well as decision makers understand their situation to improve care. Participants were generally grateful for the opportunity to share their story, and although they acknowledged difficult moments in relating some of their experiences during their original interviews, no one in either study regretted participating. This paper will contribute to discussions about how healthcare professionals, including members of ethics committees, view participation in qualitative research. It may also contribute to discussions between researchers and clinical therapists about the value and meaning for patients to participate in qualitative research studies.

SIPPEL, SARAH* (University of Leipzig, sippel@uni-leipzig.de)

The Financialisation of Food and Farming in Australia

The ownership of Australian food companies and farm lands by overseas investors has become a national debate in Australia, with some politicians and economists arguing that just as Australia’s past development was assured through foreign capital, so the nation’s future will depend upon continuing (and accelerating) overseas investment. Others are concerned about the extent – and nature – of the purchases is not in the nation’s best interests. Critics argue that some of Australia’s most iconic and successful agribusinesses will become a vehicle for takeover by hedge funds and private equity firms that can then make decisions that may be deleterious to the national interest. Others consider that when farms are run by external sovereign wealth funds and food is ‘repatriated’, taxes can be avoided: Australia might not derive income from its own productive assets. Finally, it has been observed that the sale of most farmland is going unrewarded: Australians do not know of the extent of overseas ownership and control.

Following a discussion of the current debate about overseas purchases of Australian food companies and farms, the paper deals with the phenomenon of ‘financialisation’. In an era of projected food, water and fuel scarcity, financial entities are seeking investment in agribusinesses that can be harnessed for global profit-making, and farms that can be owned and controlled directly by financial firms. Specialization in land along with opportunities for more secure food production for oil-rich but land-and-water-poor countries, are but two of the motivations for investment. Framed within a political economy perspective, the paper outlines the nature of recent overseas investments in food and farming in Australia, exploring the types of firms investing, along with their motives for investment. The paper concludes by theorizing the sociological ‘meaning’ of financialisation as it affects the Australian agrifood sector.
The rapid spread of modernization, growing urbanization and crumbling of joint family system had conspired to increase insecurity and loneliness among the geriatric population. However, lack of family support, poor financial status, physical, mental and health distress and guilt of being dependent on others are some of the problems nagging the elderly population in India, and other developing countries around the world. Very little attention has been focused on the plight of the elderly population in rural areas of the country. Problems of the aged in rural India indicate their exclusion and alienation from the contact of their own family members which in turn has affected them socially, economically, psychologically with implication of their health conditions. Their economic insecurity is the most pressing problem of the elderly population in the villages. The outside employment of the family members has further aggravated their sufferings and caused their loneliness. The care and support supposed to come from the family members are denied resulting in their deprivation and desertions. Consequently, the welfare intervention form GO’s and NGO’s are looked forward to fulfill their basic needs. The health care and support systems promoted through GO’s and NGO’s provide some solace to their requirements. The condition of the elderly population in rural India is not properly addressed. There is an urgent need of provision of care and support and status in rural community. This paper is and outcome of the field investigations conducted on socio-economic and health status of elderly population in selected block in state of Tamilnadu, India. This paper analyses the status of the elderly population in terms of socio-economic and health conditions especially in rural areas which is fragmented and loses its uniqueness which result in neglect, alienation and deprivation of elder people in the family towards the provision of care and support.

Is There a Medicalization of the Facial Appearance?

A partir d’une recherche au sein d’espaces de la réparation faciale en France et au Royaume-Uni, on se demande : jusqu’où observe-t-on une médicalisation de l’apparence, par quels dispositifs se traduit-elle.

On peut avancer qu’il existe des normes d’apparence que les institutions médicales et judiciaires encadrent. La problématique du normal et du pathologique imprègne les jugements des chirurgiens du visage qui nous rappellent le caractère souvent monstrueux de certains de leurs patients auxquels ils ne cherchaient pas à rendre la beauté mais à rapprocher d’une norme d’humanité. Une posture pouvant aller à l’encontre des associations d’aide aux personnes défigurées, qui militent pour un élargissement des normes d’apparence.

Aussi, sans proposer de typification du rapport entre réponse sociale et réponse chirurgicale, en suivant des personnes touchées par une forme de défiguration et les professionnels qui les prennent en charge sur un temps long, on peut distinguer des formes d’expérience de l’anormalité faciale fonction des appuis institutionnels disponibles dans chaque pays.

Exploring implications for accountability and democracy related to devolving responsibility for identifying, defining and resolving problems to the community level.

In response to significant policy challenges, such as climate change, health care demands and water availability facing decision makers and the community today, new approaches that place the community at the heart of the solution are increasingly being adopted. The consequences of these new approaches and their impact on established governance structures will be a key determinant to their longevity as drivers of public policy solutions.

The research will focus on the three primary subgroups involved in the community engagement process, the community (citizens), senior government decision makers (executive level public servants), and political executive government (politicians, political elite and influencers).

What different stakeholders (community, senior government decision makers and political executive government) perceive to be the reasons for undertaking community engagement?

What different stakeholders perceive to be the fundamental outcomes that community engagement can be expected to deliver?

Do stakeholder’s perceptions of the outcomes of community engagement match with the perceptions of engagement’s success?

Are there differences between perceptions of desired outcomes and perceptions of success between stakeholder groups?

The emerging trend to engage with stakeholders to identify issues and collectively decide on action has the potential to significantly impact on perceptions of executive government leadership.

The perception of leadership has the potential to significantly impact upon accountability and democracy as the legitimacy of governments are strongly rooted – at least in part – through the delivery of policies and services. The increased adoption of engagement and community based decision making may devolve responsibility for decision making to a point where the perceptions of governments’ leadership and accountability reaches a critically low point.

Virtual Networks As Tools of Social Justice

The popularization of internet has changed deeply the personal and social relationships, the cultural exchanges and the production of subjectivities. The background is a focused word focused by the desire of expansion off the capital, creating inequalities that get stronger by the mechanisms of accumulation of wealth. Social justice and citizenship are also influenced by this context.

We want to demonstrate that social networks are tools of social justice by ensuring equal access and a parallel public space of social interaction that are essential tools to enable to everybody, indistinctly, the exercise of citizenship, without the limitations of constituted social political normative structures.

To reach the objective were selected examples of usage of virtual networks from institutional profiles, personal profiles, fanpages, social movements and NGO’s. We analyzed by Qualitative Methods the options like, share and the features to move forward.

In response to significant policy challenges, such as climate change, health care demands and water availability facing decision makers and the community today, new approaches that place the community at the heart of the solution are increasingly being adopted. The consequences of these new approaches and their impact on established governance structures will be a key determinant to their longevity as drivers of public policy solutions.

Increasing numbers of poor households, primarily headed by women, desperate for jobs, will flock into cities of the South and be stuck in the informal labor market at low wages and offers no protections. Land and housing ownership is seen as key to changing the current realities for women. The UN-Habitat and the World Bank have put forth a continuum of land ownership that carries with it different degrees of security but remains weighted towards individual titling.

This paper will offer guidelines that member groups of the Huairou Commission are recommending as an alternative to business as usual. This will be compared to ideas of the “diverse” economy as developed by J.K. Gibson-Graham, authors of The End of Capitalism (as We Knew It): A Feminist Critique of Political Economy (1996, 2006). The diverse economy is defined by different transactions (alternative market and nonmarket), labor (alternative paid and unpaid), and economic enterprise (alternative capitalist and non-capitalist).

On-the-ground practices by Huairou Commission groups in Brazil and the Philippines will be compared in order to assess consequences of gender approaches for the future development of urban spaces.

Global Cyberspace: The Involvement Problem

In the present day information world the involvement of an individual in Cyber-space is an important social marker determining belonging to one or another social group. Your circle of contacts, social connections, profession, qualification and place in the social hierarchy will depend on whether you are or aren’t an Internet user.

On the government level we can speak about the loss of the competitive position in the struggle for the spot in the global information structure.

Therefore, an important problem is cyber inequality, when an individual having no physical possibility to use the Internet, is eliminated from many spheres of social and economic life of the society. It is the low level of economic development and the Internet technology development in some countries. In other countries there is a political or ideological pressure on the expansion of Internet network access. Both of these factors reflect negatively on the ability of the society to move forward.

Cyber inequality can also exist within one country and this inequality can be significant. We can see it through the example of the Russian Federation, where different regions have unequal access to the Internet technologies and the development is uneven. We can claim that the residents of the regions where there is no access to Internet economy, state digital services and virtual social space are discriminated.

LEBEER, GUY* (Université Libre de Bruxelles, g.blebeer@ulb.ac.be)

Les Droits Du Patient Et La Dépénalisation De L’euthanasie Comme Lieux De Questionnement De La Médecine Contemporaine : Le Cas De La Belgique

La Belgique a connu au début des années 2000 une activité législative intense autour de la reconnaissance des droits des patients. La loi du 22 août 2002 sur les droits du patient et la loi du 28 mai 2002 dépenalisaient l’euthanasie en témoignent tout particulièrement. La Loi sur les droits du patient a fixé les obligations des praticiens en matière d’information et devait, notamment, assurer au patient un accès direct à son dossier médical. L’application de cette loi fait encore problème aujourd’hui, et pas seulement en raison de la volonté du corps médical de maintenir son autonomie de pouvoir mais aussi du fait des carences de la loi elle-même et de la représentation qu’elle cristallise des relations entre médecin et patient, représentation qui est loin de faire l’unanimité. La Loi de dépénalisation de l’euthanasie permet à un patient placé dans des conditions très strictes de demander à son médecin d’abréger ses souffrances. L’application de cette loi fait également problème et le corps médical se trouve ici aussi au cœur de la difficulté, notamment par l’entremise de la notion de « clause de conscience ». La question est cependant plus complexe car si l’autonomie du médecin peut apparaître comme un frein à l’exercice de ce type de droit, elle peut aussi constituer le moyen de s’opposer à bien d’autres obstacles d’ordre institutionnel comme la volonté de certains établissements hospitaliers de ne pas respecter la loi, tout au moins dans son esprit. La communication se propose de rendre compte des difficultés d’application de ces deux lois, tant au niveau de la loi qu’elle constitue, et notamment autour de la redéfinition de la figure du médecin – et des tentatives entreprises dans les divers lieux de la décision politique en vue de les surmonter.

The Spaces and Times of Youth Culture in the New Century

It is starkly evident in the new century young people's biographical constructions must come terms with conditions of: rapid social and cultural change, increasing choice and uncertainty, the loss of institutional reference points as models for action and the widespread perception of intensified risk. These phenomena tend to produce a contingent and situational form of identity, with a markedly individualised imprint that is closely related to the here-and-now. This contingency of identity finds expression in a re-definition of the relationship with time-space in everyday life – the chronotope. In this process, everyday time-space arrangements progressively lose their traditional meanings in the realm of the taken-for-granted, the home of the 'natural attitude'. Rather, young people's creative use of urban time-space assumes the form of a fully fledged strategy of action connected to a contingent and situational type of identity. In this framework of understanding, young people's cultural expressions can be understood as organised not so much as answers to 'problems', but rather as expressions of the active negotiation practices that young people themselves carry out in order to deal with contemporary risks and uncertainties.

The Great Transformation Of Japanese Capitalism

Contrary to the dominant vision, according to which Japan is suffering from "arthritis", we argue that Japanese capitalism has experienced a great transformation from the early 1980s. We get this result from an analysis at three levels:
- corporate level, characterized by an increasing heterogeneity in terms of organization and performance
- institution level, characterized by a decay of previous forms of coordination and a revival
- social compromise level, characterized by a surge of multidimensional inequalities

We also show that Japan is not converging toward Anglo-saxon or European types of capitalism but follow its own original trajectory.

Understanding Welfare Diversity and Evolution In Japan, Korea, and China. A Regulationist Interpretation

In this paper, which focuses on Japan, Korean and China, we argue that these previous analyses of Asian capitalisms have underestimated or ignored in-depth analyses of Asian capitalisms from the viewpoint of welfare, in adopting, at least implicitly, a perspective, inspired by the over-simplified typology of Esping Andersen, which can be qualified of "welfare orientalism" (Takegawa, 2005). Moreover, we argue that welfare is at the core of the evolving forms of capitalism in these three countries. Our interpretation is that institutional change in Asian capitalism is currently driven by changes in the social compromise. These three economies are experiencing a series of changes that can be interpreted as the manifestations of internal contradictions, which require the development of new welfare systems to be overcome. Among these changes, this paper focuses on the ones that affect such institutions as family and firms, as well as ageing, and rising inequalities.

The purpose of this article is to show that effective social policies are the necessary condition in these three countries to promote the emergence of a new "regulation mode" able to overcome the current contradictions at work. As emphasized by Boyer et al. (2001), these three economies indeed virtually suffer from the adverse consequences of export-led growth regimes. At the level of each country, a new basic compromise should concern the wage-labor nexus, for the sake of both social justice and dynamic efficiency. New forms of welfare are emerging in Asian capitalisms, as political answers to demands from various groups. They may become a distinctive feature of these forms of capitalisms but also the main source of divergence among them.

The NFA Resistance to the KORUS FTA

This paper focuses on the Korean National Farmers Association (NFA)'s failed attempt of social resistance to the Korea-US Free Trade Agreement. Located at the intersection of the local and the global, traditional methods of farming became threatened in the rural farmlands of Korea because of the Free Trade Agreement that assured US imported foodstuff to dominate the Korean market. Despite borrowing from the "Nyleani Declaration" from the international movement of food sovereignty, resistance was unsuccessful due to the fact that "larger stripes" of globalized resources did not intervene with NFA's internal strategy and dynamic efficiency. Thus NFA's leadership and proactive failed to create a social movement to ensure viable economic food sovereignty in South Korea, as the South Korean government continues to take the path toward a neoliberal and profit-driven agricultural future.

The Impacts of Cultural Heritage Tourism: A Case Study of Ajanta Caves in India

Cultural Heritage Tourism uses the remains of history which the traveler is interested. Cultural Heritage Tourism has positive and negative impact on social-cultural, physical and economic aspects of Indian Society. Ajanta Caves in India which is a world heritage site and caves of Buddhist affiliation have been carved in Deccan basalt.

From a social-cultural perspective tourism affects cultural resources through changes in forms and functions of traditional artworks, commodification of living culture, crowded condition and community members. Tourist activities exact physical imprints on precious heritage in form of vandalism, wear, tear and pollutions. On a more positive note, tourism from the increasing number of people, helps in creating jobs and taxes and stimulates entrepreneurialism in heritage destinations (Timothy 2011).

This study recognizes the impacts of Cultural Heritage Tourism at Ajanta Caves and its surroundings region in western India. For this research project, primary data are collected through observation and interviews of local community members, visitors, agents and officers of tourism department and on the secondary data obtained from books, journals, survey reports, publication of government, etc. first part of this paper presents understanding of Ajanta caves as general description and significance of Ajanta caves. Second part of this research analyses im-

Precarious Working Life and Militant Activism of Non-Regular Workers in South Korea

From the early 2000s, non-regular employment has become a core labor policy issue South Korea. Non-regular labor, comprised of a variety of precarious employment patterns, such as fixed-term workers, part-time workers, dispatched and subcontracted workers, home workers, and dependent self-employed workers, has proliferated in Korea, particularly along with changing corporate employment strategies after the economic crisis of 1997. The diffusion of non-regular employment has led to the growing segmentation of labor markets in the country because those workers suffer from not only inferior working conditions and a vulnerable employment status, compared to regular workers, but also social exclusion from the protection of legal labor standards and national safety-net.

Given their precarious working life, non-regular workers came to the fore as a symbol of militant labor activism over the past ten years. They organized their unions even under their employers' harsh suppression and the lack of regular workers union's support. Those precarious workers engaged in the prolonged strike action to defend their unions from the employers' suppression and protest against inhuman discrimination imposed on them. Faced with limited movement resources, they often resorted to extreme struggles actions, such as hunger strike, sit-down demonstration at the air, and even committing suicide, in order to gain public attention and create societal pressure to resolve their issues.

In this context, our paper is to discern why union behavior of non-standard workers are so militant, and to examine causal relationship between those workers' precarious working life and their militancy.
Understanding Stratification in a Global Perspective: The Case of South Koreans

This study distinguishes three perspectives in stratification research based on an unit of analysis. The first is a within-country perspective which has dominated traditional stratification research. It uses nation-states as the unit of analysis with an assumption that stratification takes place exclusively within nations. Modernization school, with this perspective, argues that achieved human capitals play a central role in social selection processes in industrial societies. The second is a between-country perspective that has usually been taken by development scholars. It focuses on stratification among countries. As the focuses lie on national (not individual) level comparisons, there is a lack of accounts on how between-country inequality shapes stratification and inequality at an individual level. The last is a global stratification perspective. This perspective synthesizes the both within- and between-country stratification concepts in a sense that it perceives stratification as individual processes taking place globally. Which social mobility strategies are more effective can be different depending on which perspective or unit of analysis is used. For example, emigration to another country is hardly discussed in the within-country frame, but it draws attention as an important way for social mobility in the global perspective. This study aims 1) to introduce the global stratification perspective, 2) to apply it for understanding stratification among South Koreans (including Korean diasporas), and 3) to see how it looks different from the accounts of the within-nation perspective. To practice the global approach, I situate income earnings of South Koreans within a broader pattern of global income inequality, and reassesses the relative weight of categorical attributes (gender, family background, country of residence, etc.) based on characteristic education, skill, etc.) based on their global income standing. My hypothesis is that, from the global perspective, inequality among South Koreans remains shaped by categorical characteristics (country of residence, particularly) and the role of achievements far more modestly than usually assumed.

Relational Skill Assets and Anti-Immigrant Sentiments

This study introduces a new variable in the area of sociology of professions: relational dimensions of occupational skills. Although previous studies have underscored the importance of cognitive skill assets in migration processes and attitudes toward out-group populations, the importance of relational skills has not received as much attention. In this paper, we highlight the role of relational skills of native workers in explaining native workers’ attitudes toward immigrants, by using a General Social Survey module (National Identity 2004). We construct two dimensions of relational skills: interpersonal and instrumental skill assets at the occupational level. We conceptualize the former as an entrance skill barrier and the latter as a pulling factor that attracts skilled or unskilled immigrant work forces. Then, we create a new independent variable, “relational skill specificity,” which is a relative measure of interpersonal skills over instrumental skills in one's occupation. Our hypothesis is that workers employed in jobs requiring a higher possession of interpersonal skills over instrumental skills are less likely to hold strong anti-immigrant sentiments. The effects of relational skill specificity are highly significant and remain robust against different specifications, controlling for individual-level education and citizenship status along with other conventional cognitive skill-variables, demographic, religious and political findings within the group. The group shows the effectiveness of violent tactics, and the leaders of the group promoted more nonviolent actions. After the FBI’s countermobilization, intelligence activities particularly targeted the BPP, incarcerations and murders of most of its leaders forced the group to nearly collapse and split off into the International Section. As a result, the BPP leaders became more divided on the issue of violence. Huey P. Newton strengthened the group’s relatively nonviolent strategies, such as their free breakfast programs. Eldridge Cleaver, however, reinforced revolutionary ideas influenced by Third World guerrillas, and maintained the BPP’s violent rhetoric and tactics during his exile in Algeria. The conflict between Newton and Cleaver was a result of the state’s effort to destroy the BPP, as well as the two men’s personal power struggle. I intend to argue that the BPP did not have a fixed identity as an exclusively violent organization, but instead created multifarious concepts of black liberation inside and outside U.S. The state agencies, especially the FBI, deeply affected the process of its transformation by repressing the group. The dynamics and dialogues between Newton and Cleaver, which centered around the debate for and against violent strategies for the BPP, will be the key to understanding the inter-relationship between the social movement’s militancy and the state’s suppression.

Childhood Poverty Across Generations: A Trajectory Approach

Research on social stratification and mobility has established a strong intergenerational link in economic disadvantage, documenting the ways in which socioeconomic status is transmitted from one generation to the next. Childhood poverty, for example, plays a critical role in the stratification process, as it has been identified as a key obstacle to upward mobility. Ample evidence from the life course literature suggests that early and persistent childhood poverty has adverse impacts on educational attainment, labor market performance, health, and family formation. Incorporating these two streams of research, this paper analyzes an intergenerational analysis that turns around the question of socioeconomic mobility: How is childhood poverty experienced by parents passed on to their offspring’s poverty experiences during childhood? Using data from the Panel Study of Income Dynamics (PSID), we extend previous research in several important ways. First, drawing upon recent research suggesting the role of family influence across multiple generations, this paper examines how parents’ socioeconomic standing affects parents’ childhood poverty, which in turn affects children’s childhood poverty. Second, we employ finite mixture modeling to construct trajectories of childhood poverty across generations. Specifically, we investigate how different temporal patterns—timing, duration, stability, and sequencing—of economic deprivation throughout childhood in one generation are associated with those in the next generation. This approach thus allows us to address potential limitations of using cross-sectional measures to estimate intergenerational links in childhood poverty. Finally, our analysis examines the mechanisms by which poverty trajectories during childhood are transmitted from parents to children, using family background characteristics at the time of childbearing as intervening factors. We expect this study to generate new insights into the intergenerational transmission of childhood economic disadvantage.

The Alienate Image of University Professors Under the Corporatizing Culture of Neo-Liberalism: Social Conscience or Academic Labor?

Taiwan universities have undergone drastic changes in many respects, since last 25 years, particularly initiated by the neo-liberalism to meet the demands of a globalized advanced industrial labor market, which legitimately accelerate universities as corporations. The neo-liberalist conception, to be called the ‘corporatizing culture’, by an appeal to market-logic freedom, has signaled a radical shift in the notion of higher education/learning. The aims/academic values of public universities in Taiwan are under siege caused by undermining the meaning of university autonomy is replaced gradually by market vocabulary and ideologies. The effect is that professors will be called to public accountability and make their performance accessible to the multiple stakeholders in society. Their freedom for doing research projects is eroded and more commercial mechanisms are encouraged. The subjectivity and individual freedom of professors seem to be weakened by the management of teaching quality assessments. The author hence pertains to argue in this paper that the alienated images of professors such as de-subjective, non-ethical, and disposable, distorted by neo-liberal discourses, need to be addressed seriously, if the last Professors as social conscience and the voice of justice could last and fight back into the neo-liberal corporatizing world.
Gendering the Migration System in East Asia

This paper attempts to do gendering the migration system in East Asia by focusing on migration. Inter-Asian migration has been one of the key characteristics in recent migration trends (WMR 2012). Jones and Findlay (1998) showed migration system emerged in East Asia by examining the various linkages among origins and destinations including FDI aids, trade and migration. Building upon Jones and Findlay (1998)'s work, I attempt to gender the regional migration system by examining the gendered migration streams: labor migration for care and marriage migration to the major destinations in East Asia including Korea, Japan, Taiwan and Singapore. In analyzing these migration streams, I explore the changes in socio-demographic and economic conditions of the destinations including the gender division of labor, care provision, (care) labor market, and state policies for migration. By comparing the state responses to the seemingly uniformed issues of care provision, I argue that the recent intensification of migration system in Asia is conditioned by changes in mode of social reproduction.

How To Examine Spatial Housing Inequality and Housing Polarization?

To alleviate housing problems including issues of inequality, disparity, and polarization, we need to determine exactly their present status, characteristics, and influencing factors. Hence, this research developed a spatial housing inequality index that consisted of housing wealth inequality (HWI) and housing affordability inequality (HAI) examined factors of spatial housing inequality through a multiple discriminant analysis model using statistics data from 2008 to 2012; and suggested a housing polarization index that consisted of housing wealth polarization (HWP) and housing affordability polarization (HAP). The first finding is that inequality, disparity, and polarization of housing in Korea are distinctly different aspects. Therefore, examining housing problems requires each index or method in terms of spatial base, wealth, and affordability, such as HWI, HAI, HWP, HAP, etc. The second is that comparing patterns of PIR and the consistency of discourses on the Korean family crisis and the demographic change. In this study, the IMF economic crisis in the late 1990 triggered the increase in marriage ratio, increase in divorce and remarriage rates and low fertility rate. Therefore, the new discursive frame of the family head system was the confrontation between 'gender equality vs. tradition.' However, after the 2000s, the change of the family structure and lifestyle with the economic crisis has involved the risk on the class patriarchal family model and actual decline in marriage ratio, increase in divorce and remarriage rates and low fertility rate. Therefore, the new discursive frame of focusing on particular family problems has appeared for the recognition of the variety of family in society and social right to make one's family.

The Transformation of Family Law and Discourses in South Korea: Possibilities and Limits of State Feminism

Since the Korean family law including the family head system was enacted in 1958, the status 'a head of family' had been given to the male person- the husband or the eldest son in the legal family institution in South Korea. Women's organizations in civil society had constantly demonstrated for the abolition of the family head system for 50 years and they achieved their success in 2005. Many research questions have been focused on why the abolition of the family head system was possible in 2005 and the dominant explanation has been the state feminism. I try to point out the limitation of the state feminism which has oriented toward the actor centered approach and overlooked the wider social context and to make a supplementary view on the transformation of family structure and discourses in South Korea. Therefore my research question is 'what social conditions created a new family discourse and brought about the abolition of family head system?' The IMF economic crisis in the late 1990 triggered the increase of discourses on the Korean family crisis and the demographic change. In this transformation of family structure, the frame of family discourse for abolition of family head system in South Korea had also been changed. Before the 2000s, the cons and pros of the family head system was the confrontation between 'gender equality vs. tradition.' However, after the 2000s, the change of the family structure and lifestyle with the economic crisis has involved the risk on the class patriarchal family model and actual decline in marriage ratio, increase in divorce and remarriage rates and low fertility rate. Therefore, the new discursive frame of focusing on particular family problems has appeared for the recognition of the variety of family in society and social right to make one's family.

Globalization, Localization, and International Coproduction As an Emerging Form of Governance in the Global Animation Industry

This paper examines the interaction of globalization and localization and the rise of international coproduction as a noble governance form in global cultural industries. The expansion of Western media and cultural industries to emerging markets has been intensified since the 1990s thanks to worldwide deregulation and liberalization and the introduction of new media, such as satellite TVs and the Internet, which facilitate the integration of national, regional and global markets. At the same time, the growth of cultural and media markets in emerging countries has presented new opportunities and challenges for both global and local firms. Global media giants have found their strategies should be adjusted to better serve local audience who is not solely satisfied with their global content, and local firms have become more ambitious in bringing their content to overseas. Examining the case of the global animation industry, this paper argues that as global firms seek to tap into local markets ('localization') and local producers try to enter foreign markets with their own content ('internationalization'), international coproduction, a form of cross-national, inter-firm partnership for animation production and distribution, provides both actors with new opportunities to collaborate for...
The emergence of “new poor” who were unidentifiable but already everywhere appeared in Japanese society. Since the 1990s, people who failed to labor—or people who could be seen as workers and discusses similarities and differences of the two.

Korean labor movement. Furthermore, this paper compares the ‘People House’ union office by providing a meeting space, as well as making efforts to organizing rail privatization. It also supports small labor unions in the region which have no workers and precarious workers. A The ‘People House’ considers that labor market for non-regular workers is formed based on the locality which they live including neighboring towns. Therefore, it was established in several wards of Seoul, in Incheon and Kwangju after 2008. The ‘People House’ strategy remained mainly upon the national economic development theme, and did not succeed in incorporating both two major themes. In contrast, the Pro-EPS argument, which had built on the human rights theme until 1997, later developed to incorporate not only the human rights theme but also the national economic development theme. This study concludes that there were significant changes in public discourse between 1990 and 2003, which may affect the transformation of migrant labor policies in 2003.

The ‘people House’ and a New Move to Organize ‘resident Workers’ in Korea

Recently, a region has become a major area for labor union organizing and its activities in Korean labor movement. The vast majority of workers in small firms located in local regions are both non-union workers and precarious workers. A new move to recognize and organize them as ‘resident workers’ has appeared. The ‘People House’(‘minjunguji’ in Korean), which provides a space for workers, residents, progressive party members, labor unions, and community organizations to meet and communicate each other and to form networks among them, was established in several wards of Seoul, in Incheon and Kwangju after 2008. The ‘People House’ considers that labor market for non-regular workers is formed based on the locality which they live including neighboring towns. Therefore, it tries to approach labor and livelihood issues of regional workers from a point of view of ‘resident workers’. It provides a space to workers who want to study labor law and to fight for improving their labor conditions. It holds events for residents to meet and talk about labor rights and current social-economic issues such as rail privatization. It also supports small labor unions in the region which have no union office by providing a meeting space, as well as making efforts to organizing ‘resident workers’.

This paper has aims to examine practices of the ‘People House’ to organize ‘resident workers’ and to discuss implications of the practices for revitalization of Korean labor movement. Furthermore, this paper compares the ‘People House’ in Korea and ‘worker center’ in the United States which is community-based organization that engages in grassroots organizing to provide support to low-wage workers and discusses similarities and differences of the two.

Counter Hegemonic Discourse on New Poor in Japan in 2000s – A Case Study of Two Indie-Magazines

Along with the collapse of bubble economy and following extended economic depression since 1990s, people who failed to labor—or people who could be no longer explained by labor as it was—appeared in Japanese society. They were working-poor, net-cafè refugees, and others who felt into “new poverty.” The emergence of “new poor” who were undistinguishable but already everywhere alarmed the entire society where poverty had been believed to be eradicated with its dramatic economic growth, and provided a chance to reconsider and discuss “new poverty.” This study aims to investigate two discursive struggles by the young new poor who attempted to produce new discursive counterpublics on “new poverty/poor.” In order to do so, two Japanese indie magazines—Freeter’s Free(2007-2008) and Lost Gene(2008-2010) – are analyzed using textual analysis and interviews with editors and contributors, focusing on their strategies in terms of their contents, narratives, styles-genres, the relationship between contributors, editors and readership and etc. In these two indie magazines, the young new poor attempted to problematize public discourses on them and to produce counter-hegemonic discourse by unfolding and re-appropriating their own experience. Moreover, these magazines provided (counter-) publics where the young new poor could reach to self-acceptance escaping from self-denial and collectively search for alternative ways of life without being captured by neo-liberal capitalism. In this process, the young new poor – not only readers but also contributors, editors and – re-identify their subjectivities as laborers, political subjects, and young generation who are situated in the very middle of the social contradictions produced by late capitalism. In addition, this study explores their alternative ways of publishing as a media movement that created and managed their publishing groups as a collective social enterprise and thus struggled to cross boundaries between discursive and real practices.

Can We Hear Subaltern Woman’s Experiences?: Im/Possibility of Representation in Postcolonial Context of South Korea

The purpose of this paper is to illuminate the implication of feminist oral history as critically reexamining the relationship between hearer and speaker, representative and narrator, the said and the unsaid, and secrecy and silence. Based upon oral (life) history of military prostitutes in U.S. camp towns in South Korea (yangdong), we tried to reveal the experiences of historically excluded and marginalized ‘‘Other’’ in the postcolonial society. In this study we attempt to understand ‘‘Other’’ not just through the research process but also in the postcolonial society in Korea. Narratives of old women in kijoon ( formal prostitutes in U.S. military base) shows how women have navigated the boundaries between inevitability/ coincidence, the enforced/voluntary, prostitution/intimate relationship, and being a prostitute/military bride while continually negotiating as well as conflicting with various myths and ideologies of ‘normative woman,’ ‘official nation,’ and ‘normal family.’ In addition, women’s narratives to cause the rupture of our own stereotypical images of military prostitute not only prove the possibility to reconceive identity of subaltern woman, but also redirect the research focus from the object to the subject (hidden) desire to represent others. Therefore, we argue that feminist researchers to represent other’s experiences should inquiry ‘what/how we can hear,’ ‘why we want to know others,’ and ‘who we are,’ instead of asking whether ‘subaltern can speak or not, which shed light on what feminist oral history would be like.

Relative Social Standing and Support for NATOism

This paper explores the relationship between relative social standing and one’s attitude towards descent-based national membership using multi-level analysis. While much of the previous research on national identity has focused on the individual-level socioeconomic predictors, little attention has been paid to the role of relative deprivation. In this study, I investigate the effect of relative deprivation on one’s nativist attitudes by exploring the individual-level effects of education and
income in conjunction with the societal level of inequality in 29 countries, using International Social Survey Program (ISSP 2003 National Identity module) data. I create a new dependent variable “ancestry” which measures how much importance one places on ancestry as a core component of national identity. I examine the relationships between country’s characteristics (economic conditions, income inequality, the degree of segmentation, and collective and kin-based strategies of urban social problems) and the level of ancestry orientation (socioeconomic status, occupational position, religiosity, and political party affiliation), and one’s support for ancestry-based national membership. My findings suggest that, at the individual level, non-college graduates and low-wage earners are more likely to support ancestry-based national membership. However, at the country-level, high school graduates living in highly educated societies and countries with larger foreign-born populations are more likely to support descent-based national membership. In other words, non-college graduates in societies with high percentages of foreign-borns and college graduates may feel more vulnerable and need support for social closure against migrants through restrictive descent-based citizenship. As for income, low-income earners living in countries with greater income inequality are less likely to endorse ancestry as an important criterion of national membership. In line with the relative deprivation theory, this finding indicates that marginalized groups in countries with greater inequality (e.g. income inequality) are less likely to feel discontent and entitled compared to their counterparts in more egalitarian societies.

Coming Together and Across through Celebration: How Individuals Change their ‘Societies’

Despite its alienating forces, globalisation is noted for providing unprecedented means of mobility and communication to the masses living in post-capitalist societies. Using these instruments, more anonymous individuals are becoming ‘playing selves’ who redefine conventional social and physical boundaries and partake in the remaking of their society by actively recognising and articulating their unique positions in society. Through collective action, they also instigate social changes from the grassroots, propelling studies of social movements to (re)consider how people foster and utilise their ties as social capital to state and advance their objectives. Following this trend, this study scrutinises the emergence of ‘foose’ collective actions based on weak ties and their roles in advanced capitalist societies. It introduces two social and Japanese grassroots organisations, the Old Tokaido Road Shingawara House Community-building Association and the East Asia Collaborative Workshop, which engage in festivities and performances to respectively revive an urban community and to achieve reconciliation in East Asia. Although it is difficult to assess their achievements in reference to their objectives, these organisations are nonetheless notable for their ability to function as a node for individuals to become playing selves and to connect with other like-minded actors. From an analysis of the social interactions within these movements, this study demonstrates collective identities sustain and renew their selves by offering an open forum for diverse stakeholders where they could mutually confirm each other’s differences and form weak ties. Through this process, participants not only build networks, but also gain empowerment as they reflect on their selves and project their reflections onto their social realities. In this light, weak organisations may not be suited to initiate social changes, but it could stir individual actors and the society encompassing these actors to review and renew their perceptions of social realities.

LEE, SIYOON* (Sogang University, sjhshun@gmail.com)  
Contemporary Religious Landscapes in South Korea: From Diversity to Commonality in a Harbinger Post-Secular Society

The contemporary religious landscape of South Korea is summarized with three major religions – Buddhism, Protestantism, and Catholicism – that monopolize 95% of religious ‘market’ consistently. This paper explains these socio-religious phenomena with historical approach and tries to diagnose its implications through Habermas’s post secular theory. First, South Korean religious field has been subordinate and passively molded by exogenous socio-political factors such as Japanese colonial war, and military-dictatorial regimes, and democratization process. The current monopoly of religious market is the result of inter-play between internal dynamics of religion and external social forces. Although a highly competitive ecology of religions often causes social conflicts, it also makes positive conditions to reflect on Habermasian post-secular perspectives in the public space. Therefore, peculiar tensions between homes on the legal boundaries; also, peculiar tensions between Confucianism and Catholicism – Prof. Lee Sohoon’s “public religion” – and religious influence on a society. What is significant in the public roles of religion should be engaged in the civil ethos of a “good society” (Bellah).

migrant domestic workers, homes are private places from which they can find
work and, at the same time, seek refuge from the immigration raid. In this pro-
cess, one is portrayed as irresponsible mothers who abandon their duty of care
of their children while the other is portrayed as victims who have been failed by
the economic-nationalist immigration paradigm to pick up after other women. In
fact, such perspective has been materialized in real laws and policies which have fur-
ther reproduced or reinforced migrant women's precariousness. I focus on wom-
en's presumed normative position as care-giver, and the role that their supposed
abandonment/adoption of this position plays in public discourse in shaping the
private/public boundaries of homes. Throughout the paper, I present the process
in which nationalistic reproduction discourse, gender norms and uprootedness (ex-
periences of migration) are essentialized into the duty of care in a particularized
private/public place called home.

Precarious Work and New Class in Post-Industrial South Korea

This paper aims to examine precarious work in post-industrial Korean labour
market. Previous studies on precarious work have focused on employment sta-
tus, working conditions, and income. However, we suggest that not only employ-
ment insecurity but also insecurity of market, post-transfer and so-
cial income should be included in the conceptualization of precarious work. In
addition we include how individual workers perceive 'precariousness' and how
this contributes to the definition of precarious work. Then this paper investigates
the relationship between precarious work conceptualized in the paper and the new
class structure in post-industrial Korean labour market. Discussion on class struc-
ture departs from the traditional division of class and highlights the structural
transition from an industrial to a service economy. Gender and age will be also
considered in the analysis. We exploit a mixed method of conventional method
and QCA (qualitative comparative analysis) to examine how different configura-
tion of precarious work is associated with new class structure, using Korea Labour
& Income Panel Study(1st wave – 13th wave). Results from the analysis suggests
how precarious work in Korea is structured within the socioeconomic context of
post-industrial Korea.

The Impacts of Parent-Child Generational Gaps in Family Values
on Subjective Happiness Among Korean Adolescents

Due to South Korea's (Korea hereafter) competitive education system to en-
ter college, in addition to other developmental stressors, Korean adolescents are
more likely to experience a high level of stress. Although the degree of subjective
happiness amongst Korean adolescents was higher than the median in the happi-
ness scale, recent studies have found that Korean adolescents showed the lowest level
of happiness compared to Chinese and Japanese adolescents and those who lived
in OECD countries. In addition, due to rapid demographic changes in modern Ko-
rea, generational gaps in family values particularly with respect to marriage, par-
enting, and elderly parent support have become more noticeable. Considering
positive family relationships is a strong predictor for adolescents' happiness, it is im-
portant to understand how parent-child relationships influence adolescents' hap-
piness within the contexts of modern Korea. As part of efforts to answer this ques-
tion, in this study, we specifically examined how parent-child generational gaps
in family values influenced subjective happiness amongst Korean adolescents. Using
ordinal regression, we analyzed a subset of the 2010 National Survey of Ko-
orean Families data, consisting 91 adolescents with ages ranged from 15 - 18 years
and their parents. Results showed that the smaller generational gaps in family values
between fathers and adolescents, regardless of the gender of children, was an
important factor that predicted adolescents' subjective happiness. For exam-
ple, when adolescents had similar viewpoints to their fathers regarding values of
parenting, they were more likely to be happy. When both adolescents and their fa-
thers similarly assessed their relationship and the amount of communication with
each other, adolescent children were more likely to be happy. These results imply
the important roles of fathers in parenting adolescents and adolescent children's
happiness. In particular, it is worth noting that the consensus in family values be-
tween parents and adolescents is important to support adolescents' happiness.

Mobility of Chinese and Korean Marriage Migrants in Japan Rural Areas

In this research report, we are going to look at mobility of South Korean and
Chinese female marriage migrants in Japan from the following perspectives:
1) suspicion raised among people in the community by marriage migrants' temporarily
returning to their hometown,
2) proportional growth of monolingual in their offspring generation.
In rural areas, marriage migrants are still seen as "escaping brides", and are
under significant influence of this old paternalistic belief that "Once married into
a family, she belongs to it". This idea has taken root in marriage migrants' mobility nega-
tively, and has worked as a mechanism which restricts it. This report will present our
perceptions toward female marriage migrants' mobility through cases in To-
hoku and Tokai districts.

Canadian Women's Perspectives On Disability, Underemployment and
Health

Disabled women are underrepresented in the Canadian workforce due to un-
employment or underemployment. Some research has focused on unemploy-
ment among disabled persons but few researchers have investigated health and
underemployment among disabled women. My research addresses this gap by
exploring how women with physical impairments understand and address health
experiences resulting from underemployment. In this paper, I review the two
theoretical frameworks that guided my analytic approach—the social model of
disability and feminist disability research—and present a critical interpretive tex-
tual analysis of 10 interviews I conducted with underemployed disabled women
about their experiences of disability, underemployment, and health in a Canadian
context. These narratives illustrate experiences of underemployment including
marginalized identities, lost opportunities, limited income, and wasted energy, as
well as the negative impact on physical, mental, emotional, and social dimensions
of health. They also explain how disabled women can act as change agents to
realize their goals for paid employment, fulfilling careers and self-actualization.

The State's Role in Gentrification: Beyond the Co-Optation and
Repression Dichotomy

This paper examines the local state's role in the gentrification process. I com-
pare two cases where gentrification pressure is high and the state has a signifi-
cant stake in gentrification—Downtown Los Angeles and the old neighborhoods
within the city of Seoul. On a superficial level, the state seems inclusive in Los
Angeles and willing to incorporate voices that rally against gentrification, and the
state in Seoul seems to be exclusive, and at times violently repressive. These two
cases show to align well with the existing social movement theory that projects
a trend towards a "Social Movement Society", exclusively, in the Western world,
where social movements are much more prevalent, yet are contained and co-opted
(Meyer and Tarrow, eds., 1998).

However, this literature can inhibit scholars from taking seriously the double
role of the state that simultaneously co-opts and represses. In so doing, it can cre-
ate a false dichotomy between the role of the Western and the non-Western state
in governing gentrification. Contrary to this view, through participant observation
in both cities, I come to unveil the underlying similarities of the two states' roles in
controlling dissent. I analyze how both states 1) mask their involvement in repres-
sonalization, and 2) delegitimize dissenting voices to avoid a legitimacy crisis.
Focusing on similarities on the abstract level will help scholars of urban sociol-
ogy to better articulate the theories of the role of the local state in facilitating gen-
trification, which has been under-theorized despite the early attempt by Logan
and Molotch (1987) to bring the state back in with their 'growth machine' thesis.
With comparative case study, the point is not to discern the degree of state's in-
volvement in various cases but to identify types of involvement of the state that
will further serve as a stepping-stone for elaborating the theory of gentrification.

Erasing the Line Between Work and Leisure in Korea

This paper examines the blurring of the line between work and leisure in Ko-
rea, which is now in a highly industrialized, hard-working society prompted by
rapid globalization. It also has a well-developed ICT infrastructure with a highly
educated and skilled labour force, now evolving into an increasingly older society
within a creative, service economy. In these contexts, individuals in Korea, both
at work and at leisure, are facing diverse inequalities depending on their social struc-
tural conditions. This paper mainly regards leisure as un-coerced activity, while

Religious Diversity Management and Reasonable Accommodations in Greater Montreal Schools

Debates over the place and role of religion in the public sphere have gained significant relevance in Quebec, especially since 2006 (Lefebvre, 2008). The arrival of immigrants with religious backgrounds other than Christian, distorted public narratives over minorities' religious requests and the post 9/11 context contributed to this. As a result, the Consultation Commission on Accommodation Practices Related to Cultural Differences was created in 2007. Education, together with the field of health, stands as an arena for more potential tensions and more needs for religious accommodation (Zubrzycki, 2012). Framed within a larger comparative project, directed by Solange Lefebvre, on the regulation of religion in four national contexts, and based on a qualitative approach, this presentation analyzes how religious diversity is being managed in the context of schools in Greater Montreal. The inquiry pays special attention to the specific "reasonable accommodations" implemented to respond to religious requests of pupils and teachers — in areas such as personal religious symbols and dressing, dietary prescriptions, religious holidays and sports practice— with the aim of disclosing the effects that the so-called Bouchard-Taylor report has had in such institutional contexts.

Statistical Analysis of the Sport Participation in a Population: Some Sociological and Software Considerations

Estimating the sport participation rate in a given population raises the question of what it means to "be sporty". From 1970 to 1990, new forms of sport practice appeared that forced the sociologists involved in general population surveys to enlarge the usual definition in order to really get a whole understanding of the sport phenomenon. The goal is now not only to evaluate the hard core formed by the sociohistorical duet "training and competing" but to go further so as to include sofar and more ephemeral physical activity forms. The scale of the respondent investment in the sport and physical activities is designed, representing a progression from no practice at all to the usual sport participation in its sociohistorical meaning. To this end, the interviewing mode has changed to an emic-and-etic dual approach.

Sociologists aim to discover the sociological, cultural, demographic characteristics which may influence this sporting scale. A suitable statistical toolkit readily available in an easy-to-use computing environment is thus needed. No doubt that contingency table analysis is the fundamental technique used by sociologists. The software proposes some modern approaches for dealing with two-way tables (Yule's Q, confidence intervals, local and global effect sizes, modality profiles) suitable for a sociological quantitative data analysis, and is specifically powerful in producing statistical graphics.

Finally, explanatory methods appropriate to the researcher's goals (Wheaton, 2009) enable to detect and visualize (Elly, 1999) the sociological, cultural, demographic effects in the 2010 general survey of the sport practices in the French population.

Does Early Schooling Equalize Educational Outcomes Across Social Origins: Evidence from Pre-School Extension in France

Universal preschool is often seen as the mean par excellence of correcting social inequality in educational achievement. However, evidence on the short and long term effect of preschool is very limited. Over the 1960s and 1970s, France undertook a large-scale expansion of preschool enrollment. As a result, during this period, the enrollment rate of 3 years old children rose from 35% to 90% and that of 4 years old rose from 60% to virtually 100%. This paper evaluates the effect of this expansion on subsequent schooling outcomes (repetitions, test scores, high school graduation) and wages. We examine the average benefit of preschool enrollment and differences across social groups in the benefits of preschool. We find some sizeable and persistent effect of preschool and this points to the fact that preschool can be a tool for reducing inequalities. Indeed, the analysis shows that children from worse-off or intermediate social groups benefit more from preschool than children from better-off socioeconomic backgrounds.

Lefrançais, Arnaud* (Université de Cergy-Pontoise, lefranc.arnaud@gmail.com)
Over the last fifteen years, an important body of research has investigated the extent of the intergenerational economic mobility. Two main results have emerged from this literature. First, economic outcomes, in developed societies, are much more strongly influenced by family background than was thought two decades ago. Second, the transmission of economic inequality varies considerably across countries and high inequality is generally associated with low mobility. However, beyond the above-mentioned stylized facts, the factors that shape intergenerational economic mobility empirically have not been much explored. Why does the degree of intergenerational mobility vary across countries? To what extent does it change over time? How does the level of economic inequality relate to the persistence of inequality across generations? Have changes in the wage structure affected the degree of mobility? What policy intervention in general, and what educational system in particular, may foster equality of opportunity? Such important questions remain largely unanswered.

This paper analyzes long-term trends in intergenerational earnings mobility in France. I estimate intergenerational earnings elasticities for male cohorts born between 1931 and 1975. This time period has witnessed important changes in the labor market and educational system: large expansion in access to secondary and higher education, important compression of earnings differentials. Over the period, intergenerational earnings mobility exhibits a V-shaped pattern. Mobility falls between cohorts born in the mid 1950s and those born in the mid 1950s, but subsequent cohorts (cohorts born in the first half of the 1970s) experience a growing intergenerational earnings elasticity amount to around .55. This is significantly higher than the elasticity estimated for the baby boom cohorts. It is also lower than cohort born in the 1930s but the difference is not significant. Changes in mobility mostly reflects the evolution of cross-section earnings inequality, rather than variations in positional mobility.

LEFRANC, SANDRINE* (CNRS, sandrine.lefranc@cnrs.fr)

Les commissions de vérité et de réconciliation, dispositif emblématique d’une « justice transitionnelle », sont figure d’institution exemplaire. Quelque trente institutions ont ainsi été chargées, depuis les années 1980, d’établir, après un conflit politique violent, la « vérité » sur les actes de violence, et de proposer une politique de réparations au bénéfice des victimes. L’expérience de la Truth and Reconciliation Commission sud-africaine (1995-1998), a contribué à leur succès. La force des émotions qui s’y sont manifestées, a crédité les commissions de vérité d’une capacité de modifier le rapport des sociétés à leur passé violent, à trouver un nouvel équilibre entre le deuil et la vie. L’expression de cette souffrance permet le remplacement d’émotions de déliaison, par d’autres formes de souffrance qui se traduisent par la création d’un lien social plus solide. Les initiatives prises par ces institutions pour renforcer le processus de réconciliation sont un exemple de ce qui est possible. Leurs efforts pour se débarrasser de la souffrance par la création de liens sociaux, ont permis de libérer le traumatisme. Ces scènes émouvantes dans le même temps refonderaient la nation.

Ce pari se fonde sur des descriptions erronées de ce qui se passe sur la scène des commissions de vérité, et sur des échecs intelectuelles. L’une de ces erreurs consiste à croire que, en premier lieu, que les acteurs arrivent à l’audition avec des émotions nées de l’expérience de la violence politique, et stockées depuis lors —des « traumatismes ». On suppose, en deuxième lieu, que ces émotions, traumatiques, sont suscitées par la souffrance : peine infligée par la violence, ou souffrance de la perte d’un proche. On imagine, en troisième lieu, que l’expression émue de cette souffrance permet le remplacement d’émotions de délire, par des émotions d’adhésion : la victime s’identifierait à un collectif qui la reconnaît enfin ; réciprocement, la nation se renforce dans la communion émotionnelle, dans l’effusion cathartique. On verra comment ce “tribunal des larmes” que fut la TRC met à l’épreuve ces convictions.

Leadership Research in Healthcare: A Realist Review

According to Gilmartin and D’Aunno (2008), researchers were missing the opportunity to develop general leadership theory in healthcare sector mainly because they weren’t stressing enough the role of professionals as leaders and the need of understanding the role of gender in leadership; and because of the barriers to collect data. Many disciplines, e.g. psychology, were involved.

The present study aims to investigate which progresses researchers have done in order to understand: 1) Who are the leaders in the healthcare sector and which factors (i.e. traits, skills, competencies, behaviors and styles) are needed for such a role?; 2) How can leadership impact the healthcare sector and what challenges are addressed?; 3) Which efforts are in place in order to educate leaders in healthcare and how relevant are those?; 4) Is leadership in healthcare going towards a systemic, cross-cultural and collaborative approach?

To achieve these goals, we identified the realist review as the best methodology to analyze the relevant researches sample. We have answered questions such as “what works, for whom, and in which circumstances” highlighting: the effectiveness and acceptance of transformational and collaborative approaches; professionalism, expertise, and good task delegation within operational teams; distributed leadership, relationships, and social responsibility at a systemic level.

The relevancy and need of leadership development programs, framed within a wider strategy, emerged. Nonetheless, gaps still exist and require further investigation: particular needs in public vs. private contexts; professionals’ and women’s differentiating characters; generational gaps; associations between leadership and recruitment HR practices research; how (and if) leaders (should) influence the organizational culture and values; and developing countries specific challenges. Also, a greater proportion of relevant findings should be drawn by empirical and more rigorous studies. Finally, major attention could be paid to interactions happening at the team, organizational, and systemic level among different leaders, and among leaders, followers and external actors.

Who Will Do Science? Implications for Science, Technology and (New) Forms of Social Inequalities

Submission to RC23 Research Group: Research Committee on Sociology of Science and Technology

Who Will Do Science? Implications for Science, Technology and (New) Forms of Social Inequalities

Almost 20 years ago, the authors explored the ramifications for science and society of who practices (and will practice) science in the United States (U.S.). They describe a career of who practices science. Since then, academic scientists have become key actors in the production and training of scientists (admissions, funding, training and apprenticeships) and the design, implementation, certification and evaluation of curricular content. Moreover, access to and understanding of science and technology are necessary to function in a global, knowledge-based economy. These issues are still critically important to both the scientific enterprise and society.

This paper revisits these issues and implications for science policy in the contexts of dramatic demographic changes and inequalities in access to science and technology in the US. Currently, increases in the percentages of the U.S. population comprised by historical racial/ethnic minorities are not reflected among the individuals choosing to pursue science careers. This reinforces and exacerbates inequalities among groups. The authors explore inequalities in science and technology by examining trends in the participation of historical racial/ethnic minorities in science and engineering higher education and the workforce over the last two decades.

LEGRAND, JADE* (École Hautes Études Sciences Sociales, jlegrand@ehess.fr)

Embodying the Other As a Self

Based on ethnography of international relief organizations, this contribution explores one aspect of the daily life of aid workers: how emergency contexts bind people together and eventually melt different selves in a temporary, shared body. First, the body is considered as the biological boundaries of human being, with its vulnerabilities. It then becomes the united entity of an emergency team.

What strikes about life in the field is the level of danger commonly accepted by members of the organizational world (Roth, 2011). Putting yourself at risk, physically and mentally, is a prior condition to humanitarian career. Incidentally, the fantasy of danger flows into our perception of aid workers as modern heroes living a life of adventure and self-sacrifice (Dauvin, Simonet, 2002). In concrete terms, kidnapping, rape, beating and robbery are often their reality. While being in the field with the teams, one can observe, even experience, that not only may aid workers put themselves at risks but sometimes also others. Life in a mission creates a high dependence between the staff, relying on each other to ensure everyone’s safety. This dynamic is reinforced by the lack of intimacy and the control over individual agency.

The two-day routine is submitted to rules and constraints, particularly for international staff sharing house, office and meal. To a certain extent, these mechanisms of embodying the other operate as well with the local communities.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The Self and the Other are linked in the ethical principle of aid itself. But the way it is translated in the field is still to be described and analyzed. It opens the door to a new understanding of humanitarian biopolitics (Fassin, 2006, 2010; Agier, 2012; Redfield, 2013). Indeed, isn’t the choice of risking one’s life for the others the ultimate way to contest the sovereign power of letting die (Foucault, 1976)?

LEGRIS REVEL, MARTINE* (University Lille 2, marte.revel@gmail.com)

Are Civil Society Organisations Doing Research?

Legitimate governance of science cannot be achieved by the research community alone. Science governance should take into account issues of broad public concern. Engaging CSOs (civil society organisations) in research design and implementation more effectively could help address these issues. Publicly funded research has an obligation to produce outcomes beneficial to the public who fund it. In the European Union this obligation is reinforced by a complementary trend toward participatory governance. Momentum is growing to deepen democratic engagement through the participation of citizens, also in the research environment.

Unfortunately, the knowledge base underpinning CSO involvement in research is extremely thin. This knowledge foundation must be strengthened if Europe is to develop a research governance structure capable of accommodating CSO involvement effectively. We need to deepen our understanding of how CSOs are currently participating in EU-funded research — to what extent, in which roles, for what purposes and to what effect...

In a rigorous investigation of unprecedented scope, our study maps these parameters of engagement and analyse their underlying assumptions. The models being identified should allow us to evaluate research outcomes more efficiently and provide contextualized understanding of CSO participation moving forward...

The findings presented in our paper are based on the results of two surveys carried out by the CONSIDER project in 2012. The surveys, which covered all FP7 projects, were aimed at gathering essential information about participation of CSOs in EU-funded research. Survey one was sent to 14,000 FP7 project coordinators and generated 2,959 completed responses. The role of CSOs in research projects is perceived very differently by academic institutions and the CSOs themselves. CSO participation in the FP7 research projects privileges an institutionalized professional type of civil society organisation over grass roots activists.

LEGRIS REVEL, MARTINE* (University Lille 2, marte.revel@gmail.com)

Beyond Rational Dialogue: Alternative Modes of Participation

The stumbling blocks of the “dialogical” procedures spread in the political public place and in the service of the democratic participation of the citizens can be limited, by-passed even by the development of modalities and “post-dialogical” devices of sustainable cooperation in the public and “private” places, the political spaces and everyday life, with the aim of a both reflexive and constructive democratic governance.

The “post-dialogical” way suggests that the “dialogical” devices in the service of the democratic participation are neither a necessary condition, nor a sufficient condition of the mobilization of the actors or the exercise of the citizenship. The passage of the models and the devices of participation of “dialogical” type in the models and devices of cooperation of “post-dialogical” type allows to envisage sustainable democratic methods of social exchange and governance beyond the public place and beyond the political space, by considering their development and their functioning in the “private” spaces, in particular those of the world of work and of everyday life. The way of the cooperation groups a big variety of approaches and experiences and suggest, beyond the devices of interaction, to question the transformations of the company and the State, as well as their possible evolution towards the forms of “the cooperative company” and of “cooperative State “, major partners, with civil society, of the democratic governance of our societies.

Our paper will include a theoretical approach and the synthesis of the results of our field work in the domain of industrial democracy and of citizen contribution to sustainable development in France and in Europe.

Marketization and Agency: Freedom and Self-Control in Low-Status Online Contract Work

How does the marketization of knowledge work and the associated creation of entrepreneurial subjectivities influence workers’ agency, or their control over their own lives? Proponents of marketization suggest that it provides workers freedom in choosing where, when and how to work. Critics fear that it leaves workers isolated, adrift and vulnerable to exploitation. In this paper, we approach the question through an extreme case: self-employed knowledge workers who contract with clients around the world through online labor markets.

The data is based on interviews of 25 online workers in United States, Nepal and Philippines, and on participant observation in online labor markets and in worker online communities. In contrast to earlier studies of independent online work, which focus mostly on relatively elite workers, we focus on workers who specialize in low-status digital tasks, such as photo labeling, sentiment analysis, and data entry.

The findings show that online workers celebrated their freedoms and cast the uncertainty inherent in contract work in positive terms, as variety and excitement. At the same time, the lack of structure provided by an organizational context left many of the workers struggling with self-control, resulting in underwork, overwork and ineffective time use. To cope with self-control issues, many workers participated in online peer groups and used sophisticated software tools to track progress and create goals and alerts. Since well-paying tasks were available on the markets only occasionally, some workers felt compelled to attend whenever these tasks alerted, even at night, and structured their daily activities so as to be constantly available. This suggests that, at least for some workers, the freedom of marketized knowledge work may be somewhat illusory: the iron cage of corporate bureaucracy is replaced with a self-imposed digital cage.

LEHMANN, JULIE-MARTHE* (Hague University of Applied Sciences, J.M.Lehmann@hhs.nl)

Do-It-Yourself Finance! a Participatory Action Research on Community-Based Finance Systems in the Netherlands

The contemporary global financial and economic crisis has led to a shrinking Dutch welfare state, which encourages citizens to help and support each other on the grass roots level. This paper provides inside insights in a community-based savings and credit mechanism, called CAF-group. The rationale of CAF-groups derives from informal savings and credit associations in developing countries and migrants in the West. Since the early 1990s, international and local development organisations have learned from this phenomenon and have developed a methodology for self-funded financial groups to improve the well-being of vulnerable people. Lately, CAF-groups have been successfully implemented in Spain, Italy, Portugal, Hungary, Belgium and the Netherlands. Based on practical evidence in Europe, one can assume that participation has a positive impact on human needs such as the generation of significant economic benefits and the improvement of financial management skills. Participation creates self-confidence among CAF-members which in turn leads to feelings of ownership and responsibility for the management and maintenance of their group.

The implementation of self-funded financial groups in the Netherlands is supported by a participatory action research program. This paper discusses the results of this program by exploring whether and how participation of members can improve their well-being based on the capability approach of Sen (1993). Therefore, the capability approach is operationalized and applied to three CAF-groups in The Hague, the Netherlands: (1) men, 40 plus, ethnically-mixed; (2) women, 40 plus, ethnically-mixed; (3) mixed sex, below 30, Aruban ethnicity. Data is collected through qualitative interviews with members, participatory observations of group meetings and evaluation workshops. This research provides insights into the operational features of community-based financing mechanisms, here three CAF-group in comparative perspective, and demonstrates how grassroots solidarity economy processes can contribute to the general well-being of vulnerable people in a time of global crisis.

Certifying Practitioners and Accrediting Programs: The United States Experience

This presentation is intended to clarify the distinction between the certification of individual practitioners and the accreditation of programs in sociological practice, clinical, and public sociology. In the United States the Association for Applied and Clinical Sociology (AACS) certifies individual practitioners at the Master’s or Doctoral level. Certification is earned by a sociological practitioner to document their qualifications beyond an academic degree. It is a process of evaluation by previously certified peers and includes the submission of a portfolio and the completion of a demonstration in which applicants showcase their action oriented work. Certification is not licensure as granted by a state or commonwealth.
In contrast, The Commission on the Accreditation of Programs in Applied and Clinical Sociology (CAPACS) accredits programs. Sociology programs can voluntarily seek accreditation to document their quality and performance. It involves a program self-study and external peer review of the program. Programs must meet curriculum standards in the areas of sociological theory, methods, and practical experience such as an internship. Accreditation provides impartial advice on improving the education of students. The Commission accredits programs at the Baccalaureate, Master’s, and Doctoral Level.

This presentation is intended to be an informative one in which both the process of considering an individual and the process of accreditation for a program will be covered. A closing argument will be made that sociological practice - applied, clinical, and public - can be made stronger if it is populated by practitioners who are certified graduates of an accredited program.

Urban Land Encouragement and the Greenbelt in the Greater Toronto Area

In this paper, I look at the implications of the Greenbelt legislation that was introduced in the so-called Greater Golden Horseshoe Area in 2005 and is coming under increasing scrutiny. The main rational for the introduction of the Greenbelt was to protect green space from further land encroachment by Toronto’s massive urbanization pressures; (2) to secure the hydrological system that is important for the Toronto region; (3) to safeguard several ecological sensitive areas and its biodiversity. In tandem with this legislation, a second provincial legislation came into place with the purpose to direct growth to already built up areas. While it is hoped that the exurban expansion into the countryside will be alleviated with this policy, the provincial pressures on municipalities to support conditions for growth lead to different local perspectives on what the greenbelt constitutes. This paper looks at one municipality - Markham - as the “inside” of the greenbelt, and Barrie on the “outside” of the belt – and how they negotiate and integrate the physical barrier in their growth agendas, while contributing to further decline in biodiversity. By using these two perspectives, one from the inside, one from the outside, I will investigate how far the greenbelt is seen as a limit to growth, a repository for biodiversity or an important hydrological system. For this, I will look at the few remaining agricultural areas and their relationship to urbanization on the one hand and the protected landscape on the other. This paper draws on elite interviews with representatives in two municipalities (Markham and Barrie), review of official documents, and newspaper and symposia. It is hoped that the general lessons it brings to questions of biodiversity decline and water regime change in the context of urban development pressures where legislation, discourse and social practices are contradicting each other.

LEICHT, VERONIKA* (Promotionskolleg, Veronika.leicht@fau.de)
Inclusion and Structural Processes of Young Recipients of “Unemployment II Benefits”

This paper discusses first findings of a research project that tries to reconstruct biographical developments of young adults who are perceived as especially difficult to “include” – due to their precarious status as recipients of “unemployment II benefits”. I am especially interested in turns of events that appear surprising in the eyes of professionals and of creative “metamorphosis” (Schütze 2001). In terms of biographical analysis a special focus is put on “structural processes” (Schütze 2001) of the young adults. There have been approaches to understand the situation of young people receiving unemployment II benefits in recent studies (i.e. Schreyer/Zahradnik/Götz 2012), but the focus on the biographical context and especially the relationship with relevant professionals is missing so far. Autobiographical-narrative interviews with the target group are being conducted according to Schütze’s concept of "Passagen" (Glaeser/Strauss 1996). Insights into the interaction with the professionals are gained on the basis of spontaneous narratives of professionals (in this case: counselors in the job center etc.) about the history of their working relationships with clients (Riemann 2000).

Schütze, Fritz (1981): Prozeßstrukturen des Lebensablaufs. In: Joachim Matthes, Arno Weifenberger and Manfred Stossberg (eds.): Biographie in handlungswissenschaftlicher Perspektive. Kolloquium am Sozialwissenschaftlichen For-
'Covering narratives' are at the foreground, and for certain experiences it appears that there is no discursive space, neither in the family nor in the social context. This has consequences: inclusion and exclusion are almost inextricably intertwined and occur simultaneously inside and outside the bi-national family; and violence and fear find their way, uncontrollably, barely discussable.

Individual and Structural Causes of Neet - a Case Study of Austria

Compared to other EU member states, Austria has one of the lowest youth unemployment rates, an above-average graduation rate, and a well-developed dual system of vocational education and training. Nonetheless, ongoing structural changes induce labor market conditions that particularly bar less-well-educated young people from successfully and permanently entering the labor market. Consequently, between 2006 and 2011 the proportion of Austrian youth (aged between 16 and 24 years) Not in Education, Training or Employment (NEET) leveled off at slightly below ten percent.

In order to investigate the phenomenon of NEET in Austria comprehensively, our research is guided by the following questions: (i) How can the social composition of NEET-population be characterized? (ii) What are the relevant key factors that drive young adults on the pathway to NEET? (iii) How long do young adults remain at NEET-status? (iv) What are the key determinants that help overcoming NEET?

Our analyses are based on the Austrian sample census from 2006 to 2011 and we rely on a descriptive analysis as well as on a regression-based path analysis. First results reveal gender-specific risk factors for becoming NEET including early school leaving, poor health/disabilities, involvement in child care activities, and unemployment experiences at the individual as well as an active labor market policy and a broad supply of suitable jobs at the regional level. The heterogeneity of NEET requires individual measures for young people at risk.

Interaction Effects in Nonlinear Models - Testing and Interpreting Core Assumptions of Situational Action Theory

In contrast to the linear regression model, interaction effects—defined as the marginal effect of the moderator variable on the marginal effect of the focal variable on the outcome—are allowed to vary across individuals in nonlinear models. Thus, they do not simply equal the coefficient of the product term variable. Furthermore, even the nonlinear main effects model includes an interaction effect (labeled as structural or model-inherent interaction and/or compression effect) if both covariates contribute significantly to the explanation of the outcome. The presence of the model-inherent interaction is owed to the restricted range of the outcome variable.

However, several scholars have engaged in a discussion whether the model-inherent interaction has a meaningful interpretation. While some scholars argue that substantive interest is only on the interaction that arises from the product term variable and advocate removing the model-induced interaction from the total interaction effect (e.g. Bowen 2012), others adhere to the interpretation of the total effect (e.g. Ai & Norton 2003). So far, the discussion concerning the idea and interpretation of interaction in nonlinear models didn't result in a common perspective.

To date, there is a lack of a systematically derived justification for one of the options, based on the combination of theoretical and methodological arguments. In order to overcome this shortcoming, we (1) develop a general perspective on the idea and meaning of interaction in nonlinear models, (2) target at developing an application scheme guiding researchers to the appropriate concept of interaction—either including the model-inherent interaction or separating it from the total interaction effect—, and (3) propose statistical tests that allow for an analysis of the interaction effect.

Situational Action Theory, a recently proposed and promising criminological theory (Wikström 2006, Wikström et al. 2012), will serve as theoretical exemplification.

“How People Recount Their Life”: Recording and Analysis of Individual Well-Being over the Life Course

Constructing and structuring life courses through the perceptions of those concerned is a promising approach to the study of life-event histories. Pioneering sociologists have developed the qualitative analysis of turning-points based on subjective quality of life-course narratives (Hareven & Masaoka, 1988); we here present data from a quantitative survey which recorded individual life-event histories together with perceptions of well-being over the life course.

This unique dataset allows to explore the evolution of well-being from birth to age 50 among a representative sample of the French population. Respondents were asked to divide their lives so far into periods, and to explain and interpret these significant phases. They identified the turning points, the general tone of each period and what they saw as the landmark events.

Our initial analyses of this abundant material show how individuals’ life courses are structured around certain factual landmarks, especially landmarks in their conjugal and working lives, and the context of historical events. We also identify how individual characteristics influence the subjective description of well-being: the respondents’ subjective experiences prove to be varied, non-stereotyped and not readily predictable.

Having established some of the relevant characteristics of the declared turning points, we then explore the changes in reported well-being from one period to the next within individual life courses. To explore the perceived life courses we apply Optimal Matching Analysis to draw out their main features and establish a typology of well-being trajectory types.

Large-Scale Dissemination of Small-Scale Renewable Energy Technologies in Developing Countries

Access to clean energy services is considered as a requisite for any development in rural places of developing countries. In remote places, decentralised renewable generation of electricity has been considered for a long time as a desirable alternative to rural electrification with the extension of the grid. A number of alternative characteristics for cooking and heating have been designed and promoted by NGOs. But progress in the dissemination of these technologies has been slow. This paper will first examine some of the myths linked to rural access to energy and how they have been impeding the implementation of renewable energy projects.

The dissemination of small decentralised clean energy technologies in developing countries seems often analysed in the international development literature in terms of barriers to be overcome or institutional gaps to be filled. Considerable efforts have been put in subsidising clean energy technologies with most of the time environment to thrive compared to established centralised (and often polluting) technologies.

This paper will finally analyse how innovative business models, but also adapted institutions and regulatory frameworks for private public/partnerships are contributing to accelerate the diffusion at a large scale of technologies that can be now considered as mature.

Urban Planning and Sustainable Energy Transition in Sub-Saharan African Countries

Urbanisation rates in Africa are the highest in the world and in most sub-Saharan countries energy service delivery is inadequate to keep up with the needs. The situation is often dire, with cities scarcely able to provide for their existing population, let alone allocate resources to minimise the longer term environmental risks facing them such as global warming- leading to on-going crisis management and potentially spiralling declines in welfare and economic growth.

Inadequate access to electricity and limited mobility because of deficient public transports are common in major part of African cities, notably within informal settlements. The demographic trend in sub-Saharan Africa and massive migration from rural to urban areas can only aggravate difficulties and deepen the inequalities between the middle class and the poorest relegated in the margins of urban cities.
Strategies to integrate energy issues in urban planning could be built to mitigate these trends, by promoting energy efficient housing, better spatial planning and public transport and also access to energy by alternative electrification approach. This paper presents a research on organisational dynamics and constraints faced by sub-Saharan cities; it surveys capacity constraints in municipal departments and analyses the gap between policies and implementation of sustainable energy transition measures. This on-going research relies on case studies in Uganda, Ghana and South Africa.

National-Ethnic Identities of Leaders Of The German Minority In Northern Poland

The main objective of this report is to present the national and ethnic identities of leaders of the German minority organizations in the context of their activities after 1990. It is an in-depth case study of social construction, including structure and operating principles, considering internal and external interactions and the dynamics of this system was carried out. The empirical analysis of the leaders' identities are based on the main theoretical concept of ethnic identity that simultaneously constitutes a synonym of ethnicity by John Milton Yinger. The subject of this report includes formal institutions (associations), represented by formal and informal leaders of German minority groups in selected areas of northern Poland. The sample contains associations that operate in Pomerania, a part of Kujawsko-Pomorskie voivodship, the Warmia-Mazury voivodship and the northern part of the Wielkopolska voivodship. The location of the associations coincides largely with former province of West Prussia (1878-1920) and the territory of the former Second Free City of Danzig (1920-1939).

Cross-National Comparative Lifestyle Research: Theoretical and Methodological Considerations and a Two-Country Illustration

In this presentation, we offer a comparison of cultural stratification in France and Israel, with a specific emphasis on the association between the social field and the cultural field. Analysis of cultural stratification is interested in the degree to which individuals from different social groups are able to take part in cultural life and develop a meaningful relationship with it. In turn, such a relationship affects life chances in the realms of education, occupation, and social status. So, analysis of cultural stratification is a powerful tool for analyzing social stratification systems and to better understand the similarities and the differences between countries in this realm. Research on this topic has developed significantly, both empirically and theoretically, these last fifteen years, but relatively little attention has been granted to research that adopts a cross-national comparative approach and that asks theoretically, these last fifteen years, but relatively little attention has been granted to research that adopts a cross-national comparative approach and that asks

Contested Multiculturalism in Germany? - the Debate on Circumcision

In the words of Angela Merkel multiculturalism has "utterly failed" in Germany (16/10/2010). Although the former German President Christian Wulff had stated "Islam also belongs in Germany" only a few weeks earlier (03/10/2010) the debate seemed to be settled. In contrast to other European countries adopting official policies of multiculturalism, German politics did not strive to incorporate multicultural elements into policy making or the legal system. However, with this attitude the German secular state will face challenges with respect to the religious sphere. The 2012 medial outcry due to ceremonial circumcision recently demonstrated this ongoing societal discussion.

In this case, right-wing politicians as well as a coalition of secularist actors, and children's rights groups opposed circumcision, an essential ritual practice for the Muslim and Jewish religious communities. As a result of this debate, an exception was introduced into the German Civil Code that makes circumcision of boys for religious reasons legally possible. After this step the medial attention decelerated and left behind what can be seen as an attempt to introduce multicultural elements in an otherwise mostly secular jurisdiction.

My sociological take on the debate goes even beyond this description. I argue from a point of social theory that takes into account the 'boundaries of the social world' (Lukmann 1970). From this perspective it becomes clear that it was necessary for secular politicians, jurists, and participants of the debate to adapt the jurisdiction to the reality of the religious communities living in Germany. This involved a re-interpretation of the German Civil Code in order to respect the children's rights into a means of their symbolic inclusion into the social sphere of a religious community. In my presentation I will elaborate on this theoretical approach as well as its implementations for the analysis of the debate and the concept of multiculturalism.

From Foosball Table to Beer Crate – Ordering Everyday Worklife in an Internet Agency

Internet advertising agencies are production oriented service companies who mainly develop software applications for their customers, like advertising banner or homepages. They are an instructive example for new forms of organizing working processes in an exceedingly complex working field. By bringing in empirical data from an ethnographic study I will show that in spite of this complexity, employees are able to finish their work successfully. This is possible because of practices that are differentiated: the focus of the talk is on the differences of these practices and of a special configuration these practices carried out: masculine software developer.

The argumentation will begin with introducing theories of practices as an instructive theoretical “tool” to analyze organization and materiality, secondly basic points of the conducted ethnography will be presented, following by empirical material from the field. I will show how crates of beer and a foosball table are important parts of the practices that carried out software developer and how these practices are interlinked with practices of doing masculinity. The so produced configuration can be described as a main agent in the field – in addition to account and creative. I will conclude that the ongoing practices of differentiating, e.g. differentiating the software developers from the creatives, “guarantees” the social order in the observed field.

Involved Fatherhood: Source of New Gender Conflicts?

This paper, based on interviews with 36 couples, focuses on fathers who take parental leave or reduce their working time in favor of participating in family work. Although looking at the separating factors they help us to understand the complex dynamics of changing gender relations in the private sphere.

Involved fatherhood does not only contribute to gender equality, it is also a potential source of new gender conflicts. The hegemonic cultural construction of masculinity does not only fit into the core of this study. Our data show that involved fatherhood must be accomplished against the hegemonic pattern, but that, for involved fatherhood becoming an unquestioned routine, the father's uncommon attitude to occupational career must be shared and supported by the mother. Otherwise the man’s abstinence from career ambitions is a permanent source of conflict.

Another potential source of conflict is who is entitled to define the standards and norms of gender roles. Fathers who are engaged in family work find themselves often in an ambivalent situation. Our data show that, on the one side, mothers appreciate father's engagement, but, on the other side, tend to defend the household as their domain. Often the father gets into a position of his wife's "junior partner", if men refuse to be the junior partner a new kind of gender conflict arises. Closing the gap between "culture and conduct of fatherhood" (LaRossa) proves to be complicated in different respects. It even can evoke new conflicts.

LENNE, LYDIE* (Institut Catholique de Lille, lydie.lenne@ic-lille.fr)

La Fabrique De L’Autonomie

Dans le contexte de la mise en œuvre volontariste d’un projet utopique, construction d’un nouveau quartier de ville constitué de mixité, (…) de solidarité et d’innovation sociale », à l’initiative d’une université et de collectivités locales, un « groupe-ressource » pilote les « commissions de mutualisation », lieu incontournable des prises de décisions, de positions ou encore de pouvoir des acteurs. On proposera l’analyse de l’agenda de ce groupe-ressource, les thématiques abordées, les situations et positions, les argumentations, les processus de décision. Les sujets abordés lors de ces commissions vont de la signalisation à l’animation commerciale du site mais sont surtout pour nous l’occasion de questionner les tensions entre les notions de dépendance et d’autonomie. Dernièrement le débat autour de la vente de frites par un « foosball truck » sur le parking de l’université n’a pas échappé à l’attention. Doit-on offrir à la personne en situation de handicap, l’être « dépendant », celui qui va à l’encontre de la norme, de l’idéal de nos sociétés (GAUCHET, 2004) qu’il soit en fauteuil, fou ou vieillissant, l’occasion de consommer des aliments riches en graisse ? Celui-là même que l’on pousse à l’indépendance, à participer à un processus de vie, à se prendre en main, à être autonome mais que l’on ne reconnaît pas capable de faire ses propres choix diététiques.

Entre une « politique de la pitié » (ARENTH, 1967) et le paternalisme des décideurs, les commissions de mutualisation peinent à s’inscrire dans une conception capacitaire des individus et creusent un fossé avec les intentions originales du projet : penser le quartier par et pour les usagers.

Changing Gender Orders and the Variety of Gender Welfare Regimes

The paper considers the present transformation towards a flexibilised gender order in a comparative perspective informed by the variety of gender regimes. The paper will outline three stages of gender orders in modernity: In the first stage of national modernisation and capitalist consolidation, the neopatriarchal gender order was established which assigned public and domestic power to men and defined women as mothers and housewives. The difference based gender order developed as the neopatriarchal authority receded. Formal and legal male superiority was reduced with women’s votes, legal reforms for women’s own rights of property and decision in the family. The worldwide spread of Fordist/ Postfordist production established men as core workers and women as housewives. Emerging welfare states institutionalised this division of labour with the breadwinner-housewife model. The varieties of gender regimes have evolved in the context of the different welfare state trajectories and the various paradigms of mass production as Fordism and Toyotism, but they also were influenced by the diverse liberal, social democratic or conservative political culture.

The difference based gender order has been eroding by women’s educational advancements, by women’s movements and the resulting legal and social reforms as well as by postfordism and globalisation and flexibilisation of employment. Presently flexible gender order is emerging which is based on a pluralisation of gender and gendered employment and life forms; as various forms of sexuality have become acceptable and men, the integration of women into the labour market and increasing flexibilisation and global mobility of employment. The impact of the diverse forms of gender regimes on these transitions will be investigated.

Soft Power, Reciprocity and Guanxi: Temporary Business Migration, New Media and Belonging

This paper connects two contemporary bodies of literature surrounding the nation that appear to be unrelated. The first is what might broadly be termed, disapproving connections. Although the notion of long-distance nationalism 열gate the participation of diaspora in home nations to interference, work on trans-
nationalism and diaspora advocacy redeem these practices by revealing them to be two rather than one-way flows of socio-political influence and econo-cultural goodwill. Increasing migration from traditionally receiving nations such as Canada and Australia has also hastened the realization of diasporas as assets in the service of national interests. The second body of literature can be productively viewed as connected through a more specific triadic relationship between diaspora, home and host nation. As part of a new study on temporary business migration from China to Australia, this paper will use examples from new media to explore how theories of reciprocity and guanxi can shed light on this triad. Doing so will allow for a more holistic understanding of the various forces that shape the temporary migrant’s experience, and a grasp of the mechanisms that engender belonging amidst the uncertainties of provisional residence.

RC34-594.5 LEONINI, LUISA MARIA* (Università degli Studi di Milano, luisa.leonini@unimi.it)

Young Italians Surviving Strategies In The Social and Economic Crisis

The paper intends to present some preliminary results of a research we are carrying out in Italy to investigate the impact of social transformations, spawned by the 2008 financial crisis, on young people and their working conditions. The research’s main goal is to highlight, thanks to the methodological tools of sociology, not only the crisis’ possible outcomes but also how social actors cope with the new situation adopting best practices. Specifically, we concentrate on the changes in the everyday life’s routines, in the consumption practices, in the capability of viewing and planning the future, in the relational models adopted, in the emergence of organizations and beliefs that dominate the panic and the negotiation of identification and belonging. The main goal is to highlight paths, critical points, tactics and strategies adopted to cope with the economic crisis. The research will also point out the impact of the crisis on every day practices, on the methods of planning for the future, on the interpersonal relationships.

The main research’s hypotheses concern the influence of cultural capital on the different personal and family strategies. Cultural capital, gender and ethnicity seems to be the most relevant variables to understand differences and abilities to cope with this very difficult social and economic context. In-depth qualitative analysis has been carried out to enrich available quantitative statistical data, in order to identify possible ways to promote and support best practices able to reduce the negative effects of economic crisis, and to overcome it without weakening the social bonds and, at the same time, promote inclusive, innovative and secure societies. The research aims to provide an accurate description of the everyday practices used to adjust to the current economic crisis, thereby enriching the available qualitative data with in-depth qualitative data.

WG01-892.2 LEONINI, LUISA MARIA* (Università degli Studi di Milano, luisa.leonini@unimi.it)

Young Women Facing The Economic Crisis

The paper presents the intermediate outcomes of a research on the impact of the socio-economic crisis in Italy on young people. More specifically this paper deals with gender differences and inequalities which characterize the condition of young people in Italy. Which are the expectations, the abilities and the competences to cope with difficult economic conditions that characterize young female and male? The relevance of cultural capital will be discussed in order to understand the opportunities or the difficulties faced by young women or men. Besides some data will be presented on young male and female living in Italy but with foreign origins. We argue that gender, ethnic origin and cultural capital are the three most important variables to explain inequalities of opportunities among young people facing the economic crisis.

Communities of Sense and the Borders of Art and Politics: Graphic Art, Moving Images and Dancing Bodies in Urban Periphery of Rio De Janeiro

Abstract Text:

Duque de Caxias is a city located in Baixada Fluminense, a peripheral area of the Rio de Janeiro state occupied by many poor northeastern migrants attracted by work opportunities in the emerging 1940s and 1970s Brazilian southeast.

Transformed into national security area in 1971 by military coup d’état and administered by mayors chosen by the national government until 1985, the Caxias city is visibly experienced through massive images of floods, garbage and violence. Overshadowed by the beauties of the cidade maravilhosa (marvelous city), the neighbor city of Rio de Janeiro, Caxias is, in the words of its youth, “a steamroller crushing all their dreams for generations”[1].

Against the trend we have outlined, a new scene erupts in 2000s Caxias: a youth who perceives the city as absolutely cinematic and responds visually to this finding.

This study aims to approach the intertwining of visual art, politics and everyday life by presenting and discussing the production of cultural activist groups currently operating in the city of Duque de Caxias. The research is carried out in Italy to investigate the impact of social transformations, spawned by the 2008 financial crisis, on young people and their working conditions. The research aims to provide an accurate description of the everyday practices used to adjust to the current economic crisis, thereby enriching the available qualitative data with in-depth qualitative data.

The Dimensionality Of Immigrant Adaptation In Britain: An Analysis Across Generational, Ethnic, and Gender Lines

Many theories have been put forward to explain the long-term experiences of migrants and their descendants (here termed adaptation), from classical assimilation theory, to multiculturalism and the ‘neo-assimilation’ theories of the ‘new’ straight-line assimilation theory and segmented assimilation. These hold different assumptions as to the concepts that ought to be used to qualify the immigrant experiences, as well as the paths of adaptation, i.e. the number of dimensions that the immigrant settlement ought to take, but are not always clear as to which they are, and how they link together. Moreover, current research tends to focus more on the individual analysis of various dimensions of adaptation (socio-economic, cultural, political (electoral and non-electoral participation)) rather than an assessment of the actual number of dimensions of adaptation present across immigrant generations, which has important ramifications for understanding inequalities in the adaptation process across immigrant groups. Research on immigrant adaptation in Britain is no stranger to this trend.

The aim of this paper is to remediate this issue by analysing recent British data to explore the dimensionality of adaptation that underlie the lives of certain immigrant groups in their interactions with British society. The determination of the dimensionality will follow the work by Bean et al (2012) and use factor analysis to determine the underlying number of factors behind variables deemed to be representative of the immigrant adaptation experience and assess the structural equivalencies in the factor analyses across gender, ethnic, and generational lines. The analyses will provide an empirical evidence base to: (1) assess the extent of inequalities in adaptation across gender, ethnic, and generational lines, and (2) examine the extent to which the uncovered dimensions of adaptation in the British context match existing theoretical views.

User Participation in Welfare Service Management – Possibility of Authentic Argumentation Between the Welfare Service Users and Welfare Professionals

User participation is an age-old piece of good practice advice for human services. In Hong Kong, user participation in service management and planning is mandatory for welfare service organizations that receive public funding. Also encouraged by consumerist impetus, many welfare service organizations in Hong Kong include service users in their governance structures to inform the making of management decisions. However, critics often have doubt on the possibility of authentic argumentation between the welfare service users and welfare profes-
signals in these organizational platforms. Habermas' model of a discursive space that is free from the domination of power remains an ideal to be realized.

The author has conducted a study on the participation of welfare service users in governing welfare service organizations in Hong Kong. The study sets out to interrogate the interaction dynamics between the welfare service users and the welfare practitioners in organizational decision-making platforms. Drawing from Habermas' theory of communicative action (Habermas, 1986), the presentation will discuss how the welfare service users construct their institutional identity and the institutional power relations, and the ways that their lifeworld and system world come to influence the communicative actions. The presentation will also explore the ways that discourse orientation and communicative competence of the participants shape the discursive space for organizational decision-making. The discussion will help assess the possibility of authentic argumentation in traditional power asymmetry between the welfare service users and the welfare professionals in the Chinese society of Hong Kong.

Determinants of Effective Cross-Border Cooperation

The world over local communities broach international boundaries. The borders of the Westphalian system of states have a differentiating effect on policy regimes. This article hypothesizes that the degrees of collaboration, coordination and cooperation are a function of these communities' capacity to reduce the transaction costs that differing policy regimes on either side of the border impose. Scrutiny of this hypothesis, however, requires us to control for variation in a local community's interaction. Two phenomena over the past 20 years provide for such variation: the end of the Cold War resulted in new borders that now divided communities that had hitherto functioned as one; the security measures in the aftermath of 9/11 had a similarly deleterious effect on the way cross-border communities functioned. Narva/Vangorad across the Estonian-Russian border is an example of the former; Stanstead/Derby Line across the Canada-United States border an example of the latter. To explain variation across each case study's outcomes, the paper uses collective-efficacy theory to measure each community's response as a function of existing networks, supportive institutions, spatial dynamics, leadership, rate of change, economic cost, and organizational capacity. The findings not only disentangle determinants of collective efficacy among cross-border communities but also provide the beginnings of a model to facilitate effective cross-border engagement when local communities are confronted with events beyond their control that give rise to national policies with adverse effects on cross-border communities.

Implications of Generational Change for the Armed Forces

This paper investigates how the armed forces might optimize the skillset of the incoming generation of soldiers. Generational cohorts have widely been associated with distinct attitudinal structures and behavioural patterns: Baby Boomers, Gen X, Gen Y, Millennials, and post-Millennials. Each of these generations are said to encompass generalizable proclivities and attributes. This paper surveys the vast body of literature on generational theories which it contextualizes in wider social trends on diversity and technological innovation. With respect to the armed forces, the paper identifies controversies of particular relevance and knowledge gaps that stand to benefit from further research.

LEVENSON, ZACHARY* (University of California, Berkeley, Zachary.Levenson@gmail.com)

Dispossession through Delivery: Informal Settlement Upgrading and Socio-Spatial Confinement in Post-Apartheid Cape Town

The South African state has delivered more than 3 million formal houses since the demise of apartheid. Yet the same period is marked by a nearly ten-fold increase in the number of informal settlements, the gradual peripheralization of these areas, and the introduction of novel forms of socio-spatial containment, most notably temporary relocation areas (TRAs) on the urban fringe. How can a benevolent delivery regime coexist with forced relocations, shack eradication, and the introduction of veritable refugee camps administered by the same municipal state overseeing delivery and allocations? This paradox is particularly acute in Cape Town, where the persistence and augmentation of apartheid geography is generally accepted in the urban studies literature. In this paper, I examine relocation regime as antitheses, it is precisely through delivery/upgrading and dispossession as antitheses, it is precisely through delivery/upgrading and dispossession that post-apartheid urban relocations can be characterized as dispossession through delivery. Rather than understanding delivery/upgrading and dispossession as antitheses, it is precisely through formal housing allocation that segments of the poor are relocated to new spaces. Socio-spatial confinements are successfully portrayed themselves as legitimate representatives are defined as “deserving” and gain formal housing, while contending groups are defined as “undeserving” and relegated to “alternative accommodation” in TRAs and other novel forms of socio-spatial confinement.

CORKINDALE, CAROLYN* (Flinders University, Carolyn@corkindale.net)

Natural Disaster Mitigation, Public Opinion and a Propensity To Discount The Future

Despite the growing urgency of scientists' warnings, much of public opinion remains wary of major expenditures and lifestyle changes to mitigate future dangers from climate change. The impact is said to threaten mainly poorer countries, off the radar of wealthy polluters. Economists claim there is a universal human desire to discount the future, decreasingly valued the more distant. The worst dangers will strike many decades in the future and, even if they last for centuries only, much of the damage can be discounted to zero. Sociologists point to the greater salience of local and manifest experience over seemingly abstract and uncertain models and long term global scenarios, but also note that a cultural and social shift to short term values is recent and not universal or irreversible. A recent increase in manifest and unpredicted climate disasters, which have actually struck both rich and poor countries, may in time encourage changes in public perception and a greater willingness to act. Scientists are now focussing on the effect of small rises in average global temperatures on the frequency and intensity of extremes in general, and on the measurable probability of them having already contributed to specific droughts, floods, storms and fires.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
A nationwide Nielsen survey of 7500 Australians, commissioned by the authors, gives some indication of changing values. Willingness to contribute 'substantial but affordable sums on a regular basis' for mitigation of future risks from natural disasters was systematically greater in younger cohorts and for those with direct or indirect experience of them. It varied little between risks 'in the next two years', 'during your lifetime' and 'in centuries to come', suggesting no progressive discounting of the future.

The Growing Unpredictability Of Climate Disasters - Implications For Effective Responses In An Unequal World
Locally unprecedented and unpredicted natural disasters are already becoming manifest, and will increase in frequency and intensity, around the globe, as climate change advances.
Poorer countries, with the least resources with which to respond, are often the most exposed to droughts, floods, storms, wild fires or rising seas, but there is no universal correlation between inequality and such vulnerability, which can strike anywhere, as hurricane Sandy and the flooding of the Japanese nuclear plant have demonstrated. Accelerating climate change, shifting weather systems and poorly understood tipping points undermine the predictability needed for preparedness by even the wealthy, and few nations have the resources or experience to respond quickly without help or advice.
Transnational assistance can be equally inadequate or inappropriate as illustrated by the divergence in responses by US forces or by the lack of preparedness for radiation effects on US personnel assisting at Fukushima.
The mechanisms for rapid trans-national or local to local assistance are as yet undeveloped and Naomi Klein and others have demonstrated the dangers of external aid, when it ignores local knowledge, brings in highly paid expatriates and foreign profit making companies that undermine or displace local activities.
On the other hand there has been too little attention to the potential in empowering and channelling aid to local bodies, and facilitating direct communication between localities around the world which have had similar experiences. Monalisa Chatterjee’s study of the Moombai floods, illustrates the potential effectiveness of local networks, in contrast with the disastrous and damaging imposed responses to Katrina in New Orleans.

LEVIN, JACK* (Northeastern University, jlevin@neu.edu)
Blurring the Boundaries: The Declining Significance of Age
This book examines changes in age-related norms, both in their substance and in their declining rigidity. The analysis of changes in age norms is embedded in a wider thesis that informal social norms in general have diminished in their influence. Jack Levin argues that the social and cultural forces responsible for the blurring of boundaries between public and private conduct, and increasing equality by gender and race, are implicated in the decline of chronological age as a determinant of major life decisions. The book address issues of the cult of youth, the relaxation of age constraints, the erosion of childhood, and the argument for a new life stage of ‘emerging adulthood’. Dr Levin argues that the declining significance of age has depended on the same changes in society as manifest in increases in cheating and in noise pollution, declining basic skills, and growing gender equality. Changes in age norms are examined in the broadest sense, from childhood, to youth to adulthood to ‘boomer changes’. The book thus takes a comprehensive life course approach to aging.

Urban Resilience and Resistance in the Neoliberal City: The Cases of Comunidade Coliseu (BRASIL – SÃO PAULO) and Es.Col.a Da Fontinha (PORTUGAL – PORTO)
The world is being urbanized; the urban space is being neoliberalized (Peck and Tickell, 2002) (Leitner; Peck and Sheppard, 2007). The space neoliberalized rise up social fragmentation, polarization and unequally urbanities. At the same time however, the neoliberal spirit and practice, akin a contemporaneous religion, also arouse renewal urban struggle dynamics, renewal place strikes. The neoliberal practices and discourses produces their own spatiality and that reality is in permanent retroaction with alternative, subversive, counter-hegemonic and resilient space production and space demand. Those are the assumptions and questions criss-crossing the present essay which aims to add some contributes to the analysis of processes in the neoliberal scenario. How the neoliberal direction of space production may be revert by the local people activity and their creative urban production visible on social movements, more or less resilient, more or less resistant? How the neoliberalized space interacts with resilient and resistant space, who movements these processes engage and what are fragilities and lines of flight can they offer?
On approaching these questions, we take as case studies the Comunidade Coliseu, a São Paulo’s favela – a brazilian urban slum habitation type – placed on Vila Olímpia Neighbourhood, and Es.Col.a da Fontinha, a squat-eviction process of an urban public space in the city of Porto. The forces that broke the municipal control transformed in an auto-managed collective space. Immerged on dominant urban governance directed to the privatization, to globalized plans, to the flux creation, to the attractively of city, to the urban marketing, those places and those people try to oppose that path, almost heroically. Attempting those cases, the ambition is to underlying local/unprivileged urban population ways of coping with the neoliberal hegemony, understanding how people shapes acts and discourses of their fight, viz. grasping urban resistance potentials in a neoliberal ambience.

Diversity, Segregation and the Prospects of Multi-Ethnic Education: Narratives of Israeli Educators
One challenge for societies under protracted conflicts is to develop educational programs and curricula that would both address ethnic and social differences and bridge social differences between various groups. In particular, a society under protracted conflict immerse itself in managing the conflict, thus it fails to attend to other societal issues. In the 1990s, after the signing of the Oslo Accords (1993) and with the absorption of a significant wave of new immigrants from the former Soviet Union and Ethiopia, it was thought in Israel, as elsewhere, that multicultural education would help transcending the national, ethnic and cultural boundaries that separate these various groups.
Notwithstanding the theoretical debates about multicultural education, the challenge of bridging these social boundaries has remained the same. In fact, as it became evidenced during the 2011 social protest (again, in Israel but also elsewhere), for a moment it was as if from ‘bottom up’ has emerged a new vision of society. In this new vision, the challenge for society was to rebuild its unity and solidarity against the privatization of education. In education, this implied breaking with the “old” divisions and replacing them with a more cohesive educational vision. In this paper we ask to further explore this vision by interviewing educators (mainly headmasters and teachers) on their conception of multiculturalism in education. Particularly, the research will focus on the Negev area, where we will be tracing the relation between the structural, spatial segregation of education (and habitat) and the possibility of and interest in multicultural education.

Conceptualizing The Bereavement Hierarchy

The Open University in Israel

Yagil Levy

Abstract submitted to the RC01 Armed Forces and Conflict Resolution. Session: Death in the Military: Towards a New Paradigm?

Scholars of the syndrome of casualty sensitivity exclusively analyze public opinion and its impact on policies. A few studies argued that the mode of recruitment largely determined the perception of collective actors. From a normative perspective, the extent to which the war is portrayed as successfully attaining its original goals) to challenge the dominant discourse and influence the war’s policy. However, missing is an analysis of the bereavement discourse by which various social groups interpret the loss of their children’s lives or the potential risk posed by their military service. The tone of this discourse affects the likelihood of antiwar protest. While manpower policies create a hierarchy of risk by exposing different groups to different levels of risk, this hierarchy is also reflected within the bereavement hierarchy. It is argued that the extent to which a group will develop a subversive discourse of bereavement that can be translated into antiwar protest is highly correlated with several variables: (1) the group’s social status and its reliance on the military as a mobility track; (2) the group’s ideological stance; (3) the legitimacy to protest as derived from the character of manpower policies - market-regulated vs. state-sanctioned death. In general, the lower the position of the group in the social hierarchy, the greater its tolerance for military death, and vice versa. Different levels of discourse can be hierarchically clustered, from subversive to submissive discourse. Thus, mapping the bereavement hierarchy may improve our understanding of how the social composition of the armed forces affects the likelihood of antiwar protest.

LEVÄNEN, JARKKO* (University of Helsinki, jarkko.levanen@helsinki.fi)
Institutional Feedback and Collective Learning in Industrial Waste Management

Heavy industries offer an interesting research subject of complex operational environment of waste management. Due to massive amounts of processed materials, heavy industries also play a crucial role in achieving challenging recycling targets that many countries have set for the future. Major challenge is to increase material recycling between branches of industries. Production facilities should not be seen as bounded units, but as parts of wider industrial symbioses in which secondary material flow from one plant could serve as raw material for another process or as a component of a novel product. Such symbiosis-like industrial networks, however, are difficult to manage. Management and development of industrial symbioses requires that different stakeholders are constantly able to develop new possibilities for recycling. This, in turn, requires that stakeholders are collectively able to learn from each other to create nuanced picture of the network they are parts of. Considering this, the key question in industrial waste management is: how can we create such institutional tools that encourage collective learning in complex operational environments? Numerous analyses concerning the performance of policy designs have ended up emphasizing the importance of such flexibility that allows steering the regulation based on regulated actors’ experiences. Such an opportunity may be called as a feedback to institutional and operational environments and it seems to be a very important element also according to collective learning. Few studies, however, have analyzed the capability of policy designs to strengthen such institutional feedback in practice. Based on a case study of industrial region located in the northern Finland, I argue that institutional feedback is very important in industrial waste management. My preliminary findings point out that optimally institutional feedback allows the continuous learning and the development of industrial systems towards better material efficiency.

LEW, ILAN* (École Hautes Études Sciences Sociales, ilanlew@gmail.com)
Conversing with the Executioners: Denial and Expressed Moral Values in Interviews with Perpetrators from Nazi Germany and Operation Condor

In this presentation, we will expose a research on testimonies of former perpetrators of mass violence coming from two contexts (Nazi Germany, Last Dictatorship of Argentina), when the latter are in an extrajudicial interview situation with journalists or co-detainees. The aim of this paper is to show the heuristical dimension of such sources for the understanding of subjectivity within committed State violence and for the study of the question of “moral-concerns” of massmurderers. The paper will bring to light the power relationships characteristic of these interactions, as well as strategies carried out by the interlocutors to lead these “veterans” beyond their face-work (Goffman, 1967) and, through the framework of the encounter, make them speak more consistently about their violent acts. Secondly, we will deal with how documents of this type can give us a privileged access to questions of morality in situations of mass violence. To this end, we will look closely at places in the discussions where the mass-murderer reacts strongly and feels offended, while on the other hand he often asserts the legitimacy of the violence he committed. We will focus here on the thematics of indignation in both contexts and more specifically on the interrelations to money and the management of resources that emerge for the perpetrators in the course of their duties.

LEWANDOWSKI, ROMAN* (Voivodeship Rehabilitation Hospital for Children, rlewan@wp.pl)
Internal Conflicts Vs. Integrity within Medical Profession Under Managerial Encroachment

Poland, like other European post-communist countries inherited the inefficient health care system. The first major reform was implemented in 1999, ten years after the fall of communism. The reform changed hospital financing from fixed budget to payment for performance and granted private medical organizations access to public money.

After the Cold War, Poland inherited too many hospitals, as in the days of communism additional hospitals were created for the military purposes, internal security forces, and even for large professional groups, such as railway workers. Thus, after the reform public hospitals have been forced to compete for financial resources and a limited number of medical professionals, not only among themselves but also with rapidly growing private sector.

In the communist system, costs control were made through a lack of access to expensive medical technologies, which absolved both physicians and managers of moral responsibility for cost containment and thus limited the conflict between managers and doctors. However, nowadays managers bear the primary responsibility for balancing the hospitals budget, and the task can be realized only through exerting pressure on doctors to reduce costs. This situation exacerbated the conflict between these roles.

This paper presents the study on Polish hospitals concerning the identification of methods used by managers to take control over the clinical practice, the response of medical profession to managers actions, internal conflicts within the profession and defense of its autonomy. In western countries the pressure to reduce costs was increasing gradually over many decades, but in the post-communist states these phenomena occurred rapidly. Most doctors currently working in Polish hospitals entered the profession in the communist times and now not only they have to adapt themselves to new reality, but also help to socialize younger colleagues entering the medical profession.

LEWIN-EPSTEIN, NOA* (Tel Aviv University, noah1@post.tau.ac.il)
Changing Circumstances in Late Life and the Relationship to Household Debt

The study is motivated by the rise of household debt in recent decades in most economically developed societies. Students of consumer society have noted the increasing importance of material comfort and the growing use of credit among people in late life. Yet, for those living on fixed income any change in the economic environment or in one’s health can dramatically disrupt their economic wellbeing. The theoretical framework on household debt in late life builds on two concepts central to social stratification: consumption and risk. With regard the former we focus on risks associated with changing circumstances such as retirement and illness. As to the latter, we argue that consumer culture and its institutional structures are an important driving force behind growing household debt.

Based on the above theoretical framework, the paper addresses three issues: the relationship between debt and changes in life circumstances (especially as re-
lated to health status and labor market activity); the association between house-
hold debt and the subjective experience of economic hardship; and cross-county
variations in the relationship between household dynamics and indebtedness.
The analysis is carried out using the first and the fourth waves of the Survey of
Health Aging and Retirement in Europe (SHARE). The panel structure makes it
possible to study changes in late life (marital status, labor market, and health)
and their relationship to household debt in 13 European countries and in Israel.
Premiminary findings reveal that household debt is widespread even in advanced
ages; it is not limited to households that are asset poor; but it is systematically
related to changes in health and marital status. Large country differences exist in the magnitude of household debt. We also find com-
plex effects of country context on household level relationships.

Trade Unions and Whistleblowing: Can They Do More Than Protect Their Members?

The role of trade unions in relation to whistleblowing is frequently seen as
reactive and defensive. They often have limited resources and regard their prime
function as being to advise potential whistleblowers and to represent both those
who feel they have been victimised for reporting concerns and members who are
alleged to have engaged in wrongdoing. Research conducted by Public Concern
at Work and the University of Greenwich in the UK suggests that trade unions are
good at performing these tasks but are not particularly effective in ensuring that
allegations are investigated and wrongdoing rectified. A more proactive and collective role for trade unions would be to negotiate
whistleblowing policies and procedures at the workplace where employers were
willing to do so. Research conducted in several countries consistently shows that
whistleblowers normally report their concerns internally first and that line man-
ergers are often the first port of call. However, if this manager is not appropriate
for any reason (for example, is the subject of an allegation or is regarded by the
whistleblower as unsympathetic/antagonistic), the question arises as to whether,
for trade union members, a lay or full-time official should be regarded as a suit-
able alternative to approaching higher management.

This paper will examine the existing data about how trade unions function in
relation to the whistleblowing process and will consider the ways in which they
could use their collective strength to play a more positive role in dealing with
alleged workplace wrongdoing.

Natural Surveillance: Google Trekker and the End of Wilderness

Natural Surveillance: Google Trekker and the End of Wilderness

For individuals seeking refuge from the increasingly monitored spaces of ur-
banized “control societies,” the idea of unamed wilderness has long held a special
appeal. Figuring prominently in various strains of ecological writing and literary
romanticism, wilderness has also been central to various indigenous belief sys-
tems in the Americas, Australia, and New Zealand. In these contexts, wilderness
has often been valorized as an aesthetic, moral, and national resource of the high-
est order, a sacred place for the regenerative experience of living “off the grid” of
temporary culture.

However, new surveillance technologies are rapidly taming the wild, bringing it
under the watchful eye of the governments, corporations, and private individuals
who want to minimize risk and uncertainty in any environment—even where an
element of risk has long been considered a virtue. Indeed, the rapid proliferation
of capturing technologies such as UAVs, night-vision, CCTV, GPS and other forms
of remote sensing is challenging long-held conceptions of nature as refuge. As the
surveillance assemblage expands into the wild, finding an unobserved, or unob-
served, spot will become increasingly difficult.

While Facebook's Mark Zuckerberg dreams of an “Open Planet” of total trans-
parency, Google is bringing its “Streetview” concept to nature with “Google Trek-
ker,” a backpack mounted data collection apparatus that is designed to illuminate
the hidden spaces of the natural landscape. With satellite cameras, drones, and now Google Trekker looking over our shoulder even on the highest moun-
tain peak, will we continue to imagine the regenerative power of wilderness in
opposition to the enervating qualities of post-industrial life? Is desert solitude a
bygone fantasy? By putting Google's Trekker into dialogue with concepts of rug-
ged individualism, wilderness, and frontier autonomy, this paper will explore the
implications of “rural surveillance” phenomenon for national imaginarys and eco-consciousness generally.

The Unequal Structuring of Healthcare Choice: Perceptions of Australian Healthcare Consumers

The notion of choice in healthcare is a cornerstone of many western developed
health policy settings. In the Australian context, choice has been integral to policy
initiatives encouraging Australians to take out private health insurance (PHI). Pro-
moted by policy makers and marketed by the health insurance industry, choice
of specialist medical provider, hospital, and even complementary and alternative
services has become highly valued. This private system coexists with a universal
health insurance scheme for medical care and public hospital provision. Howev-
er, despite the emphasis on healthcare choice, there has been little exploration
about to the factors shaping, and unequal structuring of, healthcare choice.

Drawing on Bourdieu's theoretical framework of intersecting forms of capital
(cultural, social, symbolic, economic, and spatial) we explored the structuring of
choice by Australian consumers using indepth interviews. Purposive sampling
ensured a diversity of perceptions and experiences of healthcare choice, as well as
in capacity to draw on healthcare capital when exercising choice. Interviews
explored use of healthcare; purchase and use (or not) of PHI; social networks and
information sources drawn upon when making healthcare choices. Interviews
were thematically analysed.

We found that people have an unequal capacity to make choices in health-
care. Complex, interlinked forms of capital contribute to the unequal structuring
of choice. While people's choices are most clearly enabled or constrained by eco-
monic resources and tradition, economic capital is strongly shaped by social rela-
tionships and networks, geographic location and interactions with healthcare pro-
viders. Choice represents an individualised rather than communitarian approach
to healthcare service provision. Therefore the prioritising of individual choice in
healthcare policy and markets contributes to the maintenance of unequal health
outcomes across the population.

China in the British Imaginary: Coverage of Beijing Olympics in the UK National Press

Categorised as 'mega-events', the Olympics have long been an incredibly elabor-
ate media spectacle in the guise of a purportedly idyllic and ostensibly shared
global story, which uniquely reveals about host cultures, carrying real implications
for international relations and domestic interests. Such a rich cultural repertoire
shared in the media discourse becomes part of the popular imagination that con-
stitutes the collective memory. It is in this sense that British media coverage of
Beijing Olympics has shaped how a distant culture is discursively constructed and
geo-politically defined. This article will answer the following questions:
-What themes are focused on in the British press coverage of Beijing Olym-
-How does the character of reportage vary between different titles?
-What is the general image of China that emerges from the coverage to be
analysed?

This paper will examine the existing data about how trade unions function in
relation to the whistleblowing process and will consider the ways in which they
could use their collective strength to play a more positive role in dealing with
alleged workplace wrongdoing.

A New Cycle: Understanding the Current Life Course of Rural Families in Western China

Past research has proposed that with the urbanization process, Chinese agriculture is faced with prospects of industrialization and mechanization. However, rather than such transitions, we see more evidence showing a lack of labor and capital investment in agriculture in western China. This article investigates what the economic meaning of agriculture is to the rural families, and describes a generational division of roles apparently stemming from reciprocity. Using logit models and qualitative findings combined, we show that (1) agricultural income is insignificant to rural families compared to what they may earn elsewhere, so only the less capable part of labor remains home and they will not spend much time and capital in agricultural management; (2) a paradox: ages in which a peasant plays different roles at different ages: he is raised by grandparents in the country home where education is inexpensive, works in the city if possible supporting his children and parents, and returns home where livelihood is inexpensive, raising his grandchildren, hopefully with the support of his children who work in the city. We call this pattern the ‘new cycle’ as opposed to the peasants’ traditional life course which dissolved in the tension between rural-urban duality and globalization.

Gender and Power in the Primary Teaching Workplace: Women's Fight Against Male Power in Taiwan

This paper aims to explore how gendered power manifests in the primary teaching workplace with reference to the context of the teacher surplus issue by analyzing the responses of teachers in the campaign against the power. In addition to official statistical data, the data presented is derived from an ethnographic case study carried out in a primary school in southwest Taiwan. Non-participant observation and semi-structured in-depth interviews are the main sources of data collection. The non-participant observation included shadowing six teachers for four days, whereas interviews were conducted individually with eight teachers, including the six teachers shadowed, one male class teacher and one female subject teacher for a gender balance.

The analysis of data from official statistics and state publications identified the seriousness of and impacts from the teacher surpluses in the Taiwanese context and in the case-study school. The research evidence suggests the image of female teachers as a silent majority in their workplace. However, while confronting difficult challenges rooted in the teacher surplus issue, women's image may be changing as empirical illustrations of women displayed their capabilities and dedication to fight against the male principal for their ideals. When compared to their female colleagues, the involvement of male teachers in the campaign seemed passive and obscure. More importantly, this campaign process calls attention to the issue of gender and power that is, the relations between gender and power exist not only between men and women but also between men. As argued, female teachers seemed to suffer more negative experiences from the principal's leadership or from the power relations, while male teachers were supportive and reliable allies of their principal to share power and to trust because of their gender norms. In addition, the findings also demonstrate that some male teachers in the study prioritised their family responsibilities, rather than their own professional advancement. Men's dissociation may imply that men can also enjoy working with children and the solid teaching profession.

Income Inequality, the Welfare State, and Economic Growth Across Time and Space

Sociologists, economists, and political scientists have studied the association between economic growth and income inequality, although with different foci. Some scholars have primarily studied the economic implications of inequality, while others have studied the distributive effects of economic growth. In both literatures, the welfare state is implicated as a key mechanism although with different functions. Some researchers posit that high inequality generates public support for social welfare which ultimately slows economic growth. At the same time, researchers contend that stronger economies with faster growth have greater capacity to reduce inequality via the redistributive effects of the welfare state. Yet, to date, no research has simultaneously tested these theoretical propositions. This paper examines the relationship between income inequality and economic growth through non-recursive structural equation modeling by examining a cross-national, longitudinal dataset. We find partial support for both research traditions.

Parents' Commute to Work and Children's Social and Emotional Wellbeing in Germany

Based on a nationally representative sample from the German Socioeconomic Panel Data (SOEP), we examined the relationship between parents' commute to work and five domains of child emotional and behavioral problems, using SDQ and controlling for family socioeconomic and demographic characteristics and child gender. The findings show that commute to work by both fathers and mothers when their children aged 3 to 4 years was associated with a higher level of emotional and behavioral problems in their children two years later. In both-parent families, father's daily commute to work two years prior was associated with higher scores for peer problems and, to a lesser extent, higher scores for emotional symptoms and hyperactivity when the children aged 5 to 6 years. Daily long distance commutes (40 or more km each way) in fathers was associated with the highest level of emotional and behavioral problems in children. Mother's commute to work either daily or weekly was associated with a lower level of prosocial (positive) behavior in children. Analysis including single mothers showed that mother's commuting 20 km or longer each way was associated with a higher level of conduct problems but a lower level of prosocial behavior in children. This is one of two studies on this topic in the literature and much further research is needed to address causality in a more rigorously way, with more waves of longitudinal data and to examine mechanisms linking parents' commute to work and child outcomes.
ANDREWS, SONIA (Curtin University)
KENDALL, GARTH (Curtin University)
STRAZDINS, LYNDALL (Australian National University)
DOCKERY, MICHAEL (Curtin University)

This paper provides a comprehensive review of empirical evidence linking parental nonstandard work schedules to four main child developmental outcomes: internalizing and externalizing problems, cognitive development, and body mass index. We evaluated the studies based on theory and methodological rigor (longitudinal data, representative samples, consideration of selection and information bias, confounders, moderators, and mediators). Of 23 studies published between 1980 and 2012 that met the selection criteria, 21 reported significant associations between nonstandard work schedules and adverse child developmental outcome. The associations were partially mediated through parental depressive symptoms, low quality parenting, reduced child-parent interaction and closeness, and a less supportive home environment. These associations were more pronounced in disadvantaged families and when parents worked such schedules full time. We discuss the nuances, strengths, and limitations of the existing studies, and propose recommendations for future research.

LI, LIANG* (Soochow University, liliang7909@126.com)
Impact of Conjugal Living Arrangement on Marital Satisfaction in China’s Rural Labor Flows

In the context of rural people floating out for jobs, one of the challenges is marital stability of rural couples who are separated. In a traditional society, women stay at home and their husbands go outside for work. And this model of conjugal living arrangement maintains the harmony in the family for thousands years. However, now more and more women have migration experience.

Using the data from the survey “Population Mobility and Reproductive Health / Family planning Service”, which was carried out in an area of Anhui province of China in 2010 by the Institute for Population Studies of Soochow University, this paper analyzes the impact of conjugal living arrangement on marital satisfaction.

The results show that, more than 60% of rural people have the experience of going out for jobs. More than 30% of rural couples live separately. When men interact their life working at hometown, only a few of their wives float out at present. There are no signs to show that migration experiences, living arrangement or family values have significant correlation with marital satisfaction.

There are almost half of women interviewed whose husbands live apart from them being migrant workers. For rural women without migration experience, living apart has insignificant influence on marital satisfaction. However, for rural women with migration experience, living apart could lead to lower marital satisfaction than living together. On the other hand, family values are significantly helpful to marital stability.

Diffuse or Enclosed? the Ethnic Communities of Taiwanese Migrant Workers in China

This paper focuses on how the spatial characteristics of cities influence ethnic communities of Taiwanese migrant workers in China. Although Taiwanese migrants and Chinese both fall under a ‘pan-Chinese’ context, most Taiwanese migrant workers still see themselves as a different ethnic group and thus inhabit ethnic communities that are distinct from those of the locals.

Within this context, this paper tries to answer two questions which are directly related to urban sociology and community studies. First, whether the spatial characteristics of cities affects the openness or insularity of an ethnic community and—if it does—why is this so? Second, in what degree does such pan-ethnicity affect the lives of those living in different cities.

By comparing data collected from 35 interviews, as well as by examining other factors such as the cultural practices of Taiwanese migrant workers in Beijing and Wenzhou, this paper highlights either the openness or insularity of such ethnic communities, derived from factors not only based on ecological characteristics (such as physical arrangements for work and leisure), or industrial differences, but also on how Taiwanese immigrants perceive and interact with the local Chinese in different cities.

In this paper, I will first define what I mean by the openness or insularity of an ethnic community and how the insularity/openness relates to life styles, social
bonds, and ethnic relations. I will show that openness/insularity is an idea that I have arrived at by combining Claude Fischer’s (1984, 1995) concept of the institutional completeness of a subculture, Louis Wirth’s (1938, 1956) theory on the cultural heterogeneity of cities, Robert Sampson’s (2012) discussion of neighborhood effects, and the subjective experience of the city in which they live. Continuing, I will list empirical indicators of openness and insularity, such as residential pattern, social/ethnic relation, friendship network, and the perception of local societies.

*Down to Earth: Environmental Governance and Flexible Bureaucracy in China*

The notion of “flexible bureaucracy” is an oxymoron; by definition, bureaucratic institutions are not amenable to change. The sociological literature on the East Asian developmental state has articulated the processes by which authoritarian states relied on rigid bureaucratic apparatus and their evolution to implement development policies during the late twentieth century. Despite historical legacies, the authoritarian bureaucracies in East Asia have undergone substantial transformations in the last decade. This paper discusses the relaxation of bureaucratic rigidity, and devolution of political power towards non-state actors in the face of environmental challenges.

This study focuses on the case of China, seeking to understand how environmental issues have brought challenges and opportunities to the regime. How have localities in China devised different strategies to respond to pressures from above and below regarding environmental degradation? As different places experiment with innovative forms of environmental governance, what are the resulting differences in policy outcomes? These questions are not only important for understanding the current state of environmental governance in China, but also critical for contributing sociological knowledge about mechanisms of accountability, institutional isomorphism, and political legitimacy under authoritarianism.

The empirical discussion is informed by ethnographies in four Chinese cities, including Baoding, Dujianyang, Hangzhou, and Tianjin. It also draws from archival research in Beijing. This paper concludes that, in China, environmental protection is the most politically devolved policy area. Thus, environmental governance exhibits significant diversity across localities. In places where the bureaucracy remains tightly controlled by the central state, environmental governance reflects a genuine commitment to ecological sustainability, even at the cost of economic growth. Contrarily, in places where the local state enjoys higher levels of autonomy and flexibility, bureaucrats are more likely to pursue partnerships with private businesses and other non-state actors. These partnerships tend to promote business development and political maneuver under the pretext of environmental protection.

*The State on the Street: Visible Hands in Creative City-Making in Shanghai*

Historically, cities are strategic sites for the penetration of state authority. They are critical posts for taxation, defense, and trade. It is therefore no surprise that cities bear extensive marks of the state. With the rise of creative economy, however, the literature has moved beyond bottom-up, spontaneous, and community-driven forms of urban initiatives. Especially when it comes to urban culture, there is much discussion about the explosion of creativity and entrepreneurialism from below; the state seems to have disappeared from the sociological field of vision.

In this working paper, we bring the state back in. We critically interrogate the role of the state in the creation of the urban creative economy. The discussion is based on a structured comparison of three art districts in Shanghai, including Tianzifang, M50, and Bridge Eight. We develop the comparison along three dimensions. First, we situate the timing of development in the broader context of urbanization. Over the past two decades, the “norms” of urban development have gradually shifted from massive demolition towards historic preservation. The focus on timing enables us to understand how the state shapes the trajectory of creative city-making. Second, we pay particular attention to the various actors that played crucial roles in each of these projects. We attend to the contribution of different actors, as well as relations between actors. Third, we bring to light the importance of spatial attributes of each project area in constraining and facilitating the exercise of state power.

Our empirical evidence points to a more nuanced conception of the state than previously reported in the literature. We explain why, on different occasions of creative city-making, the state exhibits different levels of intervention, from tacit agreement to active support. We advance a relational conception of the state to better account for the rise of art districts.

*Class Boundaries in Cross-Class Friendships: A Preliminary Study Based on Social Eating Network Data in China*

China’s class structure is changing dramatically after market-oriented economic reforms. Economic marketization and privatization of ownership has created a new pattern of social stratification, which differs from the cadre-dominated social hierarchy in the state socialist era. Based on a national survey in China which reported social eating network among 5000 households, this paper documented social networks structure among 12 occupation-based classes, and examined patterns of friendship ties across class boundaries. In particular, analysis of strength and diversity of class cross-society ties suggests (1) the pattern of friendship is affected by social class structure, and social resources can be mobilized across class boundary through social network channels, (2) Varying degrees of social-network cohesion is exhibited among different social classes, (3) the manual-unmanual boundary is significantly more permeable than authority, expertise and property-based class boundaries.

*Living in the Gray Zone: State’s in/Exclusion of Live-in Migrant Care Workers in Taiwan*

Since 1992, in order to accommodate demographic necessities—including the increase in the number of double-salary families and the “graying” of the population in Taiwan as fertility rates decline and people live longer—the Taiwanese government has allowed the immigration of domestic workers and care workers as short-term contract labor force to shoulder the responsibilities of caring for older adults, people with disabilities, the sick, and younger children. In 2013, the number of migrant care workers in Taiwan reached a stunning 200,530 compared to 26,233 in 1997. In contrast to their counterparts working in the factories, live-in migrant care workers are not applied to Labor Standard Law which defines the rights of workers.

Relying upon institutional ethnography, in this essay I demonstrate how the specific lived experiences of live-in migrant care workers are shaped by the social organization of carework in Taiwan within the context of labor migration. This study investigates migrant labor policy in general and migrant care labor policy in particular to illustrate how the Taiwanese government includes migrant workers into private labor market to solve the shortage of care labor on the one hand. On the other, live-in migrant care workers are excluded from full legal protection by the Taiwanese government through its practice of state sovereignty.

*Exploring the Meaning of Social Justice in Chinese Context*

The globalization process has been greatly affecting the development of many professions as well as the young people who strive to become one recognized member of the professions. Among the many professions, social work, with its long tradition in pursuing social justice is the major concern here. This paper attempts to investigate how social work graduates in China understand and interpret the key concept of social justice, the value that they should be devoted to defend, and what factors contribute to their understandings and interpretations. As a qualitative research, in-depth semi-structure interview was adopted to collect opinions from 23 social work students in Guangdong province.

Result indicates that this group of interviewed students perceives social justice as a distant ideal which is too difficult to achieve. From the students’ narratives, a strong sense of powerlessness was detected and they feel constrained a lot by current social and political reality in Chinese society. They mostly construct the idea of justice within a nation-state framework by using a resource-distribution scheme.

Their conception of social justice is largely a mixed product of Western-orientated social work education and their growing-up experience in transitional Chinese society. In addition, it is worth exploring the distinctive and long-lasting effect of their received political education (mainly derived from Marxists’ theories) in high school, which offers them vocabulary, standpoint, and theoretical assumptions to develop their interpretations of justice. Based on above empirical findings, this research suggests some future directions for promoting a more inclusive and globalized understanding of social justice among the Chinese youth.
A Text-Mediated Buddhist Conglomerate and Its Practitioners: Using Institutional Ethnography to Explore Lay Followers’ Religious Experience in Tzu-Chi

The purpose of this paper is to use concepts of Institutional Ethnography (Smith, 2005) to explore the way in which texts coordinate lay followers’ religious activities in the Tzu-Chi Organisation (hereafter, Tzu-Chi), one of the largest and the most resourceful Buddhist civil organizations in contemporary Taiwan. Although it started as a small civil foundation with a few Bikkhunis and a dozen of lay female followers in the late 1970s, it has grown into an international religious “conglomerate” within half a century, and owns subsidiaries across charity services, educational institutions, medical centres, media industry, and so on. Offering a wide range of charity services and voluntary programs, Tzu-Chi organization transforms the way in which Taiwanese people think about and practice Buddhism. Scholars are aware of the thriving power and transformative structure of this organization. However, not enough debates have been devoted to a) the way in which lay followers, especially female participants, respond to this new form of religious organization, and b) interweaves the discussion with rapid socio-economic changes of 20th century Taiwan. Therefore, the researcher conducted 15 in-depth interviews on female volunteers of Tzu-Chi in order to find out the way in which the followers adapt Buddhist doctrines and practices through the organization’s modern form. The research findings demonstrate that a) in a rapidly changing society, Tzu-Chi transforms Buddhist groups into a new form of religious organization that offers practices where housewives build up horizontal ties outside the private sphere; b) media texts such as the founding nun’s book publications, monthly magazines, TV dramas produced by its own TV network, and so on, as well as lay followers’ participations in the organization’s volunteering activities help to consolidate and coordinate lay followers’ religious identities.

Religious Sisterhood Among Female Audience of Da-Ai Dramas

The purpose of this paper is to examine the way in which the audience responds to prime-time dramas broadcast on a widely watched religious channel (and another commercial TV network), owned by one of the largest Buddhist civil organisations in contemporary Taiwan—Tzu-Chi Organisation. Tzu-Chi started as a humble civil foundation with a dozen of lay female followers and a few Bikkhunis that offers charity-based services in the late 1970s. Within half a century, it has grown into a huge religious “conglomerate” which owns subsidiaries across charity services, education institutions, medical centres, media industry, and so on. Among its various types of multimedia platforms, the success of its TV network (Da-Ai TV) draws attention from one of the largest commercial TV network (CTV) and started to broadcast the Da-Ai’s prime-time drama (also known as Da-Ai Dramas) across both networks from Jan, 2013. As Tzu-Chi has increasing visibility and influence in a competitive TV market in Taiwan, this paper aims to explore the way in which the prime-time dramas are watched and interpreted among followers and non-followers. The researcher have conducted in-depth interviews on 13 female audience who have been watching prime-time dramas on Da-Ai TV for more than six months. The research findings demonstrate that the audience focuses on the edutainment purposes when choosing to watch Da-Ai TV because a) watching these dramas is seen as an easier alternative to acquire sophisticated Buddhist doctrines, and to practice them in everyday life; b) discussing these dramas with female colleagues or friends can be educational and encouraging, and, thus, helps to form horizontal ties among female audience.

Social Desirability Bias and Mode Effect in the Case of Voting Behavior

Response distribution and data quality are influenced by different mode of data collection. Such consequences are seen as mode effect. One significant influence of mode effect on data quality is social desirability bias, which is related to whether an interviewer is involved, pace of cognition process during interviews, sensitivity of survey questions, etc. For example, social desirability bias is more likely to occur in face-to-face interview when compared to telephone interview. Slower pace and the development of rapport in the former encourage respondents to think thoroughly and provide a socially desirable answer. However, previous research on desirability of mode effect did not obtain consistent findings. The problem of social desirability bias is found to be more severe in telephone interview than in face-to-face interview when dealing with voting turnout (Díaz de Rada, 2011; Voogt and Saris, 2005). This issue of such responding bias with the consideration of mode effect is worth further examination.

This study aims to examine mode effect on social desirability bias by comparing CATI and face-to-face interviews on the voting turnout of the 2004 president election in Taiwan. Data are drawn from two national representative sample conducted the same year after the election to eliminate possible recall error. Weighting by population characteristics, socio-demographic variables will be compared first to examine the dis/similarity of the two samples. Voting behavior, political attitudes and other related variables will be included in the multivariate analysis. Conclusion and discussion will be provided.

10th Anniversary of Hakka Television: A Study to Examine the Ethnic Broadcasting Policy in Taiwan

It is 2013 that the 10th anniversary of Hakka Television, the first ethnic broadcasting system in Taiwan. Reviewing the past 10-year development, there have been 3 ethnic television stations founded and operated in Public Television System to protect the minority language such as Hakka, Holo, and Indigenous. In this important moment, it is necessary to examine how the ethnic broadcasting worked in the past decade in Taiwan.

This research summarized the development of ethnic broadcasting during this decade from 2003 to 2013 in Taiwan by reviewing the literature, especially in Hakka communication. Furthermore, it also interviewed those who participated in either practical or academic field to discuss and give a suggestion for the next era.

The result shows that the population using Hakka is consistently growing owing to the broadcasting; however, it is still stated in an unequal position of language as a vulnerable one. In addition, this kind of situation is also shown inside Hakka community among different 5 accents; moreover, the gap is even widened in this group. It is obvious that the policy protecting the right of using and reducing the development gap among dialects still needs a great improvement in next decade.

Second, social networks and new technologies will be considered inviting a rethink of the inclusion of these non-mainstream tools in the fields of intensive training. In fact, both the democratic transition and the educational system can be studied from the political point of view as an alliance and strategy for the construction of citizenship where students now have extended power coming out of the classroom and are intertwined with the adult world and “control”. From there, decentralization and participation mechanisms were built in that focused on serving and satisfying the diffuse demands of its citizens. Thus, the expansion of the democratic base with the introduction of students trained in an irreversible process as is the information era and digital culture has led to a dislocation of representation and alliances. As such, the discussion here will briefly include how new political consensus, access to education and new social networks have strengthened democratic processes around the world. In particular, it will be asserted that the new school within and with the democratic context in Argentina comprise a strategic alliance that must be ensured in order to discourage the development of undemocratic contexts conducive to coups or destabilizing conflict. In the first part, the current situation regarding democracy and education in Argentina will be presented. Next, an analysis of this situation will be given. Finally, conclusions and some ideas for future changes will be proposed.

Stigma, HIV Law, and HIV Testing Among Offenders Under Community Supervision

In 2010, the U.S. Office of National AIDS Policy (ONAP) promoted a national strategy for HIV testing and linkage to care (“test and treat”), with emphasis on communities at risk. Potential barriers to HIV testing were cited, including HIV laws that criminalized non-disclosure to sexual partners. In order to identify such barriers, this study assessed knowledge and attitudes toward mandatory disclosure and HIV testing among 197 probationers and parolees in a southern state. Over two-thirds of participants had heard about the law (69.2%) and most believed that it was fair (85.5%). Most participants also supported HIV testing for offenders under community supervision (68%). Despite this support, 66.5% of participants believed that the law was a barrier to HIV testing because of fear, stigma, and potential for arrest. Perceptions of HIV/AIDS as a crime and non-disclosure as murder suggest increased stigma and resistance to “test and treat” among convicted offenders.

Women Foreclosed: A Gender Analysis of Housing Loss in the U.S. Deep South

Women were a focus of subprime lending during the housing boom, increasing their risk of mortgage foreclosure during the Great Recession of 2007-2011. Following Valentine’s (2007) call for a feminist geography on interactions between social categories and spatial ordering, this article investigates housing loss among women foreclosures in a southern U.S. county with a history of residential segregation. We collected data manually from legal notices and public access property tract data for GIS analysis. We found significant differences between women foreclosures in terms of marital status, race/ethnicity, and location. While married women foreclosures typically lived in majority-white areas throughout the county, their unmarried counterparts were clustered in low-income Black neighborhoods close to the county seat. Women’s foreclosure activity followed historical patterns of residential segregation, with privilege and disadvantage in juxtaposition with social hierarchies of race and class. We conclude that housing loss in the U.S. South is complicated by racial history and the subordinate status of ‘women alone’ in the property market.

Public at Risk or Public As Risk? Managing Environmental Concerns through Risk Governance

Public relations, risk communication and participatory approaches to risk management have emerged as means to handle diverging interests in society; not least public perceptions could be a source of risk in the sense that public perceptions and opinions could pose a threat to the legitimacy and stability of existing ways of managing risk. Thus, risk governance focuses on how organizations deal not only with the technical calculation of risks, but also with the actors they perceive as possible threats and potential risks to the stability of the organization. This paper analyzes risk governance and the implications of it. The empirical material consists of three interview studies and two studies of public records on how Swedish authorities handled citizens and stakeholders’ claims for regulating nature. The analysis finds that the public claims were seen as a particular risk, where public outrage and loss of political legitimacy became part of the risk panora ma of the responsible agencies. In particular five mechanisms were used: dissemination of knowledge; naturalization of the problem; development of collective action; inclusion of stakeholders; and individualization of responsibility. Through these mechanisms, governmental agencies succeeded to influence stakeholders and citizens understandings and modify their claims. Thus, what took place was not only a process for governing nature, but also for governing people The paper ends by addressing the question whether this conclusion indicates the end of public participation or if it can serve as a trigger for more radical approaches of public participation.

On The Development Of Talcott Parsons’ Conception Of Societal Community

On the Development of Talcott Parsons’ Conception of Societal Community During the 1950s and early 1960s, Talcott Parsons tried to write a general interpretive book on American society using the analytic methods he had developed with his function paradigm. Around 1960, he was joined in the task by his recent doctoral student, Winston White. Although the work was interrupted when White suddenly left academia in 1962, over 1200 pages of draft chapters and preliminary working papers were produced. Among the drafts and working papers are Parsons’ first attempts, using the four function paradigm, to develop a conception of the integrative subsystem of society. The initial attempt built essentially on Chicago School ecological notions of community in the sense of local community. It conceived the integration of society in terms of an aggregate of local communities. A later draft, from 1966, explored a range of social institutions that serve to integrate American society as a whole. In this work, Parsons sought to develop in analytical detail and in application to a complex modern society, the conception of societal community that had emerged in early drafts for his Societies; Evolutionary and Comparative Perspectives and The System of Modern Societies. Our presentation will discuss the differences between the two conceptions of the integrative subsystem and American society and will attempt to compare Parsons’ conception of societal community to current analyses of civil society and to Jeffrey Alexander’s The Civil Sphere. Parsons emphasized complexes of integrative institutions that have strongly equalitarian effects, but in contrast to Alexander and others, included as well institutions that have stratifying effects. He understood differences in levels of influence among individual actors, collectivities, and associations to be essential to social integration.

Misrecognizing the Modern: Japan and the Failure of Social Theory

Modern social theory rests on a series of misconceptions, the most important of which are ethnocentrism and presentism. That is, classical social theorists equated the modern with the west (and particular parts of the West at that) and with their contemporaneous reality. In so doing, as important as they are, their theorizing systematically misrecognized the nature of the modern. Yet “modernizing” Japan, and especially its social theorists, used the culture-bound and time-bound notions and in so doing not only misunderstood the nature of the West but also of the non-West, including most importantly Japan itself. Furthermore, the Japanese misunderstanding would in turn be absorbed by Western writers who were seeking precisely to overcome the limitations of classical social theory and of the modern. Needless to say, I am aware of disparate and divergent strands in social theories both in the West and in Japan but I wish to focus on the leading writers - most importantly, Marx and Weber - and consider the genealogy of misrecogni tion that continues to hobble the task of social theory today.

Using Factorial Surveys and Stated Choice Experiments to Investigate Discriminatory Attitudes and Preferences

Empirical research on discriminatory attitudes and behaviour grapples with the social undesirability of its object. In many studies using regular survey methods, estimates are biased, and the social context of discrimination is not taken into account. Several methods have been developed, especially to deal with the first problem. In this regard, the estimation of the ‘true value’ of discriminatory attitudes is at the centre of interest. However, methodological contributions focusing on the social context of attitude communication and discriminatory behaviour, as well as the correlation between both, are rare. We present two experimental methods which address those issues: factorial surveys and stated choice experiments. In a first study, the usefullness of factorial surveys is demonstrated with data on German anti-Semitism (N=279). We show that the rate of approval with anti-Semitic statements increases if (a) respondents are told that the majority of fellows agrees with such statements, (b) the term “Jews” is replaced by the term “Israelis”, and (c) reference to the Holocaust is made. Apart from the main effects of these experimental factors, significant interaction effects regarding the political attitudes and social status of respondents are observed. In a second study, a stated choice experiment on the purchase of olive oil and tomatoes was conducted in Germany (N=440). We find that respondents prefer Italian and Dutch products (control treatment) compared to Israeli and Palestinian ones (discrimination treatment). There are no significant differences between preferences for a so called ‘Peace product’ (which is produced jointly by Israelis and Palestinians) and products from Italy as well as the Netherlands. Yet, taking discriminatory attitudes (anti-Semitic and anti-Arabic attitudes) into account, a strong correlation between both, are rare. We present two experimental methods which address those issues: factorial surveys and stated choice experiments. In a first study, the usefulness of factorial surveys is demonstrated with data on German anti-Semitism (N=279). We show that the rate of approval with anti-Semitic statements increases if (a) respondents are told that the majority of fellows agrees with such statements, (b) the term “Jews” is replaced by the term “Israelis”, and (c) reference to the Holocaust is made. Apart from the main effects of these experimental factors, significant interaction effects regarding the political attitudes and social status of respondents are observed. In a second study, a stated choice experiment on the purchase of olive oil and tomatoes was conducted in Germany (N=440). We find that respondents prefer Italian and Dutch products (control treatment) compared to Israeli and Palestinian ones (discrimination treatment). There are no significant differences between preferences for a so called ‘Peace product’ (which is produced jointly by Israelis and Palestinians) and products from Italy as well as the Netherlands. Yet, taking discriminatory attitudes (anti-Semitic and anti-Arabic attitudes) into account, a strong correlation between those attitudes and stated behaviour (purchase of Israeli, Palestinian and jointly produced products) can be found. This adds support to the hypothesis that discriminatory attitudes hold behavioural consequences.

The Impact of Unemployment on Male Gender Role Attitudes in Germany

Germany has a long-standing tradition as a welfare state with a pronounced male breadwinner orientation in social and family policy. In the last decades there have been some reforms in the direction of a more gender egalitarian "adult worker model", particularly for women.

In this paper we want to explore the impact of unemployment on men's gender role attitudes within this new policy framework, assuming that unemployment might lead to a more egalitarian view on gendered work-family attitudes. The new labour market policy in Germany has a general notion that assigns obligations to work to both male and female recipients of unemployment benefits which might lead to less pronounced male breadwinner attitudes among unemployed men living in a couple. For women it has been shown that unemployment status has an influence on gender role attitudes. In explaining this phenomenon, it has been argued that there are two mechanisms at work: first, there is a selection effect implying that women with more employment oriented attitudes have a higher probability to be employed. Second, there is an adjustment of attitudes, that is, changing one's own attitudes in response to employment status in order to reduce "cognitive dissonance".

We conduct an empirical analysis of the relationship between gender role attitudes and unemployment for men and women who are interested in the effect parenthood has on this relationship. Fatherhood, in particular, might lead to a more egalitarian view on gendered work-family attitudes among men as it fosters male responsibility for family income.

Theorizing Queer Temporalities

Traditionally, feminist research has focused more on the content and the supposed effects of gender norms and their relations to power, than how the gendered power relations may change. However, there has been a tenet within feminism and—more recently—masculinity studies, which more specifically discusses how to change these power relations. A further research specifically looking at how gender norms change is warrant. How might the gender stereotypes that surely inform the enactment of violence, transform into something new? In queer pedagogy advocates try to find solutions for resisting gendered norms, for example, through queering time. The question is what is mean by 'temporality' and 'queer'? What norms of temporality are queer supposedly challenging? Taking temporality in queer studies as starting point new strategies of resistance,
against different gendered power relations, prevail. This paper, discusses various resistance strategies in relation to different attempts to reach gender equality.

Change of Basic Human Values in Europe 2002-2012

Values research is gaining an increasing popularity among social scientists and there exists several theories, trying to deal with this complex phenomenon. Given study is based on the Basic Value theory by Shalom Schwartz, which while describing a theoretical structure of basic values, has created a robust framework for both cross-time and cross-cultural value comparisons.

During last two decades, Schwartz has developed several value instruments, which has been used in numerous surveys around the world. Given analyses use data from European Social Survey (ESS), which includes one of mentioned instruments - a short version of portrait value questionnaire (PQV-21). ESS is a comparative social survey with free access and very high quality criterions. It was started in 2002 and is conducted in every second year in most of European countries. Therefor this survey provides a database with nearly 300000 cases from year 2002 through 2012, covering very dramatic period of developments in Europe.

Given study is not analyzing value change only on country level, but distinguishes also major ethnic minorities where applicable, which gives a more adequate picture of real differentiations and enables to describe occurred change in more detail.

The broader aim of this analysis is to fit the change of Europeans basic values into larger societal-change context, following the transition from economic prosperity to regression, which would also allow a better understanding of the value phenomenon in general.

LILLRANK, PAUL* (Aalto University, paul.lillrank@aalto.fi)

The New Normal As a System Challenge

Since the Lehman shock 2008 there has been a growing sense that the economy is out of joint. The world is not as it used to be during the period of Modern Normal, roughly from 1870 to 1970. The growth potential and progress of advanced economies is lost in systemic changes.

There have been several attempts at grand diagnostics. Francis Fukuyama and Avner Offer have described the Great Disruption in the microsystems of social life as a consequence of mass opulence. For the majority of people in the advanced world biological survival is no longer a daily concern, therefore the traditional foundation of morals have been eroded.

The New Normal argument by Tyler Cowen and Richard Gordon has it that “the low hanging fruit” of modern technology, demographics, the cold war, and educational mobilization have been picked. The fall of the iron and bamboo curtains have opened the world and, according to Moises Naim, created the “more, mobility, and mentality revolutions”. Daniel Alpert argues that the main disruption is an oversupply of both capital and labor, and a lack of aggregate demand. Edmund Phelps details how massive borrowing is not channelled into productive investments, but absorbed by new corporatism.

Tyler Cowen argues that due to Internet, globalization and smart machines “average is over” and the middle classes are shrinking. Ian Morris builds a historical argument about “growth ceilings” that can’t be penetrated without major systemic changes.

In the international debate Japan is seen as an example of things to come. In spite of economic and demographic decline, social order and reasonable labor force participation have been maintained. Therefore the question is, can Japan again be seen as “number one” in adjustment to the New Normal?

Rediscovery of Asia – from the Value-Based Orientalism to Strategic Universal Asianism

The so-called Asian Values debate has long history. In the late 19th and the early 20th century not only in Japan, but also in China as well as other Asian countries (e.g. Korea and India), the Asian intelligensia had dealt with the modernization. They faced with the essential problem, in which they would want on the one hand to slough off categories of the orientalism such a like orientalism defined by the western, to find the Asian way of modernization, which consist of democracy, nationalism, and welfarism. Despite of brief contents, he has tried with these principles to pioneer the strategic universal Asianism unless falling into a trap of ‘Great Asia’, which had been identified as the main obstacles in the way of East Asian integration.

Focusing on the past debate inherited in the present to criticize certain version of so-called ‘duality’, one engages in the universal professional norm of journalists as a value framework alternative conceptions of Asian commonality, this article will examine the dynamics of critical regionalism in Asia from the 1990s to today, and suggest new dimensions of universal Asianism like peace, prosperity of mankind, democratic sovereignty, and socio-cultural integration.

The Profession of Minority Journalists: The Voices of Zainichi (ethnic Korean) Journalists in Mainstream Newsrooms

This study aims to explore how minority journalists follow their profession in mainstream newsrooms. Japanese academic discourses pivoting around journalism and multiculturalism have criticized their mainstream media for presenting a news frame confined to the national boundaries, which imposes the readership as ethnically homogeneous. Although these works offer valuable suggestions, roles of foreigners inside mass media including journalists have not gained much attention as a research interest in Japan. With increasing diversity of residents, however, a demand for minority participation in the media industry slowly emerges; considering effects of minority journalists as members of mainstream media may redeem an absence of approaching minorities as subjects.

Previous studies in America clarify that minority journalists have two natures - called ‘duality’: one engages in the universal professional norm of journalists such as objectivity, the other adopts a viewpoint as a minority in journalism. This study redefines this ‘duality’ as a structure of conflict between ‘professional identity’ and ‘ethnic identity’, and investigates compatibility of this structure for Japan by interviewing 10 Zainichi (ethnic Koreans) journalists in mainstream media, - one of the biggest minority groups in Japan.

As a result, predominance of ‘professional identity’ over ‘ethnic identity’ is observed in Zainichi case, so there is no conflict such as previous American studies indicate. This absence of conflict reveals that Zainichi journalists do not necessarily pursue ‘ethnic identity’ as their foremost mission, however utilizing this ‘ethnic identity'...
Ciencia, Tecnología e Industria a Servicio De La Inclusión Digital y Social

En Brasil existe entre todos 3 millones de PCs, o sea, personas en sillas de ruedas con parálisis cerebral. Actualmente nadie puede decir que esta inserto en el mundo y que puede interferir en el mundo o esta fuera de las grandes redes sociales en el Internet. Para enfrentar esto fue desarrollada una pesquisa de sociología integrada de tecnologías digitales y enero aprendizaje. En medio de una red agencia de fomento de pesquisa, fábrica de productos de accesibilidad, Universidades, familia de los pacientes, terapeutas, escuela y poder público. El objetivo final de la pesquisa era un producto industrial acoplado en una silla de ruedas postural y de procesos técnicos especialmente configurados para realizar inclusión digital y social de jóvenes en silla de ruedas y que no pueden mover los miembros superiores.

El artículo presenta una pequeña introducción teoría de la vida social simbólica que fundamenta la aplicación de la pesquisa, descrito dos casos bien diferenciados de éxito de inclusión digital en la pesquisa: una joven con lesión neuronal congénita en proceso de alfabetización asistida por computadora y otra joven con lesión adquirida – ya alfabetizada. Ambas utilizan mouse de cabeza y recursos de vocalización computacional asistida integrada en servicios interdisciplinarios de rehabilitación e inclusión digital y social. Destacamos lo prioritario de la red de compañeras montada entre terapeutas, Universidad y una industria de productos de accesibilidad y el impacto del medios de comunicación delante de los resultados positivos alcanzados con las dos jóvenes. Por fin, desarrollamos una rápida inclusión.

LIMA NETO, FERNANDO (Pontificia Universidade Católica, fercoline@gmail.com)

Reframing Citizenship in Contemporary Brazil: The Effectiveness of Democratic Institutions

After the highly enthusiastic expectations raised by the re-democratization of Brazil in the 1980’s, contemporary sociologists and political scientists are more likely to analyze the effectiveness of political institutions that were created by the democratic constitution in 1988. This work compares the democratic effectiveness of two of these institutions: the conselhos (councils) and the ouvidorias (ombudsmen). Each of them sets a particular way of dealing with patrimonialism, a traditional obstacle to democracy in Brazil. The research results indicate that both institutions present considerable limitations to democratic governance inasmuch as they reproduce traditional practices they were supposed to confront. In spite of that, the institutional frame of conselhos is better adapted to absorb social control practices. The work proposes a systematic reflection on the relations between the constitutional foundations of these institutions, the role played by them in politics and the individual perceptions of their agents. The experience of conselhos and ouvidorias are also analyzed in the light of the broader debate on the reformulation of conventional patterns of political representation in contemporary Brazil. The main challenge to improve their democratic effectiveness is to encompass political autonomy and accountability mechanisms in their formal dispositions and daily activities.

LIMA NETO, FERNANDO (Pontificia Universidade Católica, fercoline@gmail.com)

Social Justice, Philanthropy and Ecology: The Symbolical Legacy of Brazilian NGOs

This work seeks to analyze the longstanding symbolical legacy that frames Non Governmental Organizations’ experience in Brazil. The main objective is to identify the social values which give sense to the very notion of NGO by analyzing its variations of meaning throughout history. Firstly, I present a macro sociological approach in order to deal with the emergence of the NGO field in Brazil. The connections between church, state and society for the promotion of social welfare generated the three major social values that confer meaning to the NGO’s experience: social justice, philanthropy and ecology. The first two have a common historical origin, the organizations of lay Catholics which were present in the context of promoting social welfare in Brazil since the colonial period. In turn, the consecration of the value of ecology concerns a different context, dating mainly from the decades of 1990 and 2000. I also build on a micro sociological approach in order to interpret these values in the light of the individual trajectory of Herbert de Souza, known as Betinho, the major actor in the formation of these institutions. Betinho’s biography presents individual frames to the macro-historical process of transformation of the value of Christian charity into those of social justice and philanthropy. The research results indicate the social values of social justice, philanthropy and ecology as the main cultural codes that give meaning to the contemporary phenomenon of NGOs in Brazil.

Money Matters for Early Childhood Education: The Effects of Education Subsidy on Preschool Child Readiness in Taiwan

For many children, high quality early learning environment can provide lots of the experiences and skills that help build a foundation for later school success. Among the numerous measures of early childhood education and care quality, some closely linked to later success in school are those which assess school readiness. Many researchers have been claiming that education subsidy is a significant factor related to children’s learning and development. In 2010, the Taiwan authority announced “The Free Education Program for Five-Year-Old Children”. This program which was expected to benefit a larger ratio of population revealed the importance that Taiwan government has attached to early childhood education. However, little information is available about “the effects of this program’s subsidy on preschool children’s school readiness” and “can this program’s subsidy really minimize the gap between disadvantaged and advantageous children”. This study used two waves survey for 1073 preschool students who are 5 years old from Eastern Taiwan to construct a longitudinal analysis, in order to examine the relationships between subsidy of the program and the development of children’s readiness. The results showed that subsidy of the free education program has significant influences on children’s school readiness development. Preschool children who are lower family socioeconomic status are more likely to accept extra subsidy of free education program, and further will reduce the school readiness gap with their counterparts of non-lower family socioeconomic status. That is to say, the subsidy of free education program for five-year-old children in Taiwan really diminishes the school readiness developmental gap between disadvantaged and advantageous children. The implications of the findings for theory, practice, and preschool education policy are also discussed.

LIN, JI-PING (Association professor, jiping.sinica.edu.tw)

Workload and Wage Gain As Determinant Indicators of Constructing a Composite Index Reflecting Worker Well-Being: Evidence from Taiwan Record-Linkage Data of Manpower Surveys

In light of tremendous institutional changes in the labor markets and working conditions, the research devotes to establish some labor indicators in the hope of reflecting labor transitions and enhancing international comparisons. Although existing official statistics help shed lights on recent development trend, they are not capable of providing us with dynamics and evolution of a complex labor market system temporally and spatially at individual level. Based on 900 thousand individual laborers collected from the 1980-2010 micro data sets of Taiwan Manpower Utilization Surveys (MUSs), the research uses record linkage technique to link individual records of MUSs, creating the so-called quasi-longitudinal MUS (QLMUS). QLMUS is not only large in data size, but also rich in labor information, including demographic characteristics, human capital, work status, employment dynamics, and individual wage income. On the basis of the constructed QLMUS, the research aims to study the evolution of labor well-being in the past three decades. With other factors being fixed, the study constructs an indicator of labor well-being (ILWB) on the basis of joint distribution of individual wage income and workload. ILWB is measured by the joint integral with respect to individual wage income and individual workload, which can not only reflect the collective well-being of labor by social class, region, labor market institution, but also enable us to explore the joint effect of labor market flexibility and security, or flexisecurity, and to reflect various conditions of labor market, worker’s life, labor’s value and labor market inequality. Research findings serve as the base for the design and provision of evidence-based labor market policy.

LIN, LIANG-WEN (University of California, Los Angeles, liangwen0626@gmail.com)

Education Faculty Members’ Perceptions of and Responses to the Sci-Oriented Academic Evaluation Systems in Taiwan

The main purpose of this research is first to investigate Education Faculty members’ perceptions of and responses to the SSCI-oriented academic evaluation systems in Taiwan, and then to analyze the relevant factors of how the faculty members perceive and respond to these systems. Semi-structured interviews
were conducted with 38 academics in the Field of Education from across Taiwan including 17 full professors, 10 associate professors, and 11 assistant professors. P. Bourdieu’s field theories, M. Burawoy’s theory of voluntary servitude, and neo-liberalism that has become globally dominant in higher education policies were referred as the primary theoretical frameworks.

The conclusions are as follows.

1. In terms of Education Faculty members’ perceptions, the SSCI-oriented academic evaluation systems were established top-down and followed in the logic of natural science. The main purpose and underlying logic of the SSCI-oriented academic evaluation systems are against the professional scholarships of Education, and the resistance of faculties thus is inescapable.

2. What Education Faculty members propose to modify the SSCI-oriented academic evaluation systems reflects authentically their calling of re-emphasizing the education core values.

3. This research contributes mainly to unearthing the difference of practical concerns and responsive strategies amongst full, associate, and assistant professors. Theories of field, capital, and social space proposed by Bourdieu present a substantially analytic framework, while neo-liberalism and Burawoy’s voluntary servitude theory offer modest explanations.

4. The research provides delicate analyses of relevant factors in the institutional field, although the difference within gender, university types, and dis/advantaged positions are not yet systematically discovered. The relevant factors in the institutional field include the messages embedded in and transferred from the institutional practices, and the hidden rule of the review process. The factors explain why different faculty members share the same response.

Identity Formation and Social Relations on Facebook for Taiwanese College Students

The purpose of my research is to reveal how Taiwanese college students express who they are through Facebook. Based in Taipei, Taiwan, this study applied a multi-sized approach and methods including interviews and textual analysis to explore the identity work and social relations on Facebook among college students in Taiwan, which exists under the surveillance of unseen audiences and the influence of technocapitalism in the context of cultural globalization and consumerism.

Facebook has gradually played a substantial role in students’ college life due to cultural globalization facilitated by information and communication technology, and the international mobility of higher education. Specifically, Taiwanese youth culture embraces a hybrid of American, Japanese, and Korean popular culture because of Taiwan’s historical context and geographic location. This cultural phenomenon thus reflects not only the global influence of American site Facebook but also the cultural interflow within the Pacific Rim area between Taiwan, Japan, and Korea.

32 participants were recruited from the same department of two universities for analytical purposes, as they offer similarities and differences that make for an interesting comparison of dissimilarities not only in urban and rural areas but also in public and private universities. In each university, 8 first-year and 8 fourth-year were recruited to compare changes of identity formation influenced by each university over time. Within each year, there were 4 male and 4 female students for gender consideration.

The conceptions of performance introduced by Goffman, distinction proposed by Bourdieu, and surveillance developed by Foucault are referred as the primary theoretical frameworks in this research. The preliminary findings are as follows.

1. It’s all/not only about having fun?
2. Awareness of image management vs. ordinariness;
3. Intersection of gender and class.

The results will be situated in debates on subculture versus post-subculture within youth cultural studies.

The Global Crisis, International Migration and Social Change: Increased Needs for Employment Flexibility and Its Consequences for Social Inequalities

The recent global economic down-turn, resulting in insecure and precarious labour markets, is likely to intensify the societal transformations. The paper seeks to provide deeper understanding of global social inequality and addresses contemporary inequality from the perspective of the multiple discourses of difference. Migration, and porous economic, social and political boundaries burden governance and demand innovative solutions to problems unique to global crisis. Asia is not only a migration-receiving area but it is notable for sending massive emigrants. The author utilizes the mobility paradigm or integrates it with other perspectives of inequality, such as global cultural and political economy. The paper examines mobility as the paradigm for understanding social life, and explores these new migration situations as well as the attempts of management of this new migration landscape. The author articulates three analytic approaches of migration: the first one focuses on the timing and anticipation of migration, in its family and social components. The paper that should address include: (1) the uneven embeddedness of transnational migrants in the societies to which they are connected transnational migrants’ adaptation strategies to become embedded in more than one society, (2) constructions of cultural hybridity and/or cosmopolitanism as strategies to attempt to maintain and/or increase social integration in more than one society, (3) the issues that arise for transnational migrants when they have crossed national boundaries to live elsewhere in terms of not being or feeling integrated in either one society. The author concludes with a summary of the main arguments and recommendations. The methods of the study include literature review and survey research.

Youth Education-Work Nexus and New Configuration of Social Risks. Young People, Inequality and Youth Work

This paper examines the education and work nexus in the lives of young people to demonstrate varied forms of potentialities, vulnerabilities, and types of resilience, and explores experiences of youth in terms of how education and work are integrated and/or disintegrated. The author examines the nature of shifts occurring in the context of global social policy thinking and practice, examines the analytic details of the labour market reforms, that share the same logic of selective exclusion for younger cohorts, and then considers their social, occupational, economic, and demographic consequences to depict the inequality scenarios can be predicted for the local communities. The paper is structured according to a number of key topical foci, namely: (a) to seek to determine what social, economic and institutional factors account for the different degrees of social vulnerability present in a young population, (b) to explore the causes and (un)intended consequences that globalization has had on labour market outcomes in different phases of the life course, (c) to examine global social policy thinking and practice, (d) to understand economic insecurity, youth poverty and social protection, (e) to engage youth discourses in potentialities, vulnerabilities and resilience, and to determine how well these themes apply or unsuitably capture the nature of education and work structures impacting contemporary youth, (f) to understand the development of social inequality structures in the course of increasing needs for employment flexibilization, and how the process of globalization has influenced life-course patterns and inequality structures in the local communities. The author would like to debate the results of qualitative and quantitative semi-structured research, but also focus on the theoretical concepts used in the analysis.

The Unequal Pathways to Adulthood in China: A Holistic Approach of Assessing the Role Transitions

Rapid economic and social changes coupled with constant changing policies have had impacts on the ways in which young adults structure their pathways to adulthood in China. Different from previous studies on demographic markers in young adulthood in China where the focuses are on specific life events, our paper applies a holistic approach to the transition to adulthood based on the 2006 and 2008 waves China’s General Social Survey. This study enhances the literature by presenting the ways in which social class and structural factors influence the occurrence and timing of major life events as a whole. We have distinguished five prototypical pathways to adulthood. Clear differences are found in the trajecto...
ries types between four subgroups defined by gender and household registration status, as well as between father’s social status. We also examine the evolution of transition using the typology built to reflect changes in both demographic and occupational spheres.

Governing Natural Disaster: State Capacity, Democracy and Human Vulnerability

The paper discusses how state capacity and democracy interact in affecting human vulnerability of natural disasters. For rule and revenue, political elites have the incentive to build up relevant state capacity preventing disaster impacts on the population and property. The incentive of the elites and the capacity protecting citizens shall be stronger under democratic competitive elections. Thus, strong state capacity effectively reduces human vulnerability especially in democracy. A panel data of 150 countries from 1995 to 2000 are used to illustrate the relationship between state capacity, democracy, and the impact of disaster. The empirical findings from the multilevel models imply that strong state and democracy are associated with the lower disaster death and victim tolls.

Politics Of Production In a World Factory: The Global Fragmented Despotism In Foxconn

In this article we describe some special characteristics of the world’s greatest factory (in terms of the number of employees) belonging to the Taiwanese enterprise, Foxconn group in Shenzhen, China. We argue that the factory regime has been shaped by three key elements: (1) internal globalization: it refers to the global brand names, especially the Apple group's authority and interventions of the production process in the factory; (2) organizational fragmentation: the fragmented structure of corporate governance, that is, the vertical fraction of business groups (BGs) and the horizontal segmentation of employees belonging to different nationalities. The fragmentation led to the strong autonomy of BGs and incomplete information between BGs; and, (3) workplace despotism: the surplus of Chinese low-skilled rural workers enforced the arbitrary managerial power on the shop floor. According to the three elements, we name the factory regime as the “global fragmented despotism.” The organizational structure of world factory may be helpful for explaining Foxconn’s poor labor conditions and workers’ suicides happened in 2010.

Mapping the Climate Discourse Networks: Media Coverage of Climate Change in Taiwan

There is an increasing media coverage and visibility on climate change in Taiwan. Few studies, however, have been done with regard to how issues of climate change have been reported in the newspapers. This paper intends to examine Taiwan’s newspapers from 2007 to 2008 as well as semi-structured interviews with climate experts. Through discourse and relational networks methods, the paper examine how and why the climate change media discourses have been framed and represented, and how they interact or reflect national climate change politics and policies. It concludes with a discussion of how these findings help us understand multiple actor and discourse networks that effect national climate policies.

Visualizing Voices of Women

There has been a gendered shift in migration from men to women in the past several decades. This feminization of migration is particularly noticeable with the exodus of Asian women leaving their countries - to serve as nurses in the United States for several decades. This feminization of migration is particularly noticeable with the long-term objective to contribute to their sense of empowerment and awareness of their rights as women and as workers through this process of self-reflection. Through an intimate process of gaining trust and access to different communities of migrant workers, we carefully build and cater a specific format for each group that will encourage them to share their stories. Local and migrant sex workers in Hong Kong will visualize their own voices by participating in making media themselves. This paper will examine the results of this study and the effects of these personalized narratives and the role it plays on the awareness of gender and migration at large.

The Effects of Family Support and Friend Support on Adolescent Functioning: A Taiwanese Case

A number of factors affect adolescent functioning. This study investigates the respective contributions of perceived support from family and friends to various adolescent functioning, including deviance, depression, and self-esteem. Although previous studies have examined the relationships between family support, peer support, and adolescent functioning, these studies have some limitations, such as using an western sample (e.g., U.S.) and cross-sectional data. Using the Taiwan Youth Project (TYP), we employed latent growth curve model to explore how these two supports influence adolescent functioning. We expect to see that adolescents who experience high level of family support may have better functioning (e.g., high self-esteem and low depression) than adolescents who have low level of family support. We also expect to see similar results when support from friends is in the model. In addition to the individual effect from the two sources of support, we also investigate the moderating effects of these two supports on adolescent functioning. We expect to see significant interaction between these two supports such that high level of family support may have stronger effect on adolescent outcomes when friends’ support is at high level. In contrast, low level of family support may have negative impacts on adolescent functioning even when the level of friends’ support is at high level.

LIN, YA-FENG* (Louisiana State University, ylin7@tigers.lsu.edu)
A Multi-Level Analysis of the Effect of Age on the Female Employment Rate in Japan and Taiwan

Do women overcome the limitation of their life cycle in Japan and Taiwan? Scholars have seen that the relationship between female employment rate and age is an M-shape in these countries. More women enter the labor market after graduating from high schools or colleges, leave labor force due to marriages and/or childcare, return after their children are somewhat grown, and leave for retirement. Some scholars assert that this M-shape reflects the dilemma between families and jobs for women, while others believe that the curve is only due to cohort differences in women’s behaviors.

The OLS regression model cannot entangle the independent effects of age, period, and cohort because of statistical issues, and thus we need Age-Period-Cohort (APC) model to do so. Using this method, we attempt in this paper to clarify how age, period, and cohort each affect female employment and whether women’s participation in the labor force correlates with their family obligations or cohort transitions of women in Japan and Taiwan.

This research indicates that the M-shape is more suitable to describe relationships between female employment and age in Japan. The female employment rate has a dip around the late twenties and early thirties. This indicates that Japanese women choose to leave the job market because of marriages or childbirth and they will later return to work when their children begin to attend schools. Nonetheless, the present research produces more like an inverse U shape in Taiwan. Compared to their Japanese counterparts, Taiwanese women nowadays rarely give up jobs once they enter the job market. Taiwanese women re-entry to the labor force around 35 to 44 years old was observed in 1980 through 1995 or so. Since 2000, however, this re-entry has not been readily observed.

LIN, YUCHI* (University of Hertfordshire, ninio0731@gmail.com)
Rigidity, Culture-Related Conflict and Depression

Since marital law was abolished in 1987 in Taiwan, the rate of depression has dramatically increased. The reason for this remains uncertain. Some researchers think that this phenomenon might be related to the psychological conflict be-
between ‘social orientation’ and ‘personal orientation’ which is generated through the process of acculturation. Although the development of democratisation increases personal freedom, it also increases anomic. Hence, being influenced by Chinese culture in which the values of social groups are highly valued, people in Taiwan might feel anxious and uncertain when personal orientation is strengthened. Accordingly, the researchers suggest that the tension between social and personal orientations might trigger the formation of psychological conflict. Depression could also occur when people feel that the psychological conflict is too high to cope with. In this paper, the author attempts to propose that psychological conflict is expressed through depression but not through other constructs system. In the dynamic process of social change, depression might occur when the individual's construct system is rigid and not flexible enough to adapt to the tension between personal and social orientations, aroused by the changing society. This hypothesis is examined by conducting a survey and an interview. The survey has already been conducted and the interview was not enough statistical evidence to identify the relationship between depression and conflict. The interview is going to be conducted next month, and Repertory Grid Technique (RGT) will be adopt to qualitatively and quantitatively examine the relationship between the levels of the rigidity in terms of the construct system related to personal and social orientations and depression.

Influencia De Las Nuevas Tecnologías En La Prensa y Los Procesos De Opinión Pública: Una Nueva Cultura Periodística

El surgimiento de las nuevas tecnologías ha traído consigo un gran impacto en todos los ámbitos de la sociedad pero el más significativo, indudablemente, ha sido el cambio comunicativo, ya que ha supuesto la conexión entre personas, desde cualquier lugar del mundo, con algún tema en común. Así lo ha demostrado, por ejemplo, la teoría de seis grados de separación, recogida en el libro Six Degrees: The Science of a Connected Age del sociólogo Duncan Watts, que intenta comprobar que el ‘mundo es un pañuelo’.

La prensa no es un eslabón perdido en esta cadena tecnológica, pues ha sabido aprovechar todos los recursos que genera la red para propagar sus informaciones. Hoy día se concibe un medio de comunicación que no tenga su espacio en alguna red social como Facebook o Twitter, esta última siendo la horma de sus zapatos, ya que 140 caracteres son más que suficientes para que un titular informativo o de opinión, y que miles de seguidores se informen in situ.

LINDGREN, LENA* (Lund University, Lena.Lindgren@soclaw.lu.se)

‘Modern Times’: The Conceptualization of Contemporary Societies

This paper attempts to do three things in following the development of the concept of modernity. First, it is about the last three decades; from its initial appearance and its early critique in the eighties of the then emerging postmodernity, to the now frequently used and almost indispensable appearing trend when it comes to diagnosing contemporary societies. There has thus been a journey from conceptual polemics to its having become a part of the ‘dominant intellectual discourse’. Lyotard’s ‘La Condition postmoderne’ (1979) was probably the starting point. The dichotomy of Modernity versus Postmodernity (Habermas 1980) was established soon thereafter. Later the term gradually became an integrated part of sociological theory and it was declared that “Modernity is itself deeply and intrinsically sociological” (Giddens 1990). Modernity then came to refer to a ‘global condition’ and possibly also the beginning of a future ‘world sociology’.

The International Migration of Nurses and Doctors into Healthcare Systems: A Look into the Philippine Case

This paper explores parallels and dynamic interplays between charismatic Christianity (Pentecostalism and Lutheran charismatic revivalism) and ‘traditional’ understandings of mysterious power as related to an occult sphere in Iringa, a regional capital of South Central Tanzania. I discuss how notions of mystic power as constructive, defensive and necessary yet also dangerous and potentially destructive are adopted into and partly transformed by charismatic discourses on the realm of darkness and related ritual practices of empowerment, rupture and spiritual struggle. Attempting to move beyond a rigid continuity-discontinuity dichotomy I suggest that the relationship between Pentecostal-charismatic Christianity and traditional religion/ culture may better be grasped in terms of coevalness, intersections and ongoing mutual influence than temporalising difference.

LINDIO-MCGOVERN, LIGAYA* (Indiana University Kokomo, lmcgover@iuuk.edu)

The International Migration of Nurses and Doctors into Healthcare Systems: A Look into the Philippine Case

The international migration of health professionals, such as nurses and doctors, has been a growing phenomenon in the globalization of the healthcare labor market, with serious consequences on the source countries’ capacity to maintain sustainable domestic healthcare system. One consequence is an estimated shortage of 4.3 million health professionals required for delivering essential health care services to populations in need, posing a major barrier to providing the essential lifesaving health services. A significant contributing factor to this shortage is the transnational migration, export and/or recruitment of health professionals from low and middle-income countries.

The general pattern of the international migration of nurses and doctors—where the movement is generally from the periphery/semi-periphery to the core market—is changing as emerging through fine-grained human interaction in interaction with containing coarse-grained structures (Gell-Mann, 2002, Hayz&Ashley, 2011) in what Stacey, et.al. (2000) call complex responsive processes. The ways in which human interaction dynamics generate emergent innovative structures can be clarified using complex systems models that include emergence. Novelty is understood as emerging through fine-grained human interaction in interaction with containing coarse-grained structures (Gell-Mann, 2002, Hayz&Lichtenstein, 2010) providing enabling structures from an eco-organizational perspective. We propose a complex system model of organizing emergent innovation.
Managing Social Unrest through Risk: Reintroducing the Debate

Sweden has in no way been spared from riots similar to those that took place in Parisian suburbs in 2005 and in the UK during 2011. Two events well known to the Swedish public were the manifestations of civil unrest in Malmo during the winter 2008 and Stockholm 2013. Recently municipalities in Sweden have begun to include the notion of social unrest in their local risk- and vulnerability analyses. Hence, social unrest is placed at the same ontological level as for example natural and manmade disasters, pandemics and climate change. Put differently, social unrest is managed by being represented as a risk phenomenon which consequently legitimizes specific measures to reduce the potential threat of societal disorder. Within the horizon of Foucauldian theorizing risk is employed here as a technology allowing the calculation about probable futures in the present followed by interventions in the present in order to control that potential future (Rose 2001:7). In documents pertaining to local risk- and vulnerability analyses social unrest is thus considered a phenomenon with an existence in itself, while at the same time specific groups are defined as being both at risk and being a risk to societal order. With this background there seems to be reason for returning to an old sociological debate on the status of social unrest. During the 1970s, Herbert Blumer (1971; 1978) engaged deeply in the nature and role of social unrest, arguing that social problems are fundamentally products of a process of collective definition rather than phenomena existing independently as objective social arrangements. In this paper I return to Blumer’s writings aiming to find out what he has to offer in a discussion on the present development. In addition I describe through a Foucauldian lens the process through which social unrest is made manageable using the technology of risk.
Sweden is commonly regarded as a country with some of the best housing standards in the world. The provision of ‘good housing’ has been at the core of the Swedish post-war welfare model, but, over the past decades, a systematic process of marketization has led to increasing housing shortage, and the lowering of housing standards, particularly affecting low income groups. A large amount of housing from the late 1960s is also in urgent need of renovation. Those who do not have the possibility to buy a dwelling are dependent on a shrinking rental market due to the systematic conversion of rental housing stock to tenant-owned housing, and the current reluctance of developers to start up new building projects. An important shift in the way decisions are made seems to have reached stalemate, leading to a paralysis of decision-making procedures.

This article will shed light on the organization, arguments and reception (by authorities and police) of these new social movements. We will give examples of the debate and present results from an ethnographic study based on interviews with activists from several marginalized housing areas in Sweden. We argue that this ‘dysfunctional housing market’ is the underlying cause of social space, gendered and racial segregation within the Swedish urban landscape.

**Confidence Building and Stakeholder Involvement in Nuclear Waste Management. the “Glocalization” of Social Acceptability**

In most of the nuclearized countries, the public agencies in charge of the development of a technical solution for the safe management of the radioactive waste were confronted to a strong opposition coming from anti-nuclear movements and local populations. These movements of contestation paralyzed all the decisional processes, leading the different agencies to transform their approaches and integrate what they call the “social aspects” (or the “problem of social acceptability”) of the waste into their research agenda.

In this context, this paper examines the way in which the nuclear sector has developed different strategies to react to this generalized contestation. It precisely analyses one of these strategies: the setting up of the “Forum for stakeholder confidence (FSC)”. The FSC is an international arena that was created in 2000 within the framework of the Radioactive Waste Management Conference of the Nuclear Energy Agency (NEA) at the OECD. The FSC gathers representatives from different national nuclear organizations and aims at facilitate the sharing of experiences in order to ensure a effective dialogue with the public with a view to strengthening confidence in the decision-making processes.

Drawing from qualitative fieldwork conducted in Belgium, document analysis and non-intrusive participation in meetings of the FSC, I will argue that the setting up of this international arena, in his ability to centralize all the experiments made regarding public participation and stakeholder involvement in different countries, and, therefore, in his ability to develop an diffuse “good practices” of public participation can be seen as a “strategy of glocalization” as defined by Ulrich Beck (2000). However, the FSC confronts a number of multi-level strategy that is almost impossible and the local and national level, seems to be very effective in preventing the apparition of new wave of contestation and will durably alter the social agency of local actors.

**The Role of Social Scientists in Dealing with the “Social Aspects” of High-Level Radioactive Waste Management in Belgium. Will Sociologists Tame Resistance?**

In most of the European countries that are confronted with the problem of radioactive waste, an important shift in the way decisions are made seems to have recently taken place, labeled by some scholars the “participative or deliberative turn” (Lettinck, 2010; Flora, 2009; Barth, 2006). While technocratic rationalities (based mainly on performance assessment and quantitative risk analysis) prevailed until the early nineties, they have proved to be unsuccessful and reached stalemate, leading to a paralysis of decisions-making procedures. Experts identified the “societal aspects” of nuclear waste management (mainly the emergence of organized local contestation) as the main cause of this paralysis and set up new tools of decision (e.g. SIA, local partnerships, consensus conferences) to deal with this new issue.

The present paper examines this “participatory turn” in the Belgian case. I identify the emergence of a new consensus among policy makers on how to deal with the “societal aspects” of high level waste management: it is claimed that the problem can only be properly handled if the expertise of social scientists is mobilized. Collaboration between nuclear and social scientists is therefore called upon by the actors of the nuclear sector as a way to unblock the decision-making process on nuclear waste.

Adopting a neo-institutionalist stance, I analyze the genealogy of this new kind of expertise in the field of nuclear waste management, tracking the idea of bringing social scientists in the process back to controversies in the late 1940s in the US. This genealogical account enables me to argue that this use of the social sciences can be seen as a way to maintain the prominence of technocratic rationality in participative decision-making processes.
The Marriage Squeeze for Aboriginal Men in Taiwan: The Impact of Ethnic Intermarriage Between Aborigines and Han Chinese People

Before 1970, the main stream of ethnic intermarriage in Taiwan was the elder veteran from Mainland China marrying aboriginal women, but the pattern of ethnic intermarriage between aborigines and Han Chinese has been changed due to a rapid economic transformation. In the past three decades, aborigines moved from their native villages to large metropolitan areas increasing and their spatial segregation from Han Chinese was decreased substantially. Accompanied by the population redistribution, the intermarriage rate of aborigines and Han Chinese has increased, and now aboriginal marriage is more likely to be accepted for aboriginal men declined. Although men and women both leave their hometown, the shortage of marriageable partners only appeared in specific local marriage markets, i.e., their hometown areas in the mountain or the peripheral southeastern coast. The spatial distribution of indigenous population become unequal and sex ratio only skewed in some areas due to the migration selectivity of sex and education. The propensity of migration of aboriginal women is higher than men and the well-educated tend to stay in urban areas where they are more likely to marry Han Chinese. With the social constraint of the marriage gradient and mating threshold, the less educated aboriginal men who stayed in hometown are compelled to stay single due to the shortage of marriageable women in local marriage market. Using the 2000 Taiwan population census, we try to reveal the complex relation among intermarriage, migration and marriage market. The ultimate goal is to provide some empirical evidences to revalue the impact of ethnic intermarriage in the perspective of marriage squeeze.

Conjectures on Labor-Environment Alliances

This paper examines different historical contexts under which labor and environmental movements have taken their current shapes, and offers some conjectures about possible future trajectories. We put forth a broad schema for explaining the character of labor and environmental movements according to two historical determinants: the historical strength of organized labor, and the overall character of the state (i.e., whether or not it bears an authoritarian legacy). In contexts where organized labor is historically strong and remains dominant, environmental movements are more likely to incorporate livelihood and class politics issues in their agenda, cases such as India and Brazil. However, once the hegemonic labor movements show signs of decline, environmental movements are likely to engage in fierce ideological competition against the dwindling left—cases such as Germany, England and Korea. This competition might take two different paths: the greens attempt to absorb the left (e.g., Germany), or the greens in no small measure cut themselves off from the leftist tradition and do so intentionally (e.g., Korea). In contexts where organized labor is chronically weak, environmental movements are more likely to flourish independent of class politics.

Relationship Among Fathers’ Occupation, Fathers’ Parenting Behaviors and Children’s Academic Performance during Early Adolescence in Modern China

The purpose of this study is to clarify two points: (1) whether or not there are differences in parenting behaviors of parents depending on strata and (2) how parenting behaviors of parents influence the accomplishment of children’s education. By incorporating cultural capital in Bourdieu’s theory of reproduction, this paper, an empirical study was conducted by putting together a study concept of “economic strata of fathers (occupations) → fathers’ parenting behaviors → accomplishment of children’s education” by considering parenting behaviors of parents as cultural capital. The subjects included 746 groups of second-year high school students and their fathers and mothers, and a questionnaire survey was conducted in the rural part of the Shansi Province in 2009 and the urban area in 2010. The most important aspect as a result of analysis was the strong influence of the “father’s occupation” on academic performance of children. Therefore, it was successfully confirmed that economic strata cannot be ignored and Bourdieu’s theory of reproduction can be applicable to society in China, with a significant influence from fathers’ parenting behaviors on self-esteem and academic performance of children. First of all, all parenting behaviors of parents in the blue-collar stratum including farmers and temporary workers have a weak influence on self-esteem and academic performance of children, with a higher rate than children in the white-collar stratum. Fathers in the white-collar stratum who work for government institutions, corporations and organizations gain a relatively higher income than the blue-collar stratum and emphasize more on parenting; therefore provide more home education to children. Self-employed fathers have higher income than blue-collar and white-collar...
strata and own abundant network resources; however emphasize education for males over females.

Sell the Cow and Drink the Milk: China's Community Building Discourse and Its Implications for East Asia

Despite East Asia's efforts towards integration over the past two decades, political and historical antagonisms and sovereign disputes among powers and stakeholders in the region have greatly hindered the process. Besides direct conflicts among powers, this author argues that the difficult state of community building in East Asia is also the result of the securitization of economic integration by respective states in the region, particularly by great powers such as China.

Based on the concept of securitization developed by the Copenhagen School, this paper examines the case of China and how Chinese discourse in the new century has reshaped state relations in East Asia. Specifically, this author seeks to explain how China's discourse on economic security conflict with its parallel discourse on the establishment of a harmonious regional order. The impact of China's mixed discourse is to re-open the dual debates of Beijing's peaceful rise vs. potential challenge and Beijing's maintenance of status quo vs. lean towards revisionism. The debates entail the possibility of China's re-introduction of a tributary-like system in East Asia, which has significant implications for state relations in the region.

The purpose of this paper is to explain how China plays a critical role in the regional community building process and to draw the connection between securitization and the development of integration in East Asia. This paper proceeds in five parts: part one lays out the main argument of how securitization influences community building and integration in East Asia; part two reviews Chinese foreign policy in the new century; part three traces Beijing's discourse and its implications for regional integration; and part four elaborates on the implications for state relations in East Asia and the response of neighboring states towards China's behavior.

Gender, Law and Legal Professions in China

Based on surveys, interviews, and archival research, this paper attempts to analyze Chinese women's current status and impact in the legal professions. This paper introduces and compares the Chinese pioneer women lawyers and some current model women judges to demonstrate that so-called "legal characteristics" and "female temperament" do not necessarily conflict. In the past, being affected by biological determinism, gender essentialism and dualism hierarchy; the ability of women to study law and work in the legal professions was not fully affected by biological determinism, gender essentialism and dualism hierarchy; in the past, being affected by biological determinism, gender essentialism and dualism hierarchy; the ability of women to study law and work in the legal professions was not fully recognized; since Chinese judicial reform started to pursue harmonious justice and multiple dispute settlement mechanisms, Chinese women judges, due to their abilities of mediation, have played more of an important role in the Chinese judicial system. Sex discrimination and gender bias however still exists in the legal professions in China.

Local Institutions and Historical Contingency: Divergent Paths in Local Economic

This article examines the paths of local economic transition over the past thirty years in Wenzhou and Wuxi of China from an institutional perspective. Chongqing will serve as a minor case in comparison. It argues that local institutions matter in explaining divergent paths of development in the era of market transition. Specifically, the passive nature of the local state complemented with the bridging character of business associations and the more independent entrepreneurship of local firms in Wenzhou have contributed to a local transition from a semiliberal capitalism throughout 1980s to a market economy coordinated by local state at the turn of the century. On the other hand, with a dominant local state intervention and the weakened business associations and entrepreneurship, Chongqing transformed from a typical path of planned economy towards a road of strong state capitalism. This article further traces the historical origins of different local institutions in Wenzhou and Wuxi, arguing that a historical contingency of self-liberation in Wenzhou at a critical juncture of the 1949 socialist revolution explains an inactive local state with a more lenient attitude toward the local private peasant sidelines, in contrast to the liberation by Mao's regular Army from north in Wuxi and Chongqing, which disrupted the local status quo and switched the loyalty of local power hierarchy to socialist transition in Mao's era. Thus the initial genesis of institutional arrangements as a result of punctuated equilibrium in localities shapes the way in which local institutions evolve for decades to come.

Cultural Stigma and Social Exclusion for Adolescent with Mental Illness: A Case Study in Guangzhou, China

Due to the prevailing stigma towards people with mental illness, adolescents with mental health problems are facing overwhelming social exclusion in mainland China. In order to respond to the lack of studies on the social exclusion for young adolescent with mental illness in Chinese context, this study tried to explore the process of seeking medical service and daily struggles for teenagers with mental health problems in China. A case study has been conducted to understand the social exclusion for a middle school student in her school life. The data was collected from researcher's one-year placement as a social worker in a junior middle school in Guangzhou, China. The girl, her classmates, her parents, and her teachers were targeted interviewees. According to the research findings, the cultural construction of mentally disabled people as violent and demoniacal from social media and Chinese traditional belief has profoundly affected the adolescent's mental well-being. The research also identified a dilemma faced by young people with mental health problems. On one hand, they are entitled to the social welfare; on the other hand, the labeling effect in social welfare provision and legal responsibility for school to take care of students' safety in Chinese social context result in an unfriendly environment for the young people in school, as being rejected by school and teachers once diagnosed. Chinese cultural value that emphasized family to take care of it member also leaves the family with great anxiety. A new service model as 'medical care - social workers - teachers - families - peers' for social work intervention, which seeks to promote community understanding on adolescents with mental illness, reduce the labeling consequences of 'stigma', and initiate a more positive social support environment for young patients' rehabilitation was advocated.

Gentrification during the Redevelopment of Urban Villages in Shenzhen, China

Developing countries have witnessed unprecedented rapid urbanization process, whereas we are worried to see that most of the urbanization happened in the form of urban sprawl. It is the situation in most fast growing cities that on the one hand, urban land is expanding into rural areas without control; on the other hand, many distressed inner urban sites are left unused. During the new stage of megacity, massive urban expansion is no longer encouraged, replaced by more sustainable and intensive utilization of urban land. Nowadays large scales of urban development have been taking place in China. Among which the redevelopment of urban villages has received substantial attention. Urban village is a unique phenomenon due to China's dual land system and residence registration system. China's urbanization, massive urban expansion is no longer encouraged, replaced by more sustainable and intensive utilization of urban land. Social Capital, Resilience and Self-Efficacy in Promoting Psychosocial Development Among Senior Middle School Students in Zhejiang Province

Although social capital theory has been widely applied in western countries to investigate positive factors to children and youth's development outcomes, little attempt has been made to test the applicability of social capital theory to adolescents in mainland China, especially for those who are after the compulsory education in medium-sized cities. This research aims at understanding whether and how social capital from the family, school, peer, and community contexts relate to...
the psychosocial development of senior middle school students, and whether and how resilience and self-efficacy could serve as mediators for the relation between various forms of social capital and development outcomes. 231 senior middle school students in Zhongshan participated in the survey. Results show that school quality concerning students’ interaction to school and teachers display significantly positive relation with adolescents’ mental health, behavior adjustment, clear and positive identity, but not with students’ social capacity. Family social capital as parental supervision and community social capital as reciprocated exchange also positively relate to students’ behavioral adjustment. Students with more encouragement, respect and reciprocated exchange in the community are more likely to develop clear and positive identity. Moreover, students who scored higher on teacher encouragement, structural bonding and perceived mutual help with peers, and child-centered informal social control in the community are also more likely to have higher score on social capacity. However, not all sources of social capital have significant relations with students’ development outcomes. In addition, according to the research findings, resilience and self-efficacy also mediate the effect of social capital on mental health, clear and positive identity, and social capacity, while only resilience could have the mediation effect on the relation between social capital and behavior adjustment. Implications for family service and family policy, everyday educational practice at school, and community development programme are discussed.

Educational Expansion of the Upper Secondary Schools in Taiwan

After planning and designing ‘the Twelve-Year Compulsory Education Policy (TYCEP)’ for 30 years, Ministry of Education in Taiwan finally officially announced in 2011 that the policy will be implemented in 2014. However, despite the Taiwanese government has promoted the policy for more than two years, the issue is still continuing to cause intense disputes and to gain numerous opposite views. In particular, the proportion of normal to vocational school students and the ratio of public to private schools, both of these two pre-existing structural issues of the upper secondary education in Taiwan will be the main problems to implement TYCEP. Therefore, this study suggests that for TYCEP, it is necessary to clarify the importance of these two key issues and review the impacts on the educational opportunities for high school students. Thus, this study aims to explore the history of educational expansion of Taiwan’s upper secondary schools and to analyze the backgrounds and major factors of developments of those two structural issues through the literature and field survey. Furthermore, this study scrutinizes ideas, impacts, and challenges of TYCEP’s implementation.

The Development of Inter-Firm Trust: Cases from the Animation Game Industry

Nowadays, technology has played important role in the society and even shaped the way business operates. However, there is also an awareness of the “soft sides” of business, among which is the inter-firm trust. This is particularly observed in the animation game industry where increasingly more inter-firm cooperation and inter-firm collaboration takes place. Such topics as “how to select appropriate business partners” and issues relating to the process of inter-firm trust has been showed in our research. The issue is more and more important as the inter-firm trust issue is still continuing to cause intense disputes and to gain numerous opposite views. In particular, the proportion of normal to vocational school students and the ratio of public to private schools, both of these two pre-existing structural issues of the upper secondary education in Taiwan will be the main problems to implement TYCEP.

Conflicts Between Artisanal Miners and the Government in Mongolia

In autumn 2013, Mongolians witnessed gun shootings and an attempt to blast bomb near the Parliament House, motivated by the Civil Environmental Movement of Mongolia. The country’s basic economic revenue comes from mining sector and since the democratic transition; the country started using the mineral resources with the ratification of ‘Gold Program’ in 1994. As a result, the number of artisanal miners who exploit gold in abandoned areas has increased extensively and they have been one of the main factors to the environmental degradation as they operate without any legal coordination and official registration for the last decade. The Government made an effort on dissolving those illegal and environmentally hazardous groups in 2005, but it led to extremely acute conflict between the tow sides. Remarkably, not comprehensive survey was conducted on this newly generated community in Mongolian society. Accordingly, a research was carried out for determining forms and consequences of conflicts between the artisanal miners and the Government on example of cases in Mongolia. The fundamental conflict theory and approaches were applied in this paper. As a result, the main conflicting parties in artisanal mining were identified as local authorities and the root cause for long term dispute was defined as having no mediation and facilitation in the process. Eventually, the conflicts resulted to unsustainability in artisanal miners’ activities, more risks in safety issues and many people were injured during their rudimentary operation. The research, carried out deep study on essence of the artisanal miners and process of their institutionalization, has been recognized as significant project which will contribute to effective natural resource management and resolution methods on conflicts over natural resources.

Leisure in an Unequal World: Gender Differences in Australia

Leisure in Australia has been male-dominated. Historical analysis paints a picture of women in supporting roles with regard to leisure. They have been placed in an inferior position. The home care role of men has been contrasted with the breadwinner role of males. While men dominated recreation resources, women were expected to facilitate men’s leisure. In contemporary times, the gender gap between leisure provision and participation has narrowed with observations of separate pathways in types of activities and parity in total participation. Development of gender equality in leisure has occurred through research studies; measurement of leisure engagement; and the diversity of recreation offerings and programs. The paper is structured historically with gender activity described in traditional aboriginal life, during colonial times and at post-1945 and contemporary eras.
Temporal Scales of Justice and Sustainability: Aboriginal Peoples and Environmental Governance in the "Wild" Landscapes of Northern Australia

Sustainability evokes concepts of social and environmental justice that are inherently temporal. It assigns rights to future generations and works to apprehend risks to human well-being stemming from as yet indeterminate environmental change. While the future-oriented temporality of sustainability is of manifest importance, research in environmental justice highlights the parallel importance of contemporary social and spatial relations, and the historical roots of those relations, in the determination of social-ecological futures. This presentation explores the temporality of sustainability and environmental justice in context of Aboriginal peoples’ involvement in environmental governance in Far North Queensland, Australia. It argues that while indigenous Australians are ascribed unique legal and moral rights in environmental decision-making, aboriginal involvement in environmental governance is often restricted, in practice, to conservation of natural and cultural heritage. As passage of the Wild Rivers Act 2005 illustrates, aboriginal aspirations for futures that integrate natural and cultural heritage with the development of natural resources, diversification of remote economies and/or political self-determination often meet active state resistance.

Partners in Change: Using Patient Narratives for Service Co-Design

Objectives: To use a national video archive of patient experience narratives to develop, test and evaluate a rapid patient-centred quality improvement approach (‘Accelerated Experience-based Co-design’ or AEBCD).

The intervention was an adapted form of Experience-based Co-design (EBCD), a participatory action research approach in which patients and staff work together to redesign care. EBCD draws on transportation theory and narrative persuasion, using locally collected video patient narratives to help staff see through patients’ eyes. The accelerated intervention used national rather than local patient narratives (in lung cancer and intensive care). This shortened the timetable from 12 to 6 months and halved costs.

Evaluation: An ethnographic process evaluation was conducted, including observations, interviews, questionnaires, and cost and documentary analysis (including comparison with previous EBCD evaluations).

Results: A total of 96 staff members and 63 patients participated in the four AEBCD projects. The accelerated approach proved readily acceptable to staff and patients; using films of national rather than local narratives did not adversely affect staff engagement, and may have made the process less threatening. Local patients felt the national films generally reflected important themes although a minority felt they were more negative than their own experience. However, they served their purpose as a trigger to discussion, and the resulting quality improvements were similar to those in traditional EBCD projects. But the element of the intervention that has left both staff and patients feeling energised and empowered is the direct encounter with each other; the active partnership in co-design to achieve change; and the sense of tangible results. Staff feedback suggests EBCD can reconnect staff with fundamental values of care and compassion. Patients too, report a different level of appreciation for staff, a belief that they will be listened to and that change is possible, and a renewed sense of trust in healthcare providers are looking for these types of products. This system of certification has generally relied upon the third-party certification (TPC) model as a way to ensure that producers are complying with standards. Over the past five to ten years, critiques of this model have emerged in both practitioner and academic circles. These critiques focus on the appropriateness of this model based on the type of knowledge that is privileged, the cost of the model and conflicts of interest. This paper examines these critiques by exploring how participatory guarantee systems (PGS) are used to accommodate some of the critiques of the TPC model. We draw upon examples from Japan and Bolivia to illustrate how PGS are rethinking some of these concerns. Through our analysis we explore new institutional arrangements and where there might be spaces for empowering alternative ways of knowing.

Employment and Health Consequences of Care-giving for Older Workers in Australia

In Australia there is continuing policy pressure on older adults to remain in paid work. For many, especially women, participation in paid work is undertaken in conjunction with providing care for sick, disabled or frail family members and/or grandchildren. Recent policy developments in Australia such as the National Carer Strategy Action Plan (2011–2014) articulate a commitment to ‘recognise and respond’ to the needs of carers including supporting their right to participate in social and economic life. To this end, the Fair Work Act Amendment Bill 2013 extends the right to request flexible working arrangements to mature-age workers over 55 and workers with added caring responsibilities. At the same time, The Australian Human Rights Commission Report ‘Investing in Care: Recognising and valuing those who care’ (2013) acknowledges the potential disadvantages, particularly for women, associated with unpaid caring responsibilities and the impact on workforce participation, retirement income and health.

This paper explores the relationship between paid work and care-giving, with a particular focus on Australia’s early baby boomer cohort and the gendered nature of care-giving. Analysis of longitudinal data from the Household Income and Labour Dynamics in Australia (HILDA) survey indicates that being female, having a health condition, higher education, being partnered, and being engaged in paid work and care-giving in 2002 increase the odds of engagement in concurrent activities in 2010 relative to engagement in paid work only. The finding that prior engagement is consistently related to future engagement in the same activity eight years later highlights the value of examining engagement over a longer time period. These findings will be interpreted within Australia’s policy context and the potential employment and health related consequences of care-giving on those providing the care, their families, employers and the community.

Participatory Guarantee Systems: Alternative Ways of Knowing in Agri-Food Systems?

Over the past twenty years, sustainability standards have been used in agri-food systems as a way to link sustainably produced products with consumers who
Deus Ex Machina? Religious Texts, Spiritual Capital and Inequalities – in Continuation of the Current Debate

This paper is borne from three impulses: broadly, the presently ubiquitous influence of liberation theologies within mainstream Christianities; narrower, the widespread religious assumption that the divine addresses the world through the “Holy Word” of the Bible; most specifically, a current South African debate (in which the author is a participant) on the contextual relevance of scholarly exegesis of these texts. The contention here is that the usual “application” of biblical texts to modern issues of inequality is undertaken in unsophisticated ways. First, the hermeneutic lenses are often left unacknowledged. Second, the exegetis is often poor and seldom new, because the prime concern is a pressing modern issue. However, third, with little academic background in socio-political, economic and related fields of study, the pressing issues are often analysed superficially. Thus, good intentions flounder on poor scholarship, based on a critical (by now, clichéd) rejection of “biblicism” that is combined with an ideological conservative “Western” biblicism. The underlying assumption is that Bible texts can be directly brought to bear on modern issues. The concepts of spiritual or religious capital can ameliorate this. The history and implications of these concepts are therefore reviewed. In constituting the religious identity of individuals, the Bible may well be an influence, but one among many. The thus-molded religious identity of persons so inclined may lead them to address social inequalities, pursuing a less unjust and, usually, more egalitarian society. Agency is mediated by such a constructed religious identity. The issues addressed, almost exclusively socio-political, are matters of moral high ground, presented with firm conviction, may in this less instrumentalist engagement with the religious heritage be expanded to include the theological, with greater humility, seeking clarity.

Embodying Another Self for Western Shamanic Voyage

New Shamanism is one of the many answers provided by Western countries in order to satisfy the new spiritual urgencies proposed by modernity. Spiritual research and physical well-being care the two basic components through which the argumentation about health is built up in contemporary Western world. Both spiritual and therapeutic research share the same objective attainable through activities borrowed from other disciplines like yoga, traditional medicine, Eastern philosophies and neo-shamanic practices.

My analysis is focused on how new-shamanism is being developed and conjugated in Western world, being it considered a form of therapeutic primitivism populated by small fleeting groups gathering together during meetings and seminars (with fee) in France in order to learn new “exotic” healing techniques.

In this context, the Shaman plays the role of a teacher-therapist in front of the novice-patient; both are involved in a healing and education process where teachings are all about the possibility to raise awareness in exotic cosmologies by learning visualization techniques capable of carrying participants into the shamanic universe (flying to the west). The purpose of this paper is to lay special stress on the modalities used by Western participants (mostly middle class women, aged 40-50) to embody and assimilate the techniques they learn during seminars. The common objective to such techniques is to allow participants to bring to effect the so called “shamanic voyage” without resorting to psychoactive drugs.

It is my opinion that the possibility to reach a different, transitory and unknown cosmology implies the ability to embody another self. It relates to a self which possesses a specific “ritual face” capable of manifesting itself during the symbolic interaction taking place in the social microcosm of shamanic seminars for western people in France.

Organization within Organization Studies: From Core Object to Unspecified, Awkward Relic

After the outbreak of the financial crises, scholars and public intellectuals have sought to uncover the roots of the current economic downturn. Prominent in this discussion has been a renewed discussion of the state apparatus in the context of state regulation and laissez faire, as well as a critique of the preceding decades accelerated financial deregulation. The current crises, however, should also be seen in conjunction with its organizational dimensions. On the one hand, these dimensions can be traced to the beliefs held and the actions undertaken within a multitude of organizations, including banks, corporations, credit institutions, etc. On the other hand, these dimensions should also be regarded in conjunction with a range of historical developments within organization studies (OS) itself, where the core object of the organization seems to have been problematicized to such an extent that it is rather unclear what remains of this foundational theoretical construct. By attending to these latter historical developments, the paper argues that specific, yet highly diverse, modes of theorizing within OS progressively seem to have undermined organization studies’ core object. This loss, the paper claims, have made OS ill-suited to adequately respond to the organizational dimensions of the economic crisis. Only by reconceptualizing and re-appropriating this core object can OS revitalize itself as a practically useful and relevant academic discipline.
Human Rights As Political Imaginary

The language of human rights has become one of the most important normative and policy directions of our time. Along with the struggle for democracy, this quest for human rights resonates with a striking number of societal and political projects; indeed, for some, it is the uncontested emancipatory project of a globalized world. Due to their ineradicable normative nature, however, normative approaches predominate in the human rights field; this remains the case even in the important emerging sociological scholarship.

This paper draws attention to the fact that human rights do not exist as a ready-made object of sociological analysis; hence their sociological “thingness” needs to be elucidated. The paper addresses the type of conceptual and theoretical work that is required to make human rights an object of sociological analysis in order to avoid normative restatements of the origin of human rights in a sociological register.

A model of human rights as political imaginary is proposed and used to constructively review contemporary sociological accounts of human rights. However rather than a mere review, the conceptual framework proposed by the political imaginary model makes possible a cartographical approach to the field. Thus the goal of the paper is not simply to catalogue existing approaches, but to theoretically relate them to one another in order to contribute to the development of a more synthetic sociological framework for analyzing human rights.

A Multidimensional Measure of Social Stratification: Composite Indicator of Inequality

In previous works (Fachelli, 2009; Fachelli & López-Roldán, 2010, 2012) we analysed the changes in the social and economic model of Argentina in the period 1997-2010, we observed that the social structure, measured by a variable that typifies stratification, remains basically unchanged during the years analysed in spite of the profound crisis that occurred at the end of 2001 and along 2002. With in this general framework, we developed a multidimensional model where are combined 4 dimensions (work, education, housing and income), 6 variables and 38 categories. With them we obtain a typology with four basic types. The methodology we apply is called “structural and articulated typology”: we use factorial analysis, including multiple correspondence analysis (MCA), in order to reduce the initial attribute space into “m” factors. Then we apply cluster analysis to classify individuals into “key” groups or “types on these factors.

Our goal is to obtain a single measure of social inequality. However, the multidimensionality of the concept of social stratification makes difficult to obtain a complete ordering of households according to “inequality” level. The question that arise is how generate a composite indicator, that we call “social distance”, based in a multidimensional measure taking into account the principal factorial components. We follow the work of Asselin (2009) who applies this strategy in the context of the analysis of multidimensional poverty. The communication will present the results based on the analysis of the Labor Force Survey of Argentina in 2012.nder.
Unions and levels of government. In this paper we assess the Spanish legislation on migration, particularly of the measures designed to manage the recruitment of circular seasonal foreign workers in the framework of the bilateral agreements signed by successive governments during the first decade of the XXI century. Our analysis suggests that labour market needs were a goal in the design and implementation of these policies which promoted forms of induced circularity. We highlight the idea that the seasonal labour mobility schemes in Spain have been shaped by a constellation of interests and a result of a consensual policymaking process at local and regional level in seasonal sectors with a high dependency on foreign workers. Economic crisis has change the whole implementation of these policies creating new forms of "spontaneous" circular migration.

Guestworkers Programs in Uncertain Times. Economic Crisis and Seasonal Labour Mobility Schemes in Spain

Since the 1970's, the global economy has been characterized by liberalization of trade and capital, but also by transnational movements of people. Recruitment of migrant workers has become popular in states facing the ever-changing nature of labour workers. Temporary labour migration has become an attractive resource in several low paid jobs within the agricultural, service and construction sectors. Accordingly, there has been a growth in temporary migrant worker programs in several countries in Asia, Europe, and North America. New immigration countries, such as Spain, implemented also TWP during the economic boom in the 2000's.

In this paper we aim to shed light into the process of policy-making and implementation of these programs in the Spanish agri-food industry during the last decade focusing on three dimensions: a) country selection and recruitment process, b) recognition of rights and transitions to permanent migration and c) actors and multilevel governance.

The final part of the article focuses on the impact of the economic crisis on the implementation of these programs since 2008 and its prospects in these new uncertain circumstances.

Managing Heterogeneous Actors in the Reliable Embedding of Security Technology: Findings from a Comparative Study of Airports in Germany

After 9/11 security measures, especially in the air traffic system, have been increased enormously. Complex technology is employed to protect the global circulation of passengers and goods. Recognizing this venue as a network of heterogeneous actors, it is instructive to see how they can manage to keep this more and more complex security system moving. In our contribution we want to interplay security as complex technology – in the sense that it transforms an unknown, potentially dangerous person into a safe passenger through a combination of different cause-and-effect chains – that is reliably embedded in the daily activities at the airport. Against the background of growing passenger numbers, ever more stringent airport regulations and increasing economic competition on different levels, we want to explore how it is possible to ensure this reliable embedding in spite of different dimensions of heterogeneity. We discuss findings of a comparative study of three airports in Germany which focuses on practices managing those diverse demands arising from 4 different sources of heterogeneity:

1. Differences in educational background and professional views on security
2. Differences in organizational backgrounds (bureaucracies, free-lancers, etc.)
3. Differences between passengers and participants, public transport regulations
4. Differences between places of origin (ministry, security services, airport management)

We assess the state of Japanese capitalism by taking a fresh analytic look into its labor market. Our findings strongly indicate that the general dictum of «lost decades(s)» stands in stark contrast to economic reality. What is more, we find that the purported view of strong and rigid gender inequalities in the labor market is entirely flawed.

Analyzing employment and wage data for the period from 1988 to 2010 we find that the Japanese economy has seen very stable employment conditions in a long-term perspective. In fact, Japanese businesses have created some 10.1 million more jobs than were to be expected if the 1988 labor force participation rates of both sexes had stayed constant. 1.4 million of these additionally created jobs are jobs in regular employment, and what is more, 0.9 million of these newly created
regular jobs are occupied by women. Increasing labor market participation by women reportedly largely went into non-standard employment. While this is essentially true, we can evidence a strong tendency toward closing wage gaps both between men and women, and between regular and non-regular employment. As the latter effect is particularly strong for women, we cannot draw any evidence for any particular gender inequalities for our investigation period. On the contrary, our findings suggest that women have made significant inroads into formerly male-dominated regular employment.

Hypothesizing about potential reasons for this bias, we suggest (a) that this negative perception stems from a general “adaptation problem” referring to the transition from high to low-growth economy, and (b) that the ongoing strong prevalence of the societal ideal of a male breadwinner in Japanese society effectively forecloses a positive appraisal of young women increasingly finding their way into regular employment where this happens at the expense of men.

Civil Liberties or Civil Rights? Muslim American Advocacy Organizations

This paper considers the extent to which two of the most prominent Muslim American advocacy organizations have been able to follow the pattern of advocacy established by the Civil Rights Movement as they have sought to confront Islamophobia in the USA. These two organizations – the Muslim Public Affairs Council (MPAC) and the Council on American-Islamic Relations (CAIR) – have long been at the forefront of Muslim American advocacy. The analysis considers the trajectory of MPAC and CAIR given the cultural and political context of the current “post-Civil Rights era”. I begin with an overview of what I call the “civil rights mode” of advocacy, a race-conscious strategy historically used by many civil rights advocacy organizations. This is then contrasted with a “civil liberties mode,” a race-neutral or “color-blind” strategy that has recently gained favor in certain circles.

My findings suggest that the power of the civil liberties mode in contemporary American advocacy politics has played a crucial role in limiting the effectiveness of Muslim American advocacy efforts.

Etched In Stone: Preservation Of Cemeteries and Cultural Identity

Cades Cove was a thriving Appalachian mountain community in the United States prior to the establishment of the Great Smoky Mountains National Park. The creation of the park effectively brought an end to this community. It now exists within the park as a tourist destination (approximately 2 million visitors per year) with a few remaining ‘primitive’ homesteads and cemeteries. Everyone knows what cemeteries are, but in that familiarity, there is dismissal, for few know that cemeteries are far more than what they know them to be, and in that regard, cemeteries are far more than sequestered repositories for the deceased. Cemeteries constitute libraries of stone and are proxies or microcosmic expressions of the communities they represent or represented and are an important element of community.

The first task of this research has been to conduct a sociological examination of Cades Cove and the associated cemeteries, archiving the socio-demographic data of the former communities and their residents. The second objective has been to collect precise GPS coordinates of all known stones & markers in the cemeteries of Cades Cove.

A major disaster can strike at any time, endangering precious cultural property. Our cultural preservation efforts of these cemeteries are an important component of disaster preparedness in Cades Cove and to members of the surrounding communities with direct familial ties. These cemeteries have tremendous religious and spiritual importance to the families with ancestors buried there and are a significant marker of their cultural identity. Without these preservation efforts, a major disaster could destroy these libraries of stone and they would be lost forever. This would potentially threaten the future continuity of the communities and their cultural identity, destroy the artifacts of their ancestors and their family histories, and hinder recovery efforts.

Role of Sociological Theory in Deconstructing Sociological Phenomena In Africa – the Social Exchange Theory and the Small House in Zimbabwe

Sociological theories continue to illuminate various sociological phenomena found in Africa and act as conceptual and analytical tools in deconstructing sociological knowledge. This study uses the lens of the social exchange theory to analyse the small house practice in Zimbabwe. The ‘small house practice’ is the trend among married men in Zimbabwe to maintain a single woman as a quasi-permanent sexual partner of ‘official marriage’. This relationship is considered subsidiary (small) compared to the official marriage yet it is important to the welfare of both man practicing it and the unmarried woman being looked after. The study reveals that those engaged in small house interactions are rationally seeking to maximize the profits or benefits, especially in meeting basic individual needs of both the man maintaining a small house and the woman being looked after.

LOW, KELVIN* (National University of Singapore, socleyk@nus.edu.sg)

The Spatial Politics of ‘Noise’

This paper attends to sounds and noises as sociocultural phenomena taking place in everyday sonic environments. If noise is considered as sound that is out of place, then how and where does this evaluation transpire in order for noise to qualify as an aural transgression? In defining what constitutes as sound or noise, the process also involves locating how noise is dealt with in different places that we inhabit (public space as shared/private space), at different levels (small/large-scale) and by different social actors (individuals, groups, social institutions etc.). Cases of auditory altercations in urbanity will be analysed in order to demonstrate how sounds and noises acquire socio-cultural valences in the ways that urbanites regard and utilise spaces in city life. By interrogating how places are experienced and contested vis-à-vis auditory encounters, the paper attempts to shed light on the relationship between sound, noise, and sociality in place, and also illuminates how aural information structure social positionings, divisions and hierarchies in everyday life.

Space as Material Culture

The concept of space continues to represent a challenging category in the field of sociology owing to its implicitly referring to the material dimension of things. Following the “spatial turn” in the social sciences, relational definitions of space have prevailed, yet there is still a clear lack of systematic research. However, the concept seems ideally suited to grasp the configurational nexus of complex relations between performativity, iconicity and materiality more accurately. The presentation introduces space as a cultural sociological concept and shows recent examples of how space constitutes social meaning.

BIGGS, SIMON (University of Melbourne)

Approaching Generational Intelligence: Complexity and Agency in an Intergenerational World

‘Generational intelligence’ (GI) proposes a psychosocial approach to the questions of cultural adaptation to demographic change and a reconceptualization of age as a generational issue. It places age related generational identities in the domain of intergenerational relations and contexts such as families, workplaces, in policy development and in civil society. GI suggests three dimensions, key to addressing the degree to which it is possible to place oneself in the position of another age group. These include: the degree to which one becomes conscious of self as part of a generation, a relative ability to put oneself in the position of other generations, and a relative ability to negotiate intergenerational connection.

It is argued that dominant forms of adaptation provide limited opportunities for personal development and for age-specific identities to take shape. The value of empathic understanding, negotiated solutions and complementary roles between generational groups are examined as we move toward the discovery of age-specific contributions that may also throw light on the wider human condition. As such the approach works phenomenologically and is not overly concerned with refraction based on lineage, cohort and chronological age. It also dismisses the critical psychodynamic understanding of social relations in so far as a preconscious ‘unthought known’ is seen to play an important role in the maintenance of legitimized social identities and inequalities based on age. Implications for policy and the conduct and training for research are also critically examined.
Dimensions of Exclusion in the Lived Experiences of Adult Survivors of Childhood Liver Transplant: A Micro-Analytic Perspective

The first paediatric liver transplants were performed in the early 1980s and continue today, saving thousands of children's lives. Underlying syndromes, the transplant surgery, comorbidities and side effects of medication leave young people looking and feeling 'different' from their peers, especially in childhood. Through analysis of in-depth interviews with 27 now-adult survivors of the first cohort of childhood liver transplant recipients in Europe, we take a micro-analytic perspective in reporting how the processes of feared, felt, and enacted exclusion began in early childhood for this group. Exclusion through liver transplant is an additional intersectional dimension to more recognized societal exclusions such as age or gender, and appears to be fluid throughout the life course. Adapting Goffman's work on stigma and presentation of the self, we see that problems of exclusion are only slowly resolved in a number of social role interactions, where others appear to feel free to comment on the appearance of individuals' bodies. For example, felt exclusion of schoolchildren often occurred through physical education, where the transplant scar could be observed unless the child learnt to hide their body in communal changing spaces. Learning how to present oneself to others continues throughout the life course. Narrative restarts, such as changing school or employment, appear a common way to 'pass' by losing the identity of a liver transplant recipient. However, this strategy is fragile, being contingent on the medical history not being uncovered. Positively revealing oneself as a liver transplant recipient was reported to result in inclusionary practices, more as an adult rather than a child. For most, a sense of inclusion appears to be reached by this 'new' ageing population only through growing older: the understanding that everybody has 'differences' and that being 'normal' is something not closely defined for self or others.

Growing up with a Childhood Liver Transplant: Medical 'Pioneers' and Beck's Normativity of Diversity

The concept of a stable biographical narrative and its potential undermining by long term health conditions is one that underpins much medical sociology. This is particularly true of chronic illness rather than acute conditions constituting forms of biographical disruption. More recently, the influence of approaches derived from theories of reflexive modernity have started to challenge the salience of the modernist life course, introducing notions of indeterminacy and contingency into how individuals construct individualised narratives of the self. Consequently, health conditions can constitute identity rather than be threats to it. Ulrich Beck has also argued that not only is reflexive modernization (or second modernity) constituted by the 'side effects' of modernist discourses such as those surrounding the welfare state or modern science but that this has also given rise to a 'normativity of diversity' which has replaced the more simple normativity of previous societies. This is not only witnessed in terms of the makeup of household structures, sexuality, marriage and employment but also extends to notions of disability and human embodiment.

This presentation will look at how social theory can help us understand the situation of the cohort of adults who were the first European recipients of liver transplants as children. The first childhood liver transplants took place in the early 1980s and this group has had to act as a 'pioneer' cohort all through their lives, dealing with the risks of transplant surgery, underlying syndromes, comorbidities and side-effects of medication as previously unencountered phenomena. Through analysis of in-depth interviews with 27 now-adult survivors of this cohort, we report how both biographical narrative is constructed in the face of ever present risk and how these 'pioneers' represent aspects of the normativity of diversity.

The Reproduction of Intangible Heritage Successors in Heritage Tourism

While China has achieved miraculous economic growth over the past 30 years, this process is accompanied with numerous environmental problems, which result in substantial economic losses, social conflict, and rising health costs in China. How do the Chinese assess their government's environmental performance? To answer this question, the survey data of the 2003 and 2010 CGSS data is used. We conduct an empirical analysis of government's environmental performance in the first decade of 21st century China. The main results of analysis are as follows: (1) Compared to other countries, 39.56% of the respondents think that their government has done too little, while 61.7% of the respondents think that their central government or local government become even worse in 2010 than in 2003 CGSS data. (2) Environmental performance whether in central government or local government become even worse in 2010 than in 2003 CGSS data. (3) As for central government's environmental performance, rural respondents give more positive evaluation than urban respondents. However, urban respondents give local government a higher environmental performance score than rural respondents. (4) Multivariate analysis of government's performance in environmental protection indicates that education is the strongest factor in while negative relationship with the central government's environmental performance. These results suggest that government's environmental performance in China today are a mixed system, in which objective environmental problems and resident's subject perception and social characteristics coexist to determine how the Chinese evaluate their government's environmental performance.
This study examined patterns and predictors of changing young adults’ attitudes toward gender-role during Taiwan’s social transition in the beginning of 21st century. Based on panel data from 2000 to 2011 and latent growth curve modeling methods, the study identifies patterns and predictors of attitudes formation and change from adolescence to adulthood. The young adults showed an attitude of high self-empowerment for gender equality, which was following by the declining egalitarian outlook during their transition to adulthood.

The findings indicate that the parental characteristics and their gender-role attitudes have significant influence on the formation of adolescents’ gender-role attitudes and consist with socialization perspective. The study also suggests that the parental attitudes have larger effect on adolescents’ attitudes than does parents’ behavioral modeling as indicated by parents’ household labor pattern. On the other hand, the findings disclose the important source of influence from school and community contexts on both the initial adolescents’ attitudes and the changes that occur along the subsequent effects of school track, academic achievement, class interaction, work experience and participation in community activities.

Furthermore, the results of the latent growth curve analysis evidence the inter-weaving mechanism of socialization and symbolic interaction. Therein the socialization background has far reaching impact, not only shaping the initial adolescents’ attitudes but also affect the trajectory of the attitudinal change through the various social-interaction contexts.

LU, YU-HSIA* (Academia Sinica, lyuh@gate.sinica.edu.tw)
Copreneurship and Gender Dynamics in Small Family Firms in the Transitional Economy of Taiwan

This study explores the relationship between entrepreneurship and gender relationships in family firms during the global recession in Taiwan. Although previous literature conceptualized women’s invisibility through patriarchal means, certain studies have indicated women’s substantial contributions and indispensability. The gender dynamics within an entrepreneurial setting remain understudied. In this study, the power dynamics within day-to-day entrepreneurial processes in Taiwanese copreneurial firms during the global economic recession are explored from a family embeddedness perspective.

Qualitative data generated through in-depth interviews of 24 family firms across economic sectors in 1995 and the follow-up interviews in 2010 show the diversity of the gender relationships and the complexity of the power negotiation between copreneurs and patriarchies. The market uncertainty and the firms’ adaptive strategies provide a context in which women are able to negotiate the patriarchal system and reconstruct their position by using their entrepreneurial capability. The findings show that gender dynamics and wives’ bargaining power in copreneurial firms may vary with copreneurs’ entrepreneurial capability, the nature of their specific industry, and family relationships. Wives’ adaptive copreneurship based on years of accumulated tacit knowledge and capability, is crucial for firms’ risk management in coping with market uncertainty. Wives’ roles tend to be characterized by greater autonomy in industries that utilize female skills than for wives in other industries. Conversely, wives of copreneurial firms in a stronger patriarchal culture, particularly those in an extended-family environment, are more likely to work as unpaid laborers and have no say in firms’ decisions.

The observations further reveal that wives’ entrepreneurial identity is shaped by the patriarchal culture within the family and the firms. Wives’ adaptive copreneurship strategies provide a context in which women are able to negotiate the patriarchal system and reconstruct their position by using their entrepreneurial capability. However, lack of opportunity to cultivate their entrepreneurial identity asserts their gendered identity and reinforces marginality.

Communication As A Basic Element of Organizations: Contributions and Perspectives from Digital Social Networks

From the overview of the communication as a requirement to support the organizational activity, related aspects of the digital mediated communication are proposed. Mediations supported in the new technologies appear as the most common way in which communication processes take place in the organizations of advanced societies. The organization cannot exist without the dynamic and complexity that communication provides. It is a fundamental cohesion factor.

Digital social networks introduce new concerns and problems to the mediated communication, particularly since its participatory and collaborative possibilities. In a wide sense, this requires a deepening approach from theory and practice. The revalued contributions of social networks to the organization at the internal level are not clear enough because it is consider that the commercial issues tend to prevail. From here, there are some questions to solve: is this a merely external communication issue? Is there a meaningful contribution that the comprehension of social networks brings to the organization? In the other hand, far from the importance of implementing social media as a resource in the internal communication it is also important to point out on the challenges that a “brand new” type of communication demands to the organizations. Introducing new technologies could be adopted very fast but the social comprehension of subtle changes, like those in communication, requires extra analysis.

LUCAS, SAMUEL R.* (University of California-Berkeley, lucas@demog.berkeley.edu)
Prejudice Incidence and Estimated Exposure to Prejudiced Authorities in the United States

Analysts have debated why substantial declines in the estimated proportion of persons prejudiced against women and blacks has not been accompanied by large declines in key indices of race and gender socioeconomic inequality. Some analysts contend the measures of prejudice are flawed, and this has spawned an exciting effort to measure prejudice unobtrusively. While accepting the research on implicit prejudice, I note that the sociological debate has presumed that the incidence of prejudiced attitudes is the appropriate focus of analysts attention. I submit, however, that using the measured incidence of prejudiced authorities and accounting for the social organization of exposure to those authorities produces better estimates of the exposure probability. Data limitations made it necessary to focus only on women and blacks, but the methods used can be applied to any group for which measures of prejudice exist. The results of the analysis indicate that, with levels of prejudice obtained for the year 2012, African Americans are almost certain, and girls are even more certain, to encounter authorities prejudiced against them. After presenting the findings, the implications of the findings for a thorough-going asymmetry of experience are noted. It is suggested that this asymmetry, and the doubt as to others’ sincerity it fosters, undermines prospects for positive societal response to the problem posed by prejudice as well as any effort to inhibit the transformation of prejudice into discrimination.
Rethinking Methods and Ethics in Male Sexual Risk Behaviour Research

Studying sexual behaviour of men is always a challenge to many researchers. This is a qualitative study on the sexual risk taking behaviour of men in the context of HIV/AIDS. The occupational group of seafarers are chosen for this particular study in the port city of Santos, Brazil. Seafaring is a male dominated mobile occupational group at very high risk to HIV with many seafaring countries having reported high prevalence rates of HIV. Ethnographic work in the red light district was conducted consisting of in-depth interviews and nightly observations. Local non-profit organizations working in the field were approached for entry to the site. Results showed that sexual behaviour remains a sensitive topic to discuss. Researchers need extra skills and knowledge to elicit substantial and quality information. Sex of the researcher and the way he deals with the individuals play important roles in data gathering. The study encountered various hurdles in the areas of research and safety given the nature of the study, which dealt with a semi-legal environment of prostitution and drugs. Language, cultural differences, and other idiosyncrasies have to be considered in doing the fieldwork. Ethnography is an effective method to understand many phenomena because this form of inquiry digs deeper into the relationships (with the sex workers). Length of time of researcher's immersion in the field makes him strongly embedded. A rich reflexive account in an ethnographic setting is a major output in a qualitative study. Methodological issues raised in this study provide substantial contribution to the continuing search for appropriate methods in enriching areas of research and in building safety for the given nature of the study, which dealt with a semi-legal environment of prostitution and drugs.

Achieving individual life goals demands decision-making processes characterized by the evaluation and reevaluation of personal circumstances and risks. The application of a biographical approach will highlight how university graduates work on their situations in order to reduce future risks. Based on six months of field research in Bamako, this predominantly empirical paper will investigate past, present and future aspirations and subsequent strategies of action deployed by university graduates in Mali focusing on how risk is perceived, evaluated and dealt with.

Hukou Intermarriage and Mate Selection Process of Rural Migrants in Urban China

China is a natural case for understanding the relationship between internal migration, rural-urban migrations, and stratification. Past studies show that during Mao’s era when internal migration was banned, rural people moved within 25 km from their villages. Social mobility through marriages and migration for work was hindered. After the ban was lifted in 1978, boards of rural migrants escape rural poverty and flood to the urban areas to improve their life chances. It islogically expected that spatial mobility brings people with rural and urban origins closer culturally, socially and economically, and thus increasing the odds of rural-urban marriages. However, this is not happening. The urban and the rural marriage markets are not overlapping despite migration. Based on 62 in-depth interviews with rural and urban people and participant observations in various parts of South China, I found that opportunities for rural-urban marriages are seriously constrained by the ascribed stratified “hukou system” (household registration) in various ways. First, this system links people’s accessibility to state-provided opportunities and benefits for urban people like housing, education, and health care, which cannot be enjoyed by the rural migrants. They are thus degraded as second class citizens in the urban areas and become the least desirable in the urban marriage market. Second, spatial segregation in education, housing, and workplace has reduced the opportunities for rural migrants to meet urbanites and/or developing urban ties that facilitate rural-urban marriages. Third, day-to-day discrimination against rural migrants has forced some to self-eliminate from “marrying up.” However, facing these constraints, some individuals employ strategies to break the social and spatial segregation by using Information Communication Technologies in dating and by upholding and adopting “modern” urban cultures and values so that their status is comparable to the average urbanites.

LUND, REBECCA* (Aalto University, rebecca.lund@aalto.fi)

Working on Futures, Reducing Risk – University Graduates in Mali and Their Strategies of Action

The research examines the conditions and opportunities of university education in Mali. The West African state counts two state universities, five state graduate schools and various private universities. The capital city’s University of Sama- ko with more than 80,000 students is obviously the center of higher education. Facing precarious conditions due to the shortage of means and professors the majority of students manage nevertheless to successfully graduate. Being young and highly qualified, university graduates are still heavily affected by unemployment.

Given the problematic conditions of studies and the major difficulties entering the labor market, a university degree does not create the certainty expected, but provides and even provokes risk again. Consequently, the main questions to be answered are: Why do young Malians study nevertheless? And how do young academicians cope with a situation characterized by uncertainty and unpredictability?
**The Work of Producing Quality in Changing Academia from the Standpoint of Junior Female Scholars**

This paper is a chapter in my doctoral thesis. It builds on another chapter in which I explored the gendered work of ‘boasting’ in the context of changing academia, and how this work is essential for furthering ruling purposes and interests connected to the marketization and global competitiveness of Finnish academia. I pick up from there to study the evaluation ideology from the standpoint of junior female scholars. This involves explicating: how particular managerial texts, textual technologies and artifacts, including those related to tenure track recruitment, hold people accountable in ways that lead to the production of particular notions of quality; how this is part of furthering particular organizational and managerial purposes; and how the work related to producing this quality involves the (re)production of a particular gendered order in academia. I work from there to suggest a reworking of the concept of homo-sociality in academic recruitment. In the analysis I draw mainly on an in-depth interview with one female scholar; the various versions of an article manuscript she wrote as it developed over a lengthy review process for publication in a top journal within her field; the review documents; as well as the correspondence with editors of the journal in question. Furthermore, I draw on interviews with differently positioned scholars and academic managers, field notes from various events, and text material produced over a period of three years.

**LUNDBERG, JANNA** (University of Lund, janna.lundberg@uvet.lu.se)

**Social Science and Alienation In School**

School can in many ways be seen as a place distant from life in general: in classrooms students are kept separate from the familiar parts of life. School and life outside of school follow different schemes so many students seems to put their real life on hold.

Social science class ought to be one occasion where life in school become more real and more similar to life outside of school, since it is supposed to be all about life in society. According to the curriculum for the Swedish upper secondary school it is not enough to learn about society, the students should also become a part of society through active participation – by doing democracy, not only learning about democracy (a legacy from John Dewey). In spite of this we do not appear very well equipped for taking an active part in society even after the twelve years in school that the majority of Swedish citizens complete. The importance of active citizenship is emphasized, but in the room where students and teachers do their daily work something stops the development of active citizenship.

My doctoral study focuses on the intriguing tension between what is told, said and written in theory and what is being done in practice within the field of education and democracy in general and active citizenship in specific. Alienation theory can reveal why the well-intended work within the frames of social science is failing. Alienation in school could be seen as one part of the greater social tendency to postpone life by not living in the present. This paper will examine alienation theory and if in addition to how it can be used to understand the tension mentioned above and thereby search for a path that may have the potential to lead to changes of the situation.

**LUNDBY, ERIKA** (Linnéaus University, erika.lundby@lnu.se)

**Young Consumers In Sweden**

In this presentation the question of how economic resources influence children’s peer relations will be addressed, with focus on the Scandinavian setting. This question is of particularly importance in times of changing discourses surrounding children’s role in the consumer society. The ways Scandinavian children are portrayed as ”consumer culture has gradually changed, from regarding resources towards competent actors in their own lives. In total, 48 Swedish children aged 9 were interviewed in focus groups, using a projective vignette technique and pictures. The children were asked if and how children in general could gain new friends through material possessions and money. The findings indicate that children perceived possessions as multi-functional tools in peer relationships. The ability to fit into the peer group, by the use of different possessions, was perceived as especially important. Additionally, the children perceived money as an altruistic tool to demonstrate kindness. As the Scandinavian countries become more liberalized, with higher economic differences between households as a result, we need to address the question of the consequences. We should consider the significant effects of increased consumption on children’s social relationships. If children perceive peer pressure of having “cool” things, and if they believe that they can use material goods to become more popular and accepted, they may be highly vulnerable to the internalization of materialistic values.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Surveillance often sparks responses relating to “privacy.” The era of state surveillance, read through warnings like Orwell’s, makes being watched seem negative, undesirable. We want to escape, to hide, or just be “private.” But this approach seems myopic in a world of mass media and now social media. The world of celebrity makes being seen a matter of privilege, of desire. The consequences for surveillance are far-reaching – from the unwanted eye to welcome watching. The desire to be seen may help to naturalize and legitimate surveillance of all kinds, to encourage new modes of cooperation of the surveilled with their surveillors. The desire to discover (large scale surveillance) meets the passion for publicity in social media. Flexibility, mobility and connectivity are sought through social media but users find themselves tracked and recorded using the same media. How do we account for the apparent willingness to be visible to all, or to have a secure or desirable position, when it is known that daily routines and whereabouts are tracked and traced constantly? While social media allows everyone, in a sense, to surveil, it also facilitates in fresh ways classic activities of state agencies. Such forms of surveillance penetrate the time-space paths of everyday life (using constant updates, location tracking). This paper explores these questions sociologically and critically.

**LYTKINA, EKATERINA** (National Research University, ekaterina.lytkina@gmail.com)

**Transformation – Reality or Simulacrum?**

In this report the concept of transformational societies will be revised. The concept was widely applied to address post-communist societies and especially value, institutional, normative change and related phenomena. However it is unclear whether the change is accomplished and what a post-transformational society is or should be like. Besides, a broader context should be considered. Are transformational societies only those with the communist past or can other societies, for example, experiencing economic crisis or different kinds of social instability such as revolutions or wars, or even those who enter the European Union also experience a transformation? Surely, the contemporary context is totally different from the change meant by Durkheim when he wrote about the transition from the traditional society to the industrial one. Contemporary societies are characterized by what Urry calls complexity and certain changes become their permanent characteristic. So is it possible to differentiate between a transition and a societal change? These and other questions will be addressed in the report.

**Unique Societies-Common Alienation? Revisiting Alienation in Contemporary Context**

The paper is aimed at examination of the difference of nature and characteristics of alienation and and in post-Soviet and Western countries. Recent findings (Lytkina, Welzel 2013) show that in such post-Soviet countries as Russia and Kazakhstan anomie can be measured by powerlessness and normlessness whereas meaninglessness, social isolation and job dissatisfaction form a measurement of alienation. The linkage of powerlessness and normlessness might be explained by the general Mertonean assumption of discordance between the culturally defined goals and the means the social system provides an individual with. Hence, lack of control over desired outcomes (powerlessness) causes anomie behavior (normlessness). Still, powerlessness is commonly used as an indicator of alienation (Seeman 1982, Olsen 1965, Dean 1961) whereas meaninglessness is sometimes used as an indicator of individual anomie, or anomia (Seeman 1982, Legge 2008). These arguments make formulate the following problem: are thus alienation and anomie in post-Soviet and Western countries different? If yes, what are the reasons for its difference and how can the differences be captured theoretically and empirically? Post-Soviet countries can be conceptualized as the ones who underwent the process of social transformation, thus they can be conceptualized in Durkheimian logics. One can assume that in the time of transformation the level of anomie rose significantly. Western European societies, on the contrary, experienced a relative stability. Post-Soviet countries experienced a dramatic change in the value and normative systems which before the collapse of the Soviet Union were characterized by the collectivistic nature, whereas Western societies were characterized by pluralism of normative and value systems together with high level of individualism. Which phenomena and which indicators are thus relevant for the two types of societies? These and other considerations will be taken into account.

**Gender Change and Constants. the Case of Swedish Police and Gender Equality Policy**

The aim of this paper is to present the case of gender equality policy and politics within the Swedish Police Service. The main object is to investigate the relation between gender equality change and local gender formations and experiences. The paper provides an outline and a theoretically and empirically informed discussion of specific organizational, historical and socio-demographic factors that are key in an understanding of gender and police work in Sweden, and putting this within a framework of political and policy development. Sweden is often portrayed as world-leading when it comes to issues of gender equality, and state policy has put forward ideals of equal opportunities in all areas of society. In this context the national police service is interesting, as a male-dominated, masculine, state organization where gender change is visible.

Ideals and discourse concerning gender as well as gender equality policy and gender equality projects have been a part of police organization since the 1980’s and the female-male ratio is slowly but constantly evening out. There has been a symbolic change and a statistic demographical change when it comes to women in policing. The issue put forward in this paper is the impact of these ongoing transformations in everyday police work. Rather than evaluating the gender equality regimes, this project investigates into the micro politics of changing gender regimes at the work place. The results show that change is undisputable but unevenly distributed in the organisation with regard to the gendered division of labour and gender symbolism and the grand narrative of gender equality is put under scrutiny. Further the author argues links between processes of professionalisation and academization of policing, as well as altering organizational ideals as pertinent in this process.
Reconsidering the within-Country Digital Divide and the Global Digital Gap: Comparing Students’ Daily Life Experiences with Information and Communication Technologies from 40 Countries

The rapid development in Information and Communication Technologies (ICTs) has drawn scholars’ attention to a new social problem—the digital divide. However, there has been little work examining the link between national contexts and students’ experiences with ICTs. This research combines two groups of literature: micro-level accounts on the inequality of digital usage and macro-level studies covering the global digital gap. Using data from the Organisation for Economic Co-operation and Development (OECD) Program for International Student Assessment (PISA) 2009 data, I utilize hierarchical linear modeling to examine how institutional variables at the country-level are associated with students’ digital usage across 40 countries. I use Cook’s distance to diagnose the influence of data points from the cluster level. Three institutional factors are examined: economic development, income inequality, and educational expenditure. Results show that the digital divide between socially-advantaged versus socially-disadvantaged students is wider for countries with lower income, higher inequality, and lower educational expenditure. (2) The effects of institutional characteristics on digital usage only matter for low SES students, but not for their high SES counterparts. This research helps scholars identify key national characteristics that influence the inequality of digital usage.

Exploring the Impact of Birth Cohort Size on Education Achievement of Cohort Members

Using the data from China General Social Survey 2005, this research explores the major and modulatory effects of birth cohort size on education achievement of cohort members in China. I use age at marriage as an index of birth cohort size. Results show that birth cohort size has significant impacts on education achievement of cohort members, and cohort members in larger birth cohort have lower education achievement. However, the impacts of birth cohort size on male and female, on urban people and rural people are different, and the reduction of birth cohort size will narrow the gap between these two groups. Besides, this paper decomposes net effect of birth cohort size by simulation and points out that it is the discordant change between population reproduction and education capacity that leads to this result.

Why Should I Know? the Reluctance of Absorbing and Sharing ERP Knowledge

In an ERP (Enterprise Resource Planning) system, all necessary business functions, such as financial, manufacturing, human resources, and distribution, are tightly integrated into a single information system with a shared database. Such a system potentially allows firms to manage their integrated business processes and associated knowledge, and to have more control of information and data in the organization. However, ERP systems are very knowledge intensive and require high levels of knowledge absorption and knowledge sharing between organizational members in order to be used successfully.

In the military organization we study, ERP systems are aimed at improving support, secondary, and primary processes. This means that many military employees prioritize workloads connected to the primary process of the military. The ERP system was developed to improve these secondary tasks, leading to tensons/user resistance including the reluctance to incorporate or share ERP knowledge. In turn, this lack of knowledge exchange can become dysfunctional since it prevents the use of IT that could benefit the organization.

We applied qualitative methods including 40 semi-structured interviews with ERP users and their managers in three separate business-units, who have been using the ERP for two years. In the study we assess why and how users of the ERP system become averse to the exchange of knowledge and how military organizations are able to overcome tensions between primary processes and ERP implementation/knowledge sharing as a secondary process. By combining theories about user resistance and informal/formal knowledge structures we grasp the underlying reasons of the reluctance. Moreover we contribute to the literature by studying IT as a supportive technology leading to user resistance, instead of focusing on how organizations incorporate core technologies effectively (e.g. Barley, 1986).

Global Education in Japan

Global education has become a trendy phrase in Japan. A recent international symposium entitled “Primary and Secondary Education in the Global Age,” held in August 2013 by National Institute for Educational Policy Research (NIER) and Japan International Cooperation Agency (JICA), attracted a large audience confirming interest in this area. Among the discussions at the symposium, a central one was the debate about the meaning of “a global person.” For some, especially those in economic circles, diversity is regarded as a source of competition. For others, particularly multicultural educators, diversity is regarded as one reason to implement changes to the social welfare policies and education in an increasingly global society. With these two polarized positions in mind, I examine what intercultural Education Society in Japan has tried to achieve since it first introduced the word “intercultural” into Japan 30 years ago. Because of the efforts of the society, the largest Japanese association in this field, most people in Japan are now aware of the term “intercultural.” However, research from the society has concentrated on promoting dichotomous viewpoints based on comparisons between Japan and other countries such as the U.S. The focus of the society’s research is primarily on the differences between nations, while it has scarcely put any effort into the investigation of diversity or power differences within society. In other words, in spite of the organization’s goals, it has failed to scrutinize the idea of “intercultural” in terms related to internal diversity or issues connected to social justice even as Japan has experienced a number of changes related to these in this age of globalization. In this study, I examine and analyze the context above and consider the reasons for the tendency identified in this field of Japanese education.
Judgments about Inequality and Economic Elite Among the Middle Classes: Discontents and Sociology of Critique

This paper will present the preliminary results of a research on the Chilean middle-class and its perception of the socioeconomic elite. The global emergence of the middle class has also triggered interesting social dynamics that both reproduce and question inequalities, the socioeconomic elite – i.e. the 1%? Does a perception of injustice, discontent or critique emerge towards the elite? How does that happen – or not? Our team conducted a study using an experimental methodology based on games that replicate real exercises applied by social scientists through studies in different countries: "unknown persons" and "dictator" games. Starting with a middle-class differentiation through occupation and distinguishing by type of territory where they live and work, the simulation was carried out with participants from five strata of Chilean middle classes and one from non-qualified manual workers. This method allows the study of feelings and perceptions that arise in simulated situations of social interaction, which could not be observed through surveys or interviews. We will present the preliminary results, especially subjective elements that nourish and give meaning to middle classes, reproducing or challenging inequalities. The paper will contribute to topics that are relevant to stratification in the context of globalization, such as different discourses in middle classes, their feelings, perceptions of justice/injustice, discontent or critique towards the socioeconomic elite.

MACAMO, ELÍSIO(*) (University of Basel, elisio.macamo@unibas.ch)
Science and Technology Studies, Africa and the Long Shadow of Unspoken Assumptions

Science and technology studies have injected new blood into social theory over the past 20 years. Their assumption that the workings of science and technology are a good guide into the constitution of (modern) society has played a central role in sharpening sociological thinking over the notion of modernity and its analytical relevance in research. A paradox underlies the importance of science and technology studies. On the one hand, STS seem to suggest that we should read specific type of society, namely highly technological modern society. This would seem to rule out the possibility that STS might have anything to say about societies which do not fit this description. On the other hand, however, and because STS produces social theory, i.e. a vocabulary designed to make the social world intelligible, it can lay claim to the ability to deliver concepts that can be deployed in efforts to make non-modern societies intelligible, even if only by default. This paper will try to address this paradox critically with a theoretical claim. The claim will be that the reason why STS may work well as a research programme may have to do with the fact that it takes the settings within which science and technology operate for granted. In other words, STS research works under a “ceteris paribus assumption” – legal predictability, economic and political stability, etc. – which constrains the translation of concepts into different settings.

Is the Concept of Patriarchy Useful to Comparing the Gender Relations through the World?

Is the concept of patriarchy useful to understanding and comparing the gender relations throughout history and the world? To answer this question affirmatively we must understand that patriarchy not only exists as a system of male domination that speciﬁes itself upon all human societies but instead, by adapting Erving Goffman’s concept, as a specific form of “gender arrangement”. From this standpoint two things can be shown. First, that gender arrangements such as those that exist within the European Union are not patriarchal arrangements but post-patriarchal: they are the result of the ability to deliver concepts that can be deployed in efforts to make non-modern societies intelligible, even if only by default. Second, the construction of inequalities and the social construction of inequality and between the values of personal uniqueness and social reproduction of cultural differences and gender hierarchies. Secondly, our approach also shows that in most non-Western societies, such gender arrangements are not just traditional patriarchal arrangements, but traditional patriarchal arrangements that have been modernized (by colonial hegemony) and re-remodeled (by globalized hybridization). A major consequence is that these hybrid arrangements possess both the contradictions inherent in the modernization of traditional patriarchy and those specific to post-patriarchy. Recasting patriarchy in this way enables one to grasp the logic of action and internal contradictions of each type of arrangement by identifying their singularities without placing them hierarchically on an “axis of progress”. Moreover, this analytical move also makes it possible to compare all gender arrangements according to their relationship to the principle of patriarchy.

Women Appointees and Political Participation in Brazil

This work aims to study the change identified in the women’s participation in Brazilian politics in what concern the high positions of state bureaucracy. Specifically, it will be emphasize the kind of change’s patterns followed in what regards women political appointees by two different social agents of representative government and third sector institutions linked to the work with this audience. Leisure will be analyzed in its subjective and contemplative dimensions, and in his contributions to ressignification of the quality of life of the old guy, and the strengthening of intergenerational relations, solidarity-based and participatory political and social life. In this context, the effective relationship will be addressed with the landscape, a place of memory, whose presence preserved is relevant in the biography of who gets old. Thus, these leisure activities, from the aesthetic contemplation, are compatible and suitable for various limitations arising from aging.

MACMAHON, AMY* (University of Queensland, amy.macmahon@uqconnect.edu.au)
Gender, Food Security and Climate Change Adaptation in Bangladesh

This paper examines the links between gender, food security, climate change and adaptation in Bangladesh, and investigates how a social justice approach to adaptation – with a commitment to participation, recognition, equitable governance and environmental integrity – may work to improve local level food security, and address social vulnerability. Southwest Bangladesh is facing a range of ecological and climate changes, including rising sea levels, cyclones, variable rainfall, salinity and and rise in temperature. This paper will explore how the interaction of these factors affects women’s food security and food security in the region. Women’s role in household food security is highlighted. Here, I critically examine these theories and assumptions, within the contexts of existing social, cultural and other vulnerabilities, with reference to projects and research from Bangladesh. I then discuss these ideas in relation to climate change adaptation. Socially just adaptation theory argues that for adaptation to be sustainable, transformative and effective, initiatives need to be responsive to existing social inequalities, while working to reduce vulnerability and create transformational change. Many NGOs, the Bangladeshi government and other key stakeholders, have recognised the complex vulnerabilities facing women, both within their households and communities and are attempting to incorporate these ideas into adaptation responses. However, it is unclear whether these efforts represent
strategic change for women from poor households, involving a transformation of gender structures, or only practical changes, in helping women survive.

MACPHERSON, ROBERT* (University of California Irvine, rmacpher@uci.edu)
The Right to Democracy and the State in Moments of Crisis: Lessons from the History of Radical Unionism

For the last four years square occupation movements have formed the core of a revolutionary wave calling for radical forms of directly democratic organization. It remains an open question to what degree these rights to democratization can be accommodated by states and the larger structures of global capitalism – if at all. Solving this puzzle requires the trajectories of state-movement interaction and to be conditioned by processes of global capitalism and the specifics of local context in which they contend. In reality, neither of these approaches can explain the worker organizations of Europe and the crisis itself within the history of the world-economy. The results of long-term processes of capitalist development...
regulators and those who have to implement regulations. This suggests that the rationale of hospital employment is changing bottom-up, often against what regulators conceive as an adequate design for hospital work.

Childcare and Elderly Care in Bologna

Family is the main provider in the Italian welfare system. As a consequence, supports for care in Italy are underdeveloped since care is almost totally delegated to women to sustain its members. Such model had strong influences on women's autonomy. Italy has one of the lowest fertility rates all over Europe and will be suffering in the next years from an increasingly higher old age dependency ratio, thus worsening the female care overload. Nevertheless, Bologna is a best practice in this worrying scenario. Thanks to a strong social democratic tradition, local welfare system has been able to build a new structure which has mainly developed in the new contextual situation. In this paper we will explore how the roles of grandmothers, children of dependent elderly and worker.

MAEYAMA, SOICHIRO* (Fukuyama City University, masichiro@aol.com)
Possibility of Area Management Organizations for “Bulwark” Against Neoliberal Urbanization – Thorough the Cases of Public Development Authorities (PDAs) –

In some cities in US and in Japan entirely new organizational structures have sprung up to promote urban development in the new contextual situation. In this presentation, a new structure, “Public Development Authority” (PDA) is treated, which has mainly developed in west coast of US, and is getting attention in terms of neo liberal urbanization. PDA is quite unique-style entity that is established by cities (municipalities) as special purpose government for promoting specific purpose (such as area management, or historical and business management of historic market), equipped with business specialist-staffs, and also it is governed by volunteer citizen board members. “Half private, half government”entity is run or governed by citizens.

Some PDAs has been observed to behave as “developer” in the “neo-liberal” urbanization process. But considerable PDAs, for securing neighborhood’s core and culture, are trying to build the facilities for helping local business owners and individual citizens mentally and physically, as of Seattle Chinatown International District, “IDEA Space” project for assisting local small businesses, using “visioning”method . These trials are expected to be effective “bulwark’s against diverting impacts of neoliberal developments. This presentation concretely gazes at the PDAs’ efforts (and the like’s of area management organizations) to keep local core of cultures, local “life economy” with concrete devices from the stand point of citizen’s eyes and “advocacy”. And the conditions for preventing PDA to fall into “developer” are sought.

Just for accessing the present big picture in terms of area management organizations in neo-liberal trends in US, Japan etc, CDGs (Community Development Corporation) in US and “Machizukuri Kaisha”, special purpose agency in Japanese PPPs are shortly mentioned as well.

MAGALHÃES, RAUL FRANCISCO* (Federal University of Juiz de Fora, raul.magalhaes@ufjf.edu.br)
Instrumental Action and Rhetoric: Framing Rational Action on Language Field

The paper makes a theoretical reconstruction of a model for instrumental action in language, using the notion of rhetoric. It takes persuasive language to be constitutive of instrumental reason, and analyses the possibility of bring to the theory of social action some concepts from linguistic field. The first step establishes an analogy between instrumental rationality and rhetorical movements like projection of future, or reconstruction of past. In those operations we use rhetoric in order to create the persuasive frames of reality and use them for self-persuasion and for persuade other people to go into a specific course of action. Since deliberation is a problem of collective action and rationality we can understand rhetoric in terms of building a new descriptive model of rationality, in other words, we can describe rationality as a rhetoric operation; it consists in giving different degrees of truth to the information available and then create conditions for choosing a specific way. This approach builds a critical view to the notion of information as objective data collected by rational actors, and points to the deliberation as a cognitive way to deal with framed discourses about reality. Based on this model we can criticize some analytical problems from the theories of rational choice concerning collective action, here represented by M. Olson's paradox and, in the same way, criticize Jon Elster's paradox of indeterminacy, based on the concept of optimal amount of gathered information. The concepts of rhetoric give to the theory of rational action a key to understand how in empirical situation words, and sometimes just words, are enough to create action.
Women's experiences have been the nucleus of domestic violence literature, discourse, and policy, and have shaped the therapeutic and/or punitive measures that are characteristic of domestic violence prevention – measures that research has shown are largely ineffective in curbing violence. Consequently, we still know relatively little about why men batter, and how they make sense of the negative “batterer” credential that corresponds with their offense. The few studies that explore batterer behavior are primarily psychological, reducing their violence to individual pathology that can be “treated” in therapy. Accordingly, non-psycho- logical studies are characterized by evaluations of the utility, effectiveness, and/ or therapeutic techniques of Batterer Intervention Programs, thus missing the sociological roots of batterer behavior. Drawing from in-depth interviews with 15 male batters, my research shows that these men make sense of the offenses of which they have been accused in different ways, both with regard to the role they attribute to the state in their felt disempowerment and emancipation, and the role they attribute to social policies and governance. These different meanings are attributable to a number of factors – factors I argue must be addressed to the extent that they are linked to recidivistic risks of battering. The analysis presented in this paper therefore provides a foundation for creating more effective social remedies for battering behavior, and it provides an opportunity to reconsider gender-based theories of interpersonal violence more generally.

OLIVEIRA, SAULO BARBARA DE (Federal Rural University of Rio de Janeiro)

Urban Waste and Our Day-to-Day Chaos

There is litter on most streets of the more privileged neighborhoods of the city where there is cleaning services comparable to the first world; in the underprivileged neighborhoods, urban sanitation is on pari with African or Indian quality levels: this is the reality of Rio de Janeiro and the majority of the 16 Brazilian cities with populations of over one million inhabitants. Rio de Janeiro is a city characterized by enormous inequality in income and in geographic distribution of the population, as well as in public services. Erratic urban expansion has made Rio de Janeiro one of the hallmarks of segregation and social degradation, which makes the populace’s standard of living a challenge to manage. Due to this inefficiency, most the city’s periphery has open sewage that runs in ditches, rivers, the sea and on the streets. The system of rainwater drainage does not undergo periodic maintenance where there is a system at all, causing frequent floods and public damage from heavy summer rains. Litter clogs drainage pipes and exacerbates flooding and the contamination of rivers and the sea. It is still possible to see the accumulation of garbage in outlying areas. In favelas, present throughout the entire city, the habitation conditions and urban infrastructure are precarious, and environmental degradation leaks out of control, thereby contaminating the sea and making it impossible to swim and go to the beach in many important parts of the city. Our research, conducted from the late 1970s. The objective of this article is to present a diagnostic of the impact of urban waste on the city of Rio de Janeiro. The research was conducted using quantitative methods, as well as secondary data from official sources.

MAHMD, HASAN* (University of Sociology, Los Angeles, hm77@ucla.edu)

Migrants Remittances and the Family

Abstract: Contrary to the perception of the relationship between the individual and the family as a structure, this paper offers a conceptualization of this relationship as a process whereby individuals selectively identify with various available forms of family. It builds on 30 in-depth and unstructured interviews, complemented by ethnographic participations, with the Bangladeshi immigrants in Los Angeles. Conceiving migrants’ remitting as a socially motivated economic act where the migrants invest both financial and emotional resources to maintain and further develop social relationships, it recognizes migrants’ relationships to their family in Bangladesh as central to their remitting practices. It recognizes multiple forms of family and community organizations to which the immigrants simultaneously identify themselves. However, it finds this identification as a process whereby the immigrants choose to attach to certain forms among a range of culturally defined social aggregates, which causes their remitting to be selective. Emphasizing the immigrants’ emotional involvement and collective orientation, this study recognizes the mingling of the immigrants’ self with the recipients in their origin country as essential in remitting. Thus, this paper makes significant contribution to the study of migrants’ family by adding a relational approach that identifies fluidity in the individuals’ identification to the family through migration and remitting.

Migrants Sending Money and the Family

Abstract: To know why migrants send money to home, this paper introduces a new conceptualization of the relationship between the migrants and their families. It builds on 30 in-depth and unstructured interviews, complemented by ethnographic participations, with the Bangladeshi immigrants in Los Angeles. Conceiving migrants’ remitting as a socially motivated economic act whereby the migrants invest both financial and emotional resources to maintain and further develop social relationships, it recognizes migrants’ relationships to their family and origin community in Bangladesh as central to their remitting practices. Unlike the NELM approach’s assumption of economic rationality, or the cultural approach’s emphasis of cultural factors, this paper finds the immigrants’ relationships to the remittance-recipients as central in determining their remitting. It recognizes multiple forms of family and community organizations to which the immigrants simultaneously identify themselves. However, it finds this identification as a process whereby the immigrants choose to attach to certain forms among a range of culturally defined social aggregates, which causes their remitting to be selective. Emphasizing the immigrants’ emotional involvement and collective orientation, this study recognizes the mingling of the immigrants’ self with the recipients in their origin country as essential in remitting. Thus, this paper makes significant contribution to the study of migrants’ family by adding a relational approach that identifies fluidity in the individuals’ identification to the family through migration and remitting.

MAHNE, KATHARINA* (German Centre of Gerontology, katharina.mahne@dza.de)

Contemporary Grandparenthood in Germany: A Perspective Of Social Inequality

The study provides a multifaceted analysis of contemporary grandparenthood in Germany. Building upon ideas rooted in a sociology of the family and in a sociology of ageing, the study aims to demonstrate the usefulness of a perspective of social inequality for the study of the multigenerational family in later life. Social inequality is on the one hand conceptualised in the form of unequal access to the grandparent role (e.g. the transition to grandparenthood). On the other hand, social inequality is conceptualised in the form of unequal outcomes connected to grandparenthood (e.g. levels of subjective well-being).

Based on data from the German Ageing Survey (DEAS) and applying a three-generation perspective, the study demonstrates that access to the grandparent role is in fact unequally distributed: higher educated parents are less likely to experience the transition to grandparenthood and become grandparents later in life than less educated parents. In contrast, the subjective importance of experienced advantages as prospective grandparenthood does not vary by levels of education and other indicators of social class. Given the unequal access to the grandparent role, grandparenthood could evolve into a highly valued but unequally distributed social resource for later life. Furthermore, social inequality also exists as a result of grandparenthood: positive and negative outcomes of relationships with grandchildren for grandparental subjective well-being are unequally distributed across educational groups.

Based on these results, it can be concluded that social inequality in relation to grandparenthood exists in two forms: first, access to the generally highly valued social position of grandparent is unequal. And secondly, advantages and disadvantages are unequally connected to the grandparent role. The study shows that the perspective of social inequality is essential for an adequate description and analysis of grandparenthood in social and demographic change.

Reconciling Work and Motherhood: Class and Access to Childcare in Dublin

The ‘motherhood penalty’ is invoked to explain the lower labour force participation of Irish women. Mothers with third level education and those with second level education were conducted in order to compare their respective orientations to work and their reconciliation strategies. Mothers in both groups articulated a strong intrinsic, social and instrumental orientation to their work and a distinct worker identity, separate to motherhood. As working mothers they had all overcome the first penalty.

Mothers with third level education earned incomes that enabled them to buy childcare for the child aged (0-3) using private nurseries which facilitated their full-time employment, but at considerable financial cost. But low income earning mothers could not afford the 800-1000 euros a month fees. This explains their over lower participation rates.

The exceptional mothers in our focus groups with low educational levels had even lower participation rates referred to as an ‘education penalty’. This paper will explore the ways these penalties are socially constructed in an Irish childcare policy context.

Funded by FP7 FLOWS, separate focus groups composed of mothers with third level education and those with second level education were conducted in order to compare their respective orientations to work and their reconciliation strategies. Mothers in both groups articulated a strong intrinsic, social and instrumental orientation to their work and a distinct worker identity, separate to motherhood. As working mothers they had all overcome the first penalty.

Mothers with third level education earned incomes that enabled them to buy childcare for the child aged (0-3) using private nurseries which facilitated their full-time employment, but at considerable financial cost. But low income earning mothers could not afford the 800-1000 euros a month fees. This explains their over lower participation rates.

The exceptional mothers in our focus groups with low educational levels were facilitated by getting a childcare place in a local community creche with fees of 95 euros a week full time and pro-rata reductions for part time. (Only 30,000 parents nationally have access to these). Mothers without a childcare place (if married) relied on their unemployed partner to provide childcare, or both parents worked part time. Grandparents or siblings also provided care. These constitute a mixture of recombination strategies not easily replicated. Childcare policies in a neo-liberal society can considerable reduce equality of access to childcare places and offer an explanation for the education penalty. Overall participation rates are unlikely to rise unless this inequality is addressed.

Constructing a Gender Discourse inside the OECD: The Working Party on the Role of Women in the Economy

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The UN International Decade for Women and the four UN Conferences on women helped to put gender equality on the global agenda. Although feminists are rightly critical of the slow pace of change, gender equality retains an important place on official global (and regional) policy agendas. This paper examines the work of the OEDC Working Party on the Role of Women in the Economy (ROWITE). Formed in 1975, in advance of the first UN Conference on Women, ROWITE constituted an important site for the consolidation of a feminist agenda for the Global North and, through its support for the Women in Development group within the OECD's Development Advisory Committee (DAC) supported the promotion of gender equality through its member states' programs. Although ROWITE was disbanded in 1998, its concerns were, in part, picked up by the Social Affairs Division and thus continues to have a resonance in contemporary debates.

Perceptions of the Concept of Physical Activity Among Older People and Staff in Residential Homes

Annsofie Mahrs Träff, PhD-candidate
National Institute for the Study of Ageing and Later Life, Linköping University, Sweden

This presentation aims to present parts of my doctoral work focusing on the ability and desire to be physically active when you live in a residential home for the elderly. The aim for this part of the study was to identify and describe variations in perceptions of the concept for "physical activity". Physical activity is described as positive and important for all people. My thesis is to investigate how people are interested in, and able to, maintaining physical activities even though they often have significant disabilities. And also to investigate how older people in residential homes are experiencing opportunities for physical activity and how their physical environment affects these opportunities.

The interviews show that the older people often describe physical activity in on their "daily life" and ask about what the concept of physical activity means to them and sometimes also states that physical activity is something that they do not perform. Later in the interview the very same person can describe the activities of a physical nature which they do in everyday life, for example to walk. A number of staff do not know that physically activity is one thing when it comes to themselves, but something else when it comes to the older people.

To have different perceptions of a central concept can affect both hopes and expectations.

Global Arenas of Knowledge: Perspectives from the Brazilian Case

This paper aims to present the major guidelines of the project 'Global Arenas of Knowledge' and its first results. The project involves theoretical work to reformulate the sociology of knowledge in contemporary global perspective, and three empirical studies dealing with key elements of global knowledge production and circulation. The study runs first in three southern-hemisphere countries which are part of the post-colonial periphery, and then in the USA and UK. The empirical work takes three domains of knowledge as starting-points (HIV/ climate change/ gender studies), and examines them in several ways, combining ethnographic work, interviews, documentary work and quantitative methods of citation-network analysis to study the patterns of centrality, inclusion and exclusion of researchers across the global arenas. In this paper, I present the results of the first part of the study, which involves interviews conducted in Brazil with senior researchers in three different domains of knowledge and historical analysis of each domain. For each domain of knowledge in question, I propose a topic: a) how the dynamics center/periphery affects knowledge production in the Brazilian case; b) how Brazilian social scientists in these different domains of knowledge build their careers in a global scale.

Legislation and Its Discontents: Consequences of the Peruvian Household Workers Law

Peru is currently understood as one of the fastest growing economies in Latin America, one whose wealth is highly concentrated in the capital, fueling a centralized and unregulated flow of labor. Many indigenous internal migrants work as trabajadoras del hogar in Lima, situated within a vulnerable context since their work is highly gendered, private and contained within the intimate space of the home, where discrimination based on race, ethnicity, gender and class looms. Colonial relations persist in the apartments and homes across wealthy districts of the city, yet meanwhile Lima moves ever so forward by pushing costly modernization projects, developing its booming tourist industry, and promoting its global culinary fame.

Peru passed national labor protections for trabajadoras del hogar ten years ago with negligible improvements in the lives of its household workers. Based on nine months of in-depth interviews and ethnographic fieldwork, I investigate the nature of the outcome of political inclusion and state-granted labor rights in Lima for household workers, privy to capital's growth and yet [arguably] further marginalized through labor regulation, which grants few benefits, offers no minimum wage, and lacks real enforcement in practice.

When the state steps in to regulate the informal sector, what possibilities and potential problems result? How does the implementation and specifics of legislation come to bear on the lives of those it attempts to protect, offer benefits to, or bring into political inclusion? My dissertation grapples with the intersection of gender, law, the state, and the political economy of domestic work in Peru with specific attention to new organizing strategies for household workers in the face of myriad obstacles. When and how can the law matter in the case of informality, and what else is to be done?

When Does the Dust Finally Settle? Peruvian Household Workers, Reproductive Labor, and Sweeping Changes

Peru is currently understood as one of the fastest growing economies in Latin America, one whose wealth is highly concentrated in the capital, fueling a centralized and unregulated flow of labor. Many indigenous internal migrants work as trabajadoras del hogar in Lima, situated within a vulnerable context since their work is highly gendered and isolated in the home, where threats of discrimination based on race, ethnicity, gender and class loom. This practice of domestic labor is broadly accepted in Peruvian culture, demonstrating the profoundly deep, entrenched nature of colonial relations within contemporary Lima society. Analyze domestic work as both a daily, lived-out practice and a culturally inscribed phenomenon within Peruvian society. Peru passed national labor protections for trabajadoras del hogar ten years ago, though with negligible improvements in the lives of its household workers as the law offers no minimum wage, few benefits, and lacks real enforcement in practice. Based on nine months of in-depth interviews and ethnographic fieldwork, I investigate outcomes of political inclusion and state-granted labor rights for these women workers, privy to capital's growth and yet [arguably] further marginalized through labor (mis)regulation as they continue to sweep, iron, cook, and care for the future class of Limaños. My research finds that rather than Lima paving the way for a modern, egalitarian Peruvian state, inequality and colonial relations are alive and well in Limaño homes, with serious consequences for a future, more egalitarian, and ‘modern’ Peru and Latin America.

How does the implementation and specifics of legislation come to bear on the lives of those it attempts to “protect”? My dissertation grapples with the intersection of gender, law, and the political economy of domestic work in Peru with specific attention to challenges facing women workers confronting the burden of colonial history on a daily basis.

From Political Protest to Sectarian Violence: A Sunni-Shiite Split in Lebanon?

From Political Protest to Sectarian Violence: A Sunni-Shiite Split in Lebanon? The year 2005 has been a turning point in the history of Lebanon. The assassination of the former Prime Minister Rafic Hariri in a car bomb on February 14th, 2005 triggered the largest demonstrations in the history of the country. Hundreds of thousands of people poured to the streets to denounce the Syrian presence in Lebanon, as well as to protest against the political, social, economic and security situation. The demonstration was organized by the Christian parties in opposition to the government and accused it of being behind the assassination, or to flag out their alliance with it and accuse the US and Israel of killing Hariri. In the following research I study the political protests that followed the assassination of the former Prime Minister Rafic Hariri turned into sectarian violence that has been framed as “Sunnis versus Shites”. More precisely, I look at the shift in the political salience and the re-modeling of political, confessional as well as national identities. I have used official records and newspaper archives in order to compiled a dataset of all protest movements and events of violence/clashes that have occurred in Beirut between 2000 and 2010. I analysed this dataset in order to depict the shift in political salience and to account for political mobilization in Lebanon. I show that the Hariri regime as a whole, through its inability to control sectarian violence, has lost its legitimacy, and that the government’s inability to control sectarian violence, has lost its legitimacy, and that the government’s control over the situation in Beirut is more and more jeopardized by the diminishing political power of the state in the face of the rising political power of the sects.
assassination was a “political earthquake” that shifted the attention of the Leba-
nese society from mainly pan-Arab concerns, to internal concerns and anti-Syrian activism. The analysis of our findings suggests that a change in political relations leads to sectarian tension when two main conditions are met: (a) the majority of the sectarian group follows one leader and; (b) when the two opposing communi-
ties are equal in size and in power.

Australian Carers’ Income Support Since 1983 – Changing Frames and Persistent Gender Inequality

Many Australians provide unpaid, informal care for a relative or friend with a disability, illness or age-related frailty, and women are more likely than men to be the main ‘carer’ in these circumstances. A dedicated income support payment for some Australian carers has been available since the 1980s. Unlike many other forms of income support, which have been progressively restricted as part of a wide-ranging neoliberal reform process, eligibility for Carer Payment has been extended to an increasing number and range of carers in recent years.

This paper reviews the history of this policy area, focusing on the manner in which reforms to the social security legislation have been framed. Drawing on Fio-
nna Williams’ analysis of the framing and framing of European care policies (2010), we argue that changes to Australian carers’ income support have developed within competing frames of social justice and social investment. The social investment frame, which prioritised paid work over care, has become particularly prominent in recent years. This echoes the increasing concern with paid work participation in other areas of social support, such as unemployment benefits and payments for sole parents. However, the changes to care policy reflect a unique tension between competing goals of promoting paid work participation for all working-age people and ensuring a supply of unpaid carers in the community.

Neither of the dominant policy frames addresses Australian women’s ongoing responsibility for the bulk of unpaid caring, and income support policy potentially reinforces this inequality. We argue that these issues must be addressed in future reforms to ensure that the competing pressures on women to care and to engage in paid work do not lead to greater disadvantage for carers and the people for whom they care.

Middle Class Women’s Work and Childcare in Paris

Today, France draws attention from neighbouring countries because of its high birth rate. French women are also relatively active in their labour force participa-
tion. In Paris, the number of women in work is especially high, and the number of nurseries is inadequate. How do women manage to find a place or person to look after their children while they are at work? How are women and class related to the issues of childcare? These are the main interests of this paper. In France, the most widely used form of childcare is the registered childminder, the so-called “Assistants maternels”, and not nurseries as in Sweden. The paper will put the emphasis on this French registered childminder system.

According to a French national report on childcare, in 2011, 37 % of children under three whose parents worked full time were left with registered childmind-
ders who were approved by the local authorities and received children mainly in their own homes. 18% of children had places in nurseries, and 4 % were left with unregistered childminders, usually professional nannies who worked in the children’s homes.

The French “Assistant maternal” system was passed into legislation in 1977 to clarify the undeclared work, and progressed during the 1990s to increase jobs in the domestic sphere. Local authorities conduct home inspections, and 120 hours of professional training is required for approval. The state takes charge of the social security cost of childminders.

Now in Paris, many childminders are immigrant women and they help middle class French women to work outside the home and to get higher wages than the childminders do. Mothers are generally satisfied with this system because of the flexibility of working time, which means the longer and less well paid work of immigrant women supports the work and families of French middle class women.

MAKINO, TOMOKAZU* (Japan Society Promotion of Science, makinotomo815@gmail.com)

The Transformation Of Self-Subjectivity In Japanese Youth: From 1992 To 2012

Japan’s economy entered a long period of stagnation, known as the “Lost Two Decades,” after reaching its peak in the late 1980s and early 1990s. In this peri-
od, many politicians, business person, and intellectuals critized Japanese youth: tending to lose their temper with the darkness of mind, chasing their unplanned dream without regular jobs, and not leaving their nests. Critics also told fragile and self-consciousness of young people of Japanese youth. But we can get another figure of Japanese youth from the outcome of the research of Japan Youth Study Group, conducted in 1992, 2002, and 2012. For instance, most Japanese youth love them-
sevles, and feel senses of themselves. They are anything but fragile. By the way, one of merit of comparison of three or more time point is that we can distin-
guish between temporary trend and long-term trend. For example, the ratio of re-
pondents of feeling sense of oneself has declined by degrees from 1992 to 2012. The ratio of keeping one’s individuality in any situation has declined too. And the ratio of changing oneself depending on the situation, and engaging in superfi-
cially, has decreased from 2002 to 2012. These means long-term trend of diver-
sification of the self. On the other hand, the ratio of loving oneself had increased from 1992 to 2002, but has decreased from 2002 to 2012 (temporary trend). What causes for these? We can consider two matters. First, the cultural-social change underpinning long-term trend, for instance, the diffusion of mobile media and social network service accelerating the diversification of the self. Also, we need consider what happened in 2002 (about temporary trend). We try to explain the structure of self-affirmation by comparing the determinant and related item of self-affirmation on each year. Finally, we discuss the effect of intertemporal re-
search on public opinion in Japan.

A Method to Construct the New Framework for the Equitable Water Distribution -the Case Study of the “Water War” in Bolivia-

Why does the water resource problem in Bolivia remain despite the victory of “Water War”? “Water War” in 2000 was an anti-privatization movement towards the public water service and it changed the water law and forced a private company to withdraw. The goal of the social activists who had played a main role in “Water War” was to improve water resource accessibility. However, the success of “Water War” did not solve the water resource problem in Bolivia. Does it mean that the other issue was needed to improve the water resource situation?

Existing literature has mainly focused on the strategy of water war, and the water situation not mentioned. In order to investigate a real driving factor that had caused the problem, analysis of the Water War should be revisited from dif-
ferent angle. A water shortage is classified into two factors: “Real scarcity” and “Manufactured scarcity” (Mehta 2003). While real scarcity refers to a shortage of volumetric quantities, incurred mainly from population growth, industrialization and an ecological system, manufactured scarcity is constructed by powerful ac-
tors such as politicians, bureaucrats and irrigation farmers to gain profit at the exclusive possession of water resource.

I assume that the goal emphasized in “Water War” was directed towards manu-
factured scarcity, it prevented its focus from real scarcity, which is also pivotal in order to solve the water resource problem. This study uses the original data of fieldwork and local newspapers from three times of fieldwork by the author. I will use discourse analyses to expose the process of why social activists chose to focus on “Manufactured scarcity” in order to gain the civilian support. I present the importance of recognizing the each characteristic of water scarcity to improve the water resource problem. This research intends to provide a new framework for equitable water distribution.

Pathways Of Aging: Old Women’s Gendered Narratives and Cultural-Historical Locations

Pathways of Aging: Old Women’s gendered narratives and cultural-historical location

Cultural-Historical Locations

Pathways of Aging: Old Women’s gendered narratives and cultural-historical location

About gerontology has moved away from a focus on old age per se to the recog-
nition of old age as part of the life-course, and more importantly, as the result of a lifetime’s experiences. In this paper I explore the themes that old Mexican women themselves identified as important in shaping their pathways towards old age. I do so by employing a thematic-narrative analysis of multiple in-depth interviews with older women aged 50 to 89.

Throughout their life-course the women’s personal biographies, their current social, cultural and economic locations have been informed by a range of struc-
tural factors, institutions and personal attitudes, choices and opportunities. My investigation is to stress the importance of structural and personal mechanisms that underpin the socio-cultural construction of ageing and old age; the relation be-
tween the objective reality and subjective experiences of ageing. By making refer-
enances to the women's historical and cultural location and their gender socialisation, I contend that not only is there an individual biography, but also a collective story. There is however diversity amongst these women's life experiences. Through some specific actions such as attaining higher education and continuing to work after marriage, they enacted their individual agency and challenged the prevailing patriarchal narrative. Their actions although offering 'liberating' narratives, become more evident in the experience of their daughters and granddaughters. The women's -formal and informal- participation in the labour market has not brought them real benefits in their old age, as most of them do not have their own occupational pension, thus making the role of the family central to their well-being in old age. This is relevant in relation to family arrangements and commitments that define the contexts of care and the social and economic capital these women have access to.

The Complex Adaptive Systems Approach, a Socio-cybernetic Reading

Since the foundation of the Santa Fe Institute in the United States in 1984, and especially during the 90s, was formed a new wave in the science of complexity: the Complex Adaptive Systems (CAS) approach. CAS is based on modeling and simulation of complex systems using advanced computational techniques such as cellular automata or agent-based modeling. With an interdisciplinary and universal class of models, the main methodological approach has dominated the scientific discourse around complexity. Numerous interdisciplinary complex adaptive systems centers have spread throughout the world, from United States to Europe, from Latin America to East Asia.

We need a more reflexive and critical approach to CAS, taking into account its epistemological limits. Socio-cybernetics, through authors such as Varela, Maturana, Luhmann or Morin, is very useful here, because of its emphasis on the question of the observer/subject and its construction of the observed/object. Something that CAS models ignore, seeking to determine objectively and algorithmically probabilistic patterns in complex systems, without considering that the observer and the complexity they are primarily attributes of an observer, an operation of “punctuation” in his knowledge of the world. The simulated systems are doubly result of the intervention of the observer: the real system is an “invented reality” (von Foerster) and the system that simulates the real system would be doubly so. CAS-epistemological limits become more evident in its sociological models called “Artificial Societies”. The intervention of the modeler/observer here is even more evident in self-reflexive systems that are able to observe themselves, “self-referential” (Luhmann) systems of meaning in which both the constructed nature of the subjects themselves (Foucault) and the structures or social spaces of objective positions where the subjects are located (Bourdieu) cannot be ignored in favor of a mere behaviorist study of patterns of interaction among agents and their resulting and irreducible emergences.

Not No Place: Fragments of Johannesburg

Not No Place is a collage of visual and written fragments on Johannesburg-historical, archival, found and self-generated. The book is the result of documenting and collecting material on the city of Johannesburg over the course of five years. It interweaves selected quotations with personal memories and reflective accounts, as well as fiction in an attempt to explore the city as both lived place and an imagined no-place (the direct translation of U-topia). A montage combining photographs, drawings, archival material and texts, it alternates between the mode of collector, witness, observer and author, taking into account the numerous representations of the city in historical writing, urban theory, film, media and fiction. Not No Place presents a collection of moments in the city's complex history, its contemporary spatial realities as well as its future projections. Bettina Malcumness and Dorothee Kreutzfeldt speak to their visual processes and practices informing their book-length investigation into Johannesburg, Not no Place: Johannesburg: Fragments of Spaces and Times. This intriguing and beautiful book is by no means an official biography of the city - it reads more like a richly illustrated scrapbook of ideas and reflections part made up of quotes from a multitude of sources and part made up of the authors' personal narratives and ruminations on belonging. Fragments of Spaces and Times captures well, it is a peripatetic amble through the history and physicality of Johannesburg, stumbling into recurring characters such as the Carlton Hotel and Nongoloza.

Mattering Difference Cervical Cancer, HPV Vaccines and Global Health

Vaccines are a contested technology. On the one hand, they have been presented by health policymakers, researchers and practitioners as the most powerful weapon in the war against global disease. On the other hand, vaccines have been an object of criticism and distrust by anti-vaccines social movements. Cervical cancer is a woman's disease in that it is a deeply gendered disease. It has had an important capacity for embodying historical power relations and material conditions of women experience. Cervical Screening programmes and a general improvement in healthcare services in the "developed" world has meant a significant reduction in its incidence and mortality. However, such improvement has not occurred in the "developing" world at the same rate. HPV vaccines dwell between these worlds. HPV vaccines are not only a good case for understanding the convergence of such tensions, but also they make visible new problems such as co-production between gender, technology and disease.

This paper presents the discourses on cervical cancer and vaccines as the framework used in the production of narratives about HPV vaccines. I use the terms politics of disease and politics of prevention in order to describe the arrangements of objects, narratives and institutions that involve the contemporary perceptions on cervical cancer and vaccines. I describe the tensions that make vaccines a contested technology and cervical cancer a marginal disease. On the other hand, cervical cancer has a particular story as a malady associated with poverty and sexual stigma. I discuss the permanence of these narratives in the contemporary policies and practices on cervical cancer and development. Finally, HPV vaccines establish a connection between the worlds of cervical cancer and vaccines. These technologies not only gather such tensions, but also they make visible new problems such as co-production between gender, technology and disease, the development of “anticipated” cure.

The Impact of Fukushima on Evacuation Preparedness in Case of Nuclear Disaster in Slovenia

Krško Nuclear Power Plant (KNPP) located in Slovenia has met expectations about safety and stability of operation so far. Stress tests conducted by the EU a few months after Fukushima disaster in 132 NPPs in 14 EU member states proved that KNPP was one of the safest installations. However modern technology brings inherent risks therefore failures and accidents are in some way inevitable or even "normal". The nuclear disaster in Fukushima proved that this can happen in one of the most developed countries in the world. There is no reason to assume that such disaster could not occur elsewhere including KNPP.

Drawing on results of the survey among inhabitants and interviews with the highest representatives of institutions and companies conducted in a 3-kilometre radius around KNPP, the paper seeks to establish the level of preparedness of population, institutions and companies for the evacuation in case of disaster in KNPP. The analysis reveals that despite communication efforts made by the authorities almost three quarters of the population in the potentially most threatened area are not familiar with the locations of reception centres assigned to them in case of disaster, whereas two thirds of them do not know the evacuation routes. The level of preparedness of institutions and companies is also rather low due to fatalistic attitude, and poor nuclear disaster planning, training and coordination. These facts suggest that crisis management actors, including Slovenian military, would face extremely demanding situation in case of nuclear disaster similar to one in Fukushima. The role of the military will be especially scrutinized in this context taking into account previous experiences of military's involvement in disaster management.

Uneven Development and Social Equity in American Shrinking Cities: Can the Growing Social and Economic Gap be Narrowed?

The phenomenon of uneven development as a way of differentiating growing and shrinking cities is well-established, but emerging patterns of uneven development within many shrinking cities have been less extensively examined. We find that these cities have long-since undergone internal variation within U.S. shrinking cities, these variations have become markedly more pronounced in the past decade. A conjunction of market shifts, demographic trends, and economic pressures have resulted in some areas seeing regeneration at levels not seen for many decades in these cities, while decline appears to be accelerating in other areas. The evidence of central core revitalization on the one hand and the accelerating decline of many traditional single-family neighborhoods on the other is particularly striking, with population growth, job growth and housing market strength increasingly spatially concentrated in the core, leading to a growing polarization of these cities by race and income, and raising important questions of economic and social equity. This paper will begin by summarizing the evidence from research into economic, demographic and racial change over the past decade in a cluster of ten large American shrinking cities including Detroit, St. Louis, and Pittsburgh. The paper will explore the challenges and implications for policymaking and governance of this increasing polarization, leading to a proposed conceptual framework for how governmental and NGO actors, particularly community development corporations, can foster more equitable revitalization in American shrinking cities. This framework will address the question of the policy space available for redistributional strategies in an environment of severe resource and policy constraints, and the extent to which that in turn dictates rethinking governance roles and responsibilities in shrinking cities.

MALLICK, BISHAWJIT** (Karlsruhe Institute of Technology (KIT), bishawjit.mallick@kit.edu)
Resilient Or Vulnerable? Analyzing Disaster-Triggered Migration Process Of a Tropical Cyclone Prone Coastal Community

The capacity of coping with the effects of a disaster is not only an economic capability; it is also a result of socio-politically constructed vulnerability matter of the survivors. Thus, the migration-decision by the disaster victims is not only influenced by material constraints but is also a long-term consequence of societal mechanisms that is determined through unequal distribution of resources, opportunities and power. Consequently, the aftermath intervention programs in disaster affected communities succeed to social inequalities – as well as population displacement. Taking this theoretical and conceptual debate into consideration, this paper explores how the aftermath intervention programs influence the community resilience or social vulnerability in coastal Bangladesh? Do such interventions introduce social disparities, and finally, result to a migration-decision of the cyclone victims? Results are derived from a field survey with 1555 respondents. The survey was conducted during 2009 and 2010 in 48 southwest coastal villages; those variations have become markedly more pronounced in the past decade. A conjunction of market shifts, demographic trends, and economic pressures have resulted in some areas seeing regeneration at levels not seen for many decades in these cities, while decline appears to be accelerating in other areas. The evidence of central core revitalization on the one hand and the accelerating decline of many traditional single-family neighborhoods on the other is particularly striking, with population growth, job growth and housing market strength increasingly spatially concentrated in the core, leading to a growing polarization of these cities by race and income, and raising important questions of economic and social equity. This paper will begin by summarizing the evidence from research into economic, demographic and racial change over the past decade in a cluster of ten large American shrinking cities including Detroit, St. Louis, and Pittsburgh. The paper will explore the challenges and implications for policymaking and governance of this increasing polarization, leading to a proposed conceptual framework for how governmental and NGO actors, particularly community development corporations, can foster more equitable revitalization in American shrinking cities. This framework will address the question of the policy space available for redistributional strategies in an environment of severe resource and policy constraints, and the extent to which that in turn dictates rethinking governance roles and responsibilities in shrinking cities.

MALLICK, SAMBIT** (Indian Institute of Technology Guwahati, sambit@iitg.ernet.in)
Contested Proprietary Technology: In Search Of a Non-Proprietary Technology in Agriculture In India

The paper reviews the strategies by the Government of India over time to improve the state of agriculture. The strategies and the institutional and organizational framework within which these strategies were conceived of and implemented though have contributed to improvement in agricultural productivity have led to larger consequences – exclusion of some regions, communities in the region and crops and marginalization of knowledge of those engaged in the cultivation of such crops and their marginalization from the process of development, exasperation of inter-regional and intra-regional socioeconomic disparities, and environmental problems in raising questions of equity, sustainability, justice — attributed as well as cognitive. Further, productivity based on green revolution strategy has
reached a plateau and substantial yield gaps still persist. In this context, modern biotechnology tools having potential to improve crops assume significance. The paper focuses on the potential of non-controversial, genomics-based Marker-Assisted Selection (MAS) technology for addressing biotic and abiotic stresses and yield enhancement in agriculture. As a corollary the institutional, organizational and regulatory issues associated with the development, application and deployment of MAS technology for innovations in agriculture in India are important. In other words, the national innovation system especially with reference to agriculture has to be restructured by establishing productive linkages among public R&D institutions, policy making, regulatory issues and large scale production of products including seed based on MAS. Priority setting with respect to which crops and which traits in a given crop has to be made and adequate resources, physical and human, and institutional and organizational arrangements have to be developed to achieve useful results. Further, MAS is a non-proprietary technology, and hence conflicts between ownership and control will be kept to the minimum. The MAS has the potential to promote more inclusive and user-centered innovations in agriculture in all the regions including rain-fed areas.

Telling the Stories of Disasters Study Juku: A Series of Workshops in 3 Disaster-Affected Areas in Japan

What are the ways that disasters are memorialized, and how are the lessons of disaster transferred to future generations though preserving objects as well as the actual experiences of people who experienced the disaster? The Telling the Stories of Disasters Study Juku is a series of 3 workshops held in 2013, in 3 areas of Japan that have experienced disaster: Tohoku, Chuetsu, and Kobe. Each workshop includes a tour of the local area, with a focus on the way that local institutions pass on the stories of the disaster experience, involving local community members.

In recent years, large natural disasters are happening throughout Japan: in 1995 the Great Hanshin-Awaji Earthquake, in 2004 the Chuetsu Oki Earthquake, and in 2011 the Great East Japan Earthquake. Yet in the disaster area those terrible memories are not being forgotten. Many efforts have begun to preserve and pass down these memories through sharing experiences, items, documents, video, etc., towards the creation of a future society which is stronger against disasters.

The “Telling the Stories of Disasters Study Juku,” visits each disaster area, engages in practical activities related to the collection and preservation of documents in the disaster area, listens to the local people who are involved in passing on the stories of disaster, and learns in the style of a study retreat. Incorporating the discussions of the participants, we consider the ways to pass on the stories of disaster. This paper will review the experience of the Study Juku, along with the different memorialization and disaster storytelling examples from the 3 disaster areas in Japan.

A Mathematical Extension Of The Resource Mobilization Approach Of The Social Movement Theory: An Analysis Of The Emergence Of The Arab Spring

This paper proposes a mathematical extension of the Resource Mobilization approach of social movement theory to answer the questions: Why does a particular social movement occur at a certain time of history? Does the social movement inevitably occur at that time? Or is it simply a historical coincidence? Current social movement theories are adept at providing us with the analyses of social structure of social movements; however, many of them, with several exceptions, do not seem to be ready to answer these questions. In this paper, I incorporate the Resource Mobilization approach of the social movement theory into a mathematical model of the propagation of information and attempt to ascertain that the shock wave of information and the subsequent information vacuum are the fundamental driving forces of the emergence of a social movement. This paper suggests how the shock wave and the information vacuum have played a crucial role in the emergence of the protests in Tunisia that ultimately triggered the subsequent Arab Spring. Prior to the emergence of the protests, social networks and social movement organizations have to be prepared so that the shock wave and the information vacuum can propagate in society. Thus, the Resource Mobilization approach paves a road to the emergence of a social movement. But for a movement to emerge, a shock wave and the subsequent information vacuum need to propagate in society because, during the information vacuum, people are attracted into the “field” of the protest, and the subsequent activities are coordinated there. Thus, this paper argues that the combination of the Resource Mobilization approach and the analysis of the propagation of information clarifies the detailed steps of the emergence of a social movement.

I would like to submit my paper for the Best Graduate Student Paper competition.

The Making Of “Homo Financius”: The Emergence Of The Financial Literacy Field In Israel

In the era of financialized capitalism, states not only supervise and regulate financial markets, but also discipline individuals, requiring them to take responsibility for their financial decisions and their current and future economic situation. Attendant to the privatization of risk, varied actors attempt to instill among individuals the knowledge, skills, predispositions and attitudes considered as necessary to function as responsible and wise consumers in the financial sphere, thereby creating a capable and reliable “homo finans.” In the last years, the constitutive traits of homo finans are being specified and promoted using and diffusing the concept of financial literacy, which refers to a set of capabilities that are seen as underpinning proper and responsible financial conduct. Based on a detailed process-tracing study, this paper examines the emergence of the new institutional field of financial literacy and analyzes the role of consumers as one of the actors populating it, and the various notions and practices that are being formulated, negotiated and institutionalized. The emergence of the field has been the result of interactions among actors responding to numerous changes initiated by state agencies in the local financial system and to the institutionalization of financial literacy as a compelling global standard. Following these developments, new opportunities were created for many and varied actors – both state and non-state – most of them existing before the emergence of this field. These actors propose varied notions and practices of financial literacy, drawing different field boundaries and promoting varying rules of interaction between the actors populating it. Patterns of cooperation and conflict among the actors surface mainly around the establishment and institutionalization of boundaries and rules of this emerging field.

Social Housing in Sustainable City

The paper investigates how the issue of housing has been treated by urban policy in Brazil to meet the legislation defining the social function of urban property as one of the goals of reaching sustainable city. The object of evaluation is the federal government programs of the past 10 years since the adoption of the Urban Policy City Statute, aimed at reducing the housing deficit of low-income by the use of the instrument of regularization involving, in the Brazilian case, the participation of the community resident in the project area, the implementation of infrastructure and titling of land to families. It is found that urban sustainability in the Statute, has focused on social equity and democratic management, essential aspects for sustainability, but not exhausted. It is noteworthy that much of the land regularization programs occurs in urban areas environmentally fragile, specifically borders of rivers and hillsides. The results of urban land regularization processes of social interest are unimpressive considering the research on the irregularity of urban occupation. Illustrates the fragility of these results, the confrontation between the database Brazilian Institute of Geography and Statistics 2010, and numbers of the federal program of regularization. The 2010 Census showed that 11.4 million people live in informal settlements, which corresponds to 3.2 million residential units. The program’s goal was to serve 364,000 homes, but reached in fact 46 000, which means less than 2% of the total residential units located in areas irregular. As the principal results of the analysis: misconceptions of statistical measures, that considers a single house as different types of irregular, or because there are areas not surveyed in the census; inconsistencies in the definitions of program indicators, whose main focus is in the titration, not considering improvements in the areas of infrastructure and urbanization; low investments in regularization programs.

New Ethics of Russian Ecologists: Myth or Reality?

New professional ethics is becoming important in the conditions of unequal societies, especially during the socio-ecological crisis. The present study is examined the real socio-ecological interests in mass behavior of different social communities in transformation was approved. Such important issues as a problem of availability of information on environmental activities is presented. It is characterized by:

- establishment of united federal unified information system on nature protection;
- introduction of up to data information technologies and systems into the process of the decision making in the areas of nature use and environment protection;
- provision of state guarantees of public participation in solving of environmental problems, development of effective social partnership;
- organization and implementation of the environmental education of population.

New Ethics of Russian Ecologists: Myth or Reality?

New professional ethics is becoming important in the conditions of unequal societies, especially during the socio-ecological crisis. The present study is examined the real socio-ecological interests in mass behavior of different social communities in transformation was approved. Such important issues as a problem of availability of information on environmental activities is presented. It is characterized by:

- organization and implementation of the environmental education of population.

The findings of the expert survey present the social attitudes and system of values of these professionals and the views of the lay public about their social role. The data selected in the article is the result of comparative sociological research, conducted in Post-Soviet area since 2006 till the present. Observation, content-analysis of mass-media devoted to ecological problems and expert survey were used during the research. The conception of reflection of ecological environment to social behavior and orientations of different social-demographic groups of population was adapted and developed as well as conception of socio-ecological monitoring and conceptual scheme of origin and development of social-ecological (tension) conflict in Post-Soviet dimension. The conceptualization of reflection of socio-ecological interests in mass behavior of different social communities in transformation was approved.

From Chernobyl to Fukushima: Socio-Ecological Analysis. Russian Outlook

The authors aimed to analyse the typical socio-ecological problems in contemporary Russia, Belarus, Ukraine and Moldova and the main reasons of their appearance in terms of socio-ecological consequences of Chernobyl nuclear disaster. These tragedies - Chernobyl, Russia 1986 and Fukushima, Japan 2011 - have shown that everything people do is not enough to prevent the damage to environment and societies if the country is not nuclear free. The findings of the expert survey prove high level of socio-ecological tension in the region of explosion even after 25 years of this event. The data selected in the article is the result of comparative sociological research, conducted in Post-Soviet area since 2006 till the present. Observation, content-analysis of mass-media devoted to ecological problems and expert survey were used during the research. The conception of reflection of ecological environment to social behavior and orientations of different social-demographic groups of population was adapted and developed as well as conception of socio-ecological monitoring and conceptual scheme of origin and development of social-ecological (tension) conflict in Post-Soviet dimension. The conceptualization of reflection of socio-ecological interests in mass behavior of different social communities in transformation was approved. Such important issues as a problem of availability of information on environmental activities is presented. It is characterized by:

- organization and implementation of the environmental education of population.
As first order cybernetics deals with observed systems which are teleological and second with observing, which are teleonomical; a third order of cybernetics studies mutually observing systems and are teleological and teleonomical at the same time. A fourth order of cybernetics can also be expounded as the realm of human cognitive systems, which are self-observing systems and have the features of both first and second systems. Third cybernetics has language as a basis, while fourth has cognitive coherence; social cybernetics can be understood as the interplay of third and fourth order cybernetics.

Rethinking the Paradox of Welfare States and Gender Inequality

Although most comparative studies of welfare-states and gender inequality highlight the favorable effects of work-family policies on women, a growing number of studies, including my own, provide evidence of the unanticipated, and negative, consequences of work-family policies. The conclusion from these findings is that state interventions to reconcile paid with unpaid work, which are considered “mother-friendly,” have, paradoxically, negative consequences for the labor market attainments of working women.

In this work, my aim is to locate these findings within a wider context – not to change things themselves, but to question the conclusions that arise from them. My arguments are twofold: First, I argue that the impact of work-family policies is conditioned by class. The negative implications of family-policies for women’s labor market attainments, found in previous studies, are, in fact, a consequence of their impact on highly skilled and highly educated women. Among low-skilled women, these effects not only diminish, but also reverse. Second, I argue that when the focus is shifted from a single aspect of gender inequality to multiple aspects that are analyzed simultaneously, the implications of work-family policies for gender inequality no longer appear paradoxical, for it becomes possible to see the inherent tradeoffs between the different aspects.

These arguments are examined using a wide range of country-level indicators, aggregated from the ISSP data, of 14 welfare states. The indicators encompass most aspects of women’s economic activities that have been investigated in comparative research. The indicators are divided into two groups: one that is relevant to advantaged women (e.g., women’s representation in managerial positions), and the other to disadvantaged women (e.g., poverty rates). The relationship between welfare-state policies and each group of indicators will be examined and discussed in light of the tradeoff between participation and occupational attainments, and the class divisions among women.

Youth Labor Trajectories and Social Changes: Transitions and Occupational Mobility in Three Generations of Mexican Workers

The aim of this paper is to analyze, from a life course perspective, changes in certain transitions related to occupational mobility during labor trajectories of young men and women of three generations, in Mexico. Data come from EDER 2012, a national longitudinal survey. The analysis is based on the study of:

1. The first entry to the labor market and the number and duration of occupational transitions between 20 and 30 years old.

2. Mobility tables at the same ages between five specific occupational transitions:
   a. Between “formal” and “informal” jobs.
   b. Between salaried and non-salaried position at work.
   d. Between full time and part time jobs.
   e. Between jobs in industrial and service sector.

3. Discrete time regression models associated with these same transitions. Through the analysis of mobility tables for each of these transitions and the study of the weights associated to their constraints, the objective is to test a hypothesis of social change related with the precariousness, outsourcing and de-salarization processes of work force at early ages in this country, coupled with increased “heterogeneous” labor trajectories in younger cohorts (where the “determinants” factors are more diffuse).

Under this hypothesis, we admit that the processes of globalization and internationalization of the economy enable greater heterogeneity in certain occupational transitions and an increase in the diversity of youth work trajectories.
the “choices” made by the system (Bourdieu). In public schools, where most of the students belong to low middle class families, judgments made in this context are predominantly moral, therefore more social than academic. Learning problems are considered as being originated outside of the school. Students’ personal dramas influence grades, their families are also subject to judgment. Teachers’ work is not part of the debate, teaching strategies that promote learning are not discussed, which ultimately leads to school failure. The institution investigated attends middle to upper class students and has been evaluated as one of the best schools in Brazil after several national assessments. How would be the trial in an institution where the student body is already selected socially? It was observed that the evaluation criterion has an academic origin, but the criterion is not strictly academic. Disposition’s considered fundamental at schools of excellence are: docility and academic aptitude (Bourdieu). The social selectivity in this school is a distinctive selectivity. Cutting class will operate in the kind of attitudes towards school, and the possibility of ascension through school. The student desired profile is the middle class one, whose families adhere more easily to the school values, since they have the cultural goodwill as Bourdieu defined.

What role does organized crime play in determining the success of separatist movements? My paper explores the role of organized crime in the separatist movements of Kosovo in Serbia and South Ossetia in Georgia. From 1989-2012, two cases that share remarkable similarities but have generated different outcomes in the level of successfulness of the separatist movement. The crucial difference, I will argue, is that while both Serbia and Georgia were thoroughly criminalized states in the 1990s, the former took negligible and the latter substantive steps towards curbing the extent of organized crime. This crucial difference accounts for Kosovo’s greater success in nearing sovereignty compared to South Ossetia’s more limited success. Exploring the relations between separatist movements and organized crime in these two cases sheds light on different opportunities for resource mobilization afforded by criminal enterprises, and on differing strategies of states, crime networks, and separatist movements towards each other.

Cultures of the Future: Habitus, Reflexivity and Capacity to Aspire

Human action, as Schutz observed, is constructed within an imaginative horizon of multiple plans and possibilities. While we move in the temporal domain “with great agility, pirouetting and swiveling to face both past and future, twisting and turning in the knowledge realms of perception, memory and anticipation” (Adam 2001), the sociological understanding of the same process is far from easy. The analysis of the cultural dimensions of projectivity (Mishe 2009) is a very important task cultural sociology has to achieve to understand action and social change.

The imaginative process of projection requires what Appadurai (2004) calls “capacity to aspire” that is to say the set of cultural resources shaping the ability to project into the future. In this presentation I try to explore the very complex field in which the capacity to aspire emerges as stretched out between the forms of practical anticipation incorporated in the habitus (Bourdieu, 1997) and the cultures of the future inhabiting the public domain (as produced by technologies, media, institutions). Strongly connected with the concepts of reflexivity and creativity the “capacity to aspire” has to be seen mainly as the ability to project present opportunities using socially relevant narratives. These ideas are explored through the analysis of ca. 200 essays on the future, written by young boys and girls of age 17-18.

The Rites of Institution As an Instrument of Public Policy, the Example of French Municipal Rituals

This contribution addresses the issue of the performance of contemporary French municipal rituals of institution.

I will start from the findings of my doctoral research in political science which is related to municipal rituals of institution in France. A rite of institution (Bourdieu 1982) is a symbolic event marking someone’s transition from one status to another. In my research, I identify four ideal types of municipal rites of institution: kindergarten, civil weddings and Mother’s Day; citizenship rites, which include naturalization ceremonies, coming of age ceremonies, conscription rituals; honor rites providing municipal or national medals; and work rites, which encompass welcome receptions and retirement ceremonies.

Through my communication, I will show the importance of these rituals in public action. First, I will demonstrate that these rites can be considered instruments of public policy (Lascoumes and Le Gallès 2004). Here, I will focus especially on two examples: naturalization ceremonies and Mother’s Day. Since their invention, both rituals have been the instruments of migration policy and family policy, which aim to make virtuous citizens and mothers themselves as virtuous citizens and mothers, and therefore, behave as such.

Nevertheless, how does it occur? To answer that question, I will focus on the performance dimension of these rites of institution, that is, on how status and social roles are assigned to participants in these rituals. Drawing evidence from ethnographic observations and from interviews that I conducted, I will study the sequencing of these rituals and the verbal and non-verbal performative practices that happen during these rituals, as well as the representations of the participants related to them. Thus, I will consider what social conditions allow for effective performance.

Reflections on a Rural Community Traversed By the Process of Globalization: The Case of the Tupé Reserve (Amazon, Brazil)

This paper aims to present preliminary results of a PhD research that focuses on the dynamics of social relations of rural population living in a sustainable development reserve, the Tupé Reserve (Manaus-Amazon, Brazil). In this area, agriculture is related to local and regional economic and social conditions. As such, it is an area with its own dynamics of consumer demands and new lifestyles in which imageries, values and worldviews are shared. Thus, the social relations there are no longer constrained by the local context of interaction, as various forces (local, national and global) are at stake. These, far from being seen as happenings disguised as part of a dialectical process of socialization, are instances of socialization of a particular culture. In short, we propose a paper that discusses the effects and constraints of the transformations and conflicts in the relations between global
social changes and local reality, its cultural representations, and identities of the people who live there. The question of how, and to what extent rural communities produce, and are made by, globalization is central to our work. Therefore, we are led to discuss, among other things, the vitality and renewal of topics related to rural communities.

Seeing Both the Trees and the Forest: Closure and Social Capital in the Indian Interorganizational Network

The Indian economic context is characterized by the importance of business communities such as the Parsis or Gujarathis. These communities enable trust and norms in interorganizational transactions, and substitute for weak legal institutions. Current research in the interorganizational network context has focused on closure in the local network, and does not do as well in explaining how trust and norms can be maintained within large communities. We go back to the original Colemanian conceptualization of closure and social capital which describes the operation of trust and norms in large communities. In addition, this theory emphasizes the importance of closed structures and also the importance of having “good standing” with closed structures. Hence the theory is two dimensional, and has a positional and structural element. Current interpretations conceptualize closure as a closed triad, but this conceptualization is reductive, and (a) reduces the collective element of closure to a property of actors’ local network, and (b) loses the second positional element of Coleman’s theory. We rely on the latest advances in social network methodology and a complete population network in Indian firms to look at macro closure, and position of the actor within macro closed structures. Using this macro conceptualization of social capital, we find evidence for both the structural and positional dimension of Coleman’s theory.

MANKY BONILLA, WALTER OMAR* (Cornell University, wm264@cornell.edu)

In 1993, Peru experienced one of the most radical neoliberal reforms in Latin America. In its attempt to attract international investors, the government derogated the labor market, undermined labor rights and created a non-interventionist legal environment for collective bargaining. As a result, the number of unions, strikes and collective agreements felt dramatically, while the labor movement almost disappeared. Nowadays, Peru is the Latin American country with the best economic projections—in spite of its increasing inequalities—; it is the second world free trade agreement and multinational corporations control 85% of the country’s mineral resources.

In this context, mineworkers have mobilized to get better salaries and working conditions, and have started organizing to bargaining with global mining companies. Most of the studies about these efforts have focused on the contention between labor and capital—particularly within specific workplaces—but have overlooked the role that State has in the dynamics and outcomes of the collective bargaining and the labor conflicts.

Using unique quantitative data of all the state’s interventions in the mining industry’s conflicts between 1993 and 2012, as well as qualitative evidence of two in-depth case studies, this paper analyzes the role of the state in the configuration and outcomes of labor disputes. The study shows that, in spite of the commonplace ideas about the “neoliberal state” and its pro-employer tendencies, Peruvian workers have been able to engage in face-to-face negotiations with public workers and politicians in order to confront global companies. This paper offers a typology of the main negotiation mechanisms between state and labor unions; analyzes their main differences with previous strategies used by workers’ organizations; and discuss its implications for a theory of the relationship between the labor movement, the state and the global capitalism in Latin America.

Negotiating the Margins: The Trajectories of Subcontracting Laws in Peru and Chile. The Case of the Mining Industry

In spite of their different development levels, Peru and Chile have several elements in common. In both cases the basic principles of the neoliberal reforms have persisted—in contrast with the political transformations of other Latin American countries;– mining is the most important economic activity; and more than 70% of this industry’s workforce is subcontracted. As in other societies, this labor market segmentation has produced precarious employment, from which global companies have largely benefited in the last thirty years.

Additionally, both countries experienced the biggest and longest strikes since their return to democracy in the last decade, and in both cases subcontracted mineworkers organized the main mobilizations. Although miners were not the only group claiming for a reform in the labor legislation, because of the industry’s importance, they were the most visible and powerful one. As a result, both countries changed some parts of their subcontracting laws in the last years.

Based on a comparison between Peru and Chile, this study analyzes the relationship between workers’ mobilizations and labor law’s trajectories. Whereas previous studies have focused on how workers struggle, this one attempts to explain and theorize the results of that contention. Using news clips, legal archives and interviews to union leaders, the study argues that, in spite of the similarities between their contexts, workers’ mobilizations produced divergent outcomes. In Chile, mineworkers organized themselves in their own national federation, which helped them to build a strong identity, whereas in Peru the traditional mining federation rapidly absorbed workers’ struggles, making them unable to unify their demands in a national scale. I suggest that the networks and structures of the subcontracted workers’ organizations affected the reforms they got: restrictive in Peru—they are not for all the workers in the industry—and more inclusive in Chile.

MANNING, NICK* (University of Nottingham, nick.manning@nottingham.ac.uk)

DSM V, a Sociological View

What does sociology have to say about the DSM? Sociology as a discipline has two approaches to analysing a classification system such as the DSM. Looked at as an object of sociological study, questions and observations are about the way in which this is connected to general patterns of social structure and social action. For example, how do the organizations function that produce the DSM? What are their sources of income and power? How do they change? and how does the DSM function in relation to them? A second sociological approach is to accept the general priorities of a field which is committed to some particular outcome and to try to bring sociological knowledge to bear on its problems. From this point of view, sociology could be used to try to help or improve the process of producing a classification system such as the DSM. Sociological analysis of how the DSM is produced, the way it functions in research and clinical practice and its relation to the nature of knowledge and medical care could all have been incorporated into DSM knowledge. DSM knowledge, this has not happened, and I shall argue that this has resulted in the very substantial failure of the DSM to work. In this paper, I will analyse the nature of the DSM as a classification system and its performance. Secondly I will examine the way in which the DSM became rapidly and widely accepted. Thirdly I will advance some general explanations of the way DSM has been produced and the functions it performs.

Highly-Skilled Immigrant Women's Labor Market Access: A Comparison of Indians in the United States and North Africans in France

Using the concept of cumulative dis/advantage, this paper examines how early dis/advantage in immigration generates barriers to and/or pathways by which highly-skilled North African and Tamil (an Indian regional group) immigrant women access professional labor markets in France and the U.S. respectively. It draws on ethnographic projects with North Africans in France and with Tamils in Atlanta, Georgia.

It finds that despite their more advantageous position upon immigration—student migrants, single women, and French-styled North African educational qualifications– North African women experience barriers in accessing skilled work – difficulties with French work-authorizations, temporary work contracts, lack of professional networks and of local work experience. They therefore strategize by working in skilled-technical, low-wage capacities or in the ethnic economy. In contrast, Tamil women’s immigration is marked by early disadvantages— their legal status as “dependent” wives, the non-transfer of Indian credentials and re-employability for care work – that contribute to their de-skilling. In response, they strategize through the pathway of gradual ascent – moving from low-wage to high-wage work; (re)education and direct entry; and skilled entrepreneurial work to successfully access highly-skilled work.

Four mechanisms explain these divergent outcomes - education-work experience nexus, interactive effects of local labor markets and immigration policy, social capital in classed social networks, and racialization. For Tamil women, the cumulative effects of these converters their early disadvantages to “contingent advantage” resulting in them becoming highly-paid professionals in America. For North African women, these contribute to the erosion of their early advantages leading to their “categorical disadvantage” - long-term confinement to low-wage work with few ladders into the primary labor market in France. Therefore the

609
downward mobility associated with skilled immigrant women is not universal, as is often theorized, but relational across national contexts such that some groups are more successful than others in accessing skilled work.

RC09-171.3 MANSOURLI, VALI* (George Mason University, vmansouri@masonlive.gmu.edu) Similar Roots and Diverging Outcomes: Uprising and Revolution in Iran and Egypt Recent uprisings in the Middle East have increasingly been characterized by spontaneous mobilization, decentralization, and the lack of dominating charismatic leadership. This research will demonstrate the salience of Horizontalism in constructing and contrasting the Iranian Green Movement of 2009 with the Egyptian Revolution that started in 2011 through the use of ideal types. Attention is devoted to assessing the strengths and added resilience of these decentralized movements against their Authoritarian states. Analysis through identification of different processes leading to variations on success, stalemate and repression, this will build on previous studies of revolutions to better understand contemporary social and political change. The Green Movement, despite months of sustained mass protest and delegitimization of the government, solicited little to no concessions or change from the state; while the Egyptian Revolution within only 18 days was able to topple the head of state, ushering in a struggle for the future polity between shifting alliances and elements of the old regime. Identifying key political institutional arrangements illuminates potential vulnerability or resilience to uprising, Construction of state is key, in the case of Egypt is characterized by diffusion of centers of power in institutions such as the Supreme Leader, the government and Revolutionary Guards, combined with limited but competitive elections allow for flexibility, making for added resilient state. On the other hand Mubarak’s National Democratic Party (NDP) of Egypt was more closely characterized by Patronymial bureaucratic rule, which led to competition and conflicts in interest between NDP members and affiliates who rose since the Infitah and the Supreme Council of the Armed Forces (SCAF). By looking at these social uprisings and the changing states will help to explain the current divergent and potential directions of these two movements and their future.

RC23-408.2 MANUSHI, KU (JNU) PATRAZH CHANDRA* (JNU, prakash.csss.jnu@gmail.com) Patterns of ICTs Using and Information Flow: A Study of Rural India Patterns of ICTs Using and Information Flow: A Study of Rural India Manushi and Prakash Chandra Dilare, PhD Scholars, Center for the Study of Social Systems, School of Social Sciences, Jawaharlal Nehru University, New Delhi, India ABSTRACT Information and communication technologies (ICTs) are widely acknowledged as important resources in all the aspects of socioeconomic development and this is especially articulated in national policies. Among developing countries, this perspective incorporates ICTs into the development agenda because of their relevance in transforming human activities and in presenting new opportunities for economic growth. Even if ICTs appear ubiquitous in this day and age, it still exists, the growing presence of digital divide and social exclusion. A considerable number of marginalized groups, such as rural folk, women, and low-income youth remain unachieved by the benefits ICTs are supposed to offer. The vision of a so-called “information society for all” as stated in both developed and developing countries’ ICT policy documents today does not apparently include “all” (Chiumbu, 2008).

This paper presents the patterns of people’s ICTs using and information flow perceived in India, especially in the rural areas. India is a country of multiple divides - social and economic divides already exists in the country and now with the emergence of new ICTs new divisions are shaped on the basis of many factors involved in its use and access. Today growing ICTs and the telecommunication in country has given opportunities to the excluded sections to be part of this new information society. But the impact of ICTs in rural areas is still very limited, despite its penetration into every corner of modern life. There is need of relatively good flow of information and special skills to make full use of ICTs for socio-economic gains.

RC31-553.3 MANZENREITER, WOLFRAM* (University of Vienna, wolfram.mazenreiter@univie.ac.at) Homeless Diaspora: The Impact of Return Migration on Latin American Japanese Communities Currently more than 2.5 million Americans living on the South and North American continents are Nikkei or descendants of Japanese migrants. The history of their forefathers’ emigration and its consequences led to considerable scholarly attention. Their interest in issues of living in the diaspora, the meaning of ethnicity and citizenship has been renewed by the recent wave of sojourner migration by Latin Americans of Japanese origin into Japan. Virtually nothing is known so far about the impact of “return migration” and the “returnees’ remigration” on the diaspora in Latin America. To what degree have they ideas of ethnic or political loyalty, of national and cultural identity been shifting one way or the other due to the increased proximity to their ancestors’ place of origin and the influx of material and immaterial goods from Japan? And how have narratives on the experience of hostile or discriminatory treatment by the Japanese impacted on the collective image of the Nikkei in Latin America? The Nikkei’s return home migration, to the land of their ancestors, has not fulfilled the postulated ‘negation of a diaspora’ (Clifford, 1994), it has squared the sensation of being diasporic in the sense of being displaced twice and having multiple relationships with distinct nations which are neither just homeland nor hostland. Based on multi-sited fieldwork in Japan, Argentina, Bolivia, and Paraguay, I argue that the Nikkei are entangled in a squared diaspora in which the juxtaposition of homeland and hostland itself becomes questionable, instable and fluctuating.

RC03-67.5 MANZO, LIDIA K.C.* (University of Trento, lidia.manzo@gmail.com) Community Politics and the Middle-Class Desire for Diversity and Difference. Evidence from 40 Years-Span of (super)Gentrification in Brooklyn’s Park Slope The transformation of New York City into a global corporate city and the consequences of recent changes on small firms and on dwindling employment opportunities for some and to exacerbate displacement problems for others. By encouraging suburban home ownership, discouraging rental housing construction, and upwardly redistributing income through federal and municipal tax policies, Brooklyn’s Park Slope, at the beginning of the 1970s faced a racial and tenure status division between its neighborhood residents. Reform institutions emerged from neighborhood civic organizations and broad-based interest groups.

Drawing the evolution of its demographic and housing resettlement, I found that different social groups had different class interests and ideologies, and therefore they were differently affected by abandonment and resettlement processes. The involvements and influence in community politics of twenty community organizations were analyzed through archival and bibliographic researches from the late 1960s to the present time; among them four historical institutions – which still exist - and more four recent ones, were followed through the ethnographic activities and other researches and are reported in this work. There is, in fact, a social and ‘moral pluralism’ to understand (Schumaker 2013), especially when a neighborhood has been dealing with racial, ethnic, class, and religious changes.

This longitudinal study on the process of Park Slope super gentrification investigates the middle class’ desire for diversity and difference (Lees et al, 2008), as well as the influences of housing-abandonment and resettlement processes on 1) the types of institutions that emerged to represent different class interests; 2) the types of social groups that came to inhabit the neighborhood; 3) the pattern of that emergence over time; 4) the particular goals, scope, and strategies that these organizations evolved; and 5) developmental changes in the relationships between local institutions, government agencies, and private investors.

RC21-381.4 MANZO, LIDIA K.C.* (University of Trento, lidia.manzo@gmail.com) Cool Streets: Attitude or Commodification? What - and Who - Is Driving Gentrification Along Two Changing Boulevards in Milan and Brooklyn Streets do possess attitude. What usually community preservationists define as ‘spirit’ or the ‘soul of place’, here is re-interpreted both in terms of design attractiveness - human scaled, fine grained, mixed use, or highly walkable – and urban lifestyles (Jacobs, 1989, Zukin 1995, 1998, 2010, Parham 2012). Especially during a gentrification process, we can discuss how streets embodied essential elements of ‘coolness’ – showing off trendy styles and great flavors - which seems a reflection of the commodification of cultural production.

In using the concept of ‘cool as a framework’, understanding it as a cultural category in its own right (Pountain and Robins 2000) – this work explores the ways gentrification interconnects with the development of an individual habitus as a
spatial manifestation in which the street coolness is crucial to the construction of stylish individual personae.

This exploratory paper describes the relationship between aesthetics, symbolic meanings, understandings of street character, and patterns of socio-spatial change on local shopping boulevards in two neighborhoods - Milan and Brooklyn - which are discussed in terms of financial speculation and gentrification. These neighborhoods, once considered a symbol of blight in the 1970s, today are one of the most appreciated places for Milan and New York's wealthy and educated people. As I have observed, their street practices sometimes overlapped with working class people’s street practices, with aspirations of otherness” evoke feelings of the perpetual stranger or outsider who does not belong. However, with hip bars and cafés, used-books stores, yoga studios, and renovated townhouses, they are ‘no longer regarded by the public as blighted, but instead are both celebrated as sites of cultural consumption for a new middle class’ (Ossman 2011:8).

Drawing on several years of field research (2007-2013), empirical quantitave and ethnographic data on the current, and historical aesthetic characteristics as well as types of stores, and value-creating practices are considered.

South Africa within Brics: Emerging Society and Sociological Discourse

The formation of the BRICS contingent opened up new political and economic debates and discourses. The BRICS members are all developing or newly industrialised countries, and they are distinguished by their large, fast-growing economies and significant demographic contributions to the global economy. In 2010, South Africa was the last country joined the BRICS and currently holds the Chair of the Group. Against the afore-mentioned background, as well as South Africa’s strategic position in Africa, facets of the social structure as well as critical processes act as key drivers for social change in the country as well as parts of Africa, and simultaneously, provide the platform for rigorous sociological discourse.

Consequently, this paper aims to - in terms of social structure - critically analyse the political, economic, educational and health institutions of South Africa, and the differences and similarities within the broader BRICS contingency. Macro level issues, for example good governance, democracy and social services, developmental state, economic growth and policies, development programmes and projects, literacy and access to education, crises in the health sector (HIV/Aids, etc.), as well as other issues related to sustainability will be touched on. Inter-twined with the above-mentioned, the normative component of culture, namely values, norms and sanctions will also be part of the picture.

Closely linked to social structure, the following critical processes will in an integrative way be put under the magnifying lens, against the BRICS background: ideological reconciliation, nation-building, economic transition, rationalisation, migration, globalisation and post-globalisation.

In the final instance, the paper will sought to – from the South African perspective - analyse the contingency (BRICS) as a whole and the role of South Africa within it, specifically in terms of participation (e.g. politically, economically, culturally and militarily), autonomy, inter-dependence, and a designated leader role in certain parts of the world.

Can the Racialised Other ‘Belong’? Rethinking Race, Racism and Belonging in Australia – Perceptions of Skilled Black African Migrants

This paper centres the perspectives of a group of black skilled African migrants to interrogate the notion of ‘belonging’ within the Australian context. Specifically, the paper explores how participants’ constructions of belonging are grounded in narratives (and experiences) of racism, racialisation and racial discrimination. There is a significant body of work that explores the migrant’s experiences of mobility and constructions of belonging. However, to date, not much has been done to explicitly link these with experiences of racism and racial discrimination. Drawing on data from a qualitative study on identity and belonging among skilled ‘black’ African migrants, we argue in this paper that experiences of racism and racial discrimination are entwined with aspirations of otherness” evoke feelings of the perpetual stranger or outsider who does not belong. We therefore interpret the participants’ perceptions of belonging as exposing an ‘other’ paradox of skilled migration: where feelings of being ‘needed’ (invited) into Australia to fulfill an identified ‘need’ in the labour market co-exist with experiences of discrimination to construct an ‘other’ who simultaneously belongs and does not belong. In the end, while the discussions in this paper are mainly concerned with belonging as subjective, personal and emotional attachment to particular groups and constructs of ‘home’, they also expose the power relations, contestations and complexities inherent in the notion of ‘belonging’ particularly when one has to contend with racism and racial discrimination persistently and consistently.

Social Innovation in the Housing Policy in Spain

The context of this research is the economic and financial crisis that has had the effect of exponentially increasing unemployment and evictions across the country. This research has one general objective, and two more specific objectives. The general objective is to analyse the impact of social measures on innovation and the effect of socially validated successful actions, in public housing policy in Spain, since the beginning of the crisis (2008) to the present. The first specific objective is to review the scientific literature in order to find successful actions at the international level in the fight against the loss of housing that have allowed more people, belonging to the most disadvantaged social groups, to have adequate housing. The second and final specific objective is to identify if there is a presence of some of these successful actions in the field of housing in the context of Barcelona, where I place this research, and how social movements have influenced the implementation of these initiatives. The results show that there has been a change in housing policy and citizenship, and crucially, contributed substantially to this change through innovative solutions and social pressure towards the Spanish political system. The innovation introduced by the social movements are both at the individual level (processes of financial literacy, empowerment, deliberation and participation) and at the civil society level (collective action, collaboration with organization promoting new models of housing, such as cooperatives). These innovations have open a new path for the future development of the housing policy in Spain and also has turned civil society more powerful and a significant actor in the dialogue with the State institutions.

Female Migration in Greece and Integration Issues: Access to Welfare System and Political Participation

Greece has turned in recent years into an immigration region. While immigration started in the early 1980s, it was only in the early 1990s that significant numbers of economic migrants started arriving and became a new destination country. An additional important feature of the immigration process in Greece is the large proportion of women who migrate alone in search of employment.

With regard to the integration problem of migrant women many studies in the following years have been undertaken, and crucially, contributed substantially to women from social goods and welfare national system and the non-active participation in social and political life in the countries of residence are of paramount importance. Thus, access to welfare goods is associated with citizenship, while social goods and health system use are key in the early 1990s that international efforts to measure the degree of social integration of transnational migrants. At the same time, active political participation highlights the level of their integration.

In the context of the problematic for the social integration of women migrants in new immigration countries a nation-wide survey on a sample of 600 economic women migrants who had residence and work permit was held by EKKE (National Centre for Social Research) in 2010. This paper refers to some issues related to the integration of women migrants in our country based on the results of the above survey. More concretely we will analyze the access of migrant women to social welfare services, investigating issues related to social security coverage and the use of public health services. We will also discuss the interest of immigrant women in political life, and their participation in collective political activities and organizational schemes.

Depuis la fin des années 1980, les syndicats dits « minoritaires » (Jobin, 2006) ont émergé dans le contexte japonais où les syndicats d’entreprise sont dominants et recrutent parmi les employé-e-s « régulier-e-s » (Kawanishi, Moyer, 2005). L’accroissement des emplois atypiques au cours des années 1990 a ce-
The meaning of transparency is seemingly obvious and simple, however, in political terms transparency is more “the condition of being transparent”. It arises in opposition to corruption, secrecy and lack of clarity in the management of organizations and institutions. Today, it is more relevant than ever as a consequence of all kinds of recent scandals. Citizens of democratic societies demand a more open and transparent government.

This requisite of transparency is a political goal, which is supported by the possibilities for openness produced by the microelectronics revolution. This has modified the technological, social and political scenarios. It is more than the Internet; it is becoming the global ICT system where available information is increasing daily, as are the possibilities of accessing and processing data.

In this context this paper proposes, first, an analysis of public policies according to the principle of traceability of decisions. This means that it is possible to identify the full cycle of a public policy and its relationship with the different actors involved in the policymaking process. Second, imitating food processing traceability tools, it is possible to propose a “policies processing software” for recording all the traces of public decisions and an open system to retrieve and access this data. Third, it describes the theoretical conditions and prerequisites for a “barcode” to reveal who proposed an action and how it was designed, implemented and evaluated.

Hasidic Pilgrimage As a Cultural Performance: Challenges and Opportunities

This presentation deals with the research of Hasidic pilgrimage in nowadays Ukraine on the examples of two settlements, Uman and Medzhybizh. The re- search is aimed to shed light upon the Hasidic pilgrimage through the lens of cultural sociology and the theory of “cultural performance” elaborated by Jeffrey Alexander as the most suitable theoretical and methodological tools in the analy- sis of this issue. Despite long standing historical prerequisites, Hasidic pilgrimage is still a new issue in Post-Soviet Ukraine which has become a special “core” in the world context. The understanding of performativity in the issue helps unveil its stable and emerging elements, as well as show the most problematic areas and possible consequences. It is shown that the Hasidic pilgrimage in Ukraine does possess some act of a cultural performance: collective representations (as well as background symbols and scripts), actors, means of symbolic production, mise-en-scene, power and audiences. Research methods (which included visual observation, media docu- ment analysis and interviewing) help outline and analyze typical resources, lines of communication and possible conflict areas both in time (2009-2012) and space.

The Image of the City Between the Local and the Global

Within the global competition among cities for recognition the ‘image’ plays a significant role. Cities work carefully on their iconic representation to attract tourists, knowledge-workers and investors. Therefore, they have the challenge to create a coherent as well as a distinctive image. One can argue that the field of city marketing is highly professionalized, and operates with standardised practices and similar beliefs. On that account, the images would be quite uniform, displaying rather a global culture than a local one. At this very point, the argument is reinforced by the claim that the ‘self-representation’ of a city is highly contested within the local context. Hence a study of the globally distributed images within their production and negotiation processes draws light on the local ‘urban imagery’ (Strauss 1960).

The presentation is focusing on the image production of two globally intertwined cities: Frankfurt, Germany and Glasgow, UK. Throughout several fieldtrips, city marketers leading to the creation of environmental movements. The paper presents a comparative in-depth analysis of the image production of Glasgow and Frankfurt, and shows how globally communicated ‘self-representations’ refer to the ‘cumulative texture’ (Suttles 1984) of the local urban culture.

MARIANO, DANICAR* (National University of Singapore, daniac.mariano@gmail.com)
The restrictive Assisted Reproductive Technology (ART) laws and ‘moral safety valves’ in Singapore and their role in creating Singaporean reproductive tourists or exiles

The paper analyses why some Singaporeans are crossing borders to avail of Assisted Reproductive Technology (ART) treatments like In Vitro Fertilization (IVF), Pre-implantation Genetic Diagnosis (PGD), surrogacy, et cetera. A major factor that hinders or discourages couples from getting ART treatments in Singapore is the Bioethics Advisory Committee’s (BAC) strict regulations on ARTs – one of the most stringent in Asia. Formed as Singapore’s counterpart to the UK’s Human Fertilisation and Embryology Authority (HFEA), the BAC prohibits certain technologies like surrogacy, PGD for sex selection as well as “race or traits shopping” through selection of egg and sperm donors. It also demands that hospitals and clinics are their major selling point and competitive advantage. Since many technologies and services that Singapore prohibits are allowed in these countries, many of their fertility brokers and clinics report servicing several Singaporean clients annually.

As a result of the BAC’s ban on donor payments, there is a huge sperm and egg cell deficit in the country. Many Singaporeans do not want to donate or acquire genetic material within the small city-state for fear of incest or custody issues. In contrast, Internet is enabling many to circumvent these ‘moral safety valves’ that the BAC had set in place. Various organizations involved in fertility brokers and clinics are their major selling point and competitive advantage. Since many technologies and services that Singapore prohibits are allowed in these countries, many of their fertility brokers and clinics report servicing several Singaporean clients annually.

Rethinking Environmental Movements In Developing Nations: The Case Of Cameroon

Conventional wisdom holds that citizens of developing nations rarely participate in movements similar to the “mainstream” environmental movements of the developed world. Instead, like dispossessed groups in developed countries, their mobilization generally takes the form of locally based, confrontational responses to direct threats to their livelihoods and health. A large literature examines such movements, but it generally ignores developing nations where such mobilization is infrequent. This paper examines the case of Cameroon, where mobilization of large numbers of citizens for confrontation with government or business interests over environmental issues has been limited and infrequent. Our data come from an extensive literature search and interviews with 52 NGO leaders from five of Cameroon’s ten regions. We conclude that the relative absence of large scale, clear, and immediate threats to the livelihoods or health of large numbers of citizens, in combination with a resilient, quasi-authoritarian government characterized by patronage, divide and conquer strategies, and mild repression, have mitigated against such movements. Cameroon does, however, possess scores of NGOs and citizens’ groups that address environmental problems through lobbying, public education, and concrete projects to protect the environment. Although they lack a mass support base, they do enjoy significant support. Their accomplishments are real, especially in relation to the obstacles they face; however, they are severely limited by lack of funds, expertise, and equipment. Factors cited above, combined with heavy reliance by the most successful NGOs on funding from international environmental NGOs and international aid agencies, predispose them to avoid confrontation, and only a few engage in it. Our findings suggest that conventional wisdom about environmental movements in developing countries represents a considerable oversimplification and that environmental action can assume diverse forms in developing nations. It also raises important questions about how environmental movements are to be defined, which we explore in the conclusion.

MARKIN, MAXIM* (National Research University, mmmarkin@hse.ru)
The Problem of Opportunism in the Changing Conditions (A Case of the Relationships between Retailers and Suppliers in Contemporary Russia)

The rules of market exchange do not only distribute the value added [Gereffi, 1994] but also reduce uncertainty and control opportunism in business partners’ relationships [Kelly, 1991]. In Russia in the 2000s retailer-supplier contracts included highly different requirements such as pricing and bonus requirements of retailers, unpaid services and penalties to retailers, compensation for retailers’ services. Those requirements made the behaviour of business partners predictable. But in 2009 the trade law was passed and the most of the requirements must be excluded from the retailer-supplier contracts. Nevertheless, the business partners should reduce uncertainty and to control opportunism in their relationships even in the new conditions. The objective of this research is to analyze how retailers and suppliers altered their rules of exchange after the political intervention. The empirical data are two quantitative surveys that were carried out in 2007 and 2010. About 500 managers were questioned in Moscow, Saint-Petersburg, Ekaterinburg, Novosibirsk and Tyumen. The half of them are retailers and the others are suppliers. The findings demonstrate that after the enactment of the trade law the most of unallowed requirements were excluded from the retailer-supplier contracts but they are still used as separate contracts. This practice gives the business partners an opportunity to make each other’s behaviour predictable in the new conditions. Retailers and suppliers also continue to discuss the content of the political intervention and the consequences of its application.

MARKLUND, CARL* (Sodertorn University, carl.marklund@sh.se)
Organized Hypocrisy – Disorganized Technocracy: The Assumed Retreat of Politics in Contemporary Governance in Historical Comparison

Today, it is widely assumed that a power shift has taken place over the past few decades – a shift away from politics and in favor of the market. According to this view, neo-liberalism has since the 1970s and onwards reduced the scope of “the political”, limiting the exercise of public power in general and planning in particular.

Despite this assumed retreat of politics, politics is still, at least medially and rhetorically, tasked with providing some guidance for the future, based on scientific evidence, and to generate tangible results in a logic of input and output legitimacy [Schumpeter, 2000]. Public power is still held accountable as if it possessed the power which is by now to have been lost. Political control is still able to achieve results as if it would be possible to exercise public power without the use of planning, raising the question: Why do we expect more from politics at a time when it is supposedly able to do less?

This paper proposes that this conundrum – which could be seen as an organized form of hypocrisy (openness) coexisting with an increasingly disorganized form of technocracy (transparency), to paraphrase Nils Brunnos (2002) – can be analyzed by confronting Karl Popper’s concept of “open society” with Gunnar Myrdal’s concept of “open social engineering” and Karl Polanyi’s concept of “double movement”, as generated in the context of pitted conflict between laissez-faire liberalism, totalitarianism, and democratic socialism from the 1930s and 1940s, a conflict which in some ways resemble the contemporary contest be-

Shaping the Things to Come: Concepts of Planning and European Modernity

Planning—in the sense of purposive action geared towards the anticipated future—has usually been seen by anthropologists and social psychologists as a characteristic of universal human reason. As a specific socio-political practice and scientific theory, however, historians and social theorists have often identified planning as a specific trait of European (Western) modernity, for better and for worse.

This classic analysis of scientific social and political planning speaking of politicians, revolutionaries, reformers, and scientists infuriated with the success of the natural sciences, dreaming of a brand new world. According to this view, the social sciences would be as closely integrated with politics as the natural sciences had already been adopted by business, medicine, and the military. In some more extreme “technocratic” interpretations, planning and science would eventually replace politics altogether.

Either planning has been seen as a largely technologically determined, if not outright “neutral” response to the complexity of the modern world. Or, more commonly, it has been criticized as a misguided attempt at controlling human relations and social circumstances in the same way as humans have sought to control nature. As such, planning is a key concept in European modernity. However, the many applications and diversification of planning belie any simple categorization, making it an appropriate topic for conceptual historical analysis. Yet, it is a key concept whose conceptual history is yet to be written. This paper maps out points of disjuncture between the historiography of concepts of planning, such as cybernetics, management, planning, rationalization, social engineering, and technocracy on the one hand, and the actual historical usage of these concepts on the other. Thereby, the paper brings previously isolated historiographical and theoretical strands into dialogue with one another with a view of initializing a new take on “critical planning studies”.

Foundational Political Myths in Divided Societies: The Case of Montenegro

This paper provides an analysis of the constitutive role of founding myths in the formation of nation-states. In particular, it aims to elucidate the odd cases of identity formation in complex and ethnically divided societies where, it is argued here, the historical and cultural legacies are passed on rather differently than in the case of homogeneous societies mostly analysed in the literature on political mythology. With the intention to submit a phenomenon that belongs to the family of the most basic and yet arcane and essentially contested concepts of political theory and political culture to an impartial politico-logistical investigation, the founding myth is firstly reconstructed with respect to the general theory of myth and political myth. In the second part, the role of mythological legacy in the genesis of the statehood of Montenegro both in the past and present is analysed. The author argues there are two founding narratives in Montenegro, explaining their ethnno-nationalist character and attempts to deduce patterns of their instrumentalization by the rulers of the Petrovic-Njegos dynasty and the current government. The paper ends with concluding remarks about the controversial status of ‘constructive foundational mythology’ and the need to set forth new and republicanized forms of legitimisation that would disengage the regressive dialectics induced by the myths discussed thus far.

Post-Nationalism in Practice: European Citizens’ Initiative

The discussion on the practical and heuristic value of cosmopolitanism and post-nationalism has informed and shaped the debate on the future of the European Union from the Maastricht Treaty onwards. The recent literature on belonging, allegiance and political identity suggests that cosmopolitanism is too thin of a concept to account for the gradual emergence of a common European public space visible primarily in the convergence of the EU’s civil society movements. In this context, the notion of “constitutional patriotism” is analyzed due to its centrality in the debate. Before proceeding to the central part of the paper, the author argues that social constructivism portrays a more realistic and substantive picture of the nature of the sense of European belonging. The paper concludes with an examination of the European Citizens’ Initiative and attempts to assess to what extent this institutional novelty of direct democracy in the EU has provided empirical leverage for post-nationalist belonging. Through the comparative and case study analysis of the most paradigmatic initiatives submitted thus far, this investigation aims to provide the reader with a possible dynamics of post-national identification in the EU.

When Art Worlds Look to Sociology for Inspiration: A Case Study of Contemporary Art Conservation Strategies

Recent scholarship in cultural sociology has provided new theoretical frameworks and methodological strategies for studying diverse (and sometimes incommensurable) value systems (Boltanski and Thévenot 2005, Heinich 2008). This paper examines the relevance of trends in the sociology of values (or pragmatic sociology) in a case study of recent international initiatives involved with the development of new approaches to contemporary artistic heritage conservation. The paper presents research on the activities of four international initiatives devoted to the development of new strategies for the preservation of artistic heritage. The paper examines how contemporary art conservation networks are attempting to grapple with the increasing realization that diverse value systems and multiple meanings of the arts they care for can be taken into account in new visions of the role of conservators in the preservation of artistic heritage. It examines recent trends in conservation research, in particular the efforts of art conservators to adopt sociological methods and theories for inspiration. Conservators have become increasingly involved with research about the ‘meaning’ of objects and cultural heritage sites when planning interventions. They study records of the creator’s intent, conduct interviews with artists or other authorities, critically analyze the historical contexts of the work’s origins and of subsequent transformations, seeking insights about ways to preserve the integrity of the works that respect its symbolic and cultural significance. These efforts by art conservators to draw on sociological insights provide a compelling example of the relevance and uses of sociological research in contemporary art worlds, however they also raise questions about decision-making, in particular how to use social scientific theory as an affordance for practical action.

Environmental Trust: A Cross-National Study

Environmental issues, topics, and concerns are some of the most pressing global challenges of our times. Research demonstrates public opinion on environmental concerns is global, yet simultaneously wide-ranging and varied. Despite its importance, however, our understanding of the within-country dynamics related to expression of environmental views remains underspecified. This paper examines environmental trust using the International Social Survey Program Environment data from 2000 to advance the literature on the globalization of environmental concern by articulating its content and expression in three regional clusters derived from previous research. Important similarities are shown across regions regarding the model overall. Some intriguing differences are revealed in the model when examining results for countries individually within the three regions.

Pathways to Environmental Activism Across Time and Place

This paper tests a model of pathways to environmental activism using three waves of data from the International Social Survey Program. Given expectations from the theory of planned behavior and value-belief-norm theory, a path model is specified that examines how individual resources, knowledge, awareness of consequences, attitudes, willingness to contribute, and efficacy affect environmental activism. The mediating effect of willingness to pay or make environmental contributions is investigated in detail given previous research. Results demonstrate support for the theoretical propositions across the countries included. The model explains variance in environmental concern awareness of consequences, and attitudes combined affect environmental activism. Moreover, mediating tests were conducted that demonstrate a prominent yet not exclusive role of willingness to contribute in promoting activism across nations, uncovering relations that are masked in previous cross-national research. Results reveal that the model is robust over time and across places, with some exceptions, yielding insights for future comparative and cross-national studies.

Families’ Control and Youth Sexuality As Meaningful to Young Peoples’ Transitions into Adulthood

Nowadays, in Western societies, youth transitions into adulthood are, usually, considered to be a long process. However, some authors point to the importance of continuities, social positioning and the epistemological fallacy in the lives of young people and in the representations of youth and youth transitions into adulthood. Although the family context tends to be recognized as important to young people’s trajectories, sexuality is often forgotten or, even insignificant to their position into adulthood. Thus, sexual transitions can be seen as non-important, disconnected from other transitions, and having no decisive consequences; being just a hobby or children’s play. Based on 60 in-depth interviews conducted in Central Portugal, with 60 young women aged between 18 and 28 years old, I intend to look for possible articulations between family control over young people’s leisure times, sociability and sexuality, young people’s representations and experiences of sexuality, and their transitions into adulthood. I will argue that the family context and the domain of sexuality are not meaningless for young people’s trajectories into adulthood. Instead aspects related with family control, as; pioronality in the analysis of gender relations and sexual difference, and social mechanisms such as gender that called attention for problems related with power in gender relations, male dominance and women submission, commodification of sexual female bodies, sexual double standards or sexual violence, and that brought the personal into the political agenda, I still felt that something was missing in those discourses. Notwithstanding, simultaneously I was reading the work of some social scientist authors point to the importance of continuities, social positioning and the epistemological fallacy in the lives of young people and in the representations of youth and youth transitions into adulthood.

Social and Solidarity Economy As A Real Utopian Design: A Comparative Perspective

Social and solidarity economy (SSE) presents a collective project for another way of organizing the production and the society, in which the economy is subordinated to its social function. Thus, the paper discusses SSE as a real utopian proposal (Wright 1010): its institutional design is desirable in terms of egalitarian emancipatory ideals, such as privileging the collective ownership and control of economic resources and integrating solidarity in the core of economic activities as a means to achieve common goals; it constitutes a viable, and to some extent achievable, alternative to capitalist arrangements, since it has been partially implemented and is active on the political agenda worldwide; it contributes to a pathway of social empowerment, as it involves collective actors taking control of the economy over the capital or the state. However, SSE is also a complex field pervaded by tensions and conflicts. If, on the one hand, it embodies a normative vision for overcoming the hegemony of the dominant system, on the other, some experiences have become complementary or even functional to the capitalist world. The paper results from ongoing PhD research and its purpose is to critically examine SSE, in light of an empirical comparative analysis based on one case from the North (Portugal) and one case from the South (Brazil).

Out of Time: Uchronian and Dyschronian Devices in Social Theory

Social Theory has conceded an important place to utopias, and utopian thought, either as a device to envisage new and just worlds or to imagine dystopian counter examples. However, and despite some brave attempts by Max Weber, particularly with his “Uchronia” (the realm of the nowhere in time) never seemed to enjoy the same widespread attention as their spatial imaginary counterparts. In this paper, based on the contributions of Tarde and Renouvier, I’ll try to signal that Sociological Theory has much to gain by paying a closer look to uchronian thought. First of all, uchronian thought paves the way to a better understanding of causality mechanisms at the macrosociological level, separating the essential traits from the ancillary elements. Secondly, the use of uchronias is particularly helpful in comparative historical analysis, introducing conditional reasoning and “as if” instruments of analysis, offering a clear cut division between universal rules and contextually valid models. Thirdly, analysis of uchronian literature and fictional arrangements modeled by imaginary times (such as SF movies and TV shows) is an important device to assess how societies evaluate current dangers and future risks. Building up dyschronian times (like the ones imagined by Tarde) reflects the way groups and individuals, criticize existing modernities, hierarchize the current arrangements modeled by imaginary times (such as SF movies and TV shows) and think about their possible effects. Fourthly, uchronia asserts the levels of temporal continuity and discontinuity that characterize specific societies, making perceptible the creation of fois, imaginary foundations, communitarian links, and invented traditions. Finally, uchronian thought offers insights on the ways we predict, memorize, accelerate and decelerate time and how we sew the threads that link past, present and future in intelligible ways.

Tortured Bodies, Ravaged Flesh, Killing Machines: David Cronenberg and the Sociology of Disgust

Over the past two decades, reflections on disgust and repulsion have been rippling-up in Social Theory. Moving away from an analysis entirely centred on biological responses to emotional expression, theories of disgust became an important instrument to understand moral boundaries and civilizational constructions. Disgust seems to fulfil a position akin to incest prohibition – adequately universal to be declared biological, and sufficiently particular to be deemed cultural. If the traditional views on disgust revolved around the issues of purity, pollution, and contamination, having the body at the centre stage, some of the contemporary approaches are linked not to external threats to the human integrity but to the transformative capacity of science and technology, breaking barriers, violating interdictions, and destroying moral boundaries. The danger of the body snatchers becomes the menace of the creators of resulsion. Terror and horror movies, tend to epitomize a profusion of disgusting forms of their agonizing forms on the mutilated, raped and transformed bodies of the victims of epidemics, and serial killers or on the creative and uncontrolled hubris of the brilliant but mad scientist that aspires to play a demigurges role in a new but demented universe. This double feature of disgust is paramount on the films of Canadian director David Cronenberg, representing both thecivilizing and uncivilizing roles that disgust can play, especially when linked to scientific projects. If science is seen as a cornerstone of modernity, a civilizing process and symbol of progress and enlightenment, reducing human suffering and enabling longer, healthier and happier lives, it is also possible to see it as a form of boundary crossing of the artificial-natural divide or the human-animal partition. Cronenberg’s filmography is a clear example of how the medical, biological and chemical sciences have entered the realm of disgust, side by side with porn or sexploitation.

Developing a Pattern Language For Science-Engineering-Art-Design (SEAD) Collaborations

Acknowledged similarities and prospective synergies underlie the work of artists and scientists in perceiving and describing the natural world; however, there are few formalized or easily recognized methods to utilize those commonalities for enhancing art-science collaborations. The notion that observable or archetypal patterns could represent a form of communication or a language among professionals from different fields was explored by architect Christopher Alexander, who introduced a pattern language consisting of hierarchically arranged patterns that are linked together in countless ways. Whereas the use of patterns and rhythms to communicate art or music is relatively straightforward, the utility of spatial or temporal patterns to portray or explain scientific data is less obvious. Some branches of science focus specifically on nature’s patterns and rhythms; however, most scientific data can be expressed in terms of frequencies, cycles, and other common descriptors of temporal patterns, as well as distributions, geometries, and similar descriptors of spatial patterns. The use of a pattern language for art-science communication would initially identify and collect numerous patterns to be labeled and categorized, but discernable similarities among seemingly different patterns would likely reduce this number over time. Distinguishing among natural, ideal, and abstract patterns could be a first step in categorization and might provide a handy framework for users to perceive relationships among different forms of information (e.g., ideas, data, designs). The precise structure or syntax of the pattern language (i.e., naming, ranking, illustrating, exemplifying, and referencing patterns) should be less important than an unambiguous depiction of the collected patterns and their links. Patterns and rhythms may be more recognizable to people than are words, numbers, or symbols, thus providing a means of communicating across disciplines and cultures. This paper was presented as a SEAD white paper, and supported by the National Science Foundation under Grant No.1142510.

An Integrative Model for Analyzing Strategic Corporate Social Responsibility in Portugal

Capital increasingly takes the integration of corporate social responsibility (CSR) into account in the development of business strategy. Nowhere has this been more the case than in the European Union, where commissions on CSR have reported and made policy recommendations to the European Parliament. Different firms adopt different CSR perspectives, from denial of any interest to commitment to a long-term CSR strategy for sustainability. The paper identifies levels of engagement that we place on a continuum that we call CSR maturity. Previous studies have neglected the relationship between different business strategies and the firm’s degree of CSR maturity. The research considers the variables underlying commitment to strategic CSR by looking at major companies listed on the Portuguese stock exchange. We are interested in how these companies formulate, implement, and align CSR with business strategy.

A critical literature review of strategic CSR, we present a matrix and analysis grid that distinguishes different types of strategic CSR orientation, and assesses their degree of maturity. The paper includes the findings of a pilot case study that will apply to our ongoing research.

The proposed model identifies six types of strategic CSR by looking at patterns in the company-environment relationship. This matrix serves as a diagnostic and improvement tool for the company to take advantage of CSR as a strategic force that can simultaneously create competitive advantage and social value.

The paper advances understanding of strategic CSR and proposes a model to evaluate the maturity of a firm’s integration of CSR into its business strategy. The research holds special interest at a time when Portuguese capital seeks to balance shareholder pressure to find new markets and sources of profit with strategic decisions on whether to pursue CSR as a viable path to profitability and long-term sustainability.

Examining the Long-Term Effects Families: Preparando La Nueva Generación, a Culturally-Specific Mexican American Parenting Intervention

The purpose of this study is to test the long-term results of the efficacy trial of a culturally-specific parenting intervention called Familias: Preparando La Nueva Generación (FPNG), designed to increase the effects of alcohol and cigarettes for youth participating in substance use. OLS regressions showed significant relative reductions in use of alcohol and cigarettes at wave 3 in comparison receiving only kIR. These effects, however, were completely mediated by anti-substance use norms – youth whose parent also received FPNG had significantly stronger anti-substance use norms, which in turn resulted in significantly lowered amounts of alcohol and cigarettes used. These results are consistent with the Ecodevelopmental Theory and provide further evidence to the theoretical premise that strengthening parent-child communciation of norms can have a positive effect in preventing adolescent substance use. In addition, these results support the assumption that involving parents in prevention efforts has a major effect in strengthen the efficacy of youth-only classroom based intervention. Because FPNG was designed with Latino parents and for Latino parents, FPNG is emerging as a curriculum that can positively impact familial and parent-child influences that characterize Latino youth and families and reduce substance use among Latino adolescents.

Preventing Youth Substance Use and Dependency: The Long-Term Effects of Keepin It REAL in Guadalajara, Mexico

Despite high rates of substance use in Mexico, only 43% of young adults report receiving a substance use prevention program. In response, keepin’ REAL (Man-ténte REAL), a substance prevention program developed in the US for Mexican American youth, was implemented in central Mexico by a bi-national team of investigators. Two middle schools in Guadalajara, Mexico, were randomized into a treatment (N=226) and control group (N=206) condition. Students completed a pre-test prior to implementation, a wave 1 short-term post-test after the last lesson, and a wave 2 short-term post-test 12 months later. Using a path analysis in Mplus on adolescents whose parents also participated (N=462), both direct and indirect effects of participating in FPNG were examined. Findings indicate that participation in FPNG and kIR had a significant direct effect in lowering adolescents’ amount of substance use. For alcohol and cigarettes at wave 3 in comparison receiving only kIR. These effects, however, were completely mediated by anti-substance use norms – youth whose parent also received FPNG had significantly stronger anti-substance use norms, which in turn resulted in significantly lowered amounts of alcohol and cigarettes used. These results are consistent with the Ecodevelopmental Theory and provide further evidence to the theoretical premise that strengthening parent-child communication of norms can have a positive effect in preventing adolescent substance use. From the Family to the Market – the Complexity of the Care Finance

From the family to the market – the complexity of the care finance

The problem of paying for the care delivered to old or disabled persons, because of its complexity, is rather difficult and not very popular. Simultaneously, it creates the significant element of the state’s social policy, sometimes being shaped in the previous political regime and strongly connected with the constitutional guarantee of the special rights given to the dependent persons.

Dependency, despite the development of anti-discrimination legislation and the public perception of disabled, is still one of the main factors of poverty, the stigma and exclusion. Moreover, it affects not only directly a dependent person, but indirectly this persons friends and family, who (in many countries) are legally expected to deliver the care and become fully dependent on the system of public care services. Along the change of economic regime, we can observe the strengthening of the care recognized as a commodity. This care, no matter the source of finance (public or private) has to be bought on the market.

This paper presents the initial effects of the research grant focused on the theoretical model of financing the care delivered to dependent persons, especially in the situation of social structures evolution and resources limitation. This project finalizes the few-year studies on the original theory of the costs of disability, which systematizes the expenses on disability policy and called for transparency and concentration.

The elaboration will focus on the financial situation of caregivers in different social systems. It will compare legal solutions across selected counties, the impact of the financial advantages and disadvantages for the family of dependent person, connections between public and private sources dedicated for care delivery. The discussion over types and forms of care will be tested introducing financial aspects as one of the recommendations.

NGOs in Complex Global Social Governance Arrangement: Drivers of Policy Synergy or Policy Conflict?

NGOs in Complex Global Social Governance Arrangement: Drivers of Policy Synergy or Policy Conflict?

Global social governance is increasingly characterized by complex and fragmented institutional arrangements. In this paper, we study the role of NGOs in these governance arrangements. In particular, we are interested in the question whether NGOs have the potential to be drivers of policy synergy or policy conflict. We understand policy synergy as a situation in which the interaction of different policies leads to more favorable outcomes than would have been achieved independently. Policy conflict describes a situation in which the interaction of different policies results in more negative outcomes than if these
would have been implemented in isolation. To study the impact NGOs have on these questions, we first take stock of their engagement in global social policy and then assess to what extent their role has been adequately captured in the academic literature. In a second step, we examine their potential to influence the institutional integration, norm conflicts, and actor constellations in such a way that either enhances policy synergy or policy conflict more likely. Thirdly we draw on the governance literature to investigate the impact this has on the larger field of global social policy.

Family trajectories and transitions, union formation and dissolution, are strongly linked to or framed by economic and cultural context. In that perspective, family life has to be considered more as a result or the expression of contextual parameters than a universal phenomenon that could be looked at isolated from these parameters (like work conditions, economic assets, etc.). The 2008 financial crisis and its consequences on housings revealed in different countries such a relationship between external macroeconomic factors and family transitions: the case of couples who continue to live together while considering themselves to be separated. We have studied in parallel some of these “living together apart” situations in cooperation with Andrew Cherlin and Caitlin Cross-Barnet. We have collected in different social classes, the main arguments delivered by people concerned with such situations of forced cohabitation. Among them, we identify situations where residential separation is not possible, either because of the need to keep up appearances, often for the children’s sake, or because total separation is too frightening or living in separate homes is unaffordable.

In this contribution, we want to go beyond a typology of these situations to use them as a mean to compare our respective national family culture concerning marriage, divorce, cohabitation. France and USA are effectively two very different nations regarding family issues. The common economic trauma of the financial crisis that we are still facing in our respective countries an is an occasion to reveal these cultural dimensions.

**Managing Organisational Religious Diversity in Finland**

The paper will discuss and analyse how the Finnish public administration copes with religious and spiritual diversity in the 2010s. In the post-World War II times, state’s involvement with religious affairs was on a low level with the exception of the two national churches: The Evangelical Lutheran Church of Finland and the Orthodox Church of Finland. During the 1990s and 2000s the presence of different religious traditions and organisations has grown considerably. The main contributors to new religious diversity have been (1) Pentecostal and Charismatic Christianity, (2) religions of immigrants and (3) New Age and similar types of spirituality. Simultaneously the historical churches have experienced continuous secularisation. There has been both a novel interest in religious affairs by the Finnish public administration and a shift of governing religions from church law to networks (e.g., representative councils, interfaith associations). The new model does not only challenge the historical church–state relations, but it works alongside it. The paper argues that in order to analyse how states’ aim to regulate and manage contemporary religious diversity, we should look at how the historical church–state relations function together with new forms of governance networks.

Black Ethnicity and Rethinking Assimilation Theories: A Multilevel Analysis of Housing Values Among and Between Whites and Native- and Foreign-Born Blacks in the U.S

Black-white residential segregation is still a reality in America. Research shows black homeowners are more segregated from white homeowners than black renters are from white renters. The findings have been interpreted to mean blacks do not benefit as much from home ownership because home ownership does not lead to greater access to white space. Implicit in this interpretation is the mistaken belief blacks ultimately desire residency in white neighborhoods and home ownership in said neighborhoods is evidence of the completion of the assimilation process. Focusing almost exclusively on home ownership as an indicator of assimilation is inadequate. To accurately understand whether blacks are assimilating, housing values must be analyzed. If blacks are assimilating the gap between them and the dominant racial group should decrease over time. Using census-based data for the past few decades, the present study examines the following research questions: 1. Are there racial disparities in housing values for blacks and whites and how have they changed over time? 2. Are the racial disparities larger or smaller between whites and foreign-born blacks or between whites and native-born blacks? 3. What social and demographic variables account for the variations in housing values by race and by ethnicity? 4. What are the theoretical and methodological implications of the study findings?

Gender Inequalities in Health and Socioeconomic Status: Analysis through Healthy Expectancies in the Basque Country (Spain)

In the Basque Country, like in most societies, women survive longer than men but are less healthy. However, several authors have criticized this fact as being too simplistic and not taking into account that men and women are heterogeneous groups. It is necessary to study gender inequalities in health consider other variables such as educational level, social class or age that can explain this gender gap.

The aim of the present paper is to examine gender inequalities in health and their change in the Basque Country considering two variables of socioeconomic status, and healthy expectancy as the main result variable, which integrates health and mortality. This measure also allows separating life expectancy into years of life in good and poor health. Educational level and a deprivation index of the residence area were used as socioeconomic status variables. The last one summarizes four characteristics of census tracks (unemployment, manual and eventual workers, insufficient education overall and in young people). Health expectancy is calculated in two periods (1996-2001 and 2001-2006). Women lived more years than men at all ages, periods and social groups, but the gender gap varied by age and social position. Thus, differences between men and women were greater as the level of education decreased or increased the deprivation index. The difference in the number of years between men and women was lower when considering only the years in good health, so that women lived more years in poor health. The gap between men and women decreased in the second period comparing to the first. A comprehensive vision which integrates gender and socioeconomic inequalities is necessary to adequately understand the health differences between men and women.

Gender, Ageing and Everyday Life: Visually Representing the Body

As people grow older, daily norms and practices can be disrupted, the taken for granted nature of embodiment challenged, and people may increasingly be required to make sense of bodily changes in order to maintain and/or re-negotiate their identities. Drawing on the findings from an empirical study Photographing Everyday Life: Ageing, Lived Experiences, Time and Space funded by the ESRC, this paper explores the significance of the body in everyday life for 62 women and men aged 50 years and over in the UK. Participants took photographs of their different daily routines to create a weekly visual diary, which was explored through in-depth interviews to make visible the rhythms, patterns and meanings that underlie habitual and routinised everyday worlds. This paper explores the ways in which lived experiences of gender and ageing intersect and are performed and represented through the visual accounts of participants about their daily lives. In doing so, it focuses on two key aspects: (1) the ‘everyday’ appearance and body practices of participants visually depicted – which include work done on and with the body, through engagements with clothing, hair, make up application and shaving; and (2) representations and discussions of dieting and weight loss. The paper further highlights the potential disruptions, bodily betrayals, and moments of flux, in experiences of constructing the body in everyday life, and in representing the body through the visual. In the second part of the paper, we present the commonly occurring linked representations discussing their daily practices, indicate that the body is a process of ‘becoming’, a continual bodily ‘project’ (Gill et al., 2005), which is both socially and physically constructed through the practices participants engage in to maintain, discipline, and work on and with their bodies. The paper overall highlights participants’ negotiations of, and sometimes resistance to, dominant ideas and discourses surrounding gender, ageing and the body.

MARTIN-MATTHEWS, ANNE* (University of British Columbia, amm@mail.ubc.ca)

Cultural Representations of Widowhood: Social Media and the Declaration of a Status

The lens of widowhood research has moved from a focus on role loss to challenge dominant public narratives of misery and decline, pointing instead to a complexity of experience rooted in personal biography and in gendered life course. Cultural gerontologists promotes further enquiry into mainstream sources of scholarly knowledge in the social sciences, to reveal an even more complex and varied picture. Theatre and film have emerged in some cultural contexts as powerful tools to inform and emancipate widowed women from degrading widowhood rituals and norms. In addition, the rise of social media, websites and interactive messaging, has transformed public representations of widowhood. While older women in particular have traditionally had access to a reference groups of widowed age peers, the defining quality of those interactions is different from the new world of social media. As with structured social groups in the past, these interaction bursaries outside the mainstream, brought together in structured situations through the widowhood status they have in common. Through social media, contact begins more anonymously (visiting websites, reading blogs) or highly publicly (creating a website, authoring a blog, filming an online video) and then may lead to interactions and connections beyond one’s local community – through widow conferences and meetings, with some becoming sustained interactions. In historical context, one thus sees, over the period of about 75 years, cultural shifts from the public ‘wearing’ of one’s widowhood (widow’s weeds and other aspects of dress and appearance) – that ended by the 1930s; to the subsequent ‘invisibility’ and denying of widowhood and bereavement for some decades; to use of social media as a declaration or even reaffirming of widowhood, especially amongst younger women, those for whom widowhood is off-time, or for those experiencing dis-enfranchised grief.

Indigenous Female Farmworkers in Northern Mexico: Workers’ Rights Violation Under the Veil of Better Jobs

In Mexico the implementation of macroeconomic policies has resulted in the indigenous population experiencing great disadvantage, being deprived of benefits and subject to profound inequalities. Despite the fact that in the northern Mexican states living conditions are generally better than in the rest of the country, development is unequal and inequitable. This situation particularly impacts the female indigenous population that works in the agricultural fields in northern Mexico, as reflected in their low educational levels, unemployment or unstable employment, inadequate housing, poor nutrition, lack of social support and great poverty.

This paper discusses the point of view of female indigenous farmworkers in terms of social inequalities and their effect on living conditions. It is based on research conducted over three years in an agricultural valley of the state of Baja California, regarding working conditions, workers’ rights and the health of indig-
enous women who work in the agricultural fields. Using qualitative methods, the objective of this research was to recover the voices of the farmworker women regarding the inequalities to which they are subject.

The instability and insecurity of their employment produces and guarantees a docile and inexpensive work force, thereby permitting companies to reduce the financial risk implied by the cost of guaranteeing work and benefits. This situation reflects the invisibility of these women in the eyes of the state, which leaves them in a condition of social vulnerability. The asymmetry of social relations explains how the state can offer low-quality services to this population and reduce their working conditions and salary opportunities. The socioeconomic vulnerability in which this population is found is reflected in job insecurity and the inability to defend themselves against the state.

MARTINEZ, MARIA* (Universidad del País Vasco, maria_m_g@hotmail.com)

The crisis has had a big impact in Spain and specially on those who were already in increased precarity situations as women. But in order to understand women's situations in a time of crisis, we need a longitudinal analysis that show us the weaknesses of their living conditions and the precarization of their living conditions in the last years. The aim of this paper is to analyse the evolution of women's living conditions and the process of precarization in Spain between 1995 and 2010. We will address the common hypothesis that women constitute a more precarious social group than men, and we will try to complexify it in order to analyse that hypothesis. In a first moment, we will analyse women as a precarious group as a whole by using other recent researches done in Spain around mainly the work and labor conditions of women (Borderías, Carrasco y Torns, 2011; Torns, 2012) and the exploitation of statistical data, but we will try to look into differences among women in a more detailed way. The role of social networks and how they contribute to a new sense of Japaneseness.

There are several public myths about squatting houses and social centres. One of them is based on the idea that squatters are the unique agents, authors and responsibles of the squatting movement. From Latin America to Spain, Migrants Trajectories of Integration

From Latin America to Spain, Migrants Trajectories of Integration in a Rural Province

Recent migration patterns are characterised by their global nature and the preference for urban destinations. In Spain, immigrants tend to settle in the main cities of the country. From Latin America to Spain, Migrants Trajectories of Integration in a Rural Province

Recent migration patterns are characterised by their global nature and the preference for urban destinations. In Spain, immigrants tend to settle in the main cities of the country. Social network play an important role in both the decision to emigrate and the choice of destination. Understanding this process and the relevance of identity within the Japanese community can help prevent inter-group and social conflicts as well as promote a multicultural society.

and Gracia AC-90 Community Social Support Questionnaire and open questions were employed. ANOVAs analysis showed significant differences in community integration and participation in accordance with socioeconomic, motivational and social interaction variables.

Results show that given the changes in lifestyle, customs, language, etc., the peer group, the family and the neighbourhood give the base from which feelings of self-esteem and self-efficacy are derived, although contact with local people (Spaniards) is one of the main agents of social support; it is therefore important to examine the relationships that are established between the indigenous populations and the immigrants. Prejudices and stereotypes are easily established in a climate of mutual ignorance and isolated rural enclaves are no exception. In addition to policies of control and regulation, Spain's immigrants require support in the development of the processes of integration and peaceful coexistence.

Being Wives, Mothers and Sisters in the Absence of Men: Bargaining Power of Women Left behind on Oaxacan Rural Areas (Mexico)

This paper analyses how men's international outmigration affects traditionally extended gender family dynamics in some indigenous areas of Oaxaca (Mexico). From the late 1970’s, not just the individual but the family or the household has been considered the most appropriate decision making unit to understand how migration and development are linked. Since then, gender dynamics in rural sending areas have been mainly analyzed in terms of marriage transformations. However, other relevant family relations have not been widely studied. This paper highlights the importance of including mothers and sisters of migrated men to completely understand how traditionally gender norms and discourses, especially those related to inheritance and access to land, reproduce or change in rural Oaxaca. The main argument of the paper is that son’s and brother’s migration along with other co-acting processes has broken down the traditional system of protection based on son’s inheritance. It is also argued that mothers try to build new family alliances with their daughters to be cared for old age. In terms of marriage, the paper shows that changes in wives bargaining power must be seen within a cultural context to really understand if women did improve their situation. It was noted that in the Mexican context, without establishing direct causality relations as women’s paid work greater bargaining power.

Two Oaxaca communities were selected following 5 criteria: rural areas, indigenous communities, high-medium index of poverty, and men’s migration to USA and finally uses y costumbres (ruled by indigenous customary law). The methods used to carry out the investigation were long interviews, to measure shifts on gender discourses and the analysis of quantitative secondary database, to measure functions and capabilities.

On the Relation Between Well-Being and Communication: The Ethical Turn in Conceptualization of Communication with Case Analyses of Negotiation and Decision-Making in Peppfar

Conceptualization of communication has a crucial effect on communication itself and on communication research. This paper explores how communication affects and is affected by psychological well-being with case examples from an HIV/AIDS international treatment program (PEPFAR) implemented in Southern Africa. It calls for a re-evaluation of Weaver’s metaphor on communication as exchange of information and develops Buber’s and Peters’s ideas on communication as a manifestation of the ethical, where the ethical is described as openness to otherness. Communication is viewed as a tension between reproduction of Self with alterity. Mutuality is not viewed as a necessary condition for the ethical because it involves intimacy that can only be discretely expressed. It is assumed that the end of theocidy is not the end of the ethical because the ethical is a space of profound intimacy, beyond the preachment. Extreme cases of annihilation of others can create the expectation that violence towards others, and have deeper roots than modernity. The paper identifies challenges for the ethical turn in communication such as patriarchal order, implantations, influence of the ego, dehumanization, isolation of larger contexts, traumatic disorders, and states of denial. It also identifies what enhances communication as an ethical process: reciprocal adaptation, intercultural communication, nurturing of hybrid cultures, and distance taking techniques such as time, distance, attention/topic shift, emotions such as feelings of awe, and art. Case analyses of negotiation and decision-making in PEPFAR are discussed. Implications of effective interpersonal & intercultural communication through the process of reciprocal adaptation for program success, reduced participant stress, and higher participant morale and psychological well-being in HIV/AIDS treatment programs in Southern Africa are described.

Collective Rights to Life and New Social Justice: Lessons from Latin America

For a long time, the basic legitimation of capitalist power was the private power ideology revealed by the rights of the elite to privatize collective and natural resources. This privatization strategy was central to pointing out another dogma, that is, the idea of inexhaustible resources supporting unlimited accumulation. However, the social and political recognition of the exhaustibility of resources is a recent development. Latin-American economists such as R. Prebisch who noted that international economics is not only an economic problem but also a political issue. Thus, it is possible to understand the priority given to collective and natural rights in public policy management. Latin American cases, particularly Bolivia’s, are interesting ones to reflect about this change of development paradigms.

Intellecuals and Development: Reflection from Diverse Latin America Statesments

Intellectuals and development: reflection from divers Latin America statesments

Paulo Henrique Martins

Summary: In this paper I will try to reflect about two points: the difference between economic growth and development, on the one hand, and the existence of regional statements about development, on the other. The first point is important to remark that the idea of development in Latin America is connected to the traditional criticism about imperialism and dependence. This understanding is particular to the region and it was born in the World War II when Latin-American economists such as R. Prebisch who noted that international economics is not only an economic problem but also a political issue. Thus, it is impossible to generalize this understanding of development to others continents but it is very important to try to compare some different processes. The second point is that the idea of development in the region is linked to the idea of power system, because what is developed is not the country but the power. Then, in this sense, it is possible to define some different development patterns in Latin America that reflect some possibilities of alliances between social and political forces that contribute to organize national power systems in the last decades. To demonstrate our papers we will try to show the differences and similarities between Brazilian and Bolivian cases. It is important to show the relationship and
Intergenerational Relations in Rural Tamil Nadu: Grandparent – Grandchild Relations from the Perspective of Grandchildren

The bond between grandparents and grandchildren is of special interest as it involves a relationship cutting across generations. Grandparents are in a unique position to offer love, advice and receptive ear enhancing their ability to provide emotional support. Their financial aid at critical junctures is not uncommon. In the absence of or inability of parents, the adult grandchildren generally provide care for their grandparents. In the absence of established expectations, obligations and rights permits both in the dyad have enough flexibility to build their relationship tailored to their needs and wishes while allowing freedom to minimize their contact or withdraw from the relationship.

The present paper examines the intergenerational experiences in terms of proximity, contact, time spent with, engagement and exchange from the perspective of 304 grandchildren residing in 9 villages in two districts of Tamil Nadu, India. The districts and the villages were selected using lottery method and the respondents were selected by systematic random sampling from interviews method was used to elicit data. Analysis provided percentage, mean, paired analysis of difference and analysis of variance.

The findings reveal lineage and sex of grandparents are significant factors in shaping grandparent-grandchild relationship. In general, proximity, contact, time spent together and degree of exchange are greater with paternal grandparents than with maternal grandparents. Likewise grandchildren have greater integration than grandmothers. However, age and sex of the grandchildren play an important role. The findings also underpin the role of joint family and large family size, which may imply joint living with grandparents, in enhancing the quality of inter-generational relations.

Mobile Precarious Workers? the Case of Post-2008 Latin American Onward Migration from Spain to the UK

Contemporary studies on intra-EU (European Union) migration have paid increased attention to forms of secondary mobilities, either in the case of mobile European citizens or, more significantly, in terms of third country migrants who have acquired citizenship in one Member State and subsequently migrated to another. This paper will contribute to this area of research by focusing on the case of Latin American secondary migrants with EU citizenship who have undertaken onward mobility from Spain to the UK post-2008. Existing studies have found that, for Latin American migrants, it is common to enter the EU via Spain, Italy and Portugal, where they expect obtaining citizenship to be easier, e.g. through historical and family connections. However, subsequent onward mobilities seem to have become more common after the onset of the financial crisis and its harsher consequences in southern EU countries. Drawing on a small-scale transnational project involving secondary data analysis and 25 semi-structured interviews with key informants from Latin American migrant voluntary organisations and statutory services working with migrants in Spain and the UK, this paper will explore the emerging picture of the contexts, causes and motivations that underlie these increased onward mobilities and the situations faced by secondary migrants and their families when settling in the UK. Despite these secondary migrants’ hopes of escaping financial difficulties and unemployment in Spain by making use of the right to free mobility which they have acquired with their European citizenship, the emergence in the UK has been fraught with initial arrival problems (i.e. lack of language skills, access to jobs and housing) and the vulnerabilities of joining many fellow Latin American migrants’ socially disadvantaged position as precarious workers in the UK.

Pakistani Immigrants in Central Brianza’s Small Cities (Italy): The Ambivalence of Ethnic and Non-Ethnic Forms of Incorporation into the Catholic Social Knit of an Industrial District

The paper focuses on Pakistani immigrants’ social placement in an area of small cities in central Brianza, up north of the Milanese metropolitan area. The dif- fused territorial model of immigrant incorporation in Italy – with a significant presence of immigrants out of the main metropolitan contexts – and the great variability of local governance schemes, qualify such areas as an especially suitable context to inquire the relation between migrant communities and local regulatory practices. In this paper we focus on a small city – Desio – and its surroundings, belonging to an homogeneous area in terms of immigrant composition, economic structure, political and cultural tradition. International migration has become more and more significant, producing one of the higher concentrations of Pakistani citizens in Italy. Immigrants found employment as both unskilled and skilled workers in the small cities which stretch all over the Brianza territory. Over a decade, consistently translocal networks have spread over there, most of them originating from a specific area of Pakistani Punjab. The paper aims to explore the relational everyday life emplacement of Pakistani immigrants in the local context, as it takes place through ethnic and non-ethnic forms of incorporation shaping citizenship practices and policies - practices regulation - are crucial elements affecting sociability with the house and the home area. Aspects related to housing tenure, processes of self building and care, forms of cohabitation, various uses and forms of private-space/publicness of the domestic space, will be analysed in order to account for differences in housing and urban fields.

Ambivalence of Ethnic and Non-Ethnic Forms of Incorporation in Italy – with a significant presence of immigrants out of the main metropolitan contexts – and the great variability of local governance schemes, qualify such areas as an especially suitable context to inquire the relation between migrant communities and local regulatory practices.
Recent events including the Global Financial Crisis and the BP Texas City refinery disaster have highlighted that incentive structures for senior executives work against process safety. Equally, the Global Financial Crisis was found to be precipitated by people whose behaviour was a direct consequence of their financial incentive regime. Financial incentive structures have long been used to influence professional values and practices, and at their core are assumptions about the nature of human motivation. Neo-classical economic theory starts from an assumption that people are rational, self-interested calculators and therefore respond in predictable ways to financial incentives. By contrast, work from within sociology has emphasised a breadth of human motivation beyond self-interest.

This paper engages with this debate both empirically and theoretically in the context of the present and potential role of incentives to manage major accident risk in hazardous industries. Incentive schemes are one way that organisations are seeking to manage complex technologies that have extensively depended on militarization and subsequently relied more heavily on surveillance technologies to monitor its citizens in the name of security. It can be contended that the purpose of surveillance technologies and the militarization of Canadian society post-9/11, is a precursor to greater government control; constructing ideal citizens that are ‘governmentable’ and can benefit the government by giving up certain freedoms, supporting government initiatives aimed ostensibly at securing citizen safety. This logic fits in nicely with narratives that argue there is no end to the ‘war on terror’ and therefore countries like Canada will continue indefinitely to militarize and rely on surveillance technologies. This proposed paper will examine sociologically the relationships between on the one hand, popular discourses and practices of militarization, and on the other, the adoption of surveillance systems whose software and hardware have become routine aspects of negotiating everyday life for all citizens. While government uses such risk management knowledge to secure, decisions, evaluations of the latter are overwhelmingly driven by economic rationalities, very often at the detriment of adequacy, security and equity. On the other hand, social policy literature mostly focuses upon the consequences of these decisions on pension income, rather than upon the governance of pension funds investment decisions that cause them. The paper argues that research on pension funds governance is either driven by economic rationalities, or focused upon insulated aspects of governance or regulation or the role of actors involved into decision-making. Within the latter, I aim to adopt a holistic approach in order to deconstruct the way in which actors interpret regulations and proceed to pension funds investment decisions, along with their implications for pension systems objectives.

MASOODI, MOHAMMED M.* (Queen's University, m.masoodi@queensu.ca)

Risk Management: The Effects of Militarization and Surveillance within the Canadian Context

Since the inception of the ‘war on terror’, Canada has been among the group of democratic countries that have felt the effects of militarization and subsequently relied more heavily on surveillance technologies to monitor its citizens in the name of security. It can be contended that the purpose of surveillance technologies and the militarization of Canadian society post-9/11, is a precursor to greater government control; constructing ideal citizens that are ‘governmentable’ and can benefit the government by giving up certain freedoms, supporting government initiatives aimed ostensibly at securing citizen safety. The Ice Factor: The Resignification of the Grasshopper

This paper offers a theory of cultural innovation derived from engagement with Saussurian semiotics, Sahilin's analysis of Western industrial food production, and Judith Butler's performativity of gender. Marshall Sahilins (1978) set out to turn historical materialism on its head by demonstrating that the industrial complex of meat and protein production is organized around the cultural logic(s) of the edible, around understandings of humanness and cultural proscriptions such as the incest and cannibalism taboos. "Edibility is inversely related to humanity," he argued. Particular animals such as horses and dogs, and the internal organs of edible animals, are closely associated with humanness, and the idea of consuming them precipitates feelings of disgust and betrayal. Sahilins was right that edibility is related to understandings of humanness. However, in addition to symbolic proximity, too much symbolic distance, such as in the case of the grasshopper, may also produce feelings of revulsion and disgust. In this paper I develop a theory of cultural innovation, whereby objects associated with disgust may be transformed into objects connected with enjoyment, pleasure, even edibility. An insect on an American dinner plate, except in rare and select places, represents "matter out of place" and will produce a ritual cleansing of the plate. Variable across time and culture, the signifier of the grasshopper has been associated with pestilence and filth. Nonetheless, efforts to resignify these creatures are currently taking place. The challenge is overcoming "the ice factor" - the eyes, the wings, the legs... people won't accept it beyond novelty," one proponent, or agent of resignification, stated. Building on the above as well as on Douglas and Durkheim, I examine contemporary efforts to place bugs and grubs on American and Western European dinner plates, or to turn these creatures into "mini-live-stocks," ones that are interpreted as not merely edible but as desirable.

MASULO, JUAN* (European University Institute, juan.masullo@eui.eu)
Building Local Peace in the Middle of a National War. Community-Based Noncooperation Strategies in Colombia's Civil War

Despite of the high risks involved and the high levels of uncertainty, unarmed civilians organize themselves to collectively defy armed groups in order to avoid displacement, seek protection from violence, reclaim autonomy over daily affairs, and/or build local zones of peace in the middle of war. This paper presents findings from an empirical analysis of two communities that, in the midst of Colombia's civil war, chose noncooperation as a strategy to cope with war and live a life free from armed groups' violence and rule: the Peace Community of San José de Apartadó (PCSJA) and the Peasant Worker Association of the Cararé River (ATCC). The aim is to explain what determines communities to choose noncooperation over other possible responses by examining in detail rational, emotional and moral considerations behind the choice. Mechanisms such as pay-offs reassessment, belief (transformation), anger and resentment, norms of reciprocity, and moral outrage are spelled-out. Attention is paid to both the capacity and the desire to defy armed groups, and both explore rational, moral and emotional considerations behind the choice; attempt to explain the determinants of variation in the form of noncooperation. The paper focuses on the ATCC declared itself neutral without any bargaining with armed groups, the ATCC negotiated its noncooperation strategy with armed groups. The aim of the paper is, therefore, twofold: explain what drove these communities to choose noncooperation over other possible responses (e.g. flee, obey, actively collaborate) and explain the determinants of variation in the form of noncooperation. The paper explores rational, moral and emotional considerations behind the choice; attention is paid to both the capacity and the desire to defy armed groups, and both pre-war conditions and processes that are endogenous to war are analyzed. A unique dataset on violent events at the village level and two rounds of fieldwork, including individual and group interviews and memory workshops, inform the analysis of the emergence of non-cooperation in warzones.

Japan's New and Old Concept of Ethnic Policy with a Comparison to a Multicultural Policy

Globalization has changed Japan's population composition significantly by the 1990s as a result of the arrival of a relatively large number of foreign workers for the manufacturing industry. This prompted the development of the concept of "Co-Living among Many Cultures" to facilitate the settlement of new foreign residents who have come mainly from South America and China. Many of the residents have taken up permanent residence or citizenship, instead of remaining as foreign residents on temporary visas. Japan's long and long settled Korean community who have been treated unjustly in the past are reacting cautiously to the new concept of "Co-Living Among Many Cultures".

A new issue affecting the experience of Japan's growing Chinese population is the rise of China-Japan tensions which also poses a challenge to the new co-living policy. A major aspect of the troubled relation is the emergence of transnational political action, including the Beijing Olympic torch relay incidents. Such incidents, as widely reported in the Japanese media, have triggered concerns among Japanese in general who treasure "Wa", or harmony and peace, a traditional Japanese value and practice.

In this presentation, I would like to point out what the Japanese new concept "Co-Living Many Cultures", the traditional philosophy "Wa" and the Australian "Multicultural Policy" concept have the common idea despite significant differences in demographics and ethnic relation policies in the in two countries.

Building the National Identity through the Religious Identity in R. Macedonia

After getting independence, in R. Macedonia the national sense of identity is followed by the religious sense of identity. The religion is classically sacral: "love all other nations as you love your own". We will emphasize that in fact a nation is an act of faith and believing. Through faith persons better understand characteristics of their own nation. Therefore in R. Macedonia, as a rule, representatives of ethnic communities form their own national identity while the Orthodox Church declared itself neutral without any bargaining with armed groups, the ATCC negotiated its noncooperation strategy with armed groups.

The Macedonian state as a world institution took the leading role in preserving the national identity of the Macedonian people in their entire history. It kept and secured the Macedonian identity in the most difficult battle for the Macedonians that in 1991 it was forgotten and suddenly everybody in R. Macedonia was proud of being a subject of the Macedonian ethnic community. In that moment the Macedonian state as a world institution took the leading role from MOC, as a sacral institution.

Corporate Initiatives for Sustainable Development: Some Case Studies and the Task Ahead

Corporate Initiatives for Sustainable Development: Some Case Studies and the Task Ahead

Sustainable development aims at environmental protection, social well-being and economic development. Over the years, corporate houses have realized that it is in the interest of business to operate within a healthy environment and economy and that sustainable development must be perceived as an integral part of business. This paper highlights the initiatives taken by leading corporate houses for sustainable development. These corporate include Apple, Cipla, McDonald, Philips, HUL, Reliance, Tata Group, Panasonic, ICICI Foundation and Bajaj Group. The study reveals that environmental excellence has become a part of corporate strategic thinking. However, in spite of all the initiatives with respect to sustainable development, the picture is dismal and shocking, not only in India, but world over. The three goals of sustainable remain unachieved to a significant extent. It is reported that 40% deaths globally can be attributed to air, water and soil pollution. 925 million people are under nourished. 30 trillion kg carbon dioxide equivalent greenhouse gases is released into the atmosphere. Further, rural-urban inequality is increasing while 15% of the world’s population goes to bed hungry. The author suggests the need for adopting a holistic approach towards sustainable development and the relevance of Mahatma Gandhi’s Universal Trusteeship concept. The culture and mission of the business enterprise must be aligned to gether. A sense of mission and social goal for the organization needs to be developed. The paper suggests a model which takes into account the economic, social and environmental aspects of sustainable development which rests on the belief that sustainable development is a pervasive philosophy to which every participant in the global economy (industry, community, government, NGO’s etc.) must subscribe. Structural Social Support: Insights from Sociograms of Aging Individuals

The objective of the present study was to understand the structural social support and social network of the aging persons using sociograms. The study was based on a sample of 109 Indian respondents on whom were identified significant snowballing technique and following clear inclusive and exclusive criteria of selection. The sample was classified on the basis of working status (pre-retired, retired and post retired) and gender. Respondents completed the short form of Social Support Questionnaire (Sarason et al 1987). The items assessing the number of persons were considered for exploring structural social support. The sociograms were analyzed (one sided social dependence arising from the respondents towards others) on the basis of number of persons in social network, frequency of dependence and nature of dependence. The number of persons remains similar across working groups and gender however the nature of dependence changes dramatically. It is revealed that social network of the pre-retired group is predominantly family centered where spouse is perceived as most important support system followed by children, friends, relatives and siblings. For the retired persons, spouse support is critically important. Contrarily, the post-retired depend more on themselves under different situations which require support from others. The importance of supportive neighbors and same sex friendships increase significantly for post-retired males whereas family (children, grandchildren and relatives) remains the pivotal support system for the post-retired women. Changes in the nature of structural social networks with respect to dependence on others, gender diversity in support networks, frequency of seeking help, availability of support, intergenerational support and emergence of personally satisfying leisure activities emerge as a result of aging process and remain different for both men and women across time. Subjective Assessment of Happiness and Dimensions of Social Support: Empirical Insights

Subjective Assessment of Happiness and Dimensions of Social Support: Empirical Insights

Subjective assessment of happiness maintains that happiness is a global and subjective measure of whether a person is happy or unhappy (Lyubomirsky and Lepper, 1999). Social support networks and perceived level of satisfaction from support networks contribute to happiness. The present study aimed at exploring relationship between subjective happiness and dimensions of social support (structural: number of persons, and functional: level of satisfaction). The results indicated that structural social support is positively and significantly related with subjective happiness (r = 0.291, p<0.05) for ageing males whereas functional social support is positively and significantly related with subjective happiness (r = 0.327, p=0.01) for ageing women. However, the importance of diverse support networks for ageing males and an enhanced level of perceived satisfaction for ageing women as related with subjective happiness is reflected. Subjective happiness is positively and significantly related with both the dimensions of social support in post-retired and post-retired persons. Perceived level of satisfaction becomes critically important when people retire. Conversely, due to changes in family structure, death of spouse and loss of companionships; subjective happiness remains unrelated to social support in post retired years where as a sense of personal liberation and interest in personally meaningful leisure activities surface for both ageing men and women. Keywords: Happiness, Social Support, Satisfaction, Social Support

The Interplay Between CEDAW, the Brazilian Women’s Movements, and Global Feminisms Agendas

In this paper we investigate how Brazilian women’s participation in transnational feminist networks and the UN Conferences on Women and Brazil’s ratification of CEDAW have profoundly shaped the two more recent waves of the Brazilian feminist movements: third wave of the 1980’s and the ongoing fourth wave. Our paper presents a case study of the interplay of the national and transnational dimensions in shaping women’s movements. The third wave of the Brazilian feminist and women’s movements encompasses the civic participation of Brazilian women from the third wave in the national (the Secretariat for Policies for Women), state and city levels. We argue that the reciprocal impact or feedback mechanism between transnational feminism and the Brazilian feminist movements can not be overstated. Brazilian women played a key role in building a broader and inclusive agenda for transnational feminism – currently relevant in the intersectionality of gender, race, class, and sexual orientation, CEDAW also was utilized by Brazilian feminists as a crucial tool to legitimize a very broad intersectional agenda. Based on our case study of the Brazilian feminist movement and CEDAW, we would like to argue that the feedback mechanism operating between local, national and international agendas have proved crucial to the growing intersectionality of gender, race, class and sexuality of the feminist movement worldwide. In sum, we would like to suggest that globalization and localizing the global should be at the center of both feminist activism and scholarship.

Informal Support Networks and Female Career Continuity

Female Japanese workers who have chosen to play multiple roles, such as those of wife, mother, and paid professional, often experience difficulty in career continuity. Some research and theory suggest that public policies that promote gender equality, childcare, and nursing leaves have positive effects on the career continuity of working women. Nevertheless, the impact of informal support has not been empirically evaluated.

In this exploratory study, I focus on informal networks among female workers. Affirming the importance of supportive networks, I explore how they relate to female career continuity in Japan. In order to accomplish this objective, I collected interview data on female informal support networks from persons in charge of personal or gender issues in 22 Japanese companies or associations. My major findings are that these informal support networks have three principal functions: collecting and disseminating useful information on career development, offering

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
emotional support in times of trouble, and providing role models for working women. Given the countermeasures to the dismissal or resignation of female workers in recent years, these findings can be utilized to examine the effect of informal networks on working women, which, in turn, may improve the social status of female workers and gender equality in the workplaces in Japan.

Reconciling Work and Family: Do Japanese Fathers Take Advantage of Policies?

Japanese working parents today are entitled to various work-family-balance support measures such as parental leave, nursing leave for children, and shorter working hours. However, studies reveal that most working fathers in Japan fail to utilize such policies.

The primary purpose of this paper is to further explore the reasoning for Japanese fathers to reject or abstain from using the aforementioned workplace support measures. Furthermore, some critical factors including workplace culture, and the values and beliefs of Japanese fathers must be analyzed, in order to understand their reasoning for justifying their practices.

This study is part of a collaborative research project of work-life-balance led by B. Hobson and others in the European Union. The data was collected from face-to-face interviews, which were conducted in the Kansai area between April and November in 2010. There was a total 104 respondents, which included 51 women and 53 men. All of the respondents were dual-working parents with preschool aged children.

The results of this study showed a number of ways in which the fathers discussed their work-family-balance related practices. Among the 53 Japanese fathers, an estimated 40% of fathers worked more than 50 hours per week and a majority of them worked longer hours by “their own choice”. Moreover, in most cases, fathers were afraid of burdening their workplace by altering their work plans, due to family needs. Some fathers also had fears of damaging their career by actively utilizing paid leave and child care policies. However, there were some fathers who chose to prioritize family over work. Reasons for this include: wives being distressed or child care needs. These fathers appeared to have more bargaining strength or the ability to overcome workplace critics.

The Issues Related to Care-Giving Conducted By Male in Japan

The issues related to care-giving conducted by male.

-Through the example of a husband and the son caregiver participating in the self-help group-

MATSUI, Yuka

Recently, the number of men caring for their wives or their parents has gradually been increasing in Japan.

In this study, I will first summarize current status and difficulties of male Japanese caregivers. Then, I pay attention to a meaning of the care experience of the male caregiver and survey care in Japan and a relationship of the gender.

Traditionally, family care has been thought of as a female role, so the existence of male caregiver has been largely overlooked. However, according to the latest investigation, one of three people of the family caregiver is a male.

Therefore this study interviewed it for a male caregiver and investigated it and investigated a meaning of their care experience.

As a result, I understood that a male caretaker faced various problems.

Their problem is difficulties with continuing work and doing housework, and the reduction of local relations, enclosure of the care, difficulty of talk of the problem.

So they had a risk of the abuse for the family.

And they got possible to arrest a self objectively by participating in the self-help group and evaded a risk of the abuse.

This study showed that a support function for them that a self-help group was apt to stand alone. This study explained that their problem is affected by a gender model.

And they experienced an identity crisis as the man through taking care of their family. However, there was the man who got new identity as the caregiver after having experienced an identity crisis in them.

The existence of such a male caregiver may reorganize care and relations of the gender.

Structural Disaster and Infinite Responsibility behind Institutionalized Forbearance

This paper attempts to elucidate the hidden social mechanisms of “structural disasters” involved in the Fukushima nuclear accident with a particular focus on the aspects of problems that go beyond the widespread dichotomous framework...
of perpetrators versus victims, from the viewpoint of the sociology of science and technology. In particular, this paper brings out the process through which double under-determination has influenced the formulation, implementation, and evaluation of public policies preceding and following the Fukushima accident.

Three points are made based on the analyses of the guidelines for the utilization of SLDF (The System for Prediction of Environment Emergency Dose Information), of the organizational structure of the Governmental Examination Committee on the Fukushima accident, and of the siting of facilities for the disposal of HLW (high-level radioactive waste). Firstly, the social mechanism by which “institutionalized forbearance” to secrecy causes serious damage to third parties without breaking laws or moral ethics is revealed. Secondly, the paper illustrates the way in which the organizational structure made up of both investigators and stakeholders tends to carry over structurally originated problems and reproduce them. Thirdly, the paper highlights the possibility that social decision-making, with a very long-term horizon and high degree of uncertainty, can bring about infinite responsibility, and eventually lead to collective irresponsibility.

Based on the insight into the novel dimensions of these three social mechanisms, which have been difficult to understand by utilizing the framework of perpetrators versus victims and its variants, the paper argues for the importance of evaluating and allocating social responsibility to ex-ante expertise rather than ex-post expertise provided with hindsight. In conclusion, based on an ongoing project by the special committee on scientific integrity in emergency situation of the Science Council of Japan, a policy proposal to redesign institutional structures after “structural disasters” will be made.

The Past of Others: Korean Memorials in a New York Suburb

Since the first decade of the twenty-first century, memorials to the Korean past, that of the “comfort” women, forced into sexual slavery by the Japanese Imperial Army during the 1939-45 war, have been founded in the U.S. by members of the Korean diaspora. The issue of “salu” (Jap. “comfort women”) remains contested political and moral terrain between the two countries. The fundamental narrative of victimization of women and the aim of concretizing their memory, coupled with Japan’s official reluctance to acknowledge the role of colonial aggressor—has produced tension between the Korean and Japanese communities in the U.S. At the local level, such monuments have encountered resistance in some cases. For instance, in New York City, the Korean War Memorial, which was installed on the grounds of the City Hall in 2005, was met with considerable opposition from the NYC Board of Aldermen, who feared a precedent for installing other such monuments. An emotional salvo was exchanged between the Korean-American community and the Board. The opposition was spearheaded by the Council of Korean Americans (CKA) and a grassroots campaign named Gwangju USA. The memorial was finally unveiled in 2006 after a long and difficult legal battle.

Memorial-building is a political act par excellence. The context may be considered symptomatic of wider cognitive and social shifts in immigrant adaptation. A Cross-National Comparative Study of Trust in Nonprofit Organizations

The emergence of nonprofit sector has been shown in many countries since 1990s (Salamon & Anheier, 1994). In addition, trust and nonprofit organizations can be considered basic elements of the so-called social capital which Putnam (1993) discussed. So, examining the cross-national comparison of trust in nonprofit organizations in the present social situation, Nonprofit organization, however, is ambiguous and diverse. Its concept cannot only include volunteer organizations but also trade unions and religious organizations. And its definition is never common in all countries. Thus this study aims to examine not only the simple comparison but also the measurability and comparability of that. This presents the results of some concerning “trust in nonprofit organizations” in the Asia-Pacific Values Survey (APVS, 2010-ons) and Public Opinion Survey on Political Participation and Social Contribution (Civil Society Survey, CSS, 2007-2009). The former survey was conducted in Japan and USA in 2010, and the latter in 2007-2009. The results show that the focus on the rate of the item nonresponses, “Don’t Know,” the degrees of familiar words may increase item nonresponses. On the other hand, it can be considered basic elements of the so-called social capital which Putnam (1993) discussed. So, examining the cross-national comparison of trust in nonprofit organizations except religious ones. From the results of multiple-tiver adaptation. Memorial-building is a political act par excellence. The context may be considered symptomatic of wider cognitive and social shifts in immigrant adaptation. Postrevelutionism IR or Traumatic Resecularization? What Does Historicizing the Religio-Political Unity Offer in the Post-Khomeini Iranian Context?

The postrevolutionary Iranian “Islamic revitalists” (who now call themselves “principals”) still evoke an early twentieth-century event that—in their collective reconstruction of the past—crucially crafted politics onto religion. A foreign-backed military coup d’état elevated an anti-Islamic modernizer to the position of power, enabling him to tragically crush the only voice that genuinely represented the anti-dictatorial and anti-colonial popular will. “Our religion is the essence of cosmopoliticism, and our politics is the essence of our religion,” a saying attributed to “Martyr” Seyyed Hasan Modarres (d. 1937), the prominent Shī mujtahid and long-term political opponent of Reza Khan, thus serves as the emotional (and formerly counter-) intuitive basis for the continued necessity of an Islamic theocratic state as a bulwark against secularizing forces inside and outside the kingdom. Against this backdrop, religiously-minded postrevolutionary reformists (known in Iran as “religious intellectuals”) who dare to suggest separation, in one way or another, of religion from politics run the risk of being labeled as “secularists.” It was not a mere coincidence, therefore, that both the December 2012 issue of the most liberal Tehran monthly Mehrnoume and a June 2013 principial political documentary featuring them adopted as their title “We are not secular,” a quote from prominent reformist-intellectual Saeed Hajarian.

After reviewing past-evoking claims made both for and against separating religion from politics and dynamic contentious interaction between the two opposing camps in Iran for the last two decades, this paper will reflect on two important questions. Is resecularization, be it generally conceived or analyzed in one national context, simply the reverse process of desecularization? Does historicizing secularities (and, for that matter, de-secularities) serve as means by which not only fresh reconstructions of collective memories are facilitated but also institutional reforms for accommodating pluralistic understandings of the religio-political unity may become possible?

Use of Paradata in Non-Response Bias Adjustment: Application of Sequential Propensity Weighting on Dutch Reluctant Respondent Sample in the European Social Survey

This paper explores the use of European Social Survey (ESS) Round 5 paradata Z-variables (eg. type of dwelling and neighborhood characteristics, and characteristics of contact procedure variables) to adjust survey estimates for non-response. By taking reluctant respondents - as opposed to cooperative respondents, as proxies for all types of non-respondents - this paper obtains calibrated propensity weights in sequential steps. Two types of propensity scores (i.e. focus is on ‘contactability’ and ‘survey cooperation’) are obtained through logistic regression models and multiplied with each other in order to obtain nonresponse weights for reluctant respondents based on sub-group stratification methods. ESS Round 5 Dutch sample is used as a case study because of high number of reluctant respondents sample (N=460). This paper illustrates sequential steps to transform reluctant respondents sample that are representative of all types of non-respondents through sequential propensity weights. The effectiveness of propensity weights are studied through level of standardized bias, level of correlations between Z-R and Z-Y variables as well as effects of multiple regression models on attitudinal variables tested between unweighted and weighted samples. These evaluative items are also compared with the effects of post-stratification weights to be calculated from the reluctant sample (eg. age, gender, region). The paper addresses implications of data quality in paradata, fieldwork design on refusal conversion activities and use of reluctant respondent sample for non-response adjustments in cross-national research.

Deciding ‘Quality’ Surrounding Umbilical Cord Blood Treatments in Japan and the UK

Stem cell treatments, such as those derived from umbilical cord blood, are relatively novel in the UK and Japan compared to other countries, such as Spain and America. Hence, the policy and practices surrounding the treatments are still emerging (Brown et al, 2011), and as a result creating uncertainty in the decision-making of haematologists and oncologists in the UK and Japan. In particular, when do they deem an umbilical cord blood treatment suitable for a patient; and how do they choose between umbilical cord blood banks when more than one unit is available for a patient? In essence, how do they ‘know’ what constitutes a ‘quality’ cord blood sample?

These are important insights to be gained when the cost of a single cord blood sample can reach between £16,000 to £25,000. Factors such as where the cord blood treatments are carried out and by whom have been considered as influential by policy makers in determining the success of treatments. How such a move to establish ‘clinical expertise’ around cord blood treatments would impact upon perceptions of ‘quality’ cord blood in the two countries is significant as it challenges the notion that the success of cord blood treatments is determined by the inherent properties of the cord blood unit. Furthermore, a connection between cord blood collection and banking practices and the perceived ‘transplant quality’ of a cord blood unit for stem cell treatments is also emerging from recent policy discussions, due to the proposed ‘best practice tariff’ to reimburse hospitals for securing high quality collections.

Emerging findings from a three year project, funded by the Great Britain Sakawa Foundation, to explore through qualitative interviews how those working in Japanese and UK transplant centres perceive ‘quality’ in cord blood in a global context, and what factors influence their perceptions, will be presented.

MATSUMITA, NAMIKO* (Hitotsubashi University, namiko.matsutani@gmail.com)

Collapse Of Vacant Japanese Accepting Migrant Care Workers Policy

Why has most Japanese migration policies ended in failure? Since 1990 the Japanese government have argued that we will positively accept highly skilled workers for competing economic globalization. By 2006, the Japanese government had concluded EPA agreements with the Philippines, Indonesia and the other East Asian countries. The Japanese care industry strongly disagreed with this agreement because it would lead the Japanese government to ask for the abolishment of the best practice tariff in exchange for accepting care workers. Though the Japanese care industry is suffering from a serious labor shortage, Japan has designed an absolute strict institution with high entry barriers for foreign care workers.

At the beginning of this program, hundreds of candidates came to Japan and trained for the National Nursing Examination which is the same for a Japanese examinee. The first examination was held in 2008, 82 candidates took this examination but no one could pass. The next year, three candidates could pass this exam from 254 candidates. In addition to this low pass rate, nurse candidates take this exam three times in three years and care workers have only one chance in the fourth year. Obviously candidates who can’t pass the exam must return to their country. How can they keep their motivation?

Five years have passed since this program started, the number of candidates is declining each year. The most significant problem with this program is foreign care workers were unwanted by the Japanese care industry. Japan takes no account of their former job careers, even if they have a nurse license in their home country. These skills and experience are just a prerequisite for being a candidate. Even though Japan has the most aging population coupled with lowest birth rate in the world, Japanese government are still lacking a long wide vision in regard to migration policy.

MATSUMATI, MINORI* (Kyoto University, minori.matsutani@gmail.com)

Beyond the Skill Migration: Middle Class North-South Mobility in Asia

Fawell's famous work, Eurostars and Eurocities(2008) arouse wide academic interest in mobilities in EU. Under the popularization of international migration, migrants’ social background and migration flows from/in North has been diverse. As Scott(2006) claimed, it has “become a ‘normal’ middle-class activity rather than something exclusively confined to an economic elite.” However, these works are limited on the research area. This paper tries to theorize the middle class North-South mobility in Asia, based on empirical work among young Japanese migrant workers in Asian cities, including Shanghai, Hong Kong and Singapore.

In decades, the destinations of Japanese migrants have been gradually shifting from Western countries to Asian countries. This occurs in the economic transition or power-shift between Japan and other Asian countries. Young generation increasingly prefer economic opportunities in Asian global cities. They are not typical expatriates transferred from headquarters, nor project-based temporary professionals, but contract-based and locally hired workers moving individually. This represents a new trend of migration, which has emerged in the last decade. The Japanese industry migration system has formed in Hong Kong and transplanted to other areas and discuss the characteristics of the migrants. The phenomenon formed a market-based migration system arranged by staffing agencies. Now Japanese companies abroad have two types of Japanese workers; expatriates sent by the same company and locally hired contract workers positioned under the company in Japan. Their career plans are often inconsistent with the actual achievements, since they are excluded from the companies’ promotion system. Consequently, many of them use their working experience and social networks acquired while abroad and find another career track with entrepreneurship. This shows a pattern that is distinct from career-based skill migration. Through these discussions, I propose a different perspective on the middle class migration in Asian context.

MATSUMATI, MINORI* (Kyoto University, minori.matsutani@gmail.com)

Identification for Career: Contemporary Young Japanese Diaspora in Asia

Most literature on contemporary Japanese diaspora has been focused on male expatriates and their families following the offshore transfer of Japanese companies. Under the popularization of international migration, however, the flow, period or style of migration and the social background of migrants are getting increasingly diverse. This paper focuses on a new type of young Japanese migrant workers in Shanghai, Hong Kong and Singapore.

They move individually and are locally hired, usually through staffing agencies. In most cases, they find positions under expatriates in Japanese companies abroad, which leads them to be marginalized in Japanese communities. They speak local language and work with local people under the management of expatriates. Therefore their identification becomes more complicated when compared with expatriates, who are strongly embedded in Japanese companies and communities. In addition, their identification influences and is influenced by their choice of staying/moving/circulation. They are contract-based workers and can easily change their jobs and working/living place. It means their mobility is connected with their career planning. Considering these situations, they are drawn to 3 directions: localized, globalized and national under their working conditions and future plans. Localized and globalized identities are necessary for daily working and career building in abroad. Japanese has to be preserved for re-entering Japan labor market after return as well as for business communication with Japanese companies abroad. These identities coexist, conflict or are combined in each context.

What forms their diasporic identity, how does it change, and how do they try to control/fail to control it? Based on rich empirical work since 2009, this paper reveals the process of Japanese young diaspora’s identification.

MATSUURA, YUSUKE* (Kumamoto university, matsuura@kumamoto-u.ac.jp)

Industrial Heritage and Memory : A Case Of Miike Coal Mine

In recent decades a new gaze has appeared upon architectural remains of modern industry This gaze makes it possible to turn these remains into cultural heritage, or more precisely, industrial heritage. Architectures such as factory, dockyard and coal mine pit which used to be symbols of modernity has turned, after changes of economic structure, into symbols of degeneration of local towns which had depended on these industries. Industrial heritage is a way of revitalization favored by these towns.

Through the process of heritagization, the past of modern industry is reconstructed from the point of view of new perspective. Reconstructed industrial heritage assumes public memory of the place. On the other hand, these remains used to be the places not only of labor, but also of conflicts and tragic accidents whose painful memories last long upon local people such as ex-workers and their families. It happens that local people have their own view about the past of the place of their labor different from the gaze of industrial heritage.

In this presentation I will discuss this cultural gap between industrial heritage and lived memory. How are modern industries’ remains heritaged through re-construction of the past? How local people remember the past of their labor, especially tragic moments? How the perception of the present heritagization is different as a function of the the past experiences? I will address these questions

A National Park Becomes a Growth Machine: Transnational Environmental Politics In Southwest China

This paper examines the Yunnan Great River Project (YGRP) (1998-2009) in Southwest China, a joint conservation project by the Nature Conservancy (TNC), a U.S. based conservation organization, and the Yunnan Provincial Government. The project was a vehicle for TNC to introduce a standardized model of protected area management to Northwest Yunnan, based on Yellowstone National Park in the U.S.

The study, based on archival research and interviews, has three main contributing areas. First, it sheds light on China's fragmented bureaucracy. Despite TNC's race to save one of the World's ecological hotspots within the project area, it became ensnared, not only in provincial bureaucratic politics, but also in relations between the central and provincial governments in China.

Secondly, the study reveals that global conservation discourses, such as ecological hotspots, may not necessarily create a common conservation goal among key stakeholders (e.g., local governments and people). They attached local meanings to global conservation discourses in order to advance their economic and/or cultural autonomy. In other words, the political, social, and cultural particularities of the ecological spaces in Northwest Yunnan challenged TNC's rationalized way of saving nature under globalization, and they influenced the organization to re-evaluate its conservation methods.

Thirdly, TNC's inability to build alliances with other stakeholders (i.e., provincial governmental agencies, local NGOs, and local intellectuals) weakened its position when an entrepreneurial local government adopted the national park model primarily to create an economic development scheme and turned the idea of a national park into its "Growth Machine" (Motlot 1976). The park ultimately undermined small local businesses and compromised TNC's wish to emphasize community participation.

Comment/like/Retweet: Public Discussions of Economic Crisis News Information through Social Media and the Mobile Internet

The rapid popularisation of social media services, and the even more current popularisation of mobile internet devices raises important questions about the everyday affordances of new media technologies and the rapidity of changes. In our study, everyday individuals use these new media technologies to access, discuss, share, and engage with current topics on the difficult state of our world, such as austerity, economic crisis, and financial policies that impact everyday inequalities.

In this paper I present a discussion on the forces that come to play when talking about the production of knowledge in universities understood as international identities, particularly through the act of writing. I use women's interviews to explore on the meanings of academic writing today. These interviews have been conducted with female professors from different disciplines in the Social Sciences and Humanities in one university in Chile. My argument is that contemporary ways to reason universities as corporate institutions have important effects on the configuration of knowledge, subjectivities, and their relations. Discourses of internationalization of higher education that use institutional arrangements to create specific practices to name themselves as successfully international, such as, international networks and circuits to publish academic work, designing and implementation of international collaborative research, high level indexed publications, etc., produce the idea that all these are the "natural" institutional outcomes and aspirations for professors. These institutional practices create the conditions for a new institutional developmentalism (Siddhu, 2007) where the re-configuration of international practices has taken the status of managerial tools. Institutional cultures produced through these discourses have privileged the constitution of a disembodied academic subjectivity that requires subjects to narrate themselves with no reference to gendered, racialized, nationalized, and sexualized intensities. I explore on how this disembodiment is narrated and problematized by women through their acts of academic writing, particularly in disciplines related to Humanities and Social Sciences.

L'accès Au Logement Des Jeunes Français : Pour Quelle Indépendance ?

Les jeunes français doivent faire face à des difficultés d'intégration de plus en plus aiguës dans tous les domaines de la vie sociale : accès au travail, dans des conditions stables et en rapport avec leur niveau de qualification, accès au loge- ment, accès aux droits sociaux, etc. Ces difficultés en font la population la plus en butte à la vulnérabilité sociale et à la précarité.

De ce fait, les enjeux qui pesent sur les politiques publiques de jeunesse apparaissent importants : les nécessités sont grandes de voir se développer des dispositifs qui favorisent économiquement les jeunes qui veulent un logement indépendant ; le logement indépendant est nécessaire pour permettre aux jeunes de se constituer un héritage, de devenir indépendant et de pouvoir participer à la vie professionnelle. De ce fait, les politiques publiques de jeunesse ont vocation à permettre aux jeunes de traverser leurs années de formation sans être acculés à des situations d'indépendance trop précoce.

Dans ce contexte, notre communication s'attachera à analyser l'accès des jeunes au logement indépendant. Nous partons d'une première approche objective présentant les manières actuelles des jeunes de s'installer dans un logement. Les jeunes qui vivent dans un logement indépendant ont donc un certain pouvoir sur leur vie quotidienne, sur la façon dont ils managent leur temps, sur leur autonomie. Enfin, nous présenterons les défis d'un parcours de vie de jeunes issus de familles d'origine sociale modeste qui souhaitent intégrer le logement indépendant.

YOUNG, NATHAN (The University of Ottawa)

Knowledge in the Wild - from Mad Cows to Alzheimer's: How Knowledge Mobilization Works

This paper presents analysis of interview data from a study of 'knowledge mobilization' as a social process. In doing so it contrasts concepts of 'knowledge transfer' with those of 'knowledge mobilization' which it sees as a non-linear and iterative process involving social organization, institutional cultures and human interactions. It is based on interviews with researchers from two major science labs who are investigating the way in which misfolded proteins (i.e. prions) produce spongiform illness in animals (e.g. Mad Cow Disease, BSE, Chronic Wasting Disease) and spongiform-like illnesses in humans (e.g. Cruchfeld-Jacob Disease, Alzheimer's Disease, ALS, Parkinson's Disease). The focus of this paper is not on the science per se, but on knowledge development and transition as social processes. On the one hand, it seeks to provide insight into the way that knowledge is developed and transmitted, as these processes are understood by the scientists who are directly involved in the process. On the other hand, it employs sociological perspectives related to networks, social capital, and new institutional analysis to provide a more systemic insight into the knowledge mobilization process.
The PhD Degree and Weber’s Concepts of Rationality

The decision to pursue a PhD degree is attended by considerable uncertainty over career outcomes. This is becoming increasingly so, as the gap between the demand for full time academics in the university workforce and the supply of PhD recipients continues to widen in many countries. No longer does a PhD guarantee secure employment. Add to this the large amount of time and student fees invested in a PhD, and it raises the question of why would anyone undertake a PhD? Using Weber’s concept of rationality, this paper will argue that attention must be given to the substantive rationality that is involved in the decision to pursue a PhD. The PhD degree has a dual character: as an institutionally based course in which successfully producing an original contribution to a field can result in the award of a certificate that serves as a gateway into a career; and as a powerful social symbol which is replete with certain myths, values, status and aspirations that can be personally rewarding.

As higher institutions increasingly become subject to neoliberal trends that are transforming the way that PhDs are conceived and structured (such as the growing preference towards thesis-by-publication over traditional monographs), the relationship of substantive rationalities of PhD students to more formal rationalities of higher education institutions is becoming increasingly problematic. As pressures grow on PhD students to align their studies with institutional expectations and also those of a competitive career market, this paper will examine the ways in which students and institutions are negotiating the risks and uncertainties surrounding PhD degrees in light of the push and pull of multiple rationalities.

Digital Technologies and Work-Family Boundaries: A Posthumanist, Performative Approach to Family Research

Our paper draws on a research project funded by the UK’s Engineering and Physical Sciences Research Council that explores how boundaries are being made between work and family in everyday practices, and how technologies are implicated in constituting these boundaries.

Our paper will discuss the theoretical and methodological framework that we have developed to study work/family/technology figurations in the home, and that allows us to treat study social and technological practices as mutually constitutive rather than separate. We draw on varying traditions of scholarship to do so such as: feminist science studies; studies of science and technology; material-semiotics; new materialism; and material culture studies. Our paper discusses how we make sense of family practices around technology use in light of this approach.

Our empirical study uses sensory, visual and participatory ethnographic methods (Pink 2009, Pink and Leder Mackley 2012, Leder Mackley et al 2013) .

ICT and Local Development in Globalization

Abstract

In modern times, development is more or less interconnected with globalization. On the other hand, globalization processes are more or less interconnected with the use of ICT. The use of ICT is defined as the access to modern communicative systems, and as a result marks the “presence” or the “absence” of a specific area in the world map, and consequently the ability of this area to attract investments in multiple fields of entrepreneurship.

But what is globalization in analytical terms? Is it a system consisted of state entities which maintain their authority in the regulation of their internal affairs, or is it a system which functions autonomously, transcending states? This paper examines the possible answers to this crucial question up to a final conclusion. Further on, it depicts statistical data from all over the world, in an attempt to document the interconnection of the presence of ICT services in a certain area, with the economic growth and the development of this specific area. Finally, it examines the problem of “exclusion” of certain areas from the world map of the economic transactions and the relevant processes of development, under the light of the arguments presented above.

Social Science Knowledge and Welfare Expertise – a Closely Intertwined Development

The development of the social sciences in the 19th and 20th century has produced knowledge about societies that informed other areas of social and political life. In this process, specific knowledge propositions have been chosen, others neglected, mostly depending on the actors and institutions that acted as carriers and recipients of this knowledge. The paper in hand addresses the question of how social science knowledge and its translation have contributed to the construction of welfare states, especially at their outset around 1900, especially when their financial resources were supported by societal structures. If this was accepted as a novel insight state-administered social insurances could be justified and planned. The second translation happens between countries: Social policies that had proved useful could be translated to other countries, but the standing of the newly developing social sciences within these countries had a strong influence on how successful these translations were.

I will illustrate my theoretical considerations with examples about how different welfare knowledge propositions influenced the early set-up of state-administered social policies in Germany, Great Britain and the Netherlands (ca. 1870-1920). Thus I choose to compare two pioneers of public social policies and one “welfare laggard”. I will analyse historical sources in order to analyse how text-based academic knowledge can be translated into policy expertise both within and between countries.
The Influence of Sociology on Establishing Social Hygiene in Germany (1890-1920)

In the course of the nineteenth century, epidemics and contagious diseases proved to be a considerable threat to society. Ideas to promote prophylactic medical care that was directed at larger collectives (instead of relying on a curative doctor-patient relationship) were put forward in Germany already in the 1850s. A professionalization of this expertise and an acknowledgement by public and political discourse however only started slowly in the 1890s, with a high phase in the Weimar Republic in the 1920s. Why was ‘Social Hygiene’, as the new field of expertise soon was to be called, successful in exactly this period of time?

In my paper I propose that this acceptance of Social Hygiene can in part be attributed to the emergence of sociology in Germany. Sociology put forward ideas of a structured society, sometimes with analogies to organisms like the human body. Reinforced by processes of nationalization, this led to ideas of a societal body, or ‘Volkskörper’. Medical experts could use these ideas in order to legitimize Social Hygiene as a new profession that led to paradigmatic changes in the fight against diseases: Social circumstances needed to be changed. New statistical methods hinted at the stratification of morbidity, therefore fighting germs was not sufficient, instead living and nutritional conditions needed to be ameliorated.

Social Hygiene led to a multitude of academic publications, from 1920 onwards medical faculties established professorships in the field. However, as the proposed means were diffuse and hard to apply, the actual implementation of measures varied widely and was far away from being included in national legislation. Although the interpretative knowledge put forward by Social Hygienists proved to inform the contemporary debates, the actual application of sociological ideas in political and medical programmes remained incomplete.

Japan and Mexico As Global Players in the Horticultural World Market

Abstract: Horticultural trade reflects the major features of current globalization. The first one is the multi-polarization of the economic world, whereas especially three great centers are dominating, namely: the USA, the European Union, and East Asia (China and Japan). The structure and trends of this trade can be explained by the Food Regime analytical approach, which states that during the Third Food Regime, which started in the mid-1980s, vegetables and fruits became the major foodstuffs that are consumed in the USA and China. At the same time, Mexican fresh vegetables are losing competitiveness in their principal market and the Japanese consumer is losing confidence on the safety of imported foods from USA and China. At the same time, Mexican fresh vegetables are losing competitiveness in their principal market and the Japanese consumer is losing confidence on the safety of imported foods from USA and China. All these facts make clear both countries need to diversify their markets. Therefore it is necessary to explore the possibilities of enhancing the horticultural trade between Japan and Mexico, and also to analyze the Mexican experience as successful supplier of several fresh products to the Japanese market, for instance, mangos, avocados, melons, asparagus, kabocha pumpkins and others. At the same time it is a good moment for an evaluation of the Free Trade Agreement Mexico-Japan, started eight years ago.

Who Negotiates The Relationship Between Leisure and Quality Of Life?

Increasing user’s quality of life has become a central outcome for many leisure services. In the UK, policy expectations encouraging leisure services to improve user’s quality of life have been explicitly pushed since 1999. Drawing on interdisciplinary empirical research in the fields of social policy, leisure and cultural studies, this paper presents an analytical approach to analysing the relationship between leisure and quality of life. This paper draws on evidence from the cultural sector to highlight the potential impact of leisure workers on user’s outcomes and compares UK policy to the experiences of those delivering services on the ground-level. The negotiation between policy and practice is particularly interesting due to the increasing policy shift taking place towards a more collaborative sociological investigation and their spillover effects on the theoretical development of the discipline.
style of governance. This raises the question of who is central to the process of increasing individual's quality of life through leisure activities: users, workers or the state. In exploring this question, this paper provides new empirical evidence that leisure workers are key agents in negotiating the relationship between leisure and quality of life. Through utilising their discretion, ground-level workers can deliver activities that impact individual's quality of life on multiple levels. On the other hand, workers are restrained by managerial, structural and hierarchical limitations. The paper concludes that only by exploring the relationships between users and ground-level workers can insight be gained to the relationship between leisure services and quality of life.

Global Unions, Local Power: Evaluating Labor Transnationalism from North America to the Global South

This paper explores recent campaigns led by global union federations and evaluates different strategies these institutions have employed. The central findings reveal a paradox. Though global unionism is typically concerned with creating parity and universal standards across borders, I show that the local context can either undermine or empower the intentions of global actors, creating varied and uneven results. The question posed here is simple: How can global unions build local power?

This research compares three global framework agreements (GFAs) in different national-industrial contexts in an effort to assess the varied ways they are “implemented.” I look at private security in South Africa, contract cleaning in India, and telecommunications in Brazil. GFAs have been studied from a variety of perspectives. The insight offered here is to view them as part of a long-term industrial strategy for national unions, or a component of what Marshall Ganz calls “strategic capacity.” This paper demonstrates how GFAs are used in different ways depending on local circumstances. In so doing, I focus on the local sphere as a bellwether for evaluating global unionism. The research is based on about 50 in-person interviews in nine countries, but specifically compares outcomes among unions in South Africa, India, Brazil, and the US.

The process of transnational collaboration promotes grassroots mobilization in South Africa, India, and Brazil; socio-cultural transformations within the union in Brazil. The point is to re-direct our attention to the local arena of transnational unionism, still the place it matters most. Focusing on the local arena also offers an insight into the way that specific contexts help determine the varied outcomes. Rather than a universal process, I uncover varied local approaches to transnationalism that simultaneously complement and contradict each other at different times.

Addressing Diversity Trends in Rural America

Background: The new trend in US immigration is an increase in the number of Hispanics, the largest minority population, into rural America. This growing trend in rural and ethnic diversity found in small and rural America is expected in our future growth. This demographic change is highlighted by rural and urban communities that are defined by migrant labor composed primarily of Hispanics.

Most often this definition is one of supposed “decline in community.” This presentation proposes one strategy for integrating migrants into these communities in order to strengthen the community and to save them from putative decline. We focus on the differential HIV risks and access to HIV care and treatment of newcomers and long-timers. Migrants who have been in the community for 5 years or more (long-timers) have greater HIV risk behaviors (more risky sexual behavior and greater alcohol use) and have greater access to primary care.

Methods: This is an analysis of adapting an evidence-based health intervention utilizing a sociological theory.

Discussion this will show how community structures can be strengthened by incorporating the social networks of the growing Hispanic minority into the health care system. Fundamental Cause Theory predicts that access to health-care resources will improve the health of disadvantaged migrant workers through strengthening social support within the networks, thereby reducing HIV sexual risk behaviors and excessive alcohol use.

Results: Amigos Hacen Cambios, the proposed intervention, will assess migrant newcomers (5 years or less) report lower HIV risk behaviors and have less access to primary care.

This research compares three global framework agreements (GFAs) in different national-industrial contexts in an effort to assess the varied ways they are “implemented.” I look at private security in South Africa, contract cleaning in India, and telecommunications in Brazil. GFAs have been studied from a variety of perspectives. Policies Travel Uneasily: The Comparative, Relational and Translative Work Of Making Urban Policy In a Global Context

This paper intervenes in a conversation between two emerging literatures in urban studies: that which questions the generalizability of urban theory and methods developed in, and with reference to, a small number of Global North cities and the literature on ‘urban policy mobilities’ that conceptualizes the circulation of ‘best practice’ policy models. Both literatures focus on forms of the methods developed in, and with reference to, a small number of Global North cities. A key problematic in both urban theory-building and in urban studies to more fully account for the provincial (mostly Global North) character of urban policy mobilization is the historical-geographical specificities of supposedly ‘universal’ policy models. This research compares three global framework agreements (GFAs) in different national-industrial contexts in an effort to assess the varied ways they are “implemented.” I look at private security in South Africa, contract cleaning in India, and telecommunications in Brazil. GFAs have been studied from a variety of perspectives. The insight offered here is to view them as part of a long-term industrial strategy for national unions, or a component of what Marshall Ganz calls “strategic capacity.” This paper demonstrates how GFAs are used in different ways depending on local circumstances. Older Bodies, Dancing Together: Gender, Embodiment and Aesthetics in a Canadian Square Dance Club

Square dance in North America is a social activity primarily enjoyed by older women and men. In square dance, eight people (four couples) move with and around each other, forming elaborate moving patterns in response to on-the-spot instructions issued by a caller. In the structure of the dance moves and the names of the calls, as well as the caller’s patter, square dance encodes an idealized version of heteronormative, “old time” gender relations featuring gallant masculinity and girlish femininity, which is further expressed through traditional 1950s-era square dance costumes: western shirts and bolo ties for the men; full, floury skirts and puff-sleeved blouses for the women. In the present day, these “invented traditions” coexist amidst a range of self-presentational options, as well as frequent urgings from within the square dance community to “update the image” of square dancing.

Since 2011 we have been researching the organization, practices and experiences of square dancing through an ethnographic study of a square dance club in Calgary, Alberta. Although not designated as a seniors’ club, almost all of the members are over 50, and most are in their 60s and 70s, with some in their 80s. Our research has involved participant observation as club members, interviews, focus groups, photographs, and a survey of 200 dancers from 13 square dance clubs in Calgary. In this paper our focus is on square dance as an embodied, gendered activity of aged and aging men and women who meet every week to dance. We examine the gendered forms of square dance (calls, moves, dress) as resources that actual, individual dancers take up, play with, alter, embody and resist. We also consider the ways dress-up and collaborative dancing offer older bodies the almost transgressive pleasure of countering stereotypes of old people as infirm and unlovely.

Green Consumption, Equity and Climate Change

The purpose of this paper is to explore how the mechanisms of the risk society (Beck, 2000; Hopkins, 2010; Hayes, 2012) produce inequality in respect to green consumption. The research was implemented by an empirical approach. The research data was collected by interviewing people on how they make energy decisions when buying electricity, their relationships with nature, and what they see as being important in life overall. Interviews were completed in four cities in Finland: Espoo, Imatra and Joensuu. The people interviewed ranged from the laymen to the executive, i.e. different social classes. During the research it is becoming clearer that the characteristics of the risk society and reflexive modernity and equity seem to be significant when solving issues of the risk society and climate change.

It seems that the ownership or the lack thereof of cultural, educational and financial capital makes a difference - people made their energy purchase decisions based on what had value to them which was influenced by their cultural, educational and financial background. The abstract and insecure nature of the risk society and reflexive modernity makes it difficult for people to be green consumers because of the lack of stability that seems to be a requirement for green consumption. Individuals will not act on altruistic motives without personal stability in life which would seem to lead to the possibility and understanding to take part in green consumerism. Cultural and educational capital makes it easier to grasp abstract issues like climate change or altruistic motives. It seems that green consumption can be increased by equal opportunities in employment, education and equality in income division.

Japanese Olympic Committee complaining of violence by two coaches, including the head coach of the women's team. Both these cases caused a national debate about the practice of corporeal punishment (tai butsuri) in sport in Japan.

This paper is based on the outcomes of focus groups that were conducted with students at ten universities from across Japan in 2013. In particular we examine the ways in which corporal punishment was understood by students and the role of violence from coaches, accepting them as necessary forms of discipline and, in many cases interpreting such acts as indicative of caring coaching and kindness. Further, we consider the responses of students, which suggest that these forms of corporeal punishment are necessary in producing a sense of discipline. The complex relationship between sport and education in Japan suggests that attempts to change the ways in which sports clubs operate, including coach/athlete relationships is problematic and may require major reconsideration of the role of sport in education.

‘If It Weren’t for Rugby I’d be in Prison Now’: Pacific Islanders, Rugby and the Production of (un)Natural Spaces

Drawing on research conducted with Pacific island men, this paper considers the ways in which rugby becomes a legitimate space, both for the confirmation of Pacific Islanders’ identity and the demonstration of successful integration into 21st Century, multicultural Australia. However, in positioning neo-liberalism as the reengineering, rather than the deregulation, of the state, sports such as rugby enact considerable disciplinary capacity over the bodies of minority ethnicity. The disciplinary logic is underpinned by bio-racism and commodification inherent to the discourse of post-colonial Australia. The overrepresentation of the bodies of Pacific Island men in the rugby codes, in prisons, in security, and in manual labour, suggests the structuring effects of such discourse. Such effects shape the legitimacy of access to physical spaces and also to the range of agency that Pacific Islanders’ enact. Of specific interest to this paper are the ways in which spaces, and the means to occupy them, become naturalized. This naturalization serves to obscure the actual regulating and exploitative function of such spaces, instead positing them as exemplars of individualism and self-governance.

MCDONALD, KEVIN* (Middlesex University, k.mcdonald@mdx.ac.uk)

Agency and the Vulnerable Body

Sociological approaches to agency have largely been framed in terms of intention and strategy, considering the body to be an instrument of action. However contemporary forms of collective action highlight the increasing importance of embodied experience and the senses, associated with bodies in place, mobility, and embodied publics. Such embodied experiences are not simply acts of claiming place, but experiences of displacement and vulnerability, evident in the emergence of strangerplaces and modes of action where evocative experiences of art are more important than programmes and demands. These transformations are evident in the shift from the incorporating rhythms of the protest march to embodied grammars evident in occupations, from Tahrir Square to Taksim Square. This paper explores this transformation of action, as unity and collective belonging to a ethical grammar grounded in displacement, vulnerability and embodying another self. The paper considers the implications for an embodied theory of agency, and the implications for the sociology of social movements as older models of identity-action give way to acting as embodiment.

From Indymedia to Anonymous: Agency, Public Spheres and Internet Action

The social sciences are polarised with regard to the internet and communicative action. Some authors see blogging and social media as a form of circulation characteristic of communicative capitalism, shaped by a fear of emptiness and an illusion of action. Others consider the internet to be structured in terms of openness and networking, and argue that such supposed technological qualities can ‘reverse engineer’ freedom. More nuanced forms of this technological optimism are evident in the promotion of online action as a form of radical mobilisation, and in the potential of horizontal, open networks and openness widely promoted – themes central to many of the analyses of Indymedia, in particular by ‘scholar activists’. What is striking in the period since is the decline of this kind of action, and the emergence of a quite different form of action evident in networks such as Anonymous. These are grounded in the older worlds, shaped by a culture of the ephemeral, the hidden and the revealed, with an ethic of lut, the mask and the trickster. This action takes a completely different form from the ‘open deliberation’ attributed to internet ac-

Organising Celebrity – Social Mobility and Symbolic Violence In England’s Green and Pleasant Land

According to Cohen (2013), celebrity represents the most distilled form of social mobility. The paper draws on 60 interviews with celebrities from different sectors (entertainment, medicine and business) in which they talk about their life, work and musical tastes. It identifies differences between these sectors in terms of the logic of celebrity and this is reflected in differences in accounts between these different sectors. For example the way in which doctors are constituted as self-sacrificing, collegiate and ‘moral’ is in contrast to the portrayal of individualistic heroic endeavours of celebrity entrepreneurs that justify accumulation of wealth and sidestep questions of exploitation. The constitution of celebrity doctors avoids engagement with thorny issues such as high rates of mental breakdown and drug and alcohol abuse amongst medical professionals, as well as medical errors and financial motivation. In contrast to the white, middle class nature of elite doctors, business and entertainment professionals are drawn from a more diverse range of backgrounds. With regard to the latter, celebrity accounts of mental illness have been viewed as reducing stigma and to be welcomed. However, the constitution of such celebrities is a world away from the lived experiences of ordinary citizens grappling with mental illness. Despite the differences between the different celebrity sectors, there is a common thread insofar as celebrity is implicated in providing reassurance and hope in relation to the existing order and especially the distribution of power and resources in society. In contrast to Cohen, this paper drawing on Bourdieu’s Distinction and Giddens’ writings on ‘distanciated instances’ suggests that far from reflecting social mobility, the organization of celebrity contributes to the maintenance and reproduction of societal inequalities on a grand scale.

Charisma and Subcultural Bureaucracy: Challenging Weber’s Ideal Typical Distinction

What role does charismatic authority play in the inculcation of subcultures of Weberian bureaucratic practice within otherwise non-bureaucratic environments? My research investigates the conditions that support the emergence and flourishing of subcultural niches of administrative excellence, which are characterized by proto-bureaucratic practices uncommon in the broader administrative environment. Subcultural niches facilitate bureaucratic practice by concentrating scarce administrative resources—especially bureaucratically experienced and inclined personnel—and incubating transformative administrative practices. Using interview, observational and documentary data from cases in the Ghanaian state, including more than 100 interviews with civil servants and expert observers of the state, my research documents the critical importance of charismatic leadership in establishing niches of bureaucratic excellence.

My research finds that charismatic leaders play pivotal roles in the early establishment of bureaucratic subcultures: their charisma and cultural competence at navigating social networks enables them to attract high quality personnel even in the absence of human capital scarcity. Such charismatic leaders strategically offer subordinates “high profile” work that connects them to “big men” who are influential within the larger patronage culture. By strategically leveraging these social capital rewards, charismatic leaders can cultivate meritocracy and the corporatist ethos of high quality human capital and focusing their efforts on achieving organizational goals, despite operating in low-resource environments with organizational challenges. In this sense, charismatic leaders bridge conventional patronage political cultures and the Weberian bureaucratic ethos. This suggests that, in contrast to Weber's ideal typical distinctions between charismatic and bureaucratic authority, charismatic authority may be a crucial sequential step in the transition from conventional to bureaucratic organization of power within state structures.

Cultural Entropy

Cultural Entropy
This paper 1) introduces the concept of cultural entropy, 2) sketches out the perspective it implies, and 3) discusses the centrality of materiality in such a perspective. Cultural entropy describes the process whereby the intended meanings and uses for a cultural object fracture into a chaos of alternative meanings, new practices, failed interactions and blatant disregard. If entropy broadly describes a tendency, cultural entropy is the tendency toward disorder at the level of meaning. While objects are often thought of as stable, durable, finished things, I argue (by drawing on ideas from anthropology and ANT/STS) that objects are inherently unstable, contingent, and incomplete because of their materiality. As such, in the long run, entropy is inevitable. This is especially true for objects—drawing on Goffman (1959), I argue that disruptions are much more likely during object-to-person than person-to-object interactions because objects can't engage in “impression management.” As such, it takes a great deal of cultural work to successfully communicate through objects and maintain a consistently clear residual meaning over time.

Although any cultural object faces entropy, I find that entropy is most visible in objects that people intend to affect belief and behavior. These instrumental uses of objects are commonplace: health pamphlets, commercial advertisements, protest placards, political speeches and more. As the intended meanings and uses for these objects are knowable, so too are the moments when these objects fail to work according to plan. I build upon my work on the materiality of objects—drawing on Goffman (1959), I argue that disruptions are much more likely during object-to-person than person-to-object interactions because objects can't engage in “impression management.” As such, it takes a great deal of cultural work to successfully communicate through objects and maintain a consistently clear residual meaning over time.

An Unequal World: Class, Leisure and Health Outcomes in Older People

In this presentation, we look beyond the direct physical and social effects of leisure activities on health and wellbeing. Instead, we explore the effect of leisure on the health of older people within the context of social class and structural inequalities.

Occupational class, as a proxy for social class, may be less theoretically robust in defining stratification and life chances once people retire. In Bourdieuian terms, it is reasonable to suppose that the secondary properties (lifestyle) linked to occupational class may be more important in determining the life chances of people post-retirement, than the specific occupational capitals that marked their careers during working life. However, during retirement, people may maintain their former lifestyles (tastes and leisure activities) but may also develop new activities that are linked to their material circumstances, social connections and skills. In this way, the leisure activities of older people may be central to their “space of possibilities” for a happy and healthy retirement.

This presentation outlines the results from a longitudinal path analysis of the relationships between social class, leisure activities and health status, conceptualised within a Bourdieuian framework. This study used panel data from the English Longitudinal Study of Ageing (2002-2010) with variables lagged at different time points to maintain temporal/ causal order. The findings show that the main effect of occupational class on health for these older respondents was indirect, via economic assets, cultural and social activities and perceived social status.

In terms of the role of leisure in promoting healthy ageing, the strongest effect from cultural and social activities was via perceived social status. It seems that cultural and museum-going life, in retaining the people who maintain leisure activities feel better about themselves and, as a result, be good for their health.

Fighting complacency and retrogression: Re-awakening gender equality activism in New Zealand.

New Zealand enjoys an impressive reputation for gender equality. It was the first self-governing nation to grant women's suffrage in 1893 and scores highly in international indexes such as the World Economic Forum's Global Gender Gap Index. In recent political history, women have held the top four constitutional positions: Prime Minister, Governor General, Attorney-General and Chief Justice, for a short period of time. Yet as feminist academic Prue Hyman (2010) notes, New Zealand has moved from a relatively equal society to one of its most unequal in terms of earnings and income. This paper explores the recent mobilisation of feminist civil society and female-dominated trade unions in New Zealand who are beginning to collectively advocate and litigate on human rights such as equal pay. They are using the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW) to harness their frustration, benchmark the progress and hold the State party to account for implementation of women's rights and to prevent retrogression. The paper explores the re-awakening of women's activism around social and economic rights in a nation with a strong self-regard for its international reputation in progressing gender equality. The paper uses data collected from New Zealand's seven periodic reports to the Committee on the Elimination of Discrimination Against Women and the Committee's concluding observations and responses to successive governments in relation to Article 11, relating to equal pay and pay equity. It analyses the ebbs and flows of political will and explores the patterns of complacency, frustration and now mobilisation by women's civil society groups who are pressing the case for women's human rights.

MCI TYRE, JANET* (Flinders University, janet.mcntyre@flinders.edu.au)

The Challenges For Social and Environmental Justice Posed By The Global Panopticon, Penal States and Disappearing States In An Increasingly Vulnerable and Unequal World

Facing up to an Unequal World has praxis implications for sociologists. The most important challenges are understanding the interconnected social, economic and environmental problems pose an 'existential risk' to life as we know it. The environment of the problem and the range of inter related ways in which the challenges can be addressed requires not merely transdisciplinary and cross cultural capability when designing policy responses, but the will to grasp the nettle as to why some live at the expense of the majority in this generation and the next. The paper makes a plea for a different form of governance that weighs up the social, ecological and environmental indicators of wellbeing. In order to enable equitable distribution of resources and to ensure that some are not living at the expense of others and future generations of life. It moves beyond a critique to suggesting an alternative form of governance and democracy that spans communities of interest at a planetary level.

The starting point is to address the five areas of priority drawing on the cosmopolitan agenda of Danielle Archibugi as:

i) Control over the use of force;

ii) Acceptance of cultural diversity by ensuring internal sovereignty based on rules that enable freedom and diversity to the extent that the freedom and diversity of others is not determined;

iii) Strengthening self-determination of people based on participatory democracy and the 'absence of domination' over others;

iv) Monitoring based on democracy and governance;

v) Participatory management of the global commons as the fabric of life. Currently the role of the state in Western democracies acts as protector of national communities. Those outside these constructed containers do not receive protection in states that are becoming increasingly like fortresses.

When 'the Other' Poses the Questions: Turning the Tables to Produce Data on German National Belonging

After a change was made in Germany's census categories in the year 2005, who is called a German citizen began to encompass a much narrower group than German citizens. Germany's population was divided into 'Germans' and 'persons with a migration background'. The latter category captures, in one basket, some German citizens—born and bred in Germany—along with immigrants newly arrived to the country. What makes one German? How does one come to belong to the national community? The question of national belonging and national identity is often addressed theoretically. Empirical studies, when conducted, tend to rely on data produced through surveys and apply quantitative methods. Both of these approaches fail to capture the meanings people themselves bring to the idea of nation and national belonging. Research into the social world informed by the epistemological position that there is no reality ‘out there’, independent of the shaping efforts of the mind, demands that one employs methods which access an inside view. In-depth interviewing is one such method. How, though, does the researcher's person (his/her social locations as a raced, gendered, classed, etc. research instrument) affect access to participants or impact the data produced? I—a dark-skinned, native English-speaker living in Germany— interviewed Germans (German citizens) in a mid-sized city in Germany. Participants offered understandings of what makes one German. Rather than hinder access or curtail discussion, I found that my status as outsider spurred vigorous discussions on the notion of Germanness. My 'otherness' seemed not to have hampered free expression but, rather, may have even opened the door for persons who felt themselves marginalized to voice their views. In this paper, I look critically at the process and reflect on the peculiarities of the data produced through the interviews.

Does It Pay to Play? Gender, High School Sport Participation, and Young Adult Attainment

Despite differences in the cultural meaning of sport for girls and boys, popular rhetoric implies that sport participation is always good for kids. Indeed, many youth sport organizations were built on the assumption that sport reinforces shared values—such as hard work, cooperation, leadership, and fair play—that help prepare youth for their future roles as engaged citizens. While there is ample evidence to suggest that sport positively affects educational attainment (Hartmann-2008), it is unclear whether such benefits extend beyond the college years to influence young American career trajectories or subsequent education attainment. Evidence from a small number of empirical studies suggests that sport participants tend to report higher earnings, though the bulk of these studies focus exclusively on men. Those studies that do include women are often outdated, considering the influence of sport participation for U.S. women prior to the passage of Title IX of the Educational Amendments in 1972 (which prohibited sex discrimination in education, including school-sponsored sports). Using longitudinal data from the Youth Development Study, this study explores how high school sport participation affects individual earnings and combined household income throughout young adulthood (ages 21 through 34). Multilevel mixed-effects regression models reveal that high school sport participation is positively associated with young adult attainment. This relationship is due, in part, to participants’ greater educational attainment: sport participants are more likely to enroll and graduate from college, which translates to greater earnings throughout young adulthood.

At the individual level, female sport participants report higher individual earnings, female participants report the highest annual household income. Taken together, these findings suggest that focusing on individual earnings alone does not fully capture the gendered effect of sport participation on attainment.

Gender and Cohort Differences in Work-Family Life Courses and Objective Markers of Health in Mid-Life: Evidence from the United Kingdom

The United Kingdom has seen dramatic changes in the nature of work and family life over the past forty years. Participation in paid work is now a fact of life for the majority of women, including those with family responsibilities; fathers are more involved in childcare; and family forms have become increasingly diverse. In addition, these processes of change are occurring within the context of, and may be partially driving, increasing socioeconomic inequality between households and between women. While these changes in the work and family lives of men and women are well-documented, their relationship with health and wellbeing remains unclear. This study uses the wealth of longitudinal data now available in Britain to describe gender & cohort differences in work-family life course sequences across the three national birth cohort studies in the UK: the National Survey of Health and Development 1946 birth cohort, the National Child Development Study 1958 birth cohort, and the 1970 Birth Cohort Study. Sequence analysis is used to derive life course typologies. Evidence of increasing individualisation across cohorts and the potential emergence of new typologies is investigated, as are early life predictors of work-family patterns. Finally, the study investigates relationships between work-family typologies and objective markers of health in the two
older cohorts. One of the objective health markers considered in this study inflammation, a significant predictor of chronic diseases such as coronary heart disease and type II diabetes. Early results suggest that gender differences in employment histories remain fairly entrenched across cohorts, and that educational attainment has a stronger relationship with inflammation in mid-life than the subsequent life course work and family trajectories it sets people on.

Asian Developmental States: Innovation, Industry, and Investment in China and Japan

- This paper examines the transformation of Asian Capitalism tracking innovation policies in China and Japan. Chalmers Johnson's seminal study of Japan as a “plan-rational” polity initially challenged the neo-liberal assumptions of development in the West. State intervention to discipline companies where necessary to achieve national goals of development proved similarly successful in the Asia’s newly industrializing countries (NICs), leading to a mid-range theory of state/market ties termed the “developmental state.”

- China followed a different trajectory, but again with a prominent state role I look here to the current status of the developmental state in China and Japan, to assess whether traces of Asian capitalism remain. I focus the study in the context of the global economy today, and the role of major firms in national innovation systems, where both nations have excelled. Innovation offers perhaps the best indicator of future competition between capitalisms of the East and West.

The paper opens with plan and profile in national innovation systems (NIS) with attention to higher value-added exports. I then look to the role of major firms in both nations since enterprise plays the major role in R&D. In the third section of the paper, I turn to global ties with a contrast of foreign investment in the two nations, and the role of foreign firms in innovation systems.

- The review of industrial policy evident in NIS efforts suggests three major differences in the state role. As might be expected, China’s party/state plays a far more directive role than that of the Japanese state. Secondly, the Chinese party/state continues to evolve, with curious discrepancies between central and regional governments. We find more continuity in central government policy in Japan, thus fostering various levels of wealth and development. Thirdly, inward FDI plays a major role in China’s NIS, in contrast to Japan where outward FDI links them to innovation networks in the U.S. and Europe.

MCSORLEY, KEVIN* (University of Portsmouth, kevin.mcsorley@port.ac.uk)

Visceral Militarism: Embodiment, Intensity and Experience

This paper provides a critical reconstruction of the notion of militarism that is particularly attentive to how militarism is specifically embodied in specific corporeal dispositions, structures of feeling, bodily performances, and sensory practices that are located both within militaries and beyond. As such, it attempts to move beyond a cognitivist understanding of militarism in terms of an explicit system of militaristic attitudes, values and beliefs to trace a more embodied and affective genealogy of militarism that emphasizes the often unconscious, corporeal and sensory practices that produce war-prone representations of war-prone valorization felt to be normal and desirable, through which militarism becomes assumed, and unexamined, as an ‘abstract social norm’ that may inhere within the deepest fibres of our bodily being (Shilling 2007: 13). Drawing upon empirical analyses of contemporary phenomena ranging from the growth of ‘British Military Fitness’ as a popular leisure pursuit in the UK, the technologies of affective captivating of immersive military video-gaming, and the intimacies and intensities of helmetcam footage recorded by soldiers in the ongoing conflict in Afghanistan, the paper highlights multiple practices of corporeal and sensory militarization that travel beyond traditional sequestered sites of classical military discipline, reshaping the wider sensorium and bodily pedagogics and projects in numerous domains of everyday social life. As such, the analysis emphasizes how desires for neoliberal self-actualization, thrill and bodily transformation increasingly articulate with wider military imperatives and corporeal practices that produce specific contemporary forms of embodied, voluntaristic and individuated militarism. The paper concludes by discussing the importance of locating these particular visceral militarisms with reference to shifts in the modes of embodiment, somatic apprehension of the world, and deterritorialized flows of affective experience associated with contemporary transformations in warlighting.

MEARS, ASHLEY* (Boston University, mears@bu.edu)

The Elite Potlatch: Gifts, Girls, and Distinction Among the Global VIP

As income and wealth concentration reach historic highs, sociological research on inequality has begun to focus on the social and cultural lives of the world’s “one percent.” This article presents rare ethnographic data on spending behaviors among the increasingly global elite and documents how the nouveau riche convert their economic capital into symbolic and social capital. Central to such conversations are the gift giving rituals and exchanges of women. Based on two years of observations at high-end nightclubs in the global VIP leisure circuit, as well as 70 interviews with club organizers and guests, I document how gift giving is a central condition of conspicuous consumption among nightclub patrons, who distinguish amongst themselves through the display of expensive jewelry and the display, wasting, and gifting of high-priced bottles of alcohol in ritualized potlatches. I develop the concept of girl capital to describe women as a resource for status-seeking men. Club promoters work to accumulate and mobilize girl capital through the circulation of gifts, perks, favors and intimacies to establish reciprocities, friendships and the basis of an ongoing relationship between paid brokers (men) and unpaid women, thus masking the labor behind conspicuous leisure and framing economic relationships as friendships. Additionally, women are themselves circulated as gifts among men, largely through their symbolic presence on display. Thus this article documents two levels through which gifting practices sustain structural gender inequalities and uphold a traffic in women system: gifts to recruit women and women as gifts. This article also demonstrates how gifting practices are fundamental to stratification among elites. Lastly, this article genders elite space by revealing the logics of gendered worth within a contemporary high-society arena, one which recognizes and rewards economic capital for men but bodily capital for women.

The Effects Of Divorce On Children From Life-Course and Family Systems Perspectives: Example Of Denizli In Turkey

Divorce has negative socio-economic and inter-personal consequences on adults/children consist of behavioral and emotional problems. They are more likely to divorce, more likely to marry at young ages, to report problems, perceived instability, lack of trust in their marriages. Many two-parent families don’t offer a happy environment for children. Parental divorce may disrupt the life course, with lifelong consequences for children well-being:lowered socio-economic status and problems in interpersonal relationships. Compared with individuals who grew up with both parents, children of divorce have lower levels of education, occupational status, and income, higher levels of economic hardships more often marry young, divorce and remarry several times, find themselves in unhappy relationships, and mistrust people in general. However they do not have lower levels of social support in their life. These relations may vary according to age, minority status, sex, parental education, parental death and socio-economic status.

In our research, we indicate the effects of divorce on adults who live in Denizli. The sample was randomly selected from living with divorced parents in Denizli. The effects of divorce are determined according to the adult’s age, gender, parental conflict, post-divorce family stability, parent-child relationships, educational status. These variables are significant to understand the effects of divorce on children. We examine the association between child depression and childhood parental divorce using a representative sample of 354in Denizli (177 male and 177 female). Firstly, in our research, methodological issues area examined and presented. Secondly, the findings are discussed within a theoretical framework using family systems concepts and life-course theory's arguments. Results strongly support the our research hypothesis. Cultural differences and implications of the study are also discussed. Our research is supported by TUBITAK (The Scientific and Technological Research Council of Turkey). We thank to TUBITAK for supporting to our research project.

Indigenous Religion, the State and Civil Society in Bukidnon, Philippines

The paper describes the religion of an indigenous case community in Buidnon, Philippines from participant observation, interviews, focused group discussions and content analysis of documents from government and civil society organizations and other secondary materials. It analyzes the diversifying role of indigenous religion in the public sphere amidst social change in the uplands with the entrance of migrants, logging companies, the state and civil society organizations. The paper also intends to shed light on how indigenous religion contributes to communal adaptation and sustainable development as well as efforts to protect ancestral domain in the face of increasing commercialization of the economy, as well as on gender and environment conflict. The increasing religiosity of religion and the strategies of religious leaders to position themselves in the changing context has implications as well for the relations between religion and the state and
civil society. Theoretical perspectives examining the role of religion in the public sphere as well as political ecology will be utilized as frameworks for analysis.

**Poverty and Unequal Development in Central America**

The five Central American countries analyzed in this paper (Guatemala, Honduras, El Salvador, Nicaragua and Costa Rica) have a very uneven level of development where it excels Costa Rica, which some have considered the Switzerland of America for having a great democratic stability and a good standard of living of the people that attracts the migration of his poorer neighbor Nicaragua. The rest of the countries (Guatemala, Honduras, El Salvador and Nicaragua) have very low levels of human development that join Bolivia and Haiti as the continent’s poorest nations.

This paper provides a brief overview of the emergence of the Central American countries showing different political trends in the twenty-first century governments and offering also a diagnosis of the situation of poverty. The causes are not natural but due primarily to historical internal social groups that have taken for themselves the social wealth of the nation and due also to uneven development scheme where transnational corporations in industrialized countries, especially through the extractive model, have taken over the natural resources of the region. To escape poverty, it is necessary the effective political will of governments, with the awareness that the inequality is not a manifest destiny of nature but a work of men; a best strategy is not only giving a fish to the poor but teaching them how to fish. It is necessary a public policy of redistribution of social wealth but primarily the effort in education with creation of capacities.

**Transformation of Lifestyle and Leisure Activities of Tribals in Rajasthan (India)**

Leisure is a complex phenomenon pervading every society. Leisure has meant different things to different people and the concept of leisure has changed with the times. Leisure and lifestyle experiences are culturally determined and each region has its own values and traditions. The study focuses on a significant social change and transformation of leisure activities and lifestyle of tribals in Rajasthan (India). Modernization, globalization and urbanization lead not only to the growth of commercialism, but also transformed the leisure and lifestyle of tribals, hectic and busy.

Group- oriented activities in the tribal region like Chaupal, circus, puppet shows and village fair in tribal area are about to ruin and are replaced by tea stalls, filmy songs and dances, cinema going, watching TV and satellite cable, use of mobile, etc. Traditional games like kho-kho, kabbadi, wrestling, gilli-danda, mardadhi; play cards and chaupad have been replaced by modern games like cricket and football. Family-oriented activities like folk songs, dances, music, during festivals and marriages are now restricted from week to one day activity and more within domestic sphere rather than public sphere. Artistic, religious (visiting temples and attending religious discourses or sermons) and cultural activities have been declining and are replaced by watching cinema, smoking, chewing tobacco etc. In the present paper an attempt has been made to see the different forces of changes and their effect on leisure activities and lifestyles of tribals in Rajasthan and suggestions can be given to restore the traditional leisure activities and life style of tribals.

**Globalization and Human Rights**

The concern for the human rights becomes popular particularly in the twentieth century, though it had its roots in different forms since time immemorial. The horrors of the Second World War led to the birth and recognition of the modern human rights. The global framework of human rights was laid down by the United Nations General Assembly on December 10th, 1948. The idea that the protection of human rights knows no international boundaries has gradually captured the imagination of mankind. After the Vienna Declaration (1993), there seems to be a global consensus on the fact that all the Human rights are universal, inseparable, interdependent and interrelated. The respect for Human rights is enormously essential for achieving the global priorities of peace, development and democracy. Today, the concept of human rights has assumed universal proportion, accepted virtually by all states and societies regardless of historical, cultural, ideological, economic, or other differences. Almost all the countries of the world have clear provisions about the human rights in their respective constitution. Human rights are rights which the individual has, or should have, in his society. Though the International Human rights imply rights for the individual against society, but they are not seen as opposed to the interests of society.

Despite human rights becoming the subject of concern to the legal fraternity, the Asian countries criticize the western concept of human rights is that there are no universal human rights as there is no single human nature, and thus no universal moral law to which appeals across cultures can be made.

**Keywords:** International sphere, Vienna Declaration, global consensus, legal fraternity

The Impact of Social Structures on Adolescents’ Deviant Behaviors: The Study of 402 High-Risk Street Drug Users in Iran

Aims: This study investigates the social underlying factors which impact on substance abuse in Iran’s society.

Method: A comprehensive social approach, a sociological analysis was conducted on the triple dimensions of social structure: institutional, relational and embodied structures which impact on individuals’ behaviors by using the results of a secondary analysis of a survey carried out on 402 high risk abandoned drug users in 2009 and plus evidence from some documentary findings of sociological studies to confirm the arguments about the impact of social structures on adolescents’ deviant behaviors. The paper is drawn up on theories’ Durkinn, Giddens, Putnam and also the concept of structuralism. It is related to the situations of social anomie and social capital exhaustion that illuminate the role of society institutional and relational structures on forming the embodied structure or the same actors’ behavioural habits and skills in society.

Findings: The most effective factors of substance abuse were individual factors, bonding with unhealthy social networks, exhaustion of bonding social capital, and lack of social support. During the period of social transition, emergence of uprootedness in modern life and disorientation of social actors in a space of discontinuity of old social bonds creates a ontological insecurity that can lead to the confusion of social actors to organize their social world and to deal effectively with not-so-complicated realities of social life.

Conclusion: Substance abuse is acknowledged as a social deviance which is stemmed from weakness of institutional, relational and embodied social structures during the modern era. The findings indicate the necessity of prioritization of substance abuse prevention by using a comprehensive model which includes interventions, i.e. promoting an established social order by structural policies for improving social capital, emotional and social skills and social support for individuals in society.

MEINENECHE, CHRISTOPHER* (University of Oldenburg, christopher.meineneck@uni-oldenburg.de)
Saving Electricity in Private Households: Results of a Field Trial with Smart Meter Based Feedback Systems and Innovative Electricity Tariffs in Germany

In response to the nuclear accident in Fukushima in 2011, the German government decided to withdraw from nuclear power. This turnaround accelerated the transition of the German electricity system from a fossil fuel and nuclear power dominated electricity system to a renewable energy dominated one. The national aim is to reach a share of renewable energy sources of 80% until 2050. However, the major disadvantage of power generation from renewable energy sources like wind or photovoltaic is that they are hard to predict and to control as the availability of these resources is unstable. The challenge is therefore to manage supply and demand of electricity efficiently. In order to meet this challenge, the development of an intelligent electricity grid (“smart grid”) has started. In this smart grid private households should play a role as adaptive consumers who shift their electricity consumption according to the electricity production (from periods with low production to periods with high production) and who save a significant amount of electricity.

Based on this development my research focuses on the following questions: How to enable private households to play this role as adaptive consumers? Is it possible to make electricity saving behaviours part of the household members everyday routines? To what extend are feedback systems and variable electricity tariff models able to support overall electricity savings?

The results of a field trial on advanced electricity meter (smart meter) with 650 private households from April 2011 to May 2012 in Northern Germany will be presented. Three different types of feedback systems (including an iPod Touch based feedback application) and two different innovative and flexible electricity tariffs were tested. To answer the research questions, multivariate longitudinal analyses with regard to their effect on overall electricity consumption of the participating households were conducted.

MEISSNER, MIRIAM* (University of Amsterdam, m.m.meiissner@uva.nl)
Story Telling Debt in Trading: The Topos of Urban Public Space in Financial Crisis Narratives

A major challenge of narratively portraying the 2008 financial crisis consists in representing the debt and the multiple ways in which debt – as the underlying asset of divergent financial derivative instruments – is traded today. In particular, the representation of financial securitization, connecting private and public debt with mechanisms of financial market speculation, requires narrative techniques that make it possible to meaningfully interrelate a multiplicity of private and institutional actors, temporal and geographical coordinates, as well as political and technological influencing factors.

In view of this challenge, this paper explores various filmic and literary narratives that deal with the 2008 financial crisis and its far-reaching socio-economic impacts. In particular, the paper explores how urban public space is portrayed in such narratives. I argue that urban public space in popular cultural representations of this crisis features as a narrative instrument – a topos – that points out how both the individual and organizational risks upon which contemporary speculation draws are obscured due to strategies of financial abstraction and digital trading. However, as a critical gesture, the topos of urban public space often only alludes passingly to the inequalities that are produced due to financial speculation, while largely leaving its concrete practices and instruments unquestioned.

This paper forms part of a research project that applies anthropological and socio-semiotic conceptualizations of myth to narratives of the 2008 financial crisis. The project explores how certain narratives act as both social and cognitive strategies of dealing with complex phenomena, and as means of ideological communication.
Aspects of Measuring National Identity: Insights from Online-Probing

Since 1995 the ISSP runs a module on National Identity. With increasing number of participating countries a need to test the data for cross-national comparability has become necessary. Besides data analytical approaches, cognitive interviewing has become a popular tool to uncover differences in item interpretation. Two studies conducting cognitive interviewing could already detect problematic items in the ISSP module for Austria (see Latcheva 2009, Fleiß et al. 2009). However, these studies focused on one country and problems of cross-national comparability may not have been found.

One way to assess the existence of cross-national comparability is the application of online-probing which implements probing techniques of cognitive interviewing within web surveys. The project “Optimizing Probing Procedures for Cross-National Web Surveys” already conducted a cognitive pretest and an online pretest in Germany and will run its international survey in Germany, US, Mexico, Spain and UK in January 2014. A variety of items from the ISSP module on National identity are being analyzed. The data from the project give a unique insight into interpretation differences across respondents in a cross-national perspective.

The presentation will present results of the item battery on specific national pride which has been shown to be particularly problematic in the previous studies. The following questions will be addressed: Which problems appear in a cross-national comparison of the data? Which time horizons, for example, do respondents from different countries apply when they judge their pride on their countries history? What do Mexicans understand under the term “social security system” and is this comparable to the definition given by German respondents? How comparable are the understandings of “fair and equal treatment” across countries? How can these outcomes be combined with current data analytic approaches? What recommendations can be derived from the existing data?

Ways to Uncover Cognitive Processes: A Comparison of Cognitive Interviewing and Online-Probing

Cognitive processes shape the way respondents answer survey questions: how they understand a question, retrieve the relevant information, form a judgment and how they communicate it. At the different steps of this process respondents can encounter problems.

Cognitive interviewing is a technique which aims to uncover the cognitive processes of respondents when answering a question and to detect problematic items in this regard.

In the last years the number of international survey programs increased. Cognitive interviewing is a valuable tool to reveal differences in the item interpretation across countries. The application of cognitive interviewing in cross-national surveys has so far been restricted, due to, e.g., restricted availability of cognitive interviewers across countries (Miller et al. 2011).

One additional inexpensive solution is online-probing which implements probing techniques from cognitive interviewing within online surveys. Although online-probing has been developed only recently, both techniques, traditional cognitive interviewing and online-probing, have been applied successfully to shed light on comparability issues of items in cross-national research.

However, there is still a remaining research gap. So far, both techniques have not been compared. Within the project “Optimizing Probing Procedures for Cross-National Web Surveys” data has been collected which enables such a comparison. The presentation will shed light on the differences and similarities between cognitive interviewing and online-probing. In particular, it will show what type of cognitive problems the different techniques are able to detect and in which context which of the two techniques proves itself more useful to improve items for future use.

Trust and Social Classes in Russia and Nordic Countries

Sociological studies have shown that economic and social inequalities are increasing everywhere. Studies have also shown that there is a strong connection between generalized trust and equality (Wilkinson&Pickett 2010). Comparative evidence indicate that strong social institutions prevent free riding and other similar problems. The Nordic countries are in many respect good examples of generalized trust, well functioning social institutions and equality. On the other Russia is an example of low trust, weak institutions and inequalities. However there are clear differences between different social actors both in the Nordic countries and in Russia. In the paper we ask what is the role of social class in this respect? what kind of differences there are between social classes and trust? Can we find one Nordic model, or are there differences? What are the main differences between Russia and the Nordic countries? Our paper is based on 2010 European Social Survey data.

MELLO E SILVA, LEONARDO* (University of São Paulo, leogmssilva@hotmail.com)

Brazilian Unionism and Global Union Networks: A Shortcut to the New Labor Internationalism?

Internationalization of trade unionism is not a new phenomenon. It is currently presented as a “new internationalism” as opposed to an “old” labor internationalism (Blom and Ottervik 2011). The “new” view sees trade union networks based on multinationals as function as counterweight to the advancement of neoliberal globalization. The supporters of that view bear that such initiatives could eventually update the notion of international solidarity, which is part of the labor movement historical heritage. The global union networks of multinationals are nowadays relatively well organized in some branches (chemical, metalworkers), though many accuse them of encouraging an enterprise microcorporatism at the expense of collective action. Additionally, the labor law reform initiated by the State promotes wage flexibility and encourages subcontracting. The picture is one where “internal” front points to a worsening in both employment conditions and use of labor force, while the “external” front is open to experiences of deliberative participation within corporations. The paper aims to explore this apparent paradox. Evidence brought are: the quantitative dimension of the union networks, their distribution across economic sectors, their guidelines and prospects, all captured throughout available secondary data, as well as interviews with managers and workers. The deepest reach of the union networks is intended to be sociologically measured in a scenario of restructuring, privatization and attacks on social rights. Thus, the paper seeks to raise the point that, in fact, the gap between the “old” and “new” labor internationalism unvels an underlying material and symbolic cleavage which opposes an “old” to a “new” working class.

MELOTTI, MARXIANO* (SUM Foundation - Foundation of the Italian Institute for Human and Social Sciences, marxiano.melotti@gmail.com)

Festivals and Living History. Tourism in the Age of Edutainment

The festivals of living history are perhaps among the most interesting aspects of the new cultural tourism and the new tourist culture based on festivals. These innovative processes of individual and collective identity construction entail complex interaction between re-enactors, tourists and local community; strategies of tourist and territorial marketing; and new forms of exploitation of heritage. At the same time, however, we can single out some salient features of society and tourism in the late modernity: the consolidation of forms of leisure, tourism and cultural fruition intertwining education and entertainment; the increasing loss of historical knowledge; the growing need of territorial and historical authenticity; and the acceptance of new forms of relative authenticity.

The festivals of living history are effective instruments of governance and tourist development and can meet the needs of different types of tourism. However, in many contexts – as in the case of Italy - local authorities and scholars appear unable to take full advantage from the contribution of these activities and do not support them properly. Furthermore, the “seriality” of the festivals devoted to local identity or the new culture of slowness, as well as the inability to properly manage edutainment, are stifling not only the potentiality of living history, but, more generally, of the whole tourist culture related to festivals.

RC50-808.5

MELOTTI, MARXIANO* (SUM Foundation - Foundation of the Italian Institute for Human and Social Sciences, marxiano.melotti@gmail.com)
Heritage and Sensory Tourism: The Long Way Beyond Post-Modernity

The increasing attention to the sensory and emotional aspects in tourism undoubtedly reflects the profound cultural transformations of late modernity and, in particular, of the societies most influenced by the Western consumption patterns. This attention involves - and at the same time reflects - a new concept of authenticity, of a hybrid and relative kind, more oriented to emotional and experiential aspects and less tied to contents and material aspects.

This change entails effects that appear to be particularly significant in the field of cultural and, even more, archaeological tourism: tactile and sensory museums, light and olfactory installations, practices of living history and experiential archaeology. These and other activities of consumption and leisure, aimed at recovering a supposed historical and territorial authenticity and characterized by forms of historical theming, are profoundly transforming our relationship with heritage and the past.

However, we are in a historical phase of possible cultural change, in which, both as a result of the financial crisis and because of the specific traits of the increasingly important Asian tourism, the current sensory, "liquid" and post-modern orientation could be overcome by a return of "solid" and material aspects.

With specific examples, this paper outlines some characteristics of the new cultural and archaeological post-modern tourism of sensory type, focusing on the relationship between edutainment, consumerism and the processes of identity construction, and tries to single out the possible developments of the current trends.

En la historia del hombre sedentario, la desigualdad es patente. Crea las condiciones económicas y sociales para ésta “diferencia”. Este dominio es desigual, el rico aprovechándose del pobre, el estudiado del iletrado etc. términos que provocan diversidad y estancamiento.

Esta desigualdad es parte de nuestro actuar, lo mismo da ignorarla que ejercerla, se presenta en las instituciones educativas al no existir similares posibilidades económicas. Se debe inducir una educación con sentido humanista, con una educación integral del estudiante.

La solución es la formación integral del estudiante. Ambas aportan capacidad crítica, reflexión, análisis, razonamiento lógico para la toma de decisiones económicas. Se debe inducir una educación con sentido humanista, con una educación integral del estudiante.

The Culture of Authenticity: An Empirical Study of University Students from Diverse Cultural Backgrounds

This paper is an empirical study of the influence of individuals' cultural background on their different experiences of authenticity. Due to a lack of consensus in the definition of the concept, sociologists have only recently started to study authenticity in an empirical way. This paper tries to contribute to this new field for studying authenticity by means of a quantitative analysis of open-ended responses to Ralph Turner’s True-Self Method with 138 students from La Trobe University in 2013. It constitutes a partial replication of, and a complement to, another research study conducted by Turner at La Trobe forty years ago, in 1973. Today, La Trobe’s student body is more culturally diverse than it was at the time Turner did his study. And 25% of overseas-born students, most of them coming from Eastern societies backgrounds. This is an opportunity to capture experiences of authenticity of individuals from diverse cultural backgrounds and compare them. Building on the works of Ralph Turner and Ronald Ingehart on self-conception and values respectively, this paper establishes two cultural hypotheses that reflect the Eastern/Western societies divide in relation to experiences of authenticity. Turner found no relationship between respondents’ cultural background and their experiences of authenticity. However, considering the more culturally diverse conditions of contemporary societies, cultural hypotheses seem to be worth exploring.

Drifters and Borinage: From the Filmic Subject to the Historical Subject

This communication analyzes two important films in the history of sociological films: Drifters (1929) from John Grierson and Borinage (1933) from Josaphat Nainvils. The first show the herring fishing out of the coast of England, in the North Sea, as a struggle between men and boats against the difficulties of the rough sea on the way to find and catch the herring shoals. The second one show the very arid and difficult life of the Belgian miners of Borinage, focusing in their hard work by the introduction of the new methods from the industrial revolution by changing the animal driving force for the power of steam in an harmonic process and questioning the “natural” approach of a film like Nanook of the North. This new way of labor also makes this process acquire international dimensions showing the British Empire now as a huge commercial and industrial force. Borinage shows that against the power of capitalism, that in the process of reproduction of capital also reproduces the misery of the worst living conditions despite his arduous work, the only solution is the organized working class that struggles against them with their most important weapon: stop using the force of labor and consequently stop making goods and profits.

So, if Drifters is remarkable as the first documental film in history to put the working class in the central place as a film subject, Borinage is the first one to show the working class in the process to become an historical subject to change the world, like fiction has already made in Eisenstein’s Potemkin (1925).

Is There a Difference Between a Sociological and an Anthropological Approach to Cinema?

This communication deals with the special construction of reality made by films which acquire significant epistemological interest when we are dealing with documental cinema, where the confusion and the merge between the reality of

* denotes a presenting author. Abstracts are organized by first presenting author's last name. 641
images and the exterior "reality" that the camera faces are more frequent and undeniable, based on the theoretical assumptions made by Foucault in What is an author? and by Pierre Sorlin in Sociologie du Cinéma.

It discusses the documentary cinema by analyzing their relationships with the social knowledge possibilities they offer and the access to knowledge of the social reality they allude. This analysis criticizes the positivist foundations that organizes the documentary films and the positivist watch that audience gives to them, fundamental for the misperception of a film as the "real" itself and not a construction about it, inquiring the epistemological potentialities of the kind of information those images suggest. So, if we can think that these films bring information about what is shown by its images and sounds, we can also think that they bring more information about the values, evaluations and hierarchies that institute the filmic narrative made by the film maker.

Finally, I interpret the film Les Maîtres Fous, by Jean Rouch, as a Discourse and not as a Discourse. This option force the analyst to catch an epistemological detour where the film is no longer seen as evidence of their stories but inquired in the fundamental concepts of its filmic narrative, dialectic units of form and content. The analysis point out the principles and elements imbricated in the options assumed by the director in order to constitute a filmic narrative discourse that should be seen as a general and natural truth about the "other" (a ritual) and not a discourse that alludes something else (the French colonial heritage).

Authorship and Curatorship: The Active Face of the World Music’s Passive Work

This is a research about Putumayo, a NY based label of World Music collections. On its own words, the label's work consists in organizing collection that gather music from "exotic places where the music originated" so the rest of the world could know about that culture "as it is". But what we observed in the research activity is that the curatorial work of the label brings a strong authorship signature: the label isn't only (passively) exposing the cultures in their own native terms, but (actively) substantially constituting them based in its New Yorker grammar. In light of this, the article aims to show how passive and disinterested curatorship gets also active and interested acts of authorship: world cultures are not merely being organized, but formed too. The one who selects, believing that can do it, is also the one that creates. In this way, the article lays on the meaning for the misperception of a film as the "real" itself and not a construction of the exterior "reality" that the camera faces are more fragrant and undeniable, based on the theoretical assumptions made by Foucault in What is an author? and by Pierre Sorlin in Sociologie du Cinéma.

MENJIVAR, CECILIA* (Arizona State University, menjivar@asu.edu)

Title of Paper: Multisided Violence and the State in the Lives of Guatemalan and Salvadoran Women

This paper examines the root causes of violence in the lives of Guatemalan and Salvadoran women, who currently experience some of the worst levels of violence in the world in the form of feminicides (i.e., killings of women in which the state shares responsibility through omission or tolerance), as well as the state response to such cases. Both countries have recently created governmental offices and enacted a battery of laws to combat these crimes and both countries have ratified the 1994 Convention of Belém do Pará, Brazil, yet, levels of crimes against women have continued undiminished. Impunity is rampant and only a small fraction of these crimes are ever prosecuted and an even smaller share result in convictions. And while a UN 2012 report places El Salvador's feminicide rate as the worst in the world, this country also has enacted a total ban on abortions, under any circumstance, even when the mother's life is in danger. Based on years of fieldwork in Guatemala and observations from El Salvador, I argue that these various forms of violence are deeply connected and have roots in multisided violence composed of structural, symbolic, political and everyday forms of violence. I move away from explanations that focus on individual acts of aggression against women (which for the countries I examine are often are couched in machismo) to focus on extrapersonal structures that create conditions that permit such acts. The persistence of multisided violence may not cause the horrific crimes of feminicide to occur but, I reason, the intertwined nature of these various forms of violence paves the way for these more visible forms of violence to take place and also sustains conditions of impunity on the part of the governments.

An Operational Framework for Addressing Socio-Political Environment of Disaster Risk Reduction-Oriented Spatial Planning

Spatial planning plays a significant role in disaster risk reduction (DRR); UN-HABITAT has proposed methods and implementation strategies of spatial planning at local level in this context (UN Habitat 2011). However, DRR has only partially taken this into account in the development and the implementation of numerous spatial plans. Local level socio-political environment (SPE) plays a significant role in effective and functional spatial planning. Lack of good governance, incompetency from institutions involved and corruption hinder the policy planning and implementation procedure, mostly in developing countries. This paper addresses particularly the need for a comprehensive understanding of the local socio-political conditions in context of DRR that hinder the planning process and implementation, using the developing countries examples: Mongolia Port City in Bangladesh and Medellin in Colombia. Both of these locations stand as opposite surges in Mongolia and flash flooding in Medellin. The obvious differences between them (cultural environment, social structure, level of economic development, intensity of the natural hazards, city size etc.) are considered to define the SPE which may be common to different areas in the developing world. Our findings show that in the studied regions, spatial planning is not given enough importance in local level DRR planning. Its implementation is difficult because of lack of coordination and conflicting interests between different stakeholders and also external influence from development partners. The methodology applied in this paper to address the socio-political dimensions of planning procedure is applicable to other similar contexts and that will contribute to global DRR.

Effects of Rating Scale Polarity on Attitude Measurements with Latent Variables

Beside the item content, rating scales represent a central data base for survey measures. Attitudes are often measured by a certain number of items thought to present a latent concept. This paper focuses on the polarity of rating scales and its impact on the attitude measurements with latent variables. With respect to social psychology, bipolar and unipolar rating scales are distinguished - both polar schemes reflect two opposing alternatives (e.g. agree-disagree) with a conceptual zero as midpoint (neither/nor). Unipolar scales (e.g. level of importance; do not agree –agree) reflect varying levels of the same dimension with the middle category presenting the concept's dimension's midpoint (e.g. moderate). In surveys so called "mixed" rating scales are often used, as for instance a unipolar rating scale with a midpoint that reflects a conceptual zero point.

The present study addresses the question how attitude measures with latent variables are affected by unipolar, bipolar and mixed rating scales. A 2x2 randomized experimental design was implemented varying polarity (unipolar vs. bipolar) and middle category (matching vs. non-matching to scale polarity). Different attitude constructs were measured using these rating scales. The effect of rating scale formats on item loadings, error terms and dimensionality of items were assessed using Confirmatory Factor Analyses (CFAs). The effects were also modeled and tested with help of structural equation modeling (SEM) taking response sets and certain personal characteristics into account. The participants were 522 members of GESIS online access panel representing a probability sample of German residents. The results show an effect of experimental manipulation on item loadings and error term variances. The effect of experimental manipulation on attitude measurements was mediated by response sets. The results are discussed in terms of their applicability for surveyors and researchers.

MERENKOV, ANATOLY* (Ural Federal University , anatoly.mer@gmail.com)

Problems of Recognition Extremist Information on the Internet

In recent years, there is an increase of extremist activities in different countries in the world. Terrorist organizations skillfully recruited new supporters. Internet is one way of attracting people to the organization of extremist activities. Information on extremist activities are placed on websites explicitly or implicitly or lead actions aimed at destabilizing the political situation in the country and poses a threat to the health and life of many people. Internet users are not always able to clearly define which kind of information they receive from different sites is really extremist information.

In 2013, we conducted the research in a large industrial center of Yekaterinburg (Russia). The method of research is case-study. The aims are to examine
the problems of recognition of the materials that aimed at promoting extremism and to implement actions that destabilize the political situation in the country. 2000 respondents were interviewed. They are representatives of different social groups.

The study shows that 67% of people consider that extremist information provides different methods of manufacturing explosives. Using it, one can see people, who suggests ideas of how to use it. Thus, the groups of teenagers appear who are able to commit dangerous acts against law enforcement and private citizens. 57% of people believes that extremist information calls for the approval of the advantages of one nation over the other, 53% of respondents believes that extremist information means call for terrorist acts. In this case, 17 % of school students and college students mention the difficulties in discerning which information is really extremest. 65% respondents expresses the need for training, especially young people in order to identify the information in the Internet which encourages extremism.

Local Development Agencies

LOCAL DEVELOPMENT AGENCIES
In order to fight the origins of generational poverty, the Mexican government has promoted the joint participation of the benefitted communities, fostering a culture of co-responsibility.

The Social Development Ministry (SEDESOL) designed the Productive Options Program, the support modes are: Local Development Agencies; Integrating Funds; Mentor Networks, and the Joint Financing Fund. These Agencies focus on developing the skills and abilities of individuals, families, social groups and POs (producers’ organizations) that live in areas classified as critical, such as native zones in the rural milieu, which are marginalized and made up of settlements or towns of up to 14,999 inhabitants.

The purpose of this study is to analyze Local Development Agencies as social policy instruments to fight poverty from the micro-regional standpoint.

The structure and legal framework of the Agencies in question correspond to that of a civil society organization, whose challenge is to foster micro-regional development.

This model involved a cut in the budget for social policy and a reformulation of the objectives and scope thereof. From the mid-90s to date, programs to overcome poverty have become income transfer instruments to invest in human capital.

The neoliberal proposal set forth by Milton Friedman, crystallizes on how the State has to face the problem of poverty. That is, it aims to let society know how much it costs to support the poor. Through the Programs designed to alleviate poverty, the Mexican government assumes that the poor are ready and able to overcome the generational poverty status. However, the government is only investing in improving the labor force.

Magic in Social and Natural Worlds: Planting New and More Colorful Technologies in South Africa

Scientific knowledge and technological artifacts travel with experts from centers of knowledge production to the places where they are translated, over an un-even global terrain and amidst a social history of technological failures and coercive public policies. While global in their extent and consequences, however, techno-scientific facts are emplaced and co-constructed within specific sociocultural circumstances and cultural conditions. As a consequence, accounting for a techno-scientific practice can only be made with regard to processes of local social and institutional transformation. Within a context of risk and uncertainty about water resources – real or perceived – South Africans are faced with a variety of technological options that will affect the nature of these arrangements. Focusing on a ‘disaster mitigation’ approach in a United Nations World Heritage Site in South Africa, I have positioned myself at the access points at which ‘experts’ and ‘lay’people meet to discuss the “green economy”. Considering the various ways in which a “green technology” is conceptualized, I probe at the concept of ‘trust’ and how it mediates societies relationship with science and technology. In the process I ask: What makes an expert an expert? What empirical factors make-up and account for conceptual innovation? When does an object become a technology? When does it become a problem? And might the object of that problem offer any analytical and methodological tools that are interdisciplinary and area specific?

Indigenous Pathways in Social Research: Addressing Inequities Part I

Indigenous populations live the issues of human rights violations as part of their legacy of colonialism. The ray of hope that emerges in relation to this experience is that Indigenous researchers have successfully negotiated the Northern educational system without losing their indigenous cultural heritage. The indigenous researchers and their allies in this group of papers frame culturally responsive research to confront regimes that have restricted their rights in the past. The voices of indigenous researchers explore their pathways to social research and the use of research to address human rights in their communities. Shawn Wilson, a First Nations member of the Cree tribe, provides insights into how research can be used to address human rights through an Indigenous lens in his presentation: Conducting the Ceremony of Research. Exploring the sacredness of relationships in research with consequences for supporting human rights. The second presentation, Indigenous Knowledge Systems by Motheo Koitsiwe, a member of the Bathlhoko tribe from South Africa. His research in Indigenous Knowledge systems challenges the restrictive educational and governmental systems and supports the realization of human rights, not only in his tribal community, but more broadly in South Africa. The third presentation will be by Teresa Sorde, a research from Spain, who works with the indigenous Roman community by building their capacity to work as co-researchers to address issues related to the injustices experienced by Roma. The fourth presentation will be on “Coloniality of Knowledge and Indigenous Researchers and Epistemologies” by Cesar Cisneros from Mexico; the business practice of the global dynamics of capitalism is discussed in relation to a knowledge divide that is associated with epistemic violence. Donna Mertens, a transformative researcher from the United States, will provide the final commentary in a presentation titled: Indigenous Researchers and Social Transformation.

Japanese Artistic Traditions: Mimikësi, Politeia and Re-Interpretation

My paper analyses the representation and perfecting of reality (mimikësi) by visual arts in Japan and how the different traditions of art have been connected to changes in Japanese society and culture. The Japanese state was slow to realize how important visual arts for the Japanese society and culture and that visual arts have a huge influence home and abroad. The idea of state being responsible for promoting the cultural life of people or the idea of cultural rights of people are rather foreign to Japanese society. However, the whole idea of “being Japanese” is very much a cultural reconstruction and the Japanese state has been actively engaged in shaping that reconstruction together with other pillars of establishment in Japan, such as the educational and economic institutions.

The invention of tradition does not mean that they are all false or invented from a scratch. The refined tastes of upper classes served as a basis for artistic traditions that are officially associated with the essence of Japanese art and culture. The modern Japanese state presented the Japanese cultural traditions as a proof of Japanese cultural superiority and, therefore, there has all along been a tendency also to protect the “Japanese” cultural traditions. For instance, nihonga was seen by the early modern policy makers as more Japanese than yôga, regardless of the theme of painting and without much of critical discussion whether nihonga really is that uniquely Japanese. After all, both Japanese nihonga and yôga are strongly influenced by foreign and Japanese art by each other. My paper reinterprets the tradition(s) of Japanese visual arts and places it in its social and political context, as well as develops theoretical tools that would better suit analysing Japanese artistic traditions.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
harmony and the new era of even weaker national governance, accelerated by the process of decentralisation (chihō bunken) and deepening fiscal crisis (making politicians powerless and leaving people on their own) have imposed individualisation on Japanese people from above. This individualisation has already encompassed every corner of Japanese society and the impact has been drastic for families. While the Abe administration has shown determination to address foreign, defence and economic & trade policies, the issues of social policy have clearly not been given priority and have been left to traditional institutions, especially to families.

MEUTH, MIRIAM* (University of Frankfurt, meuth@em.uni-frankfurt.de)

Supported Housing for Young Adults: An International Comparative Perspective (Germany/England) on Housing Related Social Welfare and Social Inequality

In youth research the housing transition is considered one important transition to adulthood amongst others. Nevertheless it is not sufficiently taken into account in academia. As long as young adults have the resources to go smoothly through their housing transition because they have enough resources (financial, social, biographical and educational) this transition tends to be invisible. One of the reasons for this is that it is not as institutionalized as the transition from school to work for example. However, the complexities and reversibility of housing transitions, as well their ties to other youth-related transitions and social inequalities, become forcefully visible when the homelessness of young people is taken into account. Within social welfare systems, social housing related aid for this age group is rare, and usually given in extreme situations when housing has already become problematic. This is also often connected to other requirements, such as involvement in employment, training or education.

In this paper I will present the results of a qualitative study comparing two specific supported housing schemes for young adults in Germany and England. Both focus their support on housing as well as on the labour market oriented transitions of young people. My international comparative approach, which is theoretically informed by the model of “youth transition regimes” (Walther 2006), takes into account how the housing transitions of young people are structured by specific housing markets as well as by the housing related supports within specific social welfare systems. On this basis I will highlight differences and commonalities with respect to how social welfare systems can increase or reduce housing related social inequalities.

GERSTER, MARCO (Konstanz University)

Hooliganism and the Dark Side of Football Events

Sport events in general and football matches in particular are often clouded by acts of violence. Hooliganism is a problem that is widely feared and thus is communicated throughout the media weeks or months before the actual event. Descriptions of violence, flying stones, light injuries are repeatedly reported in the media. Victims dominate the coverage. At the same time the term “hooliganism” has very little analytical power, as it is used for all kinds of violent acts that occur during football matches including right-wing extremism. The underlying purpose when speaking of “hooliganism” is to make sense of seemingly “senseless” violence, to produce a surplus of order over disorder. From the hooligan’s own perspective the violence is by no means “senseless” but is restrained by a diffuse moral code. These rules are similar to former ritualized – and thus “fair” – duels, in which the combatants could achieve or restore their honor. In this paper we want to address the phenomenon of “hooliganism” from a cultural sociological point of view. We contrast the “public” perspective and the media imagery of violent acts of hooliganism with the self-concept of the subculture in question. This comparison shows that hooliganism is a deeply ambivalent phenomenon. It is both playful and serious, sport and “war”. Hooligans are peaceful and “invisible” in everyday life, while they are violence-prone as long as the “moral holiday” (Randall Collins) lasts. We argue that this in-betweenness makes hooliganism so hard to grasp by science, politics and the media.

Transformations Of Cultural Identity: Japanese Mothers Raising Intercultural Families in Australia

Abstract:
Stuart Hall argues that identity is not about ‘who we are’ or ‘where we come from’, but about ‘becoming’ something. This paper explores Japanese women’s changing cultural identity by focussing on those who have chosen to leave their homeland and settled in Australia to raise a family. Selected from a larger study of mixed marriage, this paper focuses on three case studies of Japanese women who settled in Western Australia with their European migrant husbands and raised children in the third culture are the focus of this paper. It examines how these women adjusted their cultural values in relation to their husband’s culture and the new host culture, how they raised their children in a foreign land with a foreign husband, and the manner in which they retained elements of their Japanese identity, re-creating themselves through different stages in life. While their experiences demonstrate challenges, not least of which is a ‘cultural shock’, and racism, they also offer evidence of resilience and creativity in the negotiation of cultural adaptation. This paper demonstrates the complexity of the transformation of cultural identity, which is intertwined with the multicultural home environment, isolation from familiar cultures of origin, gender roles within the family, and the historical and political background of the society in which these women live.

MEYER, MICHELLE* (Texas A&M University, mmeyer@arch.tamu.edu)

Social Capital, Organizations, and Disasters: Theoretical Insights from Four Communities

Social capital, especially among community organizations, is central to the US Federal Emergency Management Agency’s “Whole Community Approach” for disaster resiliency, in which four of the six resiliency themes focus on social capital. Organizational social capital benefits both individual organizations and produces collective benefits for the whole network, including knowledge creation and sharing, generating financial resources, and creating innovations (Cohen and Prusak 2001; Lesser 2009; Reagans and McEvily 2003). Further, it affects efficiency and effectiveness important to social service and nongovernmental organizations (Reagans & McEvily 2003). In disaster settings, social capital among emergency management organizations fosters more efficient response (Kapucu et al. 2010). Yet, social capital research on organizations in disasters focuses heavily on emergency management agencies. Less research includes non-disaster response organizations as well as factors like disaster experience, organization type, and community setting.

In this paper, I describe theoretical insights for organizational theory and disaster theory drawn from case study research on social capital among community organizations in four communities. The case studies were all completed between 2012 and 2013 and include two communities that had recent disasters and two communities that have not. Further, three are rural (populations less than 50,000) and one is a small urban area (population 270,000). Based on interviews with nonprofit, emergency management, religious, and social service organizations, I discuss the benefits and difficulties of using social capital for community disaster response and recovery. Disasters present both obstacles and opportunities for the survival and growth of community organizations. Further, I argue that how organizations interact in networks, including legal and mission-related struggles, is key to understanding social capital for community disaster resilience. My results address how the ‘Whole Community’ is practiced as well as contribute to organizational theory about social capital’s effect on organizational and community outcomes.

JS-60.4

MEYER, MICHELLE* (Texas A&M University, mmeyer@arch.tamu.edu)

The Family Burden of Disaster Assistance

One commonly proposed, but under-theorized, component of community disaster resilience is social capital. Social capital describes the resources available through a social network that can be activated to affect the outcomes for the individuals who make up the network and the network as a whole (Coleman 1988). This concept captures the interactive aspects of a community that imply a capacity to respond, adapt, learn from a disaster, and effectively reorganize community life quickly following an event (Cutter et al. 2008; Norris et al. 2008). Thus, social capital can be both a private and public good that generates resilience for individuals and families along with communities as a whole.

Using surveys and interviews with residents of two Florida counties, one rural and one urban, I discuss disaster social capital and its role in families’ resilience. I apply a common social network measure—the name generator—to measure the availability and source of disaster-specific resources in individuals’ social networks. This network-based approach to disaster social capital shows the importance of family to disaster assistance. Individuals turn to family first for all types of assistance, and almost exclusively for financial assistance. This reliance on family results in extreme racial homophily of disaster social capital networks. Further, older family members are more often indicated as sources of financial assistance, which results in further pressure on their often limited resources. Finally, low-income and high-income respondents have similar disaster assistance networks, but high-income respondents will only use family for nonfinancial assistance and...
use insurance or savings for financial needs. This result shows the increased pressure on low-income families to help each other “get by” during a disaster (Stack 1997). At the community level, my results indicate that privatized social capital may not result in outcomes for the entire community, instead following familial lines that are often racially and economically homogeneous.

MEYER, ULI* (Technical University of Berlin, uli.meyer@tu-berlin.de)
SCHMIDT, ROBERT J.* (Technical University of Berlin, robert.schmidt@tu-berlin.de)
Collective Action and Collective Actors in Fields: Some Ontological Clarification of a Recent Debate in Neo-Institutionalism

The concept of “fields” has a lively history. Starting as one of the crucial conceptions in Bourdieu’s theory, it became a foundational concept of sociological neo-institutionalism. Today, different attempts exist to transform it into a general concept of collective action (Hoffman 1999, McGettigan/McAdam 2012). This interesting development is, however, accompanied by some weaknesses: Currently, individuals and collectives, especially organizations, are analyzed symmetrically as actors within fields. Collectives are only described as fields nested within other fields. What is urgently needed is an elaboration on how individual and collective actors are constituted, and how they are related to individual ones.

We take the distinction between agency and actors, inmanent in theories of practice (especially in the work of Giddens 1984, even Latour 2005), as a point of departure to discuss this problem. Actors – individual as well as collective ones – are special constructions of western modernity (Lückmann 1980, Foucault 1984, Luhmann 1984, Meyer/Jepperson 2000). They are often confronted with the obligation to act consistently in line with different kinds of rationality, often stemming from different field-levels. Agency, in contrast, is the essential possibility to make a difference in the stream of daily activity (Giddens 1984: 9), which is grounded in mental control over bodily activities. Although agency and actors are often actualized in an intertwined form, they sometimes only occur in a loosely coupled way.

Following this conceptualization, we can offer a more complex and clarified picture of individuals and collectives. It allows for a clearer distinction between (a) the properties of individual and collective actors, and between (b) agency and attributed agency. In addition, it allows (c) for a more elaborate description of how fields are nested within fields, for example how agency and actors are constituted by fields at the same time as they constitute them.

BESIO, CRISTINA* (Technical University of Berlin, cristina.besio@tu-berlin.de)
Modern Times: How Organizational Time Structures Influence Society

At the latest since Max Weber, we have known that organizations strongly shape modern life – and also time. Modern society has been described as organization society, in which organizations diffuse across every sector. Organizations can, and do operate with different societal macro-logics that contribute towards operationalizing and implementing them: Enterprises strive for economic profit, media organizations disseminate information and schools educate. However, in doing this they use their own specific structures and procedures. Among them are time structures. We focus on such time structures such as projects, deadlines, timetables, time routines and rhythms, and show that these are not necessarily compatible with the societal logics they address. As a consequence, organizations act as Procrustean bed regarding societal macro-logics. In the same way in which Procrustes “adjusts” people to the size of his bed, organizations impose their time structures on society.

As examples, we use the impacts organizations have on media and science. Media logics dictate that new information is provided continuously. However, editorial departments of television channels or newspapers need stable (temporal) routines. So, editorial departments often privilege the coverage of planned events like international conferences or sport events. As a consequence, organizational temporal structures play an important role by selecting news.

The logic of science implies that the time needed for research and scientific findings can hardly be defined in advance. However, organizations, such as universities, have to plan ahead. So they prioritize research proposals which can convincingly promise deadlines. In the social sciences for example, this gives an advantage to empirical studies which – in comparison to theoretical analyses – can be more easily planned.

Based on organizational institutionalism and systems theory concepts, we develop a model which allows us to analyze the selective effects of organizational time structures on societal macro-logics.

MICHAUD, JACINTHE* (York University (Glendon), jmichaud@yorku.ca)
The Dilemma of Feminist “Double Activism” and the Pressure of Separatism

Feminism shares boundaries with other political movements, often acting in synergy with many of them. The term “double activism,” coined by Italian feminists, describes the position of feminist activists who are simultaneously involved in political organizations of the left (parties, movements, unions) and feminist collectives. The act of moving across boundaries – between the left and feminism – came to light when this double allegiance was presented as conflicting loyalties in the 60s and 70s by feminists advocating a complete separation of their movement. Double activists, who lived that experience, were criticized for not devoting their energies entirely to women and feminism; for not thinking and acting freely outside frames of reference controlled by masculine thought. The pressure felt was described as schizophrenia resulting from being engaged in two opposite worlds and not feeling whole in neither of them. This presentation is based on a comparative, qualitative research between two types of feminisms which have never been compared before: Québécois (Canada) and Italian feminisms during the 60s and 70s. The paper intends to go beyond the Italian case dominated by the traditional and the New Left and beyond the 60s and 70s period by showing that double activism was – and still is – shedding light on the political evolution of the feminist movement. This is especially the case today, with the renewed synergy found between feminists and other political actors such as young queer, anti-authoritarian, anti-colonial and anti-racist political groups. The paper will focus on the complex consciousness of double activists; the existential aspect of presenting oneself as a member of a political group while helping to create feminist collectives; and the simultaneous activity of bringing social struggles within the frontiers of feminism while seeking to bring feminist principles and feminist struggles within leftist groups.

MICHEL, PATRICK* (École Hautes Études Sciences Sociales, patrick.michel@ens.fr)
Elements of a Socio-History of the Relation Between Nation and Religion – The Case of Catholicism

The nation has been, simultaneously, a privileged tool of modernisation (that is of disenchantment) and of the political, and also a potential tool of perpetuation of a new type of enchantment (which is a privileged space for the refusal of modernity). Indeed, should the nation become an object of sacralisation, it is ancient politics, funded on transcendence, that is then maintained.

One of the main actors involved in this perpetuation of enchantment has been the process of forced homogenisation aiming at producing ‘sameness’ in a fictional way. If the nation was calling for a progress of differentiation, it was only

* denotes a presenting author. Abstracts are organized by first presenting author's last name.

465
imposed in the 19th and 20th centuries while (re)producing indifference, and re-
sulting in violence.

Today, the reality of pluralism makes this fiction of ‘sameness’ globally incred-
ible. Should a space which can bring back the current evolutions carried by the
acceleration of globalisation exist, the best option would be the one that carries
the resistance against this process. In a situation that is characterized by the
disqualification of the absolute and the passage of ‘sameness’ to plurality, there
should be no surprise to the fact that we are witnessing some actions towards
the reaffirmation of the absolute and of ‘sameness’.

To explore this problematic, this paper will draw on the paradoxical relations
(and the successive reorganisation of these relations) maintained by the catholic
church towards the nation. In an orientation to follow the sign of the times (if not
to transform it, at least to inhabit it), religion and the nation are both categories
which share with intimacy the avatars of legitimacy, that is the rebuilding (and the
partial over-imposing) of complex dispositions to organise the religious. What it
play around religion and the nation can only make sense when dealing with the
contemporary redeployment of these devices.

MICHETTI, MIQUELI* (Fundação Getúlio Vargas, miquelimiqelitti@yahoo.com.br)
The Isomorphism of Practices and Discourses Between the Corporate Realm and the World of Culture in the Flexible Capitalism

Culture plays a central role in the “flexible accumulation”, but does so as a ‘resource’, as a way of generating economic value. It is in this context that arise no-
tions bringing together seemingly antithetical terms, as “economy of culture” and
“creative economy”. The study aims to show that in this new isomorphism of spirit’,
the world of culture seems to incorporate both practices and discourses from the
new corporate world, which in its turn seems to feed on the cultural sphere. In
this increasingly intricate intertwining between economy and culture, it seems to
be an isomorphism between the practices of companies of the flexible capitalism
and certain agencies of culture. Under the rhetoric of “organizational innovation”,
these agencies replicate business models such as the networking, horizontal, an-
ti-tiarchical organization, based on crowdsourcing and/or crowdfunding, etc.
In these new models of “cultural business”, content producers find themselves in
precariousness, with the promise of eventually monetize their creative
capital, they experience temporary and outsourced contracts. As Max Weber
teaches us, each form of capitalism needs a corresponding “spirit”, so that will
also be a discourse isomorphism between the world of flexible economy and the
sphere of culture. The discourses about the non-separation between profes-
sional and personal life, between work and leisure that flexible capitalism took
from counterculture is easily extended to current artistic and cultural activities
because such ideas refer to the historical separation between art and work that
founded the very category of “artist”. Through the analysis of similar practices
and discourses into the corporate world and in the cultural sphere, the study will
show how the precariousness has been rhetorically transformed into flexibility
and freedom and how, even under the rhetoric of alternativeness, culture in the
show how the precariousness has been rhetorically transformed into flexibility
and discourses into the corporate world and in the cultural sphere, the study will
founded the very category of “artist”. Through the analysis of similar practices

Parenthood, Well-Being Inequalities and Welfare State. Comparative Study of 20 European Countries

1. Income and wealth inequalities have represented a central issue of social
   policy analysis in the past. Nowadays the nature of inequalities and types of
   inequality is changing. The paper aims at analysing the inequalities in subjective
   well-being and its relations to life chances and key life course events determined by welfare state. The main questions asked in the pa-
   per: Does the welfare state reduce inequalities in people’s overall subjective
   well-being? Does the welfare state reduce inequalities in people’s satisfac-
   tion in various domains of life such as health or work-life balance?
2. The goal of the paper is to measure and compare, across European coun-
   tries, inequalities in overall and domain subjective well-being (SWB) based
   on subjective indicators of well-being. Doing so allows for the evaluation of
effects of economic and demographic changes in societies and to provide
information on well-being of different groups in the European societies. So
the first question asked is of diagnostic nature: what are the inequalities in
well-being of parents and non-parents among European countries? Are
there cross-national differences in the level of inequalities in subjective
well-being? Finally, to what extent do the vulnerable groups due to specific life
   courses stages (parenthood, marital status)?
3. The paper considers the broadly defined cross national, comparative analy-
sis of contemporary family policy as well as gender regimes. The paper will
assess if the cross-national differences in the level of inequalities in sub-
jective well-being of parents and non-parents can be related to the welfare
state regimes or to specific policies.

The Effects of School Racial and SES Composition on K-12 Reading and Language Arts Outcomes: A Metaregression Analysis

Structural vulnerability theory proposes that educational outcomes emerge as
organizational features of schools interact with students’ individual characteris-
tics. The organizational feature of interest in this paper is school racial, ethnic,
and social class (SES) composition. This paper asks the following question: “Does
school racial and SES composition affect individual’s K-12 reading and language
arts achievement?” To answer it, the authors conduct a metaregression of the US
social science literature published in the last 20 years on the relationship between
reading and language arts outcomes and the racial, ethnic, and SES composition
of the K-12 schools students attend. The authors employ a two-level hierarchical
linear model (HLM) to synthesize approximately 75 primary studies with 200 re-
gression effects. The tentative answer to this research question is a qualified yes;
students attending schools with concentrations of disadvantaged racial minority
and/or poor peers achieve less academic progress than their otherwise compara-
ble counterparts in more racially balanced or low poverty schools. Preliminary
results indicate that attending a racially isolated disadvantaged minority school
has a statistically significant negative effect on reading and language arts achieve-
ment. This relationship is moderated by the size of the sample in the primary
study and by the way the independent variable (school racial/ethnic composition)
is operationalized. Effects vary for different racial and ethnic minority groups
and the effects are stronger in secondary compared to elementary grades. The
emergence and widening of the race gaps as students move through the grades
suggest that the association of racial and social class isolation with reading and
language arts performance compounds over time, illustrating how school compo-
sition effects reflect the dynamics of structural vulnerability theory.

MICKELSON, ROSLYN* (University of North Carolina at Charlotte, RoslynMickelson@uncc.edu)
The Role of Integrated Schooling in the Development of Social Cohesion in Multiethnic, Just, Democratic Societies

Schools play a crucial role in preparing children for their adult responsibili-
ties as workers, parents, friends, neighbors, and citizens. Increasingly, in the US
and other multiethnic democratic nations this responsibility is complicated by the
growing demographic diversity among students, a diversity fueled by internation-
al migration. The central argument of this paper is that integrated schooling is a
necessary, albeit insufficient, condition for developing the social cohesion that
just, multiethnic democratic societies require to flourish. Using the United States
as a strategic case study, the paper synthesizes the US educational, social, and
behavioral science literatures on the effects of school and classroom racial, eth-
nic, and social class composition on short- and long-term academic and nonaca-
demic outcomes across the life course, with special attention paid to immigrant
youth. The preponderance of the extant US literature on the topic links integrated
schooling to improved academic and non-academic outcomes, and suggests in-
tegrated schooling is also a necessary, though, insufficient enabling condition for
fostering civic engagement in multiethnic democratic societies. Ironically, despite
this growing corpus of evidence, US schools are segregating by race, ethnicity,
and/or social class. To be sure, because of international and internal migration
trends, the nature of US school segregation has changed so that today it is much
more ethnically complex than the Black-White or Brown-White binaries of the
past. Nonetheless, studies indicate that today, as in the past, schools with concen-
trations of poor disadvantaged minority students generally fail to educate their
students. The paper discusses the implications of its findings for 21st century ed-
ucation in the US and other multiethnic democratic societies (especially OECD
member countries). It shows that opportunities for greater demographic diversity and
international migration pose for delivering educational excellence and equity to
all students.

Property, Patrimony and Territory: Autochthony and the Politics of Immigrant Place-Making in Peri-Urban Kisumu, Kenya

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The rapid urbanization currently underway in cities of the global South is unfolding under conditions of limited capacity of the state and conventional market mechanisms to avail buildable land at a pace commensurate with population growth rates. In the Kenyan city of Kisumu, there has been a steady conversion of peri-urban agricultural areas into urban land, as residents seek alternative ways of meeting the rising demand for urban housing. These migratory flows and settlements have over time spawned unique spatial structures and power geometries on the urban fringe, as immigrants from the inner city and beyond buy land and settle among the indigenous population. This paper adopts class and auto-ethnographic methods to unravel the socio-spatial transformations underway in peri-urban Kisumu. Using in-depth interviews, focus group discussions and ethnographic fieldwork, the paper analyzes the socio-spatial and political ramifications of land-buying and settlement on Kisiian, an indigenous peasant community on the western outskirts of Kisumu. The paper reveals that immigrant-host relations have been characterized by uneasy co-existence, feuds over land and social cleavages. The host community views the ‘immigrant invasion’ as an affront on their indigenous property rights, patrimony and territory—a development they blame for dwindling local fortunes and precarity of livelihoods, as traditional modes of subsistence are disrupted by the new socio-spatial order. Immigrant households have, on the other hand, devised elaborate socio-spatial strategies aimed at cementing their insertion into the emergent social and built environment. The paper analyzes these adaptive and defensive practices of immigrant households and situates their place-making practices in the broader urban morphogenesis over time. The study addresses vital questions of social inequality and structural power relations embedded in the production of urban space, together with the internal contradictions that typify the urban development process within rapidly transforming cities of the global South.

MIDHEME, EMMANUEL* (University of Leuven, emmanuel.midheme@asro.kuleuven.be)
The Mismatch Between Planning Practice and ‘Actually Existing Urbanisms’: Planning Responses to the Phenomenon of Street Trade in Kisumu, Kenya

Street trade has increasingly become an integral part of urban economies in Kenya following the onset of the structural adjustment programmes (SAPs) in the 1980s, and more recently the proliferation of globalization. In Kisumu, the increased presence of street traders in urban public spaces has however fomented a ‘clash of cultures’. On the one hand are private property interests (of capitalist investors) and the planners’ modernist vision of an orderly city. On the other hand are urban residents seeking alternative livelihood opportunities in the wake of diminishing formal jobs. The aim of this paper is to unravel the conflicts that arise out of these two contradictory worldviews on the use of urban public space. Using in-depth interviews, focus group discussions, mapping and ethnographic fieldwork, the paper interrogates a range of planning responses to the phenomenon of street trade in Kisumu over the past few decades. By extension, the paper situates the politics and spatial practices that have since been devised by street traders to fight back state repression and marginalization and to stake out traders’ claims to urban public spaces. The central argument in the paper is that both street trade and other forms of informal space production and use constitute the predominant mode of urbanism in contemporary Kisumu. Official planning practice is still steeped in prescriptive ethos aimed at producing the ‘modern’ city. There is thus a mismatch between official planning policy and the practical realities of what Shikin calls ‘actually existing urbanisms’. The paper contributes to current debates on inequality, informality, urban citizenship and the challenges of governance, particularly as they relate to contemporary planning practice and scholarship on rapidly urbanizing cities of the global South.

MIEG, HARALD A.* (Humboldt-Universitaet, harald.mieg@hu-berlin.de)
Weber's Ethic of Responsibility As a Framework for Professional Ethics

Max Weber coined the term ethic of responsibility in his lecture on Politics as a Vocation in 1919. The ethic of responsibility demands to take account of both the means and the ends of one's actions. Weber contributes to the ethic of responsibility with an ethic of “good attitude”: “there is an abysmal contrast between conduct that follows the maxim of an ethic of ultimate ends—that is, in religious terms, ‘The Christian does rightly and leaves the results with the Lord’—and conduct that follows the maxim of an ethic of responsibility, in which case one has to give an account of the foreseeable results of one's action.” My paper discusses how Weber’s ethic of responsibility can be turned into a framework for professional ethics. Key bridging concepts are (i) personal/professional autonomy and (ii) the expected degree of performance of professional work (quality, effects, efficiency, invested expertise...). I will explicative how an ethic of responsibility “takes account of precisely the average deficiencies of people” and can therefore be linked to empirical social psychology. Redefining Weber’s ethic of responsibility as professional ethics clarifies some open conceptual issues both in Weber’s approach (justification, evaluation) and in professional ethics (e.g., personal autonomy vs. professional standards).

Public Participation and Deliberation about Nuclear Energy Policy: A Case Study of “National Debate” after Fukushima Accident

This paper explores the possibility of public participation in decision-making on nuclear energy policy through a case study of “National Debate” on energy choices after the Fukushima accident in Japan. Japan has been pressed to fundamentally reform its national energy policy in order to break away from the excessive dependence on nuclear energy. In the summer of 2012, the DPJ (the Democratic Party of Japan) coalition government at that time presented a set of national energy policy options, which ranged from the complete phase-out of nuclear power to partial abolition. In order to stimulate public discussion whether to withdraw from nuclear energy, the then DPJ government introduced the method of deliberative poll and invited about 290 randomly selected citizens around the country to discuss the energy choice. The deliberative poll was the first-ever public participation and deliberation about nuclear energy on a national level, and this paper focuses on the deliberative poll through the subsequent publication of the report. Being a researcher, fieldworker, and ex-government official of “Cool Japan” policies and business projects, I will discuss about possible answers to this set of questions.
about connections between public deliberative/participatory exercises and decision-making in energy policy.

RIZZI, ESTER (Université catholique de Louvain, Belgium)

Family and Non-Family Support during the Transition to Parenthood

Although today parenting is largely a choice, having children causes stress. Parents, especially of young children, are tired, sleep deprived, and stressed (Even son and Simon, 2005, Umberson et al., 2010). They experience financial strain (Stanca, 2012) and time pressure. Childcare, an activity slightly more enjoyable than housework (Kahneman et al., 2004) is in conflict with parents' leisure, freedom, work demands, and romantic relationships (Angeles, 2010, Lyubomirsky and Boehm, 2010, Nomaguchi and Milkie, 2003, Twenge et al., 2003).

Previous studies show that families and other networks provide extensive help to parents of young children (mainly by providing childcare and housework, advice and information, as well as material support, see: Bengtson, 2001, Chan and Ermisch, 2011, Coall and Hertwig, 2010, Hank and Buber, 2009). However, longitudinal analyses of buffering effect of family and non-family networks, and the interplay of the two types of support remain understudied.

Our analysis fills this gap in several ways. First, we test if the support available from family and non-family networks actually increases after the transition to parenthood. Second, we test the hypothesis that family and non-family support alleviate the negative well-being consequences of early parenting. Third, we assume the family and non-family support affect differently mothers and fathers' wellbeing.

We use the Swiss Household Panel to observe a sufficient number of transitions to parenthood together with detailed information on support available from relatives, neighbours, close friends and colleagues. To control for section effects, we use fixed effects (hypothesis 1) and difference-in-difference (hypothesis 2).

This is one of the few analyses explicitly testing with panel data the buffering effect of support from various sources during the transition to parenthood. It is also one of the few analyses testing if social support actually increases during the transition to parenthood, which so far is only a plausible assumption.

MIKUCKA, MALGORZATA* (Higher School of Economics, mikucka.m@gmail.com)

The Well-Being Gap Between the Married and the Never Married: Time Trends and Macro Processes

Growing divorce and falling marriage rates in contemporary societies suggest that the institution of marriage is in crisis. Indeed, analyses for United States suggest that the quality of marriages, as well as the well-being premium of married over the never married persons decreased over time (Amato et al., 2003, Corra et al., 2009, Glenn, 1991, Glenn and Weaver, 1988, Rogers and Amato, 2000, Waite, 2000).

This paper examines how the well-being gap between the married and the never married changed over time and it tests the hypothesis that this trend has been shaped by the changing socio-economic conditions. In particular I focus on the hypothesis that the well-being gap narrowed because the level of economic specialization of spouses within marriage decreased. The idea that economic specialization builds the marriage premium has been formalized by Becker (1981) and is currently adopted in analyses of married couples (see, e.g. Stutzer and Frey, 2006).

I use data from the World Values Survey and the European Values Study for 87 countries on various levels of development, for a period of almost 30 years. Multilevel regression allows me to distinguish between the cross-country differences and the withincountry differences across time.

Results show that the life satisfaction gap between the married and the never married decreased over time at a rate that could close the well-being gap between the married and the never married may be explained by lower level of economic specialization within marriage. This result is policy-relevant, as it shows that enhancing traditional gender arrangements may be inefficient way of improving conditions of married couples.

Women and Men As Providers of Informal Social Assistance: The Case of Lithuania

Viewed from configurational perspective, family is a complex set of personal ties and interdependencies that extend far beyond it's boundaries and include not only more distant kinship, but also friends (Widmer, 2010). Basing on this theoretical approach, the roles of women and men in informal social support networks are explored in the paper. This makes a novelty of research, because most commonly gender differences in provision of informal care and assistance within a family of procreation and a family of orientation are discussed in a literature, leaving aside the commitments to the other persons.

The paper examines the peculiarities of informal mutual social support networks, focusing on the place of women and men - close relatives, distant kinship or friends / neighbours in these networks. Individual experiences in giving and receiving assistance are discussed and personal views regarding the expected potential providers of instrumental and emotional support (i.e., persons who would be addressed and asked for a help in case of urgent need) are analysed from gender perspective, basing on complex Lithuanian data: (1) the results of the questionnaire survey carried out at the end of 2011 - beginning of 2012 (a sample – 2000 respondents, representing national population born respectively in 1950-1955, 1960-1965, 1970-1975 and 1980-1985); (2) the findings of the in-depth interviews with 23 fathers (representing of the same birth cohorts), conducted in summer of 2012 in the six regions of Lithuania.

The investigations were accomplished in a frame of the four years research project “Trajectories of family models and social networks: intergenerational dimension”, financed by the European Social Fund (ESF).

Changing The Subject: Occupy Wall Street's Achievements and Prospects In Comparative Perspective

Occupy Wall Street burst onto the scene in New York City in September 2011. It was partly inspired by social movements in the Middle East and Southern Europe, and soon after its critique of inequality gained traction with the slogan “We Are The 99%,” it helped to stimulate many similar occupations worldwide. In the aftermath of the eviction of the New York City protestors from Zuccotti Park and the similar evictions around the country, the U.S. Occupy Wall Street movement has dissipated. But similar movements have continued to spring up around the globe, and the social processes that led to the emergence of Occupy in the U.S. remain in place.

This paper explores the sociological roots of the New York Occupy movement, with particular attention to the changing U.S. labor market. Drawing on the results of a representative survey we conducted of New York City Occupy Wall Street participants in a May 2012 protest march, we analyze the movement’s characteristics and discuss its achievements. In addition, we consider various comparisons and contrasts between the New York Occupy movement and other such movements before and since, and on that basis speculate about the prospects for the future of such movements in the USA and elsewhere.

Social Conditions of Happiness. the Case of Mexico

Social conditions of happiness. The case of Mexico

The paper is based on a national survey that will be made in Mexico next November by the seminar Subjective Satisfaction about Life and Society. The paper will present the results of a group of variables associated to happiness according to the following levels. At the individual level, it will explore the consious of freedom in decision making, the expectations horizon assumed, and the perception of control over the future life. At the mediocentric level, it will explore four dimensions: a) social cohesion levels in terms of quality of social relationships (social capital), homogeneity of them, and conflict (family, friends, neighbors, work); c) quality of social relationships and decision practices in organizations (voluntary, club, civic
and political. At the macro level, it will be taken into account two dimensions as well: a) cooperation and public goods (for example, environment care or taxes payment), and b) quality of government. We intend to show that happiness is positively associated with the capability of making decisions freely and with the sense of control of our lives; with the presence of interaction spheres, informal or for formalized, without social fragmentation and regulated by reciprocity patterns; and, with the perception that our lives are built on cooperation with others and with governments that listen to us and consider our demands.

Hospital Board Oversight of Quality and Patient Safety: A Narrative Review and Synthesis of Recent Empirical Research

Context: Recurring problems with patient safety have led to growing interest in helping hospitals’ governing bodies provide more effective oversight of the quality and safety of services. National directives and initiatives emphasise the importance of action by boards, but the empirical basis for informing effective hospital board oversight has yet to receive full and careful review.

Methods: This article presents a narrative review of empirical research to inform the debate about hospital board oversight of quality and patient safety. A systematic, comprehensive search identified 122 papers for detailed review. Much of the empirical work has appeared in the last ten years, is from the US, and employs cross-sectional survey methods.

Findings: Recent empirical studies linking board composition and processes with hospital performance outcomes find clear differences between high- and low-performing hospitals, highlighting the importance of strong and committed leadership that prioritizes quality and safety and sets clear and measurable goals for improvement. Effective oversight is also associated with well-informed and skilled board members. External factors (such as regulatory regimes and the publication of performance data) might also have a role in influencing boards, but detailed empirical work here is scant.

Conclusions: Health policy debates recognise the important role of hospital boards in overseeing patient quality and safety, and a growing body of empirical research has sought to elucidate that role. This review finds a number of areas of guidance that have some empirical support, but it also exposes the relatively inchoate nature of the field. Greater theoretical and methodological development is required if we are to secure more evidence-informed governance systems and practices that can contribute to safer care.

MILLWARD, CHRISTINE* (University of Melbourne Law School, c.millward54@hotmail.com)

New Fatherhood? Post-Separation Parenting Roles and Responsibilities In Australia

This paper addresses parenting roles, responsibilities and outcomes following marital separation in Australia (involving 15% of families with children). Recent research suggests a fathering paradox: although the proportion of lone fathers has increased in Australia over the past decades (now approx 2.2% of families with children) time use surveys show the level of involvement of fathers in everyday child care has remained very little. Despite fathers’ general lack of ‘hands on’ parenting skills, ideological changes to the Australian Family Law Act in 2006 mandated post-separation ‘shared parental responsibility’, which has been widely interpreted by lawyers and parents as a basis for equal (50-50) shared custody of children. However, a 2009-11 qualitative study, entailing three, in-depth interviews found that gender inequity in post-separation parenting responsibility leaves many mothers reliant upon welfare payments. This study included ‘tune’ fathers and mothers – ‘primary time’ parents whose children live with them most or all of the time – as well as parents sharing the care of children more equally.

The paper underscores the Family Law changes assumed a degree of interaction and cooperation between separated parents predicated on a new construction of gender in ‘doing family’. However, there is little empirical evidence to support this assumption, since (a) most separated mothers and fathers spectacularly fail to successfully negotiate parenting duties on a daily basis and (b) fathers appear more concerned with their own ‘rights’ while mothers shoulder a disproportionate burden of everyday ‘responsibility’ for children (even in ‘equal shared care’ situations where the children live half the time with each parent) – and this inequity mirrors the continuing greater levels of maternal responsibility within ‘intact’ families. Such findings reinforce the disparity between stated attitudes of concerned fathers versus their actual behaviour.

Tourism Promotion and Disaster: Ethical Issues Faced in Promoting Tohoku Since March 2011

The series of disasters following the 2011 Tohoku earthquake severely affected Japan’s ability to attract tourists. This has led to a government-directed international tourism campaign of unprecedented scale for Japan. While international tourist numbers quickly rebounded nationally in 2012, those to the disaster-hit areas remain low.

The primary cause of deflated tourist numbers in Tohoku seems to be fear of nuclear radiation. This concern was also central in Tokyo’s recent successful bid for the 2020 Olympics, and is likely to grow as the Olympics approach. Public and private institutions in Japan involved in tourism, along with guidebook publishers and others, face a serious ethical dilemma: How to promote foreign tourism to the disaster-hit areas and support their economic recovery while being open and informative about potential health and safety dangers.

This paper focuses on this ethically-charged dilemma through examining changes in discourse in international tourism promotion amongst these organizations. The appeal to support both Japan’s and the disaster-region’s recovery through tourism activities was central to many of these discourses in 2011 and 2012. This included multiple-entry visas for Chinese tourists on the condition that they visit Tohoku, and JNTO encouraging travel agencies to offer tours for foreign volunteers.

In 2013, locally-based internet tourism sites and foreign guidebooks still draw on recovery in disaster-hit regions as a central motif in promotional discourses. However, at the national level there seems to be a shift away from focusing on the disaster-hit regions and of promoting international tourists to these areas to help revive these economies. This paper looks into causes of this divergence in discourses. It considers how these organizations and institutions face differently the ethical dilemma of helping those hit by disaster in guiding the practices of international tourists while keeping tourists aware of potential safety dangers.

Contemporary Greek Myths: Visual Resources for Self-Transformation

This paper focuses on the use of visual media, including music videos, television programmes and films, by young people living in kinship, foster, residential and secure care in Scotland. It draws on a two-year exploration of practices of belonging that employed audial and visual methods (photo elicitation around spaces and objects; drawings of actual and ideal ‘homes’; recordings of sounds including music tracks then discussed in two interviews). The data produced suggest the importance of such visual media to participants in both blanking out and exploring difficult relational legacies and current circumstances. In particular, like contemporary Greek myths, television shows and music videos often portrayed difficult family situations similar to their own including parental separation, police raids, the absence or loss of a parent. Such representations and the way participants point to a complex interweaving of absences and presents cross-cutting the private and public spheres, (and often reflected and reproduced by academic discourses). In spite of living in a somewhat ‘confessional’ culture, prevailing normative family discourses generally discourage these young people from open discussion of such family circumstances. At the same time, the semi-public nature of these young people’s family lives is reflected in often voluminous case files, and the static histories they contain, repeated many times over at case hearings. Further such circumstances are often used as exemplars of dysfunctional/troubled families in stigmatising public, political discourses that divert attention from the structural inequalities that often underlie them. We argue that such visual media help to provide such young people with more fluid, more culturally accepted and semi-public representations of their experience and potentially provide them with resources for self-valorisation and transformation.

‘Taking Photos? I Don’t Do That Anymore’: Critiquing the Photo-Diary As Method in Ageing Research

Over the past 15 years there has been a burgeoning interest amongst researchers, policy makers, and funders in using methods that encourage deeper engagement with communities and offer participants greater involvement in the research process (Mitchell, Milne and de Lange 2012). This desire to use more emancipatory and decolonizing methods (Smith 1999) has led to ‘an explosion of participatory media projects’ (Luttrell and Challen 2010: 197). Little has been written, however, about how participants regard or (dis)engage with the visual as a method of choice. Over the past 17 months, a team of researchers from the University of Edinburgh and the Scottish Centre for Social Research have been exploring day to day kindness, help and support and the increasing role it plays as we age (www.livelihoods.org.uk). The research, funded by the Joseph Rowntree Foundation, adapted Bartlett and Milne’s diary making method (Bartlett 2011). Following an initial mapping exercise and semi-structured interview, participants were asked to keep a diary for two weeks recording mundane acts of help, support and kindness, offered, received, wished for or rejected. Participants chose the mode of production from a selection of visual (photo or drawing), audial (sound diaries) or textual (written or bet). Based upon semi-structured interviews and 45 diaries, this paper presents a critique of the visual as a diaries making method and an exploration of its limitations.

MILSTEIN, DENISE* (Columbia University, denichag@gmail.com)

Authoritarianism and Paths of Resistance in Latin America

How does political crisis and, more specifically, repression, transform artistic movements and their evolution? And how do the paths that artists take in contexts of crisis shape the cultural environment in which citizens respond and resist? Authoritarianism in Latin America during the 1960s and 1970s spawned bifurca-
tions and the re-drawing of boundaries in and between artistic movements. This paper explores the separation of political from cultural resistance as one such bifurcation among groups of musicians facing military dictatorship in Uruguay and Brazil during this period. Comparison of four musical movements sheds light on how repression transformed artistic trajectories in each country. Politically engaged artists and countercultural artists developed distinct trajectories that were spatially selective.

The development of sustainable urban structures in shrinking cities with large-scale funding programs. The approval for funding is based on defining areas of preferred investment and areas of disinvestment and demolition. (3) Municipal social housing policies and the allocation of low-income renters by housing companies are spatially selective.

Hence, the author assumes that the small-scale social polarization in the housing estates is reinforced by conflicting investment strategies of public and private actors, by contrasting rental policies of public and private landlords and by the withdrawal of the municipalities regarding to socially stabilizing measures from areas of disinvestment and demolition. Apparently dealing with urban decline is hereby restored to power distribution of power and resources to the actors, their divergent interests and the lack of incentives to cooperation. To develop these arguments the author analyses the case of the continuously shrinking East German city Cottbus.

The paper investigates the influence of local governance and planning practices on the increasing social polarization of neighborhoods in large housing estates in shrinking East German cities.

Despite significant outmigration of middle-class families the housing estates did not experience a collective downgrading as predicted in the early 1990s after the reunification. Instead 20 years after there can be observed a small-scale patchwork pattern of stable and impoverished neighborhoods. The author argues that the uneven development is not only triggered by the demand-driven housing market in the shrinking cities and by segregation patterns caused by the GDR housing policy. Likewise this development is reinforced by specific planning and governance processes: (1) The Federal Government of Germany supports the development of sustainable urban structures in shrinking cities with large-scale funding programs. The approval for funding is based on defining areas of preferred investment and areas of disinvestment and demolition. (2) There are a growing number of real estate investments in low-quality housing stocks. These private market actors often pursue investment and rental strategies that are contrary to the municipal development/ demolition plans. (3) Municipal social housing policies and the allocation of low-income renters by housing companies are spatially selective.

Hence, the author assumes that the small-scale social polarization in the housing estates is reinforced by conflicting investment strategies of public and private actors, by contrasting rental policies of public and private landlords and by the withdrawal of the municipalities regarding to socially stabilizing measures from areas of disinvestment and demolition. How Is Multiculturalism Americanized and Japanized?

The idea of “multiculturalism” has spread globally and impacted on the ways of being “nation-state” since the 1970s when Canada and Australia enacted the official policies of multiculturalism. The United States is one of the earliest adapters of the idea to redefine its legacies of cultural diversity in the 1980s. Japan, one of the “weak” states in the strength of multiculturalism policies, modified it to a vision of “multicultural coexistence (tabunka kyosei)” for incorporating foreign residents in the 2000s. This paper compares how to accommodate multiculturalism as an image of national society in United States and Japan in entangled three layers: community legacies, national discourses, and global values. Both countries have had historical legacies to incorporate minorities at the level of the local communities. Recent tensions regenerate national discourses and redefine the relations with foreign residents, as well as sexual minorities, are typical examples of domestic scapegoats and objects of violence.

As ultra-nationalists and neo-Nazis themselves are very few in Mongolia, the problem is whether public opinion is tolerant of them. However, the public opinion in Mongolia are conflicting. Some argue that nationalism and prejudice against foreigners is common in the country, and that exclusivists are the “weak” states in the strength of multiculturalism policies, modified it to a vision of “multicultural coexistence (tabunka kyosei)” for incorporating foreign residents in the 2000s. This paper compares how to accommodate multiculturalism as an image of national society in United States and Japan in entangled three layers: community legacies, national discourses, and global values. Both countries have had historical legacies to incorporate minorities at the level of the local communities. Recent tensions regenerate national discourses and redefine the relations with foreign residents, as well as sexual minorities, are typical examples of domestic scapegoats and objects of violence.

As ultra-nationalists and neo-Nazis themselves are very few in Mongolia, the problem is whether public opinion is tolerant of them. However, the public opinion in Mongolia are conflicting. Some argue that nationalism and prejudice against foreigners is common in the country, and that exclusivists are the majority of Mongolian people, and that their activities are still in the margins. Which is closer to reality? Resolving the contradiction and portraying an accurate picture of public opinion will help in forecasting the future of nationalism and exclusivism in the country.

This paper presents a study of issues on the national identity of ordinary Mongolians, such as exclusivism, national pride, and aspiration of “national purity.” Using data from cross-national public opinion surveys, the study examines Mongolian attitudes toward those issues, by comparing Mongolia with Asian societies and post-socialist ones. This study also explores correlations among these attitudes, as well as factors associated with them. Hence, the study aims to offer a non-European empirical viewpoint to the research of nationalism and national identity.

A New Stage In The Fragmentation Of Production: Economic and Social Implications For Development Countries

This paper deals with the implications on production activities, income distribution and institutional changes due to the significant changes taking place in the world of work. One of the most relevant characteristics of globalization in its productive and commercial aspect is the segmented organization of national and international production. A new feature of the present international division of labor is the participation of countries that opened recently to the world economy. This is the case of large countries such as China, India, countries of Eastern Europe, and Latin American ones, like Brazil, México.

The incorporation of these new actors in the global economic stage gives way to deep concerns, analyses and debates on the evolution of the economic specializations of developed countries and the industrialization strategies which are open to emerging ones.

Emerging countries have their own concerns regarding segmentation and the new trade models as it implies a great dependence to the MNCs in terms of markets, technology and organization. The new strategies require modifications to modify the structure of specialization and reduce production in sectors with price competition. They need institutions and incentives for the creation of knowledge and innovation. Thus, this paper deals with the following questions. What institutional arrangements are needed in order to make possible the insertion of emerging countries in knowledge intensive activities with high value added? Are the implications concerning employment the same as those of the international trade of final products? Do the observed tendencies towards a more uneven distribution of income, in both developed and developing countries, arise from the interrelation of national labor markets? Does fragmentation increase the negative effects in the distribution of income? Which should be the new economic and social policies and the institutional changes?

Youth and Public Space in Hanoi, Vietnam

Since Vietnam began to integrate with the global economy and culture in the mid 1980s, public spaces have been greatly transformed. They have increasingly been privatized and commercialized, and become subject to surveillance and rules, mirroring the global trend. However, in Hanoi, a very dense capital with scarce public space, the consequences of this trend are not only a decline in public space, but also an intensification and diversification of use of public space, including increasingly informal activities. These processes resulted in restricted access to the city’s largest public spaces, which are mostly fenced off and for which an entry fee is charged. At the same time, the city witnesses an increasing use of smaller public spaces as squares. They have become heavily populated by urban youth because of their easy access (no fences or fences). The Vietnamese youth that grew up in the new era of globalization are today developing a new urban culture in the squares of Hanoi, manifested in skateboarding, biking, rollerblading, and street dancing.

Based on the results of 40 interviews with youth held on two squares in Hanoi – one located in the interior city, Lenin Square, the other one in a residential peri-urban area, Trung Hoa-Nhan Chinh – and 15 interviews with professional and institutional planners, this paper provides an understanding of the use of public space by urban youth and examines how they negotiate rules and restrictions and deal with other users. The paper aims to give an insight in the role of public space in the context of a new emerging urban youth culture in Vietnam, and in the dichotomy between tightness and looseness of control over public spaces.

Routines, Rhythms and the Mobilisation of Musical Practices

Despite the increasing interest in mobilities and cultural practices, the specific mobilities of musical practices have been sparsely addressed in the scholarly literature. This paper advances the notion of mobilisation of musical practices and its relationship with routines, rhythms and bodily gestures as a way to analyse the transportation of ways of making and experiencing music across networks of relationships. The specific case of son jarocho is addressed to explore and discuss this notion. Son jarocho is a musical practice originated in southeast Mexico and is believed to be product of the encounter of African, Nahua and Spanish-Andaluz traditions. It is nowadays reproduced, appropriated and recreated in various locations of Mexico and the United States, partly due to the migratory flows between these two countries. Practitioners have used son jarocho to elaborate discourses of authenticity and preservation of a regional musical heritage; however, it is currently also sustained, informed andreshaped by transnational linkages. I suggest that son jarocho is no longer confined to a bounded and coherent community or ethnic group (namely Mexicans, Jarocho, Mexican-Americans or Chicanos), but constitutes a complex form of socially established activity in which repertoires of bodily gestures, rhythms and routines are reproduced, re-appropriated and recreated across transnational social fields.

Inequality in Students’ Citizenship Participation Across Countries

Citizenship participation is a key element to sustain and legitimize the democratic system. Although citizens are assumed to have similar rights, the empirical evidence suggests that participation is characteristic of those with higher socioeconomic background (Brady, et. al., 1995). Furthermore, these inequalities would have an intergenerational transmission (Verba, Burns & Schlozman, 2003): children with well-educated parents have the knowledge, skills and attitudes for participate in a more effective way. The main objective of this study is to analyze the individual and contextual (school and country) elements that can mitigate/strengthen the impact of the social background on student’s citizenship participation, guided by the following questions: To what extent students’ participation levels differ across countries? Are these differences related to contextual factors? Do contextual factors affect the link between students’ background and participation? The central hypothesis in this study is that country contextual economic indicators as well as democratic indicators influence both participation and the impact of background on participation. In particular, we expect that in countries with higher inequality indexes the influence of students’ and school socioeconomic background on participation is stronger, reason why we pay special attention to Latin America, the region of the world with the highest inequality worldwide.

The present paper analyzes data from the International Civic and Citizenship Study 2009 (N=140,000,38 countries). The main object of study is citizen participation, composed by two dimensions: present-future and civic-civic. Whereas civic participation refers to activities that involve interaction with the local communities, civic participation is conceived as related to formal institutions. Preliminary multilevel results show that the association between socioeconomic background and participation is strong and varies across countries, however shows different patterns depending on the kind of participation. Some country context dimension has an effect on the levels of participation. Comparison among regions will be discussed.

Migration and Gender Inequality --- a Case Study of the Role of MICRO Finance in Mumbai Empowering Women and Transforming Their Lives

Many women in the unorganised sector set up small business, that require very little capital. These are essentially low productivity undertakings. However they are generally relatively more efficient than the small business set up by men because women are able to utilize capital productively. With the expansion of microfinance facilities credit is also now available to many of these small business, enabling the women entrepreneurs to expand their activities. Providing capital to micro businesses, set up by women has emerged as an important means of women’s empowerment. Empowerment of women is another important indicator of development of a nation and an economy.

The Researcher tries to unfold the following objectives:

*To identify the growing problem of gender inequality in cities.
*To identify the need for micro financing.
*How micro financing contribute to support and empowerment.
*How marginalized women’s lives are impacted by micro financing and the importance of replicating this phenomenon.
Transnational corporations have radically altered the urban landscape of many cities in India. They are housed in gleaming, well-maintained buildings with round the clock security. Within these workplaces, primarily middle class virtually mobile workers interact with clients and customers from North America, Europe and Australia.

This paper focuses on the workers who “service” India’s high-tech workplaces. Based on interviews with workers who provide security and housekeeping services we trace newly emerging patterns of gendered work. Traditionally female-dominated sectors, such as cleaning, have experienced a large influx of men as a result of the rhetoric of professionalism which is used to promote this work within foreign corporations. Men and women in cleaning make sense of the stigma associated with their jobs (in the context of both gender and caste expectations) while simultaneously stressing the technology-based, standards driven nature of their jobs. Similarly, men and women in security jobs highlight the militaristic precision demanded for their jobs while recognizing the low waged, unstable nature of their work in the context of subcontracting. In making these normative claims, workers define and inscribe new gendered rhetorics of masculinization and feminization. We argue that these rhetorics support the gendered segregations of these occupations, which are poorly paid precarious jobs for primarily male workers.

Rethinking Pharmaceuticalisation from the View of Japanese Context

Medicalisation is a key concept in medical sociology, and is useful tool to capture social control by medical profession. Recently, however, scholars increasingly are focusing on the pharmaceutical aspects of medicalization. Pharmaceuticalisation is defined as the process by which social, behavioural or bodily conditions are treated by providing in need of treatment, with medical drugs by doctors or patients (Abraham 2010). In recent years, although the concept of pharmaceuticalisation have been pervasive in some journals, the concept is still primarily a topic explored in scholarly terms. Indeed, according to Bell and Figert (2012), as of June 17, 2011, there were only seven thousand hits for “pharmaceuticalisation” in Google and only seven for the topic of “pharmacisation” in Web of Science. However, there is a need for the concept of pharmaceuticalisation, because the empirical phenomena, which medicalization theory cannot adequately capture or explain, are increasing. Though discussion of the concept is increasingly developing in sociologically, the discussion in Japan has been ahead of the game. Therefore, in this report, by considering the reason for lack of the discussion in Japan, I aim to reconsider the concept of pharmaceuticalisation critically, and to explore the availability of the concept. One of the factors that pharmaceuticalisation is not general in Japan is universal health insurance system. Japanese people can receive the same medical care at anytime and anywhere by universal health insurance system. Therefore, we cannot imagine the impact of pharmaceuticals is greater for Japanese people. That is, generalisation of pharmaceuticalisation without the point of social system would be hard. However, given that a lot of Japanese people use dietary supplements, pharmaceuticalisation might be affect individual healthisation. Therefore, by using pharmaterialisation that is associated with individual healthisation and social system, it might be available to analyse social phenomena of pharmaceuticals better.

Reclaiming the Skin: The Tattooing and Piercing YOUTH Revolution and the Body-Skin-Mind Problem

All modern countries have recently experienced a “tattoo Renaissance.” This has become an essential part of what is here termed a movement for self-rights, the main driving force of which have been adolescents and young adults. Although tattooing and piercing, even in their more extreme forms, are generally no longer regarded as signs of social deviance, they are still viewed as “self-sabotage” since they not only pose a threat to physical and mental health, but also matter in re-definition of gender roles. They are regarded as signs of social deviance, they are still viewed as “self-sabotage” since

**Gender Inequality and Education for Women**

Due to rapid population growth, poverty and politico-economic reasons, the number of illiterates is increasing continuously in the world. In most society’s women have lower status, no access to education, less food and no health care. Work hours longer, have lowered incomes and little or no access to ownership of property. Normally in developing countries, the proportion of women literates is less than that of literate men.

Girls receive less health care and food than boys thus girls are malnourished. Due to illiteracy they also mostly work in informal sectors’ where pay levels tend to be lower. Gender specific inequalities are reinforced by unequal access to education. Girls often are simply not sent to school or drop out later, thus increasing the level of illiteracy among women.

Those who live in semi literate families, there is no pressure on women to receive education. Even when the motivation is there, other obstacles are permanently present. Women have to perform so many roles that they do not find enough time for fulltime or even part time educational activities. Fatigue, frequent or early pregnancies, caring for children and families, cultural and social activities and formal or informal employment, are among the many reasons for lack of time. Gender specific inequalities are reinforced by unequal access to education.

Present study will explore the dropout’s girls from schools and how it affects their future life and in turn loss to nation.

The New-Petty-Embourgeoisment of Professionals in the Age of Globalization

Ever expanding global corporate capitalism has all-encompassing influences; professional capital is reshaping the structure of the middle class. Professions once recognized as liberal and noble are being transformed into intellectual workers of the corporate sector of all kinds of societies. Professional expertise and intellectual capacities are being utilized for commerce and maximization of profit rather than in the interest of the client and the public. This applies to scientists, doctors and lawyers who already play the function of corporate capital on the one hand and perform the task of labour by producing the surplus. The growth of the knowledge economy world over has created vast opportunities for this kind and concomitant growth of the new middle class consisting professionals. A study of Indian professionals, working in various kinds of corporate sectors operating in different countries, reveals that they are undergoing the process of new-petty-embourgeoisment. The autonomy of the new middle class is grounded in the specialized professional knowledge; however, they work like intellectual white-collars and able to exercise lesser degree of professional independence. Furthermore, the ascendancy of new technology in all spheres of work organization has brought about a change in formal organizational relations which leads to work autonomy a class character of the new middle class, but at the same time it leads to ‘disskilling’. It has been found that more homogenous life chances and lifestyle are on rise among the professional middle class at the global level. It can be argued that they are moving from the old petty bourgeois nature and location to the new petty bourgeois class location as also subjective identity.

Reconsideration of Isigami Research By Aruga Kizaemon; Based on the Tutiya Takao’s Field Notes

We aim to reexamine both the distinguished monograph “The large family system and the Nago (serf) system at isigami hamlet, Ninohe county, Nanbu district” written by ARUGA Kizaemon in 1939, who is one of the founder of Japanese rural sociology, and some field notes and documents by TUTIYA Takao, who is a professor of economy history and participated in this research as a coworker but withdrew from it in midstream.

In this monograph, the serf system which was present at Isigami was investigated and analyzed in detail. From this monograph, ARUGA was going to form the "Douzoku(cognate groups) theory", which is the base structure of Japanese society.

However, when we read this monograph, we feel Aruga did not pay enough attention to the lacquer ware which a head family of Isigami produced in those days. It is thought that the production using forestry materials such as the lacquer ware or the mathematical was important for the cash income, because in this area the scale of rice fields was not so large. However, ARUGA does not describe the concrete situation of the lacquer ware production. How was the family system related to the lacquer ware production system?

On examining this question, we discovered some field notes and documents of Isigami research by TUTIYA. In this report, we try to consider the following points in reference to these notebooks and other documents. 1) Why did TUTIYA abandon a joint investigation? What was the critical issue for him? 2) In this critical issue, what position does the data of the lacquer ware business occupy? 3) Can we see something new when compared to the monograph by ARUGA?

Through these questions, we try to relativize the Douzoku theory and to examine the dispute over the Japanese capitalism.

Net-Base Theory of Social Capital

The concept of social capital has been widely accepted; however its theoretical significance in sociology is not clear yet. In this paper, we propose a theoretical device in order to make this analogical concept the key to integrate relation-theoretic theories of social relation, social networks, and social structure) in sociology. Social capital is analogy, the aim of which is to capture such mechanism that is similar to capital accumulation process in social structure. Every element of social
structure and every relation-theory as well should have relation to this concept to some degree. As a rule it inevitably has multiple meanings; on the other hand, it should work as a hub by which various relation-theories are consistently connected to each other. In order to extract this unifying power, we introduce the ‘net-base’. Net-base is a common attribute that provides a basis of social ties. Thus net-base implies a corresponding socio-centric network that consists of all the members who share it; moreover, configuration of various net-bases implies interrelationship between multiple socio-centric networks. We assume that accumulation of social capital is oriented by socio-centric networks embedded in social structure; then, net-base is an indicator in terms of which we can infer how network mechanisms in social structure condition the accumulation process of social capital. In making the inference we often need to access different type relation-theories, which will provide an opportunity of theory integration. Additionally, net-base is easily measurable by questionnaires on personal networks and social networks, as well as through personal and social networks survey. This network position makes it possible to locate ‘social capital’ in the storage house of relation-theories and to empirically find valid inference in regard to network mechanisms of capital accumulation. More extendedly, it should have integrity with the rational choice research program of social capital proposed by Flap and Volker (2004).

The Prime Function of Intellectuals and New Conditions of Framing Social Imaginary

The paper aims to enrich the existing reflection on the political role of public intellectuals by exploring the impact of the changing nature of the political and intellectual spheres on their potential to connect with an audience. It argues that the significance of public intellectuals’ influence in the political arena is determined by their ability to imprint themselves on a wider social imaginary through their “ability to perform” (Bourdieu, 2011). This ability, described as “social capital” by Flap and Völker (2004), is based on social networks of interconnected relationships, the complexity of the system and the visions of the past and the future. The paper’s theoretically informed empirical exploration of the intellectuals’ prime function, that is, the elaboration of these symbolic configurations, focuses on the fate of East European intellectuals who assumed the role of the creators of the post-communist state. Those dissidents turned politicians did best when they were trying to prove that they could ‘live in truth’, approached politics without any illusion. Yet their most effective performance in politics was not when they were in office but when they were in opposition. Today, East European intellectuals, like their counterparts in modern western democracies, are without much chance to be the practical politicians of tomorrow. The paper argues that the present diminished role of public intellectuals is a result of the new conditions of forming the collective imaginary. Following discussion of these changes as indicative of the new complexities and uncertainties of modern world, the paper concludes that the public intellectual’s role is being recalibrated through the proliferation of imageries that do not identify a dominant conception of the present and underling structural transformations and therefore are unable to provide dependable political and cultural interpretations of the present and a reliable guide for knowledge of the future.

MISZTAL, BARBARA* (University of Leicester, bm50@le.ac.uk)
Trust and Modes of Cooperation

The paper asserts that presently – as a result of the growing importance of networks of interconnected relationships, the complexity of the system and the innovative use of knowledge as sources of productivity gains – there is an increasing demand for cooperation. The paper critically evaluates theories that assume that today’s society increasing depends on externally regulated behaviour, so not on trust, to sustain cooperation (Cook et al 2005) and theories that argue modern society deskills people from cooperative competence (Sennett 2012). It illustrates that although today’s society increasingly ensures their solution to the problem of cooperation by setting their foundations in formal rules, yet attempts to act in the spirit of rational formalism are always complemented by the practical importance of various informal, based on trust, non-hierarchical voluntarily negotiated forms of self-coordination. Moreover, many current processes increase the scope for not role-bound and role-obedient conducts and therefore facilitate trust based social encounters. At the same time, these trends, which lead to the loosening of formal hierarchies, de-conventionalisation of organized practices and the case of the demand for trust, also create favourable conditions for trust abuse. In order to enhance cooperation, in the context of the growing level of education, expanding access to information, new digital technologies and the process of globalization, we should simultaneously rely on the both formal and informal means supporting social exchange.

Qualitative Analysis for Sociological Study of Various Conditions of Happines

What I would like to emphasize in this presentation is that now we need to turn to analysis of contents (not based on qualitative data for the sociological study of “happiness.” To say it objectively, we need to examine the methods and effects of detective analysis of research data from interviews or open questionnaires.

In this presentation, I will show the result of my examination. The examination has a wide range of open questionnaires treating them as short interviews, made on Mexican university students, who as we all know tend to answer “very happy.” As a result, three clusters were found, according to the regions, with different “conditions for happiness.” Feature keywords for happiness are: In the Capital, “above a certain economical level, nation and politics, charity-like service,” in Chiapas, the most southern border state, “economic problems, close people, religious consciousness,” in Puebla, a city in-between those, “autonomy or self-sufficiency, ‘around me’ or ‘social’ situations.” Naturally, many points are shared as well. Almost all the data used by social scientists for analysis about happiness are based on contents analysis based on rational choice theory, which will provide an opportunity of theory integration. Feature keywords for happiness are: In the Capital, “above a certain economical level, nation and politics, charity-like service,” in Chiapas, the most southern border state, “economic problems, close people, religious consciousness,” in Puebla, a city in-between those, “autonomy or self-sufficiency, ‘around me’ or ‘social’ situations.” Naturally, many points are shared as well. Almost all the data used by social scientists for analysis about happiness are based on contents analysis.

A Framework for the Sociology of Future: Logistics Curve and the Axial Ages

Until the later decades of the 20th century, almost “self-evident” image of the history was that of the ever-accelerating progress. That image of history had the objective basis: statistics of the energy consumption, etc. However, it is also evident that this kind of ever-accelerating growth cannot be maintained forever. Biology is aware of the S-shaped “logistics curve” of every species, with the 3 stages: 1. slow foreflow, 2. of rapid or explosive propagation and 3. of the stable equilibrium with the environment. Our species in a finite environment on the planet cannot be free from this curve. Statistics of the increase rate of world population shows the sharp watershed around the year of 1970, turning point from acceleration to decleration. We are already passing the historical point of junction from the stage II to III. Macroeconomic meaning of the world system crisis in 2008 can be understood as the first crush of the infinite globalized-informatized system with the finity of the reality. “Globe” is a paradoxical geometry; infinite and finity. One is the utility of detective analysis and research with a weaker hypothesis; another is the utility of detective analysis and research with a stronger hypothesis to prove, test and certify. Another is that open questionnaire, a system we cannot say we have utilized enough, can be an important source of quantitative data. With quantitative data like this, we can effectively classify and objectively treat the elements of “happiness.” Sociology has the method to do it and it must be an advantage to the other disciplines studying “happiness.”

Observing Fukushima: A Case Study of Japanese Nuclear Policy through Luhmann’s Social Systems Theory

Since the Fukushima Daiichi nuclear disaster three years ago there has been much debate regarding Japan’s nuclear policy. These debates usually focus solely on the technological, economic or strategic issues at hand, or on the dwindling public support for a nuclear Japan. Whilst all of these arguments have their own strengths, they discuss specific points regarding nuclear policy with little regard to the wider picture. They all also describe what the political system should do to resolve the issues they raise rather than considering how the political system rationalises nuclear policy and the associated risks. By utilising Luhmann’s Social Systems Theory, this paper proposes to frame the different views on the nuclear
issue as a problem of observation by different observers within a functionally differentiated society. The paper shall discuss the technological, economic and public opinion issues surrounding Japanese nuclear power, demonstrate how these are first-order observations of different observing social systems, and how Japan's political system acts as a second-order observer of these observations. By understanding this political social system which acts to manage system expectation by introducing binding resolutions upon society (and thus deals in risky decision-making), the limits of Japanese political action when faced with technological risks on one hand and the desire to maintain Japan's economic and strategic position on the other will be illustrated. This paper concludes that despite the risks of and public hostility towards nuclear power, the rationale of Abenomics and emerging strategic threats in East Asia leave Japan with little choice but to restart its reactors, a conclusion which is consistent with current Japanese nuclear policy.

The Role of Demographic and Social Factors in the Use of Licit Drugs Among University Students from One University in Kingston

In Jamaica there is a growing concern related to the excessive use of licit drugs among young people. This is due in part to the rapid social changes that have been driven by larger global and local factors. These factors may predispose young adults to use licit drugs such as alcohol and tobacco. There has been limited research on the role that demographic and social factors play in the use of licit drugs among university students in Jamaica. Socio-demographic factors appear to have little influence on the use of alcohol and tobacco than peer influence, the quality of family relationships, and entertainment practices. The results of this study cannot be generalized to the population of university students in Jamaica.

I Was Not Really Imagining Myself in Terms of Becoming a Big Scholar or Academic... Academic Mothers: Power and Powerlessness in Academia and in Homes

Power and powerlessness are two poles of the continuum of life that Academic mothers inhabit by virtue of simply playing these roles in convergence with each other.

There's is a double edged problem. Traditionally women are denied the thinking and reflecting acumen and are seen as substandard contributors to the academic discourse. Interestingly, mothering is defined in many cultures as a full time responsibility and one that is the most treasured attribute of women. One the one hand, the thinking and emotionality are seen as opposed traits that logically imply academic mothers to be lacking in the basic requisite of mothering, on the other, women's intuitive emotionality is seen as coming in the way of a scientific approach required of women as Academics. This study seeks to understand women's experiences, positive and negative in terms of transgressing these straight jacketed boundaries and combining the role of mothers and academics in India, Brazil and South Africa and seeks to explore how strong traditions of family values in these cultures influence and impact women in the Academia. Some of the questions it seeks to address are as follows:

In what ways do women live these roles which are very demanding and challenging, also satisfying and fulfilling? What are women's obstacles, what are their strengths? How do academic mothers do a different kind of academics, maybe or a different kind of mothering, so as to satisfy their aspirations from these two roles, two lives? What are their tensions, how do they resolve them, what kind of adaptations do women make? What kind of a philosophy on life and work do the women adopt? This paper will analyse the different responsibilities simultaneously. The paper is based on in depth qualitative data that is deeply reflexive and drawn from 15 women Academicians in India.

Inclusion through Communication: Support Activities for the Learning-Disabled and Autistics in Tama, Tokyo

In Japan people are encouraged to include the disabled in such places as regular workplaces and schools as in some other countries. However, even now, one third of adults with learning disability and autism are placed in facilities for the mentally-handicapped, because many persons concerned do not altogether consent to the idea of inclusion as such, particularly when the learning-disabled and autistics inflict harm on things and people in the community.

This paper is based upon my research conducted in Tama District, the most populated suburban area in Tokyo, to see how those who attend on the learning-disabled and autistics in the district act in response when they are exposed to a variety of such harm in the community. The attendants are apt to assume that harmful doings by the learning-disabled and autistics are connected with what was done by others, including the attendants themselves. Thereupon, they attempt to protect an unexpected harmful doing in terms of the relationship of the learning-disabled and autistics with other persons, trying to see what caused each individual with learning disability and autism to turn to be harmful. This attempt leads to their attaching importance to painstaking communication with him/her as a measure to include him/her in the community.

I will discuss this way of dealing with the problem in the light of the concept of double contingency first advocated by Talcott Parsons and later modified by Niklas Luhmann, believing that it can empirically be applied.

Social Investment Strategy in Japan: A Failed Attempt?

A rapidly aging society with low birth rates, an increasing public distrust to the sustainability of the social security system, a high level of child poverty, and a high rate of suicide among the youth all suggest that Japan should embrace social investment strategy. A large gain in social benefits seems possible with the rethink of an inter-generational redistribution. Yet, social investment strategy has been weak both in discourse and in practice. Although the Democratic Party of Japan (DPJ) government (2009-2012) pursued some policy innovation in the area of childcare and youth programs under the slogan of “children first,” a paradigm shift has failed to take place.

This paper asks why the adoption of social investment strategy is so limited in Japan despite the fact that its social and economic conditions should provide a fertile soil for such a strategy. We shall explore the political conditions which prevent the full-fledged development of the ideas and practices of social investment strategy. In so doing, we show how the dominant force of neoliberalism constitutes a stumbling block in policy innovation.

This paper will cover major policy changes in the realms of childcare policy (cash allowance and daycare), youth programs for job training and job seeking, and “career education” from the 2000s to the present day. Its main focus will be on the rightward shift of partisan dynamics, legacy of statism, and the persistence of traditional gender roles.

Social and Intellectual Antinomies of Information Technology

Information technology is progressing day by day, at a speed which exceeds our expectations. Therefore, the view about information technology is being torn into two conflicting poles. There are some antinomies of various dimensions in today's highly informative society. At a socio-economic dimension, Big Data (and data-mining technology) is expected to rediscover the information marketplace as a rich untouched field, and that it will produce industrial reorganization and activation, just like fossil fuel (and mining technology) accelerated the Industrial Revolution in the 20th century.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
On the other hand, Big Data has been criticized for collecting all the action histories of people and reusing these as industrial resources, giving rise to the social movement opposed to excessive surveillance and marketing.

At an intellectual dimension, especially in the field of human science, the appearance of Big Data is expected to enable statistics technology and behavioral science to explain how people’s decision making and mechanism of action selection, and help predict people’s behavior objectively. On the other hand, there is a concern that the development of surveillance society or sales promotion may infringe on people’s free will and humanness, and may seriously change the relation between an individual and society.

These social and intellectual antinomies are homologous to the thought situation of the 1960s in France, the confrontation between objectivism and subjectivism, where Bourdieu elaborated his sociology and the concept of Habitus. Today’s antinomies of information technology could be considered by using Bourdieu’s sociological methods of overcoming dualism.

Doing Occidentalism through Mangasque Convergence

This paper addresses contemporary Japan-Italy relations in the field of popular culture, shamed by the asymmetrical and mutually constitutive process of Occidentalism, Orientalism and self-Orientalism. In spite of the hegemonic and diversified impact of modern Occidentalism (F. Coronil 1996, K. Iwabuchi 2002), there is still no unified field of systematic academic investigation on the ‘West’ as a concept, which has become a kind of blind spot in the Humanities and Social Sciences (HSS) (2007). Occidentalism still continues to be examined through a body of disconnected works on the one hand, or through methodological criticalization, nationalism and culturalism on the other (the West without quotation marks).

In this regard, modern Italy and Japan offer a heuristic alternative to the center/ periphery model conventionally applied to Occidentalism, due to their ambivalent status of sharing a history both as orientalizing imperial powers, but also as orientalized exotic countries. Interestingly, in the last two decades, Italy has become the most loved foreign country in Japan among the whole young and female population (T. Miyake 2010), while Japan has witnessed a similar boom of popularity in Italy, thanks in particular to the tuning of the country with the highest number of anime series broadcast on television outside Japan (M. Pellitteri 2008).

The diffusion of Japanese popular cultures in contemporary Italy will be investigated firstly, by situating it within the process of Occidentalism, which will be examined through a theoretical perspective inspired by relational, intersectional and positional sociology (M. Emirbayer 1997, P.H. Collins 2000, P. Bourdieu 1984).

Secondly, this study will address more specifically the transmedial constellation of Japanese popular cultures (manga, anime, videogames, character design, etc.) by bringing together an aesthetic theory of the mangasque (J. Bernot 2012) and a media theory of convergence culture (H. Jenkins 2006).

New Urban Childhoods: Globalisation, Socialisation and Urban Informality on Children in Ghana

Globalisation has fuelled rapid and unprecedented levels of urban expansion the consequences of which for children's socialisation have been profound. 'Urbanisation without industrialisation' is how Davis (2006) terms this process, as economic dislocation, widening inequalities and rapid social change have undermined the capacity of cities to meet the needs of their rapidly growing populations. Many cities and towns no longer equate with the 'engines of growth and structural transformation' (UN-HABITAT 2005, 2010) attributed to them by class- urban theory, but instead appear as a cause and symptom of lasting economic and social problems. It is pointed here that one aspect of this may be productively explored through the notion of 'urban informal childhood'. Focusing specifically upon Ghana, the paper examines the growth of informal ways of working and living in urban areas and considers the implications of this for children and their socialisation. To do so, it explores the experience of structural adjustment in Ghana - a 'poster-child' for globalised market led development strategies - and traces through its impact on urban development in terms of 'informalisation' (Meagher 1995) and its corollary the growth of wageless life (Denning 2010). Particular attention is given to the implications of these developments for children as both dependent and, in addition, the impact of this on processes of class formation. As structural adjustment finds a parallel in processes of domestic re-regulation, this paper argues that children’s value to their household is progressively being re-constituted. The consideration of the informal – activity outside the regulative ambit of the state (Harloe 2010) – is also pursued through attention to new forms of urban living. As urbanisation becomes increasingly synonymous with the development of ‘slums’ and illegal settlements, this paper considers the rise of informal urban childhood through inadequate housing, overcrowding and a lack of basic services for children.

The Effects of the Ethnic Business Enterprise on a Local Shopping Mall in the Central Tokyo

This paper is concerned with the way the development of global migration has made its impact upon Japan’s urban communities. Nowadays, Japanese metropolises it is common for individuals from various backgrounds to be found living together and in recent years the rate of such interaction has been growing constantly. The major focus in this paper will be upon the Ikebukuro district, one of the major transportation terminals in the central Tokyo. Previously, the district surrounding the City centre was descending into urban decay as this community confronted a serious shortage of appropriate local labour combined with its ageing population. Since the late-1980s, this district has attracted newcomers, among workers in the 20 to 30 age-group, from foreign countries owing to its business development, offering many jobs especially in service industries. Subsequently, and particularly since the 2004-2005, the district has become the subject of media investigation of plans to establish a new ‘Chinatown’. But this is a new kind of ‘Chinatown’. Here we do not see the traditional Chinatown gates that can be seen elsewhere in Japan’s other major Chinatowns, such as Yokohama. Nor do we see the concentration of Chinese shops and Chinese business development that is evident in selling Chinese cuisine and groceries. Rather, the unique character of this area is ascribed to the numbers of Chinese commuters who travel to and from the precinct, as well as to the various free Chinese papers which inform Chinese residents of applications for visas or accommodation and apart from various skills and their taste for fashion or cuisine. This area is the place for publishing the many Chinese community papers with considerable circulation, and hence this district has become the location of an ethnic town for commuting patriots.

The Sociology of Food and Consumption: Empirical Evidence from Soon-to-be-Parents in Japan

Japanese society has been undergoing tremendous transformations in recent years; one of them is the change in family organization and family life and in particular the role and identity of the father. The most well-known example of this is the rise of the so-called ikumen: men who actively engage in child rearing. A government campaign launched in 2010 to encourage Japanese men to take a more active role in parenting is gathering momentum. Seminars aimed at men on how to develop parenting skills are now being held across the country and fathers figures who take time out of their work to spend time with their kids are currently being applauded in the media.

While Japanese fathers have been studied in the area of family sociology, research on recent changes in fatherhood in Japan and the ikumen in particular is still in its infancy. So far, no study has looked into the issue of consumer behavior of fathers in Japan and how consumption patterns change with fatherhood. Given the state-of-the field, we opted for an exploratory, qualitative research approach. After a pretest with one couple, we interviewed 12 expecting couples about their current situation and also examined the social habits of the fathers in general and their consumer life in particular. We first interviewed the soon-to-be parents separately first and then jointly together as well. All interviews were recorded and transcribed verbatim before being subjected to a qualitative content analysis.

Our findings reveal a mix of rational, goal-directed consumer behaviors in combination with the consumption of goods and services in relation to spiritual and superstitious beliefs grounded in Japanese religious traditions or folk culture. We also find gender role and generational differences when probing the social relationships between (expecting) mother and father and between father and his own father.

Institutionalization Among Older Adults in Japan

This study is to explore the risk factors affecting the possibility of institutionalization for the elders after the launch of the Long Term Care Insurance (LTCI) in Japan, 2000. Previous research shows that the level of informal caregiving, and caregiver’s capability, rather than the older adult’s declining function, were the key risk factors for institutionalization before the LTCI. The effect of LTCI services have seldom been examined from the perspective of its impact on risk for institutionalization. Using ordinal logistic regression, we analyze the claims data on LTCI service use in one city in Japan from 2000 to 2006. The preliminary results show that after the launch of LTCI, the caregiver’s preference for services is the significant factor for institutionalization, among other predictors related to risk of institutionalization, such as living arrangement, characteristics of both the care recipients and the caregivers. LTCI provides diverse home-based and institutional services for families and individuals, and in our claims data, those who utilized home-based services the most turn out to be the least likely to be institutionalized. And for the elders institutionalized the most, their primary caregivers had expressed their preferences for institutional care services at the time when applying for the LTCI services, and they utilized the least home-based services. Therefore, we gather some evidence that LTCI had provided sufficient home-based services to reduce the possibility of institutionalization due to lack of informal services. Despite the homogenized services provided, the key risk for terms of their life in general and their consumer life in particular. We first interviewed the soon-to-be parents separately first and then jointly together as well. All interviews were recorded and transcribed verbatim before being subjected to a qualitative content analysis.

Our findings reveal a mix of rational, goal-directed consumer behaviors in combination with the consumption of goods and services in relation to spiritual and superstitious beliefs grounded in Japanese religious traditions or folk culture. We also find gender role and generational differences when probing the social relationships between (expecting) mother and father and between father and his own father.

Implications of Social Capital for Family Life: The Case of « Non Statutory Parent »

My communication is on the subject of the « non- statutory parent », i.e. the person who, within a couple, fulfills the role of « parent » for a child not legally his or her own, but the offspring of his or her mate. The main results I will present is that the family’s environment of friends, and kin represents a social capital that plays an integrating role through its validation of the NSP’s right to

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
be with the child. This role is rooted in 5 structural dimensions that came to light in the course of the qualitative analysis: selectivity of link choices versus their contingency; balanced mobilisation of the parental networks versus skewed emphasis on one or two SPs or NSPs network; presence of facilitating figures within the broader family circle; presence of individual networks within the network of friends of the child; and the degree of embeddedness of those personal relationships within organised collective practices. The study present an analysis of the social capital of the family environment and its role in shaping, defining and fixing the obligations of the non-statutory parent, stemming from a will to consolidate and increase the parental role despite an unfavourable legal context.

The study is based on a sample of twenty couples living in various family configurations, i.e. hetero and homosexual step-families with whom we carried out three successive rounds of in-depth interviews; first with both members of the couple in order to reconstitute their conjugal and parental history; then with the non-statutory parent, to collect information about his or her experience and strategies deployed to consolidate his or her status within the family and in relation with society in general; finally with the couple once again, with the goal of analysing the conjugal and family dynamics.

The Middle Eastern Origins of Dictatorship and Democracy

How do we assess Arab Spring/Occupy almost 3 year later- the hopes for the emergence of popular democracy have now faded or have they? We might note that the traditional dynamics of the rise of democracy or dictatorship in West, contestations/alliances of various groups, esp landlords/peasants did/does not really apply today. Most of the MENA countries were the legacies of anti-colonial struggles for independence and democratic self-governments, but Enlightenment ideals did not emerge. Contemporary conditions differ, 1) neoliberal globalization has enabled the rise of a transnational capitalist class leading to economic growth-concentrated at the top, 2) there are growing classes and cadres of the discontented, educated precariat youth, (today’s lumpenproletariat and the disenfranchised peasants, wretched of the Earth), but 3) Today most people, even in developed countries have access to ICT/social media. To understand the `waves of democracy` and their receding tides, we need note, the movements took place quite rapidly and following the abdications or implosions of dictatorships, the only groups that were well organized were the various nationalists and activists from Moslem Brotherhood to Enhada-which were ill equipped to shepherd a modern economy. But without having experience in actual gov-ernance as opposed to critics w/o power they did quite poorly. However dismal the short term, and it may get worse, structural factors intersec, with changing subjectivities, embracing openness, equality, empathy and care, portend an optimistic forecast. However undemocratic the post Arab Spring governments may have been/are in practice, they were democratic in form and now there can be no going back to unelicted `presidents for life`. Dictatorships now face growing the popular power of numbers of youth that challenge inequality, authoritarianism, corruption and corruption, anarchism, and the disenfranchised groups. The Middle Eastern Origins of Dictatorship and Democracy

Emerging Society and Sociological Discourse in India

The sleepy, slow moving and traditional Indian society which has a historical past of several thousand years is undergoing through a process of rapid social change and unprecedented social transformations. The biggest change has been the emergence and strengthening of democracy. While people in several countries all over world are still struggling and clamingour for a democratic state and institutions, the Indian citizens are exercising their democratic rights strongly whenever occasion arises. The civil society in turn is also becoming stronger and empowerment of the marginalized sections of society such as women, tribals, dalits and the so called backward classes and communities is also taking place. Indian society moved from three percent “Hindu rate of growth” to eight percent in recent years, which was one of the highest in the world. This unprecedented economic growth not only led to the emergence of a massive middle class but also created lot of confidence in the masses about the capability and the strength of the Indian State as well as their own. However, this sudden economic growth and the consequent all round development while on the one hand raised all round prosperity and riches, it also led to the growth of inequality in society and to the marginalization of certain other groups which until recently did not felt marginalized. It is commonly said that while the rich are becoming richer, the poor are becoming poorer. Such a situation has also led to the increase of corruption in all walks of life. As such the Indian sociologists are facing several contradictory situations and are becoming conscious to focus their attention and to study the emerging phenomena and are trying to go beyond to what they have been studying for long and as such moving towards a new sociological discourse.

Immigrant Access to Training in France

Few studies in France have focused on immigrants’ access to vocational training. This lack of data is surprising in a field which has otherwise been extensively studied. Indeed, one of the stated goals of ‘lifelong learning’ is precisely to compensate for educational inequality, and immigrant access to lifelong learning is therefore essential. The recent study conducted by Gelot and Minni using data from the 2003 FQP survey is a key contribution in this area. They have shown that the rate of immigrant access to continuing education is lower than that of people of French origin and that these differences persist even after controlling for individual characteristics (age, gender, level of education, type of employment).

The aim of this paper is therefore to go one step further by focusing on the differences which exist within the immigrant population, particularly in matters of administrative status. The hypothesis tested here is that the category established by the immigration authorities when awarding first residence permits is an important line of divide, impacting immigrants’ later access to continuing education.

The Work – Family Interface Among Dutch Navy Personnel and Their Spouses

Perhaps even more than other military personnel, Navy personnel and their families face the challenges of managing frequent and often prolonged family separation. The impact of these military demands on the family and of family factors on the readiness and retention of Navy personnel is scarce and nonexistent among Netherlands military personnel. We collected data among sailing Navy personnel and their spouses at home regarding various work and family experiences. This paper presentation presents the first results of this study.

Living Parental Home: Hopes and Constraints of Young People of Immigrant Background in France

Young adults of immigrant background live with their parents longer than do those in the mainstream population (Moguérou, Santelli, 2010). The great majority of young people from non-European immigrant backgrounds are from working class homes and often the poorest and most economically insecure segments of the working class (Frickey & Primon, 2002). Research in recent years has shown that unemployment rates are very high among young people from immigrant backgrounds, especially North African backgrounds. Their disadvantage at the start of their adult lives partly explains why they defer moving out to live independently. Another factor is the cultural and subjective attitudes towards independent living that the young people share with their parents (Hamel et al., 2011).

This paper examines the impact of social and family constraints on whether and when young people of immigrant background leave home. It first reviews the factors that encourage young people to defer their departure. It then looks at their projects for leaving home. While it is recognised that more flexible relations between parents and children make it easier to continue living together, the difficulty of forecasting the future is an important obstacle. How do those most centrally concerned experience this prolonged family life? Do they want to leave and what prevents them from doing so?

Exploring the Socio-Economic Coordinates of Tourism: A Case of Jammu & Kashmir

The state of Jammu & Kashmir being the abode of Himalayas represents an epitome of natural beauty and, hence, has emerged as one of the top most tourist resorts of the world. The tourism in states tourism sector in the form of nature, cultural, adventure, pilgrimage, leisure tourism etc. has attracted tourist of every nature irrespective as well as characterised by an increasing prevalence of dysfunctional schooling systems. Therefore, this research aimed to design a gender mentoring framework through which transformation within dysfunctional schooling systems can be facilitated. In order to achieve this, a micro-level analysis of schooling systems, using the functionalist perspective, specifically enabled through the contributions of Parsons and Merton was undertaken. In addition, insight gained from a broad range of literature and other secondary resources on mentoring, best practice and quality education was used to develop a number of premises. Based on these premises the gender mentoring framework can be adapted to enable a fit-for-purpose mentoring system within a school to allow facilitation of a process of sustained transformation which gravitates towards whole school development and culture that envisions quality education for all.

Cultural Capital and Educational Inequality: A Lesson from India

The paper examines the impact of social and family constraints on whether and when young people of immigrant background leave home. It first reviews the factors that encourage young people to defer their departure. It then looks at their projects for leaving home. While it is recognised that more flexible relations between parents and children make it easier to continue living together, the difficulty of forecasting the future is an important obstacle. How do those most centrally concerned experience this prolonged family life? Do they want to leave and what prevents them from doing so?
MICRO Sociological Analysis Of Nationalism: The Fluidity Of Ethnic and Civic Identity In The Workplace, Malaysia

Ethno and civic nationalism are seen as dichotomous and a single track evolution. Studying the essence of nationalism in post colonial society may often show the dichotomous nature of nationalism. However the forces of development, modernisation and globalisation show that ethno nationalism might prevail but embracing civic behaviour might be the emerging nationalism. In global organizations, ethnicity is often regarded as static cultural container, and ethnic conflict as traditional but unusually stubborn impediment to modernization. Our main initial assumption in this research states that experienced acculturation is one of the main forces to shape identity formation at workplace. Being concurrently a cultural marker and an identity catalyst, taste is powerful vessel for identity shaping in our studied workplace. The findings of this study were based on empirical data collected between 2008 and 2010, via qualitative methods, from a specific empirical field: 5 star international-brand hotels in Kuala Lumpur, Malaysia. There are three duty free areas within these luxury international hotels where transfer of knowledge and skills take a particularly direct and tangible form: food and beverage and kitchen. Empirical evidence presented here may qualify “the Hotel” as an “advanced social laboratory” for the study of ethnic relations. Focussing on social actors, this micro-sociological study shows that ethnic identity, belief and behaviour are not static but fluid. A specific organisational model such as “the Hotel” can help us redefine how we see ethnic differences, not as divisive, but as inclusive, when contingent forces at work trigger “cross-cutting ties” along group boundaries. Transforming these inter-ethnic differences in “the Hotel” may lead to the discovery of ethno nationalism embracing civic behaviour in the service industry.

Refugee Fathers: Negotiating Fatherhood during Resettlement

The rise of globalization, visible through the increase of international mobility and advances in communication and information technology, has had a significant impact on families. Currently, the analysis of globalization has focused almost exclusively on the macro level impacts, especially on politics and economics. There has been a dearth of research focused on the micro level impacts on globalization via, such as refugees and forcibly displaced families. The majority of the research examining refugee and forcibly displaced families has been predominantly focused on mothers and children, failing to incorporate fathers as important within the family system. This gap within the research is concerning due to the changing trends of family structure around the world. Across the globe, traditional gender roles are being challenged as fathers take a more active role within the family and mothers are working more outside of the household. The scant research that does examine fathers within the context of forced migration has found that fathers hold unique values and beliefs about fatherhood in relation to displacement. They hold for their children, their interactions with their children, as well as how they negotiate their roles within the family in relation to their partner. Furthermore, many of these values and beliefs are put in flux due to post migration challenges such as unemployment, lack of social supports, racism, social isolation, and role changes. The purpose of this paper is to critically review the existing literature on fatherhood within the context of forced migration and refugee resettlement, to discuss its limitations, and to bring forth the implications for future research and policy development.

Poverty Reduction Effect of the Taxation and Benefit Systems in Finland 1993-2013 – Comparing the 1990s Depression and Post 2008 Recession

The poverty risk rate, measured as 60% of the median income, increased in Finland from 7 to 14 percent between 1993 and 2008. The poverty risk rate increased particularly in the late 1990s, when both benefits and income taxes were cut after the severe depression in early 1990s. The current (post 2008) recession has evoked very different social and fiscal policies compared to the 1990s and the recession has had a little impact on poverty risk rate so far. We use microsimulation models for evaluating the impact of reforms on the poverty risk rate. Specifically, we have estimated the poverty risk rate in comparing policies chosen in the 1990s depression and post 2008 recession. We have estimated the counterfactual poverty rates during 1993-2013 by using the SISU microsimulation model of Statistics Finland. Household disposable incomes are simulated for each year by using the same households but varying the taxation and benefit legislation according to the existing enactment. The benefit cuts during the 1990s depression had a rather modest impact on poverty risk rates and the impact was nullified during 2000s by series of benefit raises. Even after 2008 there has been several increases in the basic benefits that have lowered the poverty risk rate. Changes in tax had a considerably larger impact on the poverty reduction effect than changes in benefits. The poverty risk rate would be 2.5 percentage points lower if the tax legislation were the same in 2010 as it was in 1993. However, the level of benefits has decreased compared to the average income level. If the level of benefits would have remained at the same level compared to the average earnings in 2010 as in 1993, the poverty risk rate would be four percentage points lower in 2010.

The Evolution of Language-in-Education Policy in South Africa

During the apartheid era, South Africa’s language in education policy was ideologically driven by racism and the desire to suppress the indigenous languages of the majority of South Africans. The policy was fiercely resisted and led to unprecedented episodes of collective violence.

In post-apartheid South Africa, the language-in-education policy takes into account the socio-linguistic reality of South Africa’s multilingualism and bestows upon the individual the right to choose his or her own language of learning and teaching.

The political climate in South Africa underwent dramatic changes with the unbanning of political organizations in 1990. A new policy, emphasizing multi-lingualism, evolved. The sociolinguistic reality of multilingualism in South Africa was eventually recognised. The new Constitution of the Republic of South Africa (Act 108 of 1993), which was hammered out and forged by South Africans of all political persuasions, reflects the linguistic diversity of South Africans and recognises their right to exercise their freedom in choosing their own languages. Constitutional Principle XI provides that “The diversity of language and culture shall be acknowledged and protected, and conditions for their promotion shall be encouraged.”

In the presentation, I intend focusing attention on the apartheid language policy in schools in South Africa. The major thrust of the paper will be devoted to sketching the genesis and evolution of a new language policy for schools in post-apartheid South Africa.

The Declining Relevance of the Environmental Nation-State

The environmental state is not a formal category, but a substantive one. It came up in the late 1960s/1970s, changed in character since then and we will have to see how long it will last and in what outlook. A historical analysis of the environmental state in the OECD region should distinguish at least five periods: until 1960 (near absence), 1960-1980 (establishment and institutionalization of the environmental state), 1980-1990 (state failure and neoliberalization debates/pressure), 1990s (redefinition and legitimation of environmental states internation-ally). Many scholars note that since the new Millennium a new period has emerged: the environmental state shows a growing irrelevance.

The claim of weakening environmental state institutions seems to be part of wider concerns of the positions of states versus markets under conditions of globalization. Quite some scholars claim that under neoliberal globalisation the strengthening of the power and influence of (global) market institutions came together with declining roles of political state institutions. But that is not clearly evident regarding all agendas, as the recent regaining influence of political institutions on global financial institutions. So, is there something special at stake with respect to environmental state institutions? Is the interpretation of the current waning role and position of environmental state authorities correct? If so, how can we explain this decreasing power and position of environmental state authorities and how is it related with our capacities to cope with environmental problems? And how do we normatively assess this decreasing impact of state authorities in mitigating environmental problems? These questions are central in this paper.

Assessing the Measurement of Science Knowledge in the Wellcome Monitor Surveys: An Item Factor Analysis

The Wellcome Trust Monitor Surveys (2009 and 2012) are fielded to two samples: adults (aged 16+), and young people (aged 14-18). The survey contains multiple items designed to assess science knowledge and engagement with bio-
medicines. Analysis of the first Monitor Survey yielded a curvilinear relationship between age and high and low levels of scientific knowledge. High scorers were lowest among those aged 65 years and over. The proportion of high scorers for the middle age groups was around three in ten (of those aged 35–49 and 50–64). For low scorers, the reverse pattern holds true, and for young people, 14–16-year-olds have the highest scores. The possibility is that a given knowledge item has a different probability of generating a correct response from different age groups even if each age group has the same underlying level of knowledge. This study will evaluate the performance of the literacy items and the extent of any age-related bias. The results will feed into the design of the next wave of the survey but also speak more generally to the question of how to evaluate science knowledge in heterogeneous populations. I propose a single group IFA-IRT model to evaluate the performance of the items for a pooled sample of respondents, and a multigroup IFA-IRT model to identify the presence of differential item functioning (DIF) by age group. Briefly, the procedure is to fit a series of IFA models to the data, assessing the adequacy of fit for the scales within each subgroup. The second stage is to look at evidence for DIF/measurement non-invariance on any of the test items with a series of increasingly restrictive nested models. Finally, results from the multigroup analysis suggest that partial measurement invariance across age groups holds.

Examing the “New Normal” and Inequality in the Housing Transitions of Young People in Canada

In Canada, young people’s housing transitions have become increasingly protracted and are marked by lengthier periods of cohabitation with parents and returns to the family home. This has been occurring in a context where access to postsecondary education has widened but at the same been subjected to increasing tuition and housing costs in most large urban centres, and especially in some provinces. Most young adults in Canada today are therefore receiving considerable support from their families over the course of their housing trajectories and, arguably, this trend now constitutes the “new normal” in the transition to adulthood. However, young people from lower class backgrounds, those who leave home while they are still at school, those who exit child welfare systems at the age of 18 and who, often cannot count on parental support for housing, and experience much more problematic housing transitions. Our paper will first provide the context in which these housing transitions are occurring, by focusing on available statistical and quantitative data on youth housing trajectories and the housing policy environment. The second part of the part of the paper will present qualitative data based on retrospective interviews with two sets of young people: street-involved youth and young adults enrolled in high school vocational training programs. Using a life-course approach, the paper will examine how these youth people depend upon and negotiate their housing experiences and supports, and discuss how these types of housing trajectories contribute to the structuring of inequality over the course of the transition to adulthood.

MOLITOR, VERENA* (University of Bielefeld, verena.molitor@uni-bielefeld.de)

Included By Means of a Broadcasting Language? the Case of Language-Based Minority Construction through the German-Speaking Radio Shows in Poland

The language of diaspora communities and minorities can be considered as a boarder- making instrument, as a mechanism of exclusion and inclusion (or rather of both simultaneously). The minority- or diaspora language media can as well function as mechanisms or mechanisms of border creation, boarder maintenance or inclusions.

The paper deals with media offers for language minorities and especially the German-speaking minority in Poland, focusing on the German-Speaking radio shows in the Voivodships Silesia and Opole. In these regions two stations produce radio shows in German; the very availability of non-polish-speaking media is a transformation phenomenon. Due to the novelty of media offers in German language as well as to the fact, that those, who define themselves as “German minority” partly do not speak German because of the minority languages ban during the socialist period in Poland, the central question to be posed in this presentation arises: Which function does the German speaking radio have in the creation of borders, inclusions, exclusions, interties and belonging?

My research concentrates not on the radio listeners but on how the radio stations by means of programme planning foster a regional identity, create a picture of the self and which role German as broadcasting language plays in these processes. I will demonstrate the integration function of the media and simultaneously its function within a diasporic consolidation, focusing on how the radio stations strive to create a collective identity among the German minority. I will demonstrate, how a strong belonging to the minority and tradition of the group is produced by these radios, while asking, how is it possible, if German is positioned as “mother tongue” which is “to be learned first”.

WG01-887.1

MOLITOR, VERENA* (University of Bielefeld, verena.molitor@uni-bielefeld.de)

“Media Diasporas - Diasporic Media” - the Construction of Regional Identities through Radio Programmes

In this paper I will focus on minorities, not often described in the context of media research, namely minorities which result not from movement of people, but from shift of borders, here especially of the German speaking minority in Poland.

The main focus in my research lies on the German-Speaking radio shows which are broadcasted in a border region in Poland, near the German and Czech border. The situation of the German media there is very interesting because it is a relatively new phenomenon that there are Radio and TV shows available in German. The minority language media were prohibited in Poland during the socialism period, and could be introduced during the transformation period first. Not being based on a continuous minority media traditions, these radios are free in creating the understanding of their mission and their belonging to a community of listeners or to construct their listeners.

My research demonstrates how radio programmes represent a region in order to foster a regional or local identity and how they create a picture of the self and the others. The presentation demonstrates, how the contents and composition of the programmes describe boarders and a strong belonging to the own local group as well as to the traditions of the minority.

The presentation demonstrates the integrational function of the radio and simultaneously its function within a diasporic consolidation, and hence focuses on the challenges of minority radio stations with regard on both creating minority identities and belongings and representing a region or a local community.

Cross-National Policies and Relative Household Income of Families with Children By Family Structure and Parental Education

Focusing on an array of European and North American welfare states between 1985 and 2005, we consider how welfare state policies are related to households’ relative incomes, taking into account cross-national and temporal differences in income distributions. We consider work-family policies including public childcare and family leave generosity, tax progressivity, family allowance generosity, and levels of wage coordination. We also consider how two of the central factors that may be driving income inequality at the individual or household level – parental educational level and family structure – may be related to a household’s relative income. This research fills a gap in the literature because there are surprisingly few studies that examine inequality by both family structure and education, and even fewer that examine relative income cross-nationally and longitudinally. Our contributions are to structural vulnerability theory. Structural vulnerability theory aims to consider how the individual, or the household, is structurally located within a context. Our analysis provides a better test of structural vulnerability theory than previous studies because structural vulnerability is operationalized in both the independent (through cross-level interactions) and dependent variables. By creating a dependent variable that standardizes household income relative to societal-level income inequality, we are able to get at the very center of structural vulnerability.

Rethinking the “Exploitation of Self-Realization” Model in Japan

The purpose of this report is to examine the problem of the “exploitation of self-realization.” In recent years, it is said that young people increasingly seek self-realization in their work. Masahiro Abe has analyzed the problem based on his own experience as a provider of motorcycle delivery service, and Yuki Honda has called the same problem the “exploitation of “Yangai” (the word “Yangai” refers to the pleasure derived from doing decent work). They point out that certain companies exploit young people who seek self-realization out of work. These days, such companies are called “black companies” and have become a serious social problem in Japan.

However, when we examine national statistics and opinion research about work and employment, we find no evidence that the number of young people who seek self-realization in work has increased in the past ten years. Rather, ac-
Emotions and Collective Identities in Contexts of Exclusion. The Case of the Protest for the Rights of Asylum-Seekers in Germany

Emotions and Collective Identities in Contexts of Exclusion. The Case of the Protest for the Rights of Asylum-Seekers in Germany.

Since the 1980s, social movements' scholars recognize that emotions and collective identities are crucial for the construction of collective actions (Polletta and Jasper, 2001). The extensive literature on emotions and identities shows how these two dimensions interrelate and influence social movements' strategies, grievances, emergence, evolution, and impact. Few authors have analysed these dimensions in contexts in which activists face processes of exclusion. This focus raises however important perspectives (Einhoven, 2006). In particular, it leads us to discuss the strategic dimension of the emotional and identity work done by activists. Moreover, it permits us to relate the analysis of emotions and collective identities with more general contextual dimensions.

In this paper, I propose to follow this perspective through the focus on a network active for the defence of asylum right in Germany: 'Caravan for the rights of refugees and migrants'. This network mobilizes against what is defined as a context of exclusion: the 'residence obligation' law, which strongly restricts the mobility and social inclusion of asylum-seekers and refugees living in Germany. Through the concept of 'identity construction for emotional benefits', I will show how activists strategically shape collective identities in order to trigger feelings of empathy among asylum-seekers and refugees in the course of protest.

Two methods have been used in order to explore the construction and interrelation of emotions and collective identities in this network: an analysis of the documents that it published between 2000 and 2010, and a series of in-depth interviews undertaken in the German pro-asylum movement.

The Symbolic Representation of Borders in the Protest Against "Fortress Europe": The New Geographies and Strategies of the Movements for the Rights of Migrants

In the last two decades, the integration of member-states' immigration and asylum policies at the European Union level has led to a process of transformation and delocalization of borders. In particular, the external dimension of these policies is related with the diffusion of borders across member-states and third countries territories. Consequently, the binary demarcation between the inside and outside of states' territories is increasingly blurred, and the specific governmental practices and technologies that were once situated at the edges of territories can now be found across countries territories.

In this paper, I propose to explore the consequences of these evolutions on the social movements for the rights of migrants in Europe. Focusing on the symbolic dimension of protest events, I argue that the changing nature of European borders has influenced their organization and strategies. In particular, I show that, since the end of the 1990s, these movements have represented and used the border as a symbolic space in which new forms of protest are constructed.

This analysis is based on the observation of a selection of European networks mobilizing for the rights of migrants. The evolution of the symbolic dimension of their protest since the end of the 1990s has been investigated through three complementary methods: protest-event analysis, frame analysis, and visual analysis.

Interplay Between Work and School Outcomes Among Adolescents in Brazil: The Role of Prior Orientations and Aspirations

In Brazil and other developing countries, empirical evidences usually suggest that the participation of children and adolescents in the labor market tends to hinder educational outcomes (academic performance, high school graduation and dropout, etc.) and, therefore, lead to inequalities in educational and occupational status over the life-course. However, a body of research argues that the interplay between work and school: 1) depends on the intensity (hours) of work;
moderate work (less than 20 hours a week) can actually help the student to acquire professional and soft (sense of responsibility, independence and self-improvement) skills; 2) is the result of spurious relations the negative effect of work on school success is actually result of differences in preexisting individual orientations and aspirations that make some students more inclined to pursue this career. This paper aims to analyze, first, the extent to which preexisting aspirations and orientations toward school work and can account for the observed negative effect of work on school performance in Brazil. Second, it examines, among workers, how work intensity is related to these outcomes. In order to achieve these goals, we draw upon data from the National High School Exit Exam (ENEM) and from the Minas Gerais State Household Sample Survey (PAD-MG). These data sets combine information on school outcomes, family background, demographics, labor market situation, and orientations toward school and work. Results show that prior orientations and aspirations can predict actual labor market behavior and school outcomes, and account for part of the effect usually credited to work itself. Research on this issue in developing countries would benefit from incorporating fundamentals from social psychology to understand how inequalities are reproduced through orientations and aspirations.

MONTANARI, ARIANNA* (University of Rome, arianna.montanari@uniroma1.it)

Old and New Models of Federalism in Europe

The contradictory and complex unifying process of European Union does not seem to resemble the classic federal model, such as the United States, but rather refers to the historical legacy from the Holy Roman Empire as argued by Le Rider. The Holy Roman Empire, as it was defined by the Treaty of Westphalia, was a factor of stability, that while preventing to fall back into bloody wars, created an unstable set of institutions allowed to control the imperial power.

In the same way the tragic experience of the II World War was at the basis of the European Union as an antidote to possible future nationalists conflicts. The European unification process has been an element of law and peace, representing at the same time an old and new imperial model. According to Khanna European Unification is one of the three great empires, together with the United States and China, that are distributing among themselves the global resources and influence on the world. In his view the EU is by far the most popular and most successful empire in history because, instead of dominating, educates. Incentives for the Europeanisation - subsidies from Brussels, the workers mobility, the adoption of the euro - are too profitable to not be welcome. In this way the EU is expanding not by force, but thanks to the attractiveness it exerts on its neighbors.

The idea of Europe has led not only national level but also the local and regional authorities to research a direct relationship with the European Union institutions. In this way, the nation states have lost a significant portion of their power. At the moment in Europe there are states with limited sovereignty and increasing implications. In this way, the nation states have lost a significant portion of their power.

At the local level. The role of the Pentecostal religion in the articulation and re-composition of the different identities among Spanish Gypsies and non-Spanish Gypsies (above all Romanians) after the intensification of the arrival of transnational migratory waves of European Romanians to Spain in the 21st century.

“Ethnic Relations Between Gypsies and the Majority Populations in Spain during the 21st Century”

Since their arrival on the Iberian Peninsula during the beginning of the 15th century, the Gypsy minority is one of the most relevant “other” ethnicities in Spanish society. According to the Gypsy Secretariat Foundation, between 750,000 and 1,000,000 Spanish Gypsies live in Spain. The ethnic minority’s history in Spanish territory is characterized by a singular and intense cultural integration, a course of ethnic boundaries during the 21st century.

Two axis of analysis will be laid out;

1. In the context of intra-ethnic relationships: The fragmentation and progressive sense of differentiation of the differentiation of identities among Spanish Gypsies derived from the extensive process of urbanisation and transformations of political, social, and economic conditions after the 1970’s.

2. In the context of intra-ethnic relationships: The process of mobilization and collective action of the Gypsies during the 80s and 90s and continuity of a strong sense of ethnic boundaries during the 21st century.

This paper forms part of the doctoral thesis of the author, funded by the Spanish Government (Subprogram FPI-MICIN) as part of the Groupe Européen de Recherche Interdisciplinaire sur le Changement Religieux (GERICR) research program.

Active Ageing Research Trends and Population Policy in Iberoamerica: A Critical Review

The concept of active ageing is being used in recent decades as a line of research in ageing of population studies and as an instrument of public policy, especially since its adoption by the WHO to strengthen health, social participation and security for older people and improve the quality of life. Despite its increasing use, defining active ageing is a complex task as it is related to various theories, constructed from multiple contents and their interactions, linked to other concepts used synonymously and sometimes interoperable (healthy, productive, successful ageing, ...) and operated following various strategies in both the scientific and public policy design.

The aim of this proposal is to conduct a critical review of the scientific literature on active ageing in relation to other forms of ageing (healthy, productive, successful) in the Iberoamerican settings and in the field of Social Sciences research, to delimit its use, contents, indicators and measurement instruments and the usefulness of its application in order to clarify the confusion to which it is subjected.

Transnational Aging in Mexico. The Experience about Elderly Foreigners, and Return Migrants. Life Style in Old Age, Health Care, Social Networks and Family Support

En esta aportación se discuten ciertas formas de envejecimiento transnacional entre extranjeros en México y migrantes de retorno que regresan a México después de trabajar en Estados Unidos. En el trabajo se examinan cuáles son las formas de envejecimiento y cómo los están estos dos grupos las formas de vínculos transnacionales que presentan y los cambios en la vejez, cuidados a la salud y redes sociales. Se presentan resultados relacionados a las redes transnacionales de los migrantes y sus conexiones en la vejez. Se analizan dos grupos de migrantes, uno de jubilados procedentes de Estados Unidos que han emigrado y residen en Baja California (México), y el otro lo constituyen migrantes de origen mexicano que han retornado de ese país a sus lugares de origen (Guanajuato y Zacatecas), pero que llegan con contactos y experiencias transnacionales valiosas para este análisis. El documento se basa en análisis cualitativo que pone atención sobre las redes transnacionales a partir de la movilidad, las razones de la migración en el periodo de retiro laboral, los cambios en su identidad y el apego al lugar, redes sociales y prácticas culturales.

La razón para analizar las prácticas transnacionales de los jubilados estadounidenses residentes en México es doble; por un lado, porque es un grupo de migrantes que ha crecido rápidamente en México. Respecto al segundo grupo se justifica porque es muy conocida la intensidad migratoria de mexicanos hacia Estados Unidos, pero no se conoce el papel que juegan los migrantes de avanzada edad al retornar a México; se consideran migrantes de retorno todos aquellos que han regresado de manera permanente o temporal a México.

Position of Labor in US and Japanese Agrifood Cooperatives: A Class Analytic Perspective

Producer cooperatives emerged, in part, as a means of protecting the appropriation of surplus value from labor and often involved long struggles to institutionalize this economic form. Today, producer cooperatives constitute a significant component of the agricultural economies of most developed capitalist economies. Much work on cooperatives focuses on agent/principal problems or the tensions between producers and management in directing/controlling the cooperative. Given the historical origins of producer cooperatives in the concerns of labor, surprisingly less attention has been paid to the role of the labor that ‘adds value’ to agricultural production in cooperative organizations. This paper raises theoretical questions concerning the class position of various actors in cooperative enterprises. We consider this issue in terms of farmer (production and marketing) cooperatives as well as (food) consumer cooperatives. We ask what possible forms of organization might be introduced to cooperatives to make cooperative labor more equal members of cooperative enterprises? We briefly examine these questions with respect to the historical development and current condition of cooperatives in the U.S. and Japan and call for a need to examine these questions more systematically and comparatively from a larger international sample.

Agicultural Mindsets Across Social Networks in Four African Countries

Smallholder agriculture is coming under increasing pressure to intensify production practices for food security. Conservation agriculture (CA), involving the three principles of (1) minimum soil disturbance, (2) permanent vegetative cover, and (3) rotations or intercropping, has been identified as a sustainable way to do so. However, indigenous knowledge is not sufficient to support a transition...
to this new production system; nor is simply the introduction of new agricultural production norms and practices by a transforming agent (extension or NGO). Many observers note that conservation agriculture requires a change of mind-set for smallholder innovation to occur (Hobbs, 2007; Wall, 2007). Successful cases of CA development have also demonstrated the active engagement of a network of producers and their partners throughout the agricultural sector (Coughenour, 2003; Swenson and Moore, 2009). The fundamental agricultural development question is how to bridge the gap between these new mindsets and those of the ‘risk averse' small farmer that has informed indigenous knowledge for generations. The youth are completing in-depth production networks and taking photographs of elements of their everyday life that they define as particularly ‘Peruvian' or ‘Japanese.' Preliminary findings indicate that the youth report a range of identities (hāfu, Nikkei, Peruvian, Japanese, Peruvian+Japanese), but they struggle to articulate how being Peruvian is a part of their daily lives. Instead, a Peruvian identity is often linked to expression in birthday cakes, Christmas dinners, and occasionally speaking Spanish. The youth plan to remain in Japan, including obtaining Japanese citizenship, with few diasporic ties to Peru. Several factors are encouraging their assimilation, including the declining presence of co-ethnic migrants, the lack of ethnic institutions in the community, the pressure to assimilate in Japanese schools, and the transition to high school and tertiary education, where immigrant youth attend school with few co-ethnics. Nevertheless, this weakening of a diasporic Peruvian identity to symbolic status is surprising, given that Japanese identity is popularly defined as homogeneous and monoethnic, immigrant and mixed-race people in Japan are also racialized as gaijin (foreigners, outsiders). This has resulted in identity quandaries for many Nikkeijin migrants, including the immigrant parents of the second generation, weakening their sense of belonging in Japan and strengthening their national (Brazilian, Peruvian) or alternate ethnic identities (Nikkei, Okinawan).

Am I Japanese, Peruvian, or Both? the Ethnic Identity Formation of Second-Generation Peruvian Youth in Japan

Based on ongoing research, this presentation explores the ethnic identity formation of second generation Peruvian high-school and college-age youth in Japan. It asks what ties, if any, does the second generation have with the two countries, and what is the nature of those ties? How do the youth interpret what it means to be Japanese and/or Peruvian in Japanese society? What role, if any, do the youth's parents' experiences in Japan play in shaping the youth's ethnic identity? The youth are completing in-depth production networks and taking photographs of elements of their everyday life that they define as particularly ‘Peruvian' or ‘Japanese.' Preliminary findings indicate that the youth report a range of identities (hāfu, Nikkei, Peruvian, Japanese, Japanese+Peruvian), but they struggle to articulate how being Peruvian is a part of their daily lives. Steven Vertovec will relate the conditions of super-diversity of present-day urban spaces which affect migrants' positioning in the host society, their social milieus that cross-cut ethnicities, and cross-cultural social relations.

Ewa Morawska will reconsider the premises informing our concepts/theories of immigrant integration challenged by a new phenomenon of the continuous wave of co-directed migration of travellers seeking self-development and exciting adventure.

Thomas Faist will reflect on the role of class, ethnicity, religion, and sexual orientation in structuring inequalities in present-day multicultural societies characterized by cross-cutting identities and practices of their members, and its implications for integration/assimilation theories.

Peter Kivisto will attempt to interconnect three concepts which have informed theories of immigrant integration/assimilation: that of pluralism which informed the earliest (American) conceptualizations, the notion of ethnic options/optional ethnicity which emerged in the second half of the past century, and the recent idea of cosmopolitan canopy.

**Explaining Women's Employment Patterns in the Local Context: The Role of Education and Local Care Policies in Terrassa (Spain)**

Empirical research into the factors determining female employment has given rise to a lot of interpretations regarding the cultural, institutional and individual effects on women's employment patterns in different countries based on the analysis of individual characteristics and the effects of macro conditions (Del Boca et al., 2009; Fortin, 2005; Hakim, 2004; Crompton and Lynnette, 2005; Pettit and Hook, 2005). However, very few studies have set out to combine both macro and micro perspectives by using discourse analysis to explore the heterogeneity of women's employment patterns over the life cycle by city, by neighborhood, and among different groups of women (Steiber and Haas, 2012). In this regard, some studies have thrown doubt on whether institutional and cultural factors have the same effect on women's employment patterns in different contexts (Pfau-Effinger, 2004).

In the context of challenges posed by different work-family arrangements, using a multidimensional approach and as part of the European FLOWS FP7 research project, this paper examines variations across different groups of women in the way that contextual factors shape their labour supply. In particular, we propose to identify from a qualitative methodological perspective how women's education partly explains differential patterns with respect to employment, work-family balance and access to family help in the city of Terrassa (Spain). The analysis is based on information drawn from focus groups with different categories of women. Qualitative analysis is supplemented by the results of a survey conducted locally providing evidence of the reality of the relationship between employability and use of formal and informal care. The initial hypothesis is that women's employment patterns over the family life course are closely linked to preferences regarding jobs and the family, with education and the local care system playing a key role as both a mediating and differentiating factor in the formation of these preferences and values.

**International Couples Shaping Migration to Japan**

The Japanese are living longer and having fewer children than any other industrialized nation in the world. Immigration is seen as the key long-term solution to a shrinking tax base and a shortage of workers. Despite the reluctance of the Japanese to allow a large number of foreigners into the country, immigrants have been integrating into Japan via international marriages for decades. Whether arriving in the 1980s or for love (dating back to 1600), these couples are important because they represent the most intimate relationship possible and are an indicator of social distance and integration, both in how the couples cope and how other Japanese view these couples. I interviewed 40 individuals involved in international marriages in a rural area of Japan (Joetsu, Niigata). I transcribed the interviews and coded them using a computer software program called Dedoose. I analyzed the data using the guidelines of grounded theory, namely coding and memo-writing. I focused on the differences and similarities between those international couples who married for love (typically Western males and Japanese females) and those that were arranged (typically Japanese males and Southeast Asian females). There are important differences between the race and gender of these two types of couples, as well as the reasons for why they chose to marry a Japanese national and live in Japan. On the other hand, there are many similarities between these couples when it comes to having to adjust to living in a new culture, learn Japanese, raise children, and deal with extended family members. These similarities and differences offer a unique and intimate window into how the Japanese view foreigners living in Japan.

The Utah Minuteman Project and Symbolic Boundaries: Legal Status, Nationalism, Culture, and Race

The boundaries that groups like the Minutemen construct not only leave a record of how these boundaries were constructed, but also a view of what these boundaries will look like in the future. The literal and symbolic meanings attributed to the U.S.-Mexico border were the motivating factor for Utah citizens to go to the border as Minutemen and to establish the Utah Minuteman Project (UMP). We used fieldnotes and interviews with 20 members of the UMP and found that the importance of the literal border gradually faded as the group expanded to include members who had not gone to the border and shifted to symbolic boundaries within the state of Utah as issues centered on crime and employment. In spite of the unifying identity surrounding the literal and symbolic U.S.-Mexico border, individual members of the UMP constructed symbolic boundaries out of the following boundary markers: legal status (illegal vs. legal), nationalism (American vs. un-American), culture (English vs. Spanish), and race (white vs. Latino). The legal status boundary is the most salient boundary among the UMP, whereas other members maintain clear distinctions against. We found that a wide variety of members conflate legal status with nationalistic, culture, and race, whereas other members maintain clear distinctions between these symbolic boundaries. In the end, this calls into question the social boundaries that defines the group they are fighting against as the symbolic boundary that defines the group they are fighting against as the symbolic boundary.

Religion, Organ Donation and Disparities in Transplantation Among Minority Ethnic Groups in the UK

With a high rate of end stage renal failure and a low rate of deceased organ donation, unmet need for kidney transplantation among Black and South Asian populations in the UK is disproportionately high, with these groups comprising 26% of the active kidney transplantation waiting list. None of the main religious groups in the UK formally prohibits organ donation. Faith-related barriers have however been linked in previous research with a reluctance to donate organs, although there is little detailed knowledge regarding specific ethnic/faith groups. This study explored influences on donation among minority ethnic groups as part of a wider effort to address the inequality of opportunity to receive transplantation services. We undertook two qualitative studies: 1) 22 community based focus groups with five ethnic/faith groups: Nigerian (Christian), Caribbean (Christian), Indian (Sikh and Hindu), Bangladeshi (Muslim) and Pakistani (Muslim) origin, and 2) semi-structured interviews with 19 hospital chaplains representing Abrahamic and non-Abrahamic religions. The centrality and compatibility of religious beliefs with organ donation varied between ethnic/ faith groups and generations. Although few regarded organ donation as a religious duty, religious scriptures there was considerable uncertainty, particularly among older people and people of Muslim faith who commonly required guidance from religious leaders. Hospital chaplains generally accepted the principle of donation. However few had much experience of deceased organ donation and many felt they could not personally endorse this, although variations existed within religious affiliations. Concerns included possible delays to burial, injunctions to modesty, a need for bodily integrity at the time of death, and a belief that the body and soul remain sensate for some time after death. These findings illuminate the gap between formal statements by national religious leaders, the views of chaplains and the lay population. Greater engagement between health professionals and local communities, possibly via chaplains, might address disparities.

MORGNER, CHRISTIAN* (Hitotsubashi University, k131017m@r.hit-u.ac.jp)

World Art Cities: Theoretical Considerations

The presentation will deal with the topic of ‘world art cities’. The main body of research about global cities has primarily emphasised their function in the global economy (with Frankfurt, London, Zurich, Tokyo and New York as the main examples), thus limiting our understanding of the role of urban spaces as a microcosm and breeding ground for cultural and symbolic activities. This paper highlights the production and creation of a global artistic symbolism through a specific configuration of the artistic milieu, where a high number and a mutual interlinking of artistic activities are crucial for the formation of interactions, networks, exchange and collaboration through which a highly vivid, active and innovative atmosphere can develop. Furthermore, the paper discusses how these activities are embedded into a wider symbolic infrastructure of galleries, music venues, fringe theatres, museums and other spaces of the city. These venues enhance and reinforce certain artistic symbols because through a mutual interlinking of many spaces, they can confirm the innovative character of the work, thereby making them well known outside of their immediate locality. The paper will focus on the development of a theoretical framework that incorporates these different aspects, e.g., art districts, artistic milieu, artistic infrastructure, innovation and global reach.
as a quasi-colonial part of Empire of Japan from 1879, under the occupation of the US Forces from 1945 to 1972, and the continuous concentration of the military bases until the present. Facing on the situation above, the people in Okinawa have been seeking to relativize their ontology and change themselves through the external connections of social movements over the world.

Capitalism and Militarism after the WW2, lead by the US, had a significant influence not merely to Okinawa, but also East Asian countries, and the subjectification of Asian people. As Sakai Naoki (2008, Kibo to Kenpo, Ibusnsha) clarifies that the regime of the Post-WW2 imaginary space of Japanese people was the inter-apticul or the US-Japan homo social “complicity”. In this perspective, the power formation after the WW2 has shifted from the Hegelian understanding of the nation-state with the anthropomorphism to the homo-social complicity among the nation-states. Therefore the (cultural) naturalization of representation of Okinawa, Japan and the US has to be questioned radically from this perspective.

Considering two still dominant streams of the social movement theories, namely the European tradition of Marxism and American tradition of the resource mobilization theories, I want to seek to intervene the theories of the Postcolonialism with them. Postcolonialism here indicates three streams of critiques, cultural studies, internal colonialism critique, and the Orientalism critiques (Shoh, Kokichi, 2006, Shokioku no Shari, Toshindo). By doing so, the effect of the colonialism, imperialism and nation-state can be added to those theoretical models in order to trace the ties and networks of the social movements transcending the time and space, cultural differences, and the nation-state borders.

Growing Regional Gaps in Compulsory Education in Japan: A Case Study at an Aging Rural Area

Since the 1990s, mainly in advanced countries, policy makers have been paying increased categorical terms of school systems that work in partnership with local communities, as the closed nature of the public education system has faced criticism in the context of “neo-liberalism”. Within these global contexts, the Japanese government began prompting a new system of community-based schools named the School Management Council System in 2004. This school council system is extremely different from the existing public school system in that the citizens’ participation into school management is definitely institutionalized.

In contrast, in recent Japan, the advent of an aging society combined with a low birthrate has had a serious impact on the whole public education system, making it more important to consider educational policies from the aspect of population problems. Especially, in aging rural areas, the number of abolished schools is rapidly increasing due to depopulation, and there are heated debates on the regional gap in educational opportunities between urban areas and rural areas. Thus, one of the most urgent problems in rural Japan is to design new forms of community-based school systems appropriate to the realities of local residents around the schools in the population-declining areas.

Accordingly, this paper examines, from the perspective of sociology, the problems and the possibilities of community-based school systems by focusing on the collaboration between compulsory schools and the local residents in Japanese aging rural areas, in order to search for the new public education forms open to the local residents.

Understanding Care Giving and Care Taking Experiences throughout the Life Course - a Comparative Study of Older Couples in Denmark and Japan

The systems of providing welfare services interact with older people’s everyday lives in a very complex way. Not only the arrangements of systems as such but also the availability of services influence their possibilities and constraints at an everyday level that roles they play within the social network of their everyday lives. These interactions are long-term changing processes as both the systems and wide-ranging conditions in everyday life are neither static nor immutable. In particular, the present paper draws attention to how older people understand the ways that the welfare systems interact with their everyday lives throughout the life course. Older people’s understandings of their interaction with the welfare systems at the everyday level reflect upon both their past and present experiences and practices, and this reflection results in forming a significant part of their views and expectations for the future.

Guided by life course approach, the analysis focuses on older couples in Denmark and Japan, and explores the following questions: how have older Danish and Japanese couples experienced care giving and care taking over the life course? How do they perceive these experiences? How have older Danish and Japanese couples experienced mutual support and communication with children, grand-children, their neighbours and their friends? How do their neighbourhoods and friend’s life bases until the present. Facing on the situation above, the people in Okinawa have been seeking to relativize their ontology and change themselves through the external connections of social movements over the world.

Capitalism and Militarism after the WW2, lead by the US, had a significant influence not merely to Okinawa, but also East Asian countries, and the subjectification of Asian people. As Sakai Naoki (2008, Kibo to Kenpo, Ibusnsha) clarifies that the regime of the Post-WW2 imaginary space of Japanese people was the inter-apticul or the US-Japan homo social “complicity”. In this perspective, the power formation after the WW2 has shifted from the Hegelian understanding of the nation-state with the anthropomorphism to the homo-social complicity among the nation-states. Therefore the (cultural) naturalization of representation of Okinawa, Japan and the US has to be questioned radically from this perspective.

Within these global contexts, the Japanese government began prompting a new system of community-based schools named the School Management Council System in 2004. This school council system is extremely different from the existing public school system in that the citizens’ participation into school management is definitely institutionalized.

In contrast, in recent Japan, the advent of an aging society combined with a low birthrate has had a serious impact on the whole public education system, making it more important to consider educational policies from the aspect of population problems. Especially, in aging rural areas, the number of abolished schools is rapidly increasing due to depopulation, and there are heated debates on the regional gap in educational opportunities between urban areas and rural areas. Thus, one of the most urgent problems in rural Japan is to design new forms of community-based school systems appropriate to the realities of local residents around the schools in the population-declining areas.

Accordingly, this paper examines, from the perspective of sociology, the problems and the possibilities of community-based school systems by focusing on the collaboration between compulsory schools and the local residents in Japanese aging rural areas, in order to search for the new public education forms open to the local residents.

Understanding Care Giving and Care Taking Experiences throughout the Life Course - a Comparative Study of Older Couples in Denmark and Japan

The systems of providing welfare services interact with older people’s everyday lives in a very complex way. Not only the arrangements of systems as such but also the availability of services influence their possibilities and constraints at an everyday level that roles they play within the social network of their everyday lives. These interactions are long-term changing processes as both the systems and wide-ranging conditions in everyday life are neither static nor immutable. In particular, the present paper draws attention to how older people understand the ways that the welfare systems interact with their everyday lives throughout the life course. Older people’s understandings of their interaction with the welfare systems at the everyday level reflect upon both their past and present experiences and practices, and this reflection results in forming a significant part of their views and expectations for the future.

Guided by life course approach, the analysis focuses on older couples in Denmark and Japan, and explores the following questions: how have older Danish and Japanese couples experienced care giving and care taking over the life course? How do they perceive these experiences? How have older Danish and Japanese couples experienced mutual support and communication with children, grand-children, their neighbours and their friends? How do their neighbourhoods and friend’s life
The main findings revealed that children needed to negotiate their safety in the context of family violence and post separation. Key to this was whether the child had agency to negotiate their safety; which was dependent on four interrelated factors. These factors will be presented to explain the ‘Model of Children’s Agency’, informed by the model, implications for policy, practice and further research will be considered.

MORRIS, BRIGIT* (University of New South Wales, brigitmorrison@yahoo.com.au)

Moving Through Space

Spaces in urban geography are rich with symbols and signs related to national as well as personal narratives. Artists who construct public art installations in sites symbolizing hegemonic power and cultural identities are able to rework or reclaim the meanings attached to these spaces.

I am interested in artists who engage in performative, site-specific installations that aim to recreate historical or contemporary political events in a symbolic way. I will argue that by reframing the meaning of significant sites using artistic devices of affect and temporality, installation artists are in a unique position to critically analyse political and social questions which ‘trouble’ our society.

I will examine two case studies. The first is Gregor Schneider’s 2007 work, 21 Beach Cells. This installation involved a series of interactive metal prison cages, symbolizing Guantanamo Bay. The installation was placed on Bondi Beach in Sydney. At the time, the Australian Government supported the US government’s actions of indefinitely detaining so-called enemy non-combatants. Bondi Beach symbolizes the free and egalitarian spirit of Australian national identity – a jarring vision with the landscape of the Guantanamo prison. The second work is Doris Salcedo’s 2007 work, 6 y 7 Novembre. Salcedo installed a sculpture over the Palais of Justice building in Colombia’s capital city, Bogotá. The work remembered the events of 6 to 7 November 1985 when militia stormed that very building – the High Court of Colombia.

Salcedo and Schneider reclaim these meaningful sites to create affect between artist and viewer, between citizen and nation. The implicit value of these locations facilitates a conversational or reflexive relationship with the viewer where the past is engaged in the present. This dialogical relationship makes the viewer complicit in both the artwork and the subject matter it addresses. Therefore, the transformative power of the artwork.

MORRISON, IAN A* (The American University in Cairo, imorrison@aucegypt.edu)

Secularism and the Foundations of Pluralism: The Crisis of Reasonable Accommodation in Québec

In recent decades Québec, like many other Western states, has been a site of debate regarding the limits of pluralism and freedom of religion. In Québec, these debates emerged within the context of a restructuring of the nature of nation and citizenship. Since the early 1990s, the Québec state has undertaken a project of the construction of a citoyenneté québécoise, seen as the culmination of a transformation of the boundaries of the Québec nation that began with the Quiet Revolution of the 1960s, marked by the shift from an ethnic to a civic conception of the nation. The secularization and secularisation of national identity in Québec is presented as an expansion of the boundaries of the nation and an opening towards otherness.

Yet, contemporary Québec has also been described as the site of a ‘crisis’ related to the measures adopted to promote this conception of such a nation. Of particular focus have been the practices of ‘reasonable accommodation’ for religious practices. Opposition to such measures are made on the basis of two arguments. The first suggests the need to narrow the scope of pluralism in order to protect universal values, and secularism itself. As such, it posits the paradoxical need to limit pluralism in order to protect pluralism. In doing so, it appeals to the need to protect the universal (as host body) from the particular (as contaminant). The second argues the need to protect ‘national values’ from the dilutive and assimilatory forces of relativism and multiculturalism. As such, it demands protection of the particular (as host body) from the universal (as contaminant).

The proposed paper examines the manner in which these two seemingly oppositional arguments can be present within a common discourse that problematizes the presence of certain religious subjects and practices within the public sphere in Québec.

Modern Moralities? Children and Social Change in Vietnam

This paper explores the effects of ‘modernity’ on children’s lives and on their aspirations in Vietnam. It draws on qualitative research undertaken with children and their parents as part of Young Lives, a longitudinal study of children growing up in four developing countries (www.younglives.org.uk). The paper explores how social, political and economic changes are affecting social realities, moralities and norms, especially in relation to intergenerational relationships between grandparents/parents, and children. For example, there is clearly a rapid process of marketization taking place, where consumer durables like mobile phones and the internet becoming widely available. At the same time children describe clearly the centrality of family relationships, and especially reciprocity in the form of caring for parents, siblings, grandparents, and an expectation of filial duty by parents. There are several sets of values are colliding. (a) there is a combination of Confucian notions of filial duty combined with Communist values relating to the importance of reciprocity in relationships, yet (b) there is State-led concern about ‘social evils’ affecting children and youth by parents (while these are nearly universal, they seem particularly marked in Vietnam) and (c) new technologies that are perceived as bringing risks to children. Children themselves are aware of shifting moralities. They perceive there to be corruption among adults – some teachers, and employers - and express concern about unfairness and injustice. The paper explores whether there are ‘new’ moralities emerging, and describes how parents and children are managing these processes.

‘I Have to Help and Improve Their Life’: Young People’s ‘Transitions’ in Ethiopia and Andhra Pradesh, India

This paper explores the lives of young people growing up in Andhra Pradesh, India, and Ethiopia, drawing on data from Young Lives, a longitudinal study of children growing up in four developing countries (www.younglives.org.uk). The paper draws on qualitative research from a series of case studies to explore children’s experiences of leaving school and why. The paper argues that many of the assumptions underpinning international policy discourse that conceptualise early school leaving as ‘dropping out’ fail to engage with the realities of young people’s lives in rural areas that experience numerous economic and environmental ‘shocks’. Gender, poverty, and other social differences combine with a strong sense of obligation to parents and wider family to constrain young people’s choices and trajectories. The paper questions the utility of the concept of ‘transition’ and suggest that it must be used critically and not simply imposed on contexts that are in a process of rapid social change and economic development, but that are generating powerful inequalities that mean that some groups of young people are ‘left behind’.

Beyond the Respondent-Interviewer Interaction: Exploring the Performance of a Self-Administered Life-History Calendar

Life-history calendar (LHC) methods have been increasingly used in surveys in the last two decades. There is indeed a general consensus on the fact that the highly structured but flexible approach of the LHC facilitates the memory of past events. Respondent’s past experiences provide a context for retrieval of autobiographical memories and they are used as anchoring points and time landmarks for remembering. While there is a general agreement that the LHC methods improve accuracy of retrospective data even for different populations and cultures with a non-linear representation of time, the reasons for this performance (i.e., retrieval processes) are less clear. The literature suggest that the LHC performance is amplified by the interviewer-respondent interaction via conversational and flexible interviewing, either in CATI or CAI. However, studies using self-administered LHC on youth sex behavior argued that LHC can be used also in self-administered modes reducing social desirability bias.

In this study we present data from two surveys conducted in Switzerland (the Swiss Household Panel pilot study and the Family TimeMentor study between 2011 and 2013. Results show that self-administered LHC could produce equally valid data in terms of completeness (measured with five indicators: number of residential moves, number of intimate partners, number of children, number of jobs, and number of years of unemployment) than interviewer-respondent interactive interviewing. Moreover, self-administered LHC transmitted by mail data had even * denotes a presenting author. Abstracts are organized by first presenting author's last name.
higher levels of internal coherence than self-administered LHC completed during face-to-face interviews. We argue that improvements in the layout (i.e., graphical visualization) of the LHC, as well as an increasing popularity of life calendar model in social media, may have increased in recent years the accuracy and feasibility of self-administered LHC for data collection.

Three Generational Continuity In Achievement Orientations: New Evidence From The U.S. Youth Development Study

Growing inequality in families has prompted great interest in the intergenerational transmission of advantage. Guided by three complementary theoretical perspectives, we examine the continuity of achievement orientations across three generations. The first posits that contemporaneous parental orientations and attainments influence children. Children of more highly educated parents receive more parental encouragement and observe successful parental role models. A second approach posits that prior parental pathways matter for children. Earlier parental behavior may also provide a model of more or less successful action, and impacts children indirectly through parental attainments. A third “selection model” posits that parents’ stable traits, observed during adolescence, influence parents’ pathways, their attainments, and children’s orientations.

The Youth Development Study followed a cohort of over 1,000 Generation 2 youth from age 14-15 (1988) to age 37-38 (2011), and also surveyed their G1 parents (during G2’s adolescence) and 422 of their G3 children aged 11-21 (2009-2011). An SEM model, based on 384 G1, G2, and G3 triads, provides a three-generational assessment of the transmission of achievement orientations. Confirming the first perspective, contemporaneous parental educational expectations were strong predictors of both G2’s and G3’s orientations toward academic achievement during adolescence (self-perceptions as intelligent, a good reader, and having high ability in school). Providing evidence for the second approach, a high agency G2 paternal pathway (with high aspirations, career certainty and active job search, age 18-30) strongly influenced G2’s educational attainment and entirely mediated the effects of G1’s expectations and G2’s academic orientation in adolescence on G2’s achievement. Finally, supporting the third perspective, G2’s academic orientation during adolescence significantly predicted G2’s expectation for the G3 child more than 20 years later. The G2 parent’s orientation, measured during adolescence, thus indirectly influenced G3 orientations. This analysis supports Conger and Danziger’s (2007) integrative model of intergenerational transmission, including both selection and socialization processes.

What’s Another Word for “Ruling Relations”?: Translating IE Research to Community, Government and Academics in Medicine

This presentation highlights the work of using institutional ethnography (IE) in applied health research. I illustrate how my IE study on fetal alcohol spectrum disorder (FASD) both facilitated and complicated the process of knowledge translation (KT). I will discuss this in the context of KT with diverse audiences including community stakeholders, government policy and decision makers, and academics in medicine. It is the work of research to contain and limit the amount of data to collect and analyze in order to keep a study focused. Applied health research also commonly includes KT plans to strategically engage target audiences with meaningful research findings. As an applied health researcher, I considered each primary audience as I decided how and what data to analyze as well as how the findings would be disseminated.

The purpose of this IE study was to examine how institutional supports and services are activated and coordinated around youth with an FASD diagnosis. My study included two Canadian communities – one remote Aboriginal community and the other an urban provincial capital. In each setting, three distinct perspectives were interviewed: 1) caregivers of children with an FASD diagnoses; 2) front line workers from healthcare, child welfare, education and social services with direct involvement in the lives of children with an FASD diagnosis; and 3) policy and decision makers who manage the interviewed frontline staff. In addition to interviews, I collected and analyzed clinical and service-related forms, training manuals, policies and assessments. This large volume of data required focus and prioritization in order to produce results that meet the expectations of my three main target audiences: community, government, and academics. I argue that the utility of IE in applied research is only as strong as the ability of the researcher to "speak IE" in a language that can be understood.
services, especially in the context of unemployment and poverty. The household has become the only site of stability for most people as well as their only means of survival – the real "hidden abode of production." Most households, however, are fragile; they lack resources and are unable, therefore, to effectively alleviate and cushion the effects of unemployment, poverty and inequality.

What emerges, are particular implications for gender relations, gender identities and household dynamics. New patterns of male domination and female subordination intensify, often riddled with conflict. Intergenerational conflict also intensifies in a context where access to income and time use becomes a source of conflict rather than cooperation. Conventional theories of gender relations and households are challenged in this new social and economic context.

Strategic Collaboration As Means and End: Views from Members of Swedish Mental Health Strategic Collaboration Councils

Mental health care professionals are under pressure – both from their own organisations and professions and from external legislation and policy – to collaborate. This article reports the views of collaboration held by influential mental health care professionals who participated in strategic collaboration councils. Semi-structured interviews were conducted with 31 participants in three groups: personal ombudsmen and managers of social care and health care. The participants presented generally homogeneous opinions of collaboration, although they differed in outlook: the personal ombudsmen maintained an operational perspective, while the care managers had a more strategic focus. All participants saw collaboration as necessary to a functioning organisation. They joined the collaboration councils expecting to form interprofessional relations that would lead to greater efficiency, better knowledge of other organisations, and professional support. The participants’ adherence to a positive norm, together with further institutional pressures, contributed to homogeneity in the participants' responses. All guardians of their points of view while collaborating in networks adhering to a social norm. Strategic collaboration was thus both means and end.

MOSELSON, AIDAN* (University College London, aidan.mosselson.11@ucl.ac.uk)

Communities in Transition: Security, Policing, Appropriation and the Formation of Community in Inner-City Johannesburg

Johannesburg's inner-city was once an area notorious for crime, grime and urban and social decay. It has been described by academics as a 'vacuum of belonging' (Gottz and Simone 2003) and a hyper-ghetto, home to prostitutes, drug dealers, disease and crime (Murray 2011). In recent years, however, there have been considerable efforts to regenerate the urban environment, particularly through the provision of low-income and social housing. These attempts at physical regeneration have coincided with efforts to enhance security in the area as well as foster a sense of community. This presentation argues that more nuanced and contextually sensitive approaches are required. In Johannesburg, the provision of low-income housing has been led by the private sector, who have also taken the lead in the regeneration of the city. However, this has not resulted in a solely reanchovy or exclusionary city being created, but has had the contradictory effects of fostering increased social cohesion and meaningful regeneration, whilst simultaneously increasing the cost of land and housing in the area. Utilising Pierre Bourdieu's notions of field, capital and habitus, this presentation explores the multiple factors which have shaped the reinvestment and regeneration process in Johannesburg and shows how a diversity of outcomes and imperatives are possible and in fact present, even in a context shaped by neoliberal approaches to city-building and housing provision. Cities are part of broader social contexts or milieus and are therefore shaped by competing fields and forms of capital. This presentation highlights the multiple impulses and concerns which have shaped housing provision and reinvestment in Johannesburg's inner-city and discusses what the effects of these have been on communities living in the area and invites scholars, whilst still remaining critical, to adopt new, more nuanced and context sensitive approaches to questions about urban renewal, particularly in the Global South.

MOTCHAM, CASIMIR RAJ* (National University of Ireland, cassimo@gmail.com)

Youth Policy in Ireland and India: A Comparative Study

Contemporary policy discourse about youth is frequently trapped in the dichotomous paradigm of simplistically portraying them as either a ‘problem’ or a ‘human resource’. This broadly applies both in Europe and in Asia. However, while significant comparative research on youth, youth work and youth policies has been undertaken within Europe, very little research has been conducted which compares the European and Asian contexts, and there is none to date specifically comparing Ireland and India. Based on recently completed PhD research, his paper explores and compares the youth policies of Ireland and India through the analytical lens of Gough’s (2008) ‘five Is’: industrialisation, institutions, institutions, ideas and international environment. It examines the major ‘factors and actors’ that have influenced the historical development of youth policies in both countries and situates these in their broader regional contexts.

There are many obvious differences between India and Ireland in terms of location, economy, culture(s) and other economic and social contexts. However there are also significant connections between them, stemming not least from their common colonial experiences, meaning there are important parallels in political culture and public administration. The voluntary sector and its relationship with government agencies hugely influences policy making in both countries (the principle of ‘subsidarity’ in Ireland can be fruitfully compared with that of ‘Panchayati Raj’ in India). In India, however, there is no forum for NGOs and the government to come together whereas ‘social partnership’ has been central to Irish social policy. In both countries most youth have little or no opportunity to participate in making decisions that affect their lives. Many are not aware of their own rights, or the policies and programmes that affect them. New policy initiatives are underway in both countries, however, which hold out the possibility of redressing this.

Gender Differences in Reactions to Coming out: The Reaction of Mothers of Non-Heterosexual Children and Their Roles

In a heteronormative society, disclosing one's non-heterosexuality to others can be very stressful, but it can be heightened considerably when coming out to parents. On the other hand, parents to whom a child has disclosed their non-heterosexuality also struggle with feelings of inability to accept their own non-heterosexual child. Coming out thus causes a "family crisis" (Williamson 1998). Because family members have to reconstitute a family model which was previously based on heterosexuality. Yet what does "family crisis" mean to the parents of a non-heterosexual child?

Previous research on parents’ reactions to coming out in the West have shown that mothers and fathers react differently; mothers are found out to be more likely to react positively, and feel less guilt and responsibility than fathers (Ben-Ari 1995). Moreover a parent tends to be more accepting of a non-heterosexual child of the same gender than that of the opposite gender (Ibid). However, what are the reasons for these differences? Moreover, can the same be observed in the case of Japan?

This paper explores how gender influences a parent's reaction to coming out in both cultural and social settings. In particular, it discusses how mothers assume gender roles in coping with their children's disclosure of non-heterosexuality. Data gathered since December 2012 from interviews with family members of non-heterosexuals and observation research at a support group for family members. The

Sociologists and Believers: Alliances and Protectorates in Brazil

In Brazil, probably more so than in other countries, sociologists often hold the Comtean opinion that Sociology stands to religion as the positive stands to the theological stage. As secularization of the “holy alliance” of social scientists and cultists, the former often imposing on the latter a kind and subtle theoretical protectorate. Such alliances also exist, in greater or lesser degree, with the Catholic Church (especially with the sectors linked to the theology of liberation) and with the historical Protestant churches. Highly emblematic of this tendency are the graduate programs in “sciences of religion” that have sprouted all over the country and Facebook like sites through which social scientists (who often claim to be believers) and believers (who are at times social scientists) engage in dialogue. Contrarily, there is in the country a process of open, so far only verbal, warfare between social scientists (again of the highest reputation) and the Pentecostal and new religionist community as authoritarian and intolerant of all forms of individual diversity.

MOTTA, ROBERTO* (Universidade Federal de Pernambuco, rmcmotta@uol.com.br)
The Protestant Ethnic Thesis before Weber: Forerunners in France and Brazil

It is well known that the “Protestant Ethnic” thesis had existed for quite some time prior to Max Weber's own formulation. Some specific cases of anticipation of the thesis are represented by Émile de Laveleye and Napoléon Roussel, in the French speaking world of the 19th century and, in the same century, by Brazilian writers Tavares Bastos, E. Carlos Pereira and a certain number of missionaries of English and North-American background who worked in Brazil, like Zachary Taylor and others. Even details of Weber's thesis, concerning, for instance, the emphasis on the consequences of sectarianism (“Sektentum”) are present in mid-19th century Tavares Bastos's work. Buchanan’s (who wrote in Portuguese), or even knew he had existed. While such forerunners do not necessarily reach the same level of theoretical, indeed of theological refinement as does Weber, they view adhesion to Protestantism (albeit, at times, in a rather cultural and secularized sense) as a necessary condition for modernization and Brazil.

MOULENE, FREDERIC* (Université de Strasbourg, frederic.moulene@voila.fr)
The Challenge of Sociology of Language: Living in Society, Living with Words

Nowadays, « sociology of language » is explicitly identified in the research groups within the I.S.A. Although sociological associations all over the world don't seem to have equivalents at their national extent. Alongside, this domain of sociology has an uncertain situation within the university systems: few scholar jobs and chairs, research programmes, articles and books are clearly dedicated to « sociology of language ». The cause is probably that it is difficult for sociologists to write on language even though by definition, linguistics is a specific disciplinary field aimed at investigate language. Moreover, linguists have developed their general framework from the canon of the Saussurean dichotomy of which has been studied beyond the social context; it is significant that a scholar as influential as Thomasy still follows the « saussurean dichotomy » and considers speakers as basically identical and interchangeable. For their part, sociologists usually keep language questions out from their study domain. Thus, they forget that society is spoken by the individuals and with all the words they have learnt by doing, more, since Austin, we know that it is often as long as certain things are told that they can perform, change the reality. So, knowing that each science tends to consider its object of study as its exclusive preserve, sociology of language is an academic challenge. However, it is worth the effort because social
Homogenous or Not?

Abstract: This research contributes to the debate on Japanese media homogeneity by demonstrating that anti-nuclear editorials exhibit more diversity than homogeneity overall for the period from 1954-1970. Several observers have noted that Japan's major daily newspapers are homogenous in their news reporting and coded for indicators of progressive-conservative and universalist-particularist continua, with the Asahi the most progressive and universalist of the four publications surveyed. While relative unanimity of opposition to the bomb was found, the analysis indicates that nuclear arms were opposed for a variety of motives which could be characterized as either universalist or particularistic. Further differentiation is observed on contextual issue positions such as aid for hibakusha, United States accountability in the bombings, and the influence of the domestic communist and socialist parties on the anti-nuclear movement.

The Efficiency of Exclusion: Gated Communities, Informality and Social Mobilization in Mexico City

This paper analyzes the double-edged meaning of informality at the intersection of urban inequalities, landed property, and power in urban Latin America. Our study of the Zona Poniente in the fragmented western periphery of Mexico City allows us to identify situations of social interaction in which the narrative use of informality is central to social and cultural distinction. We find that the standard story – and normatively disparaging construction – of urban informality exercised by marginalized urban poor people must be complemented by an analysis of upper class elite practices, particularly in private-sector real estate development. The real estate development industry occupies a critical place, materially and symbolically, in structuring the urbanization in which wealthy property interests employ the attribute of informality to stave off "Third World" settlements and enable a "First World" lifestyle in gated communities. In the discourses and practices of neighborhood organizations, public planning authorities and real estate developers the referent "informality" takes on defensive and exclusionary functions and serves as referent for social mobilization against the perceived informality of the local elite.

Fieldwork in this peripheral, fragmented and contrasting area provides insights into the link between informality and confinement on various levels. Firstly, the self-enclosing of the urban elite in "gated communities" is a result of informal modes of negotiation between public authorities, neighborhood organizations and real estate developers. Secondly, the spread of such First-World urbanism has negative effects on social and physical mobility of the dis-enfranchised urban population living in deprived islands surrounded by the defensive walls of gated communities. Thirdly, our fieldwork allowed us to identify diverse types of interactions between these private urban developments and surrounding marginalized settlements. These interactions, ranging from conflict to alliances, suggest to question the hypothesis of a generalized confinement.

Segregation Of Roma Children In The Czech Educational System

One of the most serious forms of discrimination in the CR is the discrimination against Roma children in primary education. Despite conclusions by the ECHR from 2007 in the case of D. H. vs. CR, which stated that there was discrimination against Roma children in primary education, the CR is continuously criticised by international institutions for the removal of obstacles in regard to Roma children's access to education and improving their diagnostic methods and their work with socially disadvantaged children.

Interviews

Network Analysis For Discovering Political Conflict In Standardized Interviews

This paper proposes a new usage of standardized interview data: instead of studying contingency tables of individual attributes, the author suggests to analyze the hidden, implicit network structures among the respondents of these interviews. The proposed analysis is based on the idea of virtual encounters between survey-respondents, which allows to identify relations of conflict or consensus between dyads of persons. The relational information gathered this way can easily be complemented with additional survey-data about the social attributes and the group-membership of the persons representing the nodes of the analyzed network. Hence it becomes possible to calculate inter-group conflict of different status-groups and to compare it with their intra-group conflict. Similarly, looking for isomorphic coincidences of different types of network relations, this kind of analysis may also be used to identify reinforcing social cleavages. A standard survey has generally about 1 to 2 thousand interviews, which corresponds to a universe of 0.5 to 2 million possible dyads of persons. Hence, the analysis of virtual network structures requires to focus on samples drawn from this universe. Consequently, this paper also describes the construction of such samples by presenting an exemplary analysis of the European Values Study (EVS) 2008. Among others, this survey contains a political self-evaluation on a left-right scale, which is used in the example for the construction of relational arcs of conflict and consensus: dyads of persons with both a leftists or both a rightist political orientation are linked by a relation of political consensus. Other dyads with very different positions on the left-right continuum are similarly linked by relations representing political conflict. Hence, by this exemplary analysis it will be possible to assess, how much different income groups (classes) are politically polarized and how much consensus there is within each of these groups.
of the Czech citizens from the education process and what are the main consequences of such approach.

MUIR, KRISTY* (University of New South Wales, k.muir@unsw.edu.au)

Perceiving, Managing and Negotiating Risky Behaviours from Adolescence to Early Adulthood

Young people’s transitions from adolescence to adulthood are individualized, risk taking is normalized, and individual choices, behaviours and actions can have significant implications for future social and economic outcomes (Beck, 1992; Giddens, 1991). Yet young people’s choices and behaviours are also set within and influenced by their peers, families and communities (Bronfenbrenner, 1986, 1977). While previous research has examined risk taking behaviours of young people and the influences and drivers of these, we have a limited current understanding of how, why and under what circumstances young people from different family, community and economic contexts negotiate and make decisions about risky behaviours and who and what they draw on to make these decisions. Based on an Australian Research Council grant, this paper uses Australian Bureau of Statistics data and interviews with 70 young people from different social, economic and community contexts across Australia to understand how young people define, perceive, manage and experience risk taking behaviours and the supports and resources they draw on in making their decisions. Using an ecological framework, this paper aims to identify areas of support at the kitchen, community and policy tables that may assist young people in negotiating risk as they move through adolescence to early adulthood.

Losing Control in Western Canada: Private Equity Firms and Land Purchases

My paper will investigate the changing nature of land ownership in Western Canada. This is occurring largely because of the activities of Canadian private equity firms in purchasing vast tracts of farmland as investment properties, and the concomitant social and economic transformation that is happening among the rural population as their lives are affected by it. These are striking developments whose effects remain largely unknown and unstudied given that the practice was non-existent in Canada five years ago. However, they have the potential to fundamentally alter the relationship of people with the land. What will be the medium and long-term effect of this development on agriculture in Canada? Is there a transfer of ownership and control of farmland in Canada, with the resultant loss of land to individuals is often ignored when the value of land is determined? Is it the case that the cultural, spiritual and social importance of land to individuals is often ignored when the value of land is determined? Is it the case that the cultural, spiritual and social importance of land to individuals is often ignored when the value of land is determined?

While previous research has examined risk taking behaviours of young people and the influences and drivers of these, we have a limited current understanding of how, why and under what circumstances young people from different family, community and economic contexts negotiate and make decisions about risky behaviours and who and what they draw on to make these decisions. Based on an Australian Research Council grant, this paper uses Australian Bureau of Statistics data and interviews with 70 young people from different social, economic and community contexts across Australia to understand how young people define, perceive, manage and experience risk taking behaviours and the supports and resources they draw on in making their decisions. Using an ecological framework, this paper aims to identify areas of support at the kitchen, community and policy tables that may assist young people in negotiating risk as they move through adolescence to early adulthood.

The Democratic Deficit: The Rise of Private Agri-Food Standards in the Global South

The past few decades have seen a tremendous expansion of private authority in global governance. No exception, the agri-food industry has become increasingly privatised in its ownership and governance. Illustrative of this point has been the declining authority of public international bodies such as the UN’s Codex Alimentarius in the governance of agriculture. These developments are the result of a normative shift from government to governance. Such trends have proven particularly hard hitting on agriculture in the Global South, where numerous experts have documented, for example, the impacts of cash-crops for export, land grabs and agricultural speculation on the most disadvantaged.

My presentation will examine the development of agricultural standard setting and certification as a case study of private agricultural governance. Using GlobalGAP, a business-to-business standard setting body, the paper has two purposes. The first is to use private certification and standards to highlight the very real and harmful impacts private regulatory developments are having on poor agricultural suppliers in the global South. This will be done predominantly from a governance perspective. The second is to explain the broad-based shift toward a preference for private governance that has occurred with agricultural governance over the last few decades. In particular, I will examine the ideas and logic of neoliberalism and globalization frequently used to justify this shift.

By addressing the impact private regulatory standards have had on suppliers in the global South the presentation will also indirectly focus on a number of theoretical questions revolving around globalization and global governance. These include questions regarding the arrival of new political actors as key regulators of global industries; the role of the state and public regulation in agricultural global governance; and the ability of private actors to govern in the interests in mind of the broader public and the disadvantaged, in particular.

Cross-Border Marriage: Tale from Haryana, India

A significant social consequence of the skewed sex ratio is the marriage squeeze in some regions of India, like Haryana which receives its brides from various eastern states of the country and also from Bangladesh. Haryanvis of higher caste and class refuse to acknowledge existence of any such practice publicly as they consider it demeaning of their esteem and collective identity. So on one hand, scenario reflects the dynamics of continuity of such marriages with difference in stance and denial. On the other hand, the inbuilt centrifugal mechanism pushes the women in Bangladesh, who are on the socio-economic fringes of their country, to come out as brides. It is interesting to note the changes that surface in the cultural matrix of Haryana society due to such marriages. The present study attempts to examine the social, demographic and economic factors responsible for continuity of such a process over time.

The paper also deliberates on the strategies of adaptation and building resistance to the stigmatized images, by the children of these marriages. There is a palpable anxiety of the upper class and upper caste men over the stereotypical images of migrant brides and their children as inferior others. These women are facing a situation of paradoxical hypergamy as they are getting married to men of low status and therefore their status is further low in society. Resource allocation for improving their political, economic and social life in Haryana society needs active citizenry. Unless their cause is taken up by the upper sections of Haryana society through means which can be effectively represented by way of state induced policies and citizenship rights. The need for policy recommendation towards the protection of these migrant women and their children has been deliberated briefly in this paper.
firms, focusing on the role of two professional groups—corporate social responsibility (CSR) and investor relations (IR) managers. CSR managers have made the case that the CSR performance of Japanese firms lags behind that of their global competitors because of their failure to address the historically low level of gender diversity. In cooperation with IR managers, they have theorized its economic benefits, by arguing that improving gender diversity can send a positive signal to foreign investors. This constructed advocacy of gender diversity by foreign investors has substantive changes. Using panel data on more than 800 major Japanese companies from 2001 to 2009, our analyses show that foreign share ownership and the with firm influence of CSR and IR managers significantly improve gender diversity, especially at the board-director and managerial levels. By emphasizing the role of professionals in translating global standards into local contexts, our study makes a contribution to understanding the role of local actors in generating variation in the outcomes of global diffusion processes.

Resistance or Alternative Alienation?

This paper has the goal of discussing how the political project of Japan, based on its ideology of homogeneity, alienates the Japanese youth, limiting their individualization processes to, instead, focus on a single model of Japaneseness. Through some narratives examined, the Japanese youth showed to be sensing a lack of possibility to fit in society. When analyzing the societal structure in Japan, the rigidity of its job-hunting system, the curriculum of homogeneity and individuality suppression that begin in school and echo in society, the rigid gender roles presented in the classrooms and companies; the work culture of permanent availability to the company, all become apparent as the sources of the lack of belonging amongst the youth. Since there is a lack of imaginable structural change, the youth produce narratives of escaping this hegemonic Japan, adopting strategies of marginality (NEET, Freeer, and some counter-hegemonic sub-cultures); or even strategies of actual escape (prioritizing non-Japanese firms to work, or seeking for opportunities to live abroad.) This paper, thus, argues that these strategies come from a feeling of alienation and purposelessness.

The Effect of the Great Recession on out-Migration Self-Selection of the Foreign-Born

The scientific literature on the permanence of immigrants in host countries has faced the empirical challenge of measurement and characterization. Along this line, research on the impact of self-selection is crucial for a better understanding of international migration and assimilation process in the host countries. In this paper we present a comprehensive empirical analysis on the (re-)migration of foreigners in Spain. Using panel data from the Spanish Labor Force Survey we explore the relationship between out-migration patterns and the labor market situation. We focus our analysis on the self-selection process of out-migration and its change with the economic downturns. To model out-migration patterns we estimate a detailed event history analysis. Our findings confirm results from previous studies. Preliminary analyses reveal that the likelihood of leaving the host country is strongly determined by family configurations and the labor market situation of household members. Those who are unemployed have a higher probability of outmigrating, especially when other incomes are absent in the household. The findings also show differences with respect to national origin, sex, and education level. Moreover, while the self-employed and the less successful foreigners (in terms of labor outcomes) have a higher probability of leaving the country. Surprisingly, its intensity is weaker during the Great Recession than during the expansive economic period.

Effect of Economic Crises on Work Orientations Among European Countries

An extensive body of research in social sciences has analyzed the change of values in developed societies, assuming that as populations experience higher levels of wealth and security there will be a shift in their goals to show an increasing focus on self-actualization and quality of life. Concerning to work, it will be expected a relative decrease of extrinsic work orientations -those related to external aspects of work and based on the notion that work is mainly a means of obtaining instrumental resources- in favor of intrinsic work orientations -those linked to working tasks and based on the supposition that work in itself is an enriching experience that allows one to enhance their personal development and self-expression.-

The current context of economic crisis has brought up a new scenario that could alter the direction of the predicted change in work orientations, producing a return to the instrumental views in detriment of the expressive work orientations, as a response to the uncertain and risky labor conditions.

The aim of this paper is to compare work orientations in several European countries in two moments of time, analyzing the differences among countries as well as the evolution of work orientations in order to test the impact of the economic crisis on such evolution. Data analysis will consider the impact of the economic crisis on work orientations at a double level –aggregated and individual-, and will be based on relevant data from the European Social Survey (2004 and 2010).

Evaluación Del Uso De Edublogs Desde Una Perspectiva Comunicativa

Nos proponemos analizar exponer los principales problemas y las ventajas encontrados en la aplicación de edublogs en la docencia universitaria. Recibimos la propuesta de realizar la existentización de las experiencias prácticas desarrolladas en el marco de una red de innovación docente, formada por un grupo interdisciplinar de 43 profesoras y profesores de 9 universidades diferentes, en un proyecto financiado por la Universitat de València. La principal herramienta desarrollada en esta red han sido los edublogs (destinados a asignaturas diferentes), orientados hacia el aula, el espacio colectivo, tanto del alumnado como del profesorado. focalizamos la atención en los edublogs en tanto que canales que median en el proceso de aprendizaje colectivo, facilitando la colaboración en un entorno comunicativo. Desde esta perspectiva, describimos y analizamos las cuestiones problemáticas relativas ai edublog como canal en las dimensiones del emissor (quien crea el mensaje), el mensaje (los diferentes tipos de contenidos), la recepción (relacionada, entre otros aspectos, con la gestión de los contenidos), el contexto (cómo se inserta el edublog en el programa docente) y el feedback o retroalimentación.

la revisión de la dimensión comunicativa es imprescindible para superar la posible emergencia de situaciones cercanas a lo que Adorno y Horkheimer llamanaislamiento por comunicación: las disrupciones o simplemente las dificultades en el proceso comunicativo dificultarían la efectividad de los edublogs. De este modo, nuestro trabajo pretende contribuir a la mejora, desde la práctica, del uso

The Influence of Linguistic Inequality on the Vitality of Two Otopamean Languages of Mexico: Chichimeco Jonaz and Tlahuica

In this paper we explore the influence of linguistic inequality on the vitality of two related Otopamean languages spoken in Mexico, Chichimeco Jonaz and Tlahuica, both of which are endangered languages being displaced by Spanish.

First, we compare the similarities and differences in the social, geographical and historical contexts of the two languages. Then we apply international criteria found in the UNESCO Vitality Index which determines degree of linguistic vitality in order to analyze and compare the use of Chichimeco Jonaz and Tlahuica. Finally, the role of language ideology as shaped by Mexican political economies and their institutions is touched upon. How changes in language policy have influenced language maintenance and shift is also discussed.

Japanese Food: An Analysis Of Culture Through The Values Derived From Attributes

The Japanese culture has expanded its horizons in many countries and regions. In special, Brazil, where the Japanese immigrants Represents the second biggest Japanese descendent group out of Japan, its values and habits has an important presence in Brazilian territory. One of the important aspects of this culture is the Japanese cuisine. Today a fashion in Brazil, Japanese cuisine has invaded the dieta of many Brazilian people, generating a growing consumption of Japanese food. The research applies the methodology of Theory of Means End Chain - MEC. Within this perspective, product attributes allow the consumer to achieve certain benefits that are linked to a higher level, allowing the ranking of personal values. This technique is based on the implications glimmed in the Theory of MEC, with the central concept of 'ladder', exploring three levels: attributes, values and consequences. This technique provided the construction of an implication matrix and the hierarchical value map, to confirm the main elements of such behavior. The survey results shown, among consumers, values such as openness, exciting life, satisfaction, pleasure, happiness, self-esteem and affectionate relationship. These values suggest an alignment with the Japanese culture mainly happiness, affection and friendship relationship.

Local Policing in the Global City: Community Safety Development in Tokyo

In large Global Cities, the 'command centres' of the global economy, most aspects of everyday life are subject to surveillance. Forms of Neoliberal urbanism have spread public space video surveillance, homogenized theme-park malls, gated private apartment blocks suburbs and exclusionary policies towards urban others: the homeless, undocumented migrants and so on. I have labeled this as a globalizing form of technocratic surveillance, however in previous work on Tokyo, one of the preeminent global cities, I have argued that in the Japanese capital, particularly in a landscape of virtual human surveillance are still undergoing an uncertain transition in the encounter with global neoliberal capitalism.

Since 2002, under the last Governor of Tokyo, crime prevention has been managed through the Anzen Anshin Machizukuri Jourei (or Community Safety Development Ordinance) which decentralized responsibility for crime prevention to communities, supported by local (ward) government. However, both National and Metropolitan Police Authorities have also initiated their own schemes, including public displays of video surveillance, crime mapping and so on. This paper reports on empirical research from five case study areas in Tokyo with very different characteristics: a central district partly dependent on the night economy and associated disorder, a wealthy central residential ward, a working class neighbourhood with a large traditional outcaste population, and two middle-class suburban areas. It analyzes the different community-based initiatives that have emerged in each area, their compatibility with and connections to central police initiatives, and considers what combination of local or global forces are the predominant drivers in emerging crime prevention policies and practices.

MURAKAMI WOOD, DAVID* (Queen's University, dmw@queensu.ca)

Smart City, Surveillance City: Ubiquitous Computing, Big Data and Urban Life

'Smart cities' combine ubiquitous computing and urban management, and are characterized by pervasive wireless networks and distributed sensor platforms from video surveillance to meteorological stations, monitoring flows from traffic to sewerage and providing information in real-time or in anticipation of risks. These have extended from small projects for example, shopping / business complexes with integrated building control systems combining video surveillance, fire detection and crowd flow monitoring or other kinds of customer tracking, through larger but temporary initiatives like the command and control systems established for sports mega-events, to permanent whole-city initiatives like Rio de Janeiro's Smart City, sponsored by IBM.

Although largely civic, corporate and managerial, these schemes have strong influences from police and military sources, from crime mapping and predictive policing models, to new forms of urban warfare involving forms of distributed sensor platforms, and computer analytics, to enable forces to get a 'clear picture' of the complexities of the urban landscape and its inhabitants. In some cases in the USA, these have come together in overt ways, for example in the new 'Domain Awareness' initiative in Oakland, California, which extends an existing port security project way beyond the maritime 'domain' into the surrounding city, combining military and conventional civil government.

Drawing on work in science and technology studies, media studies, sociology, geography and surveillance studies, this paper considers the smart city as the archetypal urban form of the ubiquitous surveillance society. The paper considers the place of human rights in a broad sense, not simply privacy but also equity and access to services and justice, and the ability to flourish, in cities in which flows of people are managed like goods or natural resources and asks whether such rights can be 'designed in' in any meaningful way, or will be written out.

Meaning and Frame Resonance in the Linkage of Social Movement Groups - Comparing Three Millie Island and Fukushima

This study examines why some social movement groups successfully create linkage while other groups fail to do so. Past studies of the development and growth of social movements have provided an explanation from a view of structural and cultural factors. The former theory explains the linkage from existing organizations or networks; the latter employ such conceptual devices such as framing, emotions, collective identity, ideology, symbols, and themes. Comparing the anti-nuclear movement that occurred following the 1979 Three Mile Island nuclear power plant accident and the 2011 Fukushima nuclear power plant accident, this study explores the preconditions and conditions with which multiple movement groups create linkages. In the 1979 campaign in the US there was a successful linkage between the national movement organizations and the local movement groups, whereas in the 2011 campaign in Japan, such linkage did not appear to be established. The results of the analysis suggest that a successful resonance based on the frame devices results in a linkage between movement groups so for such resonance to occur I emphasize the importance of meaning. Frame resonance is necessary to establish the linkage across social movement groups, and to attain the resonance the convergence of meanings each participating group attribute to their activities is necessary in addition to conditions laid out by framing theory. Drawing on the understanding developed in the area of framing theory, I argue that the establishment of such a linkage heavily depends on the extent of frame resonance and that frame resonance is attained through the convergence of meanings attributed to the actions taken by respective movement organization and groups.

There Are Few Cases Around Here: Structural Problems of the Japanese Nuclear Compensation Scheme

The Fukushima Daichi Nuclear Power Plant accident resulted in mass evacuations and the evacuation of wide areas. As a result, 1.5 million people are assumed to have legal claims against Tokyo Electric Power Company (TEPCO). The Nuclear Compensation Act provides a settlement procedure (ADR) based on guidelines issued by an ad hoc administrative committee to be set up after an accident. In other words, the law envisages that such an administrative procedure of paying damages would identify victims of a nuclear accident. However, the scheme of the law has not worked as well as the law expected. As the law did not provide how damages should be paid in case a total amount of damages would surpass the expected amount, guidelines for payment have been issued piecemeal. Moreover, the guidelines have been challenged even in settlement procedures. The nuclear ADR was initially designed for an out of court procedure against the backdrop of the extremely small lawyer population. However, the nuclear ADR has been operated as a rational settlement procedure rather than a procedure of traditional style of compromise, which requires lawyers' involvement to handle cases. The Japanese society has grown to require legal intervention in handling mass claims but the existing structure of the legal system is unable to provide necessary amount of legal services to victims of the nuclear disaster.

Effect Of Men's Educational Attainment On Their Fertility

We are interested whether the effects of men's educational attainment on their fertility diminished over time across welfare regimes and by partnership types. Some research questions will be under study:
- Which is the effect of educational attainment of men on their fertility? Is it different for men in consensual unions and in direct marriages? In which national context men's fertility level specific to consensual union may be close to the total fertility rate of married fathers. Our hypothesis is that, in gender egalitarian societies, with a more similar gender equality across welfare-state institutions, the total fertility of men (and women) depend less on their educational attainment but more on the type of union patterns. In more traditional societies the effect of education on male fertility is more important, despite the fact that is often the opposite of what it is for women.
- GG's data for available countries will be used to compute duration-based total union specific fertility rates in the spirit of parity-progression ratios developed by Hoem and Muresan (2011) and to analyse life-time fertility determinants. The following variables will be included in the analyses: family background, gender, age, social background, partnership status, parental status, educational enrollment, educational attainment, calendar year, etc.

Knowledge Workers' Subjectivities. Precarisation and Transitions of Young Highly Qualified

Over the past decades, many EU member States have registered a large raise in the use of temporary employment. Young people are far more likely than other groups to be employed in precarious jobs, independently from their education and skills. In the age of the global economic-financial crisis, the attack to the conditions of knowledge workers goes on, according to the different lines of the neoliberalist logics, that juxtapose to the current precarisation processes phenomena like under-payment and misalignment between subjects' education and their working activities (Eurofound, 2011; Standing, 2011; Samek, Semenza, 2012). Which relation does it hold between educational levels and possibility of effectively deploying the acquired competences and skills? How do knowledge workers represent and face their precarious conditions? Our reflections are based on results obtained in two recent researches conducted in Italy (Armano, 2010; Murgia et al. 2012) – in the areas of Bologna, Milano, Torino and Trento – during which narratives of about 70 subjects, aged between 25 and 35, have been collected in reference to the transitions between education and employment. All interviewees were holding high degrees of education (bachelor, master or PhD) and at the time of the interview were employed with autonomous or dependent temporary contracts.

The research inquires on the one hand the risks of depauropation of knowledge and deskilling of highly educated young workers; on the other hand, the strong lack of adequate forms of representation and of policies aimed at facing the specific precariousness of knowledge workers. In the present article we discuss the precarious and invisible face of the condition of knowledge workers, that collides with the official one, that superficially considers them as "independent and professionals", though they are experiencing the effects of the further precarisation brought about by the crisis, without a union or political representation.

Religion and Risk: Pana-Wave Laboratory and the Risk Society

This paper documents the rise and fall of a Japanese new religious movement known as the Pana-Wave Laboratory. Founded in 1977 by Chino Yoko, the Pana-Wave Laboratory was an eclectic form of spirituality that adopted doctrines from the several religious traditions, as well as a host of pseudo-scientific conjectures about physics, environmental warfare and space exploration.

Led by the aging Chino, a reclusive woman that rarely left the confines of her Toyota van, the Pana-Wave Laboratory established a compound for its religious and scientific practices atop Gotoashii Mountains in central Japan. Believing to have the ability to channel celestial figures and a special knowledge of a communist conspiracy to have her assassinated through electromagnetic weaponry, Chino depended entirely upon the assistance of some forty members of the Pana-Wave Laboratory for her survival.

Through their view of the scientific process, Pana-Wave Laboratory members adopted images of themselves as “scientists,” taking on actual roles that contributed to their appearance and occupations as laboratory researchers. Members constructed of a full-fledged laboratory, complete with instruments and data recording devices to manage their research agenda. They then began to fashion white laboratory coats, engage in “scientific debates,” and profess their findings in their own “peer-reviewed journal.” In a dramaturgical sense, these Pana-Wave Laboratory members used the principles of scientific reasoning and props from a host of laboratory settings to create and re-create their images, while fortifying the legitimacy of the religious claims.

Using a combination of Ulrich Beck’s “Risk Society” thesis, this paper explores one group’s experiment with creating a science and the consequences of doing so in the full purview of the Japanese media. Ultimately, I demonstrate the pervasive consequences of a religious community bound up in fear of human-manufactured risk, as well as the response of its members in averting their own demise.

MURPHY, RAYMOND* (University of Ottawa, rmurphy@uottawa.ca)

Nature, Time, Space, and Scale: Confronting the Challenges of Global Environmental Problems

Non-humans in the form of nature’s dynamics have prompted human agents to modify their social practices: earthquakes shook the Japanese population into reinforcing building codes and recently questioning nuclear reactors. For many global environmental problems, such as anthropogenic climate change, there are however enormous time lags and/or spatial distances between causal social processes and environmental consequences and there are issues of scale whereby any one cause could be dismissed as minor. People can discount the future to gain immediate economic benefits and may not experience serious adverse consequences until it is too late to avoid disaster or tip the environment into a new state less beneficial to humans. This is what Giddens labelled as his paradox and what disaster sociologists call the incubation of disaster. Disasters are best conceived of as focusing events that can prompt action, but they can on the contrary be dismissed as Acts of God. Moreover land, water, and atmospheric space on our planet are huge, so it takes an enormous accumulation of pollution and material that could cause harm far from the source to threaten the entire planet. Some anthropogenic problems are resolved by non-humans: the Gulf of Mexico contaminated by the Deepwater Horizon oil gusher is coming back to life. This paper re-thinks Weberian sociological theory in terms of i) his neglected concept of non-social action, hence expectations concerning actions of non-humans and time, space, and scale, and ii) the enduring conflict of value spheres, particularly economic versus environmental benefits. It calls attention to the importance of assumptions about non-human actants that underpin society’s practices when anthropogenic environmental threats for the distant future are glimpsed, but not known for certain. It brings Adam’s analysis of time to the centre of environmental sociology. It demonstrates how this framework can be used to gain insight into contemporary environmental problems like climate change.

Position of Women in Sociology or Female Founders in Sociology

Sister's founders in sociology as a coin term are formed by Mary Jo Deegan, in order to explain, demarginalisation of female stream sociological theory. Even then there are more than 52 women considered to be founders of sociology, they are still not recognized in sociology, especially in Bosnia and Herzegovina. Aristotle's distinction between male/female, according to authoress Shipley, represents the key moment to ideological foundation of the women exclusion from academia and public life, because their identification with natural and irrational. Results of Wars, global ecological movements, and movements for the rights of the minorities were joined together in creation of significant subversion and counterpart of male stream patriarchal ordained theories in eco feminist movement. Many The women and nature in male stream theories are considered to be the insignificant Other, formed as counterpart for male principal which is culture, religion and activity. Logic of disgusting value its objection, imperialism, colonialism, patriarchy and European West racism must be rendered with the logic of nurturing as the prevailing concept of successful bioregional cooperation and interpersonal relationships, pacification and peace agreements. Key terms: logic of dominance, logic of care, malestream / femalestream, independent man vs. independent women, Aristotle's mysogyny. 

NGOs and New Trajectories of Engagement and Youth Power in the Occupied Palestinian Territory

Youth civic and political engagements are not distinct or separated from each other, and in many cases they overlap and interlink, they result in diversity of youth engagement forms. Youth organizations play an important role in the occupied Palestinian territory (oPt) in terms of being a 'recurso, catalyst, and supporter for youth engagement, whether civic or political. As youth organizations were trying to cope with changes of sociopolitical context in the oPt, they reinforced different trajectories of engagement than the ones that existed within the Palestinian society between the 70's, 80's, and early 90's. The organization's type (Social movement organization, politically affiliated organization, youth development organization) is a vital factor in deciding how the organization dealt with changes in the context and the frame and trajectory of engagement reinforced.

This paper aims at understanding the change in the trajectory of engagement in the oPt; how does it differ from the trajectory of the engagement that took place between the 70's and early 90's; how does this change impact youth power and position in the oPt; How do different types of organizations provide different strategies, forms, of youth engagement?

Tweets As Democratizing or Reinforcing Existing Inequalities?

Social media platforms including Facebook, Twitter, and Tumblr, etc. have become more ubiquitous. Sociology is well-positioned to explore the power and influence of social media economically, politically, and socially. This paper is particularly interested in gauging the value of the Twitter community and whether tweets can be a democratizing force or usually reproducing current social hierarchies and inequalities. The social media website Twitter has been prominent in the recent past, much as the ‘Arab Spring’. This paper begins by presenting a review of the literature regarding Twitter and social inequalities. It uses tweet data from June-July 2013 to classify sentiments which are associated with agency and lack of agency to draw macro-conclusions of whether aggregated tweets can be seen as generally empowering or not as an overall corpus of text. The paper provides an empirical answer to Twitter’s role in influencing global inequalities, a claim often made in popular media. The paper ultimately concludes that though there are limitations in automated sentiment analysis, interesting patterns of perceived agency against inequality do emerge.

Sexual Violence and the Issue of Comfort Women in Contemporary Japan

The "comfort" women, in reality sexual slaves for the Japanese military during the Asia-Pacific War, demand but have yet to obtain an official apology from the Japanese government. Rather, their demands have been met with insulting rejections from right-wingers, including influential politicians, whose main reasoning is: 1) Those women were not forced but were licensed prostitutes; 2) it is a kind of universality that soldiers of many nations have perpetrated wartime violations of the dignity of women; and 3) therefore Japan's issue of comfort women is not peculiar in the history of mankind, so it is not necessary for Japan alone to apologize. This reasoning is not a relic of a bygone era, but sounds familiar and even resonates with current 'rape myths' and rape culture in Japanese society which encourage male sexual aggression and support violence against women. Regrettably, tolerance of sexual violence against women penetrates even the law. Concerning the Penal Code, in its 1902 CEDAW Observation, the government urged Japan to revise and change for the better the sections of the Penal Code on sexual crimes against women (Paragraph 33-34, CEDAW/C/JPN/CO/6, 8 August 2009). The Government did not address this point in its response issued in August 2011. Furthermore, in recent years the Supreme Court of Japan has overruled several judgments by the lower courts in rape cases, usually deciding that the victim's witness was not reliable. My paper will examine in detail the connection between the reactionary response to the issue of comfort women and the reluctance to uphold women's rights in cases of sexual crimes, and will discuss the deeply rooted misogyny in Japanese society.
Language Shift and Maintenance of Tamil Language in the Malaysian Multilingual Context

The prevailing multilingual situation of Malaysia reflects the gradual shift in the use of minority languages like Tamil, both in formal and informal domains of language use. This trend has several reasons for language shift to take place, including language maintenance, and one such is the existing power that goes with language(s). How far language attitudes, linguistic views and power based policies will foster the use of concerned languages for the benefit of society at large is indeed a challenge and seems to be a question mark. The Malaysian Tamil society is gradually shifting its languages like English and Bahasa Malaysia as media of instruction to achieve education needs in different disciplines of knowledge, considering the modern economic-scientific and technological – occupational-departments. Therefore, I propose a new approach to these models.

bo

actors while real world actors are various. Real world actors choose their friend

As the developmentalist goal of catching-up with the West is gradually achieved, will China's political economy begin to gradually converge on an Anglo-Saxon (neoliberal variety of capitalism)? Or, in contrast, will the 'China Model' of combining a capitalist market economy with a Leninist Party-state continue to prosper in coming decades?

This article argues that to understand the prospects for the future of Chinese capitalism, we need a deeper understanding of the impact of public intellectuals, academics and think tanks in the ongoing ideational battle to define China's national development strategy in the 21st century.

Based on analysis of original empirical data – in the form of interviews with 24 highly influential Chinese public intellectuals – this article contributes a typology of four different hegemonic visions for China's future: First, the 'neoliberal' vision which proposes to further liberalize China's economy, and reduce state ownership, whilst retaining the current authoritarian political system. Second, the 'authoritarian socialist' vision which also eschews parliamentary democracy, but insists on state-led capitalism as the key funding mechanism for building a paternalist welfare-state from above. Third, the 'liberal democrat' vision which combines a faith in markets and a distaste for state-owned

MYLAN, JOSEPHINE* (University of Manchester, josephine.mylan@manchester.ac.uk)

The Role of Qualification in Stimulating Pro-Environmental Behaviour: The Case of Low Temperature Laundry

Changing consumer behaviour is increasingly recognized as a key aspect of the shift to more sustainable societies. However, insights into how this may be achieved at the large scale remain few. This paper contributes to debates on how to stimulate environmental behaviour change, with a case study of the adoption of low temperature laundry in the UK. The case is particularly interesting because the innovation, which requires consumers to alter their behaviour, has been promoted by detergent manufacturers, via existing products. The processes underlying the change in practice are explored from the perspective of both producers and consumers. A multi-method approach is adopted, drawing data from interviews with households, actors across the laundry industry and a large-scale survey of consumer laundry habits. While efforts to stimulate uptake of low temperature laundry have met with a degree of success, the paper argues that adoption is constrained by the meanings embedded in existing laundry practices, particularly links between temperature, cleanliness and hygiene. The analysis draws on Callon's (2002) idea of 'qualification' which conceptualizes the dynamics, interactive process through which products are attributed meaning within a market environment. Attention to processes of qualification highlights the role of firms in shaping consumer practices, enriching practice-based accounts of consumer lifestyles which privilege consumers as the main actors in the creation of shared meanings. Conclusions are drawn with respect to the role of firms in shap- ing pathways for change in consumer practices, through their role in shaping the 'qualities' of goods.

Contesting Chinese Capitalism

As the developmentalist goal of catching-up with the West is gradually achieved, will China’s political economy begin to gradually converge on an Anglo-Saxon (neoliberal variety of capitalism)? Or, in contrast, will the ‘China Model’ of combining a capitalist market economy with a Leninist Party-state continue to prosper in coming decades?

This article argues that to understand the prospects for the future of Chinese capitalism, we need a deeper understanding of the impact of public intellectuals, academics and think tanks in the ongoing ideational battle to define China’s national development strategy in the 21st century.

Based on analysis of original empirical data – in the form of interviews with 24 highly influential Chinese public intellectuals – this article contributes a typology of four different hegemonic visions for China’s future: First, the ‘neoliberal’ vision which proposes to further liberalize China’s economy, and reduce state ownership, whilst retaining the current authoritarian political system. Second, the ‘authoritarian socialist’ vision which also eschews parliamentary democracy, but insists on state-led capitalism as the key funding mechanism for building a paternalist welfare-state from above. Third, the ‘liberal democrat’ vision which combines a faith in markets and a distaste for state-owned

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
ershhip with a call for parliamentary democracy. Fourth, the ‘democratic socialist’ vision which sets as its goal a political-economic model which is based on both egalitarianism and constitutionalism.

It is concluded that all of the four visions enjoy sufficient support among different social classes and interest groups to stand a realistic chance of becoming dominant in shaping Chinese capitalism over the next decades: While the two first visions describe a current split within the Party-state elite, the two latter visions represent two different political-ideological shapes for a potential counter-hegemonic social movement from below.

It is concluded that all of the four visions enjoy sufficient support among different social classes and interest groups to stand a realistic chance of becoming dominant in shaping Chinese capitalism over the next decades: While the two first visions describe a current split within the Party-state elite, the two latter visions represent two different political-ideological shapes for a potential counter-hegemonic social movement from below.

Music As Youth Culture: Case Study in Japan

The objective of this report is to discuss how Japanese young people relate to music based on "A Generational Comparison Survey on the Lifestyle of Urban Residents and Their Sense of Awareness," a survey of young people (age 15–29) and middle-aged people (age 30–49) conducted by the Japan Youth Study Group in 2012.

Globally, circumstances surrounding music have drastically changed since the advent of the Internet, continuing to push compact disc sales down. This fact is often interpreted as young people's trend away from enjoying music in Japan, where many people believe that music is something for young people. The survey results indeed show such a trend. However, our data indicate that this trend away from enjoying music is observed not only among young people, but that it is particularly pronounced among middle-aged people. Therefore, I suggest that as people age, they tend to enjoy music less.

**Reinterpreting the Relation Between Motherhood and Paid Work: Second Generation Women in Norway**

Nadim, Marjan*

(Institute for Social Research, Norway, mna@socialresearch.no)

Reinterpreting the Relation Between Motherhood and Paid Work: Second Generation Women in Norway

A pertinent question in contemporary Europe is whether the children of migrants will reproduce the so-called traditional gender arrangements and ideals of the migrant generation, which often include strong expectations that women should prioritise family obligations over the pursuit of paid work. This article analyses the cultural and moral understandings at stake in second-generation women's reflections on and practices of combining motherhood and paid work, and explores the space for negotiating such understandings in the family. The study is based on in-depth interviews with second-generation women born to Pakistani immigrants in Norway, and interviews with some of their husbands. The findings show that the moral understandings and practices of the parent generation are not merely passed on to the second generation; rather, they are challenged and reinterpreted in ways that support mothers' participation in paid work. The article argues that this change is facilitated by the cultural and institutional context that the Norwegian welfare state represents.

**A Transnational Movement In Local Context – The Occupy Movement In Germany**

Brinkmann, Ulrich* (University of Trier, brinkman@uni-trier.de)

Nachtwey, Oliver* (University of Trier, nachtwey@uni-trier.de)

A Transnational Movement In Local Context – The Occupy Movement In Germany

The Occupy movement was a global phenomenon. After the advent of Occupy Wall Street (OWS) occupy camps mushroomed to other, in particular western capitalist states. The starting point of our own empirical research was the question, who participated in the Occupy movement. In our contribution we would like to present findings from an online survey of the Occupy movement in Germany. Carried out in autumn 2012 the study is based on more than 1000 voluntary participants (activist and sympathizers) of Occupy - it was announced through the channels of the occupy movement, Facebook and Twitter.

In our analysis we differentiate between three different groups: (a) Campers, the core activists of Occupy, (b) activists, who have been active in the camps and participated at demonstrations, etc. and (c) sympathizers, who have a predominantly positive attitude towards the movement, shared links, etc. but didn't participate in physical actions. We present empirical results for these subgroups about their class/labour market position, their financial situation, their education degree, their (material and post-material) values, their attitudes towards work and society and their forms of critique of the financial crisis. We present both a narrative analysis of the development of Occupy in Germany and an analysis of the political, social, temporal, and spatial aspects. This includes an overview of the specific frames of actions and a field analysis of other groups involved in the protest, media coverage and the advent of “Blockupy”, a broader alliance of left wing groups, trade unions and Occupy activists. Thus we analyze the German Occupy movement in two ways: Firstly, we compare it to the empirical results of the OWS-research by Milkman et al. (2012). Secondly, we compare it to the social and political patterns of other recent social movements in Germany.

Globally, circumstances surrounding music have drastically changed since the advent of the Internet, continuing to push compact disc sales down. This fact is often interpreted as young people's trend away from enjoying music in Japan, where many people believe that music is something for young people. The survey results indeed show such a trend. However, our data indicate that this trend away from enjoying music is observed not only among young people, but that it is particularly pronounced among middle-aged people. Therefore, I suggest that as people age, they tend to enjoy music less.
Obviously, many young people are interested in music. However, it is not their level of interest in music but the length of time they spend with music that has the largest impact on their musical behavior. This is supported by the fact that Japanese young people are often willing to use music as a communication tool.

Focusing on this fact, this report discusses what music is all about for young people and how young people relate to music—how music affects their everyday lives, self-consciousness, and relationships with friends.

Poverty and Mental Illness in People Excluded from the Labor Market in Japan

The unemployment rate in Japan remains at around 5%, with the proportion of the long-term unemployed higher than in other OECD countries. Our objective is to examine whether and to what extent labor market exclusion is associated with poverty and mental health, using data from the 2004, 2007, and 2010 Comprehensive Survey of Living Conditions. First, we categorized jobless people as “job-seekers,” “jobless people who have a desire to work, but do not seek a job,” and “jobless people who do not desire to work.” Then, we compared the economic and health conditions of jobless people to those of working people.

The study in Japan first, the proportion of “jobless people who have a desire to work” increased from 2004 to 2010. Compared to job-seekers or working people, these jobless people tended to be single men and married women. Meanwhile, jobless men and women had a desire to work if they were younger and had smaller savings. Second, in 2010, male “jobless people who do not desire to work” were more likely to live in poverty. For women, however, “job-seekers” and “jobless people who have a desire to work” were more likely than those in other categories to be poor or suffering from a mental illness.

In conclusion, we found that being jobless may increase the probability of poverty and mental illness, even if employment is not being sought. Furthermore, we speculated that even if men neither search for jobs nor have a desire to work, they are not necessarily satisfied with their lives as jobless, and therefore they might be socially excluded. However, this is not true for women as Japanese society is based on a strong male-breadwinner model. Therefore, the meaning of being jobless differs for men and women.

Political Coverage of Japanese Newspapers in Brazil

Today in Brazil, there are several presses written in foreign languages directed to immigrant communities which appeared in the history of the immigrants. Which characteristics are present in those minority's medias? This work focuses on explaining activity of Japanese newspapers in Brazil, which are written in Japanese for the Japanese immigrant community and published in São Paulo, the most important city of Japanese immigration in Brazil. Generally, these ethnic medias for minority community have tendency to seek and keep traditional values and culture. However, it is interesting that these Japanese newspapers in Brazil report not only culture events or education’s subjects, but also frequently political subjects. In the political subject, they report especially activity of Japanese descendant politics from the Japanese immigrant community. This work tries to describe the political coverage of the two Japanese newspapers, Nikkey Shim bun and São Paulo Shim bun, and to analyze that comparing with immigration's history and context of immigrant descendant's advance in the Brazilian politics. Qualitative content analysis was adapted to analyze the articles. We conclude that during the electoral campaigns, these newspapers represented some subjects with a favorable way to Japanese descendant candidates and showed guidance to vote on them by the journalistic persuasion, especially guiding the readers to concentrate their votes on some specific candidates to elect them with enough votes.

What Is Social about the Network?: An Analysis of the Application Program Interfaces of Popular Websites

API (Application Program Interface) is the method of continuous asynchronous sourcing of data between various ‘applications’. It facilitates exchange of data between different networks. By examining at the nature of the data extracted by the API and its use of the data in defining the utility of the ‘application’ we can produce a critical appraisal of the nature of the techno-social interaction afforded by the ‘networked’/’networking’ society.

The promise of communications technology among other things is the democracy and the user defined nature of interaction of players constituted by it. But the use of ‘bubble’ (Pariser, 2011) produced in the human-computer interaction to fashion online activities alerts us to a bias in the nature of such interactions while enforcement of technologies like unique identity based governance systems further complicates the digital divide bringing up the question of equality.

The paper is based on the analysis of API codes and its mechanisms, offered by Google, Facebook, Twitter and YouTube. The analysis looks into the nature of the ‘bubble’ generated in order to define the character of the network. This is in a bid to argue that the randomness promised by it is being reined in order to create patterns of interaction that are arbitrary and unequal compounding the problems experienced in infrastructural access and the lack of ‘cultural’ capital.

Technology is best analysed in technological terms in order to arrive at an understanding of its sociological dimensions. Such orientation is politically necessary to make apparent the the hardwiring of inequality in the era of big data.

Costs For Survival

The necessary cost to continue the life increase year by year. It is said a baby was born in Japanese assume a debt 7 million one's back just now. A fact is not able to pay to survival cost have not the method unless everybody depend on pitiful death or the help of others with obvious reasons of not income. Our viewpoint has, now a day, a nation must guarantees because of the system is organized by a nation, if the guarantee is not, everybody dies fields or only lives by personal responsibility. Furthermore we aware of the nation is not without persons. For the nation is considering the social-welfare that only taxes increase is able to reform. We examine the cost for survival. This paper continues The 86th Japan-Sociological-Society-Meeting, 2013 in Japan present. We know already cannot adopt finding employment, when companies are not more than initial incomes. Furthermore, we understand the same everything compensation as Expenditures = (welfare, pension, public-works, public-employee-salary, subsidy: childcare-allowance), for Incomes = (bonds, taxes, contribution, monetary-easing). The cost for survival includes expensive structure of various taxes. Why does the cost for survival occur? Who have costs carry on theirs back else way to pay? Can they not pay costs by service and contribution to the society? Our study picks up a 15 villages’ example simulation to answer that question modeled on Japan where a mayor live and a worker. We understand that the cost for survival increase according to the nation's expenditure and income up as various taxes. Our conclusion is that the best situation on the cost for survival lightens the burden.

Transformation of Labor Market and Legitimacy of Income Inequality in Japan

Many advanced countries have witnessed a growth of economic inequality in the age of economic globalization. However, economic inequality is not always regarded unfair. Historical and institutional contexts in each country frame citizens’ perceptions about to what extent and among which social groups economic inequality is regarded as legitimate. If citizens consider it legitimate, such economic inequality is likely to be reproduced. Therefore, transformation of labor market caused by economic globalization has grown inequality between different social groups to different extent according to how each country has legitimated economic inequality historically and institutionally.

The present research focuses on a Japanese case and investigates what inequality Japanese people regard as fair and how it relates to Japanese historical and institutional contexts. Japanese welfare-employment regime has supported citizen’s life differently according to one’s industry, firm size, and gender. We examine how this condition relates to Japanese perceptions about fair income gap.
by analyzing what determines "what amount of income people think that they should earn." To be more specific we investigate whether actual income gaps between social groups such as gender, those with different educational levels, occupations and employment status, are reflected by Japanese perceptions of 'just income gap' between these groups. As a result, we find that gaps of perceived appropriate income between different employment statuses and between different firm sizes are larger than actual income gap between these groups. Furthermore, employment status and firm size play more, or at least equally, important roles than occupation. It shows that Japanese people assume disproportional distribution of income according to firm sizes and employment status is more legitimate than one according to human capital.

Leisure and Mental Health: Sociological Study Of Women Experiencing Leisure During Their Mental Illness

This paper reports the findings from interviews with 194 mentally ill women who are seeking treatment in government hospital, Gurgaon in Haryana State, India. The respondents were questioned about their participation in leisure activities, and also about the overall experience of leisure activities. The results show that the women interviewed mainly use leisure as a part of their routine activity and hence they do not get benefits of leisure in their mental and physical health. Further, respondents reported that leisure activities gives feeling of physical and mental health and also provides experience of pleasure and freedom. It is argued that, contrary to the notion that leisure helps in maintaining good physical and mental health, doctor do not insist on participation in leisure activities. It is concluded that leisure and mental health are all embedded in the surrounding social contexts and, indeed, that leisure activities in general are intricately entwined with their boarder cultural and structural context.

When Poverty Alleviation Perpetuates Inequality. Struggles of the Poor in Johannesburg Post-1994

Although the institutions of apartheid began to be dismantled in 1994, South Africa still bears the scars of inequality and poverty it etched so deeply along the fissures of race, class and gender. Although the African National Congress (ANC) government has committed itself to eradicating poverty and ensuring "a better life for all", it has also embraced an approach to macro-economic policy largely neoliberal in character that has resulted in the enforcement of the duty to pay for basic utilities (water and electricity) among others, among the poor. Between 1999 and 2006 in Johannesburg residents in several of its townships (including Soweto, Alexandra and Orange Farm) came together in protests and formed social movements to demand that the municipality put an end to its experimentation with different forms of punishment and prevention of non-payment for the consumption of water and electricity (from cut-offs to prepaid meters). In these struggles, residents identified largely as poor people and demanded that the municipality acknowledge their inability to pay due to being unemployed or indigent by other means. Growing from illegal reconnections and mass marches and pickets, to include legal interventions and a constitutional court case, these struggles culminated in 2006 in the City of Johannesburg's most recent indigent management policy, which, it will show, puts decommodified access to services for those identified as "the poor", that are nevertheless delivered within a system that is run along market principles overall.

Recent estimates indicate that around eight out ten older Australians are homeowners, with 70 per cent outright homeowners. Much research has focused on exploring the implications of this high rate of homeownership, but research on older public and private tenants has been limited. This paper is part of an ongoing investigation exploring and comparing the life circumstances of older public and private renters and the centrality of housing tenure. It is based on in-depth interviews with older renters in the private rental market and in public/social housing and a quantitative analysis of socio-economic household and individual data from the Household, Income and Labour Dynamics in Australia (HILDA) survey. The study focuses on the relationship between the cost of the accommodation, security of tenure, type and quality of accommodation, location and characteristics of the neighbourhood and financial stress, income manageability, physical and mental health and subjective well-being. The results highlight the central role housing security and cost play in ameliorating or exacerbating the well-being of older tenants and their ability to lead a decent and valued life. The older public housing tenants because their rent is fixed at 25 per cent of their income and their security of tenure is guaranteed are able to lead a decent life and their subjective well-being is high. However, the subjective well-being of older private renters is generally poor. This is mainly due to their negligible security of tenure and the high cost of their accommodation.

A Labor Time Bomb? Workers’ Unrest in the Automobile Industry in India

In the Suzuki-owned Maruti-Manesar automobile plant in Gurgaon near New Delhi, in 2011, striking workers imolated a human resource manager. These migrant workers, who were employed informally in the formal industrial sector, demanded the right to represent themselves through independent unions. The insurgency has been one among a series of protests in the automobile sector in India, starting with the contract workers strike at the Honda plant in 2009. In Pricol, an auto part plant of the Toyota in Coimbatore, and in the Graziano Transmissionss unit at Greater Noida, the vice-president and CEO were killed by agitated workers. Bloomberg news termed these protests as evidence to a ticking labor time bomb. In this paper, I examine how far these protests signify the resurgence of collective actions among the workers. They included the show of collectivism, use of disruption and violence, and demands that pertained to the workers as a whole. They implied a move from conventional union-based articulation by formally employed workers, to new demands for independent unions by migrant laborers. These protests were organically linked to production and socialization processes that are uniquely present in the Indian automobile industry.
From Analysis of Ijime (Bullying) in Japanese Schools to Constructing Theories of Psycho-Social Orders

In this paper, we examine ijime (bullying) in Japanese schools and, so doing, propose hypotheses about the basis of wholesome civil society. Japanese (especially middle) school adopts the extreme groupism, which forces all people involved to live a highly controlled collective life in a totalitarian and closed environment. It denies not only the civil liberty but also the civil society order that enables the liberty outside of it. This provides us with the functional equivalent of Philip Zimbardo's experiment in which he analyzes how human behaviors are transformed, and what reality and psycho-social order are generated among members under certain conditions, though this kind of experiment is now prohibited from an ethical viewpoint of research. Bullying can be observed in almost any school in the world but the Japanese bullying, ijime, deserves close examinations for those particular conditions that Japanese schools force on the students. Many cases of ijime can be ascribed to the psycho-social order imposed on the students' everyday life in the classroom. Examining the psycho-social mechanisms that accompany the order above, we can abstract the basic theories about violent and persecutory psycho-social properties of human beings (e.g. various psycho-social explanatory models, ecological models of psycho-social orders, and combination of them with evolutionary theories), which are potentially applicable to various types of violent and persecutory phenomena among human beings. We can expect several outcomes of this study: (1) Psycho-social analysis of and countermeasures against bullying in school; (2) Several findings about psycho-social orders where dense interactions within groups bring about inner changes of individuals, which leads to violent and persecutory psycho-social orders—these processes loop spirally; (3) Based on the aforementioned outcomes, a framework for countermeasures against violence and persecution from domestic violence to genocide as well as for the stable liberal civil society.

The mangrove ecosystem is established only in the limited area and is one of valuable one to support biological diversity. The Guinean mangrove forest has the value as "an economic forest" producing firewood. Therefore it is important natural resources supporting the everyday life of coast inhabitants. The mangrove in Guinea is used mainly for salt manufacturing of seawater boiling-style and smoked fish. However the mangrove ecosystem is easy to catch the pressure of the development. So it is weaker than other forest ecosystem, and the sudden destruction is reported. Based on such values, wave of conservation and the mangrove activity flockes from the foreign country as the urgent matter.

However, most of these activities or programs entails inequality. The target selection is based on the frame of the donor agents. In other words, the donor agents usually choose communities in an area where achieve their goal easier. To examine it critically, some communities make every effort to receive the benefit of the program without noticing the attitude of pre-established harmony of donor agents. So, does local community that is off a target accept the inequality like this? The question to the answer is to illuminate that the local community has the power to replace process of such inequality with process of growth. This case study would like to evaluate adaptability of local community and conclude possibility of the community-based environmental conservation activities.
Effects of Wives’ Relative Resources on Husbands’ Gender Role Attitudes Among Dual-Earner Families

This study examines how in Japan, husbands’ gender role attitudes among dual-earner couples with children are associated with their wives’ relative resources, namely, in terms of employment status, and educational levels, Japanese men have more traditional gender ideologies compared with their American counterparts. However, gender ideologies among Japanese men are becoming non-traditional. Previous studies reported the threat hypothesis, in which husbands among dual-earner couples insist traditional gender role attitudes when wives’ economic contribution to the family income exceed theirs. This paper reports the result of a questionnaire survey conducted in February 2011 on 342 dual-earner Japanese husbands who had children less than 12 years of age.

Two results are obtained through path analysis. First, when wives’ educational levels or managerial posts are higher, wives’ incomes will be higher. The wives’ higher incomes are associated with the husbands’ more egalitarian gender role attitudes. However, the wives’ educational levels or managerial posts are not directly associated with the husbands’ gender role attitudes. Japanese husbands may tend to hold egalitarian gender ideologies when they hold lower breadwinner roles, and their wives have a higher economic status. In this regard, the threat hypothesis is not supported, whereas the benefit hypothesis is supported. In addition, the husbands may not care about their wives’ social positions, in terms of educational levels and managerial posts. Therefore, Japanese husbands’ gender role attitudes concern their wives’ provider roles within the family, but not with their wives’ social roles in public. Second, it is speculated that the smaller the difference between husbands’ incomes and their wives’ incomes, the lower the level of husbands’ tendency to adopt traditional gender role attitudes.

The Self Measuring Radiation Movement for Alternative Food Networks

This report argues that measuring radiation by civic groups plays an important role for Alternative Food Networks (AFNs) in current Japan. Since the 1990’s, the localized agro-food movements have spread in several countries; the United States, European countries, and East Asian countries including Japan. These movements have mainly dealt with economic issues, social justice, ecology and inheritance of indigenous food culture. Today, the AFNs groups in Japan face the new issue, which is contamination of foods by radiation.

On March 11, 2011, the Great East Japan Earthquake and the tsunami triggered a series of serious accidents at the Fukushima Daiichi nuclear power plants. Since then, Japanese have been concerned about the effect of radiation on domestically grown agricultural products. In the cases of AFNs, members tend to connect with each other directly because someone of farmers, consumers or coordinators between them have to check the food secure by themselves. Since the winter of 2011, so many grass-roots groups to measure radiation of foods have emerged.

There are 110 groups as of June 2013, and most of them are located in eastern Japan. The total number of samples which those groups already have been measured equals to the number of samples officially measured by the Japanese government.

This report is based on the author’s participatory observed research in one of such civic groups in Miyagi Prefecture from January 2013, where is one of the most severely damaged area. I found the major roles of measuring radiation are that the movement can judge the level of the radiation by themselves based on the own experiences. They can share not only the data of radiation but also the information about how to minimize the effects of radiation. Finally the implications of this study for AFNs will be discussed.

The Making and Unmaking of the Global Social Movements in the Japanese Sixties

Preliminary scholarships in the field of global social movements more or less has been focusing upon successful cases that were able to create alliances with the movements abroad and/or various transnational activities they conducted. However, in order to comprehend the substantial mechanisms of the global movement, investigation of its difficulties and limitations including various obstacles as well as structural and cultural constraints particularly while the social movements attempt to cross national boundaries is decisive. Thus this paper explores, what makes the global practices possible and how it affects the development of global movement through comparing two social movements that aimed to create anti-colonial solidarity during the 1960s and 70s based on the Japanese Anti-Vietnam War movement, which created alliance with the movements in the First World western societies and the Japanese New Left that were influenced strongly from the Third World revolutionary politics and aimed for global revolution through international hijacking and terrorism. My socio-historical investigation of the movements in the 1960s, which I consider as the beginning of the contemporarary global social movements, therefore will reveal the way in which external political factors, differences in terms of network structure and culture as well as capitals, ideology and taste of the activists influence the making and unmaking of transnational actions and thereby shapes the distinct characteristics of the global movements.

The Impact of Intra-Party Democracy and the Party-Membership in Japan: The Interaction Between Parties and Citizens

In the literature of comparative politics, there is a growing interest on the causes and consequences of the intra-party democracy such as the adoption of primaries for the leadership selection. Our paper examines the dynamics and developments of intra-party democracy in the main political parties in Japan and its impact on citizens’ political participation and partisanship, based on the newly constructed comprehensive dataset on the party-leader selection in Japan.

Our paper consists of three main sections. The first section briefly presents the theoretical framework, including the definition of key concepts as well as the causal relations between the intra-party democracy and the party membership or public support, drawing upon the theoretical debates and empirical findings in the existing literature.

The second section demonstrates the contextual information about the Japanese party politics, including the electoral system, the party system and the party organizations, as well as the summary of the development of intra-party democracy in the main political parties in Japan.

The third section then investigates the impact of the intra-party democracy on the citizens’ participation and partisanship, using both quantitative and qualitative methods. This section examines how the change in the method of party-leader selection, such as the adoption of primaries, affected the citizens’ party support and party membership, based on the empirical data such as Japanese monthly-based opinion survey. It also presents some compelling case studies on the impact of intra-party democracy on the party support and party membership.

This paper has interesting implications on the changing nature of the party membership in Japan and will be able to contribute to the discussion on the party membership from the Asian and comparative perspective.

Mutual Cooperation Due to TFT Strategy Observing Fixed Number of Cooperative Players

Reputation theories that give solution to 2-persons Prisoner Dilemma have a common assumption that all players observe what happened in all other players. However, the assumption that a player has to observe all others seems to be unrealistic. To overcome this problem, Nakai and Muto (2008) proposed us-Tit For Tat (TFT) strategy that requires a player to regard another player who did not cooperate with himself/herself and his/her “friends” as a friend, and they showed emergence of a mutually cooperative society. They assume that the us-TFT player doesn’t have to observe all other players and observe him/herself and his/her friends. However, when all players become mutual friends, they observe all other players, and hence us-TFT suffers from the same weakness of previous studies. To solve this, we propose a new us-TFT strategy with which a player observes a small fixed number of other players. The players to be observed are selected based on how cooperative they are toward the us-TFT player. We performed evolutionary simulations with ALL_D, ALL_C, the us-TFT etc. and found emergence of a mutual cooperative society. Especially, in case that the number to be observed is two, mutual cooperation is the most likely to emerge. Therefore, it is concluded that mutual cooperation can emerge without observing all others and it is a new finding. In addition, we examined what mechanism works. The takeoff begins when a player changes into an ALL_C player by an accident. After that, there appear ALL_C players between the us-TFT players such as the ALL_C player is positioned at center of the network, and us-TFT players surround the ALL_C player. Therefore, the network looks a star-like one and grows into a mutually friendly network.

Solution To Problem Of Free Rider Through Division Of Production and Sanction

The meta norm (Axelrod 1986, Yamagishi 1990) is one of solutions to the problem of free rider. This model requires all persons to be engaged in a production and a sanction at the same time. However, it seems impossible for a person to play both roles because one is different from the other as a professional job. So we suppose the division of roles meaning that a person can't play both roles, and examined whether the division can solve the problem of free rider. For in a model, we introduce two kinds of players. One is a guardian that doesn't engage in a production (that is, he/she doesn't pay a sanction cost), focuses on a sanction against a free rider with a sanction cost, and is presented a payoff by the other role. We call the player the "guardian." The other is a player who focuses on a production of collective goods with a production cost, doesn't engage in a sanction against a free rider (that is, he/she doesn't pay a sanction cost), and presents a payoff to a guardian. We call the player the "tributary." With a guardian and a tributary in addition to a free rider, we executed evolutionary simulations to examine whether a guardian can exclude a free rider and a guardian and a tributary work together for mutual benefit. As a result, we found that the division of roles had established and the coalition could exclude a free rider. Especially, it is found that guardians acquire for up to the same rate of a society as a presented payoff divided by a total production, which reminds us of a kind of tax rate.

Cosmopolitanism, Nationalism, and Colonialism: The Manchurian Motion Picture Corporation and The Production Of My Nightingale (1943)

This paper contributes to emerging studies on cosmopolitanism by presenting a sociological, historical-institutional analysis of the production (and, to a lesser extent, reception) of an arguably "cosmopolitan" film, My Nightingale (Watashi no uguisu, dir. Shimazuyasujiro, 1943), produced at the height of Japan's ethnic-nationalist period during the Second World War. I ask the following three research questions: First, what aspects, if any, of the film text can be considered to entail cosmopolitanism? Secondly, whether, how, and why could the possibly cosmopolitan aspects of the film text emerge under the existence of ethnic-nationalist policies, institutions, attitudes, and behavior existent in the Japanese colonial empire? Thirdly, what implications does this case study have on the ongoing debates on cosmopolitanism, nationalism, and political space? By providing answers to these questions, I argue that an ahistorical, normative call for cosmopolitanism may hinder our grasp of the possibility that some forms of claim to cosmopolitanism entail a rationality of narrow ethnocentric nationalism. As a historical hindsight, it is easy to dismiss Manchuria's slogan of peaceful co-existence of the five nationalities and de rakudo (heavenly place of virtuous rule) as simply political propaganda. But it may also be the case that this apparently cosmopolitan justification might have strengthened the degree of repressionlessness and discrimination of the Japanese colonial rule in Manchuria. In other words, I contend that the case study of the Manchurian Motion Picture Corporation and the production of My Nightingale suggests a possible coexistence of cosmopolitanism, nationalism, and colonialism.

The Challenge of Supporting People Suffering Ambiguous Loss: An MPS Case Study

This presentation examines the challenge of supporting people suffering ambiguous loss. "The theory of ambiguous loss" was introduced by Pauline Boss to define the sort of unclear loss that defies closure, such as having a family member go missing during a disaster and caring for a loved one with dementia. Boss provides detailed strategies for professional therapists to treat people suffering ambiguous loss, but does not sufficiently explain how supporters with key information should negotiate these delicate situations. In order to evaluate this aspect of ambiguous loss, I observed and analyzed the activities of the Missing Person Search Support Association of Japan (MPS), a non-profit organization dedicated to helping families search for their relatives who suddenly disappeared. Families in these situations experience ambiguous loss, as they do not know if their loved ones are dead or alive.

My analysis shows that MPS volunteers have to provide mental and emotional support to the families of missing persons while assisting with search efforts. The volunteers listen to families' anxieties about their relatives' safety almost every day. They primarily try to be sympathetic and receptive to the families' narratives of loss, like a strategy Boss recommends. However, sometimes they must impose upon or contradict these narratives when they obtain new information during their search. In these situations, they struggle with the decision to inform the families that their loved ones will likely never return to them, despite their hopes to the contrary.

This case study illustrates that clarifying ambiguous situations often conflicts with mental care goals when supporting persons suffering ambiguous loss.

The Meanings of Childhood Mental Health Problems and Children Behaviour: A Comparative Study Between Brazil (Santos) and France (Paris 19ème)

Epistemological studies developed in the last 10 years, mainly in the Western countries, indicate a global trend of an increasing number of mental health problems in children and adolescents, as confirmed by epistemological studies conducted also in Brazil and France. To understand the phenomena in these countries, the study had as objective to understand the meanings of mental problems and children's behavior from a sociocultural perspective, by analyzing children's experiences beyond adults' discourse, namely of health professionals and children's parents.

The research was based on the ethnographic method and took as its starting point the experiences of children with mental health problems who receive care from mental health services. The fieldwork was carried out in two mental health services: the Child Mental Health Service of the Northwestern zone (SCVC), in Santos, Brazil; and the Medical and Psychological Centre of Flandre (CMP Flandre), in Paris (19ème), France. To apprehend the different meanings of childhood mental health problems in these contexts, in-depth interviews were made with health professionals of both services and with the children's parents. The discourses about the problems and complaints concerning the children's behaviour were analysed and grouped by categories to allow the identification of similarities and differences among the adults' discourses, as well a comparison between the two services.

Adults relate childhood mental health problems to children's behaviours that they consider as strange, disruptive or disturbing, as observed at home and mainly in the school. The analysis of the different meanings of childhood mental health problems in these countries point to the interpretation between mental problems and children's behaviour in a common sense, which solutions are sought in mental health services. We observe a displacement of children's life problems towards mental health field, which makes it possible the solution to general children's behaviour.

Logic behind Life Reconstruction in the Mt. Unzen-Fugen Eruption Disaster

Areas that sustain damage in a natural disaster are forced to choose between restoring the original area and relocating to another area in order to reconstruct residents' lives. At the same time, SABO plan (erosion and sediment control) are undertaken in damaged areas in preparation for another disaster. In the initial stage of minimization of disaster loss, people unite and undertake one direction in order to defend their life. However, in the life reconstruction stage, individual issues emerge such as family structure, livelihood, economic conditions, and disparities in degree of damage, making it difficult for the whole community to keep in step.

Following the establishment of the Basic Act on Disaster Control Measures, the Mt. Unzen-Fugen eruption disaster was the first disaster to establish a hazard area in a residential area. This report focuses on the villages that fell within the SABO dam site under the plan to prevent expansion of eruption damage to central city. People in these damaged area faces two major issues. One was that the village was divided up into areas included in the SABO dam and areas that were not. The other was that the villages included in the SABO dam had to make the difficult decision to dissolve their community and vacate their homes. People consented to these unacceptable terms at an early stage because people feared prolonging a decision would cause a delay in the construction and result in a man-made disaster.

Furthermore, villages were against moving to reclaimed land on the coast provided to them by the government. Concerned with the reconstruction of their way of life, they found their own land for relocation. This report seeks to clarify requirements for life reconstruction in this area pertaining to the issue of having to relocate due to disaster prevention projects.

Involvement in Tourism and Bodily Changes: Long Braided Hair and Beaded Neck of the Pastoral Samburu

The body of the pastoral Samburu of northern Kenya is in the process of re-organization under the tourism context their beaded adornments or their “tra-ditional” appearances become commoditized. In this presentation I will introduce examples of heavily beaded neck, long braided hair, and holed earlobes, etc., which have played significant role to indicate the persons’ social and ritual status, are now drastically changing in their meanings. I indicate the process that the interaction with the tourists, for example, makes people redefine their body parts and manipulate their ethnic or personal identity.

Factors for Regional Variation in Japanese Fertility

How do people decide whether to raise children? This research examines the factors inherent in the very existence of the family: what explains family forma-tion decisions? In particular, I seek to explain the considerable regional differenc-es that exist in family formation, within the context of the falling birth rate in Ja-pan. I analyze the influence of various contributory factors such as the differential economic costs, that is, the variance in the actual costs of raising child and also in the economic benefits available. I will also examine the factors which cannot be simply attributed to the economic costs and benefits, such as regional pressure of conve-nience – the factor of what is taken for granted on family formation – how such reinforcement systems vary regionally, and how such conventions are reinforced. I mainly analyze data gathered by the cabinet office: Research on Child-rearing Environment in Urban and Rural Areas.

Regional Variation of Gender Stratification Among Japanese Lawyers

This presentation focuses on regional variation of gender stratification among Japanese lawyers. In terms of specializations, Japanese female lawyers seem to be bifurcated in a way. A large number of Japanese female lawyers engage in family law in solo practice or smaller firms than their male equivalent, while an increasing number of female lawyers work for large scale international law firms, engaging in corporate law. Such bifurcation is related to regional differences. For instance, international law firms are only located in major metropolitan areas and therefore job opportunities to work for such firms are limited to those who practice in such area. Moreover, traditional gender values are stronger in non-metropolitan areas, and it may affect and limit specialization for female lawyers. On the other hand, the relative shortage of lawyers in non-metropolitan areas could lead to better advantages for female lawyers in finding jobs in those areas. Thus, this presentation sets out to statistically examine regional variation of gender stratification among Japanese lawyers. The index of gender stratification to be used includes specializations, current firm sizes, positions, and income. The data to be used is lawyer’s census (Keizai Kiban Chosa).

The Effect of Education on Society Reconsidered: Positive and Negative Consequences

This research investigates both positive and negative effects on society of more people seeking and achieving a higher educational level. For individuals, the re-sult of greater educational achievement has been well studied and documented. It is a major route to higher social status. For a society, however, it may not be uniformly positive. The economy may benefit, as there would be a greater num-ber of capable individuals available to assume highly skilled jobs such as those in high-tech industries. Greater innovation might be a result, also. But as the number of highly educated individuals increases, the competition within the job market at the higher levels will grow as well. Furthermore, as individuals reach higher educational goals, they will become reluctant to work at a lower tech or lower paying job. What will eventuate, particularly in a poor economy when the number of jobs would be reduced? Is competition always a positive dynamic? Motivated by such questions, we began to look into unintended negative con-sequences on society resulting from the promotion of higher education. We will present these in a manner consistent with the context of a poor economy. We need to consider a country's industrial structure, using data at the macro as well as micro levels. Also, we need to look at the effect on different age groups. Additionally, we will need repeated data.

We started analyzing the data using the Japanese General Social Surveys and other surveys on society. We will present these in a manner consistent with the context of a poor economy. We need to consider a country's industrial structure, using data at the macro as well as micro levels. Also, we need to look at the effect on different age groups. Additionally, we will need repeated data.

Social Resources and Accessibility to Care: A Case Study of Persons with Disabilities in Tanzania

In Tanzania, which is one of the low income countries, governmental organizations (GOs) and non-governmental organizations (NGOs) have put more and more emphasis on the rights of people with disabilities (PWD) after 2000s. The National Policy on Disability 2004 and the Persons with Disabilities Act 2010 have put in force, and surveys on PWD are conducted in 2002 and 2012 Census. In 2008, the government carried out the first comprehensive survey on disability in the country. According to the survey, 7.8% of the population aged 7 and above have some form of activity limitation.

However, there is no actual service provided by GOs for PWD. Some PWD get information about the services provided by NGOs and can access to the services, but others may not. The accessibility is dependent to the social resources which PWD have. Social resources include the social network, the physical environment around PWD, and the economic situation of the persons themselves or their care givers. It is apparent that there are many factors cause inequalities in accessibility to care.

The applicant is going to consider what kind of social resources are important to get care in the Tanzania mainland context. The applicant puts the focus especially on the importance of the social network, because in Tanzania mainland people rely on the social network to move and can gather money from the network. The social network gives chance to PWD for changing situations around them such as the physical environment and the economic circumstances for a temporary basis. The data used in this presentation will be documents on GOs/ NGOs’ activities for PWD, and findings from on-site observation and interviews with PWD in Dar es Salaam and Dodoma, which the applicant has conducted in 2013.

Social Care at Japanese Snack Bars

Snack bar is a special statutory place, where a female attendant (usually there is a female owner called “mama” by customer) is allowed to entertain the customer solely by talking and drinking together. Physical contacts being not permitted, all kinds of talking strategies, including wide range of topics from politics to intimate affairs, are employed to allow the customer feel at home or healed after the day’s hard work.

Most of the customer is married and belong to companies. They go to Japanese snack bar to see “mama” and after talking and drinking (sometimes singing Karaoke), they feel better than before. It’s possible to say “mama” does mental care for Japanese men who needs some kind of care, not physical but mental. So that “mama” has great skills of talking strategies that Japanese men want women to do.

It might be said that Japanese men is not satisfied with communications with their wives or women who is coworkers. “Mama” and this kind of place playing the role of mental care (easier than going to hospital) is necessary in Japanese society and should be positioned one of the social place with guarantee as same as other companies.

Social Gap in Korea: The Effects of Economic Deprivation on Social Capital and Self-identified Social Stratum

In Korea, the gap between the poor and the rich has become a serious social problem since economic crisis in 1997. Income distribution has been egalized until 1997, but income disparity has taken sudden turn for a worse after economic crisis. The previous studies on social impact of economic crisis include polarization of social stratrum, appearance of the new poor population, expansion of irregular workers, popularization of unemployment and dissolution of family, disharmony of social relations etc. How the economic crisis has deepened the social gap in Korean society? The social crisis has directly linked economic troubles after economic crisis. The economic troubles often make people withdraw from social relations and underestimate one’s socioeconomic status, and by extension they affect negatively the hope for the future. The purpose of this paper examines the negative effects of economic deprivation on social capital. Furthermore we explore the economic deprivation and reduced social capital has negative influence on self-identified social stratrum, life satisfaction and optimism for one’s future. The economic deprivation such as difficulties of earning daily bread, unstable housing condition, and overdue educational expenses as well as worsening family financial situation are the critical independent factors which negatively affect on the one’s social relations and subjective ethos. The economic deprivation has a bad effect on the social aspiration and upwardly mobile expectation. Thus the financial predicaments have been deepening the social gap among the people in the context of decline of social capital and lowering self-identified social stratrum and social aspiration. We utilize the national survey data which conducted by Institute for Social Development and Policy Research, SNU in October 2012. Interviews were conducted with male and females age 19 and above. The total usable sample size was 1,000. The sample was selected through a process of multi-stage area cluster probability sampling.
Chance and Risk of Qualitative Interview Methods in an International Comparison

The study aims to identify problems in conducting and interpreting qualitative interviews in an international comparison and present some solutions. With the help of non-conventional technology and increasing cross-border mobility, qualitative interviews enjoy favorable basic conditions. Methodological innovations and quality criteria lag behind. Since foreign language and alien culture come into play, qualitative interviewees need native speakers as interviewers or translators and, in the same vein, insiders as cooperation partners and co-interviewers. The study stresses that intervention of natives needs more reflection. Researchers should know in which context an insider is situated with regard to age, gender, classification, and social position in his or her own country. In addition, there are usually interest conflicts, perspective differences, trust or mistrust, power distance, and pre-knowledge between two countries. In the light of that, thorough preparation of pre-research for cross-border interviews is of great importance. In my study small experiments with interviews about “civil society” with German and Korean interviewees will be conducted. Questions about “global civil society,” “global values,” and “global discourse” will be asked first with insider’s intervention and secondly without. By comparing the two results, it will show how intervention of an insider works in a qualitative interview and how to reduce one-sidedness, distortion, or misunderstandings.

“Viet Kieu” or Overseas Vietnamese and the Future of Viet Nam: The Case of Viet Kieu Association in Thailand

The Socialist Republic of Viet Nam (SRV) or Viet Nam is one of the countries on the Indochina Peninsula in Southeast Asia which had many times faced severe circumstance caused by colonization. However, Viet Nam finally surmounted all difficulties and has been gradually developed by great help of its own people, particularly overseas Vietnamese, including those who have already returned and who are still abroad. “Viet Kieu” or overseas Vietnamese has a long history closely linked to the protection and construction of Viet Nam. Approximately, there are 4 million “Viet Kieu” or overseas Vietnamese currently living, working and studying around the world. “Viet Kieu” is playing an important role in preserving Vietnamese language, national culture, tradition and knowledge outside the country, contributing to Viet Nam’s economic growth as well as developing the foreign relations of Viet Nam.

The study aims to analyze role of “Viet Kieu” community, particularly in Thailand, in strengthening overseas Vietnamese regime and making great contribution back to the country. The study further highlights the vision of the Viet Nam State toward the overseas Vietnamese community. It does so, the research will look at the situation of the “Viet Kieu” Association in Thailand, analyze case studies of “Viet Kieu” who benefits from the Viet Nam’s policy, and review relevant literature regarding the issue.

With illustration of the “Viet Kieu” Association in Thailand, importance of the “Viet Kieu” or overseas Vietnamese community in construct and developing Viet Nam will be emphasized in the study. Finally, this study will envisage how Viet Nam avails itself of these “Viet Kieu” or overseas Vietnamese for the forthcoming ASEAN economic integration in 2015 and beyond.

Governance As an Emergent Compromise: Access to State Service Delivery in an Islamabad Squatter Settlement

Compromise between the formalizing imperatives of modernization and locally-grounded informal networks can provide the basis for stable governance in the cities of the global south. This paper examines urban governance in Pakistan as seen through the experiences of an Islamabad squatter settlement accessing electricity supply through the state-run electricity utility. After a breakdown on illegal connections, community leaders negotiated a compromise with the utility leading to the installation of two official electricity meters for 600 households, with billing and individual connections handled by a committee of residents established for this purpose. Some households in the squatter settlement did secure individual contracts for service delivery, only to retreat to the communal arrangement when they found that formal contracts could also be used to reinforce patterns of exploitation and inequality rather than simply securing their rights of access and claim-making. The emergent pattern of governance – more stable than its predecessors – is one of compromises between formal contracts and the lived reality of an Islamabad squatter settlement. These local struggles with modernization are echoed at the policy level as well, where the state has retreated from market-ori-

Nigerian Agricultural Transformation Agenda: Conceptual Plausibility, Infrastructural Vulnerabilities and Disturbing Auguries

Agriculture in Nigeria has performed below its vast potentials of yielding an acceptable living standard for the ordinary farmer in a globalized world. The sector was the mainstay of the economy before the exploitation of crude oil. The discovery of the latter led to total neglect of the sector which continues to make significant contribution to world production of several commodities. Agriculture in Nigeria is characterized by small holdings, low technology, little value addition and mass destruction of infrastructures. Government efforts to intervene in the past have been hampered by monumental corruption among other factors. Recently, the government introduced a blueprint to develop agriculture in the country christened ‘Agricultural Transformation Agenda’ which seeks to transform agriculture from a traditional habit to modern business. The paper examines the concept behind the model vis-à-vis the infrastructural and institutional foundations required for the programme to deliver sustainable impacts. The paper concludes that the thinking behind the policy is sound but its workability may be compromised by the poor physical and social infrastructure, and dysfunctional institutional framework that characterizes the implementation environment. The paper concludes by observing some disturbing signals associated with the policy.

NAUCK, BERNHARD* (Chemnitz University of Technology, bernhard.nauk@soziologie.tu-chemnitz.de)

The German Panel Analysis of Intimate Relationships and Family Dynamics (PAIRFAM)

The German Panel Analysis of Intimate Relationships and Family Dynamics (PAIRFAM) is a multidisciplinary, long-term research program that is yielding rich data for the longitudinal study of family and living arrangements in Germany. Its main focus is on partnership processes and quality, parenthood decision making and fertility, parenting and child development, and intergenerational exchanges. A number of issues from other domains of life such as education, work, income, housing, health, religiosity, leisure activities, and network embeddedness are included as well.

PAIRFAM was started in 2008 with a nationwide random sample of more than 12,000 anchor respondents in the three cohorts born between 1991-93, 1981-83, and 1971-73. Respondents (“anchors”), partners, (step)parents, and children above age 8 are interviewed. The program with the implemented multiactor design is scheduled to run for a total of 14 waves with annually conducted interviews. Thus, we will be able to cover the most important family formation stages from age 15 up to age 50. The German Family Panel PAIRFAM provides a rich data infrastructure on a wide range of family related topics allowing researchers to analyze private living arrangements as they develop over time and in explicit consideration of the mutual interdependencies of relevant family members. Great efforts were being made by the project team to release fully prepared and documented data from the current survey wave as early as possible to the international and interdisciplinary scientific community. The scientific use file with data from the first five waves is published in spring 2014.

The paper (primarily presents) the design and the design of the German Family Panel PAIRFAM, (b) demonstrate its potential for analysis with examples, and (c) provide information on how to access the data.

DUBOST, CLAIRE-LISE (ENSAS)

Corporate Interlocks and the Specificities of Indian Capitalism

This paper aims at studying the interlocking directorates among Indian firms as a way to better understand the specificities of Indian capitalism. It draws on a study of interlocks among the top 250 companies of the NSE in 2000 and 2012. It also compares indices of centralization, compactness, density, etc. with those of similar-size networks in other countries in order to evaluate the specificity of the structure of the Indian corporate network and to locate it within a comparative typology.

This paper more particularly intends to bring a contribution to the embeddedness theory. Drawing on existing socio-historic studies, one could argue that the Indian capitalist system distinguishes itself by five characteristics: 1° A very recent liberalization that makes it a newcomer in the game of free-market economy; 2° The importance of State owned companies (PSUs); 3° A long and lasting tradition of conglomerates among business groups; 4° The importance of family ties among Indian groups; 5° The importance of caste in business networks.

NAVARRO, PABLO* (University of Valencia, pablo.navarro@uv.es)

Social Objects As Tokens for Social Eigen-Behaviors

This paper puts forward the concept of ‘Social Object’. A ‘Social Object’ would be such a thing or entity that can be used imaginatively and imaginarily. Social objects do not exist by themselves, but they come into existence through human thought, perception and action. The concept of social objects is a way of thinking about the social world as a system of symbolic structures that are constructed and re-constructed through the ongoing process of human social interaction. The social object is a construct of human thought and action that is used to represent and convey social meaning.

Another Look at Sibship Structure and Educational Achievements

Studies have shown negative correlations between both number of siblings and educational achievement and between number of siblings and cognitive ability. These findings are consistent with the Resource Dilution Hypothesis, the Quantity-Quality Trade-off Theory, and the Confluence Model. However, recently some scholars have questioned the causal interpretations of the correlations and have simulated quasi-experimental studies to test the hypothesis that it is largely spurious. The results of these tests are inconsistent so far. This paper attempts to further the understanding of the sibship size effect and its causality. We employ a retrospective life history data set on some 2000 Jewish Israeli men who were born in 1954 and interviewed while in their mid-twenties. The database includes information on several educational and cognitive outcomes measured at different ages; socio-economic background variables, and detailed sibship and household composition measures. We use fixed-effect models to evaluate the causality of the sibship-achievement association. The availability of detailed histories of household composition allows us to estimate the effects of siblings present (in the household) at different stages of the life course on cognitive and educational outcomes. This is a more precise measure than the measures that have been common in the literature so far.

Preliminary results show that the number of sibling present in the household at ages that precede the measures of outcomes is more detrimental to its achievement than the overall sibship size.

Violence Against Women: The Indian Scene

This paper examine violence against women emanates from the social hypotesis of superiority of men over women. Insubordination of women legitimates gender violence and grants social sanction to the ignoble treatment meted out to women. Manifestations of violence encompass physical aggression, such as blows of varying intensity, burns, sexual abuse and rape, physiological violence through insults, humiliation, coercion, blackmail, economic and emotional threats and control over speech, action and behavior. In extreme cases the result of this violence is death. The incidence of violence prevalent in man-woman relationship takes place in the context of the family, state and society. In most cases the male aggression towards women and girls remains tacit, hidden or unrevealed.

Prevent or Cure – the New Philosophy of Health Care

Prevent or cure – the new philosophy of health care

Health care systems evolve at the same time in many different ways: in area of developing technologies, the development of the medical knowledge, because of demographical changes and particularly - aging of the society. This induces modifications of the priorities of the health policy, new methods of organization and more complex funding mechanisms. Individual components of the health care system, illness, health care, hospital care have different contribution into the health care systems of different countries. The worlds growing awareness that for keeping and improving the population health the governments must create effective and efficient health system leads to the effective illness prevention. It shouldn’t be expected that the health effects and economical efficiency of the health care system will improve, without appropriate expenditures on actions which delay or prevent illness, and also allow early diagnosis and effective (usually cheaper) treatment

In the first part of the paper there will be discussed issues connected with modern health conceptions which create the fundamentals of the approach to the illness prevention as well as the arguments for the state engagement into health care. Health care is the specific public goods. This induces the choice of criteria, used by policy makers, to allocate public sources. The second part will present characteristics of the prevention actions, rules of the program creations and its place in the health care systems. The crucial significance is to specify the determinants of the changes of the health benefits structures financed from the public means. The last part of this elaboration, based on gathered empirical data, will discussed experiences of the selected European countries on prevention of the selected illnesses, indicating the links between expenditures and the effects of the prevention activities.

Modern Social Communication in the School System

Elena Nazarova

Modern social communication in the school system

Information technology today is perhaps one of the most rapidly developing areas, which directly affects the dynamics and to some extent determines the vector of development of a society and a system of communication.

The rapid pace of changes in contemporary social and professional spheres determines the need for such specialists, who would have not only availability, but also the ability to equally rapid self-transformation. Modern specialist is in a situation where information and communicative movement causes him to be creative, constantly speaking in a variety of roles. This fundamentally changes the status and purpose of education.

Education loses its autonomy and isolation, losing the functional role of the incubator for growing professionals. In a sense, the whole society is the educational system, where experts will not only accumulate information and knowledge in preparation for life, but also to fully live, applying them in practice in process of development.

Communicative competence and information, creative movement and tolerance come to the forefront in the formation of man, describing him as a specialist, who can be integrated into the mainstream of the movement of professional knowledge, and as a full member of the ever-changing multicultural social reality. This is an important aspect of the communicative component of education.

According to most of the school is the main element in the process of becoming a person, is to teach people to think, to respect labor, to encourage children tolerance, and develop entrepreneurial skills to real life, and not just theoretical knowledge.

The Dynamics of Migration Processes in Modern Russia: Analysis, Problems and Prospects

For the present stage of social and socio-economic transformation in Russia is characterized by sharp increase attention to the migration processes, the dynamics of which every year is losing its momentum, a negative impact on the demographic situation in the country. The immigration influx is now no longer compensate for the natural decline in population - it was in the 90s.

However, in today's globalized world for the skilled work force Russia to seriously compete. Thus, according to the UN, the total annual immigration resource in the run up to 2050 will be approximately 2.2 million people. Half of them will qualify for the United States, 200 thousand - Germany and Canada, with 130 thousand - United Kingdom. Moreover, a number of European countries are already developing programs to attract Russian citizens. Russia left more than 100 thousand scientists involved in such traditionally strong areas of the country, such as mathematics, chemistry, physics, biology. This is mostly educated people aged 35-45 years.

We believe that now in force, with sufficient clarity migration policy came into conflict with the objective needs of the country.

Cohort, Gender and Socioeconomic Inequalities in Trajectories of Frailty: Findings from a Growth Modelling Approach

We have seen a rapid and continuing growth in life expectancy. This, coupled with the baby boomer cohort heading into post-retirement life, has led to significant policy concern with the financial pressures resulting from an increasing proportion in the population of older, non-productive and dependent people. In contrast, the baby boomer cohort is also presented as extremely fortunate, or selfish. As a result of benefiting from social welfare reforms post Second World War, it is suggested that baby boomers are able to retire early and in some luxury, at the expense of younger generations - hence the accusation of selfishness. Coupled with this, there are also suggestions that we are also seeing a compression of morbidity. That is, alongside increasing life expectancy we are also seeing a shorter proportion of later life spent in illness or disability. Baby boomers appear to be a truly fortunate generation.

In this paper we will examine age cohort differences in frailty trajectories to test the extent to which we are seeing a compression of morbidity, and then we will examine the extent to which any change in frailty trajectories is distributed...
similarly across socioeconomic and gender groups. To do this we use data from the English Longitudinal Study of Ageing, which allow us to examine overlapping frailty trajectories for different age cohorts.

Financialization and (Global) Class
The concept of financialization has become a prominent issue in sociology and political economy. As a multi-dimensional phenomenon it affects different levels and social spheres - from the macroeconomic level to states, firms, households and individuals. While most explanations focus on the macroeconomic deregulations since the mid-1970's, its cultural aspects and the actors propagating it remain often under-explored. Our contribution represents an attempt of a cultural approach towards the issue of financialization. We interpret the process of financialization as the assertion of a global “market culture”, emanating from symbolic struggles between social actors over economic valuations. Thereby we aim at highlighting the role of social actors and cultural narratives in economic transformations. We ask whether the global phenomenon of financialization can be attributed to the formation of a “global financial class”.

Defence and Security Policies in the EU: From Decision Making to Political Culture
What is the contribution made by the armed forces during and in relation to security operations, both in international contexts and to protect public order and homeland security? Based on the assessment of the contribution and skills currently at the disposal of the armed forces, we have identified possible areas of further use of the military force in security contexts. In the international arena, thanks to the growing use of instruments for civil and military cooperation, the military also intervene in crisis management, conflict prevention and peace-building processes. As concerns internal security, the involvement of the military - and the use of their logistic assets - is increasingly common in response to threats such as terrorism, environmental disasters, protection of critical infrastructure and other emergency situations which the country has to deal with. This trend is also confirmed by the involvement of military forces in European “Security Research” activities, sponsored by the Commission with the objective of developing technological capabilities, tools and methodologies in “civil security”. The research was conducted through: the consultation of political, institutional and regulatory sources (at national, EU and NATO levels), the academic and scientific literature, the media; qualitative interviews with experts in the field.

Les Représentations Sociales De La Dépression Et L’accès Aux Services De Santé Mentale Des Jeunes Dépressifs: Une Question D’Identité?
La question de l’accessibilité aux services de santé mentale ne peut se réduire à celle de l’offre. D’une manière générale, la demande des services de santé mentale varie selon différentes variables sociodémographiques dont l’âge. Les études démontrent ainsi que les jeunes femmes ont généralement moins tendance que la population adulte à demander de l’aide.
C’est dans cette perspective de tenter de mieux saisir la question de la demande de soins des jeunes en proie à des troubles dépressifs que nous avons analysé des entrevues effectuées auprès de 31 répondants âgés entre 18 et 30 ans qui ont rapporté avoir souffert de dépression au cours de la dernière année. Cette enquête qualitative pancanadienne a été réalisée dans quatre sites: Moncton, Ottawa, Sudbury et Winnipeg par la méthode du réseau d’associations et des entrevues individuelles semi-dirigées. L’analyse des résultats obtenus a été effectuée selon la méthode d’analyse intégrée de contenu des représentations sociales.
Le contenu de la représentation sociale de la dépression ayant émergé du discours analysé est organisé autour de deux éléments principaux: désespoir et stéréotype négatif. Ces éléments renvoient à des dimensions descriptives et sociales de la dépression. Le discours activé par ces deux dimensions contrastait avec la nouvelle normativité sociale (autonomie, initiative, responsabilité individuelle, etc.), ainsi qu’avec les caractéristiques stéréotypées attribuées aux groupes de jeunes (dynamisme, enthousiasme, joie de vivre, etc.). Cette double tension de normative normative et identitaire mobilise une résistance par rapport à la disposition des personnes à consulter les services spécialisés en santé mentale.

Cynical Vs Empathetic Worldview Schemas and Fairness Perception
This research explores the contrast between cynicism, as a component of Kwok and Leung’s human social axioms construct, and a more empathetic or altruistic view of the social world. As such it looks at the contrast between what game theorists call “zero-sum” perception and “positive-sum” perception. What are some of the attitudinal and behavioural differences between people who believe they live in a you-OR-me world, and those who believe they live in a you-AND-me world? Given its implications for inequality, political conflict, and ideology, the study seems to capture a critical dimension in human socialworldviews. Preconceptions about whether others can be trusted and whether one can afford to cooperate extensively with others to solve difficult problems have many implications for social capital building and dispute resolution between individuals and groups in society. The study explores cynical and empathetic orientations to social interaction, and the ways in which these worldview schemas relate to (1) social fairness perceptions and (2) related aspects of personality and self-conception. Data were gathered using a multi-construct written questionnaire instrument administered to college students in New Zealand, Jamaica and Hong Kong. Results across several cultural contexts show significant differences in both personality attributes and in social fairness attitudes between participants who are predominantly cynical in their worldview (higher scores on 20-item Leung cynicism scale, relative to empathy) and those who are predominantly empathetic in their worldview (higher scores on 14-item empathy scale, relative to cynicism).

Emerging Dimensions of Senior Friendly Built Environment in Aging Societies
The purpose of my paper is to explore the methodology of my empirical research concerning analyses of senior friendly built environment in aging societies. This methodology is based on a framework of nine emerging dimensions, which result from the relationship between design, spatial experiences and quality of life define senior friendly care housing. The nine emerging dimensions are: 1. Building organisation. Through this emerging dimensions summarise buildings in a way that is relevant to the residents’ quality of life. 2. Safety and health and architectural design of senior care housing. 3. Regulations and guidelines as well as their impact to the feeling of well - being in senior care housing. 4. Privacy. According to several researchers, privacy is a most important aspect of the environment for older people (Morgan and Steward 1998, Duffy et al. 1996). 5. Ability to personalise the surrounding (personalisation as a factor, which allows the transformation of a care housing setting to a home). 6. Orientation – Disorientation – Confusion regarding place, time, personal identity, or social situation – is common among people with dementia (Cohen & Weisman, 1991). 7. Sensory simulation is concerned with the different elements of sight, smell, hearing and touch. 8. Conflicts between different building users (because senior care housing is not only a living setting but also a staff’s working place). 9. Participation and contributions of older people.

The objective of the presented method is to compile a comprehensive view of senior care housing features essential for residents and exposing potential and importance of design to improve senior quality of life.

Education As a Key to Tackle Inequalities in Shrinking Cities. Examples from East Germany

In East Germany political and economic transformation after 1990 led to demographic change, massive loss of jobs and high levels of out-migration. Just like in shrinking cities all over the world (see Mallach/Brachman 2013 for US or Fol 2012 for France) out-migration was selective: predominantly talented and skilled people left for better prospects, less qualified and less mobile parts of the population remained. The same migration pattern can be observed on a micro-level. The most fragile parts of the population with lowest educational background are left behind in the least attractive neighbourhoods.

In Germany this poses a problem for the future because statistics show that poorly educated parents tend to have poorly qualified children. Bontje and Musterd (2012) have pointed out, that if there is a shortage of well qualified people in a shrinking city, it becomes less attractive for companies and investors, which may cause many people to leave.

Some cities in Germany have realised that a shrinking society cannot afford a poorly qualified younger generation that is unable to keep or attract businesses and pay the pensions of an aging population. Theses shrinking cities regard investment in education as a key to survival and a key to tackle inequalities. The city Bernburg shall be presented to show how the challenge can be met. In 2005 it had 50% less children than in 1990. 20% of them did not complete school. In consequence Bernburg thoroughly reformed the educational landscape and developed new schooling concepts. Approaches from other German cities that focus on identity building and link education strategies to urban regeneration, may be presented to complete the picture.

Could it be a positive effect of shrinkage, that more emphasis is put on a just educational system? This argument shall be put forward for discussion.

NELLE, ANJA* (Leibniz Inst Regional Development, NelleA@irs-net.de)
The Influence of Housing Policies on Urban Fragmentation in Large Brazilian Cities

Urban fragmentation is one of the most important characteristics of the recent urban development in Latin America (Coy 2010, Maricato 2011, Pereira/Hidalgo 2008). Typically, impacts are the result of globalisation on job markets. The emergence of residential fragments is related to the building of gated communities for high-income households as well as the provision of housing for the poor by informal markets (Abramo 2009). The housing deficit in the urbanized areas of Brazil amounts to approx. 5.6 million units of, which almost 90 per cent belong to the target group of social housing (households with less than three minimum wages). Do the strategies for intervention developed by the government for reducing housing deficit help to solve residential fragments? Or do urban development and housing policies and/or their execution lead to the emergence of low-income fragments?

The research project of which the concept and first findings of a case study in Fortaleza shall be presented, aims to investigate the influence of housing policies and their implementation on urban fragmentation in Brazil. The study includes the analysis of public interventions in the realm of social housing (new housing estates and regeneration of existing squatted areas) and the influence of development plans and interventions on socio-spatial structures. The objective of the study is to discover which prerequisites assist housing policies’ implementation to counteract urban fragmentation and which parameters (i.e. value of lots, destruction-making-structures) or/and original specifications (planning-procedures, restrictions of guidelines for funding) provoke them to fail. The causes are to be examined to broaden the understanding of urban developments’ and housing policies’ potentials to better the attendance of intense urbanisation-processes observed internationally.

Effects of Work Related Factors to the Schooling, Health and Recreation of Filipino Children

Children in the labor force are a social phenomenon that has become link with the third world countries. The Philippines is one country in the developing regions where there are many children who are productively earning. The survey was conducted nationwide to collect data on the demographic and socio-economic characteristics of working children ages 5 to 17. In 1995 and 2001, four response variables (present attendance in school, dropping out from school, effect of work on schooling and reasons for dropping that characterize education status of working children were modeled. Results in 1995 and in 2001 show that the nature of employment, working days per week, normal working hours per week and doing heavy physical work affect school attendance. Factors affecting schooling in 2001 are activity during free time, and status of employment. The number of working days and hours per week, increases, the odds of dropping out from school also increases. Factors that help a child to stay in school are engagement in less permanent job, “boss” is a relative, less exhausting work and does not require heavy physical exertion, less activities that the child do during his free time as well as when he is unpaid worker. The health of working children is affected most when they work in the industries. Producers of tobacco and alcohol are included in the industries that affect their recreation in 1995 are long working hours, absence of relative supervisor on the job. Similarly, child workers in 2001 with long hours of work affect their recreation as well as work that provides little illumination. Children working in farming, fishing, and mining have less free time than those children working in other industries. However, regardless where the child works it reduces the playing time since in some cases sleeping is preferred than playing.

JS-41.4
NELSON, GLORIA LUZ M.* (University of the Philippines Los Baños, glmmelson2001@yahoo.com.hk)
Globalization and Philippine Labor Migration Phenomenon

Globalization and labor migration from the Philippines accelerated almost at the same time. Three revolutions contributed to Filipino labor migration phenomenon: communication technology, economic integration and widening demand for labor. Between 1995 and 2010, more than 9 million Filipino workers are found working in more than 140 countries with Hong kong, Qatar and Singapore as the three major destinations of “global Filipino”. Using data in 2000, 2005 and 2010 from the Philippine Overseas Employment Administration (POEA), it was found that the host-region of Filipino workers are Middle East and Asia. The nature of occupations of the Filipino labor migrants has changed from production related work in 2000 to service work in 2010. Due to this change in the nature of occupation, females more than males predominate the Filipino labor migrants in the last decade. This study supports the World system theory where peripheral countries like the Philippines supplies the labor demands of the core regions. The annual remittances of Filipino labor migrants has kept the Philippine economy afloat and are now regarded as “heroes”. Due to the failure of the Philippine government to provide job opportunities for its growing labor force population and in spite of the social cost to the families left behind, the Filipinos will search for jobs outside of the country. Thus, labor migration from the Philippines is a global phenomenon for as long as there are market demands for Filipino labor.

Family Policy and Child Poverty in Global Perspective

During the past decades, family policies have often been expanded when other parts of the welfare state have been subject to retrenchment. However, research on affluent countries shows that these developments have been far from unilinear. Instead family policy diverged cross-nationally, both in content and scope. Consequences for child well-being have also been varied. Typically, variations in child-poverty among affluent countries are frequently attributed to differences in broad welfare state regimes; leaving unexplored the ‘black box’ of program characteristics of working children ages 5 to 17. In 1995 and 2001. Four response variables (present attendance in school, dropping out from school, effect of work on schooling and reasons for dropping that characterize education status of working children were modeled. Results in 1995 and in 2001 show that the nature of employment, working days per week, normal working hours per week and doing heavy physical work affect school attendance. Factors affecting schooling in 2001 are activity during free time, and status of employment. The number of working days and hours per week, increases, the odds of dropping out from school also increases. Factors that help a child to stay in school are engagement in less permanent job, “boss” is a relative, less exhausting work and does not require heavy physical exertion, less activities that the child do during his free time as well as when he is unpaid worker. Just Generational Welfare Contracts and Poverty

Citizens in affluent countries face a great number of social and economic risks, from birth until the very end of their lives. Many of these risks are associated with specific phases of the human life cycle when the earnings potential of households decreases. How are these age-related poverty risks linked to the often "implicit" generational welfare contracts that are embedded with social policy-making? Such generational welfare contracts may seem just in their institutional design if rights for income protection are equally distributed across age groups. We argue, however, that a generational contract cannot be considered to satisfy important demands of fairness if it fails to substantially reduce poverty among citizens in different phases of life. In this paper we link the idea of generational welfare contracts to poverty outcomes in 18 affluent countries. We combine new comparative data on social rights from the Social Policy Indicator Database (SPIN) and micro-level income data from the Luxembourg Income Study (LIS). For some countries we have income data stretching from the 1960s until 2010, something that provides possibilities to analyze long term trends in policy developments and outcomes. The empirical analyses show that there is considerable degree of correspondence between the design of generational welfare contracts and age related poverty risks, particularly in terms of financial vulnerability. Higher welfare state generosity for a particular age related social risk is generally linked to less poverty in the specific target group.

Conditional Cash Transfers: A Social Investment Instrument in Times of Economic Crisis and Austerity?

Conditional cash transfers receive recognition as a way to address poverty within present and future generations while also promoting economic growth by investing in human capital. Such policies have been used extensively across Latin America and are now being promoted as part of the European Union's Social Investment Package. We assess and compare these policies in Latin America and in Europe. Specifically, we question whether they can be considered social investment policies and, in doing so, illuminate the various factors that condition the success of such policies. We draw particular attention to the need for policy approaches to be based on a life course perspective and the risk of 'policy crowding out' in the European context. Finally, we elaborate on the implications of a uniform trend in the passage of these policies, the timing of their implementation in the aftermath of economic crisis.

Living with Uncertainty, Struggling with Possibility: A Study on Radiation Effects from the Perspective of Atomic Bomb Survivors

This paper will examine the reality of radiation effects from the point of view of Atomic Bomb survivors. Radiation is a unique material which people cannot see, smell, and feel the touch of. But it can be harmful for human body. Today, especially since the horrific accident of Fukushima nuclear power plants in 2011, radiation and its effects on human have become a focal point in Japan and the world. Historically speaking, the issue of radiation and its effects has been studied predominantly in medical and physical fields. However, a study on narratives and life-stories of people exposed to radiation shows different aspects of this issue. First, in addition to actual health problems which radiation may cause, people frequently suffer from anxiety, fear, and distress about the possible effects of radiation. Moreover, their reality of radiation and its effects are often socially constructed through their interactions with medical and scientific knowledge. In this paper, I will explore the complex relationships between radiation, people, and science, through the narratives and life-stories of Atomic Bomb survivors from Hiroshima.

This paper will consist of three parts. First, I will briefly describe medical and scientific knowledge about the physical effects of radiation on human body. Second, by drawing on the survivors' life-stories and narratives, I will illustrate how they have suffered from and struggled with their anxiety and distress, caused by the uncertainty of radiation. Lastly, I will examine how the survivors' reality of radiation and scientific knowledge affect with each other.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
However, little is known what the effect of such policies is: Do policies which favour the traditional marriage family increase marriage rates and stability of marriage families? Do policies with a focus on single parents, patch-work families etc accelerate the trend to more instable family relations? Do social policies as an alternative to family security increase cohabitation and divorce rates? The analysis is based on official national statistics for OECD countries and covers the time span from 1980 to 2010. The analysis shows that social policies and family policies such as child care services provide alternatives to the traditional marriage families and family at all. Such measure increase cohabitation rates and divorce rates while fertility rates decrease. A generous and benevolent welfare state seems to provide alternatives to the traditional marriage families. Marriage is no more a precondition to avoid or escape poverty. Social security and family policies have lowered the material necessity to enter marriage, and increased the opportunity to exit unpleasant family constellations.

The Ambiguous Relationship Between Middle-Class, Civil Society and Democracy

Debates on processes of democratization create the impression that the middle-class and/or the civil society are the drivers of democratic change and the backbone of democracy. Seen from this perspective either these groups fight for democratic change or once they have a basic political freedom they will quasi automatically take possession of democracy. This was the expectation in the USA before the Iraq invasion (what we may call the "Rumsfeld Utopia"). However, we have learned that in Iraq, after the Arab spring and in many countries that under-went processes of democratization during the 1980s and 1990s there was no automatic process towards democracy. In these transitions the middle-class played an important role and many of the civil society associations, social movements and especially their political leaders had a middle class background. But the political groups and the leaders that opposed the idea of a liberal democracy also had a middle class background. At least in Africa and the Middle East the middle-class based civil society represent competing concepts of socio-political order: e.g. liberal democracy, neo-patrimonialism, neo-traditionalism, theocratic rule (or socialism in Latin America). The claim for democratic elections may be used to legitimize any of the socio-political orders.

Can Teacher's Gender Explain The Growing 'Boy Crisis' In Educational Attainment?

Gender inequalities in education have seen much change, with females gaining advantages over males in ways that have not been anticipated just two decades ago. At the same time, the share of female teachers has grown in almost all countries of the western world. There is an ongoing, contentious debate on whether this growing "feminization" of the educational system, in particular at the lower levels, can account for the growing educational disadvantage of males. In this talk, I review the literature on the "feminization of teaching" argument and present findings from two empirical large-scale studies conducted in German elementary schools which allow me to identify the effect of having a same-sex teacher for different scholastic outcomes (gender-blind test scores and more subjective teacher’s grades) and across different subjects (Reading Literacy, Mathematics, and Science). My findings suggest that the popular call for more male teachers in primary school is not the key to tackle the growing disadvantage of boys.

The Validity Of Response Latency Measurement In Cati Surveys

There is agreement among researchers that the measurement of raw response times from surveys requires a treatment for baseline speed of respondents and interviewer. There remains disagreement about the appropriate procedure to transform raw response times to response latency and there is no study that evaluates the different approaches with regards to their potential measurement error, which may have an affect on modeling and causal inference. This article fills this gap by examining the measurement validity of different ways raw response times from surveys requires a treatment for baseline speed of respondents and interviewer. We apply a Multitrait-Multimethod approach to examine four different operationalizations for response latencies and their relationship to attitude accessibility and indicators of response quality. We conclude with remarks about the levels of validity and potential biases when latencies are used as independent variables.

Trustworthiness As Rational Belief or Unconditional Propensity to Trust – Evidence from a Telephone Survey

While research on trust and trusting behavior is abundant, less attention has been paid to the study of trustworthiness itself. This seems to be at least a bit surprising, especially with regards to the theoretical claims about trustworthiness as „The crucial variable“ (Hardin 2001) for understanding and promoting cooperation based on trust. While several authors share the definition of trustworthiness as a belief, a probability assessment or an expectancy of Person A about Person B to do X, distinct measurement approaches exist depending on the mode of data collection (survey vs. experimental approach) and strategic outset of the study (one-shot vs. sequential game of potential games). Additionally, different hypotheses can be derived depending on whether one treats trustworthiness as incentive
Based on or as an unconditional propensity to exhibit trustworthiness. Hypotheses were tested with pooled data from two CATI surveys (n=706) conducted in Germany in June 2012 and January 2013. Using the techniques of both response latency measurement and Cox regression models we are able to conclude that measurement of trustworthiness either lack convergent validity or are subject to theoretical deficiencies. Consequences for future research are discussed.

ORIOLA, TEMITOFÉ (University of Alberta)

ADÉYANJU, CHARLES (University of Prince Edward Island)

**A Thousand Words: Conducted Energy Devices, New Media Events, and The Public Eye**

Between April 2003 and November 2008, 26 men died in Canada during events where a conductive energy device (CED) was deployed on them. The death of Robert Dziekanski, a Polish immigrant, in 2007 at the Vancouver International Airport, was recorded on a mobile phone and its footage subsequently uploaded to the popular video site YouTube. The video, which documented Royal Canadian Mounted Police (RCMP) officers deploying a CED on Dziekanski, was viewed by thousands of citizens of the world and expanded its footprint beyond the Internet as traditional media organizations incorporated it into their coverage of the event. Unlike previous CED-related deaths, the recording of the Dziekanski death was an integral piece of the event’s anatomy and granted members of the mass public, as scrutinizers if not legitimate bystanders, entry into how it unfolded. Following Fiske (1996), we treat the recording, its dissemination via the Internet and broader news media, and its mass consumption as a ‘new media event’—one that amplified and articulated competing narratives of risk. We synthesize the work of Beck (1992), Giddens (1991; 1990), Hall et al. (1978), and Lupton (1999) and amplify and articulated competing narratives of risk. We synthesize the work of Beck (1992), Giddens (1991; 1990), Hall et al. (1978), and Lupton (1999) and others in our examination of the YouTube video of Dziekanski’s death and over 400 reports in three major Canadian newspapers, the Globe and Mail, the Toronto Star, and the National Post. Using a broad critical approach, we assess how groups like the RCMP, government officials, and the general public made sense of the recording. The recording’s electronic nature, we argue, complicated an ‘open-shut’ case narrative commonly articulated by law enforcement officials when describing how they respond to and neutralize threats to the public. The existence of the recording allowed for competing assessments of threat and harm while altering the credibility of the police as sole purveyors of risk assessment.

Mainland Chinese Sex Workers in Hong Kong: Multiple Forms of Inequality Both in Their Past and the Present

Purpose: This research aims to understand the lives and views of sex workers from Mainland China working in Hong Kong.

Design: This research appropriates the theoretical tools of Pierre Bourdieu and uses an ethnographic approach to explore the issue Hong Kong, including expert interviews, interviews with sex workers, participant observation and field documents.

Findings: Results point to gender inequality and various other forms of oppression weaving together to form the past and current experiences of sex workers in Hong Kong from a Mainland Chinese background.

Explaining Pathways to Party Activism: Case Studies of Hong Kong Young Adults

Young people in many advanced industrial countries are unwilling to join political parties. The situation in Hong Kong is particularly underdeveloped and legally prohibited from winning governing power through election. Despite these conditions, there are still a small number of young people choosing to join and take active part in political parties. The aim of this paper is to improve the understanding of how some young people come to get involved in political party activism. Qualitative life history interviews with 23 young active members from five major political parties in Hong Kong were carried out to explore this question. Based on a preliminary analysis of the interview data, I single out four distinct paths to party membership, namely 1) the socialization path, 2) the critical experience path, 3) the occupational path, and 4) the social network path. Informants taking the first two paths tended to initially get involved in party activism for political reasons, while those taking the last two tended to get involved for non-political reasons. Theoretical and practical implications of the findings will be discussed.

Fighting Against Youth Unemployment: The Hong Kong Experience

In Hong Kong, the high youth unemployment rate due to the rising uncertainty and volatility of global economy and financial crisis since the late 1990s has driven the Government and various sectors to commit themselves to enforce a series of remedial policies and services to alleviate the problem of youth jobless and to get youth into jobs and work training. The concrete plan targeting at unemployed youth includes two major categories: First, several pre-employment training programs such as Youth Pre-employment Training program, Project Yi Jin, Youth Work Experience and Training Scheme, and Hong Kong Young Ambassador Scheme, and second, temporary employment opportunities such as Special Job Attachment Program, Program Assistant, Peer Counselors, and Summer Student Helper. This paper examines issues related to those policies and training programs aiming at fighting against youth unemployment and proposes plausible solutions to remedy and improve the present policies and practices in dealing with the problems. The proposed measures are: 1) formulating a long-term youth employment policy to provide youth with appropriate training in occupational knowledge and skills; 2) setting up a centralized system to strengthen the information and communication network of the territory’s labor market in order to facilitate youth to seek employment resources and assistance; 3) building up closer collaboration between the voluntary service sector and the business sector in order to look for more pre-employment training opportunities, chances of temporary employment, full-time job possibilities, community participation and financial support; and 4) using multiple methods to fight against youth unemployment.

Enhancing Employability Through Youth Training Schemes? The Experiences Of Non-Engaged Young People In Hong Kong

The process of globalization, the rate of technological change, the convergence of information and communication technologies, and major changes in government policies are leading to the development of a “weightless” economy, to rapidly growing high-skilled labor market and increasing demand for job candidates with certain knowledge and skills. Certainly, the labor market is tilting toward extensive increases in the demand for higher skill levels and the labor demand for low skill levels is weakening. In this environment, young people are hit disproportionately hard, obscuring paths to adult statuses, identities, and activities. As such, many young people have been left behind the transition from school to work, with more and more of them not in education, training, and employment. This paper seeks to investigate the school-to-work experiences of non-engaged youth – young people aged 15-24 who do not participate in education, training, and employment. Based on data from focus groups involving 50 non-engaged young people in Hong Kong, it seeks to: 1) examine how these young people are being systematically propelled to the edges of conventional pathways to adulthood; and 2) assess the efficacy of governmental training schemes that aim to develop employability as a strategy for engaging this population. The paper concludes by outlining prospects for future policy development, focusing on gaps and weaknesses in current provision and practice. It is suggested that effective guidance to non-engaged young people must pay adequate attention to the social context within which the individual operates. Assumptions behind the government’s individualistic lifelong learning policy are called into question.

This paper has direct relevance to Theme I.I.3 “Youth Unemployment/Underemployment and Precarity” of the RC34 Sessions at the XVIII ISA World Congress of Sociology as more and more young people worldwide are now living in economic disadvantaged circumstances and facing problems in their school-to-work transition.

Participation of Women and Girls in the National Science, Technology and Innovation System in South Africa

The importance of documenting data on the inclusion and participation of women and girls in a society’s science, technology and innovation (STI) system cannot be underestimated. The paper presents results from the Gender Equality

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
and the Knowledge Society Framework indicators: an enabling policy environment, opportunity and capability, and women in Science and Technology and innovation systems to understand the status of women and girls in different spheres of South Africa’s reality as well as their participation in the knowledge society. It is argued that the policy environment in South Africa has ensured that a gender gap has been put into place and operates in all the realms of government. A lack of funding, human resources’ constraints and insufficient coordination mechanisms have hampered the effective implementation of some of the policies. Statistics around access to quality education for girls and boys are provided and a discussion around some specific projects and mechanisms that have been put in place to encourage the uptake by girls of science and mathematic at school level are presented as case studies of the opportunities available to ensure gender parity in STI education. Lastly data is presented on women’s participation in the STI system in South Africa. South Africa has an aging, predominantly white male scientific and engineering workforce. In this regard, there is a need to focus on both tertiary level education as well as women in science leadership in the country.

For Our Children’s Future: Inequalities in Rural Development in Vietnam

The previous literature on Vietnam’s growing urban landscape shows a great deal of rapid change in Vietnam. The 1986 Đổi Mới initiative set up by the central government instigated the rural communities to develop into urban communities. This program had opened up private businesses which incentivized rural communities to urbanize in an effort to modernize Vietnam. These cases of rapid urbanization seem to widen the economic gap of a population over time. Although some people are able to enjoy the benefits which come with urbanization, many are still left in impoverished conditions. These glaring differences in lifestyle and the distribution of wealth which were once reduced by strong government policies are now being superseded by transnational businesses. This structural gap formed by larger movements in globalization, I imagine would create similar differences in personal perception of the world. Differences in experience in this national effort, changes how individuals understand their own identity, their responsibility to the land, and their sense of security for the future. This research is grounded on a 1080 rural households surveyed through an East Asian perspective in this national effort, changes how individuals understand their own identity, their responsibility to the land, and their sense of security for the future. Societal Conditions to Produce Effective Knowledge on Sustainable Food Security at Global Level: A System Theoretical Narrative from African Cases

This paper aims at presenting consequences if we conceive the concept of Food Security (FS) as normative. The intention of FS is to create conditions, where no human being is unsecured with food. Such livelihood conditions have to be instituted in social systems. The international community has declared the war against hunger as well as promoted the Universal Human Rights - including the Right to Food- over 60 years ago. Still, around 1 billion people go hungry to bed and 2 to 3 other billion suffer from malnutrition. The various disciplines of sciences dealing with FS - agricultural sciences, economy, sociology and others - are far from providing effective knowledge in order to solve the problem. If these observations are correct, than the main question arises: what can be done better within sciences in general and what can sociological observation contribute in particular? We test four hypotheses based on the Luhmannian systems theory but limited to African cases. (1) The normative character of FS has to be enforced and institutionalized in order to guide both science and practice. (2) The full and equal involvement of peasants, farmers, indigenous communities and social movements has to be enforced in all major scientific and technology development processes, in order to repair environmental damages done and enhancing FS. (3) More resources need to be mobilized by the various collectivities in order to educate a new generation of agricultural scientists and citizen enlightened with social sciences methods and ethics, (4) in order to transform the current faulty food and agriculture into sustainable, just and viable systems, languages have to be used which are understood by people. Recognized indigenous knowledge will result as a new regulative force and strengthen not only the functional system of Food and Agriculture, but contribute to more balanced rural-urban relations and sustainable livelihoods.

Aging and China's Silver Industry: Based on a Sociological Survey of Urban and Rural Beijing in 2012

By 2012, China's population reached 1,354,040,000. The 60+ age group accounted for 14.3% while the 65+ age group alone accounted for 9.4%. Every year, the 60+ age group continues to increase by 8.6 million and will reach one third (32.8%) of the population by 2050. At this rate, the 65+ age group will equal 14% of the population by 2026 and by 2040 will reach 316,720,000 making China a super-aged society. While the population ages at an accelerated rate, traditional care provided by families is declining. In response, the 12th Five Year Plan (2011-2015) encourages China's central and local governments to promote the introduction of private capital into the senior care industry, to cultivate growth of related industries and to take active measures to foster a society which meets the needs of the aging population. Preferential measures and tax benefits for private investors in the senior care industry have also been implemented. The industry is wide-ranging with new opportunities surfacing and growth is expected. However, China's senior care industry, situated in the largest consumer society worldwide, still lags relatively behind in terms of investment, human resources, awareness, and policies or funding. There is a massive potential market and yet demands both soft and hard are overwhelming the supply and China cannot keep up with the needs of the aging population.

From this backdrop we examine challenges facing China's aging population from a macro perspective including an overview of related policy trends followed by the findings of research funded by the Japanese Government and in cooperation with related institutions throughout China. We surveyed over 400 subjects aged 50+ (August-November 2012) in urban and rural Beijing regarding their lifestyle and consumption yielding a glimpse of their current situation as well as potential opportunities.

Current Social Welfare Conditions in China

China's old-age pension scheme originates from the nation's 1951 labor insurance regulation. It was primarily for people unable to participate in the workforce because of age or disability and provided for old-age, disability and survivor benefits. Prior to China's 1978 reform and door-opening, employees of government and state enterprises were entitled to receive pension without paying into the system. Since 1978, the market economy has undergone rapid growth and at the same time the pension scheme has undergone rapid reform.

We will take a brief look at how the pension scheme was reformed and how the scheme is currently organized as a result of the reform. In this context we'll examine how it is affecting people in reality. Based on surveys supported by Grants-in-Aid for Scientific Research from the Japanese Government conducted in two urban and three rural areas from 2008-2011 we'll look first at the present living conditions of seniors comparing urban and rural settings as well as regional differences. Second, we'll look at a survey of the pension system in four major cities with different age distributions and examine the issues between the system and actual reality for workers. Finally, we'll suggest ideas for how existing issues could be resolved.

Rights in the Absence of Recognized Status: Challenging or Reinforcing the Rightlessness of Irregular Migrants?

This paper starts from the assumption that efforts to counter the rightlessness of irregular migrants can be divided into two broad categories. A first strategy is aimed at securing rights through a shift of status – i.e. through regularization – while a second strategy aims at accessing a new form of rights (often conceptualized as human rights) for all residents regardless of their legal status. Demands for provision of medical care and schooling, as well as ability to access public space without fear, are not all encompassed by this latter category. Scholars have conceptualized these claims as an instance where the internal border controls of states are being challenged. This reading stresses the transformative potential of this kind of demands with regard to current citizenship regimes. However, it is also possible to read this strategy as insufficient in the sense that it leaves irregular migrants in a permanent state of exclusion. Hence, the implication of the second strategy remains disputed. Should it be understood as a component in a strategy to undermine border control? Or, rather, to entail the reinforcement of rightlessness and the consolidation of a divided society? Providing irregular migrants with a number of basic rights - while withholding access to full membership - can be seen as integral to the creation of a precarious labour force. Drawing on insights from the Swedish debate about irregular migrants this paper seeks to address these questions. The analysis is guided by the assumption that political demands needs to be analysed contextually as their intervention and implication differ historically and spatially. In accordance with this the paper seeks to provide an account of the specificities of claims-making on and on behalf of irregular migrants in different contexts with a focus on how this relates to different regimes of citizenship and border control.

Migratory Work/Family-Practices On A Precarious Labor Market

This presentation discusses the complexity of migrant lives with regard to the way they travel and make use of border-crossing activities, the diverse conditions they face on the working sites, and the way they structure their family relations and (endeavor to) achieve accountability and stability within their family life planning. This session's three thematic lines hence are in very fine accordance with the way I approach my investigation.

My current research concerns mainly Polish construction workers who are commuting between Poland and Denmark in order to improve their life conditions. Following the collapse of the Soviet Union many Eastern Europeans during the 1990s began to work (illegally) in Western Europe utilizing the tremendous gap in wages between the two former totally divided economies. Following the 2004 EU enlargement workers from the former Eastern bloc obtained legal access to the entire EU labour market. In Denmark some 50,000 mainly Polish workers are working primarily in construction, farming, cleaning and other low-wage sectors. I follow groups of construction workers at work sites and in their families (in Denmark as well as Poland), in order to understand the complex relationships between migrant work and family life. Since I regard it paramount to understand this bottom-up outlook also in a more overall perspective, my material concurrently consists of interviews with representatives from organizations in Denmark as well as Poland and moreover with politicians on both national and EU level.

In other words – relating to the two poles of scholarly stand mentioned in the session abstract – I am interested in strategies and mechanisms of migratory knowledge (and everyday life as a whole), but regard it equally essential to understand how this is reproducible and must be understood as an element in maintaining societal cohesion.
Neighbourhood Effects on Migrant Youth’s Educational Commitments, an Enquiry into Personality Differences

In the neighbourhood effects literature, the socialisation mechanism is usually investigated by looking at the association between neighbourhood characteristics and educational attainment. The step in between, that adolescents actually internalise educational norms held by residents, is often assumed. We attempt to fill this gap by looking at how educational commitments are influenced by neighbourhood characteristics. We investigate this process for migrant youth, a group that lags behind in educational attainment compared to native youth, and may therefore be particularly vulnerable to neighbourhood effects. To test our hypothesis we used longitudinal panel data with five waves (N=4179), combined with fixed-effects models which control for a large portion of potential selection bias. These models have an advantage over naïve OLS models in that they predict the effect of change in neighbourhood characteristics on change in educational commitment, and therefore offer a more dynamic approach to modelling neighbourhood effects. Our results show that living in neighbourhoods with higher proportions of immigrants increases the educational commitments of migrant youth compared to living in neighbourhoods with lower proportions. Besides, we find that adolescents with a resilient personality experience less influence of the neighbourhood context on educational commitments than do adolescents with other personalities.

Polish Identity As Entrance Ticked and Barrier On An Altered Labour Market

Taking its point of departure in current research on Polish migrant labourers in Denmark this presentation will discuss ways to understand how and why different intersections come to have diverse impacts according to the contexts they are taking place within. Different ‘identities’ – such as ethnic, national, religious – have had a very limited importance at the Scandinavian labour market through most of the 20th Century. The labour movement and the workers’ unions possessed immense influence on the labour supply and were able to prevent uncontrolled influx of workers and maintain union membership as the only prerequisite for employment. Thus the few emigrating workers became internalised in the existing union system and worked on general conditions. Following the collapse of the Eastern bloc and the success of a neoliberal political and economical regime this order of the day has fundamentally altered. A consequence of this is a major revitalisation of ethnicity as a marker of specific abilities. The presentation outlines how ethnicity at one point has become a means to get access to the national labour market in the host country, in this case because a certain Polish work ethos is claimed (and, notably, for a lower wage). At the same time however, this opportunity can be a barrier of being regarded an ordinary part on that same market. As a consequence the whole social organization around the migrant workers is impacted of the circumstances, not least the prospective family life.

On the basis of fieldwork among Polish workers on Danish construction sites, representatives from unions and employer organizations in both Denmark and Poland, politicians on national and EU level, the presentation discusses how migrants come by under these circumstances and how the challenges can be tackled within a national and supranational framework.

Neighbourhood Socialisation of Youth’s Employability, the Moderating Role of Personality

Youth growing up in disadvantaged neighbourhoods are more likely to be exposed to unemployment in their local area than youth in more affluent neighbourhoods. In disadvantaged neighbourhoods, youth may adopt more negative attitudes towards work, which subsequently may lead to higher unemployment chances. In the literature studies often only test the relationship between the neighbourhood context and occupational outcomes, neglecting the step in between. In an attempt to cover the whole socialisation process, besides unemployment, we look at how the neighbourhood shapes work commitments as well. Additionally, because some youth may be better able to cope with environmental stressors than others, we test whether adolescents with different personality types are affected differently by the neighbourhood. An influential typology of personality distinguishes three types: resilient, overcontrollers, and undercontrollers. Resilients respond relatively more adaptively and flexibly to situational demands whereas both overcontrollers and undercontrollers are relatively inflexible. We hypothesise therefore that resilient youth are less likely to be affected by exposure to neighbourhood disadvantage than overcontrollers and undercontrollers. To test our hypotheses, we used panel data (N=203) with longitudinal information on adolescents from age 16 through 25. The findings show, contrary to our expectations, that overcontrollers’ and undercontrollers’ work commitments are positively influenced by longer exposure to neighbourhood disadvantage. Resilient youth’s work commitments are not influenced in turn, work commitments do not affect the likelihood for unemployment, suggesting that adolescents’ unemployment is unlikely to be, and should be, socialised by the neighbourhood context. Furthermore, undercontrollers’ work commitments and unemployment and overcontrollers’ work commitments are influenced by the neighbourhood, while resilient youth remain unaffected. This finding is in line with the idea that resilient youth are better able to cope with environmental demands, while overcontrollers and undercontrollers are more likely to be affected by their environment.
came part of the EU. They have experienced more negative images after Poland joined the EU while their situation should have improved with the change in legal status. They narrate about their position in Dutch society, the changes they have seen, and the stereotypes they have to face. They confirm that ‘tolerance’ is no longer a key component of Dutch society, and tell about the social and economic barriers they face.

Their migration experiences and their encounters with Dutch society reveal a complex image. Coincidence, doubt and hard work are main characteristics of their histories. The in-depth interviews reveal that there was little thought of long-term planning and that choices were made rather haphazardly.

Space, Time and Symbol in Urban Indonesian Schoolboy Gangs

This paper uses theories of honour and masculinity to look at the phenomenon of male youth fighting in the urban space of two cities in Central Java, Indonesia. The masculine habitus of lower middle class Javanese schoolboys is referenced in local collective violence. Acknowledging the long history of heroic warfare and factionalism in Java, the data point to the pleasurable sense of oneself as a kind of warrior fighting with a band of brothers on specified ‘battlefields’ in the city. Four points emerge from the analysis. First, peer fighting is a temporally-bounded activity that ends with the school-to-work transition, thus bearing out Messermichart’s (1993) argument about the conditional and compensatory nature of collective masculine violence. Second, alcohol plays an important role in amplifying peer conflict and honour disputes. Third, getting a girlfriend demands the expression of a different kind of masculine habitus from that operationalized in peer fighting. Finally, Muslim schoolboy youth squads (gengs) are intense formations for the construction of warrior masculinities, employing theologically-informed imagery in battles with boys from secular and Christian schools. The spaces of battle are identified with names that anchor them to the global Islamist struggle.

Using Local Cultural Forms To Talk To Youth In The Global South

This paper uses material from two research projects, one in Fiji and the other in Java, Indonesia, to discuss the value of using local cultural forms of group talking to engage youth in everyday situations. First, although the convention of talanoa as a decolonising methodology has become popular in the Pacific, talanoa refers to storytelling. In Fiji the kind of talking which is closest to a focus group discussion is veivosaki-yoga, which in Fijian literary parlance means ‘worthwhile discussion or conversation’. The term veivosaki connotes a neutral sense of conversation and dialogue rather than storytelling. Yoga literally means ‘useful or worthwhile’. By engaging in veivosaki, Indigenous Fijian participants are tuned in to a form of communal dialogue that demands their serious consideration and response. It is therefore useful for discussing a range of issues with young Fijians concerned about their future. Second, the cultural convention of nongkrong (sitting around or walking around with friends talking) has started to be recognised by some Indonesian youth researchers as a productive method for gathering data from young people for whom nongkrong is their favoured leisure practice with age peers. Nongkrong is extraordinarily difficult to translate. It is culturally distinctive, but nothing much really happens. In some ways it is like talanoa research in that the silences may be as meaningful as the comments. None of these cultural forms of group talking matches the rigid definition of focus group discussions (FGDs) typically offered by western books on research methodology, yet they are far more culturally appropriate to the everyday lives of young people in these two countries.

Discovering Ideological Codes in the Professional Work of Daycare Personnel

During the last decades there has been a tremendous growth in the enrolment rate in daycare centers in Norway to the extent that 96% of all children attend daycare centers before they reach school age. Thus, daycare has become an important socialization arena, supplementary to parents, and a place where the demarcation line between ‘the private’ and ‘the public’ is rendered indistinct. The private becomes public when problems associated with the private sphere, for example behavioral disorder, child neglect etc., become a public responsibility. Simultaneously the public is private when normative understandings of what is accepted and accepted are transformed into public standards and definitions of ‘the good’ contributing to inform and shape parental socialization goals and practices, and the daycare personnel’s appreciation of parental practices and their gaze on the children. Alongside the increase in daycare centers there has been a demand for increased professionalization of the sector, which in general is dominated by personnel lacking formal education. Important in this respect is early intervention; the obligation of daycare personnel to intervene when a child does not develop adequately or has a worrying home environment. The development of professionalized tools aimed at mapping children’s cognitive and emotional skills are increasingly being introduced to sort out children who are in need of extra concern. However, daycare personnel report to rely on their own embodied sensitivity in regard to concern for children. In this intersection between standardized mapping and personal ‘stomach feeling’, some distinct ideological codes come into play. What constitutes ‘normality’? Is normality absolute, or are there different definitions for different children? And how is normality and abnormality (not) spoken of? The paper addresses these questions in relation to the concepts of ideological codes and ‘ruling relations’.

The Practice of Control in Risk Activities

In this paper I would like to challenge the dominating understanding of voluntary-risk-taking as activities with a focus on risk (Lyng). Instead I am arguing for a shift in focus from risk to control, which is the outcome of a successful interaction with risk. Based on ethnographic fieldwork on climbing and scuba diving, I analyse the practice of control as what Foucault calls a “technology of the self”. With this shift in focus from control, participants in risk activities are understood as practicing a dominating ideal in the post welfare era, where the individual is increasingly supposed to be responsible and in control of his/her own life (Simon).

Legalizing Internet Piracy through State-Invented Religion? a Case Study of the Swedish State’s Acknowledgement of the Missionary Church of Kopivism As Religion

In 2011 the Swedish Kammarkollegiet, the oldest public authority in Sweden, acknowledged The Missionary Church of Kopivism (Det missionerande kopi-mistsamfundet) as a faith based community (trossamfund). The Church is built on the idea that copying and the spreading of information is an ethical right. As a registered faith based community the Church qualifies as an organized and by the state approved religion, as such it is protected by Swedish constitutional law where it is stated that freedom of religion is absolute. Regardless of the sincerity of its creators, does this mean that the Church has found a way to legalized piracy for its members? If so, what future implications could this case have? The overarching question we would like to ask in this article is how the category religion enables the state apparatus to produce legitimate and illegitimate subject positions and what the consequences of this production are in relation to power and ideology.

A Discourse on Transnational Crisis of Legitimation

Historically, instances of transnational interactions between dominant and subordinate societies, through the instrumentality of the political state, had been anchored on particularistic vested interests that may quite often be of asymmetrical advantage, or may not necessarily be of mutual

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
benefits. It is argued that transnational socio-political, economic, cultural, military expressions of hegemony (or pervasive domination) are invariably in tandem with the particularistic vested interests of dominant forces of imperialism. By the same token, parties (i.e., societies/political states) in situations of subordination suffer deficits, as a consequence of their vested interests being determined due to exigencies of unequal exchange. However, imperialist forces of hegemony are quite often challenged, as expressed by counter-hegemony or crisis of legitimation, in response to conflictual vested interests. Pursuance and propagation of multi-lateral vested interests are quite than excludes solidarity by transnational hegemonic blocs, irrespective of potential or actual resistance. Hence, the enduring widespread global instances of legitimation crisis, which may be construed as acts of “terrorism”.

JAPA-15.4 NISHIHARA, KAZUHIUSA* (Seijo University, vzs00645@nifty.com) SHIBA, MARI (Jari Society Promotion of Science) Temporary Transnational Migrants from East Asia to Japan As Unskilled Foreign Workers and Methodological Transnationalism in the Age of Globalization

The objective of our presentation is to show the juncture between the sociological concepts on transnationalisation and people’s practices while referring to the temporary transnational migrants in Japan. In contemporary Japan since the 1990s, a large number of unskilled foreign workers (=trainees) from East Asian countries have been introduced to the urban and rural areas as temporary labors under the foreign trainees’ system. We focus on these trainees, called ‘Kenshusei/ Jishusei’, at agricultural villages as well as the fishery manufactures in fishing villages, severely damaged by the Great East Japan Earthquake and Tsunami in 2011.

Based on the field research, we will discuss a sociological concept named ‘methodological transnationalism’, in parallel to ‘actual transnationalism’ and ‘ideational transnationalism’. While recalling ‘methodological cosmopolitanism’ as a critique on ‘methodological nationalism’ by U. Beck, we will examine the meso-level perspective between methodological cosmopolitanism and methodological nationalism. In the present situation of North East Asia where nationalism and political tensions are continuously rising, the meso-level perspective in methodology is required in relational transnationalism. This is also a standpoint that associates with a critical viewpoint against the traditional perspective of sociology.

Another concept we discuss here is the ‘mediators’, a proximate concept to the G. Simmel’s. However, we took further analysis on the concept and categorized them according to the level: from informal/sympathetic type up to formal/businesslike type. We particularly pay attention to the ‘bridge-type mediators’, regarding as inevitable actors in transnational interactions.

Based on the discussions above, we will examine an implication on conceptions of the nation-state and (civil) society as the most decisive points in sociology. It is the conception of ‘society beyond a nation-state’ along with the perspective of methodological transnationalism, that is also required to contemporary/future sociology.

NISHIMURA, KEIKO* (University North Carolina Chapel Hill, nishimk@live.unc.edu) Re-Entering the Labor Market after Childbirth Among Japanese Women

This paper explores the women’s working career after childbirth in Japan. Many Japanese women quit working around the time of their first childbirth, and re-enter the labor market when their children get somewhat older. This study focuses on the process of re-entering the labor market. Some previous research already investigated on these issues. However, most of them only focus on the getting a job for the first time after childbirth. This study further explores what happens in women’s career after they get job for the first time after childbirth, because it seems that many women experience the changes of their employment status even after re-entering the labor market. Data used in this study is Japanese Panel Survey of Consumers (JPS). This study uses data collected from 1993 to 2008. Those women who had their first childbirth during above observation period, and did not working in the year of their first childbirth are selected to describe the working career after childbirth and analyze the determinants of F. Results of Cox regression model show that university graduates are less likely to expect a new child than those who completed high school, however, it seems that husband’s income is more important than levels of education on whether a woman get a job or stay out of labor force. Then, focusing on the women who started their first job after childbirth, non-standard employees, their working career afterward is analyzed. The results imply that those who graduated from university are more likely to change their employment status compared to those who have high school diploma. Based on these results, Japanese labor market structure and the difficulties of women’s career development will be discussed.
Politics of Science Online: Discursive Negotiation of Risk and Uncertainty Regarding Radiation Contamination

As the details of nuclear accident in 2011 unfold, many Japanese were forced into the world of scientific jargons that might determine their life. Some believed the scientific assessment of “no immediate harm,” others alerted the danger of both short- and long-term harm of radiation contamination. As Beck (1992) notes that “the sources of danger are no longer ignorance but knowledge” (p183), the knowledge itself confused their understanding of radiation and political stance. While the national discourse was seemingly splitting into two “dangerous” and “safe” camps, there have attempted to assess the risk themselves by negotiating their ideas about safety, health, and lives through various discussions in mass, print, and online media. Especially the open discussions in the social media, whose popularity is tied to the activities in the triple disaster (Sater, Nishimura and Kindstrand 2012), is an important sites where laypeople’s experience, knowledge, and logic are constructed and negotiated.

This paper attempts to illustrate how popular epidemiology (Brown 1987, 1997; Murphy 2006; Novotny 1994) and scientific knowledge about radiation contamination is negotiated in Japanese online discursive space. I compare and contrast two major rhetorics: one that is skeptical of, and another that claims immediate harm of radiation. I center my analysis to those on Twitter, due to its open architecture and ability to identify individual participants. My aim is to explore the different ways in which participants of online discussion are making sense of the situation, from their living space, food, water to their health, family, job, etc. Furthermore, I look at the debates around Kusumoto Taro, an activist politician who was elected to Upper House in 2013 by centering his campaign around anti-nuclear policy, and how such online discursive space may have ramification to the transformation of political in Japanese society.

Unpaid household labor and the provision of care within families present an important determinant for individual and collective welfare. However, in the past decades, the feminization of household employment structures have undergone significant change. In particular, the increase of dual-earner couples and demographic shifts challenge traditional arrangements of paid and unpaid labor within the household. Households are thus increasingly confronted with the decision whether to share or specialize responsibilities. It also sheds light on the normative frameworks about family and gender, affecting the choice of what and how to outsource specific tasks.

While common explanations emphasize the relevance of time and labor costs for such make-or-buy decisions, empirical results call for further explanations. From a sociological point of view the relationship between supplier and the household contains many issues which generate trust problems. Moreover, the outsourcing of household labor is embedded in a normative framework about family and gender, affecting the choice of what and how to outsource specific tasks. Although time pressures of households are increasingly relevant, the topic has so far been understudied. Especially in Germany there is little empirical evidence about the outsourcing behavior of households. The paper thus analyzes the determinants of outsourcing decisions of households in Germany.

The analysis is based on the waves 1992-2013 of the German Socio-economic Panel (SOEP) applying panel data methods. Theoretically the analysis draws upon new home economics, family sociology and economic sociology. The article gives insight into the decision-making processes of households. It also sheds light on the normative frameworks about family and gender, affecting the choice of what and how to outsource specific tasks. Although time pressures of households are increasingly relevant, the topic has so far been under-studied. Especially in Germany there is little empirical evidence about the outsourcing behavior of households. The paper thus analyzes the determinants of outsourcing decisions of households in Germany. The analysis is based on the waves 1992-2013 of the German Socio-economic Panel (SOEP) applying panel data methods. Theoretically the analysis draws upon new home economics, family sociology and economic sociology. The article gives insight into the decision-making processes of households.

Recently, growing interest has been turned toward the inherent boundaries between the work and home domains and how these boundaries are created. There have been discussions surrounding the increasing permeability of these boundaries and even their disappearance. Scholars research on regional mobility of couples has shown that it is mostly women who make these concessions and who suffer disadvantages with respect to career opportunities. A common framework for explaining such gendered outcomes has been proposed by Mincer who assumes that a joint move will occur if the gains of one partner outweigh the losses of the other partner. Since women are (still) mostly in the role of secondary earners, their losses can be outweighed more easily. However, with the rise in women’s employment participation the potential for couples co-location problem has grown, especially for the higher educated with more specialized careers. One implication of the Mincer model would be, that in particular dual-career couples should be significantly more mobile than other couple types. This contribution aims to explain these contradicting findings and to shed more light on the mobility decisions of dual-career couples by analyzing more thoroughly the circumstances of such migration. In particular it tries to combine mobility research with regional sociology and economics which emphasizes the relevance of regional opportunity structures, especially those of urban labor markets. Theoretically an extension of the Mincer Model is proposed by referring to a bargaining model of household decisions. The empirical analysis is based on panel data analysis of the German Socio Economic Panel, waves 1992-2011. The paper also gives insight into recent developments in urban settlement and the changing social structure of large metropolitan areas.

In 1997, China established its first ecomuseum as a new cultural strategy to safeguard ‘living heritage’ and develop local cultural economies. China has since experienced a wave of ecomuseum projects across the country, developed as ‘museums without walls’ encompassing the entire cultural landscape of a locality with a mission to involve the local population in the interpretation, management and protection of their cultural heritage. The ecomuseum marks an urgent need to address the pressures of modernization on the retention of local cultural traditions and a recent focus of heritage and museum work on intangible heritage practices. With the establishment of ecomuseum projects in rural ethnic minority regions, local populations have become a new tourist target. The tourism discourse that aims to integrate them and their ‘living heritage’ as objects and subjects of a modernizing China. In this paper, I offer an ethnographic perspective on the unfolding of the first ecomuseum project in Guaxixi in the Yao village of Huaiyi. Given the emphasis on the project on a community-based approach to safeguard ‘living tradition’ and promote rural development, I examine how the process of ecomuseum development not only changes the rural locality itself but also the local community’s view of its heritage and ability to control it. Particular attention is paid to understanding how the ecomuseum and the intangible heritage discourse impact the local community and shape their conceptions of heritage tourism identity as multiple forms of imagination and authentication of heritage come into play through the ecomuseum contact space.

Ambiguities in Discontinuing Medication: How General Practitioners Make Sense of Discontinuation and Their Strategies for Reducing Ambiguity

This paper will examine how general practitioners (GPs) deal with ambiguity in order to perform medication discontinuation. I examine the case of statins as it is a strongly recommended drug for reducing the risk of cardiovascular disease, however there several possible complications with taking the drug such as side effects, drug-drug interactions and lack of effect because of old age. Discontinuing the drug is therefore not a straightforward task, rather it involves a great deal of ambiguity. I draw upon interviews and observations of Danish GPs and document analysis of two independent drug recommendation bodies in Denmark, I analyzed GPs' strategies for dealing with three important problems related to discontinuation: 1) assessing the validity of patient reported side effects as a reason to discontinue; 2) discontinuing a hospital specialist's prescription; 3) assessing the likelihood of a positive outcome after discontinuation. Drawing on sensemaking-theory, I outline the strategies a GP may use for dealing with ambiguity and selecting alternatives with regards to patients drug prescription. I show how these strategies are shaped by professional qualities, including: terrain of responsibility (who's responsibility it is to discontinue), prioritizing ability (how comfortable is the GP prioritizing from a long list of medications), shared communication with patients (how two way is the communication) and discontinuation confidence (are the GP prioritizing from a long list of medications). I conclude with recommendations for how to support appropriate discontinuation in primary care and the role of GPs in shaping patients medication use.

Re-Building a Conservation Organization: The National Trust for England and Wales in the 1960s

The growth of conservation organisations was one of the more striking features of post-war social change in Britain. With their roots in late Victorian and Edwardian ideas of preservation and conservation, the membership of these organisations expanded markedly from the 1960s. The two biggest national organisations – the NT and RSPB – saw their combined memberships grow from just under 300,000 in the mid-1960s to over 5M by the turn of the century, making organisations expanded markedly from the 1960s. The two biggest national organisations – the NT and RSPB – saw their combined memberships grow from just under 300,000 in the mid-1960s to over 5M by the turn of the century, making organisations expanded markedly from the 1960s.
object of this communication is to present the GENIND project and its results. It discusses the convergent and divergent elements of such movements, its innovative aspects and its continuities with previous movements and their local and global impact on youth and society.

Geographies of the European Spring: The Case of #Spanishrevolution

Along the week prior to the past local and regional elections in Spain celebrated on 22nd May 2011, many Spanish citizens took several places and streets to denounce local corruption and national economic situation that are deteriorating democracy in Spain. Immersed in a strong economic uncertainty mainly marked by a great lack of individual as collective future, the eternal Two Spains have bumped into themselves. This paper will show how the so-called #Spanishrevolution of the present history of Spain which the urban, modern and young Spain has raised their voice against the rural, traditional, pure, old Spain. Mainly based on a sub-regional scale analysis of the #Spanishrevolution, this paper will show how the young, urban, modern Spain openly expresses that it is not willing to keep on badly surviving in the city while the rural Spain continues to lie in their country houses without showing any sign of entrepreneurship, awaiting the arrival public subsidies mainly funded by the European Commission as well as its Spanish wealthiest sisters regions. The Northern Spain has said enough to the South. Rather than showing a Hegelian spirit of the people, the #Spanishrevolution is a cry for the modernization of Spain.

Le Travail Migrant Temporaire Au cœur De La Dynamique De Centrifugation De L’emploi Vers Les Marchés Périphériques Du Travail: Une Perspective Canadienne

La communication (qui se fera en anglais) présentera trois exemples de programmes mis en place par le gouvernement canadien et favorisant l’essor de ce que nous appelons le travail migrant en régime dérogatoire sur les marchés périphériques du travail: 1) les travailleurs agricoles saisonniers migrants embauchés dans le cadre du Programme des travailleurs agricoles saisonniers (PTAS); 2) les aides-domestiques migrantes embauchées dans le cadre du Programme des aides familiaux résidants (PAFR); 3) les travailleurs migrants temporaires dits “non qualifiés” embauchés dans le cadre du Volet des professions peu spécialisées.

Partant d’une analyse de l’évolution de ces programmes, il s’agira donc de bien mettre en relief, au-delà du fait que les travailleurs migrants temporaires jouent le rôle d’une “armée de réserve, que les programmes de travail migrant en régime dérogatoire agissent comme une interface entre le cadre national et international afin de faire jouer la concurrence entre les travailleurs dans des marchés qui ne sont pas — pour toutes sortes de raisons — “externalisables”, tout en préservant l’un des plus grand parapluies防守aboutinglibéralisme réellement existant — qui fait de la liberté de circulation pleine et entière, l’apanage exclusif des biens et services et non des travailleurs. De manière à établir la cohérence d’une politique du travail visant en premier lieu la mise en concurrence des travailleurs, l’analyse montrera comment les différentes historiques ont également été instrumentalisées lors de la récente réforme de l’assurance-emploi au Canada. Nous mettrons ainsi en relief l’instrumentalisation non seulement en termes d’exploitation de cette main-d’œuvre au rabais, mais, plus encore, aux fins d’une stratégie d’éclatement d’un régime de travail de type universaliste. Ultimement, nous montrerons que la dérégulation, la logique de déstabilisation place le travail migrant temporaire au cœur d’une dynamique de précarisation par la centrifugation de l’emploi vers les marchés périphériques du travail.

Organizing Female Workers In The Informal Sector: A Case Study Of Learn-Dharavi

Labour flexibility is a hallmark of a new economic model marked by the rise of informal and precarious work. Given this structural transformation, many scholars have invited unions to organize the unorganized “at the rough ends of the labour markets” (Heery and Adler, 2004) because it is from this engagement that new forms of unionism will emerge (Murray, 2004). India is no exception. The NCEUS have shown that the economic liberalization process of the 1990s have trigger a “jobs’ centrifugation dynamic” that pushed employment towards peripheral labour markets. Since then, Indian scholars have also stressed the importance of trade unions to refocus on the “organizing model” and invest these segments (Bhowmik, 2005; Agarwala, 2008).

It is in this spirit that LEARN-Dharavi, an NGO, has successfully launched organizing drives aiming to stir collective action involving women working in the slums of Mumbai. Building on our previous research in the shipbreaking industry (Nature, 2003) and empirical data collected through interviews with representatives of LEARN-Dharavi (local leaders and female workers/members involved in different industries i.e. domestic services, canteen workers, embroidery, garment industry, street vending), the paper will present the result of a case study conducted in 2011-13 using the analytical framework developed by Coromeau (2005). It will first examine elements of contextualization regarding the State’s role in the development and “regulation” of the informal economic activities, then present the struggle’s chronology and discuss strategies, practices and demands put forwards by the different grassroots unions that emerged from LEARN’s actions. Finally, it will take a look at the “raising issues” in order to highlight the gap between discourses and practices and identify the difficulties facing traditionally organized labour when seeking to transform itself in order to meet the needs of the so-called “informal workers”.

Organized Reaction to Experiences of Stigmatization: The Identity Politics of a Muslim Organization in Switzerland

The success of the Anti-Minaret Referendum of 2009 in Switzerland was due to a long, intensive campaign of the far right political parties. The pre-referendum campaigners highlighted the signal effect of the legislation as a means to contain the “Islamic threat” in Switzerland, many Muslim organizations regarded the campaign as a concerted effort to stigmatize Islam and to discriminate Muslims.

This perception motivated a group of young Muslims to institutionalize their efforts in countering the anti-Islam activities of the far right. Thus, in 2009, the Islamic Central Council Switzerland (ICCS) was founded.

The current study investigates the identity politics of ICCS as well as its strategy to cope with what its members regard as a “conspiracy” of the far right political parties to “subjugate” the Muslim community. The paper draws on in-depth interviews with active members of ICCS as well as on data collected through participatory observation of the public events of the association.

It is argued that ICCS, very much inspired by identity politics of other minority groups, strives for what Jürgen Link (1999) would call “production of normality” – namely the recognition of Islam as a “normal” religion equal to Christian and Jewish communities.

The paper also highlights the following strategy of ICCS: Whereas the far right clearly tries to eliminate the visibility of Islam in the public spaces, the ICCS activists try not only to publicly observe an orthodox Islam, but also to propagate it. It is finally argued that the dialectics of stigmatization and provocation seems to serve the xenophobic agenda of the far right much more than the ICCS strategy of establishing the normality of Islam in Switzerland.

This study is a part of a long-term project funded by The Swiss National Science Foundation investigating the narrative identities of Muslims active in voluntary associations.

Post 3.11 Movements in Japan: A Mental Map Approach

In this presentation, we attempt to clarify the nature of antinuclear movements in Japan after March 11, 2011, from the viewpoint of participants’ mentality.

On March 11, 2011, a big earthquake and a gigantic tsunami hit the northern part of Japan. The tsunami also paralyzed the emergency power system of the nuclear power plant in Fukushima, causing power plant explosions. The nuclear accident and subsequent radioactive contamination send a majority of Japanese people in fear and anxieties.

“March 11 (3.11)” ignited a volume of civil actions. Day in and day out, one spontaneous action was followed by another. The movement also spread out geographically, so that residents in different localities have witnessed protest actions taking place successively.

Resurgence of protest actions has prompted researchers to inquire into the nature of the post 3.11 antinuclear movements in Japan. With only few exceptions, however, studies have focused on objectively observable events and other morphological features to understand today’s movement. This practice leaves us with little understanding about cultural and mental aspects of the movement.

In this presentation, we focus on participants’ mental aspects to characterize today’s antinuclear movements in Japan. Using handouts and written materials, we extract meanings campaign participants subjectively attribute to the nuclear
 explosions and their subsequent act for denuclearization. We try to reconstruct a web of meanings existant in the 2012 campaign, also identifying central meanings and important subsets of meanings. We employ a comparative design, comparing the 2012 campaign against the 1954 campaign, to highlight important features and characteristics of the movement today.

Our major finding is that, while 1954 movement dominantly drew its significa-
tion from collective memory of Hiroshima and Nagasaki and risk on food safety, post 3.11 movement was strongly driven by motherhood mentality to protect a child and a concern over local environmental protection.

Social Movement Transformations in the 20th Century: Japanese Experience

In this presentation we investigate causes and conditions of social movement change in the post-World War II Japan. Social movements in Japan have experienced tremendous transformations after the World War II. Starting with the movement surge in the 1950s, Japan witnessed a sharp rise in popular protest in the early 60s, culminating in the peak in late 60s. After a sharp decline in the early 70s, the entire civil action has stayed relatively dormant since then. Japan also witnessed huge transformations in repertoires of contention. In the 1950s, Japan saw a rise in labor movements, along with anti-capitalist, student, and environmental movements in 1960s.

Why did Japan, as non-western democracy, experience such a huge transforma-
tion in social movements after the World War II? Big shifts in quantity and quality of social movements have been recorded in some other countries. In such cases they often experience huge structural transformations. The Japanese case, with no structural change during the latter half of 20th century, does not allow us to lay out the same explanation. Also the shift is not toward a “social movement society.” Japan seems to have become a society content with what they have.

We employ both qualitative and quantitative methods to investigate into the causes and conditions for social movement change in the post WWII Japan. Quantitatively we use event data analysis to identify changes in volume and categories. Qualitatively we look for cognitive change that involve shift in values and percep-
tions toward social movement.

Our finding is that change in international politics along with growing global civil society had to do with the change in social movements in Japan. Also past experience of the 60s may have had a negative effect on the perceptions and motives of the later generations to give rise to social movements.

Routines As Competency. New Medical Routines for Hybrid Health Care Professionalism

Organizing health care services increasingly encompasses hybrid forms of medical professionalism. Relations between managers and medical professionals become less binary and oppositional; organizational forms become less performance-based and less strictly managerial; medical professionalism itself becomes more organizational. In this paper we focus on the latter trend, as most studies on hybrid professionalism tend to focus on the other two. The rise of “organizing professionalism” (i.e. medical professionalism that includes organizational and managerial capabilities) is usually approached in terms of new competencies. New competency models, such as the CanMEDS model for medical professionalism, circumscribe the new roles and acts that (medical) professionals have to perform, including collaborative and managerial roles. We take another approach; we see competency as an institutional phenomenon, instead of an individual one, and we focus on medical routines in order to analyze institutional competency. Medical routines represent institutionalized aspects of medical acts and practices and might help of hinder the rise and spread of (innovative) hybrid service delivery that is collaborative and was segmented. We especially focus on the many practical and everyday sides of medical routines. We focus on the everyday sides of orga-
nizing health care by medical professionals, including multi-professional collabora-
tion and quality and safety management. We (a) explain what we mean by medical routines as institutional competency, (b) describe current changes in medical routines that enable the rise and spread of collaboration and quality and safety management by medical professionals, and (c) trace effects on medical outcomes. Empirically, we focus on changing routines in a Dutch academic medical center.

Although the trichotomy of the world-system often is specified in terms of presciences of each stratum, particular to the global division of labor, an increasing number of studies specify and define such strata in relational terms. Parallel to this, the core-periphery concept has also been specified by network scholars as a structural template that captures some of the original relational connotations. However, even though the semiperiphery has a distinct role in world-system analysis, with several scholar focusing explicitly on this particular stratum, very little has been said about the relational patterns of the semiperiphery. Rather, in relational (network) analyses, semiperipheral countries are typically those whose relational properties fit neither the core nor the periphery. Combining a novel approach for blockmodeling of valued networks with a novel approach that identifies dependency and dominance in core-periphery structures, this paper addresses the following questions: does the semiperiphery, similar to the core and the periphery, has its unique patterns of ties? If so, what patterns? What are the characteristic patterns of ties between the semiperiphery and the core and the periphery? Using pre-determined core-semi-
periphery-periphery partitions of the contemporary world-system as specified in the qualitative literature, the novel network-analytical methods are applied in the analysis of international commodity trade matrices in search of would-be ideal blocks that characterize semiperipheral relations. Finding such would not only allow for identifying semiperipheral countries based on their relational features, but, as something distinct from similar blocks for core and periphery, respectively, it would also allow for mapping patterns of dependency and dominance within the semiperiphery and its patterns to the core and periphery strata. Additionally, it would provide the formal network-analytical toolbox with a specification and possible structural definitions of core, semiperiphery and periphery that actually stems from the actual context from which the trichotomy stems, i.e. world-sys-
tem analysis.

Higher Education of Women Between Heterogeneous Logics: Gender-Equality and Scientific Excellence As Conflicting Requirements in University System

At present the German university system is undergoing a number of reforms to improve its models of teaching and research. Equality politics have a high priority in this process. Gender equality in the higher education sector is still unrealized: Despite the fact that now equal numbers of men and women start studying, there is a big drop out of women in higher level of education systems, known as the “glass ceiling effect”. Because of that, equality politics also have take into regard later stages of university education, namely the doctoral and postdoctoral phase. This contribution is based on a scientific study from 2012, which analyses the benefits of the new measures to promote women within the junior researcher program of a scientific cluster, measures created as part of a new governmental funding policy. The German “Excellence Initiative” is one of the most important initiatives in higher education reform to strengthen international competitiveness and high-quality research. New incentives were created for universities to take into account both scientific and equality policy requirements, in order to reduce the well-known problems of women in this phase. By analysing the situation with the theoretical framework of Neoinstitutionalism, it can be shown that gender equality and scientific excellence are two different logics that came into conflict with each other. These measures partially lead to paradoxical consequences for the careers of women through the constantly changing interplay between hetero-
geneous environmental requirements and organizational structures. Instead of better support for women, new obstructions appeared in their careers. These un-
foreseen consequences arise out of conflicting institutional logics and were never intended by any of the institutional actors involved.

The “Invisible Hand” of Oppression - Symbolic Violence in the Precarisation of the German Labour Market

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
When we think about oppression and global inequality, we also have to ask why it is that many underprivileged groups suffer from oppression without any real resistance? With the analytical framework of Bourdieu's theory of practice I will argue that any theory that draws on the concept of intersectionality has to consider not only different categories of inequality but also the very processes of categorisation through labour. Taking into account this symbolic dimension of oppression in society may lead to a better understanding of its invertebrate persistence.

NORSTEDT, MARIA* (University of Lund, Maria.Norstedt@soc.lu.se)

The main question I will address in my paper is: what does the use of institutional ethnography help me see analytically that I would have risked not seeing with other methodological glasses? In order to discuss this, I will draw on and exemplify with my first analysis of the empirical material from an on-going workplace study about hidden disabilities and working life. In this moment I am in the process of doing this analysis. The study takes its starting in the experiences and work knowledge of individuals with hidden disabilities in order to understand individual, interactional and institutional aspects of identity for people with hidden disabilities when they decide to tell – or not to tell – others in the workplace. While discourse analysis is a relevant methodological approach in a study about people with hidden disabilities I argue that institutional ethnography (IE) through its analysis of institutional practices, can provide an answer to the long debated paradox among disability researchers: how to theoretically understand disability as a consequence of inequality/social structures without neglecting individuals’ bodily experiences of living with a disability. This is also something I will discuss in the paper with the help of my empirical data.

"What Do I Do Now?" Post-Retirement Leisure in Japan

Japan’s dankaisagai, the generation that was the foundation of the country’s “economic miracle,” are retiring. As their careers come to an end, Japan’s “greatest generation” seem to last at best in position to enjoy the fruits of their labors. But can they? Japan has the greatest average longevity, but its post-retirement leisure culture claves along lines of class, gender, and age. This paper first reviews leisure trends during the past 50 years, noting how they conditioned inequality in leisure expectations and practices. Three main factors affecting variation in leisure are then investigated in detail. 1) Class. Who actually retires and how? Analysis highlights the roles of retirement bonuses, pensions, and savings, as well as government supports. Japan’s elderly control much of the nation’s privately held wealth and many who are not rich have been lifted out of poverty, but poor elderly continue work out of necessity, while other carry on because work gives meaning in life. 2) Gender. In Japan’s strongly gendered society, retirement often finds two people whose leisure ideas have grown quite apart looking at each other across the breakfast table. The gendered nature of social participation remains evident in post-retirement leisure activities for men and women. Although "retirement divorce" is a danger, couples with sufficient means may find shared post-retirement leisure activities to be grounds for renewed mutual appreciation and affection 3) Age. Japan’s retirees exhibit significant variation in age (the so-called young olds, middle olds, and oldest olds), which influences leisure practices. As with gender and class, age-related leisure trend differences seen in Japan have parallels across East Asian societies. The paper concludes by considering the usefulness of the framework deduced from the Japanese case for studying leisure other Confucian catch-up economies.

Who’s the Terrorist?: Humanism and Moral Ambivalence in the Discourse on Terrorism

Although fathers’ roles have being adapted over the last three decades financial provisioning remains the essence of “good” fathering and the work schedules associated with fathers’ employment is a key factor that shapes their involvement in childcare and domestic work. However, the relative impact of fathers’ and mothers’ employment on paternal involvement in childcare is unclear, and little is known about the longer term impact, that is, whether the way parents organise their work and childcare arrangements in the first year of the child’s life impacts on paternal involvement as the child grows up.

This paper, based on work by Norman, Elliot and Fagan (Community Work and Family, forthcoming), investigates some of the tensions between employment and a father’s involved caregiver role. We open with a review of the qualitative and quantitative results from previous studies concerning father’s contributions to childcare, which highlight the facilitative influence of both paternal leave policies and other reconciliation measures have played in some countries. Then we focus on employed couples to explore the association that mothers’ and fathers’ employment hours have with paternal involvement when their child is aged three. Multivariate analysis using the UK’s Millennium Cohort Study reveals it is the mothers’ employment hours when the child is aged three that has the largest association with paternal involvement in childcare at this stage in the child’s life, independent of what hours the father works. Furthermore, both parent’s employment hours when the child was nine months old have a longitudinal influence on paternal involvement when the child reaches three, but it is the hours a mother worked when the child was aged nine months that has the stronger association with paternal involvement at age three. This suggests mothers’ work schedules are more important for fostering paternal involvement in both the immediate and longer term.

Moving up and Down in the Capitalist World System: A Qualitative Comparative Analysis of Patterns in Post-Communist Transformation

The relation of Communist world to capitalist World System (WS) is disputed subject, opinions including the views of USSR as semi-periphery power in the capitalist WS, as residual empire resisting integration into WS, parallel World anti-Sys- tem etc. It is however fuelled by promises of anti-communist counter-elites and broad populations of joining the core of WS in few years after re-introduction of free market and liberal democracy. After 20 years, analysts describe history of former communist countries in the 20th century as “detour from periphery to periphery”. Two decades of post-communist transformation, most of them remained in or returned to the positions where they were before Communism, some moved down from the semi-periphery to periphery, and only few managed to upgrade their world-systemic position. According to the trans- institutional wisdom, economic (shock therapy) or political (revolutionary removal of former communist power) factors are decisive for the early success of post-communist transformation. The author argues that neither economic nor politological explanations are sufficient to account for changes in the world-systemic position of former communist states (including China and Vietnam), and highlights the importance of cultural differences described in terms of four orientations (con- tinuation, adaptation, reaction and innovative) of social imaginary and social action on the eve of post-communist transformation. This argument is tested by qualitative comparative analysis of patterns in post-communist transformation.

What Makes Fathers Involved? Exploring the Relationship Between Paid Work and Childcare

Although although fathers’ roles have been adapting over the last three decades financial provisioning remains the essence of “good” fathering and the work schedules associated with fathers’ employment is a key factor that shapes their involvement in childcare and domestic work. However, the relative impact of fathers’ and mothers’ employment on paternal involvement in childcare is unclear, and little is known about the longer term impact, that is, whether the way parents organise their work and childcare arrangements in the first year of the child’s life impacts on paternal involvement as the child grows up.

This paper, based on work by Norman, Elliot and Fagan (Community Work and Family, forthcoming), investigates some of the tensions between employment and a father’s involved caregiver role. We open with a review of the qualitative and quantitative results from previous studies concerning father’s contributions to childcare, which highlight the facilitative influence of both paternal leave policies and other reconciliation measures have played in some countries. Then we focus on employed couples to explore the association that mothers’ and fathers’ employment hours have with paternal involvement when their child is aged three. Multivariate analysis using the UK’s Millennium Cohort Study reveals it is the mothers’ employment hours when the child is aged three that has the largest association with paternal involvement in childcare at this stage in the child’s life, independent of what hours the father works. Furthermore, both parent’s employment hours when the child was nine months old have a longitudinal influence on paternal involvement when the child reaches three, but it is the hours a mother worked when the child was aged nine months that has the stronger association with paternal involvement at age three. This suggests mothers’ work schedules are more important for fostering paternal involvement in both the immediate and longer term.

Labeling political enemies as terrorists became the new trend in the new millennium. It has not only become the cornerstone of discourse surrounding US foreign policy, but also a rhetorical tool employed by authoritarian dictators (such as Gaddafi during the Libyan crisis, and Assad during the Syrian civil war) in maintaining their grips on power.

It is argued that the threat of terrorism is successful in garnering public support for military intervention and authoritarian practices precisely because it plays on public fears and anxieties concerning anomie and unpredictable violence. The construction of a terrorist threat reinforces the authority of the state to ensure security and public safety, even sanctioning extreme measures (such as torture, intrusive surveillance and the outlawing of public gatherings) that would normally be viewed as antithetical to the humanistic principles of liberty, justice and tolerance. However, these measures are justified on the basis that terrorism is ‘evil’ and therefore requires a ‘means justifies ends’ rationale where humanitarian ideals are clouded by the ultimate concern. Terrorist groups, meanwhile, also cast their activities in terms of humanist and religious responses to oppression and aggressive foreign policy, even as they reject certain humanist principles and modernization as forms of Western imperialism.

By examining speeches and writings from key political figures, it will be shown how humanism and religion merge in the political discourse surrounding terrorism in ways that indicate uncertainty and/or duplicity over the moral foundations of contemporary political action and State power. Do such tendencies reflect differences associated with an emerging post-secularism humanism, or are they a Machiavellian bricolage of ambivalent and contradictory rhetorical elements? The answer is relevant to understanding to what extent the entrenchment of humanitarian ideals can serve to arrest the violence surrounding terrorism.

Social Stratification and Inequality in Japan

Social Stratification and Inequality in Japan

Silvia G. Novelo y Urdanivia

ABSTRACT

When one examines the subject of Japanese globalization, it quickly becomes apparent that international migratory movements occupy a special place of interest. This is due to the characteristics of this country, particularly its insularity, both in the physical and mental plane (sokoku). By focusing on the Japanese migratory phenomenon from a historical and structural perspective, this study would analyze possible Japanese population profile scenarios into the middle of the 21st century. The study will focus on migratory movements to the Americas, foreign workforce acceptance in Japan and inter-ethnic relations involving Japanese nationals and their descendants. The analysis has the tentative title of: The Sociology of Japan in the Post-Globalization Era.

Within Japan, the labor market as a whole has not been deteriorating. In fact, workers in the most important firms and in the public sector have been protected, while those on the periphery are exposed to ruthless foreign market competition. The nikkiejin, people of Japanese descent living abroad, fall into the latter group. Generally, this social grouping does not work for large institutions and firms. This phenomenon has contributed to increasing inequality between the two types of workers.

Persistent Japanese xenophobia is more apparent during transitional periods and has always been a characteristic of internal and foreign policies of the country. It has acquired distinctive traits with the opening of Japan to the world -Meiji age- and the consequent development of a colonialist mindset and territorial expansion. Will the nikkiejin of Latin America be able to overcome the deplorable mentality of sokoku and become the solution to the serious demographic problem that Japan is facing?

Key words: Sokoku, Japanese xenophobia, Nikkeijin, Americas, Japanese migratory phenomenon.

Woman Leader, Woman Employee and Ethical Organizational Culture in High and Low Gender Gap Index Contexts

Considering widely reported differences among countries in terms of innovation development levels, achievements in such fields as gender equality, organizational responsibility and other alike implementations (especially comparing American, African and European, North-South-East-European, Post-soviet-socialist countries), the paper focuses on women’s (and men’s) status in modern organizations. More specifically, the paper concentrates on perceptions of women leaders and organizational climate in the organizations working in such societies as Finland (Northern country) and Lithuania (East European post-soviet country). Quantitative data were collected by a web-based survey in Finland (2011) and Lithuania (2013, still under process). In this study, indicators of 2 scales are in the focus of empirical analysis: the Corporate Ethical Virtues scale of 58 items comprising eight dimensions of organizational virtues: clarity, congruency of supervision, transparency, management, feasibility, portability, transparency, discussability and sanctionability; the leadership practices scale of 7 items depicting interactions between a supervisor and a subordinate. Striving to ensure reliable comparability, one public Finnish (N=477) and one public Lithuanian (n=76 at the moment) organizations were selected for comparison.

Results of preliminary statistical analysis demonstrate that the respondents’ average evaluation of male leadership practices is higher than female leadership among Lithuanian respondents, but lower among Finns; also gender differences in the evaluations of corporate ethical virtues and effects of leader’s gender on the evaluations of CEV are almost absent among Lithuanian respondents, but rather obvious among Finnish ones. The findings do not only indicate effects of gender equality developments in countries with a high and low gender gap index (respectively, Lithuania and Finland), but also shed some light on interrelations between such phenomena as gender and leadership, gender perceptions of the ethical dimension of organizational culture, etc. In a comparative perspective. The analysis will be repeated at the end of 2013 after data collection process will be finished in Lithuania.

NOVIKOVA, NATALIA* (University of Tsukuba, novikovanatv@gmail.com)

Post-Disaster Literacy of a Japanese Local Community

More than two years have passed since the Fukushima Dai’ichi Nuclear Power Plant accident of March 11, 2011. The first phase after the accident, “collective moral confidence” (Petryna, 2013), suggested that the existing system will overcome the disaster, yet evolved into feelings of desperation and disorientation about actual risk. An escalated sense of the unknown and unexpected fostered a flow of voluntarism and participation in local decision-making processes. Engaged in the process of information sharing, consensus-building, and mobilizing their resources and connections, local activists have been trying to influence local government decision-making.

This paper examines the process by which the Fukushima accident has been dealt with in radiation-contaminated communities, yielding insights into local government responses to the nuclear accident and probing whether government-citizen relations have been altered in the aftermath of such a disaster. Through
fieldwork undertaken in 2013 in Abiko City, Chiba Prefecture, this paper traces the nexus of the community-NGO-government relationship, focusing on the after-effects of the Fukushima Daiichi Nuclear Plant accident. Utilizing civil society concepts and the expanding role of civil society in governance, we argue that civil society in a post-disaster community is an arena in which new ideas concerning governance are formulated and citizens' civic education is carried out. What is more, this paper provides what Charles Tilly called the "repertoire of collective action," in which people engage in modern post-Fukushima modes of political protest. While observing how people from a radiation-contaminated community have overcome risk-perception problems, this research gives insight on the modern Japanese capacity to deal with unpredictable human-made accidents, extending previously known scenarios of post-disaster management.

Characteristics of Becoming Sociology in Russia

Russian sociological thought XIX - early XX centuries was closely associated with the ideas of Russian philosophy and literature. The becoming of sociology in Russia was initiated in the framework of social journalism. The first sociological articles were published in the periodical press as a "Notes of the Fatherland", "Business", "Knowledge". One of the founders of Russian sociology N.I. Kareev highly appreciated journalistic contribution to the development of sociology, noting that the "Notes of the Fatherland" was the first in the Russian sub-faculty, which has participated in the creation of generation of sociologists. In the West the institutionalization of sociology, sociological deployment of higher education took place earlier than in Russia. Recognition of sociology at the state level in Russia was only after the February Revolution of 1917 largely due to P.A. Sorokin. The first sub-faculty of sociology was established in 1919 at the general education faculty of 2nd Petrograd State University. Only in 1916 was an attempt to create a "Russian Sociological Society name M.M. Kovalevsky". The Russian government prevented the development of sociology. The desire to prove with the help of positivism, Marxism or another theories led to unreasonable politicization of Russian sociology. On this occasion P.A. Sorokin said: "In Russia the two scientific arguments for sociology were: prison, exile and hard labour. Disinterested search for truth and the presentation of the results of this search were impossible". Therefore, the hallmark of Russian sociology was its oppositional political preconception. Probably for this reason Russian sociology was prohibited in 1929-1958 and officially named as pseudoscience.

Emotional Work During Biographical Research: A Researcher's Personal Reflection: Researcher's Experience (ongoing biographical research projects)

Social research are entangled in experience of researchers, who are emotionally affected by the work that they do. Particularly in qualitative research researchers' engagement could influencing on the resulting of data. Since during the biographical research facing many difficult situations. So it is in my case. In my biographical research with veterans I am often in difficult emotional situation. I am going to refer how I manage with this problem and provoke methodological biographical research with veterans I am often in difficult emotional situation. In my research I define this social category as veterans because respondents identify themselves as such, too. Thus, through collecting stories, the research seeks to explore experiences and understandings of former soldiers wounded and injured on mission abroad, both in terms of these constructions, and the ways in which people manage and negotiate them. My paper focuses on two ways of biographical research reflections. Firstly, on the considerable emotional challenges encountered during the research process and the ways in which these were managed through both successful and unsuccessful coping strategies. Secondly, I detail the ways in which my identity and biography impacted upon my emotional work and my relationships with participants. In order to embody such discussions I use excerpts from my own research diary and quotes from participants. Conclusions in my paper concern to the ways in which we, as the community of researchers, can do more to share our research experiences with each other for the benefit of ourselves and our work.
opment, transition, and expansion? How are men and women distributed across higher education? Which fields of study remain predominantly female (or male)?

The study then proceeds to explore the persisting patterns of gender segregation across different academic and professional fields of study, and considers their meanings from the perspectives of women's labor market participation and the shifting forms of marriage, childrearing, and other familial arrangements. The study argues that we should take both labor and marriage market forces into account in order to understand women's agency to make their own education and career trajectory choices.

A Characteristic of Private Sector in Japan about Climate Change Mitigation Measure – Corporate Culture That Puts Strong Emphasis on Harmony and Among the Sector -

Climate change has received growing attention in both political and public areas, and now, has become one of the most pressing environmental issues. This presentation will focus on private sector in Japan, and analyze their perceptions of global warming and measures to reduce greenhouse gas emission. How Japanese companies act against global warming issue? and what kind of characteristic can be found among the private sector?

The analyses are based on data from an international research project, Comparing Climate Change Policy Networks: COMPNet. This project explores characteristics of decision-making process around climate change policies and the Japan team conducted face-to-face questionnaire survey to 125 organizations during February 2012 to June 2013. In this presentation, special attentions are paid to comparitive analyses between companies and industrial associations. Careful examination will show a roll of industrial associations that adjust a diversity of opinion among the surveyed companies. On the one hand, each company has its opinion and measures toward global warming issues. On the other hand, industrial associations have functions to equalize these various opinions. In the process of summarizing claims within the industrial associations, various opinions tend to become conservative to keep strong solidarity as one industrial sector. As a result, it can be observed strong emphasis on harmony among private sector. This tendency can be explained by Japanese word “Wa”, which means “harmony”, is a key concept to understand Japanese culture and in general imply negative aspect.

Although the surveyed companies and industrial associations agree the fact of global warming on the whole, they disagree to implement some regulations to mitigate greenhouse gas emission. However, the important point is that this corporate culture has a function to prevent a company from emerging negative actor about global warming issues. This can be a characteristic under the times of neo-liberalism.

A Comparison of Social Process for Wind Farm Construction: The Case of Jeju Island and Hokkaido

As an alternative energy source for nuclear power and fossil fuels wind power is increasingly considered among the most promising energy sources in the twenty-first century. Accordingly, many of nation states have shown a great interest in promoting wind energy. However, when wind farm construction project is posed involving local places, different interpretations, values, and meanings are expressed for wind farm construction by local people. Therefore the rejection and approval of wind farm construction in local places are based at different logics depending upon specific context of local situations.

In this paper we present two case studies for successful wind farm construction projects in South Korea and Japan. Our observation was made for Jeju island province, located at southernmost part of Korean peninsula and Hokkaido prefecture, the island located at northernmost part of the Japanese Archipelago. In order to collect information as to locally involved process, we have interviewed leaders of local communities and NGOs from the winter of 2012. In this paper we demonstrate that wind energy can mean different things to local people than anti-nuclear and mitigation measure of climate change. The local people accept or reject the construction plan and its operation according to their economic situation and social, historical contexts.

Territorial Behaviours As The Regulators Of Interpersonal Space

Presentation of the research results concerning mental representation of physical space and territorial behaviours of socially excluded people, carried out with the use of visual methods.

Human territories illustrate the interdependent nature of the exchange between the man and the environment. Territories provide order and stability, as well as enable ‘mapping’ of such types of behaviour as expressed in specific places. In this way, they help us plan and organize our daily lives. Territorial behaviours understood as such have been the subject matter of my research, the results of which will be discussed in hereby presentation. The research aimed to identify the relationship between occupation of a certain space and the way of schematization of space, and, on the other hand, it served the purpose of recognition the relationship between knowledge about the environment and territorial behaviours. It sought to answer the question: how do the people who are experiencing social exclusion – either having a house or homeless – shape their knowledge about the environment? How can physical proximity and social distance? The mobile method – photo walk, which was used in the study, provided visual material for the analysis of territorial behaviours, and completed descriptive and graphic material obtained through space mapping, projective methods, in-depth interviews and surveys. In the presentation I will draw attention to the way physical space resonates with its ideas and the way of creating its own territories, which are a stage where social interactions are implemented. The ways of perception and organization of the space and the use and creation of its sociopetal and sociofugal character, by which it acquires the regulatory role for interpersonal relations and relationships, will be visualized as well.
ferring 6 or more children significantly declined with decreasing age, rising education, non-Catholic Christian affiliation and husband's desire for less children. Higher autonomy significantly increased the likelihood of wanting less than 6 or more children, having or not having siblings and co-wives were not significantly related to reproductive preference for 5 instead of 6 or more children. Age at first birth and age at last birth significantly raised the likelihood of preferring 5 or more children instead of five. * denotes a presenting author. Abstracts are organized by first presenting author's last name.
This discussion is based on more than a decade of participant-observation in a rural community with 8,000 residents and fifty churches. At the beginning of the decade, the author became a resident exclusively engaged in the full-time care of elderly parents. During the decade, a dramatic increase in overt hostility towards the rural elderly was observed and documented as a new culture was emerging to replace respect for the elderly with three main agents: predators, parasites and ambulance chasers.

This paper discusses variations among these agents as they accomplish their objective of financial exploitation of the elderly. The predator waits for an opportunity to exploit the elderly by profiting from their limited ability to defend themselves. Older children form a major predator group, along with those associated with assisted living and nursing homes. For parasites, economic survival flows from exploiting the elderly through provision of services and products that they are no longer able to access or acquire without assistance. Children and grandchildren increasingly operate as parasites. Observation suggests parasites at least double their profit from work for the elderly relative to other age groups. So the parasites operate from local shops and businesses or as attorneys engaged in servicing the elderly, with financial gain being similarly disproportionate as their primary objective. Medicare beneficiaries are often primary targets of parasites. Ambulance chasers may be engaged in provision of health care as well as entrepreneurs who offer people released from the hospital with assistance in selling everything they own, including their home; when met with resistance, phone calls to parasites in social services often facilitates the acquisition of a power of attorney for this final stage of asset appropriation. It concludes with observations suggesting 50 churches serving 8,000 are financially viable with these agents.

Stumbling over Emotions When Researching the Czech Feminist Scene

Since the fall of state socialism in what is today’s Czech Republic (CR), a feminist scene has emerged. It consists of sometimes contradictory activities on the level of (limited) grassroots activism in the form of zines and festivals, NGOs (such as the Gender Studies, o.p.s.), Czech Women’s Lobby, Czech Women’s Union and academia (a BA programme in Brno, an MA programme in Prague and a research centre within the Sociological Institute of the Academy of Sciences of the CR). The theoretical stances of those constituting the scene via their various, sometimes contradictory and conflicting activities has become the focus of my research. It consisted of a discourse analysis of materials produced by the scene as well as of interviews with the scene’s representatives.

Despite having been driven to the research mostly based on my own long-term interest in feminism and familiarity with the omnipresence of emotions in all walks of (not only) social research (e.g., Hesse-Biber 2012), the share of emotions manifested in the research was surprising. In my paper, I try to address the different emotions as they emerged in the research process in order to show how they impacted on the analysis. Besides the emotions informing the focus of the research and its design, three main sites were detected. Firstly, there were emotions showing up in the process of conducting the interviews. Secondly, there were emotions revealed in the coding process. Thirdly, there were my own emotions in response to the former two areas. Positive emotions are related to successful cooperation and achievement. Frustration and vanity stem from tensions and perceived unequal distribution of power and agency across the feminist scene as well as from the resulting limited potential to protest.
A New Analysis of Claims to Identity and Belonging: The Importance of Knowledge within Australian Native Title Claims

Within Australia success in native title claims for Indigenous peoples has come to be heavily based upon the ability of Indigenous groups to establish ongoing connection to land by presenting proof of the continuity of their identity and cultural practices since colonization. This paper explores the processes through which these claims of identity and belonging are made, and challenged, within Australian native title processes. It seeks to extend previous work examining what is creating the difficulties that prevent Australian Indigenous peoples from articulating and presenting their culture and identities in such a way that can be understood within the non-indigenous courtroom. Specifically, this paper will present a sociology of knowledge that enables new insight into these issues by bringing processes that underlie the legitimation of knowledge to the forefront. It will be demonstrated that engagement with the sociology of knowledge can be used to uncover the structural relations that inhibit Indigenous voices within native title claims. In order to do this the Australian Yorta Yorta native title case will be explored in depth using this approach. In particular the paper will deconstruct the arguments that led to the judgment that the 'tide of history' had 'washed away' the traditional laws, customs and culture of the Yorta Yorta people in direct opposition to their own claims. Through this analysis it will be shown that it was not simply the content of the knowledge itself that affected the final judgment, but a disconnect between two different understandings of the basis upon which knowledge may be considered 'legitimate'. Finally, it will be argued that the sociology of knowledge can be extremely useful in analyzing the ways in which different groups of people present their identity and senses of belonging, as well as the ways in which these claims are received by others.

Towards a Theoretical Model for the Reproduction of and Change in Gender Inequality in Higher Educational Institutions

This paper identifies key elements facilitating/inhibiting the reproduction of gendered inequality in the professoriate and senior management in higher education. Gender is seen as a social institution (Yancey Martin, 2004) and a multi-level phenomenon (Wharton, 2012; Risman, 2004). It is reflected in the societal allocation of power and resources; in state policies; in gendered organisational cultures, narratives and structures; in interactional stereotypes and perceptions and in gendered selves. Its multi-layered character can potentially exacerbate the difficulty of initiating change. However, in specific contexts, change at any of these levels may consciously or inadvertently affect change at other levels (Walby, 1990).

Cross national structures are a particularly important potential source of change since gender inequality inhibits economic growth (OECD, 2012; EU, 2012). At national level, the salience of gender issues varies. There is an underlying tension in the fact that women are disproportionately represented among knowledge workers, but are under-represented in those disciplines that are seen as most economically important (EU, 2012). Gender inequality is affected by the strengthening/weakening of other structures and the promotion of other societal or organisational priorities (including neo-liberalism; managerialism; definitions of excellence). At an organisational, interactional and individual level, agents of change include men and women who embody resistance as 'tempered radicals' (Meyerson and Scully, 2011) on any basis (gender inequality; care; other occupational experiences; collegiality etc). Finally, experiences in particular contexts may not be gendered (Rodgeway and Correll 2004), thus increasing the possibility of the emergence of coalitions.

This framework will be located in a cross national study of senior management, focusing particularly on Irish universities, and including a case study of one university where the proportion of women at professorial level increased from zero to 34 per cent over a 15 year period (O'Connor, 2014a &b)

Strategic Transitions For Youth Labour In Europe: The State Of The Debate

We examine how different comparative frameworks for international research have defined the ‘problem’ of youth unemployment. Reviewing national and European policies we argue that increased labour market flexibility in the context of an expansion of higher education and the legacy of long-term unemployment results in increasing polarisation for youth. Understanding youth unemployment cannot be limited only to the sphere of economic production and a narrow focus on skills attainment; it also needs to incorporate the role of families and social reproduction to understand how differential trajectories for young people have been created and are being reproduced. What distinguishes this phase of youth unemployment in comparison to the 1980s are family legacies inherent from previous recessions and the growth of work-poor households, the consequence decline of traditional employment careers as a result of labour market flexibility, and the very significant role of the European Union in funding new policy initiatives. This paper draws on the EUFP7 large scale projects funded by the European Commission on ‘Overcoming Youth Unemployment’.

The Street Politics Of The 3.11 Disaster

In the weeks and months after the Tohoku disaster on March 11, 2011, tens of thousands of people took to the streets in Japan to protest and voice their concerns about the government’s role in exacerbating the crisis. Of particular focus within these protests were the perceived mishandling of the Fukushima Daiichi nuclear accident, and the broader dangers associated with relying on nuclear energy. These protests were significant since they were some of the largest street protest to occur in Japan since the 1960s and 1970s when hundreds of thousands took to the streets of Tokyo to oppose the revisions of the US-Japan Security Treaty (AMPO). How should scholars, therefore, interpret and explain the recent anti-nuclear street protests within a broader perspective on popular forms of political dissent in Japan? What can these protests tell us about the nature of civil society in Japan? How did such a catastrophic event affect civil society groups already engaged in different social struggles? In an effort to help answer these questions, this paper approaches these questions ethnographically from the perspectives of different Japanese activists that were organizing public protests around irregular employment and growing economic inequalities before the disaster. What role did these groups play in the post-3.11 protests? How did they shape the street politics of the 3.11 crisis? Conversely, how did the crisis shape their politics?
The post-3/11 demonstrations against nuclear power have been regarded as a sensational development in Japan, where disruptive protest movements had been conspicuously absent since the 1970s. In contrast, I argue that collective public protests have been part of the repertoire of urban activists since the early 1990s, albeit rarely noticed by the larger public.

One prominent activist network is the group Shirōto no Ran in Tōkyō, who have been at the forefront of a number of protest movements from the early 2000s in Japan, e.g. the Freeter-movement or protests against urban regeneration and restrictive legislations. Not a pronounced environmentalist group, they nevertheless emerged as the main organizers of the early 2011 anti-nuclear demonstrations, utilizing their network and long-rehearsed creative protest repertoires. Besides these symbolic demonstrations, they enact prefigurative politics in their daily lives, implementing their alternative visions of urban sociality, entrepreneurship and empowerment. What distinguishes their network from other organizations is their strong cooperative and creative commitment beyond the restraints of conventional association like NGOs or political parties.

By interpreting their framing of the 3/11 crisis in a larger context of social change, the struggle against precarity and new developments in (proto-)political activism, I will explain how Shirōto no Ran as a non-environmental group did respond so quickly to the disaster – despite their low level of organization and professionalization. The key issues to be explored will be how they 1) organize themselves 2) develop protest agendas 3) mobilize participants, all seen under the larger topical and temporal trajectory within this group. By uncovering the workings of such seemingly “invisible” activist networks who operate outside the established civic organizations, the understanding of current forms of social movements in Japan will be broadened, re-thinking the terms of civic participation.

Reclaiming Their Streets: Prefigurative Politics on Contested Urban Grounds in Tokyo

The social vicissitudes of post-bubble Japan left many young Japanese looking for escape-routes not only from the restrictions of Japan’s societal norms but also from its highly privatized metropolitan layout. Addressing both issues, a few dozen activists of a countercultural scene in Tokyo have long experimented with alternative urban lifestyles, staging protests that oscillate between the symbolic and the prefigurative: struggling with the oppression in the use of public space, they introduced a countercultural infrastructure of small “autonomous zones” in some lesser-gentrified pockets of Tokyo, where they carve out free spaces for everyday living and flexible forms of political, social and cultural participation.

Moreover, long before “Occupy” even became a global catchphrase, they challenged the configuration of their urban surrounding (as well as local police) by staging disruptive yet playful events, like carnevaleque demonstrations, ad-hoc street picnics or the blockade of contested spaces. They tackle issues ranging from homeless rights to insecure employment, from state legislation to nuclear restrictions. Not a pronounced environmentalist group, they nevertheless emerged as the main organizers of the early 2011 anti-nuclear demonstrations, utilizing their network and long-rehearsed creative protest repertoires. Besides these symbolic demonstrations, they enact prefigurative politics in their daily lives, implementing their alternative visions of urban sociality, entrepreneurship and empowerment. What distinguishes their network from other organizations is their strong cooperative and creative commitment beyond the restraints of conventional association like NGOs or political parties.

By interpreting their framing of the 3/11 crisis in a larger context of social change, the struggle against precarity and new developments in (proto-)political activism, I will explain how Shirōto no Ran as a non-environmental group did respond so quickly to the disaster – despite their low level of organization and professionalization. The key issues to be explored will be how they 1) organize themselves 2) develop protest agendas 3) mobilize participants, all seen under the larger topical and temporal trajectory within this group. By uncovering the workings of such seemingly “invisible” activist networks who operate outside the established civic organizations, the understanding of current forms of social movements in Japan will be broadened, re-thinking the terms of civic participation.

Bridging the Gap Between Overseas Filipino Workers and Their Families through Social Media

The National Statistics Office (NSO) estimates 2.220 million overseas Filipino workers (OFWs) working abroad at anytime during the period of April to September 2012. The OFW started to analyze how the use of social media influences in communicating among families with OFW members. The birth of modern technology and its advancements, in this day and age, bridges the proximity between families who are separated in an attempt to improve their quality of life. It is argued that there are inherent tensions in this process of communicating with their families becomes a challenge. A specific purpose of communicating with their families through social media and internet is a factor that needs to be identified.

Using data from the quarterly surveys of Social Weather Stations among Filipino adults, the following questions address the following questions: (1) What forms of social media do migrant workers use to communicate with their families in the Philippines? (2) How often do migrant workers communicate with their families in the Philippines? (3) What challenges do families encounter when communicating with their families using social media? (4) How does mediated communication affect the dynamics of family relationships? (5) If a member of the family is non-digitally-literate, how then do they communicate with one another?

Here, utilizing empirical research and Filipino familial theory is analyzed to explain the benefits and disadvantages of communicating among families with migrant workers through social media.

Care Regimes and De-/Familialization in Asian Seven Societies

As the first paper of the panel based on an international joint research project on care in Asia conducted by Asian scholars from Korea, Japan, Taiwan, China, Singapore, Thailand and Vietnam, this paper introduces the research framework, social background information for comparison and major outcomes.

Care is one of key social issues today. It is usually claimed that population ageing, increases in women’s employment, changes in family life and welfare re-tracement are the reasons behind people’s growing concern on care. However, these are phenomena observed in western countries. The social conditions in Asian societies are different. This paper first clarifies the social background of growing concerns on care particularly in Asian societies. Then the paper reviews studies on care in Asia which were accumulated in the past decade.

Then the paper introduces theoretical frameworks on care, such as “care diamond,” and discusses how to modify the frameworks to apply for Asian cases. The concepts of familialism, face-to-face, de-familialization and re-familialization are defined and discussed carefully.

The 2000s observed various significant changes in care regimes in all the societies under consideration. The major findings are;

1) The role of the state is increasing in most societies. However, the state is playing its role not always in a direct way, but more often in indirect ways promoting market and community. Not only de-familialization policies but also familialization policies are implemented in the Asian region.

2) The role of the market is increasing dramatically in most societies.

3) People’s expectation for the community is increasing in many societies.

4) Socialist countries are showing different paths from other countries. The paths of socialist countries in Asia demonstrate commonalities and differences in comparison to the experience of post-socialist countries in Europe.

OCTOBRE, SYLVIE* (Ministère de la Culture, sylvie.octobre@culture.gouv.fr)

GALLANT, NICOLE* (OJS, nicole.gallant@uocs.inrs.ca)

From Cultural Globalization to Aesthetic Cosmopolitanism

‘Cosmopolitanism’ is often used in relation to ethics, politics and migration. But it is seldom employed regarding common and ordinary situations, such as everyday cultural consumption (Cicchelli and Octobre, 2013). However, recent research reveals that in France and Quebec (Donnan, 2008; Octobre et al, 2010; Pronovost, 2013; Poirier, 2012), there is a growing proportion of foreign products and contents in cultural consumption, as well as in tastes, norms, references and representations, especially among young people. Without eluding the dynamics of local cultures, hybridization and mixing (Amsselle, 1992), this “de facto” cosmopolitanism is deeply intertwined with the globalization of cultural industries. It may produce in individuals a feeling of cosmopolitanism regarding interests, attachments and imaginaries (Appadurai, 1996), or a feeling of belonging (Gallant, 2012).

The young people become via the globalization of cultural products they consume and their cultural habits (information media, cinema and theater attendance, Internet use and language practices, etc.)...

This perspective enables a reformulation of the question of “distinction” (Daloz, 2013) in two ways which are central to both the sociology of culture and the sociology of social groups. First, it questions the “cultural distinction” and the cultural legitimacy it is based on, either in Bourdieu’s classical view (1979), or in modernized versions, such as omnivormism (Peterson, 1996), or individual plurality (Lahire, 2006). Second, it calls into question the “social distinction”, through the reconceptualization of the boundary factors which mark new lines of fragmentation in young people’s cultural universes (Octobre, 2010). This talk will address these questions through a comparison between France and Quebec, within a mixed-method (qualitative and quantitative) research program.

Gender Wage Gap in Japan: Comparison Between Regular and Irregular Employment and within Irregular Employment

In the last 40 years, the gender gap in the labor force participation rate has significantly decreased in many Western capitalist countries; however, the gender wage gap remains relatively large. In Japan, female labor force participation rate and years of continuous employment, which are major factors in the lower wages of females, are still fairly lower than those of males. The gender wage gap in Japan is the second largest among OECD countries.

Sociologists and economists have investigated the relevant factors, including the gender identity and sexism of the labor market. Previous works emphasized employment status. In Japan, regular employment is full-time and permanent, whereas irregular employment is on a fixed-term basis. Women are largely irregular employees, and this has become a major source of gender inequality in wages. Further, the gender wage gap is not only seen in the bias in regular employment, but also within irregular employment types.

This study examined how the gender wage gap in Japan is affected by employment status using data from the Employment Status Survey conducted by the Ministry of Internal Affairs and Communications in 2002. I analyzed micro data using a multiple regression model: the explained variable is personal income; explanatory variables are sex, age, other human capitals, employment status, and family situation, including marital status and number of children. I likewise established the interaction between sex and other variables.

Results showed that differences in the gender wage gap mechanisms between regular and irregular employment are not significant. In the wage gap between regular and irregular employment, the female gap is smaller than that of males. In factoring in the families of employees, having children makes males’ wages go up and females’ wages fall.

ODA, ERNANI* (University of Campinas, ernanioda@yahoo.com.br)

Japanese Brazilian Migrants’ Views on the Status of Ethnic and National Categories in Japan

Recent studies have tried to avoid the pitfalls of essentializing international migrants as homogenous ethnic “groups” or “communities” by focusing on the transnational spaces and the hybrid practices that connect migrants’ sending and receiving countries. However, by restricting its attention to a duality between the country of origin and the country of destination, these efforts frequently neglect other important relations that lie beyond this dualism. Some scholars have responded to this difficulty by adopting a new kind of transnational analysis that investigates migrants not based on ethnic or national categories, but on aspects that are more comprehensive and diverse, such as the religious practices of migrants.

In this presentation, however, I examine the specific case of Japanese Brazilian migrants in Japan, and argue that one other possible strategy to deal with essentialist or ethnic categories that are rather essentialist at a starting point, but then, by critically examining the way they are interpreted by migrants themselves, develop a perspective that undermines the very essentialism of these categories. Based on fieldwork and life story interviews, I investigate how Japanese Brazilians in Japan often make use of essentialist categories about Brazilian and Japanese identity, but at the same time produce discourses that connect these categories to a much wider and even surprising horizon that includes other ethnic and national categories such as other migrant groups from Asia, North America and Europe. While also treated in an essentialist fashion at first, these unexpected new categories also allow Japanese Brazilians to move beyond this essentialism, for as they unveil new kinds of conflicts and relations, Japanese Brazilians are able to point out and make sense of social spheres that are not restricted to ethnic or national boundaries. These include, for instance, issues related to urban lifestyles and consumption culture.

Child Bearing and Good Mothering: The Case of Turkey

According to most critical social scientists, the body of woman is accepted as a means of political aspirations of politicians. In this presentation, how the capacity of woman to give a birth is politicised by government of Turkey today. Almost one year ago, the Minister of Health Affairs in Turkey started to not give permission to use the method of caesarean. And support this policy by using the good mothering discourse. This presentation is examined the attitude and behavior of pregnant women related to this policy by using qualitative techniques. How the participants express themselves as good mother and is there any relation between this feeling and this discourse are the basic questions of this presentation.

Dealing with Multiple Roles As a Medical Worker, and a Hemophilia Patient with HIV and HCV

Objective: To describe the difficulties of dealing with multiple roles in a work setting experienced by a haemophilia patient with HIV and HCV, who is also a medical care provider, and to identify the ideal behavior of medical providers towards patients with a positive HIV/AIDS status.

Method: A narrative interview that was conducted in 2009 with a male hemophiliac in his 30s, who had HIV and HCV and who was working at a hospital was analyzed.

Results: At first he concealed his hemophilia, HIV, and HCV status after receiving notification of HIV status, because of prejudice and discriminatory public perceptions about AIDS at the time and worries about restrictions at work, or dismissal. Then, after two hospitalizations for the side effects of interferon treatment, he quit his job, because he had experienced “a sense of crisis about revealing his health status,” which became necessary because he used public health insurance and medications. Also, he had experienced “medical workers’ true feelings” and noticed “the prejudice of other professionals.” However, at the same time, he had begun to reconsider living with HIV, and began to selectively reveal his hemophilia and HIV status. When working in a different medical institute he talked about his illness experience and revealed his HIV status. Here, he was “accepted by professionals.” This was a turning point for him. Revealing his status enabled him to ‘work flexible despite his condition.’ However, he faced new difficulties caused by “confusion about his multiple roles as a patient and a medical worker.” This case study identified the characteristic difficulties faced by patients working in medical fields. To solve these problems, medical workers should develop a deeper understanding, more profound than the level of understanding seen today.

ODASSO, LAURA* (Université Libre de Bruxelles GERME, laura.odasso@misha.fr)

Intermarriages and Inclusion. Time and Space of Love, Laws and Norms

Based on a number of case studies of women and men involved in intermarriages in Europe, the intervention explores how these marriages and their consequences could challenge the concepts of inclusion and exclusion. “Intermarriages” refers here to couples formed by a European Union citizen and a “Third Country National” (TCN). A TCN is a citizen of a non-EU country who resides in a European Member State, and is thus affected by some specific regulations and administrative practices. Furthermore, the distinctions found in migration laws and administrative practices seem not to be limited to citizenship (e.g. dichotomy of EU citizens/TCNs), but extend to features that differentiate certain TCNs from others on the basis of categories such as ethnicity, religion, gender and social class – all of them included in anti-discrimination laws. The requirements included in compulsory integration tests for TCNs who apply for residence or naturalization [Strik & al., 2012; Hajat, 2010] display an overlapping of these categories [Grenendidik, 2006].

Moreover, if laws and family codes (e.g. Personal Status code, civil codes) influence the legal definition of inclusion, other unwritten norms that normalize homogamy may affect the sense of inclusion and modify the concept of “otherness” according to the configurations in which the members of these couples act [Saska & al., 2011].

Bi-national family biographies suggest that what is “normal” for the members of these families vary according to time (e.g. before or after 2000) and to space (e.g. European Union vs. outside).

The method of “biographical policies evaluation” [Delcroix, 2013; Apitzsch & al., 2008] allows understanding the effects of categories as citizenship, denizenship [Bosniak, 2001] and dis-citizenship [Wodak, 2013] on these families and the
The Influence of Population Growth on Land Tenure and Ethnic Conflicts in Benue State of Nigeria

The high growth rate in human population and the increasing scale of human activities on land have resulted in tremendous environmental degradation and climatic change which have grievous consequences on the security and live of people. Benue is a county today faces with ecological and climatic problems of which they are largely responsible. The most recent are the flood disaster resulting from the over flow of river Benue and incessant conflicts with Fulani herdsmen. Man's activities with the environment have led to problems such as global warming, ozone layer depletion, loss of biodiversity, desertification, deforestation and climatic change. What these translate into is decreasing landmass that will be available for farming and grazing Benue State is an agrarian society with rapid population increase. The high poverty profile in the state has aggra-

Controllerled stress and appetite for natural resources such as plants, animals, water, minerals, air and land and so on. The aftermath of such activities is the disruption of the ecosystem. Benue State today is experiencing recurrent communal and ethnic conflicts as a result of competition over land. There is unequal access to land in the State. These problems have great effect on the health and security of the people. The paper examines how the increasing population growth, utilization of primitive technology, pressure on the natural resources etc. are affecting the land tenure system and social and food security in the state.

Forms of University Elite Sport in South Africa

The paper looks at the phenomenon of elite sport at a university in South Afri
can, for possible comparisons with other types and institutions, and how this has unfolded at such a university. It seeks to distinguish such sport in the context of three academic complexes that foreshadowed particular institutions. There is the enlightened context of sports practices, and there is the resis-
tant context that sees forms of resistance against such 'elitism' of sports, and there are the benign forms of elite sport practices or contexts. While all three types are not strictly of the mode that they occupy, they do have the main characteristics of such types. Due to the fact that even if S.A. sport is competitive, it's organizational base is low, universities see a growth spurt in sport through private-public understandings (e.g. Varsity Sport), and thus the changing the nature of the public university from a position outside of its traditional core or academic work, even though there are taught courses and modules in sports related fields (Sport Science, Human Movement Science and the like). Most of these are predominantly natural science and functionalist oriented, though there are exceptions. The paper will examine the trajectory of one or more of these sports types at (a) particular institution(s) in South Africa, in the three dominant spaces of this country, i.e. soccer, cricket and rugby from which a comparative perspective can be gained. While sport remains non-core to most universities globally, it has shift
ed somewhat on the ground, particularly with elite sportspersons emerging from that level. Various forms of elite sport thus need to be studied in terms of the forms they assume in different university contexts.

Improving Quality Education/Learning Using the ESD Learning Performance Framework

The Education for Sustainable Development (ESD) concept, although strongly linked to quality education is still outside of mainstream education and learning. And with the future of education tilted towards more qualitative, bi-directional student-centered learning than uni-directional teaching, the Decade of ESD which was launched to promote and integrate ESD in all areas of learning and hence quality education has made progress although more improvement is needed. This is particularly in the area of continual implementation and strengthening and evaluation of ESD by offering guidance on identifying the important factors and characteristics that lead to effective ESD learning performance and ultimately quality education.

This paper investigates the qualitative achievements of ESD and presents ESD learning performance as a tool for enhancing particularly ESD-based quality ed-

uation/learning. Through an action-reflection process cycle of relying the ESD elemental characteristics to the local ESD practice cases of ten regional centres of expertise (RCEs) selected from East and Southeast Asia) and the educational/learning theories and methodologies grounded in the literature, both process and content characteristics that underpin quality education were clearly and comprehensively identified and developed into a learning performance framework (LPF).

The framework therefore has the capability of 1) fostering the evaluation of ESD best practices at the local level through better identification and subsequent translations of the ESD agenda into a new global education/learning framework, and 2) enhancing quality education in the formal education sector, particularly a) developing a holistic and relevant school curricula with transformative educational contents and teaching approaches, b) improving teacher competence in relation to the LPF elemental characteristics, and c) providing a safe learning environments for students. Furthermore, recommendations are made for users identified through their links to aspects of the framework where their areas of operation are strongly associated.

Workplace Innovation in Elderly Care

By order of the Dutch national association for long term care, ACTIZ, the Utrecht University of Applied Science has carried out an Experiment of Workplace Inno-

vation in Elderly Care to develop a new innovative organizational design that is intended to improve the quality of care, work efficiency. BrabantZorg, a large care provider in the South of the Netherlands, was the pilot organization for the experiment. The result is a general instrument that should enable other care providers to initiate a similar innovation process in their own organization. The experiment was finished in the summer of 2013. The Experiment of Workplace Innovation is unique as the innovation is initiated and developed bottom up by the care professionals themselves together with the patients and/or their families. Managers, board and back-office are required to react on the change process started from the work floor and need to reflect upon their role and adapt it accordingly in order to facilitate the process. The project combines organizational design with change and implementation. The project consists of three pilots at three different nursing homes of BrabantZorg.

The Type to Train? Impacts of Psychological Functioning on Further Training Participation

Evidence is plentiful that especially level of formal schooling and occupational rank determine access to and participation in employment-related training. How-

ever, this paper shows that human capital acquisition during adulthood is not only stratified by classic markers of social inequality, but also by indicators of psy-

chological functioning, namely personality characteristics. Research shows that personality traits drive attitudes and behaviors, and determine socio-economic life outcomes like educational attainment, labor market participation and income. Thus, I conceptualize participation in further training as stratified by intra-individual differences in the Big Five and Locus of Control beyond socio-economic markers; generally I ask what sorts of individual personality traits lead to successful psychological career-related functioning over time.

This research proceeds in two stages using data from the German Socio-Eco-
nomic Panel from 2000 to 2010. Following the debate on stability or change, I first show that intra-individual personality characteristics are remarkably stable between two measurement points in 97% of the population sampled. In a second step, I apply random-effects logistic panel regression models to 39,833 observa-
tions of 4,981 individuals. Findings reveal that those who are more open to new experiences and have high internal control beliefs are more likely to participate in further training, and this holds true under different model specifications. Con-
trary to the predictions of personality hypotheses, Agreeableness, Extraversion and Neuroticism do not impact training whereas the trained out of Consci-
entiousness is more complex. I also show, regarding reverse causality, that fur-
ther training does not lead to significant changes in psychological functioning. I conclud that in addition to the classical determinants of further training such as education and occupational status, there are personality traits which characterize psychological functioning at work, meaning that personality differences lead to stratified training and career outcomes.
Transitioning from higher education into the labor market is a major life event for graduates and determines and stratifies paths of future career success. However, labor market entry patterns are different by field of study with those from hard study areas (science, technology, and engineering) following a smooth transition, whereas graduates from softer fields of study (humanities and social sciences) experience a longer, more winding road into employment where spells of marginal employment and unemployment are frequent.

This research looks at Germany, a country which is highly standardized and stratified, and compares these subject-specific school-to-work transition patterns before and during the financial crisis. It shows two pathways into employment, which are more diverse during times of economic paucity such as after the Great Recession; however, this should not be the case for all subject areas. Instead, hard fields of study are less impacted by economic downturn as they are more protected by their specialized knowledge, showing a clear and direct link between higher education and the labor market, while graduates from softer areas suffer from the crisis and show even more diverse and fragmented transition patterns.

Using data from the German Socio-Economic Panel and employing methods of sequence and cluster analysis, I look at differences and similarities within and across fields of study before and during the economic crisis within the first 24 months after graduation. I demonstrate that there are distinct labor market entry trajectories between hard and soft studies, which differ substantially for latter before and during the Recession. I explain the diversity of career transition patterns as produced by difference in human capital specificities which favors specialization over generalization. Economic fluctuations have a sizable impact on demands of general skills which translates into more fractured transition patterns.

OGASAWARA, MIDORI* (Queen's University, himawarimido@nifty.com)
Unequal Distribution of Surveillance: Data Processing of Nuclear Workers in Japan

Inequality has been a central question in surveillance studies because personal data have been sorted to categories and the data-subjects have been treated differently depending on the categories in which they are placed. The word of "social sorting" shed a bright light to those activities of dividing people behind the curtain, although data-collecting systems are usually established in the claim of everyone's benefit, either all customers or all citizen.

Surveillance does not serve everybody. Furthermore, surveillance society inevitably contains times and places that are intended to be outside of intensive scrutiny. It is a ubiquitous appearance, distribution of surveillance differs with the targets, more precisely, with the relations between watching power and the surveilled population. In turn, such times and places disclose whom the surveillance system serves.

In the Japanese context, such sites, particularly unveiled after the earthquakes on March 11, 2011, are nuclear power plants. Nuclear power plants are operated using numerous electronic monitoring systems. But the workers are not consistently surveilled. Their data of exposure to radiation have been often record-ed, underestimated, or distorted. The government has tracked their data only for the bilateral agreements with governments in Southeast Asia under the condition that they have to pass the national exam on caregiving in Japanese within a certain period of time.

Unlike migrants in the highly skilled sector or productive sector, care work performs the intimate space entails not only the political economy of care but a normative value underpinned by cultural notion of what care ought to be in each specific context. The comparison aims to situate the Southeast Asian migrants within the nexus of migration regime and care regime in Japan and Taiwan and discusses the discursive construction of the migrants as well as the care work in East Asia.

The presentation will compare Japan and Taiwan which receives migrants from the same sending countries in Southeast Asia namely Indonesia, Philippines and Vietnam and situate the globalization of care in East Asia within the nexus of care regime and migration regime. The paper argues that even though Japan and Taiwan receives migrants from the same countries, the ways in which the migrants are situated within the two regimes reveal different construction of care work as well as different entitlement of migrants. It aims to unpack the otherwise naturalized notion of care work and suggests to perceive migrants as a 'regional common good' in order to raise both the status of care work and the migrants at the same time to ensure the safety and security of the elderly and migrants alike.

The Working Mother and the Access to Childcare

In Brazil, the attendance in daycare and preschool are guaranteed by the Federal Constitution, as well as the Statute of Children and Adolescents, as a right of all children from birth to six years.

In a research with interviews of mothers who work in various capitals of Brazil (SOS Corpo, Data Popular, 2012), the main difficulty, reported by 34% was to get nursery vacancies, and this demand does not vary with social class.

Objective: To understand the trajectory of teenagers who became mothers during training period for insertion in the labor market at Campinas.

Methods: Eight mothers aged 19-23 years who were part of the 17 teenagers who became pregnant between 1992 and 2009 were interviewed. Qualitative methodology was used for analysis.

Results: Three mothers stopped studying and working. Of the other five, four finished high school and one was studying. Two were unemployed and three...
Social Historical Context Of Health and Illnesses Attrubitions In West- African Countries: A Comparative Analysis

Undoubtedly, people of diverse cultural backgrounds often make different attributions of illness, health, disease, symptoms and treatment. Cultural differences in health attributions have major implications for medical professionals because of over- attribution; attributions play an essential role in the formation of beliefs concerning health and illness. Different cultural groups have diverse belief systems with regard to health and healing in comparison to the Western biomedical model of medicine. For instance, with regard to health beliefs in the United States, African Americans may likely to attribute illness externally to destiny or the will of God and believe in the healing power of prayer. But West African patients may be more likely to attribute illness to a spiritual or social causes rather than a physiological or scientific cause and thus expect health practitioners to provide an experimental and a spiritual reason why they have been afflicted with illness. With the mixing words in mind, this study are must both material and spiritual that is (herbal remedy and amulets Vaughan, Jacque & Baker (2009). This paper therefore attempts several aspects of how culture affects the health and well-being of patients in West African countries which are significantly different from those of Western world. Because cultural issues have increasingly become incorporated into medical care as there has been greater recognition of the intimate tie between cultural beliefs and health beliefs.

OH, HELEN* (Sogang University, helenoh1@daum.net)

Healing Programs for School Bullies and Their Parents in South Korea

This study presents several social problems related to the South Korean government's push to decriminalizing bullying at school to be one of the four major forms of violence (sexual abuse, domestic violence, school violence, and harmful foods), and addresses why only the bullies and their parents are faced with legal liabilities and social responsibility. In particular, this study addresses the problem of schools and the government shifting the responsibility for school bullying onto bullies' families. School counselors and policymakers hope for “deviant” families to transition into a “normal” condition through healing programs. Recently, healing programs are springing up for a wide variety of psychological problems. In this social context, school bullies and their parents are being required to participate in healing programs.

This study employs ethnography and in-depth interviews with participants in art healing programs. The interviews target healers, program staff, bullies and their parents. The bullies are 14- to 16-year-old middle school students. Findings report that staff and participants in the healing programs do not regard bullies as “deviant.” In addition, participating students and parents believe that schools have great social responsibility for the bullying problem.

The importance of this study lies in its exposure of the fact that bullies and their parents receive recognition as “normal” in the healing program, but this is a context outside of school. Therefore, after they complete their course in the healing program, they are still treated as bullies and potential perpetrators of school violence. Consequently, they are confused about their social identity. Bullies and their parents are confronting the problem of liminality (i.e., the psychological threshold when transitioning from one stage to another) or social normality.

RC42-716.1

OH, HELEN* (Sogang University, helenoh1@daum.net)

Is There a Path to Well-Being for School Bullies?

School bullies and their parents are stigmatized as perpetrators, separated and excluded from the school community. They are wounded by this situation and need socio-psychological stability. Therefore, they try to restore their well-being and life satisfaction through healing programs outside the context of school. Such programs help them reconstruct a new identity, and they experience the process of transitioning into their new identity, which implies a state of liminality (i.e., the psychological threshold when transitioning from one stage to another).

This study focuses on art healing programs targeting middle school bullies and their parents. By employing ethnography and in-depth interviews with participants in these programs, we find that these adolescents and their parents feel freed from depression and a sense of guilt. In fact, healing programs provide a hospitable atmosphere, and healers approach participants holistically. The problem is that although bullies experience the recovery of their identities through these programs, which act as passing-rituals, their success is not guaranteed within the school system. In healing programs, bullies win trust and show the potential to become good people; outside of the programs, however, they are still treated as potential criminals. Consequently, this study demonstrates the limit of healing programs in that wounded students and their parents have no choice but to drop out of the school system and find alternative education centers for the sake of their well-being and social integration.

What Determines the Parent-Child Relationship?: Filial Piety, Economic Dependency, or Intimacy

Family structure and culture have been rapidly changing in Korea. Whether to follow traditional values or individual autonomy seems to be the crucial issue of family problems in the modern world. Previous studies explored the significance of various factors such as filial piety, autonomy, communication, intimacy, etc. in a parent-child relationship. But, what factors can positively affect on the building-up of a harmonious parent-child relationship? Previous studies did not examine the significance of such factors that may contribute to and account for the harmonious parent-child relationship.

This research aims to answer the question what factor influences most positively on harmonious parent-child relationship during the process of child's future decision making of selection of a spouse, which is still the greatest family issue in Korea. Therefore, we (research team) conducted an online survey of 262 college students in Seoul in 2013. The survey questionnaire includes parental economic support, psychological intimacy, communication, social network, filial piety as the traditional Confucian-family value, and other socio-demographics. Findings report that the communication, intimacy, social network are all positively related to harmonious parent-child relationship. Furthermore, findings report that the communication, intimacy, social network are all positively related to the well-being and life satisfaction of children on the side of the child, does not appear significantly. This research, thus, implies that the communicative rationality and social intimacy based on reciprocity is far more important for building up a harmonious family than family duties stemming from traditional values or instrumental rationality which may force one to pursue only individual interest in a family culture.

Religion, Trust and Public Society in the United States

Social integration beyond constituents' diversity becomes a pivotal theme in the public sphere of a democratic society (Charles Taylor); the major conundrum for a post-secular society (Jurgen Habermas). Although religious have played a crucial role for collective consciousness in a traditional society, their roles for social integration in a modern and pluralistic society have been put into questions. Therefore, focus on “trust in immigrants” as a particular socio-psychological phenomenon which could reflect a religious orientation and their public attitude toward social integration.

This study, utilizing the Baylor Religion Survey (2005), examines empirically how trust in immigrants is related to various dimensions of religiosity and spirituality. Besides socio-demographic control variables, explanatory variables include (1) various forms of religious identities (including theists, spiritualists, and non-affiliation), (2) cognitive types of belief (including images of God, New Age interests), (3) ideologies (religious pluralism, moral liberalism), (4) experiential types (traditionally religious experiences and spiritual/mystic experiences), and (5) practices (religious service attendance, prayer, civic group participation). The findings demonstrate all forms of religious identities other than affiliated theists (i.e., affiliated spiritualists, atheists/agnostics, and the unaffiliated) show significantly higher levels of trust in immigrants. The image of God as judge appears to be related to the lower levels of trust in immigrants whereas New Age interests do not have a significant relationship to trust in immigrants (p < 0.05). Neither religious pluralism nor moral liberalism appears significantly related to trust in immigrants. Religious experiences (religious pluralism, moral liberalism), and (4) experiential types (traditionally religious experiences and spiritual/mystic experiences) leads to higher levels of trust in immigrants. In terms of practice, both religious service attendance and civic group participation – not merely prayer alone – appear to be highly related to trust in immigrants.

Cross-Bordering Japanese Culture in the Changing Media Environment: Focusing on Japanese Popular Culture in Korea

When the animation Attack on Titan aired on Japanese television, it ranked No. 1 on the Internet hit list in Korea and received much attention through CATV and Internet. Also, a number of parodies have made on television and the Internet. Japanese popular culture is being consumed and reproduced across national borders by various media devices. In the process of media-globalization, Japanese culture was banned over 30-years in Korea owing to the historically particular condition between two countries. This paper purposes to find out characteristics of Japanese popular culture in Korea in this changing media environment and effects of media.

In Korea, Japanese popular culture was officially opened in 1998–2004, meanwhile Internet has rapidly proliferated in 2000s, young users shared manga or animation on cyberspace. Namely, media convergence and diversification have enhanced cultural contacts across borders with dynamics of policy, media industry, it effects on the space and patterns of contacting Japanese culture. Particularly, this transition appears in line with pre-existing fandom and extends throughout the new-media as Attack on Titan can indicate. Moreover, in Japan, the public phenomenon has observed on new-media such as translating contents, parodying, using as signifier, Japanese popular culture on the Internet also interacts with existing media, and shows connection among various media, for example, reproducing on television like Hanayori-dango.

Recently, Japanese popular culture can be seen through formal platform IPTV or Internet contents-store besides pirate copies. However, there is limitation on inter-face because of language, lack of content diversity, and people who cannot use new-media tends to be excluded. Considering impacts of new-media, it is necessary to create interface with new-media contents based on translation service to share culture and to create interactive cultural space. This paper represents how media environment impacts on Japanese popular culture and suggests possibility of cultural space in new-media.

Influence of Childcare Experience on Women’s Dietary Habits:
Analysis of Public Opinion Poll on Health

In Japan, food and people’s eating habits have changed quickly in the postwar era. Externalization of household functions has reduced domestic work; however, people have lost the opportunity to acquire sufficient skill and knowledge in cooking. Notably, a social problem of children’s unhealthy dietary habits has arisen. Furthermore, some studies have found that mother’s food consciousness or dietary behavior affect the related dietary habits at home. However, few empirical studies have examined the correlation between women’s dietary habits and whether they have children or not. This study examines the effect of childcare experience on women’s dietary habits by focusing on their food choices and dietary habits. Analysis of a public opinion poll on health data with logistic regression reveals that childcare experience affects dietary habits in women. Compared to childless women, women with children “eat all three meals” more regularly but are not conscious of “avoiding eating snacks.” Moreover, women who are more conscious of their food choices tend to be older, unemployed, and have a high standard of living. The result revealed the following points. First, women equate the responsibility of nurturing children to disciplining them rather than caring for their children’s physical health. Second, childcare experience has both positive and negative effects on women’s dietary habits. Therefore, these factors should be considered when encouraging and promoting improvement in women’s dietary habits.

Searching for the Global Standard Recruitment and Employment of Border-Crossing Nurses and Care Workers: Findings and Recommendations Based on Fieldwork in the Asia-Pacific and Europe

Most developed countries are faced with major demographic problems such as increasing aging populations and rapidly declining birth rates. Parallel to these same phenomena, governments have accelerated the introduction of nursing and care services from abroad in order to fill the shortage of domestic nurses and elderly-caregiving workers. However, such cross-cultural and transnational care projects are not easy for each host country, and employers have to consider the challenges of hiring overseas-born workers who come from various educational backgrounds and care cultures, and speak other languages as mother tongues.

The author investigated the problems of transnational care especially in the case of the Japanese government’s project to accept Southeast Asian nurses and caregiving workers under Economic Partnership Agreements (EPAs) concluded with the governments of Indonesia, the Philippines, and Vietnam. He explored some structural flaws and faults of the EPA project, and then explains how this led to a broader investigation to research alternative policies and programs adopted by some governments in the Asia-Pacific region and Europe.

This paper presents a critical evaluation of Japan's EPA project based on the research team’s various surveys in Japanese hospitals and care facilities as well as Filipino/Indonesian nurses and care workers in Japan. Then, it examines the Asian and Western trend of governmental policies on migrant nurses and care workers, and makes some recommendations towards the establishment of a potentially sustainable Japanese model. It finally discusses the possibility for a global standard recruitment and employment system for border-crossing nurses and care workers.

Femen in Tunisia: Came. Stripped. Conquered. Conquered What?

The paper examines different responses to the activist group Femen’s practices and messages by young activists in different political alliances, including feminist groups, in Tunisia in 2013. The Tunisian Femen context is especially interesting as it captures so many contemporary tensions regarding social change, youth activism, political engagements, transnational movements, cultural conservatism, generational clashes, politicized embodiment and shame, public sexualization, and changing fundamentalisms. While Femen has challenged global feminist movements and provoked unusually explicit anger, ridicule and dismissal among women’s movements and conservative religious authorities alike it could potentially evoke other types of responses from activist youth, especially in the aftermath of the initial revolution and later frustration in Tunisia, where a generational conflict on issues of rights and freedoms and bodily integrity is often explicitly politicized. The paper analyses the ways the Tunisian responses frame their political engagements, the motivations and explicit agenda and the followed media turmoil. The first interviews were conducted during the first on-line appearances of the Amina Tyler’s internet action in March 2013, and continued in several phases as the event received international media attention and analytical narratives became consolidated. The Western responses provoked counter-responses that the Femen event can be seen to have become one analytical window to self-understandings of gender politics among youth in the aftermath of the Revolution in contemporary Tunisia.

HIV, Stigma and Agency

Stigmatization is here studied through interviews with HIV treatment activists and voluntary HIV treatment counsellors in an urban township in South Africa. While being also activists, the counsellors form a support and advocacy group within the clinics where they volunteer, as well as in the community and society at large. I will examine how they talk about their views on expertise and knowledge, health care, authority, biomedicine and community. These patients describe their lives, care and survival as an entangled net of different relations that sustain them, a net of relations that produces healthier embodiment including both human and non-human actors: for example, help, hope, food, laboratory results, transport to the clinic, and last but not least, the pills. Activists who politicize access to medicine and therefore add the dimension of rights and global injustice to their agenda of questions. After a thorough analysis of medicalization theses should consider, tackle stigma by a de-individualization of shame as a side-effect of politicization. The paper asks what destigmatizing strategies the less vocal clinic volunteers use, as they also indicate that a major bulk of their work deals successfully with stigma. Different meanings for silences, intimacy, secrecy, confidentiality and rights are analysed.

Social Exclusion and Health Outcomes of Single-Mother Households in Japan

Single-mothers and their children are one of the most economically-disadvantaged groups of people in industrialized countries. Japan stands out from other OECD countries with regard to its high incidence of poverty and the high employment rate of single-mother households. Previous studies in the Western countries have shown significant differences in physical and mental health between single-mothers and their married counterparts. They also have found that children of single-mother households are more likely to have health and behavior problems. However, it is still unclear to what extent these differences are attributable to low-income or lack of social support. Employing a unique panel survey on women with children, this study investigates how poverty and lack of social capital affect health outcomes of mothers and children in single-mother households in Japan.

Major contributions of this study are as follows. First, it employs multiple measures of poverty. In particular, it uses not only the poverty line but also the Minimum Cost of Living calculated by the Public Assistance system to define the poor. Second, subjective as well as objective measures of health outcomes are used. Third, the effect of past experiences that may affect health (such as childhood abuse and family dissolution in childhood) is examined to control for unobserved heterogeneity.

Tentative results confirm significant health inequality between single-mothers and their married counterparts. Although poverty has a significant and negative effect on health of married mothers, it has no significant effect on health among single-mothers. In addition, even after controlling for age and other socio-economic factors, mental health of single-mothers significantly deteriorates as their children grow up.

Structure of Cultural Rejection

What does it mean to dislike a piece of culture? This study explores the idea that culture is being used as the focus of coordination among individuals. The central topic is cultural rejection. The proposition is advanced that individuals reject cultural practices as the proxies of disfavored groups who are perceived to be associated with them. In turn, this will allow individuals to distance themselves from disfavored groups and maintain the identities separate from disfavored groups. This study argues that the pattern of cultural rejection can be seen as a reflection of individuals' perception of differentiation within society. Using data on musical preferences from 1993 General Social Survey, it applies blockmodeling – the methodology originally developed in social network analysis – in a new way, to analyze the structure of cultural rejection within U.S. society. The results indicate that blockmodeling based on cultural rejection is effective in uncovering sociologically meaningful positions among the respondents, while providing unique insights into the structure of cultural divisions within U.S. society. In addition, the identified blocks correspond with individuals' perception of the degree of unity (or lack thereof) among Americans, consistent with the theoretical assumption of this study. The results also show the important roles that popular culture occupies in U.S. society.

The Relationship Between Financialization and Accounting Standards: A Japanese Perspective

This study considers global financialization in terms of the dynamics of corporate accounting standards. Accounting standards play a crucial role in financialization by measuring corporate financial performance. Since the definition of “financialization” is ambiguous, this interdisciplinary study can benefit future research. Taking the perspective of Ryuji Takeda, a legendary Japanese accounting researcher with knowledge of sociology, this study focuses on the transition from production-oriented accounting to finance-oriented accounting. This transition is analyzed using Jean Baudrillard’s concepts of “simulacra” and “hyperreality.” This study also analyzes the recent changes in Japan’s accounting standards as a backlash against excessive finance-oriented accounting. Further, the backlash is reconsidered from Takeda’s “spiral development” perspective. Although this study is essentially conceptual, data are presented in support of its argument, and its interdisciplinary perspective can further financialization studies. This paper is structured as follows. The first section reviews studies on financialization and summarizes their essential points. The second section describes the relationship between the financialization process and accounting regulations (particularly accounting standard-setting) based on Takeda’s framework, which distinguishes between production-oriented and finance-oriented accounting. This framework introduces Baudrillard’s concepts of “simulacra” and “hyperreality” to explain the financialization mechanism by considering the transition from the former to the latter type of accounting. The third section focuses on the new dominance of finance-oriented accounting standards in Japan. Post-financial crisis Japan has seen a regulatory shift such as the development of new accounting standards for small and medium-sized enterprises are reexamined using Takeda’s theoretical framework. Finally, this paper argues that new accounting regulations have emerged through a spiral development within the bipolarity between traditional material production-oriented accounting and finance-oriented accounting as a reaction to excessive financialization and finance-oriented accounting standards.

A Comparative Study of Effort and Examinations in Japan and England

This paper compares Japanese and English emphases on effort from two analytical perspectives: cultural and institutional. The cultural perspective examines the Japanese cultural belief that natural gifts are equally distributed in society, while the institutional perspective examines the competitive entrance examination selection system, colloquially known as “examination hell.”

It is clear that an emphasis on effort has permeated Japanese society. However, recent rapid economic growth has made Japan more affluent, which in turn has undermined cultural emphasis on effort. On the other hand, English culture places on the concept that natural gifts are unequally distributed, which also undermines cultural focus on effort. In this paper, I will discuss the similarities and differences in these two societies’ approaches to effort and examinations.

OKBANI, NADIA* (Science Po Bordeaux, nadiaokbani@yahoo.fr)

Social security and its solidarity policies play a central role on poverty reduction. To analyze how does it work in practice and its limits to reach its aim, it is interesting to wonder how it is elaborated, implemented by organizations and actors, and how it is questioned by policy evaluations. Hence, examine the institutional work (Lawrence, Suddaby, Leca, 2009) is a good way to better understand the complex institutional configuration where different actors interact to conduct and question policy. Studying the case of institutional work in a French social security local organization commissioned on family and solidarity policies, this comparison is applied to analyze how organizational context, economic crisis and New Public Management affect social intervention and its targeted public. This paper is based on a three years ethnographic immersion in this organization with participant observation as a policy evaluator, a research on a minimum income scheme non-take-up, with some forty interviews and document analysis. Firstly, it explain how does the organization work, its missions, partners and professional cultures. Secondly it examines how in time of crisis, this social organization has not only to deal with an increasing demand to mitigate crisis negative effects on most disadvantaged people, but also with important budgetary restrictions and performance management optimization which impact the service delivery. Then, it analyze how do street level bureaucrats (Lipsky, 1980) react in front of these paradoxical injunctions and elaborate collective and individual performance strategies which are not always focusing on social right accessibility for vulnerable people. Finally, it study how policy evaluation question this situation, giving some possible solutions for improvement without really put into question the institutional work influence on actors strategy. More broadly, this paper tries to understand how institutional configuration impacts policy implementation focusing on internal preoccupations more than in policy potential outputs for beneficiaries.

Australia’s Temporary Migrant Work Programs and Its Neighbouring Regions

Temporary Foreign Worker Programs have boomed in Australia over the last two decades, with this group of migrants now comprising the largest category of migrant entrants. Overall, migration from Asia and the Pacific has likewise expanded over this time. TFWs are employed in Australia on a range of visa types; but – with a few exceptions – the visa categories open to migrants from Asia and the Pacific are a skilled worker program (the 457 visa), student visas with work rights, and a ‘migration and development’ styled program with some nations in the Pacific (the Seasonal Workers Program). TFWs are one aspect of the formation of regional and global divisions around work. The focus in this paper is on the
ways in which these programs of temporary work are an aspect of the shaping of relations between Australia and these neighbouring regions.

In Australia as elsewhere, temporary work carries inherent vulnerabilities. These are likely to be felt more keenly in the lower skilled sectors of the workforce. It is not insignificant that there are concentrations of temporary migrant workers in the lower-income states in Asia and the Pacific. Working in lower paid work, in casualised sectors of the economy. Not while surprising, this is a way global and regional divisions of labor are constituted and that this migration is temporary, is one of the ways regional patterns can become embedded in the workforce. The argument is not that there is a singular economic logic to the formation of these patterns but rather a number of regional factors at play. These issues are explored in this paper drawing on an analysis of the different categories of temporary migration in Australia.

Transnational Engagements: Footscray, Transnational Migration and the Making of Place

Footscray is an ethnically diverse and rapidly transforming suburb in Melbourne's inner West, formed in part by overlapping waves of migrants. The Vietnamese diaspora, and more recently migrants from African countries, influence the contemporary mix of people. Migrants' engagements with more than one society and in various forms of transnational networks are evident in the way migrants make place in the suburb. The voting and electioneering of South Sudanese migrants in the referendum establishing their nation indicates involvements in transnational politics. Participation in networks of Asian commerce is demarcated in shops through the suburb. Indian students undertaking a transnational education work in Footscray, including at the Vietnamese market. Migrants' transnational experiences, connections and networks are part of the uneven resource distribution to different groups and individuals as they become embedded in places. For migrants, such networks can be understood, to degree, as contained but geographically disparate "ethnic worlds" (Werbner 1999: 25). But the places in which these networks are located shape the forms of these networks and the resources they offer. Drawing on Smith (2001), these networks "criss-cross and in doing so intersect, challenge and shape one another. To take economic examples, transnational connections provide some migrants with access to capitalisation. But for other migrants their embeddedness in more than one society is a financial constraint, as the payment of remittances can be both. Shape the resources available to different groups and individuals as they become dynamics, too, shape the different strategies available to migrants in negotiating transnational lives and the meanings given to inclusion in more than one society. The inflections towards Australia allows for one set of strategies, while the politics of race in the suburb suggested another. These issues are explored in this paper drawing on interviews and documentary sources from Footscray.

OKESHOLA, FOLASHADE BOSEEDE* (Ahmadu Bello University, shadeoyz@yahoo.com)

OKESHOLA B. Folashade AND MAMMAN A. James DEPARTMENT OF SOCIOLOGY AHAADU BELLO UNIVERSITY, ZARIA NIGERIA shadeoyz@yahoo.com ABSTRACT

This study assesses the perception of security operatives on the challenges they face as security operatives in the fight against corruption in Nigeria. The study adopted both primary and secondary sources of data collection. Primary sources are observations of security operatives at security checkpoints, questionnaires were distributed to 120 security operatives in Kaduna metropolis and 6 in-depth interviews were conducted with key informants. For secondary source, data was retrieved from Security Operatives Disciplinary Records on corrupt practices emanating from complaints lodged against them by victims (members of the public) or caught by officers /colleagues while on visiting or visiting rounds to assess performance. Findings show that causes of corruption among security operatives includes over-centrality of authority within operatives structure, recruitment based on personal character, poor salary, worker turnover, and lack of good pension scheme. However, some of the challenges facing security operatives as found in the study is that the general public initiate corruption, bringing returns by junior officers, victimization by very important personalities, and lack of a singular economic logic to the formation of these patterns but rather a number of regional factors at play. These issues are explored in this paper drawing on an analysis of the different categories of temporary migration in Australia.

What Is Diagnosis? : Medicalization of the Children with Developmental Care Needs in Medical Checkups and Preschools in Japan

Background: A nationwide study reported that 6.3% of normal class students seemedly had developmental disorders. These students or children in Japan called as “kininaru-kodomo” or children with special care needs. However, there is no definite concept of children with special care needs. Therefore, this relation-ship with professionals and non-professionals is ambiguous according to the professionals’ viewpoints. This study explores its definition through the hybrid model of concept development.

Methods: The hybrid model is composed of a combination of literature review, fieldwork and analysis. The databases Japan Medical Abstracts Society (1983-2001) showed how debt problems start to accumulate and what kind of specific debt problems young people will be analyzed in this paper. The data was gathered by using the official debt enforcement register of the Finnish Legal register center (on debt collection rulings, fines and other sanctions). The analysis of this register-based data concentrated on showing how debt problems start to accumulate and what kind of specific debt problems young people are facing. Socio-demographic background is taken into consideration in the analysis. Our results show the debt problems of minors under 18 years of age result mostly from fines or other sanctions imposed upon them by public agencies, or because of their parents. Approximately at the age of 18, the debt problems increase dramatically and involve most importantly debts from consuming. Registered payment defaults by young people have been increasing in recent years in Finland. Instant loans with high interest are one major source eventual escalation of debt problems, and new concerns have arisen on unpaid fines. Finnish young people seem to gain weight through economic independency, but at the same time they have to balance the financial risks they are taking. Since most of the young people and young adults study until their mid-twenties, youth in Finland are placed in a waiting period between youth and adulthood. The current economic crisis in Europe has intensified the risky outcomes of this age of transition.

Patriarchal and Medical Discourses Shaping HIV/AIDS-Related Stigma and Its Management in Turkey

The paper explores the discursive formation of HIV/AIDS-related stigma and its management by people living with HIV (PLHIV) in Turkey. Based on biographical narratives of 24 PLHIV, semi-structured interviews with 32 key informants, participant observation in PLHIV networks and documentary analysis, the paper focuses on the role of medical and patriarchal discourses in shaping HIV/AIDS-related stigma at the state and societal levels and highlights the implications of stigma on PLHIV's agency in shaping the physical, emotional and social aspects of living with HIV in Turkey. The findings are overviewed in two sub-sections:

First, I identify the two conflicting discourses around HIV/AIDS in Turkey: 'cultural immunity' and 'rights-based' discourses, at the state and civil society levels, respectively. Here I investigate the role of medical profession and of patriarchy in the formation of these discourses in relation to the socio-political context of Turkey, particularly referring to the perceptions about sexuality, 'modernisation' and religious discourses.

Secondly, I focus on the ways in which PLHIV understand, reframe and challenge stigma on an individual and collective levels. I focus on family and healthcare as the main institutions where the context-specific ways in which HIV/AIDS-related stigma interferes with the formation and management of HIV-positive identities. Participants' reconstructions of HIV through narratives of 'injustice' and 'neglect' are shown, to address the links between the subjective understanding of and resistance to HIV/AIDS-related stigma and the overarching discourses shaping stigma.

The paper aims at contributing to further understandings of HIV-related stigma by focusing on the power relations in the formation of stigma from a discursive and intersectional approach, by exploring the understandings of stigma from the perspective of the stigmatized, with a specific focus on the agency of PLHIV in negotiating and challenging stigma and by offering data from a cultural and geographical setting which remains under-researched.

Reconstructions of HIV and Its Stigma through Biographical Narratives of People Living with HIV in Turkey

The paper aims at exploring the subjective perception of living with HIV and its stigma through the biographical narratives of people living with HIV (PLHIV) in Turkey. Primary data were generated with 24 PLHIV, following biographical narrative Interpretive Method (BNIM) and with 32 key informants, including doctors and civil society workers providing services to PLHIV.

Biographical narratives of PLHIV are analysed to understand the implications of the discursive structures around HIV/AIDS in Turkey for PLHIV's construction of social identities. The analysis is guided by the literature on illness narratives for the identification of narrative forms and by an intersectional approach for the identification of power structures that combine with HIV-stigma.

PLHIV's biographical narratives demonstrated the ways in which the meaning of HIV/AIDS and its stigma is being reconstructed through PLHIV's interactions with healthcare professionals, with civil society workers in peer-counselling services and with the overarching concept of 'the state'. The paper focuses on three types of narratives, with respect to these three milieus: Narratives of 'uncertainties and distrust in medical profession', the 'positive reconstruction of being HIV-positive' and the narratives of 'injustice and neglect' reflecting a politicised illness identity.

Finally, the implications of the above-mentioned narrative reconstructions of HIV on the social identities of HIV-positive individuals are pointed out: A reconstruction of illness detached from fear and self-blame is framed through support networks. However, the potential empowering effect of this perception of illness is hindered by the stigmatising practices faced in healthcare settings and by the perceived denial and inaction at the state level.
eastern dialect speaking region of Japan and the latter in the western. My ongoing variationist analysis on the negation system in Japanese spoken in Mexico City reveals that both the Founder Principle (Mufwene 1996) and Dialects in Contact (Trudgill 1968) helped account for the negation system in this diaspora variety of Japanese.

**Edgewise Community: Real Estate and Asian Settlers in Tokyo**

After the latter half of the 1980’s the number of Asian people has increased as “new comer” in the inner area of big cities. As more than 25 years have passed since then, a question appeared if there was an appropriate term which expressed the situation of the community. In this paper, two area in Tokyo: Ikebukuro and Shin Okubo, are examined as case studies, and they are called “edge-wised community.” Edge-wised community is a community which has plural cultural basis, in which there exists a system designed from the bottom, and in which there exists a circuit which makes the system function.

This paper consists of the research regarding the foreign residents’ motives in acquiring the housing and in having relationship with the network and other surroundings. Especially focusing on the function of housing land and building dealers in the ethnic community, the actual condition for foreign residents to purchase the housing is clarified.

Focusing on the above mentioned two themes, this paper aims at the structural understanding at the mezzo-level of the society. According to Hughes(1931): Chicago School third term, in his research of “Chicago real estate Board” housing land and building dealers are classified in five groups. In this report, combining both Hugh’s classification and the reporter’s classification of the number of renewal times of license of housing land and building dealers, characteristics of gate keepers are clarified. There, the phenomenon of circuit-izing between “cooperative channel” and foreign customers is seen.

Then, what promoted foreign residents to acquire residence? In addition to “cooperative channel” centering housing land and building dealers in “edge-wised community,” improvement in the civility in foreign residents is thought to be a factor. In this regard, the actual condition is reported referring to the case studies of Ikebukuro and Okubo.

**The Medicalization of “Depression” Across the Globe**

Recent decades have witnessed an increased reliance on the American approach to mental illness as a global script. These definitions of and treatment responses for mental health problems have been transmitted despite classic and new concerns from consumers, professionals, and scientists about the categorical manner in which individuals across societies, construct the set of symptoms that are used in formal psychiatric diagnoses of depression. Specifically, this question of global medicalization raises issues of how individuals label problems of living and what adaptations they report as underlying the problems. Drawing from the “layers of belief” concept, we examine the multiplicity of attributions and labels that individuals across 17 societies assign to a scenario meeting DSM-IV criteria for an “official” diagnosis of depression. These include social, biological and moral causes; and, designations of physical or mental illness or “the ups-and-downs of life”. Here, we directly address the global spread of the medicalization of depression among the public in 17 societies as diverse as Brazil, South Africa, Germany, China, Iceland, and the United States. This is particularly important as more recent insights from medicalization in social context highlight consumers as one of the major engine of medicalization within and across societies. Our findings indicate that there is a great cross-national variation in the medicalization of depression, yet a significant proportion of the public in all societies relies on Western scripts when formulating their ideas about what depression is and what should be done about it.

“Cultural Toolboxes” of Mental Health Care: Depression and Public Construction of the Set of Appropriate Responses in 17 Countries

Central to understanding illness behavior is an understanding of how the public constructs what constitutes an illness and what are appropriate responses to potential illnesses. However, we know little about these cultural toolboxes of scripts, schemas and hallmarks for depression. Here we ask: How do individuals construct the meaning and response to a set of behaviors that are consistent with DSM-IV diagnoses of major depression? And, how do individuals’ past experiences with mental health problems shape these patterns? Using data from the Stigma in Global Context – Mental Health Study (SGC-MHS), we examine how medical constructs what constitutes an illness and what are appropriate responses to potential illnesses. We have constructed a model that links individuals’ past experiences with depression to the specific attributional schema that they generate for the vignette. These attributions are used to construct a meaning of depression, and are subsequently used to guide an appropriate response to the vignette. These patterns are then compared across countries and across different phases of illness behavior. The study reveals that both the Founder Principle (Mufwene 1996) and Dialects in Contact (Trudgill 1968) helped account for the negation system in this diaspora variety of Japanese.

**Housing Well Being and Social Inequality in Europe: A Comparative Analysis**

Two phenomena characterize, in a seeming contradiction, housing conditions in Europe over the last three decades: on the one hand there has been an extension of home ownership and the spread of a high standard of living, on the other hand there has been an increase in housing costs and social inequality. Although these two at face value may pertain to the crisis of homeownership, maintaining a home has continued to rise and cannot only jeopardize housing security and quality, but can also stand in the way of life projects.

The paradox is that home ownership does not exclude housing deprivation. The hypothesis is that household’s social class plays a role in enabling owners to combine home ownership and well-being.

On the basis of Eu-Silc (European Union Statistics on Income and Living Conditions) data a comparative analysis is carried out about housing conditions in European countries by focusing on social class. This perspective provides further insights about the divergences/convergences hypothesis stemming from the analysis of trends of living/housing conditions throughout Europe.

To support this claim, two main dimensions of housing inequality are identified: tenure and housing well-being. A micro level data analysis is performed, in order to take account of individual’s family costs related to maintenance of ownership in settings and in periods (such as the present day) of rising housing prices and income resources that decrease in terms of amount and stability. The aim is to demonstrate that, despite differences in well-being in Europe between owners and non-owners (on the average the firsts are better off), home owners can be regarded as a privileged category per se. Italy represents a paradigmatic case in this respect: a longitudinal analysis (2005-2012) will be provided to investigate the crisis effect on facing housing costs.

**Social Mix in Deprived Areas: A Solution to What?**

Social Mix in deprived areas: a solution to what?

The research study refers to the results of a housing mix policy in Turin (Italy) based on the correlation of the real estate complexes built at the time of the 2006 Winter Olympic Games into introducing a housing mix in cities and aimed at creating a housing mix capable of generating a social mix.

Social mix policies put together two main approaches to urban/housing policies: the people based (addressed to empowering and supporting people in their crucial life-housing transitions); area based (addressed to improving physical and social infrastructures of the neighborhood). The policymakers’ expectations about mixed districts can be listed in four points: 1) providing opportunities for housing career in district since it gives residents the possibility to move to better, more expensive and even owner-occupied dwellings; 2) improving social contacts and social cohesion, since mixed districts are supposed to foster contacts between different groups of people and through that enhancing social cohesion; 3) increasing social capital since mixed neighborhoods should developed bridging, reciprocity, norms and trust; 4) providing positive role models especially to lower strata, reducing crime, low education achievements, poor health and unemployment – starting from those expected results, hypothesis and outcomes of this specific attempt have been investigated. In the observed neighborhood social mix has not produced all the hoped-for effects. The greatest benefits have been
in limiting the negative effects. The effects as regards developing resources have been more disappointing, both at the neighborhood level and in terms of interaction. It is possible that these latter effects need more time to make themselves felt. Or, perhaps, social mix is at most effective to curb vicious circles, but not to be “automatically” a source of virtuous circle.

Representations of the Social in Digitalized [and Cyber] Domains of the Non-Dedicated

The paper is a part of the Author’s project focused on creating new kinds of the natural by the social. The main thesis is that the social creates autonomy of the natural. Communication is abounding with symbolisations enough to force out traditional perception of the natural as something external. Civilization and culture are abounding with symbolizations enough to construct the autonomous natural. Up-to-date culture is dominated by hermeneutics, re-creations, and re-productions of achievements. It is not only a testimony of civilizational crises shaped with up-to-date popular discourses but also it shows that the social is autonomous because it exists as something creating nothing new.

The Author analyses prefaces of constructing the natural as representations of the social. Thus, one autonomizes an autonomous domain of the social because it does not create the dedicated. The dedicated has been a kind of exaggeration, exemplification, and preservation of meanings. Creating—the natural individual human beings are not referred to any non-verbatim external. Physical, digital, and cyber acts of creation of the natural are representations of the social and they are not participating in something given as unknown. In other words, acts of [self–]luncovering are connected with acts of [self–]creation of social subjects. The Author argues that there is a transitory/preparatory stage of the social being dominated/occupied by new digital skills and possibilities. The beginning of the next stage will be followed by rejection of the dedicated and it will be directed towards constructions of the natural. An individual human beings become autonomous—as non-dedicated subjects of the social. The up-to-date social accepts huge number of homogenous variants, the future social will expand its cyber heterogeneity as the natural. The consciousness introduces itself as the natural. New kinds of cognitive and non-dedicated absorption will re-define—but without reference to ethics—Socrates’ cognitive valuation. The subject is the reason.

OLCON-KUBICKA, MARTA* (Polish Academy of Sciences, martalolson@gmail.com)

Handling Money in Close Relationships in Young Family Households in Poland

The paper discusses the monetary practices in close relationships in young family households in Poland and shows mutual influence of life and economic strategies made by young Poles who consider the “free market generation.” Young adults (18-35) who were growing up in the socio-economic reality after the transformation of 1989, are now in crucial age for making a wide range of life and economic choices. This generation is interesting as undergoing the transformation of models of family life, the process of individualization, and a shift in family roles. They develop new habits regarding money and consumption, and are subject to new kinds of risks and uncertainties.

In order to show the social context in which young family households’ monetary practices are problematized and represented the paper uses the qualitative content analysis of the internet message boards. Discourse analysis is focused on reconstruction of underlying assumptions (“common knowledge” and “taken-for-granted” issues) about money in young family households and on identification of language patterns related to the issue.

The research has identified money and “monetary rules” as one of the most discussed problems in the household. Young people have serious doubts about money decision making and money in a relationship is a fodder for ongoing moral and economic reasoning. Examples of such problems are: Should childcare be provided by a grandmother be rewarded financially by her daughter working full-time? How many bank accounts should a cohabiting couple open: one that is shared, two where each has a separate one, or three where each has a separate one and there is an additional one for household expenses? With a wide range of existing patterns related to the monetary practices in young family households the paper focuses on the process of rules establishing in the making.

Social Movements and Transnationality: A Conceptual Discussion

In June 2009 a short grainy video shocked people all over the world. The video, recorded by a bystander, showed a young Iranian woman, Neda Agha Soltan, dy-
ing from a gunshot inflicted by a regime related shooter during protests against the
fraudulent Iranian presidential election. Neda almost instantly became a transnational injustice symbol representing the unjust nature of the Iranian re-
gime. The case of Neda is interesting for social movement scholars for a variety of
reasons, including the role of new media and the power of photography and
citizen journalism (Olesen, forthcoming).

The present paper, however, employs the case to ask a range of conceptu-
al as well as methodological questions about the transnationality of transnation-
al movements. Because while Neda’s televised death, motivated various activist
organizations and interest organizations to act and criticize the Iranian regime,
the activities around the Neda injustice symbol was much broader. Apart from
activists, three categories of actors in particular were vociferous and active: poli-
ticians/political parties, media, and networked citizens all expressed outrage and
demanded action on the basis of the Neda case.

This propels us to ask how we can best conceptualize the activities surrounding
Neda’s death. Was it a transnational social movement – or something else? In the
paper I argue that it was in fact a social movement. Accordingly, I contend that the
activities around the Neda injustice symbol was much broader. Apart from
activists, three categories of actors in particular were vociferous and active: poli-
ticians/political parties, media, and networked citizens all expressed outrage and
demanded action on the basis of the Neda case.

It is a complex task to understand social move-
ments may be especially pertinent in a transnational context where information
circulates rapidly and where actors are increasingly networked, connected, and
visible and able to engage in numerous and often different political issues at the
same time.

Economic Crisis and Health Inequalities in Italy

In recent years Italy has been hit by a severe crisis, not only economically, with
worrying consequences on the health of its citizens. In fact, the current economic
situation threatens to undermine all dimensions of well-being of a population.
The situation is still ongoing, the timing and outcome is impossible to predict, but
that poses huge questions for those who deal with health and health planning.

A preliminary analysis of the international literature (Anderson, 2012; Binkin
et al., 2010; Cylus et al., 2012; Artazcoz et al., 2004) and data made it possible
to substantiate the effects of unemployment and increasing poverty on health
inequalities.

In this paper we will try to verify the consequences of the economic crisis on health
in Italy, what is the state of health inequalities and what are the risk factors for
proximal (material, psychosocial, occupational, environmental and behavioral),
most affected by the economic situation.

Using data by “Health for All Italy” we will rebuild the health status of the Italian
population in the last 10 years to demonstrate the changes and estimate the con-
sequences of the current crisis, and increase social inequalities.

In time of crisis it is even more necessary to ensure access to health services,
especially to the weaker member of society, since the health needs may grow
rapidly. Moreover, given the particular situation and configuration of Italy will
place the focus on geographical differences between the north and south of the
country.

The first results show that, indeed, in recent years are increasing cases of sui-
cide and depression, and all diseases related to the area of mental health (Costa
et al., 2012). Health outcomes that are affected by an economic crisis ranging
from subjective health, physical health, mental health and may very in relation to
socioeconomic status and place of residence.

Generational Change and Persistence: Gender Equality in the Life Course of Low-Income Brazilian Women

Social, economic and political changes in the Brazilian society since redemoc-
ratization have strongly impacted relational and material conditions of low-class
families. Acute transformations took place especially in the realms of mother-
role participation and the labor market, division of domestic labor and
domestic violence throughout the last decades, as reflected in the life course of
women. This paper presents results from qualitative research with two or three
generations of women in urban, low-class families in Brazil. The interviews were
conducted with several families as part of two research projects in recent years.

The reconstruction of women’s life stories and biographical self-presentations
will highlight the reproduction or transformation of social patterns against the
backdrop of new socioeconomic configurations and social policies. This recon-
struction will trace, on the one hand, the changes in the perception of women’s
role and its familial as it relates to gender equality. On the other hand, it will
be discussed how women experience their embeddedness in family structures as
influencing decisions on migration, access to labor market and to education.

For that, the life paths of two or three generations of women from large cities
in Southeast-Brazil will be presented. The analysis of the narrative interviews, fol-
lowing the reflexive-reconstructive biographical method, focuses on how the in-
terviewed women define their life course between opportunities and constraints.
This is seen in close relation with the social developments taking place around
the subjects, as postulated by the biographical policy analysis. The research results
can also cast a light on different patterns of generational intercontingency found
in the same social milieu.

The Experience of Disrespect and the Genesis of the Recognition Paradigm: Empirical Research and Normative Philosophy in Axel
Honneth’s Critical Theory

Together with Charles Taylor, Axel Honneth is among the most important pro-
ponents of a theoretical paradigm for the social sciences centered on the idea
of “recognition.” This notion has, of course, entirely different meanings in the vari-
ous contexts in which it is called upon. In Honneth’s specific case, it is of decisive
importance the fact that his theorizations around the centrality of recognition
relations for human self-realization are rooted precisely in the negative expe-
riences of denial of recognition: disrespect or misrecognition. Despite the more
than twenty years that separate us from the publication of Honneth’s Struggle for
Recognition, however, it seems that the theoretical genesis of this important book
has not yet been grasped in its full potential for understanding today’s modern
societies and for a revitalization of the social sciences in general, and of Critical
Theory in particular. This is due, as I see it, to the misreading of Honneth’s works
as much as to the author’s insistence on making the philosophical work of Hegel
the logical point of departure of his theory.

In this presentation, I intend to cast light on other motives that animated
the formulation of this recognition-theoretical critical model, aside from the Hege-
lian works from the period of Jena: namely, the sociological and historiographical
studies that convinced Honneth of the undeniable moral character of social strug-
gles, that is, the American and especially British Quakers. The reconstruction of
the Weimar Class-
s that flourished in the 1980s. This influence reveal a closer relation between
Honneth’s work and empirical social research than is made visible in his books. I
argue, finally, that this connection is a most fruitful one and that Honneth, howev-
her, partially abandons it in his recent works – despite its precise meta-theoretical
formulation under the name of “normative reconstruction” in his latest book, Das
Recht der Freiheit (2011).

Indicators for the Social Impact of Social Sciences and Humanities Research: The FP7 IMPACT-EV Project

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
There is a big concern in the international scientific community to guarantee that Social Sciences and Humanities research (hereafter SSH) has a social impact in relation to the major concerns shared by all its citizens. This is in fact a key goal of all SSH research, on the one hand, because citizens and politicians are interested in research outcomes which serve to improve society, and on the other hand, because the creation of SSH knowledge will be appreciated and maintained if it is relevant for society, and not only for researchers. Nonetheless, these impacts have been recently been critically contested. Lack of adequate tools for comprehensively assessing impact, particularly concerning social impact, and indicators of poor research outcomes in SSH research has been the object of concern for the European Commission, and it is being discussed today in academic forums. In that frame the IMPACT-EV project has been selected by the 7th Research Framework Programme of the European Commission to develop a permanent system of selection, monitoring, evaluation (ex-ante, in itere and ex-post) and comparison of the impacts from SSH research, taking into account the large quantitative and qualitative evaluation tools, identifying new ways of implementing them and exploring new standards and indicators that complement existing impact assessment processes. As special attention will be paid to the analysis of social impact of SSH research, the IMPACT-EV project will analyse and systematize indicators for both ex-ante and ex-post evaluation of the social impact of SSH research. In this paper, first results of the IMPACT-EV project will be presented to an international audience.

The Student Movement in the (Mexican) Democratic Process

Recent waves of global movements agree, among others, on three demands: to abandon neoliberal policies, media democratization, and advance the public nature of education. Mexican student movement is part of this trend.

In the democratic transition –from a seven decades hegemonic party rule to a right wing government– Mexican citizens believed that the presidential alternation, reached in 2000, would be the alternative to authoritarianism and for an institutional renewal. However, the young democracy was soon eroded with electoral frauds and social unrests. 2012 elections erased any possibility of improvement, when the old party burst with renewed signs of corporatism and complicity with the media.

In this context, neoliberal education policies fragmented the youth access to higher education. The expansion of the private sector in this field was the cornerstone of social polarization, because it deepened inequalities both in opportunities for access to education and the struggle for democracy. Part of the explanation is a differential educational discourse, between public and private. This makes perceptions on democracy and social justice impact contradictory the identity of student groups.

Thus, in the middle of the election campaign the student movement “yoSoy132” emerged. It claimed the defense of democracy and faced the position of the old–regime candidate, due to his intrinsic web of complicity. The movement, originated in private universities and extended to the public, could articulate a discourse of social justice and democratic liberties: radical transformation of mass media, for better education and against neoliberal economic model. It was expressed in a wide repertoire of demonstrations, rallies and parallel networks with working and middle classes.

The differential impact of this movement on the national politics and media democratization, based on the previously discussed, is in the present debate contradictory. These are the aspects that will be developed in this paper.

Distributed Expertise and Professional Collaboration: Recognizing Relational Interdependence in Healthcare

Background
Healthcare work in the context of the hospital is characterized by the need for collaboration. There are several reasons why this is the case; for example that the economical issues involved in modern diagnostic and therapeutic practices require highly specialized services as well as health professionals with a multitude of expert knowledge. Bringing this knowledge together in every instance of patient care requires, amongst other things, that individual professionals acknowledge the mutual dependencies and collaborative needs that arise from the distributed nature of expertise in clinical settings. However, professional cultures, hierarchical relations and differences in communication practices may give rise to inequalities in the recognition of expertise and hamper the open exchange of knowledge in decision-making processes.

Study and methods
The paper is based on two separate studies of professional work in hospitals. The studies were carried out using a qualitative design. Data were collected by participant observations as well as by individual and focus group interviews with doctors and nurses. The professional groups were interviewed separately, and the nurses interviewed more times than doctors partly because of the high number of nurses to doctors.

Outline of paper presentation
The purpose of the presentation is to describe how different modes of expert knowledge gives rise to relational interdependence between doctors and nurses, using the management of oxygen therapy and mechanical ventilation of preterm newborns as illustrative cases. Based on findings from the studies, questions to be discussed are: how is the collaborative relationship experienced and performed by the two professional groups and what determines the exchange of knowledge between nurses and doctors in concrete clinical situations? The discussion is informed by a theoretical framework that captures the relational aspects of professional work performance.

OMENMA, J. TOCHUKWU* (University of Nigeria, Nsukka, Nigeria, tochukwu.omenma@unn.edu.ng)

This paper is premised on the nomination of 17 council chairsmen (not Chair-women) by Peoples Democratic Party (PDP) for November 2, 2013 local council election in Enugu State. The issue of underrepresentation of certain groups, particularly women, brings to fore the contradiction of the party’s policy of equitable representation of women in party organs by using affirmative action of at least 35% of women. The claim to be a democratic nation cannot be sustained when political parties are not inclusive over a large spectrum of Yorubaland by the end of the 19th Century. Ibadan developed a unique patronage structure based on the babaogun clientelistic system. The babaogun system entailed a network of military warlords who had clients who provided military and civil services in exchange for protection. Indirect rule introduced by the British integrated the babaogun system into governance, equipping the chiefs with economic and coercive powers, which of course sustained a transformed clientelistic system that was only subverted by the educated elite by the 1950s in preparation for independence. Hence the foundations of contemporary patronage system in Ibadan in particular and Nigeria in general are deeply rooted in the political economy of colonial patronage and superceeding neo-colonial system. Using archival and ethnographic methods, this paper provides the context of patronage in Ibadan in pre-colonial and colonial eras.

Interrogating Social Inclusion: Preliminary Notes on Micro-Credit Institutions and the Quality of Living in South Africa

The notion of social exclusion has featured prominently in poverty and social reproduction discourses. Perhaps there is a sense that its obverse, social inclusion could ameliorate the deprived conditions and improve the quality of living of the excluded. However, the notion of 'unfavorable inclusion' suggests that inclusion does not necessarily translate into an improved quality of living. Therefore, there seems to be a skewness of emphases on employment as important for inclusion and improving the quality of living of the included. This thinking has led to the neglect of other institutional structures that may be imperative for the quality of living of certain categories of people within a society. This paper looks at the implications of the activities of micro-credit institutions as a mechanism of deprivation, even when people are included in the form of being actively employed. In fact, employment has become a conveyor belt that drives people to these institutions even when people are included in the form of being actively employed. In this context, even when people are included in the form of being actively employed, the function of social policy transcend the limitations of social exclusion and inclusion debate.

The “Romantic Love” of Young Adults in Japan

Since the 1980s, the late marriage and non-marriage action has become remarkable and decrease-in-the-birthrate problem has started gaining people’s attention in Japan. In these social backgrounds, the importance of research on ‘romantic love’ with sovereignty was also started recognizing. However, the study accumulations of “romantic love” are still not enough in the area of family sociology. This study aims to consider how young adults in Japan meaning their “romantic love” by focusing on their rhetoric and gender perspective. The research data are based on 4 group discussions and 4 semi-structured interviews with heterosexual sexual single men and woman, born in 1983 to 1993. Each group is divided by social positions such as students, company employees and gender. Using these data, I found that Japanese young adults tie the construal relationship by declaration and whether they are dating officially or not is quite important to have sex because it can be the permission, which shows their sexual relationships are quite right socially. Moreover, the analysis proves that there are not big differences about sexual behavior by gender; however, it shows that there are some differences in awareness of the marriage and “romantic love” by gender. Especially, women group members tend to set the time limit to 30 years old to get marriage and to think that they should date for as long as they feel they are wasting time. However, from the narratives of survey respondents, it suggests conditions required for marriage and conditions required for romantic love are ambivalence. In Japan where a modern family ideology and a love marriage ideology are left firmly, it could make not only marriage but also “romantic love” difficult.

Transformation of Framings of Seafood Sustainability Certification Schemes

International sustainability certification schemes have been widely accepted at industries and markets partially because of their common basic structure represented by transparency, science-based measurable standards, and third-party auditing. In result such certification schemes provide alternative regulatory mechanisms beyond borders depending on types of commodities targeted. Particularly certification schemes dealing with seafood, both wild and farmed, have been showing great expansion in the world. As they come to the fore, the number of research pointing out their shortcomings also increases.

While maintaining common basic principles of third-party certifications firmly for the purpose, the framings of each scheme shows gradual transformation corresponding to criticisms. Drawing on three different international seafood certification schemes namely Naturalureland’s organic seafood, Marine Stewardship Council and Aquaculture Stewardship Council, this paper analyzes the transformation of framing of seafood certification schemes in which each scheme integrates knowledge other than scientific ones into standards and structure of scheme. In other words, it is a new function in certification framing to achieve fine balance between credibility and critical mass.

Comparative Sociology of 11 to 18 Examinations in Thailand, England, and Japan

This paper proposes a comparison of 11 to 18 examinations and the changes they have undergone in Thailand, England, and Japan. This has valuable significance as a focus of Comparative Sociology; this series of examinations has had common and persistent importance in various societies, which makes them an appropriate frame of reference for comparison.

The first objective of this paper is to demonstrate, by using the socio-cultural network concept, that there are profound similarities and differences in the changes in 11 to 18 examinations in these areas. These results will reveal a process that have not been detected by previous single-case studies.

The second objective of this paper is to propose methodological innovations for Comparative Sociology. It combines qualitative and quantitative methods, not by simple mixture but by close connection. Through this innovation, the Comparative Sociology of 11 to 18 examinations will serve as a way to resolve the eternal tension that sociologists face between science and literature.

Reconstructing Sustainable Communities through Mutual Help Networks in East Asia: A Comparison of Mutual Help Networks in Japan, South Korea and China

One way that man has maintained society throughout history is through networks of mutual help. The purpose of this paper is to show that such traditional mutual help persists in East Asia, but has been transformed in the transition to modernity and has contributed to the development of both South Korean and Chinese modern society. Mutual help in these two societies is compared with the already well-studied Japanese case. The phenomenon is divided into three categories. One is reciprocity in helping to plant rice and re-roof houses by exchanging labor. The second is redistribution. In exchange for the right to get foods from a common store, local people have the obligation to maintain a common pool of resources. Finally, unidirectional help refers to support in funeral and wedding
cere monies requiring no monetary exchange. While the traditional forms of these customs have almost disappeared from modern life, they can still be clearly identified in all three societies. This paper reports the results of an interview survey and fact-finding fieldwork of South Korean and Chinese contemporary mutual help and shows that systems of mutual help arising from indigenous conditions have continued to contribute to sustainable communities in the evolution toward full modernity. The paper concludes that modern societies might do well to take note of such mutual help networks and incorporate them into official strategies as they search for solutions to both public and private social problems raised by the reconstructing of communities in East Asia.

The Second Group of Keban Dam Studies in Upper Part of Fırat Basin

The first group of the Keban Dam studies were carried on rural and urban areas in many fields in relation to construction process of the dam, resettlement process and later on similar to many projects in the world. However, there are not going high dam projects in many countries on the neck of many rivers and river basins. Kariba, Aswan, James Bay I-II, Three Georges, Hoover and Keban are known examples. The lower-upper parts of dams and themselves are still focus of future development projects. Therefore second, third and many more studies can be named in relation to known dams.

Initial studies were focusing on the construction of dams. Their human and environmental issues such as power, equality, aging and right issues, recognition of upper-lower and dam areas; short, medium and long term impacts have become visible in time. However studies are not enough yet to see all or policies not powerful enough to encounter all findings from the fields (human and nature).

This study consisted on four sections. The first section will be revealing introductory knowledge on a necessity of an approach to merge lower, upper and dam areas inclusive of collaboration of all scientific areas without isolating local issues. The second section introduces methodological foundations of the study. The discussion will be the third section. This will be based on three pillars: Findings from the known high dam projects from the world; general evaluation of the Keban Dam Project And recent developments, rural-urban and environmental policies in the upper part of the Keban dam and upper part of the Fırat Basin. The findings will be discussed separately. A special attention will be given to the idealized natural areas (by public-by law) and changes in them. The last section consisted of conclusion and recommendations.

International / Military-Public-Private Cooperation in Disaster Relief | Lessons Learned from Great East Japan Earthquake in 2011

The Great East Japan Earthquake which occurred on March 11, 2011 was a complex disaster including the massive earthquake, enormous tsunami and large-scale radiation leaks from the Fukushima nuclear power plant. It was the one of the most serious natural or man-made disasters in the history of Japan.

On the occasion of this tragic disaster, various military, public and private ac- tors from inside and outside of Japan were engaged in disaster relief. These in- ternational/military-public-private actors conducted various activities and made remarkable accomplishments. However, we noted that numerous survivors endured immense suffering, chaos and deprivation in the affected areas. We wondered whether international/military-public-private actors responded to the urgent needs of the survivors as quickly and effectively as possible. This question was the basic motivation for our research.

Our research summarized several issues concerning the state of affairs and lessons learned regarding trilateral cooperation from the view point the MOD and JSDF. First, it was discovered that there was considerable room for improvement in the Japanese unilateral and joint operations in the event of a large-scale, man-made disaster, even though they have a half-century record of collaboration under the Japan-U.S. alliance. Concerning other foreign military forces, construction of framework for cooperation is also desirable.

Collaboration with local governments produced a lot of lessons. Although local government should assume a leading role in disaster response, in some cases damage caused by the disaster caused them to exercising their normal disaster relief functions. This led to a dramatic increase in the volume of aid needed and demands on local organizations following the Great East Japan Earthquake. A framework for collaboration between JSDF and the private/public aid sectors is also necessary in order to properly prepare for the next large earthquake.

ONODA, SHINJI* (Hosei University, shinji-0219@hotmail.co.jp)

After spending more than two decades for consideration, Japan introduced the carbon tax (officially named “Tax for Climate Change Mitigation”) on October 1st, 2012. Japanese carbon tax adds a tax rate of JPY289 per ton CO2 emissions above tax rates to the petroleum and coal tax. Compared to the carbon taxes in Euro- pean countries, its features can be seen in its low tax rate, revenue increase and earmarked for energy-oriented CO2 emissions.

Generally, a policy is established through a certain policy making process where not only rationality of policy contents are considered but also the interests of various stakeholders under political, social and economic circumstances are adjusted. In order to introduce appropriate policies for achieving a low-carbon society, it is essential to find problems of policy making processes and constantly strives for their improvements. Therefore, this study aims at approaching for elucidation of the characteristics of Japanese policy making process by investigating the carbon tax consideration history.

* denotes a presenting author. Abstracts are organized by first presenting author's last name. 729
The analysis will be divided into three stages: (1) from start of consideration (beginning of 1990s) till the establishment of the petroleum and coal tax (2003); (2) from 2003 till the change of government (2009); and (3) from 2009 till the enforcement (2012), so that it makes easier to grasp the trends of discussion. For this analysis, the chronological method and a sociological theory called “organization theory” forwarded by Michael Crozier and Erhard Friedberg will be applied. The organization theory is one of analytical methods for organizations/systems, which assumes that individual persons/groups pursue “rational strategies” under “structured conditions” defined by various factors such as political systems, procedures, historical legacies and international trends. Data will be corrected from materials of study commissions for carbon tax, the Diet and related organizations as well as from interviews with politicians, ministerial staff, industries, NGOs and researchers.

Politics As Life-Sphere: Youth Activism and the Question of Multiple Transitions in Mubarak's Egypt

Vibrant debates have emerged on the role of young people in revolutionary movements since the so-called ‘Arab revolutions’ in 2011. Some attribute the young protagonistic role more agency than the latter would themselves consider having. Others point to a certain hype around youth in this context and argue that the role of complex and contradictory social, economic, and cultural processes should be acknowledged in the making of popular uprisings in Tunisia, Egypt, and beyond. Young activists are, however, depicted often as somewhat one-dimensional social actors.

This paper argues that locating young people’s activism in the wider context of their everyday experiences helps to unravel the multiple and at times contradictory transitions the young have to negotiate when engaging in youthful dissent under authoritarian settings. Although it is important to recognize that political activism in late 2000s provided crucial formative experiences for many young Egyptians, it is useful to remember that periodic street protesting, online campaigns, awareness raising stunts, and other forms of public dissent occurred only one aspect of their everyday lives. During in-between moments, that is, most of the time, they engaged themselves in other spheres of life such as studying, leisure, work (or finding work) and family. Thus, multiple life-spheres and trajectories within them represent an everyday dynamic in which the young had to navigate in their transitions to adulthood. For instance those, whose parents were opposition politicians, who had secured a job in civil society organizations, and whose friends were supportive of their oppositional activities, benefited from crucial synergies between work, family, friends, and activism. But others were not so privileged, while sustained participation in pro-democracy movements was further structured according to gender, class, region, connectedness, etc. The paper bases on 12 months of ethnographic fieldwork in Cairo between 2007 and 2011.

Taming the Uncontrollable Situation?: Towards a Critical Re-Examination of Cosmopolitan Modernization from a Socio-Spatial Perspective

What are the significance and problems in Ulrich Beck’s concept of cosmopolitan modernization? How do the particular characteristics of a society change in relation to the influx of ‘outsiders’ across the nation-state? This paper aims to develop a new theoretical approach to the concept of cosmopolitan modernization by integrating a socio-spatial perspective that moves beyond nationalism and the nation-state. Beck’s argument has important implications for conceptualizing the future of modern society by drawing attention to the ways that boundaries between insiders and outsiders are constantly being erased and redrawn.

Toward this end, this paper firstly examines Becker’s concept of reflexive modernization by focusing on the changes in territorial formations, individual conceptions, and the linear growth model. Secondly, this paper critiques Beck’s concept through a specific focus on critical discussions of social space developed by Graham Hancock, Uma Narayanan, and Jiro Ono. Building on these insights, this paper argues that the spatial conceptions that represent “outsiders” need to be re-examined in relational terms. Specifically, this paper proposes Harvey’s idea of relational space as a way of taking into account the shifting and emergent boundaries of inside/outside and self/other that characterize the ‘uncontrollable space’ of cosmopolitan modernization. This functional suggests an integrated, socio-spatial perspective for understanding the dynamic tensions within “cosmopolitan modernization.”
ardship Councils (MSC and ASC), and industry-led initiatives such as GlobalA.P. and the Global Aquaculture Alliance (GAA). The paper then discusses how these arrangements have led to the inclusion of new categories of private actors in the regulation of sustainable seafood (e.g., auditors), and to a new round of contestation between NGOs and industry actors such as retailers, who are seeking to counter the growing reputational risk through a series of benchmarking exercises. The paper concludes with a discussion of whether and how the investment made in these market approaches have supplemented (or even replaced) state governance arrangements in promoting sustainable seafood production and consumption in the context of globalisation.

The Role of Social and Cultural Factors in the Involvement of Physical and Sports Activity in Mexico

Mexico is the greatest consumer of carbonated drinks and has the highest percentage of people who are considered overweight. Government actions have not adequately considered sports as a factor that drives social development. Part of this weakness in Mexico is a lack of specialized studies that identify the needs for physical activity, as well as the capacity of large corporations to exert influence on legislators through lobbying, thus limiting the national Government’s possibilities to foster social development.

This paper presents results from a study that identifies some of the social factors that influence the possibility of a population’s involvement in practicing sports and physical activity, such as infrastructure, socialization experiences and different needs by gender, age, regional and cultural conditions.

The study was carried out in the central-south region of Mexico, with students of upper high school of a semi-rural community. It is an exploratory study using a mixed methodology that was conducted between September and December 2012.

The results show differentiated consumption of physical and sports activities among the student population. The important role that public institutions play in marginal communities with low economic resources regarding health care, and the promotion of physical and sports activities within this population is highlighted. The results also suggest the vulnerability of communities with low economic resources regarding health care, and among the student population.

Moralistic Trust and Rationality: The Individualization of Trust

This study discusses the individualization of trust. In the literatures on trust, there are two conflicting views on the definition of trust. Hardin (1992) argues that trust is based on the prediction about the behavior of other people. In contrast, Uslaner (2002) and Mansbridge (1997) assert that trust is based on moral values or altruism beyond the prediction.

We can apply this argument to generalized trust, or trust in strangers as well. Previous studies consider that institutional confidence and voluntary association membership are the two main explanatory variables to determine generalized trust.

Institution-centered approach asserts that monitoring and sanctioning the law-breakers by order institutions facilitate trustworthiness of people's action. Therefore institutional confidence can enhance generalized trust. This approach assumes that generalized trust is based on the prediction about the behavior of strangers.

On the other hand, society-centered approach claims that voluntary association membership creates trust among belonging group, and it is generalized to strangers outside the group. This approach implicitly assumes that generalized trust cannot be explained by prediction, but it is based on moral values.

Thus, generalized trust has the predictive and moralistic aspects. We can call the shift from trust based on the prediction to trust based on the moral value as "individualization of trust." Then, what is the condition of the individualization of trust?

This study focuses the post-materialism argued by Ronald Inglehart. We can expect that trusting based on the prediction is rational for materialists who emphasize the existential security. On the other hand, trusting based on the internalized moral value is rational for post-materialists who emphasize the more autonomous choices.

To test the hypotheses above, this study will make the quantitative-analyses based on the questionnaire survey data in Japan.

The Migration and Development Nexus: Gender Insights

Research on development and migration has mostly stemmed from an economic concern (assessing the volume, cost and contribution of migrant remittances to the local development), largely overlooking women and gender issues. The New Economics of Labour Migration (NELM), the transnational paradigm and the livelihood approaches are known to have enlarged the scope of the migration and development nexus (Haas 2010). One aim of our paper is to review how gender studies have also contributed to the shifts in the debate on migration and development and how gender issues have been incorporated.

On the other hand, over the last decade, abundant literature relating to the globalization of social reproduction (the so-called ‘global care chains’) has helped to make visible the experiences of migrant women more visible. This literature has tended to highlight women’s crucial contribution to transnational reproductive labor (Hochschild 2000). However, it largely fails to capture the articulation of productive and reproductive strategies. This paper defends the necessity of rethinking the migration and development nexus according to the articulation of transnational household’s productive and reproductive strategies.

We will review the literature on migrations, women/gender and development. Then, on the basis of case studies, we will assess to what extent do migrants’ productive and reproductive strategies (care and remittances, saving and consuming, housing, health and education) determine the gender relations and the social mobility of migrant household members.

Social Networks, Networking, and Ethnic Group Membership in a Talent Pool

Even among highly educated professionals, minority ethnic is disadvantaged relative to dominant ethnicity in access to organizational resources, power, and rewards. Social capital is an important factor in reproducing such disadvantages, as minority ethnic has less access to and reap fewer benefits from social networks. While the general positive relationship between social capital and career success is well established, limited research has been conducted on how social capital is acquired following organizational entry, and how this process is affected by marital group membership. Thus, in terms of ethnicity and gender, focusing on the relationship between social capital and social group membership, we collected longitudinal social network data among a diverse talent pool of ten trainees of one of the large urban municipalities in the Netherlands. Data collection started on the first day and continued throughout the first three months of employment. Survey items addressed occasional or recurring contacts based on work-related advice, non-work-related advice, and friendship, resulting in indicators of network size, centrality, and homophily. We followed the development of social capital within the closed network of trainees and their potential open networks with all municipal employees. Also, we conducted semi-structured interviews with each of the trainees after their first year of employment to explore individual networking behavior (building, maintaining, and using social network contacts), and matching career experiences in terms of their access to opportunities and career support. Preliminary analyses suggest differences between dominant and minority group members in terms of network structure, networking behavior, and career experiences. By combining qualitative data on network structure and qualitative data on networking behavior, we address the common critique that focusing on structure and omitting agency fails to enhance our understanding of how practices and behaviors serve in ultimately (re)producing differences in network structures and their consequences.

Canadian Immigrant Women Engineers’ Work and Life: Experiences and Change

The number of women in engineering, in Canada, is growing, yet men and Canadian-educated women engineers continue to outnumber immigrant women engineers especially at the upper level of the profession. For the last 10 years, the majority of immigrants to Canada have been mostly comprised of highly educated, internationally trained professionals, many of whom are women. Many of these women hold university degrees in engineering and other academic disciplines and almost all of them have work experience in their professions. Yet few immigrants women engineers are re-entering their profession in Canada and only a handful of them advance in their career, despite a decade long effort by Canadian educational institutions, the Canadian government, and Ontario’s engineering regulatory body to involve more women into the profession.

This paper introduces the analytical complexities that I will examine in my doctoral research whose theme is an intersectional analysis of the changing experiences of immigrant women engineers in Canada, from various educational, ethnic/race/national origin and social class backgrounds. Based on life history interviews, completed by statistical and other research literature, this paper proposes research which will explore influential social and environmental factors that have
shaped immigrant women's professional and life experiences and contributed to their underrepresentation in the profession in Canada for the last 10 years, in an intersectional analysis of gender, race/ethnicity/birthplace, and class relations which considers changes or their absence over time.

*“New Ways of Recruiting – an Evaluation of the SAF Efforts of Recruiting Ethnic Minorities”*

The transition to an all-volunteer force in Sweden has meant that the Swedish armed forces (SAF) need to try different ways to recruit personnel. For countries that abandoned conscription, there have almost always arisen recruitment problems. The new direction for the SAF, going from an invasion based defense to a more operational defense force with international focus, puts demands on cultural awareness and language skills among soldiers and officers to another extent than before. In November 2012 the SAF, together with the Swedish Public Employment (SPES) Service, started a joint project called preparatory military training. The aim of this project was to attract 500 individuals with a cultural background from outside the European Union, and language skills in other languages than Swedish and English, to start a 10 weeks long preparatory military training. Preparatory training is conducted in giving participants an insight into the way the armed forces would look like, as well as get the opportunity to develop academically. Out of these 500 individuals, the SAF aims at recruiting 300 individuals to start the basic military training in the SAF. All participants live at the military barracks and receive free meals and they are allowed paid travel home four times during the course and are paid activity support from the Swedish Public Employment Agency. Men and women live separately with the facilities. The SAF and the SPES share 50% of the education and training at the barracks.

Phase two of the project starts in the autumn of 2013 and aims at attracting 300 individuals to start the preparatory military training.

The paper assesses the effectiveness of this new and original project.

*Quality of Lawyers in Civil Litigation in the Era of Drastic Changes in Legal Education and Lawyer Population in Japan*

My presentation is based upon our empirical study on the quality of lawyers conducted in Yokohama District Court and Tokyo District Court. The number of lawyers in Japan has been rapidly increasing in the 21st century, e.g., 17126 in 2000 to 32088 in 2012. We have introduced the U.S. style graduate law school system on top of the traditional undergraduate law faculty system in 2004. The legal aid system has been drastically expanded with the completely new system called “Terasu.” These reforms were intended to enhance the layman’s access to justice and improve the quality of legal services, so that the Japanese legal profession is able to satisfy the increasing demands for quality legal services caused by the globalization. But these judicial reforms have been criticized by the bar associations and many lawyers. The rapid increase of lawyers is most severely criticized. One of the main reasons of criticism is that the increase yielded poorer quality of lawyers. We have been doing several empirical researches to test this and other claims. The study I will report at this session is modeled after Prof. Richard Moorhead’s study on the quality of legal aid lawyers in U.K. One of the
striking results of our research is that the quality of legal services in civil litigation by younger lawyers is better than those of older lawyers.

The Participation of Women in Farm Management in the Development of Sustainable Food Safety: Case Studies in Switzerland and Austria

Family-managed farms form the heart of Asian and European agriculture and are essential for the stable supply of safe food. In Japan women are deeply connected with food safety and consumption activities (Nakamichi, 2010). In Switzerland and Austria, women’s participation in farm management is also related to food safety. This paper examines specialized education for Swiss and Austrian women that encourages participation in farm management, which is in turn related to food safety.

In alpine Switzerland and Austria, Direct Payments support helps to maintain small-scale family farm management, and in particular, organic farming receives higher supports. Austria has the highest percentage of organic farming (16.5%) among EU Member States, and in a semi-mountainous area of small-scale management, it is especially high. Direct Payments support is higher than the EU average, resulting from the fertilizer regulation and the Ecological Agriculture Policy (ÖPUL). In Austria, women comprise 36% (2012) of farm managers, a high percentage within the EU. Organic farming is carried out especially in mountainous regions of Switzerland, and farm incomes receive a high degree of direct support. In a semi-mountainous area of small-scale management, organic farming holds the highest percentage. Over 11% (2011) of farm households in Switzerland are organic, and among women managers, the figure shows higher.

Examples from Switzerland and Austria indicate that women play a large role in the stable supply and safety of food, but both countries traditionally favor sons for farm succession. Women are rarely trained as successors and usually enter farming by marrying farm successors, however both countries have well-established systems of vocational training for female successors. Some women trained in home economics have achieved Meister status as farm managers. Reforms in vocational education are encouraging more women farm successors, and the number of young women receiving specialized agricultural qualifications is increasing.

Struggling Against Water Environmental Inequality through Dialogue and Cooperation: Micropolitics Under Suppressed Public Sphere

China has enjoyed rapid economic growth for decades, while not controlled environmental pollution effectively, even brought pollution accidents and conflicts frequently. Especially water environmental pollution has brought sever conflicts in rural area to challenge local governance in which government and industries maintain robust alliance to convert local natural resources into their own wealth on the one hand washing their wastes to downstream farmers on the other hand. Journalists, NGOs and scholars have been aware of this water environmental inequality in rural China as a “structure” to be changed by any institutional reform, however, more endeavor to find a fundamental approach to deepen the reform should be investigated in both theoretical and practical way. Referring to experiences in Japan where severe pollution hazard like Minamata and Itai-Itai disease caused by untreated industrial wastewater under rapid economic growth in 1950s to 70s, it reminds us a series of lawsuits by victims with their supporters were followed by institutional reform for pro-victims. However, such lawsuits succeeded in Japan not only due to growing of social movements but also due to growing of public sphere to allow broader people to join in. Although political reform has been discussed for many years in China, the public sphere is still suppressed by social control of communist party and the government. In this study, promoting “dialogue and cooperation” as an alternative approach to struggle against such a structure in China will be discussed through a field survey on NGO activities in one basin and participant observation on a pilot project of “community roundtable meetings” in another basin where water pollution has been serious. Toward mitigating an inequality under the suppressed public sphere, we could find a possibility of breakthrough by “micropolitics” among local stakeholders, while revaluing socio-ecological relations which residents/NGOs have woven through their own practices.

OVCHAROVA, OLGA* (Russian State Academy of Arts, ovcharova@ya.ru)

Gender Pyramid Politics: Trends of Global Changes

Gender Pyramid Politics: Trends of Global Change

Nowadays in the contemporary world the gender pyramid of power is maintained. The low representation of women at the making-decision level is observed both in the public and private areas of employment. It is most evident in the political sphere - the sphere of traditional male domination. There is the opinion, that women can expect to realize their ambitions in this sphere in the last place. At the same time we can speak about some changes in the presented social scheme. Over the past decades, some states have demonstrated not only the increasing number of women in the government, but also the obvious mental shifts in sharing of gender roles. In this case, it is typical that the culture of these countries have not been traditionally presented as gender-focused, the movement for women’s rights has not existed, and the women themselves do not consider their political advancement as “the social breakthrough.”

On the contrary, in the states where the issues of gender equality have been raising at the higher levels for many decades, significant neutralization of the principle of gender pyramid can’t be noticed.

In this regard, the following questions rouse great interest:

What are the social, cultural and legal reasons caused this situation?

Does the economic aspect of the pyramid change with the political advancement of women? Or is the stay of women in the authority only the question of formality?

What are the prospects of gender equality / inequality in the epoch of globalization?

OWENS, ANN* (University of Southern California, annowens@usc.edu)

Subsidized Housing and the Concentration of Poverty in the U.S

For several decades, federal housing policy in the U.S. has been used to address issues of segregation in American cities. Since the 1970s, assisted housing policies aimed to integrate low-income renters into lower-poverty neighborhoods. New programs including housing vouchers, the demolition and redevelopment of public housing, and the use of new project-based developments were adopted with the expectation that they might lead to a decline in poverty concentration in U.S. cities. However, little is known about whether assisted housing policy has successfully reduced poverty concentration. Using national data, I test whether the geographic deconcentration of assisted housing units, which occurred as the new policies were implemented, led to a deconcentration of poverty in metropolitan areas from 1980 to 2005-09. Results show no relationship from 1980 to 2000. After 2000, assisted housing deconcentration is positively associated with poverty deconcentration, suggesting that deconcentrating assisted units allowed low-income families to move to lower-poverty neighborhoods, tempering rises in poverty concentration that occurred since 2000. However, the magnitude of the relationship was quite small, suggesting that the broad shift in housing policy over the past several decades has contributed little to the deconcentration of poverty in U.S. cities, despite substantially reducing the geographic concentration of assisted units. Potential explanations for this weak relationship include the small proportion of poor residents living in subsidized housing and impacts of new subsidized housing on the mobility of non-poor residents.

LOWENBERG, RICHARD* (Unaffiliated artist, lowenberg@designnin.com)

SARC (Scientists/Artists Research Collaborations)

This is the story of a pilot project that was aimed to enable creative collaboration between five internationally chosen artists and New Mexico scientists from Los Alamos National Laboratories and Sandia National Laboratories. The SARC (Scientists/Artists Research Collaborations) project was part of the well established, international electronic festival called ISER, which occurred throughout the state of New Mexico in Fall of 2012. The project was also given major support on the University of New Mexico campus in Albuquerque by SARC (the Center for Advanced Research Collaboration). The SARC Summer 2012 pilot initiative accomplished some intended objective outcomes, garnered partners that could serve as the impetus for the program’s next phase development. There is currently no policy alignment to SARC’s priority programmatic life and works, though. This White Paper, therefore, lays out SARC resources, structural considerations and intentions. At this point, SARC reality and creative potential is being dedicatedly developed, but uncertain. It is from the grounded reality of SARC development that we will form some action points.
What lessons have been learned from this pilot program? Jack Ox will discuss the problems we encountered and what is necessary to move forward. These issues will be discussed in context with the art-sc world as it develops at breakneck speed. What are the dangers art-sc collaborations will be likely to confront in the cycle of art world attention and what that means? What is the best mix of art and science? Should one domain dominate the other? A most important question is how do we judge the collaboration; are there some collaborations between an artist and a scientist not art/science?

Accountability To Environmental Policy: Renewable Technologies and Sustainable Housing Development

Complying with policy requires of practitioners that their actions are held to account; and this must be in the context of sustainable development of the social housing sector and its use of renewable technologies. The building of ‘sustainable housing’ is integral to UK government initiatives to reduce energy consumption, fuel poverty, and carbon emissions, and to generate renewable energy. In this article, we examine how ‘accountability’ is promoted by both the UK government’s environmental policy and local councils in their planning criteria. We investigate how accountability is enacted in, and generative of, the practices of sustainable housing development by housing professionals. We identify a key process of accountability – a politics of making environmental sustainability visible through demonstrating the utilisation of renewable technologies. For housing developers, the choice to install such visible renewable technologies is part of their practices to strategically and creatively meet the policy criteria and the local council’s target for planning permission. These practices reveal much about the competition and politics that underpin how local planning authorities and housing professionals together shape environmental accountability in a bid to comply, win building contracts, and demonstrate their sustainability credentials. We demonstrate how these practices have implications for potential energy provision and consumption.

SHAW, ISABEL* (Imperial College London, isabel.shaw@imperial.ac.uk)

Transforming Energy Provision and Reducing Carbon Emissions

Our society is increasingly using more electricity. We have recently seen many changes in consumer and domestic electronics: mobile phones, tablets and Internet hubs are, for instance, now part of our everyday scenarios. It is also expected that radical changes in heat and transport services, such as domestic electric heat-pumps and vehicles, will happen in a near future. As a result of this change, it is anticipated that domestic and commercial electricity consumption will rise, which then will increase a level of carbon emissions. The problem is how our society can engage in altering the racist public discourse.

Ozaki, RITSUKO (Imperial College London)

Masculinity, Racist Experiences and Repudiation Of Homosexuality: How To Deal With Research Results In a Racist Public Discourse?

The results of our empirical studies about male youths in Germany show that young migrants are often confronted with institutional and everyday racism, experienced as a form of stereotype threat. At the same time, they are actively stereotyping and discriminating others. As researchers, we are challenged to not only take seriously racist experiences, but also to deal with the young men’s discriminatory practices, in particular the rejection of homosexuality and homosexuals, closely connected with complex images of masculinity and doing masculinity in peer-groups. Additionally, the experience of homosexual immigrants who with discrimination must be taken into account.

However, the publication of such results is problematic: In some European countries a tolerant and open attitude towards homosexuality has become a cornerstone of judging the potential ability of immigrants’ successful integration. In these discourses often two racialised images are constructed: the native ‘own people’ is contrasted by ‘Muslim immigrants’. While the former constitutes the ‘tolerant’ side, void of any negative attitudes towards gay and lesbian people, the latter is constructed as deeply homophobic. These discourses have polarizing effects and facilitate exclusionary attitudes towards immigrants. In this constellation the publication of research results about the intersectionality of masculinity, racist experiences and negative attitudes towards homosexuality becomes a walk on the ridge. We have noticed that the focus of attention is shifted to their homophobia which is constructed as an effect of Muslim culture and its primitive and uncivilized patriarchal values, while the racism experiences of the young men are then usually pushed into the backgrounds.

Ozaki, RITSUKO (Imperial College London)

In opposition to it, he considers that what is gotten by the analysis of the outside and the soul of the society is immanent in the language supporting our thinking.

Book of AbstractsXVIII ISA World Congress of Sociology
is only inert, translatable in words, the common elements given by the whole society, therefore impersonal and abstract state.

In order to recognize the aspect of the concrete and lively human life and society as it is, we have to inquire critically again the sociality which language has.

Environmental Movements Against the Coalition of the State and Capital: Anti-Gold Mining Struggles in Turkey

This paper focuses upon the question of how interactions between environmental movements and corporations and the state shape environmental conflicts and influence the consequences of these conflicts. It comparatively examines three cases that involve different levels of conflicts on the issue of gold-mining in a range of local settings in Turkey, namely, Artvin, Usak, and, Izmir. The data of the study is collected by conducting field research that includes in-depth interviews with the protestors, local people, company managers, and local governmental authorities, and by doing document analysis on the basis of the news in the daily newspapers, company reports, and web sites. Our findings indicate that state authorities and mining multinationals form a ‘pro-mining’ coalition against environmental protestors, developing common strategies and tactics against the protests. The intensity of conflicts between the environmental protest movements and the pro-mining coalition is highly related with the effectiveness of the strategies and tactics that each party to the struggle followed. In those cases where one party is highly effective while the other is not, particularly Artvin and Efemcukuru cases, the conflict is at the lowest level. While the protest movement was the dominant party in the Artvin case, the pro-mining coalition has been the dominant actor in the Efemcukuru case. In Esme case, both protest movements and pro-mining coalition are effective to some extent, making the conflict relatively more intense. Accordingly, environmental movement in Artvin is the most successful one in terms of producing intended outcomes, whereas the movement in Efemcukuru is the least successful one. In Esme, both parties to the struggle have some successes and failures.

OZEN, HAYRIYE* (Attilim University, hozen@atilim.edu.tr)

Radical Left Wing Groups and Environmental Mobilizations in Turkey

A number of protest movements emerged in Turkey over the last decade against big investment projects such as hydroelectric power plants, goldmines, thermal power stations, nuclear power stations, and dams. Envisaging these struggles as part of the broader anti-capitalist struggles, left wing groups heavily involved in these mobilizations in order to direct their opposition to neoliberal capitalism and corporate globalization. This study focuses on two environmental protest movements that emerged under the leadership of the radical left wing individuals and organizations: the movement against hydroelectric power plants in the eastern Black Sea region, and the movement against goldmines in the Aegean region. Examining the effects of the leadership of the radical left figures on these two movements, it argues that while the involvement of the left wing individuals and organizations proved decisive in the generation of these grass-roots mobilizations, it also simultaneously undermined the same movements in various ways. The leftist figures played critical roles in the emergence of these mobilizations by raising critical awareness in local people concerning investment projects, by providing them discursive frames to view investments and environment, by providing resources in the form of information and materials, and by connecting local protestors to the leftist networks. Yet, they also influenced the movements in negative ways by preventing the involvement of liberal groups to these movements, and by carrying over the cleavages and clashes between the leftist groups. Moreover, the involvement of the radical left groups is used by the state as a pretext to criminalize and stigmatize the protestors as well as to repress the environmental movements.

What Does Gezi Park Resistance Mean in Turkish Democracy?

Justice and Development Party, which has been in power for eleven years in Turkey, has its roots in Islamism. From the beginning, it has been a source of suspicion about secularism for most of the modernists in the society. The party managed to increase its votes in three consecutive elections, and it had the support of half of the voters in the 2011 elections. The rising popular support for the party also triggered the short falls and threats of majoritarian democracy. The belief that democracy was under threat, and the fear of authoritarianism gained prevalence. Consequently, wide-spread popular dissent erupted in the summer of 2013, after protestors in Gezi Park were brutally suppressed by the police force. Gezi Park protests were an expression of the ‘pluralist’ anxieties and democratic hopes of the people.

Gezi Park Resistance revealed at least two important things. First, they showed that the opposition in Turkey is not weak, but fragmented. Second, and more importantly, they showed that the popular opposition cannot adequately express itself through conventional political channels. The disconnectedness between the protests and the institutional/traditional politics makes the democratic role of the opposition more critical. There is need for discussing (new) methods and instruments to make fragmented popular opposition politically more effective on a pluralist democratic basis. The outcomes of these discussions may be helpful in analyzing the social movements of the 21st century.

In this presentation, a qualitative analysis of the texts which appeared during the Gezi Park events on pro-government and non pro-government press will be used to discuss the structure and the aims of the popular opposition in Turkey, and to investigate the similarities and the differences of Gezi Park protests with other social movements of the 21st century, such as the Arab Spring, and Occupy Wall Street.
The Culture of Women's Soccer in Senegal: Reconciling Dissonance Among Representation

What does it mean to be a “footballeuse” (a soccer player) in Senegal? In Senegal, women’s soccer is more than a game; it is a counter-culture that promotes provocation and antagonism of mainstream social norms and conventions. It is a culture framed by the shared experience of struggle that embodies strength, aggression and unconformity. In this paper, I show how the “footballeuse” culture is often in conflict with the dominant gender ideology, religious beliefs, sexual norms and social practices of mainstream Senegalese society. I then discuss how this dissonance creates perceived dilemmas in the experience of the footballeuse around questions of identity and religion. My analysis explores these dilemmas and demonstrates how these women reconcile inconsistencies among cultural representations by constructing new flexible meanings of femininity. Finally, drawing on Jacques Rancière’s theory of dissensus, I show how the “footballuses” in Senegal use this space of dissonance to claim a stake in society, to break the current order of governance, making the practice of women’s soccer in Senegal profoundly political. Data was collected through nine months of participant observation, 40 in-depth interviews as well as analysis of secondary sources such as print, online and televised media.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The paper will end with a discussion on the potential of sustainable platforms of dialogue which necessitates a strong presence and proactive reproduction of social capital. What is the long-term potential of social mobilization in a) sustainably and collectively building-up of social memory for future resilience, and b) identifying and addressing possible weaknesses and challenges faced by the different bottom-up agents in their relations of cooperation, including with the state?

**Systemic City Interdependencies In Advanced Producer Services: The European Space In Transition**

The paper reports on an analysis of systemic city interdependencies generated by key agents in world economic transformations - global advanced producer services (APS) which use world/global cities as nodes for flows in their worldwide occupational networks. The analysis draws on and develops work undertaken in a major study funded by the European Spatial Observation Network (ESPON) which set out to examine Europe's position in the networked global economy and the implications for policy: TIGER - Territorial Impact of Globalization for Europe and its Regions.

Europe provides a unique contemporary territorial frame through which to observe the success of policy transfer and upscaling relevant to sustainable cities in globalization. EU urban and regional cooperation programmes and funding has been a major strand of cohesion strategy for over a decade, moreover European geo-political rescaling in successive waves of enlargement has extended policy collaboration to an ambitious supra-state/regional level.

The authors identify two intersecting spatial processes in European APS-generating city interdependencies: A process of intensifying city-network links and functional specialization at a macro-region scale; and a process of extending city links and scale specialization connecting urban Europe to distant economic macro-regions. The interaction between these two processes points to the complex nature of city interdependencies in economic globalization and a need to de-territorialize urban sustainability prescriptions.

**Positive Aeging and Leisure: Role of Healthy in Healthy Ageing of the Elderly in India**

The ageing of the population is a world-wide trend; anticipated to have wide spread and significant social, economic and infrastructural impact. WHO defines healthy age as a state of complete physical, mental and social well-being; and not merely the absence of disease and infirmity. Healthy ageing depends upon genetic, environmental and behavioral factors, as well as broader environmental and socio economic determinants. It is particularly important for the elderly to remain physically active as this can decrease the risk of many age related conditions.

The study aims to find out the role of Leisure in promoting healthy ageing among the elderly in India urban society.

Hypothesis constructed to direct the study are:
1. Involvement in Leisure activities results in healthy ageing.
2. Type of Leisure activities play a role in determining healthy ageing person.
3. Every Leisure activity does not have a positive role in healthy ageing.

206 respondents aged 60 and above from urban settings of a fast developing town of India were selected through a stratified disproportionate random sampling. Semi structured interview schedule was used to collect the data; there after statistical method was used for the data analyses. Findings reveal that:

Health has two broad parameters, mental health and the physical health. Type of the leisure activity affects the mental and physical health differently. Passive leisure activities may have a positive role in the mental health but can negatively affect the physical health.

La Transferencia Tecnológica Como Problema Político En América Latina

La transferencia tecnológica como problema político en América Latina

Una de las cuestiones que viene causando importancia polémicas en la región latinoamericana, es el establecimiento de alianzas estratégicas internaciona-
les, con el objetivo de generar nuevo conocimiento y fortalecer las capacidades científicas y tecnológicas existentes.

La naturaleza de esta cooperación se basa en los principios de las relaciones internacionales y también en el desarrollo de particulares alianzas estratégicas, como es el caso de China.

No obstante, para el caso de los países de la región, la cooperación científica y tecnológica continúa ocurriendo de forma semejante a la década de los ochenta y noventa, una relación entre países dominada por la oferta-demanda de tecnología, que si bien tuvo en su momento un importante apoyo al desarrollo económico de estos países, hoy amenaza con acelerar el desenlace de las capacidades para la producción científica y tecnológica y en consecuencia el desarrollo social y productivo, pero también altera el escenario político.

El mismo tiempo, el poder gubernamental posee una cultura caracterizada por el analfabetismo tecnológico que impide reconocer los efectos negativos de este tipo de dependencia en consecuencia limita la actividad de formulación e implementación de políticas en ciencia y tecnología que conciban la transferencia tecnológica de un nuevo modo.

El siguiente trabajo, no sólo caracteriza la situación arriba planteada utilizando como referencia la experiencia actual de algunos países de la región, también permite evaluar la pertinencia o no del modelo de transferencia tecnológica hasta ahora desarrollado, lo somete a discusión y proporciona elementos de análisis para describir los aspectos negativos del mismo. Finalmente hace una propuesta hacia dónde debería apuntar la transferencia tecnológica en estos países.

Technological and Political Illiteracy: Its Effect on Social Change in Latin America

Technological and political illiteracy: Its effect on social change in Latin America

The political dilemma between capitalism-socialism or the political power struggle between the right and the left wing, in Latin America, has been accompanied by an anachronism related to problems of social inequality. The increase in these problems has had an effect of generating more conflict between rich and poor, and therefore has become a catalyst in the process of decision-making by the political power.

In some Latin American countries, where trying to experiment with political processes that resemble with the left thinking, social inequality has generated within the population the need to contract all areas in which acts the capitalist model, with regarding to the value and the role of science and technology in the transformations and social welfare.

As a result, it has been created a social symbolism within society, which influences negatively and pushes away the true role of science in social and economic transformations of these countries. At the same time, this symbolism influences and suffers an arrangement within the political power.

What happens is a combination of political and technological illiteracy. This combination is also a clash of ideas and political decision (political inequality) for those who in society own and generate scientific knowledge in reference to those who do not. Thus, it has distorted the development of coherent public policies.

This work attempts to make some comparisons of these practices in Latin America, analyzing more deeply the case of Venezuela.

PALGI, MICHAL* (The University of Haifa, palgi@research.haifa.ac.il)

From Self-Management to Representative Democracy – the Case of Two Kibbutz Industrial Plants

Theories of new organizational forms usually assume that in the 21st century the official trend in the majority of small industrial organizations in Western Society is more worker oriented, more democratic, with flatter hierarchical structures and more worker oriented.

In this paper we would like to show when and why an organization abandons its self-management praxis and changes from a neo-organizational structure into an almost Weberian structure. In order to do so we will show the parallelism between processes, thus occurring in many kibbutz communities by analyzing two case studies of kibbutz plants. This is done by studying the interplay between changes in the kibbutz culture and changes in the plant through life cycle theories and organizational culture theories.

Our research methodology was qualitative and ethnographic interviews were held with kibbutz members employed by the organization, with kibbutz members and with CEOs that had held jobs in the past. The interviews were conducted between 2009 and 2013. This enabled us to better understand the social and organizational processes that occurred in the community and in the plant.

The main findings show that both kibbutz communities underwent far reaching changes and at the same time so did their industrial plants. But, while the kibbutz communities limited their steps towards privatization the plants went all the way – the one plant has diminished in size as it sold out most of its manufacturing activities and now it concentrates mainly on selling and servicing products it used to manufacture. The other plant has grown and thrived but abandoned most of its democratic characteristics in favor of bureaucratic ones.

PALERI, BRUNO* (Sciences Po, bruno.palieri@sciences-po.fr)

What Are the Opportunities for Social Investment in the Continental European Welfare States?

With their passive, employment-based, status-preserving, social insurance and male-breadwinner oriented welfare states, continental European countries are the least likely cases for social investment policy innovation. Nevertheless, some continental welfare states have introduced social investment reforms. While both the Netherlands and France have a similar legacy of a typical continental European passive social insurance-based welfare state, they have changed in various ways. The Netherlands has made a strong social activation turn in social security, coupled to a more “flexicure” service-based labour market. In France, there has always been a strong policy legacy of pro-natalist child care support. Recently, an important policy focus has been paced on the Youth in France. In both these countries, social investment policies have come under pressure after the 2008 financial crisis. Some policy areas (like work-life reconciliation policies) seem to have been hit harder than other areas (active labour market policies).

Moreover, there is also substantial variation across countries. How to account for this? By analyzing the reform trajectories with respect to social investment both before and after the 2008 financial crisis, the paper assesses the variable opportunities and related feedback effects for social investment in continental Europe.

Informalization of Labour : Recent Trends in India’s Urban Economy

Urban way of life is generally considered to be associated with industrial production. Reality in most third world cities, however, indicates otherwise. Only half and sometimes less of urban population finds employment in factories or similar organizations. Rest all are engaged in ‘informal’ economic activities which are casual, unskilled, with no fixed working hours, low income, with nature of work largely fluctuating and seasonal. Several studies and reports have come...
out in last twenty years, which depict the miserable working conditions of India's informal sector workers.

While workers in the informal sector contribute a considerable amount of output to the country's GDP, the conditions under which they labour are usually deplorable. Although precise data is not available, we can safely say that nearly all workers in the informal sector lack any form of social security. India has a labour force of nearly 400 million persons, about 13 percent of the entire world's labour force. More than 70 percent of the non-agricultural labour force is in informal employment. If we include agriculture into this, it will be over 90 percent. Work in the informal sector is so common today that it is almost a norm.

Today, due to policies of globalization, facilitated by advances in technology, labour is losing its formal and organized character. Workers are divided into two groups, who are employed and who are in the reserve army of labour, willing to do anything to obtain employment. Large number of workers in India, who form this reserve army, miserably wander to and fro between cities, town and villages, living in different phases of employability in seasonal cycles.

This paper attempts to understand, based on available literature, trends of formalization in the fast changing employment scenario in Indian urban economy.

Examining the Manifest Function and the Latent Function of Japanese Class: Focused on a Example of Public Middle Schools in Osaka

This presentation examines, from the viewpoint of the manifest function and the latent function, extensive adaptive function that Japanese classes could potentially play and understand this issue, the author conducted an investigation at public middle schools in the Kansai area in Japan from 2009 to 2012. The investigation combined participant observation, semi-structured interviewing, and description-type questionnaires. M-GTA technique was used to analyze the field research data.

Results obtained from data collected via participant observation and interviews suggest the follows. Besides functioning as a supplementary lesson for Japanese language and other subjects, the Japanese class also provides a place for "feeling of security" as well as "maintenance of mother tongue and native culture". We can say this is the manifest function of Japanese class. Apart from such conventional role, Japanese class has demonstrated a crucial role in facilitating intercultural understanding and cultural exchange. Newcomer students, sharing the mutual identity of a minority in class, were observed helping one another to cope with problems and thus create a more comfortable learning environment in school. Then, Japanese class also offers a career role model which could potentially affect newcomers' career choice in the future. And this is the latent function of Japanese Class that we cleared.

In summary, the Japanese class offers a place for interaction with Japanese students in various activities; an opportunity to re-identify one's own root; a place to obtain sense of self-realization and recognition; as well as a channel for resource procurement. Hence, it is not only the manifest function but also the latent function of the Japanese class has been observed in this study.

Cyberspace and Cross-Cultural Relationships Online

Previous studies claim that intermarriage dating sites are new digital technologies that have transformed the mail-order bride business. It is generally assumed that, when women from developing countries turn to intermarriage dating sites, economic deprivation and opportunities are the main driving motivation. What is ignored in such accounts is the role of desire for love and intimacy. Does the presence of economic and social gain in cross-cultural relationships exclude the latent function, extensive adaptive function that Japanese classes could potentially play and understand this issue, the author conducted an investigation at public middle schools in the Kansai area in Japan from 2009 to 2012. The investigation combined participant observation, semi-structured interviewing, and description-type questionnaires. M-GTA technique was used to analyze the field research data.

Results obtained from data collected via participant observation and interviews suggest the follows. Besides functioning as a supplementary lesson for Japanese language and other subjects, the Japanese class also provides a place for "feeling of security" as well as "maintenance of mother tongue and native culture". We can say this is the manifest function of Japanese class. Apart from such conventional role, Japanese class has demonstrated a crucial role in facilitating intercultural understanding and cultural exchange. Newcomer students, sharing the mutual identity of a minority in class, were observed helping one another to cope with problems and thus create a more comfortable learning environment in school. Then, Japanese class also offers a career role model which could potentially affect newcomers' career choice in the future. And this is the latent function of Japanese Class that we cleared.

In summary, the Japanese class offers a place for interaction with Japanese students in various activities; an opportunity to re-identify one's own root; a place to obtain sense of self-realization and recognition; as well as a channel for resource procurement. Delivery Of Quality Education In Global Era

However, education and skills have also played key roles. Education has generally supported rapid economic growth through encouraging foreign investment, enabling technology transfer, promoting productivity and progressively upgrading the skills base as required for each successive economic shift to higher value-added manufacturing and service industry. Education has also played generally positive role in promoting relatively cohesive national identities. Our key tasks in relation to each of our target countries were four-fold. The first was to identify the points in recent world history at which each country made a deliberate choice to forge a stronger integration between respective domestic systems and the global economy. The second was to provide an assessment in each country of progress towards the three goals of successful engagement; i.e. export-led economic growth, income equality and peace. The third was to provide an assessment of the contributions made by education and education policies to each of these goals. The fourth was to analyse past policies for their impact on these goals and current and proposed policies for their likely impact in the future.

While many of our most important challenges have their roots in our history, there are important new opportunities and challenges emerging in the new century. However, to underestimate the new opportunities and challenges, or to locate ourselves as 'victims', would be an historic mistake. While some commentators despair at the complexity of the current global environment, particularly with reference to the welfare of developing nations, we take a slightly different view. While cognizant of supra-national developments, we cannot stand by and watch the erosion of our efforts to build a democratic society.

Voting Behaviour Among the Youth in Malaysia

Malaysia's 13th General Election held on 5 May 2013 was one of the most exciting General Election in Malaysia's political history. The result showed that the ruling party (National Front) and the opposition coalition (People's Alliance) contested closely in the 222 Parliamentary seats. Although the results showed a rather status quo in favour of the ruling party, the opposition coalition managed to capture 42 seats from 89 seats in the 12th General Election, while the seats obtained by the ruling party reduced from 133 to 140 seats. This paper examines the young voters' voting patterns to determine the significant of this bloc of voters as both coalition parties were trying to get this inscrutable voters, comprised 40% of the electorate. 12,912,590 registered as voters and the 40% belong to the 21 to 39 years old age group. Before the election, almost 65% of them were labelled as 'fence sitters' who were mostly non-partisan and were seen as the deciding voters. National Youth Survey by The Asia Foundation indicated that the political thinking of the youths in Malaysia are not static but have changed accordingly. This new shift allows this paper to discuss the position of the youth in Malaysia's 13th General Election which party benefit from their role and whether youth were the deciding factor or kingmakers in Malaysian politics as reflected before the General Election.

The Right to Exams: Examining China's Citizenship Transformation through a Petition Campaign in Beijing

Market reforms in China beginning in the late 1970s have initiated the transformation of China's citizenship regime by restructuring the triadic configuration of relations between the state, the market, and an emerging civil society. The gradual erosion of that institution which defined and structured China's bifurcated regime of stratified citizenship rights. Under the emergent regime of citizenship, individuals' ability to become and act as citizens, as well as their ability to partake in the construction of the new citizenship regime, depends increasingly on their market position. Thus, short of achieving a more equal citizenship, market re-
forms are leading China from one unequal citizenship regime to another unequal citizenship regime.

'Supply Chain Solutions' at All Costs: The Case of Linfox and the Transport Workers Union in Thailand  

Linfox is Australia’s largest privately-owned logistics and supply chain company which provides transport and delivery services across the Asia Pacific region for the world’s biggest consumer goods companies and retailers. In Thailand, Linfox provides services for four distribution centers of Tesco Lotus (a joint venture between A Thai company and Tesco PLC, the world’s second-largest retailer after Wal-Mart). Work conditions have steadily deteriorated over the past ten years (serious injuries including deaths caused by stress, exhaustion and falling asleep at the wheel) and reached a breaking point in January 2013 – the same time as a nationwide minimum wage policy was put into effect on January 1st 2013 – a controversial policy that prompted many companies to increase working hours, reduce benefits, lay off workers and/or close down their factories. The Linfox truck drivers had no choice but to go on strike but their action only resulted in the dismissal of fifty-six union members and refusal from management to further negotiate with the workers. This paper examines the 2013 dispute between management and 430 members of the Transport Workers Union who work as truck drivers for Linfox – a multinational transport company which first started its operations in Thailand in 1992. Based on interviews conducted in the field, this paper will provide an analysis of the conflicts confronted by workers (whose several attempts at forming a labor union were shut down by management) with the aim of better understanding global corporate strategies and the challenges posed to worker solidarity. Since these are not new challenges, are there really opportunities then for new forms of resistance?

The Future with Powerful Consumers: A Case Study of Kickstarter  

In our technologically advanced modern age, the power of production has shifted from the producer to the consumer. Everyday consumers are taking a more proactive role in the way they buy, use, and mold products to their needs and purposes. These new-age consumers are changing the way corporations produce products and are forcing corporations to acknowledge the wisdom, knowledge, and creativity that consumers have to offer. As part of this developing phenomenon, crowdfunding has become a new practice of corporations and small-time producers. Crowdsourcing is the idea of soliciting contributions (be it money, ideas, or labor) from a large group of people (such as a virtual community). Kickstarter is an American-based, private-for-profit company founded in 2009. Dubbed “the world’s largest funding platform for creative project” (http://www.kickstarter.com). A platform in which producers of any kind (films, games, music, art, technology) can ask for donation for creative projects, Kickstarter puts the power in the consumers’ hands. People have the option to donate as much money as they want to the over 100,000 projects open for funding. The design seems simple, yet it is rife with controversy. Kickstarter does not provide any regulation in terms of completing the projects and delivering to the consumers. Unsurprisingly, there have been numerous projects that have been funded but not finished and delivered to the ‘backers’ (i.e. funders). By analyzing the Kickstarter community through Consumer Culture Theory, particularly focusing on the first million financed project, this paper seeks to identify how firms are interacting with consumers through crowdfunding. We explore the challenges that firms face when engaging consumers through crowdfunding and the implications for the future of consumer-sponsored production.

Participation in Voluntary Organizations and Civic Integration of Immigrants in Crisis-Stricken Greece  

During the last two decades Southern European countries, which were in the past a labour reserve for Western Europe and North America, experienced migration transition to host societies. A number of factors explain this transformation; their geopolitical position, the improved socioeconomic situation and the fact that they are part of the European Union. The recent economic crisis seems to have affected the size of immigration flows in Europe while it raised new issues related to the integration of immigrants in southern European host countries and the challenges faced by the latter for maintaining social cohesion.

Migration research in Southern Europe focuses on the immigrant characteristics and the integration opportunities of immigrants. The recent emergence of immigrant associations and voluntary organizations has not been accompanied by an extensive study of the interactions between immigrant entrepreneurship in voluntary associations and civic integration in Southern Europe and more particularly in Greece. Moreover, the ongoing economic recession has had an immense impact on the participation and civic engagement of immigrants in host countries.

The paper aims at unveiling the factors which are related to the participation of immigrants in voluntary associations and the implications of immigrant participation for their social and civil integration in host countries. Firstly, the paper will review the relevant literature in Southern European countries and then the situation of immigrant participation and civic engagement in Greece will be presented. The paper will be solidly based on a comparative analysis of research findings emanating from two consecutive research projects aiming at the study of immigrant participation in voluntary associations at the start (2009-2010) and in the midst of crisis (2013) in Greece. Both quantitative and qualitative data will be used to reflect on the deficits and the challenges of the EU and Greek migration policy towards immigrant participation and civic integration.

The Creation of Peaceful Neighbors and Calm Swedes  

The Creation of Peaceful Neighbors and Calm Swedes  

A discreet aspect of everyday life in Scandinavia is the relative absence of feuds between neighbors and the peaceful atmosphere that prevails in neighborhoods. It is rather difficult to find shoving Swedes and in criminal statistics there are rather few incidents of killings between neighbors. Another aspect of Swedish everyday life is that, when asked, two of three Swedes state that they trust other people.

In this short historical expose the author connects the absence of feuds between neighbors in everyday life and the high degree of trust prevailing in everyday life in Swedish society. It is argued that the regulation of “neighbors war against neighbors”, in essence the regulation of the inter-human space between neighbors, early in Swedish history pacified the relations between neighbors and created a fertile ground for the generalization of trust from few people to many people and for the creation of an atmosphere of trust. The author argues that it was the spread of topography and cartography through agricultural reforms before industrialization that created objective representations of property and thus eliminated boundary feuds between neighbors. By examining topographic maps before and after the reforms the author discusses how the regulations and objective representations of the physical space regulated the inter-human space.

The day after: The Effect of Diary Timing on Time Data Analysis  

The day after: The Effect of Diary Timing on Time Data Analysis  

As proved in psychological research, human memory is deceiving and we tend to forget certain events (see e.g. Kahneman, 2004), especially if they were of little importance – such as daily chores or random household-related tasks. However, these minor episodes are important in time data analysis, as they can tell much about the differences in time-use patterns or time allocation across the society. This fact has important implications for the time-data validity. If filling in of the time-use diary is postponed by the respondent until, for instance, the day after the activities took place, the record is already subject to substantial distortions. Some episodes are simply being forgotten. It results in diminished sequence variability, and extended episodes of the typical activities - at the expense of the less usual ones. What is more, it has an effect on the differences in time allocation as shown in cross-sectional analysis. The day when the diary was filled in can thus have a significant impact on the results as well as conclusions drawn from time-use research. Using the German Time Use Data 2001/2002 and Polish Time Use Data 2003/2004 (both surveys conducted within the Harmonized European Time Use Survey framework) we show how gender differences in time allocation differ depending on when the diary was filled in by the respondent. By the means of multivariate analysis we also show how sequence specificity (such as number of episodes and their duration) differs depending on whether the diary was filled in on the same day as the recorded one – or the day after.

**Hidden Ethnic Inequalities. a Possible Global Educational Exploration Using PISA**

The international educational evaluation programme PISA analysis the variances of school achievement of different countries. In several PISA reports there are described the criteria of successful schools, and the ways the social backgrounds can be overcame. In the PISA framework educational opportunities are distributed equally if the student’s education is independent of their own family background. Based on PISA reports one can have a detailed picture about the school integration of migrants, the factors which have impact on their educational outcomes.

It is important to underline at the same time that based on PISA results there is no detailed analysis of non-migrant or native national minorities. In some countries the results are presented following the (regional) minority language of test (e.g. Belgium, Spain, Canada), however a comprehensive analysis of native national minorities is failed.

Using PISA databases one can gain some relevant information about national minorities’ school outcomes (in at least 20 countries). By a cross-tabulation of the language spoken at home and of the language of test (state language or minority language) one can distinguish at least three main students groups: minority students who learn in their mother tongue (language spoken at home: minority language), students who learn in state language, and majority students (who learn in majority language, of course).

Having these students subgroups one can test two basic research questions: 1. rather the mother tongue education or the mainstream language education outperform among minority students? 2. rather the native national minority or majority students outperform? These comparison could tend us to interpret the variance in student performance in linguistic/ethnics terms. Moreover if after accounting for socio-economic background these variances still remain we can assume that exists hidden, ethnic-linguistics inequalities among students.

**The Fluidity of Texts and Structures: Exploring Institutional Ethnography of the Child Protection System in Dominican Republic**

This presentation discusses the challenges experienced in using Institutional Ethnography (IE) in a context other than Global North. I discuss the challenges in attempting to translate both linguistically and culturally some of the important concepts of IE to Spanish and the culturally different institutional structures of Child Protection System in the Dominican Republic (DR).

Based on a five year international collaborative project (Canada-DR) this presentation discusses some of difficulties in implementing a national study of the child protection system, when institutional structures were not clearly identified, and when institutional texts were not clearly defined outside the legal discourse –Child welfare Act. The team of researchers used different IE means of data collection: 1) Mapped out the “fluid” structures of the different actors working toward the protection of children and youth; 2) completed textual analysis of the rules and regulations –or lack of; 3) completed six months of direct observations and finally interviews of different actors within the system. What characterize the child welfare system in different provinces in Canada is a highly regulated and clearly structured system with standards of practices. What characterized the child welfare in the DR is relations of ruling in constant flux where practices were not based on any written forms of protocols of practices, but in personal experience and political influence of those engaged in the protection children and youth.

Since the team of researchers are now engaged in new project both in the Dominican Republic and working toward future projects in other countries of the Caribbean and Central America, the questions of applicability and universality of IE outside the Global North becomes very important.

The Managerialization of International Collaboration: The Silencing of Social Justice Solidarity

There is an extensive literature on the process of “overmanagerialization of academic work” (Todd, et al 2013). Academics’ programs that continue to engage on progressive issues such as social justice or global solidarity face difficulties in negotiating the disjunction of the entrepreneurial university and solidarity of international collaboration. “Internationalization” of programs has become a buzz idea that most universities in North America are pursuing, but the question remains “What kind of internationalization? And who is benefiting from this process?”

Using Institutional Ethnography, this presentation discusses the negotiation process with which the author has become involved with in the development and implementation of an “international Youth Right project” during the past two years. The author discusses the steps taken to textually transform the “local realities” of the everyday experience of youth advocating for the protection of their rights into textual instruments of control-financial, managerial as relations of rulings that reflect the managerial realities of the Northern institutions (the entrepreneurial university and its funders). Through mapping out the different “project management processes” required to develop and implement international projects within the entrepreneurial university context, this presentation will discuss the disjunction of local realities of those who are supposed to benefit from this kind of project -children and youth and the institutions that are supposed to manage them.

The following questions are discussed: What challenges children and Youth face in achieving their rights? What are the consequences of extremely legalistic discourses of rights on the everyday living experiences of youth in the Global South? How is the managerialization of international collaboration within university context affecting the everyday practices of solidarity?

SEMISYS Y Procesos De Construccion*De Significado EN LA Prensa Digital Colombiana

La adaptación de los medios de comunicación a las dinámicas de la globalización tienen repercusiones sobre los procesos de producción de significado. Las transformaciones han propiciado formas de interacción comunicativa, sustentadas en los valores de la globalización. Esta manera de construir el significado tiene distintos de efectos sociales que repercuten, en la interlocución y las formas como la ciudadanía construye criterios para participar de la vida colectiva y democrática. Esto es relevante en países con industrias culturales monopólicas y oligopolías que centralizan el proceso de producción y difusión de la información, y que fomentan lógicas de consumo en lugar de formas de participación y oligopólicas que centralizan el proceso de producción y difusión de la información, y que fomentan lógicas de consumo en lugar de formas de participación directa en los asuntos públicos.

Se propone explorar las formas como la prensa digital construye interacción a través de la organización de las páginas web. Se reflexiona sobre el formato, el componente multimedia y la multimodalidad en los procesos de producción de significado. Se identifican las formas como gráficamente se construyen marcas de deísis, orientadoras del proceso cognitivo y mecanismos de construcción y reproducción ideológica.

El corpus de esta investigación son los print de las páginas web de inicio del periódico ElEspectador.com y la revista Semana.com. El corpus se toma el 1-08-2013, tomando como punto de referencia el conjunto de recursos de interactividad que se apropian para construir significador con el fin de identificar cómo se propone la interacción comunicativa entre productores discursivos y usuarios-lectores.

Palabras clave: medios de comunicación, formas de interacción, multimedia, multimodalidad.

Precarious Politics: Struggles Against Insecurity in the Global North and Global South

My discussion will complement Standings' general analysis by focusing on the collective struggles of two insecurely employed, low-income groups at opposite ends of the globe: low-wage immigrant workers in California, United States, and citizens living in poor communities in Gauteng, South Africa. Both groups compensate for their lack of economic leverage by organizing around demands for recognition, dignity and inclusion. Because these demands are largely directed towards the state, their struggles for economic survival become entangled with struggles around citizenship status. These cases affirm Standing's emphasis on the importance of citizenship and recognition, but paint a more optimistic vision of the precariat's capacity for struggle, and underscore the need for greater attention to differences between the Global North and Global South.

The 1988 Seoul Olympic Games and Habituating Developmentalism in Korean Society

This paper examines social impact of the 1988 Seoul Olympic Games on South Korean society. It attempts to explain the event not as a facilitator to the democratization, but as a means of justifying developmentalism derived from dictatorship government in Korea. The 1988 Seoul Olympics have been regarded as an event that not only displayed the state of the rapid economic growth, but also carried out a positive role in the peaceful process of democratization.

However, the current political situation in Korea raises a question whether the democratization is really successful or not because authoritarian style developmentalism is continuously supported by Koreans, even after the transformation into democracy. Some people claim that a certain level of the authoritarian rule are restored and legitimized. This study argues that the hosting gave the former dictators hegemony, a persuasive power which works in peoples’ everyday life.

First, huge amount of urban regeneration promoted Korean Chaebol (conglomerates) to build skyscrapers in the center of Seoul. Some of the buildings functioned as popular attractions and showed the most citizens the fruits of the economic development by the Chaebol and the dictatorship government.

Second, a huge number of apartment buildings were constructed by Chaebol's construction companies and ‘Apart’ became a typical dwelling form of middle class in Korea. The middle class people dwelling in the ‘Olympic village’ invented their own consumer culture and lifestyle. That is, ‘distinction’ in Bourdieu's term began among the citizens.

The middle class's everyday life depends on the products by the Chaebol and the narratives on the growth of their households identify with the narrative of economic growth of Korea. This serves as a principal of supporting successor of the dictatorship in Korea, even beyond the democratization.

A Sequence Analysis of Career Pathway of College(University) Graduates Youth in South Korea - Focus on Variation Across School Locations -

This study intends to analyze career pathway of youth who graduated college(University) in South Korea. The aim of this paper is to show dissimilarity in transition pattern in labour market within youth by the variation across school locations. In order to analyze it, Korean Labor and Income Panel Study data collect in 1998-2009 is used. The dataset is divided by school location (Seoul & Gyeonggi, Incheon & Non-Metropolitan areas). I examine sequences of labour market statuses using explorative methods of sequence analysis and optimal matching algorithm. The main results of this study are as follows. Pattern of youth’s work careers is different by firm-size and occupation. For example, youth who graduated from provincial college(university) get job in smaller firm than any other groups. And, labour market entry time is also different. For instance, youth who graduated from Gyeonggi, Incheon college(university) prefer entering the labour market to applying for a job although it is unstable job. In contrast, youth who graduated from Seoul college(university) prefer applying for a job to entering secondary labour market. In addition, level of exposure of employment instability is different. Youth who graduated from provincial college(university) have difficulties finding stable job. They face high risks of job termination. Also they expose to repeat of (re-)entry and exit labour market. Especially, it is distinct between Seoul*male group and Non-Metropolitan areas*female group. As results of this study show, we need to consider gap of career pathways within youth. And institutional support should be provided by gourp characteristic.

PARK, JINYOUNG* (Cornell University, jy989@cornell.edu)

Solidarity and Empowerment of Women Workers in Asia

Solidarity has been stressed as one of the most important tools for powerless and marginalized groups of people left alone labor movements. Pressures from globalization create additional demands for workers and activists to extend their solidarity cross the borders. This is not only because globalization has created problems that connect people's lives across national boundaries, but also because it has produced many situations and cases in which workers, and activists face similar problems and circumstances, making sharing and learning from each other useful. Based on my experience working at the Working Women Academy
Life History and Family Changes in Korea and Japan

This study examines important characteristics of family changes and modernities embedded in the life history of Korean and Japanese elders born in the 1920s and 1940s. The elderly born between the periods of the 1920s and 1940s underwent very compressed social changes, such as the imperialism, political turmoil after liberation and ferocious national building, wars, diaspora, and the high turmoil after liberation and ferocious national building, wars, diaspora, and the high economic development. Modern families have been developed and transformed in this vortex of social changes. Reconstructing the memory of the elderly people's own life history, this study aims to discover characteristics of family changes and modernities in Korea and Japan.

Surveys and interviews were conducted in Seoul, Korea and Nagoya, Japan from 2009 to 2011. Questionnaire covered detailed information about family in origin, education, experiences of adolescence, marriage and their own family, work, and later life. 100 cases in Korea and Japan respectively were collected considering age, gender and economic status of the elderly. In-depth interviews were then followed for the cases with importance in the study and elders' willingness to interview.

Several important concepts of modern and family changes are interpreted by comparing life histories of Korean and Japanese elders. Modern construction of patriarchal family and its change are compared. In regard to the period of childhood and the youth, the mixture of kinship and modern rearing, gendered education, and influences of imperial war and Korean war, diaspora and repatriation were investigated. In the interplay between the individual adulthood and the social period of high economic growth, mixed relation with extended and nuclear family and ideas of gender role division were compared. Finally, attitudes in inheritance, after-death, and family support in later life and social changes were compared.
social patterns of low-carbon energy consumption would not be found in developing countries, or be found only in its upper-middle and upper classes. The few sociological studies do not allow to a conclusively answer.

Sustainable development in Latin America is being challenged. Population growth is not driving the increase in GHG emissions, but rather growth in consumption (Satterthwaite, 2009). In this global context, Chile is an example of an emerging economy whose growth affects the environment.

It is possible to hypothesize that the energy consumption in emerging countries (in AL) is associated with the family socioeconomic unequal position. But what happens when we study social patterns of energy consumption of families of similar social positions?

Research on households energy consumption, their views and behavior is complex (Lutzenhiser, 1993). No sociological studies seem to be available for answering this question in AL. This paper aims to shed light on this issue based on qualitative and quantitative empirical sociological research recently conducted in Chile.

'Must the Subaltern Fight?: Resistance and the Art of Forming Your Masters'

There are many instances from the history of colonialism – not confined to the experience of successful anti-colonial conflict – of the impact of the subject’s on those who purport to be their masters. With this reformulation of Spivak’s classic question, this paper sets alongside the anthropology alluded to by a version of James C. Scott’s book title from 2008, the paper focuses on the subaltern’s alternatives to open, violent resistance. Thus the paper attempts to map the interplay between top-down power (the paradigm of ‘power over…’) and the bottom-up capacity of the subjects to maintain a degree of autonomy, or even effectively shape the power which is ostensibly exercised ‘over’ them.

How can a ‘power to…’ be shaped into an enabling power which facilitates human activities from the subaltern side? The answer is to be found in the combination of three further dimensions in power relations over and above the top-down will: the resistance of the subject; the practices which actualize activity in a society; and the structuring of conceptions which is traded in discursive exchanges.

Scott (plus Hirst 2005) and the historical sociology of resistance provide an access point for the first of these; Foucault for the second; and Bourdieu an account of ideology that illuminates the third. The paper will draw empirically not only on the history of colonialism and its end, but also on the many histories of popular resistance. The purpose is to read the historical sources with this particular blend of theory, showing the contradictory impulses within which actual power develops.

Predictive Policing: The Case of Burglary

This study is designed to utilize large amounts of data from previous time points in the City of Indio, CA, to analyze the predictors of burglary rates, commercial and noncommercial, to test the idea that a predictive model of burglary could be developed. Using predictions as to sub areas in the community that are expected to have the highest burglary rates, based in part on an observed relationship, lagged across time, between truancy and burglary, we develop an intervention model and apply it most heavily on the predicted high burglary areas. Evaluation is designed to see if we can reduce these predicted high burglary areas to areas with below city wide means for burglary in the previous year.

Future Energy Landscapes in Canada: Discursive Renderings of Renewable Energy Alternatives through Q Methodology

The transformation of energy landscapes toward more sustainable energy futures is often fraught with challenges, not the least of which is public opposition to the altering of treasured spaces and places. Drawing on Charles Taylor’s social imaginaries, Zeubravel’s socialization theory and Nassauer’s notions of culture and landscape, this paper identifies the discursive and visual structures that anchor the socio-ecological world to existing modes of energy production and limit the potential for energy landscape transformation. Within this analysis, culture is understood to be inextricably linked to landscapes and energy development – from wind mills and solar arrays to oil sands and hydroelectric facilities – having a profound effect upon landscape preferences. The landscapes humans create as they meet their needs and desires are not always beautiful or healthy, but they comprise heritage that contributes significantly to an individual’s sense of place or identity. Therefore any meaningful transformation of these landscapes toward sustainable futures will require careful and incisive analysis of these social and cultural anchoring points. These points are examined in this study through Q method analysis of 48 statements on energy production in Canada. Research involves three diverse case study areas (Alberta, Ontario and New Brunswick) aimed at gaining insights into the discursive underpinnings of energy production. Results offer nuanced and regionally specific understanding of citizens’ deeply rooted and often conflicting values surrounding landscape change, aesthetics, governance, ownership, renewable energy alternatives, and identity with the energy sector.

The Link Between Disaster and Violence Against Women

There is compelling evidence that violence against women increases following large-scale disasters. Yet there is a research gap on why this happens, and how increased violence may relate to disaster experiences.

This presentation reports on the first Australian research into this – a phenomenon previously overlooked in emergency planning and reconstruction after disaster. In the absence of reliable quantitative data, interviews with 30 women in Victoria are conducted after the 2009 Black Saturday bushfires provided evidence of increased domestic violence, even in a context that silenced women. Community members, police, case managers, trauma psychologists and family violence workers empathised with traumatised and suffering men – men who may have been heroes in the fires – and encouraged women to wait it out. These responses compromised the principle that women and children always have the right to live free from disaster.

Violence provides an opportunity to reinforce traditional gender roles, and this presentation considers the concept that social cohesion relies on women’s sacrifice. Further, it identifies that male privilege plays an important role in ensuring men’s interests are prioritised.

The launch of the research findings in 2012 brought this highly sensitive issue to the attention of disaster managers and inspired changes within key emergency organisations to improve the safety of women and children in the aftermath of disaster, beginning with improved data collection and training for disaster personnel. A partnership project was then funded to explore men’s experiences after Black Saturday, with a focus on men’s harmful behaviours to themselves and to those around them. The role of gender and the cost of patriarchy to both women and men are examined through interviews with 32 men.

The Cost of Living Longer: Projections of the Effects of Prospective Mortality Improvement on Economic Support Ratios for Eighteen More Advanced Economies

The aims of this paper are twofold; (1) to forecast mortality for a wide range of more developed countries from 2010-2050 and (2) to simulate the effects of the forecast mortality patterns on economic support ratios under the continuation of current fertility, migration and labour force participation. The mortality forecasts are prepared for eighteen countries using the Poisson Common Factor Model proposed by Li (2013). The effects of mortality on economic support ratios are estimated by comparing the results of projections under the best estimates of the forecast mortality change to the results of projections which assume that mortality remains constant over time. The results of the mortality forecasts show that the projected gains in life expectancy for both sexes are greatest in Japan, Israel, Australia and in East-Central Europe, and are least in the Ukraine, Netherlands, North America and Sweden. Preliminary results show that the ratios of total hours worked to age-weighted populations are projected to fall most in Japan, East-Central and Southern Europe, and least in Sweden and Australia. In all countries the forecast improvement in mortality accounts for less than half the projected decline in support ratios under the continuation of current fertility, migration and age-specific labour force participation and the age structure of the initial population.

Nature Grabbing or Successful Practices for Nature Conservation? Blurred Boundaries in Chilean Protected Areas

Literature on protected areas (PAs) constantly reanimates an ancient debate that opposes conservationist scholars, considering the world history of PAs, as a testimony of human progress, to critical voices counting this history as a record of failure (Brockington et al. 2008; Stolton, Dudley 2010). For, as several social scientists have emphasized, conservation regulation has in many cases been part of coercive colonial strategies and disempowerment of indigenous groups. More recently, contributions on “nature grabbing” have joined the debate, revealing processes through which property rights and control over natural resources are transferred from ‘poor’ to powerful hands (Fairhead et al. 2012).

Based on case-study research in two Chilean regions, the Atacama Desert and Green Patagonia, this paper examines the shades of grey between what may be acknowledged either as a success or a failure in the contemporary governance of PAs. This paper argues that there is a need for examining PAs and their governance by using more sophisticated analytical frameworks that help to capture the social complexities in which these areas for nature conservation are embedded and reproduced.

This paper is structured in five parts. Part one combines literature on socio-ecological systems, environmental sociology and political ecology to discuss critical social sustainability issues in the contemporary governance of PAs. Elaborating on these theories, part two offers an analytical framework drawing attention to the social dimensions of PAs, including politics and power dynamics, economic forces, institutional transformations, as well as culture, discourses, values and justice in local histories. Section three discusses conservation policies and land uses in a neoliberal context that has allowed a widespread proliferation of private PAs. Section four zooms into two Chilean regions and the remaking of their PAs histories. The paper concludes with reflections on the blurred boundaries between successful conservation and nature grabbing leading to injustice.

Rio Museum of Art in Times of Trouble

Given the growing diagnoses of musealization processes, of the spreading of cultural centers and of the new status assigned to curators, this research investigates the emergence of exhibitionary institutions as instruments for intervention in the urban space, in times of social change. I shall here analyze the foundation of the Museu de Arte do Rio, in March 2013, at the Rio de Janeiro harbor district. The aim of the research is discussing the possibility of building an art institution, taking on account the formation of social networks and the negotiations for the place destined for museums in contemporary times, and of the negotiation of border-related perceptual and material differences. Built through a decade of disputes, the Museu de Arte do Rio seems to be revealing both of the place destined for museums in contemporary times, and of the negotiations between organized groups and institutions in Rio. Proposed in times of optimism and prosperity in expectation for megaevents such as the World Cup in 2014 and Olympic Games in 2016, the museum was conceived as a new icon for the city's image. Nevertheless, just when it was founded in March, 2013, the museum was, however, the target of demonstrations that anticipated the massive protests that spread in the country since mid-2013, taking to the streets of the city more than a hundred thousand of people in June 17, 2013. This paper seeks to understand how the institution has been the target of new disputes in the city and has been incorporating new categories to face the demands for change.

Fukushima, Tsunamis and Earthquakes: The Meanings of Risk in the 21st Century

The most significant nuclear disaster since Chernobyl in 1986, struck in Japan on March 11, 2011 as the Fukushima Daiichi nuclear reactor failed in the face of the earthquake and subsequent tsunami. In Fukushima, Japan, the social trauma is still present, while the distrust over the safety of the nuclear energy has grown. This paper analyses the shades of grey between what may be acknowledged either as a success or a failure in the contemporary governance of PAs. This paper argues that there is a need for examining PAs and their governance by using more sophisticated analytical frameworks that help to capture the social complexities in which these areas for nature conservation are embedded and reproduced.

This paper is structured in five parts. Part one combines literature on socio-ecological systems, environmental sociology and political ecology to discuss critical social sustainability issues in the contemporary governance of PAs. Elaborating on these theories, part two offers an analytical framework drawing attention to the social dimensions of PAs, including politics and power dynamics, economic forces, institutional transformations, as well as culture, discourses, values and justice in local histories. Section three discusses conservation policies and land uses in a neoliberal context that has allowed a widespread proliferation of private PAs. Section four zooms into two Chilean regions and the remaking of their PAs histories. The paper concludes with reflections on the blurred boundaries between successful conservation and nature grabbing leading to injustice.

PASQUETTI, SILVIA* (University of Cambridge, sp638@cam.ac.uk)

Affective, Symbolic, and Family Ties Among Palestinians in the West Bank and Israel: A Multi-Sited Ethnography and a Transnational Research Agenda

Melding insights from recent works on the affective, embodied, and symbolic dimensions of transnationalism with multi-sited fieldwork in Palestinian localities across the Green Line between the West Bank and Israel, this paper aims to develop a transnational research agenda on Israeli and West Bank Palestinians. It argues that a focus on emotional ties, symbolic practices, and subjective views can help overcome the scholarly tendency to use the spatial and legal divisions imposed differently on situated Palestinians as boundaries for research and to assume that these imposed divisions are the most salient factors in the everyday lives. It also sketches a transnational research agenda on these two segments of Palestinians, discussing how a focus on everyday life and a multi-sited research design can help explore their various transnational engagements from the expression of feelings of solidarity and the pursuit of cross-border family practices to the negotiation of border-related perceptual and material differences. Second, beyond the case of Palestinians under Israeli rule, this paper problematizes the privileged focus on mobility in transnational studies and calls for more attention to the role of transnational histories and forms of belonging in the lives of people experiencing forced spatial immobility and legal exclusion.

PASQUETTI, SILVIA* (University of Cambridge, sp638@cam.ac.uk)
“He Is Not Clean:” an Ethnography of Surveillance and Emotions Among Palestinian Arabs in the West Bank and Israel

Drawing on insights from works on the affective dimension of the law and on recent theorization of emotions as transpersonal and collective phenomena, this paper explores the role of political informers of the modern state’s security agencies on shaping emotional relationships among members of targeted populations. Specifically, based on ethnographic fieldwork within and across a West Bank refugee camp and the Arab districts of an Israeli city, I explain how the state practice of recruiting “collaborators” (informers) produces distinct meanings and emotions in these two localities. Camp dwellers react to political informing through collective informal social control, personal investment in the camp residents’ reputation, and support for the physical expulsion and even violent death of alleged “informers.” City residents experience political informing as a form of “symbolic dirt” that circulates in all public and private spaces, ambiguously mixed with criminal forms of informing, and mediates affective and social ties among neighbors, friends, and family members. I also explore the distinct predication of former “collaborators” who were relocated by the state’s security apparatus from the West Bank to the Israeli city where I conducted fieldwork. By focusing on the entanglement between political informing, moral claims, feelings of belonging and betrayal, and practices of physical expulsion and relocation among differently situated Palestinian Arabs, this paper aims to theorize the role of the state’s security apparatus in shaping emotional relationships and responses among targeted people.

Literate and Iliterate Tribal Youth and Leisure

In the empirical analysis we use data from the ISTAT-2011 ‘Survey on the transition from work to work of University graduates’ to examine the early labour market returns of different tertiary degree holders from bachelor’s, master’s and long degrees in terms of employability, class position and wage. By means of binomial, multinomial and OLS multiple regression, the empirical results show that the labour market rewards of the three types of degree do not reflect precisely the legislative arrangements. According to expectations, four years after the completion of studies, bachelor’s graduates are the most prestigious and rewarded occupations than masters and long degrees. However, labour market outcomes of long degrees and masters vary widely, although they are legally equivalent. Net of other relevant personal characteristics, graduates from long degrees are less likely to be employed, but gain higher wages and have higher probability to reach the apex of the social hierarchy compared with graduates from master’s programmes.

Colonial Legacies, Low and Discourses of Inequalities. An Analysis of Poverty Alleviation

The paper uses the example of a revolutionary poverty alleviation programme (which is now given legitimacy as a law) to understand and assess the discourses that structure inequalities in India. The focus is on a law called National Rural Employment Guarantee Act which provides as a right, employment to one member of a poor household for 100 days of a year.

On the basis of case studies, this paper argues this discourse does not have a language to comprehend the relationship between cultural forms and processes that organize inequalities in India at three levels. First, the attention of this Act is on objective quantifiable attributes of inequalities and wealth disparities such as poverty line, income and food consumption, an understanding which it inherents from 19th century colonial liberal discourses. It thus cannot recognize the fact that the poor work and labour in economies that combine and exchange low value labour goods and services which are rarely quantifiable in terms of the rational economic language created by contemporary capitalist discourse. Second, this colonial legacy has further frozen a range of differentiated cultural practices of domination and subordination that organise inequalities into a few standard Orientalist categories. We argue that not only are these practices varied but they range from stigma, discrimination, intolerance, prejudice and hatred. These may manifest as individual discrimination but are moored in group based representations of domination which are reconstituted from colonial classificatory systems.

The Act has little comprehensions of these differentiation and cultural practices as these remain invisible and thus quantifiable. Third, these representations are unevenly organised across localities and regions defining the nation state creating a complex pattern of exclusionary intersections that manifest differentially in varied economic and social contexts of the territory. These cases help to rethink and understand the theory of inequalities.

The Global South and Postcolonial Perspectives in International Sociology

A powerful current development in our discipline is the emergence of postcolonial and global-south sociologies. This is not a new specialization, but a change in perspectives that will affect all fields of sociology. New possibilities are currently being explored in sociological theory, sociologies of disability, education, gender, modernization, the history of sociology, and more. This session is planned as an interactive event in which leading colleagues in this movement of thought will debate issues raised by the participating units and by other ISA members. In the latter part of the session, comments and questions from the floor will open a dialogue with members of the panel. Among the themes for the session are questions of centrality and marginality, changing methodologies, changing agendas for research, new audiences, and changing curricula for teaching sociology.

Gender Inequality and Women's Health: Indian Perspective

Indian women face most of the health problems due to discrimination. The high risk groups in their lives are early childhood and reproductive age. Inadequate and poor nutrition, non-access to primary health care, poor reproductive health and discrimination against girls are four major causes for higher female mortality between ages one and five and high maternal mortality rates.

The practice of sex determination tests and subsequent induced abortion, small family size are added to decreased sex ratio. Sex-selective abortions are indicative of the low value to girls. Gender disparity in nutrition starts from infancy to adulthood. Girls are breastfed less in infancy. Malnutrition is an underlying cause of death among girls below age five. Nutritional deprivation amongst girls leads to improper growth and anaemia. Anaemia is more prevalent amongst girls, pregnant and lactating women. This not only compiles childbearing and result in maternal and infant deaths, maternal depletion and low birth weight infants, but also severely affect women's productivity and quality of life. Infertility poses a serious social and emotional threat to women.

Women also face reproductive tract infections and related infertility. The reasons for maternal deaths include sepsis, abortion, haemorrhage, and anaemia, etc. Sexually transmitted diseases, HIV, have serious implications for women. Women tend to seek medical help only if an illness is advanced, thereby reducing their chances of surviving. Many deliveries take place at home, with untrained assistant in proportion of moderately skilled workers by automation. Low wages of highly skilled workers, are not involved in decision making including use of contraceptive, family size, etc.

The objective of the paper is to analyse current health status of women and give recommendations to policy makers, health workers to take steps to improve women's health status. The paper is based on secondary data.

RC09-176.5

Globalisation, Technology Transfer and Growing Inequalities in India

Globalisation and transfer of technology in the recent past have brought about significant changes in the process of production of goods and services providing services to the ever growing size and variety of clients which is looked upon as a positive development. But the fact that needs to be looked into is, what implications it has for the workforce in terms of wage inequalities which is an equally important issue. Increasingly advanced technology applied to various sectors in service and manufacturing is assumed to call for new skills and tasks, normally of higher sophistication and complexity which may result in increased real wages for highly skilled sections of the workforce. Another outcome of this development is steady decline in proportion of moderately skilled workers by automation, task performance, which again could have wage implications for the remaining workforce resulting in greater inequalities. This assumption was tested in eight Indian states in level of task performance, which again could have wage implications for the remaining workforce resulting in greater inequalities. This assumption was tested in eight Indian states in their chances of surviving. Many deliveries take place at home, with untrained assistant in proportion of moderately skilled workers by automation. Low wages of highly skilled workers, are not involved in decision making including use of contraceptive, family size, etc.

The objective of the paper is to analyse current health status of women and give recommendations to policy makers, health workers to take steps to improve women's health status. The paper is based on secondary data.

Municipal Solid Waste Management In Kolhapur, India: Need For Decentralized Composting

The management of municipal solid waste is emerging as an environmental issue in India. Under Municipal Solid Waste Management and Handling Rules, 2000 and directives of Hon'ble Supreme Court, all the citizens are to segregate the garbage at source.

The waste generated in Kolhapur city per day is 150-165MT. The contract was done by Kolhapur Municipal Corporation (KMC) with Zoom Bio fertilizer Pvt. Ltd. in 2000 and since 2003-04 it used to segregate biodegradable solid waste and for making biogas for the city. But as the company went into liquidation, this project was closed in July 2011.

KMC had given a contract of collection and transportation of solid waste to Ramkey Group Pvt. Ltd. from 20th Nov. 2007 to 15th August 2013. But the contract was ended by the KMC in June 2011 as the company was not lifting all the waste from the city.

Along with the increasing population more land is required for the disposal of solid waste and today there is no reserved piece of land for the treatment plant in city. The place at outskirts of the city, Top quarry is under dispute. There is resistance from people of that area and there is a stay order from Hon'ble High Court not to use that place for dumping waste. A land at Halsawade is allotted for sanitary land filling but it is under dispute and stay order has been given by Hon'ble High Court.

The centralized collection and processing has been failure and created environmental issues. There is a need to adopt decentralized composting at homes, apartments, colony, garden, institutes etc.

The paper reviews the Municipal Solid Waste Management in Kolhapur and also shows the attempts made by citizens for decentralized composting.

Population and Environment: Panchaganga River Water Pollution In Kolhapur District, India

India has rich water resources. The demand for water increases with the increasing population and developmental activities in cities and villages on the riverbanks which leads to environmental pollution. There is surface water as well as ground water pollution due to lack of or under capacity of Sewage Treatment Plants and it has adversely affected human health.

The Hindu Survey of Environment 1991 states that the river Panchaganga is one of the 12 polluted hotspots in India. Along with 39 villages, Kolhapur and Ichalkaranji are two cities located on the banks of Panchaganga River. According to Census 2011, Ichalkaranji Municipal Council had 287,570 population and Kolhapur Municipal Corporation had 549,283 population. The sewage generated from these cities is to be treated properly and 39 villages also pour sewage water into the river. Panchaganga river water gets polluted due to domestic and drainage water, commercial and hospital establishments. It has influenced in the form of water borne diseases and claimed 24 people due to outbreak of jaundice in Ichalkaranji in May 2012.

The paper based on the secondary data focuses on the population growth and other factors responsible for Panchaganga river water pollution and how it influenced on human health.

Causes and Social Implications of Educational Inequities in Indonesia

Educational inequities in Indonesia has been existed for many years. Two major challenges with respect to educational inequities are access to and quality of education. Access to primary education is almost universal, while access to junior and senior secondary are still far from the government target. Let alone the tertiary education. The quality of education occurs at all levels of schooling. The twin problem of educational inequities is a major concern of the Government of Indonesia (GoI). Over the past decade GoI has allocated 20 percent of its national budget towards education sector. GoI has made numerous attempts to overcome the inequity issue through, such as regulating the functional assignment between central and subnational governments in providing primary and secondary education, and issuing the minimum service standard for its implementation. Apparently these regulations were not prepared in a systemic and integrated fashion. This
paper analyzes the causes and social implications of educational inequities in Indonesia. In terms of causes, this paper focuses on the socio-economic background, culture, and access to resources. While on social implications, it will cover four issues. The first two deals with the fact that educational inequities will increase inequality in income and competitive ability among individuals in labor markets. Thirdly, educational inequities will widen inequality of vertical social mobility chance among social strata. The more educated have higher probability to advance to higher social strata than those with lower level of education. This may give rise to social exclusion, which is the final impact to be discussed in this paper.

Mobilizing from Appropriate Technologies to Sustainable Technologies (based on Grassroots Innovations)

This paper offers an understanding of the concept of Appropriate Technology (AT) and points out its historic relevance from the standpoint of developing countries. The paper focuses on the evolution of AT movement in India and ideological contributions by various thinkers like M. K. Gandhi, E. F. Schumacher, J C Kumarappa, and others to this movement. It stresses that AT movement as a discursive one is not about mobilizing activities and people but is about academic discourses on AT. And the paper presents an empirical case study of a social movement organization named Honey Bee Network, emergent of the said movement that does not represent the original discourse of the movement any more rather represents the later turning point of the discourse, i.e. the drift toward sustainable technologies. This drift is perceived on the basis of experiences of a developing country like India with regard to mitigations of western industrial technologies and their non-sustainability. Noteworthy that this case study of the Honey Bee Network at Ahmedabad is in fact a network of three organizations namely, SRISTI, NIF, and GIAN which are to scout, document, register, and incubate the grassroots innovations and that are based on traditional and indigenous knowledge systems and steadily to transform these grassroots innovations into commercialized technologies. The Honey Bee Network as a social movement organization has been analyzed from the vantage of the well known resource mobilization theory of social movements. Lastly the paper brings out the socio-cultural embedded character of the grassroots innovations and their resultant technologies. And it is further argued that, this bottom-up approach of technological development paves the way for sustainable technologies that are socially and culturally embedded and are founded on social participations. Such technologies are perceived to be representative of an alternative paradigm to that of modern western technologies.

Rise of Self-Help Groups As a Social Movement: Experiences from the Indian State of Odisha

Studying and participating in the process of development has been the approach of governments in developing countries and Non-government organizations (NGOs) for which they have taken plethora of initiatives following both top down and bottom up approaches. Some of those (initiatives) succeeded while others failed. But no programme for socioeconomic development was so wide reached and popular than the Self-help group approach. Self-help group (SHG) is a small, economically homogeneous and affinity group of poor people who come together to save some amounts regularly, mutually agree to contribute to a common fund, meet their emergency needs, adhere to collective decision-making, resolve conflict through collective leadership and provide collateral free loans on terms decided by the group. These groups try to empower the least empowered sections (mostly women) socially, economically and politically. Involving millions of women (through SHG), thousands of NGOs, MFIs, and bank branches give this phenomenon a movement perspective.

This paper is an earnest attempt to examine the evolution and development of the phenomenon of SHGs from social movement perspectives. It examines the phenomenon as a social movement at all and the applicability of different theoretical perspectives to study it. The paper uses the resource mobilization theory and constructivist approach as the analytical frameworks to explain the emergence and working of SHG system. The political and cultural opportunity structure in Odisha has been very much supportive to make the movement wide spread. At the same time operation and control from the top (Government of Odisha) affects the rigor of the movement. The paper discusses some such complex issues of collective actions.

The Transmission of the Chineseness to Chinese Descendants in Thai Society through the Understanding the Meaning and Religious Symbols

The research entitled “The transmission of the Chineseness to Chinese descendants in Thai society through the understanding the meaning and religious symbols” aims to investigate the existence of Chineseness in Thai society focusing on the Chinese patterns and how Chineseness being transferred to the young Chinese generation born in Thailand, which include the transfer of knowledge and understanding of the meaning of important Chinese festivals and traditions, problems related to the transmission of Chineseness, and the factors supporting the success of the transmission of Chineseness. This study is an applied research integrating both quantitative and qualitative data which collected by questionnaire and an in-depth interview. The findings are that a majority of the research participants still have their beliefs and faith in gods and sacred or holy items. Most of them still pay their respect to gods on Chinese Sabbath Days as well as to their ancestors. Chinese New Year and Chinese Autumn Festival are two Chinese traditional practices inherited to every Chinese family in Thai society. Chinese New Year, Chinese Autumn Festival, Vegetarian Festival, Moon Festival, God’s Thanks Giving Day, and Fifth Moon Festival are among the most important festivals which the young Chinese generation agreed that these festivals should be inherited to the next generation. Most of participants have knowledge and understanding of the meaning of Chinese New Year, Chinese Autumn Festival, Vegetarian Festival and God’s Thanks Giving Day. The transmission patterns of Chinese festivals and traditions are either direct or indirect. The problems regarding the transmission to the young generation related to social, cultural and economic factors. The factors supporting the success of the transmission of Chineseness are accurate information given by the old to the young generation, a refining process in a family, encouragement of the sense of Chineseness to the young generation.

A Generalisable Promise of Risk? Risk-Based Self-Regulation and the Inherent Limits of State Intervention in German Occupational Health and Safety Governance

In Anglo-Saxon academic discussions risk-based governance (RBG) has been identified as a method for rationalizing corporate and public governance processes top-down, i.e. offering a central management vision that can then ‘colonise’ other domains and organisations in regulatory processes. As such, risk seems to entail a universally applicable promise for central governments to remedy blame for failure all while managing tight budgets. But does this hold true in distinct institutional settings?

Starting from the empirical observation of occupational health & safety policies (OHS) in an international research project (HowSSAFE), we find that, in Germany, risk approaches largely emerge in arenas outside the central state, with normative justifications, governance forms and organisational logics that seriously contradict Anglo-Saxon state-centric RBG notions. Moreover, regulation of workplace risks in German policies is characterised less by a coherent risk strategy than by pockets of risk-based governance. These have emerged, for instance:

- in the funding structure of the public accident insurance (classifying companies into risk groups)
- in research priority setting and prevention campaigns of mutual trade associations
- in inspection strategies of the Landers (risk-rationalizing the use of limited control resources)

These fragmented and scattered risk approaches in German OHS raise the issue of risk-based self-regulation as a so far rather misrecognised form of risk governance. To enlighten this blind spot, this paper examines the role of territorial self-regulation by the sixteen Landers in OHS policy enforcement and public self-regulation by nine para-public organisations which govern the accident insurance, compensation and prevention in specific economic sectors. We show how self-regulation absorbs blame for failure and cost-bearing and contains RBG relatively unencumbered by the state. We argue that self-regulation inherently limits accountability pressures for central government, thus dismisses the promise of risk, and challenges some key conceptual and empirical claims of the Anglo-Saxon risk regulation research.

PAULSEN, FRIEDRICH* (University of Münster, friedrich.paulsen@european-research-services.eu)

Restorative Justice Approaches in US-American Cities – Smart Responses in Stressful Times?
In 2010, about 750 adults per 10,000 of the US population were incarcerated. Mass incarceration in the United States affects nearly solely poor urban communities of color. US American cities are focal points of racial divide. Since years, the withdrawal of public welfare and intensified criminal prosecution are two sides of one medal. Current processes like urban gentrification and the on-going economistic crises are widening the gap between upper and lower strata of urban society further. As social cohesion is harmed and cities are bankrupt, the level of stress experienced by the responsible and mostly local authorities increases. Does this stress turn the responses of authorities to the most vulnerable groups towards more innovative approaches to meet minorities needs best? Restorative justice approaches may offer more effective avenues to conflict resolution and enhance social cohesion and the communities’ capacity to build up resilience against crime and victimization. The main objective of the case study based research is if authorities in US cities made experiences of implementing new approaches of democentric and community-oriented police practices in urban areas (1) where minority people live. Could new practices guide the way for general improvements of the relation among police and minorities in the US? The cases under qualitative study will be northeastern rust-belt cities, where industrial decline and financial austerity triggers further social divide and structural disadvantage of the urban Afro-American population. As it transpires that the predicted differences in the basic structure of police-citizens relations between Anglo-American Common Law cultures (where Restorative justice philosophy first originated from) and continental European Civil Law societies can be observed very clearly as a common denominator, results enable a comparative perspective among policing minorities with regard to Restorative justice in urban settings in Europe and the US.

Doing Social Sciences on the Military Field: A Special Operation?

The concept of “Normative Power Europe” is one of the most actively debated among international relations scholars. It is usually presented as an alternative way to conceptualize the role of the European Union as a new type of international actor. According to Manners (2002), the distinctive feature of normative power is its “ability to shape the conceptions of ‘normal’”, and thus provide classify certain actions as legitimate or illegitimate. Achieving the status of a normative power is considered by most scholars and politicians as the greatest success of European integration, which has opened new perspectives for the EU as an actor on the global political arena.

The concept of normative power has been developed to account for the EU’s distinction as a foreign policy actor, but this paper is based on the premise that its applicability is much wider, and seeks to explore the conditions for the emergence and functioning of normative power in non-European countries by comparing discourses and political practice in the EU and Latin America. Using qualitative discourse analysis (Hansen 2006, Hofp 2002, Laclau 1991, Torging 1999, 2005), and taking the EU as the model case, it then looks at the normative aspects of foreign policy discourse and practice in Latin America. This paper focuses on the pan-regional discourse, later to be complemented by individual country cases. The hypothesis is that a strong and independent counter-hegemonic discourse, based on the struggle against world neoliberal injustice, exists in Latin America, which contributes to the emergence of normative power.

Doing Social Sciences on the Military Field: A Special Operation?

The presentation explores the role singing and performance of national song plays on the (re-)production of Estonian national identity (Estonianness). Starting from the revitalization of the ethnic-civic debate (Brubaker 1996) in Eastern Europe, most scholars have assessed Estonian nation-building as being prevalently ethnic (Latvin 1998, Mole 2012). In particular, choral singing tradition that remains relevant on a vocabulary of historicism is interpreted through the prism of nationalism (Bolhman 2011). This paper initiates a critique to the above approach by introducing three new dimensions: globalization, Europeanization, and multiculturalism. Informed from a structuralist constructivism (Bourdieu 1989) it combines analysis of social structures and institutions with perceptions of individual actors. The main focus is on power relations incorporated into singing as a tool for identity production. In particular, it will be explored how the singing tradition responds to identity tensions between ‘ethnic Estonians’ and ‘non-Estonians’, namely Russian speakers who constitute 26% of the population (census 2013). Considering singing tradition (1) in a network of social spaces – national and supranational, as well as (2) from the joint perspective of individual experiences and objective structures such as the state, allowing us to examine collective identity building mechanisms in post-socialist context in a nuanced and less deterministic way.
the researcher and the military institution (understanding of the functioning of the hierarchical organization and its values)
the researcher's academic environment (university or think-tanks affiliations) and the armed forces

The present paper aims at giving a thorough understanding of the complexity of the researcher social position during his/her social sciences investigations in the army. It is based on a personal experience as a Ph.D Student working on the French Land Forces. Being at the same time a female Ph.D Student in political sciences working on the French Army, a junior academic and a reservist who enrolled as a private and evolves now in a high level headquarters, generates a very particular inquiry context and can be used as an asset if and only the researcher is fully aware of the consequences of its presence on the military field.

This paper will also debate the importance of a personal and physical commitment from a methodological viewpoint and will discuss the opportunity of developing a comprehensive approach based on the simultaneous use of qualitative (sociological interviews, ethnographic observation), quantitative (questionnaire inquiry) and comparative methodologies. The usual case-selection problematic will be treated by focusing on a specific population: the French reservists. Lastly, the ‘specificity’ of the army as a special social field that requires specific scientific tools (to gain access, to evolve in the institution) will be pondered.

Ecological Modernization as Discourse: A Media Analysis of Irish Newspaper

Ireland has had a very mixed response to the challenges arising from the fact that climate change is perhaps the greatest threat to this planet and to our current way of life. This research investigates how Ireland's most important newspapers have raised awareness and disseminated information about the issues related to the challenges we face. An analysis of the trend in the coverage of climate change between 1997 and 2011 was undertaken in order to map the peaks and troughs in the media coverage of the issue, and to see if there was a correlation between the peaks in newspaper coverage and significant climate change events. A second stage of the analysis sought to uncover how the issue was framed by the newspapers. Analyses of issue were made to see what types of issues were most commonly discussed. The final level of analysis sample and coded the statements made by the actors whose views appeared in the Irish newspapers in 2007 and 2008 in order to generate the affiliation network database. This database was used to create four separate discourse clusters, each of which represents a different sub-discourse network within the overall climate change discourse network. Within these clusters actors are tied to each other through their shared positions on related issues. An analysis of the clusters and the complete discourse network found that the climate change debate was dominated by key economic and political actors in Ireland, and that the discourse of ecological modernization was used to reconstruct the issue of climate change as a technological and economic challenge rather than an environmental one.

TGG0-965.1

PEACOCK, DAVID* (University of Queensland, david.peacock@uqconnect.edu.au)

Institutional Ethnography and The Uses Of Critical Discourse Analysis

For Dorothy Smith, IE is both a social ontology and social scientific procedure that seeks to empirically investigate discourse as social relations that are organized by the activities of people. Such an approach creatively connects ethnographic methodologies to the local accomplishment of the social with a Marxist insight into people's active participation in extended social relations that can 'overpower' and implicate them in wider 'ruling' relations and injustices. Critical discourse analysis has often be used by Institutional Ethnographers as a means to examine certain texts as they are embedded within a field established through sequences of institutional action. Yet the discourse analysis performed in much Institutional Ethnography to date has not paid close linguistic attention to the way the specific local actors utilise texts and discourses in an active appropriation of the ruling relations established by official discourses. Using data from an Institutional Ethnography in Ibadan in 2007/2008, this paper illustrates how a Fairclough-inspired Critical Discourse Analysis of the hybridity of a sample of institutional texts and interview transcriptions is able to provide greater analytical purchase on how texts are actively appropriated within an institutional field of action. Retaining Smith's focus upon texts and discourses within ongoing and daily interactions, I seek to develop this within this analysis how genres, discourses and styles (Fairclough) are assembled within a text within a given (higher education equity) social practice. This paper demonstrates how this kind of linguistic focus, when joined with an analysis of the functions that texts play in organising and sequencing a field of institutional action, offers possibilities for more nuanced accounts of individual and collective social agency in the process of semiotic and social change.

BISSELL, PAUL (University of Sheffield)

Dependency Denied; Health Inequalities in the Neoliberal Era

It is now well established that unequal societies have higher rates of health and social problems than more equal ones. Those adopting a psychosocial perspective see shame and invidious social comparison as one means by which inequality impacts the body, and the social body (Wilkinson & Pickett 2009). Whilst social epidemiology has been critiqued for medicalizing and marginalising of agency. For example, people are not passive recipients of inequality, they resist and endeavour to protect themselves, and there are debates about the place of political discourses such as neoliberalism in this process.

In this paper, findings are presented from a study of women in northern England which used Free Association Narrative Interviews (FANI) to explore the experience of life in an unequal, neoliberal society. Shame and social comparison were present in their accounts, but not in the ways anticipated. Women in the study did not ‘know their place’ in a hierarchy, and detailed knowledge of the exact identity was sparse. Women reported various shame avoidance strategies focused on protecting children from the stigmatising impacts of living with a lack of appropriate goods, and shame and shame avoidance were also seen in relation to the women’s bodies and homes. Most striking was a discourse of no ‘legitimate dependency’ - an often painful discourse, where all aspects of dependency were disavowed and self-reliance valorised, leading to considerable strain and distress.

We argue that this discourse represents a partial internalisation of neoliberalism; often expressed colloquially, using the language of therapy. It is manifest in the holding of the self to impossible standards of non-dependence, and through the ‘othering’ of those considered insufficiently responsible. This is an unstable and unhappy discourse, but one which seemed unavoidable for participants, in the absence of available, alternative explanations for inequalities.

PEARCE, TOLA* (University of Missouri, Columbia, pearcei@missouri.edu)

Backbreaking Work: Female Food Vendors, Globalization and The Legacies Of Indigenous Systems In Southwestern Nigeria

Interest in the well-being of women in Africa comes from a longstanding concern about how indigenous practices, rights, and responsibilities interacted with imported western structures and policies during the colonial period and after (Pearce 1989, 2000, 2005). Then as now, there have been unintended consequences for segments of the population. This paper focuses on the impact of neoliberal globalization on the lives of working mothers: low income female food vendors. The paper uses data collected in 2007/2008 in Ibadan, Nigeria to explore how capabilities developed in an earlier era have been folded into the expanding requirements of economic globalization. The data come from a larger, multi-sample study begun in 1984 that has investigated many aspects of the vendors’ lives. I take my lead from Sassen’s(2006) use of the term ‘capabilities’ and her suggestion that we pay attention to systems as well as individuals: How do emerging systems depend on capabilities created within the old order? Much of the economic and social welfare of the pre-colonial order rested on household production in which female economic and reproductive roles were central. With colonization, women, women’s bodies and homes.  Most striking was a discourse of legitimate dependency - an often painful discourse, where all aspects of dependency were disavowed and self-reliance valorised, leading to considerable strain and distress.

Globalization is, for example, destabilizing former negotiations on responsibilities women in the state and spouses to capture women’s roles as providing mothers. The paper uses data collected in 2007/2008 in Ibadan, Nigeria to explore how indigenous practices, rights, and responsibilities interacted with imported western structures and policies during the colonial period and after (Pearce 1989, 2000, 2005). Then as now, there have been unintended consequences for segments of the population. The Emergence of Trust in Clinics of Alternative Medicine

The demand for the services from practitioners of alternative medicine has increased within the last decades in those nations in which Western scientific evidence has been employed in the health care discourses. The impetus for this paper is to examine how trust between practitioners and users emerges in clinics of alternative medicine where practitioners are self-regulated and the patients pay out of their own pockets for attending non-authorised treatments with very limited scientific evidence of effects. Trust is a key concept for healthcare outcomes and is broadened in research of health. However, most studies focus on formalised institutional settings and only few sociological studies of trust have contributed knowledge into how alternative practitioners win their clients’ trust. Drawing on three qualitative studies (in sum 124 in-depth interviews and 3 focus groups) of different forms of alternative medicine, conducted in Denmark from 2006 to 2009, we explore how uncertainties are managed and trust emerges in the treatment encounter. By informing the empirical findings with a concept of intersubjective trust (i.e. Barbato 2009), experiences among clients and practitioners are in focus to contributing new empirical insights on how trust is performed since the basis for trust is not evident. The analysis demonstrates that situated trust in the alternative encounter comprises relational, bodily as well as material aspects.

PEDERSSON, INGE KRYGER* (University of Copenhagen, ikp@soc.ku.dk)
The Lifestyle & Health Jurisdiction: A Danish Case about Reducing the Development of Lifestyle Related Chronic Diseases

The objective of this paper is to contribute new insights on the intra- and inter-professional responses to, and dynamics within, an emerging jurisdiction of health problems related to lifestyles. It is examined how health professionals and hospitalised patients are mobilised to reduce the risk of developing the most common and deadly lifestyle related chronic diseases. How are socially contested issues such as dieting, smoking, alcohol intake and physical activity (in Danish the so-called KRAM factors) defined and managed in terms of medical problems? A Danish case study illustrates the issues of disease prevention as they emerge in clinical practice in Danish publicly owned hospitals: “KRAM screening & interview”, that is registration and detection of patients’ so-called risk factors to strengthening the efforts on disease prevention. This intervention program followed up by disease prevention counseling is a free service provided by publicly owned hospitals, and is present in the Northern part of Denmark, eventually all over the country. One key jurisdictional dynamic to be analysed in this paper is: jurisdictional disputes and professional settlements (Abbott 1998, 2005): What is the division of labour between medical doctors and other professional groups within the interventions programs, and how is this division of labour maintained in professional practice and organization? Empirical materials include documents (standard procedures, registration forms a.o.), qualitative interviews with patients and counselors about goals and practices, and observations of counseling situations. It is discussed how medico ideas feed into the policy process and how governance networks are linked to explain why lifestyle problems are turned into the medical area, nationally as well as in international spheres, i.e. WHO.

Old Ways and New Ways: The Relation Between Criminology and Sociology in Post-War Sweden

The trajectory of criminology in 20th century Sweden can be described as that of a discipline under the influence of medicine in the first half of the century, and of sociology in the second. The change from one scientific perspective on crime to another took place in the decades following the Second World War. This shift has been explained by factors such as the decline of medical explanations of society and human behavior following the atrocities committed by Nazism, and the growing influence of American sociology on Swedish academia during the post-war decades. The validity of these explanations is still to be proven. And even if there is truth to them, the question of how the shift came about is still to be answered. In my investigation of the relation between criminology and sociology in post-War Sweden, I will argue that changes can be discerned at three levels in the process by which sociology came to dominate the field of criminology: in the theoretical content of Swedish criminology, in the infrastructure for the production of scientific knowledge, and in the Swedish political discussion on crime. Then levels are not separated, neither from each other nor from the society surrounding them, but nevertheless theoretically and empirically distinguishable. An analysis of each of these separate levels will contribute to a better understanding of the relation between them, and of the issue of the relation between criminology and sociology.

On a more general level my investigation will address questions of disciplinarity and interdisciplinarity. It problematises the relation between sociology and other disciplines of social science. Finally, it illustrates the complex character of the interdisciplinary relations needed to produce a fundamental change in the scientific perspective on a social problem.

Urban Restructuring and the Educational Politics of Race and Place in the Global Niche City

While Detroit is not a center of global finance and has declined as a global production center for the automobile industry the changing relationship among cities, nation-states, and the global economy is manifested in struggles over urban development strategies in Detroit as its leadership attempts to position the metropolitan area as a global niche city. In the process of reimagining the city, the region's largely neoliberal corporate and political leadership deploys particular urban development strategies in the areas of education, housing, public infrastructure, and governance. While such deployments are framed as both inevitable and in the best interest of everyone, they are also deeply implicated in the restructuring of social and educational exclusion, particularly among the cities overwhelmingly impoverished Black and immigrant residents.

My paper analyzes Detroit's neoliberal policy complex in relation to education, urban development, and governance, drawing on documentary analysis pertaining to the crafting of policy. Recognizing the devastating impact of massive home foreclosures, urban flight, rampant segregation and poverty, and the closing of many public schools, I also reference ethnographic work I am beginning in public schools in inner-city suburban Detroit to demonstrate the ways in which nostalgia for the city among suburban whites, rituals of place-making, and their intersection with the racial imaginary and issues of territoriality play out in broader struggles over the city and the metropolitan region's resources, cultural representations, and power.

Lifecourses, Pensions and Poverty Among Elderly Women in Belgium: Interactions Between Family History, Work History and Pension Regulations

The precarious financial situation of many elderly women in developed countries is well-established. Nevertheless, in-depth insight into the persistent vulnerability of this group remains largely absent. In this article, we demonstrate how a specific focus on the interaction between work history, family history and pension regulations can provide greater insight into the mechanisms that produce poverty among elderly women in Belgium. To that end, we make use of register data on some 9,000 women aged 65 to 71. Data on the poverty risk of these women is linked to career and family data, spanning over 45 years. We find that pension policy can indeed account for the higher poverty risk of some groups of elderly women (e.g. divorcées) as compared to others (e.g. widows). Similarly, pension policy can, to a large extent, directly or indirectly explain how previous life-course events, such as marital dissolution or childbirth, affect old age poverty risk. However, our study also reveals some unexpected findings. Most notably, pension regulations fail to account for the beneficial situation of married women. Indeed, our analyses suggest that capital (income) may prove more decisive than pension rights to explain the low poverty risk of married women when compared to other marital groups. Drawing from our findings, we conclude with some suggestions as to where pension policy should go from here.

Conflicts within Finance Capital and Implications for the Climate Crisis

Particularly in the era of financialisation, the logic of financial capital is focused on (short-term) profits, often at the expense of environmental concerns in general, and climate in particular. Indeed if this were not so then there would likely be no climate crisis. Yet in recent times many groups, including elements of finance capital, have called for greater emphasis on long-term considerations including on climate. What is it that makes some parts of finance capital focus on climate issues while other parts eschew them? What motivates climate-interested investors and what is their potential for addressing the climate crisis? We address these questions through a combination of qualitative analysis of interviews and

**Performance Consumptions, Sleep Management and Risk Perceptions**

This paper aims to discuss the management of sleep as a focus for performance investments among youth, through the consumption of pharmaceuticals or other therapeutic products, such as natural medicines or supplements. In this context, sleep plays a particular role as a depharmacIALIZED resource to achieve a certain level of (cognitive and/or physical) performance. While being an object of normative discourses about “healthy lifestyles”, sleep is simultaneously presented as a feature that can be artificially optimized through performance consumptions that place it at the frontier between treatment and enhancement.

The investment that shape consumption patterns directed at sleep management not only reveal particular risk gradations attributed to therapeutic resources for those purposes, but they also express forms of management whose instrumentality organizes differentiated consumption practices, which are context-dependent.

Our analysis is supported by the results of an ongoing research about therapeutic consumptions to enhance physical, intellectual and social performance, among young people in Portugal (aged between 18 and 29). A mixed-method approach was used, including a nation-wide survey (n=1500), followed by semi-structured interviews (about 50 individuals, selected from the questionnaire respondents). On one hand, the survey originated a set of quantitative indicators about youth sleep patterns, consumptions and predispositions to consume sleep management products, as well as perceptions of risks associated with them and ways of dealing with those risks. It also revealed how these indicators were socially distributed (in terms of gender, education level, occupation and scientific area of study). On the other hand, the interviews enabled the qualitative exploration of the specific purposes that lead to the consumption of products to help one sleep or stay awake, and provided information about the manner in which young people weigh between risk and effectiveness and between the immediate and the deferred benefits regarding these consumptions.

**Crossroads - Bolivian Urban Folk Music and Andean Diaspora Communities on the Internet**

This proposed paper focuses on the relationship between representations of Bolivian urban folk music and Andean diaspora communities on the Internet. What transnational experiences may signify for a music culture, which travels between places and spaces, are discussed through case studies. Bolivian/ Andean urban folk music, which contributes to the construction of a relationship between folk, popular, rural and urban music and a relationship between a local and a global scene is studied.

I study virtual rooms as leisure spaces where old and new meanings of identity and social relationships based on a sense of community can be observed. Processes of hybridization in the form of identity markers will be described. Aspects about relationships between Andean popular music, Latin American music and Bolivian music, stardom and audiences are addressed.

Questions about defining identities and mixing influences are considered. I also try to show how contemporary social issues and changing identities are juxtaposed in complex collages in the virtual rooms, by musicians and their audiences, through affective links in processes of social production of music. Issues such as how relationships between the local and global music culture and new as well as old identities, articulated on the Internet, are examined. I attempt to understand processes of cultural production as ways of creating new meanings, spaces and a sense of belongingness in cultural activities of diaspora.

**Eating Organic, Growing It Yourself**

There are many things to talk about when discussing organic food, from class to gender, ethics, health, cross-border supply chains, environment, food-security. In Cambodia the discourse of organic food has emerged during this past decade, especially as result of the increasing unregulated food import from neighboring countries. It has become even more worrisome as local farmers wildly use chemical inputs without proper skills and State control.

Ironically, for many rural Cambodians, the question of organic food seems to be less relevant. For them, organic food is normal. It is what they produce or source locally in the village. Instead, their important questions are about feeding their families and balancing this immediate need with caring for nature, ensuring that their land remains fertilized and cultivable for the younger generations.

This paper focuses on organic rice, the main agriculture crop in Cambodia. Even though the country is self-sufficient at the national level and producing surplus for export, pressure to reach export targets leads to big farms using more chemical inputs, which they can easily get from the market. Hence rice is not always organic and being organic rice, the main agricultural crop in Cambodia. PEN, RANY* (University of Sydney, rpen2122@un.sydney.edu.au)

Securing Food While Caring for the Field: A Case of Rice Farmers in Kampong Speu, Cambodia

Since the adoption of Rice Export Policy, Cambodian rice export market has emerged and the country recently joined the top ten rice exporters. While nationally it produces surplus, many poor rice farmers cannot produce enough for home consumption. Small farmland, unfertilized soil, unsecured land ownership, limited access to irrigated water and unpredictable precipitation are some major causes of their low productivity.

Furthermore, around 43% of rural population depends on purchased foods. The increase of export volume potentially puts more pressure on these consumers, especially the poor, because it is uplifting local prices to as close as the international prices.

Facing food insecurity and having to cope with agricultural production challenges, some smallholders still continue their conventional approach of sustainable land use. Instead of trying to increase productivity through using chemical inputs, these rice farmers choose to preserve and improve their soil quality using organic fertilizers. This is particular for poor smallholders interviewed in Kampong Speu province.

Because rice farming alone is not enough and with limited supports from Government, alternative coping mechanisms that these farmers have adopted include diversified agriculture activities i.e. vegetable home garden, crops farming, livestock raising; seasonal agricultural and non-agricultural works within the village, in nearby villages, or in neighbouring countries; and work related migration to industrial towns.

Using data from a fieldwork conducted in Cambodia early 2013, this presentation will examine these above approaches undertaken by farmers in a district in Kampong Speu province. All interviewees, except two, are part of livelihood programme supported by a local organization, Action for Research and Development, which recruits these beneficiaries based on their economic and social status: families without or with small farm land; families with many children; families that are heavily indebted; poor families with disabled members; or elderly people without support from their children.

PENG, ITO* (University of Toronto, itopeng@chass.utoronto.ca)

Reshaping and Reframing Gender, Care and Migration: With Focus on Asia-Pacific

In the recent decades, changes in economic structures and women's shift into paid labour have strained the family's capacity to perform care, while worldwide population ageing has led to increased demand for paid care workers. The resulting “care deficits” represent a challenge for individuals seeking to reconcile work and family as well as for national policymakers who must balance demands for care with those for equal opportunity for women, and for the full development and utilization of human capital. The need for care has also reinforced “global care chains” that draw women from poorer nations into employment as care workers in wealthier ones, creating not only care deficits but also a “care drain” in sending chains that draw women from poorer nations into employment as care workers.

This paper examines political, institutional and cultural factors that have shaped, and are reshaping, ideas and norms of care, focusing on Asia-Pacific. Definitions of care determine what care is and should be, and who will provide care - family members, communities, and/or paid workers; native-born people or migrants – and the extent to which care may become commodified. How do these definitions shift and adapt as conditions change? How do migration regimes (the laws, regulations and practices surrounding immigration) shift in response to changing demands for care workers?

PENG, ITO* (University of Toronto, itopeng@chass.utoronto.ca)

The “New” Social Investment Policies in Japan and South Korea: Social Inclusion through Social Care Expansion?

China's internal labor migration has attracted worldwide attention during the last three decades. While studies on rural-urban migration and its implications for China's development proliferated, the reverse flow of these migrant workers and their lives in rural villages or townsships upon their return have been largely ignored. In China, many women migrant workers have chosen to return to their rural villages upon their marriage and pregnancy. This paper explores the meaning of city working experience for migrant women and the role of women play both in decision-making of return migration and in establishing their new lives in the changed rural context after staying in cities for an extended period of years. It challenges the stereotypical images of Chinese migrant women who are always depicted as passive recipients of the structural constraints such as the patriarchy system, capitalist market and state policies. Rather than severing their connections with rurality and upholding the modernity they gained from urban experiences, many of them are actively trying in their own ways to reconcile their liminal identity by working on “ruralizing” some "modern" values while others are “modernizing” the "rural" values. Either way they are reconstructing a collective identity for themselves with meanings only they themselves would understand and appreciate. Besides, through critically employing Bourdieu’s theory of practice, it puts forward a multi-field perspective in understanding these returned women's identity reconstruction and daily practices and highlights the importance of localization of western theory in Chinese context.
The material convergence that occurs in disaster-affected areas is well documented, as are the associated complications that arise. Among these challenges, research has documented the arrival of donations in excess of the need, of material donations instead of monetary contributions, and the donation of items inappropriate in the time, place, or cultural context (Holguín-Veras et al. 2007; Neal 1993; Neal 1994; Rodríguez et al. 2006). Despite the discrepancy between what is needed and what is donated, people continue to make these kinds of contributions. This paper examines the subjective meanings and understandings people who participate in disaster relief give to donations and need. Using Entman's (1993) definition of framing, this research examines how donors frame post-disaster needs, including their problem definitions, causal explanations, moral evaluations, and treatment recommendations, as well as what information and sources inform those frames. Preliminary analysis suggests that participants frequently construct involvement in disaster relief as a moral obligation, though the source of that moral obligation can vary in form, including religious motivation, the mission of the organization to which they are a member, or a personal connection to the area. The donation is not only the treatment recommendation to meet a subjective construction of need developed by internal rationale and information attributed to other sources. Some view the donation of material goods specifically as a treatment for the perceived problem of recipient misuse of monetary donations (be they a disaster relief organization or the individual identifying as a disaster victim). Though not always explicitly stated, participants see the cause of the need as external to those affected by the disaster. Donations are determined accordingly based on these frames. Thus, how these frames are constructed has implications for disaster response.

Interconversion of Capital and Structure of Inequalities – Managing Transition Toward Adulthood in Transforming Society

This paper draws on Bourdieu’s concepts of ‘capital’ and ‘field’ to examine how different social groups of young people negotiate the transition into the labor market and toward adulthood – particularly the interconversion of various forms of capital, in the process contributing to the reproduction of inequalities. The transformation of the Cambodian society toward a modern industrial and service economy has introduced a new context for youth labor market and mobility. The emergent occupational and mobility field has become characterized by the stratification of passages into poorly-paid, labor-intensive workers and university graduate workers, and by a dual youth policy discourse of promoting the entrance subject and protecting the ‘at-risk’. Based on a study of the life experiences of young urban migrant labor workers (n=20) and university students (n=31) in Cambodia in 2011–2012, this paper demonstrates how different forms of capital are drawn upon by differently positioned youths in managing their transition toward adulthood. The rural youth rely heavily on their social network and embedded cultural capital to produce economic resources for mobility and future security. On the other hand, those with relatively higher economic capital, mostly the urban youth, concentrate on accumulating institutionalized cultural capital, and sometimes developing new embedded cultural capital, for mobility and successful adulthood. The results are to be interpreted in the context of quickly transformed social space, the absence of a welfare state, and the instrumental family of Cambodia. At the interactional level, the transforming society has entailed two differentiated capital conversion strategies for the rural poor and the (often urban) resourceful in the transition toward adulthood, but neither group/strategy is insulated from new risks and uncertainties of the life course. At the socio-structural level, the process contributes to an alternative structure of inequalities broadly tantamount to the emerging working and educated middle classes.

Life Course Opportunities and Uncertainties in Transforming Society – Managing the Transition into the Labor Market in Late-Developing Cambodia

The generalized ‘late’ modern change, including post-industrial capitalism and increased individualization, has by now become a powerful tool for youth and life course sociology to describe emerging patterns, risks and uncertainties of modern lives. Although research has increasingly been focused on the risk and uncertainty experienced as part of personal biographies via their socially differentiated positions, a Eurocentric standpoint remains influential as recent life course changes and risks are seen as diverging from the modern industrial ‘normal’ life course. This paper attempts at a complex exploration of the embeddedness of opportunities and risks in the individual’s social context and biographical experiences. First, I will position the contemporary transformation of Cambodian society in the context of modernization theory (Beck 1992; Giddens 1990) and debate on the varieties of modernity (Chang 2010; Eisenscher 2008) to make a case for a more specific examination of change toward a modern society. I will then reconstruct the processes of Cambodian transformation and how they feed into the opportunities and risks for new life courses. A theoretically informed but empirically grounded typology of biographical management, based on a study of the life experiences and expectations of different social groups of Cambodian young people (n=51), will be used to illustrate how the opportunities and uncertainties in the new life course are differently managed based on socio-cultural and individual resources during the transition into the labor market and toward adulthood. This shows that in the context of compressed modern transformation, not only does the life course encounter both new risks and opportunities, but it also requires a mix of traditional and modern frameworks and resources to deal with inherent uncertainty.
The main goal of this paper is to describe the professionalization process of sociology in Argentina during the last five decades. First, it examines both the role of sociologists in Argentina during different historical stages and the situation of the teaching of sociology, trying to identify different traditions and tendencies. Second, the paper additionally describes diverse organisational frameworks in which local sociologists have tried to set their professional and academic issues. Third, it presents some data from a research that focusses on the working conditions of sociology graduates in Argentina from three different cohorts. One, a group graduated from 1961 to 1974. It had an early and successful professional insertion linked with teaching and state planning. Two, another group which received their degrees from 1984 to 1992 had more problems in searching for jobs, but new opportunities in public opinion polls and consultancy were expanding. Third, a young cohort of graduates since 2002 who found an institutional scenario of new social demands and requests for sociological knowledge at academia, state and private sectors. The paper looks for an answer to what were their jobs and how they started and followed a professional career in sociology, trying to identify the socialization process of their actions and the political and social networks to which they were affiliated. Methodology combines the use of previous data, the job situation of sociologists in Argentina at different historical stages with a survey, trajectories reconstruction and in-depth interviews. Finally, this paper reflects upon the multiple challenges that sociology in that country faces at the present: institutional expansion, funding opportunities and social recognition combines with institutional fragmentation and lack of consensus on sociologists as workers and professionals.
the latters would have more difficult its action in a more dispersed labor market. In other words, addition might not be limited to new mining boom only, such as Freudenburg suggests, but to merely “large companies”, like nuclear or celluloses. Additionally, evidence suggests that the boom might give way to a very particular community culture that overestimates the importance of the grandiosity for any kind of other goals. These are some of the conclusion that will allow to build (upon Freudenburg’s legacy) a more consistent and global sociological theory on the boomtown phenomenon.

Work Social Representation Among Young People and the Ambiguity of the Development Policy in Poland

This paper aims to examine the perception of the meaning of a “good job” among young generations in Poland. The economic policies implemented in recent years have emphasized the importance of entrepreneurship among new generations. The immobility of generations raised during the communist period is usually seen as an inconvenient that stop a major development. This is very clear judging by the number of public advertisement that encourage students to start up their own business, the invitations to take part on competition for the “best business” and the highlighting of entrepreneurship related subjects in the universities’ curriculum and the emergency of certain entrepreneurship icons within the political spectrum. By mean the conduction of focus groups, in-depth interviews and participant observation, the current research inquiries on the idea of a “good job” among young people, with a special stress on how entrepreneurship is seen. Despite the pessimistic discourse and domination discourse about the low wages, working in some of the many foreign corporations that has invested in the country in recent years is seen as the top of the mind job. This accounts for the importance given to the symbolic meaning of belonging to an “international” organization, the social status provided by it and the need of constructing a “modern” identity of themselves. All these things, despite the usual low wages and lack of career opportunities provided. Asked directly about the possibility of becoming entrepreneur, it is seen as a step subjected to first success in a corporation. Entrepreneurship incentive policies might not have the expected results. The fault might be, among other reasons, the contradictory of the public discourse between, on one hand, the importance given to entrepreneur and, on the other hand, the persistence for attracting globally-driven investment by established corporations and elites via tax break and low salaries policies.

PÉREZ-CASTRO, JUDITH* (Juarez Autonomous University of Tabasco, pkjudith33@yahoo.com.mx)

The Values Of Scientific Ethics: A Way To Face Inequality

Scientific work is one of the most socially valued activities, as it is a complex task that requires specialized professionals and very specific knowledge and skills. Science characterizes itself because its permanent growth and its self-regulation. It means that any proper or formal research has to be necessarily subjected to scrutiny, refutation and peer approval. Scientific work can be profitable and advantageous. In fact, nowadays, science and technology are usually considered strategic areas to the economic growth, innovation, productivity and competitiveness.

However, impacts of scientific research cannot remain only in the economic field; on the contrary, it must also help the social, communal and personal development. In this paper, we talk about the social responsibility of science and how their results can contribute to improve the living conditions of individuals and to reduce inequality. At first, we analyze the values that support scientific ethics and then we discuss about the ethics of commitment and social responsibility.

We focus mainly on three principles: 1) the observance of the integrity and the respect of the human rights, 2) the social commitment of research and 3) the respect to the individual communities and countries where the research is carried out. Then, we present the results obtained from a study developed with a group of professors-researches from the Juarez Autonomous University of Tabasco. The objective was to identify the values that distinguish their work as researchers.

The results showed us that, regarding scientific ethics, some values such as objectivity, self-regulation, confidentiality, professional collaboration and the pursuit of knowledge are deeply seated in the researchers’ practices; however, social commitment and responsibility seem to be less important to the researchers’ work, especially when they have to compete for funding or when complying with the deadline and amount of production.

Mobilization and Performance in the Public Space in 2011: A Comparative Approach

From the Tunisian Revolution onwards the increase in social mobilizations around the world shows not only a significant shift in the political sphere but also some heavy evidence of social change. Young people, who have been at the center of those mobilizations, are especially susceptible to provide evidence of change when cultural, moral or attitudinal issues are involved. Furthermore, such mobilizations possess significant symbolic and cultural dimensions, and constitute fusion experiences in which a great charismatic power, able to trigger off social and cultural change, is generated.

These experiences may or may not have a ritual nature. According to J. Alexander, in the less complex and differentiated societies, social cohesion is generated by rituals, understood as periodical repetition of symbolic interaction in which participants fuse in the whole. However, in more complex and differentiated contemporary societies, the ritual is unable to keep fusion by itself, thus allowing for social performance to achieve the re-fusion of those social elements no longer cohesive.

The main goal of this paper is to approach some of these mobilizations in which youth occupied the streets as social performances, and to explore its consequences for social change. The four 2011 cases to be analysed are: the Egyptian Revolution, the Spanish Revolution (15-m), the London riots and the Youth World Revolution, the Spanish Revolution (15-m), the London riots and the Youth World.

PERGER, MARGARET* (Deakin University, mcostell@deakin.edu.au)

Working Circumspectly: What Are the Implications for Teaching in Multicultural Australia?

Migration, in the era of globalisation has created unique learning environments in Australian schools. While teachers’ chatter and media debates focus on the merits of current education reform agendas a deadly silence reigns over the question of teaching and learning in culturally diverse communities. Government reforms increasing emphasise the importance of national testing regimes as a measure of student achievement, school performance and teacher quality. Such emphasises have, according to recent research, impacted negatively on curriculum and pedagogy (Dulfer et al, 2103) and created classroom environments that are neither responsive to the needs of students nor inclusive (Thompson, 2013).
This paper presents a methodology for investigating teachers’ everyday practice that draws on Institutional Ethnography, Critical Discourse Analysis and Ontological Inquiry as a means for uncovering, not only the being of social relations in everyday practice but also how that relation can be understood ontologically. It addresses, in particular, how the mediation of teachers’ work relates to the influences and interests of others by tracing the constitution of social relations disclosed in relations that emerge between teachers’ perceptions of practice and their enactments. In doing so, the being of the social comes into view.

IE’s recognition of being in practice is acknowledged. To better understand the impacts of the ontological dimension on practice, analysis of data, extends IE by drawing on Heidegger’s (2005) conception of ontological inquiry. This has been chosen for its dual focus in explaining the significance of Being, itself, and to reveal explicitly the Being of people and equipment in teachers’ work.

Analysis of research data offered by practising teachers, confirmed textual mediation in everyday practice revealed, too, teachers who practised circumscriptedly. In doing so, the ontological significance of whom we are to how and why we enter into social relations was exposed.

Women’s Schooling behind Infant Survival. Modeling Demographic Dynamics in Non-Affluent Countries

This paper examines the critical relationship between women’s education and infant mortality. This relationship is a key to the demographic transformation of the global South, and a test case of the determinants of the demographic transition. This quantitative study examines the relationship between female education and infant survival in 80 developing countries. It is found that the relationship between women’s schooling and infant survival is shaped by a set of social and health-related variables. These variables have been rarely studied simultaneously. Evidence in the paper is drawn from datasets some of which have only recently become available from agencies including UNICEF, UNDP and UNESCO. The data is controlled by income level, population size, as well as by the extreme epidemic or political instabilities. Missing data is replaced by regional averages. The path-models on infant survival provide new estimates showing the extent to which women’s education influences infant survival in the global South. The study supports the conclusion that the most powerful societal covariates determining the relationship between infant mortality and women’s schooling, are income poverty, child health services and breastfeeding. Women’s education explains 30-40% of the cross-country variation of infant survival. A key finding is that influences outside the health sphere improve health practices and performance. This global update is in line with what smaller N country-studies and survey based community studies have shown. The results stress that the universal social policies including women’s education, poverty alleviation and multiple health policies intersect in fundamental ways for better infant survival. And that universal social policies are fundamental in explaining the pattern of demographic transition in the global South.

The Making Of Obedience To Authority: From Binet To Asch To Milgram

The design of Milgram’s Obedience to Authority can be traced back through Asch’s classic experiment on conformity to Binet’s experiments on memory and suggestion. Binet and Milgram used what is now termed exploratory experimentation which is not guided by theory or hypotheses but consists of carrying out systematic variations to formulate empirical rules. Binet conducted two experiments. Binet and Henri (1894) wondered what would happen if school children were given a suggestion so slight that they did not notice its existence? Children were shown a model line on one board and then had to identify the model line on a second board that contained a set of lines including the model line. When the student picked a line on the second board, the experimenter would quietly ask, “Are you really sure? Is it not the next line?” In a second experiment Binet (1900) showed a group of three pupils six objects on a poster board for a few minutes and then asked them a series of questions about what they remembered about the objects recently presented. The task was repeated by this task jointly and the students competed with each other to be the first to give an answer. Years later Asch (1951) would combine Binet’s two experiments in his classic study of conformity to groups. The group viewed a model line and then the naive subject would find himself disagreeing with the others on matching the model line. Milgram knew of Asch’s experiment but wanted to generate sufficient social pressure on an individual in a one-on-one situation. The Binet and Henri experiment with its questioning of the choice of line provided the bridge between Asch’s group conformity and Milgram’s (1974) researcher/experimenter prodding the teacher/learner “to please continue” and “the experiment requires you to continue.”

Transnational Solidarity Of Trade Unions In Europe: Two Cases Of Institutional Work Against The Background Of The Euro-Crisis

Trade unions and labour movements have emphasized solidarity as a universal policy based on common interests of all workers, regardless of borders and boundaries. Despite this rhetoric they have primarily organised national or sub-national collectivities and contributed to establish common identities and moral norms in these contexts. Modern notions of solidarity are thus firmly established at the national level, while at the European level liberal market principles and social indifference predominate. This prevailing social indifference has been challenged by at least two developments: (1) the introduction of a common currency, and (2) European economic governance in response to the Euro-crisis. Both developments have led trade unions to transnationalize their strategies: (1) As monetary integration abandoned the option to devaluate currencies as a strategy to improve international competitiveness, wage setting institutions have come under pressure. This in turn induced trade unions in some sectors to coordinate their wage bargaining policies across borders. (2) Far reaching austerity measures in EU countries had a big impact on labour market and social policies - trade unions responded to these developments by organizing and mobilising resistance at transnational level, e.g. the European Action Days.

Our empirical research in both fields (wage bargaining and protest movements) is guided by the following question: What constrains and opportunities have trade unions in Europe encountered in their strategic attempts to create and maintain solidarity enhancing institutions at transnational level?

Our central argument rests on two assumptions proposed by the classical sociologist G. Simmel (1908): He states that conflict is an important step from mutual ignorance to social integration. However, the integrative impact of conflict is dependent on legitimized institutions and practices of conflict resolution (Vobruba 2013), which themselves are contested. To explain union strategies in multi-level fields we use sociological institutionalism (Scott 2008; Lawrence/Suddaby 2009) and power resource theory.

PERO, DAVIDE* (University of Nottingham, davide.pero@nottingham.ac.uk)

ALBERTI, GABRIELLA (Leeds University Business School)

This paper discusses collective contentious practices of migrant workers in Britain who organise to improve their disadvantaged work and life conditions. It will draw on ethnographic data and cultural productions about labour organizing initiatives in the cleaning sector such as ‘The 3 Cosas Campaign’ and ‘Justice for Cleaners’ whereby migrant workers have been struggling for more dignified and enactable working conditions with the support of their communities, within and without formal and recognised trade unions. This discussion will critically consider the complex relationships that developed between these workers (many of whom are from Latin America) and local labour and community organizations, focusing on the tension between the class-based and so called ‘ethnic’ identities of the raspa groupos under study.

The paper aims to contribute to the theoretical debate on how to apply the framework of intersectionality (Yuval-Davies 2011) to the study of migration and labour movements. Inspired by recent critiques of the resilience of methodological nationalism (Glick Schiller and Caglar 2006; Glick Schiller 2008), our examination will question prevalent theorizations of collective action and migrants’ forms of political engagement persisting in social movements and migration studies. It will also question the ethnocentric and institutionalist focus of traditional industrial relations literature highlighting the benefits of an interdisciplinary approach to the study of migrants’ politics across the literature on migration and labor relations.

The Ontology Of The Global City-Regions

The ontology of global city-regions.

The global world is made of hundreds of city-regions interlinked and net-
worked. Yet the ontology of the global city-region is still to be defined.

It includes a different substance than the XX° century metropolis, or the gener-
ic and endless city of today. It is a web of contracts much wider and global than
in the National epoch. In the past the contract was Principal-Agent: the Principal
being the State, the Agent being the City. Whose main role was to provide streets
and social housing, schools and welfare. Today the agglomerating substance of
global-city-region is relational contracting among actors which are global in many
cases: enterprises, services, networks. Their places have a variable geometry and
geography, functionally defined and no longer territorially bounded.

Relational contracting is a partnership contract where asymmetries arise. The
main asymmetry is about information access, which is selective among and within
cities in the digital era. A second asymmetry is about mobility which is still more
selective: those who can move (financial markets, multinational enterprises, big
buyers, world experts), those who simply cannot (sub-contractors, client enter-
prises, contingent labour). Within global city-region governance mechanisms
should include new constitutional orderings by bridging social capital and linking
divided actors and fields.

Migratory Experiences of Portuguese People in Macao during and after the Portuguese Administration of the Territory

Migratory experiences of Portuguese people in Macao during and after the Portuguese administration of the territory

The transference of Macao’ administrative power from Portugal to China, in December 1999, has represented for Portuguese people who lived there until the 80s and 90s of the XIX century the end of a migratory experience in a very spe-
cific context, frequently characterized as being almost ‘colonial’.

Following the hand over, while many Portuguese migrants have returned to Portugal, some choose to stay in that Chinese territory; others have later decided to go back again; and a few others, who have never lived there, elected Macao as their host society. How was the integration process of those Portuguese migrants

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
who settled in Macao in the beginning of the XXth century? Did they keep the same benefits - concerning leaving conditions and life styles - that Portuguese people used to have during the Administration period? What kind of relationships have they developed with the local people (mainly Macanese and Chinese) in this 'new' political, social and cultural living context? Were they more prone to assimilate local references than their counterparts who lived in Macao in the 'colonial' period?

Basing our study on a qualitative research supported by interviews to two groups of Portuguese migrants - those who lived in Macao during the Portuguese administration and those who moved to the territory after that period - is our purpose to analyse and compare their migration experience (in social-economic, cultural-symbolic and identitary terms) highlighting the continuities and changes observed.

**Portuguese Youngsters on the Move after the Macao's Migratory Experience**

Macao has been for the last two decades of the XX century the host society of young Portuguese people, whose parents, mainly high qualified workers, have preformed professional functions in the public or private sectors of the territory. Once this migratory cycle came to an end, and after their return to Portugal, a large number of these young Portuguese has migrated again, some to Southeast Asia, others to different places, this time as protagonists of their own flow. Basing our study on life stories, our purpose is to analyse to what extent the migration experience of these individuals in Macao has contributed to the formation of their cosmopolitan identities, as well as to create a predisposition to re-migrate.

**PETERS, VERA** (Institute for Climate Impact Research, vera.peters@pik-potsdam.de)

**The Carbon Footprint of German, Scottish and Czech Households and Its Determinants – the Influence of Infrastructure, Lifestyles and Socioeconomic Conditions**

Climate change is on its way, and individual consumption decisions contribute substantially to it. About 40% of all GHG emissions come directly from private household energy consumption, and the figure is even larger if indirect effects of private consumption are included.

In order to further explore the conditions that lead to smaller GHG emissions, we present results from a quantitative household survey (n=1.532) in three European countries (Germany, Scotland, Czech Republic), which was conducted within the framework of an EU FP 7 project (GILDED) in 2011 and 2010.

A CO2-calculator and its items on self reported behavior were used to estimate households’ carbon emissions in the field of residence, mobility and nutrition. Beside site specific conditions such as infrastructure and socioeconomic factors, major individual and social motives for sustainable behavior are explored by applying psychological and sociological concepts such as the "Schwartz value inventory", people’s perception of climate change and a lifestyle segmentation.

We focus especially on the explanatory power of the lifestyle approach for predicting carbon footprints. Lifestyle or “milieu” segmentations represent popular analysis tools especially in German sociology that aim at a modernized concept of social inequality encompassing the 'subjective' dimension (attitudes, values and preferences) as relevant aspects for social differentiation. We applied this concept by connecting values and preferences with the households' income, thus trying to identify different “social milieus”, i.e. like-minded social groups that are characterized by distinct mental frames and economic status. Previous lifestyle research suggests significant group differences on factors influencing energy use, e.g. the amount and kind of electronic appliances used or leisure mobility patterns. However, it has yet to be shown if different energy patterns result in different levels of overall consumption and emissions between the groups.

**The Stigmatizing Semantics of Methadone Maintenance Treatment**

People who use heroin are often described as one of western society's most stigmatized and marginalized groups. In public discourse, people associated with heroin use are construed as unruly, lacking self-control and generally bad persons. Negative representations of the heroin addict are also reflected in the regulatory framework surrounding Swedish methadone maintenance treatment (MMT) – the most common treatment practice for heroin addicts – which is based on a basic idea that the treatment not only could, but also should lead to a normalization of the clients’ lives.

In this paper, the everyday semantics of Swedish MMT is put under scrutiny. The analysis based on a local, qualitative study exposes that the professional power is not as objective, neutral and fair as portrayed by national guidelines, policy documents and the professionals’ talk. Methods developed in critical discourse analysis and discourse psychology are used in order to analyse a number of key concepts used in everyday clinic practice. For example, at the clinics, “drug-free” and “drug-abuse” are two frequently occurring concepts that are difficult to define because they are not related to the drugs themselves, but to the question of when and how the narcotic substances have been used, as well as who has decided that they should be used. Analysis shows, that according to the professionals’ talk, it is possible to live a “drug-free”, “normal” life with methadone, as long as it is distributed by the clinics and ingested according to staff’s recommendations, while taking the same amount of drugs obtained from a source other than the clinic is defined as “drug abuse”, legitimizing sanctions of more disciplinary kinds. However, the effects of the disciplinary exercise of power are counteracted by the clients’ modes of resistance, such as subversive interpretations of staff’s arguments or “narratives of resistance”.

**Mass Media Representations Of Multifarious Violence During The Greek ‘crisis’ In 2013: A Qualitative Approach**

The multifold violence observed during the Greek ‘crisis’ corresponds to the many-faceted character of the recession and to its intensity, as the country continues to reel under the shock of cultural, societal and political rifts. The following
presentation focuses on internal forms of violence and specifically on behaviours of suicidal or quasi-suicidal character. Our primary aim will be to outline the many different ways this type of violence is presented by the Greek media. The study has been conducted with a qualitative methodology utilizing content analysis, through the prism of which we examine the way internalized violence is represented by two of the mainstays of the Greek media, namely the press and internet. Specifically, we will introduce a number of popular blogs and sites with a high traffic volume of traffic and some well-known newspapers with a large reader-ship. Second, through the method of qualitative content analysis we will focus on the construction between violence and social inequality and the diverse ways in which these social phenomena have been approached by the news information media. Thirdly, we will classify these representations on the basis of content analysis of representative excerpts from articles and reports on the particular self-destructive form of behaviour that has come to be associated with the 'crisis'. Finally, we will analyze the ways in which the electronic and print media target the social status and ethnic background of victims.

**PETROV, VLADIMIR V.*** (Novosibirsk State University, v.v.p@ngs.ru)

**High Quality Education: Globalization and Problems of National Educational Systems**

Requirements of the Information Society and Knowledge Society determine the need for significant improvements, structural changes, shifting priorities in the social system. Such a trajectory of development is already represented not only by the transformation systems in North America, Western Europe, countries of the Confucian and Buddhist cultures but also in the Eastern Europe and Russia.

While comparing educational systems of Russia and the United States primarily from the aspect of high quality education development there we can see deep differences between these systems that are connected with different historical traditions, regional and local education programs is necessary. Particularly sensitive should be the attitude of the state towards high quality educational institutions: it is necessary to take into account their specificity, to seek additional resources including financial in the form of various additional scholarships for the talented students, and grants to effectively developing educational institutions etc. and at the same time maintaining their maximum autonomy.

**Cross Country and Intergenerational Comparison of Income and Wealth using Luxembourg Income Study (LIS)**

**Abstract**

The aim of this paper is to analyse the income and wealth among the elderly (65-75 years old) and people in their prime age (35-45 years old) in a cross-country comparison. Which group is more likely to be at risk of poverty? The novelty of this paper is that includes not only the disposable income (defined as the sum of total revenues from earnings, capital income, private transfers, public transfer net of taxes, social security contributions and other obligations such as alimony) but also a proxy for the net wealth including the net value of the dwelling in the analysis. Within each age group, we will identify the subgroup most at risk of poverty (based on gender, citizenship status, education level). We selected the countries that have information on wealth from the last wave of LIS, centered around the year 2010: Colombia, Ireland, Israel, Italy, Luxembourg, South Africa and Japan (with available data from 2008). The paper will contribute to the existing literature through a cross-counties comparative analysis of income and wealth from an intergenerational perspective.

**Factors Influencing the Careers of Young Scientists during the Period of Their PhD. En Ethnographic Case Study**

The underrepresentation of women in science and the question of reasons for their relatively frequent resignation compared to their male counterparts is a much-studied topic of increasing relevance. In this area there are – nevertheless – very few ethnographic studies comparing various disciplines. This paper intends to show the potential of such a discipline-comparative, ethnographic study of doctoral students: With a focus on everyday practices the study researches embedded practices of gender differences and their gender codes, as well as differences in specialized cultures. Thus, a contribution should be made both to explain the proportionally higher exclusion of female scientists from academia compared to their male counterparts as well as for research about the professional culture. In two ethnographic case studies, the production of gender disparity shall be captured at the level of everyday operation of scientific practices and in habitual actions. The participatory observation is supplemented by interviews. The focus of this investigation are the everyday practices of researchers, since we assume that a number of gendered and gendering practices and their incorporated implicit attributions, are not made consciously by the actors, but happen interactive.

The research examines scientific working groups, whose research is part of an excellence cluster. In particular PhD students in the subjects of physics and chemistry are accompanied through their academic life. Several factors have an impact on daily work and facilitate or hinder coping with the demands during the period of promotion. The studied situations were therefore divided into four categories: time, space, material resources, and social interactions. In all these areas, gender differences can be identified in both disciplines. Furthermore, differences are visible in the methods of scientific working of the two disciplines.

**The Impact of Contractual Relationships to the Identity and Values of Religious Organizations – a Pilot Study in Sweden**

Part of the growing impact of new liberal economic market rationality is an increasing demand of religious organizations to establish partnerships or contracts with the state. Deregulation and liberalization of (public) welfare services in Sweden, especially in the 1990s, resulted in greater attention to civil society as a resource in welfare provision. While the previous state-based welfare model advocated financial solidarity and equal rights to welfare services, the new marked-based model is based on the idea of the individual's right to freedom of choice and accepts different individual financial capacities. From being advocates for a comprehensive welfare system equal for all, religious organizations are presently invited and enrolled as contracted parts of a system accepting inequality in welfare provision related to the financial capacity of the individual. Indications from previous research show that tensions between their identity and the implicit values of contractual relationships particularly affect religious organizations' specific profile and qualities of religious organizations which at an initial stage was an important part of the distinctive value of their contribution as social agents, as perceived by both parties. A reduction of the religious organizations profile may be caused by e.g. a demand for professionalization of the contracted services, a demand for tuning down the religious profile or a demand for accepting values in conflict with its core values. This paper discusses the short term and long term consequences for religious organizations identity and freedom by entering into partnership or contract with public authorities. One specific question is if these relationships are new forms of state-religion regulation? The paper build on results from the research project Welfare and Religion in a European Perspective (WEREP) and a recent pilot study in Sweden analysing formal contracts and written agreements of partnership between religious organizations and public authorities.

**Corporate Social Responsibility Practice in Russia and in Western Countries**

The aims of study is to determine the dominant practices of corporate social responsibility in Russia and to compare them with the features of the model of corporate social responsibility of business companies in developed countries. The research questions are: what features of corporate social responsibility do companies in Russia have in common, what is the nature of corporate social responsibility in Russia and to find the advantages and disadvantages of the domestic model of corporate social responsibility. The empirical base of the research was information on websites of 570 largest companies in Russia. In study it were examined sections of sites about the activities of companies in the field of social and environmental areas, as well as the characteristics of company's interaction with stakeholders in social networks. Content analysis of the data published on the Internet has allowed to identify three areas of social responsibility of Russian companies: operating in the interests of their employees, charitable initiatives and efforts to protect the environment. However, it was found that the practice of social responsibility in Russia is significantly different from Western models, due to the specific socioeconomic problems, philanthropic traditions, religious norms and the role of the state. The results can be used in future comparative studies of social responsibility of business in Russia and abroad, and to improve the efficiency of Russian business practices in the area of social responsibility and accountability to stakeholders.
Despite the growing significance of anti-aging, its impact on the users’ everyday life has hitherto been under-explored. This presentation focusses on users of anti-aging products and services in Germany and is based on 15 narrative interviews conducted in the context of the research project “Biomedical life plans for aging”. The interviews show the profound impact of anti-aging on the individuals’ biographies: Although users cannot observe the effectiveness of their practices, they are invested with biographical meaning. Therefore, it is supposed that the persistence and attractiveness of anti-aging practices goes far beyond their scientific persuasiveness. Within the reconstruction of the significance of anti-aging for the interviewees’ biographies, the symbolic and emotional potential of the practices are to be examined: Anti-aging turns out to be an ideal staging ground for presenting oneself as a rational actor and a self-caring subject. Anti-aging can thus be described as a form of lifestyle that is committed to an ideal of scientific rationality and the moral values of individuality and responsibility.
Over the past decades social inequality has grown in France, as in many other countries. Paradoxically, however, during that same period the dominant discourse, both in the social sciences and politics, has tended to conceal this growing social polarization and to eliminate any reference to class. Indeed, since the beginning of the 1980s, sociologists and politicians have vied with one another to invent cleverly worded euphemisms to describe the structure of French society. However, these substitute discourses were soon gaisaid by the growing social disparities prevalent within French society, and which existed in spite of the rhetoric which obstinately denied the reality of class. Indeed, in France, the notion of ‘class’ had, at best, changed and become more complex, but remained as present as ever.

This paper will, first, explain the background to this increasing social polarization of French society. This polarization is not unique to France, and can be found in varying degrees in most capitalist countries in Western Europe. The widening wage gap has had far-reaching consequences for all significant aspects of people’s lives, and a number of indicators converge which allow us to expose this tendency, and demonstrate the existence of a system of inequality characterized by segmentation, hierarchization and conflict. After this presentation, some thoughts will be put forward on the words and categories that are used in certain sociological theoretical frameworks. This alternative sociological discourse was pervasive between 1980 and 2000 and continues to be used today, even though it has long since been largely refuted by the facts. We will focus on the discrepancy between the rhetoric of these theories, which deny the existence of ‘social class’ and the undeniable reality of a growing polarization within French society.

Roland Pfefferkorn, University of Strasbourg
Our preliminary results suggest that developed countries with the smallest achievement gaps are likely to have higher performing low-SES students, and high performing high-SES students. Preliminary results also suggest a relationship between income inequality, social safety nets, and gaps in student achievement. Because our work identifies social and economic contexts that contribute to achievement gaps, our study demonstrates both barriers and possibilities that influence academic mobility.

PHILLIPSON, CHRISTOPHER* (The University of Manchester, christopher.philippson@manchester.ac.uk)

Ageing and Class in a Globalised World

Discussions about the role of social class in the lives of older people have often occupied a marginal position in social research into ageing. Despite the importance of themes linked with inequality and latterly social exclusion, the tendency has been to examine these only loosely through the lens of social class, with researchers often preferring to emphasise individual characteristics or life histories, other statuses (e.g. gender and ethnicity), or more general features associated with the social organisation of age. In consequence, social class has had limited influence on many of the concepts deployed to understand the lives of older people. This paper asks whether the class relations as then we might expect by a class-based approach, it is possible for class-based analysis to reframe popular understandings of food and society. Within this context, we examine whether the social organisation of age can be said to be separate from the social organisation of age, and how this might affect the way in which social gerontology has developed. Would a fuller appreciation of social class add anything to our understanding of later life? To develop these points the discussion reviews, first, ways in which the role of class has been minimised in studies of ageing; second, evidence for the re-emergence of class analysis; third, the importance of situating class analysis within the context of globalization and economic change; fourth, the paper concludes with an assessment of possible developments in the application of class analysis to the study of ageing.

The New Political Economy of Generations: Social Class and Social Divisions in Old Age

Increased inequalities within nation states have influenced social structures in a variety of ways. For older people, one consequence has been greater differentiation within generations driven by contrasting experiences of economic recession and life course events. Generations, in western society from the mid-20th Century, were underpinned by near full employment, orderly transitions into and out of work, intergenerational mobility, and declining levels of inequality. These processes ground during the 1980s and have continued to be affected by a combination of austerity and accelerated globalisation. The paper will examine how a combination of globalisation and long-term economic change is re-structuring core social relationships in old age. The consequences arising from this include: the weakening of the idea of generations as a meaningful unit of analysis; the emergence of new political and social identities in later life; and the growing importance of divisions operating within generational and related social groups. The paper will explore the implications of these developments for theoretical work in the sociology of ageing.

Beyond Alternative/Conventional: Māori Worlds of Food

Within popular understandings of the food crisis, the global food system is often perceived as a clear differentiation between ‘alternative’ and ‘conventional’. These two constructs generally distinguish between means of provisioning and consuming food according to narrow and readily measured economic, social and ecological criteria. This categorisation results in a strict dichotomy represented by antipodal views and explicit characterisations of value – what in terms of convention theory would be integrated within orders of worth. In fact, the reframing of popular understandings of the food crisis require a more open engagement with food (its production and consumption) that recognises the diverse sites of action at which change can be enacted and realised. Such an approach sees continuity from mainstream activities to the small individual, independent and value-oriented ones. This paper uses the theoretical framework of regimes of justification from convention theory (Boltanski and Thevenot 1986, 2006) to elaborate a Māori world of worth in order to demonstrate the potential for marginal economies (Gibson-Graham 1996, 2006) to reframe popular understandings of food and society. Within the New Zealand context, there has been some ferment around Māori groups – a minority whose culture is based on the concept of sustainability as a cornerstone:

who recently implemented economic activities around a western-values frame in terms of economic organization. Using two case studies, both expressions of the Māori community but with different approaches in terms of strategies, a reflection is presented on community organisation, food systems innovation and the role of market in food relations.

Who Needs Age-Friendly Cities? Exploring Representations through Participatory and Trans-Disciplinary Research

This presentation bears on the first two years of a six year participatory and trans-disciplinary research programme exploring what an ageing society means for the city (facts), what the latter could become (ideas / scenarios), what can be done (actions / what is feasible) and what should be done (ideals). The programme stems from societal concerns in the province of Québec (Canada) regarding the rapid absolute and relative increase of people aged 65+ and 80+, and the projected impacts this will have on collective services, manpower, and public as well as private financial programmes such as pension funds. It specifically examines how these concerns and trends might transform the city, including housing, mobility patterns, activities, services and the spatial and material form of the urban matrix. The methodology includes, on the one hand, more traditional research methods such as policy and research reviews, survey data analysis, qualitative case studies, fine grain studies of person / environment interactions, and, on the other hand, participatory, trans-disciplinary and trans-sectorial panels for scneario development and assessment. This presentation focuses on the wide variety of and numerous discrepancies in discourses and representations encountered in the process, and how old age is socially constructed through numerous power relationships shaping these representations and the interactions between discourses. The analysis confronts the discourses and representations of individuals, communities, experts and institutions in terms of what may be possible. It illustrates the wide gap between normative discourse aimed at reorienting and shaping the elderly through urbanism and the variety of ageing experiences, to the point that one must ask: “who needs age-friendly cities?” In conclusion, a word will be said on how participatory and trans-disciplinary research can contribute to reducing this gap and innovate in how we approach age-friendly cities.

Austerity and The University In Britain

Austerity and the University in Britain

Over the past decade, young people in the United Kingdom have been facing a variety of factors which have impinged on their opportunities to enter higher education and their chances of finding a job once they have graduated. Whilst changes in government policy have led to a sustained governmental policy to increase the participation of 18-to-30-year-olds in higher education (initiated by the Labour Government and continued by the Conservative-Liberal Democract Coalition Government), the 2008 financial and the ongoing economic crisis resulted in the introduction of austerity measures following the 2010 general election. Notably, the Conservative-Liberal Democrat Coalition Government enacted a sizeable cut to public spending on higher education and it raised substantially the cost of annual university tuition fees starting in 2012-2013. At the same time, the rate of unemployment among graduates has been rising and getting a degree is no longer an automatic boost to one's life chances. For many it results merely in unpaid internships and/or employment schemes.

This talk will examine British "youth in austerity" regarding prospects for studying in higher education and subsequently entering the labour market over the past decade. It will include young people’s responses to the recent decrease in higher education funding and increase in university tuition fees.

Divided and Ruined: The Failed Student Protests In Great Britain

The current decade has been marked by both the global economic crisis and a growth in social movements around the world spearheaded by young people. In particular, we have witnessed collective action – demonstrations, direct action and civil disobedience – regarding higher education. In Britain, there was a series of demonstrations and sit-ins in the winter of 2010-2011 about the Conservative-Liberal Democrat Coalition Government’s plan to cut dramatically public spending on higher education and to raise considerably university tuition fees. In fact, both of the policies were enacted and the ceiling on annual fees went up to £9,000 (approximately 1,500,000 JPY) in 2012-2013. Just after their introduction, a demonstration took place organized by the National Union of Students (NUS).
Strikingly, this #DEMO2012 had three themes: “Educate, Employ, Empower,” rather than only higher education and it was attended by far fewer demonstrators. This talk will analyze the social movements organized by young people against higher education reform since 2010 in Britain. It will focus especially on the 2012 demonstration, in order to ascertain to what extent it can be gauged to have been a failure. Drawing on interviews I made with protestors, as well as photographs I took of the demonstration, the talk will reveal that the different types of participants were very polarized about the best course of collective action to take. For example, the extreme-left wing radicals and anarchists accused the NUS of cooperating with the Government, whilst the NUS claimed the extremists were not focusing on the issues at stake. This lead to highly confrontational scenes during and after the demonstrations which detracted from criticisms of the Conservative-Liberal Democrat Government and its youth policy. Instead of uniting and fighting, the protestors were divided and ruled by Government cuts in an era of austerity and lack of social change.

This paper considers the meanings young members of the ‘new far right’ English Defence League (EDL) attach to their activism. Based on an ethnographic study (2012-13) including interviews with over 30 grassroots activists, it argues that the movement’s trademark slogan ‘Not racist, not violent, just no longer silent’ denotes more than a cynical PR strategy. In contrast to a ‘politics’ they reject (understood as ‘debating’, ‘listening’ and ‘reading the Sunday Times’), participants in EDL actions provides young people with a way of ‘getting your point across’, ‘speaking out’ and ‘standing strong’. This, it is argued, is indicative of the experience of the political sphere by some young people as characterised by a ‘politics of distinguishability’ in which legitimation of one’s identity is linked to the social distance between ‘politicians’ and ‘people like us’ and the legal and cultural circumscriptions on ‘acceptable’ issues for discussion. Drawing on Mouffe’s (2005: 6) argument that right wing populism has made inroads in those places where traditional democratic parties have lost their appeal to an electorate no longer able to distinguish between them in the ‘stifling consensus’ that has shaped the political system, the paper traces the resonance of these tropes in the narratives of the ‘political’ among a broader sample of (non-activist) young people in the UK (based on representative survey and interview data gathered for the FP7 MYPLACE project of which the EDL ethnography is also a part). The paper asks whether the desire to engage in politics in a ‘loud and proud’ way might confirm Mouffe’s argument that a democracy that ‘works’ for ‘the people’ may not be one based on a ‘universal rational consensus’ managed through institutions that ‘reconcile all conflicting interests and values’ but rather one in which there is a vibrant public sphere of political contestation (ibid. p.3)?

National Cultures Reconceptualized for the Social Sciences: Basic Elements for an Analytical Framework

National Cultures Reconceptualized for the Social Sciences: Basic Elements for an Analytical Framework

Globalized state-societies in the twenty-first century are framed by national cultures. This cultural metaframe is insufficiently understood by sociologists and other social scientists. Yet national cultures are full of social mechanisms that shape domestic politics, economic success and failure, and the evolution of global society. To make use of this framework for explanatory purposes, it needs to be underscored that nationalizing mechanisms are sociocultural mechanisms that work in conjunction with better known political and economic mechanisms. Based on a new conceptualization of national cultures, the contours of which this paper will lay out, it quickly becomes evident why and how in general terms nationalizing mechanisms operate in a broad range of social systems from small groups to large movements and organizations. Whether, where and to what extent the inclusion of nationalizing mechanisms can make a substantive contribution to explanation is an open empirical and theoretical question. The argument presented here reconceptualizes existing empirical and theoretical knowledge on nations and societies in order to open up a fresh perspective and sketch out a basic framework for one of the most misunderstood areas of social reality in the global age. That paper further develops the author's previous foundational work on social systems and nationalizing mechanisms aimed at rehabilitating the central significance of nation for the sociological enterprise.

Institutional Contradictions and the Organization of Emergency Management

This paper provides an institutional analysis of Australian emergency management from the early twentieth century to the present and highlights the institutional contradictions that generate conceivable barriers for effective organization. Building on the literature in organization and management theory that focuses on institutional logics, I argue that to understand why emergency management is riddled with these contradictions it is useful to describe the different logics that are elaborated in organizations. Institutional contradictions in emergency management carry traces of tensions between the church and entrepreneurs from as early as the twelfth century, traces of a style of statistical reasoning that emerges in the seventeenth century and traces of the ongoing struggle to produce a legitimate form of government for the state. Since the 1990s, Australian emergency management organizations, like many other organizations, have adopted an input-output logic that focuses on institutional logics, I argue that to understand why emergency management is riddled with these contradictions it is useful to describe the different logics that are elaborated in organizations. Institutional contradictions in emergency management carry traces of tensions between the church and entrepreneurs from as early as the twelfth century, traces of a style of statistical reasoning that emerges in the seventeenth century and traces of the ongoing struggle to produce a legitimate form of government for the state.

From Being Excluded to Becoming a Triumpher: Higher Education Massification Policies in Venezuela and Their Biographical Meaning

In 2003 the Venezuelan government started to implement a variety of social programs known as “Bolivarian Missions”. These Missions addressed a variety of social problems that the traditional systems of education, health and social services had failed to overcome. The creation of these programs rapidly became one of the distinctive symbols of the new revolutionary government and the promise of a better life for the poor and excluded groups. In the education sector, different ‘Bolivarian Missions’ offered literacy programs, basic education, high school and higher education for all. Over the years, these educational programs have been strongly linked to the political legitimation and support of the government by those who have perceived the missions as a benefit. Official reports claim to have solved a historical debt with some marginalized groups of the country, which has shaped the lives of those who have been recently included to both the education system and the Venezuelan society as a whole. This article seeks to explore how this process of inclusion has been experienced by those who have been educated, which represents an important gap in the literature that deals with the Venezu-
el case. Moreover, I will show how the official discourse has transcended into the memories of those who once felt excluded and now feel like triumphers, consistent with the public discourse around the existence of the so-called “Mission Sucre”. This work is based on two case reconstructions of the life stories of two higher education students who are currently enrolled at two of the many “Aldeas Universitarias” that operate throughout the country’s regions. This work is based on biographical-narrative interviews (following Rosenthal) and ethnographic observations that I conducted for my ongoing doctoral thesis.

Subaltern Tactics and Spaces for Decommodification: Non-Institutionalized Political Practices in a Tokyo Working-Class Neighborhood

This paper draws upon a 2-year ethnography (2012-2014) in a Tokyo working-class neighborhood, with a focus on subaltern political practices. Building upon the distinction between the two meanings of the “political” (Claude Lefort, Essais sur le politique; Manuel Castells, La Question urbaine) – one related to the institutionalized sphere of the ruling, the other to the social system of power relations and its transformation –, subaltern political practices can be defined as practices that allow their actors, collectively or individually, to free themselves from such-and-such subordinate positions in the net of power relations. Through this theoretical lens, one can observe an array of collective or individual political practices that contest, bypass or elude unfavorable power relations.

With the ever-increasing commodification of society, quite blatant in large cities like Tokyo, domination often makes oneself feel as economic domination. In this context, subaltern political practices take notably the form of tactics (Michel de Certeau) aiming at getting loose from economic dependencies through the building of small and frequently temporary autonomous spaces.

Since these dependencies are experienced more strongly as we go down the social ladder, this paper focuses on tactics devised by homeless people living in the area. I’m engaged in, before showing that practices which are most easily discernible in this radical life-situation can also be noted among working-class neighborhood inhabitants. Urban agricultural practices found among homeless groups and individuals as well as in working-class neighborhoods are an especially interesting case. Growing their own food allows the persons involved to build a small autonomous space, both real – one get a fair amount of “free” food – and symbolic, as they constitute de-commodified spaces in which other types of relations and non-monetary practices can take place (exchange of seedlings between homeless groups, fruits and vegetables’ gifts to visitors or neighbors...).

Leisure and Family : A Mutually Supportive Relationship

W. H. Davies in his lovely poem ‘leisure’ states the wonder of a life worth living where one has no time for leisure, why we are so full of worry that we can hardly steal little time to stand still and watch the world go by. What is this life if, full of care we have no time to stand and stare. No time to stand beneath the boughs and stare as long as sheep or cows.

Contrary to previous studies that focused mainly on the historical context, this paper draws upon a 2-year ethnography (2012-2014) in a Tokyo working-class neighborhood, with a focus on subaltern political practices. Building upon the distinction between the two meanings of the “political” (Claude Lefort, Essais sur le politique; Manuel Castells, La Question urbaine) – one related to the institutionalized sphere of the ruling, the other to the social system of power relations and its transformation –, subaltern political practices can be defined as practices that allow their actors, collectively or individually, to free themselves from such-and-such subordinate positions in the net of power relations. This paper is based on ethnographic fieldwork conducted mostly in Poland, also in the Czech Republic and Hungary where I collected numerous in-depth interviews with squatting activists, made several participant observations and analyzed media sources (both mainstream and activist independent media). In the paper I want to focus on the intersections between the radical squatting movement and moderate movements such as tenants movement to show the transformative power of the squatting movement on other actors. I will be basing primarily on two case studies from Poznań and Warsaw implementing them with examples from other countries from Central and Eastern Europe and the results - in my opinion - can be addressed to other developing societies.

PIOTROWSKI, GRZEGORZ* (Södertörn University, grzegorz.piotrowski@sh.se)

**Youth Social Movements and Democratization**

In mid-1980s Central and Eastern Europe have witnessed an interesting aggrandization of anti-communist struggles. Parallel to the pro-democratic dissidents new movements populated by young people and connected to youth subcultures have emerged, in particular the anarchist and environmental protection movement. These new movements were not only inspired by groups from Western Europe and the US but were also an expression of critique of the disintegrated movement slowly shifting to (neo)liberal positions and loosing the touch with the workers base as well as the young people whose demands (i.e. regarding compulsory military service) were largely ignored. These newly emerged movements were capable of bridging structures and agency in an unique way.

The popularity of these youth movements partially lays in attractiveness of the subcultures that were the vehicles of the new ideas and not in the topics they were bringing. Moreover this subcultural-political connection seems to have an impact on today’s radical movements making them mostly a young people’s domain and activity. This has far-reaching consequences and recent mobilizations in the region (anti-ACTA protests in winter 2011/2012, many protests in Bulgaria in 2012 or the earlier alterglobalist mobilizations) prove the point that coalition-making possibilities and support from other actors are limited.

The paper is based on long-time research and fieldwork among social activists (alterglobalists, anarchists, environmentalists, squatters) and former dissidents that took an active role in the 1989 transformations for various research projects. Empirical data were collected from in-depth interviews, participant observations and from movements’ publications (printed and online) collected over the years.

**Potential, Strength and Weakness of Argentinian Social Sciences to Analyze Contemporary Society**

This paper attempts to describe the current state of the Argentinian social sciences in terms of institutionalization, research capabilities and agenda. It is framed within a research program called PISAC, implemented by the National Council of Social Sciences and co-financed by the Ministry of Science and the Secretary of University Policies. PISAC has three main objectives, each one linked to a specific research project: a) a critical assessment of theArgentinian social science system (institutions, agenda, researchers’ profiles, publications, etc.); b) a review and systematization of the research findings produced in the last decade with regards to key issues addressed by the Argentinian social sciences; c) a structural study of current social, political and cultural trends in the country.

In this paper, in particular, we present some preliminary findings and discussions related to the first research project (a). In this sense, we maintain that Argentina’s scientific field is currently featured by a dynamic, predominantly public and professionalized system that has witnessed a geometrical growth in the last decade. Both the public universities and the National Scientific Council (CONICET) have benefited from this growth. Accordingly, social sciences have experienced an expansive phase visible in the consolidation of postgraduate studies, international publishing and collaborative research. However, some important problems still persist:

1. In terms of institutionalization, professionalization and full-time research positions the social sciences are still well behind the natural sciences;
2. the structural heterogeneity of Argentina’s scientific field, featured by the split between CONICET and the public university system;
3. the national media circuit of the social sciences is still weak, both in terms of domestic and international circulation of knowledge produced locally.
4. There are significant differences in the levels of institutionalization, professionalization and internationalization that the academic activities related to the social sciences bear in different regions of the country.

**Domestic Workers As Agents for Development? the Migration-Development Nexus Debate Revisited Though the Decent Work Agenda**

At the global and regional level, the current public discussion of international migration is dominated by a revived interest in the linkages between migration and development. To date, this debate has left out certain forms of migration and alternative understandings of development, and remained especially unfavourable to particular forms of migration that women undergo. Despite the evidence that domestic workers are numerous and that domestic work is increasingly an important source of waged employment for women, domestic work is often specifically excluded from national labour instruments such as the labour standards or the minimum wages mechanisms in many countries in Asia. Moreover, many migration regimes purposely exclude domestic workers from accessing rights that other labour or skilled migrants in the country are entitled to. With growing interest in return migration and its relationship to development, there have been efforts to place domestic workers 'back' on the trajectories of the 'productive' economy, especially in the form of entrepreneurial programs and the teaching of return migrant women to use their remittances money productively by becoming enterpreneurs. Common failures of such programs requires us to question the fundamental bias in creating such programs and the placing of emphasis on productive labour, instead of re-examining the importance of reproductive labour in development.

This paper will provide a systematic deliberation on the meaning of decent work for non-industrial, reproductive work, focusing on fair wages, working conditions and industrial relations. Its overall objective is to trace discursive and research frameworks around gender and labour migration from a development perspective to test the place of domestic work within it and to prompt greater attention needing to be paid by development studies to the realm of reproductive work. We will base this on the specific experience of domestic worker migration in Southeast Asia.

PIRK, REELIKA* (Tallinn University, reelika.pirk@gmail.com)

**The Role of Social Movements in Youth Political Participation**

In the debate of youth political engagement social movements have a crucial role to play. In many contemporary democratic societies political culture is facing a crisis of legitimacy. Scholars around the world have stated that the level of traditional political participation is decreasing, especially among young people. On the other hand, there are opposite views, claiming that instead of being politically disengaged, young people are looking for (new) forms for participating in society, as they simply address social issues differently. Thus, new social movements (as well as Internet and single-issue activism etc.) are considered to be new platforms for young peoples’ political activism.

This paper is based on case study of ethical-moral values promoting animal rights movement in Estonia. A youth group that consists of politically minded young people who actively participate in and address different issues of the society. This paper explores the importance of social movement activism in sphere of political participation. Especially, it first analyzes how young people conceive their participation and role in society. Secondly, how young activists address political issues through social movements. And thirdly, what challenges they face when participating in socio-political sphere through social movements. The empirical data set includes open-ended interviews and informal conversations as well as participant observations and secondary data sources.

**Orthodox Online Communities in Social Russian Nets As an Object of Social Research**

Social nets is new social communication environment and the majority of people are involved into them all over the world.

The leader among existing social nets in Russia and Russian-speaking area is Vkontakte.

In the social net of Vkontakte there is an orthodox audience which consists of approximately 10% on the part of active audience of this social net. The most active and numerous representatives of the orthodox audience are three age groups which expose relevant portraits of the orthodox audience in Vkontakte: under 18, 18-24, 25-34 years old.

Communities in the social net is main communicative core around which users’ interests are formed. For our purpose all orthodox communities in Vkontakte can...
be divided into four groups: communities of general orthodox theme, communi-
ties where the main content is presented by the quotations of revered fathers
and modern members of clergy, and also parables and cautionary tales, issue-re-
lated communities (question to priests, for youth, family, devoted to beneficence,
etc.), and at last territorially united communities (the communities of bishopic,
youth orthodox unions of certain district, etc.)

Each orthodox group in VKontakte and its own unique target audience on the
basis of which the group administration chooses content: by format (articles, news,
news, fillers, quotations), by form (text, photo, audio, video), by the functionality of
VKontakte social net (discussions, meetings).

In orthodox communities VKontakte the model of social interaction ‘online-of-
line’ is actively developed. Within the framework of this model the participants
of communities are informed about offline events running (rapidly erected tem-
ples buildings, beneficence, meetings with interesting people, etc.) via VKontakte
functionalities (messages, meetings). Due to communities participants high degree
of loyalty the information about future events is spread by ‘virus’ method by the
means of likes and repost system.

PITASI, ANDREA* (Gabriele D’Annunzio University, profpitasi@gmail.com)
The Fourth Paradigm

The paradigm shifts which featured the systemic thinking from the 1980s to
the end of the last century and the very beginning of the 21st lead to some radical
epistemological changes at the crossroads between communication sciences
and sociology. This paper on one side reconstructs the key paradigm shifts in
system theory from the whole /part one (P1) to the system /environment one (P2)
and then to the autopoietic paradigm shift (P3). Kuhnian normality was rather
unlikely in systems theory and still the key global economical, technological, so-
cial challenges of our times required revolutionary shifts. The other side of this
paper is essentially focused on theorizing a fourth paradigm shift which selects
the fragments of the late XX century epistemological debate turning them in
a systematic (in the Mertonian meaning of the term) redesign of the concept
of system itself revealing that design and evolution are two faces of the same coin.

“In any event, we have changed our own evolution but not ended it.”

(Barash 2008: 25)

"Some increase in plasticity is to be expected [...]. It represents the extrapolation
of a trend toward variability already apparent in the babaos, chimpanzees and other
cercopithecoids which is really surprising however is the extreme to which it has been
carried. Why are human societies this flexible?" (Wilson, 2000: 548)

RC09-176.6
PITASI, ANDREA* (Gabriele D’Annunzio University, profpitasi@gmail.com)
“Hypercitizenship” and the Evolution of a Global Identity

The idea of the citizenship moves from the consideration of autonomous agents
and global flows eventually converging by means of autoopoietic systems.

This work reframes the topic of the reconfiguration in the evolving social sce-
narios within Pitasi’s concept of HYPERCITIZENSHIP, sketched out by designing a
multidimensional and multipolar convergence among different kinds of citizenship.

With its four conceptual dimensions, Hypercitizenship, features the strategic
attitude of those areas in which capitalism is turning into turbogenetic capitalism.
Its main features are the following: Cosmopolitan, scientific, societarian and en-
trepreneurial.

The Hypercitizenship concept is focused on the fact that communication about
key challenges of our times is increasingly meaning communication and public
understanding of science and technology for governance and policymaking on a
global, global scale.

From this point of view, law becomes one of the paradigms which are sufficiently
enough, within the current conditions of social experimentation due to the absence of institutional
ized dialogue between finance industry insiders and outside critics. A noteworthy
exception is the recent development of Islamic investment banking in Malaysia,
where (external) Islamic scholars are in an institutionalized dialogue with (insider)
investment bankers.

This dialogue has created an ongoing project to create “sukuk,” a novel fi-
nancial instrument designed as a moral replacement for sovereign and corporate
bonds. “Conventional” bonds are understood by many Islamic scholars as immor-
tal because they are untethered from “real” economic activity and produce reve-
uue streams based on “interest.” In contrast, sukuk are alternative asset-backed
securities (ABSs) putatively tethered to the real economy and generating moral
revenue streams without recourse to interest. This initiative is ambitious and
global: in 2012, $137 billion sukuk were created (issued) world-wide in a number of
currencies.

To theorize the social mechanisms and governance structures that enable such
dialogue, this paper investigates questions centered on how theologians un-
derstand and control investment bankers. How do Islamic scholars and financial
engineers speak with one another with sufficient expertise so as to co-construct
new asset-backed securities that conform both to theologians’ interpretations of
law as well as to bankers’ perceptions of marketability and profitability? Moreover,
how can religious scholars control financiers sufficiently to enforce mini-
mum standards of moral compliance?

To investigate these two questions, this paper draws on 48 focused, ethnog-
ographic interviews conducted in 2012 and 2013 in investment banks with financial
engineers and Islamic experts who co-produce sukuk. The paper and presenta-
tion summarizes the case, theorizes social mechanisms and governance struc-
tures, and hypothesizes implications of the case for other morally-committed fi-
nancial reform projects seeking to dialogue with and control investment bankers,
such as Occupy Wall Street.

Contemporary Adults: Understanding Youth through Intergenerational Comparison

Although sociology has already deeply analysed the profound changes oc-
curred to youth and paths of transition to adulthood in the last decades, it is
often possible to notice two glaring deficiencies in many sociological works: first,
young people are frequently conceived as a category of its own, a spe-
cific social group that is somewhat isolated and studied separately, making it most a comparison with the previous young generations; secondly lit-
ttle attention has been payed to adulthood, the final destination of youth.

Adults should be a model for young people’s transitions, but within the contempo-
rary context this stage of life’s standard model is threatened by contemporary trans-
formations and late-modern processes (individualisation, flexibility, globali-
sation, juvenileisation) and it’s become more and more complex to define what is
‘young’ and what is ‘adult’, where youth finishes and where adulthood starts, which
functions characterise these two ages and which are their reciprocal connections.

All that has huge consequences on the social identity of both young people and adults, on their intergenerational relations and each generation’s transitions.

The intent of the proposed contribute is to think youth in a generational
way by studying young people in relation and in comparison to the co-pres-
ent adult generation, lighting up the contemporary features of adulthood.

The proposed contribute - based on an empirical research which involved 30
Italian young people aged between 18 and 24yo and their significant adults
through semi-structured interviews- aims at contrasting the specific inter-
pretations of adult identity emerging from the representations and practic-
es of adulthood of two generations: the baby boom and the millennial one.

Through this comparison the presented research highlights the processes be-
neath contemporary intergenerational dynamics inside and outside the family,
allowing a deeper knowledge and understanding of contemporary youth.

The Embodied Mind and Epistemic Difference: Lessons from Disability Studies

Embodied mind theories in neurocognitive science and philosophy of mind
are increasingly cited as a conceptual bridge between neuroscience and social
* denotes a presenting author. Abstracts are organized by first presenting author's last name.
scientific epistemologies. Theories such as enactmentism, embodied realism, and extended cognition share a preoccupation with grounding mind and consciousness in the lived, active body, with situating these in environment, and with challenging the abstract, disembodied Cartesian subject. In this sense, they echo sociological and feminist views on the epistemic significance of the body. Yet sociologists and feminists argue that an embodied view of mind must involve the recognition of differences between knowers, while neurocognitive theories assume a generic or universal body and pay little attention to epistemic multiplicity. In this paper I argue for the importance of epistemic multiplicity in forging interdisciplinary theories of embodied mind. I also put difference in more literal terms by addressing corporeal variation. How neuroscientific embodied mind theories come out on the epistemic significance of phenotypical variation can be gleaned from the debate on multiple realisability, or the idea that the same mental state can be achieved through multiple physiological processes. This debate focuses on difference only to reinstate epistemic sameness. For more considered reflection, I look to disability studies, particularly the work of Jackie Leach Scully, Tobin Seibers, and Rosemarie Garland-Thompson, to consider what phenotypical variance teaches us about the embodied mind. Disability scholarship shows us that all bodies are variant in some way; this work puts pressure on assumptions of biological universality. The example of disability also shows not only how problematic it is to assume a generic body, but also a generic fit between body and world. I argue that embodied mind theories can best grasp epistemic difference by resisting an \textit{a priori} body-subject whose relevant properties are fixed in advance.

PIXLEY, JOCELYN* (Macquarie University, jocelynpixley@gmail.com)

Central Bank ‘Independence’

The global financial sector still has very little regulation over its capacity to manufacture money (or to refrain from doing so), even though the credit crash occurred nearly seven years ago. Many hopes are placed on central banks but surely they have been forced to play an ‘unfair game’, as Hyman Minsky said many years ago. This paper investigates ‘independence’, not only as a sociological misnomer, or a form of central bank ‘dependence’ on what financial markets think (as Fed officials put it) but also the effects of central bank quantitative easing since the crisis. The Fed’s QE has enormous impact on most other economies. The ECB is (or was) a test case for hopes of international agreements over the control of money creation. Although the field shifts rapidly, it appears to be dominated still by bond vigilantes behind which lie coalitions of interests that defend the status quo ante. So far few effective oppositions have risen to urge a firmer path for the Fed, such as that taken by the Swiss National Bank. In 2012 it called the bond trading firms’ bluff; in contrast the Bank of Japan is under some ‘control’ by Treasury. I report on my current interview material in Europe with central bankers and treasury officials.

Barrier and Risk Free Environments for Older People. a Survey Applied to State Provided Units in Chile, the Need of a New Policy Approach

Increasing ageing and urbanization are two tendencies which together characterize the 21st century as an unprecedented demographic revolution. In this context a large proportion of older people, particularly in Latin America, will live in vulnerable social, economic and cultural conditions in inadequate habitats which should be addressed by public policies. The effects of the built environment has been the less attended in Chile, despite its relevant impact in both the physical and perceptual dimensions of life affecting its quality reflected in inclusion, social participation, autonomy and independence of this age group. Adequate habitability of housing and urban space should be provided allowing ageing in place as long as possible. Unfortunately, the senior population in Chile has focused on providing housing for those unsheltered through the provision of new units which have not considered the needs of older persons. Considering than more than 80% of seniors in Chile own their homes (SENAMA-INTA 2010); the addition of public policies focusing in improvement of existing housing is relevant. Considering the high accident and mortality figures related predominantly to falls due to aspects of the built environment and the high personal and economic costs for families and the medical assistance system, design issues become relevant issues.

This paper presents findings related to the design and use of an evaluation instrument developed for the detection of risks and barriers in a sample of housing provided by the State of Chile, using objective and subjective techniques. (Direct observation of performance of Basic Activities of Daily Living, (BADL), focus groups regarding findings and dimensional evaluation both of users and spatial conditions). Findings reflected barriers and risks mainly associated with Mobility, in around 30% of BADL operations, due to inadequate object and/or architectural design mostly related with height, presence of uneveness or lack of elements.
National sociologies are often referred to, either directly or implicitly, but the methodological basis for doing this is normally taken for granted rather than discussed, and relevant data are not evaluated critically. The commonest formulation is probably in terms of the thought of those identified (in ways not specified) as leading national social thinkers, though there are also some cases where the contexts of the national journals (identified as such in ways not specified) are treated as sufficiently representative to be used. There are also problems about what to define as the nation. What if the state and its sociology are divided in important ways, for example by having different language communities? What if the sociological work done within state boundaries is closely integrated with sociological work done elsewhere, or significantly influenced by the work of recent immigrants? Such questions raise issues about what could be defined as a ‘national’ sociology. This paper explores the practical possibilities of empirical work on the characteristics of national sociologies as variously defined, giving special attention to some sources which have not commonly been used in this context.

Public Trust in Health Information Sharing and Health Systems in the United States: A National Survey

Background: The U.S. Institute of Medicine’s Report, Digital Infrastructure for the Learning Health System, calls for “weaving a strong trust fabric” among stakeholders, including the general public, to facilitate broad data linkage and sharing. The texture and quality of this “fabric” is understood, particularly with respect to attitudes and beliefs about information sharing held by non-experts. This presentation adds to a growing body of trust research by measuring trust at the individual, institutional, and system level. It examines four key dimensions of trust – fidelity, competency, integrity, and global trust – and key determinants such as awareness, beliefs, and previous experience. Methods: To understand the dynamics of public trust in broad data sharing as a common practice in the context of the U.S. health system, we are administering a 232-item questionnaire (n=1000) using probability-based web panel designed to be representative of the United States and administered by the GfK Group (formerly Knowledge Networks). Findings: Preliminary results from a pilot survey (n=500) indicate that 60% have a somewhat or generally favorable view of information sharing among healthcare providers, hospitals, public health, and insurance companies. 62% feel that it is fairly or very likely that the quality of health care will be improved with increased data sharing, while 49% see health information sharing as likely to benefit personal health care. Most feel that the health system is inadequately regulated (54%) and that the system would be improved by monitoring by independent oversight (63%). Discussion: The public’s trust of technological change that promotes information sharing in the U.S. health system is not a foregone conclusion. Using probability-based web panel designed to be representative of the United States and administered by the GfK Group (formerly Knowledge Networks). Findings: Preliminary results from a pilot survey indicate that 60% have a somewhat or generally favorable view of health information sharing among healthcare providers, hospitals, public health, and insurance companies.

Concepts and Practices of (Counter-)Democracy in the 2010s Movements

This paper proposes a cross-analysis of democracy as demand and practices as defined and implemented by young activists in recent social movements. It draws on first hand empirical material from three qualitative research: democratization movements in Mexico (12 interviews, 2012-2013), Moscow (23 interviews, 2013) and Rio de Janeiro (32 interviews, 2013); progressive activists in Europe (7 countries, 37 interviews and a focus group, 2012); and ecological transition activists in Brooklyn (22 interviews, 2010-11) and Belgium (34 interviews and 2 sociological interventions, 2012-13), as well as 7 interviews with Occupy Wall Street activists. Text analysis (NVivo) and consolidated methods of discourse analysis suggest that four democracy can be isolated in young activists’ discourses: direct democracy, responsible democracy, argumentative democracy and protest democracy. Direct democracy at the local level is notably connected to experimentation in horizontal and participatory deliberation processes as well as memoracy leads to stress citizens’ responsibility, whether in their consumption practices (the local transition movements) or in monitoring elected representative and civil servants (often mentioned in Russia and in Brazil). Argumentative democracy is mobilized by committed experts, who trust in the impact of rational and well-developed arguments and popular education. Finally, many activists insist on protests, popular movements and mass demonstrations able to influence policies.

The paper will briefly analyze each of these forms of (counter-)democracy, the cultures of activism it refers to, their subjective dimensions and their relation to institutional/representative democracy. It will underline the heuristic potential of this multi-dimensional approach to deal with structural limits of representative democracy and to explore paths towards more democratic societies.

PLOWS, VICKY* (Victoria University, vicky.plows@vu.edu.au)

Reducing or Reproducing Inequalities? Ethics and the Researcher’s Role in Negotiating Power Relations Between Young People

A key concern of youth research is the ethical issues that arise through the inherently unequal power relations between adult researchers and young research participants (Brooks 2013, Matthews 2001). However, less attention has been given to the ethical dilemmas that arise for youth researchers when confronted with negotiating their own role in witnessing and responding to unequal power relations and oppressive behaviours between young people during the research process. We know little, for example, about how youth researchers respond to racist, sexist or homophobic behaviour (Curtis et al 2004) or negotiate the exclusionary practices of young people towards each other (Morris-Roberts 2001).

For youth researchers concerned with and committed to challenging issues of injustice and exclusion and/or to adopting a non-authoritarian role with participants this can be particularly troubling (Morris-Roberts 2001). Ethical dilemmas involve the choice between two or more alternative actions all of which may test an ethical belief or cause some potential harm (Banks 2010). Reflecting on some of my own experiences of ethical dilemmas, as a participant observer in a Scottish youth project for 12 months, I analyse the basis of my responses, actions and inactions to potentially harmful, exclusionary and oppressive behaviours between young people and how this connects with broader theorisations of young people’s agency and conceptualisations of challenging interactions.

Like others, I advocate for ongoing reflexive engagement with ethical issues as they emerge in the research journey (Sime 2008) and for openness about the everyday ‘messiness’ and ‘sense of failure’ that commonly occurs with qualitative research practice (Horton 2008). I show how engaging with these processes aided my research development and analysis of the project data, as well as the implications of these ethical dilemmas for a social justice research agenda.

PLUSS, CAROLINE* (Nanyang Technological University, pluss@ntu.edu.sg)

Cosmopolitan and Essentialized Socialities in Transnational Spaces

This presentation forwards the new analytical concepts of cosmopolitan and culturally hybrid, and culturally essentialized, socialities. This is to account for the access to professional, family, and/or friendships/lifestyles resources of 25 Chinese-Singaporean transnational migrants—who lived in Hong Kong—in their respective transnational spaces, which they formed by subsequently living in several different cultural spaces. As a formative part of this, I analyse the role of the cosmopolitan and essentialized socialities of access and non-access to the resources of different contexts-of-interaction in different places and societies because they merge both, the two basic forms of culture contact (adaptation or differentiation), and social relations of reciprocity, trust, collaboration, and exchange. This presentation will show that the Chinese Singaporeans’ explanations of their practices (or lack of practices) of these two forms of accounts for how they perceived of changes in their own characteristics, in the dominant cultural characteristics of their transnational spaces, and of the cultural characteristics of processes of globalization that the Chinese Singaporeans were carriers of. Emphases are on the role of the cosmopolitan cultural characteristics the Chinese Singaporeans acquired through bilingual education in Singapore to establish cosmopolitan socialities in their contexts of work and friendships in Hong Kong with English-speaking people who were form the West, and Asians who had lived in the West; and ‘cosmopolitan’ work socialities with colleagues in mainland China (the PRC). However, the Chinese Singaporeans mostly maintained essentialized socialities in their families, and they were largely excluded from the (differently) essentialized socialities of local Hong Kong people, compelling them—paradoxically, to more highly values cosmopolitan socialities with other non-locals in their contexts of work and friendships.

Shifting Spaces of Hope and Power: Facing Increasing Inequality and Crisis in Asia

For the past two decades, the Asian region has experienced rapid economic growth. While countries like China, India and Thailand have reported double digit growth rates in their economies, the region has experienced increasing poverty and inequality. Complicating this contradiction is the region’s high score in the Global Risk of Hotspots for Disasters (2013 Global Risk Index). This paper will discuss the region’s challenges and responses to this multi-dimensional crisis, highlighting the varying contexts of inequality among countries in the region and their social innovations.

POKROVSKY, NIKITA* (Higher School of Economics, nikita1951@yahoo.com)

Cellular Globalization and the Environmental Awareness in Rural Communities

A multidisciplinary team of social scientists (sociologists, economists, social geographers and demographers from main Moscow universities under the auspices of the Society of Professional Sociologists) works in the Russian region of Kostroma, similar in size to West Virginia and has a population of 800,000. 70 percent of its territory is virgin forest. The Soviet era industrial plants in Kostroma have gone out of business, leaving Kostroma’s environment as the region’s main asset. Despite the region’s seeming isolation from the flow of globalization, a process of “cellular globalization” (Pokrovsksy, 2008) is subtly but inexorably changing the character of the region. This process is changing traditional rural ‘solidarity in despair and poverty’ towards recognizing wealth as a value. Against this social background one can indicate the growth of rural communities made up of the migrant residents from big cities who decided to move out from megapolises in order establish a new environmental Utopia based on the value of ecological balance and downshifting. In the countryside ‘new re-colonizers’ continue their basic professional work through Internet and telecommunications, they make use of all modern commodities of life, they travel much on business—they are on the move or in the condition of ‘liquid mobility’. Those new ‘infocommunication settlers’ (ICS) exemplify a much higher degree of social solidarity and vitality as contrasted to the deteriorating solidarity of the traditional population of the region. Is this an early evidence of the forthcoming general turn to ‘infocommunication ruralism’ in the spiral trajectory of social change?

Book of Abstracts

** denotes a presenting author. Abstracts are organized by first presenting author’s last name. 771
Our examination of testimonial accounts from the oral archive Memoria Abierta has shown that a number of survivors who were illegally imprisoned during the World Cup recall and express feelings about this event. While we expected concretional spaces to be fully hermetic and insulated from outside information - as total institutions (Goffman, 1961) - , we observe, in contrast, the precarious and tumulting conditions through which the prisoners accessed and either celebrated or scorned football and nation. Indeed, rather than having been censured or concealed by the repressors, the World Cup, as a national festivity and media event, was to some extent integrated to repressive practices.

We will discuss a number of situations evoked by the survivors in which the World Cup and its media broadcast intervene in the power logics of military personnel and their relationship to the inmates (better described as "disappeared") in the case of clandestine detention centres. We will also discuss the effects of the "informational porosity" of the total institution in the inmates' experience. Our presentation will be centered on the subjectivity of social actors: their opinions, expectations, and causes of suffering. We will also discuss the limits of such an attempt to reconstruct these positioning, given the passage of time and the contentious nature of this international sports event.

POLKOWSKI, RADOSLAW* (University of Strathclyde, radek.polkowski@strath.ac.uk)

Pathways to Citizenship (inclusion) and Conflict (exclusion): Employment Relations in Migrant Workers' Workplaces in Belfast, Edinburgh and Wroclaw

The study explores trajectories of migrant inclusion and exclusion in Belfast, Edinburgh and Wroclaw - the economic centres in the top most 2004 migrant destination countries. Northern Ireland (NI) and Scotland became net in-migration countries in the early 2000s. A significant share of their immigrant population is composed of workers from Poland - a country that itself is becoming a destination for a growing number of migrants.

Previous literature has developed different conceptual understandings of migrant integration into host societies. However, there has been less research about critical biographical junctures at which individuals stop being migrants and become settled in their various communities, migrant and host. By taking a leap into migrant workers' subjectivity, this study investigates, through the analysis of in-depth interviews, how migrants develop and negotiate their belonging and sense of place, and how their understanding of what home is evolves over time. It builds on previous studies on migrant settlement but adds to it by exploring qualitative differences in settlement thus arguing for a more nuanced understanding of the concept that sees it not as a state but a changing process with variant shapes. The study also tries to explain how different settlement trajectories are affected by the nature of employment and the import of political economy.

The research is set in several political economy contexts of new immigration destinations. Being part of the UK, Scotland and NI share many features of liberal welfare states and liberal economic agendas, but at the same time, NI has been characterized as retaining strong elements of Keynesianism. By contrast, Poland is a Dependent Market Economy with a welfare regime that combines elements of both conservative and liberal models supplemented with unique post-communist features.

The study is funded by the European FP7 Marie Curie Training Network "Changing Employment". Website: http://www.changingemployment.eu

POMA, ALICE* (UPC and EHEA-CSIC, alice.poma@gmail.com)

Feeling Intensely and Changing Radically. How Emotions Felt in Protest Lead to a Cultural Change

The aim of the paper will be to present our proposal of analysis that links the emotions felt in protest and the transformations of consciousness and behaviour considered as outcomes of the protest.

Aware of the emotional intensity these experiences have and the importance of incorporating this dimension to the analysis, our objective will be to show how emotions motivate, discourage, radicalize and generate new outcomes out of the experience of struggle, giving a new meaning to the experience of protest. In order to do this, we will analyse the role of emotions in crucial moments of the protest, in which people decide to take part in the struggle and decide themselves to it, changing their way to see the world and their relationship and bond with other people in a process that leads to transformations of consciousness and behaviour and, finally, to their empowerment.

Based on previous empirical research where we have studied different experiences of migrations, protest and resistance in Spain and Mexico (indignados, #yosoy132, two Oaxaca's women collectives, Mexican anarcho-punk movement and a few resistances against dams and environmental conflicts in both countries) we propose an analysis that inverts the look to ordinary people who participate in these experiences in order to understand their deepest and least visible dynamics which macro-structural literature cannot perceive. The methodology that we have
developed throughout our research is based on in-depth interviews, life story telling, focus groups and narrative analysis of the biographical material.

All in all, we want to prove that the emotional dimension is vital to understand and analyse the change of worldview that ordinary people experience when participating in protest and resistance; as well, it leads to a change in the perspective where protests are seen.

**POMA, ALICE* (UPO and EEHA-CSIC, alice@poma@gmail.com)
Local Resistances and Social Change. How Local Environmental Protests Lead To Citizens’ Empowerment and Democratization**

Currently, thousands of communities and collective groups all over the world are struggling to defend their territories from devastation which leads to the construction of railway, energy and hydraulic infrastructures, only to mention a few. Both in Europe and Latin America, the complicity of the institutional left wing, engaged in the construction of infrastructures and in the limits of the transnational social movements focused on following the agenda of power rather than the problems of the local communities, has led to the emergence of thousands of autonomous experiences of struggle that arise from below.

In our article we will show that these experiences are social and political laboratories where self-organized citizens are experimenting new political practices and are also proposing new discourses, turning these resistances to defend their territory into experiences of democratization, political participation and empowerment.

Focusing on the subjective dimension of protest, we will show the role of emotions, such as place attachment, motivation to action, participation and radicalization of discourses and practices, in order to describe how the experience of resistance produces a transformation of consciousness and behavior.

We will base our analysis on an item of empirical research carried out during experiences of resistance in Spain (the struggle to defend the Riohalo valley and the Grande river) and Mexico (the struggle against the reservoir of San Nicolas) all of them analyzed with techniques of qualitative research. The approach selected has been from below, in other words, centered on the experience of participants and activists of local communities.

Finally, what we intend to highlight is that these resistances are struggles for a significant democratization of territory and resource management, and eventually, of society.

*Images des latino américains dans la direction de la composante militaire de la MINUSTAH (Mission des Nations Unies pour la Stabilisation en Haïti)*

The United Nations Security Council, through Resolution 1540, adopted in 2004, decided to send a multinational force in an effort to reestablish civil stability in Haiti after the political crisis of the Jean Bertrand Aristide government, which erupted on February 29, 2004. More than eight years since the implementation of the United peacekeeping force, the opinions presented here are of two national sectors of Haitian civil society, namely, educators and farmers, and are investigated in relation to the perceptions each group holds about the presence of military force in Haiti through the United Nations Mission for the Stabilization of Haiti (MINUSTAH). The opinions of the two organized civil society sectors researched, the perception that MINUSTAH could be interpreted as a military occupation characterized by neo-colonialism, a humanitarian mission or a mission to support and reinforce institutions in the country. In confronting these different thought orders with the historical trajectory of the Haitian people, represented in the time after the foundation of the Nation-State, in 1804, by the antagonism and divergence of viewpoints between the elites and the masses, it is possible to note that the image that the two researched groups have of MINUSTAH result, in the first place, in the way in which each group constructs the idea of the Haitian nation or of the "imagined Haitian nation."

*Gender Roles In Television Commercials In Asia*

Television advertisements are a rich source of data for social scientists to investigate because they can be seen as a reflection of prevailing cultural values. Gender value is also one of the critical factors in developing marketing strategies via advertising messages. Advertising gender role stereotyping has been a prominent topic in literatures since the 1970s. Over the past decade gender stereotyping in television commercial has received particular attention. Most studies reveal that advertisements reflect the construction of gender roles in society. However, research of gender roles in advertisements is plentiful in the United States. There has never been any comparative research concerning the gender roles in television commercials between Asian countries. Therefore, this paper compares the gender roles in Japan, Korea, China, Taiwan, Thailand, and Singapore.

This comparative content analysis of 2,205 sampling advertisements, collected randomly during August and October in 2012, suggests that the image of gender roles in television commercial does not correspond with the construction of gender roles in reality. In contrast, advertisements create the attractive image of gender roles in society. However, the most findings of this research are similar to the previous result of literature in term of gender of main character, voice over, age, and roles of male and female character in television commercial.

Lo que aquí se expone forma parte de una investigación más amplia realizada en México bajo el título “Ética profesional y posgrado. Valores presentes en las prácticas de generación y transmisión de conocimientos que llevan a cabo cuerpos académicos y grupos de investigación educativa”, buscando comparar experiencias de formación ética profesional en programas de posgrado que ofrecen instituciones de educación superior en distintas entidades federativas.

Chiapas y Yucatán son dos estados de la República Mexicana con diversos grados de desarrollo socioeconómico en los que habitan pobladores pertenecientes a diversos grupos étnicos. A lo largo de los años, las iniquedades sociales que caracterizan a las sociedades posesiolanitas por motivo de la etnia y el género han mostrado algunos cambios en ambos estados, sin embargo persisten rezagos en materia educativa que se hacen más evidentes en los niveles de educación superior. En esta comunicación se realiza un análisis comparativo que muestra cambios ocurridos del año 2000 al 2013 en la composición de la matrícula que estudia en programas de posgrado en las universidades públicas más importantes de la región sureste de México, las cuales se ubican en estos estados: la Universidad Autónoma de Yucatán (UADY) y la Universidad Autónoma de Chiapas (UNACH).
An “Area Studies” Program in France: Scientific, Institutional and Geopolitical Rationales

Institutionalizing and developing “area studies” programs are commonly associated with the Cold War context, while the strengthening of knowledge about foreign areas became a goal of public research and educational policy. These developments came within scientific, academic and geopolitical rationales. Their importance could vary according to the strength of the national intellectual traditions in studying specific foreign areas, the connections between disciplines, and the need for expertise due to the position of a particular State in the international relations. In the case of the US, these evolutions were less explored for the Western European countries, and that would allow probing their particularities. The paper focuses on the set up from the mid-1950’s of the Area Studies, and particularly of the Russian and East European Studies, by a specific academic field: the 6th Division of the École Pratique des Hautes Études. Outlining the national and international conditions determining such a process, it also points out the particularities of the local (academic, scientific, political) context and of its main initiators’ background. Thus, it questions the specific path taken by the implementation in France of this new scholarly infrastructure. Furthermore, the paper takes into account the social, professional, political characteristics of the team initially recruited for working on a “sensitive” geopolitical area and their productions, while it explicates the scientific content of research, documentation and teaching programs. They are meant to implement interdisciplinary approaches relying on various disciplines, which provide a broad historical perspective to their experiences. More interesting is how the grandmothers, mothers, daughters and granddaughters negotiated their changing needs and opportunities and how they balanced tradition, duty, affection and innovation.

PORTER, MARILYN* (Memorial University, mporter2008@gmail.com)

Generation and Reproductive Health in Newfoundland

This paper presents a linking piece between a comparative study of the Reproduction of the Child and the micro level of household practices and the attempted implementation of a national reproductive health program in St. John’s, Newfoundland. The focus is on two specific policies: the law allowing women to travel to London, England for abortion and the government’s attempt to encourage families to have two children. The research shows that involvement in sustainable consumption among young people in Brazil is low. It can be explained, partially, by the way that young people in Brazil remain under the influence of the family much longer than in Europe and North America, and therefore do not have to perform household tasks or face the dilemma of making consumption choices at their daily lives. It also can be explained by the importance and activism of Brazilian social movements that are responsible for many social changes, thereby rendering individual action in daily lives somewhat secondary. We finally point to another relevant cultural aspect of Brazilian society, namely the way that individuality and a sense of responsibility are formed. We conclude, therefore, that while global tendencies may be identified in many countries, the way these develop depends on the institutional configuration of each society.

Sustainable Consumption Among Brazilian Young: Daily Practices and Political Participation

Several evidences point to changes in Brazilian consumption practices that might be interpreted as a growing greening and politicization of consumption, similar to what has been occurring in other countries. In this process, consumption practices are perceived and used as a way of political pressure to improve social and environmental conditions. In this article we present the results of a research aiming at mapping political consumerism phenomena in Brazil, focusing on young people. The research was divided into two different methodological phases, a quantitative and a qualitative one: (1) a survey conducted in 2010 among 457 young people aged between 16 and 25, belonging to upper, middle and lower middle socio-economic segments, all living in the two biggest cities of Brazil, Rio de Janeiro and São Paulo; and (2) a focus group with a total of 51 young with the same socio demographic characteristics, conducted in 2012. The research shows that involvement in sustainable consumption among young people in Brazil is low. It can be explained, partially, by the way that young people in Brazil remain under the influence of the family much longer than in Europe and North America, and therefore do not have to perform household tasks or face the dilemma of making consumption choices at their daily lives. It also can be explained by the importance and activism of Brazilian social movements that are responsible for many social changes, thereby rendering individual action in daily lives somewhat secondary. We finally point to another relevant cultural aspect of Brazilian society, namely the way that individuality and a sense of responsibility are formed. We conclude, therefore, that while global tendencies may be identified in many countries, the way these develop depends on the institutional configuration of each society.

An Epistemological Look at the Concept of Transnational Families

The study of transnational families is a recent one, and although many contributions have been produced in the last decade, it is still necessary to look at the theoretical and epistemological characteristics of the concept. Transnational families are not only an outcome of family member’s strategies, but they are also part of broader transnational dynamics particular to global capitalism where a hierarchy of mobility rights exist, depending on skills and talents. As stated in recent literature, the constitution of transnational families is part of contemporary mobility trends. But the use of the concept presents some difficulties that in my point of view need to be addressed. First, it’s hard to find a unique definition general enough to take into account the diversity of families (different migrant communities) and to determine its boundaries; for instance, to determine who are involved in the transnational family practices. Second, the predominance of the network’s approach (informal connections, remittances, individual strategies)

“Transnational Families” Analysed through the Intersectional Prism

This communication stands at the crossroads of the sociology of migration, the sociology of family, and the sociology of gender relationships. It focuses on Latin American women and men who migrate unaccompanied to Canada for a given period of time, as part of specific government-sponsored temporary work programs for “unskilled” workers. The participants work in Canada, usually for many years, as either live-in caregivers (mostly women) or as agricultural seasonal workers (mostly men). As a result of a significant increase of temporary immigration in Canada and a more restrictive and selective law for permanent immigration, we have observed the creation of a permanent-temporary labor migration dichotomy. Thus, the migrant experience and the relevant life-challenges that both groups face are not the same. Literature review, forums and other related migrants’ activities show that one of the most important challenges faced by temporary workers is the configuration of transnational families, particularly because they are not allowed to bring their families to Canada, as permanent immigrants do. In fact, in addition to a global hierarchy of mobility rights related to their professional skills, many other factors determine the transnational families’ lives: differences in legal status; their access to resources, mobility and lifestyles; their origin or ethnicity; their age; their gender, etc. The intersectional approach will allow us to include the diversity, complexity and analytical challenges of this particular contemporary phenomenon.

Encrucijada Latinoamericana en Bolivia: El Conflicto del TIPNIS y Sus Implicaciones Civilizatorias

El presente ensayo busca interpretar las implicaciones civilizatorias que vemos presentes en el conflicto del TIPNIS (Bolivia), resaltando la importancia que para el campo de las luchas territoriales, social, ambientales tiene el desarrollo del conflicto del TIPNIS. En la primera parte se hace un análisis desde los múltiples espacio-tiempos que están implicados en el conflicto. En segundo lugar se centra el análisis en las actuales presiones desde dinámicas socio-espaciales, especialmente de ampliación del capitalismo en frentes de expansión/invasión, que constituyen tensiones territoriales sobre y alrededor del territorio y territorialidad de los pueblos indígenas del TIPNIS. El estudio resalta el papel de los movimientos sociales bolivianos en la configuración de las nuevas luchas políticas emancipatorias en el mundo ancladas a los conceptos de luchas tecno-políticos como territorio, autonomía, autogobierno, buen vivir, madre tierra, derechos de la naturaleza, estado plurinacional comunitario, resiguiendo la antigua lucha por la tierra en una otra clave teórico-política, distinta de la liberal y/o marxista. El ensayo destaca la importancia de entender los procesos y dimensiones que el TIPNIS nos plantea para tomar las decisiones que están en juego, y que construyen toda una encrucijada alrededor del continente, el mundo y también para los gobiernos progresistas que intentan empujar cambios en la actualidad.
but one important issue has been legal change. The introduction of no-fault di-
 vorce in the post-war years contributed to the rapid increase in divorce, and more recently the idea that same-sex marriage will be sanctioned by law has stirred up significant public controversy.

Debates around the legal recognition of same-sex marriage and other related matters surround the argument in Germany and California that circumcision constitutes physical abuse of the child have only served to unite and unify other- 
wise separate and disconnected religious groups – fundamentalist Christians, 
 ultra-orthodox Jews and conservative Muslims. This eruption of religious issues con-
stitutes physical abuse of the child have only served to unite and unify oth-
matters such as the legal argument in Germany and California that circumcision
routines and different sources of tensions surrounding the politics of truth com-
clusion members and deponents. Unlike similar initiatives convened in other coun-
try, for intellectual life at the national level. We first document evidence for this
assumption, then discuss the consequences of funding mechanisms and research
assessments for higher education. Then we review several factors in this move-
der: 1) the rationalization of expertise as a feature of Weberian bureaucratic
authority; 2) the politics of higher education regulation and control, as manifest
in the new managerialism and related research assessment exercises; 3) the
private and financial of commercial scholarly publishing, which takes its advantage of the preceding developments by charging high prices to maximize profits; 4) deci-
sions by editors and their journals to play by the new rules even when they are
personally opposed to them and when they value journals for a different purpose.
We draw on national case studies from Japan, Taiwan, Argentina, Singapore, the
UK, and South Africa.

The purpose of this communication is to present our findings of an original research that is being conducted at the Center for the Study of Violence of the University of São Paulo, considering the cycle of violence that took place in the Met-
ropolitan Area of São Paulo, which among other incidents, led to a crisis in the public security sector in the State, in the year of 2012.

Since there is no official data on the matter, our data were mainly collected
from the media. According to it, during the second semester of that year 30 state
agents, (specially Military Police officers) and 274 civilians were killed and 200 in-
jured in similar situations – hooded men, shooting their victims from a motorcycle
or a car in movement. This suggests that death squads or equivalent group strat-
egies of execution were used. The novelty here seems to be, amongst others, the
organization of groups oriented to killing out of duty police officers.

The research aims at identifying the trigger(s) of these sequences of actions,
 around which a dynamics of action-reaction seemed to be installed. For now, our
main hypothesis is that previous political decisions, taken in the realm of public
security policies, worked as the main trigger to initiate a process of mutual killings between members of the State of São Paulo Military Police and members of the PCC (First Capital's Command) organized crime group.

This presentation will seek to clarify the underlying principles as well as the
routines and different sources of tensions surrounding the politics of truth com-
misions that are currently convened in Brazil by systematically cataloguing them
here, and presenting reports from their public sessions and interviews with commis-
sion members and deponents. Unlike similar initiatives convened in other coun-
tries that have transitioned from authoritarian regimes, the truth commissions
in Brazil did not occur at the onset of the emerging democratic regime. Instead, they are such as the emergence of groups, appearing in the context of an already mature democracy, and acquiring a multiplicity of forms, as they are established at dif-
ferent levels of governments, legislatures, universities and many other forms of
organization of civil society. Established by Brazilian president Dilma Rousseff in
May of 2012, the National Truth Commission (NTC) forms the main axis of a large
net of independent commissions. Through the NTC, the Brazilian State takes upon
itself the responsibility of investigating the human rights violations that were per-
petrated by its own agents during past military governments (1946 to 1988), but
does so without revoking the Amnesty Law of 1979, which explicitly prevents any
criminal investigation or punishment of any transgressions of human rights that
may have occurred during this period. Therefore, the NTC holds the clarification
of the historical human rights record as a value in itself, and not as a means of
informing judicial action. However, this paradigm is not uncritically accepted by all
the auxiliary commissions, which, despite operating under the same legal frame-
work as the NTC, often question the general amnesty principle. The value of his-
torical truth as either a goal in itself or as a potential instrument to legal reform
and judicial action remains the topic of much controversy, and forms the main
analytical thread of this presentation.

segregation with the same-sex partnering data from the 2010 U.S. census to calculate segregation scores for the 100 metropolitan with the largest homosexual populations. We show that there is a sizable amount of residential segregation between these two groups. We also show that gay male households are more segregated from heterosexual households than are lesbian households. And we show that the level of segregation varies positively across the metropolitan areas with the size of the gay male and lesbian population. Our research contributes to the general literature on residential segregation by focusing on a non-racial minority that has heretofore received very little attention.

Towards Better Education and Less Inequality? Trends in Geographical, Generational and Gender Inequality in Education

In our paper we provide an overview of past, current and possible future trends in disparities in education following the traditional patterns of inequality along gender, generation and geography. Magnitude and recent trends in inequality vary across regions and countries. Educational differences by generation indicate the speed of change in human capital formation over time and we identify different patterns of educational transitions that are closely connected to societal, educational transitions. We suggest that pathways from female disadvantage to gender equality and new forms of inequality. The closing of gender gaps is typical mostly of developing countries, where recent gains in education are often more pronounced for women compared to men, but are not always sufficient to remove the limitation in access to education; whereas the issue of male disadvantage especially in higher (i.e. post-secondary) education emerges in developed countries of the North, as well as countries in Latin America, East and South-East Asia. It must be emphasised that gender inequalities are an important aspect of “over-education”. For the future of potentially “over-educated” societies, evidence that gender differentials is important for education policies.

We base our analyses on a unique global dataset on educational attainment -- encompassing the reconstruction and projection of educational attainment from 1970 to 2060 for 171 countries by age and sex -- developed at the Wittgenstein Centre for Demography and Global Human Capital.

HIV, Dating and Mating: An Analysis Of Stigma In Self-Presentation

While the Universal Declaration Of Human Rights counts among its fundamental rights the right to marry and found a family (Article 16), it is often informal societal discrimination that inhibits this right (UN 1948). Gay men living with HIV/AIDS deal with the stigma of their status from both external to and from within the gay community. Often they are legally required to disclose their stigma prior to sexual activity, in essence moving them directly to what Goffman (1963) calls discriminated. Despite overwhelming evidence that sero-discordant couples can effectively manage HIV transmission risk through safer sex practices, positive men must negotiate their status in a dating landscape often characterized by stigmatization language that polarizes gay men in to “clean” or “dirty” states, the latter referring to men who are HIV positive; in effect making their sexual history their calling card. This paper begins with a critique of Goffman that offers an alternative for those who are perceived to be inherently and irreparably discredited, and then presents an analysis of a comparative sample of three hundred personal advertisements across three differently populated American cities: large metropolitan, medium urban, and rural. Extracted from the free and open website craigslist.org, the advertisements are qualitatively analyzed for stigmatizing language such as “clean only,” “drug and disease free (DFD),” and other text used to communicate sero-status. The paper concludes with a discussion of implications and suggestions for researchers interested in studying inherently stigmatized groups.

Persistent School Segregation or Change Toward Inclusive Education? the Convention on the Rights of People with Disabilities and Reform Mechanisms in Germany

The United Nations Convention on the Rights of People with Disabilities (UNCRPD) was ratified in Germany in 2009. Article 24 requires that nation-states implement an inclusive education system. This ambitious goal poses great challenges for the implementation of institutional and special education systems that can facilitate— or hinder—inclusive education. Germany is one of the countries worldwide that, to achieve the UNCRPD’s goals, must transform its highly segregated education system. In fact, for decades Germany has maintained one of the most diversified and segregated education systems in Europe. Inclusive education contradicts not only contemporary special education structures, but the entire highly-stratified general education system, addressing a core conflict in German education policy. The consequences of segregation, such as social assistance receipts over the life course, are dramatic even if they have not often been calculated.

Thus, this neo-institutionalist analysis examines both the barriers and the reform mechanisms that impact the implementation of the UNCRPD in a decentralized national context. German federalism guarantees the sixteen Bundesländer authority over educational matters; however, ratified human rights conventions demand fundamental reforms regardless of regional policymaking preferences and priorities. Based on historical process-tracing and expert interviews (with policymakers, administrators, scholars, and advocacy groups), we contrast “leader” Schleswig Holstein with “laggard” Bavaria. In the northern state, inclusive education has diffused broadly since the 1970s. In the southern state of Bavaria, implementation is just beginning; indeed, the law’s intents are being subverted by government actors, exhibiting considerable backlash.

Comparing these cases enables an investigation of specific mechanisms of institutional persistence and change: power-based, legitimacy-based, utilitarian, and functional. This analysis contributes to the theoretical literature on institutional change and path dependence, to studies on the human rights revolution in education (UNCRPD in particular), and to research on inclusive and special education, long marginalized in the sociology of education.

Becoming worldly: Developing Global Cosmopolitan Perspectives On Diasporic Homeland Tours

Diasporic tourism—structured group tours to natal, symbolic and ancestral homelands—is a growing industry where globalization, migration, leisure and the symbolic economy converge. Using ethnographic material from three diasporic tourist populations, this article examines the process of narrating a collective self-hood through diasporic homeland tourism. While tourists travel through space to homelands in order to travel through time and discover ancestry, they also move in scale by claiming membership in a global community. Framed within the theoretical intersection of tourism and diaspora, this comparative project reveals the utility of cosmopolitanism—as a category of practice—for domestic displays of identity and community.

No One “Likes” Sandy: Facebook and Post-Hurricane Recovery In Long Beach, NY

Technologies, like social media sites, have made it easier to communicate and can capture the “ephemeral” cultural artifacts found during periods of upheaval and change (Stallings 2006). However, due to its relative newness, social media’s role in recovery efforts after natural disasters has not yet been thoroughly explored. This report adds to existing literature and demonstrates how social media technologies supported and facilitated localized recovery efforts and memorializations from below in Long Beach, New York. The Long Beach Hurricane Information Facebook page, created by two transplants to keep out-of-towners informed has since morphed into a virtual bulletin board that provides support and information for local residents. Residents both near and far see this site as a place to share information, organize local responses, and importantly remember. Referencing their personal memories of Long Beach, posters reference local symbols and sayings to perform solidarity and community in this virtual space. This site bears witness to the resiliency, frustration, strength and as well as the shortcomings and failures of institutional recovery efforts. While they struggle to rebuild, they work together; defined and connected by the “Long Beach sand in their shoes.”

Crisis and (re-)Informalisation Processes: The Cases of Barcelona and Berlin

With the economic crisis and the retreat of welfare services, European cities are witnessing the reemergence of informal practices creating reciprocity mechanisms and informal markets as well as non-formal, reciprocity-based forms of provision of housing, healthcare and other services. Nevertheless, the strength and the emergence of these practices takes place unevenly across these cities, depending on the impact of the crisis, the nature of the state and its multi-level governance and the institutional culture on the provision of policies.

This paper presents through historical and qualitative analysis, the role of informal practices in the provision of resources in two European cities in crisis: Barcelona and Berlin. As in many other southern European cities, the emergence of informal practices in Barcelona is key to understand the capacity of its inhabitants to overcome the adverse effects of the crisis. Historical analysis will show that informal practices until the eighties and that part of these practices are reappearing now. In Berlin, which fell into a deep economic and financial crisis with the reunification of the city in 1990, informal practices have been an element explaining the redevelopment of the city. Local administrations have tried to formalise informal activities negotiating and tolerating certain practices.

Both case studies show that processes of informalisation taking place in the current crisis are rooted in previous practices and the historical development of cities, that never saw a complete disappearance of these practices. Besides, the analysis shows how these practices have been selectively allowed by local administrations to ensure certain form of social cohesion.

Socially Innovative Forms of Renewable Energy Provision: Towards a 'Commons' Approach to Sustainability in Barcelona and Catalonia

With the financial crisis, responses to environmental problems in European cities are increasingly based on privatisation of water and energy companies, and the promotion of technological approaches to increase efficiency and reduce pollution and energy consumption under the policy concept of ‘smart city’. This paradigm promotes energy efficiency without discussing the systems of production and supply. Nevertheless, there also exist alternative approaches from civil society fostering new models of energy production, distribution and consumption.

This paper focuses on these proposals and their institutionalisation possibilities through the analysis of a cooperative initiative (Som Energia) spreading in Barcelona and other Catalan cities. Following the experience of initiatives in northern Europe, this cooperative proposes new relations with green energy through the redistribution of both decision-making and energy power. This brings an increase and diversity of actors in the field of renewable energy, moving from traditional large private corporations and public companies to common citizens, who act both individually in the private-domestic sphere and collectively through socially innovative experiences.

The paper analyses a) how the cooperative emerged in its institutional and governance context, strongly dominated by an oligopoly of large private electricity companies and a complex and inefficient regulation that entails economic, social and environmental deficits, and b) the potential of this approach to create a greener and more democratic model of production and supply of energy. Results show that the co-op must tackle barriers and obstacles adapting itself continuously to changing frameworks. Despite this apparent unfavourable scenario, it develops different strategies for ensuring the activeness paving the way for the strengthening of alternative forms of organization led by civil society that go beyond state and city to changing frameworks. Despite this apparent unfavourable scenario, it develops different strategies for ensuring the activeness paving the way for the strengthening of alternative forms of organization led by civil society that go beyond state and city to changing frameworks.

PRANDNER, DIMITRI* (University of Salzburg, dimitri.prandner@sbg.ac.at)

Individuals and communities live in a globalized world, defined by supranational institutions, companies and civil societies, while global travel and information streams expand. Yet they are part of specific nations that have experienced very specific events, which became part of very specific cultural figurations that are shaping strategies of those specific nations. These narrative structures are figured and refigured to continue to be included in the ongoing struggles and challenges – e.g. economic or political crisis and developments – that are experienced in the context of a nation state. And the national media – in all their forms and distribution channels – are a primary channel where those processes can be observed. Yet when discussed in the media those figures are often used as tools to discuss contemporary issues and anticipate further societal developments. But how are those ideas included when further events happen that may or may not match those anticipations?

The proposed presentation will discuss how the Austrian quality press (“Die Presse” and “Der Standard”) did discuss potential futures in relation to international terrorism from 2001 to 2011 and how those futures were continuously included into national narratives of a country which never took an active role in the international war on terror. How do those predictions brought forward from strictly national media differ from the forecasts found in the New York Times, an internationally recognized information leader? How do the Austrian journalists build those international futures and how do they think about them later on? Do the reference those figures built within the national context again?

Those questions will be discussed, using 25 narrative interviews with Austrian journalists and a qualitative comparison of 1377 Austrian newspaper articles with 1983 from the NYT, published in 5 two week sampling windows from 2001 to 2011.

WG01-892.4

PRATA, ANA* (California State University Northridge, ana.prata@csun.edu)

The recent economic crisis affecting Southern European countries has been singular in both its intensity and complexity, and as such, it has had a profound impact on the economic, political, social, and institutional realms. I compare how the Spanish and Portuguese governments, women’s state agencies, parliamentarians, and social movement organizations have inserted issues of gender equality and women’s empowerment into narratives about the economic crisis and the austerity measures intended to mitigate it. The fiscal consolidation in Spain and Portugal has had a more severe impact on female employment rates, working conditions, wages, and welfare provisions than in the rest of Europe. In this comparative research I address the following questions: What policies have the Spanish and Portuguese governments pursued to mitigate the effects of the economic crisis on women’s position in the labour market and in the domestic arena? How have these governments framed the various problems and the solutions directed at increasing gender equality and empowering women? Which political groups or social movement organizations have inserted these issues on these agendas and what strategies have they devised to deal with those challenges? Which problems affecting women are these groups framing as a priority (e.g., employment, poverty, violence) or even as a ‘problem’ at all? And finally, how are these groups framing potential solutions? Findings show that it is mostly women’s state agencies (not parliamentary members) that highlight how the economic crisis has impacted women disproportionately. The agencies’ focus seems to be more the increase in domestic violence, and less on issues of women’s unemployment or the gender pay-gap. The print media does not highlight how the recession is affecting women, although some articles mentioned the strains families have had to deal with since the crisis and the strategies they adopted in response. PRATA, ANA* (California State University Northridge, ana.prata@csun.edu)

**Residents’ Responses to the May 1-4 2010 Boston Water Contamination Incident**

This study used the Protective Action Decision Model to examine local residents’ warning sources, warning receipt times, message content, warning confirmation, risk perception, and consumption of untreated tap water, bottled water, bottled water, and bottled water. An interesting phenomenon was found during the May 1-4 2010 Boston water contamination incident. Most residents received warnings from news media and peers, followed by the warnings mentioned 2.3 of five recommended elements of a warning message—most commonly the threat and the recommended protective action. Consumption of untreated tap water declined, consumption of personally chlorinated water remained negligible, and consumption of bottled water and bottled water increased. First warning source was significantly related to protective response but message content was not. Unexpectedly, risk perception was more strongly related to water consumption before the incident than after the incident. This finding calls attention to the need to recognize that, although increased risk perception can increase protective action, successful implementation of protective actions can decrease risk perception.

**Families Apart: Long-term Implications of Canada’s Live-in Caregiver Program for Filipino Migrant Workers and their Families**

Canada's Live-in Caregiver Program (LCP) is one of Canada's largest and oldest temporary foreign worker programs. Throughout the first decade of the new millennium, the program grew four-fold, in line with a more general national and global exportation of a certain type of needed foreign worker programs. The majority of those coming through the LCP are Filipino women, part of a vast labour diaspora of over nine million Filipinos working in roughly 200 countries. An unusual feature of the LCP is the opportunity it affords to migrate permanently to Canada if the worker completes 24 months of live-in caregiving work within a 48-month period. In the Philippines, displaced China and India to become Canada’s top immigration source country: by 2009 40 percent of Filipinos migrating to Canada came through the LCP. I report on research carried out in collaboration with the Philippine Women Centre of BC that documents the long-term effects of this program on Filipino families settling permanently in Canada, with a special focus on the challenges faced by Filipino youth reunifying with the mothers in Vancouver.

**Testimonial Theatre, Transnational Debate and Filipino Labour Migration to Canada**

I have for many years worked with the Philippine Women Centre (PWC) of BC to document the experiences of Filipina migrant domestic workers and their families in Canada. Our latest project, a collaboration with Caleb Johnston and theatre artist, Alex Ferguson, involved creating a testimonial play based almost entirely on verbatim transcripts of interviews conducted with migrant Filipino domestic workers, their children, Canadian employers of domestic workers and nanny agents. In the first instance, we turned to theatre to put disparate experiences of care into dialogue and to stimulate wider public debate within Canada. But for domestic workers involved, the theatre project also solidified their desire to narrate their stories of life in Canada differently to their families in the Philippines. In November 2013 we presented the play at PETA Theatre in Manila as an effort to contribute to a complex transnational debate about Canada's Live-in Caregiver Program. I discuss some of the challenges of transnational translation, given that the same migration experience can look and be thought about differently from different locations, and the potential of theatre as a platform for dialogue and organizing and promoting cultures of solidarity and resistance.

**Workplace Innovation and Consequences for Employees and Organisational Performance in the Netherlands**

Based on ‘Netherlands Employer Work Survey’ (NEWS) data this paper investigates the consequences of workplace innovation for employee and organisational performance in the Netherlands. The NEWS is a unique, two-yearly held survey among 5,000 establishments of public and private organisations on policies and practices of Dutch employers, concerning work related issues, such as working conditions, employment relations, HR and innovation management. Workplace innovation is defined by Pot (2011) as “the implementation of new and improved interventions in the fields of work organisation, HRM and supportive technologies. Workplace innovation is considered to be complementary to technological innovation”. Taking this definition, which is rooted in the ‘theory of modern sociotechnology’ (De Sitter) and ‘the job demands - control model’ (Karasek), as a point of departure, we constructed a Workplace Innovation Index that consists of the following characteristics: ‘active job’ (flexible but tailor-made employment relations), ‘employee voice’ (dialogue and autonomy), ‘flat organisation’ (limited hierarchical levels and teamwork), and ‘innovation orientation’ (openness to renewal and seeking new knowledge externally).

The relationship between this WPI-index and several performance output measures, such as labour productivity, performance (turnover, profit), sickness absence, work stress, and perceived employee commitment will be examined. Control variables are sector (industrial branches) and organisational size (number of employees). To date, research investigating the relationship between workplace innovation and organisational performance has been scarce. Our analyses will be executed in the end of 2013 and will be fully reported in the paper. Implications for theory and practice will be discussed.

**Emotions and Values: From the Greek Riots of 2008 to the Movements of 2011**

It is not uncommon for theories of collective action to differentiate between ‘conventional’ and ‘unconventional’ protests. This paper argues, however, that although riots are ‘unconventional’ protests, they are an important element in the process of collective identity construction. They signal a crisis in representation and the need for improved or renewed popular politics, as practiced in social movements. Riots, although lacking the clear demands, degree of organisation and duration of social movements, offer an insight into the network of emotions and values that subsequently crystallise into more coherent forms of collective action. In this respect they should be thought of within the theoretical framework of social movements. The intense and open expression of anger in Greece in November 2008 was one of these instances which although not purposeful in the traditional sense, provide an insight into the networks of values and emotions leading to the movement of the ‘Aganaktisimenoi’ (Indignant) responding to the economic crisis in Greece in 2011.

**Responding to the Greek Crisis: Social Media, Horizontal Organization and Networks, then and Now**

The use of social media during the first wave of protests responding to the crisis and the string of lending agreements in Greece, enabled the emergence of a new political discourse. The main website of the Greek ‘Aganaktisimenoi’ (Indignants) was anchored around the concepts of horizontality, autonomy and leaderless (www.real-democracy.gr). The analysis of the website reveals an attempt to divide the political field in pro and anti memorandum forces and expresses the widely felt hostility and suspicion towards the existing forms of democratic representation (Prentoulis and Thomassen, 2013). Although the lack of coherence and permanency of this movement points towards processes of identification (as failed movement) (Prentoulis and Thomassen, 2013), it is not uncommon for theories of collective action to differentiate between ‘conventional’ and ‘unconventional’ protests. This paper argues, however, that although riots are ‘unconventional’ protests, they are an important element in the process of collective identity construction. They signal a crisis in representation and the need for improved or renewed popular politics, as practiced in social movements. Riots, although lacking the clear demands, degree of organisation and duration of social movements, offer an insight into the network of emotions and values that subsequently crystallise into more coherent forms of collective action. In this respect they should be thought of within the theoretical framework of social movements. The intense and open expression of anger in Greece in November 2008 was one of these instances which although not purposeful in the traditional sense, provide an insight into the networks of values and emotions leading to the movement of the ‘Aganaktisimenoi’ (Indignants) responding to the economic crisis in Greece in 2011.

**Responding to the Greek Crisis: Social Media, Horizontal Organization and Networks, then and Now**

The use of social media during the first wave of protests responding to the crisis and the string of lending agreements in Greece, enabled the emergence of a new political discourse. The main website of the Greek ‘Aganaktisimenoi’ (Indignants) was anchored around the concepts of horizontality, autonomy and leaderless (www.real-democracy.gr). The analysis of the website reveals an attempt to divide the political field in pro and anti memorandum forces and expresses the widely felt hostility and suspicion towards the existing forms of democratic representation (Prentoulis and Thomassen, 2013). Although the lack of coherence and permanency of this movement points towards processes of identification (as failed attempts) rather than new forms of collective identity, this paper is concerned with the influence of the ideological and organizational elements emerging from the use of social media during the protests and their displacement on a variety of socio-political sites: First, the ideological and organisational influence of social media for the creation of Solidarity Networks. Second, the use of social media by the radical left coalition Syriza, which is currently the opposition party in Greece.
What Drives National Differences in Intensive Grandparental Childcare in Europe?

Grandparents play an important role in looking after grandchildren. The provision of intensive grandparental childcare varies considerably across Europe, with figures ranging from less than 4% in Sweden and Denmark, to almost one quarter of children being looked after by grandparents in Greece. This paper investigates whether contextual-structural factors (such as formal childcare and labour market structures) and family cultures influence the level of informal childcare support from older parents to their adult children, using data from the Survey of Health, Ageing and Retirement in Europe. Multilevel analyses suggest that grandparental childcare variations are mostly driven by macro-level factors. Both parent and grandparent socio-demographic and economic characteristics were associated with intensive childcare and were consistent with existing literature. However, even accounting for socio-economic and demographic differences between national populations, country-level variations in the levels of provision of intensive grandparental childcare remain. Most of such variation can be explained by structural and cultural factors. In particular, in those countries where both parents and grandparents are expected to work, formal childcare is generally well provided and appears to be the norm; thus, there is a lower level of grandparental childcare. In contrast, in countries where there is a high percentage of women who are not in paid employment, maternal care for pre-school children appears to be the preferred norm. In such countries, provision of formal childcare is limited as care is expected to be provided by family members, and mothers in particular rather than grandmothers. If, however, a matrix approach is used in a country where mothers are expected not to work (but to look after children), she tends to rely on grand-maternal support on an almost daily basis. Recent European policies which encourage older women to remain in the labour market are likely to impact on mothers’ employment, particularly in Southern European countries where there is little formal childcare.

You Are a Dark Person after All

In the 1960s I visited one of the racially mixed primary schools in the Netherlands. Half of the 200 pupils were second generation Moluccan children, whose parents felt forced to leave their home country in 1951 in the aftermath of the decolonization of the Dutch East Indies. Some forty years later I recorded the lifestories of 35 of my former classmates. This paper will focus on the extent in which the native Dutch, as members of the ethnic majority, and the Moluccan-Dutch, who perceive themselves as second generation political exiles, identify with Dutch society. More specifically, it will analyze how their accounts tap into but also resist dominant discourses of race, ethnicity and culture. While the stories of the native Dutch contain a range of images of the ‘other’, from special or pitiful to unsettling or inferior, and often express concern about the ability or willingness of ‘foreigners’ to adapt to Dutch culture, the Moluccan accounts appear to be devoid of any imagery of immigrants as ‘other’, as well as any concern about cultural integration. On the other hand, while most native Dutch emphatically emphasized that they consider Moluccans to be part of ‘us’, the Moluccan accounts testified that, due to their different culture or outward appearance, they cannot but identify as ‘other’.

Being Active As a Route to Health and Happiness

A key feature of what has been called the epidemiological transition is that a fundamental shift occurs in mortality and disease patterns whereby pandemics of infection are gradually displaced by degenerative and avoidable diseases as the chief form of morbidity and primary cause of death. One of the more well recognized is that recognizing such a transition is that the health policies of rich nations have incorporated a concern to promote ‘healthy lifestyles’ and a personal sense of ‘wellbeing’ with the ultimate aim of reducing mortality and morbidity rates across the life-course. One component of a healthy lifestyle is said to consist of sustained physical activity for at least 150 minutes every week, but according to the WHO only around 1/3 of people in Europe achieve this; the reasons why are numerous and complex. In this paper we explore lay thinking about what ‘activity’ is and what might promote and effect and what the consequences might be for the distribution of resources in later life.

Geopolitical and Personal Influences on Willingness to Participate in Political Action in the Middle EAST

This paper examines individuals’ willingness to engage in political action in five Middle Eastern countries (Egypt, Iraq, Jordan, Morocco, and Turkey) using the 5th (2005-2008) wave of the *World Values Survey*. We will also analyze the sixth wave (2010-2014) once it becomes available in spring 2014 in order to draw comparisions with the 5th wave. Analysis with the 5th wave demonstrated that individuals’ willingness to sign a petition, join a boycott, and participate in peaceful demonstraions was lower in the Middle East than in any other region of the world. Nearly 70% of respondents would never sign a petition; 75% would never join a boycott; and 72% would never participate in a peaceful demonstration. Counter to this finding, the Middle East, especially Egypt and Turkey, has seen high levels of political action over the last 4 years. We aim to understand political action in the Middle East by examining change in the percentage of individuals willing to participate in political action and what the consequences might be for the distribution of resources in later life. We then assess analysis of each country in comparative perspective, highlighting whether a loosening of controls emerges in both countries, what purposes it is serving, and potential use of a linear park designed for an inner city area stretching across

The Politics of Intergenerational Conflict: A Comparative Study of the UK and Japan

Internationally we are witnessing renewed conflict over political settlements and attempts to forge a new moral economy of welfare in economically straightened times. In some (but not all) advanced economies these disputes are crystallising around the concept of intergenerational equity with a noticeable re-positioning of older people as the selfish welfare generation. In this paper we consider the recent resurgence/emergence of discourses of intergenerational conflict in the politics of financing later life, especially pensions and social care, in the UK and Japan. In both countries there are calls in government and public life for a re-balancing of public expenditure in favour of youth, while age-divisive policies set

Where does the voice go in contemporary culture? How is it composed, decomposed, constructed, reconstructed and made apparent? What are its signs and dislocations, its logics and movements? What are the expectations and reasoning for the voice's presence as a particular kind of expression and information? In exploring how we might set out to answer these questions, this paper is divided into two sections. In the first part, and drawing on insights from the sociology of culture and technology, it argues that the birth of modern popular music is also the birth of a permanent coalescence of the voice and technology. For the voice does not sing alone, it is always accompanied by, is implanted in and mediated by technologies, paradoxically, just as it attains the status of a unique expressive carrier and index of individuality, femininity and personhood, so it is also killed by a whole plethora of machinery that reveal that carrier to be radically hybridised.

The second part takes the form of an exploratory scene assigned to a particular vocal modality. It aims to show how, in the case of the Japanese virtual idol singer, Hatsune Miku, complex entanglements of human and non-human entities are not only radicalised, but also played with, ironised and turned into aesthetic forms that unsettle the foundations on which the voice sounds out. Here, not only does the voice become a pliable object of information, enmeshed in machinic vocalisations and subject to the microscopic transformations of digital technologies, but it also represents a simulacra of the hyper-sexualised female body as a performative object and act. From the Miku phenomena we learn much about how the body, the voice and digital technologies fold into one another in an era of global transformation.

Families

The transformation of gender identities and family models within migration projects increasingly highlights the gender perspective as an elementary variable of migratory processes. The paper aims to investigate how the gender roles of transnational Bolivian migrant men residing in the Brazilian capital Brasilia are emulated and reconstructed by their families in the transversal Bolivia-Brazil context. Based on the theories of intersectionality and hegemonic masculinity, the paper develops a theoretical framework for the study of transformations and modernization in the sociopolitical landscape of Japan since its introduction, this paper provides a theoretical examination of scholarly literature regarding several historical periods of note through a chronological “grand narrative” structure. It is necessary to take into account the political climate surrounding the repression of Christianity during each of the eras mentioned in this text. For in Japan, if there indeed lies a pattern of immanent quality in the violence toward Christianity across these eras, then as Etienne Balibar states, we witness a “systematic use of violence to prevent collective movements of emancipation that aim at transforming the structures of domination.” The evidence examined is thereby directed toward the question of violence toward Christians as an institution or a matter of political expediency immediate to each circumstance up to the end of the proscription in 1873, with additional considerations of the subsequent years until the postwar Allied Occupation.

The derived conclusion is that the multiplicity of factors behind the violence at each stage of history elucidates certain specific goals for achieving power on behalf of the oppressor in each case, and not general qualities of the Christian faith being targeted. Thus, the continued repression of Japanese Christians is seen to be a bias of political convenience rather than ideological conviction.

**“Intercivilizational Encounters” with the West and Modernizing Moves in Post-Soviet Russia: Civilizational Perspective**

The present paper considers civilizational analysis as an appropriate theoretical framework for the study of transformations and modernization in the post-Soviet Russia. Unlike the conceptions of linear westernization, ‘transition’ or modernization theory and its variations (catch-up modernization, ‘convergence’, etc.) civilizational analysis and multiple modernities theory do not disregard interactions between modernity and pre-modern traditions, sociocultural settings, internal contradictions and historical background. The changes in contemporary Russia and the distinction of Russian modernity are mainly shaped by the post-Soviet encounter of the Russian society with its legacy of the “soviet project of modernity” (J. Arnason) and imperial traditions with Western modernity. The first post-Soviet decade was a period of the ultimate ‘openness’ to the western modernity and the domination of Westernism in political discourse. Acquired Western institutional models and cultural ideas (capitalist free-market economy and democratic policy with liberal ideology, to name few) have been originally interpreted and mutated while being assimilated into the Russian context. Following Arnason, the encounter between the West and the rest is seen as a ‘global projection of the problematic’ that remains open to diverse alternative interpretations. To illuminate the outcomes and impact of the Western borrowings and reveal factors affecting their adaptation, the paper proposes to conceptualize contacts between the post-Soviet Russia and the West as “intercivilizational encounters” (J. Nilsson and J. Arnason) with a focus on the interaction between different “civilizational complexes” (B. Nelson). The post-Soviet “encounters” induced changes in cultural orientations, interpretation of power,
Locus of Control and Cumulative (Dis-)Advantage in the Labor Market

The relationship between Locus of Control (LoC) and occupational outputs has already been shown in several cross-sectional studies. The belief to have control over the achievement of the own goals, as do people with internal LoC, seems to be an important property for the career opportunities. Thus, people with an internal LoC get more pay, and take higher vocational positions in the average. This paper, however, has a longitudinal perspective and investigates the mutual influence between labor market experience and the development of LoC. Specifically it is assumed that there is an accumulation of (dis-)advantages for people with an external locus of control. In this case the external locus of control leads to worse employment opportunities and the worse employment opportunities leads then to a strengthening of the external LoC over time. On the other hand, an accumulation of advantages could be assumed for people with a stronger internal LoC.

The analysis is based on household panel data from the German Socio Economic Panel (SOEP) for the years 1999-2010. The SOEP includes a multi-item scale which measures the LoC in the years 1999, 2005 and 2010. In addition, the SOEP contains much information about the employment history, so that the employment situation can be modeled in detail.

On the basis of “Fixed-Effects-Models” I estimate the effects of labor market outcomes, like unemployment or the decrease of income, on a possible change in the locus of control over time. First results show that a deterioration in the individual labor market situation leads to an increase of an external LoC. The assumption of the accumulation of (dis-)advantages can be so be confirmed on the basis of the previous analysis.

The Effect of Inequalities within Families on Work-Values of Adolescents

The occupational aspirations and work-values of adolescents strongly influence their career choice and therefore are formative for their status attainment. The importance of the family for adolescents’ development of work-values has been mostly studied in terms of direct intergenerational transmission of work-values from parents to their children. In contrast with this approach the present study investigates to what extent the sibling constellations and inequalities within the family affect the formation of work-values. It is assumed that differences in supportive parenting between siblings reduce the social work-values of the child that is less supported. Based on the assumptions of the theories and research on social comparisons it is further assumed that these effects are stronger for more similar sibling pairs, because the individual social comparison orientation is stronger and a “de-identification” is harder within these pairs.

The analysis is based on household panel data from the German Socio Economic Panel (GSOEP) for the years 2000-2011. In the GSOEP adolescents are interviewed at the age of 17. In this GSOEP adolescents are asked to what extent their siblings have similar goals or their perceived parenting behavior. The great advantage of the data is that the siblings are also surveyed at the age of 17.

On the basis of “Sibling-Fixed-Effects-Models” I estimate the effect of the differences in the perceived parenting behavior. First results show that a supportive parenting style increases the social work values, but that higher support of the other sibling leads to a lower formation of social work-values. The results also reveal a stronger effect for same-sex siblings in comparison to opposite-sex siblings. In particular, the effect is stronger for sisters than for brothers.

Successful Educational Actions in Southern Europe: From Marginalization to Educational Inclusion

The recreation of the successful social and educational actions is achieving the transformation of social contexts with strong indicators of exclusion. These actions have been identified through the INCLUD-ED project, the only integrated project about schooling from the Framework Programmes of research until its ending in December 2011. There have been 15 universities from 14 countries participating in the project and case studies have been conducted in Spain, Italy, Malta or Cyprus, among other countries, where the successful educational actions (SEAs), universal and transferable, have been identified. The case that we are pre-
senting here is the one in the La Milagrosa neighbourhood, at the outskirts of the city of Albacete (Spain). The educational centre in the neighbourhood presented low academic performance, high levels of absenteeism, serious problems of co-existence among students and high levels of conflict between teachers and the families. Through the implementation of the SEAs advocated by the international scientific community, a transformation started which was extended far beyond. The academic results experimented a rapid improvement and the diverse social agents (university, administration, professionals-officers and neighbours) carried out a Dialogic Inclusion Contract to re-creates the SEAs and to carry out the transformation process. This process has become a model at a European level to exit the ghetto. The key resides in the design of policies based on scientific evidence; and on the inclusion of the voices in all the decision-making processes.

New Alternative Masculinities Against Gender Violence

This paper presents a South's contribution to overcoming gender violence. Recent scientific evidence about the perpetuation of the traditional heterosexual model of masculinity upon gender violence shows that 1) there are in the history many examples of men that have fight together with feminist women for the eradication of gender violence; and 2) often and according to an existing socialization to be egalitarian do not promotes a desirable image (in terms of sexual attraction). It stands out the differentiation between three types of masculinities: Dominant Traditional Masculinities (DTM), Oppressed Traditional Masculinities (OTM), and New Alternative Masculinities (NAM). The DTM and OTM contribute to perpetuate violence against women, while NAM allows preventing it and, thus, overcoming it (Flecha, Puigvert, Rios, 2013).

This theoretical contribution was presented for the first time in Barcelona (Spain) in a conference organized by Hemes en Diálog (Men in Dialogue), a men's organization, based under the context of Dialogic Feminism and which main objective is to promote and strengthen other models of masculinity based on equality and dialogue, as an alternative to the hegemonic masculinity. From the theoretical perspective of Dialogic Feminism, defined by Puigvert (Beck-Gersheim, Butler & Puigvert, 2013), and the new conceptualization of DTM, OTM and NAM, it is possible to contribute to the eradication of gender violence in different countries. Thus, this paper proposes how this conceptualization could be transferred to all cultures and contexts and fight gender violence in a global way.

From Reform Socialism To Transnational Capitalism: The Political Economy Of Foreign Direct Investment In Postsocialist Central and Eastern Europe

The existing literature on postsocialist transformations in the former communist ruled states of Central and Eastern Europe (CEE) argue that paths of market reform in the region were largely determined by policies implemented at the moment of transition. This paper, by contrast, argues that reform paths were heavily constrained by each state's inherited industrial structure and ties to the world economy prior to 1989. Examining flows of foreign direct investment (FDI) in the region during the initial liberalization period, the paper shows that the density of East-West inter-firm ties in the 1970s, and rates of international state indebtedness during the same decade, are better predictors of how rapidly postsocialist states amassed FDI stocks in the early 1990s, than their economic, institutional or policy characteristics during the transition period. However, the paper also finds that whilst the pace and inherited ties to the world economy formed a powerful structural basis attracting FDI, post-Communist political coalitions were key in enabling or hindering the advancement of foreign investment. The combination of industrial structure and political coalitions at the time of liberalization explain divergent pathways in transitions from state socialism in CEE.

Social Implication of Inequity in Higher Education; A Comparative Study of Formal and Non-Formal Mode of Education in Andhra Pradesh of South India

A B S T R A C T

SOCIAL IMPLICATION OF INEQUITY IN HIGHER EDUCATION

A comparative study of formal and non-formal Mode of Educatio in Andhra Pradesh of South India

*Dr. P. Koteshwar

Social implications of different modes higher education has been gaining lot of importance in contemporary times. This is because of growing important for higher education and its consequent skill and talent required for management of complex issues and problems emerging in the era of post liberalization. As such Higher Education has been considered as necessary tool for social transformation by using increasing knowledge in science and technology. As a result in the post globalization era developed and developing countries initiated establishment of institutions of higher learning across the world. In this consequent the Government of various Nations have been liberalizing the higher education and imparting education through formal and non formal means, India is one of such countries which has been liberalizing higher education and expanding its institutional activities through formal university education and non formal system of open university education and distance mode of higher education to reach to all the sections of the society.

However, there is a lot of disparity in the content, quality, curriculum and mode of teaching etc. Further the socio-economic profile of the students are also varies. Hence there number of consequences on the students due to various systems of education for the same degree.

This study aims at to understand comparatively the system of formal and non formal higher education and its implications and the students of various backgrounds. For this study Kakatiya University and its formal and non formal system of education has been chosen to understand the implications of the system inequity in higher education.

A New Age of World Factory: Monopoly Capital and the Struggle of the New Generation of Chinese Workers

A startling 18 young workers attempted suicide at Foxconn production facilities in China in the year of 2010, attracting worldwide attention. This article looks at the historical development of Foxconn Technology Group as a case to demonstrate the advent of rapid capital expansion in China and its impacts on the lives of Chinese workers. It also provides an account of the role of the state that facilitates to Foxconn's production expansion as a form of monopoly capital. Foxconn is important and typical of this phenomenon due to its speed and scale of capital accumulation in all regions of China which is incomparable to extant enterprises. We argue that this new form of capital generates a global factory regime and a distinctive managerial mode that further leads to workers' suffering from work pressure, anxieties and desperation at an unprecedented level.

PUN, NGAI* (Hong Kong Polytechnic University, punngaig@gmail.com)

Communism Revisited: A Third World Perspective

As an idea or philosophy, Communism died in the West when the mature form of capitalism didn't succumb to a communist revolution. As the result of the transfer of capital, with the support of militarism and class conflicts in the Third World, socialist revolutions arrived there in the 20th century. This is the history of communism, the first wave, if you would like to name it.

Since the movements of the 1960s, the state or party-politics has usually been represented as the enemy to be attacked. But from a Third World perspective, as Lenin highlighted, the highest stage of capitalism was imperialism. The first half of the 20th century focused on national liberation that required a state machine. This proved to be the foundation of communist struggle in the context of the Third World. After the revolution, the state didn't vanish but this didn't put an end to the struggle – as many in the West thought – since we see communism as praxis rather than an idea of History.

There are three reasons for the continuing existence of the socialist state: The failure of Western communist movements to liberate their own working class and their counterparts in the third world. The Cold War required the strengthening of socialist states and develop the socio-economic conditions for socialism. The lack of grass roots democracy and the lack of substantial class forces which could counter-balance the bureaucratization of the party-state.

Although it failed, the Chinese Cultural Revolution was an attempt to address these historical predicaments. Capitalism has conquered most Third World countries and enveloped their life-worlds, thereby creating the social conditions for the final capitalist crisis and the second wave of the communist revolution. A new sociology of communism needs to revisit the politics of class, collective and human emancipation.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The present contribution stands as a deeper and wider sociological reflection of some empirical evidence resulting from a national research project entitled “Federalism, Local Autonomy and Quality of Democracy”. In an attempt of understanding the reasons for the substantial halt of the federal reform process in Italy, the content analysis of the interviews addressed to privileged witnesses of the administrative and local political system emphasized two central aspects: the increasing role played by technical knowledge and the persistence of a ruling-class-es political culture geared toward a parochial/individual dimension of interest, more than according to general and collective aims. On the one hand the increasing complexity and technical nature of the regulatory framework “imposed” by a higher level of governance (European Union), on the other a network of relationships between politics, society and economy – both at national and local level – that is oriented to the defense of the achieved benefits through what we can describe as familialistic (or neo-feudalistic) mechanisms of interaction.

The picture that emerges may help to explain, within a constructivist theoretical framework, the Italian lack of engagement towards the “bandwagon” formed by countries that have managed to gain an advantage by the phenomena of globalization in terms of growth, competitiveness, development and democratization of decision-making processes of their political systems (by implementing, for example, inclusive decision-making practices supported by the use of new technologies of information and communication).

The aim of the contribution is therefore a general reflection on the political culture of the Italian political elites and its “weight” in shifting the impact of globalization from a potential added value for both national and local development to the actual practical loss of competitiveness of the whole system.

**Bewixt and Between: Web Spaces and Southern Theories**

Traditionally, the dominant forms of sociology have been based on the assumption that theories were generated in the north while the global south contributed-mostly confirmatory-cases. Many scholars have challenged this assumption though, given the political economy of knowledge systems, their perspectives have not, as yet, shaken up some of the core orthodoxies in the metropole. At the same time, sociologists who are in tune with theory-making and well-developed knowledge systems in different parts of the world are aware of co-existing frameworks that describe diverse social realities. Some of these co-existing frameworks have been identified and described as Southern theories, indigenous theories etc. I have been paying special attention to the appearance of new (and the disappearance of old) cultural genres and art forms as well as the weight of popular culture in these pages and the boundaries between entertainment and “serious” art. By using both qualitative and quantitative content analyses, we focus here particularly on two countries and the respective newspapers, Britain (The Guardian) and Finland (Helsingin Sanomat).

**Discourse on Affirmative Action: Perspectives of a Privileged Minority**

The legislated system of racial privileging institutionalised under apartheid in South Africa was dismantled with the transition to an inclusive democracy. With the normality of a racialised order questioned measures were instituted to address the legacy of the apartheid workplace regime. In this paper the discourse of middle-class whites who challenges to entitlements they have historically, is considered. This discourse reveals how privilege and disadvantage is conceived, and shifts, with a loss of power to dictate terms of engagement with others. Narratives on colour-blind merit, efficiency and equity are marshalled to protect a privilege position and challenge potential threats.

**“Dilemmas” of Migration Governance: A Case Study of Nepal**

The labor market is complex in every society. Along with one's movement from one place to another, his/her life becomes vulnerable. Though migrants are to be treated not as workers but as human beings with human rights, reports state that labour migrants have been facing a lot of problems not only in receiving countries but also in their own soil. Generally, labour-sending countries in Asia are confronted with the dilemma between “promotion” and “protection”. In the face of bleak employment prospects at home and the economic gains from foreign exchange remittances, countries would like to see expansion in overseas migration of national workers. At the same time, they cannot turn a blind eye to the rampant abuses of basic human rights suffered by their nationals abroad. Nepal, being one of the newly emerged countries in sending its labour force to the international market, especially in Asia, has been one of a witness of such dilemma. On the one hand, it exports its labor in order to take some pressure off local unemployment. On the other hand, it has to deal with exploitation and even death situation of its citizens as the recent case of Qatar shows.

Within this background, this paper explores the reasons behind Nepal's reluctance not only to put the labor migration in its policy priority but also to sign/rectify the UN Convention. In other words, examining the link between political ideology of major political parties in Nepal, and its reflections in introducing gov.-of-the-day policies including the labour ming its labour force to the international market, especially in Asia, has been one of a witness of such dilemma. On the one hand, it exports its labor in order to take some pressure off local unemployment. On the other hand, it has to deal with exploitation and even death situation of its citizens as the recent case of Qatar shows.
essay The Gift, sociologists and anthropologists have considered the gift largely on the basis of exchange. However, there are also forms of giving that are not reducible to the reciprocity of exchange. While in ceremonial gift exchange (e.g. Christmas and birthday presents, reciprocal dinner invitations, etc.) gifts are perhaps best conceptualised in terms of reciprocal recognition (Hénaff, 2010), the practices of giving presented by self-sacrifice and humanitarian aid, for instance, escape or at least suspend the strict economy of exchange. What is more, the paper suggests that modelling the gift solely according to exchange significantly undermines the giving (up) involved in the gift. Whenever what is given is given only ‘in exchange’, so to speak, the giving with abandon is annulled already by definition. Nevertheless, it is not that giving would be completely separate from reciprocity. The paper argues that gratuitousness and reciprocity comprise two dimensions of the gift that at once presuppose and exclude each other. The gift of ceremonial gift exchange needs to involve some generosity and thus at least be guided by the ideal of the pure, absolute gift, if it is to avoid being turned into sheer market exchange. And, from the other way around, even the gratuitous giving in pure loss seems to presuppose at least a minimum of reciprocity – insofar as the gift is accepted by the givee – if it is not to remain illusory, utopian, and abstract.
oped by the sociologist Jörg Stolz (2009) to complement the ‘religious economies approach’ within secularization theory. Based on a relational approach to study ‘nonreligious’ groups and organisations (Quack 2014), I will further engage with the organisations’ struggles for various kinds of capital within institutional and field-related ‘logics’. On this basis, I discuss the ways in which nonreligious organisations can be situated within the ‘surroundings’ of a religious field, thereby complementing Bourdieusian studies of specific religious fields.

Reconfiguring Personal Communities In A ‘ Divorce Biography ’

Scholarly discussion on divorce has largely focused on the detrimental consequences of divorce. This scholarship inadvertently constructs divorce as a tragic life event that destroys individuals and a social problem that threatens the very fabric of society, reinforcing and reflecting common attitudes towards divorce. However, there has been an emerging field of research challenging such academic and policy discourses about divorce. My study is situated within this new sociology of divorce. It departs from the perspective that divorce signifies moral decay and instead focuses on the ways in which individuals organise their family life and practices. My research argues that divorce creates spaces, however fraught, for individuals to construct what I call a ‘divorce biography’. These spaces include the ways in which individuals navigate around cultural norms and take into account practical considerations as they reconfigure their personal communities for survival, intimacy and belonging. This study shows how divorced individuals might continue to build and enjoy strong and close relationships even after the rupture of their marriage and disruption of their nuclear family unit.

**Estimating Societal Trends from Heterogeneous Cross-Sectional Time Series Surveys – Some Challenges Demonstrated on the Example of Church Attendance Trends in Europe**

Sample-based social science surveys have initially been a tool to collect data for analyses with a limited time-horizon. With the advent of long-standing survey programmes such as Eurobarometer, EVS/WVS, ESS, or ISSP, the option of deriving society level trend information from cross-sectional data collected over different time points has come into the world. It has often been demonstrated that larger trends can be observed from repeated cross-sectional surveys within the same survey program, when some methodological homogeneity can often be taken for granted. It is however much less clear whether data from different survey programs, with different methodological details, are sufficiently homogeneous to be cumulated into a common source database for building even longer, denser, and geographically more complete trends. The present study uses a database of responses to church attendance questions in European surveys, compiled from the survey programmes named above. This database is analysed with respect to possible problems arising from the requirements of harmonisation across time and countries, given the variety of languages, question and questionnaire formats, and other design properties of the individual surveys. The database presently comprises more than 800 time/country samples from 32 European countries or regions and covers almost all years from 1986 to 2010. Analyses aim to establish the presence or absence or particular national and supra-national trends, identify aberrations of samples from trend patterns and investigate possible methodological factors behind such aberrations. Further, the analysis may eventually contribute to answering such questions as what the effects of different response formats, sampling design, administration modes etc. on reported average attendance levels are.

Understanding Patterns of Political Participation – Are National Borders Natural Borders?

Different modes of political participation are often seen as expressions of the local political and cultural environment in which people live. Institutionally formed, formal participatory behaviors such as voting or petitioning are understood to signal compliance, support and trust for the political system, non-institutional behaviors such as boycotts or participation in demonstrations are understood to signal conflict and risks for social cohesion. Obviously, the likelihood that respondents report certain behaviors depends – besides respondent characteristics – on incentives and opportunities for such behaviors found in their home society. For comparative studies this means that we have to expect cross-national variation in the measurement properties of scales for political participation, even for substantive reasons alone.

This study investigates how such substantively driven heterogeneity in the measurement of protest behaviour can be dealt with, in particular in relation to methodologically driven heterogeneity of the participation measures, which may be also present and which we routinely attempt to exclude. A latent-class item response theory model for a participation scale from the European Values Study 2008 will be estimated and the outcomes analysed in terms of substantive and method-induced variation across countries.

**Genre Et Vieillissement : L’expérience De Femmes aînées Immigrantes**

Cette communication présente certains résultats d’une recherche qualitative menée auprès de 90 femmes aînées ayant immigré à Montréal au Canada, dont on ne sait peu de choses. En effet, les données sur les aînées immigrantes sont rarement portées à cause de la nature de leur vie privée. Cette recherche s’inscrit dans le cadre d’une enquête auprès de 90 femmes aînées qui ont immigré à Montréal au Canada, durant les années 1950 et 1960. Les auteurs se sont principalement intéressés à la vie privée des femmes immigrantes en ce qui concerne la vie au quotidien, le rôle de grand-mère (échanges de services, liens avec les petits-enfants, impact de l’éloignement géographique) (Attas-Donfut, 2008; Philippson, 2002; Treas et Shampa Mazumdar, 2004; Aldous, 1995). Notre recherche vise à comprendre l’expérience – au sens à la fois des perceptions et des émotions ressenties et des actions déployées par les femmes pour organiser leur quotidien (Dubet 1994). Le vieillissement quant à lui doit être compris dans ses dimensions à la fois personnelles (rapport au corps, à la santé, etc.), familiales (place de la grand-maternité, rôles comme aîné) et des émotions ressenties et des actions déployées par les femmes pour organiser leur quotidien (Dubet 1994).

**Regulation of Private Expenditures in Cross-National Perspective**

Over the past decade, health spending in many developed countries has grown faster than gross domestic product, leading governments to search for alternative financing structures, notably through increases in the share of private expenditures. However, as these increases are generally not randomly distributed in the population, these transformations have raised concerns about their impact on both population health and social inequalities in health. Finally, as the extent of private expenditures on health varies between developed countries, it appears that certain countries are better able to limit barriers to health insurance coverage, notably through more generous public coverage as well as greater governmental regulation of the private insurance industry. This paper will examine this hypothesis with the Health Insurance Access Database (HIAD), by demonstrating the variation over time, by health service and
across countries in the nature of those policies. The HIAD is a repository of policy indicators offering harmonized policy data on public coverage and the regulation of private expenditures. The standardization process used for collecting these indicators allows for comparisons over time (from 1990 to 2010), across health services (data are collected on 8 health services, for instance prescription drugs), and across OECD countries (as well as the OECD’s type of health system (comprehensive, welfare oriented, entrepreneurial) and the OECD’s typology of the role of PHI within that system (primary, primary substitutive, supplementary, duplicative or complementary).

This research will inform and feed the current debate on the future of health care in developed countries and on the interplay between the public and private sectors in these changes.
